He tried explaining the Internet to a group of French investors. They wanted to know who the president of the Internet was. Garrison tried to tell them that the Internet was a network of networks and that no one person was in charge. They couldn't understand the concept, so finally Garrison told them he was the president of the Internet.

It was difficult for the French investors to comprehend the new Internet technology because no part of it fit the way they viewed the world. The French, like the Spanish 200 years before them, were used to seeing things in a particular way: Organizations have structures, rules, hierarchies and, of course, a president. In regards to the Internet, the French were mistaking a starfish for a spider.

A spider is a creature with eight legs coming out of a central body. It has a tiny head and usually eight eyes. If the French investors were to ask who was running the spider show, the answer is clearly the head. If you chop off the spider's head, it dies. When the French investors heard of the Internet, they wanted to know who was in charge — where was the head?

But the French investors weren't dealing with a spider. The Internet was actually a starfish. At first glance, a starfish is similar to a spider in appearance. But the starfish is decentralized. The starfish doesn't have a head. The major organs are replicated throughout each arm. In reality, a starfish is a neural network — basically a network of cells. Instead of having a head, like a spider, the starfish functions as a decentralized network.

This brings about the second principle of decentralization: *It's easy to confuse starfish with spiders.*

Alcoholics Anonymous

When Bill Wilson realized he was dying of alcoholism, he knew he couldn't combat it himself. His answer was to get help from people with the same problem. Alcoholics Anonymous was born.

At Alcoholics Anonymous, no one's in charge. And yet, at the same time, everyone's in charge. Today, if you were to ask how many members AA has, there'd be no way to tell. How many chapters? Again, no way to tell. No one knows, because AA is an open system. The third principle of decentralization is: *An open system doesn't have centralized intelligence; the intelligence is spread throughout the system.* Information and knowledge naturally filter in at the edges, closer to where the action is.

Alcoholics Anonymous is flexible, equal and constantly mutating. The fourth principle of decentralization is: *Open systems can easily mutate.*

(continued on page 4)

The Spider, the Starfish and the President of the Internet

(continued from page 3)

Whether you're a centralized organization, like a spider, or just an observer on the battlefield, eventually you'll realize the fifth principle of decentralization: *The decentralized organization sneaks up on you.* Because the decentralized organization mutates so quickly, it can also grow quickly. Spider organizations weave their webs over long periods of time, but the starfish can take over an entire industry in the blink of an eye.

The sixth principle of decentralization is: *As industries become decentralized, overall revenues decrease.* Introduce starfish into the equation and wave good-bye to high profits. It's why you want to be on the lookout for any starfish before they take an industry by storm.

The trick is, of course, to predict explosive change before it occurs. That's the only way to avoid falling into the French investor pitfall over and over again. That means you need to ask the right questions. ■

A Sea of Starfish

What do an encyclopedia, a piece of software, a phone company, classified ads and naked people in the Nevada desert have in common? They're all decentralized.

Skype

Niklas Zennstrom, the founder of Kazaa, applied the lesson from Kazaa — avoid central servers — to the phone business. Zennstrom started Skype, which let people connect to each other directly, via free computer-to-computer phone service. In December 2004, Skype had 15 million users. By the end of 2005, it had 57 million.

Skype rendered the telephone industry's models of generating profits through long-distance charges obsolete. Although Skype may or may not thrive in the long run, it has opened up a Pandora's box.

Craigslist

Founded by Craig Newmark in 1995, craigslist is now in 35 countries and more than 175 cities around the world. The site attracts three billion page views a month.

According to Newmark, "The way craigslist runs is that people who use it post, and if they find something inappropriate they flag it for approval. So in a very day-to-day kind of way, the people who use the site run it."

The Web site is a starfish company because it allows users to interact with each other directly without anybody telling anybody else what they can and cannot do. But the big attraction to the site isn't just free ads. It's community.

In an open system, what matters most isn't the CEO,

(continued on page 5)

The Right Questions

Is there a person in charge?
If you see a CEO, chances are you're looking at a spider. An open system, on the other hand, is flat.

Are there headquarters?
Every spider organization has a physical headquarters. A starfish organization doesn't depend on a central headquarters.

If you thump it on the head, will it die?
If you take out the headquarters, chances are you'll kill a spider organization. Unlike spiders, starfish often don't have a head to chop off.

Is there a clear division of roles?
Most centralized organizations are divided into departments. In decentralized organizations, anyone can do anything.

If you take out a unit, is the organization harmed?
Units of a decentralized organization are by definition completely autonomous. Cut off a unit and, like a starfish, the organization does just fine. In a centralized organization, any department is important. If a spider loses a leg, its mobility is significantly affected, and if it keeps losing legs, its survival will be at risk.

Are knowledge and power concentrated or distributed?
In spider companies, power and knowledge are concentrated at the top. In starfish organizations, power is spread throughout.

Is the organization flexible or rigid?
Decentralized organizations are amorphous and fluid. Because the arms of the starfish have relative freedom, they can go in a multitude of directions. Centralized organizations depend more on rigid structure.

Can you count the employees or participants?
It is possible to count the members of any spider organization. Counting the members of starfish organizations, though, is usually an impossible task. It's not only that no one's keeping track, but also that anyone can become a member of an open organization.

Are working groups funded by the organization, or are they self-funding?
In open organizations, there is often no central well of money. Things are different in centralized organizations. Without central funding, departments cannot survive.

Do working groups communicate directly or through intermediaries?
Typically, important information in centralized organizations is processed through headquarters. In open systems, communication occurs directly between members.

A Sea of Starfish

(continued from page 4)

but whether the leadership is trusting enough of members to leave them alone. Newmark does have reverence for his users. He lets them be.

Apache

The first popular browser for surfing the Web came from the University of Illinois at the National Center for Supercomputing Applications (NCSA) Project. But NCSA did not respond when engineers sent patches to be integrated.

The engineers started talking to one another through an e-mail list and decided to post the patches on their own. An engineer named Brian Behlendorf came up with a name for the project — Apache. Apache was organic — engineers would contribute, and the good patches would be picked up by other users.

Apache collected so many patches for the NCSA Project that eventually it posted its own version. The software was completely open-source. Engineers all over the world started using Apache to run their Web site server. Apache quickly became the industry standard. Today 67 percent of all Web sites are run on Apache.

Wikipedia

Wikipedia has fascinating origins that in many ways capture the evolution of an open system. In 2000, Jimmy Wales launched Nupedia, a free online encyclopedia that could be used by children whose parents couldn't afford their own set.

Larry Sanger, Nupedia's editor-in-chief, saw that getting something published on Nupedia was a chore. He learned about something called a wiki. Wiki is a technology that allows Web site users to easily (and quickly) edit the content of the site themselves.

With that, Nupedia became Wikipedia. Within five years, Wikipedia was available in 200 languages and had extensive articles — more than one million in the English-language section alone.

The quality of the articles is outstanding. People take great care in making the articles objective, accurate and easy to understand. Members themselves take on the job of policing the site. This brings us to the seventh principle of decentralization: *Put people into an open system and they'll automatically want to contribute.*

Burning Man

The Burning Man festival, which happens yearly in the Nevada desert, is known for eclectic costumes, rave music and a host of naked people on drugs. It's the only 24/7 decentralized experience you can find these days.

There are two main decentralized qualities to Burning Man. The first is that there really aren't many rules. The other thing that takes getting used to is that nothing costs money. That's the second decentralized quality of Burning Man — it's based on a gift economy. You provide things because you want to, as a way to contribute to the community, not because you expect anything in return.

Burning Man, though outside the mainstream, holds a crucial lesson for businesses. When you give people freedom, you get chaos, but you also get incredible creativity. Because everyone tries to contribute to the community, you get a variety of expressions. ■

Standing on Five Legs

A decentralized organization stands on five legs. As with the starfish, it can lose a leg or two and still survive. But when you have all the legs working together, a decentralized organization can really take off.

LEG 1: Circles

Circles are important to nearly every decentralized organization previously mentioned. Once you join a circle, you're an equal. It's then up to you to contribute to the best of your ability.

Today, the Internet has allowed circles to become virtual. Joining circles is so easy and seamless that most of us are members of a decentralized circle of one kind or another. Circles gain freedom and flexibility when they go virtual, but being in the physical presence of other participants adds a dimension of closeness, and a sense of ownership emerges.

Instead of rules, circles depend on norms. The norms become the backbone of the circle. Members enforce the norms with one another. As a result of self-enforcement, norms can gain even more power than rules.

As the norms of a circle develop and as members spend more time together, they begin to trust one another and are often motivated to contribute to the best of their abilities.

LEG 2: The Catalyst

In open organizations, a catalyst is the person who initiates a circle and then fades into the background. In Apache circles, the Nant'an played the role of a catalyst. He could lead by example, but he never forced his views on others.

The same pattern appears with every decentralized organization: A catalyst gets the decentralized organization going and then cedes control to the members.

In letting go of the leadership role, the catalyst transfers ownership and responsibility to the circle. When the job is done, a catalyst knows it's time to move on.

Once the catalyst leaves, however, his or her presence

(continued on page 6)

Standing on Five Legs

(continued from page 5)

is still felt. The catalyst is an inspirational figure who spurs others to action. Circles don't form on their own.

LEG 3: Ideology

Ideology is the glue that holds decentralized organizations together. Ideology is the shared philosophy among members.

LEG 4: The Preexisting Network

Decentralized networks are much more conducive to serving as platforms for budding starfish organizations. Typically, it takes the special skills of a catalyst to enter a network. But the Internet changed everything.

Today the Internet serves as an open platform on the back of which a wide variety of starfish organizations can be launched. The implications of the Internet for decentralization are profound.

The Internet not only makes it easier for people to communicate, it also provides a fertile ground for a host of decentralized organizations.

LEG 5: The Champion

A champion is relentless in promoting a new idea. Catalysts inspire and naturally connect people, but there's nothing subtle about the champion.

Champions are inherently hyperactive. Like catalysts, they operate well in non-hierarchical environments, but they tend to be more like salesmen than organizers and connectors.

The Five Legs in Action

Elizabeth Cady Stanton married an abolitionist, but her experience with the abolitionists wasn't all positive. When she attended an anti-slavery convention, she was forced to sit in a segregated section reserved for women. Women were not allowed to speak or vote in the meeting. Stanton wondered how women could fight for slaves' rights when they were denied equal rights.

Stanton was a catalyst who, when presented with an ideology, catalyzed a new movement. It took 10 years, but Stanton joined with the Quakers to organize a women's rights convention. ■

The Hidden Powers of the Catalyst

Catalysts often draw upon similar tools. These are:

- **Genuine Interest in Others.** Catalysts are genuinely interested in others. We can tell when a catalyst really cares about what we're talking about; when that happens, we tend to open up and reveal more about ourselves. This is the catalyst's essential tool.

The Catalyst Versus the CEO

CEO	Catalyst
The Boss	A Peer
Command Control	Trust
Rational	Emotionally Intelligent
Powerful	Inspirational
Directive	Collaborative
In the Spotlight	Behind the Scenes
Order	Ambiguity
Organizing	Connecting

- **Loose Connections.** Catalysts thrive on meeting new people every day. Knowing so many people allows a catalyst to make connections between individuals who would otherwise never meet.
- **Mapping.** Catalysts think of who they know, who those people know, how they relate to one another and how they fit into a huge mental map.

Catalysts don't just know more people; they also spend time thinking about how each person fits within their network.

- **Desire to Help.** Wanting to help is the fuel that drives a catalyst's ability to connect people. The desire to help people isn't just a nicety; it's an essential part of being a catalyst.
- **Passion.** The catalyst provides the drumbeat for a decentralized organization. The organization needs a strong and ongoing ideology to keep going. The catalyst starts the organization and then takes on the role of constant cheerleader.
- **Meet People Where They Are.** A catalyst doesn't try to persuade people but rather relies on a much more subtle technique: meeting people where they are. A catalyst doesn't prescribe a solution; instead, he assumes a peer relationship and listens intently. You follow a catalyst because he understands you.
- **Emotional Intelligence.** Catalysts tend to be intellectually brilliant, but they lead with emotions. Once there's an emotional connection, then and only then is it time to brainstorm and talk strategy.
- **Trust.** It's not enough to meet people where they are and to form emotional bonds with them; a catalyst must also trust the network. As a catalyst, all you can control is whether people have personal relationships with each other based on trust.
- **Inspiration.** A true catalyst isn't just a matchmaker but an inspiration to others to work toward a goal that often doesn't involve personal gain.

(continued on page 7)

The Hidden Powers of the Catalyst

(continued from page 6)

● **Tolerance for Ambiguity.** Being a catalyst requires a high tolerance for ambiguity. That's because a decentralized organization is so fluid that someone who needs order and structure would quickly go mad. But this ambiguity creates a platform for creativity and innovation. Starfish organizations need ambiguity to survive.

● **Hands-Off Approach.** Perhaps the most difficult and counterintuitive element of being a catalyst is getting out of the way. Members of a starfish organization can become frustrated with the catalyst when they don't know what they are supposed to be doing. But this is what leads people to take charge, giving members a high level of ownership over the organization.

● **Receding.** After catalysts map a network, make connections, build trust and inspire people to act, what do they do? They leave. It is only in a catalyst's absence that people take the reins and move their own relationships forward. ■

Taking On Decentralization

As in the case of the Apaches, when attacked, decentralized organizations become even more decentralized. The opposite is true for spider organizations, and it's the eighth principle: *When attacked, centralized organizations tend to become even more centralized.*

Decentralized organizations are able to wreak havoc on a variety of industries and sectors, and the strategies used to combat these organizations fail. But starfish are not invincible. Here are some concrete strategies to combat a starfish invasion.

STRATEGY 1: Changing Ideology

The only part of the decentralized organization that you can realistically go after is the ideology. But changing ideology isn't easy.

When a starfish ideology can be successfully changed, the results are powerful, so theoretically, trying to change an ideology makes sense. But the process is difficult.

STRATEGY 2: Centralize Them (The Cow Approach)

The Apaches remained a significant threat well into the 20th century. But then the tide turned. The Americans prevailed. How? The Americans gave the Nant'ans cattle. Once the Nant'ans had possession of a scarce resource — cows — their power shifted from symbolic to material. Now they could reward and punish tribe members by giving and withholding this resource.

Once people gain a right to property, be it cows or anything else, they quickly seek out a centralized system to protect their interests. The moment you introduce property rights into the equation, everything changes: The starfish organization turns into a spider.

STRATEGY 3: Decentralize Yourself (If you Can't Beat 'em … Join 'em)

The third strategy recognizes that decentralized organizations can be so resilient it's hard to affect their internal structure. If you can't beat them, join them.

The best opponent for a starfish organization is often another starfish. In the decentralized revolution, old strategies don't work.

A company or corporation must explore new options in order to effectively fend off a starfish attack. Sometimes it's best to draw upon both the centralized and decentralized worlds — "the combo special." ■

For additional information on why a decentralized organization like al Qaeda is so powerful, go to: http://my.summary.com

The Combo Special: The Hybrid Organization

eBay represents the combo special. It's neither a pure starfish nor a pure spider, but a hybrid organization. Companies like eBay combine the best of both worlds — the bottom-up approach of decentralization and the structure, control and resulting profit potential of centralization. eBay is *a centralized company that decentralizes the customer experience.*

The second type of hybrid organization is *a centralized company that decentralizes internal parts of the business.* These companies have a CEO and some hierarchy, but they also have starfish-like DNA.

When Jack Welch, GE's charismatic leader, took the reins, GE was a highly centralized bureaucracy in need of a healthy overhaul. His real genius was in decentralizing the massive organization. He separated GE into different units that had to perform as stand-alone businesses. Welch's approach benefited GE because it made each unit accountable and did away with inefficiencies.

The combo special often requires a constant balancing act. Companies can't rest on their decentralized laurels; they must seek and pursue the elusive "sweet spot." ■

In Search of the Sweet Spot

The decentralized sweet spot is the point along the centralized-decentralized continuum that yields the best competitive position. Around the same time that eBay was founded, another auction house, Onsale, entered the market. Onsale held and sold inventory like other ven-

(continued on page 8)

In Search of the Sweet Spot

(continued from page 7)

dors, but rather than charging a set price, it allowed consumers to bid against one another. It was a centralized solution that took a small step toward decentralization.

When people started using eBay, the market dramatically shifted. Compared to Onsale's small step, eBay took a giant leap toward decentralization by allowing anyone to sell and purchase items. Onsale began losing market share and soon went out of business.

The decentralized system that allowed eBay users to auction items directly to each other was simply superior — eBay had landed on the sweet spot. ■

The New World

The forces of decentralization have created a new set of rules.

RULE 1: Diseconomies of Scale

As counterintuitive as it sounds, it can be better to be small. We have entered a new world where being small sometimes provides a fundamental economic advantage. As diseconomies of scale increase, the cost of entering a new market dramatically decreases.

RULE 2: The Network Effect

The network effect is the increase in the overall value of the network with the addition of each new member. Starfish organizations are particularly well positioned to take advantage of the network effect.

Often without spending a dime, starfish organizations create communities where each new member adds value to the larger network.

RULE 3: The Power of Chaos

In the decentralized world, it pays to be chaotic. In seemingly chaotic systems, users are free to do whatever they want.

Starfish systems are wonderful incubators for creative, destructive, innovative or crazy ideas. Where creativity is valuable, learning to accept chaos is a must.

RULE 4: Knowledge at the Edge

In starfish organizations, knowledge is spread throughout the organization. The best knowledge is often at the fringe of the organization.

RULE 5: Everyone Wants to Contribute

Not only do people throughout a starfish have knowledge, but they have a fundamental desire to share and to contribute. Contributors spend hours editing Wikipedia articles because they want to make the site better.

RULE 6: Beware the Hydra Response

Attack a decentralized organization and you'll soon be reminded of Hydra. If you cut off one head, two more will grow in its place. There are ways to battle a decentralized organization — but don't try to cut off its head.

RULE 7: Catalysts Rule

Catalysts are crucial to decentralized organizations. It's not because they run the show, it's because they inspire people to action. But watch out: If you turn a catalyst into a CEO, the entire network will be in jeopardy.

RULE 8: The Values Are the Organization

Ideology is the fuel that drives the decentralized organization. If you really want to change a decentralized organization, the best strategy is to alter the ideology of the members.

RULE 9: Measure, Monitor and Manage

Just because starfish organizations tend to be ambiguous and chaotic doesn't mean that we can't measure their results. But when measuring a decentralized network, it's better to be vaguely right than precisely wrong.

Most catalysts care about the members, but they don't expect reports or want control. Managing a decentralized network requires someone who can be a cross between an architect, a cheerleader and an awestruck observer.

RULE 10: Flatten or Be Flattened

There are ways to fight a decentralized organization. But often the best hope for survival is to join them. Increasingly, in order to survive, companies and institutions must take the hybrid approach.

Yes, decentralized organizations appear at first glance to be messy and chaotic. But when we begin to appreciate their full potential, what initially looked like entropy turns out to be one of the most powerful forces the world has seen. ■

The Strategist

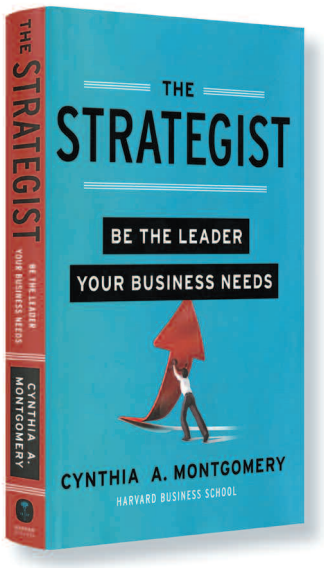
Be the Leader Your Business Needs



by Cynthia A. Montgomery

THE SUMMARY IN BRIEF

"Are you a strategist?" That's the first question Cynthia Montgomery asks the business owners and senior executives from all over the world who participate in her highly regarded executive education class. It's not a question they anticipate or care much about on opening day. But by the time the program ends, they cannot imagine leading their companies to success without being — and living the role of — a strategist.

Over a series of weeks and months, Montgomery puts these accomplished executives through their paces. Using case discussions, after-hours talks and participants' own strategy dilemmas, she illuminates what strategy is, why it's important and what it takes to lead the effort. En route, she equips them to confront the most essential question facing every business leader: Does this company truly matter? In doing so, she shows that strategy is not just a tool for outwitting the competition; it is the most powerful means a leader has for shaping a company itself.

The Strategist exposes all business leaders — whether they run a global enterprise or a small business — to the invaluable insights Montgomery shares with these privileged executives. By distilling the experiences and insights gleaned in the classroom, Montgomery helps leaders develop the skills and sensibilities they need to become strategists themselves. It is a difficult role, but little else one does as a leader is likely to matter more.

IN THIS SUMMARY, YOU WILL LEARN:

- The most important question you need to answer as the leader of your business.
- How to avoid falling prey to the myth of the super-manager.
- The surprising impact of industry forces on your company's performance.
- How IKEA, Gucci and Apple demonstrate the principles of defining purpose, turning purpose into reality and keeping strategy vibrant.

Introduction

You're about to get a revisionist view of strategy. It's not that what you've learned is incorrect. It's that it's incomplete.

Fifty years ago strategy was taught as part of the general management curriculum in most business schools. In the academy as well as in practice, it was identified as the most important duty of the president — the person with overarching responsibility for setting a company's course and seeing the journey through. This vital role encompassed both formulation and implementation: thinking and doing combined.

Although strategy had considerable depth then, it did not have much rigor. Heuristically, managers used the ubiquitous SWOT model (Strengths, Weaknesses, Opportunities and Threats) to assess their businesses and identify attractive competitive positions. How best to do that, though, was far from clear. Other than making lists of various factors to consider, managers had few tools to help them make these judgments.

Advances over the next few decades not only refined the tools but spawned a whole new industry. Strategy in many ways became the bailiwick of specialists — legions of MBAs and strategy consultants, armed with frameworks, techniques and data — eager to help managers analyze their industries or position their firms for strategic advantage. In truth, they had a lot to offer.

In time, though, a host of unintended consequences developed from what in its own right was a very good thing. Most notably, strategy became more about formulation than implementation, and more about getting the analysis right at the outset than living with a strategy over time. Equally problematic, the leader's unique role as arbiter and steward of strategy had been eclipsed.

As a field, we gained a lot from the introduction of economics into strategy, and the tools and frameworks it created. But there were also important unintended consequences: of greatest concern, we had demoted strategy from the top of the organization to a specialist function. Chasing a new ideal, we had lost sight of the value of what we had — the richness of judgment, the continuity of purpose, the will to commit an organization to a particular path. With all good intentions, we had backed strategy into a corner and reduced it to a left-brain exercise. In doing so, we lost much of its vitality and much of its connection to the day-to-day life of a company, and we lost sight of what it takes to lead the effort. ●

Strategy and Leadership

Does your company matter?

That's the most important question every business leader must answer. As my former colleague Adam Brandenburger liked to ask: If your business closed its doors today, would your customers suffer any real loss? How long would it take, and how difficult would it be, for them to find another firm that could meet those needs as well as you did?

Most likely, you don't think about your company and what it does in quite this way. Even if you've hired strategy consultants or spent weeks developing a strategic plan, the question probably still gives you pause. If it does or if you're not sure how to respond, you're not alone.

The Entrepreneur, Owner, President Program

It is evening on the campus of Harvard Business School. The kickoff orientation to one of the flagship executive programs at the school is about to begin.

A final hush settles as the program begins with an overview of who's here: 164 participants from 35 countries with a collective 2,922 years of experience. Two-thirds of their businesses are in service industries, the rest are in manufacturing.

They are here to participate in an intensive management boot camp for experienced business leaders. It spans topics in finance, marketing, organizational behavior, accounting, negotiations and strategy, and runs for nine weeks in total, divided into three three-week sessions spread over three years. One of the things these leaders do when they are here is work on the strategies for their own businesses.

Getting to the Reality of Your Strategy

Having seen hundreds if not thousands of these strategies in their initial form, what is clear to me is this: Many leaders haven't thought about their own strategies in a very deep way. Often, there is a curious gap between their intellectual understanding of strategy and their ability to drive those insights home in their own businesses.

Further, any leaders today do not understand the ongoing, intimate connection between leadership and strategy. These two aspects of what leaders do, once tightly linked, have grown apart. Now specialists help managers analyze their industries and position their businesses for competitive advantage, and strategy has become largely a job for experts or something confined to an annual planning process. In this view, once a strategy has been identified and the next steps specified, the job of the strategist is finished. All that remains to be done is to implement the plan and defend the sustainable competitive advantage it has wrought. Or at least that's the positive take on the story.

What's been forgotten is that strategy is not a destination or solution. It's not a problem to be solved and settled. It's a journey. It needs continuous, not intermittent, leadership. It needs a strategist.

Good strategies are never frozen — signed, sealed and delivered. No matter how carefully conceived, or how well implemented, any strategy put into place in a company today will eventually fail if leaders see it as a finished product. That's why strategy can't be outsourced. That's why every leader needs to step up to the role of chief strategist in his or her company.

The strategist must watch over the firm, identify and weigh, decide and move, time and time again. Consultants' expertise and considered judgments can help, as can perspectives and information from people throughout an organization. But in the end, it is the strategist who bears the responsibility for setting a firm's course and making the choices day after day that continuously refine that course.

Are **you** a strategist? It's a question all business leaders must answer because strategy is so bedrock crucial to every company. No matter how hard you and your people work, no matter how wonderful your culture, no matter how good your products or how noble your motives, if you don't get strategy right, everything else you do is at risk. ●

Are You a Strategist?

Here's a test of your strategic thinking. Step into the shoes of Richard Manoogian, CEO of Masco Corp., a highly successful company on the verge of a momentous decision. You've got a big pile of money and must decide whether to invest it in a far-reaching new business venture. If you don't go ahead, you could be passing up an opportunity for growth in a new direction and hundreds of millions of dollars in future profits. If you take the plunge and turn out to be wrong, you may have wasted $1 billion to $2 billion. Either way, you will have to live with the results for many years.

First, Consider the Company

It's 1986. Masco is a successful $1.15 billion company that has just recorded its 29th consecutive year of earnings growth. Its ability to wring outsized profits out of industries that are neither high-tech nor glamorous has won it the moniker of "Master of the Mundane" on Wall Street. Its portfolio includes faucets, kitchen and bathroom cabinets, locks and building hardware, and a variety of other household products.

Masco's leaders want to tackle other mundane businesses where their prowess can "change the game." In their immediate sights is the U.S. household furniture business, where they see another opportunity to seize profitable dominance of a sleepy industry.

Now Consider the Industry

At the time Manoogian was weighing this decision, household furniture was a $14 billion business in the United States that didn't make much money. With high transportation costs, low productivity and eroding prices, it had about 2 percent annual growth, and return on sales, on average, was about 4 percent. There were more than 2,500 manufacturers, but 80 percent of sales came from only 400. Making matters worse, both sales and profits were cyclical and tied to broad economic factors such as new home starts and sales of existing homes.

The real issue, though, is not whether there are problems in the industry but what they mean. Are all these problems an opportunity for a courageous company with the right skills? Or are they red flags warning outsiders to stay away?

What's your inclination at this point? Usually when the time comes for a decision in class, "Do it" wins definitively, by at least a 2-to-1 margin. So what, in fact, happened?

Masco did enter and in a bold way. In total, Masco spent $1.5 billion acquiring 10 companies and another $250 million upgrading their manufacturing facilities and investing in new marketing programs. They became the largest furniture company in the world.

When I post Masco's financial results, silence falls as people absorb the numbers. In a few seconds, there are whispered expletives around the room.

After 32 years of consecutive earnings growth, Masco's net income fell 30 percent. Two years later, operating earnings from furniture came to $80 million on sales of $1.4 billion, an operating margin of 6 percent, versus 14 percent for the rest of the company. After many years of struggle, Masco announced its intentions to sell its furniture businesses. Soon, however, the company discovered that exiting the furniture business was much harder than entering it. After a number of deals fell through, it eventually succeeded in selling its furniture firms, at a loss of some $650 million. When it was all over, Masco's CEO Manoogian admitted, "The decision to go into the home furnishing business was probably one of the worst decisions I've made in 35 years." ●

The Myth of the Super-Manager

As a strategist, what can you learn from Masco's foray into furniture and the support most executives give that ill-fated decision?

Even if you were undecided or skeptical about the furniture industry, I'm willing to bet that some part of you supported Masco's move. Bold, visionary leaders who have the confidence to take their firms in exciting new directions are widely admired. Isn't that a key part of strategy and leadership?

In truth, it is. But the confidence every good strategist needs can readily balloon into overconfidence. A belief that is unspoken but implied in much management thinking and writing today is that a highly competent manager can produce success in virtually any situation. One writer calls this "the sense of omnipotence that plagues American management, the belief that no event or situation is too complex or too unpredictable to be brought under management control."

I call this belief, when taken to its extreme, "the myth of the super-manager." It seems to come naturally to many successful entrepreneurs and senior managers who see themselves as action-oriented problem solvers, confident doers for whom difficulties are daunting but solvable challenges. Confidence matters. But there's much more to strategy and leadership than a steadfast belief that a daring vision backed by good management can overcome virtually all obstacles. Without the rest of it, "bold" too often becomes "reckless."

Understanding the Forces

A chart on relative industry profitability compiled from Standard & Poor's and Compustat databases shows the average return on equity for 20 industries over the 20-year period from 1990 to 2010. The chart shows surprising statistics about the way profitability varies by industry. Tobacco companies experience 36.1 percent average annual return on equity — which means leading firms in the industry do even better — while airlines stand at -10 percent and commercial equipment comes in at -2 percent.

Are these vast differences from industry to industry caused by random variation? It's not likely — they're too large and too consistent. Do some types of businesses attract great managers while others attract only poor ones? Sometimes, but not enough to account for the differences.

In fact, as Michael Porter's work helped us understand, these variations are caused by economic forces that shape each industry's competitive landscape differently. Some of these relate to the nature of rivalry within the industry itself; others have to do with the balance of power between the industry and its suppliers and customers, substitute products, and potential new entrants.

The collective impact of these forces on the profitability of individual firms and, in turn, on the industries in which they operate is called "the industry effect." You may be surprised to learn that some and perhaps much of your company's performance is determined by such forces.

The strategist's first job is to understand them and how they affect the playing field where competition takes place.

The Power of Realism

The fundamental lessons here are simple but of paramount importance for the strategist.

- First, you must understand the competitive forces in

your industry. How you respond to them is your strategy. That means if you don't understand them, your strategy is based on luck and hope.

• Second, even if you understand your industry's competitive forces, you must find a way to deal with them that is up to the challenge. That may mean skillful positioning, deliberate efforts to counter negative forces or exploit favorable ones, or even a timely exit. But don't be trapped by the myth into believing that your superior management skills will carry you to success.

• Third, whatever you do, don't underestimate the power of these forces. Their impact on the destiny of your business may well be as great as your own. ●

Begin With Purpose

Now let's talk about a company that DID find a path out of the wilderness of unattractive industry forces. The story begins with an individual: Ingvar Kamprad, the founder of IKEA, who by all accounts built one of the world's greatest fortunes. In 2010, his privately held company, which he started in 1942 at the age of 17, had sales of 23.1 billion euro, net profits of 2.5 billion euro and gross margins of 46 percent.

So, what is it that is special about IKEA? Low price? Design? Flat pack? Swedish meatballs? The answer, of course, is "all of the above." The centerpiece is low cost — without that, nothing else works — but everything else not only supports low cost but adds its own distinctive attraction.

But what if there is a deeper insight here, an insight that applies to all businesses whether you've decided to compete on low price or with differentiated, specialty products. It's something else that was behind *everything* IKEA did.

A Concept Company

If Kamprad were here and we asked him to describe the essence of what IKEA was doing, what would he say?

His own words are instructive: "We are a concept company." He goes on to describe the idea that guides the firm. IKEA offers "a wide range of well-designed, functional home furnishing products at prices so low that as many people as possible will be able to afford them." This serves the company's aim to create "a better everyday life for the many."

These words weren't said by Kamprad on rare occasions. All new employees are indoctrinated with these ideas, and they're prominent in the company's annual report.

Although IKEA calls this statement its "concept," the word I prefer is purpose. Purpose is the way IKEA or any other company describes itself in the most fundamental terms possible — why it exists, the unique value it brings to the world, what sets it apart, and why and to whom it matters. Notice how IKEA's purpose as expressed above answers all these questions. It's important to notice that the statement is about IKEA as a particular player in a particular market — it's distinct, it's clear, and it says concretely what IKEA is bringing to the market. It's not just a fluffy emotional comment, or a broad aspiration. It's a concrete description of the firm as an economic player.

Does *Your* Business Matter?

It's not as easy as you might think to know whether your business has a viable purpose or whether it truly adds value in your industry. Financial success at any given moment is an indication but may prove fleeting. However, there is one simple question that — if you can answer it honestly — will give you a good idea.

If your company disappeared today, would the world be different tomorrow?

Despite our long discussions about purpose, and their general buy-in to the idea, this question always catches executives by surprise. Frankly, it's not a question most have been asked or asked themselves. It's a real soul-searcher. But it's one you need to answer.

It may not be the job of the strategist to invent a firm's purpose on the lonely mountaintop and then come down and deliver it. Many people may be involved in its creation. But whether there is a purpose and whether that purpose is viable is a leader's first responsibility. This is the strategist's job. ●

Turn Purpose Into Reality

As the IKEA story demonstrates, defining a sound and distinctive purpose for your business is essential. It is a strategist's way to stake a claim. With it, you have earned the right to play, to take part in the game. But winning the game? That takes more.

Consider the experience of Domenico De Sole, an Italian-born, Harvard-trained tax attorney who in 1994-95 was thrust into the top job at Gucci. Though he had previously led the company's North American operations, he was stunned by what he discovered when he saw the entirety of the once-admired company.

Gucci, once a symbol of high fashion and inspired design, had lost its way so badly that the investors who owned it wanted out. An effort to sell the company had failed after the bids were deemed too paltry to accept, so

the investment group asked De Sole to put the house in order and sell the company's shares to the public — as soon as possible.

Facing a business on life support, De Sole began to assemble a team. He promoted Tom Ford, a 32-year-old fashion designer, to replace Dawn Mello as creative director when Mello chose to return to the United States. He also named a new production chief and a new CFO and strengthened the international management team. Crucially, he also secured a modest cash infusion from Investcorp, a Bahrain-based private equity fund.

Working with Ford, De Sole successfully rebuilt the company based on a new purpose: the company would be fashion-forward, high quality, good value. But why was De Sole successful and [former Gucci head] Maurizio Gucci not? Gucci's charm blinded his investors to the company's internal disarray and inability to deliver on his promises. De Sole, by contrast, built and executed his strategy in a tightly linked series of actions.

The Big Idea

The essential difference between Maurizo Gucci and De Sole is that a great purpose is not a great strategy. A great strategy is more than an aspiration, more than a dream. It's a system of value creation, a set of mutually reinforcing parts. Anchored by a compelling purpose, it tells you where a company will play, how it will play and what it will accomplish.

It is easy to see the beauty of such a system once it's constructed — but constructing isn't always an easy or a beautiful process. The decisions embedded in such systems are often gutsy choices. For every moving part in the Gucci universe, De Sole had to decide what he believed was the choice that would specifically advance the purpose of the firm. This was strictly binary management: Either the particular component advanced the purpose of fashion-forwardness, high quality and good value, or it was rebuilt. Strategists call such choices "identity-conferring commitments" — they reflect what an organization stands for. They are the choices that are central to what a firm is or wants to be.

Too many leaders, unwilling to give up any possible advantage, take the easy route and dodge or defer the tough decisions. Not so with De Sole. He was willing to make trade-offs. Each choice he made threatened a loss even as it promised a gain — focusing on new customers, lowering prices, letting a lot of suppliers go. But with each decision, he was asserting that Gucci was going to be one thing and not another, a formidable responsibility made more difficult when dealing with a very sick company.

The Edge

Think of strategy as a *system of value creation* — rich in organizational detail and driven by purpose, it is the bridge between lofty ideas and action. But while it's easy to see it in companies like Gucci or IKEA, when all the details are laid out in front of you, I know from working with thousands of organizations just how rare it is to find a carefully honed system that really delivers.

The problems often begin right at the start. If leaders lack a clear idea about what they want their businesses to be, they cannot build coherent systems of value creation because they don't know what they should be designed to do exactly or how their success should be measured. That leaves them to fiddle at the margins of success with generically good practices such as "state of the art" sales management approaches or Total Quality Management. These may be helpful, but they're not what will help you find an edge and live on it.

You and every leader of your company must ask whether your strategy is a real system of value creation — a clearly defined purpose tightly backed by a set of mutually reinforcing parts. If not, it's time to build one. ●

Own Your Strategy

It's always easier to look as an observer on what other leaders and other companies have done. It's much more difficult, however, to confront the reality of your own business. But every leader worth the title must do so.

Now is the time to look at your own company. What's your strategy?

When this question is put to our program participants, many of them nod confidently. By this point, they have been talking about strategy for a long time and they have a good grasp of the principles. And they've repeatedly shown their ability to identify the strengths and weaknesses in the strategies of well-known and celebrated firms — at a safe distance.

But when I press them to describe their own strategies, many struggle. Beyond somewhat sweeping statements, they often have trouble articulating what their businesses actually do or what sets them apart. The ideas come out vague; the statements they write down are often generic or uninspired.

State Your Purpose

Your company's purpose describes the unique value your firm brings to the world. It's the throbbing heartbeat of your strategy — the careful pronouncement of who you are and why you matter. It should be specific

and easy to grasp, because the rest of your strategy flows from and supports this beginning.

A purpose gives you the right to play and puts you in the game. But it doesn't mean you have the right to win. Just as De Sole made sure that each component of the Gucci enterprise aligned with the company's purpose, so must all your activities and resources work in concert to support your own purpose.

Develop Your System of Value Creation

You need to pinpoint who the customer is early in the process. But which customer? It's not always the end user. Laura Young joined Leegin, the predecessor company of Brighton Collectibles, in 1991, when it was primarily a seller of men's belts and the owner, Jerry Kohl, wanted to expand into ladies' leather goods.

When Young and Kohl began to define the strategy for Brighton, they struggled with where the company's focus should be. The question of who the customer was loomed large: Was it the end consumer, the women who snapped up the matching pieces and shared their finds with their friends? Was it the owners of the several thousand largely family-owned specialty boutiques that carried Brighton's accessories or the sales associates in those boutiques and in Brighton's company-owned stores? Or was it the roughly 100 dedicated sales representatives who called on all those stores?

Ultimately, they decided that the people who sell its products were its customers because they were the ones whose dedication could most influence the consumer's purchase decision. With this understanding, they could review everything else the company did to see if it really served that customer well.

To keep merchandise fresh and interesting for them, the company makes "a little bit of a lot of things" rather than huge quantities of a few items. That means the retailers could vary the choices and give the women who buy its products a lot of different options to choose from. Brighton also keeps the sales associates engaged with a steady flow of creative motivational events, seminars and other opportunities to learn about the brand.

Importantly, Brighton protects the boutiques by refusing to sell to big department stores such as Macy's, Dillard's and Neiman Marcus. They come courting, but Brighton has turned them away.

In return, Brighton makes an unusual demand of its retailers: It requires them to sell at a minimum resale price in order to protect the integrity of the brand so that customers know they are being treated fairly no matter where they shop for Brighton. It is so committed to this approach that when tiny Kay's Kloset in suburban Dallas insisted on discounting the line and took Brighton to court, the company fought back. After the U.S. Court of Appeals for the Fifth Circuit ruled in Kay's favor, citing decades of precedents, Brighton appealed to the U.S. Supreme Court, which sided with Brighton.

In doing so, Brighton changed the landscape of American retailing: The decision overturned a 96-year-old piece of the Sherman Antitrust Act and told courts that manufacturers and distributors sometimes could, in fact, insist on minimum prices, so long as the effects of such policies are pro-competitive. Although the company has grown considerably since then, maintaining minimum retail prices on its goods remains a cornerstone of its strategy. At the center of it all, though, was great clarity about who Brighton's customer was and a model that enabled the company to serve that customer extraordinarily well.

The Road Ahead

Your strategy, if it is well-conceived and on point, will guide you through tumultuous markets, competitive challenges and your push into new arenas. It will tell you what resources you need to build up and what baggage you should let go. More fundamentally, as you put purpose in the center of your strategic thinking, you will see a shift in the way you look at every opportunity. You will find yourself instinctively asking whether that new business, customer or product adds value; whether it really fits with what you are doing; and whether it benefits from or enhances the business as a whole. Only then will you truly own your strategy. ●

Keep It Vibrant

In most popular portrayals the strategist's job would seem to be finished once a carefully articulated strategy has been made ready for implementation. But, as I tell executives, don't get comfortable yet! Rarely can strategy be so neatly contained. There will always be some choices that were not obvious. There will always be countless contingencies, good and bad, that could not have been fully anticipated. At heart, most strategies, like most people, involve some mystery.

Interpreting that mystery is an abiding responsibility of a strategist. Sometimes this entails clarifying a point or helping an organization translate an idea into practice, such as what "best in class" will really mean in that company and how it will be measured. Other times it entails much more: refashioning an element of the strategy, adding a previously missing piece or reconsidering a

commitment that no longer serves the company well.

When I talk to managers about dynamic strategy, I like to delve into the story of Apple, a company that has evolved and reinvented itself more dramatically than perhaps any other over the last three decades.

There is a lot to learn from Apple's journey and from the experiences of its remarkable and controversial leader Steve Jobs, who was at the helm long enough to shape and reshape the company. The Apple story challenges us to address some of the most basic truisms of strategy and, ultimately, to question one of the most foundational: What is the desired result of a strategy?

On Being a Strategist

"OK," you may be thinking, "I get that strategy must be dynamic. I accept that by most measures, Apple is a strategic success. And Steve Jobs really turned it around. But let's be fair: He was Steve Jobs — and I'm not. Nor is my company Apple."

You're right, of course. There was only one Jobs. But he wasn't a born strategist. He made huge mistakes. He had to learn to be a strategist, just like the rest of us.

Jobs had to wrestle with the profound and terrible paradox many strategists must manage: Stay the course — reinvent yourself. This may sound like a choice between continuing on a given path or choosing another, but for most businesses it's usually a duality: being one thing while becoming something else.

This points to another advantage for a firm: the strategist, or more specifically, you. As a strategist, you're the person who must watch over the organization, guiding its course, making the choices that bring it back to center day after day and year after year even as you must choose when the center, the purpose, itself should evolve.

Leading strategy is a nonstop responsibility; it can't be outsourced or solved in one great brainstorming session. You won't just wake up one day to find that your company has a new advantage or that its purpose changed overnight. Rather, it will change because the industry changes. It will change because tastes change. It will change because your people change and they bring new skills and strengths to the enterprise. And, ultimately, it will change because someone made the call to do so — you, the strategist. It's the most important role a leader plays. If a leader doesn't embrace the role, and do so in a deep way, the company will flounder. We all know companies like that: the lackluster ones who can't escape the gravity of a bad industry or the worn out ones whose people work feverishly for years but don't have much to show for it. ●

The Essential Strategist

What will make you a successful strategist? What skills and mind-sets do you need to hone?

The most important thing is to understand that you are not a manager of strategy or a functional specialist. Others can fill those roles. You are, first and foremost, a leader. Your goal is to build something that is not already there. To do so, you must confront the four basic questions you have already explored:

1. What difference does my organization bring to the world?
2. Does that difference matter?
3. Is something about it scarce and difficult to imitate?
4. Are we doing today what we need to do in order to matter tomorrow?

Most business practitioners are unaccustomed to facing questions of this kind. We're much more comfortable confining ourselves to more tangible business issues. To lead, you have to be willing to make room for new challenges and be open to the unique ways you can add value to your business.

As a leader, if you ignore or underestimate your crucial, ongoing role as a strategist, something essential in your business will be missing. Answered well over a lifetime, the questions at the heart of strategy will help a company prevail.

Articulating and tending to a living strategy is a human endeavor in the deepest sense of the term. Keeping all parts of a company in balance while moving an enterprise forward is extraordinarily difficult. Even when they have substantial talent and a deep appreciation for the job, some leaders ultimately don't get it right. Their legacies serve as sobering reminders of the complexities and responsibilities of stewardship. On the other hand, it is exactly these challenges that make the triumphs so rewarding. ●

THE SUMMARY IN BRIEF

No matter how many milestones we hit or career successes we achieve, we all struggle with lingering feelings of doubt— doubt in our abilities, doubt in our leadership, and doubt in what we're capable of achieving. In ***The Surprising Gift of Doubt,*** author Marc A. Pitman doesn't just help readers conquer that ever-present imposter syndrome. He goes even further to help leaders and future leaders harness those feelings of inadequacy and turn them into a rare level of leadership. Along the way, Pitman reveals that the feelings of doubt we experience at various stages in our careers are actually signs that we're on the verge of a major breakthrough.

In the end, readers will emerge from this summary with more confidence, more courage, and increased self-assurance as they face the challenges of leadership with an unshakable strength that has emerged by harnessing their doubt to become something more powerful than ever.

IN THIS SUMMARY, YOU WILL LEARN:

- How to move from imitative leadership to a more confident leadership style that brings together the best of your aspirations and your unique traits and skills.
- How to become 'more yourself' as a leader rather than emulating what you've seen succeed for others in different scenarios.
- How to turn doubt into confidence again and again in your leadership career.
- How to set and achieve impactful goals using the MagnetGoals methodology.

Introduction

It's hardly surprising that so many CEOs and other top executives feel like lost children looking for a teacher to explain the rules. In our information-saturated world, there are no shortage of volunteers to explain them. Bossy board members, mostly well-meaning, will dictate tasks. Staff irritated by lack of direction will impose their views on the boss. Opinionated customers will tell leaders all the ways they're wrong and how they should fix the problems.

There is a second choice. You can choose your own 'curriculum.' You can write the rules yourself, determining your own way of measuring success. This can be messy at first, involving some trial and error. But the strategies that result are based on who you are and how you operate.

Listening to the Inner Nudge

Most plans or formulas force you to fit into their molds, imposing their structures on you. They fail to build upon who you are, so they fail when your enthusiasm for them wanes or when the fear that you will not succeed diminishes.

The secret to growing as a leader is that you have to do some inner work, none of which can be done for you. And there are no guarantees. The good news is that once you learn the tools that will help you listen to and trust your inner nudges, you'll be able to use these tools for the rest of your life. You'll be able to help your staff and your entire organization use them, too. If you have experienced success in the past— perhaps so much so that everyone seems convince you'll keep pulling a rabbit out of the hat despite the fact that you have no earthly clue how you'll do it— you're in the right place. You can do it. You can become the confident, exceptional leader you want to be. You'll have to do the work, but you don't have to walk this path alone.

Taking the Leader's Journey

Leadership is a journey divided into four stages, or quadrants. They are Observe, Experiment, Focus, and Analyze.

You begin in Quadrant 1, where you are full of confidence because you have been promoted to a level of leadership. If this is not confidence in your own ability, then it is confidence in teh fact that others say you can lead. This is where you 'observe' leaders you wish to emulate.

In Quadrant 2, you begin to experiment. When your confidence falls, you find yourself worrying that something about you must be broken. So, you look for ways to fix yourself. With all the available books, blogs, webinars, podcasts, seminars, and courses, you think surely one of those will fix you. But having read the book or taken the course, you notice that it doesn't quite work the way the reviewers said it would.

When you realize that other people's systems give you only one perspective on leadership but not the complete perspective. In Quadrant 3, tentatively at firs tbut with increasing awareness, you begin to 'analyze' what you have learned from watching people and studying systems. You get in touch with your strengths and your limitations, with your values, and with your own goals. You stop assuming that you are irreparably broken if systems don't work for you.

That growing confidence leads you to Quadrant 4, a stage of 'focus' and quiet confidence. Here, you have learned how to listen to both external suggestions and internal cues. And you are leading in a way that comes from within. You are humbly confident in your ability and free to lead with grace and flexibility as well as bring others along the path of the four quadrants.

Accepting Your Gifts

Despite the mistakes people make with personality or aptitude tests, a healthy exploration of hardwiring is crucial for leaders. The trick is to move from a Quadrant 2 perspective where hardwiring is an externally imposed system forced on people and teams to 'fix' them, to a Quadrant 3 perspective where you and your people internally explore hardwiring as a way of understanding yourself, your habits, and your patterns. The Quadrant 2 way labels people in order to pigeonhole them. The Quadrant 3 leader uses these indicators to better appreciate people and the perspectives they bring to the table. Rather than placing limits on you, understanding your hardwiring helps you discover your unique way of interacting with and making sense of the world.

Using the DISC model, you can determine whether you're Active/Task Centered, Active/People Centered, Reserved/People Centered, or Reserved/Task Centered. This doesn't restrict you to only acting within your 'model,' but can help you understand a bit more about your innate abilities and patterns.

As helpful as it is, behavior-based assessment just scratches the surface of hardwiring. Looking at the other types of hardwiring— abilities and motivations— will help you grow into the leader you've wanted to be.

Realizing the Benefits of Your Ability

As a leader, digging beneath learned skills to uncover your hardwiring— the strengths that come easily to you— gives you a much clearer picture of your unique, natural abilities. These come to you easily, without stress. Learned skills are the ways you learn to compensate for a lack of natural abilities. One helpful result of learning the difference between your natural strengths and your learned skills is that you can transfer the skills, applying them to other areas.

Most often, stress comes from operating either in areas that do not come naturally to you or in ways that don't call on all your abilities. If you're not aware of your hardwired abilities, you might take on roles that are out of sync with your nature. This explains why so many leaders live in a state of constant, low-grade stress despite looking like they're combining the ladder of success. They mimic what the previous leader did without realizing that those strategies could be sabotaging their own ability to lead effectively. A leader will always have tasks that aren't life-giving, but learning your natural abilities frees you to test accomplishing these responsibilities in ways that are more in line with your innate talents. This reduces stress and fills your work with renewed energy and purpose.

Knowing the Strengths of Your Motivation

When you're struggling with doubt because you don't yet have a firm grasp on what makes you tick as a leader, the third area of hardwiring—why you do what you do— will immeasurably support you. Here, you are not looking for an explanation about how certain tasks or behaviors come easily to you. This is a deeper why. One based on motivation.

How do you describe your motivation? One helpful system is the Enneagram. The Enneagram suggests that human beings are motivated by one of nine stories, or ways of seeing the world. These nine approaches to life are presented as different personality types. According to the Enneagram, personality is developed when, early in childhood, we learn that the world is not entirely safe. So, we adopt personality, a habitual orientation to life tha protects us and helps us relate to others.

A deep dive into hardwiring, whether through Enneagram assessment or other methods, can be transformative in developing your own leadership style. Knowing how you do things, what things you do easily, and why you do them gives you more command of your choices and actions as well as a much richer understanding of how different people operate. But hardwiring is just one part of the journey you will take from the stuck uncertainty of Quadrant 2 to the rich expiration of Quadrant 3.

Learning the Stories that Serve You

Working on identity usually catches leaders off-guard. They like that assessments give data. But identity seems too 'touchy feely' to be effective. But clients often find it produces some of the best lasting insights.

Current neuroscience is showing what ancient civilizations already knew: human beings are wired by story. When something happens, we want to know why. If you're given a set of incomplete details, you try to make sense of them by weaving a story to hold each detail together. As you work on identity, your story, you will discover clues about yourself in three different types of stories: stories you tell, stories you like, and the stories you hear from others. Follow this route, and you will be blown away by how much you will learn about the role you can play in your own story.

Organizing Around Your Goals

Despite the variety of ways that each system approaches goal setting, they are right about one thing: there is power in writing down your goals. Writing goals focuses your mind and helps you create a clear plan for accomplishing them. Often people read goal-setting systems as fixed systems that you have to work within. Hopefully, MagnetGoals and cascading goals will serve as tools for you, not the other way around. Give them a try and take what works, then discard the rest.

MagnetGoals is a process that involves four steps to more effective goal-setting and goal-reaching.

Step 1: Your Top 100

The first step in the process is to brainstorm a list of 100 things you want to do in the next twelve months. The best part about the length of this list is that it forces you to get creative, and even a bit fanciful. Focus on areas such as health, finances, life-long learning, travel, and relationships. This step may take time, as much as a few days or weeks. That's okay. Take the time to expand your list.

Step 2: History of the Future

Once you've completed your list, let it sit for a few days. If you did nothing else and just reviewed this list a year

later, you would be shocked at how many of these goals you had accomplished.

But your next step is to write a History of the Future. This is a description of what life will be like after you've accomplished everything on your list. It can be as short as a paragraph or as long as a few pages. This step is designed to propel you toward the life you dream of achieving.

Step 3: Narrowing the List

The third step is to narrow the list to three to five goals. These are your MagnetGoals. All the goals on your list are important. But there's no way you could focus on a hundred goals in a year. Goal-setting experts often warn people that five is pushing the limit.

Try to focus on goals that influence many other goals on the list and goals that seem to 'jump' off the page.

Step 4: Get Yourself There

Now that you have dots next to a few of your goals, it's time to review the list with the intent of choosing three to five of them. Some choose a professional, a relational, and a self-improvement goal. Some choose goals that match up with their roles at work. Others choose the goals that seem to 'speak' to them. Whatever process you choose, once you've identified those three to five, circle them and move on to the final step: creating a road map for each goal. This includes a list of all steps needed to accomplish the goal, all strategic alliances and resources that will be helpful, a list of potential obstacles, and an accountability partner who will help you accomplish this goal. Finally, clean up your road map and get to work.

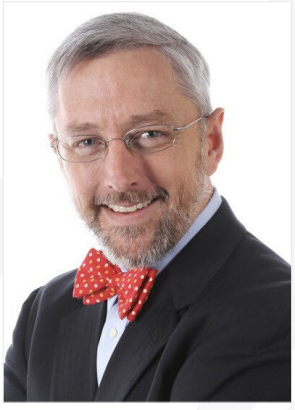
Relating with Your Time

Feeling like you are not prepared for the next meeting, let alone reaching your major targets, because you are constantly trying to tame your schedule into a controlled system can be soul crushing. But if you can glance at your weekly plan and your daily focus sheet and instantly recall how your smaller objectives fit into the big picture, you build quiet confidence in yourself and your leadership abilities. Advanced planning will help you get through the unpredictability of the day without losing track of the most important priorities.

Honoring Your Integrity

Leadership really is all about becoming more yourself. This is precisely why Quadrant 2 approaches fail to completely change you— they are not about being you. Pressing into Quadrant 3 gives you the tools to make any approach yours, because you will process new strategies and advice from others through the filters of your hardwiring, your identity, and your goals. You will be able to eat the chicken and spit out the bones.

Quadrant 3 tools are already yours. You find them for yourself. You can have the help of an executive coach, spiritual guide, or therapist. But the tools are in you. Welcome to your leader's journey.



Concord Leadership Group founder **Marc A. Pitman,** CSP® helps leaders lead their teams with more effectiveness and less stress. His latest book is *The Surprising Gift of Doubt*. He's also the author of *Ask Without Fear!*®— which has been translated into Dutch, Polish, Spanish, and Mandarin. Leadership

The Synergist

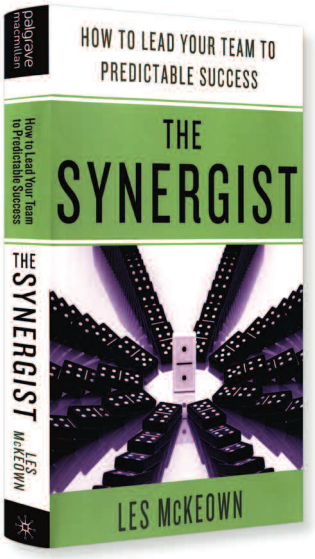
How to Lead Your Team to Predictable Success



by Les McKeown

THE SUMMARY IN BRIEF

Why do so many teams fail to perform — achieving compromise at best and gridlock at worst? And what does it take to end this gridlock? *Wall Street Journal* best-selling author and speaker Les McKeown shows how to take any team from gridlock to world-class success.

In *The Synergist*, McKeown argues that every successful team includes a critical player, the Synergist, who can take the three existing types — the bold dreamers (Visionaries), the pragmatic realists (Operators) and the systems designers (Processors) — and knit them together into a dynamic, well-rounded team. Most importantly, according to McKeown, the Synergist is a role that anyone can learn.

While most attempts at teamwork improvement deal only with the symptoms of group dysfunction such as distrust, poor communication and fear of change, McKeown addresses the root cause: the innately unstable Visionary-Operator-Processor triangle. Because each of the three styles' motivations, views and goals are incompatible, without a Synergist every team will eventually implode, stall or underperform. Only Synergists can put aside their own agenda and interpret the language of difficult personalities, capture the best from each person and put the good of the enterprise ahead of their own egos.

McKeown, who has used techniques presented here in his consulting with Harvard University, American Express Financial Services, the U.S. Army, Microsoft, United Technologies Corp. and more, shows how any individual can fill this critical role, whether or not he or she is the formal leader of the group.

IN THIS SUMMARY, YOU WILL LEARN:

- How to recognize the signs of ineffective teamwork.
- How to make the right interventions at pivotal moments.
- What your team needs to succeed.
- How anyone can learn to be an effective Synergist.

THE COMPLETE SUMMARY: **THE SYNERGIST**

by Les McKeown

The author: Les McKeown is the President & CEO of Predictable Success. He has started more than 40 companies and was the founding partner of an incubation consulting company that advised on the creation and growth of hundreds more organizations worldwide. Since relocating from his native Ireland to the United States in 1998, McKeown has advised CEOs and senior leaders of organizations on how to achieve scalable, sustainable growth. His clients range from large family-owned businesses to Fortune 100 companies, and include Harvard University, American Express, T-Mobile, United Technologies, Pella Corp. and Chiron. He now spends his time consulting, writing, teaching and speaking. He has appeared on CNN, ABC and BBC, as well as in *Inc.*, *Entrepreneur*, *USA Today* and *The New York Times*.

Introduction: What a Synergist Is and Why You Should Care

If you're involved with any group of people who are trying to achieve common goals, whether by leading a Fortune 500 company or volunteering part-time at a kid's soccer league, you soon become acutely aware that those goals will be achieved *only through the work of the people in the group*.

Put simply, organizations don't succeed in and of themselves. They succeed only through *individuals* working in groups and teams.

Groups and teams lie at the heart of every successful enterprise — in fact, they *are* the heart of a successful enterprise. Walk the halls of any organization, large or small, and you'll see huddles of two or more people everywhere, interacting formally and informally, face to face and virtually, meeting in conference rooms and hallways, communicating by e-mail, phone, Web conference, social media and text messages, even occasionally by pen and paper.

A Vital Bridge

In the best — and most successful — organizations, it's these interactions among individuals that together form a vital bridge between the organization's overarching vision and the day-to-day actions required to realize that vision. From these multifaceted human interactions spring the ideas, decisions, plans, strategies and tactics necessary to move the organization forward to success.

In the worst — and least successful — organizations, these same interactions between individuals produce stress, indecision, confusion, uncertainty and distrust, frustrate the organization's goal of realizing its vision, and drain the enthusiasm, commitment and direction of everyone involved.

For many organizations, perhaps even the one you work with, each day brings a mix of each. Some interactions gel and produce a profitable, positive result, while others gridlock or stall, producing little or nothing of actionable value.

Yet for every organization, the difference between the two is by far the single most important factor in determining whether the enterprise succeeds or fails. If you can ensure that when your people interact they are effective and deliver the goods, you win. Watch them stutter or fail in those same interactions, you lose.

Pass Me a Paper Clip

This simple fact — that the quality of people interaction is a fundamental requirement for organizational success — seems self-evident. Yet, every day in organizations large and small, untold thousands — quite probably millions — of group interactions take place, most of which fail to take the organization any closer to its goals. In many cases, groups meet, interact, then part, no closer to achieving their objectives than when they started.

This tide of unproductive and ineffective group interactions has a massive cost: It drains the global economy of billions of dollars a year, strangles creativity and initiative, and results in many businesses, divisions, departments, projects, groups and teams stalling out long before they've even begun to realize their full potential.

On an individual level, the cost of group dysfunction is just as high: It generates inordinate levels of stress, demoralizes entire workforces and demotivates otherwise high-performing people who would rather take a paper clip, straighten it out and stab it in their eye than sit through another interminable, ineffectual meeting.

And it's not only formal meetings that are caught in this seeping maw of interpersonal dysfunction. Every type of interaction — one-on-one discussions, phone calls, e-mails, water-cooler chats, performance reviews, brainstorming sessions, even the annual picnic — can become blighted by misperceptions, misunderstandings and outright manipulation.

Breaking the Cycle

Not surprisingly, this frustrating, repeating cycle of dysfunction has produced an avalanche of resources purportedly designed to help groups and teams be more effective. Books, workshops, conferences, assessments, quizzes, coaching — you name it, there's a tool of some sort designed to make group interactions work harmoniously and effectively.

Here's a news flash: They almost never work.

The reason most group- and team-improvement programs fail to produce permanent long-term change is simple: It's because they address the *symptoms* of group dysfunction (distrust, poor communication, fear of change, to name just a few) rather than the root cause. In fact, in many cases, symptoms are incorrectly labeled as root causes. Take distrust as an example, a factor many team-improvement programs concentrate on. Distrust doesn't appear out of nowhere; it always has a root cause. There's always a reason (valid or not) why one team member distrusts another. Trying to eliminate distrust without dealing with the underlying root cause of that distrust is like filling up your gas tank when the car's tires are punctured — it might be worth doing, but it isn't going to fix your problem.

Making an End Run Around the Symptoms

The basic difference between an ineffective group interaction and a highly productive one lies in the existence of a single component — a natural, uncomplicated and easily introduced component at that — the role of the Synergist.

Introducing the Synergist role to your people interactions can produce a dramatic, profound and lasting effect precisely because it blows past the lengthy and complex list of all possible symptoms of team and group dysfunction and, instead, concentrates on just one thing: the single root cause of team and group dysfunction. ●

PART I: THE UNSTABLE TRIANGLE

Overview

Organizations do not achieve success — people achieve success through working individually and in groups and teams.

Everyone who participates in group or team work tends to act primarily in one of three naturally occurring styles: as a Visionary, an Operator or a Processor.

- **Visionaries** think big, generate creative ideas and take risks. They also become irritated by detail and can disengage easily when bored.
- **Operators** get stuff done. They take the Visionary's big idea and translate it into actionable tasks. They like to be left to work alone and will do whatever is necessary to complete the task they're given, even if it means breaking a few rules.
- **Processors** devise and monitor the systems and procedures necessary to enable an organization or enterprise to deliver consistent results in a complex environment. They think linearly and objectively, and are averse to undue risk.

The Visionary-Operator-Processor (V-O-P) relationship is not a naturally stable one. The tensions and conflicts caused by often competing desires are the root cause of most group and team dysfunction.

To make the V-O-P relationship stable, a fourth, learned style needs to be introduced. The Synergist style acts as a buffer between the V-O-P styles, taking the best from each and enabling them to work effectively together. ●

The Visionary

Visionaries cycle between active and idle mode, alternating between bursts of creative energy and recharging. They can be dangerous to be around when they come back from an idle period because of the multiplicity of ideas they generate.

Their ability to hyperlink to multiple subjects, coupled with their ability to hold seemingly contradictory viewpoints on the same subject, can confuse those who work with them.

Visionaries bring vision, flexibility, courage and the ability to simplify seemingly complex ideas. They also bring a pragmatic approach to getting things accomplished and not overhypothesizing.

On the minus side, team members can find it frustrating to have to deal with the Visionaries' boredom with detail, their need to own all the team's ideas and their extremes of commitment.

If you're working as a peer with a Visionary, be selective in how you involve him or her. Listen nonjudgmentally and, rather than forcing new ideas on him or her, involve them at the outset in the idea-creation process.

If you manage a Visionary, schedule variety, accountability and frequent check-ins. Enforce a few important restrictions strongly, rather than trying to enforce many limitations weakly, and make sure the individual's team isn't overdominated by other Visionaries.

If you work for a Visionary, you can build valuable sweat equity by working long hours, mastering a broad grasp of detail and maintaining a positive demeanor. Once you've gained your boss's trust, you can begin to be more selective about what initiatives you focus on and can provide a vital challenge function. ●

The Operator

Operators are intensely task-focused and will do whatever it takes to complete the job they have in hand — even if it means working outside the system and ignoring standardized procedures in order to do so.

Because of their propensity toward action, Operators can provide an effective reality check for groups and teams, help eliminate unnecessary implementation steps, and identify redundant or overly complicated systems and processes. It's important to give Operators latitude in how they do what they do. Micromanaging Operators is ineffective and can cause intense frustration on both sides.

Working alongside an Operator can be frustrating because of the Operator's impatience with delay, and his or her maverick approach to systems and processes. This makes relationships with Operators defensive and issue-oriented. If the relationship can be moved to a more proactive footing, potential areas of conflict can be identified early and problems avoided.

Effectively managing an Operator requires clear direction, providing autonomy, being consistent in enforcing boundaries and helping him or her prioritize and delegate.

Working for an Operator can be frustrating, as he or she is rarely around and isn't a good delegator. It is important to physically accompany your Operator boss in order to develop a trusted relationship. Once you've done so, you can find ways to run interference (facilitate his or her interaction with the organization's systems and procedures) and you may be able to tap into high-quality coaching and mentoring. ●

The Processor

Processors think logically, are compelled by data, not anecdote, and like to bring order to situations. They tend to be risk-averse and do not cope well with ambiguity or imprecision.

Having a Processor on your team will bring to the table consistency, scalability, accuracy and an objective perspective. A good Processor will also assist the other team members in identifying key metrics to use in controlling the enterprise.

Some Processors can overanalyze data to the extent that others find frustrating. Their resistance to both risk and change, their relatively steady pace of work irrespective of the need of urgency and the fact that they often respond to requests by saying no, can make them a challenge to work with.

Working with Processors can be made easier by respecting their need for order, listening to them and challenging them constructively, giving credit where due, and refraining from hyperbole and exaggeration.

If you are managing a Processor, set clear, precise goals, make sure the organization's overall commercial priorities are understood, have patience and improvise sparingly.

If you work for a Processor, you will benefit from gaining an understanding of the underlying patterns or rhythms to the work, and similarly understanding his or her priorities (which aren't always obvious). Be careful in communicating big surprises or bad news, and plan ahead to get access to a Processor's mentoring and coaching skills. Innovate incrementally, not in giant leaps. ●

Gridlock

The combination of Visionary, Operator and Processor is an inherently unstable one, which leads to the group or team compromising or gridlocking instead of performing effectively.

The three main reasons for this are that Visionaries, Operators and Processors each have different inherent motivations, each view the team's ultimate goal differently and each see the surroundings in which they work differently.

Visionaries are motivated to start new things and to solve problems. They believe the group's primary purpose is to solve problems, and to do so they *talk* and

think. Their view of the landscape in which they work is dominated by patterns and perspective.

Operators are motivated to finish tasks and fix things. They believe the group's primary purpose is to take action, and to achieve this they *decide* and *do*. Their view of the landscape in which they work is dominated by opportunities and obstacles.

Processors are motivated to systematize and supervise. They believe the group's primary purpose is to control, and to do so they *analyze* and *align*. Their view of the landscape in which they work is dominated by compliance and contingent liabilities.

These varying perspectives severely impact the team's ability to work effectively by preventing the Visionary, Operator and Processor from naturally coalescing into a group; reducing the degree of interaction when they do; and preventing them from agreeing on a common view of what they are trying to achieve. ●

PART II: THE SYNERGIST

Limping to the End Line

Left to their own devices, the V-O-P team is inherently unstable and will descend into gridlock relatively quickly.

The V-O-P team usually goes through four phases:

1. Formal meetings. In this phase the Visionary, Operator and Processor first realize that they cannot, jointly, make consistently good decisions, mostly because their way of "showing up" in meetings is different and incompatible.

2. Informal communications. In phase 2 the Visionary, Operator and Processor try communicating one-on-one outside of the formal meeting structure. They soon discover that this too is ultimately futile, as the same incompatible differences still exist between them.

3. Meetings redux. In fact, the pain caused by trying to communicate informally turns out to be even greater than that caused during the formal meetings, and so the Visionary, Operator and Processor turn to the third phase: attempting shorter meetings, more focused on getting decisions made and restricting the V-O-P interaction.

4. Endgame: Compromise or gridlock. However, even in these constrained meetings the Visionary, Operator and Processor cannot but help let their natural styles emerge, and it's not long before the team moves into the fourth phase, the endgame.

For most teams, the endgame involves one or more of four options: reducing expectations of the team and the participants, and simply continuing, even though no one now expects anything of value to emerge from the process; disbanding; obtaining outside help (which ultimately doesn't work, thus only postponing the inevitable); or negotiating an implied compromise.

There is a fifth option, which many high-performing teams discover by trial and error: introducing a fourth, learned style, called the Synergist. Introducing this fourth style to the group changes the dynamic of the guaranteed-to-fail V-O-P team to something new, a V-O-P-S (Visionary, Operator, Processor, Synergist) team — one which has considerable chance of success. ●

From Triangle to Pyramid

The Visionary, Operator and Processor are like the epidermis of an organization — prick them and they bleed in predictable ways. The reactions of the Visionary, Operator and Processor are so ingrained — their natural styles so much a part of who they are — that the V-O-P team reaches a standoff, with the participants trapped in their own V-, O- or P-driven agenda. Viewed abstractly, such a team looks like a triangle, with the V, O and P each positioned at a corner.

So if the Visionary, Operator and Processor are not going to change their natural styles and we cannot remove them from the team, there is logically only one way to substantively change the existing team dynamics, and that is to *add* something: a fourth style, one which, when introduced into the team, will transform it from a flat, two-dimensional triangle into a fully realized, three-dimensional pyramid; a team with depth, freed from dysfunction, and released into productivity and high performance.

What Is a Synergist?

The Synergist is the missing link that transforms the two-dimensional V-O-P group into a truly three-dimensional team. It does this by enriching and transforming the interaction between the Visionary, Operator and Processor in ways we'll examine momentarily.

The key defining characteristic of the Synergist style is that unlike the Visionary, Operator and Processor styles, the Synergist is focused primarily on what is best for the enterprise (the organization, department, division, project, group or team).

This detached perspective — not focusing reflexively on his or her own concerns — gives the Synergist a high-level perspective of the team's activities. If, as

we've seen, the Visionary, Operator and Processor can be seen as the epidermis of the organization, each reacting reflexively and predictably, the Synergist can be compared to the neocortex, collecting information and signals from the rest of the body, processing them and outputting instructions that enable the team or group to perform productively.

The Synergist's Toolkit

A key feature of the Synergist style is that it is primarily a learned style. Although natural Synergists do exist, they are rare, so in most teams the Synergist input comes from Visionaries, Operators and Processors who have learned to emulate the Synergist style.

The learning requires commitment. Synergism doesn't happen overnight — it's not like flicking a light switch. It's more like developing a new habit — but anyone can master the basics relatively quickly.

The Synergist's toolkit is nothing mysterious or magical — it's essentially a set of nine learned skills that anyone can develop. None of the nine skills individually will be new to anyone who has worked in an organization for any length of time, and most people will have developed at least some of these skills already.

But there is one piece of "magic" that transforms these nine relatively mundane skills into something very special — the secret sauce of Synergism, and it's a *personal commitment* on the part of the Synergist that governs and informs the use of the nine skills.The nine skills fit into two categories: personal productivity and teamwork.

Personal Productivity Skills

• **Time management.** The prospective Synergist's challenge is to be on top of his or her own time management to the extent that he or she can engage with the team or group without feeling distracted or overwhelmed by his or her other commitments.

• **Priority management.** The Synergist's challenge: Even if you are doing things right, are you doing the right things?

• **Crisis management.** The Synergist's challenge: To be like water and react appropriately to crises: Are the ripples you create in response to a crisis no bigger and no smaller than they need to be?

• **Delegation.** The last skill needed in the category of personal productivity is delegation, the ability to hand off tasks better done by others, releasing you to do what only you can do best.

Teamwork Skills

• **Conflict management.** Synergists do not overreact to conflict — nor do they needlessly create it or, worse, avoid it. Instead, they manage conflict positively, always in the light of the enterprise commitment, seeking the best outcome for the organization as a whole.

• **Difficult conversations.** At the center of the Synergist's toolkit is a readiness (and the skill) to draw out painful, difficult or negative issues as they arise and not to let them fester or grow. The Synergist builds understanding, breaks down barriers and develops unity in the team.

• **Communication skills.** The Synergist's role here is about his or her ability to facilitate effective communication among the others.

• **Inclusiveness.** The Synergist's role is to break down the brittle independence of individuals by ensuring that everyone on the team is jointly engaged in all aspects of the team's interactions, not just those in which they feel most comfortable.

• **Accountability.** Finally, an active Synergist will ensure that the team holds itself accountable to do those things it commits to doing.

Starting Fast, Finishing Strong

There are two types of teams — organic teams and constructed teams.

Organic teams comprise a group of people who come together of their own volition (for example, to start a business or solve a community problem).

A constructed team is one put together by selection, such as a project group or a subcommittee.

Organic teams have a binary, win/lose success profile — if the team fails, so does the entire enterprise. Constructed teams work in a less primal environment and can underperform for some time without immediate consequence.

A constructed team is usually selected at the outset, and the selection process is based on factors such as functional knowledge, availability and willingness to get involved. The disposition of Visionaries, Operators, Processors and Synergists is essentially random. This team only rarely changes thereafter. Whereas, a successful organic team learns to adapt their team composition over time in order to reach their goal. This process of adaptation follows a predictable pattern, one that is based entirely, albeit subliminally, on ensuring the optimum sequencing of the roles of Visionary, Operator, Processor and Synergist.

Constructed teams can learn from watching the way in which the organic team develops over time and, where appropriate, mimicking that adaptive approach.

PART III: BECOMING A LEADER OF LEADERS

Inside the Secret Garden

Synergists essentially do two things: They put the previously gridlocked V-O-P team back on track by removing conflict and tension, and they create an entirely new environment that allows the team to perform at the highest level.

Every successful team or group works to the same hidden pattern: a predictable cadence in their interactions that produces flow, engenders cooperation among team members and results in high-quality decisions. Only by accessing the Synergist style can a group or team access this pattern. Even in those rare occasions when the V-O-P team breaks through with a brief spurt of productivity, they do so because one or more of the team members is subconsciously operating in the Synergist role. Most importantly, only the Synergistic team can consistently operate within the pattern.

The pattern is a natural one, a subliminal rhythm that all successful teams fall into. Natural Synergists understand the rhythm intuitively. A team blessed with a natural Synergist will find itself subconsciously following this new pattern because the Synergist team member will prod it to do so. Conversely, the Visionary, Operator and Processor do not "naturally" understand this pattern of successful team interaction — in fact, the V, O and P tendencies fight against it, pulling the team's interaction *away* from the new pattern and into failure.

The Rhythm of Success

All groups and teams are formed for the same basic purpose: to pool the knowledge, experience and skills of each individual member in order that they may *together* produce high-quality decisions on behalf of the enterprise as a whole. Because of this, all *successful* groups and teams, irrespective of their specific goals, follow a similar route or pattern in their interactions — the pattern of high-quality decision-making. At the 30,000-foot level, this pattern of high-quality, team-based decision-making looks like this:

Investigation → Interpretation → Implementation

For the group to deliver a high-quality decision, it must move through these three sequential stages, which we'll call a "3-I" pattern. First, *Investigation*: the group has to collect the information it needs in order to make a good decision. Second, *Interpretation*: the information and data have to be interpreted, from which comes the actual decision. Third, *Implementation*: the group must determine what needs to happen in order for the decision to be implemented (by themselves or by others).

Stage 1: Investigation

The Investigation stage can be short and simple, or long and complex, depending on the issue under consideration. Either way, successful teams, those with strong Synergistic input, consistently address three imperatives at the Investigation stage: intellectual rigor, embracing change and financial understanding.

In the context of high-quality, team-based decision-making, we can define intellectual rigor as: the commitment to ask as many questions as are necessary to uncover all the material information required to make any needed decision.

By keeping the team focused on the importance of intellectual rigor while blunting the extremes of possible reactions, the Synergist takes the team into flow right from the start. As a result, the Visionary, Operator and Processor begin building the muscle of productive interaction.

Synergists coax the following behaviors from their team to deliver intellectual rigor:

- We go beyond an initial information exchange.
- We do not rush to judgment.
- We do not instantly accept any one team member' analysis of a situation.
- We ask detailed questions to uncover key facts.

The second imperative in the Investigation stage is to embrace change. In this context, we can define embracing change as: the commitment to identify, assess and embrace positive change agents, and to identify, assess and account for unavoidable negative change agents. Discussions at the Investigation stage are often brittle and restricted to what is already known. It is the Synergist's role to encourage behaviors that break this dynamic. The behaviors that Synergists encourage for acceptance of change include:

- We explore industry trends outside of our organization.
- We are in close contact with our customer base.
- We read and research outside industry sources.
- We challenge fundamental assumptions.
- We work outside our comfort zone.

The third imperative in the Investigation stage is financial understanding, which, in this context, we can define as: the ability to read and understand the basics of an income statement, a balance sheet and a cash flow projection. One of the most notable characteristics of teams operating without a

Synergist is how frequently their outputs are financially naive. They often either ignore the financial implications of their decisions or make sweeping assumptions that don't hold up in the real world. An effective Synergist will ensure that this gap in financial understanding is filled, either by co-opting someone onto the team (even temporarily) who can help or by providing those team members who do possess an understanding of how the numbers work with a safe environment in which to share their knowledge.

Four behaviors which indicate that a group is meeting the imperative of financial understanding are:

- We can read and understand basic financial statements.
- We request the financial data underpinning the decisions we make.
- We understand the financial impact of our decisions.
- We have a balanced focus on revenue, profits and cash. ●

Pulling the Trigger

Stage 2: Interpretation

The second I of the 3-I process is Interpretation. The Interpretation stage involves working through the information that was gathered in the Investigation stage with the goal of making a high-quality decision based on that information — tempered by the team's experience and knowledge. The three Synergistic imperatives in this stage — stamina, discipline and objectivity — not surprisingly echo the three main missing factors in the non-Synergistic V-O-P team's deliberations.

Previously, the inherent tensions in the team made the interactions between the Visionary, Operator and Processor so fraught that it would quickly drain the participants of all three imperatives. Now, with those tensions banished or greatly reduced, the Synergistic team must learn to rebuild the muscles of *stamina*, *discipline* and *objectivity* in order to stay focused and engaged during the Interpretation stage.

While the team will not be required to exhibit a high level of all three on every occasion — sometimes the Interpretation stage can be short and relatively simple — an effective Synergistic team *will* need to be able to draw on each one of them regularly and often.

1. Stamina. The stamina imperative implies that the team has the mental, physical and emotional strength to concentrate for prolonged periods on the detail of both decision-making and implementation.

2. Discipline. The discipline imperative implies that the team can maintain focus on and commitment to a course of action until it is completed.

3. Objectivity. The objectivity imperative implies that the team will base its decisions solely on the appraisal of the relevant facts, without undue consideration of personal prejudices. ●

Making It Work

The final stage of the 3-I process is the Implementation stage, when the group or team must determine what needs to happen for their decisions to be implemented.

Stage 3: Implementation

For the old, dysfunctional V-O-P team, the Implementation stage is usually abrupt; once a decision is made, it is released into the wild and left to fend for itself. It's therefore not surprising that the implementation rate of V-O-P team decisions is typically low. Without guidance and help from the team that came up with the decision in the first place, there are simply too many ways in which it can be derailed or sandbagged.

For the Synergistic team, there is no reason for this to be so — with the team in flow, the extra time invested to ensure a smooth handover from making a decision to successfully implementing it is time well spent.

In essence, the Synergistic team must act as its own midwife — not just birthing the decision, but tending and caring for it in the first stages of implementation until it has reached the point where its survival is assured. Achieving this requires that the team meet three imperatives: *consensuality*, *communication* and *accountability*:

1. Consensuality. The team will commit to early, frequent and congruent consultation with key individuals — specifically, those holding authority, responsibility and/or influence over the implementation or outcome of key decisions.

2. Communication. The team will fully explain, to as many stakeholders as possible, as often and in as much detail as is required, the key implementation steps for all major decisions.

3. Accountability. The team will establish formal structures and processes by which each team member is held accountable for the satisfactory conclusion of his or her implementation commitments. ●

RECOMMENDED READING LIST

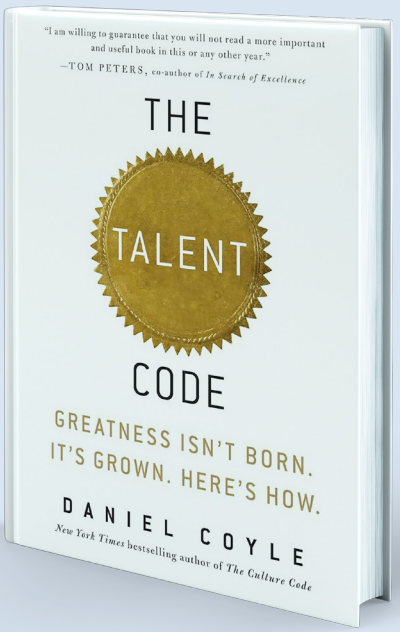
The Talent Code

Daniel Coyle

Book Snaps™
In-depth reviews of best-selling business books.



The Talent Code

Greatness Isn't Born. It's Grown. Here's How.

By Daniel Coyle

Daniel Coyle is the *Sunday Times* bestselling author of several acclaimed books, including *The Culture Code*, The *Talent Code*, *The Little Book of Talent*, and *Lance Armstrong: Tour de Force*. He lives with his wife and four children in Homer, Alaska, and Cleveland Heights, Ohio.

A Book Review by Soundview

Cracking the Code of Talent

Why is it that in certain places and at certain times, a hotbed of talent will spring up seemingly out of nowhere? Why is it that some coaches and mentors are able to elicit greatness from their players and mentees? How exactly does practice work? What type of practice is most effective for success? These are all questions that Daniel Coyle sets out to answer in his book, ***The Talent Code: Greatness Isn't Born. It's Grown. Here's How***. Coyle's book first establishes the role myelin plays in successful practice, and then he gives detailed analysis of different successful coaches and learners in an effort to help his reader understand and achieve greatness.

What Myelin Does

Coyle explains that myelin is responsible for all learning. Myelin is "a neural insulator." It works like rubber insulation around a copper wire because it wraps itself around nerve fibers in much the same way that rubber insulation wraps around a copper wire. The effect is that the signal is both "stronger and faster" because it stops the leaking of electrical impulses. The more a person effectively fires their circuits, the more myelin is wrapped around their neural circuits. Every human being can grow myelin, and myelin is at work in all sorts of skills that people can learn. We cannot feel this happening, however. We can only see the effects as our skills begin to improve. Skill, according to Coyle, "is a cellular insulation that wraps neural circuits and that grows in response to certain signals." Practice is the mechanism by which these skills increase. As Coyle states, "The idea that all skills grow by the same cellular mechanism seems strange and surprising because the skills are so dazzlingly varied. But then again, all of this planet's variety is built from shared, adaptive mechanisms; evolution could have it no other way."

Not all practice is created equal. Coyle highlights a mediocre clarinet player he calls Clarissa. In a video of her practicing, she vacillates between the practice of a genius and the practice of someone barely competent in her craft. In her moments of genius, she performs multiple skills including fixing mistakes, comparing herself against an ideal, and rehearsing in her mind. This is the way experts practice. In her moments of weakness,

she merely moves through the steps, creating what barely sounds like music. The difference in moments of growth and moments of stagnation is the result of the different ways she practices. Coyle explains that a highly effective process of practice is what helped create hotbeads of talent throughout history. It is behind the Bronte sisters, the success of baseball players from the Dominican Republic as well as the proliferation of literary talent in Shakespearean England. The good news is that it can be learned.

How Myelin Works

Coyle expected to see something amazing and innovative happening when he visited modern talent hotbeds. He believed he would find "world-class speed, power, and grace." At times this is what he saw, but at other times, he witnessed slow struggle. From this he learned that it is small failures that ultimately lead to progress. It is not words like willpower, concentration, or focus that explain the prowess of exceptional performers because these words do not capture the difficulty these performers go through in practice. It is also too simplistic to use the nurture versus nature paradigm to explain greatness. Rather what separates the greats from the rest is deep practice, and this type of practice requires moments of struggle that sometimes last only a microsecond, but this microsecond of trouble facilitates the deep learning they are engaging in. Coyle writes that "deep practice is built on a paradox: struggling in certain targeted ways – operating at the edges of your ability, where you make mistakes – makes you smarter."

These types of difficult experiences allow for trial and error, and because of this, obstacles turn out to be helpful. For this to be effective, scaffolding must be in place which is essential if people are to learn efficiently. This scaffolding asks people to practice just beyond what they are capable of, and it is important because larger challenges do not provide the same benefits of these smaller, quicker challenges. People generally try to avoid difficulties, but small trials are actually the defining factor of deep learning.

Coyle, like many people, once believed that learning was a product of neurons and their synapses, and there is truth to this; however, myelin plays a large role in the process of learning. Coyle bases his understanding on three facts.

1. Every human movement, thought, or feeling is a precisely timed electric signal traveling through a chain of neurons – a circuit of nerve fibers."
2. "Signal strength, speed, and accuracy" are increased as myelin wraps itself around these nerve fibers.
3. Myelin will optimize a circuit in proportion to the number of times a circuit is fired. Our movements become "stronger, faster, and more fluent" the more we perform them.

When people train, they signal the myelinization of wires. With a lot of training, the wires become strong and fast. Skill can be seen as the myelin insulation that is wrapped around neural circuits. During deep practice, neural circuits are fired and optimized. This is true whether a musician is learning to play the piano or an air core pilot is learning to fly a plane. Myelin also explains why practicing with mistakes is more effective than repeating easy tasks "because the best way to build a good circuit is to fire it, attend to mistakes, then fire it again, over and over. Struggle is not an option: it's a biological requirement." This entire process takes time and energy, and that is why passion is important. Passion is what prompts people to continue practicing through difficulties.

The author gives two further insights into brain science. The first is that "all actions are really the result of electrical impulses sent along chains of nerve fibers." We receive input and then we respond with output. It is the circuit that controls everything we do, and fast circuits mean fast movements.

The second insight into the human brain is that we become less aware of our skill circuits the more we practice them. This means that skills become automated and are performed by the unconscious mind. This is why tasks that at one point may have seemed difficult can start to feel effortless. This was important to our ancestors throughout human history because they were better able to focus on life threatening situations when other tasks could be performed without conscious thought.

For a long time, the role of myelin was overlooked. Since the early 2000s, however, researchers have discovered that myelin acts as a sort of super highway in the brain, greatly increasing information processing. Not only that, but it can regulate the speed at which nerves are activated. It is through deep practice that myelin covers the nerves. This practice must be repeated, so it is not lost. Despite the fact that there are many different types of skills people can learn from reading to shooting a basketball, there is only one type of myelin that serves all of these skills. Additionally, myelin can only be lost through age or disease. People continue to produce myelin throughout life; however, its production is most efficient in the early years which is why it is easier to learn new skills when young and harder as people progress through life.

As Anders Ericsson has demonstrated, memory can be improved. Prior to Ericsson's work, scientists believed that nobody could remember more than seven digits. This was a fixed limit. Ericsson was able to prove, however, that some people could memorize many times that amount. In fact, one person was able to memorize 100 digits. This proved that there is no universal limit to memory. Ericsson began to promote his idea that "every expert in every field is the result of around 10,000 hours of committed practice." This must be deliberate practice that consists of technique work followed by feedback. It must focus intently on finding weaknesses. This deliberate practice that Ericsson speaks of is the same as the deep practice Coyle promotes. Coyle admits, however, that it is more complicated than Ericsson's work alludes to: 10,000 hours of any type of practice will not always lead to world class skill.

Talent Hotbeds

Coyle turns his attention then to people who excel in groups, including the Brontës, the Z-boys and the greats of the Renais-

> *People are more motivated to continue practicing when their efforts rather than their outcomes are most praised."*

sance. The Brontës were three sisters who, among the three of them, created such literary greats as *Wuthering Heights* and *The Tenant of Wildfell Hall.* Some used to claim that the sisters' greatness appeared out of nowhere and that they were far removed from English society. This is not entirely true, however. The Brontes lived in a place of both politics and of commerce. Additionally, their home environment provided plenty of intellectual stimulation as it was full "with books, current magazines, and toys, overseen by a benign, tolerant father." The sisters wrote books when they were young, but these books did not demonstrate innate genius. The sisters were mainly copying the characters and voices of well known authors of the day. Still, they wrote frequently, and it was this deep practice that Coyle believes is responsible for their greatness. Their writing skill was developed through all of the hours they spent imitating great writers and in a childhood that was full of this deep practice. The sisters enjoyed writing, and they pursued this together. Each cared about the writing their sisters were producing. As Coyle states, the Brontes, "fired and honed millions upon millions of circuits, tangled and untangled thousands of authorial knots, and created hundreds of works that were utter artistic failures except for two redeeming facts: each one made them happy, and each one quietly earned them a bit of skill." This skill consisted of insulated neural circuits that grew. At its publication, critics loved *Wuthering Heights* and called it original, but as Coyle points out, it was not original. It was based upon all of those years of writing the girls produced when they were young.

Coyle states that "geniuses are not scattered uniformly through time in space… To the contrary, they tend to appear in clusters." Coyle then goes on to write about moments of great achievement, including those in Athens, Florence, and London. Florence's Renaissance is the most well documented of the three. While there are many explanations for the Renaissance including the prosperity of the time, as well as the peace, freedom and social mobility residents experienced, Coyle believes that it is shortsighted to attribute the greatness of the Renaissance to just these factors. He writes that "myelin doesn't care about prosperity, peace, or paradigms." Rather, Coyle believes that the craft guilds that were in place in Florence at the time were a big part of what prompted the Renaissance. In guilds, apprentices worked under a master and learned their craft through them. "In short, apprentices spent thousands of hours solving problems, trying and failing, and trying again, within the confines of a world built on the systemic production of excellence." This is what Coyle believes led to the greatness of the time.

Coyle then moves on to the nature versus nurture debates. He believes that seeing success through this paradigm falls short when speaking of genius. Genes do provide blueprints, but writing an instruction book for behavior is incredibly difficult because complex human beings encounter countless different situations in life. Instead of writing an instruction book for behavior, Coyle states that our genes "contain instructions to build our circuitry with preset urges, proclivities, instincts. Genes construct our brain so that when we encounter certain stimuli… a factory loaded neural program kicks into gear, using emotions to guide our behavior in a useful direction." It would be biologically expensive for human beings to create circuits for skills that they will never need to use. For example, skills such as creating software would not have been helpful in the 19th century. The brain responds to this problem with a different design strategy whereby circuits that are used most frequently get the most broadband while those that are fired least get less. These installers work hardest during youth because it is then that people adapt to their environment. Because of this, people believe that the skills they have acquired are gifts, but the real gift is the broadband installer because this is what insulated the needed circuits in the first place.

Rules of Deep Practice

Coyle writes about what he calls the holy shit effect which is the response people have when they encounter greatness For example, a person may be astonished to see a chess player who is able to memorize a board quickly. Coyle attributes this skill, however, to grouping. Another example of grouping is when people see the individual letters for a word and are used to seeing the letters together. Because they have seen this grouping before, they are easily able to decipher the word. This is how chess players react when they see chess boards they have encountered many times before – they can memorize quite quickly. If a computer, however, makes a random configuration not based on the logic that the player expects, it becomes much more difficult for players to memorize the board. The paradigm is gone. Physical skills are built in the same way. An example of this is when a gymnast is able to combine movements seamlessly that they have practiced individually in the past.

There are three steps to chunking. First a person needs to see the whole. Then they need to take apart the whole and divide it into parts. Finally, they must slow things down and practice these individual parts. This is the same regardless of the skill a person is trying to master.

If chunking is the first rule of deep practice, repetition is the second. The author writes, "There is, biologically speaking, no substitute for attentive repetition. Nothing you can do—talking, thinking, reading, imagining—is more effective in building skill than executing the action, firing the impulse down the nerve fiber, fixing errors, honing the circuit." There are caveats to this rule, however. Not all practice is the same. Deep practice requires peo-

ple to be practicing on the edge of their abilities. Second, people can only complete so much deep practice, about 3 to 5 hours, in a single day. Coyle also notes that people need to feel their mistakes as they make them. Successful practice requires those practicing to reach for something, to fail, and then to reach again.

Ignition

Coyle then turns to the motivation that is required to prompt this deep learning. He likens this motivation to an ignition. He notes that many people believe they love what they do because of something innate within them, but it is more complicated than that. Oftentimes, motivation can come from preconceived ideas. For example, Coyle notes a study that followed children learning an instrument. They discovered that the single greatest factor that determined how long a child would continue to play the instrument was how long they believed they would play before they even started. For example, if before a child even had their first practice they believed that they would continue to play throughout life, they were more likely to continue on with their practice once they began. It is the children's preconceived ideas about themselves, not passion, that most affected their outcomes. A lot of times, these ideas involve identity. For example, a child who associates himself with musicians will be more likely to continue on the work of becoming a musician.

Hotbeds are often embedded in places that lack many comforts. People who are ignited are ignited in part because they see a better future. This gives people the motivation to do the deep practice necessary to succeed at high levels. It is not enough, however, for these cues to merely ignite motivation. There has to be a continual supply of signals that keep this motivation going, so it does not fade out. One way to foster this motivation is in the words coaches and mentors use. People are more motivated to continue practicing when their efforts rather than their outcomes are most praised. This praise is most effective when it acknowledges the difficulties a person went through in order to get where they are.

Master Coaching

Coyle then turns to coaching talent, and he lists four virtues of great coaches. The first virtue is referred to as the matrix. He states that "years of work go into myelinating a master coach's circuitry, which is a mysterious amalgam of technical knowledge, strategy, experience, and practiced instinct ready to be put to instant use to locate and understand where the students are and where they need to go." The second virtue is perceptiveness. Master coaches try to deeply understand those they coach so they can better help their students move forward. Coyle calls his third virtue the GPS Reflex. By this he means that good coaches have a sense of urgency to the direction they give. The fourth and final virtue is theatrical honesty. Coyle writes that "many of the coaches I met radiated a subtle theatrical air." They are tuned in with those they work with, and they, themselves, are moral standards.

Coyle ends his book with a discussion about how these insights into myelin are applicable to skills of every kind. Coyle's book opens by describing how myelin works and then delves into numerous case studies involving different types of coaches and different types of teachers including sports coaches, charter school founders, and even a skateboarding team. He goes back in time to the Renaissance to explain how hotbeds of talent were created, providing insight for today about how hotbeds are still developed in the same way. His myriad detailed examples make the book imminently readable while also giving readers blueprints for success.

Principle IV – Simplicity – Building Resilient Organizations
Page 5

THE SUMMARY IN BRIEF

What does Eastern philosophy have to do with doing business in the AI era? A lot!

As Jack Myers' ***The Tao of Leadership*** proves, the core principles of ancient Chinese philosophy are cornerstones for building a new model of leadership in a world where human and robotic interactions are increasingly intertwined.

The book shares valuable advice about reorganizing companies and rethinking leadership roles to survive the inevitable effects of the fourth industrial revolution, represented by the rise of artificial intelligence. As AI tools become smarter, leaders must become more empathetic, agile and able to infuse humanity in brand messages and interactions. Also, they must understand the dangers of unethical AI training and rampart AI overtaking every human function in life and business.

By 2050, the author believes that AI will be fully integrated into every aspect of life and business. The decisions leaders take today will define the future: AI-driven for the benefit of humans, or ruthlessly ruled by AI without any consideration for the welfare of people.

IN THIS EXECUTIVE BOOK SUMMARY:

- Discover the five Tao principles and how they apply to leadership.
- Understand the major transformation AI is poised to bring to the entire business world.
- Find real-life case studies, showcasing the ideas presented in the chapter.
- Get actionable tips for implementing the principles of Taoism into your leadership style.

Introduction

The acceleration of technology since the dawn of the internet browser in 1993 has fundamentally reshaped society, businesses, and human experience. The introduction of OpenAI in 2020 marked a pivotal moment, pushing us into an era where technological advancements outpace our capacity to control them. The traditional phases of innovation—once marked by a gradual journey from idea to implementation—must now adapt to an era where the development cycle for technologies and business models is drastically shortened. My Blueprint for Leadership offers structured guidelines for leaders to champion a shift toward a more integrated, responsive, and ethically grounded corporate structure. This blueprint is a practical tool kit that provides business leaders with five core principles for integrating advanced technology with human ingenuity for transformative success.

Principle I – Harmony – Holistic Integration of Creativity and Technology

Chapter 1 - The Synergy of Technology and Creativity

Effective leadership today demands a blend of tradition and futurism, requiring leaders to be agile, informed, and visionary. Leaders must now contend with the complexities of AI and machine intelligence, which add dimensions and layers to an already challenging reality. The invention of the printing press by Johannes Gutenberg in 1440 democratized information, making books and ideas accessible to a broader audience. The Industrial Age in the late nineteenth and early twentieth centuries introduced a wave of technological innovation with the advent of electricity, the telephone, and the automobile. The early twentieth century was a time of significant change, with the rise of radio and, later, television transforming how information was disseminated. In the late twentieth and early twenty-first centuries, the rise of the internet, social media, and mobile technology once again both disrupted business models and spurred a new wave of creativity. Today, we stand at the brink of another transformative era driven by machine learning and generative AI.

The Da Vinci Connection: Bridging the Past and Future of Technology and Creativity

To understand the intersection of technology and creativity in our current era, we turn to the quintessential Renaissance man, Leonardo da Vinci. His notebooks are filled with designs for inventions far ahead of his time, including flying machines. His approach to engineering was fundamentally creative, driven by curiosity and an insatiable desire to understand the mechanics of the natural world.

The Industrial Age: A Symphony of Technology and Creativity

Spanning the late 1800s to the mid-1900s, this era was marked by groundbreaking technological innovations such as the automobile, telegraph, and cinema. One of the most fascinating figures of this era, Antoni Gaudí, embodied the seamless integration of technological innovation and artistic creativity. He invented new architectural methods, such as tilted columns for support, which revolutionized the building of cathedrals while creating structures of unparalleled beauty.

The Technological and Creative Wizardry of Steve Jobs

One of Jobs's most significant contributions to the integration of technology and creativity was the Macintosh computer, introduced in 1984. The Mac was the first personal computer to feature a graphical user interface, making it far more accessible to the average person than the text-based systems that preceded it. The iPhone epitomized Jobs's philosophy. It wasn't just a phone; it was also a powerful, portable computer that redefined how people interact with technology.

The Bilbao Effect: A Symphony of Culture and Innovation

In 1983 a catastrophic flood devastated Bilbao. Local leaders embarked on a bold and ambitious plan to revitalize the city. Their vision was to pivot from an industrial economy to one centered around culture and tourism. The Guggenheim Museum Bilbao opened its doors in 1997, and the impact was immediate and profound. The once-declining industrial town was transformed into a vibrant cultural hub. The era of AI promises to unleash unprecedented creativity and innovation, transforming how we live, work, and create. By understanding the historical context of da Vinci's, Gaudí's, and Jobs's interdisciplinary genius and applying those lessons to modern technological and generational challenges, leaders can navigate the complexities of the AI age. Embracing continuous learning, leveraging emotional intelligence, and fostering inclusivity will enable organizations to harness the full potential of AI while nurturing the human spirit that drives innovation and progress.

Harmonious Innovators: Integrating Technology and Creativity

Embracing continuous learning, leveraging emotional intelligence, and fostering inclusivity will enable organizations to harness the full potential of AI while nurturing the human spirit that drives innovation and progress.

Satya Nadella, the CEO of Microsoft, stands out as a Harmonious Innovator who has effectively leveraged technology for creative and cultural transformation. By prioritizing accessibility and inclusivity in Microsoft's products, Nadella has ensured that technological advancements benefit a broader audience, reflecting a commitment to cultural and creative progress.

Tim Cook, who succeeded Steve Jobs as CEO of Apple, has demonstrated a remarkable balance of technological investment and creative vision. He has fostered a culture of openness and collaboration at Apple, encouraging creativity and ensuring that the company's technological advancements are aligned with its core values.

Sundar Pichai, the CEO of Alphabet Inc. and its subsidiary Google, exemplifies the integration of technology and creativity through harmonious innovation. Pichai has guided Google through significant advancements in AI, machine learning, and quantum computing while maintaining a strong emphasis on ethical considerations and user-centric design.

Jacinda Ardern, the former prime minister of New Zealand, exemplifies how harmonious innovation can lead to significant technological and cultural advancements. Her government's handling of the COVID-19 pandemic, climate change policies, and focus on mental health and well-being reflect her commitment to empathetic governance. Ardern has also championed technological innovation, particularly in renewable energy and digital infrastructure.

Principle II – Flexibility – Innovative Thinking with Disciplined Leadership

Chapter 2 - The Odyssey of Innovation

As we look forward to 2050, most corporations, and especially large public companies, remain locked in legacy structures unchanged since 1952 that restrain agility and speed. Leaders in the AI era must understand and embrace the need to overcome inertia, resistance, and risk aversion to innovate with speed and agility. To thrive, they must cultivate a mindset that values experimentation, embraces failure as a learning opportunity, and prioritizes agility in their strategic planning.

Chapter 3 - Viewing the Change Through the Prism of Media

Johannes Gutenberg's invention of the mechanical movable-type printing press around 1440 marked the onset of the Printing Revolution. The telegraph's success laid the groundwork for another transformative invention: the telephone. From the telephone, the leap to radio and television marked another significant advancement in communication.

In 1991, Tim Berners-Lee invented the World Wide Web, a system that utilized hypertext to link documents and enable easy navigation. The most recent paradigm shift comes with the advent of generative AI, a technology capable of creating content and solving problems with minimal human input. This new era, marked by the integration of AI in everyday life, represents a profound transformation in human-technology interaction.

Cable TV: A Case Study in Corporate Innovation and Inertia

Cable television's growth was spurred by the establishment of channels that offered unique content not available on broadcast TV. Traditional broadcast networks initially resisted the rise of cable television. By the time broadcast networks recognized the potential of cable TV, they had already lost significant ground to early cable operators and networks.

Leaping forward to 2025, the broadcast industry's failure to learn from past mistakes has resulted in even greater economic consequences. Traditional broadcasters were late to the streaming TV business, allowing companies such as Netflix, Amazon Prime Video, and Roku to gain a significant head start.

Chapter 4 - Michael Milken and Financial Capitalism

Michael Milken played a pivotal role in the growth of the cable television industry during the 1980s. Milken pioneered the use of high-yield bonds, commonly known as junk bonds, to fund ventures that traditional banks and investors deemed too risky. This innovative form of debt equity provided crucial financing for several burgeoning

cable enterprises. Milken's actions, while aggressive, were instrumental in reshaping the financial markets and driving economic growth. His use of high-yield bonds is now a standard tool in corporate finance, and many of the innovations he introduced have been integrated into modern financial practices. The lessons from Michael Milken's financial innovations, the rise of venture capital, and the ongoing advancements in AI highlight the need for a balanced approach that complements the narrative of technological progress with a strong commitment to social responsibility.

Principle III – Balance – Leveraging Machine Intelligence

Chapter 5 - "Real" Science Fiction

Science fiction has long served as a prophetic lens through which we can envision the future. Blade Runner, based on Philip K. Dick's novel Do Androids Dream of Electric Sheep?, presents a future where bioengineered humans, or replicants, are indistinguishable from real humans. This narrative foresaw the complexities of AI and humanlike machines. As we consider the future of a cybernetic reality, we must also address the current state of technological advancement. Virtual reality (VR), augmented reality (AR), and deepfakes are creating highly immersive simulations that often feel more real than reality itself. As we stand on the cusp of Cybernetic Reality, we must embrace this future with open minds and a readiness to adapt. While many organizations have incorporated digital advancements and responded to unprecedented changes over the past few decades, they have not yet reached the point of realizing the visions once imagined in science fiction Organizations are weighed down by overlapping siloed teams, each performing redundant tasks within departments, divisions, and business units.

Chapter 6 - The Advantaged and Disadvantaged

The advent of the internet browser in 1994 marked a significant technological breakthrough. However, this innovation also created a stark divide between the internet "haves" and "have-nots." Amazon embraced technology from the start. Founded by Jeff Bezos in 1994, Amazon began as an online bookstore. Recognizing the internet's potential, Bezos invested heavily in digital technology and marketing.

In contrast, Kodak, once a dominant player in the photography and film industry, was slow to embrace digital technology. Despite developing the first digital camera in 1975, Kodak feared digital photography would cannibalize its film business. Its late attempts to pivot to digital products and services were insufficient to reverse its decline. By 2012 Kodak filed for bankruptcy, a stark contrast to Amazon's meteoric rise.

In today's technological environment, the integration of generative AI and machine intelligence is becoming essential for corporate success. Companies that embrace these advancements, such as Amazon, thrive, while those that resist change, such as Kodak, falter.

Chapter 7 - Transhumanism in 2050: A Seamless Narrative

Looking forward to the year 2050, the corporate landscape has shifted dramatically. AI-driven systems manage routine tasks, allowing humans to focus on creative, collaborative, and strategic endeavors. The true differentiators of success—creativity, empathy, and intuition—remain uniquely human qualities.

In an alternate vision for the year 2050, the unchecked and rampant development of generative AI and machine learning—without the complementary influences of human ingenuity, intuition, creativity, and empathy—has led to a markedly different world. AI-driven systems manage all aspects of business operations, from hiring and firing to project management and customer service. The gap between the technological "haves" and "have-nots" has widened, with access to advanced education and high-paying jobs concentrated among a privileged few. As we look toward the future, the lessons from this alternative vision of 2050 remind us of the importance of balancing technological advancement with humanistic values.

Chapter 8 - Building Portals, Not Bridges

Companies must invest in AI, machine learning, and other disruptive technologies to remain competitive. It's equally imperative to build portals rather than rely on legacy practices that argue for bridges from the past to the future. Effective leaders in the AI era will understand and embrace the transformative potential of combining analytics with human-centric values. The following steps outline how leaders can effectively integrate advanced generative data analytics into their decision-making processes:

1. Invest in Data Literacy Training
2. Adopt Advanced Analytics Tools
3. Foster a Data-Driven Culture
4. Integrate AI and Machine Intelligence
5. Promote Creativity and Innovation

Effective leaders in the AI era will understand and embrace the transformative potential of combining analytics with human-centric values.

6. Ensure Ethical Data Use
7. Implement Empathetic Analytics

Chapter 9 - The Future of Personalized Experiences

The integration of machine intelligence and generative AI offers unprecedented opportunities to understand and meet individual customer needs. However, the potential of AI in personalization comes with significant responsibilities. Privacy concerns are paramount, and organizations must ensure that they handle customer data with the utmost care and transparency. Balancing automation with a human touch is also essential. While AI can automate many aspects of customer interaction, maintaining a human touch in critical areas is necessary.

Principle IV – Simplicity – Building Resilient Organizations

Chapter 10 - Introducing New Human Priorities

Embracing the interplay between human ingenuity and technological capability defines the next horizon of corporate and societal advancement. Visionary thinking allows leaders to foresee potential disruptions and opportunities, fostering a culture of innovation that leverages AI to gain competitive advantages and transform business operations.

How to Develop Visionary Leadership Skills:

- Continuous Learning and Curiosity
- Strategic Thinking
- Emotional Intelligence
- Risk Management
- Fostering Creativity
- Collaborative Leadership

Implementing Visionary Leadership:

- Embrace Strategic Foresight
- Foster Inspirational Leadership
- Demonstrate Resilience and Adaptability
- Make Decisive Decisions

Leaders are now challenged to develop a collaborative approach to risk management, a challenging shift for any organization aiming to compete successfully in this dynamic environment. The leadership qualities necessary to master risk management include foresight, decisiveness, adaptability, and resilience.

Chapter 11 Context-Aware AI, Inclusivity, Education Sustainability and Globalism

Leveraging AI to offer personalized experiences that cater to individual preferences and identities can significantly enhance user satisfaction. Generative AI has the potential to revolutionize education by adapting to the learning pace and style of each student, providing personalized resources and support. Corporate leaders also have a vital role to play in supporting education. By investing in educational programs within their companies, they can ensure that their workforce is prepared for the future. The training of AI models, especially deep learning models, requires vast amounts of computational power. Data centers, which house the necessary hardware for AI training and operations, consume a tremendous amount of energy. Transitioning to energy-efficient data centers can significantly reduce the carbon footprint of AI operations. Developing more efficient algorithms that require less computational power for training and inference can also help. Ensuring that the hardware used for AI, from servers to chips, is produced and disposed of sustainably is crucial.

As AI continues to evolve, its adoption and implementation vary significantly across different regions and cultures. Collaboration among nations is essential to address the challenges and opportunities presented by AI. Leaders must advocate for policies that promote the responsible development and deployment of AI, ensuring that technological advancements are aligned with global ethical standards and human values.

Principle V - Integrity – Organizational Consolidation across Capabilities

Chapter 12 - The FusionFlow Process

Integrating the FusionFlow Process into legacy business models involves a multistep approach to ensure smooth transition and full integration across divisions:

- Strategic Assessment
- Incremental Integration
- Cross-Departmental Collaboration
- Continuous Learning and Adaptation
- Leadership and Vision Alignment

Silos, traditionally created to manage complexity and scale within decentralized companies, are now proving to be major obstacles in an era characterized by rapid technological advancements. By breaking down silos and encouraging collaboration across different departments and functions, dynamic team structures create the ideal conditions for innovative thinking. Transitioning to a dynamic team structure is not without its challenges. Here are the recommendations for breaking down silos:

1. Foster a Culture of Open Communication
2. Promote Cross-Functional Teams
3. Implement Agile Practices
4. Invest in Continuous Learning
5. Encourage Empowerment
6. Break Down Hierarchical Barriers
7. Integrate Technology Seamlessly
8. Promote a Unified Vision
9. Encourage Interdepartmental Collaboration and Eliminate Redundancy
10. Monitor and Adapt

Chapter 13 - Future-Focused Leadership Techniques

Scenario planning is an essential tool for future-focused leadership. It helps leaders anticipate various potential futures and develop strategies that are robust across different possible outcomes.

Agile leadership is another critical component of future-focused leadership. Agile leadership involves embracing principles such as iterative development, continuous feedback, and adaptive planning. AI transformation leadership is a crucial aspect of guiding organizations through the integration of AI and machine intelligence. Leaders who possess resilience can maintain their composure and decision-making abilities even under intense pressure. They inspire confidence in their teams, providing a stable anchor during times of uncertainty. Adaptability is another key leadership quality. Adaptable leaders are open to new ideas, willing to experiment, and capable of shifting strategies when necessary. Senior leaders must model these qualities in their actions and decisions, demonstrating a willingness to embrace change, learn from failures, and support their teams through challenges.

Chapter 14 - Embracing the Future

Leadership in the AI age demands a blend of tradition and innovation. As technology evolves, so must the skills of the workforce. However, the rapid pace of technological advancement can quickly render today's skills obsolete. Leaders must navigate these uncertainties with a commitment to continuous skill development and fostering a culture of innovation and adaptability within their organizations. Bridging generational divides within organizations is another critical challenge. Effective leaders foster an inclusive culture that values diverse perspectives and promotes collaboration.

Leaders must evolve their skills to interpret and act on advanced data insights, utilizing AI tools to enhance decision-making and drive innovation. However, leaders must ensure that AI is used ethically by incorporating transparency, fairness, and accountability in AI-driven insights. Statistics and surveys often point to a significant gap between the importance of continuous learning and its practical implementation. To bridge this gap, it is crucial for leaders to rethink what it means to engage in continuous learning. Here's how leaders can foster this mindset:

- Embed Learning in Daily Routines
- Leverage Technology for Microlearning
- Cultivate a Culture of Curiosity
- Set Personal and Team Learning Goals
- Encourage Cross-Functional Projects
- Recognize and Reward Learning Achievements

Chapter 15 Future of the Workforce

The COVID-19 pandemic has forever altered the land-

scape of work, accelerating the adoption of remote and hybrid work models. Leaders must recognize that the shift to hybrid work is now a permanent fixture of the corporate landscape in businesses that do not require full-time, in-person presence. To effectively manage remote and hybrid teams, leaders should develop comprehensive strategies that encompass the following recommendations:

1. Establish Clear Communication Channels
2. Cultivate a Cohesive Company Culture
3. Leverage AI and Machine Intelligence
4. Practice Empathetic Management
5. Invest in Technology
6. Encourage Flexibility and Autonomy
7. Focus on Outcomes, Not Processes
8. Provide Continuous Learning Opportunities
9. Implement Regular Feedback Mechanisms
10. Promote Diversity and Inclusion

Understanding the human side of restructuring involves recognizing that change can be unsettling and requires careful management. Leaders who focus on the human aspect ensure that their teams are supported throughout the transition, fostering a culture of trust and collaboration. The increasing capability of AI to mimic and even enhance humanlike emotional responses challenges leaders to redefine their roles. Human leaders must focus on fostering genuine empathy, deep relational connections, and moral and ethical decision-making—areas where human judgment is still superior and more nuanced than AI.

Social intelligence involves understanding and navigating social situations and building strong interpersonal relationships. Active listening is an essential skill for leaders aiming to improve their emotional and social intelligence. Conflict resolution is another critical area where emotional and social intelligence play a significant role. Leaders must be adept at managing and resolving conflicts in a way that is constructive and fair.

Multilingual and multicultural AI serves as a bridge across global divides, allowing for more inclusive communication and collaboration. This capability enhances human creativity by providing tools that facilitate the exchange of ideas and knowledge across cultural boundaries.

Structured mentoring programs designed to support underrepresented groups have bridged gaps in access to opportunities and professional networks.

Leaders should leverage AI to enhance the mentoring process by providing data-driven insights and personalized recommendations. To fully embrace the future role of AI and machine intelligence, mentoring programs should focus on the following:

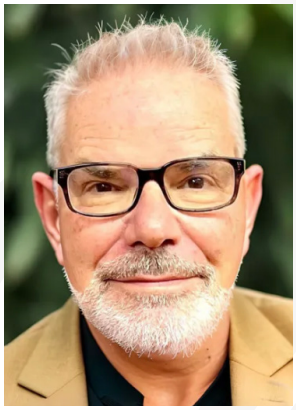
1. Incorporate AI-Driven Insights
2. Leverage Predictive Analytics
3. Enhance Personalization
4. Promote Techno-Humanism
5. Facilitate Continuous Learning

Conclusion Harmonizing Yin and Yang in the AI Era

This book represents a vision for 2050 that offers a balanced and hopeful future, where technology and human values coexist harmoniously. Central to navigating this landscape is the ancient Taoist philosophy of yin and yang, which embodies balance and harmony.

In leadership, yin and yang can be seen as the balance between strategy and execution, intuition and analysis, and innovation and tradition. Leaders who master this balance can harness the strengths of both forces, fostering a harmonious and effective organizational environment.

The Blueprint for Leadership in the AI era offers a comprehensive road map for creating organizations that are ready for anything. This is your opportunity to lead with vision, embrace innovation, and create a legacy of enduring success.



Jack Myers is a pioneering Media Ecologist and thought leader with five decades of experience at the forefront of technological and cultural change. As an advisor to global corporations and the author of five influential books, including Virtual Worlds and The Future of Men, Jack has consistently demonstrated a visionary approach to emerging trends in media, technology, and leadership. He is the founder of MediaVillage, the media industry's leading knowledge exchange platform, and his work as a Senior Lecturer, columnist, and consultant has earned him numerous accolades, including a Peabody Award and multiple Emmy nominations.

THE SUMMARY IN BRIEF

The Ten Golden Rules of Leadership draws on classical philosophy to argue that effective leadership is not rooted in position, technique, or charisma, but in character, judgment, and disciplined self-knowledge. Authors Michael A. Soupios and Panos Mourdoukoutas contend that leadership begins with understanding one's inner world—strengths, weaknesses, motives, and blind spots—and translating that self-awareness into principled action.

Across ten rules, the book explores how a leader's character shapes workplace culture, the ethical use of power, and the quality of organizational life. Leaders are challenged to cultivate healthy communities, distinguish constructive competition from destructive antagonism, embrace truth and candid criticism, and apply skepticism when evaluating information. Classical figures such as Socrates, Aristotle, Hesiod, Sophocles, and Heraclitus are used not as historical ornament, but as lenses through which modern leadership dilemmas can be better understood.

The central message is consistent throughout: authority without integrity produces compliance, not commitment. Lasting leadership emerges when leaders live by a higher personal code, align ambition with ethics, and transform power into trust. This summary presents leadership as a moral discipline—one that demands courage, restraint, and continuous self-examination.

IN THIS EXECUTIVE BOOK SUMMARY

- Understand how character shapes authority, power, and workplace culture
- Distinguish ethical leadership from coercion and the misuse of power
- Harness competition and ambition without allowing them to become destructive
- Build trust through integrity, self-knowledge, and principled judgment

RULE 1

Know Thyself

Without question, knowledge is an indispensable feature of leadership. Among other things, it is an essential component in addressing the many problems with which leaders are routinely confronted.

There are two types of knowledge: the factual information that can be acquired by formal education and real-world practices and the knowledge of one's own inner world. It is this second category that uniquely establishes the standard of real leadership.

Self-comprehension, therefore, is a fundamental precondition necessary for real leadership. Leaders must understand their inner world—their strengths and weaknesses as well as their bright and dark sides.

Coming to know thyself in a modern sense of the phrase is an immensely difficult task. The modern world offers an endless assortment of trivial endeavors that encourage a superficial, nonanalytical existence. Even for those inclined to seek deeper meaning and understanding, the volume of distraction is such that very few are able to engage in anything approximating a meaningful program of self-interrogation.

There are psychological obstructions we all tend to erect in an attempt to shade our eyes from the glare of troublesome truths. Failure to remove these obstacles renders taking stock of oneself impossible. Those who fail in this regard will never command the intuitions and insights requisite for real leadership. It is essential that the would-be leader commit to an agenda of spirited self-indictment, because the most lethal distortions come not from the lips of our opponents or competitors. They tend to flow, instead, from our own hearts.

Humans are by nature hedonists—pleasure seekers who instinctively desire ease and comfort over challenge and pain. For this reason, the pursuit of truth is rarely comfortable, particularly when it requires understanding who and what we really are. The truth can set us free, but it is not an easy thing to obtain. This category of truth requires struggle, discipline, and courage. Knowing thyself means bringing a fresh transparency to hidden motives and identities. It involves self-revelation whereby one ruthlessly exposes the frauds and deceits that give comfort.

There is the increasingly important obstacle of mass media imagery. With very few exceptions, we are continually bombarded with portraits of successful types who allegedly merit emulation. These dubious paradigms tend to glamorize lives that are as superficial and inane as they are unreflective. They promote a disreality that suggests there is no particular urgency in considering the larger questions of life.

Let's be clear about what this implies for leadership. The vast majority of people are unwilling to explore the dark regions of their inner being. In doing so, they create a counterfeit reality for themselves, which can place any organization at great risk.

Knowing oneself means the end of role-playing. It involves casting a harsh and unforgiving light upon a variety of self-exonerating falsehoods. It takes a good deal of nerve to unmask those reassuring lies we so enjoy telling ourselves. But it also takes a good deal of nerve to be a real leader.

RULE 2

Office Shows the Person

Of all the many problems facing today's business world, none is more critical than the quality of the work environment. In the absence of an affable work setting, employee loyalties quickly dissolve. The number one reason for employee exit is a disagreeable workplace. The organization forfeits the time, energy, and resources it invested in recruitment and suffers the effects of having employees who lack meaningful commitment over time.

Negative work settings do not occur spontaneously. This failure can be traced to managerial deficiency and, more often than not, to the abusive misapplication of power. Nothing will more rapidly alienate workers than a manager who delights in resorting to the stick as opposed to the carrot.

As Pittacus observed, "Office shows the person." The assumption of authority brings out the leader's inner world. It reveals whether the leader has undergone a process of honest self-discovery that allows for the productive application of power. Power will invariably reflect what no résumé ever does, namely the psychological and spiritual disposition of the person.

Lord Acton, a 19th century British historian, said, "Power tends to corrupt and absolute power corrupts absolutely." The misuse of power is a direct result of psychological deficiency. Power becomes a compensatory asset employed as a defense mechanism to offset feelings of inadequacy and vulnerability. The abusive application of power is the only way some leaders can attain a sense of security and confidence. Such situations reduce the work environment to a dysfunctional psychodrama in which morale and productivity are compromised.

> The most lethal distortions come not from the lips of our opponents or competitors but from our own hearts.

Healthy and productive work settings are not the result of spontaneous good fortune. The most important ingredient for success is quality leadership. Failures of leadership will virtually ruin the organization. None is more lethal than arbitrary applications of power. Supervisors who micromanage, second-guess, criticize, and bully are a toxic presence. Their abuses destroy worker motivation, compromise loyalties, and create debilitating resentments.

By contrast, true leaders who have developed a philosophy of life use authority to advance the causes of the organization. Authority, in their hands, becomes an instrument of integrity and conscience.

Effective leaders have no need for or interest in browbeating staff members. They offer object lessons in the fair and enlightened application of authority, leading by dignified example and turning subordinates into believers willing to go the extra mile to advance institutional objectives. True leadership does not come from the crack of a whip. Instead, it reflects a special wisdom that recognizes how often the cooing of a dove proves more profound and productive than the roar of a lion.

RULE 3

Nurture Community in the Workplace

Well-functioning corporate communities and positive group sentiment are the foundation of the modern workplace. They gather and focus the energies and resources of business organizations in the pursuit of institutional goals. These cooperative units do not arise spontaneously. They tend to be uniquely related to the talents of the leader.

There is no greater evil than discord and faction and no greater good than the bonds of communal sentiment. Only when a social unit enjoys a harmony of value and loyalty will it be able to attain its desired objectives. Therefore, fostering community and shared purpose are virtues leaders must nurture by providing the right support, guidance, and incentives.

Some of the world's most successful companies have attained their status because they enjoy a philosophy of leadership that reflects the virtue of team. They understand both the logic and efficacy of an environment in which the workforce is skillfully forged into productive units that approach the term "we" as an essential part of the corporate culture.

The two obstacles to creating corporate communities:

- Individualism—placing "I" before "we"
- Lack of willingness to critically self-assess

American culture has an almost romantic fascination with the virtues of the individual. Yet even the most successful individuals depend on a complex system of collective support mechanisms. Ignoring or rejecting these attachments risks cutting oneself off from a critically important shared resource. One of the most essential responsibilities of a genuine leader is to help subordinates recognize that the logic of collective action benefits both the organization and the individual.

A well-ordered group functions as a force multiplier in which the potency of both the unit and the individual enjoy mutual enhancement. The key defining elements include a strong sense of loyalty and commitment to the organization, a spirit of genuine camaraderie among team members, and a consistent willingness to subordinate personal interest in favor of the larger good.

Team composition is critical. Leaders must carefully assess personalities with an eye toward the group dynamic they create, recognizing that chemistry is essential. Facilitation must never be confused with abdication; without continuous guidance, the group can disintegrate into antagonistic camps.

Leaders must keep the group grounded, focused, and on point, adapting a balanced approach—at times laid-back, at times decisive—to avert groupthink. Real leaders resist the temptation to reduce the team to a personal ego platform and, whenever possible, default to "we" as opposed to "I."

RULE 4

Do Not Waste Energy on Things You Cannot Change

The word "change" has become a critically important term in today's corporate world for two reasons. First, the spread of globalization with its rapid development of integrated

markets has made change a constant and unavoidable aspect of doing business. Second, the rapid advancement of information technology has produced an environment in which business models are in a continuous state of flux.

If corporations are to survive and prosper in such change-driven environments, "they should strike out on new paths rather than travel the worn paths of accepted success," to use John D. Rockefeller's words. Steering clear of old paths and strategies is often difficult. Old habits and institutional inertia are powerful forces that distort the need for change and innovation. They can link the institution to policies and programs with little or no prospect of success while wasting valuable resources.

Conventional wisdom can obscure sound business practices. Subcontracting and outsourcing helped personal computer makers cope with competition brought about by globalization but failed to protect the industry against alternative products such as tablets and smartphones. Similarly, the maxim that concern for core business is the key to competitive advantage can no longer guarantee profitability.

The failure of Eastman Kodak and the gradual decline of Xerox prove that not all strategies work in a rapidly changing business environment. Leaders must assume a posture of flexible response: quick to take advantage of new opportunities and quick to discard practices with little prospect of benefit. Do not waste resources and energies on things you cannot control and things you cannot change.

Aristophanes wrote the comedy *Peace*, which offers a pointed illustration of this principle. One character says, "never will you make the crab to walk straight." The message is clear: some events and circumstances are unlikely to change, no matter how aggressively we attempt to alter them. This insight underscores the importance of knowing when to suspend efforts to control or transform situations that defy modification.

Leaders tend to be hard-charging types who relish the exhilaration of long odds. They seek opportunities to succeed where others have failed and are prepared to redouble their own efforts and those of their subordinates. There are, however, limits. There will be times when too many variables lie beyond the control of the executive. For instance, they may have control over corporate goals, staffing, corporate partners, and location of units, but not over government policies and competitors.

Genuine leaders understand the consequences of failure and are prepared to acknowledge their role in unfruitful enterprises. They are objectively realistic about challenges and accept that on occasion they are incapable of dispensing miracles. After all, it is a fool's errand to seek to alter the lateral stride of a crab.

RULE 5

Always Embrace the Truth

Anyone who has worked for a large organization has probably noticed a herdlike mentality among subordinates—a tendency to routinely endorse the decisions made at the top, even if those decisions steer the corporate ship in the wrong direction. Dishonest assessments and false praise are potentially toxic features of the corporate environment and must be dealt with in a straightforward manner by a genuine leader.

Apple-polishing is distortive of truth, and truth is the lifeblood of the organization. Effective leaders should always embrace the truth, always encourage candid criticism throughout the organization, be skeptical of flattering appraisals, and never let authority place a wedge between them and the truth.

"There are only two people who will tell you the truth about yourself—an enemy who has lost his temper and a friend who loves you dearly," said Antisthenes. The evaluative commentaries offered by those around us must be viewed with considerable skepticism. It highlights the remarkable infrequency with which people receive legitimate appraisals about themselves. How a leader responds in these situations will disclose not only that person's likely success as an administrator but, more fundamentally, the leader's status as a person.

Wise leaders understand that honest assessment is an essential requirement of effective leadership. It is crucial that opportunity for candid expression be encouraged as widely as possible throughout the organization. The higher up the corporate ladder an executive ascends, the less likely it is that person will receive complete and accurate evaluation. Encouraging such submissiveness jeopardizes the welfare of both the organization and the leader.

How pseudo-leaders seal themselves off from truth:

- They avoid hiring heretics—the opinionated and quarrelsome individuals.
- They have little time for dissenting opinions in corporate meetings.
- They evaluate subordinates according to their affability rather than their performance.

> Power will invariably reflect what no résumé ever does, namely the psychological and spiritual dispositionof the person.

Managers must develop the skill and the courage to carefully read the motives of those around them. Learning to stop conning oneself will place the manager in a substantially better position to recognize others' attempts at conning. No leader can hope to do a responsible job in an atmosphere devoid of opportunity for candid expression and forthright analysis.

Real leaders will never be surrounded with a company of honey-tongued parasites, never limit communication to those who passively accept the predigested views of management, and never make the utterance of truth the organization's one unpardonable sin. Truth is an invaluable strategic corporate asset. Don't let it go to waste. Embrace it.

RULE 6

Let Competition Reveal Talent

Talent is the catchword of modern business, for good reason. It is the ultimate source of competitive advantage, especially in high-technology industries where corporations rely on innovation to differentiate themselves from the competition. Bringing talent out and aligning it with organizational interests requires an environment that allows employees to compete with each other in a constructive rather than a destructive way.

Anyone familiar with the history of ancient Greece knows that conflict was a continuous aspect of their civilization. The Greek term for these rivalrous passions is *agon*, meaning "contest," and from the earliest beginnings of their history, the Greeks employed competition as a mechanism for identifying an individual's comparative worth and merit. They understood the potent psychological forces involved in opportunities to achieve distinctions of honor and glory. Much of the Greek cultural achievement was directly related to the harnessing of these energies.

Hesiod, the ancient Greek poet best known for *Works and Days,* describes two forms of *Eris* (strife) that animate the human spirit. One takes the form of *antagonism*—a malignant, destructive strife that produces the evils associated with war and releases the selfishness of the individual. Yet he also acknowledges a second, more beneficial form of strife: *competition*, a constructive force rooted in envy and pride that does not lead to the brutalities of the battlefield. Instead, this form of contention proves productive in economic terms, releasing the ingenuity and creativity of the individual.

Hesiod explains how this constructive strife motivates the shiftless man to work, how neighbor vies with neighbor in the pursuit of wealth, and how members of every vocation are driven to compete within their fields. The net effect of this competitive spirit is the production of more and better "fruit," which is why he concludes that "this strife is wholesome for men." Long before modern economists, he grasped the critical connection between human ego and economic productivity—a logic that continues to underpin the system we call capitalism.

For leaders, this distinction is essential. Competition is not inherently destructive, but it must be nurtured, harnessed, and directed to prevent it from devolving into antagonism. Human ambition, when properly managed, can play a critical role in fulfilling organizational objectives. Motivation of this sort, what might be called "impulsions from within," is rare in large, complex institutions, yet it must remain a pivotal concern of effective leaders. Designing environments that cultivate such motivation through well-structured competition requires leaders to be keen assessors of human personality and disciplined stewards of competitive energy.

RULE 7

Live Life by a Higher Code

Of all challenges business leaders face as organizations grow, one stands out: aligning subordinates' behaviors, goals, interests, and attitudes with the larger organization. Without alignment, leaders have authority but not the power to lead. Subordinates may comply publicly but violate decisions privately, reducing the likelihood of achieving institutional objectives.

Under these circumstances, it comes as no surprise that scores of academic papers have been published proposing all sorts of solutions to the problem, from bureaucratic restructuring to sanctions and rewards to cultural controls. But none of these measures can yield the desired results unless leaders earn the trust of their subordinates. The trouble is that trust

doesn't happen by accident, nor can it be manufactured by an army of consultants. Trust must be nurtured over time, and it comes only to those who have dedicated themselves to a higher life code. This is the means by which subordinates become committed followers.

In the history of Western thought, few voices can match the authoritative tones of Aristotle. In *Nicomachean Ethics*, a foundational work on moral philosophy and human flourishing, Aristotle presents a detailed account of the qualities necessary for a good life. In Book 4 of that work, he offers a famous portrait of the "magnanimous" or "great-souled" person. While much of this description reflects distinctions between ancient and modern worldviews, certain traits of the great-souled individual remain remarkably relevant for leadership.

The great-souled individual possesses a strong sense of self-worth—not narcissism—because he or she lives by a higher and more rigorous life code. Personal honor, not ego, is the ultimate priority. Such individuals are morally attuned and largely indifferent to money, power, and title except as secondary outcomes of principled living. They resist petty vanities, never flaunt superiority to demean others, value honesty over opinion, speak directly without guile, refuse to hold grudges, assist without seeking aid, and remain calm in crisis situations.

Every large organization has both a formal and informal identity. Staff may comply with policy in form while violating its spirit in practice, which is why effective leadership must command both. Authority confers formal prerogatives, but power lies in influencing beliefs and conduct even without formal title. A great-souled leader, combining character with both formal authority and informal respect, ensures the highest probability of institutional success.

RULE 8

Always Evaluate Information with a Critical Eye

When assessing information, no organization can afford to be complacent. Knowledge and information are in constant change. What was conventional wisdom yesterday may no longer be valid today. Leaders must consider the circumstances that shaped the information, even the means by which it is conveyed must be critically examined. They should never assume information is unsoiled by hidden agendas, must suspend judgment until data is critically evaluated, and resist the temptation to rush to judgment.

Anyone familiar with ancient Greek philosophy understands that open-ended inquiry was its unique hallmark and that it was specifically this willingness to pursue truth in a fresh and unrestricted manner that distinguished the Greeks from the rest of antiquity. Whereas other ancient peoples were burdened by received opinion, the Greeks insisted, as Socrates said, that "the unexamined life is not worth living."

Socrates repeatedly warned against the conceits of wisdom, a position that explains his famous response to the Oracle of Delphi, a sacred religious authority in ancient Greece believed to speak for the god Apollo, when it identified him as the wisest of the Greeks: "All that I know is that I know nothing." In other words, Socrates was considered wise precisely because he refused to be inflated by the pretense of knowledge.

Ancient Greek Skeptics, a philosophical movement that challenged baseless intellectual conviction, advanced a critical mental attitude they believed should become a standard feature of every thinking person's cognitive arsenal. The essence of this mindset is reflected in the term *epoche*, which refers to a bracketing or "suspension of judgment." Skeptics highlighted the need to control a reflexive tendency to jump to conclusions and to assign truth status to ideas, theories, and explanations that fail to merit such attribution.

By adopting skepticism's idea of *epoche*, contemporary leaders enhance administrative effectiveness. This practice of bracketing information slows premature judgment, allowing leaders to certify the credibility and usefulness of information prior to its inclusion in decision-making. Many important choices are too often based on improperly examined premises—assumptions shaped more by conceptual inertia than on meticulous assessment.

Dogmatic thinking is not unique to philosophers; large organizations are equally prone to advancing propositions devoid of factual foundation or adequate evidence. Leaders who recognize this risk apply *epoche* deliberately, proceeding with caution when certifying the credibility of data that will guide critical decisions.

An important part of skepticism involves disabusing ourselves of the myth of pristine information. Both context and medium often contain obscure meanings and hidden intentions. Even hard evidence such as statistical data needs careful scrutiny. Leaders must inspect the source of information, methods of compilation, degree of filtering, track record of suppliers, and possibility of hidden agendas. Strictly speaking, no leader can afford to be complacent when assessing information necessary to operate effectively.

> Trust must be nurtured over time, and it comes only to those who have dedicated themselves to a higher life code.

RULE 9

Never Underestimate the Power of Personal Integrity

Professional success is the goal of every leader. That goal, however, can be pursued in two ways: the easy way and the hard way.

The easy way involves a denial of principle and integrity. This approach may yield some rapid, short-term gains, but in the end, it typically results in harm to both the organization and the leader. No corporation can benefit when blind ambition and intoxicating greed become the coin of the realm. In contrast, the more difficult path represented by ethical conduct will produce superior results for the company and the executive alike.

Sophocles wrote the play *Philoctetes*—a work we believe should be read and carefully considered by every executive. The two central characters are Neoptolemus and Odysseus.

Neoptolemus is a young man of undefiled principle for whom honor and integrity are the primary concerns of life. Odysseus is a man of mischief and deceit intent upon compromising the youthful integrity of Neoptolemus. Throughout the play, Odysseus advances a dishonorable agenda—the belief that the ends justify the means. Neoptolemus ultimately rejects this view, declaring, "I would prefer even to fail with honor than win by cheating."

Hard-core cynics believe the principled path leads to defeat and failure and that success must be grasped by whatever means necessary. Any executive who allows moral considerations to cloud thinking empowers the competition with potentially devastating advantages. Dishonesty, duplicity, and deceit are never justifiable activities for a real leader. Managers who rationalize conduct, manufacture fictional rationales, and allow moral considerations to be fluid will inevitably come to grief in every facet of life, including their careers.

The contrast between these two paths can be illustrated by considering two executives with markedly different career trajectories. Executive A did not simply climb the corporate ladder but hacked a way to the top through ruthless ambition, guided by the belief that principle is for losers and that success depends on how low one is willing to sink. Over time, despite evident ability, this mindset produced a notorious reputation. Subordinates first, and eventually senior leaders, came to view Executive A as untrustworthy—a toxic asset whose questionable conduct threatened morale, collaboration, and even legal exposure, rendering the individual a corporate pariah.

Executive B, by contrast, operates from a deeply held moral conviction consistently evidenced in professional conduct. Known throughout the organization for integrity, transparency, and candor, this executive has accumulated a substantial fund of trust and goodwill. Superiors and subordinates alike are eager to collaborate, confident that Executive B's word serves as an ironclad guarantee.

The comparison makes abundantly clear that while ruthless ambition may yield short-term advancement, ethical leadership sustains credibility, strengthens institutional loyalty, and supports long-term success for both the leader and the organization.

Honesty, truthfulness, and integrity are invaluable aspects of human credibility. Minus such credibility, no manager can ever hope to attain the status of a real leader. Following the path of Neoptolemus, rather than Odysseus, ensures honor and long-term success.

RULE 10

Character Is Destiny

Character is the essence of the philosophy of leadership. The set of values leaders espouse, the priorities they embrace, and the life code they live by shape the future of the organizations they lead. As Heraclitus famously observed, "Character is destiny." True leadership begins within, not without.

Heraclitus is best known for the doctrine of the unity of opposites, which holds that the apparent turmoil and chaos of the world are largely the product of human misunderstanding. Rather than denying change, he argued that reality is highly dynamic, yet governed by an underlying order. What appears disjointed or chaotic is, in fact, part of a well-calibrated harmony in which change in one area is matched by corresponding adjustments elsewhere.

According to him, this hidden order binds existence into a coherent whole, and it is humanity's persistent failure to perceive it that led him to criticize those who considered themselves wise. Disorder, in other words, is often not a feature of reality itself but a symptom of flawed perception.

Who a person is—the values one espouses, the priorities one embraces, the life code by which one lives—inevitably plays a significant role in determining the quality and substance of life. Character tends to be the prime determinant influencing virtually every facet of human experience, from personal relationships to professional lives. Those of good character acknowledge and respect the rights of others, have the courage to accept responsibility for their own shortcomings, and operate in loyalty to a personal code of conduct. This wisdom, stemming from deep self-understanding, helps shape the destiny of real leaders.

The utility of this insight will not be lost on real leaders. Such men and women understand that their substance (character) as people will directly influence their fate as managers. A well-formed character is the priceless reward paid to those who have done the hard work of coming to know themselves.

Epilogue

There is no royal road to leadership. On the contrary, achieving the rank of genuine leader is a daunting task that most will find prohibitively challenging. Among other things, it involves an intimidating process of self-assessment in which light is cast upon those hidden truths we all tend to zealously conceal. It also requires a kind of moral stamina whereby ethically informed standards become regulative features of a person's life. In sum, leadership requires a special form of courage: the courage to know thyself and the courage to fashion a code of conduct governed by principled conviction.

Michael A. Soupios is a professor of political philosophy at LIU Post in New York, where he has taught and held a range of administrative positions since 1977. He is the author of numerous scholarly articles and five books, including *The Ten Golden Rules*, coauthored with Panos Mourdoukoutas. Soupios holds eight graduate degrees, including four doctorates. His scholarly interests span history, classics, philosophy, political science, and religion, fields in which he has conducted seminars and delivered special lectures. He lives in East Northport, New York, with his wife, Linda, and continues to teach and write on political thought, ethics, and classical leadership traditions.

Panos Mourdoukoutas is professor and chair of the Department of Economics at LIU Post in New York. He has published widely in professional journals and major media outlets, including Forbes.com, where he writes a regular column, as well as *Barron's, The New York Times, Japan Times, Newsday, European Management Review, Management International Review*, and *Journal of Risk and Insurance*. He is the author of twelve books, including *The Ten Golden Rules*, coauthored with Michael A. Soupios. Mourdoukoutas has lectured internationally for private and government organizations and specializes in global markets, business, investment strategy, and personal success.

THE SUMMARY IN BRIEF

The 21st century has dawned, and the requirements for leadership have fundamentally changed. Every day, leaders around the world face issues of complexity, uncertainty and sensitivity, requiring precise thinking and judgment at warp speed. Speed is a given, expertise is fleeting, and learning to trust others in your organization is trickier than ever. Authority has given way to influence. The leadership bar has been raised.

In The Third Opinion, *Dr. Saj-nicole A. Joni notes that the raising of the bar has given way to an even greater challenge for leaders — determining to whom they can turn when experienced, trustworthy advice is required. Some leaders might turn to colleagues inside the organization for help; others might call upon a trusted adviser outside the company. There is, however, another opinion for which most people never ask: the third opinion — the unvarnished insight of a loyal and diverse inner circle of advisers, experts and mentors. This "outside insight" might just be the most important advice of all.*

What You'll Learn In This Summary

- ✓ Leadership today requires three new habits: Habit of Mind, Habit of Relationship, and Habit of Focus. Used together, these habits enable you to build a powerful leadership circle and lead with the benefits of outside insight.
- ✓ Leaders must also master three distinct types of thinking: Application Thinking, Expert Thinking, and, most importantly, Exponential Thinking.
- ✓ Leaders must be naturally curious and possess a solid knowledge of their own preferences, styles and foibles in leadership and thinking. This self-knowledge is essential in building an inner circle of advisers, because you must know how you will work with your advisers and be able to accurately guess how well they will work with you.
- ✓ The progression of one's need for an inner circle of advisers is directly related to the progression of one's leadership career. Based on levels of organizational or structural responsibility, three broad distinctions are defined — Early Leadership, Key Leadership, and Senior Leadership.

THE THIRD OPINION

by Saj-nicole A. Joni, Ph.D.

— THE *COMPLETE* SUMMARY

Outside Insight

Leadership today requires three new habits:

- **Habit of Mind.** Leaders today must master a new level of thinking: exponential thinking — the process of examining context, looking for interrelationships, exploring assumptions, and asking questions that reveal the full truth and potential of a situation. This thinking enables you to see all sides of a complex issue, most often in the company of other, like-minded individuals. Indeed, successful leaders need to regularly spend time with thinking partners they trust, because exponential thinking is best done with others.
- **Habit of Relationship.** Leaders must assemble a new kind of leadership team: one that ensures that they undertake the right kind of exploratory thinking and are challenged by multiple perspectives. This leadership team must be comprised of an action team and an inquiry team that are capable of translating exponential thinking into useful action.
- **Habit of Focus.** Leaders must have the skill and discipline to focus on the essential nonurgent issues.

Important Inner-Circle Conversations

Conversations with inner-circle thinking partners are broad-ranging and typically fall into one or more of these four basic categories:

✓ **The visionary conversation**, which imagines the different possible futures that you might create, then determines how to use that insight in the here and now.

✓ **The sounding board conversation**, which takes place when you want to work with someone who has the right expertise, wisdom and experience to take a third-opinion look at a new strategy or set of ideas.

✓ **The big picture conversation**, in which you and a thinking partner step back and look at all the things that are going on, making sure that where you want to go is aligned with all the complex and interdependent parts involved in getting there.

✓ **The "expertise in inquiry" conversation**, in which you look not only to develop your knowledge, but also to develop fundamental models and new ways of thinking about the terrain.

They must be able to create and execute strategies to carry out their leadership agendas. They must be able to use their inquiry teams and advisory network to get this critical work done, and done properly.

Used together, these habits enable you to build a powerful leadership circle and lead with the benefits of outside insight. These habits are critical to what kind of leader you will be. They distinguish your leadership and your career trajectory.

You can begin developing the three habits and your advisory network at any time during your career. It is important to develop and use the three habits in concert. While everyone will use them differently, there are guidelines to help you focus on perfecting the various parts of each habit as your leadership progresses. In addition, your source of outside insight will likely differ from that of any other leader. The thing to remember is to keep your advisory team a balance of formal and informal sources.

Thinking Partners

Thinking partners are exponential thinkers who are able to offer you new information and new lines of sight. The best thinking partners have a well-developed ability to think across parochial boundaries; they also possess an aptitude for detecting interdependencies, and they know how, fundamentally, to see a problem at several different levels. They also have the ability to pick the right level for the best solution.

There are a number of capabilities you should seek in your inner-circle thinking partners. They should ask great

(continued from page 2)

questions and listen closely. They should have reputations for integrity, and high-quality experience relevant to the key issues you need to resolve. They should be flexible, providing unique perspectives and tailoring their input to meet the challenges and questions at hand. They should have curiosity and an intuitive understanding of your strengths. They should be free from conflict of interest, both personal and structural. They should also be as eager to work with you as you are to work with them. ■

Habit of Mind

There are three facets to the Habit of Mind: *mastery of three levels of thinking*, *curiosity and self-knowledge*, and *spotting great talent for your inquiry team*.

Mastery of Three Levels of Thinking

Leaders today must extend their abilities to integrate new and old information, plan more flexibly, and be ready to redefine the very way they understand their job, company and marketplace. In order to do so, they must develop mastery in three types of thinking:

- **Application thinking** (mapping the *known* onto the *unknown*). You must focus on planning and implementing well-understood methods in ways that yield replicable results. People skilled in application thinking can readily identify the characteristics of a problem and, with the benefits of experience and history, find a solution.
- **Expert thinking** (invoking deep understanding of a specific subject). Expert thinking is brought to bear when challenges and issues are new or unique and don't fit easily into a solution by a known method. Approaching the issue from their area of expertise, expert thinkers bring new perspective to diagnosis, and the knowledge and problem-solving skills to develop custom approaches and solutions.
- **Exponential thinking** (exploring new terrain with new frameworks). Inherent in the nature of exponential thinking is the need to engage with others who bring different perspectives and who are capable of helping you explore issues outside your awareness, mental models, and current understanding. Until you master exponential thinking, you cannot take full advantage of the third opinion.

Curiosity and Self-Knowledge

It is essential in this day and age to have a realistic picture of yourself — an accurate picture of how you function best within your organization. This is particularly true as you develop thinking partners and pursue exponential thinking.

A good leader is a curious leader. Good leaders possess a self-confidence that enables them to remain open and inquisitive, even on the occasions when they might be wrong. They want to know more than just how to get something done: They want to understand the principles that underlie an issue, and when these principles apply (or don't).

A good leader also understands his or her managerial style. Good leaders ask themselves, How do I fill up my time — in face-to-face meetings or solo work? Am I

(continued on page 4)

The Six Steps for Exponential Thinking

In order to master exponential thinking, there are six steps to follow. These include:

1. Understand the mental models that guide your thinking. What are the assumptions about how your business works — about the marketplaces in which your company sells, the key levers of change in those marketplaces, and the nature of your competition? These mental models deeply impact how we make sense of the world and how we choose to act. We must be aware of these models, both in ourselves and in others.

2. Develop your ability to discern patterns. We must look for patterns that dictate how we make sense of the world, particularly when an existing pattern cannot explain a new business element or pattern. Recognizing these patterns is an essential business leadership skill.

3. Check and recheck for hidden assumptions. In order to understand the challenges we contend with today and will contend with in the future, we must unearth and examine our assumptions about how business is conducted.

4. Create varied scenarios of the future. Exponential thinkers consider mental models, patterns and assumptions, and use them to develop a portfolio of scenarios for the future. They also possess the ability and judgment to create multiple views of the future, compare one to the other, determine their probabilities, and commit to a course of action that is powerful, yet flexible.

5. Look for ways to brighten your line of sight. You must think very carefully about how you get your information, its sources, and its sources' sources. What filters have come between you and the data you use to make important business decisions?

6. Invest in your ability to think in the gray space. Leaders who take their organizations to new heights of success have no established references to sort out the big picture — they must discover that new reality, pushing the boundaries of what's known, acceptable, legal, comfortable and practical.

Habit of Mind

(continued from page 3)

more energized by meeting with people, or by working alone? Do I thrive on chaos, or do I work better when everything is in its proper place, and activity is quiet and purposeful? Leaders ask these and other self-auditing questions on a regular basis.

Good leaders are aware of their style of thinking around others, and how they process information in general. Some leaders prefer lively debates on issues; others are better suited listening to a discussion and following their intuition after collecting everyone's opinions. Knowing your own style will help you complement that style with others in your inner circle. You should also know the ways in which you learn the best. Are you a more visual learner, or do you need to have conversations to hash out the particulars of an issue? Do you understand interrelationships best when they are presented to you, or when you experience them? Knowing your capacities for processing information (and developing new ones) will help you get your information in a form or format that you will be able to integrate best.

Good leaders also do not believe their own hype. If you are featured in a publication or some other media outlet, you must be cognizant of how you're being presented, and what that presentation means to your exponential thinking and your thinking partners. Don't let your personal branding get in the way of the quality of your interactions at work.

Spotting Great Talent for Your Inquiry Team

In order to build a dependable leadership circle, you must be able to develop an ability to evaluate others and their strengths, weaknesses, preferences and biases. Distinguishing between the roles of adviser and thinking partner helps you develop the advisory network that is most relevant to you and your leadership challenges. You must also distinguish between those colleagues who are superior advisory resources and those who are better thinking partners, in order to cultivate the right group of leaders around you.

The Habit of Relationship

You need to understand how you work with team members and thinking partners (your Habit of Relationship) to ensure that you undertake the right kind of thinking (your Habit of Mind) on the important issues. In fully engaged exponential thinking with others, you:

- Listen.
- Are willing to be wrong.
- Ask for help.
- Create an environment in which people feel safe expressing opinions.
- Share the spotlight.
- Know when to do expert and exponential thinking.
- Think about yourself as part of a larger whole, or many larger wholes.
- Are committed to developing your own capacity and that of others.

Knowing yourself — your gifts and faults alike — is the starting point for creating opportunities through the three habits. The next step is to build relationships that support and sustain your leadership with trust. Trust is dynamic. It is the central question of leadership and an issue that leaders must regularly revisit.

Understanding Trust

There are three fundamental distinctions of trust that leaders must understand and develop:

1. Personal trust. This is the trust that develops in the workplace from shared tasks and an understanding of your colleagues' strengths, weaknesses, preferences and the like — in other words, what makes them tick. For most people, this is the basic meaning of trust, which becomes problematic as you move "up the ladder," and your colleagues come to you looking for **a)** the same old trust, and **b)** access to power. You must understand this, grapple with your new roles, and tailor your thoughts and actions to meet new professional (not personal) responsibilities.

2. Expertise trust. This is the trust that comes from competence and knowledge in a particular subject matter or process. It focuses on knowledge, judgment and thinking abilities. As you proceed through the ranks, you must

(continued on page 5)

Four Signs That It's Time to Reach for the Third Opinion

There are a number of patterns that emerge when you feel the need to reach for your inner circle, including:

✓ When you know you're capable of taking action, but you're unable to focus for the requisite amount of time.

✓ When you feel your organization will be in serious trouble if you don't do the right thing.

✓ When you know you shouldn't tackle an issue on your own, regardless of whether you have the time.

✓ When you know you're capable of taking action, but you also know you'll be better off if you think through your options with someone else.

Trust takes time; most leaders start building their inner circles as an Early Leader and allow them to evolve over the course of their careers. It's never too late to start, and the trust and perspective afforded you through building your inner circle have never been more critical.

Habit of Mind

(continued from page 4)

be able to discern quickly to what degree you can trust the expertise of the people you come across, regardless of the level of personal trust you might establish with them.

3. Structural trust. This type of trust refers to how much someone's position or role affects your confidence that he or she will be able to deal with you straightforwardly. It is the kind of trust that changes the most as you become more senior in your company, since with higher rank comes the greater likelihood that people will want to influence your thinking for their own purposes.

The Nature of Relationships

The nature of your relationships becomes much more complex as you rise through the leadership ranks. Think of your relationships in terms of three distinct categories: action vs. inquiry, internal vs. external, and working vs. inner circles.

You need *action* teams to carry out the day-to-day business of your organization — fighting fires, solving problems, setting and meeting goals, and so forth. Beyond that, however, you also need teams of *inquiry*, to help you think beyond what's urgent and immediate to what's important and long-lasting. Of course, action and inquiry will not always be independent realms — intertwining the two helps drive results and performance.

Internal and External Circles

You must also build your *internal* and *external* circles, creating connection between the world of your organization and the world outside. This is not to say that you must develop powerful resources in your external network to compensate for weaker internal teams or other deficiencies within your organization. On the contrary — the better your internal teams are, the better your external teams need to be, to provide vital processes, practices and data outside organizational boundaries and put them to work inside.

Your working circle is the essence of your daily work life. It is comprised of those with whom you are regularly in contact and on whom you count as resources. Your inner circle is increasingly important as you rise through the ranks. As an Early Leader, your inner circle will likely include key staff members, supervisors, team leaders, and other colleagues with whom you work intensely. As you move through the ranks of Key and Senior Leadership, with their broad responsibilities, you will see distinctions between your working circle and inner circle. Being clear about the distinctions between the two enables you to focus, effectively delegate, and leverage your time. ■

For additional information on not believing your own hype, go to: http://my.summary.com

Habit of Focus

The hardest part of leadership is to keep sustained focus on essential topics and data, not just the urgent, *gotta-do-it-now* needs. If too much of your work is urgent, you are not appropriately focused on what is important. You are merely careening from crisis to crisis. Mastering the Habit of Focus — the ability to move forward with important but nonurgent issues in a chaotic, high-pressure environment — is crucial to effective leadership.

You must devote your most precious resource — your unscheduled time — to the most important issues that affect you: the ones that hold the greatest potential to yield the highest returns over time. This includes using your time for reflection and inquiry — a much more difficult thing to do than you might think. The great gravitational force of the workday gives immediate tasks too much pull. Without planning things carefully, you will likely find your time constantly slipping away.

Focus Is Your Responsibility

You and you alone are responsible for your focus. If you intend to focus on some important issue that reaches beyond urgent, day-to-day matters, you must make it a real part of your work. You need to schedule time, space and resources to address the issue, or it won't happen. Urgent issues have huge pull and will take up all your time and then some if you let them. The Habit of Focus uses your Habit of Mind and Habit of Relationship to drive results from your nonurgent, yet important leadership agenda.

Frame Your Issues Clearly

You must learn to frame your agenda. Strategically framing issues — setting context, time frame, scope and viewpoint — is work that is among the cornerstones of leadership. Work with your best thinkers and your inner circle to get this done — framing work is inherently exponential. How you frame guides what models you choose, what assumptions you maintain, what interrelationships you pursue, and so forth. When you frame your agenda, think of these things:

- How narrowly or broadly am I thinking about my challenges?
- Would it be helpful to frame the key issues at several different levels?
- What is my time frame for this issue? Why?
- Where does this issue fall in terms of importance and priority?
- What mental models and assumptions do I have that could affect how I frame this issue?
- What tools might I use to frame this issue? What are the limits of these tools?

(continued on page 6)

Habit of Focus

(continued from page 5)

● What is known and not known about this issue?

Of course, beyond framing specific issues, you need to have a clear sense of what your overall leadership challenge looks like. Only once you have a sense of the whole can you develop a reasoned response to any particular issue. ■

The Inner-Circle Life Cycle

Let's explore how inner-circle relationships progress through the stages of leadership: from Early Leadership (a first assignment as the head of a unit), to the stage of Key Leader, and finally, to achieving Senior Leadership at the top of an organization.

Both the issues of leadership and the ways in which thinking partnerships develop change profoundly over the life cycle. Thus, how to best establish, nurture and grow the leadership circle relationships that will be essential to your success is a crucial topic to address.

Building Lifelong Leadership Circles

Your advisory networks and teams are very powerful leadership resources, precisely because they are full and fully developed relationships. Most leaders, even young ones, have some form of advisory network, usually informal — a friend you can call for advice, or a group of people with whom you trade favors.

As you progress as a leader, however, you become increasingly empowered to create, staff and use an ever-growing advisory network. You should populate it with people you really click with — people of the highest caliber, people with whom you are completely committed to working. Your advisory network is built around a single visionary person: you.

As such, its composition and use will necessarily change as your career progresses. You need to understand what you already have in place, and how those people currently serve or fail to serve you. Understanding what makes you powerful in exponential inquiry will allow you to build this team to support your strengths.

Start Right Now

How should you begin? Start by asking yourself these key questions:

● What kinds of contacts and network have I built, and how and why do I use them?

● Are there teachers, mentors, friends and activities that have been particularly important in my development at some stage in my life?

● How do I include my spouse or significant other, family members, and personal friends in my current inner circle?

● When have I had a conversation or ongoing dialogue in which I significantly changed my understanding or learned something I did not expect? What were the conditions and nature of the relationship that led to the insight?

● Are there critical areas of inquiry for me now where I find I have no thinking partner, or where the thinking partners I do have are lacking in the expertise, perspective, or structural trust I need?

The Stages of Leadership

While there are no hard and fast demarcations in the stages of leadership, three broad distinctions are useful: Early Leader, Key Leader, and Senior Leader. Level of responsibility for the business is a good way to think about the leadership stage. In smaller businesses, Key and Senior Leaders routinely face decisions across many functional areas that have direct impact on the business. In large organizations, the Early Leader might manage 20 to 50 people, with a significant role to play in the organization and real decision authority that impacts results. The Key Leader typically leads a strategic business unit or a division. Some large global corporations make this distinction when they think about their "top 200" leaders. Senior Leaders occupy the very top levels of the organization. ■

Early Leaders

Most individuals at the Early Leader level are immersed in mastering the basics of their job responsibilities, in understanding the dynamics of their organizations, and in demonstrating the capability to lead groups to deliver business results. They must first learn to develop a few key advisory relationships to begin to get the third opinion regularly. Second, they must lay the groundwork for their long-term leadership circles.

Habit of Mind for Early Leaders

In order to develop the Habit of Mind, Early Leaders must work to improve their exponential thinking, to look for hidden assumptions, attempt to disprove hypotheses, actively seek out the data points that don't fit, and analyze trade-off and risk. They must ask themselves these questions:

● Are there things I see as clear-cut issues that someone four levels above might see from many perspectives and not as being so clear-cut? Do any of these issues directly affect my excelling at work today?

● Are there issues or challenges that seem persistent or recurrent despite my best efforts to work on them? What are the underlying dynamics that seem to keep me from making progress on these issues?

● Are there things that I know that top management doesn't know that, if they did, would lead them to make

(continued on page 7)

Early Leaders

(continued from page 6)

very different decisions?

- Are there people I am working with who might have a different point of view about the world, based on a different background and understanding of the world?
- How much flexibility do I have to structure my time? Am I using my time as effectively as possible?
- Have I been caught unaware by a business problem? What can I do differently to better prepare myself for such things in the future?
- Are there people who think about things and frame questions in ways that are better than I can? Do I admire these people? What makes them able to do that?

These skills are difficult to develop alone, which unmasks a need for thinking partners to help you with your exponential thinking. It is also critical to listen to these people. Use the answers to these questions to help you integrate multiple perspectives and develop new skills and knowledge. To improve your listening skills (and, consequently, your exponential thinking), you must create opportunities to remind yourself to listen for the unexpected idea, the different perspective, and the unspoken truth.

Habit of Relationship for Early Leaders

Early Leaders have the potential to cultivate a wide network of contacts, both inside and outside the organization. Broadening one's spectrum of networks to include thinking and sharing perspectives has been key for helping some Early Leaders improve their networking.

Early Leaders broaden their base of relationships first by determining who in their day-to-day interactions might be interesting to get to know better over time — people with new or different perspectives on common issues. Early Leaders try to imagine how operations might be different if these people were not around, or, conversely, what they would do with and for these people if they were going to be in the leader's inner circle for the long haul. The leader must also be cognizant of how effective he or she is at cultivating and maintaining relevant contact with these and other colleagues with whom he or she is not involved on daily issues.

First, however, the Early Leader must learn how to develop contacts outside his or her organization. An external network can be built from contacts made through trade associations or trade shows, through alliances with other organizations, through local colleges or business schools, alumni networks, chambers of commerce, nonprofit activities, and many more.

Habit of Focus for Early Leaders

One critical objective at the beginning of building and using your advisory network is learning how to get results from insight. Knowing what to do with what you learn is the difference between thinking in the abstract and truly powering up your leadership capacity. Armed with new insight, you must move forward and find an outlet to use that insight, understanding the full range of stakeholders for your ideas and calibrating your ideas with the organization's goals to make the biggest impact possible. Most importantly, you must find ways to ensure you are able to see your new ideas through to a result.

Keep focused on nonurgent issues. Work with a special adviser on focusing your insights to gain results — this is perhaps the best point of concentration for an early-stage advisory relationship. Having this partner will help you move from being someone who comes up with many good ideas that aren't acted upon, to someone who uses innovation to get great results. This is often a determining factor in how quickly you move from Early Leader to Key Leader. ■

Key Leaders

It's never too early or too late to start reaching for the third opinion. The critical juncture for outside insight and inner-circle thinking partners typically comes as leaders hit their stride as Key Leaders.

Habit of Mind for Key Leaders

Having developed the basic capabilities of Early Leadership, Key Leaders must turn their full attention to developing their complete Habit of Mind. By reaching the Key Leader level, it is certain that you have developed unique patterns of success by drawing on your curiosity, your self-awareness, and your awareness of others, different perspectives, and exponential thinking.

To further your Habit of Mind, consider these key issues:

- How your active curiosity manifests itself in day-to-day work.
- How well you understand and value the abilities of others.
- Whether you avoid diving into issues where there are likely to be no clear-cut answers, and how you prefer to tackle those issues (alone or with others).
- How you mitigate bias in your information sources.
- How you determine what best supports your ability to judge yourself from all angles, rather than from a single, self-interested lens.

Habit of Relationship for Key Leaders

The first signs of changing relationships and trust appear when one moves from Early Leader to Key Leader. Your primary inner-circle action team might no

(continued on page 8)

Key Leaders

(continued from page 7)

longer be the right group to handle inquiry-related issues. Certain things might be difficult to discuss with this group, for a variety of reasons. You need to populate your inner circle (internal and external) with people you value for their expertise, exponential thinking capacity, shared personal chemistry, degree of structural trust, relevance to nonurgent agenda items, and reputation/relationship to the organization.

To whom can you turn with unspoken concerns about an issue or decision? With whom would you most want/need to think before making critical decisions? Who sees the problems in a similar fashion as you? Who sees things differently, challenging your blind spots most effectively?

Habit of Focus for Key Leaders

How you spend your unscheduled time is a most significant factor in what kinds of results you and your teams will achieve, and what your career trajectory will be. You must prioritize your needs; increase and improve your external relationships, contacts and resources so that you can turn to them with confidence; and develop your inner circle, working with exponential thinking partners. Get informed perspectives, challenge your choices, refine your inner circle, and create your third opinion team — these are the things leaders do to challenge themselves, to challenge their perceptions, and to find new ways of solving problems.

Some other things to consider when developing your Habit of Focus include the following:

- Continue to ensure that your inquiry shapes successful action.
- Manage the inflow of advice, counsel and information you receive. You don't have to take everything that is offered.
- Structure your advisory network to meet your needs and your thinking style.
- Allocate the time you need to focus on your nonurgent important agenda.
- Expand the impact of your advisory network to your organization. ■

Senior Leaders

The move to Senior Leader means a whole new level of leadership challenges. You'll need greater vision, broader focus, and longer time frames. Your actions, and the values embedded in those actions, will be mirrored in your organization. Every move you make will be placed under a microscope and scrutinized for intent and direction.

Many leaders can thank their advisory network for helping them get from Key Leader level to Senior Leader level. At the Senior Leader level, bonds and loyalty on both sides run deep. As the nature of responsibility and power changes at the Senior Leader level, your advisory network must likewise grow with the challenges you now face.

Deepening Your Habit of Mind

Now that you've arrived at the Senior Leader level, consider your inner circle. Is it sufficiently diverse to help you with a wide range of issues? Do the people in your inner circle help you to broaden your perspective and options, helping you to think in new ways?

Turn the camera on yourself now. As you become more successful and powerful, are you honest enough to be able to explore uncomfortable truths with your thinking partners? Relationships begun in expertise, inquiry and trust must develop as you develop, as your partners develop, and as you all gain in experience and skill.

Broadening Your Habit of Relationship

As a Senior Leader, you must spread your net of key relationships wider than you did (or were able to) as a Key or Early Leader. You must determine what must be done to get the top people inside and outside your organization to work with you. This is where your personality and leadership capital — your reputation capital — might come in handy, to attract the best and brightest to you, and to consider you as a thinking partner.

One way to attract them is to help them achieve their goals. As a Senior Leader, you are in a unique position to make your thinking partners a powerful force in your organization. Once you have proven to be successful in such an endeavor, other key thinkers will likely follow, including some you might not have been able to access before. Now that you're at the Senior level, it's a whole new game.

Challenging Your Habit of Focus

Even as a Senior Leader, you must focus effort on your own growth, as well as that of your company and advisers. You must regularly push inquiry to its limits and encourage others to do so as well. You must determine whether the challenges of Senior Leadership cause you to reframe or refocus the boundaries of your inquiry. This must happen regularly — otherwise, you get mired in old patterns and old thinking.

You must also focus some time on considering your legacy — what you will leave behind in your organization when you retire or otherwise move on. Have you concentrated on how to best spur innovative ideas in the lower ranks? Have you groomed anyone in the Early Leader ranks to move up to Key Leader, or from Key Leader to Senior Leader? Let your legacy be one of intelligence, development, thought and results. ■

THE SUMMARY IN BRIEF

Is it possible to distill decades of real-world business experience into a handful of guiding principles that entrepreneurs can employ to overcome adversity?

The Touchstones of Leadership: Essential Principles for Business Leaders takes on this challenge. The book brings together 45 business principles organized within a comprehensive four-part model to guide the reader through organizational, operational, and strategic issues faced by entrepreneurs on a daily basis.

Author Joseph Carleone adopts a pragmatic approach towards the presentation of the essential principles for business leaders. He draws from executive experience spanning decades and his profound knowledge of various industries – from aerospace to defense, chemical, pharmaceutical, and cosmetical, to name a few.

IN THIS EXECUTIVE BOOK SUMMARY:

- Learn how to employ the 45 touchstones to overcome common business challenges and become a better leader
- The reasons why these touchstones are universally applicable across industries and corporate cultures
- Real-world examples of how the touchstones have been applied to various challenging situations
- The importance of value-centered leadership

Part 1: Managing Oneself

Touchstone 1: Don't Focus on Things Outside of Your Control

In years of leading different organizations – from R&D to high-volume manufacturing, program management to general management, marketing to business development, and engineering to CEO – I have found that people often get caught up in worrying about things beyond their control. While these can be significant concerns, and leaders should be aware of them and have mitigation plans in place, the best thing to do in all cases is to do the best job we can and not worry about what is outside our control.

Touchstones 2: Never Mistake Activity for Achievement

At all levels in a business organization, it is essential to avoid getting bogged down with activities that do not lead to results that create value and improve the business or organization.

Touchstone 3: For Minor Matters, Trust Your Mind, for Major Matters, Rely on Your Gut

Minor, in this context, does not mean unimportant. It suggests matters that are more directly addressable and matters the decision-makers can get their arms around more easily because most of the facts are there to be analyzed. On the contrary, significant, or major, matters are ones that are constrained by aspects that are somewhat out of our control, such as the complexity of the situation, time, and lack of data. Insightful gut feeling is typically required in four problematic areas:

- Chaotic: Where an issue is poorly defined
- Crises: When rapid response is required with no time for detailed analysis
- Change: When things are changing so fast that no detailed data exist
- Cryptic: For highly ambiguous issues where the factors are somewhat contradictory

Touchstone 4: Consider Using the Seventy-Two Hour Rule When Faced with a Major Surprise

When challenging situations occur, it is often best to investigate before reacting. Very often, initial reports during a crisis need to be corrected. It usually takes seventy-two hours to grasp the essence of the problem and put a plan in place to deal with the issue.

Touchstone 5: Focus on Relationships and Results, Not Activities and Time-Saving

To be successful in the long term requires relationships with colleagues, external customers, internal customers, suppliers, bosses, subordinates, owners, and those in the community. In team structures, we need to be able to challenge one another to achieve high-quality results. This requires trust and the right chemistry. Furthermore, we must not create problems that don't exist. That is, don't "overthink." Risks must be taken to grow, both personally and in business. The fear of office politics must be avoided, and we must never make differences personal.

Touchstone 6: Let Your Principles, Not Circumstances, Guide Your Behavior

Most of us can agree on the following Covey principles to guide a business operation:

Fairness, Patience, Honesty, Kindness, Integrity, Quality, Dignity, Charity, Service

If internalized by the organization, these principles will drive trust and respect. Value statements have a place to provide guidance, but values must be aligned with the principles stated above and internalized by the business members.

Touchstone 7: When You Are Out Selling, Never Discuss Religion or Politics

Religious beliefs and political preferences are not germane to almost every business transaction, and discussing these beliefs will not add value to any business setting. Fundamentally, these two topics, politics and religion, can initiate passionate responses when broached, often causing serious arguments that have nothing to do with the business matter.

Touchstone 8: Never Pursue Glory; Pursue Excellence

Focusing on the recognition aspect of a project or decision can remove the focus necessary for a successful result, especially in the longer term. It will encourage cutting corners and an attempt to accelerate the task to achieve "success" sooner without the permanence necessary to be truly successful.

Touchstone 9: Procrastinators Are the Leaders of Tomorrow

The results of decision-making and subsequent action are clear measures of how leaders perform. The timing of these decisions and actions will nearly always affect the quality of the results that occur from these decisions and

Procrastinators are paralyzed by their indecision to act and fail to complete tasks on time.

actions. Procrastinators are paralyzed by their indecision to act and fail to complete tasks on time. There is a clear distinction between one who constantly puts off deciding and a good leader who waits until it is absolutely necessary to make a decision. Timing is everything in decision-making, and making a decision out of convenience versus waiting for appropriate information is an important distinction.

Touchstone 10: Sometimes You Must Take a Step Back to Take Two Steps Forward

We all try to keep pressing forward on our current path, whether our careers, our current project, or building a relationship. As we pursue these, however, we may realize we are on the wrong path. When this suspicion arises, it is often advantageous to take a step back and review the overall landscape and strategy of what got us to where we are.

Touchstone 11: Those Who Dare to Teach Never Cease to Learn

As you quietly ponder and develop your business strategy and associated action plan, think seriously about how you will communicate the plan to your team. The best way to learn and develop a complex subject is to teach it. Your team expects you to teach them what you know. The teaching is often quite informal. It can be by example rather than direct instruction. You must be aware that you are always teaching, whether you like it or not.

Touchstone 12: Imagination Is More Important Than Knowledge

Knowledge is constrained by what is currently understood and limited by the body of works that exist. Yes, that body of knowledge will grow in the future, but that growth is driven by those who push the boundaries and experiment with new things that have yet to be envisioned. This is where imagination comes into play. Imagination is the ability of the human mind to see things that don't exist today but could.

Touchstone 13: Managing Is Doing Things Right: Leading Is Doing the Right Things

This well-known statement is a great guideline to describe the difference in our overriding responsibilities when operating as managers compared with when we are operating as leaders.

Part 2: Interpersonal Skills

Touchstone 14: Treat Employees as You Would Want Them to Treat Customers

Why don't people believe CEOs and other business leaders when they say, "People are our most important asset"? Have you ever heard a CEO state the opposite or allude to some other aspect of the company being more important? The reason for this is that CEOs whose sincerity is questioned have yet to instill trust and respect throughout their organizations. As The Seven Habits of Highly Effective People pointed out, treating employees as customers is an excellent way to engender this trust.

Touchstone 15: The More You Expect of People, the More They Achieve

Motivate people by expecting more of them. People are genuinely encouraged by leaders who believe in them. It drives them to step up a level. Haven't you achieved more when you were expected to perform better? Speakers often perform better when in front of an audience than when practicing. This also holds for musicians and actors who perform better in front of an audience versus private rehearsals.

Touchstone 16: No Deal Is Better Than a Bad Deal

Part of entering negotiations with "no deal" as an option is to have a Plan B if you find it necessary to walk away. Good leaders always think in terms of alternatives in the event of a failure. They must be able to pivot in a different direction immediately when they see their primary path being blocked.

Touchstone 17: Fear of Loss Often Results in Irrational Decisions

Irrational behavior among otherwise rational, intelligent, and well-trained people is driven by situations or conditions that block the normal, logical thought process. These situations sway people to react in specific ways because they trigger psychological undercurrents. It is important to

remember that people will always be influenced by psychological forces that can create irrational behavior. So, we need to recognize that by understanding these psychological influences, we can work to offset their power.

Touchstone 18: Trust Is the Highest Form of Human Motivation

One of the hallmarks of a good leader is a high level of trust demonstrated within the leader's organization at all levels. High trust throughout an organization will create communication channels that are efficient, effective, and quick. Even poorly phrased communications will be interpreted correctly. On the contrary, in low-trust environments, even very carefully constructed communications will be misinterpreted negatively.

Touchstone 19: Keep Those Who Hate You Away from Those Who Haven't Made Up Their Mind

Hate is a lack of trust. In an organization, there will be people who don't trust you as the leader. So, when introducing new players into the organization, it is essential not to let the "distrusters" significantly influence those who haven't had a chance to evaluate the leadership objectively.

Most likely, you won't be able to convert or remove all the detractors, especially in larger organizations, so expect some sabotage, especially in unnecessary delays in implementing changes or passive-aggressive behavior. It is essential to recognize that rational thinking and debate will not work with people who don't embrace change.

Touchstone 20: Hate Is Difficult the Closer You Get to Someone

When people feel displeasure with others or with policies, processes, or organizations, they often erect barriers to avoid displeasure, even though they may not understand the reasons for their unpleasant or uncomfortable feelings.

These barriers provide a protective shield, or at least people believe they do, making them more self-centered. In addition to these barriers inhibiting any real form of collaboration, they can result in hatred and resentment. The hate continues to get stronger and stronger as the distance between the parties increases. As you work to bring the parties closer, try to empathize. It is essential to focus on the good things the parties have accomplished and highlight the expected new achievements. Things must always be kept at a highly professional level, and it is important to work on transforming enemies into friends.

Touchstone 21: Leaders Strive to Be Respected, Not to Be Loved

To be respected, you should:

- always deliver more than promised.
- respect yourself with confidence and understand no one is perfect.
- bring people together.
- fix the problems; don't fix the blame.
- create a learning organization.
- praise accomplishments publicly; criticize privately.
- learn to love change.

Touchstone 22: The Human Soul Hungers to Be Appreciated, Valued and Recognized

It takes work to develop a culture where people genuinely want to see one another be successful. It requires the entire leadership team to listen intently and with genuine empathy. In addition to listening, expressing appreciation is a way to develop a culture of respect.

Touchstone 23: A Formula for Failure Is to Try to Please Everybody All the Time

Leadership requires making difficult decisions that are often unpleasant for coworkers but necessary for the business to be successful. The key is encouraging ideas, objections, and alternatives to the surface, being heard, and being thoroughly evaluated. People must truly feel that their opinions were honestly considered. Then, make the final decision and logically explain the rationale and reasons.

Part 3: Managerial Skills

Touchstone 24: A-Players Hire A-Players, B-Players Hire C-Players

A-players tend to seek excellence, which attracts other A-players. This drives the business toward an authentic culture of excellence, whereas B-players hire C-players. Looking at the team surrounding a leader will be a strong indicator of which leaders are A-players and who are B-players. B-players are often insecure, making hiring people who might outperform them uncomfortable. In reality, leaders are highly recognized for picking the best people.

Touchstone 25: Never Negotiate Against Yourself

In essence, life is a negotiation. In both our personal and

Cost and price negotiations often take one of two paths: line-by-line or bottom-line.

work lives, many of our day-to-day interactions are negotiations. That is why it is so important that we understand how to interact both in gathering information (listening) and in influencing behavior.

Touchstone 26: Never Negotiate "Line-By-Line" and Bottom Line Simultaneously

Cost and price negotiations often take one of two paths: line-by-line or bottom-line. In the line-by-line approach, the negotiators review the major contractual tasks; discuss the scope of each task, the people assigned, and the purchased materials required; and debate the cost or price of each line item or task. The idea is that once the negotiators haggle out their differences on each line item, it becomes a simple addition to get to the total or bottom-line price for the contract.

In the bottom-line approach, the negotiators focus on the overall goals, objectives, and deliverables under the scope of the contract and directly address the total price. They often use similar contracts as benchmarks and adjust the price accordingly. They also often use competitive pricing as a starting point.

Problems occur when you start with the line-by-line approach but the total price by adding each line item does not match the buyer's expectations. The buyer then switches to the bottom-line approach, ignoring all the line-by-line work done. If this happens, the major problem from the seller's perspective is that the seller has already given up concessions on price and scope detail during the line-by-line discussions. Now, the buyer wants further concessions.

At this point, the seller should not make bottom-line concessions. It is not fair for the buyer to expect that. This is unfair to the seller and wastes a lot of time for both parties. The only fair thing to do at this point is to go back to the line-by-line approach and see if the buyer can live with scope and schedule changes to allow the bottom-line price to come down to the expected amount.

Touchstone 27: Once You Get into a Hole, Stop Digging

The fundamental definition of being in a hole is making the same mistake repeatedly. Sometimes, we don't even recognize we are in a hole. This is because we have blind spots. We think we are doing everything right and keep doing the same thing as things worsen. This could be due to a bad habit, a poor policy, poor implementation of a good strategy, or just a very poor strategy. In this sense, to continue digging means repeating the same activity and wishing the situation or result will improve.

Touchstone 28: Don't Counter an Offer if You Can't Split the Difference

We have seen deals fall apart at the very end because one of the parties cannot make a final price adjustment to close the deal. The emphasis or advice here is to ensure the negotiators are positioned so that there is enough flexibility to close the deal and not get backed into a corner during the negotiation process.

Touchstone 29: Problems Are Opportunities Dressed in Work Clothes

Life is opportunistic, as is business. Problems will occur in life and business. When these problems occur, our mindset determines whether we view them as opportunities or not. If we are pragmatic, we see that solving this problem will add value and is an opportunity.

Touchstone 30: In Theory, There is No Difference between Theory and Practice. In Practice, There Is

Applying a theory to a practical situation requires experience and often empirical data to validate the theory, define its limitations, and interpret the results it provides properly. Hands-on experience is essential for putting the theory into practice.

Touchstone 31: Forecasts Should Be Accurate; Targets Should Be Ambitious

This Touchstone triggers a considerable amount of challenge and debate. Some feel that forecasts should be developed such that, if targets are achieved, the forecast will become a reality. This approach will lead to relatively easy targets since people want to ensure the forecast is met. A

more entrepreneurial approach treats forecasting and target setting as related but different. Targets should be superior results that an organization desires to achieve. These targets are, therefore, a stretch from the status quo and an improvement from the present condition. The organization's members must develop the targets. All must buy into the fact that, while difficult, these targets are achievable.

Touchstone 32: Focus on Results and People, Not Methods

Delivering meaningful results creates value. Focusing on the results and metrics that matter to drive business value is important. Our processes are important, but the process is the tool; the results create value.

Part 4: Strategy and Alignment

Touchstone 33: Strategy Is About Deliberately Choosing to Be Different

An in-depth five forces (threat of new entrants, supplier power, buyer power, threat of substitution, rivalry among competitors) analysis not only assesses the attractiveness of an industry or business area but also provides insight into how you can position your business to be more competitive and vie for a greater share of the industry's profits.

Touchstone 34: The Essence of Strategy Is Choosing What Not to Do

It is always tempting to deviate from the strategy when presented with a highly attractive business opportunity inconsistent with the strategic direction. But, pursuing it can be destructive in the long run as resources get diverted to a profitable venture, causing the inability to respond to an opportunity in the business strategy's sweet spot. That is not to say we won't pick up a "golden nugget" we see by the road, but we shouldn't go off the road to look for it.

Touchstone 35: If You Can't Fix It, Feature It

Certain unavoidable negative situations or conditions are often encountered as part of doing business. These may even threaten a company's reputation or give customers or investors pause. Sometimes, they are simply the weaknesses embedded in the business. These negative situations, however, are very often not truly detrimental to your delivering products or providing services in the long run. Therefore, there is a natural tendency to distract others from the negative issue or avoid discussing it. Often, a smarter solution is to turn this liability into an asset. It also can become a point of differentiation from the competition.

Touchstone 36: Focus on What's Strategically Best, Outsource the Rest

Activities determined to be nonessential to the strategy or generic can be safely outsourced. Tailored ones provide unique competitive value and should be kept in-house or brought in-house if currently outsourced. It is important to retain control of those tailored activities to maintain the best competitive advantage.

Touchstone 37: Feed Opportunities; Starve Problems

Everyday problems are like weeds in a garden. You don't want to ignore them or give them much time and attention. Get rid of them carefully, but don't fertilize, water, or encourage them to grow.

Touchstone 38: Bad News Is Not Like Good Wine; It Doesn't Get Better with Age

When there is bad news, and something goes seriously wrong, the mature leader will face this, understand it, and do what is necessary to rectify the situation in a timely manner, regardless of the personal cost or the cost to the company.

Touchstone 39: Always Keep Time on Your Side

When involved in a business transaction, one of the worst situations you can encounter is to be forced to complete the transaction because of time constraints. Sometimes, this is unavoidable, but most times, good planning, combined with realistic time parameters, can avoid such situations.

Touchstone 40: Maintain Strategic Continuity; Don't Keep Pulling Up the Flowers to See if the Roots Are Healthy

If you have a good strategy, give it time to work. A good strategy is based on the fact that your customers and their needs are enduring. Therefore, gestation time is important to make your unique value proposition work. A good strategy should not be abandoned for small, near-term disappointments.

Touchstone 41: Stop Doubling Down on Your Losing Strategy

A major change in strategy may be required in three scenarios:

- Customer needs change such that the core value proposition becomes obsolete

- Innovation invalidates the essential activities of the value chain
- Technical breakthroughs can overwhelm the value proposition

Touchstone 42: A Business Either Grows or Declines; It Never Remains Constant

Most businesses don't remain stagnant for long. They either grow or shrink. To establish a sustainable company, it is crucial to have a growth strategy with ambitious objectives. However, more important than that is cultivating a culture of growth with a competent leadership team.

Touchstone 43: Assuming Your Competition Will Fail Is a Losing Strategy

Don't underestimate what your competitor might be able to do. There are several ways that the competitor may become more competitive or even try to unlevel the playing field without your knowledge. When looking at the competition, our natural bias and loyalty to our own company cause us to underestimate the competition's ability to perform. The competition will likely perform better than we expect.

Touchstone 44: There Is No Upside without a Downside

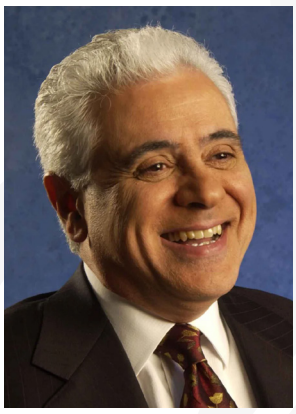
When making a decision to take a calculated risk, it is often useful to ask, "What is the worst that can happen?" And then ask, "How likely is it to happen?" The answers to these questions will inevitably supply the basis for a risk mitigation plan but also trigger a risk-reward evaluation.

Touchstone 45: Simplicity Is the Crown of Genius; Complexity Is the Cloak of Mediocrity

Einstein has been quoted as saying, "The definition of genius is taking the complex and making it simple," while da Vinci wrote, "Simplicity is the ultimate sophistication."

Conclusion

These Touchstones reveal a common theme or message: great leadership is built upon trust and mutual respect. For a business to succeed in the long term, it must prioritize establishing trust and respect as integral parts of its fabric. To foster a unified culture within an organization, it is crucial to select individuals based on their strengths and talents and to build upon those strengths. The company must remain focused to align itself with its business strategy. Finally, perseverance is essential for achieving success.



After receiving his PhD from Drexel University, **Joseph Carleone** helped start a company in the Aerospace and Defense industry, conducting R&D for the Department of Defense. For nearly 25 years, Joe held various leadership positions at Aerojet. In 2000, Joe was appointed president of Aerojet Fine Chemicals which developed, scaled, and produced Active Pharmaceutical Ingredients (APIs) for the pharmaceutical industry. He is currently Chairman of Avid Bioservices and Lead Director of Sensient Technologies, and further serves as a senior advisor to OES Europe, specializing in trans-Atlantic M&A.

The Trust Edge

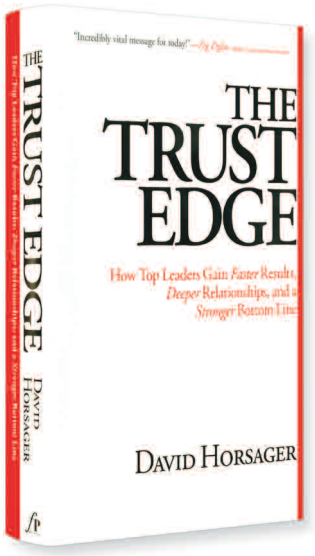
How Top Leaders Gain Faster Results, Deeper Relationships, and a Stronger Bottom Line



by David Horsager

THE SUMMARY IN BRIEF

In *The Trust Edge*, David Horsager reveals the foundation of genuine success — trust. Based on research but made practical for today's leader, *The Trust Edge* shows that trust is quantifiable and brings dramatic results to businesses and leaders. In this book, Horsager teaches readers how to build the Eight Pillars of Trust.

When leaders learn how to implement these pillars, they enjoy better relationships, reputations, retention, revenue and results. Fascinating and timely, *The Trust Edge* unveils how trust has the ability to accelerate or destroy any business, organization or relationship. The lower the trust, the more time everything takes, the more everything costs and the lower the loyalty of everyone involved. Conversely, an environment of trust leads to greater innovation, morale and productivity. The trusted leader is followed. From the trusted salesperson, people will buy. For the trusted brand, people will pay more, come back and tell others. Trust, not money, is the currency of business and life!

IN THIS SUMMARY, YOU WILL LEARN:

- The enormous impact of trust on your ability to succeed as a leader.
- How to identify and implement the Eight Pillars of Trust.
- How to extend trust to others and rebuild trust if it's been lost.
- The method to apply trust in the difficult world of the digital economy.
- Why trust can transcend cultural boundaries in business.

Introduction

In 2009 at the World Economic Forum in China, world leaders got it right when they declared that our biggest crisis is a lack of trust and confidence. We are in a trust crisis, and organizations are slow to realize the bottom-line implications.

From massive fraud in business to scandals in politics and athletics, we're lacking in trust. Meanwhile, the world is "flattening" in many respects. Cultures are meeting and expanding in ways that weren't possible even a decade ago. But globalization isn't a free ride. The megamergers and open markets have aroused new suspicions and misunderstandings. We can reach across borders, but we don't know how to be trusted by the people we find on the other side. In the 21st century, trust has become the world's most precious resource.

If you visit the Roman ruins or the synagogue in Capernaum, you will see that many parts of the structures have crumbled but the pillars still stand. Pillars hold something up. They are strong, solid and lasting. In the years I've spent studying the underlying connection between success and trust, I've identified eight key areas that are best described as pillars. These pillars are significant for anyone interested in building support for genuine success.

No matter what your role is, trust affects your influence and success. It has an impact at every level of business. Those who are trusted are effective.

Take responsibility for yourself. When you focus on increasing your own trust edge, you will enjoy greater success and impact. When you change yourself, you have the best chance of affecting your organization, your family, your relationships and even your world.

PART I: THE CASE FOR TRUST

The Trust Edge

Without trust, transactions cannot occur. Without trust, influence is destroyed. Without trust, leaders lose teams. Without trust, people lose sales. Without trust, organizations lose productivity, relationships, reputation, talented people, customer loyalty, creativity, morale, revenue and results. John O. Whitney, of the Columbia Business School, found, "Mistrust doubles the cost of doing business."

Trust Defined

Trust is a confident belief in someone or something. It is the confident belief in an entity:

- To do what is right
- To deliver what is promised
- To be the same every time, whatever the circumstances

You are trusted to the degree that people believe in your ability, your consistency, your integrity and your commitment to deliver.

The trust edge is the competitive advantage gained when others confidently believe in you.

While it may appear to be static, in reality trust is more like a forest — a long time growing but easily burned down. Trust requires time, effort, diligence and character. Inspiring trust is not slick or easy to fake.

There are two dimensions of trust. First, there is the dimension of time. This dimension goes from short to long. Another dimension of trust is depth. This dimension goes from shallow to deep. Deep trust is generally established over time. Deep trust often sprouts up quick-

ly if a trusted source testifies that you are trustworthy. I call this transferred trust. Because A trusts B, and B trusts C, then A trusts C.

When trust is deeply established, you will often be given the benefit of the doubt instead of having every action judged with skepticism.

Trust is not simply a dish in your leadership buffet. It is the table holding up the smorgasbord of talent demonstrated by your team every day. When organizations acquire the trust edge, it shows in every relationship and eventually is proved by a growing bottom line. Trust gives a concrete and critical advantage.

Impact of Trust

Trust, not money, is the currency of business and life. In a climate of trust, people are more creative, motivated, productive and willing to sacrifice for the team. What happens when the business gains the trust edge? Every aspect of business becomes more profitable. Customers will pay more, tell others and come back. With suppliers whom you trust, one call is enough. Delivery time and costs decrease because there is less double-checking, paperwork and follow-up.

The High Cost of Suspicion

Skepticism and suspicion create the opposite of trust and destroy motivation, teamwork and results. Skepticism brings everything into question, slows processes and promotes suspicion. America's public climate has been pervaded by suspicion.

A lack of trust is your biggest expense. As trust diminishes, procedures and laws increase, even for those who can be trusted. Millions of dollars that could be used for research, staff training, or benefits and incentives are being spent on oversight and accountability processes to accommodate regulations.

The more you're trusted, the less you pay. As trust goes down, value goes down. As trust in the market tanks, so does the value of the business. Without trust there cannot be economic activity.

If you happen to make a mistake that could erode trust, sometimes stakeholders will see your mistake as an exception and continue to have complete confidence in you. An extra measure of grace is commonly given to those who have laid down a solid foundation of trust. On the rare occasion when a mistake is made, those who have the trust edge are given the benefit of the doubt.

By earning the trust edge, you will gain a significant advantage that extends far beyond the bottom line.

Barriers to Overcome

Trust has decreased significantly over recent years. A study by Datamonitor found that 86 percent of consumers were less trusting of companies than they had been five years ago. Fewer than two out of five employees today have trust or confidence in their senior leaders.

To overcome the barriers, let's first identify them. Once we know where they lie, we will overcome them using the pillars.

- **Barrier 1: Conflicts of Interest.** Conflicts exist between shareholders and management, personal investors and banks, teachers and parents, and politicians and the public, to name just a few.
- **Barrier 2: Rising Litigation.** Trust can stay shallow. People are worried about whom they can trust or what someone might do to them if they make a mistake.
- **Barrier 3: Low Customer Loyalty.** Customer loyalty is lower than ever. People don't think of being loyal. They think of themselves. People no longer feel loyalty from companies, either.
- **Barrier 4: Media Coverage of Scandals.** Many would not think of others as being untrustworthy until they hear that someone has indeed acted in such a way. This makes them think that anyone might do the same to them, and distrust abounds.
- **Barrier 5: Speedy Social Networks.** Information, critiques and recommendations travel quickly across social networks such as Facebook and Twitter. Opinions that build or destroy trust travel around the world in no time.
- **Barrier 6: Technology.** The average person does not understand how it all works, and so technology can breed skepticism. Because trust is built by consistency over time, rapidly changing technology can be a barrier.
- **Barrier 7: Fear.** We most easily trust the familiar. With such rapid change, there is so much to grasp. If we don't understand something, it is hard to trust it.
- **Barrier 8: Negative Experiences.** Recent studies show that 80 percent of Americans do not trust corporate leaders. Negative experiences are a detriment.
- **Barrier 9: Individualism.** By nature individualism lacks a need, capacity and desire to trust. We must get rid of the arrogant assumption that we know everything and can do everything on our own.
- **Barrier 10: Diverse Thinking.** People prefer to work with others with whom they have something in common. Differing views can make for lack of unity.
- **Barrier 11: Instant Gratification.** People want everything fast, without effort, discipline or hard work.

Speed has become an expectation. Trust can take work and time.

• **Barrier 12: Focus on the Negative.** Much of the research concerning trust has traditionally focused on how trust has been ruined rather than how it can be built.

PART II: THE EIGHT PILLARS OF TRUST

Pillar 1: Clarity

Without a clear plan, employees are confused and become ineffective. Without a clear product choice, prospects won't buy. It's difficult to have faith in someone who has fuzzy plans or unclear expectations. Confusion breeds fear, frustration and lack of focus.

For the trusted leader, clarity starts with honesty. Clarity is also increased when a message is heard or seen frequently. According to *Edelman's 2009 Trust Barometer*, people need to hear information about a company three to five times in order to believe the information.

In your quest for the trust edge — your quest to become a trusted leader — clarity has three different and equally important areas:

• **Vision and Purpose.** Few things inspire trust or hope like every member of the team working together toward a shared vision. A clear vision unifies and motivates. Do one or two things well. It signals to clients that you know what you're doing and you're going to be competent in your specialty area instead of trying to be all things to all people. Narrow your organization's choices to a few good things, with specific groups in mind.

• **Expectations and Communications.** A clear communication of expectations will prevent both misbehavior and failure. When I'm specific with my request about what I want, I almost always receive what I asked for. When I'm vague in my requests, I typically receive something other than what I had in mind. Part of being clear is being transparent and authentic. Those who are trusted are candid; they aren't afraid to tell the truth in the clearest terms possible.

• **Daily Tasks.** People spend lots of time planning but very little time turning their plans into daily actionable tasks. Daily clarity leads to accomplishing the most important things every day.

Pillar 2: Compassion

Do not underestimate the bottom-line impact of compassion. The ability to show care, empathy and compassion is a strong component of trust. The following aphorism is true: "People do not care how much you know until they know how much you care." People want to do business with those who have concern for the whole of humanity.

There are four key ways we show we care. I call them the "LAWS" of compassion.

• **Listen.** Listening is a fundamental skill of genuine success, and it's hard to be great or trusted without it. Bad listening habits are not just rude; they are expensive. Keep eye contact. Listen with your body — gesture with your hands. Practice patience — listen carefully before you answer. Make a habit of seeing things from others' point of view. Hold one conversation at a time.

• **Appreciate.** Everyone longs to be appreciated and recognized. One of the most effective things you can do is to notice people doing good work and encourage, appreciate and thank them for it. People and their accomplishments are what give an organization its value.

• **Wake up.** Life is short. Many people go through life in a comatose state, never really engaged with those around them. It is so easy to be focused on the future that we forget to be present with people today.

• **Serve others.** It has become normal to think of ourselves first. To be trusted, we need to break free of that mindset. Those who act selflessly give us cause to

Whole Foods, Whole Character

In the late 1980s, Whole Foods Market company chairman and CEO John Mackey set the pay ceiling for his executives at no more than eight times the pay of an entry-level employee. This ceiling has been raised a few times since then, but Whole Foods Company is one of the few international companies to have a pay ceiling at all.

Amid high growth, it would have been easy for Mackey to demand a larger salary. Instead, he refused his stock option bonus, reduced his own salary to $1 per year, donated all his stocks to charity and set up a $100,000 emergency fund to be used by employees who were facing financial problems.

Mackey set an example for his organization. He's trusted, top to bottom, and has used that trust to spread a vision for greater impact in a stronger company. As a result, Whole Foods has grown from one store to more than 200, becoming the world's largest organic retailer. You cannot argue with his impressive level of integrity and resulting success. Mackey has the trust edge.

rely on them. When customers recognize that they're truly cared for, they show their satisfaction by buying again and again.

Pillar 3: Character

One side of character is integrity. Integrity is being consistent in thoughts, words and actions. The second side of character is having high morals by which to live. Those who live according to a strong moral compass have the trust and admiration of those around them.

Like any element of trust, character takes time, intentionality, selflessness and discipline. Doing what one says is essential to building trust. Great leaders keep their word and take responsibility. They do what is right over what is easy.

Advantages of implementing character in the workplace include enhanced morale, increased productivity, reduced staff turnover and strengthened customer relationships.

Character is formed by continued hard work and intentional effort. A great way to get started is by asking the fundamental question: Am I doing the right thing?

Breaking promises is a quick way to lose trust. We must hold ourselves to standards of high character if we want to foster positive impact and success.

We must think about our pattern of thoughts because all actions start as thoughts. Trusted people control their thoughts because they understand that pure thoughts lead to good actions. Good input leads to good output.

Pillar 4: Competency

We tend to trust those who we know can do the job.

Apple has created a following of committed customers who are willing to pay more than competitors' customers because Apple delivers fresh, innovative technology again and again. Apple has created an environment where high standards of competency result in innovative usable technology. We must be highly competent in the areas where we want to be trusted.

The ability to learn quickly, amid rapid change and even crisis, is more important than learning any specific skill today. A new MBA may feel equipped with many skills, but those specific skills change quickly in the current environment. The greater need is learning and adapting even in the midst of crisis.

Join a Mastermind Group

Synergy occurs when the output is greater than the sum of the parts. When things work in concert to create an outcome that is more valuable than the total of all individual inputs added together, synergy is manifested.

As professionals, however, we sometimes get so individualistic that we let teamwork fall by the wayside, and we lose the benefits that can come from being part of a team with a unified purpose. Others might seem like competitors, and we end up trying to fight the world alone. Obviously, this is no path to success. That's where the support of a mastermind group is helpful.

When you're facing a major roadblock, five heads are more likely to have the experience and answers than one. Life is better as a team sport. If you really want to get the best out of yourself and make a bigger impact, find a circle of like-minded individuals. Being part of a mastermind group is an excellent tool for sharpening your strengths and competencies.

Pillar 5: Commitment

Commitment is what true friends enjoy. There will always be people who will enjoy your company, laugh at your jokes and eat your food, but it's the ones who stick with you when effort and sacrifice are involved whom you really trust.

Martin Luther King Jr. endured 30 arrests, physical assaults and threats against his family because of his determination that men should live as equals. His commitment to that goal was so obvious to everyone around him that men and women followed him into confrontations with angry mobs, trained police dogs and fire hoses.

The strongest leaders in history demonstrated an unwillingness to give in when things were tough, and so they were able to unite others in support of their cause. These leaders were committed to something beyond themselves. Commitment reveals devotion and loyalty.

Own Up

In my research for this book, I saw time and again how those who were committed took responsibility for their actions. In our litigious culture, there's always someone to blame. Deflecting blame is no way to build trust. Take personal responsibility and spread praise.

If you want to build trust and earn the faith and respect of every person in your life, stick to this simple principle: Consistently do what you say you'll do, when you say you'll do it. We have all been misled by leaders, salespeople, politicians and maybe even friends who make big promises but have weak follow-through. Don't be like them.

Pillar 6: Connection

At its core, trust is about relationships. It's a way to measure how we feel about our interactions with the people and organizations with whom we deal. People

like to do business with friends, and friendship starts with a connection.

It's amazing how much we can learn about our colleagues and friends if we just learn to ask the right questions. When we find something in common, a connection is even more quickly established.

Because we often don't get past the surface, we miss out on a depth of understanding that could allow us to better see the opinions, needs and challenges of others. If you are a leader, sharing the benefits of a project rather than making demands creates a feeling of ownership. Asking questions and then providing solutions forms a solid connection.

Pillar 7: Contribution

Contributors deliver results. And results are what make a person indispensable.

Some people are takers and some people are givers. Takers are in relationships only to receive. Givers invest in others. Givers understand the fundamental truth, "The more you give, the more you receive."

Consider how you can be a giver of the following:

- **Attention.** Can you notice or acknowledge people more?
- **Resources.** Can you set a plan to give away a larger percentage of your income every year?
- **Time.** Can you spend more time making a positive difference?
- **Opportunity.** Can you give someone a chance or an opportunity?
- **Help.** Can you help someone in a practical way?

Become a Contributor Every Day

How do you improve your individual contribution? Here are 10 key strategies for becoming a daily contributor:

- **Plan tomorrow today.** Plan out and prioritize the activities for the next day. Count the items on your list, and then number them in order from most important to least important.
- **Deliver with Difference-Making Actions.** Write down your most important current goal. Then write down the numbers 1 through 5. Next to 1, write the most important thing you can do today to accomplish that goal. Then write the next most important things under 2, 3, 4 and 5.
- **Bundle.** Phone calls, emails, and paperwork are prime candidates to be grouped together. They can be done more quickly and efficiently in a batch than one at a time. A great way to get through all of your meetings is to bundle them together. Have a "meeting" day.
- **Email efficiency.** Email can be an effective form of communication, or it can be a costly interrupter. Close your email. Check it at the top of every hour.
- **Keep a clear desk.** A messy desk invites your mind to wander. A clean desk leads to productivity and concentration.
- **Make meetings matter.** Hold fewer meetings. Be clear about what you want to accomplish. Distribute an agenda in advance. Set shorter agendas. Schedule meetings back-to-back.
- **Make a flight plan.** Come prepared to work. Bring along something you can work on if you find yourself with an unexpected block of free time. Take to the skies only when you are sure it's necessary.
- **Optimize your computer.** Ask for help. Work on one thing at a time. Periodically clean out clutter. Do maintenance during downtime and back everything up.
- **Practice a power hour.** For 60 minutes each morning, we don't do meetings, phone calls or emails. We don't take any interruptions. We focus on the activities we identified as most important for long-term impact.
- **Decide now.** Don't let indecision weigh you down. Delayed decision-making causes stress, pileups and time wasted searching for lost items. Make little decisions along the way.

Pillar 8: Consistency

All of the pillars are critical, but if they're not practiced consistently, they crumble.

Consistency is the only way to build a brand or reputation. With consistency comes trust. You will never get one big chance to be trusted in your life; you will get thousands of small ones.

Apply It!

Ask yourself: Am I the same every time? Do I deliver the same quality, act with the same consistency and speak with the same honesty all the time regardless of the circumstances or the people around me?

Habits don't change on their own, and even with good intentions, they're difficult to alter. Here are some of the steps that help create a habit-changing environment:

- Write down the habit you want to change. Writing it down solidifies commitment.
- Note the benefits of changing and consequences of not changing.

- It is easier to "replace" a habit than to "quit" it.
- Work on one habit at a time.
- Create a clear plan.
- Break the plan down into daily actions.
- Create appropriate accountability through a trusted friend or professional.
- Reward the target behavior.
- Keep it on top of your mind.
- Remove the distractions.
- Ask for help.

PART III: TRANSFORMING TRUST

Extending Trust

Becoming trustworthy ourselves, although not easy, is far less complex than the concept of extending trust to others. Given the unknowns, we wade into the waters of extending trust with caution.

When you extend trust to people, your expectations of them meld with your belief in them, and the combination inspires success. What is expected of people will probably be what they aspire to.

Believe in those around you, and let them know you believe in them. The rewards of extending trust can be truly extraordinary. Expectations and trust motivate teams to sacrifice and meet great challenges.

Where there is a lack of trust, everything costs more, takes more time and creates more hassles. Extending trust inspires greater efficiency and effectiveness.

Although you want to extend trust to people, how much you give should depend on how much you think they can handle. You want to start out with a little and let things grow from there. When people let you down, find out what went wrong and repeat the process. To those who show themselves trustworthy with a little, more responsibility and trust will be extended.

Rebuilding Trust

What happens when you need to rebuild trust? You have to get it back. To enjoy long-term success, you must be trusted.

Remember our "trust forest"? What do you do if it's been burned down? You salvage what's left and plant another one. After that, you keep doing everything you can to let the trees grow while you wait. Any attempt to build trust too quickly is likely to make things worse.

What are the seeds of trust? They're small promises that are kept. Whether the breach of trust was your fault or not, move forward with consistency and integrity. Be cautious with regard to whatever weakness cost you trust in the first place. If you have a habit of missing deadlines, focus on meeting your deadlines. If you've lost trust because you've done poor-quality work, look at how to gain knowledge through more education or mentorship. If your integrity is under scrutiny, remove secrecy, invite accountability and adopt a zero-tolerance policy for future indiscretions.

Apologize Thoroughly

When we've wronged someone or broken his or her trust, it's up to us to make it right. This is a big part of rebuilding trust. Part of that is apologizing in a way that satisfies the other person. Sometimes we might say we're sorry and then not get the results we were hoping for. If you aren't sure what will make things right, ask. Often those who have been wronged can tell us what they want. And even if they can't, the experience of being heard will often help defuse their anger and frustration. Make sure your apology is understood to be sincere and clear. A sincere apology process usually includes the following:

- I am sorry.
- That was my fault.
- What can I do to make it right or solve the problem?

PART IV: DEEP TRUST IN A FLAT WORLD

Globalization and Trust

Globalization, the shrinking of borders and broadening of our business horizons, is an enormous component of business today. But it presents an enormous challenge with regard to trust.

One of the most interesting things I learned in my research on trust is that diversity isn't always great for trust. That is, people more easily trust others who are like them, and are more apt to mistrust those who are different. Keep in mind that I define "diversity" not by color or ethnicity but, rather, by all of the ways we are different from one another: ways of thinking, backgrounds, political views and many more.

Be careful. I'm not saying diversity is bad. In fact, it is critical to innovation, creativity and success. The old saying is correct: "If we are both the same, one of us is

not needed." Embrace diversity for greater creativity and innovation, but consider similarities and opportunities to connect in order to build trust. When people do not have the same frame of reference, they may not know what to expect from each other. Find common ground.

In building trust globally, we must magnify the pillars of trust. Every culture elevates different values and views of success. Listen. Observe. Learn. In a high-trust climate, differences and diversity are valuable, beautiful and fruitful.

Here are tips for global interaction:

- Be humble.
- Be teachable.
- Be observant.
- Be quiet. (Most cultures are not as loud as our American culture.)

You may have to go the extra mile to win over international associates. Whether good or bad, the United States has a reputation that precedes you. Show people they can trust you, as an American and as an individual, and they most likely will. ●

Trust in the Online Age

Like globalization, the online revolution has brought thousands of new efficiencies to the way we work. But e-commerce has the potential to slow down trust. That's because the Internet is the ultimate anonymous medium. The person or company on the other end of a transaction could be anyone anywhere. In this environment, distrust is more prevalent.

With every book, CD and gadget sold, Amazon.com offers the consumers a chance to rate the product and comment on the service they received. Because of this, and because it posts the bad comments with the good, it is able to build trust quickly. Customers trust one another more than they trust marketing propaganda.

In the online age, reputation moves at the speed of light. Do something wrong, and the public will know about it within minutes. Get something right, and your reputation can skyrocket just as quickly.

One of the simplest ways to gain trust online is to make guarantees. Let customers know that you have a return policy if they aren't happy with your product. Put it in writing that you will not share or sell their contact information.

To show that you are trusted, consider the following tips for a trusted site:

- Be simple and clear.
- Be informative.
- Make it easy to connect with you.
- Show real people. ●

PART V: COURAGEOUS TRUST

A Sharp and Lasting Edge

Have you ever tried to use a dull knife? It takes intentionality and time to stop and sharpen the knife. It is the same with your trust edge. Sharpening it will give you an advantage in your career and life.

In a recent study, elderly respondents were asked about their biggest regret in life. The biggest regret was that they did not take enough risks.

Trust is always a risk. Risk can be scary. Risk takes courage. It might seem like a halt in progress to stop and make genuine connection. It takes discipline to continually build competency. It takes guts to risk your job or a relationship by standing up for what you think is right. Lay the groundwork of trust and enable yourself to take risks. Not every risk is going to mean a gold rush.

Trust flows from individuals, not organizations. Individuals are the conduit for trust. It's not up to your organization or the responsibility of anyone else. Your courage to take action and become trustworthy will be the invitation for others to follow. Keep working to build the pillars of trust. Start by laying the first brick. Persevere through the barriers. Be a clear, compassionate, high-character, competent, committed, connecting, contributing and consistent leader. When you are, you will enjoy the foundation of all genuine and lasting success, the trust edge. ●

RECOMMENDED READING LIST

If you liked *The Trust Edge*, you'll also like:

1. ***Smart Trust* by Stephen M. R. Covey and Greg Link with Rebecca R. Merrill.** This summary reveals why people and organizations are achieving unprecedented prosperity from high-trust relationships and cultures.
2. ***Credibility* by James Kouzes and Barry Posner.** Kouzes and Posner explain why leadership is above all a relationship, with credibility as the cornerstone.
3. ***Trust Agents* by Chris Brogan and Julien Smith.** The social media experts will show you how to build profitable relationships with trust agents or become one yourself.

THE SUMMARY IN BRIEF

In the volatile and cutthroat world of business, adversity is inevitable, but failure is not. Wes Wheeler's ***The Turnaround Leader: Rebuilding Great Organizations in the Face of Adversity*** offers a valuable blueprint for reviving struggling companies and creating sustainable success through disciplined leadership, hard work, and practical strategies. Drawing from his own remarkable career, Wheeler explains how even a business on the brink of collapse can recover with the right mindset, work ethic, and integrity.

Rooted in his formative experiences, from delivering newspapers to managing major projects or leading reputable pharmaceutical firms, Wheeler's journey is one of resilience and constant reinvention. His leadership during economic uncertainty, strict regulatory scrutiny, hostile takeovers, and the COVID-19 pandemic offers a useful guide for entrepreneurs and aspiring leaders alike. With a refreshing blend of realism and optimism, the book not only shares Wheeler's personal evolution but also equips readers with the necessary tools for overcoming hardship in any industry.

IN THIS EXECUTIVE BOOK SUMMARY:

- Identify and address systemic issues that lead to organizational failure.
- Valuable strategies to guide companies through financial, operational, or reputational crises.
- How strong work ethic and integrity can ensure long-term success.
- Real-world lessons from turnaround efforts in high-stakes industries like pharmaceuticals.

Preface

I wrote *The Turnaround Leader* for two reasons.

First, as a lifelong reader of histories and biographies, I have always found immense value in seeing past events documented and described so that others can remember them and understand how they led to where we are today.

Second, I hope to present current and future business leaders with case studies they might find useful in their decision-making. The challenges I faced in my business career have been unique, but the solutions I implemented as a leader are universal.

Chapter 1: Beginnings (1963–1978)

Turning Around Family Failures ... and Finding a Path to My Purpose

My childhood years were defined by two major failures: one in business and, shortly after, one in a marriage. The business failure came when I was seven.

My family and I had lived in Spain for two years, returning to Clason Point, New York, in the spring of 1963 to witness the tail end of a disaster —the still-smoking embers of the Wheeler Yacht Company. The shipyard had burned to the ground.

The fire devastated my dad. His lifelong dream – taking over the family business – had turned to ashes. When I was twelve, he divorced my mother and went on to remarry twice.

I helped Mom at home. Wanting to be responsible, I started working at age ten, washing cars, shoveling snow, and mowing lawns. At twelve, I got lucky. I nabbed a paper route.

My first job as a paperboy led to a lifetime of work and discipline. My paper route established habits for a life of hard work that I continue to keep to this very day. It's where my work ethic was born.

I earned my mechanical engineering degree from Worcester Polytechnic Institute (WPI) in 1978.

I graduated with distinction, the WPI equivalent of cum laude, and then I got several solid job offers. I said yes to one of the world's largest oil companies, Exxon.

LESSONS LEARNED

Failures can lead to opportunities. Struggling through early failures—even those not of one's own doing—often instills a natural instinct and a burning drive to make the future better. Working hard at a real job from an early age will establish a healthy, lifelong work ethic.

Chapter 2: Exxon (1978–1989)

A Whole New World

I like to refer to my time at Exxon as "career bootcamp," where I learned professional discipline. From 1978 to 1989, I absorbed management lessons—and life lessons—at Exxon Research & Engineering Company (ER&E). In five of those twelve years, I worked overseas on assignments in the United Kingdom, Japan, South Korea, and Italy. Stateside, I held posts in New Jersey and California.

After several projects and relocations, and after twelve years of being in the top 10 percent of my peer group, I wanted a promotion. But the promotion I felt I'd earned for more than a decade of outstanding service would not come, I was told, for at least a few more years.

That frustrated me. I lost my patience. A phone call changed my life. A North Carolina area code. A man named Tim Tyson. A chieftain in the pharmaceutical industry. Tim asked me if I might consider a career change. Yes. Yes, I would. Boot camp was over.

LESSONS LEARNED

I believe it's valuable to start a career with a large, established company. Why? It teaches you how to work with leaders and colleagues of all types—brilliant, demanding, lazy, or loser. It creates structure in a work life. You learn how to navigate the labyrinth of rules, policies, mood swings, deadlines, and dramas the business world presents.

Chapter 3: Glaxo (1989–2002)

Acquisitions, Mergers, Launches, and Carving Out a Global Operation

I had never heard of Tim Tyson before his call. I had never heard of his company. I learned that Glaxo was a century-old player in the pharmaceutical industry. Tim Tyson was a leader there. He needed help with a big project – a massive $350 million (more than $700 million in today's dollars) new greenfield R&D campus in the RTP in North Carolina, and he heard I might be the man for the job.

I took the job. That decision would prove to be one of the most consequential of my life. Against all odds, the build-

Do the hard stuff. The impossible stuff. Fill the voids. This is how you differentiate yourself from the others.

out of the Glaxo R&D project met the October 18, 1991 deadline. The project was a success. It came in on time and under budget.

This brought my long sought promotion. I took a new title as director of engineering for all Glaxo's RTP facilities. I now had a team reporting to me.

My Move from Engineering to Marketing

In July 1993, Glaxo had rewarded Tim for his vast campus construction oversight with a long-sought promotion of his own. He then received a second promotion, to vice president of sales and marketing, an even bigger position. Tim asked me to take the title of group director of marketing services.

This was a pivotal moment in my career. I went to work mastering this new trade. I read, talked to marketing experts, and experimented. I learned everything there was to learn about marketing and drugs and how the development-to-launch cycle worked.

From Marketing to Manufacturing

Unexpectedly, GlaxoWellcome had come under major scrutiny with the FDA relating to the manufacture of sterile drugs in the United Kingdom. It was a massive crisis.

Tim picked up the phone—again—and called me. Tim Tyson, the fixer, needed his own fixer. I took the job and was promoted to senior vice president of GlaxoWellcome manufacturing strategy. I had no idea how to develop a strategy for manufacturing. But by this time in my career, I knew I could figure it out.

GlaxoWellcome operated some sixty-five manufacturing sites in dozens of countries. Its manufacturing was a complicated mess. The factories were not centralized. As Tim busied himself politicking and resolving the FDA issues, I began to work out a global restructuring strategy for manufacturing.

More Kingdoms to Merge: The Creation of GSK

GlaxoWellcome would join with another big pharmaceutical firm, SmithKline-Beecham, to create a new entity, GlaxoSmithKline (GSK). For me, the merger meant suddenly managing the restructuring of a manufacturing system with 109 factories instead of 65.

Every week, in plain sight, I saw political backstabbing between the legacy Glaxo people and the legacy SmithKline people. If anything, my disillusionment felt deeper than it had at the end of my Exxon service. I grew so frustrated that I began to brood over my next move.

Then something happened. Déjà vu, all over again. My phone rang.

LESSONS LEARNED

It is possible in a large company to make a real difference. Find a way to break out of the pack. Take on the tasks and the work that nobody else has the guts or energy to do. Do the hard stuff. The impossible stuff. Fill the voids. This is how you differentiate yourself from the others.

Chapter 4: DSM Pharmaceuticals, Inc. (2002–2003)

A First-Time CEO Grapples with an FDA Warning Letter … and Turns Around a Troubled Company

I accepted the job as CEO for the DSM Pharmaceuticals facility in Greenville, North Carolina. I would become my own boss. With Tim Tyson's blessing, I felt free to reach for the highest rung on the corporate ladder: chief executive officer. That next rung, though, came with splinters.

DSM (previously Dutch State Mines) bought Catalytica for $800 million in cash and debt. The Dutch bought Catalytica under a tremendous misunderstanding. They thought their acquisition gave them a pharma company with the industry's famously high margins. They didn't grasp that a CMO is a completely different business.

After closing the deal, the new owners in the Netherlands stared in surprise at a document, called a "warning letter," sternly stating that the Greenville site was in multiple violations of the US Code of Federal Regulations CFR 21, Part 11.

Something like a corporate miracle would occur on my brief watch of one year and one month. It only happened, though, through the hardest work of my life so far. Our successful efforts and facility turnaround would ultimately be quantified by two major product launches, a growing revenue base, and the increased output from operational improvements. We got product moving again and our revenues started to grow. Progress also showed on the regulatory front.

I could have spent the rest of my life steering this company into the destiny it deserved after our remarkable turnaround. But then the phone rang. Tim Tyson called. Tim had landed something new, something enticing. The new outpost was a company called ICN Pharmaceuticals, based in Costa Mesa, California. After a lot of hard thinking, I decided to go for it.

LESSONS LEARNED

Dying companies can be saved. It takes grit, determination, good people, and a steady hand.

Whatever the situation, you must win the hearts and fire the enthusiasm of others around you. Set a clear path for success, repeat it often, and the people will follow.

Chapter 5: Valeant Pharmaceuticals International, Inc. (2003–2007)

An SEC Consent Decree ... and Fixing a Broken Company

ICN came to life in a garage in Los Angeles in 1959 when a young graduate of Tulane University's biochemistry program borrowed $200 to buy equipment to synthesize chemicals he could sell to research labs. Milan Panić would, eventually, grow his little endeavor into a global company named ICN Pharmaceuticals, later Valeant, while also finding the time to serve as Prime Minister of the Federal Republic of Yugoslavia (1992–1993), and to run unsuccessfully for president of that nation (1993).

Panić left one year before I arrived—and with ICN still under the stigma of a stiff SEC Consent Decree. Robert O'Leary, an ICN chair and the new CEO, wanted good and able help to handle such a complicated enterprise. But neither Tim nor I, however, would be completely prepared for the corporate chaos we would enter.

Three Strategies for Change

Tim's reinvention of Valeant would be based on three strategies: Restructure. Transform. Innovate and grow.

- To restructure, Valeant would slough off the parts of its business that didn't make money.
- To transform, Valeant would prioritize efficiency and operational excellence.
- To innovate and grow, Tim and Rob knew the real key to a turn-around —they needed to fill the Valeant pipeline with new products that would create fresh sources of revenue.

I asked Tim for a role leading the North American business unit. I also asked to lead their global marketing team. Furthermore, I asked to lead mergers and acquisitions. Tim said yes to all.

New Branding, New Attitudes

With agency help, I initiated a project to change the company's brand. In 2003 ICN became Valeant Pharmaceuticals International, Inc. The stock ticker changed to VRX. A commanding purple—the historic color of royalty—animated our Valeant logo and all our branded materials.

The leadership team was enthusiastic. Valeant was ready to shed the past and build a strong new image.

Eventually, the acquisition of potential blockbusters, along with the fresh cash, the burgeoning pipeline, ongoing clinical trials, and the growth of smartly marketed portfolio products, made 2005 a pivotal year in Valeant's turnaround. And that continued to show progress through 2006.

Tim had these surging revenues, a new management team, and a new board of directors. Valeant was his now. He yearned to make a bold move that would leave his mark on the pharma industry forever.

However, the involvement of fabled consultancy firm McKinsey & Company, and the hostile takeover by an activist private equity firm would soon spell trouble for Tim and for all of Valeant.

A Momentous Career Decision

My phone rang. Again. JLL Partners wanted to talk with me about the CEO position at Patheon. I said yes. For the second time, I'd leave Tim for my own greener pastures. It was a painful decision. We'd had so much success with the Valeant turnaround. We really had fixed the company, despite all the noise around us.

There are good people and bad people in business, as in all of life. We must learn to identify the bad actors as early as possible.

LESSONS LEARNED

There are good people and bad people in business, as in all of life. We must learn to identify the bad actors as early as possible. If the bad actors work for you, you must remove them. If the bad actors have control over you, there is a choice to be made. Either learn to trust them … or watch your back. But trust must be earned through deeds and actions. If the bad actors are left unchecked, they can and will destroy you.

Chapter 6: Patheon, Inc. (2007–2010)

Building a Quality Reputation during a Corporate Takeover

I look back on three tumultuous years at Patheon with mixed feelings. The opportunity for me to run a public company on my own for the first time was awesome. But that stint also stands among the toughest professional and personal times in my life.

As Patheon's new CEO, I led a company turnaround that positioned it for tremendous future success. I achieved this goal despite factions at war in a corporate takeover, and in spite of the Great Recession, chilling the global economy like a new Ice Age.

By the time I unwillingly departed at the end of 2010, I had stabilized the fragile and disorganized company I'd first walked into. The organization had skirted financial collapse, and by 2010 all the Patheon financial vectors were pointed up.

LESSONS LEARNED

Sometimes bad things happen. A market crash. A global recession. We have no control over these things, but if we remain true to ourselves and do the right thing for our businesses and people, we can survive and succeed.

Chapter 7: Marken (2011–2019)

Turning a Complete Financial Write-Off into a Global Industry Leader

Soon after leaving Patheon, I launched my own consulting practice, WPWheelerLLC. A company called Apax Partners recruited me as an advisor. After a few months, Apax asked if I would be interested in running Marken, a clinical logistics company it had purchased about a year earlier.

I had no real experience in clinical logistics, but something about Marken intrigued me. It was global, and it had a good reputation for quality.

Marken would test all my skills in leading a company. As it happened, I was equipped with a solid team, and we would lift Marken up from financial ground zero, transforming it into a renowned global player with unrivaled leadership in its sector.

Marken was sold to UPS on the winter solstice, December 21, of 2016. We became one of the best-performing parts of all the vast UPS global businesses, and with margins which were accretive to its parent company.

LESSONS LEARNED

In business, quality and service win. One can take a failing company and turn it into a business that truly cares for customers. Above all, never minimize the value of strong leadership when faced with adversity, ill-willed people, and misaligned board members.

Chapter 8: Bushu Pharmaceuticals Ltd. (2017–2021)

What Not to Do When Hiring a Consultant

In the years I led Marken, I also helped out a Japanese company called Bushu. The story demonstrates the power of experience, partnership, and leadership in solving problems that appear intractable.

My long-ago Exxon assignment in Japan gave me a good working knowledge of how Japanese business leaders thought and reached decisions. That Japan experience, along with previous turnaround work at DSM, Valeant, and Patheon—work that included international engagements in

Japan and other Asian nations—rewarded me with a clear vision of how to get Bushu back on course.

LESSONS LEARNED

Consultants can be helpful but also can be dangerous. We hire CEOs for the ability to set a vision and a strategy. Consultant input is valuable, but a good CEO will know how to use that information, or disregard it, before charting a course for the future.

Chapter 9: UPS Healthcare (2019–2020)

The Design and Launch of a New Vertical Business Unit

UPS, the world's largest and most important logistics company, put up its first pharma facilities in 2005. These nascent UPS Healthcare logistics efforts, though, fell short of their potential.

With Marken going great guns in 2018 and 2019, I found myself in more and more meetings in UPS's C suite. I became central, in fact, to a Big New Idea taking shape.

Jim Barber, UPS's chief operating officer, began to lean toward setting up a whole new business vertical within Big Brown that would be dedicated to healthcare logistics. Carved out of an existing UPS P&L, it would become the first independent industry-focused business unit ever within the century-old integrated UPS network.

Jim asked me to be president of the new division. In December 2019, I started work.

Standing Up UPS Healthcare

My new organization would have its own finance function, its own marketing function, its own engineering function. It would have independent departments for information technology, human resources, communication, legal, and sales.

In January 2020 we started with a new brand and a new name for our new division. We were UPS Healthcare. We focused on complex healthcare customers: pharmaceutical and medical device companies, laboratories, hospitals and clinics, diagnostic testing companies, and other companies that supported these.

Audaciously, our team even made a logo change. For the first time in UPS's proud 115-year history, the UPS shield was allowed to use a color other than brown. We made it blue, to distinguish the new division for our customers and within UPS itself.

UPS Healthcare had 114 facilities in twenty-five countries and seven thousand employees. That's where we started life, in March 2020. And that's where we started saving lives as a great pandemic swept the world.

LESSONS LEARNED

Established companies build cultures that are deeply rooted in the souls of their leaders. Sometimes, such strong company cultures stifle entrepreneurial thinking internally and kill unique ideas. A strong leader is willing to step out of a cultural quagmire and create something unique and different for the greater good.

Chapter 10: UPS Healthcare (2020–2023)

Battling a Global Pandemic

By April 2020, the United States reported one million COVID-19 cases. Stores and institutions shuttered. The economy stalled, except for online businesses. The world was in lockdown.

UPS Healthcare would become essential to three major COVID-19-era logistics efforts, each of unprecedented scale and paramount urgency:

1. Personal protective equipment (PPE): We created a logistics pathway to deliver and store all the PPE that we could.
2. Test kits: We created a logistics program that could deliver COVID-19 test kits anywhere.
3. Vaccines: We built a global supply chain to store and deliver COVID-19 vaccines.

These initiatives undoubtedly saved many millions of lives.

Post-COVID-19 Progress

Meanwhile, life went on for UPS Healthcare, the business. Anticipating the age of biologics, and proven so spectacularly right by our COVID-19 preparation, UPS Healthcare industriously built out our cold chain around the world.

On April 17, 2023, I retired from UPS at the zenith of my forty-five-year corporate career. We had ten thousand employees worldwide and had exceeded all expectations. In

the three years I was president, our growth was triple the rate of industry growth.

LESSONS LEARNED

A global crisis, for all the harm it does, can hold a silver lining. It can drive needed changes by making it easier to break restrictive rules. My advice? Run to the fire, not away from it. Use the power of a leadership position to forge bold new practices.

Chapter 11: What's Next (2023 And After...)

Building Boats and Beyond

I'm certain the next phase of my life will be filled with more business ventures. My top priority, though, will involve reviving a solid family brand and building boats.

My great-grandfather, Howard E. Wheeler, started the Wheeler Yacht Company in 1910. My dad never got over the loss of the company. So it has come down to me to resurrect the Wheeler boatbuilding craft and name. I reincorporated Wheeler Yacht Company in 2011. The Wheeler boatbuilding business is back, albeit at a much smaller scale.

You'll understand by now what drives me. I see that my purpose—my love—is fixing things. Families, after my dad left. Businesses, struggling to survive. Boats, deserving of glory instead of ashes.

Reflections

By the time you read this book, I may be retired. Perhaps not. My approach to life has always been inspired by challenges whether they happen by chance or by design. Life's challenges make you alert and sharp—and keep you busy. They occupy your mind. They occupy your spirit. I gladly move on to that next challenge, whatever it may be.

Wes Wheeler is a career business executive with deep international experience in nearly all parts of the pharmaceutical industry and a five-time CEO / President / Chairman of several public and privately owned companies. He is known for his ability to lead companies through challenging restructuring circumstances while building productive work cultures. After spending decades fixing other businesses, Wheeler has shifted his focus to Board work and advising private equity firms.

THE SUMMARY IN BRIEF

Strong products, smart strategies, and clear goals matter, but none determine organizational success as decisively as leadership. Whether a company is launching a new initiative, expanding into a new market, or trying to improve its existing operations, the presence or absence of capable leaders shapes the outcome.

Yet many executives hesitate to develop new leaders, fearing they may be training their own replacements. In ***The Ultimate Guide to Developing Leaders: Invest in People Like Your Future Depends on It***, author John C. Maxwell argues the opposite: developing leaders is the surest way to secure an organization's long-term health, resilience and competitive edge.

Drawing on decades of global leadership work, Maxwell explains why leaders who multiply other leaders expand organizational capacity, strengthen momentum, and ensure continuity. He also shows why avoiding leadership development leads to stagnation and future vulnerability. For Maxwell, the goal is not to protect a position; it is to build a leadership pipeline that never runs dry.

IN THIS EXECUTIVE BOOK SUMMARY

- Find out how to identify people with leadership potential and develop them with confidence
- Understand how you can empower emerging leaders to take ownership, drive momentum and share the leadership load
- Get useful advice on how to coach new and existing leaders toward sustained growth and higher performance
- Understand why developing leaders today secures the future of your entire organization long-term

CHAPTER 1

Understand That Developing Leaders Is the Answer

When conducting leadership conferences, I am asked a lot of questions about how to solve problems and overcome challenges. Most often, people want to know how to improve and grow an organization. My answer is straightforward: Develop leaders. If you grow a leader, you can grow the organization. If you don't, you can't. A company cannot grow throughout until its leaders grow within.

The strength of any organization is a direct result of the strength of its leaders. Weak leaders equal weak organizations. Strong leaders equal strong organizations. Leadership makes the determination.

The Unbelievable Return of Developing Leaders

For any team, small business, large corporation, nonprofit organization, or government entity, the key to accomplishing today's goals and achieving tomorrow's dreams is leadership. And the surefire way to improve the leadership of your organization or team is to develop leaders yourself.

There are innumerable benefits that come from having developed leaders working with you. Here are seven of the most significant:

1. Organizations with developed leaders outperform the competition

The better the leaders in an organization, the more successful it can become. A recent report published by human resources consulting firm Development Dimensions International stated: Organizations with the highest quality leaders were 13 times more likely to outperform their competition in key bottom-line metrics such as financial performance, quality of products and services, employee engagement, and customer satisfaction.

2. Developed leaders multiply your resources

When people become successful, they always eventually hit a wall where they realize that their resources are more limited than their vision. The solution to this dilemma is developing leaders. Good leaders increase resources in a way that nothing else does.

3. Developed leaders help you carry your leadership load

Leadership can be difficult. Most leaders carry heavy loads and feel that there are too few hours in a day. If you're a lone leader, you carry all that weight; but when you have other leaders working with you, that weight can be shared. You simply need to be willing to give some of it to them.

4. Developed leaders help you create momentum

Momentum is a leader's best friend because it makes large problems small, average people excellent, and positive change possible. The best way to create momentum is to harness the positive power of good leadership. Leaders are all about forward movement. They love progress more than anything else.

5. Developed leaders expand your influence

Years ago, when I first started receiving invitations to speak to groups, I made a decision. If I had a choice, I would always choose to speak to leaders. Why? Because I knew that when I spoke to a group of leaders, I could help not only them, but all the people they help. That's why I'd rather teach a hundred leaders instead of a thousand followers. When I influence leaders, I influence all the people they influence.

6. Developed leaders keep you on your toes

Nothing keeps a leader on his or her toes better than leading a group of leaders who are being developed. When the team you lead is growing, you have to keep growing to keep leading them well.

7. Developed leaders ensure a better future for your entire organization

My organizations are filled with developed leaders who do particular tasks better than I do. I know that the future of my organization is secure because of the leaders who will carry on after I am no longer able to lead. If you have developed strong and capable leaders, and you have trained them to develop more, the future will be bright.

You Can Develop Leaders

It's taken me decades to learn what I know about developing leaders. I've had my failures, as well as my successes. As you take this leadership journey, there are three things you need to prepare yourself for:

1. Developing leaders is difficult

Leadership is hard work. There are no two consecutive easy days in the life of leaders. If today is easy, you know tomorrow probably won't be. But everything worthwhile is uphill. If the purpose of life was ease and comfort, no sensible person would ever take on the demands of leadership.

2. Developing leaders takes time

If developing ourselves as leaders is a long, ongoing process, then we should also expect the development of others in

> You must give up looking to cross a finish line and instead find your own internal fulfillment line you can cross every day.

leadership to be the same. You must give up looking to cross a finish line and instead find your own internal fulfillment line. That's something you can cross every day when you embrace the process of developing leaders.

3. Developing leaders put your dreams within reach

People too often overvalue their dream and undervalue their team. They think, "If I believe it, I can achieve it." But that's simply not true. Belief alone is not enough to achieve anything. It takes more than that. Your team will determine the reality of your dream. A big dream with a bad team is a nightmare.

CHAPTER 2

Commit to Becoming a Developer of People

We cannot reach our potential without the help of others. While self-evaluation is valuable, the perspective and assistance of people who are ahead of us in life and career are essential to our success. As a leader on your team or in your organization, you can help others go farther, move faster, and be more successful than they could ever be traveling on their own. You can do that by developing them.

Developing people means adding value to them in any way you can. It means giving people time, attention, advice, and encouragement when they need it. It means making an investment in them without expecting anything specific from them in return. It means giving them a leg up to make them more successful.

Leaders know intuitively that they should be developing people. We know it's a great way to add value to others, improve their lives, and make our organizations more successful. However, too many leaders neglect the process. Here are five common reasons why:

- lack of awareness
- lack of time
- inability to find someone to develop
- lack of belief in others
- reluctance due to past failures

Credibility as a Developer of People

Your ability to develop others is dependent on what you know and what you are able to do. But it's equally dependent on who you are. Development is caught as much as it is taught. The catching part is totally dependent upon your credibility. To gauge where you currently stand, ask yourself these three questions:

- What is my level of credibility?
- Will my strengths contribute to theirs?
- What experiences outside my strengths can I give them?

Becoming a developer of people is really about looking for ways to add value to others every day and committing to follow through. Developers don't just lead a team and strive for organizational success. They invest in people to help them improve their lives. And when it comes time to train, coach, and mentor those people who have benefited from their investment, they are more open to following them and learning even more.

If you desire to develop leaders in your organization or on your team, the way to start is to commit to becoming a developer of people. That's the strong foundation upon which to build.

CHAPTER 3

Get to Know Your Team Members

Listening is one of the most important skills any leader can possess, yet most of us put greater emphasis on talking. How many times have you heard people complain that their bosses don't listen? How many times have you heard children say their parents don't listen? People in authority usually prefer to talk. However, there is perhaps no better way to get to know others and connect with them than to become a better listener.

Once you become a better listener, you can increase your understanding of people by asking questions. Asking questions has the opposite effect of giving direction. When you give direction to your team, you often confine them. When you ask questions, you create room for discovery—for artic-

ulation, communication, innovation, and problem-solving. Questions show that you know you don't have all the answers and value the input of others.

Good leadership requires a perspective shift from it's all about me to it's all about others. That means we need to try to see things from others' points of view.

If you want to develop the members of your team as people and then be able to develop them as leaders, you need to get to know them. You need to learn how to see the world from their perspectives. You can do this in three key ways:

- **Learn perspective thinking** – learn how others think and lead them from where they are, not from where you are.
- **Practice perspective seeking** – when developing someone, get their perspective and then give them yours.
- **Engage in perspective coordinating** – point out and try to tie together different perspectives.

If you are going to develop people, you need to learn who they are and do everything you can to understand them. And you need to be open enough to allow them to understand and learn from you. And while you do that, be sure to encourage them. While people's hopes and dreams may be unique, they all need to be encouraged and lifted up.

CHAPTER 4

Equip Team Members to Excel at Their Jobs

There are three main reasons people fail in a job. They may lack the ability or the desire to do the job. Or they are not properly trained to do the job. Or they do not understand what they are supposed to do to complete the job. The good news is that equipping addresses two out of three of those problems. If team members who possess ability and desire fail, you may be at fault because you neglected to train them properly.

As a leader, it's one thing to ask people to be on your team and take a journey with you. It's another to equip them with a roadmap for the trip. Good leaders provide a means for people on the team to get where they need to go. They equip and empower them.

This process starts with the leader who intends to equip others. First, that leader needs to be successful. As soon as you know what you're doing, invite team members to join you and let them watch you. In the third step, the focus moves away from the leader: it goes from I to you.

At that point, others are doing the task, and the leader coaches, encourages, and corrects the people doing the work. After that is the handoff. The task is delegated to the equipped team member. But importantly, there is a fifth step. The person who has been trained selects another team member to train. This is where the effectiveness transforms—it goes from addition to multiplication. If every team member trains someone else, the multiplication factor never stops.

To be successful in this process, focus on five essential practices:

1. Be an example others want to follow
2. Spend time with your team members
3. Set equipping goals with them
4. Encourage team members to learn by doing
5. Remove barriers to growth

CHAPTER 5

Identify Your Potential Leaders

Some leaders are tempted to recruit leaders from outside their organization and work with them. I recommend that you start where you are with who you have. Observe the members of your team, whom you should now know pretty well, since you've taken time to get to know them and equip them. Looking for potential leaders to develop in your own organization makes sense for three reasons:

1. They are a known quantity

Unlike when you interview people from outside, you don't have to imagine how insiders will perform. You can look at their actual performance to see what they can do. You can observe their strengths. You can personally talk to everyone who works with them to find out about them.

2. They already fit the culture

When people have already been working in the organization for any length of time, you know if they fit because they have already been a part of the community.

3. They have already established influence

Good leaders, even those with little training or experience, influence other people. When you're trying to identify potential leaders to develop, look for influence. It's a qualification that must be present in someone you wish to develop as a leader, because leadership is influence, nothing more, nothing less.

> A big dream with a bad team is a nightmare.

One way to measure their influence is by using the Five Levels of Leadership, which move from the lowest to the highest levels of influence.

1. **Position**. People follow because of title.
2. **Permission**. People follow because of relationships.
3. **Production**. People follow because of results.
4. **People development**. People follow because of personal life change.
5. **Pinnacle**. People follow because of respect from earned reputation.

A Picture of Potential Leadership

As you look for potential leaders, remember that they will have the same characteristics as good leaders with whom you have already been working, except that they won't have developed these characteristics yet.

When I look for people with leadership potential, I start by examining five areas:

- the attitude of potential leaders: willing
- the character of potential leaders: solid
- the ability of potential leaders: high
- the track record of potential leaders: proven
- the mindset of potential leaders: improvement

CHAPTER 6

Invite People with Potential to the Leadership Table

Having a leadership table means creating a place in your organization or on your team where people can learn, practice leadership with its successes and failures, and receive opportunities to shine.

People with leadership potential want to spend time with other leaders. They want to observe good leadership. They want to talk about it. They want to experience it. It fires them up. A true leadership table is a place where anyone with potential, the desire to lead, and the willingness to learn can sit and become part of your leadership team.

To begin developing your potential leaders and to make your team or organization attractive to other potential leaders, you need to make sure a few things happen at your leadership table:

- expose them to the culture of a leadership environment
- encourage them to participate in the dynamics of the table
- allow them to benefit from the power of proximity
- let them practice leadership

CHAPTER 7

Know the Goal of Developing Your Leaders

Once you've invited people with potential to the leadership table and begin working with them, what do you want them to become?

Obviously, every organization is unique, and so are the goals and work that must be done. And different kinds of leaders need different skills to be successful in their areas. But are there key areas where all leaders can develop?

The answer is yes. When I develop leaders, I want to be certain they are developed in three core areas, which I think of as the three Gs:

1. Grounded – possessing core values that make them solid

Like begets like. That's a universal law. Look for leaders who have a solid foundation, who are grounded. The characteristics I seek in a grounded leader are:

- integrity
- authenticity
- humility
- teachability
- maturity

2. Gifted – using their strengths to lead well

There is no substitute for a lack of giftedness. Ability determines potential. The giftedness of leaders is the first step making it possible for them to grow and succeed.

3. Growing – possessing a hunger and capacity to keep learning and developing

Because we're discussing developing leaders, a pattern of growth is essential. Ideally, the leaders you are developing will already be growing and understand the growth process. If not, you will need to help them get there.

CHAPTER 8

Empower New Leaders to Lead

Where does the ability to empower others come from? It is based primarily on earning respect, building relationships, and providing an environment of empowerment.

The greatest leaders aren't necessarily the ones who do the greatest things. They are the ones who empower others to do great things.

To do that, leaders need to be willing to give up center stage. They must give up the need to be needed by others. Instead, they must cheer on the people they empower when they succeed, not feel threatened by their success. They must point to the victories of others and celebrate their successes. That's what secure, relational leaders do.

Take a look at the six characteristics of an empowering environment, make note of how many of them describe your organization or team, and think about ways you could promote them where you lead. Empowering environments:

- embrace everyone's potential
- give team members freedom
- encourage collaboration
- promote accountability
- give leaders ownership
- reward production

CHAPTER 9

Harness Your Leaders' Natural Motivation

In every leader's organization or team, you can find people who seem to lack motivation. It can be difficult to get some people moving. Ideally, the leaders you have chosen and begun developing will not be reluctant to dive into challenges and take action. But even people with high potential can use a boost. All of us can benefit from a bit of motivation from time to time.

Here are the seven motivations of leaders:

- **Purpose** – leaders want to do what they were created to do
- **Autonomy** – leaders want the freedom to control their lives
- **Relationships** – leaders want to do things with other people
- **Progress** – leaders want to experience personal and professional growth
- **Mastery** – leaders want to excel at their work
- **Recognition** – leaders want others to appreciate heir accomplishments
- **Money** – leaders want to be financially secure

As you develop leaders, learn which of these seven factors motivate them and tap into them. By learning what motivates your leaders and harnessing that motivation, you will energize them to keep growing and developing. Focus first on what motivates them the most, but also inspire them in every area you can.

The best leaders and highest achievers are always self-motivated. They work because they want to. They lead others because it's rewarding. They take joy in their work. One of the greatest gifts you can give as a developer of leaders is to help the people you lead to harness their own internal motivation so that they can lead and inspire others every day.

CHAPTER 10

Challenge Your Leaders to Work as a Team

What's more powerful than a motivated, equipped, and empowered leader? A group of motivated, equipped, and empowered leaders. What's more powerful than that? That same group of motivated, equipped, and empowered leaders working as a team! When good leaders are united, empowered, and focused on a shared vision, they become almost unstoppable, accomplishing nearly anything.

If you want to achieve big things and develop your leaders at the same time, then you need to challenge them to work together as a team. To do that, you need to:

1. Make sure your leaders are in alignment with the vision
2. Help your leaders bond and care for one another

> People won't commit to you when they understand you; they commit when they feel understood.

3. Ensure that your leaders are growing together
4. Position your leaders to complement and complete one another
5. Communicate to your leaders how they are making a difference

CHAPTER 11

Choose Who to Develop Further

One of the greatest leadership discoveries I made in my life was that the Pareto principle (20% of any group is responsible for 80% of its success in any given category) could be applied to people. This was revolutionary to me. I had been trained and encouraged to love and value everyone, which is something I still strive to do every day. But that doesn't mean you're supposed to develop everyone! Compounding benefits will result from developing the top 20%.

This development of the top 20% is the ultimate step in the development of leaders. This is what separates great teams from good ones. It separates teams that last from teams that flash in the pan. It enables teams and organizations to create successful succession plans. When you mentor your best leaders, it takes everything to another level.

As you prepare to choose who to develop further from your team of leaders, you need to be highly strategic, consistent, and intentional.

What to Look for in Leaders to Mentor

When you identified potential leaders and invited them to the leadership table, you had ideas about who might be a good leader. After developing them, empowering them to lead, and training them to work as a team, you now know what they can do. After all, you've seen them in action.

As you reflect on your experience with your leaders, look for these six characteristics:

- a track record of demonstrated leadership
- understanding of their place and purpose on the team
- recognition of the place and purpose of others
- willingness to give up personal agendas for the vision
- tangible results in their leadership
- hunger for growth

Whenever you invite leaders to be mentored, make it clear they haven't reached a destination. They're being given an invitation: to work just as hard, if not harder, but to make a greater impact doing it. By being mentored, they will gain greater influence and grow to make a larger contribution.

Work Yourself Out of a Job

As you choose the best leaders to develop, I believe your ultimate goal should be to work yourself out of a job. Equip and develop leaders who replace you. It's what I've tried to do most of my life. I'm always looking around, asking, "Who can do what I am now doing?" For everything you do, there is almost always someone who can step into your shoes and take over.

Working yourself out of a job is the ultimate development win. Try to pass the baton in as many professional areas as you can. To accomplish that, focus on three things:

1. Place a high priority on working yourself out of a job

Begin by asking yourself, "What am I doing right now that could be done by someone else?" Once you've answered that, ask, "Who should I begin to develop to do this?"

***2.* Place a higher priority on developing people than protecting your position**

Most leaders are focused on holding the position they have or gaining the position they want. The focus is on themselves. Ironically, hoarding power is often what leads to someone losing power. The position doesn't make the leader; the leader makes the position. The way you expand your potential is to help others develop theirs. Raising up and equipping leaders makes you a better leader—and better able to do bigger and better things.

3. Place a higher priority on succession than on security

Too many people in leadership positions are looking for security. But good leadership is never about holding fast. It's about moving forward. I believe that as a leader, if you work yourself out of a job, you'll always have another job. Success doesn't come from protecting what you have. It comes from developing others to replace you so that you can move on to bigger and better things.

CHAPTER 12

Mentor Your Best Leaders One-on-One

Perhaps the greatest compliment you can give leaders is to offer to mentor them. But mentoring takes more than just skill. It takes finesse. It takes empathy. You need to be able to find common ground with those you mentor because your relationship must be able to go to another level of openness and authenticity. You must be open about your past failings and mistakes. And you must make the leader you're working with feel safe enough to be open and honest about where they're falling short and need to grow.

Soft skills, such as asking questions and listening, having empathy for people's journeys, and understanding their perspectives, are crucial in today's leadership environment. People won't automatically commit to you and your mentoring when they understand you. They'll commit to and follow you when they feel understood. That will happen for you as a mentoring leader when you:

- value them
- let them know you need them
- include them in your journey
- adopt a teachable spirit
- ask questions
- listen well and often
- seek to know their perspective
- give credit to them when they help you
- express gratitude for those who helped you
- replace *me* with *we*

CHAPTER 13

Teach Your Leaders to Develop Other Leaders

If you have used the guidelines outlined so far to train, develop, and mentor leaders, you have already put yourself in rare company. The majority of leaders content themselves with gathering and leading followers; few put in the effort to develop people to become effective leaders.

Know that there is still one step higher you can climb as a leader. You can teach your leaders to follow in your footsteps and become developers of leaders in their own right. And that's a worthy goal, because every organization needs more and better leaders.

The best purpose of leadership achievement is to use everything you've learned to give a hand up to others, helping them become leaders, and then teaching them to do the same for others with potential. There are seven different growth levels that you must achieve to become a reproducing leader:

1. Growth that makes you capable of doing your job well
2. Growth that enables you to grow others in your job
3. Growth that allows you to effectively reproduce yourself in your job
4. Growth that provides meaningful opportunities for higher-level leadership
5. Growth that prepares you to develop others to higher levels of leadership
6. Growth that stretches you enough to have a mentoring relationship with growing leaders
7. Growth that gives you the ability to develop leaders who reproduce leaders

If you want to reach your full leadership potential, then you need to develop leaders who carry the same vision for developed people into leaders to reach their potential. If you do that and they do that, the leadership pipeline you create will never run dry.

Developing a Reproducing Environment

If you want to move up those growth levels and encourage other leaders on your team or within your organization to do the same, you need to create an environment that promotes leadership reproduction. To accomplish this, you need to have five expectations in place:

- The leader of the team models leadership development
- Everyone is expected to develop someone
- Leaders focus on developing leaders, not recruiting more followers
- People are continually growing themselves out of their jobs
- Leaders become more than mentors—they become sponsors

Conclusion

Teaching your leaders to create other leaders is the last step in a long journey of developing leaders. But the journey shouldn't end there. In a positive, healthy, successful, growing organization, the process of developing leaders never

stops. The best leaders continue to invest in people like their future depends on it—because it does.

Developing leaders is the most organizationally valuable action you can take. While other organizations are still trying to figure out what's next, your leaders will be out conquering new territory. While others are scrambling to find someone to champion their next initiative, you'll be taking your pick of leaders from your deep bench. When developing leaders becomes a lifestyle for everyone in your organization, you can't help but be successful.

If you want a better team, a better organization, and a better future personally and professionally, dedicate yourself to developing leaders. It will be one of the most impacting and rewarding things you ever do.

John C. Maxwell is a #1 *New York Times* bestselling author, speaker, coach, and leadership expert who has sold more than 34 million books worldwide. His work has been translated into dozens of languages and used to train millions of leaders across industries and nations. He is the founder of Maxwell Leadership, a global organization dedicated to developing leaders who create positive change. Maxwell also founded the nonprofit organizations EQUIP and the Maxwell Leadership Foundation. His teachings emphasize values-based, people-centered leadership. He has been recognized as the world's most influential leadership expert by *Business Insider* and *Inc.* magazine and is a recipient of the Horatio Alger Award and the Mother Teresa Prize.

THE SUMMARY IN BRIEF

When author Scott Jeffrey Miller's publisher approached him to write ***The Ultimate Guide to Great Mentorship: 13 Roles to Making a True Impact***, he was coalescing a ten-year, ten-volume series on master mentors. In promoting the first two volumes on more than two hundred podcast episodes, television shows, and radio programs, he found that the interviewers most commonly asked him less about the mentors he featured in favor of and questions about the actual process of mentoring.

In exploring such topics as selecting or becoming a mentor, how to handle conversations that don't go as planned, and whether or not mentoring was still relevant in a post-pandemic virtual work world, Miller began outlining and codifying his point of view on mentoring. This resulted in his identification and explanation of the various roles that mentors play and how they differ based on the mentor-mentee dynamic and, eventually, the writing of this book. The intent is to provide a road map for all the roles a mentor will be asked to play, consciously or unconsciously. For each role, mentors will learn a description of the role, the goal, upsides, downsides, and the skills required to be successful.

IN THIS SUMMARY, YOU WILL LEARN:

- The thirteen roles that mentors play.
- What your goal as a mentor is in each role.
- How the execution of the role can have upsides and downsides.
- Which skills are essential for success in each role.

Role 1: The Revealer

The Revealer works like a paleontologist, delicately brushing away the metaphorical dust and debris to reveal the mentee's passions, talents, fears, and goals. They work to *uncover* so others can *discover*–all while remaining hyper aware of their own personalities.

The Goal: To lead the mentee's awareness, progress, and growth through precise exploration and discovery, and along the way, ensure their own style and approach doesn't overwhelm or distract.

The Upside

- Surfaces important facts and feelings that can help or hinder personal effectiveness and engagement
- Provides a framework for a mentor to lean into their own stylistic strengths or work through and around weaknesses
- Helps a mentee feel safe and appropriately vulnerable, so they can become "comfortable with being uncomfortable"

The Downside: A mentee can easily shut down, feel overwhelmed, or become intimidated by a heavy-handed mentoring approach. As a result, they can often pull back, obfuscate, or even abandon the relationship altogether.

Key Revealer Skills

- Know what the mentee is trying to accomplish and the environment in which they are trying to accomplish it
- Employ patience and deliberate thinking
- Remain hyper aware of your default personality style
- Explore with an inquisitive and gentle approach

Your primary job as the Revealer is to help uncover the mentee's feelings, perceptions, strengths, fears, and misconceptions about their own potential by consistently being mindful of the fact that you're not them. They may not know what they want out of life or a career–or even the mentoring relationship itself. Your role is to make them feel comfortable being uncomfortable.

Role 2: The Boundary Setter

The Boundary Setter creates the parameters of the mentoring relationship. They do this up front and as early as possible so that the proper guardrails exist and the mentoring journey can be efficient, effective, and safe.

The Goal: To set clear boundaries about expectations, what the mentoring relationship is and isn't, and the roles the mentor and mentee will play and won't.

The Upside

- Both parties understand the scope of the mentoring relationship
- Saves time having to deal with issues in the moment that could have been mitigated through setting expectations early on
- Helps the mentee understand their role and expectations for the mentoring sessions themselves
- Provides an early warning for mismatched expectations between a mentor and mentee
- Offers the mentee a clear picture of what lines can be blurred, and which shouldn't be crossed

The Downside: Mentoring sessions are likely to wander off topic, be at risk for unintentional and improper requests, and become unproductive or worse.

Key Boundary Setter Skills

- Designate duration and frequency
- Confirm the agenda
- Establish roles and responsibilities
- Set boundaries
- Call a timeout when needed
- Make and keep commitments
- Address violations
- Pull the plug if necessary

Setting boundaries for the mentoring relationship is essential. But after some work together, earned maturity, and an increasing level of trust, you can help your mentee know when the "hard and fast" line you *never* cross is actually a bit "fuzzy" and they can carefully and intentionally own the consequences for stepping over it, or even being invited by you to do so.

Role 3: The Absorber

Second in priority to The Revealer is the Absorber. The Absorber recognizes that the best mentors are active lis-

> Like many virtuous habits, both the mentor and their mentee benefit when a leader can shut up and listen.

teners. They foster an environment of psychological safety where mentees feel heard, understood, and valued.

The Goal: To invest your focused time and attention into your mentee through active listening, empathy, and intentional focus.

The Upside

- Creates a high-trust environment where mentees feel safe to be vulnerable, heard, and understood
- Builds an expectation and experience that the mentee can share "unfiltered" what's on their mind and work through it without judgment
- Helps mentees discover their unique and valuable genius

The Downside: Mentors confuse declaration with dialogue, trading short-term efficiencies for the long-term benefits that come from investing in and hearing what their mentees have to say.

Key Absorber Skills

- Get out of selling mode
- Avoid the "if I were you…" trap
- Learn your mentee's genius and resist shaping it into yours
- Listen and absorb as an active listen
- Practice intentional focus and empathetic listen
- Stop interrupting
- Be gentle on yourself and know when to be prescriptive

This role requires patience, curiosity, and suspended judgment from mentors. Like many virtuous habits, both the mentor and their mentee benefit when a leader can shut up and listen. And if you think you're already good at that, here's a newsflash: You can do better. A wandering mind. An interruption. A self-serving question. A lack of empathy. It happens to us all. The key is to know when these temptations are creeping into your mentoring style and try to minimize them.

Role 4: The Questioner

The Questioner relies on their empathetic skills, relatability, common experience, and insight to help zero in on the right issues for their mentee. They are adept at employing insightful questioning and identifying and catching problems early by asking the right questions at the right time, in the right way, and with the right intent.

The Goal: Use thoughtful, relevant, and open-ended questions to help the mentee zero in on the right root cause or underlying issue that can then be worked through together.

The Upside

- Reduces risks by catching critical issues early
- Build trust by making "bad" news safe to discuss
- Helps the mentee focus on the right things at the right
- Uncovers insecurities and misconceptions that might be getting in their way
- Surfaces other issues that may need to be addressed

The Downside: When the mentor is asking self-serving or extraneous questions based on their own agenda, experience, and timeline, the mentee can be forced into offering responses or "solutions" that have little to do with what they ultimately want to accomplish in order to satisfy the mentor's needs.

Key Questioner Skills

- Employ a laser like focus to cut through confusion and create clarity
- Recognize that "right" is what progresses your mentees goal
- Make it safe to share bad or embarrassing news
- Guard against the "wrong" news
- Build trust and establish safety
- Avoid prosecutorial badgering

This role will likely come naturally to you. Perhaps too naturally. Like all strengths in life, when overplayed they can

become liabilities. So it's important to calibrate your questioning skills to get to the root cause as efficiently as possible without compromising a safe environment for your mentee.

Role 5: The Challenger

The Challenger tactfully pushes their mentee to confront assumptions, perspectives, mindsets, or behaviors that are impeding their performance. They determine the level of confrontation that will be helpful given the mentee and the situation as they model the critical thinking that will serve the mentee throughout their professional life.

The Goal: Use challenges to prompt critical analysis so mentees are more introspective and use sound reasoning in their decision-making.

The Upside

- Provides additional clarity for both the mentor and the mentee
- Surfaces bias, misunderstandings, faulty assumptions, flawed perspectives, and errant information
- Separates feelings from facts
- Assumes the "right" intervention is not simply what worked for the mentor in the past
- Teaches mentee to employ critical thinking and challenge their own suppositions before taking action

The Downside: Without the due diligence of critical analysis, mentees are left to execute against untested assumptions and flawed perspectives, wasting time, energy, and separating them even further from achieving the goals that matter most to them.

Key Challenger Skills

- Know *when* to challenge
- Ensure your mindset is focused on the mentee's goals and skills, not your own
- Allow the mentee space to share
- Plot the appropriate challenge level for the situation

As a mentor, it can be dangerously tempting to force your mentee into your formula for success based on your own career trajectory. Likewise, it might be tempting to merely accept whatever goal a mentee offers, assuming they've thought it through adequately. Both scenarios can be disastrous. And so, The Challenger pushes back, offering alternatives when appropriate.

Role 6: The Validator

The Validator strengthens the relationship by recognizing, accepting, and communicating that the thoughts, feelings, emotions, perceptions, and beliefs of their mentee, whatever they may be, are valid and worthy. The Validator may not agree with the mentee's conclusion about such experiences, but they recognize you don't have to agree with someone to validate them. The Validator simply wants to affirm their mentee's emotions, state of mind, and ability to accomplish their own expressed goals, while ensuring they feel seen and understood.

The Goal: To strengthen the mentoring relationship and progress their journey by strategically validating a mentee's confidence, competence, fears, and anxieties.

The Upside

- Communicates acceptance
- Calms intense emotions so mentoring can be more effective
- Expresses that internal experiences do not have to be the same for everyone
- Acknowledges the inherent value of the mentee
- Affirms that the mentee is being listened to and understood and not being judged
- Builds trust and rapport in the mentoring relationship
- Reinforces a mentee's strengths and unique gifts

The Downside: When a mentee does not feel accepted and understood by their mentor, they can feel rejected, ignored, judged, and even worthless.

Key Validator Skills

- Focus on the relationship, not the ISS
- Find affirming language that resonates with your mentee
- Praise and validate effort
- Actively listen
- Recognize that "validate" doesn't mean "agreeing with"

We all benefit from sincere, well-timed validation, as two of our greatest human needs are to be seen and to be heard.

There is hard-won wisdom that comes from having traveled the path before.

Ensure that your mentee feels heard and seen by you. The Validator makes those important relationship investments while increasing trust, respect, and even love.

Role 7: The Navigator

The Navigator leverages their knowledge and expertise to chart a new way forward for their mentees. Whether having walked the path themselves or gained wisdom from the journey of others, they stay at least "a day ahead." The Navigator maps out the relevant opportunities, costs, best practices, regulations, processes, guidelines, and even laws that define, restrict, or serve as the guideposts along the way.

The Goal: To draw on the mentor's wisdom and experience to guide the mentee away from potential pitfalls and toward their intended destination. Also sometimes known as protecting people from themselves.

The Upside

Provides an opportunity to share the various insights gained by a mentor over their career

- Helps mitigate against career pitfalls and offers shortcuts along the mentee's journey
- Connects decision-making to governing principles
- Surfaces best practices
- Serves as a buffer against unconscious incompetence
- Provides focus and necessary guardrails to keep things on track and build momentum

The Downside: The mentee can become a "wanderer," tempted to identify too many goals and quickly lose their focus on their unique path–one where the mentor's own life experience, institutional and industry knowledge, and hindsight could have proven valuable.

Key Navigator Skills

- Stay a day ahead
- Connect to governing principles
- Understand the situational rules of the road
- Minimize unconscious incompetence
- Keep perspective

There is hard-won wisdom that comes from having traveled the path before. As a mentor, your experiences can provide the practical knowledge to keep your mentee from having to recreate the wheel. Your "been there done that wisdom" is a massive gift you can offer. But you must do so sparingly, to avoid falling into the self-referenced narrative you've been previously warned against.

Role 8: The Visionary

The Visionary paints a picture of the future to inspire their mentee to take on new challenges, see themselves as more capable, or envision an expanded outcome. The Visionary artfully tempers such a vision, however, so it remains motivating and achievable, not so grandiose as to be unactionable, or reflective of what the mentor values, and not the mentee.

The Goal: To provide a vision of a future state that stretches the mentee to do and become more, yet remain grounded within their motivations and present, or reasonably acquire, necessary skills.

The Upside

- Creates a motivating picture of what the mentee can achieve
- Anchors day-to-day work to something bigger
- Helps a mentee reach their full potential
- Sets the stage for moving the conceptual into concrete actions

The Downside

Decouples a mentee's day-to-day work from a vision of what they're working toward, making it less likely they'll offer discretionary effort or make any real progress toward their articulated goals.

Key Visionary Skills

- Speak your future
- Be thoughtful about what's realistically possible
- Find a new level of achievement to reach for
- Ensure it's the mentee's vision and not yours
- Calibrate your conversation to present circumstances

There may be perfect circumstances when the benefit of your creativity and vision as a mentor is exactly what's needed. Perhaps someone is on the cusp of a massive pivot in their already successful career or conversely their success is being crushed and your mentee needs a major lifeline. Pull out all the stops and offer them your finest vision of what could be. This may be your finest day as a mentor: the culmination of all your battles and wars cast into a vision of what's possible.

Role 9: The Flagger

The Flagger works like their namesake on a construction site, intervening as necessary, with highly distinctive signs, such as "stop" or "caution," to protect their mentees from potential danger.

The Goal: To appropriately intervene when it's necessary to slow down or stop a mentee and provide clarity around the potential pitfalls ahead.

The Upside

- Stops a mentee from going down a path that could be dangerous, illegal, risky, or unsafe
- Slows a mentee down so the mentor can offer feedback and allow the mentee to course correct
- Benefits from and helps build trust that the mentor is looking out for the mentee
- Prevents accidents before they happen
- Reinforces the parameters set by The Boundary Setter

The Downside: Allows the mentee's ignorance or even arrogance to land them in metaphorical potholes.

Key Flagger Skills

- Raise the red "Stop" sign when the mentee is in danger
- Raise the yellow "Caution" sign when the mentee should slow down and think
- Choose your words carefully, so as not to turn off the mentee
- Declare your intent, indicating you have the mentee's best interest at heart

As The Flagger, you know that laws and policies are not generally open to much interpretation. Be concerned with slowing things down enough so the mentee knows what those laws and policies are. Only then can the mentee decide if they want to follow or break them.

Role 10: The Distiller

The Distiller role is focused on deciding together which strategies, projects, and decisions warrant continued focus and execution. The Distiller collects and prioritizes the insights and passions gained over the mentoring journey and processes the opportunities into an actionable offering for the mentee to choose to adopt or not.

The Goal: To leverage the insights and learnings that come after a series of mentoring sessions, then refine and reduce the options into a focused opportunity for the mentee to consider.

The Upside

- Combines the strengths of several roles and focuses them on a specific solution
- Filters through an overabundance of potential choices to help the mentee decide where to invest their time and energy
- Allows the mentor to apply an artful combination of roles, goals, and objectives for their mentees to digest and make their own

The Downside: The mentee can feel lost and even paralyzed because of the plenitude of choices, options, and paths that have surfaced through previous mentoring sessions.

Key Distiller Skills

- Pull different ideas together to create something
- Bottle mentoring experiences into a unique offering
- Filter out what's helpful and what's not
- Create and archive potential future strategies to consider later

The Distiller role allows you to creatively co-produce, co-prioritize, and even co-capture a blend of mentee "in-

gredients" both built on a shared history and also distilled into an actionable plan of current and future strategies.

Role 11: The Activator

The Activator is concerned with finding the right moment where their mentee would benefit from a carefully worded statement of encouragement and belief, lighting a spark to push harder, set even more ambitious goals, or stretch themselves in new and exciting ways.

The Goal: To ignite new levels of motivation and momentum at an intentionally impactful moment, reinforcing the mentor's faith and what their mentee can achieve.

The Upside

- Infuses newfound drive and motivation
- Helps close the gap between a mentee wanting to do something new and actually accomplishing it
- Shows the mentor's faith in the mentee's capabilities

The Downside

Misses the crucial moment when a mentee is poised to take on something more but lacks the simple spark to see it come to life.

Key Activator Skills

- Know which message to ignite
- Look for signals that your mentee is ready to "strike the match"
- Use your power carefully, as our words and energy have consequential impact
- Avoid serving as a green-lighter for passions and projects, rather letting the decision lie with the mentee

The Activator can light a spark that changes a mentee's career, and perhaps more importantly, infuse a level of joy, purpose, and momentum the mentee doesn't even know they need. This is what The Activator does–they boldly strike the match at the exact right moment.

Role 12: The Connector

The Connector is an optional role where the mentor considers if, when, and how they may want to connect their mentee to their personal and professional network.

The Goal: To determine if and when a mentor will choose to provide connections to their mentee, enabling them to experience new growth, opportunities, and personal and professional development.

The Upside

- Creates additional opportunities for the mentee
- Leverages the mentor's network of contacts to help expedite the mentee into a new role or responsibility
- Can create a win-win for the mentee and the new mentor, coach, employer, or client
- The mentee shows great respect for and provides great value to the mentor's network

The Downside: The mentee misses out on what could be a shortcut to the next stage of their personal or professional development and career.

Key Connector Skills

- Recognize the role is optional
- Share the importance of your network
- If desired, make the connection

The Connector role can provide a great opportunity for a mentee to further learn, grow, and contribute in new ways. But such a tacit endorsement comes with a certain amount of risk. After all, the mentee would be leveraging your reputation and relationship. Their success or failure will reflect on you. Make no mistake, once you've made the connection, you're in the middle of the mix. So be thoughtful about whether The Connector role is a good fit for your current mentee and list of contacts.

Role 13: The Closer

The Closer is the last role a mentor plays, celebrating the mentoring journey with their mentee as they formally bring the mentoring relationship to a close and point to what's next.

The Goal: Create a celebratory capstone event that closes out your mentor-mentee relationship and helps them prepare for the next part of their journey.

The Upside

- Follows the formal close-out process established by the sponsoring organization, if one exists
- Establishes an important milestone representing the

mentee's accomplishments

- Offers a chance to celebrate
- Creates a bridge to what's next for the mentee

The Downside

The mentee misses out on a chance to reflect on their progress, celebrate their wins, and turn the page on the next chapter of their journey.

Key Closer Skills

- Focus on the present, and the potential future
- If there is not a formal closeout process established by the sponsoring organization, use the six steps outlined below

6-Step Close Out Process

1. Revisit where your mentee started.
2. Share funny or tender learnings about their growth.
3. Re-identify and communicate your commitments to the mentee moving forward.
4. Resurface worthy concepts that were closed or tabled
5. Celebrate the wins and learn from the losses.
6. Recap your confidence in them and outline any areas of potential support.

Mentoring truly is a privilege, and your influence on your mentee's life can be incalculable. Adopting the 13 roles presented can help you lift another human being and help them achieve their goals. And as a bonus, you will find yourself lifted, too.

Capping a twenty-five-year career in which he served as chief marketing officer and executive vice president, Scott Miller is currently FranklinCovey's senior advisor on thought leadership, spearheading the strategy, development, and publication of the firm's bestselling books on this topic. Miller hosts the FranklinCovey-sponsored On Leadership with Scott Miller, the world's largest and fastest-growing weekly leadership podcast. Miller also authors a leadership column for Inc.com, and hosted the weekly iHeart Radio show Great Life, Great Career.

THE SUMMARY IN BRIEF

Who is a versatile leader? What sets them apart from the rest of the world? How do great leaders create valued outcomes and lead their organizations toward unparalleled success?

The book, ***The Versatile Leader: The Confidence to Excel in Every Situation*** deploys familiar occupations as metaphors to drive home important aspects of strategy and tactics. With its roots embedded into three critical areas of leadership, the book highlights values that serve as a guiding light for those wanting to become great leaders.

By including powerful references to Bible verses, stories, and principles, author Msuega Tese urges leaders to analyze where they have gone wrong and identify important lessons they learn.

IN THIS SUMMARY, YOU WILL LEARN:

- About the qualities of a versatile leader.
- How to lay the foundation for versatile leadership.
- About familiar occupations as metaphors.
- How to deploy strategy and tactics to excel in every situation.

Introduction

Leadership skills are needed everywhere. Unfortunately, only certain people in need do have them. However, it is possible to overcome this shortcoming and become a versatile leader if desired.

A versatile leader is a person of integrity who, along with others, creates valued outcomes using appropriate metaphors. The principles you're about to learn in the book are very portable and can be used anywhere without the need for retooling.

Part I examines the definition of leadership and covers fundamental concepts including situational leadership, metaphors, and the organizational life cycle (or the S-Curve). Parts II and III present an occupation used as a metaphor. The metaphors in part II account for less frequent actions called strategy. They set the stage for tactics, which emerge as metaphors in part III.

Part 1: Foundation

Chapter 1: Foundation

Leadership involves three words: beliefs, actions, and benefits.

Beliefs have profound implications for individuals and organizations. To survive and achieve success, organizations must have a sound set of beliefs on which it premises all their policies and actions.

Without actions, beliefs are of no value. Regardless of the situation in which a leader finds herself, she must act according to what she believes to be true. While it is not wrong to think of the personal gain one can derive from a situation, a leader should always focus on what will be helpful to others. Ultimately, authentic leadership is all about consistently acting on your beliefs for the benefit of others.

Chapter 2: Concepts

The key concepts linked to leadership include Followers, Influence, Authority, Position, and Management.

Since leaders act on their beliefs for the benefit of others, some "others" may end up following the leader. However, not everyone will follow, and you shouldn't expect them to do so either. The widespread perception that a leader must have followers is flawed. Indeed, there are leaders with followers, but we cannot generalize and say it must always be that way.

Influence is a phenomenon many people use to define leadership. But leadership itself is not defined solely as an influence. If we wake up in the morning intending to influence someone, we'll most likely return home disappointed. We can do all the right things, but the decision to change is not in our hands but theirs. This is why trying to control influence is futile.

Authority is the right to use power. We must know how to use the authority we already have to do good repeatedly, irrespective of our position in an organization. It is possible to lead from any position and act on your beliefs to achieve remarkable outcomes. Being a leader is a matter of choice, not position. Leadership is about how we deal with people. Management is about how we deal with things. To lead effectively, a leader must use both hands – the "leader hand" and the "manager hand."

Chapter 3: S-Curve

Effective leadership requires understanding where your organization is on the S-Curve or the business life cycle. The stages in this curve include preparation, start-up, growth, maturity, and decline.

The preparation stage is critical but often omitted when describing the business life cycle. This stage is where the importance of writing a business plan comes in. Crafting a comprehensive plan helps challenge many assumptions, expose faulty concepts, and bring a great dream to life.

After you register the venture at the preparation stage, you progress into the start-up stage. Use the MVP (minimum viable product) concept to test and validate your assumptions. It is often difficult to guess how long a company's start-up stage would last. To depart from this stage, a venture must overcome the valley of death, make regular profits, and demonstrate the potential for reliable growth.

The growth stage brings a time of regular profits and more growth opportunities. This is when leaders must set standards, put systems in place, and constantly improve the changing requirements.

The maturity stage is when your brand is known and profits are predictable, and the company enjoys a reasonable period of maturity. As time goes by, however, leaders may forget its essence, which can lead to the decline stage. Let's look at the metaphors in parts II and III to navigate the challenges or S-Curve stages and their transitions.

Part 2: Strategy

Chapter 4: Physician

The Physician metaphor helps you know your organization's actual status so you can choose a general direction for it. It is often said that "prescription without diagnosis is malpractice" and good doctors always start with a diagnosis. They don't begin treatment simply because you have pain. When leaders find themselves in a new situation, they must do what doctors do – make a diagnosis to know the real status of the organization.

As a leader, you must also know the vital signs of your organization in the form of KPIs (or key performance indicators) and SWOT analysis. You must analyze the internal and external factors affecting your organization before making strategic plans.

Chapter 5: Architect

Use the architect metaphor to articulate your vision when starting anything new. This can help develop a realistic plan to bring your vision to reality.

When in their studio, architects sketch out what seems to the owner like a finished product, and make detailed drawings for different teams involved in the construction. What architects do in their studio must be like what leaders do during the S-Curve preparation stage.

Once the architect's design (or a leader's implementation process) is ready, it's time to oversee it. Leaders must closely supervise the implementation of the strategic plans, especially during the start-up stage. They must also have openness and flexibility to engage in open-vision processes. Regardless of the vision you choose, make sure it gets implemented so you don't end up with an abandoned project.

Chapter 6: Builder

Before laying the first block, a building contractor must understand the architectural plan and specifications. Builders usually start from the ground up once they know the blueprints. More than anything else, the foundation determines the strength and stability of the structure.

People are the foundation of your business. As a leader, you need the right people to ensure your organization continues to thrive well in the future. Like a house, an organization must be built with quality for it to last. Remember, organizations are built when people work, not scramble for credit. Getting the job done should be your primary focus as a leader.

Chapter 7: Engineer

Engineers solve problems and improve on what already works. They do this with curiosity, persistence, and creativity. Just like engineers, leaders need to be problem-solvers. Every stage on the S-Curve comes with problems where the engineer metaphor can prove useful.

Always start with the basics of how things work each time you encounter a problem. See problems as opportunities. Solve problems, but be careful about creating the cobra effect. Think carefully before implementing solutions. Always ensure your organization experiences constant improvements.

Chapter 8: Entrepreneur

In any situation, the leader must use the entrepreneur metaphor to produce tangible results.

Since you are one of the most important building blocks of your organization, you have important goals. Even if you don't aim to change the world, you can learn great lessons from entrepreneurs. Understand the meaning of ownership and optimism and infuse them into your undertakings. Learn to take calculated risks and bring out substantial outcomes.

Ownership starts with what's not yours. It is a mindset, not a status. Just like an entrepreneur, leaders must work for the best outcomes for their organization, even if they will not get any direct benefits. Use optimization to overcome setbacks and take risks in pursuit of results that matter. Manage your risks carefully and take risks only after careful analysis. Engage your people in your leadership ideals and push them toward making a difference in the world. Always ensure your ideas are worth the commitment of others.

Part 3: Tactics

Chapter 9: Journalist

Metaphors require defined objectives for them to function efficiently. Without a strategy, your tactical efforts may not generate meaningful value. As with the strategy section, getting reliable information is where tactics start.

The journalist metaphor tells us that a good decision not conveyed properly may not realize its intended objective. Therefore, leaders can learn from journalists how to communicate clearly and confidently with stakeholders.

The most relevant lessons to glean from journalists include obtaining reliable information and keeping others in-

formed. Powerful information can be acquired when you're close enough to the action you hear from primary sources.

While gathering information is critical, what you do with it is of greater importance. After obtaining information, journalists organize and deliver their findings to their audience, allowing them to form their own opinions. Leaders can learn from journalists how to write "real stories" for their stakeholders, teams, and customers.

Chapter 10: Coach

Coaches can teach us how to select and train teams. They teach us the importance of delegation and competition. Leaders must value character and competence equally. Coaches don't criticize things they don't understand. Similarly, leaders should be careful to observe before advising.

Like great coaches, great leaders don't need external constraints to value their time. They set their goals and timelines to achieve them as if they were running for gold at the Olympic Games. Results will not always be in our favor. When this happens, as a leader, you must own up to your mistakes and focus on ways you can improve by tapping into the spirit of sportsmanship.

Chapter 11: Parent

Parents provide an exciting metaphor for leaders who seek to leave a legacy. It helps them prepare those who will take their organizations to greater heights long after their departure. This metaphor is very personal and has a lot of emotions.

Good leaders, like good parents, understand the importance of emotional intelligence. They also know how to establish healthy boundaries. Leaders train juniors to maturity to create sustainable organizations.

Chapter 12: Judge

Leaders must use the metaphor of a judge to resolve conflicts within a team. They must understand the laws applicable to their sector or jurisdiction so they don't mistakenly commit fraud.

Leaders must also humble themselves when they realize they haven't lived up to the standard. Instead of giving excuses, they must own up and clean up before they move on. Without such remedial action, a leader's lack of credibility can stand in the way of fair judgment. Finally, as a leader, you should create a system where an aggrieved party can assert their right to appeal when needed. This can enable you to correct your mistakes without external intervention.

Chapter 13: Pilot

Following the pilot metaphor can help leaders learn many things. For instance, most airplane accidents happen during takeoffs and landings. Similarly, more corporate bankruptcies occur during the start-up and decline stages of their lifecycle. Learning from pilots can help leaders improve the safety records of their ventures and minimize bankruptcies.

Just like how flying requires training and certifications, different levels of business management also require structured training and leadership development programs to achieve organizational goals. Leaders must constantly learn from business incidents and prevent reoccurrence. Just like a pilot, they must prepare for all possible outcomes and train themselves and their teams for the unexpected.

Chapter 14: Soldier

Soldiers are on the frontline of warfare. They risk their lives in service of their country or cause. The rigorous training of soldiers exemplifies qualities such as disciple, courage, and loyalty. By observing them, leaders can learn how to handle tough situations confidently.

Discipline, in leadership, relates to having a sense of purpose and relentlessly focusing on it until you see the result. The very act of pursuing your goals demands a great deal of courage. The soldier metaphor gives the leader the disciple and courage to make good decisions in tough situations while also being loyal.

Chapter 15: Diplomat

Leaders can apply lessons learned from diplomats to give and receive feedback positively. They can learn how to negotiate for good outcomes in different situations. As you work in a group of any size or kind, diplomacy will also help you synergize seamlessly. It will help you respond to sensitive situations with tact instead of fury and wisdom instead of flattery.

Part 4: Seamless

Chapter 16: Synergize

Now that you've explored the important metaphors of leadership, it's time to understand how you can blend them seamlessly into your role. In an era of interconnectivity, cooperation is no longer by choice but a necessity.

We need to join with others to create synergy to b successful. Fortunately, essential elements such as adaptability, collaboration, and humility can help.

Adaptability is a team trait that emerges when team members alter their roles to address a challenge. It requires team members to be flexible and creative. Adaptability requires a good level of shared understanding. There are people you need who you will not be able to hire. Yet without their help, some opportunities will be lost. In this case, collaboration will be your best option. Aside from tapping into the power of adaptability and collaboration, leaders must understand the importance of humility. Being humble makes it much easier to lead others. Moreover, in humility, when you take on a new role, you will value what others have done before your arrival.

Chapter 16: Start!

A versatile leader is a person of integrity who, with others, creates valued outcomes using appropriate metaphors. You don't have to be a superhero to become a versatile leader. You simply need to make up your mind and then start.

Kick off your journey using the journalist metaphor to identify the urgent things. Then use the physician metaphor to gain insight into the strategic status. Finally, as you progress toward your journey, deploy the rest of the metaphors to bring out the best results from every situation you face.

Conclusion

At this point, I will assume you've read the earlier chapters and have gained a good understanding of the core ideas presented. I want to congratulate you on your perseverance. "All good things must come to an end," goes the popular saying. But your leadership journey shouldn't end here. Now go ahead and lead with excellence. The world is desperately seeking versatile leaders like you!

Msuega Tese is an African entrepreneur based in Luanda, Angola. Tese draws from three primary sources to provide a fresh perspective on leadership: lessons he learned growing up in a rural Nigerian village, his experience as an engineer and entrepreneur, and his Christian faith. He is the cofounder and executive director of Integrated Solutions Angola. Tese graduated with an honors degree in Electrical Engineering from the University of Port-Harcourt, Nigeria.

THE SUMMARY IN BRIEF

Vision is the essential ingredient for successful leadership. Unless you have a clear picture of where you want to lead your organization, nobody will follow you. But if your vision is compelling, people will apply their best thinking and effort to make it real, regardless of the obstacles or opposition you face.

In ***The Vision Driven Leader***, *New York Times* best-selling author Michael Hyatt asks 10 simple questions to help you craft an irresistible vision for your business; ensure it's clear, inspiring, and practical; rally your team around the vision; distill it into actionable plans that drive results; and more.

Based on Hyatt's 40 years of experience as an entrepreneur and executive and backed by insights from organizational science and psychology, this book reveals the difference a vision makes and how to craft one for you and your team. Vision is more important than ever today. Learn how to create a good one with ***The Vision Driven Leader***.

IN THIS SUMMARY, YOU WILL LEARN:

- Why vision defines leadership.
- The pitfalls of vision-deficit leaders.
- To craft a clear, inspiring, practical vision that you can sell to your stakeholders.
- Why it's never too late to change a company's vision and chart a new course.

PART I: VISION DRIVES EVERYTHING

Question 1: Are You a Leader or a Manager? The Cost of Confusion

Vision is the essential ingredient for successful leadership. There's no substitute. Without it, influence fades along with the crowds. This is especially true in business. Unless you, as a leader, have a clear picture of the destination where you want your company to be in three to five years, you've got nothing that will inspire people to follow you.

This is the primary difference between leaders and managers. When asked by *Harvard Business Review*, "What makes a good manager?" GE's legendary chairman and CEO Jack Welch responded with a crucial clarification: "I prefer the term 'business leader,'" he said. "Good business leaders create a vision, articulate the vision, passionately own the vision, and relentlessly drive it to completion."

Both roles are important, but they are fundamentally different and require different dispositions and skill sets. Leaders create vision, while managers execute vision. Leaders inspire and motivate, while managers maintain and administer. Leaders take risks, while managers control risks. Leaders stay focused on the horizon, while managers have their eye on short-term goals and objectives.

The Essential Ingredient

Vision is a clear, inspiring, practical, and attractive picture of your organization's future. It doesn't have to be 10 or 20 years down the road, though that might be helpful. It's an imagined future—usually just three to five years out—superior to the present, which motivates you, which guides day-to-day strategy and decision-making, and around which your team can rally.

Without this, you're effectively voting for the status quo. Your organization doesn't need a leader unless they want to change. It doesn't take a leader to maintain the status quo. A competent manager will do just fine. If, however, you find the status quo unacceptable and want to focus your efforts, energize your team, and scale your business, you must be a vision-driven leader.

But for many leaders, it's not as easy or straightforward as it sounds. Through no fault of their own, they're often dismissive of, confused about, and ill-equipped to create compelling visions for their organizations.

The 10 questions can help you create and cast your vision; make it clear, inspiring, and practical; sell it to your team; and weather the challenges ahead. Together, the questions work like a diagnostic tool to help you focus on what matters and get the answers you need to channel your efforts, energize your team, and grow your business bigger than you ever thought possible.

These questions also function like the interlocking parts of a proven vision-crafting system; address them honestly and you'll leave with a powerful vision you can deploy in your organization.

So, are you a leader or a manager? If you're a leader—or if you want to become one—and if you yearn to be equipped to create and cast a vision for your organization, then read on. You're a tenth of the way through already.

Question 2: What Difference Does Vision Make? The Pitfalls of Vision-Deficit Leaders

What difference does vision make? Vision-deficit leaders trip headlong into one or more of six pitfalls:

1. Unpreparedness for the future. While nobody can see the future, a vision can clarify the future and prepare a company for what is on the horizon. "There is no reason anyone would want a computer in their home." So said Ken Olsen, founder of Digital Equipment Corporation in 1977.

By contrast, Apple founder Steve Jobs predicted, "The most compelling reason for most people to buy a computer for the home will be to link it into a nationwide communications network." And Jobs made that statement four years before the invention of the World Wide Web.

Computer scientist Alan Kay is famous for saying, "The best way to predict the future is to invent it." Vision is the first step in doing that. Without it, leaders are unprepared for whatever is coming next.

2. Missed opportunities. Being unprepared for the future means overlooking key opportunities in the present. Why? Vision keeps us attuned to possibilities that align with the future we see. Without a vision, those opportunities slide right by.

3. Scattered priorities. Without a vision, the opposite is also a problem. When we're unclear about our destination, we tend to make short-range decisions, pursuing whatever opportunities look good in the moment. Oppor-

By aligning around a clear and compelling vision, you can avoid sideways energy and wasted effort.

tunities that appear promising up close can prove disastrous in wider perspective.

4. Strategic missteps. Here's a simple but powerful truth: The future hasn't happened yet. It's imaginary. It doesn't exist. And it can take one of countless shapes, depending on decisions we make in the present. Synthesizing the learning from the first three mistakes above, vision steers our decision-making in the present by preparing us for the future, helping us spot the right opportunities, and shielding us from the bad.

Vision, in other words, helps us avoid strategic missteps and failures.

5. Wasted money, time, and talent. Vision provides a direction for execution as well as a standard by which to judge performance. Without it, teams invest themselves in irrelevant outcomes and unimportant projects. Beyond that, they don't even know if they're winning because there's no external standard to evaluate their progress. Everybody runs in circles.

By aligning around a clear and compelling vision, you can avoid sideways energy and wasted effort. By minimizing or even eliminating the cross-purpose activities within your company, vision allows you to execute more effectively.

6. Premature exits. Wasted effort leads to frustration and futility, and that means vision-deficit leaders are prone to quitting the field early—same with their burned-out employees. The ultimate goal of a clear vision is to stay the course during the inevitable hurdles and resistance and succeed. Vision keeps you and your team motivated, engaged, and committed so you don't bail before the payoff.

When slowdowns and setbacks threaten to throw you off course, when breakthroughs remain elusive, vision can sustain the mission and lead you to your projected outcome. But only if you still have one.

Now that you understand the difference that vision makes in your organization, are you ready to create your own? That's what you'll do in Part II, by answering five key questions.

PART II: DRAFTING YOUR VISION SCRIPT

Question 3: What Do You Want? Direction Begins with Desire

Leadership is not a gently sloping road. Oftentimes there is no road. It's only possessing a clear vision that enables leaders to make a way when none previously existed. It all comes down to what you want. Unless you're clear on that, you'll never stand a chance of achieving it.

So what do you want? Let's look at how a Vision Script can help you create a detailed answer to that question.

Not a Mission Statement

An effective mission statement keeps you on task by answering four questions: Who are we? Who do we serve? What problem do we solve? What transformation do we deliver? All good, all necessary. But beside the point when it comes to vision.

A mission defines what a business is; a vision describes where it's going. Mission is here; vision is still out there. Mission is now; vision is next.

A proper Vision Script is not a tagline or a bumper sticker. It's a robust document, written in the present tense, that describes your future reality as if it were today. The trick is to step into the future and record what you see in four key areas of your business:

The future of your team. Your team makes everything else possible. The right team will enable you, as the leader, to focus on what you do best. So, what does the ideal team look like to you three years out? And how does your organization take care of them and cultivate a winning culture? This needs to be specific enough for anyone reading to visualize it for themselves.

The future of your products. The future vision provides a measuring stick for the present, but it is superior to the present. By definition, you're not there yet. And that's where the excitement comes in! What's next in terms of

your products? What do you want to create? What do you want to offer?

The future of your sales and marketing. How do you get those amazing products to market? We're not talking nuts-and-bolts methods and strategies. This is a chance to think broadly and philosophically about your sales and marketing. This is fundamentally about how you relate to your customers.

The future of your impact. Finally, your Vision Script should describe the intended outcome of the team's effort. What's the result of your realizing your vision? You can answer in terms of financial impact, but it can also be in other, less concrete ways, such as reach or influence or something less material.

Question 4: Is It Clear? Make It Concrete and Explicit

The first qualifying question for your Vision Script involves clarity. But clarity can be hard to come by. Why? There's a tendency for visions to be abstract at first. We are, after all, describing the unseen, the not-yet-here, what lies over the horizon.

For a vision to be clear, it has to be concrete, not abstract. But that's not all. Your vision must also be explicit. That is, it must be sufficiently expressed in easy-to-understand language.

Vision is about shared sight. It's not enough to see the future. You have to ensure others can see what you see and act on it. You don't drift to a destination you would have chosen. Instead, you have to be intentional, forcing yourself to get clear on what you want and then rendering it in a form that's both concrete and explicit.

Five Steps to Gain Clarity

How do you get clear when you feel fuzzy? Maybe you're unsure about your plan, you're not sure what to do, and it looks like your competition is flying by, leaving you in the dust. Every leader faces this at one time or another.

Here are five simple steps to gain clarity and move forward. First, admit you're unclear. It's hard to admit we're missing something. But that's the first step toward clarity: admitting we don't have it. Until then, we're not ready for it.

Second, recognize your blinders. In her book ***Clarity First***, Karen Martin identifies six key factors that keep leaders unclear. They're all different, but they work to cloud the world around us: ignorance, lack of curiosity, overconfidence, cognitive biases, time constraints, and fear. It takes some self-reflection to see if any of these are operative, but it's worth the effort.

Third, ask for input. There are many sources of good counsel: spouses, mentors, executive coaches, business colleagues, industry peers, your team, and so on. Ask them what they think. You're not alone.

Fourth, process the feedback. Now that you have feedback from the sources that matter most, you need to process it. Writing externalizes our thoughts, which helps us critique and improve them. Include core members of your team. Review the work together.

Fifth, just start. It's important to get moving. When you can't read a sign, you have several options: Think more about what the sign might say, scrunch up your eyes to change your focus, buy high-powered glasses, or ask a friend to read it to you. But the best and easiest way to get more clarity is to just move closer to the sign. Taking steps forward can bring things into focus.

Clarity without inspiration leads to boredom and disinterest, and inspiration without clarity leads to excitement without direction. Your vision has to include both. That's why inspiration is the focus of the next question.

Question 5: Does It Inspire? Moved People Move People

It's not enough to have a vision. Unless your Vision Script ignites hearts, minds, passion, and creativity, you won't attract the talent or the buy-in from your team necessary to reach your destination. Your customers won't buy into it, either. And you'll forgo the impact and contribution that you might otherwise have on the world stage. A vision that fails to inspire will surely expire.

Does your vision inspire? There are four characteristics to ensure it does.

What isn't, not what is. The first gas-powered taxi was built by Gottlieb Daimler in 1897. Later that year, Friedrich Greiner started the first motorized taxi company in Stuttgart.

Fast-forward a hundred years or so. In 2006, more than 240 million people rode in a taxi in New York City. Clearly, the taxi business wasn't a new idea.

Along came Garrett Camp and Travis Kalanick. By focusing on the "what isn't"—namely, a taxi company that didn't own any cars and didn't have any drivers on the payroll—they founded Uber. Garrett and Travis could have taken the safer, more conservative road by envisioning some sort of partnership within the existing taxi ecosystem. Instead, they stepped out into the future and envisioned what could be apart from the existing best practices in taxi, limo, and transit services.

> Anything big and inspiring will be a bit risky, but it shouldn't be stupid.

Exponential, not incremental. You know your vision will be inspiring when you move from taking the baby steps of incremental change to pursuing giant, exponential, and pioneering ideas.

On January 9, 2007, Steve Jobs presented the first cell phone without a keyboard or stylus. We're not talking a better keyboard; this move represented a whole new technology. He said, "iPhone is a revolutionary and magical product that is literally five years ahead of any other mobile phone." He was right.

Risky, not stupid. There's a difference between a vision so big it makes you uncomfortable and one that's just plain stupid. How can you tell? Here are a few qualifying questions. Are you likely to fail? If yes, it's stupid, not risky. Does your team believe in it, or can the key stakeholders get aligned on it? If no, it's stupid, not risky. Does the risk imperil your mission? Unless your mission is already imperiled and the new vision is your plan to survive, it's stupid, not risky.

Anything big and inspiring will be a bit risky, but it shouldn't be stupid.

What, not how. Vision is about what the future looks like, not how you plan on getting there. By focusing on an inspiring what, people find their why. The problem with focusing first on how is that we stop believing in a superior tomorrow. We fail to see how we can accomplish more. We torque back our vision so it's "realistic." And because we tend to experience what we expect (Question 3), we manifest our low expectations. We grow less than we could, achieve less than we're capable of, and experience less than we deserve.

Once you've ensured that your Vision Script is inspiring, the next step is to ensure it's practical. The next question will help you further refine your vision by showing you how, at last, vision connects to strategy.

Question 6: Is It Practical? Understanding Strategy

Vision is about where you're going, and strategy is the path you're planning to take. Vision comes first because there's no path without a destination. But without a path, there's no progress. Thankfully, a practical vision suggests the strategy.

Starting with the vision and working backward, we craft a strategy, then set goals, and then break down those goals into meaningful next steps. This is where long-term strategy and daily productivity meet.

There should be a through line from your vision to your daily to-dos. Five elements describe how annual planning and daily productivity work together:

Vision Script. The Vision Script is the basis of everything else. It's a clear, inspiring, practical, and attractive picture of your team, products, marketing, and impact three to five, though possibly more, years into the future.

Annual plan. From that vision comes this year's annual plan. What will you do this coming year to make progress on your vision? What projects will you undertake that will bring you closer? What initiatives will you start or stop? The clearer your Vision Script, the more apparent the answers to these questions will be.

Quarterly goals. Look at your list of annual goals. You'll want to pursue two to three per quarter. Think of these as your Quarterly Big 3—near-term objectives that can keep you focused and drive productivity, rather than promote procrastination and inevitable overwhelm.

Weekly objectives. To stay on target for your Quarterly Big 3, you need a Weekly Big 3, composed of three weekly achievements that will move the needle on your major goals (as well as key projects). Consider a Weekly Preview process in which you review your Quarterly Big 3 each week and decide what three next steps to prioritize in the coming week.

Daily tasks. Your weekly objectives then inform your daily to-dos. Choose just three key tasks each day—your Daily Big 3. Don't worry if that seems like too few. They add up, and they keep you focused and on track. Once you gain the focus that comes from identifying your Daily Big 3 every day, you're going to know that no matter what else happened, you accomplished three high-leverage tasks to help you realize your goals and, ultimately, your vision.

Question 7: Can You Sell It? Enrolling Your Team

The surest test of your vision is whether you can sell it to four key stakeholders: your immediate team, the organizational leadership (if you're the CEO, this might include your board or investors), to the rest of the company down the chain, and across the organization. Depending on how your company is wired, you may also choose to sell your vision outside of the company to watchers in the media.

Vision driven leaders are engaged in a bit of a dance. We have scripted a crystal clear vision of our future reality, one large enough to inspire others, one that also stirs up enough uncertainty to make us take a deep breath, like we're stepping into a swimming pool filled with cool water, and yet we have to sell it to the team with full confidence. And they have to buy.

Selling inside. Let's say you've written your Vision Script. You've ensured it's clear, inspiring, and practical. But at this stage, you're not descending Sinai with the tablets. Your vision is still a first draft, capable of reshaping and improvement. And that's a plus. Invite refinement from key stakeholders. Not only will you get vital input to improve your vision, people more willingly support what they shape.

Selling up. If you're a division leader, selling up the chain may include your vice president or the executive team. If you're the president, selling up the chain would be your board of directors.

When selling up, timing is everything. Since you invested several days crafting your Vision Script and talking about it with your team, you don't want to be rushed when you bring it to your boss. You'll also want to schedule a time when your boss is likely to be the most receptive. You know your boss or board. Don't walk into a quagmire you could have easily avoided by being more intentional up front.

What about the pitch itself? Here are five steps: commit to success; understand the customer; think through your presentation; anticipate objections; and make the pitch.

Selling across. When selling your vision to peers and colleagues in the organization, do so privately and in advance of selling it down the chain. Actively listen, and talk through any questions or concerns they may have.

Begin by creating a list of influential stakeholders, determine who you will contact first, and then quietly make visits or calls before the wider rollout. This includes divisional or department leaders, anyone with supervisory responsibility. Be sure to give your key leaders time to process the change you're calling for, provide input, and work toward alignment.

Selling down. Leaders encounter a lot of problems, but poor company-wide communication is one problem they often create for themselves. Sometimes, as leaders, we think we've said what needs to be said. We're actually worried about overcommunicating. But the job is to bring definition through repetition. The truth is, you can't overcommunicate your vision to the organization. It's impossible. Constant communication helps people hold on to what matters most.

PART III: THE CHALLENGE AHEAD

Question 8: How Should You Face Resistance? Dealing With Obstacles

There are few constants in life, but resistance is one. There are no friction-free visions. The best face hardships, miscalculations, setbacks, disappointments, and other barriers to success. The question is, how do you, as a vision-driven leader, respond? How should you face resistance?

Tim Cook became CEO of Apple in August 2011. Instead of having free rein to build his own vision for the organization, he was forced into crisis management just six months into the job. Footage revealed troubling work conditions at Apple's biggest manufacturer in China, and low-paid workers rioted. Cook hired an independent auditor who recommended 360 "remedial action items" regarding conditions, pay, and safety. Important fixes but not what he planned on doing right out of the gate.

There are endless manifestations of environmental resistance like this. Entrepreneurs run out of money. They experience production delays. Costs balloon. Marketing campaigns flop. They can't get a product to work as promised.

But such resistance is also predictable, even if the specific problems remain hidden until they arise.

The Vision Zag occurs when a business defines a new vision and, in turn, experiences a fresh round of investment, energy, and market growth.

When you hit the wall, when you feel the resistance, the answer is to remember what's on the other side of the wall and why it matters to you. If it's launching a new business, saving an existing business, bringing a new product to market, whatever, we have to stay plugged into that vision like it's our personal power generator.

It's also important to keep negative emotions at arm's length. When resistance rears its ugly head, it's not the facts of the situation that are the problem but how we respond emotionally. While we need to stay emotionally connected to our why, we can't let negative emotions swamp us. We may experience fear, doubt, and disappointment, but we don't have to let them dictate our actions. We can notice them for what they are, refuse to let them control us, and keep moving forward.

Three essential traits you can leverage when the resistance threatens to thwart your vision: tenacity in the face of rejection, integrity when tested by ethical compromise, and courage in the face of settling for less than success.

Question 9: Is It Too Late? The Power of the Vision Zag

When we ask, is it too late? the temptation for some is to look at our circumstances and jump to "yes." But are they right? Countless businesses fail every year at all stages of life—startup, legacy, it doesn't matter. Yet companies with one foot through death's door stage comebacks more often than you'd guess.

They do this through the Vision Zag. Think of it as re-visioning. In companies that Zag, vision-driven leaders come up with new and inspiring directions for their organizations. And here's the thing: Organizations can perform this move at any life stage.

There are seven stages of a business: Startup, Rising, Transitioning, Mature, Legacy, Zombie, and Dead. These are not rigid categories—more like convenient points on a continuum. A Zag occurs when an organization effectively jumps back to an earlier stage.

The Vision Zag occurs when a business defines a new vision and, in turn, experiences a fresh round of investment, energy, and market growth—even if the company is a Zombie or Dead. Why does this matter? Without an effective vision, you're stuck wherever you are.

It's never too late to get started with a revised vision. After several decades of saving the world with their superheroes, Marvel Entertainment Group couldn't save themselves from the clutches of defeat. In December 1996, they filed for bankruptcy protection after their stock value collapsed from $35.75 to $2.375 in just three years.

After several years of legal wrangling, Marvel joined forces with ToyBiz, emerging from bankruptcy in June 1998 under a new name: Marvel Enterprises. Having sold the rights to their most popular superheroes, Marvel needed a new vision if they were to live to fight another day.

Their Vision Zag was comprised of three things. First, they decided to focus on movies rather than comic books—a radical change from their previous focus on pen and ink. Second, they leveraged several of their remaining crown jewels (such as Thor and Captain America) as collateral to secure a massive cash reserve of $525 million from Merrill Lynch. This allowed them to bankroll their vision of 10 movies over the next several years.

Third, given ToyBiz's expertise in creating toys, Marvel Enterprises decided to make movies out of minor characters that few remembered, strategically picking superhero characters that would also make great toys.

The first installment of *Iron Man* made $585.2 million worldwide, *Iron Man 2* made $623.9 million worldwide, while *Iron Man 3* grossed more than $1.2 billion at the box office—bringing the three-movie franchise earnings to more than $2.4 billion, not including toys, soundtracks, and licensing.

No wonder Disney bought Marvel in 2009 for $4 billion.

Question 10: Are You Ready? Preparing for the Journey Ahead

Every Vision Script is unique, but every new initiative presents a predictable set of challenges. Whether you're launching a business, leading a division within an organization, or taking a promotion as the CEO of a company, you have to take five steps to succeed in developing and delivering a Vision Script that will define your future.

1. Schedule it. Many people skip this step. Don't. There is something that happens when you set aside the necessary time. It's a way of focusing your intention and clarifying what you want to accomplish. Block the time on your calendar and start pulling together whatever you need to help you answer Question 3: What Do You Want?

2. Get the necessary input. It's possible to do almost anything if you are willing to surround yourself with good counsel. While creating a compelling Vision Script is your responsibility as the leader, inviting several members of your leadership team to embark on that journey with you makes the task less daunting.

3. Trust the process. Remember, you're going off the map into new and unfamiliar territory. You won't have all of the answers pinned down at first. Vision Scripting is a discovery process. Work through your answers to the questions posed in Part II: What do you want? Is it clear? Does it inspire? Is it practical? Can you sell It? As you do, your vision will take shape.

4. Tweak as you go. Your Vision Script is not a once-and-done thing. It's your vision. You have the freedom and flexibility to rethink, revise, and recast based on any number of factors, including input from your team. Knowing that you can tweak along the way takes the pressure off of trying to be perfect with your initial version.

5. Go ahead and launch. At some point, you have to sell the vision and then begin executing. "A good plan violently executed now is better than a perfect plan executed next week," as General George Patton once said. Perfection is just another way of saying procrastination. And you don't have time for that. Your team is waiting to see what you see.

Vision-driven leaders breathe life into dead or dying companies (think Marvel). They innovate new cutting-edge products (think Apple). They create businesses that never existed before (think Airbnb). And they give their employees the direction and focus necessary to infuse their culture with fresh energy and purpose (think Microsoft).

Are you ready? Wouldn't it be exciting to take your people in the bold new direction you want them to go? Wouldn't you love to see your team energized by what the future holds for you and your organization? You can. It's your turn to lead and win with vision. Waiting feels safe, but waiting kills vision. Where will you take your team next?

THE SUMMARY IN BRIEF

Great leaders become the architects of a corporate culture where people at all levels thrive, and organizations achieve consistent success.

By offering a powerful combination of personal experiences and savvy business advice, the book ***The Winding Road to Excellence: Leadership Lessons Learned from Life's Potholes*** lays out a set of thought-provoking "Mantras for Excellence" that can help you become a truly authentic leader.

Author G.T. "Toby" Stansell uncovers innovative approaches to help leaders address their organization's most pressing issues. Throughout the book, you will uncover valuable insights and actionable steps that can help you spot and capitalize on valuable opportunities, improve financial performance and efficiency, and build a sustainable and positive organizational culture.

IN THIS SUMMARY, YOU WILL LEARN:

- How to achieve personal and professional excellence as a leader.
- How to become an authentic leader.
- How to hire efficiently and build valuable teams.
- How to build a positive and sustainable organizational culture.

Part 1: Personal and Professional Excellence: People Who Do

Chapter 1: Never Give in to Fear

Never say no to an opportunity because you're afraid. Once you start overcoming your fears, your confidence grows, but not in some overt, "Look at me!" center-of-the-attention fashion. Real confidence is not attention-grabbing. Two of the most important mantras that drive quiet leadership capable of helping organizations and people achieve extraordinary results include:

"Stop trying to draw attention and start paying attention"
"Humility is more important than visibility"

Chapter 2: Making the Most of What You Have

All of us possess about the same number of assets and liabilities. Some people's assets and liabilities are just more noticeable than others. We're always tempted to believe that other people have it better than we do. But we don't have a clue what other people are facing or have faced. Comparing yourself to others is either going to boost your ego or it's going to make you jealous. Neither one is a healthy or endearing trait. What's important to remember is it's okay to be competitive, but don't be comparative.

Chapter 3: It's Either Results or Excuses

There's an old saying: it's either results or excuses. Never allow another person's failure to be an excuse for your own. We can always find reasons for failure or poor performance. To avoid excuses, you have to build a culture that balances empowerment and accountability. A leader is free to make any decision within their span of control, body of knowledge, or area of expertise, as long as the decision doesn't unnecessarily put our ***company***, our ***culture***, an important ***customer***, a significant ***contract***, your ***character***, or your ***confidence*** at risk. These are what I refer to as the six Cs.

Chapter 4: People Who Do Simply Believe They Can

The distance between informed and ignorant is really short. Make sure you don't travel too far. Ignorance is nothing more than not knowing. The cure for any state of ignorance starts with a simple commitment to learn things. The biggest difference between people who do and people who don't is that people who do simply believe they can. Leaders not only have an insatiable need to learn things, but the best of them also create practical and innovative ways to move people and businesses in entirely new directions, even when it is uncomfortable.

Chapter 5: The Test of Personal and Professional Maturity

Overcoming fear and becoming a doer take a certain amount of maturity. Once you begin to believe in yourself, you become intrinsically motivated. When you are unafraid of failure, you have a passion for taking on challenges that you would have previously sidestepped, many of which offer a path to measurable professional and personal success.

Chapter 6: Being Right is Overrated

Being right is overrated. Being together is more important than being right. Good leaders only have to be right 51% of the time. The truth is, it doesn't matter whether you're right or someone else is right. The goal should be to get what you're doing right. You can do the "right" thing in the wrong way or at the wrong time and it can be worse than doing nothing at all. Objectives shift. Priorities change. And unexpected challenges arise. Ultimately, what is "right" is the thing that produces tangible results – in the right way.

Chapter 7: Humility is More Important than Visibility

When you see genuine humility in a leader firsthand, it can be life changing. When I was a teenager, my Dad used to tell me, "Toby, you are competitive and assertive by nature, which means you're gonna do some dumb things you wish you hadn't done. All I ask is that you own it when you do." One of the most important five-word sentences you will ever learn is "Let's do it your way." Its corresponding partner five-word sentence is "It's my fault. Blame me." This is an essential trait in leaders. If people don't know that you are fallible, then you will never be approachable.

Chapter 8: Your Greatest Weakness May Be an Unprotected Strength

Admitting your weakness is one aspect of humility and humility is largely about self-honesty. Real retrospection allows us to separate ego from our ego strength (the part of us that says, "I can do this no matter how hard it seems"). Remember, your greatest weakness is many times an unprotected or misguided strength.

Chapter 9: Failure Is an Early Indicator Of Impending Success

You rarely learn something new when you experience repeated success. After all, if you achieve success in an endeavor, you will generally execute the same process in the same way the next time you encounter a similar challenge. But when you experience failure, you get the opportunity to discover better ways to execute it. Doubt kills dreams more than failure ever will. So, instead of being afraid of failure, see it as an indicator of impending success.

Chapter 10: Responsible Decision-Making

My observation is that most of us make decisions emotionally and then build a case to support them rationally. We need to instill a business culture that facilitates the opposite, where we intellectualize our decision-making and do so based upon reliable data. However, we should not become robotic in our decisions. You can teach an animal right from wrong, but you can only teach a human wise from unwise. The best leaders make the best decisions. It's that simple. You must be comfortable and confident in your own judgment. Trust your values and your instincts, don't react with emotion, keep the six Cs firmly in mind, and make the decision.

Chapter 11: The Four Cs of Teamwork

The four Cs of teamwork include ***Communication, Cooperation, Collaboration,*** and ***Coordination***. When any of these elements are missing, the result is a disjointed organization or an inefficient effort. True communication begins when at least two parties speak with each other, not to each other. Cooperation is always about finding a solution that can be accepted by all parties. Through cooperation, we are then able to collaborate, working together to identify who did what best. By coordinating our approaches and building off existing organizational strengths, we can create a multiplier effect that can accelerate the impact on the communities we commit to serve.

Part 2: Leadership Excellence: Lead from the Middle

Chapter 12: Everybody from The Janitor to The King Deserves to Be Treated Well

Every person in the organization plays an important role in fulfilling its purpose, achieving its vision, and accomplishing its mission. Therefore an authentic leader embraces inclusivity and eschews exclusivity. If a team member fails to rise to A-level performance or makes decisions that don't land well, a good leader will pull them aside (alone), and then discuss the situation diplomatically. Conversely, when team members have delivered excellent work, an authentic leader will acknowledge it openly.

Chapter 13: Authentic Leaders Measure Results, Not Style

Authentic leadership is always preceded by authentic living. Authentic living starts with having integrity, which is simply doing what we say we're going to do. Instead of making false promises, authentic leaders follow through on commitments. Customers want products and services that perform exactly as they expect. Shareholders and owners want measurable results that put dollars in their pockets. The true test of an authentic leader is whether they deliver the desired results on a consistent basis. No matter how charismatic you are as an individual, you can't talk or hype your way to authentic leadership; you must earn it by generating results.

Chapter 14: An Organizational Chart May Give You a Position, But Only People Can Grant You Power

Most of the world's greatest achievements required more than a single individual to get the job done. It took a team. So, while organizational charts may give you a position, only people can grant you power. In business, however, it is not about having a handful of superstars who overshadow everyone else. It is more about making sure:

- People are good at what they do
- People like what they do (when they don't like what they do, they don't do it for long)
- They like doing it together

Good executive leadership creates an environment that is the ideal balance of empowerment and accountability.

Chapter 15: Great Leaders Learn How to Think Beyond

Most businesses, like most people, expend a great deal of time and energy looking backward. They seem constantly to focus on fixing the last problem rather than anticipating the next one. A better term to describe how we should act might be "anticipatory." Being anticipatory – looking ahead or thinking beyond today – is the best way to avoid future negative surprises. Great leaders, and the great teams they lead, think beyond the moment. They anticipate problems and challenges that might arise and prepare for them before they occur.

Chapter 16: The Test of Authentic Leadership

Your legacy of leadership will be defined by how others remember you, because of what they became, did, or achieved as a result of the relationship that you had with them and the positive influence you exerted in their lives. If the culture of the businesses we run encourages our people to strive to be their best, then the business has a chance to run at its best. Whatever job you hold, it must be about the five Fs. A job needs to provide enough ***financial*** reward and ***free*** time (the first two Fs) to invest in the three Fs that are genuinely important: your ***faith, family,*** and ***friendships***.

Part 3: Organizational Excellence: Culture Trumps Strategy

Chapter 17: Culture = Organizational Personality

Great leaders help construct a positive, productive, and cohesive culture to drive their organization toward optimum performance. The traits they bring to the table include: a culture of service, encouragement, empowerment, accountability, inclusivity, discipline, respect for all levels, rules, and individuals within the organization, and a culture of innovation. To make these traits achievable, we must have the right people performing the right functions in ways that showcase their passions and strengths.

Chapter 18: The Seven Seas (Cs) Of Hiring

If people are key to building a successful organization, how do you hire the right ones? The answer lies in the seven seas (the seven Cs) of hiring: ***Competency, Character, Calling, Contribution, Commitment, Collaborative,*** and ***Chemistry***.

During the hiring process, a leader must make sure that diversity and chemistry are fully symbiotic when it comes to the assembly and operation of any team. After all, what makes us different should make us stronger, and better.

Chapter 19: Digital Communication and The Demise Of Genuine Dialogue

We may live in a digital world, but we interact and work with humans. No matter how much we may depend on digital technology, our business will still be driven by our people, and that means we must master communicating both humanly and digitally. Learn to match the communication medium with each type of situation you encounter to maximize clarity, knowledge transfer, and productivity while minimizing ambiguity, inefficiency, and hurt feelings.

Chapter 20: Technically Priceless But Practically Worthless

It used to be that the common business model for optimization was PPT: people, process, technology; now, it is PTP: process, technology, people, with process and technology running together virtually concurrently. The technologies we apply, including informational technology, must be measured by their ability to improve operational and financial performance, and that means our people must not only be able to apply them but also to extract the full potential out of the tool or technology being employed. If that's the case, then we may be falling in love with shiny objects that we can't put to work.

Part 4: Sales Excellence: Customers Don't Want to Be Sold; They Want To Be Served

Chapter 21: The Reverse-Negative Selling Model

All good sales approaches contemplate the fact that people love to buy but hate to be sold. That reality has led me to what I label the "Reverse Negative Selling Model." This model involves spending time to identify your problem and then approaching it from the exact opposite way convention tells us we should. Going against convention isn't about being different, but it is about thinking in different patterns. As an authentic leader, don't be afraid to think counterintuitively. Figure out what your unique value proposition is, and always express it in terms that matter to your customers.

Chapter 22: Sales Is A Science, Not A Science Project

Use the NTSB acronym as a first-level filter for qualifying a prospect. NTSB in sales translates to Need + Timing + Sponsorship + Budget. Does the prospect have a legitimate need for a product or service? Is the timing right? Is there sponsorship and support across all influencers and decision-makers? Will the budget prospect's budget support expenditure of the necessary magnitude?

Once your prospect passes the NTSB test, MEDDIC is the next acronym to adhere to. MEDDIC represents a few critical elements of a sales process that are mandatory and that cannot be trivialized. These include Metric, Economic buyer, Decision process, Decision criteria, Identifying pain, and Champion. In short, consistent sales success requires nearly flawless planning and execution. One without the other is useless.

Part 5: Business Excellence: Find Something You Do Well and Perfect It

Chapter 23: Crooked Wire Value

When our value proposition is undifferentiated from our competitors, then our customers will simply extract our straight-arrow and replace it with that of our competitors. But when we provide solutions that are both irreplaceable and drive quality results, it can be almost impossible to get us out. Crooked wire value results from the provision of innovative products and services that are unexpected by the customer and unmatched by the competition. Ask yourself: three years from now, what is it that your market and your clients will be dying to have? Figure that one out and success will soon follow.

Chapter 24: Decision-Making by The Numbers

The three-step process – called the 3-2-1 decision-making model – to help leaders make effective decisions includes:

1. To not take any action or engage in any activity that is illegal, immoral, or unethical.
2. A leader's behavior, both at work and away from work, should reflect and reinforce their brand values and brand culture.
3. To determine which decisions we can make on our own and which ones require additional counsel. Unless the decision has the potential to damage one or more of the six Cs, it comes with a lower risk and must be made. If the risk is significant, it's best to get someone else in the boat before taking the final step.

Chapter 25: Many Times, The Things We Want to do the Least Are the Things We Ought to Do the Most

Difficult decisions are not supposed to be easy, and they're certainly not fun. It is easy to drag our feet on those decisions and to tell ourselves that we will deal with it next week. But two mantras come to mind:

1. Never make peace with a weakness
2. When is the best time to fire somebody? The first time you think about it.

So it's best to hit the hard things while your mind is relatively uncluttered and before others begin to make demands on your time that compromise your ability to accomplish the truly important objectives.

Conclusion: Be Present

As leaders, we can achieve excellence by first becoming mindful of who we are and what we expect of others. By being a living model of the principles and values that are at the core of your nature, you will create consistency in your patterns of decision-making and predictability for how you treat others. That, in turn, will expand your sphere of influence. We need more good leaders. Be one.

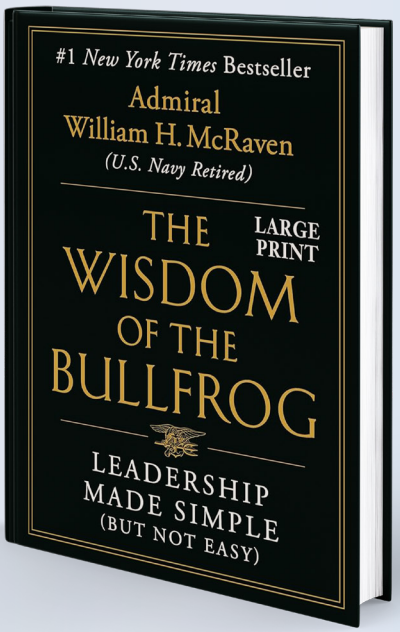
The Wisdom of the Bullfrog

Admiral William H. McRaven

BOOK SNAPS™
Zooming In On Your Next Read



The Wisdom of the Bullfrog

Leadership Made Simple (But Not Easy)

By Admiral William H. McRaven

Admiral William H. McRaven is the #1 New York Times bestselling author of Make Your Bed and the New York Times bestsellers Sea Stories: My Life in Special Operations and The Hero Code: Lessons Learned from Lives Well Lived. In his thirty-seven years as a Navy SEAL, he commanded at every level. As a Four-Star Admiral, his final assignment was as Commander of all U.S. Special Operations Forces. After retiring from the Navy, he served as the Chancellor of the University of Texas System from 2015 to 2018. He now lives in Austin, Texas with his wife, Georgeann.

What Separates the Good from the Truly Great?

In military terms, the bullfrog is "the longest serving frogman and Navy SEAL on active duty." Admiral William H. McRaven (U.S. Navy Retired), former bullfrog and current chancellor of the University of Texas System, sets out to relay all he has learned about leadership in his book, ***The Wisdom of the Bullfrog: Leadership Made Simple (But Not Easy).*** While his book is replete with military stories and lessons McRaven learned while serving the nation in the military, his advice holds for anybody acting in a leadership role in any capacity. His main belief about leadership is that it is a simple endeavor although it is never easy. A true leader, he believes, not only gets a job done but maintains and advances the reputation of his or her institution. McRaven has developed a list of eighteen sayings he encountered throughout his life, and in each of his chapters, he presents the saying, explains it, and gives an example of how he has seen it play out. This is not a step by step guide to becoming a leader or a collection of case studies. Rather, this book goes deeper than that and expounds upon who a leader must be if they are to lead effectively. In many ways, this book is about character and how that character affects not just the individual but all of those around him or her. In short, it is about who a leader must be.

Honor, Trust, and Action

The first phrase McRaven presents is "death before dishonor." He defines honor as "doing the right thing for the right reasons," and he believes that people will follow a leader anywhere if they believe he or she is a person of honor. An important part of great leadership, he maintains, is having a code of conduct that can guide a leader through inevitable tough situations. Everyone will make mistakes, but having a code of honor remains paramount to success. McRaven concedes that some unethical people make it to very high positions, but he stands behind his belief that ultimately this behavior will have negative consequences either for the individual or for the organization he or she works for. For McRaven, "Being a person of high integrity is what separates the great leaders from the commonplace."

"You can't surge trust" is the next saying McRaven attempts to

live by. He discusses the decision the CIA made to use McRaven's special forces team in their attempt to capture Osama bin Laden, and he explains that the trust involved in this decision was only possible because it had been built over many years. Trust is not something that comes instantly. His way of building trust is to "Show up early. Work hard. Stay late. Have a plan. Deliver on your promises. Share the hardships with the employees. Show that you care. Admit your mistakes." Trust cannot be rushed, but it is essential for competent leadership.

Next McRaven moves on to the task of commanding people with the phrase, "when in command, command." He discusses the story of Admiral Chester Nimitz. Nimitz had been in command of the Decatur when the destroyer ran aground. The incident was so severe that the admiral was given a letter of reprimand for dereliction of duty. Nimitz made mistakes, but he also learned that with great responsibility comes the need to make decisions, and no person will always make the correct decisions. Still, it is the job of a leader to make decisions and take action, nevertheless, and command. This requires the ability to face challenges while also understanding that leaders were chosen for a job because they are good. He writes, "As a leader you must always appear to be in command, even on those days when you struggle with the pressures of the job… You must instill in your men and women a sense of pride that their leader can handle any problem."

What Leaders Must Do

In his next chapter, McRaven, then "the brand-new ensign at Underwater Demolition Team Eleven" was summoned by the Skipper. McRaven was surprised by the summons, and as he made his way to the Skipper, he imagined what honorable task he may be about to be given. When he got to the Skipper, however, he was asked to create a float for a Fourth of July parade. Needless to say, McRaven was disappointed about the task he was given, but through that experience, he learned the next phrase he lives by, "we all have our frog floats." For him, frog floats are tasks that people consider beneath them, and McRaven was taught by his Master Chief that the best thing to do in these situations is to do the absolute best you can. McRaven also learned that "if you [take] pride in the little jobs, people would think you worthy of bigger jobs."

McRaven believes that when difficult situations arise, a leader must go to the source of the problem and be visible and do what needs to be done. This is summed up in his phrase, "run to the sound of the guns." To exemplify this, he discusses the management of the 2010 Deepwater Horizon oil spill. The CEO of the company at the time stayed in London white also downplaying the severity of the incident which was "one of the largest oil spills in the history of the industry." McRaven believes the leaders can sometimes be reticent to go to a problem because coming up with a solution usually requires admitting to being part of the problem. Good leaders, he maintains, "embrace the challenge." Going to the source of the problem presents risks, but it is essential to quality leadership.

"Real leadership," McRaven writes, "is not always about being the person in charge during an existential crisis….Sometimes real leadership is just doing the right thing when no one else is. When you take action of your own accord, it sets the tone for the organization." McRaven writes these words as he discusses the Ranger's saying, Sua Sponte which means "of your own accord." He acknowledges that it is often hard for leaders to allow those under them to make important decisions. After all, it is often the reputation of the leaders and the whole organization that is on the line. Still, he insists that people must feel empowered and take advantage of that empowerment to do the right thing without needing to be told. McRaven believes that the missteps and mistakes that will sometimes arise because of this is better than fostering an environment of inaction.

Next McRaven goes to discuss the phrase, "who dares wins," and to exemplify this philosophy, he discusses the decision President Barack Obama had to make as to whether to send people into the compound where intelligence believed Osama bin Laden was hiding out. While the intelligence pointed to the fact that he likely was in the building, there was no way to ascertain this for certainty. As such, Obama's reputation as well as the lives of those inside the building and those tasked with going in the building were on the line. Obama believed that troops needed to go in, but he was careful with the process and with the lives in his care as the team on the ground spent weeks of careful training for the mission. Risks must be taken, but they must be carefully considered and managed. McRaven discusses opportunities that the greats in all fields have taken even though they were risky. Some succeed, and some do not, but they were all willing to take a risk, and those who succeeded also spent ample time preparing for the risk. Great leaders, he claims, must be bold but not brash.

"No plan survives first contact with the enemy" is the theme of McRaven's tenth chapter. With these words, McRaven introduces the importance of contingency plans. The military, he explains, goes through many steps to test plans against possible worst case scenarios. This requires time and effort, but he believes this process is absolutely imperative for success because it helps ensure that a team will always be ready for whatever contingencies are thrown their way.

Leadership and Standards

McRaven believes deeply in the need for high standards. Soldiers who desire to be SEALs desire to be the best, and they know that high standards are required of them. This brings forth the saying, "it pays to be a winner," but McRaven believes there is a corollary to that statement and that is that there are downfalls to failing or losing. McRaven tells the story of a night when one of the members of his SEAL team got into a bar fight with some marines. When McRaven pointed out the number of Marines who had acted poorly to Coumatos, the commodore, Coumatos told him that the Marines were young and that he expected more from SEALs. They are held "to a higher standard." McRaven understood that they were held to high standards and that while they sometimes fail to meet these standards, people need to be held accountable for such breaches. He writes, "Everyone wants to be a part of something special. Everyone

> People benefit when they know exactly what is expected of them."

wants to be a valued member of a great organization. And the only way to be a great organization is to set high standards and expect people to live up to those standards." He believes that people want to be winners and want to be challenged. "Never underestimate" he says, "the value of a stretch goal, of setting the bar high and challenging your employees to clear it."

When McRaven writes, "A shepherd should smell like his sheep," he means that a leader should be sharing experiences with those they lead. This includes dangers and camaraderie, and it means listening to stories. In SEAL training, the officers and the enlisted soldiers participate in the same training. There are two key benefits to this, McRaven writes. The first is that the officers get to know the enlisted people and understand what motivates them. The second benefit is that it instills a level of respect in the enlisted soldiers for their officers because they have all gone through Hell Week together. McRaven believes ineffectual leadership will arise when leaders lose touch with those they lead.

Oversight and Communication

To "troop the line" refers to the act whereby a leader inspects his or her military. McRaven believes that daily inspections provide leaders with great insight. When leaders gain this insight, they see what it is that their people need. When people have the resources they need, they feel valued, and this is a large part of having solid morale. This is not something that McRaven just did while in the military. He also troops the line at the University of Texas schools. He finds that there are problems in all organizations in the lower levels that people struggle to overcome and that can make jobs more difficult for those working in these lower roles. Often, however, a leader can quickly make changes that eliminate these struggles, and this can make things better for the whole organization.

This ties in to McRaven's next phrase "expect what you inspect." He tells the story of Colonel Bud Sydnor who approached one of his captains and called him out for not inspecting his troops. The captain replied that this is not necessary because everyone there is a professional. To this, Sydnor responded that "if you were a real professional, you would understand the value of an inspection." While he admits that there is a line between oversight and excessive scrutiny, he maintains that each leader must find a way to walk this line because any organization will become sloppy if people's work is not inspected. He believes that people benefit when they know exactly what is expected of them.

To illustrate the importance of communication, McRaven discusses a time when he was in ambush training. When the instructors ambushed McRaven and his men, McRaven discovered an opportunity to take his instructors by surprise and wipe them out. While he thought he would be lauded for his effort and effectiveness, he was not. This is because he failed to communicate what he was doing with his troops whose job it was to listen to McRaven. Instead of leading his people out of the kill zone, he left them without communicating, leading at least one man to believe McRaven was abandoning the group. From this, he learned the invaluable lesson of the importance of communication.

These are many of the lessons and insights McRaven presents in The Wisdom of the Bullfrog: Leadership Made Simple (But Not Easy.) These and the other lessons are all hard won from his time in both the military and in the University of Texas system. The chapters of the book are short, often including the narrative telling of an incident and the lesson he learned from that incident as well as an explanation of the phrase the chapter is about and an introductory quote by a notable person elaborating on that chapter's text. Each chapter ends with a brief list of things for the reader to remember. Because McRaven's chapters are short, clear, and littered with memorable anecdotes and stories, the lessons can be learned quickly and understood easily. Still, they are lessons meant to guide a life and a career, and because of this, understanding them is far easier than living by them. This ties in with McRaven's theme that great leadership can be simple but it is not easy. This book will likely appeal to anyone in any position of leadership whether that position be in the upper echelons of the military or in their own homes. After all, as McRaven says, leadership is about honor, and honor is necessary in any well-lived life.

Leading With Passion and Power

THE WIZARD AND THE WARRIOR

THE SUMMARY IN BRIEF

Why use wizards and warriors as models for leadership? Because, as Peter Drucker once said, everything you learned is wrong — at best, it is misleading and insufficient. You typically learn in school, workshops and seminars that if you can manage the work and serve the people, you have what it takes. It's not true. Maybe you have enough stuff to be a pretty good manager, but it takes much more to be a good leader.

This summary gives leaders the insight and courage they need to take risks on behalf of the values they cherish and the people they guide. Great leaders must act both as wizard, *calling on imagination, creativity, meaning and magic, and as* warrior, *mobilizing strength, courage and willingness to fight as necessary to fulfill their mission.*

Bestselling authors Lee Bolman and Terrence Deal present the defining moments and experiences of exemplary leaders such as David Neeleman (CEO of Jet Blue), Mary Kay Ash and Anne Mulcahy — all of whom have wrestled with their own inner warrior and wizard. Their engaging case studies are followed by commentaries that raise questions and suggest possibilities without rushing to resolution or simple answers.

Armed with this summary's expanded repertoire of possibilities, leaders can become more versatile and imbue work and life with more power and passion.

In addition, this summary will show you:

- ✓ ***How to surprise your constituents by showing them possibilities they never imagined.***
- ✓ ***Where to find transformational opportunities that exist everywhere and in every moment.***
- ✓ ***How to attain the warrior's power and the wizard's magic with effort, passion and continual learning.***
- ✓ ***How great leaders have found confidence in themselves and passion for their cause.***

Confronting the Wizard and Warrior Within

Managers are running on two cylinders — structure and people — when they need four. Two other frames — political and symbolic — are required to make sense of the roiling, moving targets that organizations serve up every day. They take us into a world dominated by power and passion. The bad news: That's just where managers are usually weakest. We know this from research and across sectors. Inattention to these two ways of thinking and behaving is a debilitating Achilles' heel.

Managers shy away from politics because they see its dynamics as sordid or because conflict scares them. They fear losing control and losing out. They cling to the illusion that if organizations were run right, they wouldn't be political. Most managers have an even harder time grasping the elusive and mysterious influence of symbols. Discounting culture as fuzzy and flaky, they don't see it, even though it's there and influencing everything they do. Great leadership doesn't happen without addressing these political and cultural issues head-on. Leaders cannot afford to stay on the sidelines and play it safe. Someone has to be willing to stand up and put it on the line. That's why we need more wizards and warriors.

Thinking on Your Feet

Wizard and warrior are roles that you can choose to play and learn to play better. Wizard and warrior images are metaphors to help you think on your feet. When, for example, you are in dangerous and highly charged political situations, what are your options? There are three kinds of warrior — toxic, relentless and principled — and four key attributes that warriors need to be successful — mind, heart, skill and weapons.

When the culture of your enterprise needs tweaking or transforming, what are your wisest moves? There are three wizardly roles — authentic, wannabe and harmful — and specific ways leaders can inspire, deflate or destroy a company. To be successful, wizards need to discover their own magic and spiritual core and then summon the collective spirit through example, values, ritual, ceremony and stories.

Defining moments in the lives of leaders from different eras illuminate pathways to follow and pitfalls to avoid. These lessons can provide insight and perspective that will be invaluable in your own defining moments. Knowing when to fight or when to invoke key symbols can determine whether you succeed or run aground.

Light and Shadow

Richard Nixon won the U.S. presidency in 1968 and again in 1972. Ray Price, Nixon's chief speechwriter, described Nixon as possessing both a very bright side and a dark, thunderous side that was mostly hidden from public view. Price and others on the presidential staff saw Nixon's potential for greatness but worried about the darker angels of his nature. These often rendered him insecure, secretive, angry and vindictive.

Fascinating and shadowy, brilliant and petty, loved and hated, Richard Nixon stands out as one of America's most controversial and cryptic presidents. As the only individual ever to resign America's highest office, he is conspicuously one of a kind. Yet the source of his fall — inability to recognize and manage competing demons — is the stuff of Shakespearian tragedy, a story repeated worldwide throughout history. Nixon's demons lurk in even the best of us.

Mother Teresa's Vatican biographer wrote that she had an interior life marked by an experience of a deep, painful and abiding feeling of being separated, even rejected by God. She called her inner experience, "the darkness."

Mother Teresa was born Agnes Gonxha Bojaxhiu in 1910 to an Albanian Catholic family in Macedonia.

Confronting the Wizard and Warrior Within

(continued from page 2)

When she was 18, she joined the Sisters of Loreto, an Irish religious community with missions in India. In 1946 she was working at a Catholic high school in Calcutta. During a train ride that year, she received a call to serve the "poorest of the poor." Alone and without funding, she began her new mission. In 1950, she established a new Catholic religious order that built missions worldwide to serve the poor. By her death in 1997, she had become an inspiration to the world for her commitment to doing "small things with great love."

Why would such a woman feel chronic emotional pain? She, like Richard Nixon, had her darker side. Admired by most, she also attracted critics. She was a politician as well as a saint. Her passion and faith were deep and powerful. They fueled and sustained her commitment to her calling. But her impulses toward power and self-promotion were equally robust. Her political inclinations were at the heart of her spiritual struggles.

Conflicting Forces

Richard Nixon and Mother Teresa were larger-than-life world figures, and both struggled to manage the conflicting forces in their psyches. Egged on by short-sighted advisers, Nixon let his ambition and his fears trump his genius, with devastating results. Mother Teresa's triumph was to turn similar tensions into a powerful creative force. She successfully rode the tiger of conflicting impulses and aligned them in support of her call to serve the poor. Their divergent stories reveal deep truths about the risks and possibilities of leadership. Magic and power coexist in the world and in each of us. So too do self-interest and ambition. The forces of light and dark are uniformly real and powerful.

Many of us hope to lead from our comfort zones. We deny our demons and avoid the inevitable tensions between passion and politics. We disavow both warrior and wizard, hoping that expertise and people skills will get us where we want to go. It is a vain hope. In limiting ourselves and playing it safe, we lose touch with reality and close off access to our deeper psychic and spiritual power. We also forfeit the likelihood that we will achieve anything interesting or important.

Power and Spirit

To lead with passion and conviction, we need to embrace both power and spirit. We need to recognize and follow a path of paradox and contradiction, a promising route right in front of us.

When should a leader fight, and when should he or she search for new options? Leaders must reflect about how they currently cope with this dilemma, and how they might approach it differently in the future.

There are four different roles in leadership:

1. Analysts emphasize rationality, analysis, logic, facts and data. They believe that leaders must get the right information, analyze it correctly, and develop goals and strategy based on facts. They try to avoid or control emotions and politics to avoid distorted decisions and irrational action.

2. Caregivers emphasize the importance of people and relationships. They prefer collaboration to competition and care as much about helping as winning. They look for ways to understand and respond to the needs, concerns and feelings of colleagues and constituents.

3. Warriors believe that managers and leaders live in a world of conflict and scarce resources. The leader's job is mobilizing the resources needed to advocate and fight for the organization's agenda. Warriors emphasize the importance of building a power base: allies, resources, networks, coalitions. They welcome battle and competition rather than fear or avoid it.

4. Wizards bring imagination, insight, creativity, vision, meaning and magic to the work of leadership. They look beyond the surface of things to see new possibilities. They surprise and delight followers with new and imaginative solutions to old problems. They goad others to be creative. They often work magic — accomplishing the impossible. The symbolic tools of their trade include icons, ritual, ceremony and stories.

Organizational Frames

These four images correlate with four organizational frames. The *Analyst* hews to the structural frame that sees organizations as factories or machines, and focuses on their rational aspects. The *Caregiver* prefers the human resource frame, with its emphasis on alignment between people and organizations. The *Warrior* corresponds to the political frame, which sees organizations as arenas in which individuals and groups compete for power and scarce resources. Finally, the *Wizard* aligns with the symbolic frame, with its emphasis on the cultural and nonrational features of organization.

All four frames are critical for understanding life in groups, organizations and societies. The warrior and wizard roles are the most neglected and the most important for leadership. Research over the last two decades has consistently found a paradox: Most managers rely primarily on the structural and human resources perspectives, *but* the political and symbolic frames are most often associated with effective leadership.

The better people understand and use the possibilities of the wizard and warrior within, the more likely they are to become leaders who bring clout, hope and faith to organizations that have become neutered and sterile. ■

For additional information on choosing a warrior role, go to: http://my.summary.com

Warrior Roles: Toxic, Relentless and Principled

There are three distinct roles that warriors may play, each falling somewhere in the murky terrain between the idealized knights and villainous ogres of legend and fiction. The role an individual plays is determined by a combination of history, character and circumstance. Recognizing the characteristics and consequences of each warrior role increases your ability to choose one that fits a given situation, and to shift from one to another as circumstances change.

All leaders make enemies as well as friends. They inevitably generate mixed reactions and ambivalence, so it is a mistake to take too much comfort from the praise of allies or suffer too much pain from the attacks of enemies.

The warrior's choice of role is further complicated by a persistent tension between noble aspirations and tedious realities. Warriors are frequently wedged between the sublime and the mundane, between lofty imperatives of a demanding ethical code and constant temptations of baser, more expedient interests. This struggle arises in part from the gap between patriotic dreams and the grim reality of the battlefield. It also reflects the transitory nature of human life. Since there is little time to waste, warriors are perennially tempted to grab what they can while they can.

Finally, the role warriors play depends on the cause they seek. For some the cause is narrow and selfish. Others commit themselves to a larger common good. There have been many warrior leaders in war, politics and business. Most have claimed to fight on behalf of some noble mission. Far fewer have ultimately succeeded in achieving great purposes and accomplishing their chosen agenda. Too many accumulate power and then use it badly, unleashing destructive forces that lead to waste and ruin.

The Toxic Warrior

At the destructive end of the warrior continuum, we find the *toxic warrior*, whose inner world is dominated by conflict and turmoil. In toxic warriors, the conflict between forces of dark and light rages with almost unmanageable intensity. They are, at worst, thugs and sadists. They believe that victory and their own interests supersede everything else. They have little patience for ethical concerns; the end justifies the means. They are often brilliant, politically shrewd and charismatic. They may temporarily achieve extraordinary heights, yet their truncated vision and moral flaws lead almost inevitably to tragedy.

Adolph Hitler, Joseph Stalin and Pol Pot exemplify the most destructive of toxic warriors. Each amassed extraordinary power and changed history, but left a legacy of damage and death. Their commercial cousins include people like Leona Helmsley and "Chainsaw" Al Dunlap.

Here are three guidelines for avoiding the path of the toxic warrior:

1. **Managers need a realistic sense of self.**
2. **Be alert to signs of toxic leadership.**
3. **Take on a new role.** Move to a more productive stance.

Toxic Warrior "Chainsaw" Al Dunlap

While Al Dunlap was chief executive of Scott Paper, he more than doubled profits and market value. He achieved this financial miracle by slashing head count and cutting "frills" like research and development. He told managers not to get involved in community activities, eliminated all corporate contributions to charity, and moved Scott's headquarters from Philadelphia (where it had been for more than a century) to Boca Raton, Fla. (where Dunlap had a new home).

A closer look at the bottom line revealed that employee morale sank and Scott lost market share in every major product line. Dunlap did not stay long enough to find out whether he had sacrificed Scott's future for short-term gains. After less than two years, he sold the company to its biggest competitor and walked away with almost $100 million.

Sunbeam hired Dunlap in 1996 to work his managerial skills on its struggling appliance business. Dunlap started by laying off about half of Sunbeam's work force and he closed more than half of the company's factories and warehouses. Inside Sunbeam, anyone who voiced concern was soon out of a job. After an initial rise in stock price, it went into a free fall in early 1998. With the company teetering towards bankruptcy, its board sacked Dunlap less than two years after he came aboard.

The Relentless Warrior

Midway on the continuum is the *relentless warrior* — a tireless and passionate battler. Like their toxic counterparts, these warriors want to win, but they recognize that some costs are too high. They will push the rules of the game only so far. Microsoft founder Bill Gates, U.S. President George W. Bush and Hewlett-Packard's embattled CEO Carly Fiorina are among many examples of the relentless warrior.

Relentless warriors are passionate about their aims. But they are pragmatic enough to know the dangers of plunging recklessly over legal or ethical cliffs. They often test and sometimes bend the rules but rarely break them. High-profile cases have shown that you lose if your actions put you in jail, or if the products of your enterprise cause death or injury. One relentless warrior, a successful entrepreneur, summarized his perspective on business ethics very simply: "Death and jail scare me."

Three strengths and limits of the relentless warrior are:

(continued on page 5)

Warrior Roles: Toxic, Relentless and Principled

(continued from page 4)

1. Relentless warriors' courage, persistence and determination make them formidable foes.

2. Relentless warriors excel when the objective is clear and they can advance against clearly defined adversaries.

3. Relentless warriors' constricted field of view, stubbornness and willingness to steamroller opponents cast them as polarizing figures.

The Principled Warrior

Nearer to the light end of the continuum, we find *principled warriors*. They see victory as a means rather than an end, worthy only if honorable and in service of a higher purpose. Mary Kay Ash, Abraham Lincoln and legendary basketball coach John Wooden are examples.

Principled warriors are particularly likely to alter the course of history. They leave a legacy for several reasons:

1. Principled warriors put combat in perspective because they are not in love with it.

2. Principled warriors will sacrifice for a worthy cause.

3. Commitment to a coherent set of purposes and values makes principled warriors most likely to make a just and lasting difference. ■

The Warrior Path

Regardless of the role they play, warriors succeed through a combination of four basic ingredients: heart, mind, skill and weapons. *Heart* gives warriors passion, courage and persistence — it is the "fire in the belly" — that propels them forward in the face of risk, confusion, danger and obstacles. *Mind* gives warriors the direction and guidance to make strategic moves on life's ever-changing chessboard, avoiding snares, ambushes and blind alleys. *Skill* — developed through instruction and experience — determines how well leaders read and manage people and circumstances to move their cause forward. *Weapons* are the armory that warrior leaders employ to champion their cause.

Each of these ingredients contributes to the potential path to victory: overcoming a less determined or more fearful opponent with greater courage and passion, outsmarting a more confused or less disciplined opponent with a better game plan, besting an opponent through greater art and technique or winning by deploying stronger assets on the field — a larger force, better players or superior weaponry.

Warrior Heart

No one plays to lose, but not everyone plays hard enough to win. In every arena of human conflict, there are countless examples of individuals or groups who beat an otherwise-superior opponent by dint of a bolder heart and steelier determination. Heart drives a leader's intensity and commitment; it is the wellspring for the passion, courage and persistence that are crucial to success.

1. Passion. Passion is at the heart of all successful leadership. It is rooted in a deep, sometimes obsessive, personal and emotional commitment to a cause, a group or a task. It is a basic quality of all great warriors and leaders.

2. Courage. Courage is derived from the Latin word for heart. It is vital because conflict always brings risk of loss — physical, economic or social. Leaders need a willingness to go beyond orders and job descriptions, to buck the tide and plunge into uncertain, dangerous waters. Wal-Mart founder Sam Walton had that kind of courage. So did Joan of Arc. General George C. Marshall — architect of Allied victory in World War II and of the postwar Marshall Plan aiding Europe — showed similar courage throughout his career.

3. Persistence. Victory rarely comes quickly or easily. More often it is a long, costly, sometimes disheartening slog.

Warrior Mind

Sun Tzu's point — made 2,500 years ago — still holds today: Heart sustains the warrior but may run amok if cut off from mind's direction and discipline. Mind without heart is sterile, but heart without mind is reckless, often suicidal. An effective leader needs both. Great warrior leaders show consistent habits of mind.

1. Focus: Knowing what you want.

2. Foresight: Mapping the terrain and developing a game plan.

3. Flexibility: Responding fluidly to threats and opportunities.

4. Discipline: Aligning passion with purpose.

Warrior Skill

Skills are capacities developed over time. Genes confer potential, but potential becomes a usable skill only through effort, practice and instruction.

The skills that warriors need depend on where and how they fight. For the modern leader, the most important skills are personal and psychological, variations on the theme of emotional intelligence. Leaders need to know how to read people and recruit them to their cause. They need ability to motivate and inspire allies and followers. They must learn to negotiate with friends for support and with enemies for workable pacts. Four key skills are:

1. Intuition: Knowing the psyche. Mary Kay Ash, the founder of Mary Kay Cosmetics, built her successful direct sales business with a passionate focus on the needs and aspirations of women who were frustrated with their lives and their careers. She knew they wanted income. But they also wanted to feel better about themselves and be more in control of their lives.

(continued on page 6)

The Warrior Path

(continued from page 5)

2. Recruiting: Making friends and enlisting allies. In combat, you want comrades at your side, and they need a reason to support you. To gain their loyalty, you need to cultivate relationships and offer compelling reasons to join your team.

3. Inspiration: Rallying the troops. Winning requires a highly motivated, spirited team. Rallying your constituents is essentially the art of making an offer so attractive they can't wait to sign up.

4. Bargaining: Enlisting friends and buying off enemies. Bargaining is a process of making deals that work for all parties concerned.

Warrior Weapons

No warrior wants to go into battle unarmed. Weapons translate heart, mind and skill into power. Historically, weapons were physical implements of combat, but the most important tools of the warrior leader are not physical but social, economic and institutional.

The Godfather, Mario Puzo's film and novel, opens with a wedding reception for Don Vito Corleone's daughter. Following tradition, the Don holds court as friends and retainers come to pledge their friendship and loyalty. Some also come to ask his assistance on some problem they believe only he can solve. The Don obliges whenever he can, because loyal friends and allies are a vital source of his power. Personally, the Don possesses many of the skills of a warrior leader. Those skills enabled him to assemble a formidable array of weapons — his allies, his position as the head of the Mafia family, the family's capabilities, and the resources that he controls either directly or indirectly — that were the building blocks of his power. Weapons are the fourth essential element in a warrior leader's success. These include:

1. Position. *Where* you are situated is often more important than who you are in determining how much power you can exert. More powerful and visible roles provide at least three key power sources: *authority*, *access* and *visibility*.

2. Organization. It makes a big difference if you are fighting with or without an army. Organizations are created precisely because they are capable of doing things well beyond the capacity of any individual. They are tools in the hands of anyone who can control their complex dynamics.

3. Resources. You have power when you own or control things that other people want. Those assets may be tangible (like money or petroleum) or intangible (like access or prestige). They may be durable (like land) or evanescent (like tickets to a hot concert or sporting event).

4. Allies. Lone warriors are deeply rooted in myth. In the real world, solitary warriors usually lose, outnumbered and overwhelmed by opponents who mobilize a larger force. Smart leaders understand they need friends and allies. ■

Anne Mulcahy's Success Formula

In 2000, Xerox stock fell from $63.69 a share to $4.43, the company lost 90 percent of its market cap, and the best and brightest headed for the exits. When Anne Mulcahy became CEO of Xerox in August 2001, few observers gave her much chance of success. Yet three years later, *BusinessWeek* put Mulcahy on its list of the best managers of 2004. The stock was up, the company was profitable again and Mulcahy had met earnings targets 10 quarters in a row.

Mulcahy's success formula combined passion and hard work. She garnered recognition from the beginning that she needed allies — lots of them, both inside and outside the company. Constantly on the move, she met with bankers, customers and employees. She sometimes visited three cities in a day.

Wizard Roles: Authentic, Wannabe and Harmful

Throughout history, people have been fascinated by the magical power of wizards and wizardry. Wizards are part of an ensemble of players who devote themselves to the mystical, symbolic aspects of a tribe or organization. Other related roles include sorcerer, magician and shaman. What sets wizards apart is captured in the root meaning, "wise."

In story and legend, we find numerous examples of three wizard archetypes personified in the *Lord of the Rings* trilogy by Sauron, Gollum and Gandalf. Sauron exemplifies the role of the *harmful wizard* — he is immensely powerful but long ago embraced the dark side of magic. Sauron seeks power and destruction. Gollum, a small, hunched figure obsessed by his desire to possess and wield great magic power, is a *wannabe wizard*. As is often true of wannabes, he flirts tantalizingly with success, without quite grasping the gold ring he seeks. Gandalf personifies the *authentic wizard*. Gandalf's wisdom, more than anything else, is responsible for the evil Sauron's eventual downfall.

The Authentic Wizard

Authentic wizards have discovered their passion or calling through hard work and inner reflection. Their genuineness leads others to see them as real and worth joining in a common quest.

David Neeleman, CEO of JetBlue, demonstrates that a little magic can go a long way in creating a virtuous enterprise. After he was fired from his senior executive position at Southwest, he identified his next quest — to create "the first mega-startup in aviation history." He envisioned an airline committed to restoring humanity to air travel, com-

(continued on page 7)

Wizard Roles: Authentic, Wannabe and Harmful

(continued from page 6)

bining low fares with high style. His wizardry gave birth to JetBlue: an airline that is now one of the top-performing enterprises in the country — in terms of both profitability and customer satisfaction.

1. Wizards are wise. From the get-go, Neeleman realized he needed to surround himself with true believers whose talents complemented his strengths and compensated for his weaknesses.

2. Wizards recognize the importance of symbols and emblematic events. JetBlue provides symbolic support to customers in the form of comforts such as leather seats, each with its own private television.

3. Wizards encourage a strong link between words and deeds. Neeleman is a regular feature on flights, serving beverages and snacks along with the cabin crews.

The Wannabe Wizard

Wannabe wizards veer off the road when their bold new ideas go nose-to-nose with traditional values and entrenched cultural ways. Wannabes also go astray when they initiate a bold new undertaking with vacuous values and cotton candy platitudes that offer little meaning or substance. The resulting vacuum attracts time-worn ways imported from other circumstances and creates a breeding ground for greed and destructive politics. Unlike streetwise authentic wizards, wannabes rely too heavily on book smarts and the fashionable ideas of the moment. They become caught up in their noble intentions and anticipated success, only to trip over unforeseen events. Their intended magic proves no match for the power of opposing forces.

The Harmful Wizard

Harmful wizards have objectives that are self-serving, sinister — or both. They leverage their magic with a profound understanding of the potency of symbols, but manipulate people toward questionable ends. In the short term they are often successful. But in the end their schemes lead to chaos and destruction. Others pay the price for their grandiose, fanatical or destructive visions.

History abounds with the misguided exploits of harmful wizards: Adolph Hitler, Joseph Stalin, Saddam Hussein and Osama bin Laden, to name a few. America's corporate world has also seen its share of talented executives whose evil feats of magic wreak havoc on others: Eastern Air Lines' Frank Lorenzo, Sunbeam's "Chainsaw" Al Dunlap, WorldCom's Bernie Ebbers. The magic is potent; the aftermath is calamitous. ■

The Wannabe Wizard's Blind Spots

Here are some of a wannabe wizard's blind spots:

1. Understanding the influence of the environment on organizational values and practices. Particularly in new companies, values and beliefs from the outside impact internal workings. Newness has not given local ways an opportunity to emerge and mature.

2. Discounting the significance of symbols and cultural values and practices. Flags and anthems hold nations together. Studies of top-performing businesses have, time and again, highlighted cultural cohesion and focus as a key factor in financial performance.

3.Overlooking the importance of corporate heroes and heroines. In distributing recognition and rewards, Enron's Ken Lay and his leadership team missed an opportunity to define the company's values. They reinforced only what mattered most: profit, whatever its source.

4. Getting caught up in your own image and neglecting the business. Ken Lay was a wannabe wizard. He wanted to create the greatest company ever to grace the world of business. At first the magic seemed to work, but a cultural vacuum allowed greed and cutthroat politics to trample the high ethical standards he espoused.

Wizards at Work

Mary Kay Ash was tired of working for other people. She was a terrific salesperson who outperformed nearly all her colleagues. She was so good that she was often tapped to train other salespeople — mostly men. Once up to speed, many were promoted over her. That bothered her so much she decided to take a chance on her own and create her "dream company." Her venture was helped by a chance meeting with a woman who was selling cosmetics formulated by her father. Mary Kay bought the rights and put together a plan for a company that would market and sell the products. Her accountant warned her against the venture, cautioning that it was not economically viable.

Mary Kay Cosmetics was launched as a company devoted to giving women a chance to succeed. It was a business built more than anything else on Mary Kay Ash's faith in herself and in women like her. She was convinced that public recognition for a job well done was the wellspring of motivation. The company quickly became known for its frequent rituals and lavish annual celebrations. These events were resplendent with symbols that expressed and defined the "Mary Kay way."

At her death, Mary Kay was chairman emeritus of a multibillion-dollar company. Her magic had created hundreds of female millionaires. Her legacy was an enterprise devoted to providing economic and spiritual opportunities for women as well as maintaining a healthy bottom line.

Wizards at Work

(continued from page 7)

The Wizard's Odyssey

Magic can be learned and wizardry can be cultivated. Wizards share the following five traits:

1. Wizards are wise. Attaining wisdom is not a passive process. Experience provides the raw material. Reflection gleans the important enduring lessons.

2. Wizards embrace foibles and folly. Avoiding mistakes or trying to cover them up produces a large share of the errors and toxicity we often see in organizations and societies. Fear of error kills creativity and innovation.

3. Wizards are intimately connected with soul. Wizards probe within their souls to navigate life's peaks and valleys.

4. Wizards are magical. Magic has been replaced in most organizations by facts, figures and technology. But deep down it is still the allure of magic that we yearn for in our life and work. Selling cosmetics to neighbors is scary, but receiving a diamond bumblebee in front of an audience of 5,000 colleagues is magical for successful salespeople at Mary Kay Cosmetics.

5. Wizardry is within reach. In our relentless search for wizards, we overlook a prime source — our own souls. The power of wizardry is inside each of us. We have common sense or wisdom that can be unleashed if we stop looking outside and focus instead on our inner journey.

Summoning the Spirit

Before Southwest Airlines, only the affluent could afford air travel. If individuals of limited means wanted to hold a new grandchild, comfort a dying friend, attend a graduation or be present at a bat mitzvah, their only travel options were car or bus. Southwest changed that and multiplied the number of passengers winging their way to destinations across America.

Southwest oozes spirit. It bonds employees together in an uncommon quest. It captures the hearts of customers, who become players in the otherwise no-frills company's fun. It shows in day-to-day operations. It shows up on the bottom line. For years, Southwest has been one of America's most profitable air carriers.

Herb Kelleher, Southwest's co-founder and longtime CEO, played a central role in its success. His fun-loving, self-deprecating wizardry was contagious.

Spirit is there to be summoned and maintained in any group. It just takes someone to release it. The magic formula centers on values, icons, ritual, ceremony and stories. The elements of that elixir are available to anyone, anywhere. But someone has to ignite the wizard within and take the risk to make the chemistry work. Remember:

1. Values unify purpose, focus and behavior.

2. Icons and emblems shape abstract values into vivid representations.

3. Rituals bond people to each other and reinforce the sense of community.

4. Ceremony beckons the spirit.

5. Stories nourish the spirit. ■

The Leader's Journey: Fusing Warrior And Wizard

The wizard relies more heavily on magic and mystery, the warrior on strength and skill. These two distinct ways were personified in ancient Japan by the ninja, who relied on subtlety and artfulness, and the samurai, who emphasized power and physical prowess.

The Sword and the Wand

Leaders who make a difference regularly combine the warrior's instinct for combat with the wizard's imagination and foresight. To combine the two, leaders must have an extraordinary ability to embrace both sides of tensions and polarities others see as unbridgeable opposites. They must:

1. Wield both sword and wand: Know how to create as well as defend. Leaders need the sword to defend a group and its way of life, and they need the wand to create and transform cultural values and ways.

2. Accept current reality, and challenge it because they see its possibilities. Leaders need to see the world both as it is and as it might be, while being clear about the difference between the two.

3. Learn by sensing and intuiting. Great leaders need great powers of observation and intuition.

4. Be both strategists and visionaries. Leaders need the analytic brilliance of the great strategist as well as the imagination and insight of the visionary.

5. Combine the power of the commander and the courage of the champion with the wisdom of the counselor and the magical powers of the shaman. This paradoxical combination is difficult. Great leaders find ways to do it. ■

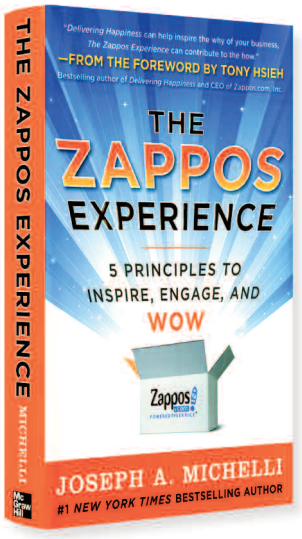
Leadership

The Zappos Experience

5 Principles to Inspire, Engage and WOW



by Joseph A. Michelli

THE SUMMARY IN BRIEF

Zappos. The name has come to stand for a new standard of customer service, an amazing online shopping experience, a great place to work and the most impressive transformational business success story of our time. Simply put, Zappos is revolutionizing business and changing lives.

Now, Joseph Michelli, author of the internationally best-selling business books *Prescription for Excellence* and *The Starbucks Experience*, explains how Zappos does it — and how you can do it in your industry.

The Zappos Experience takes you through — and beyond — the playful, offbeat company culture Zappos has become famous for. Michelli reveals what occurs behind the scenes at Zappos, showing how employees at all levels operate on a day-to-day basis while providing the "big picture" leadership methods that have earned the company $1 billion in annual gross sales during the last 10 years — with almost no advertising.

Michelli breaks the approach down into five key elements: Serve a perfect fit, make it effortlessly swift, step into the personal, S T R E T C H and play to win.

Zappos has woven these five key components into a seamless strategy that's the envy of business leaders. Now that strategy is yours.

With *The Zappos Experience*, Michelli delivers a package for instant success right to your doorstep. All you have to do is open and use it.

IN THIS SUMMARY, YOU WILL LEARN:

- How to increase employee engagement.
- How to connect with customers authentically.
- How to create an energetic culture.
- How to grow your people and products.

Zappos? What Is Zappos?

Zappos lessons are applicable not only to every business sector, but also to the personal and professional development of people at every level of an organization.

While the media image of Zappos often portrays an over-the-top playful culture that might not seem applicable in your industry or workplace, I challenge you to temporarily suspend your cynicism and explore the possibility that Zappos is neither too casual nor too weird. In fact, employees at Zappos demonstrate a commitment to hard work and excellence that the best companies in the most conservative of industries would envy. Style differences may exist; however, the underlying principles that drive success at Zappos will improve both your company and you.

From its inception in 1999 at the height of the dot-com boom, Zappos had a significant early history of being on the brink of extinction. Out of necessity, the company's staff members and leaders had to revolutionize a business model, craft an engaging culture and develop unique operational features. To place the evolution of Zappos in perspective, I will highlight three critical, not necessarily linear, components of the Zappos survival journey. These three targeted historical pivot points offer insights regarding leadership decisions and staff efforts that kept the orders rolling in and the bankers, employees and customers happy. Each of these pivotal transitions solidified the current Zappos culture.

1. Forging a team with diverse strengths. Before Venture Frogs would agree to invest money in Nick Swinmurn's concept of an Internet shoe store, Tony Hsieh and Alfred Lin required Nick to partner with someone with expertise in the shoe business. Nick approached Fred Mossler (now known at Zappos as "just Fred"), asking him to leave a high-paying and stable job at Nordstrom. Fred recounts the unconventional way he was recruited to join the Zappos team: "Nick initially called me posing as a recruiter. He said he had something commerce-related and was looking for someone with a footwear background. I agreed to meet him at a little bar near the Nordstrom store after work one night. I went in with my suit and tie and looked around for a similarly clad person, and instead, this kid in Boardshorts and a T-shirt ran up to me, saying, 'Hi, I'm Nick. I'm not a recruiter. I've actually just got this idea.'"

Nick introduced Fred to Tony and Alfred, who had capitalized Venture Frogs through a $265 million sale of their prior business, LinkExchange, to Microsoft. Fred indicates that Tony and Alfred's prior success "gave me a little more comfort and confidence that there would be some teeth in this business." For weeks, Fred couldn't decide if he wanted to leave Nordstrom to join Zappos, but a major shoe show was about to start, and the Zappos team would need to have a presence at the show to sign up vendors if they wanted to kick off their business and move forward. Fred recounts, "About a week before the shoe show, Nick called and said, 'Listen, if you're not going to join us, let me know now. Otherwise, I need you to take that leap of faith.' At that point, I said, 'All right. Let's do it.'"

2. The courage to try to do what you think is "right." A great advantage for many Internet retailers is the low overhead they can enjoy relative to brick-and-mortar operations. By relying on their vendors to drop-ship products (send the product out directly from the vendor's warehouse), Internet retailers can focus their resources on marketing and creating easy user experi-

ences that make their websites more attractive to customers. In this model, however, the Internet retailer loses control of service, as order fulfillment depends upon the vendors' processes.

Early on, leaders at Zappos realized that buying shoes online created considerable risk and anxiety for consumers and that this anxiety would be worsened if online shoppers had to depend upon the varied delivery practices of the company's vendors. As a result, the executive team at Zappos made the bold move to do what they felt customers needed. They leased a warehouse close to a United Parcel Service (UPS) shipping hub near Louisville, Ky., bought inventory from vendors and committed to consistent and quick delivery to online purchasers. When efforts to have a third-party vendor oversee the warehouse operation faltered, Zappos took over the Fulfillment Center and, in typical Zappos fashion, used a trial-and-error approach to improve processes and maximize customer service.

3. Passion, determination and humility. During the most arduous and desperate times in the early evolution of Zappos, Tony Hsieh became increasingly more involved with and committed to the company. From what started as a fairly hands-off approach to Zappos operations, Tony became more instrumental in the daily affairs of the business. Through his passionate increase in effort, and ever-dwindling financial resources, the brand averted one near-death experience after another.

Whether it was moving a fledgling Zappos into the Venture Frogs office space or extending extra personal money so that Zappos could make payroll, Tony led by example. ●

PRINCIPLE 1: SERVE A PERFECT FIT

It All Comes Back to Culture

While the Zappos culture is enviably strong today, the journey to its well-defined values was not exactly linear. The way the leaders at Zappos delivered their culture and defined their values should offer hope, insight and encouragement to those who lack a written set of values or feel there is a gap between their purported corporate values and the actual culture of their business.

Most businesses already have a set of written values that sound as if they could apply at any and every business. In many cases, employees are not able to recite those values, let alone act in accordance with them, and have no idea where the guiding principles came from. Staff members may not see the values as being relevant to their day-to-day lives and may even view them as being out of step with current business conditions. And in cases where the corporate values do capture the core qualities of a business, the actions of employees may not demonstrate the values in a way that allows consumers to differentiate the business from its competition.

Ultimately, many company leaders just don't know what makes them different from rival businesses or what is at the core of their identity. They are "doing" business, but internal guiding or defining principles do not drive them.

Some Values Are Known at the Start; Others Are Discovered on the Journey

While positive corporate culture was always on the radar of the leaders at Zappos (given their prior experiences in less-than-positive work environments), as in so many other startups, these leaders did not *explicitly* define their core values when they launched their business. However, even without writing their values down, the Zappos leaders *implicitly* demonstrated what they believed by the actions they took in establishing the business. For example, from the beginning, the Zappos leadership aspired to create a work environment that was fun and communal. These leaders understood that people who play together stay together and that a team and family spirit was essential for their brand's survival. To give their company the best chance of success with the limited human and early financial capital they had at their disposal, the Zappos leadership believed members of their small team would be heavily reliant on one another and would be spending an inordinate number of hours together. If the work wasn't fun and the team wasn't tightly connected, the heavy lifting required at start-up would not have been possible. ●

Culture Should Be a Verb

Many great and talented people seek employment at Zappos, but few are selected. Christa Foley, Zappos recruiting manager, reports that the actual applicant-to-job ratio for positions in Nevada hovers at around 30,000 applications annually for about 450 filed positions. In essence, 1.5 percent of all applicants make it through the rigorous cultural and technical hurdles. At many businesses, applicants have to conclude that they weren't selected simply because the "offer letter" never arrives in their mailbox. However, consistent with the Zappos values, leadership makes a point of letting unsuccessful applicants know the results of the application

process. This may seem like a small courtesy, but it speaks to the company's willingness to act in a way that is consistent with values such as "build open and honest relationships with communication" and "deliver wow through service."

Andrew Kovacs, sourcing specialist, shares, "We aren't just here to serve customers who are in a transaction buying our products. We serve all stakeholders, including all applicants, some of whom may even be our actual customers. Communicating with applicants to let them know their status is simply a way of being respectful and serving them. Therefore, we provide applicants an automatic reply that we received their résumé, and we follow up again to let them know whether or not we are moving forward with their application. That takes time. But, come on; we're Zappos."

For Zappos leaders, it's critical that values be adhered to in both pleasant and less-than-pleasant business circumstances, including the way Zappos handles unsuccessful applicants.

PRINCIPLE 2: MAKE IT EFFORTLESSLY SWIFT

Less Effort, More Customers

I've never encountered a business owner or leader who said, "I wish fewer of my customers were raving fans." We all want to maximize that special group of high-value customers who not only support our business through steady repeat purchases, but also eagerly refer new customers to us. While a great deal is known about the factors that drive customers away from a business, the attributes that lead to customer evangelism are the subject of considerable debate. That exact debate played out very clearly in two vastly different articles in a single issue of the *Harvard Business Review*. The titles of the two articles were "Stop Trying to Delight Your Customers" and "How I Did It: Zappos' CEO on Going to Extreme for Customers."

The authors of "Stop Trying to Delight Your Customers," Matthew Dixon, Karen Freeman and Nicholas Toman, reported, "Conventional wisdom holds that to increase loyalty, companies must 'delight' customers by exceeding service expectations. A large-scale study of contact-center and self-service interactions, however, finds that what customers really want (but rarely get) is just a satisfactory solution to their service issue." "How I Did It: Zappos' CEO on Going to Extremes for Customers," written by Zappos CEO Tony Hsieh, suggested that service excellence requires dedicated commitment to such Zappos service values as "deliver wow through service."

So when it comes to customer loyalty, which is it — to wow or not to wow? The answer is actually simple. It's *both*!

Consistent with Tony Hsieh's perspective, "wow" is an important dimension of customer loyalty and should be pursued. The first step in that pursuit is achieved by making sure you are simply "getting it right" (delivering exactly what customers want the first time you serve them) and "making it easy" (reducing the overall effort required for customers to get their needs met). Once accurate and easy service delivery occurs consistently, customers can be "wowed" if the business exceeds their expectations and/or offers personalized care. The importance of accurate and easy service delivery is well demonstrated by Dixon, Freeman and Toman's research, which, in a nutshell, shows the following:

- Delighting customers should not be the first priority in building customer loyalty.
- Reducing your customers' effort to get their problems solved is the low-hanging fruit in the loyalty journey.
- Acting to reduce your customers' effort can actually reduce your service costs.

The Ticket to the Big Service Dance: Velocity, Knowledge, Recovery and Surprise

According to international studies like those done by Convergys, when a company masters ease and accuracy, its customers are looking for expedited service, knowledgeable staff and other aspects of the experience that add value. Zappos adds value through service by:

1. Emphasizing velocity. Employees notice when leaders make choices on behalf of service velocity, and so do customers. Rapid order fulfillment is one of the most commonly mentioned aspects of Zappos service excellence, according to online reviews.

While most of us notice slow-loading web pages or long delivery times, can you imagine your customers consciously clocking your service velocity, assessing your server page load speed, or shopping you and your competitors simultaneously? As business leaders, we would be wise to assume that service velocity is something our customers are always either consciously or unconsciously assessing.

2. Increasing staff members' knowledge of products and service delivery. Studies of customer dissatisfaction consistently show how important it is to have employees who can address the customer's need during the customer's first contact. That research also suggests that the prime reason customers stop dealing with a business is poor service interactions, not faulty products.

3. Elevating service recovery. In the course of millions of site visits and tens of thousands of calls and purchases each day, Zappos makes mistakes. But Zappos doesn't categorize those errors as failures; instead, each of those mistakes serves as an outstanding opportunity for both its business and its customers.

Companies like Zappos act swiftly, take responsibility (often even when the fault is beyond their control), enable staff discretion to fix problems, compensate fairly, do a little something extra to acknowledge inconveniences and follow up until the issue is brought to satisfactory closure.

4. Delivering surprise beyond the predicted and normative. Zappos diligently looks for effective ways to improve its operational excellence, increase personal service delivery and go beyond the predictability challenge to exceed expectations and surprise customers.

Ease of Service

Rafael Mojica, senior user experience architect at Zappos, explains how he and other members of the user experience team view their jobs. "It is an obsession to make our website — and ultimately all Zappos touch points — more user-friendly. We spend the bulk of our time focused on our website's ease of navigation. Although our customers are very satisfied with our navigation, we will never be content. We want to think through everything that the customers might want and how they can get their needs met with the least effort. The design and development process is not as intuitive as you might think because it's not simply about providing information. Too much information can be overwhelming. Our goal is to provide what customers need exactly when they need it."

At the heart of all well-designed customer experiences is a dedicated commitment to understanding the customer's wants and desires. With that understanding, processes are crafted to ensure that the customers get what they want, when they want it, with the least effort possible.

PRINCIPLE 3: STEP INTO THE PERSONAL

More Than a Wallet With Legs

Customers today are tired of being treated like "wallets with legs." Zappos gets what this means.

The leadership at Zappos understands that business can be about more than discrete transactions or money/product exchanges. Business can be, and increasingly must be, about the development of personal relationships that span a customer's lifetime. While average managers might think a company can thrive simply by selling goods or services to customers, true leaders understand that all business is personal. In the end, business success relies on one group of people caring for or profiting another. Ordinary brands often take a "one size fits all" approach to service, but legendary companies like Zappos find ways to create individualized experiences that extend beyond their solid service platform.

People who genuinely believe that if they "serve well, sales will take care of themselves," tend to build legendary brands. Aaron Magness, senior director of brand marketing & business development at Zappos, remarks, "It's sad how a little bit of genuine care can make the difference between horrible service and amazing service. If companies thought more about interaction and less about transaction, people would flock to them."

It is this attention to interaction at Zappos that propels people to connect further with the company.

Connections at All Levels

It's easy for leaders to encourage staff members to create personal, emotional connections with customers. However, it is quite another thing to help them continually grow in service excellence. At Zappos, the process of growing talent in personalized service is tireless and comprehensive.

In the Zappos call center, for example, a Customer Loyalty Team (CLT) trainee is evaluated on all aspects of service delivery. Through a call review form, a new employee will routinely be rated (with a 1, 2 or 3) on a wide range of quality dimensions, including the degree to which the trainee forms a personal, emotional connection with the customer. In the past, the same rating system was used to evaluate the service quality of every CLT staff member. That process of quality measurement, however, was changed in response to staff feedback solicited in an e-mail survey.

According to Zapponian Tami Lemke, "One of the things we want to do is deliver happiness inside and out-

side of Zappos, and the quality assurance program was creating a little fear in our people and leaving them feeling like they weren't in control. Having a sense of control is linked to happiness, and we wanted to promote growth and not fear, so we made a few changes. To reduce anxiety, we went from performance metrics to pure feedback. We completely did away with scores for full-fledged CLT staff. Supervisors and staff members now just talk about the things the CLTs liked about identified calls and the things they could've done better. Essentially, we are discussing how we can continue to elevate the Zappos Experience while helping CLTs attain their service goals." Tami also notes that in order for employees to have greater control, "We implemented several methods to include the CLTs in picking which of their calls would be reviewed. For example, in our self-assessment process, which we do at least once a month, a CLT lead will pull up a huge list of recent calls. The team member looks at this list and chooses a call, and both the lead and the team member listen to a recording of the phone call. We review that call against key elements of the Zappos Experience, including the strength of the personal connection achieved." ●

PRINCIPLE 4: S T R E T C H

Zappos University

As good as Zappos is at present, staff members and leaders will always tell you that they need to be better. Rebecca Henry Ratner, HR director at Zappos, captures the company's constant sense of striving and restlessness when she says, "Zappos is a place where every day is a stretch. I never know what's coming, but I know I'm going to like it. I'm constantly challenged and placed in situations where I have to live outside my comfort zone. In fact, outside my comfort zone is starting to become my comfort zone. Fortunately, Zappos understands that a key to retaining great people is to keep them challenged and learning, and that's where our Pipeline team comes in."

And the Destination Is?

Educator Lawrence J. Peter once said, "If you don't know where you are going, you will probably end up somewhere else." A large part of a Zapponian's ability to achieve strong and personal connections with customers is the clarity with which the entire organization understands and moves in the direction of a shared service destination.

There isn't really a university at Zappos. Or is there? While technically the answer would be no, functionally the answer would be yes. Zappos does not have a university per se, but its Pipeline team framework resembles a university more closely than it resembles a traditional corporate training department. Rather than Zapponians having to face mandatory, often boring, typically predictable and marginally relevant seminar offerings, the Pipeline team has created a vast catalog of dynamic, interactive courses. This curriculum was developed at Zappos to address two overarching business questions:

1. What are the knowledge sets and behaviors needed to produce strong departments and leaders at Zappos?
2. What should be offered to grow the culture and increase the happiness of Zapponians?

In essence, the Zappos Pipeline serves to facilitate personal, team, leadership and business growth. ●

Beyond Shoes

Brand positioning experts understand that consumers give companies "permission" as to how far they can stretch their product and service offerings. For example, in the 1990s, Clorox considered extending its well-established bleach brand in the direction of laundry detergent, dishwashing soap and other household cleaning applications. Consumer research, however, showed that Clorox was synonymous with bleach in the minds of the buying public and that consumers would be hesitant to purchase any Clorox product that would touch their hands or their dishes. As a result, Clorox focused its brand extension in the direction of toilet bowl cleaners, tub and tile products, and drain openers.

Like that of Clorox, the early brand positioning of Zappos put it at risk of being denied permission to grow outside of a shoebox. However, a broad vision of the future, careful listening for customer requests and an increasing level of consumer trust has allowed the Zappos brand wide opportunities to S T R E T C H.

If you type "www.shoesite.com" into your browser, the Zappos website will appear. Nick Swinmurn secured the address shoesite.com for his online shoe store in 1999, but later that year, the name was changed to Zappos. The company's leaders understood that a made-up name like Zappos would provide a unique, searchable Internet identity and would allow the company to broaden its product offerings if brand extension was ever deemed appropriate. Consistent with the leaders' wisdom in deciding to rebrand the startup, the Zappos name has allowed the company to stretch outside of its original mission of "becoming the première destination for online shoes" and venture into a broader world of merchandise and services. ●

PRINCIPLE 5: PLAY TO WIN

Play Well

Play and fun have served Zappos well. Undoubtedly, fun holds the rich and highly collaborative Zappos culture together. But let's face it, if Zappos were dedicated only to fun, the company would not be thriving today. The genius of Zappos leaders is the way they blend the fun into the work. The visionary leadership at Zappos understands that work made fun gets done. Moreover, work made fun creates energized, happy and cohesive teams.

Generally speaking the overarching benefits for Zappos from creating a culture of play and family connectedness are very consistent with the positive correlations researchers have found. For example, management professor Dr. David Abramis of Cal State Long Beach, among others, has shown that high levels of workplace fun are consistently associated with increased creativity and productivity. Employees who find playful enjoyment in their workplace have more positive relationships with their peers, make better decisions, are tardy or absent less often and use fewer sick days than employees who aren't having fun. In essence, fun is serious business at Zappos, and in turn, that fun produces serious business results.

Fun at work is not something that can be left to chance or an optional initiative that disappears when things get difficult. Leaders at Zappos have never wavered in their support for a playful culture. The benefits of that approach are supported by research from Hewitt and Associates that shows it pays to invest in a positive work culture, especially during times of business uncertainty. Ted Marusarz, the leader of global engagement and culture at Hewitt, notes, "The extra effort companies put forth in difficult times makes a difference in how successful they are at boosting morale and retaining top talent in a strong economy." ●

R.O.F.L.

As an Internet acronym, R.O.F.L. stands for "rolling on the floor laughing." Zappos may be the best example of an often-underappreciated truth: A small investment in workplace fun will produce tangible and profound benefits for your staff members, your customers and your brand's equity. As proof, let's look at how the nominal but consistent investment in workplace fun produces lasting returns for Zappos as it relates to:

- **Improvement in the quality of life of Zappos employees.** The approach taken by Zappos leaders on behalf of employee happiness essentially mitigates the toxicity of the psychosocial work environment, removes emotional hazards, modulates the pace and intensity of work, establishes a sense of "justice" and increases employees' sense of control.
- **Extra-mile effort by staff members.** The extraordinary business growth at Zappos is probably, in part, a result of employees feeling that they are being treated so well that they can't let Zappos down.
- **Exceptional outcomes on key performance goals.** Key revenue growth markers show Zappos as having virtually no sales in 1999 and topping the $1 billion gross sales mark by 2008, with consistent breakthrough numbers thereafter.
- **Impassioned employee and customer evangelism.** To get customers to refer you to their friends, you need to have employees who are deeply loyal and who themselves are evangelists for your brand. ●

Conclusion: Endings, Beginnings and You

In the span of a decade, Zappos leadership has taken a fledgling idea and parlayed it into a billion-dollar business known for service, culture and delivering happiness. While this rapid success is noteworthy, in the overall context of business longevity, the company is relatively youthful. When I think about the accomplishments of Zappos, the words of Winston Churchill come to mind, as he suggested that failure is not fatal or success final. The leaders at Zappos have managed small failures well, but many questions remain on how well they will manage their runaway success.

Tony Hsieh, Zappos CEO, notes, "We have been fortunate enough to make a number of sound choices on behalf of our staff, our customers and our overall business, but we have a lot more to learn." Much of the immediate "learning" at Zappos is likely to be from reciprocal opportunities that will occur as a result of its relationship with Amazon. While each company is likely to learn from the other, both Amazon and Zappos will also have to maintain their uniquely different, albeit aligned, cultures. In fact, Amazon CEO Jeff Bezos notes, "The culture and the Zappos brand are such assets. … There is a lot of growth ahead of us with Zappos, and I am totally excited about what can be accomplished over time."

Maybe the greatest challenge Zappos leaders face is the adjustment required when going from a charming business outlier to an expanding, mature business benchmark. While many people root for you in your startup phase, some will become tired of hearing about your thought leadership, or they will become suspicious, critical and envious as you gain size and prowess. Moreover, as leaders and staff members take pride in the very successes that lead to business growth, everyone can be lulled into a false sense of security.

The Biggest Hurdles for Tomorrow's Accomplishments

In his book *How the Mighty Fall*, bestselling author and business consultant Jim Collins outlines his research on the stages of business meltdown. The first of Jim's stages, "Hubris Born of Success," focuses on corporate pride, which often emerges before a fall. Jim suggests that yesterday's success, in many ways, can be one of the biggest hurdles for tomorrow's accomplishments.

While Zappos is certainly not immune to failure, the company is well positioned to circumvent significant pitfalls simply by adhering to one of its most crucial and unusual values: "Be humble." Jennifer Van Orman, Zappos software engineer, reflects, "My favorite value is 'be humble.' I have never worked in a department with so many geniuses. Really smart people surround me and none of them are divas. No one is ever too busy to help anyone else out. There are no egos around here. That's refreshing."

Unlike other successful businesses, where pomposity and vanity have been an Achilles heel, Zappos is likely to sustain its success as long as people like Tony Hsieh continue to demonstrate the curiosity, humility and service described by a Zappos senior user experience architect: "I was working in Kansas City for another company, and I met Tony Hsieh following his presentation at a conference I was attending. The day after Tony spoke, the conference was coming to an end. As I looked out the window getting ready to leave the conference venue, I noticed that it was raining and resigned myself to getting wet. To my surprise, at the door of the conference center was Tony Hsieh, the CEO of Zappos, giving out ponchos. As he handed one to me, I thought, 'Wow — they anticipated the weather and my need.' That's something I have never seen from senior leaders at any other business, and I wanted to work for and be a customer of Zappos."

Allow me to offer overall guidance about benefiting from the Zappos lessons:

1. Refine it to meet your need. Anything from Zappos that you might wish to incorporate into your business must be filtered through the lens of what will make it work for you.

2. Think about the unconventional. *The Zappos Experience* is a story of leaders who did not set out to follow a cookie-cutter template on how other online retailers were achieving short-term success. Instead, it is a lesson about leaders who passionately pursued goals that had a long-term timeline and resulted in a transformational legacy.

What's Your Leadership Legacy?

Zappos is no longer in the shoe business; it is in the happiness business! Its leaders became passionate about a goal that transcended products or processes. Those leaders shifted their attention from business success to transformative objectives and, in the end, elevated their significance and their legacy. Columnist and author Irving Kristol once suggested that leaders need to define that "one big thing and stick with it. Leaders who had one very big idea and one big commitment are the ones who leave a legacy."

I am an advocate of taking the time to think of that "one big thing" that you want to accomplish as a leader and forging your own "leadership legacy statement." Leadership guru John Maxwell suggests, "People will summarize your life in one sentence. Pick it now."

When asked about a Zappos legacy statement, Tony Hsieh said, "I hope that Zappos can inspire other businesses to adopt happiness as a business model — letting happy customers and happy employees drive long-term profits and growth. Ultimately, it's all about delivering happiness."

So what's your leadership legacy statement? Write it down — but, more important, live it! If you do, you truly will understand the transformational power of the Zappos experience. ●

Page 5

THE SUMMARY IN BRIEF

The goal of this book is to help you make a difference. First, let's define what being remarkable means. It does not mean amassing wealth, power, or fame. There are people who have done this and are not remarkable. And there are people who haven't and are. In ***Think Remarkable: 9 Paths to Transform Your Life and Make a Difference***, being remarkable means you are making a difference and making the world a better place.

Being remarkable also means you are a good person—people use words such as empathetic, honest, and compassionate to describe you. If offered the chance, they would love to join your ohana, the Hawaiian word for the community of people who support and care for you. This book provides the roadmap, along with some inspirational examples, but only you can do the work. Being remarkable is neither innate nor conferred—if it were, you wouldn't need this book.

Making a difference and being remarkable are not easy, but you won't regret trying. When you make a difference and are remarkable, you live a life that matters, reflects your best self, and inspires others to be remarkable as well.

IN THIS EXECUTIVE BOOK SUMMARY:

- The reasons why making a difference is the key to being remarkable
- The importance of adopting a growth mindset and learning from your experiences
- The process of using your perseverance to make a positive impact

Stage 1: Growth - Build a Foundation - Embrace the Growth Mindset

Adopt the Growth Mindset

Undoubtedly, the growth mindset is necessary to be remarkable, and you hold the power to change and elevate yourself. Let this sink in: if you want to be remarkable, you have to grow.

Find Support

If adopting the growth mindset was a personal decision and transition, life would be simple. However, growing requires both supportive people and a supportive environment.

Embrace Change

Your mindset can only grow to the extent that you expose it to new experiences, domains of knowledge, and skill sets. Study subjects that you've never considered—or that you failed at in the past.

Explore areas you've kept putting off because you didn't think you'd excel at them. Adopt the interests of your family, friends, and followers instead of making them embrace yours. Experiment with new tools and technologies and see where they take you.

Take Baby Steps

Until you've got the growth mindset flowing through your neurons, set small goals so that success begets success.

Find a Hero

It helps to have a hero to put your "plight" into perspective and reduce tendencies to focus on the negative. Perseverance is one of the things that makes people remarkable.

Bloom, Baby, Bloom

Growth and transition are challenging and time-consuming, but they are essential to making a difference and being remarkable. They demand conviction, humility, and considerable effort to achieve.

Embrace Vulnerability

Flip Over Growth

The flip side of the growth mindset is vulnerability. Becoming remarkable will take a long time, and you will face failure and setback, so the journey entails embracing vulnerability.

Go On, Be Brave

More important than avoiding wounds is how you deal with them. A great approach to failure is this: sometimes you win and sometimes you grow.

Brace for Impact

Every remarkable person I know has dealt with challenges. You will face negativity, rejection, and even danger. Keep in mind that with difficulty comes opportunities for growth—which is exactly what a remarkable person invites with open arms.

Give Yourself a Break

The first step in the process of bouncing back is to "give yourself a break" by forgiving yourself and stopping the self-criticism.

Learn from failure.

Failures provide valuable information that improve future efforts, and you could not have obtained this information in any other way than risking failure.

Use the doubters.

Has anyone told you that you can't succeed? They could be doing you a favor if you can turn their doubt and negativity into your determination.

Face it until you make it.

Face and deal with your vulnerabilities and wounds.

Plant Many Seeds

Get Stoked about Oaks

The metaphor of planting acorns is perfect for making a difference and being remarkable. That is, you must collect, prepare, plant, tend, and wait. It is as simple to describe as it is difficult to accomplish.

Trust the Dots

If we knew which acorns would grow into mighty oaks and which dots would connect, then we would tend only to those. You have to plant many seeds and trust that things will work out later.

Get an Education

There are few better ways to plant seeds than to get a formal education. One can also get an education in other

Eliminating suffering from people's lives is an excellent means of achieving remarkableness.

ways: reading, online courses, apprenticeships, internships and training programs. Remarkable individuals obtain an education and then never stop learning.

Pursue "interests and not "passions."

Passion is too high a bar, so give yourself a break. Passions start as "interests" that are acorns.

Build random connections.

The more people you know, the more likely you'll develop meaningful relationships and make connections.

Don't be picky.

Pride and pickiness often prevent people from seizing opportunities.

Fight framing.

Don't let others - including yourself - define you.

Start in sales.

There are few functions as good as sales to force you to get outside your bubble and reach out to people you don't already know.

Make yourself indispensable.

These are the ways to become an indispensable asset to your company and boss: show up, do what nobody else wants to do, broaden your skill set, own a niche, establish high standards, and make your boss look good. People who are indispensable to others are almost always remarkable.

Weed the seeds.

It is the ability to make wise judgments—to see the difference between what is true and what is false, what is good and what is bad, what is important and what is not. Discernment skills will help you decide when to listen, when to ignore, and when to challenge.

Always ask "what's missing" when evaluating information or data.

STAGE 2: Grit - Activate Your Aspirations - Do Good Shit

Embrace the Grit Mindset.

Good shit can be a product, service, team, classroom, group, art, sports, or a life—this is up to you. Doing good shit takes resilience, perseverance, and patience—aka grit. It is a characteristic shared by all remarkable people.

Create What You Want to Use

Visualize a change that you want to make—in yourself or with a product, service, book, piece of art, or cause.

Alleviate pain.

Eliminating suffering from people's lives is an excellent means of achieving remarkableness. Ask yourself, "Whose pain can I alleviate?" to uncover opportunities.

Work backwards.

If you start with people's needs and work backwards, you are more assured that they will embrace what you're doing.

Resolve Your Indignation

Addressing something that pisses you off is a good way to identify a cause, as is righting wrongs even if they don't directly affect you.

Jump to the next curve.

Create the future rather than react to it. Truly innovative and remarkable businesses develop products that accelerate the next curve.

Ride the tide.

Seek ways to "raise the tide" for everyone—not only your boat. The leading edge of remarkableness is to be the first to jump curves and create the tide, but you can also achieve remarkableness by riding a rising tide.

Go see, go be, and go do.

Doing or participating is the way to learn. "Go and see"

and "go and be" foster the ability to feel what other people are feeling. Being remarkable also requires making the leap from empathy to action.

Do the right thing.

Often, doing the right thing is neither the simplest nor the most practical option. Pay attention to your inner compass and denounce dishonesty and fraud, but also recognize that this course involves personal risk.

Transform yourself.

Transformation of your own life is another path to being remarkable and making a difference.

Ask simple questions.

Remarkable people don't usually start with grandiose plans of crushing or dominating the universe. They start with: Isn't this strange? Is there a better way? Why has no one done this before?

Establish a subcategory.

It's cheaper to create a niche within a category because people have a basic understanding of what you do. Creating a new category is a remarkable accomplishment, but new categories are rare.

Get unique and valuable.

A good test of the viability of an idea is whether it is both unique and valuable. When what you're offering is unique and valuable, then marketing, selling, fundraising, and recruiting all get easier, so do your best to create products and services that embody both qualities.

Get Beyond Eureka

Formalize your goals.

Formalizing your goals by writing them down helps you to go beyond Eureka and achieve results.

Prove your concept.

This refers to a prototype or mock-up that allows people to touch, feel, and interact with your idea.

Get mentors.

Mentors are force multipliers. They can help you see opportunities, avoid mistakes, and stay on the right path.

Find complements.

Whatever you do, there are conditions that make complements, well, complementary. Complements can enhance creativity, decision-making, problem-solving, productivity, and the workplace environment.

Identify your inner Nigel.

Julia Cameron, the queen of creativity, has an imaginary friend and inner critic named Nigel. Naming your inner critic is beneficial because it compartmentalizes doubt into a single entity. Then the relationship can become humorous and lighthearted—and probably more constructive.

Develop a routine.

Rather than vacillate about what to do first, you just start every day with the same activity. The goal is to get in motion and save your brain power for important choices.

Break bad habits.

Katy Milkman's remarkable book explains how to break bad habits that are preventing you from moving beyond Eureka: reduce impulsivity, decrease procrastination and overcome inertia, establish a streak-setting initiative, combat insecurity, and surround yourself with successful people.

Forget Balance, Think Ikigai.

This is a Japanese term that roughly translates to one's purpose. It may be that instead of finding your ikigai, it finds you and grows over time.

Savor your shit sandwich.

The real-world test to determine if you have found your ikigai comes from Mark Manson, author of ***The Subtle Art of Not Giving a F*ck***. He says you'll know you found your calling when you enjoy the shit sandwiches that it requires.

Make decisions right.

Perfect decisions are an illusion. So take your best shot, focus on making your decision right, and don't look back. Remarkable people get things done.

Get your foot in the door.

The purpose of most pitches is to avoid elimination and to stay in the game—which means continued engagement, conversation, and discussion. The purpose of a pitch is to gain access through the door and prevent it from being shut.

Get your early adopters.

Until you gain your first and second followers, you may be

Making a difference and becoming remarkable necessitates building relationships and persuading people.

considered an isolated nutcase. Do whatever it takes to get them, and your credibility will subsequently increase.

Grok the Gospel of Bob.

Bob Cialdini is the godfather of influence and persuasion. Here are some favorite Cialdini-isms that will accelerate the adoption of your ideas: make people like you, use peers, "pre-ciprocate", ask for reciprocity, provide social proof, demonstrate expertise, demonstrate scarcity, tap into commitment and consistency, foster unity, demonstrate a trend, promote helping others, use converts.

Find something in common

Making a difference and becoming remarkable necessitates building relationships and persuading people. Harness the power of observation, do your homework, keep your eye on the goal, and focus on the big picture and learn to ignore the rest.

Tell good stories

David Aaker, the godfather of branding, extols the advantage of storytelling as a method to garner support. Stories are easier to tell and to remember. Aaker's blueprint for good stories: Provide a narrative arc. Good stories are short, yet have a clear beginning, middle, and end; be authentic, grab attention, evoke strong emotions, communicate a simple, significant lesson.

Open Your Architecture

This is technical jargon for creating products and services that other organizations can supplement with features and functionality. This enables other organizations not only to buy into your dreams, but also to integrate their products into your dreams as well.

Don't Hear "No"

As Shellye Archambeau was ascending corporate America she didn't hear "No" for an answer. People may have said no, but Shellye heard them say, "Not yet" or "Not now." Maybe she even heard, "Yes, if." This kind of grit and invulnerability to vulnerability are necessary to become remarkable and make a difference, so don't give up.

"Let a Hundred Flowers Blossom"

This is a line stolen from Chairman Mao Zedong, although I fail to see how he implemented it. Let any kind of flower blossom and be thankful that anything blossoms at all.

Optimize the Day

This can be done with: a broad coalition, being clear about what you want to accomplish, and when you do have an action, make sure it's something people can do.

Show up in Person

Your presence communicates that you care and are invested in the process, thereby strengthening relationships and establishing trust.

Become a Mission-Driven Asshole

According to Tony Faddell, creator of the iPod, iPhone, and Nest thermostat, there are four kinds of assholes: political, controlling, ego-driven, and mission-driven. Mission driven people are dedicated to the mission of the organization, they steamroll people who aren't excellent. They care a lot. They work hard. They listen and change their minds if you are right.

STAGE 3: Grace - Uplift and Inspire - Lead by Example

Embrace Grace

Grace is the final stage of becoming remarkable. It refers to the poise, kindness, and thoughtfulness that serves to uplift and inspire others.

Get Over Imposter Syndrome

Viewed positively, imposter syndrome can mean that you have a sense of humility and self-awareness. When you are racked by imposter syndrome and don't exude confidence, you can impede your own progress, so here's what to do:

- Admit that you're feeling inadequate.
- Assure yourself that even remarkable people sometimes feel like imposters.

- Focus on your accomplishments.
- Seek the assurance and feedback of friends and colleagues.
- Fake it until you make it. This is not the same as falsifying your accomplishments or results.
- Focus on the mission or cause.

Craft a "Good Situation"

A remarkable leader enables the success of others; fosters their development by rewarding their commitment, perseverance, and achievements; and ultimately guides people to realize their full potential.

Hire Better Than Yourself

Put aside your ego and look for people who will make the organization even better, with or without you.

Negotiate Like a Champ

Remarkable people are good negotiators. They get what they want and want what they get. And the people who they negotiated with want to do business again.

Here are tips to be a remarkable negotiator:

- Give the other side what it wants.
- Write the other side's victory speech.
- Make the other side's case.
- Hardly ever say no.
- Fight fire with water.
- Don't anchor.

Put Skills First

In the quest to hire better than yourself, the most important quality is the skills people bring to a job.

Send the Right Signals

Ensure that your incentives and objectives are aligned. You should avoid encouraging people to take the wrong actions to achieve their objectives if you want all of you to achieve remarkable results.

Draw Boundaries

An essential skill for anyone who wants to be remarkable is drawing boundaries around demands of their time, attention, and energy.

Manage by Zooming Around (MBZA)

Do not underestimate the power that relationships and connections possess. It is crucial for your success in all aspects of life that you interact with others frequently.

Shut the F* Up

One of the ways to lead the way in a graceful manner is to listen more than you talk. Silence shows power. It means that you're in control of the pace, and you are giving people the chance to absorb what has been said. It also shows you can manage your emotions, and you take the time to understand the situation. Silence is often more eloquent than words.

Reduce Risk

When you are not dealing with constant crises, you become a more self-assured and inspiring leader, which sets the tone for the entire organization.

Say "I Don't Know"

It's okay to acknowledge your own ignorance. In fact, it can increase your credibility and trustworthiness. However, be sure to express it in a way that inspires optimism.

Take the High Road

Value All People

You can tell a lot about a person by what they do when there's no money or glory involved.

Count Your Blessings

Everyone interviewed for Remarkable People counted their blessings even when their blessings were few and their difficulties were numerous. Everyone.

Fulfill Your Success Oblige

Here are tangible ways to fulfill your success oblige by supporting others: Mentor them. Give them money. Give them your products or services. Buy their products or services. Promote and recommend their products or services. Jointly develop products, services, or programs. Act as a reference. Set a good example.

Help Others Succeed

Help in person, help often, help strangers, share commonality, work through an organization, use your expertise, exert yourself, and let go.

Make Wise Interventions

Defined as "interventions that nurture people's belonging and self-worth." By asking others the appropriate questions, listening to their responses, and encouraging them to reflect on their experiences, we can foster in them a sense of belonging and self-worth.

Over-Deliver

Exceeding expectations exemplifies generosity of time, effort, and trustworthiness. This is evidence of a remarkable and gracious person.

Change How You Keep Score

Your life comes down to your legacy, and how you keep score determines your legacy. You should aim to make people's lives better, and to make the world better.

Punch Up Not Down

Remarkable people do not punch down. Clueless, arrogant, insensitive assholes punch down. End of discussion.

Ask "How"

Asking "how" promotes understanding and empathy. This strategy not only helps you to connect on a deeper level, but also enables you to be a more effective influencer and leader in your own right.

Learn How to Apologize

1) Simply say "I'm sorry," 2) Accept responsibility for your actions, 3) Demonstrate compassion, and 4) Choose the appropriate moment.

Ignore the Small Stuff

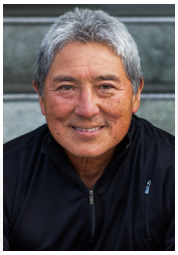
Ignoring the small stuff can also be satisfying because you're in control and you know what's not getting to you, and it can be good for your reputation because counterattacking (and its temporary high) will not impress anyone.

Leave no Regrets Behind

Even remarkable people have regrets. It is important to build a foundation by making wise choices, having the courage to take bold actions, nurturing and valuing relationships, and acting with morality and compassion. By acknowledging common regrets, you can live a remarkable life.

The Gospel according to Stacey Abrams is the perfect ending to this book. Her admonition to "be curious" is Growth; "solve problems" is Grit, and "do good" is Grace. This book aims to help guide you on the path to becoming remarkable. Being remarkable isn't about wealth, fame, or power. It's about making a positive impact in the world, even if it's just one life, organization, or classroom. Additionally, remarkable people are known for their kindness, empathy, and compassion.

By following the steps outlined in the book, and embracing the core values of growth, grit, and grace, you can become remarkable and make a meaningful difference in the world.



Guy Kawasaki is the chief evangelist of Canva and host of the Remarkable People podcast. He was the chief evangelist of Apple, trustee of the Wikimedia Foundation, and brand ambassador of Mercedes-Benz. THE SUMMARY IN BRIEF

Thrive encourages you, as a business leader, that it is possible to create a culture where people are excited to go to work every day because they are inspired and fired up about the mission of the company, excited about their role, and supported by a team that is aligned around the vision and mission. However, too often the opposite happens instead, and workers are disengaged, appearing as either sleep-walkers or saboteurs in your organization each day. Research shows that a full 70% of workers are disengaged. *Thrive* is your blueprint for creating a culture of high engagement and high performance.

Author Andrew Freedman began to work with Paul Elliott, Ph.D., collaborating on strategic initiatives with clients to help them apply the high-performance principles and practices that facilitated growth and business impact. *Thrive* is the result of this client work, now packaged for others to use to impact their business. Thrive provides you with a replicable, scalable model to achieve levels of success that you didn't believe possible—for your organization, your people, and your customers.

IN THIS SUMMARY, YOU WILL LEARN:

- What the top influencers of a successful organization are.
- How and why to start with your vision and mission.
- Why clear role expectations are so important for employees.
- How to implement the Role Excellence Profile (REP) process.

Introduction

Thrive is your blueprint for creating a culture of high engagement and high performance. The tool I use to help business leaders improve their business culture was developed by my co-author, Paul, and is known as the Exemplary Performance System (EPS). There are six influences addressed by EPS:

- Environments, Systems, and Resources
- Expectations and Feedback
- Rewards, Recognition, and Consequences
- Capacity and Job Fit
- Skills and Knowledge
- Motivation and Preferences

Define Success

Most workers start each day with their tasks for the day in mind but may lose the connection between the mission and vision of the company and how their tasks fit in to that larger purpose. The Shift model takes the opposite approach, a "right to left" process, and begins with defining success, then moves to determine outputs of value, then to analyze tasks, and determine influences. So, always start with mission, vision, values, goals, and corresponding metrics.

Creating a thriving enterprise requires employees to understand how their contributions, results, and accomplishments link to the organization and its strategic intent. Without knowing the value of their performance or their role, employees have an isolated, fractured, and often uninspired view of their work.

When leaders effectively link goals and metrics throughout the organization, it sets the stage for heightened employee engagement and for the organizational influences of the EPS to come into alignment. Making this one change facilitates significant performance acceleration through individual and organizational clarity about the impact created by what each person does and how they do it.

Aligning an employee's role with the goals of the company ideally begins before she officially joins the team. Hiring managers can (and should) provide a realistic role preview during the interview process. Such a preview is designed to highlight the areas that most often attract and retain the right people as well as those aspects of the role that may cause them to fail or leave.

A realistic role preview reduces the likelihood of post-hire surprises. It helps a candidate understand the role and corresponding tasks and responsibilities and provides context for how the role fits into the big picture. Metrics for the job should be made clear. The candidate needs to fully understand that what she does makes a difference and that her job has an impact when it comes to achieving company goals.

Impact cuts both ways. Candidates should also understand the effects of producing substandard results. Performing poorly in their role will have some type of consequence for the enterprise. The consequence could show up as a financial loss for the company, an inconvenience to a customer, or a negative impact on a department goal. Each employee must have clarity with respect to the impact of their performance.

Organizational Influences

Organizational Influences introduces you to three key influences and related factors from EPS that inhibit or foster success:

- Environments, Systems, and Resources
- Expectations and Feedback
- Rewards, Recognition, and Consequences.

For organizations to thrive, their people need to thrive.

Systems design and integration should start with the vision and strategy of the company, establishing clarity and helping to maintain alignment among the top layers of leadership. Leaders then can effectively align the three influences and keep them in sync directly and, ultimately, through everyone else throughout the organization.

This cascade of influence and accountability is driven by the behavior modeled by senior leadership for the divisional, departmental, team, and individual levels. Beyond modeling, there is the activation of a culture of inquiry in which regular probing occurs on processes like feedback and compensation.

An employee must understand expectations and how he fits into the broader work system. A well-aligned organization consistently provides clear overall expectations and consistent and meaningful feedback for all levels of employees—from executives to those on the front line. Expectations align with company goals, and feedback is specific. Goal setting, check-ins, mile markers, and one-on-ones occur in a steady, constant stream. Comprehensive performance reviews are held annually.

There are various career advancement options. Opportunities are shared and explored regularly. Turn work environments into ecosystems that enable and encourage their people to work in ways that produce better business results. New hires should feel inspired by their company's vision, understand the expectations for their roles, and receive ongoing feedback about how they're doing in the frame of those expectations. High-performing employees need to have the necessary resources, processes, and tools available to support them.

When individual contributors, line managers, and directors are able to see how the pieces of the puzzle fit together, the magic of high performance is enabled. Cross-departmental understanding of how one person's work relates to another's creates a camaraderie and cohesion that supports better outcomes and better experiences. Whenever and wherever behavior consistent with the expressed preferences of the company occurs, recognition by direct supervisors and others, through appropriate rewards, earns more of the same and better from its people. To create a whole that is greater than the sum of its parts where those parts don't compete but complement one another is the outcome goal of a thriving, well-aligned organization.

Individual Performance

For an organization and its employees to thrive, there must be alignment of the three individual influences from EPS:

- Capacity and Job Fit
- Skills and Knowledge
- Motivation and Preferences

Competencies are not the only factors that shape success, and the employee's level of talent does not guarantee performance excellence. The three individual influences reflect the totality of an individual, and none outweighs the others—they must all fit together in a harmonic mosaic.

Analyze "Star" Employees

We use a tool at SHIFT called the Role Excellence Profile (REP). The REP is a powerful, outcomes-based approach designed to shift the performance in the majority of your workforce to higher levels of contribution that are significantly more profitable. The Role Excellence approach focuses on identifying what makes your top performers tick and what they actually do to be so effective. These insights are then laid out in a performance map that is used to guide others to replicate those behaviors. Through interview, observation, and case-based analysis, exemplary performers reveal what is needed to accelerate the performance of the entire organization.

The Role Excellence Profile (REP) process provides greater role clarity for individual contributors and teams, identify best practices, and uncover barriers to high performance. Creating clarity around what excellent performance looks like and using that new standard as the design point for recruiting, hiring, onboarding, training, coaching, performance management, and career mobility can have a significant impact on your organization's top- and bottom-line business results.

Amplify and Accelerate Impact and Results

Trust is one of the greatest accelerators of organizational performance, and lack of trust is one of the greatest decelerators. Inherently, people know this, yet many leaders fail to build this critical element into the fabric of the organization successfully. The truth is, you can build trust in small ways right now, from having regular one on ones with employees to writing handwritten thank-you notes.

You accelerate your organization impact when you do two things: create a vision and bringing the entire organization into the planning process how to carry it out. Organizational momentum comes to a halt when employees can't see how their role fits in with the strategy—distance and disconnection create disengagement and, ultimately, diminished performance. I instead want to help you operate with clarity and transparency, measuring what matters most and putting your people in a position to move your organization forward.

Independent Strategy

Leaders need high levels of discipline and a rigorous approach to follow-through and execution. New initiatives will not deliver the intended benefits with a fractional focus or effort. Leaders must set the example of full commitment to an execution and implementation effort that delivers the intended business outcomes. Without accountability for results, roles, teams, and organizations underperform. In either case, the EPS model can bring to light the most direct ways to shift performance.

We have found that creating rituals, routines, and rhythms are the practical ways that organizations connect and engage with one another. Leaders also need to work on transparency and that includes being honest about difficulties. The wisdom

of knowing when to slow down for a time so you can speed up later is at the heart of shifting performance.

Resistance and Resilience

It is hard to successfully land business transformation and change efforts. In order to bridge the gap between strategy and execution, leaders need to understand that providing steadfast leadership amidst chaos, clarity and certainty during times of great ambiguity, and fortitude when it would be easier to relent and retreat are defining characteristics that form the foundation of a high-performance culture.

We love to talk about The Achievement Model as our growth process. It starts with Mindset first, the why we do what we do. That is followed by Process next, the how are we going to get there question. Last is the what, the results, that so often others put as highest importance. Results are never as high unless you have down the shared vision and mindset and processes developed how to get there.

Two characteristics you must develop are the ability to mitigate resistance and build resilience. To help you in your endeavors, we strongly recommend that you have people in your life who can, among other things, tell you what you need to hear, not what you want to hear, and get you to see points of view and possibilities that you may not have otherwise been able to see. These people can be mentors, peers, or friends, but you've got to have folks who can play these roles for you if you are really going to be the leader of a thriving organization.

Conclusion

If you want things to be different—if you are really ready to commit to elevating performance and business results in a sustainable way—you must take ownership of the change you need to see. You get what you tolerate. The success—or lack thereof—in your business and your life is mostly within your control.

Leading your people past their current plateaus will not be easy. In fact, it will be painful, risky, and met with resistance. That doesn't matter, because you know you can be more, do more, and give more. Every successful person has a mental model for accomplishment. The intent of this book is to help you develop your own.

Thrive provides you with a replicable, scalable model to achieve levels of success that you didn't believe possible—for your organization, your people, and your customers.

The world needs you to take the next step. Put your new ideas and knowledge into purposeful, consistent action. "Good" results put you out of business. "Great" results keep you in the middle of the pack. Organizations that THRIVE set new standards for business.

Andrew Freedman is a lifelong advocate for maximizing human potential and creating positive change. For over 25 years, he's been a driving force in designing strategies that provide leaders with a foundation to translate individual, team, and organizational talent into tangible business growth.

Paul Elliott is President, Founder, and Chief Performance Architect at Exemplary Performance LLC. Paul leverages his experience with Fortune 500 organizations to help clients achieve exceptional results by optimizing the performance of teams and individuals.

Tribal Leadership

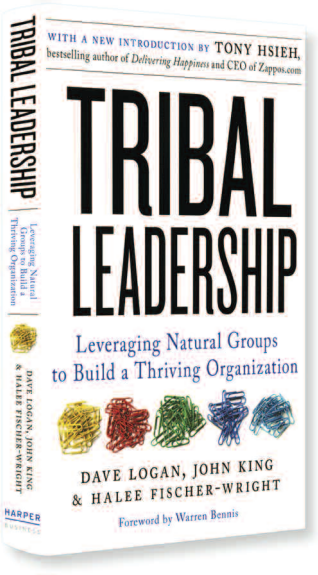
Leveraging Natural Groups to Build a Thriving Organization



by Dave Logan, John King and Halee Fischer-Wright

THE SUMMARY IN BRIEF

It's a fact of life: birds flock, fish school, people "tribe."

Every company, indeed every organization, is a tribe or, if it's large enough, a network of tribes — groups of 20 to 150 people in which everyone knows everyone else or at least knows of everyone else. Tribes are more powerful than teams, companies or even CEOs, and yet their key leverage points have not been mapped — until now. In *Tribal Leadership*, Dave Logan, John King and Halee Fischer-Wright show leaders how to assess their organization's tribal culture on a scale from one to five and then implement specific tools to elevate the culture to the next level. The result is unprecedented success.

In a rigorous eight-year study of approximately 24,000 people in more than two dozen corporations, Logan, King and Fischer-Wright refine and define a common theme: The success of a company depends on its tribes, the strength of its tribes is determined by the tribal culture and a thriving corporate culture can be established by an effective tribal leader.

The often counterintuitive findings of *Tribal Leadership* will help leaders in today's major corporations, small businesses and nonprofits learn how to take the people in their organization from adequate to outstanding.

IN THIS SUMMARY, YOU WILL LEARN:

- How to understand, motivate and grow your tribes.
- The Five Stages of Tribal Leadership and the navigation system to guide your effort to move people through the stages.
- The secrets that have led the highest-level tribes to remarkable heights.
- How to find new ways to succeed where others have failed.
- How to employ your company's tribe to maximize productivity and profit.

PART I: THE TRIBAL LEADERSHIP SYSTEM

Every organization is really a set of small towns. If you're from a small town, think of the people there. If you're not, think of, as Don Henley sings, "that same small town in each of us."

The people are different in every town and the roles are never exactly the same. But there are more similarities than differences and the metaphor itself always holds, from companies in Nebraska to ones in New York or Kuala Lumpur.

We call these small towns tribes and they form so naturally it's as though our tribe is part of our genetic code. Tribes helped humans survive the last ice age, build farming communities and, later, cities. Birds flock, fish school, people "tribe."

What Is a Tribe?

A tribe is a group between 20 and 150 people. Here's the test for whether someone is in one of your tribes: If you saw her walking down the street, you'd stop and say "hello." The members of your tribe are probably programmed into your cell phone and in your e-mail address book.

Some of the corporate tribes we've seen include the high-potential managers of one of the world's largest financial services companies; the doctors, nurses and administrators of one of America's most respected health care institutions; the research and development division of a mammoth high-tech firm; and the operational executives of a major drug company.

Tribes in companies get work done — sometimes a lot of work — but they don't form because of work. Tribes are the basic building block of any large human effort, including earning a living. As such, their influence is greater than that of teams, entire companies and even superstar CEOs. They determine how much work gets done, and of what quality.

Some tribes demand excellence from everyone and are constantly evolving. Others are content to do the minimum to get by. What makes the difference in performance? Tribal Leaders.

Tribal Leaders focus their efforts on building the tribe or, more precisely, upgrading the tribal culture. If they are successful, the tribe recognizes them as the leaders, giving them top effort, cult-like loyalty and a track record of success. Divisions and companies run by Tribal Leaders set the standard of performance in their industries, from productivity and profitability to employee retention.

The Five Tribal Stages

Every tribe has a dominant culture, which we can peg on a one-to-five scale, with the goal being stability at Stage Four and, on occasion leaps to Stage Five. All things being equal, a Five culture will always outperform a Four culture, which will outperform a Three and so on. (Stage Five is unstable but can produce history-making innovation.) People and groups move only one stage at a time and the actions that advance people from Stage One to Stage Two are different from those that advance them from Two to Three.

If tribes are the most powerful vehicles within companies, cultures are their engines. Here is an overview of the Five Stages:

Stage One

Fortunately, most professionals skip Stage One (only about 2 percent of American professionals operate here at any given point), which is the mindset that creates street gangs and people who come to work with shotguns. If people at Stage One had T-shirts, they would read "life sucks," and what comes out of their mouths supports this adage. People at this stage are despairingly hostile, and they band together to get ahead in a violent and unfair world. Most anthropologists say that human society started at Stage One — clans scratching out an existence while fighting with one another.

Stage Two

In 25 percent of workplace tribes, the dominant culture is Stage Two, which is a quantum leap from Stage One. People operating at Stage Two use language centered on "*my* life sucks." People in this culture stage are passively antagonistic; they cross their arms in judgment, but never really get interested enough to spark any passion. Their laughter is quietly sarcastic and resigned. The Stage Two talk is that they've seen it all before and watched it all fail. A person at Stage Two will often try to protect his or her people from the intrusion of management. The mood that results from Stage Two's theme, "my life sucks," is a cluster of apathetic victims.

Stage Three

The theme of Stage Three, the dominant culture in 49 percent of workplace tribes in the U.S., is "I'm great." Or, more fully, "I'm great and you're not." Normally, doctors operate at this level on their best days, as do professors, attorneys and salespeople. Within the Stage Three culture, knowledge is power, so people hoard it, from client contacts to gossip about the company. People at Stage Three have to win and for them, winning is personal. They'll outwork and outthink their competitors on an individual basis. The mood that results is a collection of "lone warriors," wanting help and support and being continually disappointed that others don't have their ambition or skill.

As with Stage Two, no amount of team building will turn this group of self-described star players into a team.

Stage Four

The gulf between "I'm great" (Stage Three) and "we're great" (Stage Four) is huge — Grand Canyon huge. This level represents 22 percent of workplace tribal cultures, where the theme of people's communication is "we're great."

When groups get to this point, they see themselves as a tribe with a common purpose. They commit to shared core values and hold one another accountable. They will not tolerate *The Office*-style performance or the personal agenda of Stage Three. Fully three-quarters of tribes operate below Stage Four, and those in the zone of Tribal Leadership haven't stabilized at this level. As a result, they oscillate in and out of Stage Three.

Stage Five

Stage Four is a launching pad for Stage Five. When we explain this last stage, which reflects less than 2 percent of workplace tribal cultures, we see skeptical looks coming back at us. Stage Five's T-shirt would read "life is great," and they haven't been doing illicit substances. Their language revolves around infinite potential and how the group is going to make history — not to beat a competitor, but because doing so will make a global impact. This group's mood is "innocent wonderment," with people in competition with what's not possible, not with another tribe.

Teams at Stage Five have produced miraculous innovations. The team that produced the first Macintosh was at Stage Five and we've seen this mood at Amgen. This stage is pure leadership, vision and inspiration. After a short burst of activity, Stage Five teams recede to Stage Four to regroup and attend to infrastructure issues before possibly returning to Stage Five. In sports, these bursts win Olympic gold medals and Super Bowl rings. In business, these explosions of leadership make history.

Tribal Leadership Up Close

Stage 1: *Mood*: Despairing Hostility
Theme: "Life sucks."
Stage 2: *Mood*: Apathetic Victim
Theme: "My life sucks."
Stage 3: *Mood*: Lone Warrior
Theme: "I'm great (and you're not)."
Stage 4: *Mood*: Tribal Pride
Theme: "We're great (and they're not)."
Stage 5: *Mood*: Innocent Wonderment
Theme: "Life is great."

The Tribal Leadership Navigation System

The key to locating your tribes is to listen for how *most people* talk and notice how *most people* structure their work relationships. You'll see elements of many cultural

stages in your tribes, so look for what is most common.

Signs of Stage One. Most people talk as though they are alienated from organizational concerns. When they cluster together, they form isolated gangs that operate by their own rules, often based on absolute loyalty to the group. Many people are socially alienated, never talking to anyone. The theme of their words is that life has given them a bad deal, so it's OK to do whatever it takes to survive. There may be acts of violence, such as fistfights or extreme verbal abuse. Minor acts of theft or vandalism are a problem.

Signs of Stage Two. People talk as though they are disconnected from organizational concerns, seeming to not care about what's going on. They do the minimum to get by, showing almost no initiative or passion. They cluster together in groups that encourage passive-aggressive behavior (talking about how to get out of work or how to shine the boss on) while telling people in charge that they are on board with organizational initiatives. The theme of their communication is that no amount of trying or effort will change their circumstances, and giving up is the only enlightened thing to do. From a managerial perspective, nothing seems to work — team building, training, even selective terminations appear to do nothing to change the prevailing mood. The culture is an endless well of unmet needs, gripes, disappointments and repressed anger.

Signs of Stage Three. People engage in anything that's going on with energy and commitment, but, when you listen closely, they talk mostly about themselves, and focus on appearing smarter and better than others. They think they're focused on team concerns, but their actions show their interest is personal. People tend to form two-person relationships. They rarely bring people together, they resist sharing information except when it's necessary and they pride themselves on being better informed than others. Winning is all that matters, and winning is personal. People at this stage complain that they don't have enough time or support, and that the people around them aren't as competent or committed as they are.

Signs of Stage Four. Teams are the norm, focused around shared values and a common purpose. Information moves freely throughout the group. People's relationships are built on shared values. They tend to ask, "What's the next right thing to do?" and to build ad hoc partnerships to accomplish what's important at the moment. Their language focuses on "we," not "me." If two people get in a squabble, a third will step in and repair the relationship rather than create a personal following for himself. Unlike Stage Two, the group is composed of people who have played the Stage Three game and won — and who are now ready for genuine partnerships. Your first job is to make sure each person is stable at Stage Four, as most groups at this level crash down to Stage Three when under stress.

Signs of Stage Five. Your tribes hardly ever refer to the competition, except to note how remarkable their own culture is by comparison and how far their results outstrip industry norms. The theme of communication is limitless potential, bounded only by imagination and group commitment. People in this culture can find a way to work with almost anyone, provided their commitment to values is at the same intensity as their own. (Unlike Stage Four, the focus isn't on "our values," but on resonant values.) There is almost no fear, stress or workplace conflict. People talk as though the world is watching them, which may well be the case as their results are making history. Your job is to make sure the infrastructure to maintain these leaps to Stage Five is in place. ●

PART II: YOUR JOURNEY AS A LEADER: LEADING OTHERS THROUGH THE STAGES

Stage One: On the Verge of a Meltdown

The person at Stage One is alienated from others, expressing the view that "life sucks."

There are two ways to move from Stage One to Stage Two. First, the person has to substitute "life sucks" with "*my* life sucks" — the mantra of Stage Two. The difference in these stages is huge, and moving forward means dropping language that the nature of life is flawed and saying instead that life works for some people, but not for you.

One man we got to know in our research is an artist named Joseph. When we interviewed Joseph, he talked as someone who had made the transition: "I had to give up my art, because the cost is my family." He sounded like a victim of circumstance: that others can do art, but not him. *His* life sucked — he's made it to Stage Two.

Second, the person can move to a tribe where the offending behavior is not tolerated. The mother of a former gang member, whose son began attending a church-run youth center, told us, "I'm worried; he used to be so alive, but now it's like the cord got pulled." From a tribal perspective, her son went from the fire of despairing hostility (Stage One) to the passivity of being

an apathetic victim (Stage Two). This was progress. When we interviewed him, he looked sad and said, "This place sucks — I don't know anyone here." He had gone from the alienation of Stage One to the disconnection of Stage Two.

Give Stage One People a Chance

There are people in Stage One who want life to be different, and our advice to employers is to give them a chance. William, part of Joseph's tribe, has made doing so a part of his design and general contracting business, Design For You, in Chicago. He employs former gang members, convicts and people who have fallen into (and out of) heavy drug use. He believes that helping people out of Stage One is the responsibility of every person in society. At the same time, if people aren't willing to leave the allure of Stage One, he doesn't pursue them. If they relapse into despairing hostility, he invokes the "horse whisperer" protocol and pushes them out, but watches for when they're ready to try again. ●

Stage Two: Disconnected and Disengaged

People at Stage Two are separate from others, although unlike those at Stage One, they are surrounded by people who seem to have some power that they lack. As a result, their language expresses "*my* life sucks." Unlike Stage One, a person at Stage Two communicates the view that others' lives seem to be working.

When people at this stage cluster together, their behavior shows characteristics of being apathetic victims.

Leverage Points for a Person at Stage Two

Here are four leverage points for a person at Stage Two:

• Encourage her to make a friend. Then another friend. Then another friend. In other words, encourage her to establish dyadic (two-person) relationships.

• Encourage her to establish relationships with people who are at late Stage Three. Such individuals can be identified by their eagerness to mentor others into becoming mini-versions of themselves.

• In one-on-one sessions, show her how her work does make an impact. In particular, show her areas where she is competent and where her strengths are. In the same meeting, point out abilities she has that she has not yet developed, but be careful to make the tone of these discussions positive.

• Assign her projects that she can do well in a short time. These assignments should not require excessive follow-up or nagging, as this behavior may reinforce her "my life sucks" language.

Success Indicators

Here are two indications of success:

• She will use "I'm great" language, as opposed to "my life sucks." She may name-drop, point to her own accomplishments and brag. Many of her sentences will start with "I."

• She will exhibit the lone warrior spirit of Stage Three, often comparing herself with her co-workers and using disparaging language like "What's wrong with them?" and "If they tried, they'd succeed." ●

Stage Three: The Wild, Wild West

The essence of Stage Three is "I'm great." Unstated and lurking in the background is "and you're not." Ask people at this stage how they see work and you will hear: "I'm good at my job," "I try harder than most," "I'm more able than most," and "Most people can't match my work ethic." The key words are "I," "me" and "my."

People at Stage Three report, almost universally, that they don't have enough time, don't get enough support, and are surrounded by people less able and dedicated than they are. No matter how hard they work, they can't punch through the barrier of a day that has only 24 hours. They've hit the point of diminishing returns, so the harder they work, the less effective they are and the less their efforts seem to matter. Simply put, they want to get to the next level but don't know how to get there or even what the next level looks like.

Leverage Points for a Person at Stage Three

Here are eight leverage points for a person at Stage Three:

• Encourage him to work on projects that are bigger than anything he can do alone. In short, assign him work that requires partnership.

• Point out that his success has come through his own efforts, but that the next level of success is going to require a totally different style. In other words, show him that what's brought him to this point will not be enough to move him forward.

• Describe role models (ideally in the company) that are exhibiting Stage Four behavior. You'll know these individuals by (1) their focus on "we," (2) the number of triads (three-person relationships) in their networks and (3) success that comes from groups.

• When the person complains that he doesn't have time and that others aren't as good (the two chief gripes at Stage Three), show that he has crafted his work life so

that no one can really contribute to him.

• Tell stories about the time you made the transition from Stage Three to Stage Four.

• Coach him that real power comes not from knowledge, but from networks and that there is more leverage in wisdom than in information.

• Encourage him to manage using transparency, as much as is possible under corporate policy.

• Encourage him to form triads.

The Tribal Leadership Epiphany

Having interviewed thousands of people who have made it into Stage Four, the zone of Tribal Leadership, we discovered that every person had an awakening. Some called it a major business insight. One said, "In the shower this morning, I realized there's a better way to do business that will mean much higher profitability." Some called it corporate karma. Others described it as a need to live their values. Some came to it after years of psychotherapy or doing a self-help program. Some came to it through what Warren Bennis and Robert Thomas (in *Geeks and Geezers*) call a crucible experience: an event that causes people to reflect — at both intellectual and emotional levels — on their core assumptions. For some people, 9/11 kick started the epiphany. For most people, the epiphany was actually a series of epiphanies, each presenting a deeper insight about what wasn't working in Stage Three.

While the epiphany happens to all Tribal Leaders, it may not happen in adulthood. Gordon Binder, former CEO of Amgen, apparently had it growing up in New Mexico and finished it in the Navy. Frank Jordan became a Tribal Leader through the Boys & Girls Clubs.

They described the epiphany as *the* turning point in their lives, both personally and professionally, regardless of how they came to it or went through it.

Although it often took months or years for the epiphany to burble through their minds, once the moment of awareness happened, there was no turning back. They often described it in sound bites. We heard statements like:

- Nothing that matters is personal.
- Stage Three has no legacy.
- To win at Stage Three is to win small.
- I now see I have been a manipulator, not a leader.
- I'm tired; isn't there some other game to play?
- I see myself through others' eyes and I don't like what I see.

As the person sees into her blind spots she realizes that the ego hit of accomplishment isn't the same as success itself. Her attention shifts to what's really important, and, almost always, the goal is tribal. David Kelley, CEO of IDEO, said his goal became "Hanging out with great people and creating stuff that makes a difference." George Zimmer, CEO of Men's Wearhouse, said, "We need to keep thinking about the people in our stores and how to make their lives better."

As the seesaw tilts toward Stage Four, the person's language and behavior shift away from dyadic relationships toward networked systems of people.

Stage Four: Establishing Tribal Leadership

In our research, after a person has had the epiphany that takes him from Stage Three to Stage Four, he behaves differently. Our data show that people tend to take one of three paths. Kelley, took the first: He got together a group of like-minded friends and asked how they might make money. The relationships come before the business model; the tribe before the profits. If the group is composed of people who are really operating at Stage Four (rather than dropouts from the system in the midst of Stage Two), the ventures tended to do very well, like IDEO. The key question is, "Have we all owned and are we all done with Stage Three?" If the answer is yes, a small group of people becomes what we call a tribal seed. As it grows, it attracts resources, people, money and ideas, and it flourishes into a tribe.

The second path is that the newly minted Stage Four person looks for people in a large organization who are eager to play by a different set of rules. Often, these will be people in late Stage Three or individuals in the process of going through the epiphany. The Tribal Leader collects and nurtures them and forms a tribe based on their values and aspirations. The group — often a new department or, in a matrix organization, a "project" — becomes unusually successful, often being labeled a "miracle." As the group succeeds, people at Stage Three notice the results, often trying to replicate the tribe's strategy within an "I'm great" culture. Such approaches fail, and the Tribal Leader's group moves further ahead with people scratching their heads about how he does it.

The third path is that the person forges out on her own, developing what we call tribal antennae — an intuitive ability to find people who can contribute to success on a larger scale than one person working alone

and who value her help in return. From the outside, her actions look like networking gone wild — she's constantly reaching out to more and more people, with others saying that she needs to learn focus. In fact, her actions are systematic: She is shopping for tribal members. As she finds people who fit, she networks them into the group, and a tribe slowly takes shape. Unlike the first approach, where the tribal seed determines the nature of the business from the start, this third path produces rapidly changing tribes and business models. The key to this third path is that it's not "my tribe," but "our tribe." The person who cobbled it together is recognized as the Tribal Leader, not the single visionary who calls the shots. In this system, anyone is welcome to play — and tribal members all have a hand in recruiting, provided they have something to offer and obey the rules. ●

PART III: OWNING TRIBAL LEADERSHIP: STABILIZING STAGE FOUR

A key point for companies that want to attain Stage Four is to go for values *now*.

Core values are "principles without which life wouldn't be worth living." There are two ways to seek core values. The first is for a Tribal Leader to tell a value-laden story, which triggers others to tell similar stories about their values.

The second way is to ask three to five open-ended questions such as, "What are you proud of?"

The Tribal Leader's goal is to find shared values that unite the tribe.

A Noble Cause Is What We 'Shoot For'

If core values are the fuel of a tribe, a noble cause is the direction it's headed. A noble cause captures the tribe's ultimate aspiration. Said differently, core values are what we "stand in" and a noble cause is what we "shoot for."

There are two ways to find a tribe's noble cause. The first is to keep asking, "in service of what?"

The second way is to ask the Big Four Questions of people in the tribe: "What's working well?" "What's not working?" "What can we do to make the things that aren't working, work?" and "Is there anything else?" These questions capture a group's current assessment of its situation and its aspirations about what should change and why. The noble cause will often emerge out of people's answers to the questions.

The goal of determining values and a noble cause isn't agreement; it is alignment, which produces coordinated action married with passionate resolve. *Anything* not consistent with the core values and noble cause needs to be reworked or pruned.

The group captures the essence of Tribal Leadership when it asks, "What activities will express our values and reach toward our noble cause?" The answer becomes a reason to form networked relationships and the basis of a tribal strategy. ●

Triads and Stage Four Networking

Every September, a remarkable party takes place at which people in commercial real estate discuss and close more business than perhaps on any other night of the year. At the center of the party is CB Richard Ellis Vice Chair, Darla Longo.

Longo's behavior was the most remarkable part of the event and most missed her magic. She didn't promote herself, talk about her accomplishments or say "I," "me" or "my," other than to say, "I'd like you to meet … ." Longo played matchmaker. She introduced clients to brokers, senior brokers to successful rookies and clients to one another.

If we were to take any moment of the evening and watch it in slow motion, we'd see three elements. First, Longo would have at least two people around her. Second, she would talk to them *both* at the same time, even if they didn't know each other. Third, if we listened to her words, we'd notice that they would have the effect of building or deepening the relationship between the other two people.

Longo emerged as one of the leaders in commercial real estate for many reasons: her drive, endless energy, talent, vision for the business, and focus on integrity and values. In our years of watching her, one simple act of behavior stands out: her ability to "triad" — to create business relationships *between* two people, based on core values and mutual self-interest, and then move on. In essence, she receives loyalty and followership by creating relationships between other people. She is one of the most successful people in commercial real estate because her actions build triads, the foundation of a Stage Four tribal structure.

The Structure of Stage Four Relationships

The triad is so powerful that it can link tribes together (remember, the upward barrier on a tribe is 150 people, so many of these companies are tribes of tribes), creating an unlimited capacity for scalability.

While the triad is the basic building block of Stage Four cultures, these blocks can be stacked to the sky,

resulting in large, robust, dynamic and growing networks of tribes at Stage Four. All are vibrant, values-based and filled with people giving their best efforts — leading and being led at the same time. ●

A Tribal Leader's Guide to Strategy

When we collected the best practices we observed from Tribal Leaders, and combined them with the results from a careful study of historical tribes, we came to a model with five parts: values, noble cause, outcomes, assets and behaviors.

• **Values and Noble Cause.** Setting a strategy starts with recognizing the values of the people who will implement it and the noble cause to which they aspire. These pieces give the tribe a boost in motivation and align it on a common purpose. They go a long way to owning Stage Four.

• **Outcomes, Assets and Behaviors.** Once values and a noble cause are set, tribal strategy involves three conversations. The first is "what we want," or outcomes. The second is "what we have," or assets. The third is "what we will do," or behaviors. It's imperative that the Tribal Leader keep these three discussions separate. ●

PART IV: TOWARD VITAL WORK COMMUNITIES (STAGE FIVE)

In the early 1990s, we only knew about tribal Stages One through Four, and we had lots of examples of each. On the basis of our observations, we believed that Stage Four's "we're great" language was the top of the mountain. Then, thanks to Amgen, everything turned upside down, delaying the publication of *Tribal Leadership*. The discovery was worth the wait.

We walked into Amgen in the 1990s and asked who their competitors were. We expected "Genentech" (another biotechnology firm) or maybe — if people were ambitious — "Pfizer" (a fully integrated pharmaceutical company). It was even possible that people would be so ill-informed about the marketplace that they wouldn't know. All of those answers would be consistent with what we expected to find, and they would help verify our hypotheses and make us happy researchers.

"We're in competition with cancer," we heard from Amgen employees. *Huh?* No mention of a company.

The same people went on to say, "Maybe [our competitor] is inflammatory disease, such as arthritis, Obesity, *(or)* Parkinson's." We weren't happy. In fact, our four-stage model couldn't explain what we were hearing.

To make our situation worse, we didn't see any evidence of tribal pride. No high fives, no "We're No. 1" banners (which they were in growth, although not in revenue or market capitalization).

A Mood of Innocent Wonderment

"It's amazing," one person in engineering told us. "A few good experiments, and now we're sitting on billion-dollar patents. It makes me think of all the human diseases we'll beat in the next few years." His tone was what perplexed us more than his words. It wasn't pride. It was almost a whisper, like a prayer of thanksgiving. It's a mood we came to call innocent wonderment.

We had stumbled across our first example of Stage Five, and it was as much a leap forward as Stage Four was from Stage Three. It is, we believe, the future of business.

At Amgen in the 1990s, and in most other organizations at this stage, the culture oscillated in and out of Stage Five. After a burst of history-making activity, the group fell back to the "we're great" language of Stage Four, assessing their performance relative to competitors. Then another market opportunity, or possible discovery, would come along and catapult them back into Stage Five. If we graphed out the Amgen of the early 1990s, the culture would be like waves on the beach: the crests in Stage Five and the troughs in Stage Four.

Stage Five

Since Amgen, we've found dozens of organizations with Stage Five tribes. What they all have in common is Tribal Leadership taken to its next level, and a level of performance that makes history. ●

RECOMMENDED READING LIST

If you liked *Tribal Leadership*, you'll also like:

1. ***The Five Dysfunctions of a Team* by Patrick Lencioni.** Lencioni reveals the five dysfunctions that go to the very heart of why teams often struggle. He outlines a model that can be used to overcome these common hurdles.
2. ***Leading Outside the Lines* by Jon R. Katzenbach and Zia Khan.** Katzenbach and Khan examine how formal and informal factions together form the bigger picture for how organizations actually work.
3. ***Stop Workplace Drama* by Marlene Chism.** Marlene Chism shows how to change the way you and your organization confront and work through problems.

Fermenting a Business Revolution

TRUE TO OUR ROOTS

THE SUMMARY IN BRIEF

Winemaker Paul Dolan has led Fetzer Vineyards to become one of the biggest and best-known wineries in the United States while also becoming a model for sustainable businesses around the world. As the president of Fetzer, Dolan is helping to lead his company — as well as the entire California wine industry — toward major changes in how wineries and grape growers preserve the environment, strengthen their communities, and enrich the lives of their employees, without sacrificing business success.

In True to Our Roots, Fermenting a Business Revolution, *Dolan describes the six guiding principles he uses at Fetzer that can help managers in any industry build and grow stronger, more sustainable companies. With an intense commitment to define new business principles for the future, Dolan and Fetzer have taken positive and active steps toward proliferating sustainable commerce while leading a management revolution in one of the most competitive industries in the world.* True to Our Roots *offers a fascinating glimpse into the California wine industry as well as extensive proof that a company can do well while following sustainable business principles that focus on the future of employees, the environment and the community.*

What You'll Learn In This Summary

✓ How to balance economic success with environmental and social responsibility and sustainable business practices.

✓ How all our actions, and their consequences, remain inside a much larger system.

✓ How everything in life gets its meaning from its context.

✓ How people are the source of sustainability, not a resource for it.

✓ How to create a virtuous cycle of knowledge and empowerment.

✓ How sustainability requires that we orient ourselves toward a larger purpose.

✓ How to expand people's understanding of what's possible for them, their companies, and their world.

Sustainability: Fetzer's Business Revolution

On a September morning in 1987, my entire way of thinking began to change. Before that morning, I had only read about the impact of synthetic chemicals on the microbiological richness of the vineyard earth. On comparing the lush, sweet flavors of a row of organic grapes with the bland, less expressive flavors of the conventionally grown grapes only 15 feet away — grown with pesticides, herbicides and fungicides — I was amazed by the dramatic difference in flavor between the two.

At that moment, I could see that the continued use of chemicals at nearly every step of the grape-growing process would diminish the quality of future vintages, and surely affect the long-term market position of the winery. It was clear to me that Fetzer Vineyards and all other wineries were risking their economic futures by placing themselves in an unsustainable position. I realized I must take action.

When I was made president of the winery, I was given the opportunity to make a difference as a winemaker, and I was determined to take advantage of it. I moved immediately to steer the company into a new course, one that would be described today as "sustainable."

Inspiring Passion and Creativity

It would require a revolution within organizations, and among managers and workers. We needed to replace standard operating procedures with something more sustainable. Everyone could participate in the process, and everyone could benefit. We could lead the revolution ourselves: We simply had to reconnect with what's important and practice the principles of sustainable leadership that arise from the experience.

It's time for business, a powerful force that can create tremendous wealth and technological progress, to become a positive force for change. The new possibility for those of us in business is to preserve that progress and wealth for the generations to come.

Over the past 10 years, Fetzer's employees rallied to this new possibility with inspiring passion and creativity. Changing the world is not easy when you're running an industry-leading corporation that's competing in the global marketplace, fending off low-cost imports, managing multiple production facilities, leading employees with diverse cultural backgrounds, adapting to constantly shifting regulations, and responding to tightening health, safety and employment laws. Fetzer makes nearly four million cases of wine each year, and competes with more than 1,000 other wineries in California, as well as those all over the world.

While competing with them all, Fetzer Vineyards increased earnings an average of 15 percent a year through the 1990s, while keeping its environmental and social responsibilities as top priorities. Our experience proves that operating on a more sustainable basis is not an economic liability — it is an economic advantage.

Moving Forward

When we changed course in 1992, we relied on three things to move us forward:

1. A willingness to admit we didn't know how to run a sustainable business. We had to discover how to do that through constant exploration.

2. Assume that everyone in the company had more to offer than just their job description. If we fully respected and acknowledged the human spirit in everyone, they would deliver the ideas and energy we needed.

3. We never stopped talking about what we were

Your Business Is Part Of a Much Larger System

When I joined Fetzer after receiving my graduate degree in winemaking, I was married with two boys who made my move to Redwood Valley an adventure. Over the years, things became difficult at home and tense around the winery. The formula of command and control that I had learned during three years in the military before I went to study winemaking, of setting and achieving goals by and for my own authority, no longer succeeded with the people I loved most in the world. It wrecked my marriage and devastated my own family.

Unfulfilled Roles

It was my brother Peter who finally helped me see that my personal drive for success at work was an empty substitute for discovering what really made me happy. My own judgments were more real to me than the behavior of the people around me, and justifying my own world was more important than joining the world everyone else was living in. I saw that I had not fulfilled my role as husband and father for my family. Rather than discovering who they were and what we needed to flourish together, I had simply taken what I needed from them and let them deal with the consequences.

It was the same with my winemaking team. I realized that I controlled and dominated them, using them to advance my own ambition, never allowing for their own personal growth or success. I thought I was serving Fetzer, but I was really pursuing my own agenda, which gave me justification for getting angry at people rather than stopping to question my own role in our success and occasional failure.

New Awareness

With this new awareness, I started to slowly change my behavior and create a more positive environment. Instead of expecting my winemaking team to fail or let me down, I opened up to them. Instead of enforcing my world on them, I found the world we inhabited together, where our communication could be a two-way street that offered more freedom of expression to everyone.

In 1992, the Fetzer family sold the winery to Brown-Forman and recommended that the new owners appoint me president. They agreed, and suddenly, unexpectedly, the opportunity to make a larger contribution to the world opened up. Around the same time, I read an eye-opening book called *The Ecology of Commerce* by Paul Hawken. His analogy — that the world of business could work with the same harmony and balance as the natural world — deeply appealed to me. Hawken's book helped me imagine that I could do the same thing with Fetzer Vineyards. Our whole company could operate with a far greater awareness of its place in the world, and from that perspective it could make a much bigger difference than I could make alone.

Ten years later, I now see this as the first principle for sustainable business: *Your business is part of a much larger system.*

Paul Dolan's Business Principles

1. Your business is part of a much larger system.
2. Your company's culture is determined by the context you create for it.
3. The soul of your company is found in the hearts of its people.
4. True power is living what you know.
5. You can't predict the future, but you can create it.
6. There is a way to make an idea's time come.

Interconnected and Interdependent

At Fetzer, we now recognize certain realities shape everything we do. They include:

- **We are not alone.** Everyone, and every business, inhabits the same larger system. None of us is outside it or exempt from its realities.
- **We are not separate.** All our actions as a company and as individuals affect the larger system, just as its health and well-being affect us. Everything within the larger system is interconnected and interdependent.
- **We can make a difference.** The choices we make can turn interconnectedness into a force that can move the world. We can create change in the larger system by how we operate in our own spheres of influence — whether it's inside our companies, inside our communities, or inside our industries.

The realization that our organizations are part of a much larger system needs to start at the top, so people take it seriously. Out of that awareness we naturally can see the interconnections, and the opportunities where a change in our business practices will lead to new and better consequences for the system. We can respond to those opportunities by acting, and through those actions

(continued on page 4)

Your Business Is Part Of a Much Larger System

(continued from page 3)

create sustainable businesses for a sustained world.

Responding to Opportunities

As we have opened up our awareness of our larger system, the opportunities to operate Fetzer more sustainably seem to arise nonstop. One that we have embraced most fully is stewardship of the earth, which includes all our own vineyards, old and new. It involves proactive restoration and conservation: eliminating chemicals; planning how and where we lay out new vineyards; changing how we irrigate our fields; and committing to conserve and restore riparian habitats.

We are also actively sharing with the wine industry and the business community at large everything we have learned and done to make Fetzer more sustainable. This is now making a difference in the way our industry works — a difference that can be a model for all agriculture that includes equitable treatment for people, preservation of the earth's natural vitality, and a solid economic return for business owners. ■

Your Company's Culture Is Determined by the Context You Create for It

I wanted Fetzer's vineyard workers, production people, salespeople, and everyone else in the company, including me, to see themselves as part of a team with a higher purpose. People want the hours and days and years they put into their work to amount to something more than a corporate bottom line. It doesn't have to be idealistic; it just has to have personal value to them. I had to find a higher purpose that would engage everyone in the organization in a compelling way. I knew we had to come at it from the perspective of being part of a larger system, and I knew it would take exploration and discovery. I wanted our purpose to combine growth and profitability with making a difference in the world, and I needed to get complete alignment on that purpose with Fetzer's new parent company, Brown-Forman.

Two months after the acquisition, I gathered the seven members of Fetzer's Leadership Team and three leaders from Brown-Forman for a long weekend retreat in a remote homestead deep in the forests of Northern Mendocino. While there, we determined that our core purpose was summed up in the phrase: *Fetzer people, enhancing the quality of life.*

Once we identified our purpose, there were opportunities everywhere we looked. We had focused the lens through which we would view our company. Profit, growth and quality goals all took on a different meaning. We developed a mission statement that included the idea, "We are an environmentally and socially conscious grower, producer and marketer of wines of the highest quality and value." This one sentence said that we were going to place our environmental and social concerns on the same level with our business-oriented, economic goals of quality and value.

Making a Greater Contribution

If everyone in the winery sees his or her work in the light of making a greater contribution to the world, then a culture of pride, quality and hard work naturally rises up from the workers themselves. It was in noticing this intersection of purpose, context and culture that the second principle of sustainable leadership began to become clear for me: *The culture of your business is determined by the context you create for it.*

Money is not enough of a context to motivate people on a sustained basis. I believe the right culture can do anything, including building a sustainable business that's a powerful investor magnet. As leaders, our job is to cultivate our people, bringing out their best, and create a rich, human whole greater than the sum of its parts. That's culture: something bigger than the individuals within a group, which they nevertheless are an integral part of. Teamwork becomes more natural, because everyone knows why the work the next person is doing is valuable. If they are talking about that context all the time, and if they are constantly examining their workplace, their products, and their processes from the standpoint of fulfilling themselves and their purposes, you

(continued on page 5)

Fun Tours at Fetzer

Paul Dolan started a program at Fetzer called "Fun Tours" for small groups of workers. On Fun Tours, he got to show people the rest of the business they were part of, including its new winery, vineyards, and the hospitality center and organic garden at Valley Oaks Ranch. This allowed people to see beyond their own department and start to see the value of their contribution inside a larger purpose. During the tour, Dolan would talk to them about elements of the business, from sales reports to new products to new vineyard plantings and projected growth. Eventually, he would talk to them about Fetzer's core purpose and desire as an organization to make contributions in many areas. Then they would have a great lunch, share some of Fetzer's wine, and talk about what was most important to them in working for Fetzer Vineyards.

Your Company's Culture Is Determined By the Context You Create for It

(continued from page 4)

can hardly keep up with the ideas they create.

Discovering an organization's unique context can only be found by plunging in and trusting that the people with you will also plunge in and help you identify your purpose for being in business. You have to articulate that purpose in a powerful, meaningful way so your people get aligned with the purpose. ■

For Additional Information on Fetzer's mission statement, go to: http://my.summary.com

The Soul of a Business Is Found in the Hearts Of Its People

Shortly before I became president at Fetzer, I took a two-month management class in problem solving and teamwork. I returned to work and began to look at my relationships differently. I had to accept the disconcerting fact that I wasn't a very good listener. I would sit and politely listen to the ideas of an employee, with my mind already made up. I would let the person finish and then say, "Those are good thoughts, but I think I want you to ..." As long as I was dealing solely with ideas or concepts — listening only for the logic or agreement that would be in sync with my own point of view — the people didn't actually matter that much to me.

To overcome this, I sat down with my winemaking team members, one at a time, and told them the ways I had been seeing them in my mind. I said I would drop the way I had been thinking of them and try to see them for who they really were. It worked. People I had judged as nice to be around but lousy contributors now had a chance to contribute and get recognized for it.

Clearing Away Judgments

My success in clearing away judgments with co-workers gave me confidence to try it with my own family. I realized the way I was holding my teenage son Jason in my mind was more about me than about him. I was the one who needed to bring more respect to the relationship. Once I dropped my harsh interpretation of him, he was able to be the loving, caring son he truly was.

I began to see that all my significant business and personal relationships were based to some degree on my interpretation of the individuals involved. I wanted to be seen for who I was but I was not offering this same respect in return. The consequences for Fetzer were far-reaching: I was holding back the entire company.

Fetzer Empowers Its Employees

Although Dolan writes that Fetzer was not looking to start a trucking company, one started itself inside Fetzer and just kept growing. Keith Oakley started as a delivery driver, taking wine 120 miles south to the San Francisco Bay Area. When Fetzer expanded to a second winery in the 1980s, it needed a tanker truck to move bulk wine between locations. Keith found the right truck and began driving it.

As Fetzer kept expanding its business, it kept needing more transportation, and Keith just kept saying, "We can do that." Thanks to this can-do attitude, the company quietly acquired a dozen trucks. One day, Dolan writes, the company realized that this was a sizable fleet for a winery. Everything was working well, but most of Fetzer's competitors were using common carriers, so Dolan and his management team decided to do a benchmarking analysis. It turned out that Keith and his team were running a pretty tight outfit. Fetzer's cost per mile averages as much as a third below what it would pay common carriers for the same services, and they were setting standards for safety and efficiency that any outside company would find hard to maintain.

Fetzer's costs are lower because Keith and his team are totally into it. They not only like to drive the trucks; they like to work on them, too. They are fully expressing their passion for trucks, and Fetzer gives them a space to do that. In that context, they have turned out to be truly great at what they are doing.

Once I began seeing people as more than just bearers of news, ideas or suggestions, I could find the level of pride, passion and talent within them. I began to understand what a good listener is: a person who respects others as strong, unique and with something to contribute.

When my Leadership Team meets, anyone can have something to offer that's new, important and potentially a breakthrough. If someone is willing to speak up in a meeting, it's because they have seen something and believe it will make a difference. When we honor that, it alters the whole dynamic. My team members can see me giving them space to express their creativity.

Once I set aside my judgments and allowed everyone at the company to contribute more fully, people seemed to follow a natural progression. They moved from being accountable for certain predefined results to taking personal responsibility for our larger mission. When I removed limits, they could respond to Fetzer's larger purpose with initiative and creativity of their own. This freedom, within the context we were constantly rein-

(continued on page 6)

The Soul of a Business Is Found In the Hearts of Its People

(continued from page 5)

forcing, unleashed the power of our people. It allowed them to match their own capabilities and interests with opportunities they saw to contribute. They could become "response-able," not just accountable.

A New Responsibility

The new responsibility for business is to make this shift at an organizational level. Rather than viewing accountability to our shareholders as a measure of how well we enhance shareholder value and hit financial targets, we can begin responding to the growing social and environmental challenges facing the world today. These challenges are, increasingly, part of the landscape in which we all must perform. Responding to these challenges so our companies can operate efficiently is a crucial part of operating profitably. If we recognize and tackle these issues as an integral part of our new way of looking at business, we'll find equitable solutions and ultimately reduce the costs of doing business.

Every organization can respond in its own way, with its own unique capabilities, making its own special contribution. Along with making profits, we can make a difference. A sustainable business should be a whole business, with a heart and soul. It must have integrity, a moral center, and it must be connected to its values and the greater world. It must aspire to do what is right, not just for the bottom line, not just from a legal standpoint, but from a moral and ethical standpoint. A sustainable business is not only accountable: It's responsible.

The wholeness we managers seek for our business is around us every day. This is what led Fetzer to the third principle of sustainable business leadership: *The soul of a business is found in the hearts of its people.*

Seeing people as great so they can reveal themselves as great involves more than just a shift in perception. It also involves the practical issue of creating space for people to fully express their contribution once we've removed internal limits on them.

Passion and Creativity

At Fetzer, we make sure our people are working in an environment where they know they can express their passion and creativity. We acknowledge their accountability even before they respond to larger opportunities, and acknowledge them publicly when they make the shift to responsibility. Ideas or actions they might have once held back are now closer to tangibly benefiting the business. That creates a new future for the company.

This is one of the most sustainable cycles in human progress: being respected for our ability to make a contribution, being given opportunities to fully express that ability, and being acknowledged for it afterward. ■

True Power Is Living What You Know

In 2000, Fetzer Vineyards purchased an historic old farm called the Butler Ranch, and planned to cut down the property's old cherry trees to make way for a new vineyard. After a giant outcry from the community — families who would flock to the ranch to pick fruit and picnic — I held several public meetings to discuss the future of the Butler Ranch with the community.

When upset community members fought back to preserve the cherry trees and the contributions that the Butler family had made to the community, we took several actions to identify and address the concerns of community members. These actions included the commissioning of a commemorative quilt to honor the Butlers and the ranch, but the trees were eventually removed.

It turned out that the economics of the Butler Ranch didn't work if we restricted our new vineyards to the original area covered with cherry trees, so we expanded into virgin woodlands. Our employees were not in favor of this and they let me know it. They pointed out that it did not enhance the quality of life. It might have made financial sense, but we had created a context where economics don't operate in isolation from social equity.

The Larger System

The purchase and battle over the development of the Butler Ranch dramatically changed my knowledge of Fetzer's relationship to the larger system. It changed what I knew of the company's commitment to its purpose, context and culture. The community outcry and the heartfelt sentiments from my employees created a strong sense of internal conflict for me. I wanted to get back to a sense of personal and corporate integrity. To do that, I had to adjust my stance on land development.

Today, Fetzer's policy is that we will not develop pristine natural landscapes into vineyards. We'll convert agricultural land, but we'll never again harvest a forest for a vineyard. The lasting legacy of what happened at the Butler Ranch places our future actions back in alignment with what we believe.

The lesson I took away from this experience is the fourth principle of sustainable leadership: *True power is living what you know.* If our businesses bankrupt our environmental and social future, we as individuals are left holding the bag. By simply living what we know to be true, we have the power to change history.

We can stop ignoring what we know to be vital truths.

(continued on page 7)

True Power Is Living What You Know

(continued from page 6)

The conventional way of doing things can be confronted. We can stop ignoring the unavoidable reality that we are operating unsustainably, as businesses and as a culture. We can demonstrate a new possibility for business by shifting to sustainable practices; we can help others pursue new possibilities in their own businesses. If we don't do this, we are violating our own integrity.

If a company lacks integrity, it's because the company is acting from some of its values, but against others. It's expressing the value of its stakeholders in seeking to maximize shareholder value, but suppressing the value of its stakeholders who respect the environment and human rights. In contrast, removing that internal conflict unleashes tremendous creative power. It encourages people to really express what they believe, because the whole organization believes it, too.

The Power of Conversation

The new possibility for companies is to insert a conversation about sustainability into the conversation about maximizing profits — and keep it there until they become the same conversation.

The conversation about sustainability needs to take place everywhere: in the boardroom, on the factory floor, in sales meetings, and in investor presentations. It has to be able to happen anywhere, any time. Conversation is one of the few processes that is almost guaranteed to produce new insights, new ideas and new connections. During conversations, ideas show up between us that might never show up in our own thoughts. Leaders have a specific role to play in this discourse — they must generate the conversation about sustainability inside and outside the organization. ■

Enhancing the Quality of Life

During monthly meetings of Fetzer's Leadership Team, they discussed how they would manage the business to achieve its purpose, and how it could generate the conversation about its purpose among everyone in the company. The team broke down the areas where it felt it could make a difference:

✓ People are a priority, because otherwise there would be no one to enhance the quality of life, and no one to receive the benefits from succeeding at it.

✓ Profit had to be part of Fetzer's context, otherwise nobody in the company would have jobs and a vehicle for enhancing the quality of life.

✓ Quality had to be part of enhancing the quality of life, because "life's too short to drink bad wine."

✓ Consumers were a big topic because when you produce millions of cases of wine, you need to enhance the lives of millions of consumers.

✓ Alliances and rich conversations with a broad array of strategic partners are critical because their performances are essential to success.

✓ Our environment is so central to our way of life that it make no sense to think about enhancing the quality of life without taking environmental impacts into consideration.

✓ The community we are part of is also important because we are part of a much larger system, and we can make a difference within it.

You Can't Predict the Future, But You Can Create It

Experience has taught me another principle for sustained leadership: *You can't predict the future, but you can create it*. With this principle, we can turn the future's inherent unpredictability from a negative into a positive. We just have to create the future from the future instead of predicting it from the present. By doing this, the processes for achieving a sustainable future will organize themselves accordingly.

If I stand in the future and look back at Fetzer after we have become a six-million-case winery, I see things about today's four-million-case winery I can't easily see from the present. I can see all the areas where we're not behaving like a six-million-case winery. I can see people who are going to have to step up, and what kinds of opportunities they're going to need along the way. I can see structural issues about production, efficiency and distribution. I can see a marketplace that needs millions of new wine-drinkers.

When looking at growth from the future backward, unpredictability becomes my ally, not my enemy. Unexpected things that happen now fit a pattern I can more easily recognize. I'm thinking that all kinds of things I can't foresee are going to have to happen for my business to reach the target. I need the future to be unpredictable. I need the unexpected. I'm actually helping to create unexpected events by stepping into the future and managing my business from there.

Creating the future from the future is an important way leaders earn the right to lead in a sustainable business. We're looking forward more than our counterparts in business ever had to because now there are much bigger pitfalls ahead of us as a society: global warming, melting ice caps, crop devastation, epidemics of disease, and vast regions of social and political unrest. Creating a future that minimizes those pitfalls is part of our job as leaders.

(continued on page 8)

You Can't Predict the Future, But You Can Create It

(continued from page 7)

Creating the future from the future is also a major vehicle for getting ahead of our newly empowered organizations, with their context, their passion, and their freedom to discover and live what they know inside a much larger system. We leaders must shift from a perspective of incremental change to a perspective of transformation. The key to success is to paint a vivid picture of the future so it can come to life for others in your organization. The point of the picture is not to accommodate the present. The picture a leader paints must accelerate the arrival of a particular version of the future. ■

There Is a Way to Make An Idea's Time Come

How do you make an idea's time come? What steps can you take that will affect both the present moment and all future possibilities, for your organization as well as the larger system? You can take a stand.

Companies have the ability to create a sustainable future by taking stands on environmental and social issues. DuPont, Nike and Xerox are among the growing number of companies that have taken stands on zero waste. Patagonia took a stand when it decided it would use only organically grown cotton in its line of popular sportswear. Robert Redford's company, Sundance, took a stand on environmentally responsible ski resort development. These decisions are not incremental. They are either/or, do/not-do decisions, the kind that don't just reflect change: They create change.

This is the difference between an idea whose time has come and an idea whose time we must make come. A stand is about adapting the world to your world. A stand creates the trend that others want to follow. When you commit yourself to something that doesn't currently exist, you create real change, not incremental change.

The difference between stands and positions is important for sustainability because positions can subtly undermine sustainable leadership. Positions keep us in a state of reaction rather than initiation, but stands don't change based on the politics of the day or if someone objects. A stand actually includes all the objections and positions everyone else might take about it, their considerations, and their particular circumstances.

Taking a Stand

There are four dimensions of taking a stand:

1. A stand is personal for each of us. It's about seeing a personal possibility of making a contribution and fully expressing our commitment to that.

2. Each of us is responsible for its completion. We don't have a part in the play, we are the play.

3**. Each of us is responsible for generating the conversation about the stand.** You're responsible for making the stand come alive for others, to attract them to it as a possibility, and to advance its exploration.

4. Each of us is responsible for remaining open to whatever happens. Objections and roadblocks may look like problems, yet they should be viewed as opportunities to recommit to the stand, discover an unexplored path, and spur you to unconventional solutions.

A stand does not adapt to these types of things. It includes them in its larger purpose. The world adapts to the stand, not the other way around. A stand is big, unwavering and enduring. You take a stand because you can, and because you believe it will make a difference.

Going Organic

In 2002, I began painting a vivid new picture for Fetzer, in which all the vineyards we own, manage, or contract with would be farmed organically. Our own vineyards were organically farmed, but provided only about 20 percent of the grapes we needed. I was now envisioning all our fruit being grown organically by the end of the decade, which would involve our contract grape farmers in an exciting new adventure.

Our winemakers and managers responded to this picture with reactions that ranged from enthusiasm to anxiety. Once everyone had raised their issues, we were able to organize them by structuring the conversations we needed to have. Once everyone was talking and people were beginning to see a clear picture of the future, we announced to the world what we wanted to do.

By going public, I was showing the world not only the future I saw, but also my conviction that we could create it despite potential obstacles. That is an important way that a stand makes an idea's time come. It may take others a while to wrap their minds around this idea, but they can't deny that some of us see it already, are working toward it, and believe it will happen. If people have ideas or interests related to a new possibility, taking a stand on it gives them a focal point for expressing them.

Everyone wants a healthy planet, a strong community, and economic prosperity. Going public with a stand for sustainability taps into this huge potential for concerted action, and that's what gets results in the end. I see this already in our stand about organic farming. Everyone is helping create a company that is built around a sustainable future, and when we succeed, everyone is going to share in the results and the rewards. ■

THE SUMMARY IN BRIEF

When it comes to the way we lead–in the workplace, in the classroom, at home–we've been repeating the same style of leadership for a long time. Many leaders still approach their role with the priority that there is a job to be done, and their role is to leverage resources and people at their disposal to accomplish the task at hand. Has this Command & Control style of leadership worked? Probably not.

In fact, most of us have wanted a different way to lead and be led. We've known what we want to move from–Command & Control–but we're less clear on what we want to move to. In ***Trust & Inspire: How Truly Great Leaders Unleash Greatness in Others,*** New York Times bestselling author and global authority on trust, leadership, and culture Stephen M.R. Covey provides the answer. In it he suggests a simple term, and complete framework, for the change we need: Trust & Inspire. At its core, a Trust & Inspire paradigm flows from a fundamental belief in the potential and greatness inside each of us. It's goal is to unleash people's talent and potential–to truly empower and inspire them–rather than try to contain and control them. This approach also produces far better performance. Trust & Inspire is the new way to lead.

IN THIS SUMMARY, YOU WILL LEARN:

- The Emerging Forces and Epic Imperatives impacting our work and lives.
- The Fundamental Beliefs of a Trust & Inspire Leader.
- The 3 Stewardships of a Trust & Inspire Leader.
- 5 Common Barriers to Trust & Inspire Leadership.

The Future of Leadership

For decades, we've been getting away with a tired, out-of-date leadership style that we've patched and propped to try to make work for our changing world. But incremental improvements within a flawed paradigm will no longer work. It's time for a new style of leadership–one that is relevant for our times.

Not only has the world changed, so has the nature of work itself, along with the workplace, and the workforce. Inclusion, collaboration, and innovation are no longer simply buzzwords but are the price of entry to being successful in our current as well as every future reality.

Our constantly disruptive environment continues to create infinite choice and possibilities for a rapidly evolving, dispersed, and diverse workforce. This workforce demands a new kind of leader–a leader who can see, develop, communicate, and unleash greatness in every person.

The world has changed. Our style of leadership has not.

These mega changes we are experiencing are a result of "Five Emerging Forces." These forces of change are sweeping through our world and impacting our work and our lives in unprecedented ways. We might try to avoid or ignore them, but they will not ignore us.

The Five Emerging Forces

1. **The Nature of the World Has Changed:** Technological innovations are bringing about extraordinary changes. These changes are converging and blending in what is being called "the Fourth Industrial Revolution." On top of this, never before in history has so much knowledge and information been available. This explosion of knowledge has changed the way we view the past and made us think differently about the future.
2. **The Nature of Work Has Changed:** The "what" of work today has become increasingly knowledge- and service-based, with access to instant and simultaneous information. It is far more collaborative, innovative, and creative than ever before. Increasingly, people are being asked to focus on work that requires more of their hearts and minds, and less of their hands and backs.
3. **The Nature of the Workplace Has Changed:** There are also major shifts happening related to where we work. Working from home or working from anywhere is fast becoming the norm particularly in some form of blended or hybrid combination with on-site work. This is leading to changes in organizational structures and systems and has a significant impact on workplace culture.
4. **The Nature of the Workforce Has Changed:** Our workforce is far more diverse than ever before, filled with people from different generations, genders, raced, ethnicities, sexual orientations, religions, cultures, backgrounds, experiences, and perspectives. The goal is to create an inclusive culture that enables us to maximize our diversity–our differences–as our greatest strength.
5. **The Nature of Choice Has Changed:** The advances in technology have taken us from multiple choice to infinite choice, as consumers and as team members and leaders. With this flexibility and increased choice, it's important for leaders and organizations to create the kind of culture that attracts, retains, and inspires the best in people.

These Five Emerging Forces are at work in our world regardless of whether we see them or are even aware of them. In order to thrive, let alone survive, in their whirlwind of change, we organizationally and as leaders need to adapt as fast as things are changing around us. If we fail to adapt, we will likely not be able to deliver on two epic imperatives of our time–the most essential and critical needs of every organization in this new environment.

The Epic Imperatives of Our Time

All organizations today have two epic imperatives to achieve. First is the ability to create a high-trust culture that can attract, retain, engage, and inspire the best people–and thus win the ongoing war for talent. In other words, win the workplace. Second is the ability to collaborate and innovate successfully enough to stay highly relevant in a changing, disruptive world. In other words, win in the marketplace. If we cannot deliver on these two epic imperatives, we won't be able to sustain success in our new world.

Command & Control versus Trust & Inspire

Perhaps the best way to understand why and how Trust & Inspire leadership is more relevant and apt for our day is to see how it contrasts to the style of Command & Control.

COMMAND & CONTROL	TRUST & INSPIRE
Compliance	Commitment
Transactional	Transformational
Efficiency	Effectiveness
Status Quo and Incrementalism	Change and Innovation
Fixed Mindset	Growth Mindset
Coordination among Functional Silos	Collaboration among Flexible, Interconnected Teams
Control, Contain	Release, Unleash
Motivation	Inspiration
Manage People and Things	Manage Things, Lead People

Becoming a Trust & Inspire Leader

This part of the book provides practical advice on how to change from a Command & Control style of leadership to Trust & Inspire. First, you'll be challenged to take a hard look at your paradigms about people and leadership and the actions that follow. Then we will walk through how to make the life-changing switch to Trust & Inspire.

> Trust & Inspire leaders don't simply agree with them intellectually–they consistently live them.

The Fundamental Beliefs of a Trust & Inspire Leader

The fundamental beliefs of a Trust & Inspire leader are based on timeless and powerful principles. As with all principles, these beliefs are not surprising. What makes them powerful is that Trust & Inspire leaders don't simply agree with them intellectually–they consistently live them.

Collectively, these beliefs make up a more complete, accurate, and relevant paradigm through which we view people and leadership today. Each of us can become a Trust & Inspire leader through understanding and acting on the following fundamental beliefs.

People have greatness inside them…so my job as a leader is to unleash their potential, not control them. A Trust & Inspire leader believes that there is greatness in people. Their intent is to develop and unleash that greatness while helping people see the greatness within themselves. Our desire to trust and inspire people increases when we see them from a paradigm that acknowledges their inherent worth, ability, and potential.

People are whole people…so my job as a leader is to Inspire, not merely motivate. Trust & Inspire leaders recognize that people have multiple layers that make up a whole person. For people to reach their highest potential, we must see and treat them as whole individuals and focus on the four aspects that make up a whole person–body, heart, mind, and spirit.

When people come to work, they bring their whole selves. Seeing others holistically–rather than as fragmented pieces or parts–is not just a strength but a necessity. People need inspiration, not just motivation, to answer the desires to give back, to have a cause, to find fulfillment. Inspiration lights what is already inside people. Trust & Inspire leaders look to ignite the fires within.

Stewardship is a responsibility that implies the highest level of trust, or being entrusted.

There is enough for everyone…so my job as a leader is to elevate caring above competing. A scarcity mindset leads to jealousy and an unwillingness to even work with others, much less recognize their success. It can breed bitterness, dissension, and unhealthy competition and contention. On the flip side, an abundance mentality dissipates jealousy and internal competition. Another person's success doesn't diminish our own. It's all about caring for others.

Leadership is stewardship…so my job as a leader is to put service above self-interest. A stewardship is "a job with a trust." People who operate from a Trust & Inspire paradigm have a sense of stewardship about everything, including their time, talents, money, possessions, relationships, and family.

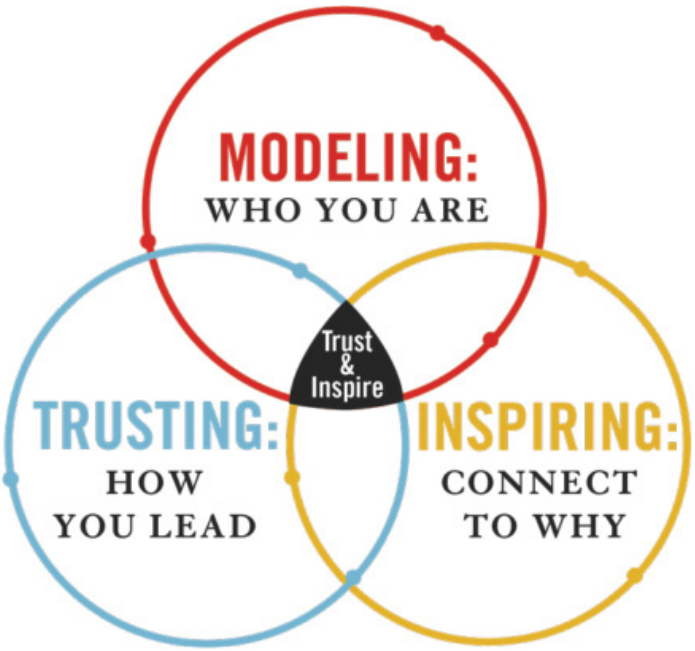
They have a distinct sense of responsibility as stewards–as having a responsibility for the growth and well-being of those they serve and lead. Above all, stewardship puts service above self-interest.

Enduring influence is created from the inside out…so my job as a leader is to go first. Leading is about intentional influence that endures, even when the leader is not present. The best way to create this kind of enduring influence from the inside out is to simply go first. Trust & Inspire leaders start with themselves. They look in the mirror. They model the behavior. They go first.

The cumulative effect of these beliefs, when lived, creates a Trust & Inspire leadership mindset–an expansive lens through which we view the world. As we internalize these beliefs and act on them, we will find the strength–indeed the humility and courage–to become Trust & Inspire leaders.

The 3 Stewardships of a Trust & Inspire Leader

A fundamental belief of a Trust & Inspire leader is that leadership is stewardship. Stewardship is a responsibility that implies the highest level of trust, or being entrusted. When we have a stewardship mindset, we have been given a job to do, and we've been entrusted to see it through. The Trust & Inspire framework consists of 3 Stewardships that work together and build off each other.



1. Modeling (Who You Are): While there are many important attributes to model, these have the greatest impact for the new way to lead. These behavioral virtues are combined into pairs because each is tremendously influenced by or balanced by the other.

Humility & Courage: A humble person is more concerned with what's right than about being right, about acting on good ideas than having the ideas, and about recognizing contribution than being recognized for it. Some people have high levels of humility but lack courage. Such leaders are often more concerned with being liked than in doing what is right. It takes courage to do the right thing. Humility, bolstered by courage, is a powerful force.

Authenticity & Vulnerability: Authenticity means real and we are drawn to it. If our reality matches our words, we are who we say we are and this has a significant impact on how those we lead experience us. Vulnerability, then, is when you open yourself up for others to see for themselves who you really are. The word "intimacy" can be broken down to say "into-me-see." Trust & Inspire leaders are vulnerable by opening up their authentic selves.

Modeling empathy with others dramatically increases not only well-being, but also the performance of all involved.

Empathy & Performance: Empathy is understanding another person's thoughts, feelings, experience, and point of view. Modeling empathy with others dramatically increases not only well-being, but also the performance of all involved. Results matter, to our credibility and effectiveness as a leader. How we do what we do matters enormously. Empathy and performance may seem like odd companions, but they go hand in hand. When we deeply listen to others, only then can we truly learn what things are most important to them–and only then can we commit to doing those things. And keeping those commitments is performing.

2. Trusting (How You Lead): You can have two trustworthy people working together and no trust between them . . . if neither person is willing to extend trust to the other. Trust is only achieved when someone is not only trustworthy but also trusting. Most people, no matter how trustworthy they are, truly struggle with the ability and skill of extending trust. By trusting others, leaders unleash human potential and multiply performance. Trust is a competency–an actual skill–that can be deliberately focused on and improved.

Clarify Expectations: This is based on the principles of clarity, responsibility, and accountability. When you clarify expectations, you create a shared vision and agreement up front about what is to be done. When we as leaders mutually establish clear expectations around the trust being given, it sets everyone up to win.

Practice Accountability: This is based on the principles of accountability, responsibility, stewardship, and ownership. There are two key dimensions to practicing accountability, and the sequence matters. As a Trust & Inspire leader, you hold yourself accountable first, and you help others hold themselves accountable second.

Grow People: The overarching responsibility of any Trust & Inspire leaders is to grow people, rather than fix people. When people grow and get better, performance improves. This style of leadership ignites passion, creativity, ownership, and commitment.

3. Inspiring (Connect to Why): Your job as a leader is not just to keep people around, but to lead them in a way so they consciously and enthusiastically choose to stay, so they thrive and contribute meaningfully. Research shows that what people want most from their leaders–more than any other attribute–is to be inspired. And yet, in multiple studies, most leaders rank lowest in their ability to inspire.

The disconnect between what people want and what leaders are giving is staggering, and it results in a massive tax on well-being and productivity at both the personal and organizational levels. Far too often we equate being inspirational with being charismatic. You do not have to be charismatic to be inspiring. Inspiration does not depend on any physical or even emotional quality or attribute. Rather, it is simply who you are and how you lead that inspires. While charisma may motivate, it is authenticity that inspires. Best of all, inspiring others is a learnable skill.

We practice the principle of connection through connecting with people and connecting to purpose. When we genuinely connect with people–when they feel like we "see them" and have real interest in them–that's inspiring. It's even more inspiring when people feel connected to purpose, meaning, and contribution–to why what they're doing matters.

3 Levels of Connecting with People

In connecting with the people around us, we can increase our ability to inspire by focusing on three different levels of connection with:

Ourselves: Connect to your own purpose first. Finding your "why" begins by being authentic about what really matters to you.

Our relationships: Elevate caring over competing. When you feel that others are interested in what is important to you, you want to respond in the same way: with caring. The two key attributes that demonstrate caring are empathy and compassion.

Our team: Belonging is what turns a group of people into a team. If people feel like they are an important part of something bigger than themselves, they will become energized, and they will be inspired to contribute in new, different, and meaningful ways.

Connecting to Purpose

People want to know that their life and their work matters, that they are significant. They want to find meaning in how they spend their time, not just a way to pay for it. Money is just one part of the journey, not the final destination. That is the difference between success and significance.

When the 3 Stewardships of a Trust & Inspire leader–modeling, trusting, and inspiring–are viewed independently, each of them is significant, and they each inspire, but the true power comes when we strive to live and fulfill all three simultaneously. As we do, we can become an incredible catalyst for both transformation and performance.

Stewardship Agreements

Stewardship agreements are the Trust & Inspire tool leaders use to clarify expectations and practice accountability between people involved in any interdependent endeavor. The purpose of stewardship agreements is to get results in a way that grows people. The basic idea is that a stewardship agreement shifts the paradigm of interaction from:

- Vertical positioning to horizontal partnering
- Hovering over and checking up to self-supervision and accountability
- Micromanagement to self-governance
- Leaders judging people to people judging themselves.

A stewardship agreement is a tool perfectly suited to remote/hybrid work, to a dispersed workforce, and more broadly, to the new way of working. The point of it is to have a common understanding and commitment toward your highest mutual priorities. They can be surprisingly simple and are liberating for all involved.

They don't emerge from isolated techniques but rather from enduring principles. It is difficult to use them without first building a relationship of trust, and it's difficult to maintain them without personal credibility. They will help us overcome many of the common barriers that so often get in the way of trusting and inspiring others–of unleashing people's potential.

There are five elements that should be included when creating a stewardship agreement.

1. Desired Results: What do you want to accomplish–and why?
2. Guidelines: Within what boundaries?
3. Resources: What do we have to work with?
4. Accountability: How will we know how we're doing?
5. Consequences: What are the implications if we do or don't achieve the desired results?

5 Common Barriers to Trust & Inspire Leadership

It's understandable to be apprehensive about a new leadership approach, especially when you've spent most of your life operating in a different way.

The overarching barrier to becoming a Trust & Inspire leader is that we think we already are one! As a result, the problem is always "out there"–in other words the problem is everyone else.

While this mindset is the generic, universal roadblock, there are five very particular and specific barriers that keep us from becoming Trust & Inspire leaders.

1. "This Won't Work Here"

There is no question that there are very real circumstances and limiting factors that will impact the fit of Trust & Inspire leadership to any particular industry, organization, or team. But whatever your situation, you can lead by going first. You can't manage your boss but you can lead your boss. You can be the catalyst for change.

2. Fear—or "But What If…"

"...I Lose Control?"

"...It Doesn't Work?"

"...I've Been Burned Before?"

"...I Don't Get the Credit?"

"...I'm Not as Confident as You Think I Am?"

Anytime we are about to make a difficult decision or try something new, we instinctively consider the risk. We ask ourselves a host of "what if" questions that all revolve around the same concept–fear.

The antidote to fear is trust. Overcome these fears by extending smart trust, balancing risk and returns, believing that most people can be trusted, maintaining an abundance mentality, and building credibility.

3. "I Don't Know How to Let Go"

For many of us, ceding control–letting go–can feel impossible. The inability to let go, however, can be damaging to morale and stifling to creativity. Letting go doesn't mean you have no control. It means developing a high tolerance for failure with a focus on learning and course correction.

4. "I'm the Smartest One in the Room"

Being smart is more than just intelligence and credentials. It includes your ability to reach people, to inspire them, to open their minds rather than to shut them down so that everyone can benefit from what they bring to the table. If you think you're always right, you'll find that when it comes to people, you're more often getting it wrong.

5. "This is Who I Am"

Habit is strong. But while your style may have worked in the past, in the disruptive, multigenerational, and ever-changing world of today it will only grow in irrelevance and ineffectiveness. A Trust & Inspire leader rescripts. We are programmers, not programs.

Trust & Inspire in Any Context

Think of a role in your life that really matters to you. Maybe it's a family role, such as parent, spouse, or child. Maybe it's a work-related role, such as HR manager or team leader. Maybe it's a community, church, or volunteer organization role.

You don't have to be given the title to be a leader. Leadership is a choice, not a position. You can be a leader in any role and make a difference to the people you interact with in that role. Regardless of the role, plug it into the following question:

Am I a Command & Control _____, or am I a Trust & Inspire _____?

When we adopt a style of Trust & Inspire, people trust us more and feel inspired when they are around us. The principles are timeless and transcend the various roles in everyone's life.

Wherever there is greatness, wherever there is achievement, wherever there is success–you can find a Trust & Inspire leader.

People are not moved to greatness; they are inspired to it. When we model, people will think, I want to be like that person. When we trust, people will think, I want to deliver for that person. And when we inspire, people will think I want to contribute with that person.

We can be that leader. We should be that leader. And as we become the leader we strive to be, we will find that life is made all the better for it. This, indeed, is the new way to lead, and a better way to live: Trust & Inspire.

Stephen M.R. Covey is cofounder and CEO of CoveyLink and of the FranklinCovey Global Trust Practice, and the author of the New York Times bestselling book, *The Speed of Trust*. A sought-after and compelling keynote speaker, author, and advisor on trust, leadership, ethics, culture, and collaboration, Covey speaks to audiences around the world. A Harvard MBA, he is the former CEO of Covey Leadership Center, which under his stewardship became the largest leadership development company in the world. Covey resides with his wife and children in the shadows of the Rocky Mountains.

Turn the Ship Around!

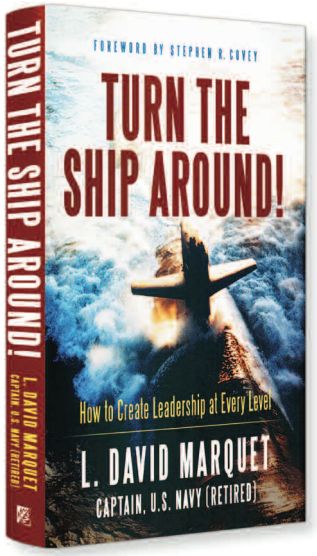
How to Create Leadership at Every Level



by L. David Marquet

THE SUMMARY IN BRIEF

How would you like to work in a place where everyone around you is totally engaged and contributing their full intellectual capacity; a place where people are healthier and happier because they have more control over their work; a place where everyone is a leader?

A nuclear-powered submarine would seem an unlikely place for a new model of leadership to be forged, especially aboard the USS *Santa Fe* — dogged by poor morale, poor performance and the worst retention in the fleet. That is, until David Marquet took command.

Turn the Ship Around! is the story of how Marquet took the ship from worst to first by challenging the U.S. Navy's traditional leader-follower approach and implementing his own framework of leader-leader. The results revolutionized the field of leadership, as each member of Marquet's crew became a leader and assumed responsibility for everything he did, from clerical tasks to crucial combat decisions.

By embedding goodness in the practices and people, *Santa Fe* continued to win awards and promoted a highly disproportionate number of officers to submarine command. Stephen R. Covey visited the *Santa Fe* and called it the most empowering organization he'd ever seen.

No matter your business or position, you will benefit from the leadership approach developed on board the USS *Santa Fe*.

IN THIS SUMMARY, YOU WILL LEARN:

- A framework for implementing change in any organization, one of acting your way to new thinking.
- That if you want people to think, you need to "give control, create leaders" not "take control, attract followers."
- You will learn the two requisite pillars for properly giving control without causing chaos.

THE COMPLETE SUMMARY: **TURN THE SHIP AROUND!**

by L. David Marquet

The author: A top graduate of the U.S. Naval Academy, L. David Marquet commanded the nuclear-powered, fast-attack submarine USS *Santa Fe*, turning the crew from "worst to first." *Santa Fe* earned numerous awards for being the most improved ship in the Pacific and the most combat-effective ship in the squadron.

Introduction

Between my first and second deployments on the USS *Sunfish*, we got a new captain, Commander (later Rear Admiral) Marc Pelaez. One day I saw a large merchant ship through the periscope. Sonar had been listening to it but they were not sure of its range because they had been authorized only for passive listening, the normal mode for submarines. I mused with the sonar chief how helpful it would be if they could ping the merchant using active sonar, something we rarely did. Captain Pelaez appeared beside me. "Well, why don't you?" Of course he knew the reason — it takes the captain's permission to authorize going active on sonar. Sensing my discomfort, he said, "Why don't you just say, 'Captain, I intend to go active on sonar for training.'"

"Captain, I intend to go active on sonar for training."

He responded "Very well," and disappeared, leaving me standing alone and in charge for the first time.

For the next half hour, we pinged away using all the combinations of pulses we could. The sonarmen loved using their equipment in novel ways. The sonar chief loved training his men. I loved it. That taste of authority and ability to craft my watch team's training was a powerful tonic for me.

When I took command of the USS *Santa Fe*, its crew were at the bottom of the fleet — technically, operationally, and emotionally. Within a year, the situation was totally turned around. We went from worst to first in most measures of performance, including the one I valued most: our ability to retain our sailors and officers.

We need to reject leader-follower as a model and view the world as a place for leaders everywhere to achieve this vision. ●

Part I: Starting Over

I hoped to bring the passion I experienced on *Sunfish* to the USS *Will Rogers*. Rather than telling everyone what we needed to do, I would ask questions about how they thought we should approach a problem.

Things did not go well. During the maintenance period, we made several errors that required us to redo work.

Things got worse. I had wanted to give my team more authority and control, but my heart wasn't in it after we made a series of technical errors. I didn't understand that the team I'd inherited did not have the requisite technical competence to make higher level decisions and I hadn't trained them to the new level. I would give decision-making control to my people, but they'd make bad decisions. I went back to leading in the way I'd been taught. Simply exhorting people to be proactive, take ownership, be involved and all the other aspects of an empowerment program just scratched the surface. I began to seriously question the image of sea captain as "master and commander." I began to wonder whether everything I'd been taught about leadership was wrong.

Business As Usual

Several years later I was assigned to command the submarine USS *Olympia*. I received a year-long course specifically tailored to the submarine. The officers leading PCO (prospective commanding officer) training were hand-selected from among proven captains; Captain Mark Kenny led my group and inspired us to great learning as well as introspection. Every day we learned about our submarines and ourselves.

I went on a short cruise around Hawaii as a final vacation just before the change of command ceremony for

Olympia. In those days it was unusual to receive a call from shore and I assumed it was an internal call. I was startled to hear a crackly voice on the other end inform me that my change of command was canceled. I would be taking over the *Santa Fe* instead.

I was panicked. The foundation of my leadership approach, my technical competence, was for the wrong submarine.

Change of Course

In contrast to the *Olympia*, *Santa Fe* was the ship we all joked about. A damning photograph of *Santa Fe*'s inattentive crewmen had been released on the Internet the previous year. It was used as a training example of how not to be. *Santa Fe* was the ship that had trouble getting under way on time. And *Santa Fe* had the worst retention in the submarine force: in 1998, for example, it re-enlisted only three crewmembers.

My challenge would be to use the same people and, by changing the way they interacted and behaved, dramatically increase the combat effectiveness of *Santa Fe*.

Maybe this was the chance to set the crew free from the top-down "do what you're told" approach to leadership. Maybe this was the opportunity of a lifetime. Of course, I would be solely responsible and, if *Santa Fe* weren't ready, it would be my fault and likely my job.

Frustration

When I arrived on *Santa Fe*, mostly I got mumbles or grunts and a lot of men looking down at their shoes. These guys were beaten. They had been told over and over that they were the worst ship in the submarine force, and they believed it.

Walking the ship I would ask the crew questions. They would be skeptical of these questions initially. That's because normally I would have been "questioning," not curious. I would have been asking questions to make sure *they* knew the equipment. Now I was asking questions to make sure *I* knew the equipment.

The impact of this focus on people was that I was going to have to rely on the crew to provide me with the technical details about how the submarine worked. This went against every grain of my naval leadership and scientific training.

If you walk about your organization talking to people, I'd suggest that you be as curious as possible.

Call to Action

I attended a department head meeting, a routine review of maintenance issues. Lieutenant Dave Adams, the weapons officer (Weps) briefed a problem with the vertical launch system. After the meeting, I followed Dave to his stateroom.

"Weps, you seemed a bit frustrated."

"Look, Captain, I have a vision of how I want this department to operate." As I listened to him tell me about how he wanted things to be, I became more and more enthusiastic and impressed. Unfortunately, he was being ignored. In essence, Dave was describing a problem inherent in the leader-follower model, although he didn't use those words.

Dave wasn't the only frustrated officer. The crew's pain and frustration were providing me with a tremendous call to action. I resolved that we would turn everything on its head.

'Whatever They Tell Me to Do!'

I stopped to chat with a first class petty officer on watch in the engine room.

"Hi, what do you do on board?" By asking open-ended questions like this, I could better gauge what the crew thought their job was.

"Whatever they tell me to do," he immediately replied with unmistakable cynicism. That was the attitude all over the ship. This attitude pointed to the reality that the fundamental structure of leader-follower was the problem on board ship.

Another thing bothered me. Who, exactly, was the "they" in the statement "whatever they tell me to do"? Wasn't they, us?

I could also see the costs of leader-follower in the lack of initiative, the waiting for others and the department heads' paralysis.

Everything would have to change.

I thought back to my introduction to *Santa Fe* and took stock of what we had going for us.

First, the crew wanted change, even if they didn't know quite how to do it.

Second, we had an incredibly supportive chain of command.

Third, my reliance on the crew for the specifics of how the boat operated prevented me from falling into old habits and the trap of leader-follower.

Finally, it seemed clear that the crew was in a self-reinforcing downward spiral where poor practices resulted in mistakes, mistakes resulted in poor morale, poor morale resulted in avoiding initiative and going into a survival mode of doing only what was absolutely necessary. To break the cycle, I'd need to radically change the daily motivation by shifting the focus from avoiding errors to achieving excellence. ●

Part II: Control

A submarine has a built-in structure whereby information is channeled up the chain of command to decision makers. Instead, we were going to deconstruct decision authority and push it down to where the information lived. We called this: Don't move information to authority, move authority to the information.

If I started at the top, with the XO (executive officer), COB (chief on board) and department heads, we would be using a top-down approach to implement a bottom-up leadership philosophy. That was inherently contradictory. The junior officers weren't a good place to start because they had lost credibility in the command and would still have to learn the basics of leadership. Starting at the bottom, with the junior enlisted men, probably wouldn't work either. There was too much distance between them and me. So here I was with the chiefs.

"Men, we say the chiefs run the navy. Is this true on *Santa Fe*?"

Reflexively they answered, Yes! Uh-huh. Of course!

"Really?"

Well, came the second round of answers, as most of them looked at the floor. Apparently not so much on *Santa Fe*.

In reversing years of the leader-follower system's erosion of the chiefs' authority, the chiefs on board *Santa Fe* — now under my command — would be going against the grain. I wanted to make sure they deliberately decided to take charge.

I asked, "Do you want to?"

Reflexively they answered, Yes! Uh-huh. Of course!

"Really?"

And that's when we began to talk honestly about what the chiefs running the submarine would mean.

They would be accountable for the performance of their divisions. It would mean being intimately involved — physically present in most cases — in the operations of the ship and in each activity.

'Welcome Aboard *Santa Fe!*' How to Create Cultural Change

We had hundreds of things to fix and they all seemed to need fixing immediately. Some of our laments were that morale was low, enthusiasm was low and energy was low. I asked the officers how we would know if the crew were proud of the boat. What would we observe?

Some of the responses were: They'd brag about it to their family and friends! They'd look visitors in the eye when they met them in the passageway! They'd boast to their friends on other submarines!

Well, what if we just tell them to act that way? Could we act, or talk, our way into a new way of thinking?

So, when a member of the crew saw a visitor on our boat, he was to greet the visitor using three names — the visitor's name, his own name and the ship's name. For example, "Good morning, Commodore Kenny. My name is Petty Officer Jones. Welcome aboard *Santa Fe*."

When you're trying to change employees' behaviors, you have basically two approaches to choose from: change your own thinking and hope this leads to new behavior or change your behavior and hope this leads to new thinking. On board *Santa Fe*, the officers and I did the latter.

Under Way on Nuclear Power

The crew was still focusing too much on complying with regulations rather than working to make our submarine the most operationally capable warship possible.

A typical example involved the preparation of the underway charts. The charts were perfect in that they complied with all the rules and regulations. They were irrelevant because I knew we wouldn't be using the route they proposed. They plotted the navigationally better route, which was north of Molokai. This was open water and the fastest route, but it wasn't the way the enemy submarine would go and, hence, wasn't the way we needed to go.

None of the reviews up the chain of command noted this problem because the reviews were all focused on making sure the charts were navigationally and procedurally correct, not on enabling *Santa Fe* to be an operationally effective warship. In short, the reviews were focused on avoiding errors as opposed to accomplishing something. There was another human tendency working against us as well. Subordinates generally desire to present the boss with a "perfect" product the first time. Unfortunately, this gets in the way of efficiency because significant effort can be wasted. We decided that at each phase in the review process the navigator or assistant navigator should talk to me. These would be quick conversations. Even a 30-second check early on could save numerous hours of work.

'I Intend to …'

During our first time at sea, we ran an exercise ourselves. The drill was simple. The engineer would shut the reactor down with a simulated fault and the propulsion would be shifted to an auxiliary electric motor, the EPM (electric propulsion motor), during the repair.

I nudged the OOD (officer of the deck), my senior department head, Lieutenant Commander Bill Green and suggested we increase speed from "ahead one-third" to "ahead two-thirds" on the EPM to give the nuclear trained enlisted men (nukes) more to worry about.

"Ahead two-thirds," he ordered. Nothing happened.

I asked the helmsman what was going on.

"Captain, there is no ahead two-thirds on the EPM!"

I applauded the helmsman and grabbed Bill. I asked him if he knew there was no ahead two-thirds on the EPM.

"Yes, Captain, I did."

"Well, why did you order it?"

"Because you told me to."

He was being perfectly honest. By giving that order, I took the crew right back to the top-down command and control leadership model. That my most senior, experienced OOD would repeat it was a giant wake-up call about the perils of that model for something as complicated as the submarine.

Thereafter, the goal for the officers would be to give me a sufficiently complete report so that all I had to say was a simple approval. In effect, by articulating their intentions, the officers and crew were acting their way into the next higher level of command.

Up Scope!

Emergency situations required snap decision making and clear orders. When you follow the leader-leader model, you must take time to let others react to the situation as well. You have to create a space for open decision by the entire team, even if that space is only a few minutes, or seconds, long.

When issues aren't foreseen, the team doesn't get time to think about them; a quick decision by the boss is required, which doesn't train the team. No one has the time to actually think through the issue. There are few ways to try to get your teams thinking for themselves:

- If the decision needs to be made urgently, make it, then have the team "red-team" the decision and evaluate it.
- If the decision needs to be made reasonably soon, ask for team input, even briefly, then make the decision.
- If the decision can be delayed, force the team to provide inputs. Do not force the team to come to consensus. Cherish the dissension. If everyone thinks like you, you don't need them.

Who's Responsible?

Like every other submarine, we would have weekly "tickler" meetings where the department chiefs and department heads would sit in the wardroom going through the binder page by page. Of course, none of this activity actually resulted in getting it any of the work done; it simply allowed us to catalog what we were supposed to do. There is no requirement to maintain a tickler, only a requirement to get the work done.

We unburdened ourselves of the effort of maintaining the tickler. This had two advantages. First, it would be most efficient because the work would be getting done without the overhead of maintaining the tickler and those darned tickler meetings. Second, there would be no illusion about who was responsible for the performance of the departments: the department heads were!

Don't preach and hope for ownership; implement mechanisms to actually give ownership. Eliminating top-down monitoring systems will do it for you.

'A New Ship'

Think out loud is a mechanism for control because when I heard what my watch officers were thinking, it made it much easier for me to keep my mouth shut and let them execute their plans. It was generally when they were quiet, and I didn't know what they would do next, that I was tempted to step in.

There's no room in our military language for the kinds of context-rich conversations that are critical to good team performance. We aren't comfortable talking about hunches or gut feelings or anything with probabilities attached to it. In order to make the fewest mistakes when reporting on things, we say as little as possible. This is a problem throughout the submarine force, and we worked hard to encourage the entire crew to say what they saw, thought, believed, were skeptical about, feared, worried about, and hoped for the future. We realized we didn't even have a language with which to express uncertainty and we needed to build that.

'We Have a Problem'

Before things got a lot better, they got worse. A sailor had energized breakers on the pier after the conditions for energizing them had been met (so there was no hazard), but he hadn't cleared the red tag before doing so (indicating we were just lucky). You don't want to be accidentally safe. No one was hurt. Nonetheless, the engineer said he would report the problem up the chain, to both Squadron 7 and Naval Reactors. There was guidance on what kind of problems should be reported. This seemed to fall on the border, and I was tempted to handle it "in-house."

Lieutenant Commander Rick Panlilio was adamant — and he was right. We set up the critique for the next day, and Panlilio called his counterparts at Squadron 7 and the Naval Reactors office and invited them to the critique. We called this idea of being open and inviting outside criticism "Embrace the inspectors."

We applied "embrace the inspectors" not only to one-time critiques and problems, such as the shore power mishap, but also to entire inspections. We would utilize the inspectors to disseminate our ideas throughout the squadron, to learn from others, and to document issues to improve the ship. This mechanism sends the signal that we are in charge of our destiny, not controlled by some force. In other words, the crew of *Santa Fe* are responsible for *Santa Fe*. As a result, *Santa Fe* was getting superior grades on inspections.

Part III: Competence

One of the two pillars that support control is competence. Competence means that people are technically competent to make the decision they make.

We decided that when operating a nuclear powered submarine, we wanted people to act deliberately and we decided on "take deliberate action" as our mechanism. This meant that prior to any action, the operator paused and vocalized and gestured toward what he was about to do. Only after taking a deliberate pause would he execute the action.

I believe "take deliberate action" was the single most powerful mechanism that we implemented for reducing mistakes and making *Santa Fe* operationally excellent.

'We Learn.'

We had been taking actions that pushed authority down the chain of command, but as authority is delegated technical knowledge at all levels takes on greater importance.

If all you need to do is what you are told, then you don't need to understand your craft.

Fundamentally, this is where I think I failed on the *Will Rogers*. I had tried to push authority and control, but the technical competence of the engineering department, accustomed to being given specific guidance, had atrophied. I had assumed the requisite level of technical competence and I hadn't taken the necessary steps.

With the perspective of needing to increase technical competence, we thought about the simple reality "we learn," and that's what we adopted. It was something that every member of the crew did every day. It seemed to be the basic element that unified all of our actions.

We needed to take every opportunity to learn, so I intended to run some unexpected casualty drills, including simulating that certain gauges had malfunctioned.

It didn't go well. Given unexpected indications, the team got confused. People took wrong actions initially, and took too long to determine and correct the source of the problems.

Afterward, we gathered for a debrief, during which I simply asked, "What happened? The chief briefed the procedure."

"Captain, no one listens to those briefings."

"What do you mean?"

"Well, you come on watch, sit in the chair and, when the chief starts reading from the book, you're thinking, 'I really know how to do this,' so you don't listen too hard."

That described a phenomenon I've seen many times. A briefing is a passive activity for everyone except the briefer. From that point on we would do certifications. Certifications shift the onus of preparation onto the participants. The change from passive briefs to active certification changed the crew's behavior. We found that when people know they will be asked questions, they study their responsibilities ahead of time.

Final Preparations

A fire on a submarine was one of the most life-threatening accidents we could have. Studies showed we needed a fire hose applying water to a fire within two minutes. The engineer had briefed the drill monitors that a simulated fire would be in the storeroom just aft of the crew's mess.

The closest fire hose on *Santa Fe* was in the passageway just forward of the crew's mess, about 50 feet from the fire's location. It should have been easy. The fire was detected and the alarm was sounded. What happened next? Well, the nukes scattered, running right by the hose. The crew member assigned to that particular hose couldn't even get to the hose because there were so many nukes in the way.

This was another example of where the procedure had become the master and not the servant. The motivation had shifted from putting the fire out to following the procedure.

We attacked the motivation problem. We authorized the drill monitor at the scene to adapt the drill based on the crew's response. Now, the crew was motivated to attack the fire unencumbered by administrative disincentives and distractions.

I explained to the crew that our objective was to put the fire out and I didn't care who was on the hose. Now, when the alarm sounded, the closest man self-organized to achieve the goal.

Specifying goals, not methods, is a mechanism for competence. In our case, this was because the crew was motivated to devise the best approach to putting out the fire. Once they were freed from following a prescribed way of doing things, they came up with many ingenious ways to shave seconds off our response time.

The problem with specifying the method along with the goal is one of diminished control. Provide your people with the objective and let them figure out the method. ●

Part IV: Clarity

Clarity is the second supporting leg — along with competence — that is needed in order to distribute control. Clarity means people at all levels of an organization clearly and completely understand what the organization is about. This is needed because people in the organization make decisions against a set of criteria that includes what the organization is trying to accomplish. If clarity of purpose is misunderstood, then the criteria by which a decision is made will be skewed and suboptimal decisions will be made.

Under Way for Deployment

We'd done it. We were ready to deploy, two weeks early.

"Look, we're going to be gone for six months," Panlilio advocated. "We should encourage each person in the crew to establish personal goals — take courses, read books, exercise, that kind of thing."

We decided to let the chiefs talk to their sailors about their individual goals, but we'd define some shipwide goals for everyone to focus on during the deployment. We came up with three themes: empowerment, efficiency and tactical excellence.

Prior to the September advancement exam, we gave full practice advancement exams. Rather than looking at the advancement process as a separate activity, we integrated it into the operations of the submarine. Now all our interests were aligned.

Our efforts to improve the petty officers' performance on the advancement exams paid off. Months later, the COB walked in with a smile. He handed me the advancement results. Overall in 1999, we advanced 48 enlisted men — 40 percent of the enlisted crew. By explaining the process to the crew and giving them the tools to improve their performance, we empowered them to determine their own success.

A Remembrance of War

As submariners, we have a tremendous legacy, but no formal program for inspiring a crew with that legacy. On board *Santa Fe*, we adopted several practices that would connect us to this rich legacy and educate the new members of the crew about what the submarine force had accomplished during World War II. It helped provide organizational clarity into what we were about — the why for our service.

Leadership at Every Level

On deployment, we had the time to finish the job of defining our guiding principles. I wanted to make the guiding principles real. If I was a crew member faced with deciding between two different courses of action, would these principles provide me the right criteria against which to select the appropriate course of action?

Guiding principles have to accurately represent the principles of the real organization, not the imagined organization. Falseness in what the organization is about results in problems.

I have seen this in an organization that talked about safety first, but whose real interests were in profits. Not acknowledging that they would balance safety with profits resulted in miscommunication, lack of credibility and unaligned decisions.

A Dangerous Passage

On the first night, as we were passing the lights of Singapore to our starboard, I noticed a dim light moving across us.

Panlilio, the OOD, shouted, "all back emergency, right hard rudder!"

Immediately the ship started shuddering as the throttleman back in maneuvering shut the head throttles and rapidly opened the astern throttles, reversing the main engines. The light was a dimly lit tugboat, with the tug on one side of our path and its tow on the other.

We barely stopped short of the tow line between the tug and barge. I was shaken.

I grabbed Scott Dillon, who maintained the supply of awards, and asked him to get me a Navy Achievement Medal. I returned to the crew's mess and pinned it on the throttleman while he and the watch team ate breakfast. I spoke words of appreciation and professionalism. Later, I would formally report his exemplary service, but

the immediacy of the recognition was important. Use immediate recognition to reinforce desired behaviors.

Looking Ahead

Customarily, selection boards read performance evaluations filled with words like "significantly improved procedural compliance," which are basically meaningless. The evaluations of the officers on *Santa Fe*, on the other hand, would report "reduced critiques by 43 percent, reduced percent of the crew smoking by 12 percent, increased on-time performance by 31 percent," and so on. I believe the ability to specifically quantify accomplishments went a long way toward allowing us to boast disproportionately high selection rates.

Using hard data was an effective way of proving we had achieved the end we had in mind.

As you work with individuals in your organization to develop their vision for the future, it is crucial that you establish specific, measurable goals.

Combat Effectiveness

Are you looking for resilience in your organization? We realized that resilience and effectiveness sometimes meant questioning orders. Encourage a questioning attitude over blind obedience.

I entered the control room, where things were strangely calm. Surely my guys knew that if we moved out of position it would make it much harder for us to find the SEALS and for them to find us. The OOD on the bridge had already ordered "Ahead one-third."

I looked at the digital chart. A little arrow indicated our direction of motion, and it was pointing slightly toward the beach. I thought, "We don't want to go ahead, we need to back out." So I shouted out, "That's wrong. We need to go back."

Sled Dog was standing quartermaster. There was a pause and silence for half a second, then he said frankly, "No, Captain, you're wrong."

It dawned on me. The bow was pointing away from land and we were being set astern. That was what the arrow on the digital chart was showing. And I remembered that the watch team had planned it this way, with the bow out, in case we needed to make a quick getaway.

Moments later we saw the Zodiacs. Had the men followed my order, we would have gone in the wrong direction; we might've missed them.

A New Method of Resupplying

We had an ensign on the periscope, Armando Aviles. He was brand-new. He was enthusiastic and unconstrained from knowing how the "real navy" works. This worked to our advantage.

After listening to a discussion about our need for oil, Ensign Aviles chimed in. "Hey, that's the AOE [a navy fast-resupply ship]. Why don't we just ask them for some oil?" I looked at the periscope display and, sure enough, there the fast combat support ship USS *Rainier* was transiting through the Strait of Hormuz several miles away.

If you wanted to resupply from *Rainier* you would request it be added to the DIM (daily intentions message). This needed to happen at least 36 hours before the planned event. You didn't just "call up" and get supplied. Except in this case, we did. Sure, why not, I thought. What can we lose?

Not only did *Rainier* send the oil we needed, they sent newspapers and fresh fruits and vegetables as well.

What we need is release or emancipation. Emancipation is fundamentally different from empowerment. With emancipation, we are recognizing the inherent genius, energy, and creativity in all people, and allowing those talents to emerge.

Ripples

Now, years later, I can see that implementing leader-leader on *Santa Fe* achieved two additional accomplishments that weren't immediately knowable.

First, the ship continued to do well long after my departure. Since we embedded the goodness of how we did business in the practices and people, that goodness persisted beyond my tenure.

The other accomplishment was that we developed additional leaders in numbers widely disproportionate to the statistical probabilities.

This is the power of the leader-leader structure. With this model you can achieve top performance *and* enduring excellence *and* development of additional leaders.

If the leader-leader model can work on board a nuclear submarine, it can work for you. ●

THE SUMMARY IN BRIEF

Is your once-thriving organization stuck? Is your team on life support, unable to deliver on its potential? Is your initiative or campaign limping along instead of sprinting ahead? In ***Turnaround,*** Lisa Gable, turnaround mastermind, offers a clear-headed, straightforward method for getting you back on track.

For more than 30 years, Lisa Gable has been called to turn around failing organizations and solve seemingly intractable problems. From Silicon Valley to Washington DC, she's seen it all. Over time, she's learned that the key to course-correct when things go south is applying the discipline of process engineering—carefully re-evaluating everything your organization does and how it does it—with diplomacy and humanity, taking care of relationships, and forging strong partnerships.

At a time when dizzying innovation cycles, hyper-competition, and a global pandemic have made survival more challenging than ever, Gable's time-tested and industry-proof method in ***Turnaround*** will give you the tools to turn your ship around and chart a course to success.

IN THIS SUMMARY, YOU WILL LEARN:

- A simple, powerful four-step method for breathing new life into the most troubled ventures.
- Why a successful turnaround requires breaking down the past.
- Strategies for mapping out critical decisions and actions.
- To set aggressive goals and form the partnerships you need.

Introduction: The Turnaround Method

You are sitting in a conference room at eight o'clock at night, and you can't see the light at the end of the tunnel. The engineers in your team are reworking the timeline, and once again, the product will not be shipping on time. You keep running the numbers, but they don't add up. Your boss is going to be upset.

Every day, projects, teams, and organizations find themselves stuck with a seemingly intractable problem. The product is on life support and bleeding money. The team is exhausted by never-ending drama. The organization is hobbled by competition. A revolving door of project leads, managers, consultants, and leaders tried to fix the problem. No one seems to be able to turn the situation around.

Why Things Go South

To solve a complex problem, you must turn it on its head. You should ignore the popular recommendations or knee-jerk reactions for how to solve it. Instead, you must try relentlessly to understand the underlying cause of the problem—especially if no one has been able to fix it after many attempts.

Here are the seven most common reasons why projects, teams, and organizations go south:

- They are built on haphazardly designed processes and structures.
- Those in charge believe more money can solve everything.
- The economics of the business make the end goal impossible.
- They are stuck in a cookie-cutter approach to culture and management.
- Their leaders make self-interested and empire-building decisions.
- Their founders overstay their welcome.
- Their leaders don't recognize the project, team, or organization is at an end point.

In 2020 and 2021, the COVID-19 pandemic caused massive disruption, exposing organizations and projects that were suffering from these seven problems and leaving them in even more perilous shape. When your project, team, or organization is built on haphazardly planned systems and processes, when you are stuck operating in outdated ways, and when your leaders make decisions from a place of ego and not with the entities' best interests at heart, a disruption of this kind can be the nail in the coffin. Sadly, for many, the pandemic was just that.

But it doesn't have to be this way. If your project, team, or organization is worth saving, you can turn it around, even in the direst situations.

The Turnaround Method

There are four straightforward but rigorous steps that you must take to pull off a successful turnaround:

- **Step 1. Visualize the future**. Stop thinking of the problem and tweaking what's already there. Instead, focus on where you want to end—on your future perfect scenario.
- **Step 2. Break down the past**. Analyze what is working today and can help bring your new future to life—and what is not and needs to go.
- **Step 3. Create a path from present to future**. Map out the critical decisions that you need to make—and build the right team to move forward with them.
- **Step 4. Execute with speed, confidence, and heart**. Set aggressive goals and partner well so you can speed ahead to your goal. You've got a plan—now run with it.

Although this method may appear simple, it demands strength and conviction. It's not easy to point your compass in a new direction and change course. It requires making bold decisions, adhering to a process that many around you will resist, and being open to collaborating with others. If you commit to the method, it can work for you.

How to Lead a Successful Turnaround

You may be the CEO of a for-profit or nonprofit organization, the head of a major division or program, the manager of a team, or the lead on a project tasked with heading its turnaround. Or you may be an individual contributor who sees an opportunity to make things better.

Regardless of your title, this is your moment to assume the mantle of leadership and become a driver of positive change. Stop looking over your shoulder for someone else to save the day. You may be the hero. As you begin leading a turnaround, consider these five recommendations:

Start the turnaround process without assumptions. If you go into a turnaround with a predetermined

> Stop thinking about your present problems and start imagining where you want your project, organization, or team to end up in the future. . .

outcome in mind, you might miss what really is making your project or organization fail.

Take the time to engage in shuttle diplomacy. The turnaround method requires a radical restructuring of your organization, team, or project. Change does not happen overnight; you'll need people on your side to get this done!

Find like-minded people to help achieve your vision. Find people who not only are process-driven and energized by the turnaround method but also have compassion and lack ego—traits that will inspire loyalty.

Don't treat every step like a battle. Turnarounds are a process, not a war. You definitely want to become the best-in-class, but your actions should focus on improving your competitive capabilities through aggressive, sustainable goals, not by pummeling your competitors with back-channel maneuvers.

Keep your commitments. You show up when you say you are going to show up—no matter how tired you are. You do everything you said you would do—no matter how inconvenient it is.

Change is hard. Leading change is even harder. You'll have to be tough to get through likely bumps along the way. But the reward—leading a successful turnaround with grace and resolve—is worth it.

Step 1: Visualize the Future

Stop Thinking About the Problem and Focus on Where You Want to End

As things are going south on a project or organization, we often get stuck, even obsessed, on specific issues or problems. We think that if we could only fix this or that, we would be able to turn this ship around. So we tweak what's already there to make it work better. When that doesn't work, we tweak another thing. The churn continues.

Although it is always good to pinpoint what's not working, focusing on fixing existing problems is not the best starting point for a successful turnaround. You can become so focused on resolving the issues in front of your nose or pointing fingers at each other that you never resolve the underlying issues affecting your results.

Stop thinking about your present problems and start imagining where you want your project, organization, or team to end up in the future—then design a path to this new vision. To visualize the future, you must

- Describe your perfect world scenario.
- Identify Job 1 (. . . and 2 and 3).
- Reframe success.
- Evangelize your future vision.

Describe Your Perfect World Scenario

If you could wave your magic wand, what is the future you would want to see? In other words, describe the perfect world scenario you want as your end point. This scenario can be as bold as you'd like.

This scenario typically leverages and maximizes a core competency that your project or organization is uniquely qualified in and that drives your position of strength. The first step to describe a future perfect world scenario is, paradoxically, to go back to the past. Understanding your project's or organization's genesis can be the key to rediscovering its core competency.

Your project, organization, or group came into existence for a reason. Whoever founded it came together around a particular purpose. Zero in on what you can do that others cannot. This is your core competency—and the key to your perfect world scenario.

To visualize a new future, it often helps to focus on your customers' or constituents' pain points. Often, in an effort to build something great, we fail to appreciate what they truly want and need—and therefore what will lead to our success.

Once you've visualized this new perfect world scenario, describe what it would look like in three years or five years or whatever time frame the scope of your turnaround de-

mands and allows. Analyze the level of investment that will be needed to get there. Clearly identify all who would be affected by this new scenario.

Identify Job 1 (. . . and 2 and 3)

Your journey to delivering your perfect world scenario is possible only if you focus everyone on your team or project on a clearly articulated and easily understood objective.

In a turnaround, you have a limited number of plays in which you can invest time and resources heavily to execute your scenario. Job 1 is your big play, the boldest objective. For Intel in the early 1990s, Job 1 focused on getting the tech industry to standardize around its platform.

For Salesforce software, Job 1 was to change the way organizations managed and tracked relationships by building a company "around one main idea: that software should be delivered 24/7 to people over the cloud."

If Job 1 is the big-ticket item, you also will need to define Jobs 2 and 3, the key deliverables that will create the change. Think of them as the backup singers to your vocalist.

Reframe Success

If you are in the middle of a turnaround, that means the old standards of operating, measuring, and defining success are no longer working. It is time to hit the reset button. To do that, you need to define new basic operating standards for your organization, project, or program.

Increasing deliverables while reducing costs is table stakes in a turnaround, no matter your industry or sector. If you are a tech company, you need to increase the value of your tech offerings while reducing costs. If you are running a project within your organization, you need to increase its effectiveness while reducing costs or resources, such as time invested.

When you are in the middle of a turnaround, it is also important to establish basic operating standards for how you conduct business. That means identifying values that you want to incentivize to achieve your goals and translating those values into an established norm or a code of conduct for how you engage and treat each other, your partners, and your customers.

When you reframe success by establishing new basic operating standards, you also are providing guidelines for how everyone in the organization can do well and contribute to accomplishing Jobs 1, 2, and 3.

Evangelize Your Vision

Once you've visualized the future, you have to bring everyone into the vision. You will be more effective speeding toward your goal if you don't have to battle people along the way. Focus on winning hearts and minds, and get people to buy into the future that you are visualizing.

As you recruit more people and partners to support your efforts, evangelizing your vision requires three strategies:

- **Getting buy-in from as many people as possible**. To get buy-in, first you must identify the needs of every key player.
- **Engaging new allies, including those who in the past might have been competitors or detractors**. Identify the allies you need to publicly support your vision. Those allies might be peers or other organizational leaders. Assess them carefully.
- **Carefully building trust and relationships with those who will be affected by your actions**. Building trust is never easy nor quick. It requires consistent due diligence in your dynamics and a fundamental shift in behavior as you develop a relationship over an extended period.

Step 2: Break Down the Past

Figure Out What Still Works and What No Longer Does

No matter what turnaround you are managing, once you've visualized the future of the project, group, or organization you are transforming, you need to break down the past. You must examine the project's or organization's current assets—the products, services, programs, tools, processes, campaigns, etc.—and identify those pieces that no longer fit and those that are critical to filling any gaps.

All too often, we are brought in or find ourselves in a position to turn around a problem project that everyone knows is heading south, but no one seems able to articulate why. Instead, we say, "It's a mess" or "It's losing money." We can see the symptoms but haven't dug deep into the level of detail required to diagnose correctly what's wrong or to prescribe the right treatment. Conducting an audit of a project's or organization's assets helps us do that.

Conduct a Thorough Audit of All Assets

To break down the past, you first must conduct a thorough

audit of all the assets you are working with. Perhaps this seems like an unnecessary step. After all, you know the products, services, fundraising, and marketing campaigns in your organization or project inside and out.

Go deeper. Identify all the efforts that your project, team, or group currently engages in. That can be a long list: Yes, it includes every product or service, campaign or program, as well as your processes (how you handle your sales); initiatives (what initiatives you make to reach a certain audience); external communication efforts (via websites, email lists, and social media); customer support (how you help your internal or external clients); and tools (what software keeps track of your products launch).

Group the assets by the outcome they are involved in producing. For example, you might have a bucket of assets focused on attracting a particular type of customer. This bucket might contain advertising collateral, social media posts, and descriptions of customer service processes focused on that customer demographic.

Assess the Value of Every Asset

Analyze the value of your assets, and determine how well they support yours. You'll need to

- Quantitatively rank and rate assets based on whether they generate revenue or expenses and on their cost inefficiency.
- Evaluate how the assets are perceived or valued internally and externally.
- Benchmark the performance of your assets against similar ones you consider best-of-class.

As you redesign and reimagine how to deploy your assets, understanding their true financial impact, their perceived value inside and outside the organization, and how well they stack up against the competition will help you decide what assets are worth keeping and which you need to ditch.

Keep or Toss: Decide What Stays and What Must Go

Once you've made a comprehensive list of all the assets—the products, services, programs, tools, processes, campaigns, etc.—and have assessed their financial impact, how they are perceived internally and externally, and how they measure up against those from competitors, you need to identify which of these assets will help you achieve Jobs 1, 2, and 3 and which will get in your way.

To do so, classify each asset as

- **Must-have**—assets that will be critical to realizing your new vision;
- **Nice-to-have**—assets that align with your new vision but are either too resource intensive or relatively more expensive than must-haves;
- **Must-go**—assets that are too expensive and cost inefficient or simply don't help you achieve your new priorities (Jobs 1, 2, and 3).

Of course, deciding between the nice-to-haves and must-goes is not easy. Every project, group, or organization has at least a few assets to which people feel a strong attachment internally or externally. But you can't keep inefficiencies or assets that dilute your effectiveness or the ability to realize your new future. If an asset does not allow you to increase your outputs while reducing costs, then you should let it go.

If an asset does not allow you to increase your outputs while reducing costs, then you should let it go.

Reassure Employees, Partners, Customers, and Your Community

As you make decisions about what assets to keep and which to let go, it's important to understand how these choices affect others and how they are perceived by employees, partners, customers, and the community.

Change brings anxiety. People feel bounced around as their reality shifts, and uncertainty grows. They become cynical and wary. They are fearful about maintaining their livelihood or losing a project that made them love their job. Any party with a vested interest in your project's, team's, or organization's success will need to trust that the tough, sometimes draconian decisions you're making will truly lead to a better future.

Above all, building trust requires

- **Acting with transparency**. When you are making decisions about what assets to keep and what has to go, be prepared to talk openly about the changes and why they are necessary.
- **Leading with numbers**. When communicating about the assets you'll need to abandon, focus on the financials. Numbers do not lie and often speak for themselves.
- **Being direct**. Once you've identified an asset that needs to go—say, an expensive program that no longer delivers as much value as it used to—rip the bandage off. Don't let people build false hopes that the asset can be saved.

Step 3: Create a Path From Present to Future

Map Out Critical Decisions and Actions Needed

Now it's time to decide how you will use your remaining assets and evaluate whether they can perform at the levels needed to get Jobs 1, 2, and 3 done. This requires making critical decisions about where to invest resources, what to promote, and what is your baseline requirement to operate.

While you may have a clear picture of these assets and their moving parts, your team members who focus on keeping the fires burning and the trains running on time while you are out evangelizing your new vision may not. You need to systematically bring them along on the journey, helping them understand the role the assets play and giving them clear direction on how to move forward.

A decision tree is a visual tool that helps you and your team make decisions about the remaining assets and lets everyone see clearly the assets that you don't have and that need to be developed to reach your goals. They also help you determine where to allocate your most valuable resource—your people—and where those people might no longer be needed.

Create a Decision Tree

A decision tree is essentially a flow chart, a yes/no visualization process. The idea is to group the assets you were left with after your audit in categories and run them through three essential questions. Each question forces you to answer "yes" or "no."

The answers help you (1) make decisions about which categories to pursue more strongly; (2) determine which assets have the most potential to provide value and where you should invest the most resources; (3) identify opportunities where you can extend the value or revenue generation of an asset. As you answer these questions, your new business framework will begin to emerge.

Here's how to create a decision tree, step by step.

Step 1: Group assets in categories. The first step to building a decision tree involves grouping your remaining assets once more. This time, however, you will group assets that are alike. Some typical categories for your groupings include products (all products, services, and offerings); media and marketing exposure (your logo, website, promotional campaign, etc.); and joint ventures (your partnerships).

Next, identify the target market and the size of that market for each asset. Once you've identified the categories and listed the corresponding assets under each, start asking the following questions.

Step 2. Does the asset meet baseline requirements needed to compete? Understand where you are now with each asset and what investment levels are required for you to own the space they operate in. In addition, determine whether your assets meet baseline operational needs, that is, to support the day-to-day tasks necessary to carry out the basic activities of your project or organization.

As you are accelerating toward your new vision, you still need to meet these baseline requirements and customer obligations to get your product or offering out the door.

Step 3: Does the asset continue to be cost effective? As you consider the goals for your project or organization (Jobs 1, 2, and 3), you'll find that some assets that survived the first round of audits will accelerate you toward your future, while others will not. The ones that don't might look less attractive as you perform deeper cost-benefit analysis. Start by analyzing whether each asset can operate at the baseline performance level. Then determine if your operational prowess will enable you to set new strategic growth opportunities.

Step 4: Can you or should you add a new capability or new feature to existing assets? As you create your decision tree, you may determine that by rearranging or building out your assets by partnering with another organization, team, or project, you can introduce a new capability or asset that significantly increases either the revenue or

Great turnaround leaders know that you don't reach a major milestone on your own.

impact of your project or organization and allows you to realize your vision more quickly.

Analyze the core of what you are doing to determine if you are truly creating a new asset that provides a new product, service, or value—or if you are just improving the original asset or providing the same value or service in a different way.

Step 5: Is the asset a market differentiator? In each category, consider whether the asset is expected to generate significantly greater revenue or value than the cost of branding and marketing it. If it is, you have an opportunity to make several strategic moves, from extending your offerings or brand to differentiating certain product lines as premium ones.

The exercise of creating a decision tree will help you home in on your top assets. As you do, you'll have to keep tossing those that are nice-to-haves but not necessary to fulfilling your perfect future scenario.

More important, whenever you cut assets—whether they are must-goes cut during the auditing phase or nice-to-haves cut during the decision tree phase—you often have to make another set of heart-wrenching decisions: determining who in your team has the business experience that will be needed in this new business framework and who does not.

Step 4: Execute with Speed, Confidence, and Heart

Set Aggressive Goals and Foster Effective Partnerships

Competitors will always be at your heels, ready to catch up to you. Being slightly better than them is not going to cut it anymore. Otherwise you'll find yourself in a perpetual game of cat and mouse with your competition. That's why you need to run. Really fast.

Once you have a plan for how to best deploy your assets and move forward, you need to quickly and confidently execute your turnaround strategy. If you take too long debating your executional path, you will lose.

Three tools will help you move with speed and agility: setting aggressive goals, partnering with others, and leading with confidence and diplomacy.

Set Aggressive Goals

The decision trees that you created will help you identify the moves and investments you need to make to get Jobs 1, 2, and 3 done.

But to succeed, you'll also need to set Big Hairy Audacious Goals (BHAGs) for each of these jobs. Introduced by Jim Collins and Jerry Porras in their best-selling book ***Built to Last***, BHAGs are long-term goals designed to get everyone energized to meet a target that is clear and exciting. The goals themselves don't need to be audacious on the world stage. They just need to be bold in the context of your project, program, or organization. A sales manager's goal might be to increase her team's revenue by 50 percent.

To successfully set aggressive goals against your Jobs 1, 2, and 3, you must make them quantitative and public, inspire everyone in your team and beyond to achieve them, and constantly communicate progress against them.

Look for Opportunities to Partner

Great turnaround leaders know that you don't reach a major milestone on your own. No one person, team, or organization has the capacity to do everything. If you are leading the turnaround of a project within your company, you might need to partner with other departments or peers outside your group. If you are an organization, you might need to partner with another one to reach a bigger audience.

A good partner often can help you move more quickly by (1) providing a capability that you need but is too expensive to develop or acquire on your own; (2) helping you reach a market, a customer base, or a set of constituents that you don't currently have access to; (3) being better at executing in one of the areas that is not a core competency of yours.

The key to a good partnership is to identify partners who are willing to align their objectives with yours to achieve a common outcome. You need to understand your partners'

needs and find common ground. This isn't always easy, but it works. Here are some ways to ensure that your partnership succeeds and helps you meet your goals:

- Be generous in your relationships.
- Be a committed partner, but set clear boundaries.
- Celebrate collective wins.
- See the world from the partner's point of view.
- Don't move so fast you leave your partner in the dust.
- Don't take yourself too seriously.

Lead with Confidence and Diplomacy

When you set aggressive goals and partner with others to execute your turnaround strategy as quickly as possible, you are bound to hit some bumps along the road. You will be learning as you go, so there will be situations where you inadvertently make mistakes. When that happens, recognize your mistakes and own them.

This is the time when it is critical to be transparent. When you make a mistake, let your boss and other necessary stakeholders know, and lay out the actions you'll take to address them. Mature businesspeople know that some things go south, but will appreciate your transparency. Sacrifice a bit of your ego because a leader needs to be willing to take the hits in order to move everyone beyond the immediate problem.

The art of diplomacy—gentle nudging, looking for avenues to move another party to "yes"—is critical to moving quickly and nimbly. It's also exhausting. Creating and maintaining goodwill means never letting your guard down and always displaying a positive presence despite any personal frustrations you might be feeling.

To move forward confidently, avoid these pitfalls:

- **Perfectionism**. Don't let perfect be the enemy of the good.
- **Consensus**. It's important to have enough supporters on your side to execute your strategy. However, once you bring an issue to the table, talk about it, and make a decision on it, do not reopen the discussion.
- **Blinders**. Acknowledge the good things proposed by another team member, a critic, or a key stakeholder. Identify the common denominator which you can agree on as the measurement of success.
- **Opportunism**. As you execute with speed and desperately need to show progress, it is tempting to go for the quick or opportunistic win. But don't sacrifice a sustainable solution for a short-term win.

The Turnaround method not only helps you execute a turnaround but also promotes a pattern for the future. It helps you embed a new vision, core competency, and decision trees in their DNA and set them up to weather changes positively for many years.

Lisa Gable is currently the CEO of FARE, the world's premier organization fighting food allergies. She is recognized worldwide as a turnaround mastermind. As CEO of several organizations and as a former U.S. ambassador, United Nations delegate, and advisor to Fortune 500 companies, she has orchestrated and executed the successful turnarounds of well-known private and public organizations in many industries and sectors. She is highly regarded in business, political, and philanthropic circles for her ability to tackle difficult issues directly with discipline and diplomacy.

THE SUMMARY IN BRIEF

There's a learning curve to running any successful business. But once you begin to rely on past achievements or get stuck in outdated thinking and practices that no longer work, you need to take a step back — and unlearn.

In ***Unlearn,*** Barry O'Reilly shows you how to break the cycle of behaviors that were effective in the past but are no longer relevant in the current business climate and now limit or may even stand in the way of your success.

This unique resource walks you through every step of the unlearning process. You'll discover new ways of thinking and leading in every industry. By intentionally and routinely applying the system of unlearning, you'll be able to adapt your mindset, adopt new behaviors, acquire new skills and explore new options that will totally transform your performance and the business you lead.

Good leaders know they need to continuously learn. But great leaders know when to unlearn the past to succeed in the future. ***Unlearn*** shows you the way.

IN THIS SUMMARY, YOU WILL LEARN:

- To unlearn the behaviors and mindsets that prevent you and your businesses from moving forward.
- To relearn new skills, strategies and innovations that are transforming the world.
- To break through and discover new information and insights that guide your behavior, perspective and mindset.

Why Unlearn?

There comes a time in the life of every individual when doing the things that brought you success in the past no longer delivers the same results. You wake up, walk into your office and sit at your desk just as you always have. But suddenly you're stuck, stagnating, unsatisfied or struggling with what was once your secret to success.

This is the paradox of success. While thinking and doing certain methods may have brought you success in the past, it's almost certain they won't continue to bring you success in the future.

Disruption does not actually apply to organizations. The truth is it applies to *individuals*. Exceptional leaders have discovered it's not how smart they are, how much they know, how long they've been in an industry or what they have learned. It's the ability to recognize when to unlearn and when to let go of past success and their outdated thinking and behaviors, and innovate new mindsets and methods to achieve extraordinary results.

In times past, an individual's knowledge would last a lifetime. Indeed, knowledge would be passed down for many generations and still be highly useful. Yet, as the pace of innovation increases, once-useful knowledge now becomes rapidly obsolete.

The answer is not only to learn. We struggle even more to know what to let go of, move away from and *unlearn*.

Unlearning is the process of letting go of, moving away from and reframing once-useful mindsets and acquired behaviors that were effective in the past but now limit our success. It's not forgetting or discarding knowledge or experience; it's the conscious act of letting go of outdated information and actively gathering and taking in new information to inform effective decision making and action.

Consider what great leaders and the great companies they lead have in common. They have cultivated a capability within themselves to innovate, adapt and anticipate the future. They invest in experiences that enable them to grow; they seek situations that are uncomfortable, uncertain and the results unknown. They create mechanisms to experiment quickly and safely gather new information to evolve into something better.

They succeed over the long term by not holding on to what once brought them success. How they succeed isn't magical; it's methodical. It's not down to serendipity or luck — they have intentional systems.

How to Unlearn

Accordingly, unlearning isn't a one-and-done event — it's a *system*: a system of letting go and adapting to the situational reality of the present as we look to the future. It's recognizing that whatever it is that we have previously done may no longer be useful at this moment. Your mission is to develop the capability to know when to move away from outdated information, take in new information to inform your thinking, and adapt your behaviors as a result.

The Cycle of Unlearning

The system of unlearning is based on a three-step approach to individual and collective growth called the Cycle of Unlearning. Adopting the Cycle of Unlearning doesn't rely on being smart, or lucky, or desperate or all of the above. It relies only on you — your courage and commitment to use it intentionally in your work and your life to achieve extraordinary results.

Step one: Unlearn. Unlearning does not lead with words; it leads with action. You can't just say, "Yeah, of course I want to unlearn." You must first embrace your purpose by clarifying your why and your what. Why exactly do you want to unlearn? What specifically do you want to unlearn?

Do you believe this is important? Are you open to it? Are you curious? Do you agree there could be a better answer other than your own, an alternative way to achieve better results? When you can answer "yes" to these questions, then it's time to focus on the specifics of what you want to unlearn.

Step two: Relearn. There are immense challenges to relearning effectively, and we create many of these challenges ourselves. First, you must be willing to adapt and be open to information that goes against your inherent beliefs — that may be at odds with what you have always been told or taught to do. Second, you may need to learn how to learn again. Finally, you must create an environment for relearning to happen in a meaningful, yet often challenging, space outside your comfort zone.

Step three: Breakthrough. Once you learn how to relearn and open yourself up to new information flows, networks and systems from every possible source, you are poised to develop the kind of breakthrough thinking that has the potential to vault you into the lead. Breakthrough is the result of unlearning and then relearning — it's the new information and insights that come out of the first two steps of the Cycle of Unlearning. The information and insights

You don't trigger a shift in mindset by simply thinking differently; you start by acting differently.

are extremely powerful because they inform and guide your behaviors, perspective and mindset.

Unlearning the Obstacles to Unlearning

Often the most challenging obstacle to unlearning is ourselves: our old thought patterns that make us blind to new possibilities and new ways of improving. Obstacles may be internal, external or contextual, but whatever their origin, they conspire to keep us firmly stuck in the status quo. They include

- Our leadership conditioning;
- Our knowledge threshold;
- Our biases;
- Our desire to always be correct;
- Our focus on reward and recognition;
- Our ability (or inability) to deal with uncertainty and risk;
- Our curiosity (or lack thereof);
- Our environment.

The way we view success can be an obstacle in itself because success can limit our willingness and curiosity to unlearn. The more successful people are, the more fearful they become to try untested methods or alternative techniques because they're afraid their stellar record, prestige or personal brand will be destroyed.

Turning Obstacles into Opportunity

When Andy Grove was at the helm of Intel, he realized that the business they were in at the time — memory chips, which were becoming commodities — was going to die. Grove recognized that Intel was experiencing an existential threat, and he pivoted the company to the production of microprocessors, a category that Intel stole from its Japanese competitors (which had 60 percent market share) and eventually came to dominate.

Said Grove about the decision: "I looked out the window at the Ferris wheel of the Great America amusement park revolving in the distance, then I turned back to Gordon [co-founder of Intel] and I asked, 'If we got kicked out and the board brought in a new CEO, what do you think he would do?' Gordon answered without hesitation, 'He would get us out of memories.' I stared at him, numb, then said, 'Why shouldn't you and I walk out the door, come back in and do it ourselves?'"

And that's exactly what they did. The best leaders don't have all the answers; they ask better questions. The result of better questions — or unlearning prompts — is better answers.

Andy Grove and other successful leaders have realized that if they wanted to have a breakthrough in leadership mindset and business results, *they* had to behave differently, not their teams, and they had to commit to it.

You don't trigger a shift in mindset by simply thinking differently; you start by acting differently. When you act differently, you start to see and experience the world differently, impacting your mindset as a result. Behaving in new ways changes your perspective on situations, which in turn impacts your mindset. The resulting shift in mindset then affects your behavior, and so a virtuous cycle of new thinking and behavior begins.

Unlearn

We can unlearn the old patterns and practices that continue to hold us back by addressing a series of specific necessary conditions. Resolving each one of these necessary conditions represents a step through the Cycle of Unlearning and closer to our final destination: breakthrough.

Necessary condition one: Identify a challenge you wish to address. Ultimately, unlearning depends on you selecting a challenge — an obstacle to remove or opportunity to enhance — that will have a positive effect on your performance.

The very first step in unlearning, therefore, is to decide exactly what it is that you will focus your efforts on. Perhaps

you've got a long-time product that isn't performing as well as it used to, or your own efforts at personal development aren't bringing the results that you hoped for, or maybe you or your team seems to be stuck in a rut you can't get out of.

Necessary condition two: Define success as though you have dissolved or conquered the challenge. The key to any good experiment is to define success before you start. The same is true of unlearning. But people often struggle to define good aspirations or outcomes. In that case, it's helpful for people to tell stories of what success might look like if they solved the challenge they decided to tackle. What would they be doing? What might be happening to them, the people they work with and their customers? How would it be different from today? Visualize or tell the story of what it would look like six months, a year, or three years after they solved that challenge.

What are the behaviors you, your team or your customers would be exhibiting to confirm that you had addressed that challenge and not only solved it but dissolved it forever? What would be faster, cheaper or better quality? Write it down. Doing this will help you start to get a picture of where you want to be, what you may need to get you there and any concerns that might be holding you back. But the most important part of the exercise is to THINK BIG! It's your aspiration or outcome to own, so be audacious with the extraordinary results you will achieve.

Necessary condition three: Channel courage over seeking comfort. Seeking comfort over channeling courage often results in taking the easy option of avoiding situations where you feel you're not in control of the outcome. As a result, you're stuck in the status quo and not growing.

Voluntarily moving outside your comfort zone requires courage. It requires a willingness to be vulnerable. In her book ***Rising Strong***, Brené Brown says, "If we are brave enough often enough, we will fall; this is the physics of vulnerability. When we commit to showing up and risking falling, we are actually committing to falling. Daring is not saying, 'I'm willing to risk failure.' Daring is saying, 'I know I will eventually fail and I'm still all in.' Fortune may favor the bold, but so does failure."

Brown's concept of vulnerability illuminates perfectly what is required to unlearn — being willing to put yourself out there, to really go outside your comfort zone and to be courageous rather than to be comfortable.

Necessary condition four: Commit to, start and scale the cycle of unlearning. The critical next step is to make a very firm commitment to moving forward through the Cycle of Unlearning and then doing just that. But this is not a one-and-done cycle; it is a scalable system that allows you to tackle bigger, more ambitious and more audacious challenges as you iterate more quickly and frequently the Cycle of Unlearning. Each iteration builds upon the previous one as you build your courage, curiosity and capabilities to strive for excellence in whatever it is you wish to achieve.

Relearn

How do you start to relearn? It's simpler than you may believe. You think big about that aspiration or outcome you want to accomplish. Next, you start small by doing something that's really easy to do. This approach enables people to get started easily and feel successful quickly. When paired with deliberate practice, this helps build confidence and gain momentum to take on greater, even more difficult challenges over time.

Relearning is a process of experimentation to try new behaviors and take in new data, new information and new perspectives. By considering all this new input, we challenge our existing mental models of the world and adapt our thinking and behavior to achieve extraordinary results. Here are the three necessary conditions of relearning:

Necessary condition one: You've thought big; now create options for small steps. After you have clarified your desired outcome, you then brainstorm options for small steps that will take you toward your desired outcome. List them all. Challenge yourself to create as much optionality for yourself as possible. List new and old behaviors and those in which you have skills, are a novice or are simply curious to experiment with. The more options you put down, the more likely you are to find the behavior that will work for you.

Now that you have created a number of options, identify the first small step you believe is aligned to achieving that high-level outcome you desire. Take that small step and celebrate the results, regardless of whether they are positive or negative.

Necessary condition two: Find the right behavior that aligns with helping you achieve the outcome you want. Behavior scientist B.J. Fogg describes something

called behavior matching. The purpose of behavior matching is to find the right behavior that aligns to your level of motivation and ability as you aim to achieve the aspiration or outcome you desire.

Behavior matching often requires iteration and alignment to individual competencies, skills and preferences. It's another reason why you need to experiment with many behaviors, because you may need to try various options to find the right behavior for yourself. Doing smaller, faster, cheaper iterations on different behaviors will help people find the one that works best for them more quickly. It's also easier to recover from unwanted results, fail gracefully, discover that it wasn't the right behavior and move forward.

Necessary condition three: Starting small is even smaller than you think. People often leap to the big single-step solution and deconstruct it into a series of tasks to complete. They don't scale back to small steps to experiment with and grow into. They define success as completing all their predefined tasks, not cultivating new behaviors by taking small steps and course correcting as they progress.

Ticking off tasks for big-bang solutions will not help you relearn; that should be unlearned. What are the smallest steps that will keep you moving toward your desired aspiration or outcome and, ultimately, to accomplishing it? Make a list, and then make these steps even smaller. Ask yourself, "What could I do in a month? What could I do in a week? What could I do in a day? What's my smallest step?"

Write them down, quantify and constrain them. Then get ready to get started.

Breakthrough

As we have seen, each of the three steps in the Cycle of Unlearning can be broken down into a series of specific necessary conditions for action. In the case of breakthrough, there are four necessary conditions:

Necessary condition one: Reflect. You don't break through to transform yourself, your teams or your organization by simply ticking boxes as you complete your task list. You break through by stepping back and reflecting on exactly what it is you are doing and the results your effort is yielding. Are you doing the right things? Should you be doing something different? Are you actually achieving the aspiration or outcomes you intended? Or are you simply ticking off tasks on a list, and asking if it took as much effort or time as you thought?

Necessary condition two: Feed forward. As you gather feedback from your small experiments, feed the results forward into your next small experiment, and then feed those results forward into your next small experiment — the benefits become exponential. The quality of each subsequent experiment increases because you will tend to apply and compound the lessons learned from previous experiments.

Measure your outcomes over output. Strive to gather feedback in real time to discover rapidly how your efforts have been received, thus optimizing your adaptions and next actions in minutes, hours and days rather than weeks, months and years as might be the case with traditional approaches.

> What are the smallest steps that will keep you moving toward your desired aspiration or outcome?

Necessary condition three: Align impact and increase safety to scale breakthroughs. How do we start to scale the Cycle of Unlearning and the breakthroughs that result? The key is deliberate practice, which demands explicit focus, reflection, and taking on more challenging tasks to keep improving and progressing toward extraordinary results.

Note that scaling breakthroughs is not about copying the same practices that one individual or organization did to achieve their breakthrough. You scale breakthroughs when you encourage people to share lessons from what they've done to improve, the successes that they've had and the setbacks they've endured. That normalizes the behavior of getting uncomfortable, being courageous and embracing uncertainty about how you will try to grow and improve in your own context.

Necessary condition four: Increase your rate of unlearning. Pairing experimentation with deliberate practice enables you to respond to a rapidly changing world. Thomas Edison understood the power of unlearning,

relearning and breakthroughs at his Menlo Park complex, which was known at the time as the "Invention Factory."

Edison and his team optimized for the number of experiments they ran, rather than how long they worked. In many ways, Edison's operation looked a lot like today's Silicon Valley tech firms. There was no such thing as a 9-to-5 schedule — workers labored through the night if necessary and slept the next day. Everything was in beta and subject to constant experimentation until they achieved the outcomes they desired and the breakthroughs they sought. Consequently, new products were born.

Great leaders get better answers because they ask better questions. And they ask them in ways that increases the rate at which they unlearn, relearn and break through — both for themselves and for others with whom they work and do business.

Unlearning Management

CEOs, executives and managers who hold onto legacy thinking and outmoded methods such as command and control — telling people what to do and exactly how to do it — are not only micromanaging through control systems designed by themselves and for themselves, they are also limiting the potential of the entire organization.

This kills innovation and strips all human creativity, ingenuity and expression from others' work. Followers gradually become robots simply focused on executing work — not thinking, not questioning, not believing they have any control over what they do.

Leaders can actually gain more control by taking their hands off the wheel and allowing those employees closest to the situation to make decisions at speed and take accountability for the results.

But first, executives and managers must unlearn much of their leadership conditioning, which today is still based on an Industrial Era that has long passed. Instead, they must provide clarity of purpose, intent and direction for what is needed and why it matters, and then stop, shut up and listen. Let people in the organization with the most context and knowledge of their domains figure out how to get there.

The job of leaders is to design systems that enable people to experiment with potential options and learn as quickly, as cheaply and as safely as possible while they discover how to achieve the desired outcomes. These are outcomes that leaders and their teams agree upon together, a shared understanding of what accountability means.

Relearn to Trust Your People

Leaders don't just randomly trust their people. Individuals and organizations create systems that give them trust or fast feedback if the aspiration or outcome they wish to achieve is not possible, flawed or must be corrected — thus providing control.

Toyota has long believed that first-line employees can be more than cogs in a soulless manufacturing machine; they can be problem solvers, innovators and change agents.

Toyota pioneered the use of Andon cords strung above the assembly lines in their manufacturing plants; now wireless yellow call buttons serve the same purpose. When there is a serious problem that can't be quickly and easily resolved, assembly line workers have the authority to push the yellow call button, which immediately stops the assembly line of the entire factory and illuminates a sign above the workstation, which indicates exactly where the problem is.

When an employee pushes the button, the first thing the manager does is "go and see" the problem immediately by stopping whatever he or she is doing and physically walking over to the workstation in question. The managers thank employees for finding the problems and then ask the workers a series of five questions to aid the employees in problem solving to address the obstacle they have discovered. In his book ***Toyota Kata***, Mike Rother describes this as the Coaching Kata:

- What is the target condition?
- What is the actual condition now?
- What obstacles do you think are preventing you from reaching the target condition? Which one are you addressing now?
- What is your next step (next experiment)? What do you expect?
- When can we go and see what we have learned from taking that step?

The managers don't tell the employees how to fix the problem, or correct it for them. Instead, they work together to devise an experiment that improves the system of work.

When you have decisions that are highly uncertain, make feedback loops shorter and faster, gather information, adjust

Feedback is most effective when it comes from reality, and the reality provided by our customers far exceeds the opinion of any internal authority figure.

and go again. Fundamentally, it comes down to unlearning your legacy leadership conditioning and relearning the better behaviors that will make you a better leader and make your people better leaders, too. The breakthrough occurs when you've got all your people leading and they're scaling the leadership in your organization.

Unlearning with Customers

For the majority of companies, engaging customers and obtaining their feedback comprises the last step in the product journey. After we have spent significant time and money designing, building and launching new products, services or processes for our customers, it's often only then that we ask them what they think. Unfortunately, this is absolutely the worst moment to first hear what our customers have to say — it's far too late.

We must unlearn the way we engage, collaborate and create with our customers, and relearn how to interact, leverage and connect with them to discover new innovations and breakthroughs together.

T-Mobile CEO John Legere understands this better than most leaders. When Legere first joined the company in 2012, he didn't sit in his office and consume endless presentations made by employees, market analysts and researchers. Instead, he had a special phone line installed in his office to listen directly to customer service calls for three hours a day and better understand what obstacles, issues and challenges customers were facing while trying to use T-Mobile's services.

In this way, he created an unfiltered and unsanitized firehose of customer feedback to inform what both he and T-Mobile needed to unlearn and relearn in order to improve their customers' experience and innovate T-Mobile's products and services.

Feedback is most effective when it comes from reality, and the reality provided by our customers far exceeds the opinion of any internal authority figure. Therefore, how we gather information — especially from our customers through their experience of the product and services we create — becomes the key input for our Cycle of Unlearning, to understand what works and what does not.

Building Your System To Unlearn with Customers

When it comes to creating a system to unlearn with customers, these are some of the key questions for leaders to work through:

- How am I making decisions?
- Where am I getting that information?
- What's the quality of the information that I get?
- How frequently and quickly can I get it? How frequently and quickly can I respond to it?
- How is that information helping me to unlearn what's not working with the products I'm building or the way my company is working?
- How can I use that information to relearn how we serve our customers?

Unlearning Incentives

One of the reasons people get trapped doing the same things they've always done is because of organizational incentives that drive their behaviors. These incentives are often financial in nature, including pay raises and bonuses.

If you create a contingent relationship with your employees based on rewards by saying, "If you do this, you will get that," then they will have a natural tendency to focus on the "get that" part of the equation.

If, for example, you tell managers that they will get a bonus for reducing operating costs, then the managers will put their full focus on taking costs out of the system, perhaps even to the detriment of the overall organization and its long-term growth prospects. And as the magnitude of the "get that" increases — as bonuses rise into the tens and

hundreds of thousands of dollars — then executives and other employees will do whatever it takes to earn them.

It's time to unlearn individual pay-for-performance incentives and relearn to create the conditions for authentic motivation, courageous behaviors, and exploring risky initiatives in a controlled manner to get the breakthroughs to achieve extraordinary results. The strategy is that you don't suddenly change everything you're doing and work in a new way. Think big, but start small. Pick one or two initiatives in your portfolio that you can experiment with in a safe-to-fail manner.

Incentives by Design

Employees want to be appreciated, and companies actually have many instruments to make people feel appreciated and motivate them in their work, beginning with job design.

3M famously encouraged its technical employees to spend 15 percent of their time pursuing their own ideas, a remarkably progressive program that started in 1947. This practice resulted in a variety of product innovations for the company, including Post-it ® Notes.

Companies can provide career advancement opportunities, allow employees to work from home, offer open time off and much more. When incentives are done right, people feel appreciated and engaged in their work. When done wrong, employees put in the minimum amount of effort to get the most out of the incentive system. This only leads to negative outcomes for all parties.

When designing incentives, remember Charlie Munger's words: "You get what you reward for." Identify your desired system-level outcomes, then make visible and clearly signal to employees what behavior you are looking for.

The Cycle of Unlearning begins with you. Think about what you want to unlearn for yourself, and commit to start. There is no ideal state or moment or situation, and waiting for existential threats or crises is not fun. Instead, adopt the practice of unlearning intentionally and habitually as we do breathing and living.

With ongoing, deliberate practice, every one of us can leverage unlearning instinctively and use it intentionally — not just when there is no other alternative or option.

This unique capability is what enables leaders to continually find new and higher levels of performance — often beyond what they initially thought possible — within themselves, their teams and their organizations.

THE SUMMARY IN BRIEF

What happens to employees when they lose their way amidst change, when they become unplugged from purpose, connection, direction, meaning, and value—when they, in a word, lose their energy? ***Unplugged*** provides a fresh look at engagement as a choice employees make based on how they perceive the change and on how much discretionary energy they will give to the endeavor.

Various factors contribute to employees unplugging: experiencing change as loss, repetitive change leading to fatigue and/or apathy, becoming overwhelmed because of additional workload, low work satisfaction, and feeling poorly led. ***Unplugged*** shows leaders how to restore this lost energy. The key is for leaders to set the example and focus on five elements that will help them refocus employees and reengage their energy.

But it isn't enough to tell leaders what to focus on; leaders also need to understand what to do. ***Unplugged*** achieves this, by showing how to introduce exciting new practices into how organizations operate.

IN THIS SUMMARY, YOU WILL LEARN:

- Five key lessons for why organizations become unplugged.
- The importance of essence-based leadership for reengagement.
- To help employees perceive opportunity and build personal accountability.
- To foster organizational connectedness, inclusion, and validation.

Unplugged—How an Organization's Employees Lose Their Energy

Every manager or leader in any organization is in the energy business—the human energy business. Employees are limited energy resources, and how they use their energy over the course of an eight-to-10-hour day will determine the level of performance achieved, as indicated by engagement research.

Leadership can mandate the amount of time an employee works, but it can't mandate the amount of *discretionary energy* (the energy over and above what is routinely needed to do one's job) invested by the employee.

Engagement is the combination of the perception of desired changes and the amount of physical energy expended on the changes. When employees are asked to engage, they determine whether the request is positive, neutral, or negative. They then choose how much energy they will invest.

Engagement most clearly happens when employees decide to have a positive perception of what is happening in the organization, particularly in times of change, and then they choose to devote a high level of energy to executing the change and helping the organization drive its strategy and achieve its goals.

Disengagement: What Causes an Organization to Become Unplugged?

Research on organizations going through change reveals five key lessons:

Lesson one: the role "perceived loss" plays. The fundamental premise of how change affects an organization is simple: If employees perceive change as primarily a gain (positive for the organization and for them personally), many of the engagement-related issues do not occur. On the other hand, if the majority of employees perceive the change as a loss, disengagement is likely, with employees becoming stuck in the change rather than moving through it.

Lesson two: loss comes "in code." Loss can be experienced or exhibited in four basic patterns: disorientation, discontent, disidentification, and disengagement. Disorientation occurs when an employee is confused or unclear about what is happening. Discontent occurs when an employee is angry or frustrated with the changes that have occurred or with the leadership that initiated them. Disidentification occurs when an employee focuses more on what was rather than on what will be. Disengagement occurs when an employee invests little or no discretionary energy. A questionnaire given to 5,000 employees from various organizations revealed that disengagement was by far the most common way employees reacted to perceived loss. The first three patterns of loss can certainly cause employees to stay stuck in change, but they don't necessarily result in energy loss. Disengagement does.

Lesson three: repetitive change leads to change fatigue. If an organization is frequently changing, it can result in a form of fatigue, leading to more chronic and ongoing disengagement. Employees can become overwhelmed and burn out or put their energy on hold or "rust out," which occurs when employees experience the death of ambition.

Lesson four: how much energy employees give at work is their choice. Individuals have three primary categories of choices to make when deciding how to use their energy: proactive, reactive, or inactive. When employees choose to expend energy in a positive way, they're described as proactive. The varying degrees of expended energy are **complying willingly**—moderately positive but expending a low level of energy; **enrolling—**engaged but not fully; and **committing fully**—high level of energy in a positive way.

Employees who chose to use their energy to oppose or argue against change are described as reactive. The three varying degrees are **complying grudgingly**—feeling compelled or coerced to invest some energy to minimize some risk; **resisting—**putting energy into fighting the changes or convincing other employees that it's a bad idea or strategy; and **getting even**—using energy to get even, which can take the form of badmouthing leadership, theft, legal recourse, or sabotage.

The choice to be inactive is a form of disengagement that occurs when employees choose to withhold their energy, to be in a period of waiting, or to withdraw. The three degrees of inactive choices, which are all forms of disengagement, are **pseudo complying**—employees give the impression that they are positive and expending some energy, when in reality they aren't; **waiting and seeing**—employees remain neutral and withhold their energy until they either better understand the situation in a positive way or are swayed to act in some manner; and **unplugging**—employees have quit and stayed or have made the decision to leave but have yet to do so. They're negative and have no energy for work.

Lesson five: organizations can disengage in a short period of time, while reengaging is a longer, more difficult undertaking. It is amazing how fast change can

Essence describes who the leader wants to be to his or her followers—the example the leader wants to set.

affect the energy and engagement of people at work. Reengagement is a longer, more difficult undertaking.

Getting the Energy Back: Reengaging the Organization

The key responsibilities of leadership are to refocus the energy and reengage employees. To do so, leaders must understand, from the employees' perspective, what is needed for reengagement. Five elements are key to either maintaining engagement or recovering lost engagement:

- Perceived opportunity;
- Personal accountability;
- Connectedness;
- Inclusion;
- Validation.

But first, let's look at the role leadership plays in reengagement, plugging back into the organization's energy supply—the performance of its employees.

Leadership's Example

There is a specific type of leadership—called essence-based leadership—required to exemplify and develop the five elements of engagement.

Character-based, or essence-based leadership, speaks to one's being and represents those core qualities driven from the inside out. Essence is about one's purpose, values, beliefs, and vision. Essence describes who the leader wants to be to his or her followers—the example the leader wants to set. The first step is to understand yourself, who you want to *be* as a leader.

Meanwhile, form refers to what a leader needs to do—the behaviors and actions taken that demonstrate leadership competencies and are often driven by organizational expectations and norms. Form comes from the outside in and is the image or persona the leader creates by what he or she does.

Integrity is the integration between who one is and what one does—essence and form. Both are important to leadership, but more important is keeping essence and form in balance. The question for leaders to answer is, "Where do you get your signals that influence and shape you as a leader, from inside (essence) or outside (form)?"

Understanding the importance of leading from an internal orientation is critical for leaders who are challenged by how to help employees reengage following organizational change.

Essence-Based Leadership

Being essence-based, or leading from within, is essential for reengaging an organization, for four key reasons:

Reengagement requires the leader to set the example. Whether the leader wants to be or not, he or she is being watched and is therefore always setting an example, and the employees are talking about that example. Therefore, a critical question for leaders to ask themselves every day is, "What do I want my example to be?"

Reengagement needs leadership resiliency. A resilient leader needs to strike a balance between being flexible and durable—in other words, between pathfinding and stewardship. Being a pathfinder calls for taking others to a place they wouldn't go by themselves. Stewardship is about protecting those enduring tenets that shouldn't change. These tenets include the leader's values, purpose, and vision. This is about the strength of one's example.

Reengagement calls for leadership courage. Be clear on what you stand for: your values, philosophy, and beliefs, which are the essence qualities. Living life in response to one's values, measuring success by effectiveness and contribution to others, and living life on purpose provide the foundation upon which to lead courageously.

Reengagement requires the leader to practice mutual influence. Mutual influence means that each person can influence the ideas and behaviors of others. A mutual influence relationship is an open working relationship in which both individuals are encouraged to speak freely, challenge each other, and hear and accept what the other offers.Your ability to influence others is directly tied to your willingness to be influenced by others.

Let's now discuss the five elements of engagement, which help you focus on what to do, not through your position, power, or authority but by your example.

The Element of Perceived Opportunity

Engagement occurs when employees feel they are part of something important, when they feel that what they are doing has purpose, and when they can clearly link their purpose to organizational direction. Engagement begins when employees buy into something.

Leaders who are sponsoring change to effectively manage the transition must communicate realities and take care of their constituency. Speaking to the problems focuses primarily on the current state of the organization, on what isn't working. Examples could be poor fiscal performance, increased competition, high operating costs, a looming downturn, and so on.

It's a good strategy in the right situations, but it's accompanied by a level of risk. Focusing on the problem can just as easily disengage employees rather than engage them.

The mindset that best serves full engagement is realistic optimism—working positively toward a desired outcome or solution. Realistic optimism is truthfully sharing problems associated with the organization's current reality and, most importantly, moving to a focus on how to create a positive future.

To enhance the element of perceived opportunity, leadership needs to create a message of realistic optimism. The most basic way to prepare a statement of realistic optimism is to complete the following statements:

- Looking forward, what worries you the most?
- Looking forward, what excites you the most?

With the information from these two questions, write a simple statement of realistic optimism that describes a positive picture about the future for your specific constituency. The message has to feel real to people, not just "rah, rah" or "we're going to be the greatest." Be real. That's what employees want. Presenting only a positive picture when everyone knows when problems exist can create the impression that leadership isn't being truthful with them.

Several practices give an organization a sense of future, also referred to as a sense of perceived opportunity. These practices include the following: having a strong vision, creating a sense of mission, creating a sense of personal purpose, and setting organizational goals.

Realistic Optimism and Strategy Development

When exploring a strategy for moving the company forward, realistic optimism must meet certain criteria. The three criteria from the employee's perspective are

- Is the strategy believable?
- Is the strategy doable?
- Is the strategy feasible?

Employees and management need to buy in to what is being asked of them. If the majority of employees don't think the strategy is believable, it's likely that the strategy will meet some form of resistance or a wait-and-see posture.

Sometimes, the strategy is believable (a good idea), but it's not doable in the minds of the employees. They question execution when they can't see the strategy being accomplished for reasons of time, required expertise, complexity, and so on. If a percentage of the organization doesn't feel the strategy is doable, at best engagement will be some form of compliance: willful, grudging, or pseudo complying.

At times, the strategy is believable and doable but not feasible. Management or employees question feasibility when the strategy is believable and doable, but the lack of money or resources will prevent execution.

When any one of the three questions remains unanswered or is a concern, the employees will likely choose to withhold their energy or grudgingly comply at best.

The Element of Personal Accountability

Engagement happens when employees are expected to give their best and know what they are being held accountable for. When this is the case, personal accountability increases.

Accountability gives employees a sense of direction. Accountability clarifies for employees where and how to focus their time and energy. *Personal accountability* is present when employees are clear about what is expected of them from both performance goals and behavioral expectations.

Personal accountability gives employees the opportunity to answer, "How am I doing?" from a self-perspective. They're able to assess their performance against the knowledge of the goals and expectations being asked of them. The ability

to hold oneself accountable and monitor one's own performance is a stronger factor in an employee's reengagement than if accountability and feedback on performance come from external sources such as a manager.

Performance Goals and Expectations

If the objective is to increase personal accountability, make sure you differentiate between a performance goal and an expectation. Performance goals focus on achieving desired business outcomes. Well-written performance goals usually start with the word "to" followed by a verb.

For example, "to increase face-to-face sales calls to five per week by June 1," or "to reduce machine downtime by 10 percent by March 1." Leaders are generally good at setting performance goals.

Expectations focus on expected behavior. Focus on two areas when clarifying behavioral expectations: performance focus and values focus.

Performance focus: Leaders need to connect expectations to a variety of performance-related activities. For example, a corporate strategy might be to focus on select vertical markets. An expected behavior might be to establish criteria you'll use to focus on markets. A key corporate initiative might be to increase customer intimacy. Expected behaviors might be to consider the customer's perspective when solving problems and to seek feedback from your customers to ensure their satisfaction.

Values focus. The second area of focus for expectations relates to corporate values. After leaders have identified what the corporate values are, they need to clarify expectations for how employees operationalize those values and behave consistently with them.

Wilson Learning has a set of beliefs and core values. Each of those core values has a list of expectations to guide employees to know how to behave consistently with those core values. One of their values states "We value collaboration and teamwork with our customers and throughout our global organization." The expected behaviors for this value include "We accept and support team decisions after they're made; we acknowledge the value of all team members' contributions; and we make decisions based upon business interests, not self-interest."

In general, leaders have learned how to provide clarity on performance goals. The opportunity for improvement is often on the expectations side of the equation.

Not only does setting expectations help your employees know how to behave, but it also increases your ability and the effectiveness of using consequences like rewards and behavioral correcting later when your employees either meet or don't meet goals and expectations. The more specific the goals and expectations, the more effective your consequences will be because your employee will know exactly what they did or didn't do to get either rewarded or corrected.

Engagement occurs when employees feel connected with each other, focus on mutual interests, and share responsibility.

The Element of Connectedness

Engagement occurs when employees feel connected with each other, focus on mutual interests, and share responsibility.

Young, successful companies often have a natural sense of connectedness—referred to as a "small company or family-like culture"—one in which everyone knows everyone else, communication happens face-to-face, and members huddle informally rather than having scheduled meetings. In these organizations, employees feel energized and committed to each other, often with a strong feeling of support and camaraderie. In addition, these types of organizations can easily hire individuals who share the same values and beliefs.

However, as an organization grows, maintaining a true sense of connectedness becomes a challenge. What happens? Two processes are geographical disconnection, when companies grow and move employees to different locations, and organizational segmentation, when differentiation drives how leaders think and act.

Creating Connectedness

Each of the core reasons organizations disconnect has a series of ways to reconnect. Consider these strategies for making geographic segmentation work:

Familiarity. The more familiar employees are with each

other, even when geographically distanced from each other, the more likely they are to communicate and collaborate. To establish familiarity, have employees who need to connect meet each other face-to-face with the purpose of getting to know each other and plan the best ways to communicate. If getting together in person isn't easy, then have them spend some time on videoconference or on the phone learning about each other and establishing ways to stay connected.

Cross-pollination. Offering employees the opportunity to relocate to one of the smaller geographic locations or allowing an employee from one of the smaller locations to spend a period of time at the company's headquarters can prove beneficial. Both parties can learn different practices from each other, learn how small or large companies operate, share values and beliefs, and become familiar with each other.

Virtual teams. If employees are geographically segmented and serve a similar service or function as those employees in other locations, having them identify as a virtual team helps connectedness. A virtual team (also known as a geographically dispersed team, distributed team, or remote team) is a group of individuals who work across time, space, and organizational boundaries with links strengthened by forms of communication technology. An initial meeting, face-to-face if possible, allows team members to get to know each other and what they believe they add to the team.

In functional segmentation, the company's functions differentiate themselves from each other and can develop a silo mentality, put up barriers to collaboration, and advocate and defend for their part of the whole. In order to create connectedness, the company has to cover this differentiation.

De-differentiation. De-differentiation is the act of setting aside differentiated thinking that segments a group—many hats—and wearing what is referred to as "one hat." In order to successfully connect, leaders or employees representing different functions must learn to take off their individual hats (their functional identities) and put on one hat that speaks to the whole that unites them all.

For example, if a senior team consisting of members of HR, finance, business development, and manufacturing is together, "one hat" implies everyone temporarily sets aside the belief they are there to represent their function, and put on a hat that changes their mindset to focus on what it means to be responsible for the whole—the business. The team must accept this identity to truly feel connected.

Developing a Collaborative Mindset

A second way to enhance connectedness is creating a collaborative mindset within the culture. For a collaborative mindset to exist, one key ingredient must always be present: mutual interest.

When teams operate with a collaborative mindset, all members need to be clear about the team goal that they're trying to achieve together, connect to the goal, and influence each other on how best to accomplish it. In a collaborative culture, members can feel free to influence others, but they must also have the skills to do so. As a leader, you play the most critical role in creating a collaborative culture first by practicing mutual influence skills and also by creating the expectations that everyone has the skills to practice mutual influence.

Three skill sets help people connect with each other and collaborate to create something of value:

Listen to learn. In a collaborative culture, the ideal is to listen for the benefit of understanding the ideas and assumptions of others in order to create solutions together.

Express to explore. Express to explore means expressing your ideas for the benefit of examining them and connecting to other ideas.

Integrate to innovate. Better solutions that serve multiple interests and truly solve the problem are created when you integrate diverse ideas. Focus on incorporating all viewpoints to create the best solution.

The Element of Inclusion

Engagement happens when employees are well informed and involved and have an opportunity to openly express their thoughts and feelings. Simply stated, people want to feel like they're in on things.

How information is gathered, shared, disseminated, and understood greatly impacts the sense of inclusion, as does whether individuals feel they have the freedom to openly express themselves. A lack of information flow is one of the fastest ways to create disengaged employees. If employees don't feel included, they won't feel engaged.

If you ask Joe Grabowski, the former president of environmental consulting and engineering firm Wenck Associates, what his key responsibilities were, he'll tell you that one of them was to inform and be informed by associates. When asked why he refers to employees as "associates" or "mem-

Engagement occurs when employees feel that they matter and that they have a valued place in the organization.

bers," his response is, "I wanted them to feel like equal members of an open community."

Informing others is demonstrated in many ways and is still carried on after Joe's departure. Everyone gets a copy of the strategic plan. Embedded in this plan are the company's vision, mission, and purpose. Town hall meetings allowed employees to get clarity on or question the strategic plan and its implications.

Employees can use the compelling company website to stay current on organizational happenings, access a variety of information sources, and by just typing in a word, connect to a collection of resources available for experience and support. How the organization is doing on a monthly basis is posted, and at least once a month the president or a senior officer has an open information session with anyone who cares to attend.

Once a year, they have an all-hands meeting that everyone from every geographic location attends. This event provides a variety of opportunities to share, learn, better understand, and connect with colleagues.

Consider these other various forms of inclusion:

Information sharing. Information sharing has gone digital and can take the form of emailing, blogging, websites, wikis, podcasting, forums, images, newsgroups, and so on.

Inviting input. Inclusion occurs when employees feel they have the opportunity to weigh in on key matters that impact them and/or the business, usually in the form of surveys and focus groups. Inviting employees to share their thoughts and opinions is equally important. In its simplest form, inviting is asking rather than telling. Yet, inviting requires the leader to be genuine and truly open to others.

Providing feedback. Inclusion occurs when employees know how the organization is doing. They welcome any form of posted or shared information that gives them clear indicators of how they're doing. For example, if you walk through the BMW sports utility vehicle manufacturing plant in High Point, South Carolina, you would see various monitors continuously update employees with real-time information on production, quality, and safety.

Using teams. Inclusion occurs when employees feel they're a part of a team that contributes to solving a problem or advancing a strategy. Engagement increases when employees feel they contribute.

Allowing for mutual influence. Mutual influence occurs when the leader has the ability and willingness to influence his or her team or associates, and they in turn have an opportunity to influence the leader. This culture of openness allows information to be readily shared.

Building trust. The most important element to a culture of inclusion is trust in each other. In order for these inclusion practices to have any real value, leaders need to be trusted. Employees need to feel safe in order to feel comfortable expressing themselves.

The Element of Validation

Engagement occurs when employees feel that they matter and that they have a valued place in the organization. Validation is the expressed interest leaders have in their employees. From the employees' perspective, being validated is when they feel like the leader sees them as important. There is something about the way the leader engages with them that makes them feel like they matter, as a person, not just as employees. They feel validated because the leader demonstrates they truly matter to the leader.

Interest comes in a variety of forms: recognition, listening, involvement, understanding, rewards, learning, growth, and so on. The best way to demonstrate caring is through "acts of interest." Three primary acts can become part of the element of validation:

Supporting the individual as a person and for the work he or she does. One of the questions employees often have on their mind is, "Where do I go for help?" A leader can support the individual in many ways, such as the following: providing additional help with a complex project that

is overwhelming the employee; helping make connections with key people as a way to make the employee more visible; helping in a personal family situation when daycare cancels due to weather; being a good listener; being an advocate in the employee's absence; supporting a balanced work life.

In each case, the employee feels validated because of the support others personally provide and for the work he or she does.

Rewarding the individual with both monetary and natural rewards. For most employees some form of monetary reward is still the primary means of recognition for performance. However, a financial reward or promotion may not always provide the kind of recognition the situation calls for. Natural rewards are forms of recognition an employee finds intrinsically satisfying about their work. One example of a natural reward is learning. Learning is a reward that the organization can build into the employee's work life in the form of new experiences, seminars, books, mentoring, and so on.

Developing the individual by providing opportunities to learn and grow. Humans are programmed to grow. Most employees want to continue to grow in knowledge, competence, experience, and responsibility. Employees grow in different ways, but to achieve high engagement, they want to feel that leadership is interested in their growth. They want to feel that possibilities for upward movement in the organization exist to develop mastery within their area of expertise.

Wenck Associates has three developmental tracks employees can follow: Track One is a mastery track where employees focus on their area of technical expertise—water, air quality, or municipal. The desire is to develop a domain competency where they can develop into a nationally recognized expert in their field. Track Two is to become a resource manager, where they take a leadership position but stay within their engineering disciplines.

Track Three is business operations, where they are groomed for a generalist role, sharing responsibility for how the organization runs. Each employee has a personal developmental budget he or she can use to enhance his or her expertise, learning, or experience.

Organizations disengage quickly, but reengagement is a long-term, culture-changing process. A key aspect of a highly engaged work culture is leadership that understands what it means to give energy rather than take energy away from an organization.

Armed with that understanding, leaders can implement the five elements of engagement.

THE SUMMARY IN BRIEF

In ***Unstoppable Teams***, Alden Mills, three-time Navy SEAL platoon commander and founder of the company Perfect Fitness, reveals how to put together teams that can accomplish any objective—by leveraging unexpected values and priorities.

SEALs and civilians operate in extremely different environments, but what makes both kinds of teams excel comes down to the same thing: service to others, trust, empathy, and a caring environment.

Success almost never depends on individual talent and valor; instead, it depends on creating a strong foundation for yourself and using that foundation to help others go beyond their individual pursuits and talents to create something bigger and better—an unstoppable team.

Unstoppable Teams shows managers at every level, at both large and small organizations, how to inspire, motivate, and lead the people around them. It's the handbook for how to build care-based teams that will push people to achieve more than they ever thought possible.

IN THIS SUMMARY, YOU WILL LEARN:

- To use the four key actions of the CARE loop to create an unstoppable team.
- How to lead yourself as your first team.
- To create the 10x advantage, by aligning your team's actions with the goals and actions of external allies.

Introduction

When a small group of people band together to do something extraordinary, the rest of us scratch our heads in wonder. Whether it's an unranked basketball team outplaying an undefeated powerhouse or a little-known startup becoming the overnight market leader, David and Goliath stories capture our attention and inspire us.

We cheer for successful underdogs, and we even dream about being like them—a tightly knit team of ordinary people doing extraordinary things under difficult circumstances. That's an unstoppable team, one that brings diverse gifts to bear on the team's goals through a shared sense of purpose and a deep commitment to each other. You can assemble as many individual superstars as you'd like, but they won't become unstoppable unless they believe in each other and in their collective mission.

When young men and women who want to join the SEALs first hear about Basic Underwater Demolition/SEAL school, they become obsessed with the grueling physical exertion that lies ahead. But what gets you through the training is a balance of mental, emotional, and physical strength, combined with your greatest asset as a SEAL: the people around you.

Whether hunting for a war criminal deep in the mountains of Bosnia or conducting classified combat mini-submersible operations at night 30 feet underwater with hand signals (squeezes) as the only means of communication, SEAL Team is bound together by a common purpose and a mentality of "I've got your back." SEALs place the success of the team above individual needs because the team's needs come to represent their individual needs, too.

Unstoppable teams aren't reserved for elite forces in the military. In sports, in business, in communities, in every facet of life, developing the qualities of an unstoppable team is essential if you want to thrive in chaos and break away from the pack. It might sound crazy, maybe even superhuman, but it's within your reach.

The Cornerstone for Team Building

Caring is the cornerstone for building trust and persistence in any group. When people feel cared for and when they care about the tasks and goals at hand, they are willing to step beyond their perceived limits and dare to do something greater than they originally thought possible. If you're willing to commit to caring for and serving others, then you can become a truly unstoppable force for making greatness happen.

There are four actions—connect, achieve, respect, and empower—that, taken together, lie at the heart of every great team. It's called the CARE loop. When these four acts of caring are activated, anything is possible.

It's no coincidence that military strategists consider SEALs (and other military special forces) to be force multipliers 10 times more effective than conventional troops. Moreover, this extreme team dynamic—called the 10x advantage—is not unique to SEAL Teams. It can be harnessed by any well-constructed and highly functioning small team.

If you want to be a great team builder, then you need to learn to become a great relationship builder first. It starts with you. Let's now discuss the foundational component of every great team.

Your Platform

The first team you must build and lead is your own team, the one inside you. This is about creating a conversation between the head and the heart. That's exactly what's needed to lead oneself.

Becoming a Navy SEAL involves exercises such as "drown proofing." That's a game in which your hands are tied behind your back, your feet are tied together, and you're challenged to swim 300 yards. Think about this head-heart conversation for a moment. You are instructed to swim without the benefit of the very things that make it possible for you to swim in the first place—your arms and your legs.

It's only natural to think, "Hey, wait a second. I need my arms to swim. If I don't have them, then I can't swim." That's the start of the conversation. Then the head takes the discussion deeper with, "Wait, the instructor said you could die doing this. Is this worth it to you?" And then there's the obvious, nagging question: "What's the purpose of this test, anyhow?"

If you allow yourself to fixate on these thoughts, you will create a downward spiral of negative thoughts that can easily lead you to feeling defeated even before you try. Those negative feelings might also cause you to act in a manner that is directly opposed to your goals: you might quit before you even get started.

You don't need to go through SEAL training to have this collision of voices directing you to take action away from your desired goal. It's all too easy to obsess about what might go wrong, what you lack, and what bad outcomes

The key to making your mental, emotional, and physical platform work for you is understanding why you care.

could be waiting around the corner. How can you accomplish the task at hand when you're preoccupied with your own thoughts and worries?

The ability to lead yourself—your platform—is the foundation for leading unstoppable teams. Focus on yourself, what you lack, what you desire, and you'll get stuck. But focus on what you need to accomplish and how you can enlist others to reach that goal, and you'll become unstoppable.

The Formula: Focus, Feel, Act

There are only three things you can control: your mental, emotional, and physical capabilities. That's it. We can't control the weather, our competition, the marketplace, or our employees. But we can control what we think, how we feel, and how we act and/or react to what comes our way. Put simply, focus on what you can control, and decide what you want to react to. Period.

The Focus, Feel, Act formula works for individuals, but it's also how unstoppable leaders build 10x teams. What we focus on creates a feeling that drives a behavior that results in an action. The resulting action either reinforces our focus and feeling or shifts them to take a different action. The challenge is trying to make sense of all those internal voices.

Our brains are endlessly focused on energy conservation. Thinking requires a great deal of energy, so seeking the simplest solution is in our best interest. The brain is remarkably adept at creating reasons *not* to do something.

Your brain will always be a bit of a whiner, but you can stem some of its complaining by feeding, resting, and exercising it. You can also keep those whiny complaints in check by learning to manage another critical component of your platform: your emotions.

Out-of-control emotions are like driving a car without ever taking your foot off the gas. You're eventually going to crash or hurt someone else. But if you learn to regulate your emotions, to direct your attention to productive emotions, you will learn to drive like a Formula One champion, expertly banking the curves, learning when to hold back and when to let go as new crises and opportunities appear.

Now that we've covered the first two components of the Focus, Feel, Act formula, let's turn to the third. Our ability to talk back to the brain and listen to our emotions is directly linked to our physical actions. Our entire body supports the functions of our brain. It's responsible for feeding our brain oxygen and the proper nutrients and for carrying out the brain's commands, i.e., taking action. The condition of our body determines how much work we can accomplish.

This three-way conversation between our mental, emotional, and physical "voices" is always going on. Understanding these influencers is paramount to leading your first team: you.

The key to making your mental, emotional, and physical platform work for you is understanding why you care. Knowing what you care about and how it makes you feel will help you focus on taking the actions required to succeed. Becoming an unstoppable leader begins with understanding yourself.

Finding Unstoppables

All great teams are made up of people with complementary skills and strengths. It might sound as though all you need to do is get a group of people with different skills together, and—presto!—you have an unstoppable team. But building unstoppable teams is challenging. Our egos, our pride, and insecurities may prevent us from seeing where our true powers (and our real weaknesses) lie.

Second, it's not always easy to recognize other people's superpowers. Third, it can be a challenge for individually gifted people to see the benefit of working with others to accomplish a common goal. A lot of high-achieving people get that way through a single-minded focus on themselves and their goals.

Likewise, most of us think we are better at more things than we really are. It is hard to come to grips with our own weaknesses. And sometimes our own superpowers aren't obvious to us. That's why relying on others to help you identify your strengths and weaknesses can be helpful. This is called triangulating, after the technique of land naviga-

tion used during SEAL training. Here are the steps.

Step one. Find at least three people from three different environments of your life to give you honest feedback. Select people who will give it to you straight without fear of hurting your feelings. When you select these people, find one or two people each from your professional life, your personal life, and your community.

Step two. Ask them this question: "If you were counting on me to save your life but I could save it only by using the one thing I am best at, how would I save you?" They should answer by giving you a verb, not a noun. What action are you best at—inspiring people, analyzing data, drawing pictures, coordinating a project, inventing a new idea, or . . . ?

Step three. Triangulate the feedback and look for similarities, commonalities, and patterns in it. Test the feedback against your own answers to these questions. Is there something in the feedback that rings true in your gut, not just your head? Does some portion of the feedback sound familiar to you? This exercise helps you identify your own talents and also the skill gaps you'll need to fill with contributions from teammates.

The Seven Unstoppable Traits

There are seven traits that characterize unstoppable teammates. These are the must-haves for powerful team dynamics—regardless of the team's circumstances and challenges.

1. **Competence**—a curiosity to learn new skills and develop mastery of new subjects;
2. **Perspective**—thoughtfulness about the way past experiences and challenges have shaped attitudes, beliefs, and behavior;
3. **Communication**—the ability and willingness to express ideas and emotions;
4. **Drive**—a can-do spirit, a strong work ethic, a hunger to succeed;
5. **Humility**—inclusiveness, self-awareness, and respect for others;
6. **Flexibility**—an openness to new perspectives and the adaptability to let go of one idea or belief to embrace another;
7. **Selflessness**—a willingness to serve others and to place the truth and others' interests above self-interest.

Your job as team builder and leader is to develop a team that embodies these seven traits, to direct the team's focus, and to set an example of the behaviors that will drive the actions required to succeed. Then, as you scale from a team of one (leading your action platform) to a team of many, your greatest challenge is to connect with them, the first step in activating the CARE framework.

Connect

No matter what industry you work in or what position you hold, your success depends on your ability to build human relationships. At the center of relationship building is empathy—the ability to place yourself in your colleagues' shoes, to understand their point of view, or more important, their feelings. Building connections with others requires empathy, and empathizing requires that you show vulnerability and act with transparency.

If that sounds a lot like the role that parents play in a child's life, that's not a mistake. It's this level of care that makes some teams unstoppable and others just mediocre.

As a leader, you don't have an automatic, innate connection. You must build it through the three Cs: communication—physical, mental, emotional; credibility—integrity, accountability, humility; commitment—reliability, consistency, focus.

Communication. The first way you connect with others is through communication. You might think that's obvious, but do you know that 55 percent of face-to-face communication occurs without even muttering a word? That's right: Studies have proven that most of our communication comes through body language and tone. Thirty-eight percent is how we say it, and only 7 percent is what we say.

Learn to use all the elements of body posture, facial expression, and eye contact in synergy and with intent, and you'll find that your ability to connect and to build trust increases.

Now layer in the mental components of communicating. Are you preoccupied by your own thoughts and your own needs? When you speak, do you use "I" and "me" a lot? Do you say that people work "for" you or "with" you? People want to be seen for who they are; they want to be recognized for their superpowers; they want to contribute; they want to be led, liked, and, yes, even loved. We need to feel connection, not just to other people but to the purpose of our work, too.

The third component of effective communication is using

feelings as a powerful tool for connecting with others. At the heart of connecting emotionally with others is curiosity. The hunger to learn from others comes from being curious—curious about others' backgrounds and points of view and curious about different approaches to solving a challenge.

Credibility. Leaders live or die by their reputations. Your reputation or personal brand is nothing less than a promise, which is supported by people and a process. A person's brand promise is dependent not only on how they communicate but, equally important, on whether they are reliable, act with integrity, and hold themselves accountable for their actions.

How you handle the truth or difficult situations, how you take ownership for your team's actions, and whether you follow through on your commitments determine your credibility.

Commitment. The more consistent you are in your actions, the more you are trusted, because people know what to expect. If you're erratic in your actions, people don't know who you are. Inconsistent actions throw people off balance, and when they're wondering "what's next," they're spending more time guessing what the leader is going to do than focusing on what they should be doing to help the team. Consistency in your actions and your behavior cements trust with your teammates.

That's how unstoppable teams work. They swarm a problem from multiple angles before they single out one approach.

Achieve

Teams exist for one reason: to achieve results. Unstoppable teams exist in all environments of crisis, creativity, and productivity, and they all strive to achieve goals where the outcome is uncertain—over-the-horizon (OTH) goals that lie beyond our visibility and push us out of our comfort zone.

The goals that most unstoppable teams aspire to reach exist beyond the line of sight of any one individual. The team leader's role is to help team members see well beyond the visible horizon and find ways to surpass real and/or imagined limitations. The team leader's actions involve the five As of Achievement: Aspire, Assume, Assess, Assure, and Appreciate. Taken together, these five actions form the second part of the CARE loop.

- **Aspire.** Bring the goal to life by helping team members personally connect to it. Give them hope and a reason to believe that their collective efforts can achieve the task.
- **Assume.** Give your team the space, resources, and confidence to do their jobs.
- **Assess.** Initiate performance assessments frequently and transparently to avoid surprises and unify the team.
- **Assure.** Encourage and reassure your team of their purpose, progress, and perspective; help team members overcome their fears and doubts.
- **Appreciate.** Show enthusiasm and gratitude for both individual efforts and team progress.

A little over 60 years ago, the Russians put Sputnik 1 into orbit. Mankind's first satellite launched two nations on a race to explore space. Three years later, John Kennedy narrowly defeated Richard Nixon to become the youngest president in US history. The nation was divided after decades of bloodshed, from World War I to the Korean War.

President Kennedy recognized that a common goal could rally the country; he sought an OTH goal that the country could aspire to achieve. While delivering a speech to Congress on May 25, 1961, four months after taking office, he challenged the nation to "put a man on the moon by the end of the decade."

At a time when America was still trying to understand how to launch a satellite, the idea of putting a man on the moon in less than ten years was the definition of an OTH goal. There was no clearly identifiable way to accomplish it. As NASA leaders quickly realized, their OTH goal would depend on best guesses, trial-and-error efforts, and numerous course corrections over the next decade. As they dug in, NASA teams often would learn something new or develop a new technology that would change their minds and hence their course of action on how to accomplish the goal.

That's how unstoppable teams work. They swarm a problem from multiple angles before they single out one approach. They realize that when you're venturing into unknown waters, it's all hands on deck. This process of

swarming for solutions, as opposed to sending off individuals to work in silos, is the essence of what unstoppable teams do. They don't rely on one person for the solution; everyone pitches in without regard for individual glory. But this selfless attitude does not happen magically; that's why the CARE loop is so important.

Respect

If you want your team to care about their customers, show them how to care for each other. This sets the example that carries forward in all interactions. As a team leader, you reap what you sow. Your team will act the way you do.

Respect as a verb is not a passive trait; it's all the actions you take within your team and outside the team to shine a light on the team's skills and capabilities and to show how the team can contribute to others' success. Your job as a team builder is to take the lead highlighting other people's skills and articulating how those capabilities can help the team.

Mutual respect is a powerful adhesive when the team comes under pressure. People who feel respected are more confident to express their ideas. They aren't wasting energy thinking of how not to look stupid; instead they focus on using their abilities to help the team solve the problem. Put simply, respect fuels greater levels of contribution. When you create an environment of mutual respect, you also eliminate the fear of being ignored, humiliated, or victimized.

What Comes Around Goes Around

Three elements of respect are the three Rs: Realize, Recognize, and Require. These actions establish an environment of respect that, when interwoven with the trust you have built and the direction you have set forth, will create a platform for developing empowered teammates.

Realize. Respect comes from two places: from your authority and from your actions; the respect garnered from the latter is more valuable and more sustainable than the former.

Recognize. Respect derives from results. As a team builder, it's your job to bring forth and acknowledge the superpowers of each of your teammates.

Require. Respect isn't a nice-to-have; it's a requirement, and it needs to be shared and reciprocated.

When Doug Conant became CEO of Campbell Soup in 2001, he viewed respect as a cornerstone of his turnaround strategy. The company had lost over half its market value, conducted a large round of layoffs, and faced declining revenues. A Gallup researcher reported that the company's engagement statistics "were the worst for any Fortune 500 firm ever polled."

Conant spent the next nine years never missing the opportunity to show respect for the contributions of the 20 thousand people of Campbell Soup. Conant and his leadership team developed the Campbell Promise: "Campbell valuing people. People valuing Campbell." He intentionally led with the importance of Campbell valuing people; he wanted people to know they are valued and respected.

He reinforced the promise with a 10-point pledge as to how he intended to lead, and his first point was, "We will treat you with respect and dignity." He personally sent more than 30 thousand thank-you notes to show his respect for employees' efforts. His actions set the tone for his 350 senior leaders to emulate, and they did. By 2010 the company was setting all-time performance records while outpacing the S&P 500 five-fold.

Empower

When the training tool the Perfect Pushup (made by Perfect Fitness) became a breakout success, company leader Alden Mills was called a one-hit-wonder entrepreneur. If the Perfect Pushup had been an album, it would have received multiple platinum awards within its first year. What it got instead was a whole host of comments from industry veterans saying, in essence, "Enjoy it while you can. You got lucky, kid."

Yet over the next eight years, five more of the company's products—Perfect Pullup, Perfect Multi-Gym, Perfect Ab Carver, Perfect Cooling Towel, and Perfect Smartphone Armband—earned the equivalent of platinum status, and several others sold at gold level. No longer could someone say, "You got lucky, kid." That's because Perfect Fitness had created a system for developing products that sold in the millions.

What was the secret of the team behind these series of successes? Empowerment. The products didn't come from one inventive genius; they came from the entire team. Every single person on the team owned the product-idea process.

When people are owners, they think cooperatively. They share ideas, test new concepts, and focus on finding the best idea no matter who comes up with it. They act selflessly. Put simply, empowerment, which closes the CARE loop,

When a team authentically proves how much they care about other people, they experience an exponential return on their efforts.

depends on three actions: educate, enable, and engage.

Nothing shows people you care more than dedicating time to helping them learn new skills. Be careful, however: telling people what you know (and what they don't know) isn't the same as teaching them. Empowerment isn't a task you can check off your list or test on paper; it develops over time and depends on creating an environment where every person on the team shares lessons learned and feels a responsibility to coach and support other team members' growth.

The Geometry of Education

Think of education as a triangle. Each side of the triangle expresses one of the three ways to educate someone, and ideally you want to be creating an equilateral triangle in which all three sides are equal. Here's how to define each one:

Leapfrogging: This is in-house and often informal training delivered via lessons learned, best practices, debriefings, or email updates shared among teammates.

Externality: This tends to be more formal training provided by outside professionals, often representing unusual or diverse fields of expertise.

On-the-job training: On-the-job training gives people the chance to put their knowledge to work. This learning-by-doing approach may include mentoring and coaching as well.

When you create a system for educating your teammates with all three sides of the triangle, they will develop the "know what," the "know why," and the "know how" to achieve goals and develop new confidence and capabilities for future roles.

Creating a culture of empowerment can be challenging, because it requires the leader to let go, to relinquish control so that others can step up, make decisions, and take control as well. However, here's the irony: the more you empower others, the more the power returns to you. It comes back to you in a different, even more potent form: gratitude.

As a leader, your role is to grow your people to achieve their highest potential. Each phase of the CARE loop builds upon the others, and this final phase completes a group's transformation from selfishness to selflessness, from a group of individuals to an unstoppable team.

Activating the 10x Advantage

It's time to broaden the team-building discussion to include other constituents and stakeholders who have a hand in your team's success or might be affected by your team's performance. When a team authentically proves how much they care about other people, they experience an exponential return on their efforts. This is called the 10x advantage. The 10x advantage is activated by aligning the actions of the internal team with the goals and actions of external allies.

Many teams become one-dimensional and imbalanced when the relationship with one constituency, usually the customer, is emphasized over others. Then team-building goals and resources are devoted to whomever and whatever can help hit the bull's-eye, and everyone and everything else becomes nonessential.

The problem with this "customer is everything" approach is that it disregards 67 percent of your other key teammates, who can help you get more customers. The three constituents outside your organization—customers, contributors, and community—can become a force multiplier for your team's efforts. And when you bring them into the CARE loop, you'll see what it's like to be part of something bigger and better than any one team can achieve on its own.

The transformation from a group of individuals to an unstoppable team is marked by five phases.

Phase 1: Connected group. In this phase, connections are still weak, and communication is impersonal; the leader does most of the talking and speaks mostly in terms of "I" and "me." Leaders tend to micromanage their direct reports, and direct reports focus mostly on "managing up." As you might guess, empowerment is nonexistent.

Phase 2: Direct group. Directed groups are connected

through an authoritarian figure who spends most of his time telling others what to do and how to do it. The direction is known, measurable, and achievable. Fear of failure is high, and people tend to focus only on the specific tasks they've been assigned. Information is disseminated on a need-to-know basis. Accountability is low, and the group's focus is on pleasing the leader and not being singled out for mistakes.

Phase 3: Respected team. In this phase of team development, individuals have begun to feel emotionally connected to each other and to identify with the emerging team. They have started to feel intellectually invested in the group's progress toward achieving their goals. The leader listens more and talks less, giving the group more time to share insights and learnings with others.

Phase 4: Empowered team. The fourth phase of team building begins to harness the collective focus and efforts of the entire team. The team leader transfers decision making and authority to the team. Selfless action is commonplace, and the team begins to build similar links to external stakeholders, based on the same values of connection, achievement, respect, and empowerment.

Phase 5: The 10x advantage (aka the unstoppable team). This is the peak of team building. The CARE loop has become a well-oiled machine within the team as members seek to activate the CARE loop with external constituents as well. The team reaches levels of performance that have not been seen before and enjoys spending time together at work or for fun, and word-of-mouth about the team's commitment to each other and to their goals spreads far and wide.

The leader is humble; humor and warmth abound. The team's actions are magnified and improved by the support and participation of their contributors, customers, and community. People express enthusiasm, even love, for each other, and look for new opportunities to collaborate and pursue even bigger goals.

Team building and teamwork are personal. They're about a group of human beings, all with their own quirks of personality, their own superpowers and weaknesses, coming together to do something amazing.

Put the CARE loop to work and practice connecting, achieving, respecting, and empowering. Have some faith that you've done the work, or that you're prepared to do the work, of opening yourself and your heart to building relationships that are deep, sturdy as hell, and immensely satisfying to your heart and your head.

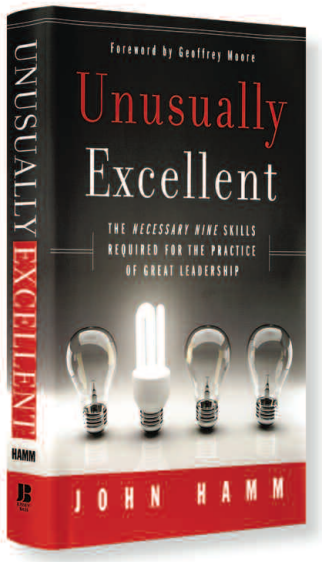
Leadership



Unusually Excellent

The *Necessary Nine* Skills Required for the Practice of Great Leadership

by John Hamm

THE SUMMARY IN BRIEF

Often, when leaders experience trouble, they look to blame an outside source or expect a small tweak to right their ship. But many times they have actually lost their grip on the basic foundation of their own leadership.

Unusually Excellent offers both seasoned and aspiring leaders a framework for understanding and a guide for applying the fundamentals of leadership at every stage in their careers. The business environment may change, but no management trend can displace the core laws, proven over centuries, of excellent leadership.

Leadership expert John Hamm explains why leadership can't be mastered as a single concept or tool that can be pulled out of a hat when needed. Excellent leadership is composed of actions, ideas, emotions, cultural forces, history and expectations that work together in an interconnected system. This system forms the core of the winning combination of superb Character, skill-based Competence and professional Reputation. Hamm demonstrates that any leader can excel by consistently putting into action the Necessary Nine skills: being authentic, trustworthy and compelling; leading people, strategy and execution; communicating, making decisions and making an impact.

Unusually Excellent offers powerful, unforgettable leadership lessons, reinforced empirical evidence and logical analysis that will prepare you for the ongoing journey toward exceptional leadership.

IN THIS SUMMARY, YOU WILL LEARN:

- How to put yourself in service to whatever you value most deeply.
- How to develop and renew your leadership skills.
- How to master the fundamentals of leadership at every stage in your career.
- How nine essential skills can help you practice great leadership.

Introduction

Credibility is a matter of character and earns the right to lead. *Competence* is a matter of skill and earns respect. And *consequence* is a matter of values and earns reputation. These are the three overarching categories for the nine essentials of leadership. Within each category lie three essential precepts, each linked conceptually to the other two.

Unusually Excellent: The Essential Skills

- **Credibility: A Matter of Character.** Authentic, trustworthy and compelling.
- **Competence: A Matter of Skill.** People, strategy and execution.
- **Consequence: A Matter of Values.** Communication, decision making and impact.

Probably at some time in your education or career you have seen every one of these essentials. But you've probably never seen them arrayed like this — or realized how all of them interact to create a powerful synthesis that is greater than the sum of all of them.

It is this higher plane of leadership — the one that emerges from the virtuous cycle of all of these essentials *working together* in a consistent manner over the course of a career that creates "unusually excellent" leadership.

Unusually excellent leaders are rare — perhaps one or two in 100. But that doesn't mean you can't be one of them. Talent and aptitude matter, of course. So do timing and opportunity. But what keeps good leaders from becoming great ones is often just a matter of either not appreciating the need for *all* of these essentials to be in place and showing up in their day-to-day leadership behaviors — or, more tragically, realizing it too late. To learn, we must realize and accept what we don't know and begin to seek that knowledge at that moment.

How many talented leaders have lost their credibility early in their careers and borne that stigma ever after? How many executives have proven themselves gifted at execution but not at strategy, and have pulled their organizations down for lack of a plan? And how many otherwise capable leaders have failed to get their organizations to follow because they were unable to communicate well enough to enlist them?

You don't have to share that fate. You can be that one in 100, that unusually excellent leader. Look again at the leadership essentials. They may be difficult, but they aren't complicated — and there are only nine of them.

As a leader, every day you waste not perfecting these nine essentials only makes their accomplishment that much more difficult. So there's no better time to begin than now. ●

PART ONE — CREDIBILITY: EARNING THE RIGHT TO LEAD THROUGH CHARACTER

Being authentic — knowing who you really are and holding true to yourself in the most difficult moments — is "ground zero" of leadership credibility. It all starts here, like taking your grip on a golf club or tennis racquet — you must get the first step right to ensure your chances of success. To create the trusted connections you need in order to lead with real influence, you must first pass the authenticity test of your followers.

'When Am I the Most Authentic?'

Ask yourself: "When am I the most authentic?" The likely answer is when you are with family and close friends — the people with whom you can let down your guard and allow your true self to emerge.

What do those "authentic" moments have in common? *There is nothing at stake*. Your friends and family already know who you are, so being yourself with them has no unforeseen consequences. They know you aren't perfect, so you aren't obliged to be. They like you as you are and they wouldn't want you any other way. When you are with these people in your life, you believe you are already inherently "good enough" to hold your place in that family or that friendship. You aren't "trying out" anymore — you made the team and you act like you know that. You trust yourself completely. There is no doubt in your mind that you are wholly and completely qualified.

These examples from the comfort of our lives with friends or family also illustrate the quality of the connection and ease of dialogue with others that we feel when there is no temptation to be someone we are not.

When Something Is at Stake

Although being ourselves authentically comes easily in most personal life settings, it is at times difficult as a leader on the other side of the same reason: When you are leading an organization, in the situations that test you the most, *there is usually something at stake* — for others and for you. The outcome of most leadership interactions has a consequence to everyone involved, and it is in your hands. These are the stressful times when you must have the courage of your convictions and be true to yourself in every way. These are the circumstances that challenge us to do the right thing even if it feels difficult, risky or uncomfortable and, in the same moment, tempt us to say something that just seems easier at the time.

Knowing who we are at the core is a project of awareness, courageous introspection and thoughtful reflection. The inquiry we must embrace is: *What informs and creates our capacity to lead with real influence?* Surveys tell us we are informed by our own personal reflection — and it takes real courage to own the unvarnished truth about our lives and our past. We are also informed, in a profound way, by understanding how others perceive our leadership behavior. This requires a tolerance for unfiltered feedback that few leaders have. ●

Being Trustworthy: The Consistency of Integrity

There is absolutely nothing more important than a leader's trustworthiness. As anachronistic as it may sound in the 21st century, men and women whose word is their honor, and who can be absolutely trusted to be fair, honest and forthright, are more likely to command the respect of others than any other type of person.

Safely Successful

Trust is arguably the most important element of organizational effectiveness. To attempt to achieve the goals most organizations strive for without a culture of trust is not impossible, but it is immeasurably more difficult and it only adds to the formidable challenges inherent in the market. Leaders must initiate the trust-building process with their own commitment to trustworthy behavior. The two main points of this topic are: What is the fundamental purpose of trust and how do leaders build trust in organizations?

What is the essence of trust? Trust is about safety. The presence of trust, in organizations, creates the feeling of confidence — a secure knowledge that our behavior, our work and our performance will be evaluated in an objective, rational and consistent way. It means we need not fear a subjective, arbitrary or personal attack that would threaten our reputation or stability within the organization — or worse, our self-esteem. We can then manage ourselves accordingly. It is the comfort of knowing we'll be treated fairly if we simply do the right thing. What solidifies this feeling of safety is experiencing it consistently, to the point where it is *predictable*. We can count on it. Then, and only then, are we freed up and fired up to do our best work.

There is a primal, biological need in all of us to feel safe — physically, emotionally and professionally. When we don't feel safe, our natural response is to focus energy toward a showdown with the perceived threat — and our attention on whatever scares us will increase until we either fight or run in the other direction, or the threat diminishes on its own. It will certainly distract us from what we cared about before we got scared.

How do we build a trustful place for our followers? Most important, as Barry Posner writes in *Leadership Challenge*, as a leader, when it comes to building trust you must "go first" — you must *model the way*. Being trustworthy creates trust. Don't wait for others to demonstrate their trustworthiness for you to trust them. That is a silly game of cat-and-mouse that can go on indefinitely with both parties waiting for the other to earn their trust. It is

the leader's job to step up and start the process by granting trust up front and allowing others to earn that trust later through their behavior. Leaders take the risk. That is why they are leaders. ●

Being Compelling: The Commitment to Winning

Authenticity and trustworthiness create the basis for productive and committed relationships. These first two virtues are necessary but insufficient to create committed followership. Above all else, the thing that defines leaders is that they have not just friends or admirers — they have followers.

To be willing to act of our own free will and choose to follow someone, we must experience something distinctly different, something more than the feeling of being "inspired" or "safe." We must feel *compelled*. Almost any version of success requires committed *action* toward goals. And action requires teams of people assembled around leaders aligned with a shared, bold vision. Compelling leaders create a following that is different from one of "believers" (those are for gospel preachers and spiritual teachers); leaders find and inspire followers who commit not just with their mind or hearts, but also with their time and energy.

We followers are compelled by a cause. This starts with a vision that expresses a substantial commitment in tangible ways. Leaders must paint a picture for those they wish to enroll — a vision of what winners will look like and how participants can contribute their talents in the pursuit of that vision and share in the ultimate success. From the perspective of those who follow, the message is "This vision has a place for you and I want you involved in this project."

If you ever doubt the power of a cause — consider Lance Armstrong's massive success with Livestrong. There are dozens of worthy and compelling campaigns and programs to raise money for cancer research — great organizations like the Susan G. Komen Race for the Cure, the V Foundation and others. But there is nothing to equal Livestrong for bringing ordinary people together around the *cause* with the *yellow rubber bracelet*. To wear one says to everyone that you have joined the club, for $2 or $2 million, or for nothing except your emotional and public commitment to the vision Armstrong has communicated for ending cancer, having gone through the experience of having cancer himself. The brilliance in the symbolism of the wristbands is well known and has been copied by hundreds of other causes as a surefire way to publicly show who has signed up for each campaign — and these bracelets, of all colors and styles now, serve as great conversation starters. They allow people to feel the pride of having signed on to a team that others respect.

We are compelled by leaders. By the same token, no one will sacrifice for a project, no matter how exciting, if the leader hasn't made a full and clear — and public — commitment. That commitment must inspire others to make their own choice to join and dedicate themselves to the mission at hand. ●

Great Leaders Hire People Who Are Smarter Than They Are

Great leaders earn that title by having the self-assurance to *always* do their very best to hire people who are smarter than they are — for real. They are secure in their role and their leadership equity, and are genuinely not threatened by talent. On the contrary, they crave having world-class people, knowing that the bar goes up each time a super-talented person joins the team.

PART TWO — COMPETENCE: LEADING ON THE FIELD WITH SKILL

Every business is a "people" business, because every business — indeed, every meaningful endeavor — is composed of human beings taking action in an organized manner to accomplish the mission in front of them. *There is no substitute for talent.* To be even more accurate — there is no substitute for the best talent you can find and hire. It may seem obvious, but let's review this idea. Why do we want the best talent?

For starters, we know that most organizations are limited by — or propelled to success primarily by — the quality of the people on the team. From an NFL football franchise to a business of any size, shape or flavor to a nonprofit or community organization, the best teams separate themselves from the pack primarily by having more capable, talented and committed people.

Seating Chart

Nothing changes the results in a functional role faster or more dramatically than getting the right person doing the work. A job turns from a liability to an asset as soon as the right person takes over. As the great business writer Jim Collins reminds us in *Good to Great*, we have to "get the right people in the right seats on the bus."

What distinguishes the kind of talent that can move the needle in a different way than most other people can? Talent follows the normal Pareto 80/20 principle

— 20 percent of your team produces 80 percent of the organization's value and ability to execute competitively. The shorthand for this group of people is "value creators" or the "best and brightest." Don't wait for an opening to bring this kind of talent on board. Find the people and make a spot for them. You'll never regret hiring the best people you can find.

The Leader's Agenda Regarding People

What is the rest of the leader's agenda regarding people?

- Hire the best.
- Focus on "fit."
- Make a team.
- Lead that team to victory.

Unusually excellent leaders take hiring seriously and personally. They are involved in the *design* of the hiring process, including the interviewing process (which most people have never been trained to do properly), and they pride themselves on personally meeting every candidate headed for an offer, if it is humanly possible to do so. They are on the hunt, constantly and relentlessly, for talented people — using every resource available to (1) identify the people they should know and (2) get to know them. They are always networking and always selling their company — meeting people who could lead them to the superstars, whether they are active in the market or not. ●

Leading Strategy: Ideas to Plans

In the real world, under the pressure of command, leaders regularly confuse or collapse the distinctions among leading people, strategy and execution. They sometimes assume that because they have the right people and a distinct goal that they can simply "flood the zone" and find success. Or they believe that a single-minded focus on day-to-day tactics, yet another "two yards and a cloud of dust," will eventually deliver them to their destination.

But *strategy* is one essential leg of the three-legged stool that is *competence*, and it is equally as important as the other two disciplines. A successful performance is not just the musicians, nor the playing of the music; it is also the sheet music on the stand — the *plan* for the notes and chords that allows talented people to make it sound so good.

Process to Plans

Unusually excellent leaders appreciate the power of a plan. They realize that even the best athletes need a playbook, a game plan or a pre-shot routine to ensure that their talent shows up on the field. Surgeons, pilots, lawyers and practitioners of any profession where the work is complex always have a plan — even if the task is something they've done hundreds of times before. They also know that great plans are created from accurate and complete data gathering, a rigorous analytical process and the collaborative efforts of experienced and wise people. And the most important thing they know is that although the *content* of brilliant plans is the domain of sophisticated data and creative thinking, *the art of leading strategy* is a *process competency* — a skill that great leaders continuously sharpen. They realize that great plans develop from vigorous conversations, among the best people they can gather, and are then endorsed and driven from the top. They know that a good plan must capture the best ideas of the organization in innovative and bold ways, mostly from the bottom up. Most of all, they understand that without a plan to win, they are left with only a plan to lose.

That said, a plan — no matter how brilliant — is not a strategy. A strategy is bigger than a plan. A plan is an intellectual construction that combines the best information that can be gathered about what is so now, thoughtful predictions about what will happen in the future and a model for how to succeed in light of those conditions. A strategy includes this plan but also accounts for *how* we do things, not just *what* we'll do — and it accounts for what happens when that plan collides with reality. ●

Leading Execution: Action to Results

Execution is about results. At the end of the day, leaders are held accountable; they get paid to produce the agreed-upon results.

Execution is where the rubber meets the road, the snap is taken, the play is run and the shot is hit. There is no score until the game starts. At that moment, preparation yields to the event itself, and winners and losers are determined. There is no place to hide.

That isn't to say that execution stands entirely alone (this fact is forgotten by many leaders). In most organizations, every day is a game day; in fact, most days are — from the staging of the next action to the ongoing recruiting of the right talent to the hurried training that takes place on the sidelines based on new moves by the competition that have just been spotted.

Most of all, the strategy process is still active long after execution has been initiated — in fact, it can't even

truly begin until that moment, when the *plan* is at last tested by the reality of the field of play.

Measurement and Feedback

The first two factors that make execution distinct from the domains of people and strategy are *measurement* and *feedback*. Planning is the province of statistics and probabilities: What is our market size? How well does this player hit against lefties? What are the chances that this plan will work? In contrast, as we put the game into play, we start to get feedback from the actions we take and we begin to get some measurement of progress. Execution, however, lives on the actual performance data coming in: What's the score? How are we doing in the Japanese market? How do bookings compare to billings?

The other significant feature that distinguishes execution from the other steps is the presence of time — the game *clock*. There are the performance and production time frames built into the calendar — the week, the month, the quarter and the fiscal year. Other leadership processes have their own internal clocks, but none are so driven by external deadlines as execution.

Planning, of course, has its own deadlines, but they are rarely precise and the consequences are usually not fatal. By comparison, miss a product introduction date — as Microsoft did (by nearly two years!) with its Vista operating system — and the entire enterprise (or in the case of Vista, the personal computer industry) can be nearly wrecked. ●

PART THREE — CONSEQUENCE: CREATING A CULTURE, LEAVING A LEGACY OF VALUES

The ability of leaders to communicate effectively is perhaps the highest leverage activity in their set of responsibilities. When they do it well, things work smoothly and effectively. When it is done poorly, countless problems come out of the woodwork, all in response to the lack of good information available. Leaders must embrace this work and commit themselves to a high level of proficiency over the length of their careers as professionals. Communication is *essential* to leadership effectiveness.

Talking Trust

Leaders always struggle in large group settings to get really difficult issues out on the table and to establish an environment of truly open and honest communications. And we've all seen what usually happens: the leader asks, "Are there any questions?" and is met by dead silence. This is exactly the opposite of what most leaders want.

One of the best solutions I've seen was devised by David Pottruck, former CEO of Charles Schwab. He appreciated that whenever there's power in the room there is also a great reluctance to ask questions. So, he decided, the only solution to get things flowing was to ask the tough questions himself.

And that's what he did. Standing in front of a large company meeting, he dramatically jumped off the stage and ran into the audience. There, he asked the empty stage the one question that they all wanted to ask but were afraid to: "Why aren't we getting bonuses this year?" Then he ran back up on stage and gave a thoughtful, honest, complete answer — proving that he was indeed willing to discuss the tough issues with everyone in the room — and, in fact, wanted to.

That broke the ice. Questions began to emerge — first the safe ones, and then some tougher ones as the team warmed up and realized this was a safe place. Then, when one audience member asked a truly brave question, another one that everyone else was reluctant to ask, Pottruck thanked the employee and then asked the audience to give the man a standing ovation — thus stripping away much of their fear of speaking up.

It is Pottruck's experience and belief that the content of what he says as a leader is rarely remembered; what is remembered is how his words made listeners *feel*. In other words, although leaders usually focus on the information content of their communications, often what matters much more is the emotional content of that message and the connection — the leader's empathy with the audience. ●

A Leader's Decision Making: Values-Based Choices

The final judgment of our leadership expertise will depend, more than anything else, on the quality of the decisions we have made, in aggregate, over the course of our careers as leaders. Leading decision making is, in essence, leading the conversation that improves the quality of those decisions.

Your primary job as a leader is not to make most of the decisions that arise every day, but to lead in such a way that the people who *do* make them make better decisions than they would alone.

That much should be obvious to the reader. After all, if strategy is the adaptation of planning to the real

world of competition and conflict, then decision making is the real-time response of leadership to the twists and turns and unexpected challenges of execution. Sure, leaders also make decisions during the planning process, and sometimes those decisions can be decisive, but it is the series of decisions made under pressure, in the heat of battle, that makes careers and sets legacies.

When you look at the lives of great leaders you admire, aren't those game-time decisions the ones you most admire and remember — and isn't that the very definition of legacy?

If we examine decision making — both the art and the science — there is a structure to consider and a number of powerful and useful principles to keep in mind.

Decision Structure

The structure of leading decision making appears simple on the surface but, as with many things, the devil is in the details. The following are the categories and the *sequence* of thinking to consider as you approach this extremely important competency:

What? What exactly are we deciding?

When? When should, or must, this decision be made?

Who? Who decides?

How? How will the decision be made?

It is obvious that "what" is the starting point — we need to know what, precisely, we are deciding. However, you may wonder why I positioned "when" ahead of "who" or "how." Quite simply, the perceived urgency of a decision often determines both the choice of who makes it and, accordingly, how it is made. And we usually know the "when" as one of the first aspects of the decision at hand. If something is truly urgent, and there is someone nearby and available who is appropriately qualified to make the decision, it probably makes sense to let that person decide, even if he or she is not the absolute best person if the urgency was not high. If there were more time, it might be possible to route that decision to someone even more qualified to decide.

The urgency of a decision can certainly be dramatized or overblown, and there are certainly more false alarms than legitimate emergencies. Nonetheless, knowing the true time frame in which something should or must be decided will certainly shape the choice of who decides and how the decision gets made. ●

A Leader's Impact: The Transfer of Influence from Leader to Follower

Of all of the issues of leadership and legacy, none is more complex, elusive and unpredictable than your work with people — the relationships, transactions, conversations, interactions, conflicts, shared victories and all the rest. These are the memories that have the most juice for most leaders and most followers.

Even though you can't fully know the ultimate impact of your leadership, you can learn to imagine or even predict that your legacy will be based on how you are leading today.

Your influence as a leader is a function of leading authentically, present to the moment, doing your very best with the challenges in front of you and paying no particular attention to your imagined assessment of your behaviors at some point in the future.

Whisper Campaign

The two most obvious ways that leaders have an impact, and ultimately create a legacy, are through their *decisions* and *successes*.

The third, less obvious factor that will affect a legacy is *reputation*. This is what people think and will say about you — and there is almost nothing you can do about it. You may flatter, buy or intimidate people into a polite silence for a while — but eventually, especially after you are gone, nothing will constrain them from expressing their true feelings about you. And when that historian, doctoral candidate or biographer comes around, you will pay for every moment of cruelty, indifference or lack of empathy you had as a leader.

What to Do

So, what can you, as a leader, do *while* you are leading, real-time, to create the look-back talk that you'll be proud of?

1. **Live the Nine Essential Skills.** If you concentrate on those things, with one eye cocked toward the ongoing state of your reputation, you can be pretty sure that your legacy will be a good one — even if you ultimately fail to reach your goals.
2. **Pay Attention to Change.** Change requires, at a minimum, a little empathy and a lot of patience. Don't attempt to deny or resist change — just help people get through it better than they could if left to their own devices.
3. **Get More Curious, and Smarter, About Human Nature.** If you can keep in mind that most basic states of emotion are simply a function of one's relationship with "what you want," then

the first great question you need to ask your subordinates as a leader is: *What do you want?*

4. **Give Feedback.** It is the best tool you have to connect, add value and create relationships different from the usual arm's-length management relationship.
5. **Celebrate Success.** Take the time — officially endorsed and led by you — to celebrate your team's accomplishments and victories.
6. **Respect Life Outside of Work.** What is important for you to remember as a leader is that your people do have private lives outside of work, that those lives are important to them and that, as a matter of principle, you must respect those lives.

Afterward

Leadership is a *mentality*. To lead others with influence and impact, you must *think* through as many issues as you can, from this point of view: as a *leader of people*. There is always a business or strategic view of a situation, and that is a useful perspective. But most of what we decide or communicate as leaders has a specific leadership consequence somewhere, at some time. Holding the *mindset of leadership* as your perspective, when you are pressed into service as a strategist, battlefield commander, negotiator or any other role that demands your attention on a given day — will improve the quality of your choices as assessed by those you lead. Double check to make sure you've considered every situation from the context of leadership before you finalize any decision.

Leadership is a *practice of behaviors*. The crux of leading is doing the right things, doing them well and doing them consistently. Behavior is the basis for both culture and reputation, and is a direct reflection of our personal values, revealed over time in small acts. So, while you can learn all the complicated or esoteric theories or concepts of leadership, your impact ultimately rests on your willingness and ability to do what needs to be done, do it with skill and professionalism and, of primary importance, do those things consistently over time, in both easy and difficult circumstances, even when you don't feel like it. You will be judged, in the end, by your actions.

Leadership Is a Noble Profession

Leadership is a *noble profession*. It is a mission of service to others and of achieving, through people, those things that move the world forward. To the untrained eye, leading may appear tremendously egocentric, but it is really so much more about those who have trusted you to lead them. Leaders who realize this fact early on are set up to win in a very different way than leaders who live in the illusion that it is all about them. It is a journey of learning that begins with self-awareness and continues throughout a career of discovering what it is about you that others see as authentic, trustworthy and compelling.

Finally, leadership is a *passion*. It is not a "job" and it is not a career for everyone. There is no shame in declining to lead if it is not for you. Leadership is a choice. It is a deep, burning desire to engage with people and rally a community to achieve greatness. That passion is both an attribute and an asset of leaders, as it creates a virtuous cycle of hope and belief, and results that benefit everyone involved. Leadership can be difficult, thankless, frustrating, maddening work at times. It is only the passion of leading on the field — the thrill of looking other human beings in the eyes and seeing their energy, willingness, trust and commitment — that makes it all worthwhile, in a very quiet, private way.

Leadership Occurs in a Conversation

Much of what we experience as leadership actually occurs in a *conversation.* Conversations help ideas come to life and enable visions of the future to take shape and form. Conversations create meaning and context — they explain the things that confuse people. Perhaps most important, conversations make things happen — they help create direction and provide the inspiration for commitment and action. When something is not as you want it to be, chances are good that there is a conversation you need to have to fix it. The bottom line is that we expect and need our leaders to be superb communicators. This means we need them to craft the right messages, deliver them skillfully and effectively, and listen with engagement and empathy.

THE SUMMARY IN BRIEF

True leadership involves creating a vision, communicating it fervently, and holding people accountable. A compelling vision is the answer to the big question: what is this company about, and how are we going to achieve our goals? Being a visionary doesn't automatically make you a leader, but leadership without vision isn't leadership. A leader's vision must be communicated to their team or organization; otherwise, it's just words on a wall. And a leader must hold their people accountable to live the company's vision. This is hard sometimes, but accountability is an act of love.

Vision to Results: Leadership in Action is intended to offer a solution to the corporate world's crisis of leadership, which manifests in leaders too often valuing caution over everything and companies acting in ways designed to protect the status quo at all costs. Author Jim Fischetti, an ultra-successful leader, innovator, and consultant, has spent four decades refining his notions of what makes a great and transformative leader. He believes that the biggest vision in the room always wins.

IN THIS SUMMARY, YOU WILL LEARN:

- The importance of a compelling vision to any organization.
- How to keep your vision from being just words on a wall.
- How your vision and empowerment of your people are connected.
- Why you should think big when crafting your vision!

The Crisis In Leadership

We live in a time of corrupted leadership. Not corrupt, necessarily, but corrupted. Leaders who aren't accountable. Systems designed to protect the status quo at all costs. These are symptoms of a larger disease, and they are existential threats to the success and longevity of any organization. The common thread running through this crisis is vision. Organizations need a leader with compelling vision who is dedicated to spending lots of time communicating that vision to their people.

One hallmark of the corrupted leader is that they avoid danger at all costs. Gridlock and stasis are the inevitable result. Perfection is an unattainable idea, and failure is underappreciated. It is in failure that growth occurs. Unfortunately, we idolize the image of the infallible leader, and fear of failure leads to paralysis. Leaders who worry about failing are leaders inclined to do nothing in the first place.

The need for instantaneous results has exacerbated the problem. With social media and wall-to-wall media coverage, there's no anonymity to act these days. Leaders have no room to figure things out, so deficiencies in vision inevitably lead to colossal public failures of the kind that don't easily lend themselves to correction. This isn't a call for less transparency. But there needs to be space to be wrong or adjust decisions that don't work out as planned. Without it, leaders take the most cautious route possible—and greatness rarely results from meekness.

There must be mechanisms for holding the leader and the led accountable for achieving the mission. The price for failure to hold people accountable to the vision can be steep. Accountability is a safeguard against failure and an act of supreme care. Too many leaders lack the intestinal fortitude to hold people accountable, and it shows in every public arena.

Real leadership requires a certain kind of strength—the strength to do the right thing, not the thing that necessarily feels the best. Leadership is not for the weak of mind or character. More of us should be more committed to removing bad performers, negative actors, and even mediocre people from our organization more quickly.

It All Begins With A Vision

The most common problems with establishing a vision often arise from within.

A vision that isn't communicated isn't a vision at all. Too often, leaders think there's got to be more to it—there has to be a grander scope to this earth-shattering activity of being the head honcho. They don't understand one key idea: success is simple; it's just not easy.

An insecure leader often needs reassurance that no one else could do the job but them. Complexity is a way of cementing the leader's importance to the organization—but there's a cost. This type of leader creates a role for themselves that's nearly impossible for anyone but them to perform. Others are both baffled by and excluded from the leader's vision.

What is a vision? A mental image of what the future will be or could be. It's rare for the person with nothing but financial motives to achieve massive success. Making money is great, but it's hardly the basis for a compelling vision on which to base the hopes of an entire organization. Compelling visions lead to compelling outcomes.

Great Visions, Communicated

Leaders have to achieve absolute clarity is delivering their vision. Muddled thinking at this stage of the process will lead to inevitable confusion among your people.

Conciseness is important, too. Being concise brings rewards beyond taking less time—a concise vision is clearer, and a clear vision may be the difference between people aligning with your mission and their discarding it as more white noise in the midst of a day overflowing with it. Being concise will push aside the unnecessary, so people won't get sidetracked with things that are outside the goal.

Be consistent in communicating your vision. Your message should never change, no matter the audience. And consistency is also about your actions being in alignment with your words. If your actions don't support the articulated vision and mission, then that vision is just a bunch of words on a wall. Communicating a vision is not a one-and-done thing. Be sure to communicate via multiple methods.

Connecting The Dots

An ever-present danger is that visions become misaligned. Priorities change and the focus gets blurry, and once the leaders and the led are no longer aligned, things can get tricky.

When everyone in an organization connects through a shared vision, one of the interesting results is that these connections tend to flatten hierarchies. The worth of each per-

son is directly related to the fact that each of them plays a necessary role in executing the vision. In a culture in which every member of an organization is equally important to achieving its mission, leaders can afford a vibrant sharing of ideas and healthy discussions.

The secret to ensuring that staff is connected to the vision is to create measurables that go beyond basic statistics. Get people to regularly tell stories showing how they're carrying out the vision.

Having fun is underrated in ensuring that staff is connecting to the vision. If you as the leader aren't the jovial type, designate a "fun captain" and charge them with making sure people are having fun. Offices in which people aren't having fun are also most likely offices that aren't hitting their goals. People who are willing to laugh and have fun are people who feel safe where they work and likely feel connected to their leaders through the shared vision for the company.

Fear is a sign of a dysfunctional organization. Workers who live in fear of disagreeing with the leadership will keep all their best ideas to themselves. Worse, they might decide against pushing back against the leader's mistakes. Disagreements mean employees feel safe.

Connecting with your people through the vision brings out their best work. If your vision includes space for your people to expand their skills, explore their interests, and bring their best ideas to the office, you will maximize the chances of success.

The Biggest Vision In The Room

Visions need to be big enough to move people to action and to encompass the individual visions of all the people in the organization.

One of the hallmarks of any big vision is that it is also a little outlandish. We have always loved visionaries who tilt at windmills. The vision should be so outlandish that it causes people to pause. Audacity is attractive. A big vision that's also a little bit crazy will be a siren song to the kinds of people who are looking to connect to something larger than themselves. The why of your vision is important. Ideally, your why needs to connect your vision to a larger goal in order to resonate with people.

A powerful and compelling vision, communicated often and connected to leaders and the led, is like rocket fuel for achieving massive results. One ingredient in formulating this propellant is emotion. Logic will get you only so far. Emotion is the thing that makes people act.

Highly successful people know when to say no so they can focus their energies on fewer things. This is counterintuitive because it may cause some people to not like you, but it's the essence of great leadership. Saying no protects your vision. It keeps you from getting sidetracked.

There is nothing as important in empowerment as how one finds, nurtures, and rewards the people you bring into an organization.

Empowerment

There is nothing as important in empowerment as how one finds, nurtures, and rewards the people you bring into an organization. These people bring the talent and drive to the task of making your vision a reality. In this context, empowerment is made up of five components: hiring, investing, releasing, rewarding the talent, and letting the talent reward you.

Hire talent that's going to get the results your company needs and invest in that talent to set your people up for success. Then, most importantly, release your talent into the world and allow them to own it. Reward talent. Financial opportunity is important, but there are other rewards too. Bringing additional resources to bear on the work at hand is one reward. If you can make the work component of your employees' job easier, more efficient, and more productive, that is reward in itself. Training opportunities are also a great reward. Finally, let the talent of your people reward you. The natural result of all the work and investment you put in should be getting results through your people.

Empowerment is a two-way street. When leadership empowers the led to accomplish their shared vision, there is an onus on the led to take that empowerment and run with it. To know if they've done so, inspect the work of the people you've entrusted to get it done. And act quickly when it

becomes clear that the vision is not being accomplished.

Empowering people can lead to detachment. The worst thing you can do is become a seagull leader—the type of leader who floats around up in the sky all day, swooping in at the last moment to defecate on people. The result is a lack of ongoing consistency. Even if the leader's actions are justified, people are going to stop listening after enough squawking and defecating. Course correction is best accomplished on an ongoing basis, not in intermittent bursts of displeasure and anger.

Accountability

When accountability is lacking, problems and issues arise constantly, forcing leaders to play Whack-a-Mole, smacking down problem after problem. This is inefficient.

Leaders need to remind themselves that accountability is not about simply tracking achievement and execution. Keeping an eye on your people is fundamentally an act of kindness toward them and a demonstration of your care and concern for them.

The leader fosters an atmosphere of accountability through four key attributes: culture, commitment, standards, and expectations.

Culture arises from the answers to these questions: What does your organization stand for? What is it like to work there? What types of people do you seek? It is imperative that every member feels committed to the organization, from the top to the bottom. Culture drives the standards to which you hold your people. The organization either has high standards or none at all. Pair the company's standards with clear expectations.

Holding people accountable leads to the occasional difficult discussion. Leaders must have the guts to confront a person in the company when their performance demands it if they care about that person. You don't have to relish the idea of holding your people accountable, but you need to do it. This builds your relationship with them.

Consistency is key to accountability, which is about offering weekly feedback. Monitoring your direct reports' performance and giving consistent feedback lets them know you're aware of their existence and that they're doing the job well.

The accountability process can be broken down into three categories: set expectations, track and monitor results, and give consistent feedback. The best team of any sort will always win over the team with the single best player. (Well, almost always. There's only one LeBron James.) A great leader knows that any results they generate come through the people on the team.

Your goal should be to set your team up for success in such a way that they can succeed without you. To do this, empower, equip, and encourage your people.

Conclusion

The biggest, most compelling, well-communicated, and successful vision is not a lottery ticket. Putting the principles to use takes lots of hard work and dedication. Any results you achieve as an organization will be through the work of your people. Your personal greatness is almost irrelevant.

The insight that vision and communication are the pillars on which everything else is built in your organization is key to your evolution as a leader. If the biggest vision in the room always wins, this insight is the biggest vision of them all.

Jim Fischetti is a leader, innovator, and consultant who's spent over 50,000 hours developing leaders throughout corporate America. He's spoken to more than 60,000 people and helped one organization increase sales from $4 billion to $13 billion in just three years. Jim has spent four decades refining his notions of what makes a transformative leader and is committed to helping others understand the importance of vision in their lives outside the corporate world.

THE SUMMARY IN BRIEF

Author Todd Cherches relies on a single phrase as the foundation to all of his thinking. Visual thinking and visual communication have the power "to communicate, to innovate, to manage, and to lead."

When we communicate in this way, we increase the attention, comprehension, and retention we get from others. As a leader, you can leverage this by inviting and inspiring those you lead to see your picture of the future and follow you confidently into it.

In ***VisuaLeadership***, Cherches teaches tools and techniques meant to "equip, enable, and empower" leaders to improve their efficiency and effectiveness, to maximize "performance, productivity, and potential," and to "open your eyes to a world of new possibilities and new approaches" in becoming the visionary leader you need and desire to be.

IN THIS SUMMARY, YOU WILL LEARN:

- Four ways to get people to see what you are saying as a leader.
- How models allow you to gain clarity, direction, and focus.
- How powerful the use of metaphors and stories are in leadership.
- Ten tough questions every self-aware leader needs to be able to answer.

What is VisuaLeadership?

VisuaLeadership exists at the point at which visuals and leadership intersect. It is the art and science of applying visual thinking and visual communication tools, tips, and techniques to manage and lead yourself and others.

Here is a formula that sums this idea up:

VL = (VT + VC) x (M + L)

VisuaLeadership =

(**Visual Thinking + Visual Communication**)

x

(**Management + Leadership**)

There are four ways to get people to see what you are saying as a leader. Each of them are employed for the purpose of conceptualizing and/or communicating.

Visual Imagery relies on things like videos, pictures, doodling, emoticons, shapes, logos, body language and more.

Mental Models use frameworks like tables, graphs, charts, diagrams, and matrices.

Metaphors compare things that are unlike one another and can be drawn from an endless array of possibilities including sports, art, nature, animals, and business.

Finally, **Visual Storytelling** harnesses the age-old power of storytelling with anecdotes, cautionary tales, drama, and comedy.

To provide clarity and solidify understanding of these ideas, here are a few questions that illustrate the use of visuals in real life:

Can you think of ways that use visuals such as maps, drawings, or photos to gather or learn new information or use those same visual tools to communicate your ideas, plans, or emotions?

Do you apply mental models or frameworks, like pro and con lists or flowcharts to "help frame your reality, innovate, make decisions, and solve problems?"

Metaphors and analogies are used ubiquitously to communicate with one another for the purpose of understanding or explaining new things. Can you think of a few?

What are some of your personal "go-to stories, anecdotes, lessons, and examples" you pull out regularly to illustrate or make your point?

When you take the time to consider how frequently you already rely on visuals in daily life to understand and communicate, it is easy to see how they can be intentionally applied to enhance your effectiveness as a leader.

Visual thinking and communication enhance leadership effectiveness because we understand at a deeper level and recall what we have seen far more clearly when we have been presented with the information visually.

Leading with Visual Models

Visual models are frameworks that can be incorporated into your work as a leader, helping you make decisions, weigh factors, and gain consensus. Models help us take complex information and simplify it so that we can more easily understand it. They clean things up for us mentally, removing the messiness and complexity of a situation and place things within a framework. With a clearer understanding of the information being presented, we can make decisions that are informed and intelligent. Leaders can help others get their own minds around a new concept, plan, or challenge with the assistance of a visual model.

The different types of models a leader can use are limited only by the imagination. The following are just a few of the 18 models that can be used to be more effective as a manager or leader as well as to boost productivity.

ABC Decision-Making Tool

One of the preferred models is designed for decision making. There is no such thing as a perfect decision. Decisions cannot ever be absolutely right or wrong. Rather, we can take the information that we have available to us and make the best decision possible. But that is sometimes easier said than done.

When faced with a decision as a leader, the "ABC Decision-Making Tool" can help. This model breaks the decision-making process into clear, visually-displayed chunks, organized and considered in three parts.

Issue: The first part requires you to describe the problem or issue you are facing.

Options: The second part asks you to narrow your options down to just three viable solutions to the problem.

Decision: The decision is made in part three based on

CAP is about having the **c**onfidence, the **a**ssertiveness, and the **p**resence to speak up and to speak out.

your understanding of the situation and your interpretations of the factors involved.

Put Your CAP On

Another recommended model is all about assessing your confidence, assertiveness, and presence and is called, "Put Your CAP On."

The main difference between those who succeed and those who don't can be summed up in those three words: **confidence, assertiveness,** and **presence.** Confidence is the degree to which you believe in yourself, Assertiveness is your ability to express yourself, and Presence is how you are viewed in the eyes of others.

At the core, CAP is about having the confidence, the assertiveness, and the presence to speak up and to speak out. To try new things. To take chances and risks. To fall and to fail. To fail and to learn. To seize opportunities and to act before the window of opportunity slams shut on your fingers.

The Passion/Skill Matrix

If you love doing something, even if you're not very good at it, you're going to spend time doing it in the hope of getting better at it or because it is fun. Similarly, if you're good at something but don't love doing it, you don't really *mind* doing it. What about something you love doing *and* you're good at? Now you've hit the magic bullseye: your passions and your skills are in alignment.

In almost every job, there are going to be aspects of your role that you enjoy doing and those that you don't. There are things that you are good (or even great) at, and things that you are not. The key to success lies in finding a position that strikes the right balance.

That's where looking at yourself through the lens of the Passion/Skill Matrix models comes in handy. By breaking all of your job-related tasks into the categories of good at, not good at, like doing, or don't like doing, you can you identify your:

- Sweet Spot: things you like *and* are good at doing
- Growth Zone: things you like but aren't good at *yet*
- Default Zone: things you don't like but are good at
- Failure Zone: things you don't like *and* are not good at

If you sit down and reflect on your current role in this way, you can dramatically enhance your potential for success.

Power Dial

One of the reasons we hesitate, procrastinate, or fail to take action is because we feel as if we lack power. When out of work, stuck in a dead end job, or struggling with getting others to buy in to our ideas can make it seem like we have no leverage at all. But you have more power than you think!

Power can be described as the ability or potential to allocate resources, make and enforce decisions, and/or impact and influence others. You can turn up your potential power into performance to maximize your productivity and produce results.

Your power comes from three sources:

Personal: who you are, what you know, what you can do

Relational: who you know and who knows you, and

Positional: your role, status, or position.

Each of these sources can be leveraged, developed, and grown to boost your confidence and increase your influence.

Leading with Visual Metaphors

Whether you are conscious of it or not, you encounter countless uses of metaphor in your daily life each and every day. News programs, blog articles, books, social media posts, conversations, and more are peppered with them, and for very good reason.

What Are Metaphors?

Metaphors are simply figures of speech in which we use one thing that is usually completely unrelated to the topic at hand to explain something else. When we say something was "ice cold" or "on fire" we are using the words ice and fire to convey an idea that doesn't actually have anything

to do with ice or fire itself, but you immediately understand what the meaning the message is delivering. In this way, metaphors are an extremely effective and memorable way of communicating a central idea.

> The metaphors we encounter far and wide in real life show us what a powerful tool they can be in communication.

The Power of Metaphors Made Clear

This paragraph, for example, shows how prevalent and effective metaphors really are:

If I were to tell you that this book covering visual thinking and visual communication is *rooted* in the idea that thinking in pictures will help you to be a more effective leader, that I wanted to *plant this seed* in your mind by providing you with numerous examples as illustration, and that if you *branched out* into this area, I would be willing to *go out on a limb* and bet that if you start incorporating visual imagery, models, metaphors, and stories into your repertoire it will immediately *bear fruit*…I think the power of metaphor, in leadership and in life, even if you have never really thought about it before, will become immediately apparent.

The metaphors used in the previous statement, and those that we encounter far and wide in real life, show us what a powerful tool they can be in communication. Metaphors can:

- serve to make the unfamiliar familiar
- the intangible tangible
- the abstract concrete
- the complex simple
- the confusing clear
- and the invisible visible

You do have to be careful, however, that your use of metaphor doesn't cause confusion instead of clearing it up.

You shouldn't, for example, throw out the metaphor of sounding like a broken record to a group of college students who have likely never heard a vinyl record at all, and would, therefore, most likely not be able to relate to what a broken one might sound like. In that case, your message will get lost in translation, so to speak.

No matter what topic, anytime we are receiving new information we rely on our existing understanding of similar topics or our experiences to make sense of the new ideas. We line it up relative to what we already know and understand, as well as where and how this new information fits into our already-established mental map.

Metaphors can bridge the gap between present understanding and future work and challenges. Leaders who leverage the power of metaphor will find that those who they lead will be better equipped to rise to the challenges in your workplace now and well into the future.

Metaphor-Based Practices

Here are just a couple of the 14 metaphor-based practices that can help you lead more visually:

Elephant in the Room

One metaphor-based practice is related to confronting the "elephant in the room" anytime your team or a group you are leading is distracted or disengaged because of something unrelated to the topic at hand or that came on suddenly and carried a shock factor.

Take the example of a group that was hired to deliver a management training series. Shortly before the six-part series was set to begin, the managers who were going to attend learned that their company was being sold.

Obviously this weighed heavily on their minds. Many of them were unsure if they would even be employed by the company following the acquisition, which understandably distracted them from the training session in front of them. The acquisition was the "elephant in the room."

When you encounter a big elephant in the room, resist the temptation to ignore it as if it will go away on its own. Instead, put the spotlight right on it and work together to decide what should be done about it.

Making the Bed

People generally fall into one of two camps. There are

When we tell stories, we share a piece of who we are, what we think and feel, and what's important to us.

those that make the bed every single day without fail and those that don't see the point. After all, you're just going to crawl back into it and mess it up at night, right?

The problem with this daily struggle is that the dread, avoidance, and distraction of not making the bed takes up real space in your mind. It needlessly adds to the mental toll you are holding in your mind, negatively impacting your energy levels, enthusiasm, and focus.

The solution is clear. Just get up and make the bed. And no, we are not just talking about actual sheets and blankets. Whatever metaphorical beds you are leaving unmade, take care of them and make space for more important activities and pursuits.

Black Sock Decision Making

Instead of spending valuable time and energy every single day deciding what color or pattern socks to wear, wouldn't it be simpler to only have black socks in the drawer?

The more decisions in your life that can be standardized, systematized, automated, or eliminated, to the point that you don't even need to think about them anymore, the more free your time–and your mind–will be to focus on things at work, and in life, that truly matter.

Think about areas in your life where you can apply Black Sock Decision Making to achieve better results.

The Little Pink Spoon

A great pleasure in life is to walk into an ice cream store where they will allow you to taste a few flavors with a little pink spoon before ordering your cone. Why are they willing to give away their product for free? Because they hope that by giving us a free taste, we'll end up buying more in return. You can apply this to your life, too.

As you prepare for your next interview, client meeting, sales pitch, or presentation, think about how you might give people "a little pink spoon-sized taste" of who you are and what you have to offer. And, if all goes well, they'll want all of you...with a cherry on top.

Yellow Ball Leadership

When thrown three different colored balls, a dog always brought back the yellow ball…regardless of which color she was asked to fetch. Why? Simply because she wanted to! Similarly, people tend to gravitate towards the tasks that most interest and motivate them.

The first-ever management consultant Frederick W. Taylor wrote in 1911, "People do best what they like best to do." And, apparently, that applies to dogs as well. So, for leaders, finding out what motivates your people will help you to set them up for success. And whatever that "yellow ball" is for you...go out there and get it!

Your Leadership Weather Report

What's your leadership weather report today? When you walk into a room, are you a cloud of doom or a burst of sunshine? Are you threatening or encouraging?

Your mood, attitude, and energy are contagious. From a leadership perspective, it's important to be consciously aware of how your disposition can impact others in both positive and negative ways.

Leading with Visual Stories

All human beings respond naturally to storytelling. We are absolute naturals at telling stories, too. This is true even when we perceive ourselves as not being very good storytellers at all.

Everyone Can Tell a Good Story

Here is just one of the 19 powerful examples from a workshop on the use of storytelling in leadership. One of the participants told the group that he really hated storytelling because he was "a terrible storyteller." When prompted why he felt that way, he went on to tell this terrific story about why he thought he was so bad at it. Everyone can tell a good story...even when they think they are terrible at it.

When we tell stories, we share a piece of who we are, what we think and feel, and what's important to us. And through

the power of story, we can teach, we can change people's point of view, and we can even change the world.

From the perspective of your work as a leader, the key is to find ways to use stories purposefully and strategically. Your goal is to leverage storytelling to educate people, engage them so that they continue listening, and to excite them so they will be inspired to act. Visual storytelling is all about painting a picture with words during which you are taking someone on a journey and sharing an experience in such a way that they are able to see it in their mind's eye.

Stories can be classified into a number of categories, each with its own distinct purpose. The "Cautionary Tale" is meant to dissuade your team from letting something happen to them in the way it happened to you. Similarly, the "Personal Failure Story" is shared so that you as a leader can reveal a major mistake you made so that those you lead can avoid it for themselves. And, in so doing, your willingness to share your story and demonstrate your vulnerability will result in your being seen as a more human, empathetic, and relatable leader.

Stories are a pathway to share the wisdom of your experience with others. No matter what type of story you tell, when leaders are willing to share any kind of story openly, authentically, and with vulnerability, they are able to create a climate of psychological safety. This leads to a culture of openness, collaboration, and trust and that is advantageous for everyone you lead and the organization. The lessons learned from the openly-shared stories benefit all.

Leading with Visuals: What Now, What Next

The future is never completely known or certain but savvy leaders can better equip themselves for "The Road Ahead" with visual thinking and communication. This is especially important now, perhaps more so than ever. We are living in a world that is ultra-fast-paced, full of information overload and distraction, that leads to ever-shortening attention spans.

You can leverage the power of visuals to cut through the clutter so as to capture people's attention, enhance their comprehension, and increase retention. The competencies and abilities demanded upon today's workforce are ever evolving. VisuaLeadership can strengthen your capabilities and impact as a leader, better preparing yourself and those you lead for the future.

One way to assess your future readiness in this regard is to contemplate a series of questions. This set of questions is targeted at assessing, and if necessary, improving your self-awareness which is foundational to your success as a leader.

VisuaLeadership can strengthen your capabilities and impact as a leader. . .

Ten Tough Questions Every Self-Aware Leader Needs to be Able to Answer

Question 1: How do you personally define leadership?

Leadership is not a title. Rather, it is about stepping up to leadership when leadership is needed. It comes in many forms. What is yours?

Question 2: Who are some of the leaders that you admire, and why?

By looking at the qualities and characteristics of leaders that you hold in high regard, you can shape your own.

Question 3: Who have been some of the influential people in your own life from whom you have learned something valuable about leadership?

The answer will help you get specific about your own values, leadership style, and ethics.

Question 4: What have been some of the defining leadership moments in your life?

These are moments that you would consider game changers that moved or inspired you in a profound way. They have shaped the person and leader you have become and serve as a guidepost.

Question 5: What are you truly passionate about?

These are the things that excite you out of bed every morning or keep your mind contemplating at night. They energize

you and give you purpose. Figuring out what lights a fire inside you will help you do the same in those that you lead.

Question 6: Why should anyone be led by you?

This is a scary one and more than a little challenging to face. You can get to the heart of the answer by considering what would happen if you left your current position. Would people eagerly leave to follow you or would they be glad that you were going?

Question 7: What are some of the key leadership lessons you would want to pass along to others?

Part of your responsibility as a leader is to foster leadership skills and traits in others. Pondering what you want people to say about you at your retirement party will hone in on these lessons.

Question 8: Who are the people in your life right now who make you a better person and a better leader?

Think about the people in your life that you can count on to be open and honest and candid and truthful with you, with no other agenda other than wanting to help you be the best person and the best leader you can be. You will need to rely on them throughout your leadership journey.

Question 9: What are you reading, listening to, and watching?

The information you expose yourself to can have incredible impacts on how you lead yourself and others. Never stop seeking out new sources.

Question 10: Are you a good follower?

Effective leaders sometimes have to follow someone else's lead. Who do you follow and are you good at it?

Conclusion

No matter where you are on the journey of leadership, this collection of frameworks, metaphor practices, and storytelling is now a part of your VisuaLeadership tool kit. If you are intentional about implementing them and looking at your work as a leader through a visual lens, you will be better able to get your ideas out of your head and into the heads of others and change the world by turning your visions into realities.

Todd Cherches is the CEO and cofounder of BigBlueGumball LLC, an innovative New York City-based management and leadership consulting, training, and executive coaching firm. BigBlueGumball's patented VisuaLeadership® methodology leverages the power of visual thinking and visual communication to equip, enable, and empower business professionals of all levels to maximize their performance, their productivity, and their potential. A three-time award-winning Adjunct Professor of leadership at NYU and Lecturer on leadership at Columbia University, Todd is also a TEDx speaker, a member of Marshall Goldsmith's "MG 100 Coaches," and was one of eight global finalists for the Thinkers50 "Distinguished Achievement Award" in Leadership (2021).

THE SUMMARY IN BRIEF

The way leaders currently develop their visions of the future is not working. The existing model-usually called a vision statement or mission statement-sets leaders up to fail right from the outset.

In ***Vivid Vision: A Remarkable Tool for Aligning Your Business Around a Shared Vision of the Future,*** author, business consultant, and motivational speaker Cameron Herold provides a step-by-step solution.

What you need for your company is a Vivid Vision. A Vivid Vision helps you steer your company in the right direction at exactly the right speed so you can grow and attain your goals.

IN THIS SUMMARY, YOU WILL LEARN:

- Why you need and how to write a Vivid Vision.
- How to internally and externally roll it out.
- How to make your Vivid Vision come true.
- What benefits you can expect from the process.

> Outside, for a number of reasons, is an ideal place to allow yourself to dream, to hop into your time machine and lean out into the future.

Why You Need a Vivid Vision

Picture this: You're CEO of a company. Your product is a leader in a growing market. You've got a great team. Your customers love you. You are perfectly set up to explode, and you're ready to lead this growth.

There's just one problem: No one in your organization can read your mind. Just because you know what needs to happen doesn't mean that anyone else does. You can tell them, but how often do they really understand exactly what you're saying? They might understand the words, but do they really see your vision? And do they understand it well enough to execute it?

As the chief executive officer, no one else in your organization knows with any certainty what it is you want to build. At best, they guess. If you want your team to build what you see, you must provide them with the means of understanding it. Otherwise you will get different ideas of what to build.

The result? Confusion. Everyone will have a unique, subjective experience, drawing a picture that looks nothing like anyone else's. In other words, your workplace is without alignment.

The only way to have your team aligned - moving in the same direction at the same speed - is to develop a detailed vision of the future and share it with them.

The problem is that the way leaders currently develop their visions of the future isn't working. The existing model - usually called a vision statement or mission statement, sometimes a vision board - sets leaders up for failure, right from the outset.

When people show up for work, knowing - not guessing - what their chief executive envisions for the company three years out, down to the minor details, they are aligned. And aligned workers perform better than individuals merely operating in proximity toward a vague goal. When you know where you're going, you can make decisions and apply them.

The point of creating a Vivid Vision is to lean out into the future, to pretend you're traveling in a time machine to a moment three years ahead. It's dreaming where you want the company to be in every metric and working backwards from there.

There's a BHAG (pronounced bee-hag) quality to the Vivid Vision. BHAG is a term developed by Jim Collins in his landmark book, Good to Great. It means Big, Hairy, Audacious Goals.

These goals require you to stretch your imagination to such an extent that people outside of the company probably think you're crazy. But the people inside your company believe these goals are quite possible - if they share in your Vivid Vision.

How to Write It

To begin the process of creating your Vivid Vision, your first job is to free your mind from the day-to-day worries of running your business. That means leaving the office. Grab a notepad and pen and go somewhere inspiring.

Outside, for a number of reasons, is an ideal place to allow yourself to dream, to hop into your time machine and lean out into the future.

Outdoors, you can access a different mindset. The natural world completely expands your spectrum of thought. A vacation is a really great time to write a Vivid Vision, but even if you sit in your backyard enjoying the warmth of the sun, it's better than writing your Vivid Vision on a plane or from your office.

The Vivid Vision requires you to unlock the playful part of your mind and engage in some childlike dreaming.

One technique to use is the Mind Map. The idea is to start at the center and work out from there with little branches. As the leader, you are firmly planted in the center, and the various areas that contribute to the business branch out. Describe each of those branches in about three to four bullet points.

In other words, describe what your marketing, sales, and so on, looks like until you've captured every area. You want to consider every aspect of the organization including culture, codes of conduct, the fiscal environment, the scenery, the vibe. Deliberately leave out numbers and data and get a feel for the place.

When you step out of your time machine three years from now and walk around the office, what's happening?

The Mind Map is the initial foray into the Vivid Vision and will act as an outline for the rough draft that you the leader will then write. Type up the notes from your Mind Map sessions and organize all of your ideas into smaller categories that have bullet points.

For example, under customer service you may have three or four bullet points, while under public speaking you may have five or six. Then take all the bullet points and write a paragraph for each section. The resulting document is your rough draft.

Now that you have something to work with, it can be polished. Generally, it is best to hire a professional writer who can take your work and make it jump off the page. Once the writer has the document worded precisely to your satisfaction, spice it up with some stylish graphic design. Try to keep the finished product to four pages of content or less.

How to Roll It Out

You're going to roll this vision of yours out for the whole world to see, so be bold when you do. When others read your Vivid Vision, they need to experience a moment of awe. If their jaws don't drop a little bit, you need to think bigger. Small, safe, calculated plans don't inspire. And you really want others to share in your enthusiasm.

Internal Rollout: You'll begin with an internal rollout. This involves sharing your Vivid Vision with all of your employees, all of your board members, and anyone inside the walls of the company.

When you initiate an internal rollout, you want this done in person, alongside your team. Try to get everyone in the same room, though this will, of course, depend on the size of your organization.

Begin by handing everyone a hard copy of the Vivid Vision. The entire group is going to read it aloud, taking turns to read a couple of sentences each until the document is finished.

While the reading is being done, the CEO's job is to look around the room and gauge reactions. Notice which people appear the most engaged, excited, and invested. Also, who isn't. You may have to get them out of the organization at some point. It only takes one bad apple to ruin the bunch.

After the reading, have employees circle any of the sentences or phrases that most excite and inspire them and have them share their thoughts with the group.

This activity exists for employees to simply understand where the CEO wants to lead the organization. The focus for now is not how each statement will be accomplished. It just needs to sink in and provide a source of contemplation and inspiration.

Bear in mind that your journey is three years long. Each quarter, break out the Vivid Vision again and reread it. Open it as a Word document and highlight in green any of the sentences that have come true since last quarter. Then, highlight in yellow any of the sentences you're currently working on. Now, everyone will begin to see the future take shape!

External Rollout: Now that everyone within the organization fully understands and is rallying behind the Vivid Vision, it's time to share it with the rest of the world. The external rollout helps everyone understand the organization's direction. It is recommended that the external rollout happen one quarter after the internal rollout.

Just as with the internal rollout, it's critical to make everyone understand that this is a vision of the company three years from now, not today. That will ease the minds of those that may think the ideas sound crazy.

Introduce it to them by saying, "This is what our company is going to look like in the near future. We all recognize it doesn't look like this today, but this is us leaning out three years ahead, describing what it looks, acts, and feels like."

You'll want the external rollout to happen simultaneously with customers, potential employees, suppliers, potential suppliers, bankers, lawyers, and, of course, the media.

This is done with email blasts, a post on the company website, newsletters, press conferences, journalist pitches, flyers, and more. Err on the side of too much information, rather than not enough.

The key is to continually send it to people so that everybody can see what you're building, where you're going, and what it looks like. What ends up happening is these outside parties play a role in your vision, as they contribute and conspire to make it true.

How to Make It Come True

See your grand ambition not so much as a single entity, but as dozens of smaller entities linked together. Realize that every sentence in your Vivid Vision is a goal in and of itself. And to bring about each sentence, a certain number of projects will need to be performed in a certain order.

By breaking down your goals into bite-sized pieces, you will be able to overcome each obstacle as it arises and finalize each necessary project along the journey.

The key to crossing the chasm between today and three years from now is by starting three years from now and working backward through time. This is reverse engineering.

For your BHAG, for example, consider all the different products that you're going to need, and then think about when the different components of it need to be put together and in what order that must happen.

Once you have the plan laid out, you just execute it going forward. Two to three months before the three years has expired is the time to start working on the next Vivid Vision.

Benefits: Big and Small

You will reap many benefits from your Vivid Vision when you share it with people both inside and outside of your company.

Stability: It's important that customers feel good about your company and where it's going. You will find that customers make buying decisions based on what the company is going to look like in the future. It's your job to share that information with them.

The "WOW" Factor: There is a synergy that happens when people outside of the company start getting excited about you. The outside excitement inspires everyone inside.

When people are talking about your company, the engagement within the company rises. It makes your company more attractive to potential new employees as well. The "WOW" factor is priceless for a brand.

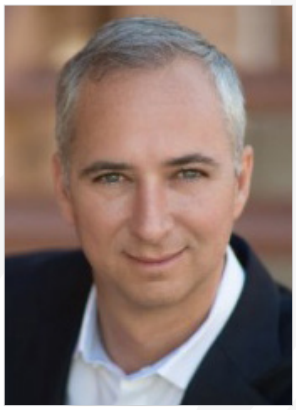
Validation: You need the media to buy in to the Vivid Vision. As a species, we have a fascination with novelty. We want to see new things that inspire and excite us. Journalists, knowing this, are eager to share stories about the "next big thing."

Once the media has disseminated your vision, your marketing department can leverage the print, digital, or broadcast media in the ever-expanding realm of social media.

By using the Vivid Vision, you're going to have better success. It's a lot easier to get the result you want when you know what the result is. And it's easier to get where you want to go if you know what the destination is.

At the end of the day, you are the master of your brand, and if you want others to see you as the $10 million company you will be in three years, the power is literally in the palm of your hands.

Apart from you, no one in your organization knows what it is you intend to make of the company you lead. And they can't build it if they can't see it. It's your task to provide them the means of seeing it with a Vivid Vision.



Cameron Herold is the mastermind behind hundreds of companies' exponential growth. Cameron's built a dynamic consultancy- his clients have included a 'Big 4' wireless carrier and a monarchy. What do his clients say they like most about him? He isn't a theory guy- they like that Cameron speaks only from experience. He earned his reputation as the business growth guru by guiding his clients to double their profit and double their revenue in just three years or less.

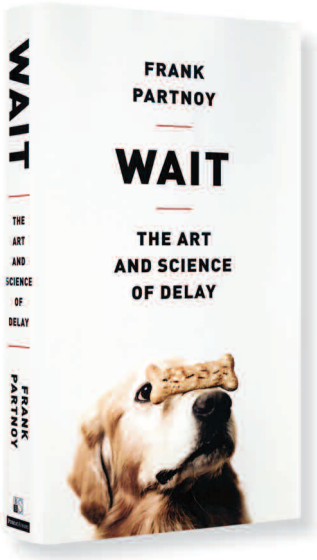
The Art and Science of Delay



by Frank Partnoy

THE SUMMARY IN BRIEF

What do these scenarios have in common: a professional tennis player returning a serve, a woman evaluating a first date across the table, a naval officer assessing a threat to his ship and a comedian about to reveal a punch line?

In *Wait: The Art and Science of Delay*, author Frank Partnoy weaves together findings from hundreds of scientific studies and interviews with wide-ranging experts to craft a picture of effective decision-making that runs counter to our brutally fast-paced world. Even as technology exerts new pressures to speed up our lives, it turns out that the choices we make — unconsciously and consciously, in time frames varying from milliseconds to years — benefit profoundly from delay. As this winning and provocative book reveals, taking control of time and slowing down our responses yields better results in almost every arena of life … even when time seems to be of the essence.

The procrastinator in all of us will delight in Partnoy's accounts of the power of delay on sports, investing, business and innovation. His insights underscore the myriad ways in which delaying our reactions to everyday choices — large and small — can improve the quality of our lives.

IN THIS SUMMARY, YOU WILL LEARN:

- Why experts take the necessary time to pause even during superfast reactions.
- The roles of the psychological system 1 (automatic and involuntary) and system 2 (effortful and deliberate) in the mind and how they work in decision-making.
- Why "thin slicing" sometimes needs to be measured in minutes rather than seconds.
- The way in which panic can warp our perception of time.
- Why "clock time" isn't the only way to organize your behavior.

Introduction

In recent years, scientists have made great progress in comprehending how we make decisions. Psychologists have suggested we have two systems of thinking, one intuitive and one analytical, both of which can lead us to make serious cognitive mistakes. Behavioral economists have said our responses to incentives are often irrational and skewed, sometimes predictably so. Neuroscientists have taken pictures of our brains to show which parts react to different stimuli.

Yet we still don't understand the role time and delay play in our decisions and why we continue to make all kinds of timing errors, reacting too fast or too slow. Delay alone can turn a good decision into a bad one, or vice versa. Much recent research about decisions helps us understand what we should do or how we should do it, but it says little about when. Sometimes we should trust our gut and respond instantly. But other times we should postpone our actions and decisions. Sometimes we should rely on our quick intuition. But other times we should plan and analyze.

Although time and delay have not occupied a prominent spot in decision-making research, these concepts lurk behind the scenes, especially in discussions about human nature. Many scientists say the key skill that distinguishes human beings from animals is our superior ability to think about the future. However, thinking about the future is different from predicting it.

The essence of my case is this: given the fast pace of modern life, most of us tend to react too quickly. We don't, or can't, take enough time to think about the increasingly complex timing challenges we face. Technology surrounds us, speeding us up. We feel its crush every day, both at work and at home. Yet the best time managers are comfortable pausing for as long as necessary before they act, even in the face of the most pressing decisions. Some seem to slow down time. For good decision-makers, time is more flexible than a metronome or atomic clock.

During superfast reactions, the best-performing experts instinctively know when to pause, if only for a split second. The same is true over longer periods: some of us are better at understanding when to take a few extra seconds to deliver the punch line of a joke or when we should wait a full hour before making a judgment about another person. Part of this skill is gut instinct and part of it is analytical. We get some of it from trial and error or by watching experts, but we also can learn from observing toddlers and even animals. There is both an art and a science to managing delay. ●

Hearts and Minds

Stephen Porges, a psychiatry professor and neuroscientist at the University of Illinois at Chicago, believes the key to our psychological development as human beings lies not solely in our brains but below them, along the nerve that serves as the two-lane racetrack for the signals that zip back and forth between our brains and the rest of our bodies. He focuses on the tenth cranial nerve, known as the vagal nerve, a strip of fibers that originates in a part of the brain stem and winds around the most important parts of our bodies, from the head and throat to the lungs, heart and digestive system.

In a 1994 speech, Porges said the vagal nerve that runs from our brain stem throughout our bodies is really two tracks of fibers wound together: one crude strand we inherited from our common ancestry with reptiles and one sophisticated strand we developed more recently as

mammals. Both operate at high speed, within milliseconds, but they do very different things. The crude reptilian part controls our digestive and reproductive systems, while the more modern mammalian part controls the muscles of our head and face, along with our cardiovascular system. But, Porges carefully noted, both systems are connected to the heart.

According to Porges, when we confront a stimulating event — something exciting or scary — both strands of the nerve affect the heart, but in opposite ways. The tortoise part instantly sends signals to withdraw and shut down, like the emergency brake of a car. Many scientists refer to a fight-or-flight response, but Porges thinks of it as "fight, flight or freeze."

In contrast, the mammal part of the vagal nerve reacts to stimulation more flexibly, revving up and slowing down the body, as appropriate. It also can let up on the reptilian brake, which otherwise might shut everything down.

Time is a slippery concept, and we are often wrong about it. If we focus on how our brains react over the course of seconds and minutes, we will not see quicker reactions. This is a general problem we have with thinking about decision-making, for both children and adults. All too often, we find ourselves looking in the right places at the wrong time.

Research on the vagal nerve has revealed a high-speed world inside our bodies, one so fast that we cannot consciously access it. Yet when we are asked to make a decision, it is these rapid-fire responses that help determine what kind of a decision we will make. A speedy response in our hearts can help us delay a speedy response in our brains and bodies. It is a strange idea, but being fast at first really can help us go slow later on. ●

Superfast Sports

A tennis court, baseline to baseline, is 78 feet long. First serves are launched, by men and women alike, at more than 100 miles per hour. A player returning serve has just 400 to 500 milliseconds from when the ball leaves the server's racquet until it hits his or her own. Just half a second.

To understand why some tennis professionals are so good at returning serve, I made an appointment to see Angel Lopez. Lopez has coached numerous professionals and is a contemporary of Jimmy Connors.

Lopez explained how Connors revolutionized the return with his speed and focus. Lopez's mantra is "ball identification" — the preparation phase that precedes the decision about exactly how to hit the ball back. He told me to watch Connors' eyes as they darted around and then froze.

"The theory of returns used to be that you should hit the ball as early as possible. But as players got faster and equipment improved, they learned to hang back and hit harder returns. They spend more time on ball identification, getting a chance to read the ball and then really punish it."

Connors and Chris Evert didn't have substantially faster visual reaction times; no one does. But they were much faster at reacting physically. Their physical speed freed up time for them to prepare during the phase Lopez calls ball identification. This was when they absorbed the crush of data generated after the ball left the server's racquet. They split up the time available during a service return; because they were so fast, they had extra time to gather and process information. Finally, at the last possible instant, they committed to their choice of return and swung. They sandwiched a lot of preparing between seeing and hitting.

Connors and Evert were able to stretch time and gain an advantage from their ability to delay. They got fast first in order to go slow later. ●

High-Frequency Trading, Fast and Slow

In the middle of 2006, the stock trading firm UNX, Inc., found itself in trouble. The company was seven years old. Its technology was dated. Its computer platforms were falling behind, and its clients, including sophisticated hedge funds and Wall Street banks, were shifting to competitors. To survive, UNX needed to build a more efficient trading platform that could compete with other superfast trading firms.

Andre Perold, then the chair of UNX's board, understood the problem and knew just who to call. Scott Harrison, the man Perold called, said, "Our goal was to become faster and cheaper than anyone."

Harrison and UNX quickly raised money and built a cutting-edge computer trading system. Both the hardware and software were designed to be faster and therefore more efficient. Harrison set up the new machines in a second-floor office in Burbank, Calif., 3,000 miles from Wall Street. Then he flipped the switch.

When UNX switched on its new computers, its trading costs immediately plummeted. The new platform supercharged UNX's business. Suddenly, the firm could

buy and sell shares at a lower cost than just about anyone else. Clients rushed to do business with them.

Although UNX's new trading platform was a huge success, he thought they could do even better by moving their computers 3,000 miles — from Burbank to New York. Harrison understood that geography was causing delay: even at the speed of light, it was taking UNX's orders a relatively long time to move across the country.

He studied UNX's transaction speeds and noticed that it took about 65 milliseconds from when trades entered UNX's computers until they were completed in New York. About half of that time was coast-to-coast travel.

This is where the story gets, as Harrison put it, weird. "We saved 35 milliseconds by moving everything east. All of that went exactly as we planned," Harrison said. "But all of a sudden, our trading costs were higher. We were paying more to buy shares and we were receiving less when we sold. The trading speeds were faster but the execution was inferior.

"Finally, we gave up and decided to slow down our computers a little bit, just to see what would happen. And when we went back up to 65 milliseconds of trade time, we went back to the top of the charts. It was really bizarre. In a world that values speed so much, you could be slower, yet still be better."

Like professional athletes, Harrison, Perold and UNX learned there is an art to delay, even for preconscious reactions that take only milliseconds and even if those reactions are implemented by a computer, not a human being. By delaying its trades slightly, UNX avoided the extra costs that arose from the rush of instantaneous trading. It got better results by waiting a few dozen milliseconds — by procrastinating at the speed of light. ●

Bad Call

Psychologists often say there are two systems of the mind: system 1, which is automatic and involuntary, and system 2, which is effortful and deliberative.

So far, we have been looking at what a psychologist would refer to as system 1. As we have seen, timing and delay play an important role even for the kinds of superfast preconscious reactions that psychologists would label as automatic. Even during just a split second, there is a lot of variability in heart rates, athletic responses and subliminal reactions.

Once we have at least half a second, we can engage in effortful, conscious thought, either to reinforce the automatic reactions of system 1 or to try to slow down or change them. When both systems are involved, we often get caught in an internal battle: intuition versus analysis, or instinctive emotion versus logical deliberation. With just a few seconds, we are capable of thinking through some judgments and choices, but probably not all of them. Both systems are prone to error, particularly under time pressure. System 2 has the capacity to correct system 1, but it also can magnify a mistaken snap reaction.

Bob Gibson and the New York Giants

It is Sunday, November 19, 1978, another dark fall afternoon for Bob Gibson, the offensive coordinator of the New York Giants football team. With a record of 5-6, the team desperately needs a win at home against the Philadelphia Eagles, who lead by one game in their division. Late in the fourth quarter, the Eagles trail by just five points and the crowd at Giants Stadium is on edge.

Odis McKinney, a rookie defensive back for the Giants, intercepts what might have been a touchdown pass from Eagles quarterback Ron Jaworski. All Coach Gibson needs to do is call three quick plays and the Giants will win.

The game has ended for just about everyone. Except Coach Gibson, who still has to make his final, crucial decision. Both of Gibson's decision systems are firing: his system 1 is automatically reacting to the threat to an important member of his team and his system 2 is consciously considering his choices. Should he tell Giants quarterback Joe Pisarcik to fall on the ball and risk exposing him to an onslaught? Or should he call a play designed to keep his quarterback safe? He has just a few seconds to make the call.

A football coach's predicament is like that of an emergency room nurse or a firefighter or a military first responder. Life moves fast for these people, and a large part of their decision-making is unconscious. However, with a few seconds, they also have a little bit of time to think. The trick in this slower time frame is to tap into cognition when it helps and to shut it off when it doesn't.

A few seconds isn't long enough for system 2 to map out every possibility, but it is long enough for a coach's biological systems to kick in and interfere with his ability to deliberate. The noise from these physical reactions can lead to mistakes from both systems 1 and 2.

System Overload

Coach Gibson's body is bursting with biological responses as he decides which play to call during the Eagles' final time-out. The primary actor is his adrenal

medulla, located on the top section of the kidneys — right smack in the middle of what we think of as the gut. As Gibson perceives danger, neurons fire in the basal ganglia region of his brain, telling his adrenal medulla to pump fight-or-flight hormones, particularly adrenaline, throughout his body. The adrenaline rush causes his blood pressure to rise. Physically, he is a mess.

Mentally, he is a mess too. Much of the executive function of his brain, in the cerebral and prefrontal cortices, shuts down and is overruled by the amygdalae. As his conscious system 2 breaks down — not immediately, but over the course of a few seconds — he defaults to his unconscious system 1.

When our brains are loaded with stimuli, it is more difficult for our conscious processes to work. As the load on our brains increases, we rely more on our unconscious processes. That is what is happening to Coach Gibson. As the seconds tick, he is moving away from control toward automaticity. His brain is full.

When Gibson calls the final play — a handoff to running back Larry Csonka — the Giants players are stunned. In the huddle, Csonka tells Pisarcik, "Don't give me the ball." The players are disorganized as they line up. One says, "Joe, just fall on the damn ball."

Then, Pisarcik loses control of the snap. He tries to tighten his grip, but now Csonka is too far away and he shoves the ball into Csonka's hip instead of his hands. The ball falls to the ground. It is picked up by the Eagles player Herman Edwards, who runs the ball into the end zone. With that touchdown, the Eagles won the game, 19-17. The play became legend, known as the "Miracle at the Meadowlands."

Gibson was fired the next morning and never worked in football again. Unfortunately for scientists who study decision-making, he has never said whether he called the play more as an automatic response or whether his decision was based on some quick deliberation. To this day, he refuses to talk about the fumble or its consequences. ●

A Slice Too Thin

The expression "thin slicing" was coined in a 1992 article published by Nalini Ambady and Robert Rosenthal in the *Psychological Bulletin*. They used the term to describe people's ability to detect patterns in an event even if they experience only a narrow portion of that event. In particular, they focused on what people can glean from brief, silent video clips. And their answer was: a lot.

Their best-known finding, from a 1993 follow-up study, was that people who watched a series of brief, silent videos of a teacher reached similar judgments about the teacher as did students and supervisors who sat through the teacher's class for months. The study has been widely cited as an example of the power of our unconscious system. Its subtitle says it all: "Predicting Teacher Evaluations from Thin Slices of Nonverbal Behavior and Physical Attractiveness."

In 2005, Malcolm Gladwell published *Blink*, a book that introduced thin slicing research by Ambady, Rosenthal and others to a broad audience. Gladwell begins with an example of thin slicing extraordinaire, a story about whether a marble statue purchased by the J. Paul Getty Museum in California was a fake. He describes four experts who saw the statue and were instantly repulsed. He then introduces the book as follows: "In the first two seconds of looking — in a single glance — they were able to understand more about the essence of that statue than the team at the Getty was able to understand after 14 months."

The two-second time interval became a popular mantra for thin slicing. Suddenly, everyone was talking about two seconds. Gladwell reinforced the importance of the two-second interval in talks, on his website and within *Blink*, which he summed up as "a book about those first two seconds."

Stop for a moment now and think about the idea of thin slicing. When we thin slice we detect patterns in an event even if we see only a narrow portion of that event. The key to the concept is that we reach a conclusion even though we don't have the full picture. Thin slicing is driven by the unconscious system because it takes the lead over the conscious system in decision-making during such a short period.

But thin slicing is almost never about just two seconds. In fact, not even the titles of the leading articles on thin slicing are about two seconds. The revolutionary paper by Ambady and Rosenthal is entitled "Half a Minute." John Gottman's coauthored study of videotapes of couples is called "Predicting Divorce Among Newlyweds from the First Three Minutes of a Marital Conflict Discussion." Minutes, not seconds.

Neither of those studies found that anything close to two seconds was the optimal thin slice. To the contrary, Ambady and Rosenthal found that although students who watched three two-second videos (six seconds total) of a teacher did pretty well in matching the evaluations of people who sat through the entire semester, students who watched 10-second videos did better.

More recently, Ambady and other coauthors defined a thin slice as "any excerpt of dynamic information less than five minutes long."

So how thin should a thin slice be? The answer is rarely two seconds. If we are judging whether someone is dangerous, our brains and bodies are wired to react very quickly, within milliseconds.

But for other questions, two seconds isn't nearly long enough. If we are asked to tell whether someone is friendly or dangerous, we do better with more time. To accurately assess whether someone is sociable, we need at least a minute, preferably five.

The research on thin slicing demonstrates that we can be fast, but it also shows that even a little bit of extra time can often help us make better decisions. One slice does not fit all, and there is nothing magical about two seconds. Instead, how long we should thin slice depends on what we are slicing. ●

Don't Panic

The writer Douglas Adams used the phrase "Don't panic" prominently and often. Arthur C. Clarke said Adams' phrase was the best advice ever given to humanity.

One of the main reasons why "Don't panic" is such valuable guidance is that the sudden onslaught of fear we label panic can seriously interfere with our ability to decide on the best course of action. Panic makes it difficult for us to use logic or reason. Panic shuts down our conscious system 2 and leads us to rely on our primal automatic system 1. Relying on system 1 is not necessarily a bad thing, especially if we are experts.

One problem with panic has to do with our perception of time. How we experience time varies depending on our environment, even when we aren't stressed or afraid. If you live in a city with a population of more than 1 million, a pause will seem twice as long as it does to someone who lives on a farm or in a small town. Try pausing for a full minute during a conversation or a speech. You probably won't make it. Instead, after 10 or 20 seconds you will break down and speak.

When we are panicking, this time warping gets much worse. People who have panic attacks often experience time dramatically slowing down or speeding up. If you have been in a car accident or a high-speed chase, you probably felt time expand.

What is happening? Our brains are making time elastic. Time itself isn't stretched, but our perception of it is. Under extreme stress we are hyper-attuned to the moment. Surges of adrenaline warp how we experience time under pressure, fooling our judgment. After the fact, the culprit is the intensity of our memories. Because memories are carved more deeply into our brains during high stimulation, the event seems to have taken longer in retrospect.

Because of how panic influences our perception of time, it magnifies the difference between experts and novices. Experts understand the downside of panicking, but they also use time warping to their advantage by stretching every second to maximum effect. Novices are more vulnerable. Their world speeds up and slows down whether they want it to or not. ●

At Last, Procrastination

Our society is obsessed with productivity, and we despise procrastination. And then, beginning in the 1970s, the do-it-now anti-procrastination industry burst onto the scene. Over time we began to feel terribly guilty about procrastinating, yet we did it even more. The percentage of people who say they procrastinate "often" has increased sixfold since 1978. According to some studies, nearly one in five adults is a "chronic" procrastinator. Our focus on procrastination is relentless.

But it wasn't always so. In ancient Egypt and Rome, procrastination was thought to be useful and wise. Studies find that although procrastination is problematic for some people, others can procrastinate but still get plenty done without stress, coping problems or low self-esteem.

Academics who study procrastination fall into many camps. Many psychologists follow a definition from Piers Steel, a leading researcher, that procrastination is "irrational" delay.

Another group of psychologists gives procrastination a more positive spin, depending in large part on the amount of energy the procrastinator expends. So-called active procrastination is smart: it simply means managing delay, putting off projects that don't need to be done right away. In contrast, passive procrastination is dumb, equivalent to laziness. This group says procrastination might be good or bad, depending on how much effort we put into it.

On one thing nearly everyone agrees: virtually all of us, at least some of the time, feel the urge to procrastinate. And there is wisdom in each camp.

In 2005, Paul Graham, a computer programmer, investor, writer and painter, wrote an essay called "Good and Bad Procrastination." He opened by saying, "The

most impressive people I know are all terrible procrastinators. So could it be that procrastination isn't always bad? Most people who write about procrastination write about how to cure it. But this is, strictly speaking, impossible."

Graham notes that when we procrastinate we don't work on something. However, he says, we are *always* not working on *something*. In fact, whatever we are doing, we are by definition not working on everything else. For Graham, the issue is not how to stop procrastinating, since we will always be not working on something and, thus, procrastinating. Instead, our real challenge is to figure out how to procrastinate well — how to work on something that is more important than the something we are not working on. In thinking about procrastination, Graham says what matters most is comparing what we are working on with what we aren't.

For Graham, procrastination is all about trade-offs. We are constantly trading off what we are doing now against what we might do in the future. As long as we are doing that in a reasonable way, it doesn't matter that we are putting some things off. ●

Master Class

The challenge of procrastination is figuring how to weigh immediate versus distant consequences. That same kind of now-versus-later evaluation is also at the core of professional expertise and judgment. We typically define professionals — lawyers, accountants, doctors, journalists and financial advisers — as people who do high-quality work, have specialized knowledge and follow high ethical standards. But professionals have another quality we might not notice as often: the ability to manage time.

The best lawyers and accountants are masters of delay. Litigators understand precisely how to allocate their time writing a brief or preparing for an argument or trial. Business lawyers develop an exact sense of timing of deals and when negotiations should move forward or end. Experienced auditors can plan backward from a filing deadline to map out when work should be completed, hour by hour.

True professionals are able to act quickly, but are willing to go slow. They are comfortable using both intuition (from the automatic system 1) and analysis (from the deliberative system 2). They resist the fast-running herd and wait for the ideal time to make their move. That doesn't mean their decisions are slow; they can be faster than just about anyone when it matters. The best professionals understand how long they have available to make a decision and then, given that time frame, they wait as long as they possibly can.

In Atul Gawande's provocative and insightful book *The Checklist Manifesto*, he shows how doctors can use checklists to save lives by reducing mistakes in medical decision-making, particularly during hospital surgery. He also advocates checklists for other nonmedical professionals, including airline pilots and financial professionals.

Checklists serve as a reminder when our memory fails and as a guard against cognitive mistakes. They provide a framework to make sure we pay attention to each step of a task. But there is an art to checklists. If they are too complex and cumbersome, they can be counterproductive. If a checklist includes too many steps or is inflexible, it will be inefficient or ignored. Good checklists streamline straightforward jobs. The ideal checklist is one page long, with not too many words on it.

Gawande's surgery checklist includes three "pause points": before anesthesia, before incision and before leaving the operating room. Each pause is designed to last no more than a minute — just long enough for members of the team to make basic checks. It might not seem like something as simple as making sure everyone on the surgery team introduces themselves by name and role would matter. But the results are striking: even taking just a few seconds before the incision helps to slow down the tempo of the surgical procedure, and that slower tempo leads to better outcomes. ●

Get Off the Clock

Much human behavior is based on "clock time" which divides our day into quantifiable units. Some clock time is based on nature, but much of it is fabricated. A day is a natural length of time, determined by the rotation of the Earth, but the hour is an entirely arbitrary unit of time.

Clock time isn't the only way to organize behavior. A second approach is "event time," where we continue doing something until we finish or some event occurs. For example, you might start work, not at 9 a.m. (clock time), but after you finish breakfast (event time). To illustrate the differences between clock and event time, imagine that you have five tasks to perform today. How would you organize them?

In general, you should use a calendar when your primary concern is efficiency and you should use a to-do list when your primary concern is effectiveness. Efficiency means going fast; effectiveness means being complete, even if it takes longer. If you have a brief that must be filed by Friday, you care more about efficiency and should put the filing date on a calendar and plan

your work accordingly based on clock time. But when you go to the grocery store, you should use event time to make sure you don't leave the store until you have every ingredient necessary to make dinner.

Perception of Time

If you are like most people, you feel there aren't enough hours in the day. You perceive you are working longer and harder than in the past. But this perception is wrong. It is well documented that people feel more time pressure today. Yet the fact the median number of hours that people actually work has remained relatively constant during the previous five decades and has declined in recent years.

Time pressure gets worse as we make more money. Studies show that higher income generates more time stress, even when the number of hours worked is held constant. In an experiment by Sanford DeVoe, people performed a task and were told to keep track of their time in six-minute increments. Half of them believed their work was being billed at $90 per hour, the other half believed their rate was $9 per hour. After finishing their work, those billing at a higher rate said they felt significantly more time pressure, even though everyone did exactly the same work under the same conditions for the same amount of time.

Pay inequalities have grown in part because of the massive shift in compensation policies from long-term event time to short-term clock time. Whereas pay used to be split more evenly among managers and employees, now a much larger share goes to the most senior executives. As shorter-term clock time comes to dominate our work and the pay gap widens, there are two potentially serious consequences.

First, for many people, work becomes less satisfying overall. If we are motivated to accomplish something important in our work, we will be willing to wait decades and understand that jobs we start might not be finished until after we are gone. Hourly pay eats away at this philosophy and ultimately makes work less fulfilling.

The second risk is that the accelerating pace of technology and ticking of the clock will make companies less profitable over the long term. Quick responses are important and useful, but so is strategic perspective. Workers who are accustomed to instant gratification expect major advances to come quickly. ●

A Lifetime of Innovation

The most important innovations of modern times — the automobile, camera, computer, cotton gin, light bulb, penicillin, sewing machine, steam engine, telephone, television — were not overnight epiphanies. They took decades or longer to invent and develop. And although the cycles are getting faster, the most dramatic innovations of the modern era — Apple, Google, Facebook — have taken years.

Einstellung Effect

The word "Einstellung" means "attitude" in German. The Einstellung effect refers to our tendency to become stuck in our ways, to act or think in the same manner we've always acted or thought, even when we are presented with alternatives that are obviously better. The best innovators are skilled at overcoming the Einstellung effect.

Somewhere out there is a kid thinking about an idea that might ultimately lead to a discovery as important as gravity or oxygen, or something as routine as a Post-it. Right now, that idea is an unformed, dim thought. If the discovery comes, it will not be a light bulb suddenly going on. It will be the culmination of a decades-long process. ●

Go Long

Most of life's big questions need to be answered over the long term, but understanding shorter-term decision-making can help us handle the epic questions more completely and thoughtfully. An appreciation of the minuscule gives us a better chance at tackling the massive.

Our ability to think about delay is a central part of the human condition. It is a gift, a tool we can use to examine our lives. If there is just one word of wisdom about decision-making for children born a hundred years from now, people who will have all of our advantages and limitations as human beings but will need to navigate an unimaginably faster-paced world than the one we confront now, there is no doubt what that word should be.

Wait. ●

THE SUMMARY IN BRIEF

Around 90 percent of what organizations do is accomplished through collaborative effort. Indeed, teamwork is a quintessential and critical element of organizational life. However, some organizations do not seem to grasp that concept. They pay close attention to other organizational functions—for example, technology and human resources—but fail to develop a comprehensive strategy for effective teamwork. About 40 percent of teams are dysfunctional.

Wake Up and Smell the Coffee: The Imperative of Teams describes an approach to teamwork that, if implemented across the organization, can deliver up to a 20 percent improvement in effectiveness.

Simon Mac Rory, a specialist in team development who for more than twenty years has worked with senior staff leaders to help them discover how to have a truly high-performing team, wrote this book for team members, team leaders, and organizations. It puts the imperative of teams in context; discusses the characteristics, strengths, and challenges of the basic team types; and teaches leaders and team members alike how to have effective teams.

IN THIS SUMMARY, YOU WILL LEARN:

- What teams are and why they are crucial to business success.
- Why "giggers" and Gen Y make teams even more important.
- The four basic team types and their strengths and weaknesses.
- The twelve criteria for team effectiveness.

The Imperative of Teams

A team is "a group of people, normally fewer than ten, that needs to work together to achieve a common goal, normally with a single leader and where there is a high degree of interdependence between the team members to achieve the goal or goals."

Organizations seem to think that teamwork happens by magic, to judge by their actions. If they didn't, they would have a corporate team strategy; a requirement that all teams reflect on ***how*** they do things, not just on ***what*** they do; and minimum standards for all teams.

Ninety percent of organizational output is achieved through teams. Thus, an organization with a defined strategy for teams and the commitment to see it through can drive a 10%–20% improvement in their effectiveness, productivity, and bottom line.

There are many benefits to taking teamwork more seriously and focusing on it:

- Efficiency
- Innovation and creativity
- Enhanced working environment
- Minimized risk
- Learning and talent

These benefits don't happen by putting a group of talented people together, calling them a team, and standing back. It takes hard work, strategy, an organization that enables teamwork, and a culture that recognizes the importance of teamwork.

Two recent workplace developments only make teams more important. The first of these is the gig economy. Though "giggers" are independent contractors, they matter as much for an employer brand as full-time employees do. They can seriously damage an employer brand by giving negative feedback to the company publicly. The most effective way to integrate giggers is through a culture of teaming and teamwork.

The other recent development enhancing the imperative of teams is the presence of Millennials (Generation Y), those born between 1981 and 2000 who now make up about 40 percent of the workforce. By 2025, that share will be 75 percent. Organizations must have a teaming culture to ensure that they fully connect and engage with this generation, which is demanding a changed workplace.

Organizations must commit resources and budget to design that promotes agile decision-making and teamwork. What is needed is a corporate team strategy (CTS). A CTS is about understanding what, why, and how teams are deployed into the organization and how they are supported.

Many organizations and their leaders seem to believe many things about teams that are, in fact, myths:

Team development and teamwork are fun. No—they are hard work that require consistent effort and continuous attention. Work teams are nothing like sorts teams.

Team building at offsite events takes time away from real work. This does not need to occur. Outdoor events don't help create an effective team because their structure is not like workplace norms. Team development occurs in normal work hours and is about giving time to reflection on how the team does things, rather than on what it does.

Team development is only for problem teams. In reality, every team, even the CEO and their team, can do better. Team development is for all teams, all the time.

Teams are there to support their leader. The converse is the reality: leaders are there to support their teams. Leaders can only be successful through the success of their team.

Harmony is essential and conflict is anathema. The truth is that conflict is essential and the source of innovation—it is how it is managed that can cause problems. Properly managing conflict requires rules of engagement, planning, and evaluation.

Organizations and senior leaders are champions of teamwork. Many of them pay lip service to teams but fail to have a genuine team strategy.

There are six hot topics, discussed below, that need to be considered, understood, and incorporated into any team strategy.

Team size. Size matters because it affects team effectiveness. The accepted range is three to twelve, and three to ten is preferable.

Psychological safety. It is critical that team members experience no negative consequences for speaking up, expressing new ideas, and openly seeking new ways to improve the team or the company.

Reflexivity. Teams need to take time as part of day-to-day work to engage in an intentional and structured process to think about and discuss how they do things. Reflexive teams are more innovative and more effective.

Team-based assessment. Performance appraisals once a year is rapidly being abandoned. Real-time feedback, little and often, is what is now required. Team assessment, integrated with individual assessment, is imperative.

Diversity and inclusion. Companies with effective diversity and inclusion strategies will outperform their competitors.

Morale and motivation in teams. Morale is the state of mind of a person or group with regard to the function or tasks at hand: esprit de corps. Motivation is more complex. Leaders should address the issues of morale and then create the conditions where motivation has a good chance to be exercised by team members.

The author and his colleagues at The ODD Company developed an effectiveness model, assessment tool, and methodology for teams to drive performance: the Team Diagnostic Profiler (TDP) model. Team members answer questions related to goals, leadership, relationships, process, climate, and structure on a seven-point scale and then—the most important part—discuss the outcomes. The TDP model can be directly linked to morale and motivation.

Four Types of Teams

The Traditional Team

About 60 percent of teams are traditional teams. These are teams that are functionally oriented and stable over time in which specialists work together and share a common operational language. The leadership is predetermined by the hierarchical structure of the organization and is often led by the most senior person on the team. The members work in close proximity to each other and develop a group memory and rapport that improves effectiveness and efficiency. Challenges can include that the most appropriate team leader is not in place and members who are promoted may be technically competent but not have people management skills. Such teams in different parts of the organization see problems and solutions through different time lenses because of the nature of their work; this must be understood and well managed. Team members may not understand the organization's big picture, which can lead to misunderstandings of priorities. The purpose of such teams within the larger organization and how they do things should be reviewed regularly. The traditional team has a tendency to be complacent and that must be monitored.

The Project Team

The project team, formed to accomplish—of course—a particular project, is problem-solving, innovative, change-oriented, short-term, and often cross-functional. Its strengths include that they have a clear focus, deadlines, and milestones. Goals are well-defined. Challenges include the need for the team to clearly understand why its mission is important to the larger organization. Teams formed quickly and made up of people who don't know each other can cause confusion and inhibit progress. However, project teams are the norm for more and more employees. Like all teams, they need to take time out to reflect on how they are doing what they are doing.

The Virtual Team

Virtual team members are geographically dispersed and rely on communication technology in order to collaborate. Their strengths include access to more talent at the most competitive cost, less disruption to work time since travel is eliminated or minimized, reduced bureaucracy that creates greater productivity, and greater diversity, which fosters innovation. The challenges faced by these teams include unmanaged or unappreciated cultural diversity issues. Because of distance, trust between team members is more difficult to establish and maintain. A group memory doesn't develop naturally.

The Teaming Work Group

The teaming work group (TWG) is based around shifts, so it never comprises the same people two shifts running. It is a variant of the traditional team and has many of its strengths. But these teams present more challenges than any other team type. Maintaining standards of performance is more difficult. Leadership is difficult because team leaders never work with the same individuals. Error rates and mistakes are higher because TWGs don't have the same opportunity as other teams to learn from mistakes. It is very difficult to bring all members of the team together to discuss challenges and maintain team spirit because of the large size of the pool drawn from.

Six Factors of the TDP Model

Goal and Role Clarity

A team's goals must be clear to, and understood by, each team member. A process to track progress against goals must be put in place and followed.

Team members must know what is expected of them, how their work contributes to team goals, and how their performance will be evaluated. Role clarity is the team leader's responsibility and requires one-on-one and team discussions so that everyone understands others' roles.

Leadership Behavior and Participation

Team leaders should understand that leadership needs to be flexible and evolve with time. Team leaders must engage individually and in team meetings with the team. The leader's job is to get everything that impacts or inhibits the team's performance out of the way. The team leader should embrace this inverted hierarchy—the leader at the bottom, supporting the team.

All team members must participate—be engaged and expressive—for the team to succeed. Psychological safety is crucial to participation. The leader should create the conditions for it, be sure every team member gets equal air time, and, if someone is not participating, understand why.

Commitment and Communication

Team members' commitment to the team and each other can be evidenced by the degree to which they feel they can depend on each other. Achieving a level of trust and a sense of reliability within a team takes time and requires lots of consistent good practices.

Honest communication occurs when team members feel free to say what they think, believe they are being listened to and heeded, are not punished for reporting bad news, and have regular forums for open information exchange. Good communication drives enthusiasm and thus morale.

Planning and Evaluation

Teams can be addicted to action to move toward the goal, which can undermine the need to plan. Over-planning can also occur. Inappropriate planning causes unnecessary frustration, inferior work, re-working, confusion, unseen risks, customer dissatisfaction, and damaged team or team leader reputation.

Evaluation requires the team to evaluate what is being done, why it is being done, and how it is being done. Leaders should not call out poor performers in front of their peers; doing so creates an unhealthy environment and discourages team members from participating in the evaluation process.

Recognition and Conflict

Recognition of the positive contributions of team members should be publicly recognized. But bad and average performance also need to be recognized and dealt with. Better performers are often overloaded and poorer performers underutilized. This has negative consequences if it is ongoing. It is unfair to poor performers to not be supported to improve and they may not understand they need to improve or what they need to improve.

Whether conflict is harmful or beneficial is due to how it is dealt with. When managed poorly, it can lead to discord, strife, stress, anxiety, and reduced productivity. When managed well, it can have positive outcomes that lead to increased productivity, more efficient processes, or product and service innovation.

Composition and Organization

Having a well-balanced team requires knowing the strengths of each member and plugging the gaps. In teams, as in architecture, form follows function. Function refers to the goals or purpose of the team; form, to the number of members and their skills and abilities.

There is no one-size-fits-all way for teams to be organized. The team should discuss the most appropriate management practices for their situation, their goals and tasks, and their interdependencies.

Dr. Simon Mac Rory is a team development specialist. He works with senior leaders to help them discover that edge to become truly high performing. He founded the ODD Company in 2011 to deliver TDP (a cloud-based team development tool and methodology) to the international markets. He received his doctoral degree from Nottingham Trent University for his work on the application of generic frameworks in organization development and is a visiting research fellow at NBS.

Developing Others
Page 4

THE SUMMARY IN BRIEF

Are you working too many hours, neglecting friends, and sacrificing your health in the name of professional success? Daphne Scott, a medical professional, found herself coaching people for professional success. Her fear, however, held her back from seeking her own success. Dr. Scott finally stepped into her change and shares what she learned along the way.

Waking Up a Leader walks you through five key relationships needed to thrive. Managing these relationships—time, money, the self, friendships, and the unknown—will decrease your stress, improve your well-being, and enable you to make the best decisions for yourself and your team.

Most leadership books focus solely on the transactional skills involved in managing: planning projects, organizing schedules, forecasting budgets, and so on. Some focus on transformational skills to help leaders renew their vision and better themselves. Few leadership books cover both planes: transforming the way leaders see the world, their businesses, and themselves, while simultaneously helping them transact skillfully in the workplace.

IN THIS SUMMARY, YOU WILL LEARN:

- How we relate to more than just the people around us.
- Which transactional skills can be practices for effectiveness.
- The transformational skills that give understanding for meaning.
- How transformational leaders cultivate environments for growth.

What Do You Need To Succeed?

Transactional skills give leaders the ability to deal with the external who, what, when, and how. Transformational capabilities enable leaders to understand their inner why—the ultimate meaning, purpose, and vision behind their transacting—and cultivate environments in which people can do their best work and flourish. In today's workplace, leaders need both skillsets.

Relationships

We tend to think that objects, people, and events outside ourselves cause us to feel a certain way. This simply isn't true. Our internal reaction determines our initial experience, whether positive or negative, and we can learn to respond versus simply react. We can choose how we relate to our world. Learning this transformational skill will enable you to transact with others more skillfully. It will also change your life in whimsical and magical ways. In essence, a relationship is made up of an action that occurs between us and something in our world. When we become aware of our naturally occurring reactivity, we can choose to respond differently.

Attention

Scott tells the story of a team's reaction to the negative comments written on Glassdoor by a disgruntled employee. The team had burned at least twelve hours stuck in reactivity of thought, fearful of lawsuits, and poor reaction from the public. As soon as they stopped ruminating about the future and focused on the facts in front of them, they came up with a multistep action plan. Once they came back to paying attention, they had a solution in minutes, and their stress disappeared. They saved time, money, and energy. They experienced improved well-being. A veritable bonanza of benefits and freedom. When whole teams learn to pay attention with mindfulness, they enjoy greater creativity, innovation, and problem-solving.

Your Thoughts and Emotions

After working on a big project for several months, Steve submitted a stack of paperwork, expecting feedback and a dash of praise for his hard work. The next day, his boss sent an email: "Looks great. Let's keep moving forward." Steve's immediate response to his boss's email was anger. He was afraid that the boss's short response signaled he would not receive a promotion.

Steve had certain thoughts, which generated certain emotions, which led him to view his boss in a certain way. He was responsible for any rude or inappropriate behavior that resulted from his subjective reality. Having a healthy relationship with our thoughts and emotions will enable us to maintain the best intentions and take the most skillful actions, as Steve was able to do once he became aware of what was happening for him. He took the courageous step of challenging his own story by talking to his boss directly.

A negativity bias lives within each of us. We have a way of seeing the world wherein we try to predict all the things that could go wrong to make sure our well-being stays unthreatened and permanent. Positive emotion is a powerful antidote to this naturally occurring negativity. If we consciously cultivate positive emotional states, we can increase our well-being by counteracting the hardwired negativity bias.

Time

We treat time as a finite thing, like books or coffee, that we can run out of or potentially have too much of. In reality, time and the clock are human-made constructs, and we have all the time we need to do the things we really want to do.

Relating to Time

We choose our relationship to time. When we relate from fear, it can feel like time is happening to us. In reality, time is only our experience of attempting to order our perception of a past, a future, and the present into some way that makes sense to us and allows us to feel sane. Our experience of an hour or span of minutes, however, depends on our internal frame of mind. Let's say two people arrive at the airport gate ten minutes before boarding. One person might be thinking, "Oh my gosh! I wish I could just get on the plane," while the other person might be thinking, "Man, this is great! I have ten minutes to sit still." Same ten minutes, very different experience.

Transacting from Fear

When leaders transact from fear, they don't take time to create a system or follow an accurate list. They try to multitask, and as we will soon see, they ignore their relationships and the needs of others. As long as we operate from a fear of not having enough time (or having too much time), we won't effectively manage time on the transactional plane, and our teams and leadership interactions will suffer as a result.

Transacting from Trust

Leaders must take responsibility for their relationship with

time. Moment by moment, you need to pay attention to how you're relating to time. In your daily interactions with your team, as you look at your schedule for the week, as you consider the due dates for upcoming projects—in all these situations and many more, pay attention to your thoughts and emotions around time. Our energy levels affect our transactions. We can manage our energy with regular practices of rest and renewal and building reserves so we can keep the tank full and ready to go. This type of energy management makes our experience of time change in dramatic ways. And that energy affects those around us.

Money

Research shows that if we want to increase our capacity for joy, calm, and less stress, we need to start using money as a means to experience our time in the way we would like. We also need to value our time more than our money.

Time-Money Connection

The way we are spending our money, or earning it, is also how we are spending our time, or using it. Our relationship with money is never actually about the money. We can use money as an excuse for many things, but honestly, it's never really about that. It's about how we see ourselves in the world.

A Transformational Look at Money

When we prioritize and focus on money, our behavior changes. We become less helpful, a bit stingier, and less interested in the welfare of our fellow man. Money motivates us to work more hours, but it decreases our motivation to help others.

Gratefulness is one of the keys to unhooking yourself from a fear-based relationship to money. Be grateful for the resources you have right now because right now is all there is. Focus on what you have available in the present, not what you're missing or what you think you won't have in the future.

A Transactional Look at Money

Fear causes us to make decisions that do not support our well-being or the well-being of those around us. If a company loses a lot of money on one deal, management might decide to "save" money by cutting the entire marketing budget. However, this might be the time when marketing is most needed to increase sales. As with time, fear can produce narrowed vision. Decisions made in this scarcity mindset are usually short-sighted and fail to take in the whole organizational picture.

The Self

Meet Betty, CEO of a healthcare company she started when she was nearly forty. Ten years later, the company was thriving. Betty, however, was sleep deprived and anxiety ridden. She was also using alcohol to relax and subsequently developed a drinking problem. She was up at 5:00 a.m. every day, drinking coffee by 5:05, and checking email by 5:15. She worked until eight or nine at night and then had a nightly bedside beer.

Betty slowly began waking up to what was happening. She started realizing that she was entirely too attached to who she believed she was in the world. She was the successful person who gets it all done. But when Betty hit bottom, she realized she needed to change her relationship with herself.

A Transformational Look at the Self

Betty's story has a happy ending. She let go of the idea that she needed to do everything herself. She started developing other members of her team and delegating many areas she was controlling. She stopped working eighty hours a week. Betty's change didn't happen all at once. She started by making small choices.

Little by little, Betty challenged the stories she had been telling herself. Slowly, she returned to well-being and peace. It's not that Betty stopped having goals or striving to succeed, but she related to her work and her identity in a completely different way. She moved from the fear of "Who will I be if I don't do X, Y, Z?" to trusting "I will still be, period, even if I don't do X, Y, Z."

You can learn the skill of letting go of the self bit by bit. As mentioned, it's not some mystical practice for the chosen few sitting on a mountaintop. Everyone can learn to pay attention, separate facts from story, and consciously bring the focus back to transformational truths.

A Transactional Look at the Self

When we operate from fear, many patterns show up through our actions in relation to how we see ourselves. Part of the reason we get upset with ourselves is we think we should be the self who _____ (fill the in the blank: never gets angry, never says the wrong thing, always acts selflessly, always turns projects in on time). We create this fixed identity of ourselves as the one who does this and the one who doesn't say that. When we don't do this or we do say that, we judge ourselves harshly. When we grasp the truth that we are not the fixed identity we create in our

minds, we more readily realize that we often say and do many different things. We may need to become more skillful in some areas, and that's okay.

Friendships

We require connection with other human beings—that's why we seek friendship. Even after we become adults, we still require connection with others. Considering how much energy we put into our work and the fact that relationships occur there, too, it is worth creating thriving friendships in our work lives as well as out.

A Transformational Look at Friendship

Contrary to the way we sometimes act, our colleagues are not simply a means to an end. Connections at work improve the well-being and vitality of all concerned. We need to learn to take a genuine interest in people because they're people, not because we're trying to get something from them. When we've built the transformational connections, we can more skillfully manage the ups and downs of transacting with one another.

A Transactional Look at Friendship

One way to create a connection with people at work is to help people when they need it. Someone might need the information to finish a report or assistance in using a new computer program. Simply offering our assistance when we can is all it takes. Even handing someone a stapler when they don't have one nearby begins the process of supporting others to get their work done. To this end, an excellent question for leaders to ask themselves is, "What is the one thing my team needs me to do for them today?"

Developing Others

Leaders have an incalculable influence on the current and future path of an organization; it's worth our time to develop others. Leaders are not born with the transformational and transactional skills to lead; they need to be developed in the relationships we've been discussing. When we develop leaders, we take the first step toward improving the broader culture everyone participates in.

No matter where you are on the leadership spectrum, you can wake up to a new way of leading. Mindfulness is not reserved for the chosen few. It's a skill you can learn and practice daily. Doing so will transform the way you relate to your thoughts, emotions, coworkers, and the vicissitudes of life.

Dr. Daphne Scott is the founder of DS Leadership Life and the chief culture officer for Confluent Health. She is an expert at waking up leaders to a mindful way of leading, and given her improv comedy training, she brings a unique sense of humor to her work helping merged companies integrate cultures. Daphne holds a Master's of Applied Positive Psychology and is also a certified mindfulness meditation teacher.

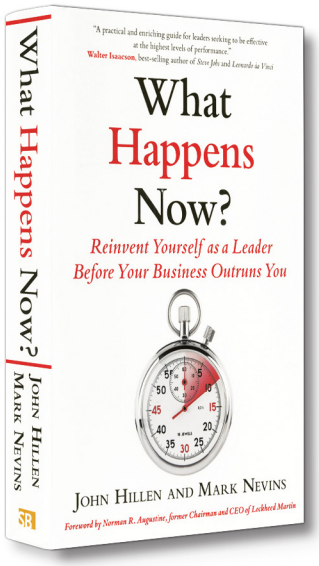
Leadership

What Happens Now?

Reinvent Yourself as a Leader Before Your Business Outruns You



by John Hillen and Mark Nevins

THE SUMMARY IN BRIEF

Again and again the growth of organizations outruns their leaders' skills. If you're one of those leaders, you know the result: As the job grows bigger than you are, you get disoriented by a world of unfamiliar challenges. You then hit a wall of ineffectiveness, a stall point. Your stall then escalates into a crisis.

What Happens Now? helps you to embrace this reality, by showing how sophistication requires you to do things you've never done before — inspire people, nurture relationships, energize teams, groom successors, influence stakeholders. As troubleshooters for leaders of all kinds, authors John Hillen and Mark Nevins focus on the most menacing issue they see in organizations every day: leaders who try to solve challenges solely by engineering solutions to more complexity — process mapping, data analytics, information systems, instant reports. The result? Organizational wreckage.

Instead, you can turn game-stopping stalls into personal growth and organizational success and launch the next phase of your lifelong leadership journey. In this compelling guide, Hillen and Nevins show you how.

IN THIS SUMMARY, YOU WILL LEARN:

- The key differences between sophistication and complexity.
- Why stalls are often a consequence of success.
- To identify and overcome the most common career stalls, including finding purpose, building teams, managing new stakeholders and more.
- Why building your team's leadership is key to your organization's success.

THE COMPLETE SUMMARY: **WHAT HAPPENS NOW?**

by John Hillen and Mark Nevins

The authors: John F. Hillen, DPhil, is a leadership and strategy professor in the School of Business at George Mason University, a consultant and a director for many companies. A *Washington Technology* columnist, he writes regularly on leadership and strategy. Mark D. Nevins, PhD, is a consultant and advisor to top executives, teams and organizations. He has coached and advised a broad range of executives, from the C-suite to high-potential corporate vice presidents.

Why Leaders Stall

Confusing Challenges of Complexity with Those of Sophistication

Over a career, everyone is almost sure to hit at least a few stalls. Stalls come about when your organization hits one of those inflection points — usually as it grows and changes, or the industry or world changes around it — where you need to deploy entirely different skills and behaviors as a leader.

Stalls are often a consequence of your success, making them hard to fathom. They are the points when you're challenged to build on your acclaimed record to deliver bigger or different results, often depending on skills you undervalue or didn't think you needed.

While leadership involves many kinds of challenges, the ones that usually stymie you at inflection points are those that require increased *sophistication*. Facing challenges of fresh sophistication requires not just that you change your team or organization but that you change yourself and others. This means not just changing structure and systems. It means changing thinking and behaviors.

Matters of leadership sophistication don't get the same attention as the challenges of *complexity*: the responsibilities for managing the systems and processes in your organization. If you're like most leaders, you find it easier to embrace complex challenges: You can document them, measure them, and subject them to analysis and data crunching.

But you may find it more difficult to discover solutions for problems not easily measured or explained by the "hard" data. Leaders become baffled as to why they can't drive higher performance, and the reason is that they are caught up in using tools for solving complexity issues when they need to develop the capabilities to lead in a more sophisticated way.

Imagine you're a technology leader, highly regarded for your aptitude in overseeing product development. You have long kept the organization clicking as it expanded to multiple regions.

All of a sudden, your boss asks you to ramp up innovation by partnering with other organizations via joint ventures. Your mastery and mindset for overseeing the team underneath you do not translate to managing people in enterprises who do not report to you. If you're like many leaders, you'll fear that you've been thrust into a dynamic of new relationship-building challenges you don't know how to navigate, and will probably stall.

Becoming Sophisticated

As you take up the task of developing yourself as a more sophisticated leader, you have to take stock of your own capabilities: Are you aware of the shrinking efficacy of your technical skills?

What *are* the new capabilities on which your leadership success will depend? A less obvious question is, which skills that you value today should you deemphasize — or resist exercising at all?

As you rise as a leader, you'll be obliged to master relationship management, raising outside funding, grooming new leaders, redefining purpose in times of wrenching change, handling reputational risk or ethical challenges, and much more.

As with a front-line leader, so with leaders at all levels: Your first task is to discover the pieces of yourself that you must reinvent to master sophisticated challenges.

Leader Without a Story

Stalling When You've Failed to Provide Purpose

In times of growth, or during rapid market change, you can hit a showstopping juncture — when different people in the organization see different realities. They see different visions, different missions, different strategies. People across the organization "own" different stories. And hitched to conflicting storylines, they pull the organization in different directions, with different motives and rationales.

Leaders facing this stall do not have just a newly complex communications problem. The real problem, subtler and less visible, is failing to define and articulate purpose in a way that unifies direction, values and strategy.

This is different from having to explain more things to more people because the organization has grown or changed. That is a challenge of complexity, which you can tackle with more communications tools, people and strategies. Having to articulate purpose in creative, compelling, meaningful and powerfully simple ways to multiple constituents is a challenge of sophistication.

Even experienced leaders unintentionally set the stage for this stall. Gary White was tapped to lead children's clothing store Gymboree after a career at Dayton-Hudson, now Target. At Dayton-Hudson, the story of retail operations was clear: Run clean stores, stock plenty of product, keep salespeople smiling and provide solid customer service.

At Gymboree, a specialty store with 1,900 square feet, he moved right from the start to take that same approach. What happened? "Sales dropped 20 percent!" he says. White was the boss, and yet he realized he had gotten the fundamental narrative wrong.

As it turned out, his stall was not merely about a misfire in how to conduct operations. It was about failing to tap into purpose — the focal point of his narrative painting was washed out, and he had to put new brush strokes on his canvas quickly.

White's head of store operations was diplomatic: "At Gymboree," she said, "moms come in with newborns and toddlers. They expect us to do things like blow up balloons and entertain kids in the stores so they can shop." The company's purpose was not rooted in operational efficiency as it is at big retailers. Rather, it was rooted in being close to customers and providing them with a distinctive experience.

"That was the first big learning for me," White says. "Park the ego, take the tie off and get in the role . . . I listened. I learned. And then I took what I thought was the best of all I heard to meet our mission to grow and be bigger."

And with a fresh and purpose-driven story, he turned the organization's results right away. He could then get in the role and become, as chief storyteller, a reflection of what the company stood for.

How can you better assess whether you've hit a stall in failing to establish purpose? Start by honestly answering the question, "Have I crafted a strong, explicit narrative that is memorable and repeatable? Does it engage people? Or does the story fail to seize and energize people to the point that they can shout it out to their own people? Is the response to my story, 'Okay— so what?'"

Recover: Get Your Story Mojo Back

Creating story and purpose is a task you cannot delegate, even though you should enlist others as co-authors. You are the chief of the tribe, a torchbearer for the organization. How can you make the themes of your narrative burn hot with purpose, and in turn, fire the passions of your people?

Ask rising stars from all over the organization to contribute. Everyone brings new insight to six story elements:

Vision: Depict the future state you're striving for and what the world you touch will look like if you are successful.

Mission: Explain why you exist and what you hope to achieve.

Purpose: Clarify why those accomplishments will fulfill the vision and make a difference.

Strategy: Map the path to accomplish your mission, goals and "how we will get there."

Values: Cite the norms of motives and behavior you'll hold everyone accountable to.

Capabilities and culture: Describe what you need to do and how you'll work together — detailing "the way we do things around here."

Leader of Team Zero

Stalling When You Let Your Team Splinter

Often a leader's team members work at odds, clashing over goals or style, putting their own priorities over the common goals of the enterprise.

Some leaders essentially throw up their hands and adopt a laissez-faire philosophy about their teams. They say, "What am I supposed to do about their lack of collaboration? I'm not a marriage counselor."

Experience shows that if you think you can let nature take its course with a team, you will lose control of it. And the more accomplished and prestigious your team members, the harder you'll have to work to bring them back into cooperation. You will stall.

What are the hints and cues that you're in a stall? The first hint is simply that the people on your team, not having a strong collective view of priorities, clash. They feud during conversations, avoid productive conflict, or shut down and resist passively.

A second hint that you may be headed for a teamwork stall is when your team is populated with managers whose egos balloon out of proportion to their roles.

A third hint that you're in a teamwork stall is when you fear relinquishing work, responsibilities and decision-making authority to others. If you're a leader with a talented team but you think nobody can do the job as well as you can do it, you are certainly due for a stall.

If you sense something is wrong with your team, it's time to make sure you're gaining the right situational awareness to know where and how you need to change. Every team at any level in any organization must be able to answer three simple but critical questions:

- **Where are we?** (What's the current state of our business?)
- **Where are we going?** (What's our three-year vision? What are the most important near-term and longer-term strategic milestones to achieve it?)
- **How will we get there together?** (What do we need to do as a team and as individuals to achieve our short- and long-term goals?)

On the bumpy road of organizational growth, if you're going to avoid stalling, you must work on team dynamics all the time. You'll get top grades for team leadership only when you endow the team with clarity of objectives, authenticity and trust, honest communication, a voice for everyone, results orientation and accountability, and continuous learning and feedback. Your prime task, from the start of your reinvention and ongoing, is to create alignment.

Craft Your Rules

A tool for recovering from the teamwork stall is asking your team to devise explicit "rules of engagement" or "rules of the road." What are the ground rules for how your team meets and works together? Teams that assume these rules are a given or tacit will run into trouble, especially when the pressure is on.

Drafting rules of engagement can sound like an exercise in etiquette, not leadership. But when you turn the exercise into a deliberate and conscious group task, it forces people to think in a more sophisticated way about their minute-to-minute behaviors and their accountability to each other for acting in line with them.

The rules themselves are not always novel, but if the team members create them together in their own language, it's much more likely people will take ownership of them and adapt their behaviors accordingly.

Hervé Sedky, president of the Americas unit of Reed Exhibitions, the global event-management company, asked his team to develop rules of engagement that in the end included the following:

- Respectful honesty and candor (Don't express opinions as facts; be comfortable challenging).
- Step outside your role (Don't be defensive; be open; think team/enterprise).
- This is a safe zone (Trust; celebrate).
- Assume positive intent.
- Encourage participation by all.
- Once we agree, execute.
- Be fully present and listen.

Asleep at the Stakeholder Wheel

Stalling When You Neglect Your Stakeholders

Leaders spend much of their careers communicating and interacting over two managerial channels. The first one is telling people who work for them what to do. The second is telling people who don't work for them what they want to hear. In other words, in the first mode they give direction and orders to employees or vendors, and in the second they act attentive and responsive to customers, prospects or bosses.

But what happens when the relationship challenges get more sophisticated? As your organization and responsibilities as a leader grow, two broadcast/receive channels will no longer suffice or get you the results you need.

As you rise, you gain a host of new stakeholders: regulators, investors, boards, the public, the media, political figures and even rivals in your organization. And these new stakeholders simply don't interact with you through either of those two communication channels.

You will stall if you don't see that your stakeholders will change — and probably quickly — as your job changes. You will need to understand each of these new people and invest in meaningful dialogue with them. And you will

need to deepen relationships and exert influence not via conventional management communications channels but rather with the sophisticated capabilities of a leader adept at stakeholder management.

How do you discover for yourself if you have stalled in exercising influence through your stakeholders? You do so by exploring whether you understand the people with whom, and through whom, you'll accomplish your most important objectives. The best way to start this exploration is by creating a stakeholder map.

On a blank sheet of paper, list all your stakeholders, an inventory of all the players and how they relate to you and your objectives. Then configure the names into a graphic you devise on an 11- by 17-inch sheet of paper, depicting the network of stakeholders in whatever way makes sense to you.

There are only two rules for drawing your map. First, don't draw a standard organization chart. Org charts lie. They may capture the structure of a hierarchy, but they don't capture the sophistication of relationships or patterns of collaboration. Those relationships differ markedly from an org chart's boxes and lines.

Second, put specific people on your map, not just categories of players or groups. When you form relationships, they are with people — not institutions. Which individuals can help you win? What is each individual's agenda and objectives? Who may oppose you? Who do you need something from? Who needs something from you? Who is affected by your team's work? Who can, and will, influence outcomes? Or stand in the way?

Recover: Getting Your Stakeholder Bearing

Using your stakeholder map as a guide, schedule regular conversations and work sessions to build and deepen relationships. Use your plan to establish a habit of figuring out people's positions, perceptions and expectations — deepening trust, collaborating better and influencing outcomes. As you go about reaching out, determine the questions you must ask to foster better dialogue and gain collaboration and support:

- What do these stakeholders most want or need from me? What are they afraid of or worried about?
- What interest — political, emotional, financial — do they have in what I'm trying to do? Are they supporters or detractors or competitors?
- How can I best engage these stakeholders? In what ways/styles do they want me to engage?
- Do they understand what I'm trying to accomplish? Can my efforts help them achieve their objectives?
- Do they have a strong relationship with anyone I need to get closer to — and can they introduce me or advocate for me?
- If these stakeholders are resisting what I'm trying to do, how can I turn them around?

'Nobody Gets It!'

Stalling When You're Failing to Lead Change

When your organization grows and changes, it's easy to take one thing for granted: that you can communicate easily, just the way you always have, and that people will "get it" and change. Email, company newsletters, town halls — that's all you need, right? If you think that way when you need to lead change, the sophistication of your growing organization may have outrun your ability to spark people's engagement and catalyze action.

Especially during wrenching or dynamic change, you can't get by with just a sound story straightforwardly broadcast. You must also cultivate one of the hallmarks of the sophisticated leader — the ability to hear and speak to your people on *their* terms, not yours, in a way that motivates them to execute.

These capabilities come from learning to understand the different ways your followers think and feel, and then speaking to their heads and appealing to their hearts in ways they appreciate, resonate with and feel energized by.

How do you know if you've developed the capability, approach, mentality and behaviors to communicate change in a way that truly engages people and moves them?

The ultimate measure of whether you're communicating the message of change effectively is whether you're spurring ongoing conversations. Do you trigger a give-and-take that guides people in fitting the organization's story into theirs, giving them enough time to reflect on it and to embrace it as their own? Do people "get" the story clearly enough to be able to reframe it in their own terms, summarize it and tell it back to you?

Recover: The Elements of Change

To become an effective chief explaining officer of a changing organization, you need to adopt an approach and mindset committed to engaging and connecting with others constantly. You will probably have to practice new kinds of communication more than you think.

One way to start is to create a communications plan to genuinely drive change. This is not a plan you would produce for product marketing or publicity, where your focus is on

message transmission. It is one that aims to create connection, influence and feedback — essentially a "dialogue plan."

Become a chief explaining officer with a four-part plan:

1. **To stimulate conversation**
2. **To focus on your listener**
3. **To choose your communication channel**
4. **To choose your medium.**

In the first part, you describe how you plan to have a conversation both to advocate and inquire. On the one hand, you want to inform, sell and champion. On the other, you want to ask good questions, have people ask questions, verify what your people understand and have them inquire as to what you mean.

The second part is understanding your listeners' styles and needs. This means understanding the different "currencies" of communication. People respond to different subjects of interest. Do you talk about the challenge of the job, the meaning of the mission, the brilliance of the strategy, the prestige of their position, their relationships with people or the value of their being needed? Which currency do they most value in receiving your message?

The third part is learning to transmit on three different channels. One is facts: the logical, objective realities of the situation and the roadmap for the way forward. A second is emotions, which you can broadcast with humor, encouragement, empathy, honesty and courage. The third and perhaps the most powerful is symbols: metaphors and images that make a story memorable.

The fourth part is choosing your medium, or rather, many of them. Communications experts talk about a spectrum running from "lean" to "rich" communication. Each type requires a different investment and delivers different results. On the "lean" side are email, mass mailings and posters — cheap but not that effective. Slightly less lean are podcasts or group emails.

On the "rich" side are small-group meetings and one-on-one conversations. If you want rounded, relaxed, earnest dialogue, then interactive team meetings or individual visits are the way to go. You can and should sit with your most important stakeholders.

Master of the Old Universe

Stalling When You Lose Your Authority

Chris Howard, the president of Robert Morris University in Pittsburgh, was his high school student body president, Honor Society inductee, talented band member and star athlete. During his senior year in Plano, Texas, as captain of the football team, he helped lead the team to 12 straight wins and a state championship with a 12–2 record after a 0–2 start.

But Howard also had to experience the ugly side of humanity. An African-American who moved to Collin County, Texas, with his family in 1979, there were instances "when people used the N-word like they used the word 'jerk'," he says. "There were even some situations where acquaintances would tell me, 'We don't like black people, but we like you and your brother.'"

He learned as a young man that his innate strengths and capabilities would not necessarily endow him with the authority he needed to get others to follow him. He had to build himself up in additional ways — and especially so in a community burdened by so much prejudice.

Howard did what all leaders must do to avoid a stall: He created a personal syllabus for ongoing growth as a leader.

You could assume that as a leader celebrated for delivering results and taking the organization to new levels, you automatically establish your authority. But individual performance doesn't translate into leadership authority. To retain authority as you step up a level, you need to upgrade yourself to project what followers require in order to have confidence in you, feel inspired by you and spring into action.

If you suspect you're stalled because of your shortage of authority, ask yourself a simple question: What is my source of authority? Why would anyone want to follow me? Or for that matter, respect me; invest themselves in my vision, decisions, values or mentorship; or trust my enthusiasm or judgment for getting great things done? Why should I expect people to call me a "leader"— just because of my title or position?

Recover: Back On Your Horse Again

If you were to ask Bob Zoellick, former head of the World Bank, for examples of his leadership that stand out, you would partly hear about loans and grants to developing countries. Or about helping countries grow, build institutions and expand opportunities for men and women. Those are the important functions of the bank.

But you'd also hear about the time Zoellick had to resist South African politicians who wanted him to jettison his corruption-fighting chief because that chief had challenged powerful interests when leading a special-investigations unit in his home country.

Or about how he had to insist the bank find a way to aid the emigration of a Ukrainian corruption informant whose

life was at risk in his home country. As for the Ukrainian, says Zoellick, "We had, in effect, to create a witness protection program. Some World Bank people said, 'Well, he ran the risk so he's on his own.' And I said, 'You can't do that with people! What message are you sending? And what is your moral standard here?' So we had to help him get out, and take care of him and his family.'"

To be sure, performance at the bank would be measured by his work to overcome poverty and spur sustainable growth globally. But his authority also depended on asking more pressing, controversial and difficult questions, in particular, "What's the right thing to do?"

Leaders can enhance their sources of authority by delving into the staples of leadership theory, but they also have to create their own defining moments, as Zoellick did. These are moments when you leverage your authority to do the right thing, to be the person other people will want to follow.

It's not enough to be just the one with the answers, the intellect or the expertise.

Hamster on a Wheel

Stalling When You Focus Your Time and Energy in the Wrong Places

Many leaders find that as they try to stay on top of bigger and more sophisticated organizations during dramatic change, the impulse to get inappropriately into the details trips them up again and again. It just takes different forms as they ascend to each new organizational role.

In these situations, whether a leader on the front lines or a new C-suite executive, you may begin to feel drained and overwhelmed, with diminishing returns to show for your efforts. You continue to dedicate the same hours and effort to your organization, but you think, "I'm working like a maniac but not getting anywhere!"

Is it possible you're still trimming weeds? Maybe you should instead be addressing the tall trees the organization really needs you focused on.

Time and energy are finite resources, no matter how vigorous your passion for work. Giving an hour of focused attention to X means you're not giving that time and energy to Y. As a leader, you can't afford to burn energy on tasks that don't truly demand your perspective and wisdom as the boss.

If you perceive warning signs that you're stalling, probe further to determine how your habits, schedule and mindset may be indicators of a coming stall. Examine how you divide your time between acting as a doer, a manager and a leader.

Draw three columns on a tablet of paper, one each for "Do," "Manage" and "Lead." List all your activities and actions for this quarter, allocating each, in specific and measurable terms, to one of the columns. Estimate your time devoted to each, and calculate each column's relative percentage. Then ask yourself, "Given my role and what I want to accomplish, am I investing my time and energy commensurate with the best returns?"

Prescribe 'Do, Manage, Lead'

Now that you've identified where you've been spending your time and energy, how should you re-focus tomorrow? What work should benefit from your periods of peak energy? If you're spending too much time *doing*, how will you shift your mindset to more *managing* and *leading*? You may want to make changes to systems or structure, and yes, maybe you should hire a chief of staff. But more often you'll want to target more sophisticated behaviors.

A general rule is to delegate everything someone else can do. First, as a leader, you must delegate all the activities that someone else can do because that frees you up for work only you can do.

Second, only by delegating do you create opportunities to develop the leaders below you: Give them a chance to step up, learn new skills, and get the experience and visibility to turbocharge their careers. Delegation motivated by this logic is a hallmark of the sophisticated leader.

That said, as a leader you should never delegate three responsibilities. The first is being the face of the organization — especially in bad times when everyone is watching.

The second is acting as "Chief Strategy Officer." You should always be looking out from the bridge of the ship, even if you have strategy experts working for you.

The third is taking charge of developing your leaders. Neglecting this last responsibility will hurt the organization most of all.

Coach of the B Team

Stalling When You Can't Keep Your Leaders From Failing

When Hector Batista accepted the job as CEO of Big Brothers Big Sisters of New York City (BBBS) in 2010, he found himself confronting a team of struggling leaders who tested him like never before.

Just three months after Batista started, he became aware of a significant BBBS program that he had not heard of

previously — and he became aware of it in an embarrassing way. When he met with a major foundation to provide an update, the funders asked him about this program. He was nonplussed: "What program?" he asked. Only later did he learn that a longtime staff leader had stepped away, and only a single board member had any visibility into the program. The abdication of leadership by his staff stunned Batista.

In another instance, he noted that a wealthy entrepreneur had been donating $2,500 to BBBS every year. Batista called him to thank him for his gift. The entrepreneur expressed surprise, because he had never gotten a call before. Batista, just as surprised, promptly made a personal visit, and the man upped his gift to $50,000 a year along with a $50,000 gift for a new "Going the Extra Mile" initiative. And then he put BBBS in his will for $1 million. Batista still marvels: "There was no cultivation of donors going on."

Faced with these realities, Batista realized he had to remake his senior team to start, replacing some leaders and promoting "diamonds in the rough." He also had to align the team around a strategy and reverse behaviors in which leaders at the top formerly did little to help the leaders below them grow and thrive.

Batista's story helps us raise a question we should ask of any leader: Are you going to leave a legacy of leadership behind? If you're not building a bench of capable leaders, you're lapsing into one of the most tragic stalls of all: putting at risk your organization's near-term performance and longer-term success.

One way to assess your involvement in a stall in developing leaders is to examine how decisions are made about leadership. How many of the decisions related to developing people do you make, and how many do you hand over to a consultant or your HR head?

Another way to assess your stall is to look carefully at your own 360-degree feedback. Do your leaders feel they are growing and advancing in their careers under your guidance?

Recover: Getting Personal With Leaders

The essential factor in recovering from a stall in leadership development is to commit to getting personally involved. Spread your philosophy and influence across all formal and informal efforts and programs to develop your people.

These three elements matter most in developing leaders: helping leaders clarify and prioritize goals, deepening their understanding of the others whom they must engage and influence to achieve results, and developing a keener knowledge and awareness of themselves. When you are working to develop other leaders, help them keep their focus on all three: goals, others and self. This model is called the Leadership Triangle.

The most pragmatic way to begin your change in mindset and behavior is to spearhead the creation of a structured program for leadership development at any level in the organization. Although you may work with your HR team or talent department to develop the strategy and approach, position yourself as the champion of the effort rather than a passive sponsor.

Integrate the company's strategic and business challenges, what you believe the organization needs from its leaders to excel, how each individual can get better and how people will be held accountable for changing. Whatever your level or role as a leader, get involved in helping to create the best possible formal programs to develop other leaders, and let the Leadership Triangle be your guide.

You can't avoid stalls entirely. But if you make the commitment, you will learn to sense impending stalls. And you will continue to grow without undue slowdowns. That's when you will become your own version of your "best leader ever." You will create a lasting legacy for yourself, for others, for your organization and for the world around you.

THE SUMMARY IN BRIEF

In ***What They Didn't Tell Me*** the author's goal is to help you become a resilient leader and surround yourself with teams you can trust to weather storms and achieve great things together. Author Jawad Ahsan is a CFO of a publicly traded company and admits that his path there was anything but typical. He didn't enter as a CPA or via a job on Wall Street. He instead achieved his financial and leadership training from General Electric. Throughout his story, you can feel his successes and failures, the steep learning curve he had to overcome, and the flexibility and perseverance he overcame to adapt and overcome challenges along the way.

Just as importantly, the author emphasizes the challenges he had to overcome as a Pakistani American, the son of two immigrants, and a practicing Muslim. His background had an impact and provided a unique perspective to team building, leadership, and cultural development. This book is his story, which, while unique to the author, provides universal lessons so you can become a resilient leader and build teams you can trust.

IN THIS SUMMARY, YOU WILL LEARN:

- How to hire people you can trust.
- How to avoid people with the four uncoachable traits.
- How to lead teams in the most effective ways.
- How to lead your team with vision rather than react to short-term circumstances.

Introduction

A common thread I see in new leaders today is that they tend to focus only on what needs to be accomplished. They feel their role as a leader is to simply find direct reports who can fill a role and perform the duties of that job. What they don't do is focus on the person themselves and why they're a good fit.

Chapter 1

The truth is that there are some things you can coach and other things you can't. In my experience, there are four uncoachable traits:

- Unyielding integrity: Always doing what's right and holding others to the same standard.
- Accountability: Fostering trust, executing with a sense of urgency, and taking pride in the quality of your work.
- Collaboration: Being a team player and always prioritizing the well-being of the team above any individual achievement.
- Positivity: Being a positive thinker, breaking through barriers to present solutions, and not engaging in any gossip or negative talk; assuming positive intent and getting any issues or concerns out in the open.

Chapter 2

There's a huge difference between having to listen to someone and wanting to listen to someone. Having a title doesn't automatically make that happen. In fact, I'd argue that leading with the mentality that people have to listen to you will make them want to do the opposite.

If you want to build a team that is resilient and has a strong desire to follow you into the breach, you have to change your mindset about your position. A title is what you get when you earn your way into a job. You have to choose what kind of leader you're going to be once you've assumed that position. How will you inspire people? How will you motivate them? These things must be a conscious choice.

Chapter 3

When you identify someone on your team who has a lack of integrity, you fire them on the spot. You don't say to yourself that you know someday it could be a problem. It's a problem today, and this is only the stuff you're aware of. Who knows what else might already be happening that you don't know about? I have seen time and time again when parting ways with someone who demonstrated a lack of integrity that what I saw on the surface was only a fraction of the poor and toxic behavior that individual would engage in.

Chapter 4

Integrity, accountability, collaboration, and positivity are crucial elements for a team. I found that if someone didn't have them, they could not be coached to develop them. While firing is never an enjoyable task, it was absolutely critical to the team and the company to remove those who were uncoachable. Knowing and embracing that has served me incredibly well in my leadership journey.

Filter versus Funnel

Developing a filter for feedback is crucial if you want to be an effective, confident leader. Feedback is useful in terms of fine-tuning your trajectory—it should be utilized to make course corrections. You shouldn't simply go left or go right based on where people are telling you to go.

Before I sit someone down to discuss my observations of their work and behavior, the first question I ask myself is: Will this be something that is actionable for this person? If it's not, I keep my mouth shut. When you give feedback, not only should it be actionable, but it should include some form of recommendation for how they can improve.

Remember that even when you're giving positive and actionable feedback, you have to consider the person as a whole. Not all feedback can be delivered in the same way and be effective for everyone. You cannot give someone effective feedback unless you understand, to some extent, their view of themselves.

Chapter 5

I tell my direct reports when they're managing their own teams that it's vitally important for them to consider and understand how people view them.

As you move into bigger and bigger roles, the perception your team and other people have of you is not just based on what you do at your desk from day to day. It also comes from the success you're having.

The question for me then becomes: What can I do to give

this employee a better experience? It might not always be compensation. Sometimes it can be giving them time off. Recognition in front of their peers. Opportunities to have their opinions heard in front of leadership. There is a litany of things that you can do to make that person feel as though they are in the boat with you, helping to steer, instead of just having orders barked at them by the captain.

Chapter 6

People, for the most part, want to be led. It's human nature. This is not to say that they want to be told what to do, but they do want to be given direction. When you give that direction and you're confident in it—when you can articulate the reason why—people will follow. If you can make them feel as though they are a part of whatever decision you're asking them to follow, then they'll be even more willing to do so.

Driving behaviors and outcomes is an extension of the choice you make to become a leader. As a leader, it is important for you to serve those who manage your teams in this way as well. You must support their decision such that they feel empowered, but you must also let them know that they can't act as weather reporters. They can't just come and tell you what's going on. You need them to drive change, behaviors, and outcomes as well. There are always going to be people who push back against their initiatives, but it is their job to make sure that everyone stays on track.

Chapter 7

Be very clear about what you want, and don't compromise on that. It's easy to get distracted. Being location agnostic has been incredibly helpful to the growth of my career. I've moved several times. In the thirteen years I was with GE, I moved twelve times.

Chase experiences. It can be challenging because it might mean moving away from friends and relationships, but if you're going after what you want, sacrifices will have to be made. The experiences and opportunities I've had have come from those kinds of sacrifices. There is no other way I can say this: if you want to make it, you've got to go where the job takes you.

As you hire, do so in such a way that you have more talent than you need. Yes, you will likely have people who are going to leave because they are ready for the next step but face a lot of competition to get that promotion, but that's a good problem to have.

Chapter 8

You have a responsibility as a leader to shape not only your direct team, but your leadership peers. You cannot be complicit. It was the reason I led the call for a new head of that division. I viewed it as my responsibility not only to the organization but to create an imprint on the company as a whole. I saw firsthand the people suffering and struggling due to the toxicity of our culture, and to stand by and do nothing about it meant I was effectively endorsing it.

Chapter 9

Employees that are mediocre don't often have the self-awareness to know that they are, and they will rarely remove themselves from their situation or look to improve. The other employees on the team who are carrying their weight will absolutely notice, and it's demotivating to see a substandard team member continue to stick around.

It sounds harsh, but as a leader, if your team is going to trust and follow you, you have to make better decisions than leaving warm bodies in the chair. Their low performance will only cause the team to suffer. Suffer the short-term pain for the long-term success of the team.

Chapter 10

Right or wrong, people will always find things to criticize. It is important to project confidence, without a doubt—to be optimistic and upbeat for our employees, our investors, or whoever your audience might be. Do so, however, without draping yourself in roses. Temper your exuberance a bit. You can remain confident, upbeat, and positive, but you must be mindful of how you come across. You must be self-critical. You can't be so optimistic that you leave yourself open to further criticism.

Chapter 11

It feels good to be wanted. To be wined and dined. Everyone should get to experience that. If you're going to go over the top to get them here, you better make damn sure you continue to make them feel appreciated when they're doing the excellent work you hired them to do. To be clear, it's not just about material rewards. I spend roughly two-thirds of my time on people—listening to their challenges, coaching them, giving them career advice, or talking to my direct reports at length about their own teams.

You can't feel threatened by the idea that your team might outshine you. If you do, you can't be an effective leader, and you can't build an ironclad team. Let go of your ego. When your team shines, it reflects on your abilities as a leader to bring talented people together. It also creates an environment where your people feel safe. It's a lot harder to leave a space where you're comfortable and secure.

Conclusion

If the early part of my career was defined by how I reacted and responded to what happened to me, the later part was defined by whom I surrounded myself with. The people I worked for, worked with, and hired on my teams have been the single most important factors by far in terms of my career turning out the way it has.

A mentor told me once, when I was transitioning from an individual contributor to a manager, that there was a limit to how much I can get done with just my laptop and myself, and that I would need to learn how to build great teams if I wanted to continue to find success. It was advice that seemed obvious at the time but is something I've thought back to often the more I've learned it to be true. However good you are at any given task, however skilled you are, or however smart you are is irrelevant in the grand scheme if you are unable to build and maintain high-performing teams.

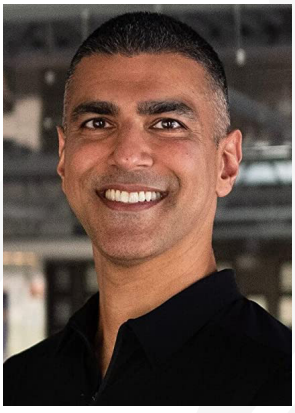
An effective team that is not resilient will only carry you so far. When faced with adversity, they won't be there for you in the way you need them when you need them the most.

The four uncoachable traits that I've referred to in this book—integrity, accountability, collaboration, and positivity—are individually important factors for building resilient teams. Collectively, however, they serve as a heuristic for something that is probably the most important factor in building resilient teams and is itself an uncoachable trait: trust.

If you want to build an effective team, hire for skills. If you want to build a resilient team, hire people you can trust. If you want to leave a mark on this world, hire for both.

Believe in Yourself, or No One Else Will

If I could go back and tell the version of myself at the beginning of all of this—the one who heard he didn't belong in this company or that position—I'd tell him to just believe in himself. And that's what I want to tell you. You can do it. Yes, the path is paved for some. It's an unfortunate reality, but it's true. However, there is nothing to say that you can't create your own path.



At age 29, Jawad Ahsan defined his North Star: he wanted to move up to the C-suite. A year later, he became a divisional CFO at GE Healthcare, and was soon promoted to be a GE executive. By age 34, he was the CFO of a private-equity backed SaaS company, and by age 37, became the CFO of a publicly traded company, Axon. As CFO, Jawad is responsible for leading the company's global finance, corporate strategy, legal and IT organizations, as well as Axon's consumer-facing business. During his tenure, Axon's market cap has increased from $1 billion to over $6 billion.

THE SUMMARY IN BRIEF

Working in fast-paced, stressful conditions with different types of people, all with their own beliefs, values, cultures and work ethics, can cause conflict in even the most basic business relationships. Unresolved conflict in organizations, especially at the highest level, can have dire consequences, such as low productivity, employees' anger and hostility, increased costs, and increased absenteeism and turnover. It's important to realize that conflict handled properly can actually be a great asset to a company. When conflict is managed well, it can lead to new ideas, improved teamwork and commitment, and a better understanding of the people who work alongside you day in and day out. When managers, especially at the highest levels, understand the root causes of conflict, they can be effective in using the conflict as a springboard to greater production and higher achievement.

What You'll Learn In This Summary

✓ **The causes of conflict.** Knowing the telltale signs of conflict can help managers analyze what's causing it and deal with it effectively.

✓ **How to align your group to work together.** Forming a group that agrees on strategic and operational goals makes it easier for group members to agree on ground rules and their roles for the project.

✓ **How to prevent conflicts from occurring.** Avoiding personal attacks, respecting the opinions of others and resolving conflict as quickly as possible are a few of the techniques described.

✓ **Changing the "me" to "we."** Take the steps necessary to emulate high-performance work teams who focus on the team's goals and not individual goals.

✓ **Effective leadership manages conflict.** The management style and interpersonal skills of an organization's senior management dictates how conflict affects the company.

WHEN GOLIATHS CLASH

by Howard M. Guttman

— THE *COMPLETE* SUMMARY

Anatomy of Conflict

Many companies become paralyzed by unresolved conflict. For these organizations, it is important to understand that putting an end to conflict is not a desirable goal. Conflict should be managed, not eliminated.

Conflict is destructive when it:

- Leads to a win-lose game in which one side wins at the other's expense.
- Diverts energy from important activities or issues.
- Destroys people's morale.
- Polarizes groups and destroys cooperation.
- Produces irresponsible or regrettable behavior (e.g., personal attacks).
- Leads to stalemates rather than decisions.

Observing and accepting differences is helpful and necessary. Discussing employees' disagreements can improve problem-solving and be an asset for decision making. Airing opposing viewpoints can bring about new ideas and strategies.

Though most people are not aware of it, conflict keeps a company alive and flourishing when it:

- Stimulates healthy interaction among employees collaborating on a task.
- Opens up discussion about important issues.
- Strengthens team spirit and commitment to group goals.
- Results in better solutions to a problem.
- Improves the quality of a group's work.

Whether conflict works for or against an organization depends on one vital thing: how it is managed.

Through words and actions, effective managers send the message that conflicting opinions must not be swept under the rug. Those opinions can encourage workers to have open, productive dialogue that can benefit the entire organization.

The Roots of Conflict

Conflict occurs when the needs and desires of two or more parties are incompatible. When those parties strive for the same thing — whether it is money, materials, space, time or any other resource — they are in conflict. The word conflict comes from the Latin *fligere* ("to strike") and *com* ("together"), so it is not surprising that common terms used to describe conflict are "clashing" or "butting heads."

When people who have individual needs work together, there is always the potential for disagreement. At some point in all personal relationships, conflict is inevitable, and the same is true of business relationships. In what situation other than business are people with different cultural backgrounds, values, beliefs, and

(continued on page 3)

Test Your Conflict-Management IQ

How effectively does your organization manage conflict? The more questions below to which you answer "yes," the greater your company's need to examine its conflict-management procedures:

- ✓ Is your business strategy fuzzy or unclear? Does your senior management team often debate its meaning?
- ✓ Do people in your company arrive late for meetings or not at all?
- ✓ Do meetings often deteriorate into chaos?
- ✓ Do you need to have more meetings than you should because closure is never reached?
- ✓ Does the atmosphere become tense when a certain executive enters the room or a particular issue is raised?
- ✓ Are priorities constantly changing? Are people unclear about who owns issues?
- ✓ Are discussion and debate discouraged? Is silent agreement the norm?

Anatomy of Conflict

(continued from page 2)

psychological and emotional needs forced to work together for eight or more hours a day, year after year, trying to achieve a set of common goals?

Business conflict is not only found among the Goliaths at the top. It permeates organizations regardless of function or level on the corporate hierarchy.

More than ever, senior executives must be adept at managing conflict throughout their organizations. To do this, they must understand more about the roots of conflict, the reasons why conflict is essential to the human condition.

What Causes Conflict?

There are two main sources of conflict among people in both personal and business relationships: *individual differences* and *stylistic clashes.*

Individual Differences. No two human beings — not even identical twins — are alike in all aspects. Because we are all unique, we all have differences with one another. We all bring to relationships different:

- **Wants and needs**
- **Values and beliefs**
- **Assumptions and interpretations**
- **Degrees of knowledge and information**
- **Expectations**
- **Cultures**

When we interact with people whose wants, needs, values, beliefs, assumptions and interpretations differ from our own, we might find ourselves in conflict with them. But that does not mean we have to butt heads with them. People can have different opinions without taking those differences personally. One of the keys to successfully managing conflict is learning to depersonalize it, or simply view it as a business situation to be handled.

Stylistic Clashes. In a business context, style means the ways each individual approaches interpersonal communication. Some people are comfortable revealing their innermost thoughts and feelings, while others find it extremely awkward and embarrassing to open up, especially in front of a group.

Effective communication is critical for resolving differences, and we all must be aware of how we communicate. What is our primary style? Do we use it some, all or most of the time? Do we vary our style depending on the situation? Do we vary it depending on the person with whom we are communicating or the issue that is confronting us?

Although human behavior cannot be separated into neat categories, it is helpful to think about communication methods in three broad styles: *nonassertive, assertive* and *aggressive*. It is very difficult to accurately identify your own personal style.

Options for Coping With Conflict

There are four ways in which people in a conflict-laden situation can deal with it:

1. Play the victim. Say nothing, act powerless and complain.

2. Leave. Physically move away from involvement.

3. Change yourself. Move from your original position, change your view of the other parties, or just "let the situation go."

4. Confront. Address the issue openly, candidly and objectively by communicating with the other party.

Confronting conflict head-on is one of the hardest things for an organization to do. To accomplish this, executives must start by debunking the many myths about conflict.

Most people believe that conflict is caused by difficult, quarrelsome people who simply can't or won't change; that successful teamwork requires a conflict-free environment; that people can't separate disagreements over business issues from personal attacks; and that confronting another person or group always leaves bad feelings. But not one of these myths addresses a fundamental truth about conflict: It is and always will be. ■

Why Goliaths Clash

Senior executive teams have a strong, steady effect on the psyche of an organization. They are highly visible role models who deliver a powerful, implied message to others: My behavior shows how a senior executive operates — do likewise.

Strategic conflict — disagreement at the top over the future direction of the organization — is conflict at its deadliest and is the hardest type of conflict to resolve.

Resolving Strategic Conflict

Guaranteeing the success of a company's business strategy should be the top priority of every senior management team. Strategy is the way an organization defines its future. Disagreements among senior executives about future products, key capabilities, financial targets and growth expectations create friction among the group that can weaken the foundation of a company. How can a senior team resolve conflict that prevents it from delivering the results its board members and stockholders expect?

Effective conflict management begins with alignment. To operate at peak performance, a senior team must be aligned and reach agreement in four distinct areas:

- Strategic and operational goals must be clear, spe-

(continued on page 4)

Why Goliaths Clash

(continued from page 3)

cific and agreed-upon.

- Team members' roles must be carefully defined so each member knows exactly what he or she is responsible for and what he or she is authorized to do.
- Ground rules must be established to guide group behavior.
- The broad range of personal styles that team members use when interacting with one another must be understood and managed.

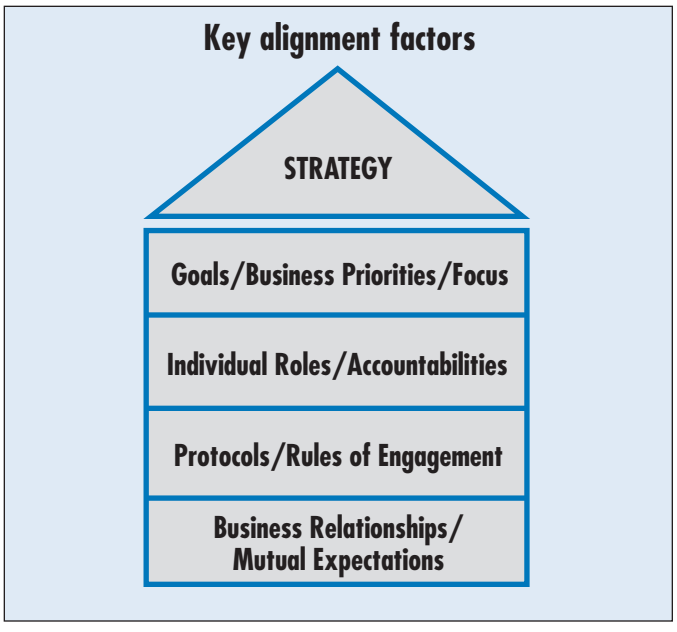
Individual Roles and Accountability

One approach to dealing with lack of alignment is to hold a formal session on the subject with the senior team. Before beginning the alignment session, it is useful to ask participants the following two questions: "How clear are you about your role and accountability on the team?" and "How clear are you about your role and accountability in the organization?"

Many CEOs are surprised to learn that many people on their staff cannot answer these questions well. What these leaders don't realize is that none of their workers operates in a vacuum — workers are constantly interacting with one another. Chances are they have not discussed what their roles are and what they expect from one another.

Rules of Engagement

Having goals and rules clearly set out will get you only so far. Procedures for resolving conflicts — think of them as ground rules for behavior both within the team and outside of it — are key elements in the conflict-management process:



Alignment at Johnson & Johnson

How can a huge, multinational company made up of many subsidiaries keep everyone in all those business units on the same page?

Johnson & Johnson (J&J) knows how. Health care giant J&J is a "portfolio organization" that consists of 195 subsidiary companies. The companies are organized into 20 "franchise groups" that make products for many different uses: skin and feminine health care, wound management and closure, analgesics, anti-infectives and painkillers to name only a few.

Because each franchise must have the same business focus as the parent company, each year J&J's senior team asks franchise leaders to develop their own strategic plans and submit them to the team for review and approval. Once a plan is approved, it's up to each franchise to translate its strategy into operational goals and action plans at every level.

According to Michael Carey, corporate vice president for human resources for J&J, the franchise strategies are tied together by the parent company's clear, common goals and values that reduce the possibility of misunderstandings.

These goals are clearly stated in two ways. The first is J&J's Statement of Strategic Direction, which explains that it will capitalize on its decentralized form of management and manage for the long term. The second is a list of four company-wide goals identified by the executive committee: innovation, process excellence, e-business and flawless execution.

- **Don't "triangulate."** Triangulation is bringing an issue to a third-party mediator for resolution. Triangulation is an attempt to avoid responsibility by using the third party to handle an issue that should be resolved head-on between two people.
- **Don't recruit supporters to your point of view.** We all know people whose main mission in life is advancing their own cause. They are always looking for opportunities to win people over to their side, and they make private disagreements public by bad-mouthing anyone who dares to contradict them. This form of third-party recruiting doesn't bring about positive changes in behavior; it tears apart, rather than unites, the team.
- **Resolve it or let it go.** The longer conflict remains unresolved, the greater the chance that it will grow, spreading negative feelings throughout the team. To cut off conflict before it spreads, some teams establish a deadline (e.g., the conflict must be resolved in 24 or 48 hours). When two members of a team have a conflict,

(continued on page 5)

Why Goliaths Clash

(continued from page 4)

the team leader gives them a deadline to resolve it. If they cannot resolve the issue by the deadline, they must drop the issue and move on.

- **Don't accuse in absentia.** At a team meeting, if someone brings up an issue that involves another team member who is not at the meeting, the discussion should stop immediately. The team owes it to the missing team member to postpone further debate until he or she can be present.
- **Don't personalize issues.** John Stuart Mill once observed that the key to progress is letting all ideas start off even in the race, and eventually the truth will prevail. In business, differences of opinion can stimulate new ideas and lead to a favorable outcome for all parties. ■

High-Performance Teams and Conflict Management

The one competitive advantage that cannot be bought, copied or made obsolete is excellent management of people and processes, including the management of conflict. The best way for an organization to achieve this advantage is by creating and nurturing high-performance teams from the top down.

High-performance teams are powerful because they bring together diverse viewpoints, experiences, judgments and capabilities. Diversity can often create damaging conflict, but not in high-performance teams, where open and direct conflict is actually valued.

High-performance teams do not follow the traditional corporate hierarchy. Employees are asked, often for the first time, to assume individual and collective responsibility for business results. These teams focus on the customer instead of their bosses, and they view their work efforts as benefiting the group, not just their own departments.

The High-Performance Team

B.W. Tuckman, a pioneer of group-development theory, summarized the results of more than 50 studies conducted on team development into a four-stage model: forming, storming, norming and performing. An expanded version of the Tuckman model makes it more relevant to the new performance environment of the horizontal organization.

Looking closely at the behaviors that characterize teams at each stage of the model can help a team understand the obstacles it must overcome to reach stage four.

Stage one of the expanded model is "testing." In stage one, many teams are made up of individuals working together for the first time. Their initial behaviors include testing and assessing each other to determine the level of candor that will be accepted by the team and the team leader. Tensions run high. Conflict is often suppressed rather than addressed, and there is a fear of confronting issues and individuals.

Stage two is "infighting." Stage two often begins after teams have been working together for a while and have fallen into a set behavioral routine. It is where viewpoints are aggressively advanced. It is filled with accusations, finger-pointing and backbiting. Executives feel vulnerable and on the line. It is also where many breakthroughs in conflict resolution take place.

Getting Organized

Stage three is "getting organized." Stage-three teams have realized that to become high performers, they cannot continue to bury conflict or allow it to run rampant. They must transform conflict into dynamic energy that produces results. Teams in stage three are in a learning mode. They are in the process of clarifying roles and goals while they develop skills and establish procedures. At this point they are confronting issues, not people, and giving feedback.

Stage four is "the high-performance team." In stage four, the team translates into action the lessons it has learned during its evolution through the previous three stages. Stage-four teams share eight key attributes that separate high-performance teams from their less-effective counterparts:

1. The mission, goals and business priorities of the team are clear to all team members. For a team to operate at peak performance, these standards must be clear to all members.

2. The team is comprised of the "right" players. As individuals further down in the organization begin to serve on teams, it becomes essential that all employees have three competencies. They must be technically proficient in their particular function; they must have the communication skills to build support for their project across functions; and they must be able to understand their organization's strategy and how it affects their day-to-day actions.

Waiting Compounds Conflict

3. The roles and responsibilities of each player are clear to that person and to all team members. The team leader should step in as soon as it becomes apparent that there is confusion in this area. Waiting only compounds the conflict.

4. Team members are committed to the team "winning" — achieving business goals — over their own self-interest. When teams focus on common goals and become comfortable sharing their opinions, individual

(continued on page 6)

High-Performance Teams and Conflict Management

(continued from page 5)

members begin seeing themselves as serving two roles in the organization. They are no longer only conduits between their departments and the team; they are also active members of a team committed to helping the group achieve its goals.

5. The decision-making process that the team employs is understood and accepted by all team members. When a team meets, there are three ways it can make decisions: unilaterally, consultatively or by consensus. It is often best to use different decision-making processes to handle different issues.

6. Every team member feels a sense of ownership or accountability for the business results that the team must achieve. The notion of shared accountability is an important and unique aspect of high-performance teams.

Comfortable With Conflict

7. All team members are comfortable dealing with team conflict. Candor and depersonalization become second nature. When team members realize that they will be applauded rather than punished for expressing opinions honestly and constructively, they no longer hold back.

8. The team periodically evaluates its progress, focusing on how it functions as a cohesive group. To ensure that a high-performance team keeps its edge, it must be in a continuous learning mode, acquiring and honing the skills it needs to do a project well. ■

The Road to High Performance

Teams that have been working together in a state of dysfunction for a long time carry a lot of interpersonal conflict. When team members comment on the way they work together, they usually feel a great deal of discomfort. It takes tremendous courage to stand up in front of your business associates and admit that you are making mistakes now and then. During discussions aimed at diffusing conflicts, it is important to talk about issues openly without making personal attacks.

Some typical behaviors that can damage the team effort are:

- Not sharing information.
- Being aloof from the rest of the group.
- Going "underground" with complaints.
- Listening to and commiserating with co-workers' complaints instead of encouraging them to resolve them.
- Triangulating by trying to get support for their own interests from their superiors and others.

Becoming a High-Performance Organization

Alignment does not stop with the Goliaths of senior management. They exert tremendous influence over the organization, but the Davids in every function must also play their part.

To become a high-performance team, most organizations must pass through five major steps, or phases:

Phase One: Defining the Business Need

An organization's journey to high performance begins with a business need — specifically, the need to take performance to a new level. The move from Stage One to Stage Five requires an intense desire to win in the marketplace.

Phase Two: Structuring the Teams

At this point, most senior teams must answer some basic questions about the business teams that are going to be formed:

- How many members will be on each of the teams?
- Which individuals will be on the teams?
- Who will be the team leader of each team?
- What will the teams be accountable for?
- How will each team's success be measured?
- How will team members be rewarded for success?

In a company where new teams are being set up, getting answers to these questions usually requires a long period of discussion before agreement is reached.

Phase Three: Aligning the Teams

At this point, the focus shifts to the senior team to ensure that its goals, roles, processes and business relationships are consistent with high-performance requirements.

Every individual on a team plays a dual role: gatekeeper to his or her function and team member. The leader of the team has even trickier tasks to perform:

- Confronting the team with candid observations of group and individual behavior and the potential consequences to the team's performance.
- Soliciting team members' comments to clarify their goals and intentions.
- Guiding the team as it begins to collaborate.
- Negotiating and recording contracts that define agreements about how the team will work together.
- Displaying two behaviors that are important to effective teamwork: *candid disclosure* and *openness to feedback.*

(continued on page 7)

The Road to High Performance

(continued from page 6)

Phase Four: Moving the Message

As with any major organizational change, successfully creating high-performance teams requires effective communication and the buy-in of all employees involved.

High performance is not just talking. It involves explaining the transformation of the team, testing the understanding of group members, relating back to everyone's job, and then answering the question everyone wants to ask: What's in it for me?

To give everyone a satisfactory answer, team discussions must center around the amount of decision-making authority the team has, how often senior management will meet with the team to review results, and how conflicts within the team will be resolved.

Phase Five: Maintaining the Momentum

Moving to the "performing" part of the process, a team must put into practice the things it discussed during alignment sessions. Promises must be kept to change destructive behaviors such as letting go of damaging or mean-spirited criticisms, being candid and encouraging candor in others, refusing to triangulate, and putting loyalty to the team above self-interest. The written and verbal contracts made among team members about business relationships and responsibilities must become working documents. ■

E-Mail Etiquette

According to Disney's Michael Eisner, "E-mail's very virtues also make it dangerous — it is instant, global, quick and easy. It becomes easy to be rude, easy to use language incorrectly, easy to make stupid mistakes, easy to do irreparable harm."

Here are some tips on how to avoid conflicts from misuse of e-mail:

- **Use the right medium for the message.** E-mail is an effective tool for one-way communication, but it doesn't lend itself to situations that require interactive communication.
- **Deliver your messages clearly.** When you send an e-mail message, identify the goal of your message and get right to the point.
- **Practice the "Golden Rule."** Put yourself in the recipient's shoes and ask yourself how you'd feel if you received the message you're about to send.
- **Respect confidentiality.** You'll lose the trust of others if you pass confidential e-mails along to people not authorized to read them.
- **When in doubt, DON'T.** If you are angry or upset, don't send your message. Save it and read it again after you have calmed down to make sure it is appropriate for the situation.

Conflict Management As Art and Skill

In the "old" organization with many levels of authority, power ruled. Teams were a collection of individuals, usually from the same function, who were led by the person occupying the "power position" in the chain of command. Although subordinates on the team were allowed to express themselves, they usually functioned as information sources who served the leader or decision maker.

Later, the "horizontal" organization swept away much of the old-order remnants of power. In the new paradigm, the one who wins is not the person with the most clout, but the one who has the right combination of strategic instinct, technical capability, people skills and the ability to persuade.

Assessing Where You Stand

The second basic capability a leader must have is an understanding of how he or she deals with conflict. This involves being crystal clear on where you stand in terms of the two personality dimensions — *assertiveness* and *cooperativeness*.

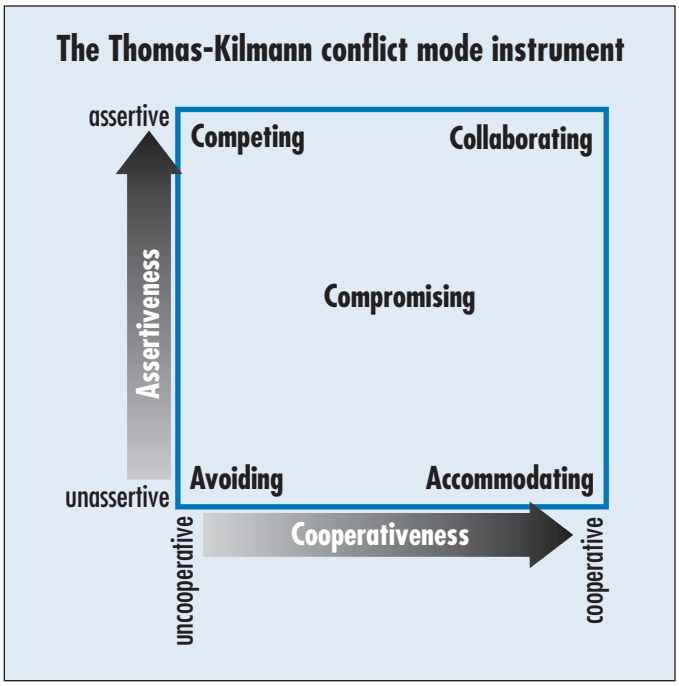
Assertiveness is the extent to which a person attempts to satisfy his or her own needs. Cooperativeness is the extent to which an individual attempts to satisfy another person's needs. Examining these two basic dimensions of behavior in one's own personality makes it possible to assess the balance that exists between the concern for oneself and a concern for others.

It also becomes possible to identify five distinct methods that people employ when dealing with conflict. The Thomas-Kilmann Conflict Mode Instrument in the figure on the next page is a graphic representation of these five methods.

Thomas and Kilmann define each method as follows:

- **Competing implies being assertive and uncooperative.** A person who chooses this method is more interested in pursuing his or her own interests at the expense of others, and using whatever power is necessary to win.
- **Accommodating means being unassertive and cooperative.** This method, which is the opposite of competing, implies self-sacrifice. The accommodating person chooses to neglect his or her own concerns to satisfy the concerns of others. This method requires giving in to another's point of view when you prefer not to.
- **Avoiding is being unassertive and uncooperative.** A person using this method chooses not to take action at

(continued on page 8)



Conflict Managements as Art and Skill

(continued from page 7)

this time, either for himself or herself or for others. As a result, the conflict is not addressed. The avoidance behavior may involve sidestepping discussion of a past issue, postponing it, or withdrawing from what the person feels is a threatening situation.

- **Compromising involves being square in the middle in terms of both assertiveness and cooperativeness.** This method is often efficient. Both parties try to quickly arrive at a middle ground by "splitting the difference." The end result might be a solution that is mutually acceptable yet only partially satisfying to each side.
- **Collaborating means both assertive and cooperative**. Collaborating requires that both sides work together to find a solution that fully satisfies the concerns of each side. It involves listening, empathizing and exploring each other's strategic goals and concerns.

Using Assertion Skills

When your needs are pressing, assertion skills are the solution. The trick here is maintaining the delicate balance between standing up for what you need while respecting the needs of others.

The nonassertive individual, in effect, says, "I've got needs and so do you, but I'm not telling you what mine are. And if you don't guess them, I'm going to hold it against you." The nonassertive individual is a volcano waiting to erupt. At the other extreme, the aggressive person proceeds on the basis that "I've got needs and so do you, but mine count more." The aggressive person is the schoolyard bully in business attire.

People who are nonassertive must learn how to protect their boundaries — whether physical or psychological — and express their agenda without crossing the line to aggression. The aggressive individual, in contrast, must learn not to violate the boundaries of other people.

Each type of behavior has payoffs, and each exacts a price. For the nonassertive executive, the payoff is avoiding arguments and coming across as a team player, but the price is steep in terms of unmet needs and reduced effectiveness. Aggressive executives tend to get their way and benefit from their bullying behavior. They pay the price, however, by alienating other people, stifling input and feedback, and failing to gain commitment, especially in the new knowledge-based organization. ■

For Additional Information on active listening, go to: http://my.summary.com

Leadership in Conflict Management

A leader's style is very important to successful conflict management. The continuum along which behavior ranges goes from nonassertive to assertive to aggressive. When the behavior of the most senior executive falls into one of the two extremes on the continuum, there is certain to be fallout.

The nice-guy model of leadership doesn't work because such a leader will try to avoid confrontation, when in many instances, constructive confrontation is exactly what is needed. Neither does the aggressive approach. The tough-guy leader typically carries baggage that is unsuited for building a high-performance team, such as being controlling, unreceptive to feedback, and intimidating.

Methods of Improvement

The following guidelines will help any manager improve his or her conflict-management skills:

- **Be candid.** When issues surface, bring them out in the open for discussion.
- **Be receptive.** Discuss all competing points of view. Let everyone on your team know that it is not only safe to disagree, it is expected.
- **Depersonalize.** Look at each issue that surfaces as a business case, rather than as a personal indictment.
- **Be clear about the decision-making rules of the game.** Will the issue under discussion be decided unilaterally, consultatively or by consensus?
- **Learn to listen.** A key skill here is decoding and feeding back the messages you think you are hearing.
- **Recognize and reward successful conflict management when you see it.** ■

When We're in Charge

The Next Generation's Guide to Leadership

By Amanda Litman

Amanda Litman is the cofounder and president of Run for Something, which recruits and supports young, diverse leaders running for local office—since 2017, they've launched the careers of thousands of millennials and Gen Z candidates and in the process, changed what leadership looks like in America. She's also the author of *Run for Something: A Real-Talk Guide to Fixing the System Yourself* (Atria), a how-to manual for people running for office.

A Book Review by Soundview

Navigating the Changing Demands of those in Power

How does one learn to lead and lead well? It can be exhausting, exhilarating, and a whole other host of emotions that can be difficult to express or handle. Thankfully, there are thousands of books that share wisdom, tips, and tricks on what makes a good leader and how to lead a team effectively. These books also provide guidance on keeping team members on track, maintaining a clear vision, and knowing how to respond when challenges arise.

What about leading when the roadmap to leading well hasn't been written yet? When, while standing at the front of the room, the realization that everyone is waiting for words to flow, decisions to be made, and the occasional witty remark to come. This may come naturally to some, but for an entire generation, they are writing and rewriting the leadership playbook as they go, because they have seen how previous generations have done it and know that it won't and doesn't work for them.

In ***When We're in Charge: The Next Generation's Guide to Leadership***, Amanda Litman shares the wisdom that she has gained over the years about how to lead. When she started as the co-founder of Run For Something, she was operating without a how-to manual because no one else had successfully built an organization doing what they were doing. She noticed a significant change in 2022 when she found herself surrounded by executives who were the same age or younger, wrestling with the same challenges that they had worked through in years past.

What was the difference? The Gen-Z and Millennials lead differently from those who came before, and as far as Litman could tell, no one had taken the time to write about or discuss why. She realized that part of why it had been so difficult to start and lead a company was that she couldn't find an example that quite fit her where she was in the moment, and that is why she decided to write *When We're in Charge.*

She breaks it down into three parts that are easy to digest. In Part One, she speaks directly to readers, sharing with them how to lead with authenticity, develop a leadership persona that feels genuine, and navigate the complexities of "professional-

ism" and its sometimes problematic definitions. Part Two dives into teams, the policies, and the culture that is created. Not only thinking about what work is for and how next-gen leaders grapple with that, but also the ever-changing expectations, how to create an inclusive workspace, and what transparency is and is not. Finally, Part Three returns to the reader, teaching them how to thrive, not just survive, in the workplace, and encourages them to consider what they truly want out of life.

Litman clearly states that this book is not a description of the current state of the workplace, but rather an aspirational look at what it could be. She hopes the reader uses When We're in Charge as a framework to lead with compassion, firm, maintainable boundaries, and imagination and curiosity. Each part of the book begins with questions and answers to be reflected on as each chapter is read. Throughout the book, Litman uses language that some may consider coarse, but it is used purposefully to emphasize her points and illustrate to next-gen leaders that it is acceptable in certain contexts.

Part One

Stepping into leadership roles can be difficult for next-gen leaders because they are stepping into roles that were not made for them. The leaders who came before them may have wrestled with questions of how to handle themselves and how to lead well, but Gen Zers and Millennials have a unique set of questions to answer that have never been asked before. They want to know how to be themselves while navigating the ever-shifting definition of professionalism and how to utilize social media, knowing that their colleagues and teams will see almost everything they post. It is a lot to wrestle with, but they can do this by being strategic about their communication method and being responsibly authentic as they purpose to lead their teams.

The Modern Life's Buzzword

For this new generation of leaders, people who have been told their whole lives to celebrate their authenticity and to be themselves, it can be a harsh reality when they step into their new leadership roles and find that being themselves is almost impossible. They must present themselves a certain way because, whether they realize it or not, they set the tone and norms of the workplace. They must quickly realize that their role in the organization is not to be their true self. Instead, their role is to be their best selves at work, serving the stated mission and those around them. Why? Because being their authentic, unfiltered selves can be potentially dangerous, they need to be themselves in a strategic way.

Authenticity is a quality that is highly sought after in leadership positions, and even leaders claim to want to embody it. They need to realize that authenticity doesn't mean saying what they think, however, and wherever they want to say it; nor does it allow for unprofessional behavior. It ultimately doesn't serve the larger goals they wish to accomplish, but it can also be used and interpreted as an excuse for hurting the people they come in contact with.

To understand themselves and begin their journey of authenticity, they need to have a sound knowledge of not only who they are, but also which persona they are presenting: their home self or their work self, and do they know how to do that? Their goal shouldn't be to be themselves all the time, but rather to be their leader-self when it is required of them, in a way that preserves their mental health and core values. While the cover may change, the story remains the same, and it is essential to remember that so being responsibly authentic can happen. They can do this by following three steps) find out who they are, 2) be precise about what they hope to accomplish, and finally, 3) define the overlap between the two. Once they do this, they will have what they need to be intentional with how they choose to show up and how much of themselves they allow their teams to see.

A New Definition

Professionalism has been redefined time and again, and now, next-gen leaders are wrestling with what that means for how they lead. Some things haven't changed, such as general etiquette and respecting others' time, among others. Things such as bare shoulders, tattoos, and certain piercings have become increasingly more acceptable as younger generations have stepped into leadership roles, as they have the opportunity to redefine what is considered professional in their space. Because they are among the first to make these changes, it is common to feel a little lost as they try to bridge the gap between their personal and professional selves. They now have the opportunity to convey their professionalism through their appearance and how they communicate.

Leaders set the tone for their work culture. They demonstrate how much of themselves team members can bring to the workplace and how they present themselves to others. This isn't just restricted to a dress code; how they communicate with the people around them tells team members what is acceptable to say and how to say it. Feeling lost while navigating these waters is fairly normal because they are figuring out what this looks like in real time, and there is no guidebook to help them. While it won't always be easy, and clothes need to not distract or take away from their message, Litman encourages leaders to find clothes that make them feel their best and most confident.

Leaders also have to grapple with communication in a unique way because certain platforms didn't exist before. There is no specific, correct way to do this, but it is essential to be mindful of how one communicates so it doesn't detract from the ultimate message or goal. There are a few key considerations regarding internal communications that can also be applied externally, such as carefully selecting visuals, understanding which spaces feel comfortable for them to show up in, and knowing which old-school rules are appropriate to break.

The Dangers of the Internet

Next-gen leaders have grown up with the internet in a way that is unique to their generation and is an integral part of their leader persona. As such, it is essential to recognize that their executive persona extends beyond their speech and attire to how they present themselves online. They need to quickly realize

> *Purposing to protect one's peace is vital because, Litman asserts, no leadership goal is worth sacrificing one's mental health for.*

that their success is tied to how their online presence and how the people around them, particularly their team, perceive what they share. It would be impossible to meet the expectations of all. Still, when social media is carefully cultivated and utilized, it can be a powerful tool for advancing a goal or idea.

However, clear boundaries need to be set because people viewing will feel as though they know everything about them based on what has been posted. Purposing to protect one's peace is vital because, Litman asserts, no leadership goal is worth sacrificing one's mental health for. Whether they choose to be a leader who is a regular poster on social media or one who prefers a minimal or non-existent social media presence, they need to be intentional and remember that it is a tool to be used effectively.

Part Two

Now that leaders have a good sense of who they are as a leader and how to present themselves well, they must look to their organization and ask themselves how they can create a workplace where their team can be themselves, how they they can lead well in a remote workspace and how to handle the ever-shifting demands for transparency. Litman states that this can be achieved by carefully defining the type of organization they are, as well as the behavior that is encouraged and modeled by the leaders, because leadership is about the team and what they can accomplish when they have been set up for success.

Real, not Full

It has become fashionable to encourage employees to be vulnerable and bring more humanity to the workplace, but this can be challenging, especially in the current era of partial or full work-from-home arrangements. Just as a leader must set boundaries and communicate them, they also need to do the same for their organization. When asking team members to be vulnerable, leaders need to be mindful of this request and create a workspace where people can be their real selves. This means the workplace needs to be a place of emotional and psychological safety, where people are treated with dignity and respect.

Be clear about expectations, as otherwise, everyone is set up for failure. Establish processes for communicating feedback so that team members feel free to speak up about and against inequity. Leaders need to have firm foundations and be explicit about what they expect so that everyone understands how the organization's culture functions, has a clear escalation path for when something is out of line with the code of conduct, and, finally, models the expected good behavior themselves.

For teams that work remotely, it is essential to meet in person as often as possible. However, even virtual meetings should be viewed as an opportunity to reinforce the goals and expectations that have been established. Be purposeful about the time available, ensuring that each gathering has a clear goal that everyone is aware of and understands. Utilizing icebreakers and planned time for spontaneity can help teams feel more connected and get to know each other.

Resting Better

In the past, it was unfortunately common to hear complaints about junior employees living their lives outside of work. Next-gen leaders are proposing to break that cycle and need to actively think about and create guidelines so their teams can integrate rest and unplugging into their work lives. They need to not only encourage their teams to utilize their vacation and sabbatical days, but also take them themselves, so employees know it's okay to step away and build their systems in ways that can handle absences, because suffering and burning out doesn't serve anyone.

Litman also endorses the Four-Day Work Week (4DWW) as a way to make work more sustainable for their teams. The transition must be carefully planned and thought out; however, by adjusting scheduling and the pace of work, among other factors, it can have a positive impact on employees' attitudes and their ability to be present for their loved ones outside of work. A good leader knows their job is to create a work space for their team to accomplish their goals and not feel like they are an overworked cog in an un-oiled machine. They need to establish the necessary boundaries and policies that will protect the people around them and break the unhealthy cycles that have preceded them.

Let's Be (Carefully) Honest

Communication must be carefully thought out, and the expectations for it must be laid out, as transparency is expected in the workplace; however, putting it into practice can be challenging. Transparency may be defined differently, but the root of trust and a common understanding remain the same. It can be challenging, but communicating well will allow expectations to be explicit and clear, thereby avoiding frustrations, disappointments, and complicated dynamics. Challenges may come with being transparent with team members. Some may feel that their knowledge gives them a sense of influence. Others may not be able to handle all the information they are being given.

It can be difficult, and the results might be scary, but this new generation of leaders knows a change must be made. Transparency is valuable both personally and professionally and is a means to accomplishing the goals at hand.

Part Three

Leadership can feel exceptionally lonely. It can be challenging to find a community when friendships with employees aren't possible, a mentor can't be found, self-care sounds like a laughable buzzword, and the pressure is constantly mounting. The solutions are unique for everyone, but by creating and maintaining firm boundaries, knowing one's identity outside of work will help next-gen leaders stay resilient in the face of mounting pressures.

Finding Joy and Community

Next-generation leaders are facing a multitude of challenges, including the evolving definitions of professionalism, navigating their presence, and constantly creating and revising policies, among others. It can be, and is often, lonely work. Relationships evolve, and team dynamics shift, bringing both challenges and benefits as one assumes a leadership role. There isn't a prize to be won for going alone, but Litman encourages wisdom as the reader navigates relationships with employees.

Finding community must also be thought about differently. A community can be found online, through a group chat with friends or fellow leaders. It can also be as simple as proposing to remember simple details to connect with the people that they cross paths with, or joining a board to help serve the community better. Next-gen leaders know that while they aren't the first person like them to walk into the room, they are determined that they won't be the last and recognize that their loneliness will serve no one.

Working Well

Now that the day-to-day aspects have been examined, it is time to look to the future and what comes next. It can be complicated to think about ambitions, because it isn't that this next generation of leaders wants to have it all; they know the world isn't set up that way. Instead, they know they want enough of the things that matter to them and are willing to negotiate and juggle their professional lives so they can be present. They are reshaping their career paths and running their companies differently from those who came before them.

The ambitions they are working to achieve are a good thing, unless they have become all-consuming. For a generation of people who were told they would never really work a day in their lives if they loved their job, it is time to redefine what a good life looks like. They understand that they still have to work in order to have the lives they want, so even though they are the generation most likely to change jobs rapidly, it is because many of them agree that a nonlinear career path keeps them creative and innovative.

This new generation of leaders, the GenZers and Millennials, has one overarching rule that can be summed up by simply stating that the way things were done yesterday is not the way they have to be done tomorrow. They won't always succeed and will face difficult decisions. Still, they also know that anything is possible because they are changing the game, redefining leadership, and reshaping their world in their sphere of influence.

When We're in Charge: The Next Generation's Guide to Leadership by Amanda Litman is an enjoyable read that explores the challenges that next-gen leaders will face. She proposes that GenZers and Millennials have unique strengths that will help them as they navigate leadership roles that people like them have never or rarely filled. Because a mentor is hard to find and playbooks are still being written, they are forging ahead to create paths and models to guide those who follow and look up to them. She uses profanity throughout the book, but does so only when it serves her purpose and enhances her message. She is encouraging, stating that while next-gen leadership can be complicated, this group of individuals can still achieve its goals and change the world.

Who's in the Room?

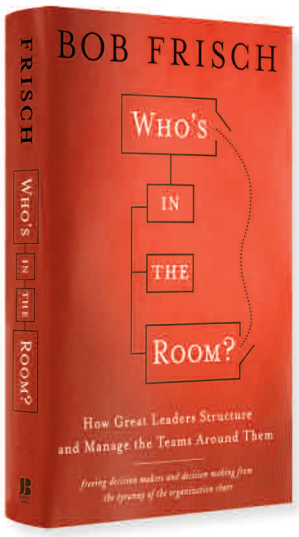
How Great Leaders Structure and Manage the Teams Around Them



by Bob Frisch

THE SUMMARY IN BRIEF

At the top of every organization chart lies a myth — that the boss and senior management team make all the critical decisions together. In reality, most decisions are actually made by the boss and an inner circle of confidants — a "team with no name" that exists outside formal processes.

This gap between the myth and reality of decision-making causes significant problems. Executives wonder why they weren't consulted earlier. Bosses wonder why team members have trouble grasping the big picture. There's a tension in the executive suite, and repeated attempts at team building don't seem to resolve it.

In *Who's in the Room?* Bob Frisch provides a unique perspective on this widely misunderstood issue. Flying in the face of decades of organizational psychology, he argues that the solution lies not in addressing behaviors, but in unseating the senior management team as the epicenter of decision-making. Using a broad portfolio of teams — large and small, permanent and temporary, formal and informal — great leaders match each decision to the appropriate team in a fluid, flexible approach that you won't find described in management textbooks.

The result: The right teams addressing the right issues at the right time, a renewed sense of collective purpose for the organization's most senior and valued leaders and, most importantly, bosses seeing an end to people asking, "Why wasn't I in the room?"

IN THIS SUMMARY, YOU WILL LEARN:

- How great leaders can unleash the full power of their senior management teams against a specific set of critical tasks for which they are uniquely suited.
- How to understand and embrace the way decision-making actually happens in your organization.
- How to use "teams with no names" to best advantage.
- How to engage your management team in critical tasks.

THE COMPLETE SUMMARY: **WHO'S IN THE ROOM?**

by Bob Frisch

The author: Bob Frisch, managing partner of The Strategic Offsites Group, has worked with organizations ranging from Fortune 500 companies to German *mittelstand* family businesses to the U.S. Department of State. His work has been featured in the *Harvard Business Review*, the *Wall Street Journal*, *Bloomberg Businessweek* and *Fortune*.

Introduction: Who's in the Room?

Most of the world's best executives make decisions in ways that don't show up on an organization chart or a process flow diagram. When it comes to critical decisions, they implicitly understand the inherent limitations of the formal executive team. They tacitly acknowledge that it's desirable for the boss to have the ability to vary who is in the room when major decisions are being made. And they instinctively know exactly whom they want with them in the room for each specific decision.

Having a small cadre of trusted advisers in the room when each big decision is made is the way most leaders run their organizations, and when the real nature of the executive team is fully understood it will also be clear that this approach is the *best* way.

Strengths and Limitations of Senior Teams

Senior Management Teams (SMTs) have undeniable strengths, and they are in a unique position to do things that no other group in the organization can do as well. Making big decisions isn't one of them. Unless the senior team's limitations are understood and its genuine strengths put to work, the blame and frustration on all sides will continue. The organization will have the approach half right: ad hoc decision making by the few. But it will also have the approach half wrong because it will fail to fully leverage the real power and competencies of the many.

By understanding the nature of executive decision-making, executives and the members of their senior teams can stop beating themselves up and each other. They can start improving the ad hoc decision-making process that probably already lies near at hand, and they can focus the executive team on what it does best. This outcome doesn't require organizational overhauls or irrelevant team-building exercises. It requires only an acceptance of reality and a willingness to refine that reality with a few simple steps that can be taken tomorrow.

It's time to send the psychologists packing. Time to stop hamstringing yourself and selling the members of your executive team short. And time to free decision-making and decision makers throughout your organization from the tyranny of the organization chart.

The organization will get faster, better decisions and a higher level of organizational alignment in executing against those decisions. Team members, and the people who work under them, will achieve new levels of effectiveness — and even fulfillment — in being unleashed to do what they do best. And you and other leaders in the organization will see a dramatic drop-off in people coming into your offices and asking, "Why wasn't I in the room?" ●

PART ONE: FROM PROBLEM TO PORTFOLIO

Most Companies Are Run by Teams with No Names

Whether used wisely or poorly, kitchen cabinets are an ineradicable fact of organizational life. The term *kitchen cabinet* has its origins in U.S. history. It began as a term of abuse used by the political opponents of President Andrew Jackson to describe the loose collection of advisers he used, in parallel with the official cabinet (the *parlor cabinet*), to make important decisions. In 19th century American dwellings the kitchen was literally a smoke-filled room that was kept hidden from guests,

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor in Chief; **Andrew Clancy**, Senior Editor; **Chris Lauer**, Contributing Editor; **Amanda Langen**, Graphic Designer

whereas the parlor represented the publicly acceptable face of the home. Today, of course, *kitchen cabinet* is applied to any leader's unofficial group of top advisers, and despite the almost universal use of these groups, the term's contentious beginnings are worth keeping in mind. Their use is almost universal.

Virtually every CEO depends on a small group of trusted advisers that he or she consults about most major decisions. As the executive ultimately accountable to the board, the CEO has every right to consult anyone he or she pleases in making a major decision.

Advantages of a Kitchen Cabinet

The fact is that a kitchen cabinet offers advantages that almost no leader is willing to give up:

- It enables the CEO to consult with precisely the right mix of advisers for a particular decision.
- Because it is a small, highly selective group, it preempts the problems of endless discussion, uneven qualifications and competition over turf that plague larger, more representative teams.
- It frees the CEO from the organization chart, which describes reporting relationships, not decision processes or decision rights. Involving all of the CEO's direct reports in every decision is inefficient.
- It provides the CEO with the candor and the confidentiality that only a small, highly trusted group can provide and that is critical in making major decisions with far-reaching implications for the company internally and externally.

These unofficial, ad hoc groups are a powerful asset, and so leaders have employed them since the dawn of recorded history. Leaders are not only unlikely to give up kitchen cabinets, they *shouldn't* give them up. Ultimately, the issue is not whether the kitchen cabinet has supplanted the Senior Management Team (SMT) or usurped its role, but how best to use *each* team.

Team Building Won't Solve the Problem

Fred Adair and Richard Rosen conducted a study for the global executive search firm Heidrick & Struggles on top-management team performance. They surveyed 124 CEOs worldwide and 579 of those CEOs' reports. Despite the fact that CEOs didn't indicate on the survey that their Senior Management Teams (SMTs) are broken, there is a constant pressure to somehow fix the current situation. The status quo seems unacceptable. It's a rare strategy offsite or management retreat that doesn't include at least one agenda item facilitated by a coach, trainer, psychologist or organizational consultant. At the time this chapter was being written, a Google search for the phrase *leadership team development* returned 9,430,000 hits. An entire industry exists with the sole purpose of improving team effectiveness.

CEOs may show confidence in their teams when they fill out consultants' surveys, but actions speak louder than words. The corporate emphasis on team-building activities implies that the problem lies with the team itself — somehow the SMT isn't working to its potential — and that the root cause is psychological.

Let me be clear. An executive coach can perform a valuable service. At one time or another, almost everyone has had the experience of working with someone who is difficult. Such people may be arrogant, abrasive or overbearing. They may be devious. They may pursue their self-interest at all costs, fail to deliver on promises or shirk their responsibilities. Their bad behavior irks colleagues and can be highly disruptive on any team.

Confronted with such a character, a perceptive boss may call in a coach who can help to change deeply ingrained habits, smooth the rough edges and generally reform the offender. In less dire cases, where some kinks in the individual's working style are getting in the way of results or an aspect of an executive's capability needs improvement, a good coach can help that executive achieve better performance in the job.

But when the focus is team building with the SMT, it's another story. Team members may feel better after one of these sessions and like or understand each other more. But from a decision-making perspective, or in terms of the SMT becoming more effective in its role of leading the organization, these exercises are largely ineffective and beside the point. Further, the philosophical and empirical foundations of team building are shaky. Its stated goal of *team effectiveness* is so general and unmeasurable as to be almost meaningless. Most important, the problem that team building is typically being applied against isn't psychological or behavioral at all.

Don't Blame the Boss

The failure of the behaviorists to fix the issue of top-team performance implies that the underlying problem with decision-making may not be psychological or behavioral at all. But if it isn't a question of the behavior of the team or the behavior of the leader, what is it? Breaking sharply with the behaviorists, a significant number of experts would say that what you need to fix is not the team or the leader but the *process*. The

Heidrick & Struggles study notes that "team processes — how a team works together, including its decision-making patterns, modes of conflict management, responsiveness to changes in customer or other environmental changes and the management of its meetings — are viewed as *the* most important contributors to Top Management Team effectiveness."

The authors of the Heidrick & Struggles study agree that different decisions require different methods of attack, but instead of addressing decisions from the point of view of the leader's repertoire of behaviors, they argue that it is more effective to establish a set of clear processes starting with decision-making. Clarify who gets involved, when, and what their decision rights are at any given point in the formulation of the decision. Then chart that involvement for each kind of decision. Once the process is made clear, the team's ability to function effectively within that process will presumably be enhanced.

Decision Rights

Decision rights emerged from the responsibility charting frequently used as a tool in project management. For example, one of the most commonly used such tools, RACI charting, identifies the team **R**esponsible for doing a particular piece of work, the individual **A**ccountable for seeing that the work is done, the individuals or groups who should be **C**onsulted for their opinions about the work and the individuals or groups who should be **I**nformed as the work takes place.

Similar frameworks, appropriately adapted for the particular requirements of decision-making, may be used to chart decision rights. Unquestionably, making decision rights clear and putting those rights where they belong can improve performance. I use it often with my clients in order to clarify the roles both of individuals and of groups in key processes.

So, even though formal decision authority is seen to rest with one person, the implication of all these models is that teams should make decisions, with the leader stepping in "for better or worse" to "resolve any impasse." But the nature of the SMT makes this assumption untenable at the top of organizations. SMTs are, in fact, not well suited for making most major decisions. ●

Four Fundamental Conflicts at the Heart of Senior Management Teams

By their nature, SMTs entail four fundamental conflicts — not one of which is psychological — that make the team's status as a decision-making body highly problematical:

- **Mission Control versus Knights of the Round Table.** In team discussions, members are torn between the functional expertise that brought them to their place at the table and the leader's desire that they take an organization-wide, holistic perspective. This is a conflict between what the leader expects of them and what they know.
- **The team versus the legislature.** It's called a *team*, but it more closely resembles a *legislature*. Each team member represents a significant constituency — all the people in the member's function or business area — constituents who aren't present at SMT meetings. Meanwhile the CEO expects team members to act in the best interests of the overall enterprise. This is a conflict of accountability.
- **The House versus the Senate.** The kind of legislature the team resembles is undefined, resulting in deliberations clouded with ambiguity. Is it a group like the U.S. Senate, where every state has equal weight, or is it more like the U.S. House of Representatives, in which the most populous states have the most clout? This is a conflict about where the balance of power is within the team.
- **The majority versus the majority.** The *voting paradox*, first demonstrated by a French mathematician and social theorist, the Marquis de Condorcet, in the 18th century, shows that no matter what choice a group makes, other alternatives can simultaneously command a majority of the group's preferences. This is a conflict about consensus.

None of the first three of these conflicts is easily resolved — and the voting paradox cannot be resolved at all. But all of them can be easily understood. That understanding can help both leaders and team members let go of unrealistic expectations about the executive team's role. The leader can better manage the tensions to which these inevitable conflicts give rise. The team can focus not on smooth functioning — that's the true realm of team building — but on finding the things it can do best.

It's time to stop blaming the SMT or the leader for the failure of the team to effectively raise and resolve critical issues.

Why not instead accept the reality that the use of kitchen cabinets points toward: CEOs need different configurations of people — different people in the room — for different types of decisions and different tasks.

Instead of assuming that a single management team of direct reports can best handle most issues, great leaders surround themselves with a portfolio of teams — permanent and ad hoc — to draw upon. Rather than see-

ing themselves as the organization chart depicts them — leading from the top of a pyramid, with the SMT directly below — they view themselves as being at the center of a series of concentric circles, with the organization radiating outward. For them, the solution to the perpetual problem of the SMT doesn't lie in psychology; it lies in the adroit use of a custom-tailored portfolio of related teams. It is found not in a monolith but in a multiplicity.

Case Study: How One CEO Transformed His Top Team

One leader who has looked past the SMT monolith is Thomas J. Wilson, chairman, president and CEO of The Allstate Corp., who has reshaped the senior management structure of this $31 billion, 35,000-employee company.

Finding the combination of teams that works best for you requires not only acknowledging reality but delving into some history. In many organizations, team structures and processes have simply been handed on from one leader to another with little reflection by successors about whether that legacy really suits them.

The SMT structure Wilson inherited when he became CEO had been created in 1995 by then CEO Jerry Choate. Although Choate was chairman and CEO, he wanted to maintain day-to-day oversight of the dominant Property and Casualty (P&C) side of Allstate's business, so he created a multilevel structure — an SMT that consisted of his direct reports plus a few key executives two levels down in the organization chart.

Wilson's immediate predecessor, Edward "Ed" Liddy, maintained Choate's structure during his tenure as CEO. But Liddy's style was to adopt more of a corporate approach, and he left most operational decisions to the presidents of the divisions. Liddy was also more of a kitchen cabinet CEO, whose style favored frequent one-on-one discussions with his subordinates and close advisers.

Like many CEOs, Liddy tempered his natural instincts by deliberately introducing into his decision process trusted perspectives that differed from his own. But he didn't do this by bringing in the entire SMT and putting key strategic decisions on the table in front of the group as a whole.

From a Single Top Team to Multiple Teams

When Wilson became CEO, he already believed that the SMT structure he inherited wasn't going to provide the kind of support he needed to get Allstate where he knew it had to go. The kitchen cabinet approach was not his style either. "In general, I prefer a broader group of people in the conversation," Wilson says. "Not so broad that it's unwieldy, but broader because I like to see the interplay between them. That's my personality, and I wanted an organization around me that supported that."

Wilson puts great value on group decision-making, despite its inherent difficulty. "Forcing the organization to decide builds sustainability," he says. "I didn't want to lead being only CEO-centric."

Shortly after his appointment as CEO was announced in October 2006, Wilson told the SMT that the company needed to become more consumer-centric, requiring the organization to become faster and more flexible.

Operating the company, overseeing the strategy and ensuring the development of talent — all functions formerly carried out by a single SMT — are now allocated to three single purpose permanent committees.

Best Practices: Design an Organization That Delivers the Outcomes You Need

Leaders can increase the likelihood that they will get the outcomes they are seeking by thoughtfully flexing teams along five critical dimensions: number, size, composition, issue ownership and timing. Here are some best practices for each of these dimensions:

- **The number of teams should be no more than absolutely necessary to achieve desired outcomes.** Most organizations have far too many standing committees, with far too many regularly scheduled meetings. It's not surprising that many executives spend almost half of their working lives in meetings.

- **Size should be determined by the desired outcome at each stage of a conversation.** As we've seen with the three naturally occurring teams — the kitchen cabinet, the SMT and the all-officers group — the size of a group makes it better at some things than others. The same principle should be applied to all teams.

- **Composition should be determined by the nature of the issue at each stage of the conversation.** Just as teams can be flexed in size depending on the desired outcome at any given point, they can be flexed in composition, understood as the kinds of expertise different individuals bring to the conversation.

- **Issue ownership should be determined by the requirements of the conversation, not by a charter.** There is no iron rule that says a particular team has

to handle an issue from beginning to end. Different points in the conversation may require the participation of different teams.

• **The timing of the parts of a task should accelerate the tempo of the business.** Timing is tied to outcome and objectives, so the team is faced with not just a question of what but also of by when. The task is to orchestrate all of the time frames so that they are in harmony and — most important — to accelerate their work so that the entire business is faster, more nimble, responsive and proactive.

PART TWO: THE SENIOR MANAGEMENT TEAM UNBOUND

Engage the Senior Management Team in Three Critical Conversations No Other Team Can Have

No other team in an organization combines the seniority, representativeness, collective wisdom, experience and competence of the SMT. But those extraordinary characteristics rest on a very ordinary foundation — team members' status as staff to the boss.

As one executive put it, "I changed their name from the Executive Committee to the President's Staff because I wanted people to stop treating them like gods." Once the SMT has been demythologized, then its members' seniority, their fully representative nature, their collective abilities and the fact that they are also staff to the accountable executive can be used to best advantage.

Liberating the SMT from the illusion of being a decision-making body opens up the potential for the team to take on a more important role than ever. There is a whole spectrum of activities at which senior management teams excel — activities through which they can make a far bigger contribution to the success of the organization than by nominally approving business cases or dealing with myriad minor issues that have no other home.

As the most senior team, with all the key components of the organization simultaneously represented around the table, the SMT of course has an ongoing role to play in the day-to-day coordination of the business. As with any staff, providing ongoing, cross-functional oversight arises as a natural purpose of such a group. In fact, at many companies, operational coordination is the primary role of the leader's staff. But beyond this familiar operational role, the SMT has the potential to shine at several extremely important strategic tasks, the outcomes of which can profoundly affect the performance of the entire organization. These critical tasks are:

- Developing a shared view of where the organization needs to go and why.
- Managing a prioritized set of strategic initiatives designed to get there.
- Managing dependencies within and among initiatives to ensure their success.

In other words, these tasks concern vision, allocation of resources and execution — three of the most critical responsibilities of top leadership.

Align the Senior Management Team Around a Common View of the World

A good starting point for making conversations about vision meaningful and relevant to a group like a SMT is to pursue a deliberately pedestrian definition of vision by asking these questions: What is the next set of opportunities this company is going to pursue, and what are the capabilities that will lead us to realize those opportunities successfully? Arriving at the answers that will form the vision involves:

- Developing a common view of changes in the external world.
- Understanding the organization's existing capabilities for pursuing the opportunities that those changes will create and determining what new capabilities and assets will be needed in the future.
- Defining the boundaries of the current business that will need to be modified or removed in order to pursue these specific opportunities.

Once the vision has been established, the tools to operationalize it — initiatives, priorities, metrics — can be put into place. But the key is to first make sure that the SMT understands where the company is headed, why that direction makes sense and what it will need to get there. Many failures of vision can be traced back to a failure to define and communicate one or more of those key understandings. Expressing the vision in deliberately pedestrian terms — opportunities, capabilities and boundaries — makes the process highly accessible to the entire team, even if its members don't see themselves as particularly visionary.

Your executive team members can reach a mutual understanding about the world they are operating in and

the opportunities, capabilities and assets they have — or will need — to succeed in it. Developing a vision is no more, and no less, than the SMT building and articulating a common view of the future.

Prioritize and Integrate Initiatives to Hit the Strategic Bull's-Eye

The company's current situation determines how the SMT combines or sequences three questions about an initiative: (1) Does this team own it? (2) How important is it relative to the others? (3) How urgent is it relative to the others?

The company may already have prioritized by importance but now needs to decide on timing. Or, facing a crippling proliferation of initiatives, it may need to tame issues of both timing and importance right away. Regardless of how it proceeds, the important thing is to harness the underlying principles and significant advantages this approach offers for successfully completing what can otherwise be a very difficult job:

- **Clustering in relative categories is much easier and ultimately more productive than rank ordering.** Absolutely and precisely rank ordering initiatives is virtually impossible.
- **The secret lies in fuzzy logic.** The reasoning behind bucketing initiatives this way is roughly analogous to applying *fuzzy logic* — an idea that first appeared in mathematics for situations in which the reasoning is approximate. Rather than an attempt at false precision, the fuzzy logic of the initiatives prioritization conversation is a series of pairwise comparisons. For example, consider that *warm* doesn't typically have to be a precisely defined term but a condition somewhere between *hot* and *cold*. Similarly, it's easy for the SMT to get a sense of whether a given initiative is more or less critical than another if it's a question of clustering it in group A or group B. The grouping of initiatives proceeds on the basis of approximations, with neither absolute values for inclusion in a particular group nor absolute ranks for the initiatives within a group.
- **It's not rocket science — and doesn't need to be.** False precision is doomed to failure, and the simple expedient of bucketing initiatives can break the team free of the rigid logic of rank ordering or metrics-based approaches. Placement of options into broad categories, like must do/should do/nice to do or now/soon/later, is much easier and just as effective as spending hours negotiating precise outcomes.
- **The left hand learns what the right hand is doing.** Through the prereading and subsequent discussions, the members of the SMT gain a detailed understanding of what's going on throughout the organization. These conversations provide them with a common perspective on what the company is doing to drive the achievement of its objectives. In both cases, the result is greater alignment, including a common framework for the hundreds of decisions they make in the course of doing their jobs.

Move from 'Should We Do This?' to 'How Do We Do This?'

Positioning the SMT as the decision-making authority at the pinnacle of the business case process is a sham at most companies. The reality is that decisions have essentially been made by the time they get to the senior team, having been all but decided by the accountable executive, with critical sign-offs acquired along the way. Yet the near-universal use of the SMT for final review and some form of sign-off on business cases goes unchallenged and unchanged.

Making the process useful begins with a frank recognition of several major shortcomings of the business case process, all of which are contributing to the failure to address dependencies:

- **Business cases are inherently one-sided selling documents.** Whether business cases are being presented to the senior team or to a single executive, they have a glaring weakness: They are written and put forward by people who want the answer to be yes.
- **The business case process is dominated by the finance perspective.** It makes no sense to frame a business case in terms of one function, yet in most companies the process remains primarily in the realm of financial data on spreadsheets rather than in a real discussion of doability.
- **Individual business cases are typically considered serially.** As a result, the finite functional resources not already absorbed by business as usual may already have been allocated to other initiatives. The proposals that get the lion's share of funding are not necessarily optimized around the best cases but rather those that come at fortunate times in the approval cycle.

By making a few simple but critical changes in the way that business cases are prepared and discussed, lead-

ership teams can make the final consideration of a proposal into a powerful tool for resource allocations and cross-organizational alignment:

- Set the strategic dimension of the business case in the context of the team members' conversations about their common view of the world and the company, and their prioritization of initiatives.
- Set the business case in the context of the cases that have been previously approved and those that are likely to arise in the future.
- Create templates that require answers to the fundamental questions of doability, including critical resource dependencies as well as risk assumptions.
- Use the final SMT review meeting to probe those dependencies and assumptions — with each member representing his or her function rather than the team acting as a single executive entity.
- Gain commitments from each team member to deliver the critical resources identified, with the team understanding the trade-offs involved and potential downstream implications.
- Recast ownership of initiatives arising from strategically important business cases to the SMT as a whole, with both individual and collective responsibilities and consequences, instead of viewing the sponsoring function as the sole owner of the initiative going forward.

At some point the SMT as a whole will appear to be dysfunctional. Until your team is having the right conversations — about members' common view of the world, the prioritization and integration of initiatives, and the management of dependencies — you are missing out on the best way to build an effective team: allow it to succeed at the things that it is best suited to do and that also confer the most advantage on the business. ●

Tailor Your Portfolio of Teams for Top Performance Now

If I've done my job right, your thinking about the teams around you has come a long way. Along the way, four fundamental principles have emerged:

1. **Teams don't decide — executives do.** Teams can provide valuable input, insights and ideas — they are a critical element of management. Their discussions can surface solutions and provide persuasive points of view. But it's rare that a major decision is actually put in the hands of a team. True group decision-making is a rare event in practice because groups don't have accountability. Individuals do.
2. **The SMT shouldn't be considered an all-powerful group at the focal point of all key decisions and processes.** Dispelling the myth of the SMT members as the gods on Olympus and recasting them as a unique instance of an ordinary organizational construct — an executive's staff — can be a more powerful transformative tool than years of organizational coaching and team building.
3. **Kitchen cabinets are an inevitable and desirable part of a leader's support system.** When critical decisions must be made, leaders want and need the counsel of trusted advisers. They may form a small core group that gets together regularly, occasionally joined by one or two others, or a leader may choose to get opinions from others one by one. But it's rarely, if ever, the Senior Management Team's meeting as a full group that fulfills this crucial sounding-board function for a CEO.
4. **A renewed emphasis on the SMT's alignment functions will give its members more real influence than ever over the course of the business and will re-energize them.** Given their experience and representativeness, the executives on the SMT are ideally suited to address three of the most important responsibilities of senior leadership: helping to set direction, allocating resources and ensuring effective execution. Through a series of structured conversations, they fulfill each of those responsibilities by, respectively, developing a common view of the world and the company, prioritizing and integrating initiatives, and managing dependencies within and among initiatives to ensure their doability. By focusing their time and energy on the tasks they are best suited for, they will gain clarity about how they can add value *as a team*. ●

RECOMMENDED READING LIST

If you liked *Who's in the Room?*, you'll also like:

1. ***Beyond Performance* by Colin Price and Scott Keller.** Keller and Price put hard science behind their big idea: that the health of an organization is equally as important as its performance.
2. ***Full Engagement!* by Brian Tracy.** Business success expert Brian Tracy shows managers how they can supercharge their employees' efforts.
3. ***Divide or Conquer* by Diana McLain Smith.** The author distills almost 30 years of experience studying and advising leaders to offer a new way to think about teams — not as a bunch of individuals, but as the sum of their relationships.

THE SUMMARY IN BRIEF

Leaders hear "yes" far too often. They don't hear bad news until it's too late. They get groupthink, not reality. They think they've achieved consensus, then find their decisions undermined by colleagues who never really bought in. It's an enormous problem: for leaders, teams and organizations. But is it inevitable? No.

In this summary, Harvard Business School's Michael Roberto shows readers how to stimulate honest, constructive dissent; use it to improve decisions; then align their entire organization behind those decisions. Drawing on extensive research, this summary shows how to promote candor, leverage an organization's wisdom, and build consensus that leads to effective action. It also presents examples from history while exploring how real organizations make real decisions, as well as how the decision process unfolds throughout the organization — not just in the executive suite. Along the way, the five myths of executive decision making are explored to help readers understand why these myths are so dangerous and how they can be overcome.

In addition, this summary describes:

- ***✓ How to encourage open debate that promotes better decisions and more successful implementation.***
- ***✓ How to reflect an organization's wisdom and expertise in all its leaders' strategic decisions.***
- ***✓ Ways to ensure constructive conflict while preventing dysfunctional conflict.***
- ***✓ How to recognize when a leader is being told "yes" by people who really mean "no."***
- ***✓ Ways to keep decisions from being undermined after they are made.***

WHY GREAT LEADERS DON'T TAKE YES FOR AN ANSWER

by Michael A. Roberto

— THE *COMPLETE* SUMMARY

The Leadership Challenge

In February 2003, the Columbia space shuttle disintegrated while returning to Earth. In 1996, two of the world's most accomplished mountaineers and three of their clients died on Mount Everest's slopes during the deadliest day in the mountain's history. In 1961, Cuban exiles invaded the Bay of Pigs with U.S. support, and Castro's military captured or killed nearly all of them.

Catastrophic failure always brings forth troubling questions. Why didn't NASA managers act when they discovered a potentially serious danger? Why did the mountaineers ignore their own safety rules? Why did JFK support a rebel invasion despite clear evidence it would fail?

We want to learn from others' mistakes. But our misconceptions about decision making make it difficult to learn the right lessons. We envision a leader or team members sitting in a room making a fateful decision. We rush to fault their analysis, question their acumen, and doubt their motives. Yet, when it comes to strategic decision making, these differences seldom distinguish success from failure.

Strategic decision making is a dynamic process that unfolds over time, in fits and starts, and flows across multiple levels of an organization. Social, political and emotional forces play an enormous role. While cognitive decision-making tasks may prove challenging for many leaders, the socio-emotional component is often their Achilles heel.

Decision Quality and Implementation Effectiveness

Leaders must select the right action and mobilize the organization to implement it effectively. Thus, success is a function of both *decision quality* and *implementation effectiveness.* ***A leader's ability to navigate through the personality clashes, politics and social pressures of the decision process often determines both of these.***

Few managers have mastered these dynamics. Consider the dialogue within many organizations: Candor, conflict and debate are often conspicuously absent during decision making. Managers feel uncomfortable dissenting. Groups converge quickly on one solution. Critical assumptions remain untested. Creative alternatives never surface. Leaders hear "yes" too often, or hear *nothing* when people mean "no." Their organizations don't just make *poor* choices: They may leave unethical choices unchallenged.

Of course, conflict alone isn't enough: Leaders must also build consensus. Consensus doesn't mean unanimity on all facets of a decision. Nor does it mean surrendering leadership. It *does* mean people will cooperate in implementation, even if they're not fully satisfied with the decision.

Consensus requires strong commitment to the chosen action, *and* strong, shared understanding of its rationale. Commitment helps prevent opponents from derailing implementation. It promotes perseverance in the face of obstacles. Common understanding of the decision rationale helps individuals coordinate and act in the "spirit" of the decision. Conversely, commitment without deep understanding can amount to "blind devotion." Individuals may dedicate themselves to implementation, but work at cross-purposes because they understand the decision differently.

Unfortunately, if executives engage in vigorous debate during the decision process, people may walk away dissatisfied with the outcome, disgruntled with colleagues, and less dedicated to implementation. How do you foster conflict to enhance decision quality while *simultaneously* building the consensus needed for effective implementation?

Decision-Making Myths

To manage strategic decision making well, first understand how decisions actually unfold. Let's start with five myths about decision making, *and the realities:*

(continued on page 3)

The author: Michael A. Roberto is a faculty member at Harvard Business School. His research focuses on strategic decision-making processes, senior management teams, and organizational consensus building. His work has been published in the *Harvard Business Review, California Management Review*, and other leading journals. He has developed leaders at organizations ranging from The Home Depot to The World Bank.

GEORGE Y. CLEMENT – *Publisher*

Myth	Reality
The chief executive decides.	Strategic decision making involves simultaneous activity at multiple levels of the organization.
Decisions are made in the room.	Much "real" work occurs offline, in one-on-one conversations or small subgroups.
Decisions are largely intellectual exercises.	Strategic decisions are complex social, emotional and political processes.
Managers analyze systematically and then decide.	Strategic decisions unfold in a nonlinear fashion; solutions often arise before managers define problems or analyze alternatives.
Managers decide and then act.	Strategic decisions often evolve over time through iterative choices and actions.

The Leadership Challenge

(continued from page 2)

Have you ever censored your views during meetings, nodding approval while privately harboring serious doubts? If so, you're not alone. Managers often feel uncomfortable dissenting in the presence of a powerful executive. They defer to technical experts or industry veterans. Entire industries blindly accept obsolete assumptions about customers, markets and competitors. Pressures for conformity arise in homogenous groups. Finally, some people simply aren't comfortable with confrontation.

Whatever the reasons, the absence of healthy debate frequently leads to faulty decisions. That's what happened on Everest. Leaders ignored their own critical-decision rule designed to protect against the dangers of an extremely perilous nighttime descent after indoctrinating "subordinates" not to question their judgment. Lower-status guides didn't feel comfortable raising concerns. Five people died.

The Perils of Conflict

Individuals may engage in *cognitive, task-oriented conflict:* substantive debate over issues and ideas. This exposes each proposal's risks and weaknesses, challenges key assumptions, and encourages people to define problems or opportunities in new ways. It *enhances* solutions.

But people may become wedded to their ideas, reacting defensively to criticism. Deliberations become heated; disagreements get personal. This *affective conflict* can lead to costly delays, bad decisions, and poor implementation.

To manage conflict and build consensus, you must overcome several sources of difficulty. These include:

- **Leadership Style.** Some executives are uncomfortable with *any* confrontation. Others are introverted: Employees can't discern their intentions and rationales. Others manage by intimidation, leaving employees unenthusiastic about actions they couldn't help formulate.
- **Cognitive Biases.** Most people downplay data contradicting their beliefs, and over-rely on data supporting them. People can overestimate their own capabilities, not recognizing when they need help.
- **Threat Rigidity.** Often, strategic decision making occurs in the context of serious business threats. Threat-related stress may induce rigid responses that draw on ingrained practices that worked before, but don't anymore.
- **In-Groups Vs. Out-Groups.** Participants may categorize others into "in-groups" and "out-groups," and view in-group members more positively. This diminishes social interaction, impedes information flows, and fosters tension.
- **Organizational Defensive Routines.** Organizations develop defense mechanisms to minimize embarrassments, preserve morale, or make "bad news" palatable. These behaviors become habitual, discouraging candor and placing crucial issues "off limits."

The most fundamental obstacle to successful strategic decision making occurs when leaders fixate on the question, "What decision should I make?" rather than asking, "How should I decide?" Answer the "how" question correctly, and you can profoundly improve both your decisions *and* your execution. ■

Deciding *How* to Decide

In 1961, President John F. Kennedy authorized U.S. support for the Bay of Pigs invasion, an attempt by 1,400 Cuban exiles to overthrow Fidel Castro. It proved catastrophic. Kennedy asked his advisers: "How could I have been so stupid?"

The president's team didn't lack intelligence. But its decision-making process was deeply flawed. Veteran CIA officials advocated forcefully for the invasion. They filtered the information and analysis Kennedy saw, excluding officials who might have exposed the plan's weaknesses. The president and cabinet often deferred to the CIA "experts," downplaying their own reservations.

Afterward, Kennedy completely overhauled his foreign policy decision-making process. He directed his advisers to abandon protocol and deference during meetings. He urged advisers not to participate as department representatives, but as "skeptical generalists." He invited lower-level officials and outside experts to participate. He split advisers into subgroups to assess alternatives. He assigned close confidants as "devil's advocates." He chose not to attend preliminary meetings to encourage free discussion. When the Cuban missile crisis arose in 1962, these changes helped ensure a far more successful outcome.

In defining your decision-making process, you have

(continued on page 4)

Deciding *How* to Decide

(continued from page 3)

four levers of power. They are:

1. Composition. Who participates? Columbia may have been doomed because NASA relied too much on titles and protocol rules to dictate participation in safety discussions. Ask: *Can an individual provide data, information or a fresh point of view others don't possess? Will he or she play a critical role in implementation? Have you included trusted confidants as sounding boards?*

Finally, have you handled demographic diversity appropriately? If your decision requires creative thinking, and your usual advisers are susceptible to groupthink, seek more diversity. But if implementation will necessitate intense coordination, and your advisers have trouble reconciling contrasting worldviews, lean toward homogeneity.

2. Context. What norms and ground rules will control the deliberations? *Structural context* includes reporting relationships, control mechanisms, and reward/punishment systems. *Psychological context* (behavioral norms and situational pressures) can be more fluid. Work to create a climate of psychological safety, in which people will take personal risks, share information, admit mistakes, request help, surface "taboo" topics, and express dissent. Lead by example. Acknowledge your own fallibility.

3. Communication. How will participants exchange information, generate alternatives, and evaluate them? A *structured* approach dictates detailed procedures for offering viewpoints, comparing alternatives, and reaching conclusions. With an unstructured approach, managers discuss ideas freely. This fosters strong commitment. Add structure to foster more divergent thinking and productive debate.

4. Control. How and when will you introduce your own views? Some crisis situations may require early intervention. Should you play a special role during the decision process? Will you be the "steadying force" who tempers overconfidence, or the "devil's advocate"? Research suggests it's useful to cultivate a "symphony of distinct roles." Encourage subordinates to play some of them.

President Kennedy demonstrated that leaders have many ways to affect the quality of a high-stakes decision-making process, and can improve by learning from failures. When failures occur, many executives seek to identify their flawed judgments and assumptions (*content-centric learning*). But some fail to investigate *why* they erred (*process-centric learning*). Kennedy thought carefully about *why* his decision making went astray, and sought ways to employ better processes. ■

An Absence of Candor

When Jack Welch became GE's CEO, everyone spoke politely, avoiding controversy. Welch called it "superficial congeniality ... pleasant on the surface, with distrust and savagery roiling beneath." Are people engaging in "superficial congeniality" during *your* meetings? Check these warning signs:

- Do subordinates await your cues before commenting on controversial issues?
- Are meetings full of hefty binders and fancy presentations, not lively dialogue?
- Do the same people tend to dominate management team meetings?
- Do you rarely hear concerns or feedback directly from those several levels below you?
- Do senior management meetings simply ratify decisions already made elsewhere?

Changing players rarely improves candor: The problem typically has deep structural and cultural roots. Organizational obstacles to candor can be "hard" or "soft":

Dealing with hard barriers. Simplify structures to improve information flow and coordination. Clarify roles and responsibilities: With today's ad hoc teams, it's sometimes unclear who's in charge. Note, too, that COO/"Chief of Staff" structures can discourage subordinates from trying to raise concerns with you. You need multiple sources of information, even if they occasionally make you less efficient.

Dealing with soft barriers. Barrier #1: *status.* Studies of cardiac surgery teams find that status differences prevent nurses from voicing concerns or offering valuable suggestions. *The most effective teams include surgeons who downplay status and welcome input.* Barrier #2: *language* — especially your organization's ways of characterizing problems. Deliberate language shifts have made hospital staff far more willing to discuss dangerous medical errors, and *prevent* them. Barrier #3: *unstated assumptions* about "how we work around here." At one firm, senior managers assumed contentious debates should be resolved offline; new members felt this deprived them of opportunities to rebut flawed proposals.

Yes, structural and cultural factors inhibit candor. But passive leadership is also a barrier. Don't wait for dissent to find you: *Seek it out*. If you personally invite others' views, they'll become more willing to speak freely. ■

Hard and Soft Barriers

Hard Barriers	Soft Barriers
Structural complexity	Status differences
Ambiguous job/role definitions	Language system
Information filtering mechanisms	Issue framing
Decision-making group composition	Taken-for-granted assumptions

Stimulating the Clash of Ideas

Four tool sets can help you encourage divergent thinking and productive conflict. These tool sets are:

- **Role-play methods.** Role-play your competitors, alliance partners and customers, and even your successors.
- **Mental simulation techniques.** Have participants consider how events may unfold over time. Use *scenario planning*, a structured method for predicting changes in industry conditions, and assessing how diverse strategies might play out under those conditions. Or try "pre-mortems": Envision complete failure, imagine the paths that may lead there, and consider the probability of each failure scenario. List the biggest risks. Determine if they're avoidable. If not, choose another course.
- **Conceptual models and frameworks.** Designate individuals to launch their inquiries from different vantage points. They'll often arrive at quite different conclusions.
- **Point-counterpoint dynamics.** Polycom CEO Robert Hagerty employs "red" and "blue" teams to scrutinize potential acquisitions. Red teams come up with reasons *not* to do the deal; blue teams present arguments *for* it.

'Watch Out' Situations

As you promote vigorous debate, here are common pitfalls and *solutions*:

Intention	Inadvertent Result	Solution
Employ devil's advocates.	Token, ritualized use of devil's advocates; self-congratulatory attitude.	Consider "rotating" the role of devil's advocate, or taking it yourself.
Facilitate the dialogue.	Creating leader-member exchanges rather than open dialogue and wide-ranging discussion.	Encourage advisers to interact repeatedly with each other, not route all arguments through you.
Maximize time efficiency.	Packing the agenda; moving quickly between topics without providing time for dissent to emerge.	Balance efficiency against the objectives of making a high-quality decision and building commitment.
Provide time for dialectical inquiry.	Letting people become entrenched in subgroups so they can't debate with an open mind.	Bring subgroups back together sooner, before they become too invested in the option they're examining.
Make data-driven decisions.	Focusing too heavily on the minutiae of the quantitative analysis.	Refocus on the assumptions and logic behind your analysis.

When it comes to encouraging vigorous debate, practice *does* make perfect. At GE, everyone quickly learned how to engage in heated, productive debates with Jack Welch, who declared "constructive conflict" a core value. Chuck Knight, Emerson Electric's longtime CEO, designed confrontation into his company's strategic planning process. Managers gradually became more comfortable with it, learning how to prepare, respond, handle contention, and use it to make better decisions. ■

Keeping Conflict Constructive

In the 1950s, comedian Sid Caesar starred in the top TV series *Your Show of Shows*. Its success may be credited to its remarkable team of comedy writers, including future legends such as Mel Brooks, Larry Gelbart, Neil Simon, Woody Allen and Carl Reiner. They spent day and night together in the "Writers' Room," where ideas flowed freely, people competed fiercely, and genius emerged from mighty struggles. Wrote Caesar, "Chunks of plaster were knocked out of walls; the draperies were ripped to shreds; Mel Brooks frequently was hanged in effigy by the others." But the writers produced legendary skits week after week, and remained friends and collaborators for decades.

Caesar had created an atmosphere in which the writers could argue passionately, yet achieve breakthrough creativity. Emulating his antics might not be advisable, but leaders should develop principles for ensuring that vigorous conflict remains productive, wherever it takes place.

Diagnosing the Debate

Conflict is *constructive* as long as individuals keep raising interesting questions that provoke new lines of discovery, keep trying to understand others' positions, and remain open to new ideas. It's *dysfunctional* when they repeat worn-out arguments, opposing camps dig in their heels, and loud voices dominate. Unfortunately, debates sometimes become dysfunctional before the leader recognizes the warning signs. Have people stopped asking questions intended to gain a better understanding of others' views? Have they stopped searching for new information, or revising their proposals based on others' critiques? Have they stopped asking for help interpreting ambiguous data or admitting concerns about their own proposals? Have they begun to repeat arguments more stridently? Are less outspoken individuals withdrawing?

The most glaring warning sign is the emergence of affective (interpersonal) conflict. Have people crossed the line from issue evaluation to personal criticism? To find out, there are specific questions participants can be asked about a recent decision process.

To find out more about a cognitive conflict, ask:

1. How many disagreements were there over different ideas?

2. How many differences about this decision's content did the group have to work through?

(continued on page 6)

Keeping Conflict Constructive

(continued from page 5)

To find out more about an affective conflict, ask:

1. How much anger was there among the group members over this decision?

2. How much personal friction was there during the process? ■

The Inability to Decide

In 1996, two top Boston hospitals merged, bringing together 1,000 highly accomplished physicians in the Beth Israel Deaconess Medical Center (BIDMC). The early years went badly: Losses soared to more than $50 million per year. Paul Levy took over as CEO in 2002. He found extensive work had been done to identify solutions, yet substantive changes had never materialized. The organization simply couldn't decide or execute.

Many organizations are plagued by similar inabilities. Managers debate, but can't reach consensus. Leaders can't make decisions and move forward. There's "analysis paralysis." Or people don't surface objections during the process, then work behind the scenes to sabotage implementation.

The problem is rarely one executive: It's a "culture of indecision." Indecisive cultures come in three forms, but all lead to the same outcome: a chronic inability to achieve consensus, and act.

Cultures of 'No'

When Louis Gerstner became IBM's CEO in 1993, its culture had become insular and rigid. A cross-functional group could spend months solving a problem, but if a manager objected, he or she could halt implementation. One executive even asked each business unit to appoint a "nonconcur coordinator" responsible for blocking proposals.

Such organizations don't use dissenters to encourage constructive divergent thinking, but to stifle dialogue and inquiry. Powerful dissenters needn't defend their views with data or logic: They simply impose their will.

A "culture of no" needn't be formal: It can permeate an organization's informal incentives and communication patterns. For instance, there's the "smart-talk trap." Some companies reward people for delivering negative "gotchas" that *sound* intelligent, but are indifferent to actual performance.

Cultures of 'Yes'

At BIDMC, Paul Levy's people would sit quietly during meetings, conveying an implicit "yes." He'd only discover their objections later, as they undermined his decisions. Many firms face this predicament. Executive adviser Ram Charan argues that an overemphasis on hierarchy, excessive process formality, and insufficient trust contribute to the problem. But some leaders foster it through the design of their decision processes.

One company with a large executive team routinely asked small subgroups to take contentious issues "offline" for analysis. The subgroup worked closely with the CEO to examine alternatives and present tentative recommendations. After review, the CEO and subgroup would jointly make recommendations to the full team. The leader expected the team to raise issues, but they rarely surfaced: People felt the recommendations were a *fait accompli*. Conflict only emerged later, as managers sought to undermine decisions they disliked.

Cultures of 'Maybe'

In highly analytical organizations, managers gather huge amounts of objective data before acting. This approach has strengths, especially in stable environments. But, in dynamic markets, it can become a perilous handicap.

Some leaders hate turbulence: They constantly strive for certainty in an inherently uncertain world, endlessly pursuing every unresolved question. It's crucial to recognize when the marginal value of additional information has begun to decline, or even plummet.

As executives become frustrated with inaction, they attempt to accelerate decision making. Some conclude that complexity and ambiguity are the problems. Often, they oversimplify decisions, drawing the wrong conclusions. Worse, their shortcuts don't tackle the cultural problems that lead to inaction.

You begin transforming culture by modeling desired behaviors as you lead decision-making processes. But *which* behaviors increase the likelihood of achieving timely closure and true consensus? ■

Fair and Legitimate Processes

First, you need to manage an open, transparent process in which people with diverse perspectives, interests and expertise can influence decisions. People don't care only about outcomes: They care about process, too. If they perceive a process as unfair and illegitimate, they're far less likely to commit to your plan, even if they agree with much of it.

Fair processes provide a "cushion of support" for authorities when they make an adverse ruling. When procedures are viewed as fair, people receiving an unfavorable verdict express nearly the same satisfaction as those who won. Businesspeople tend to perceive decision processes as fair if they:

- **Have ample opportunity to express their views and present disagreements.**
- **Feel the process was relatively free of secretive**

(continued on page 7)

Fair and Legitimate Processes

(continued from page 6)

maneuvering.

- **Believe the leader has listened carefully, and thoughtfully considered their views.**
- **Perceive they had a genuine opportunity to influence the final decision.**
- **Clearly understand the rationale for final decisions.**

Here are six ways to enhance perceived fairness:

1. Start by providing a road map outlining how the process will unfold.

2. Reinforce your open mind-set: Counter the impression that the decision has already been made.

3. Listen actively: Ask questions for clarification, test for understanding, and avoid interrupting people.

4. Explain the decision rationale — how you evaluated alternatives and made your choice.

5. Explain how input has been used, and how individuals contributed to the outcome, even if their opinions didn't prevail.

6. Express heartfelt appreciation for all contributions.

Procedural Legitimacy

Procedural legitimacy — the perception that organizational processes and techniques are desirable, proper and appropriate — is crucial.

Procedural legitimacy helps explain why organizations systematically gather more information than they use. This symbolizes that managers are engaged in a thorough, *rational* decision-making process. Likewise, generating multiple alternatives, using formal analysis, or hiring external consultants are ways of signifying thoroughness, rationality and, hence, legitimacy.

Unfortunately, efforts to enhance process legitimacy can backfire if constituents see them as manipulative. Evaluate how your own actions affect perceptions of legitimacy — and *others'* actions, too.

Are a proposal's advocates providing every participant with *all* available information before deliberations? Or are they "pre-selling" a few key executives with more information? Doing so demonstrably harms legitimacy. Others feel disadvantaged if they're examining data for the first time, while "favored" individuals have seen it earlier.

Leaders can't entirely eliminate symbolic behavior; at times, it has great value. But they *can* keep it from becoming a problem. Here's how:

1. Create a level playing field. As much as possible, ensure equal access to information.
2. Identify token alternatives, and either take them off the table or force serious consideration of them.
3. Separate advocacy from evaluation. Consider asking unbiased third parties to independently evaluate proposals.

The Misalignment Problem

You may think you've managed a decision process fairly, but find that others disagree, and you haven't achieved real buy-in. To make sure your team's perceptions match yours, do the following:

1. Conduct ongoing "process checks," auditing your ability to generate dissent, manage conflict constructively, and maintain legitimacy.
2. Hold private one-on-one meetings to test alignment. Some individuals are more comfortable expressing process concerns privately.
3. Ask members to discuss the team's approach to decision making among themselves, with you absent.
4. Pay close attention to nonverbal cues during interactions with advisers and subordinates. ■

For additional information on how manipulation shaped perceptions at Daimler Benz, go to: http://my.summary.com

Reaching Closure

During World War II, Gen. Dwight Eisenhower commanded history's most powerful military force. Under his leadership, the Allied Forces liberated Europe. But even as supreme commander, Eisenhower couldn't simply issue dictums from on high. He needed to hold a complicated alliance together, balancing the competing demands of strong-willed individuals such as Churchill, Roosevelt, Montgomery and Patton.

Eisenhower defined the D-Day invasion strategy amid much contentious debate by leading a fair decision process, then making the final decision himself. But he did more than that. He reached closure by breaking the complex issue down into manageable parts.

Over five months, the group gradually arrived at decisions regarding landing dates, bombing strategy, the use of airborne troops, and other crucial details. Eisenhower navigated contention by searching for agreement on key facts, assumptions, and decision criteria. He brought the group along gradually, building on areas of common ground. And when he declared a matter closed, it *stayed* closed.

Divergence and Convergence

Eisenhower's brilliant leadership challenges the conventional wisdom about strategic decision making.

Some teams converge too quickly on one solution, without sufficient critical evaluation and debate. Others generate many alternatives, but can't achieve closure. To avoid these problems, scholars and consultants often recommend encouraging divergent thinking early on, and then shifting to convergent thinking to finalize a choice.

But effective leaders direct an *iterative* process of diver-

(continued on page 8)

Reaching Closure

(continued from page 7)

gence and convergence, much like Eisenhower's. They seek common ground *repeatedly* during the process. They can't completely defer judgment on all issues while engaging in brainstorming and debate. They must reach intermediate agreements on elements of the decision, lest they find themselves trying to bridge huge chasms late in the process. They strive for a series of "small wins."

Psychology of 'Small Wins'

Small wins bring new allies together, lead opponents to recognize common interests, consolidate progress, and build momentum. People discover they can work constructively together, despite differences. Small agreements catalyze further agreements.

Complex problems can overwhelm groups due to the cognitive limitations of the decision makers. Humans simply can't process reams of information effectively. The cognitive challenge is to make decisions more manageable. *Small wins do this.*

People become tense when they perceive a problem as too difficult to solve. This type of emotion makes it even harder to succeed. A small-wins approach keeps everyone engaged and committed. Writes psychologist Karl Weick, "A small win reduces importance ('this is no big deal'), reduces demands ('that's all that needs to be done') and raises perceived skill levels ('I can do at least that')."

Search for two types of small wins. *Process-oriented* small wins don't constitute solutions to the problem, but they lay the groundwork for finding solutions. Examples include goals and objectives, assumptions, and decision criteria. *Outcome-oriented* small wins consist of partial solutions that could be executed in conjunction with other proposals yet to be agreed upon. Examples of outcome-oriented small wins include taking alternatives off the table, option-oriented agreements, and contingency plans.

Shifting Into Decision Mode

Even with a small-wins approach, leaders may find it difficult to close down debate. Three steps can smooth the transition from deliberation to decision. These are:

1. Set clear expectations for how the final decision will be made.

2. Clearly communicate how your role will change at a critical juncture in order to achieve timely closure.

3. Build a relationship with a confidant who'll bolster your confidence when it's time to act. ■

Leading With Restraint

The business press adores charismatic, forceful leaders. Many executives agree. They believe firms can't make critical decisions by committee: The chief executive must "take charge." To them, fostering dissent, striving for fair process, and building buy-in are signs of weakness. This is not true. ***Executives can be bold and decisive, while harnessing the collective intelligence of their organization and gaining real buy-in.***

Effective leaders take charge when confronted with difficult choices. There are *two* ways to take charge: Dive right into finding the best solution, or first address *process*.

In the Bay of Pigs case, Kennedy became deeply involved in the details of the invasion. But he'd already lost control of the go/no-go decision by allowing the CIA to shape the process. During the Cuban missile crisis, he was much more directive about the process, making careful choices about composition, context, communication and control. Of course, he retained the final call, but he resisted the temptation to micromanage. No one perceived him as weak because he let others state their case before he acted.

By first deciding how to decide, you can capitalize on more of your organization's expertise. You're more likely to make a sound decision — *one you can actually implement effectively*.

Exercising Restraint

When faced with a complex problem, many CEOs have a strong intuition about what to do. It may often prove correct. *But not always.* To make the most of their team's expertise, they must refrain from pronouncing their solution upfront. They must recognize the truth: They do not have all the answers. They must understand that the best decisions are useless if the organization won't execute on them.

Great leaders start planning the decision-making process early. They ask: *How will I lead this discussion? What are likely to be the key points of conflict? What mechanisms will spark new thinking? What will be my role?* They know they don't have all the answers. But with their guidance and firm leadership, their teams can uncover the best answers to the toughest problems. ■

SOUNDVIEW RECOMMENDED READING LIST

If you liked *Why Great Leaders Don't Take Yes for an Answer*, you'll also like:

1. ***Crucial Confrontations*** **by Kerry Patterson, Joseph Grenny, Ron McMillan, and Al Switzler.** The authors help readers develop the skills it takes to resolve the most pressing personal and organizational problems.
2. ***Capitalizing on Conflict*** **by Kirk Blackard and James W. Gibson.** The authors, two attorneys and conflict resolution specialists, write that only by bringing conflict to the surface and resolving it can managers unleash the full power of an organization.
3. ***Listening to Conflict*** **by Erik J. Van Slyke.** Van Slyke prepares readers to resolve disruptive disputes in their company by listening and hearing what people don't say as well as what they say.
4. ***7 Survival Skills for a Reengineered World*** **by William N. Yeomans.** Yeomans shows readers how to survive and thrive in an era of job uncertainty by showing them how to become better followers and team players.
5. ***Getting to Resolution*** **by Stewart Levine.** Levine's advice for handling communication breakdowns is varied for the occasion and tested in the heat of battle.

Why Leaders Can't Lead

Warren Bennis

SOUNDVIEW Executive Book Summaries®

Just Managing Isn't Enough

WHY LEADERS CAN'T LEAD

By Warren Bennis

THE SUMMARY IN BRIEF

Executives must resolve to lead, not merely to manage. There's a major difference. Many organizations are well managed and poorly led because executives address routine problems while ignoring or slighting important matters. They allow themselves to become buried with details that should be delegated to assistants.

True leaders are able to draw others to them through focused commitment, make dreams come alive and unite people behind those dreams, communicate through vivid models and examples, and know the extent of their skills and apply them effectively.

Successful leaders inspire employees by making them feel significant. Learning and competence are highly valued, and workers feel they're part of a genuine team or family. The most influential leaders motivate their people through joint identification with collective goals rather than through rewards and punishments.

If you hope to lead your organization to prominence you must encourage dissent, disagreement, and truth from associates and search for the truth yourself by spending time in the field, analyzing your own operations, and talking with employees and customers.

You must also balance your career and personal roles, using ambition, talent, and learning ability to serve rather than enslave you.

As constant as change has been in this century, and as vital as it is today, it is still difficult to bring about.

People in leadership positions must be agents of adjustment who face things as they are and prepare for things as they will be.

If competence and conscience are to be restored to government, business, and society alike, that restoration must start with those who propose to lead our organizations. It must begin with you.

If you wish to order the book, call Soundview, 1-800-521-1227 (outside the USA and Canada, 1-610-558-9495) or fax 1-800-453-5062 (outside the USA and Canada, 1-610-558-9491) and charge to your credit card. E-mail: sales@summary.com. Internet: www.summary.com. Send mail orders, in U.S. funds drawn on a U.S. bank, to Soundview, 10 LaCrue Avenue, Concordville, PA 19331 USA. We also accept American Express, MasterCard, Visa, Diners Club, and Discover. Please include the book price plus $4.00 shipping and handling for the first book and $1.50 for each additional book; in Canada, $5.00 for the first book and $3.00 for each additional book, and add GST/HST (12521 8826 RT); in Mexico, $5.00 for each book; all other countries, $11.00 for each book, shipped airmail.

THE SUMMARY

Social, business, and governmental organizations face a leadership vacuum so intense that an implosion is imminent. We ascribe leadership qualities to those in leadership positions, and learn, often too late, that we have credited the incumbents with greater ability and courage than they possess.

How do we get leaders to care about the organization's welfare and identify with its destiny? Both institutions and individual employees depend on these leaders for support. Such care calls for development of a corporate climate of understanding.

Without such caring, the institution becomes a place that none of us would like to be responsible for or preside over.

Basic Truisms of Leadership

Many people in leadership positions feel enveloped in an amorphous, unconscious conspiracy to prevent them from doing anything whatsoever to change their organization's status quo.

Routine work drives out the nonroutine and stifles creative planning and fundamental change. Minutiae becomes the order of the day while the long-term needs of the organization, its people, and those whom it serves go unfulfilled.

Managers must resolve to lead, not merely to manage. There's a big difference. Many organizations are well managed and poorly led because managers prefer to act on routine problems first. After all, those are the easiest to deal with. In doing so, however, executives become unwitting co-conspirators who worship the routine and ignore or slight the unique.

If you believe you're in this position, create an "executive constellation" of subordinates and assistants who know more than you about everything within their areas of competency. Then demand that these underlings deal with routine issues instead of kicking them upstairs onto your desk.

And what should you do? Become a conceptualist — a leader with entrepreneurial vision and the jealously guarded time to spend thinking about the forces that will affect your organization's destiny.

This fine distinction between leadership and management protects you from getting entangled in your organization's routine machinery.

To be a genuine leader you must create clear-cut, measurable goals for your organization, goals that are forged with advice from all elements of the groups that it serves. Next, you must advance toward these goals without being overburdened with bureaucratic baggage that will sap your strength, energy, and initiative. Your job's charter must allow you to take risks, make mistakes, use your creativity to the hilt, and encourage those who work with you to do the same.

THE TRAITS OF A LEADER

Perhaps the most important distinction between leaders and managers is this: Leaders do the right thing; managers do things right. Both roles are critical, but they differ profoundly.

There are lots of examples of people at high levels who do the wrong things well and the right things not at all.

American organizations tend to be underled and overmanaged. Their preoccupation with doing things right causes less attention to be devoted to doing the right thing. Management schools typically focus on producing good technicians and staff people, but they don't stress developing and remaining loyal to the four competencies that characterize true leadership. They are:

- Managing attention
- Managing meaning

TEN KEYS TO AVOIDING DISASTER DURING CHANGE

As constant as change has been in this century, and as vital as it is today, it is still difficult to bring about. Institutions are fundamentally opposed to change. Here, then, are ten ways to avoid disaster during periods of change — which means, of course, any time and all the time.

1. Recruit honestly. Refuse to paint the visible and real drawbacks of your organization as exhilarating challenges. If a recruit's expectations are too high, and your promises are too grand, disillusionment is inevitable. The disparity between vision and reality becomes intolerable.

2. Guard against the crazies. Innovation attracts interesting people. Unfortunately, it also attracts people who will distort your ideas into something monstrous. You'll then be identified with this monster and forced to spend precious energy combating it. Be sure the people you recruit are innovators, not crazies. You want change agents instead of agitators or neurotics.

3. Build support among like-minded people. There are no clean slates in established organizations. There can be no change without history and continuity, so resolve to build support among like-minded people, whether or not you recruited them.

4. Plan your changes from a solid conceptual base. Have a clear understanding of how to change as well as what to change. Any reorganization must have coherence, forcefulness, and a set of functional mechanisms to convert your ideas into reality gradually and incrementally.

5. Don't try to mandate change. Organizations have both a paper structure and an intramural or informal one. As a good administrator, you must understand the relationship between the two and create a good fit between them and any planned alterations.

6. Don't allow those who oppose change to appropriate basic issues. Successful change agents make sure that members of the old guard aren't frightened at the prospect of change. If they are, they'll start to fight dirty, and they've got tradition and history on their side.

7. Know the territory. You must learn everything there is to know about your organization, which often means mastering the politics of local chauvinism, along with an intelligent public relations program.

In Southern California, for example, big developers are constantly being blindsided by neighborhood groups because they haven't bothered to acquaint the groups with themselves and their plans. Such groups know their rights and they know the law, and the developers haven't made an effort to know them.

8. Appreciate environmental factors. A change that increases organizational discomfort is probably doomed. For example, a new computer system may be a good thing, but people may see it as bad if it results in overcrowded offices. Plan ahead to accommodate the satellite effects of such changes before you proceed.

9. Avoid future shock. Executives who become too involved in planning for the future may forget the past and neglect the present. As a result, employees may already be opposed to a plan before it goes into effect. If your eye is always on tomorrow, you may not give your people the attention and support they need.

10. Involve employees in planning changes. This platitude of planning theory is as true is it is trite. Nothing makes people resist new ideas more adamantly than their belief that change is being imposed on them.

- Managing trust
- Managing oneself

Managing Attention

Leaders who manage attention can draw others to them because they communicate an extraordinary focus of commitment. Theirs is a compelling vision that brings others to a place they have not been before. If you hope to do this, you must know what you want and communicate your vision, not in a mystical sense but in the context of outcomes, goals, or directions that others can see clearly, relate to, and galvanize their efforts behind.

Managing Meaning

Leaders who manage meaning make their dreams apparent to others and unite people behind those dreams. Ronald Reagan wasn't called "the Great Communicator" for nothing. One speech writer said that Reagan could read the phone book and make it interesting because he had a gift for metaphors that people could identify with.

In his first budget message, for example, Reagan described a trillion dollars by comparing it to piling up dollar bills beside the Empire State Building. He had the ability to breathe tangible, vivid life into ideas. People relate to and respond to mental images or models more than words. As an effective leader, then, you must train yourself to communicate through the use of meaningful models and examples. This is a time-honored way to make one's vision clear to others.

Managing Trust

The main determinant of trust is constancy — people want to know where their leaders stand and what they stand for. In fact, a recent study showed that people

would much rather follow individuals they can count on, even when they disagree with their viewpoint, than people they agree with but who waffle on the issues.

"My boss may be an SOB," the vice president of a major manufacturing company once said, "but at least he's a consistent one."

Managing Oneself

The fourth leadership competency is managing yourself-knowing the extent of your skills and applying them effectively. This quality is critical, because leaders without self-knowledge can do more harm than good. Inept executives, like incompetent doctors, can make life worse and people sicker and less vital.

"He doesn't have ulcers," goes the comment about the dictatorial manager, "but he's a carrier." The world could afford fewer executives of that stripe. May their numbers diminish.

FOUR THEMES OF LEADERSHIP

Leadership provides the basic rhythm of an organization. It gives pace and energy to the work and empowers the work force. This empowerment, the collective effect of leadership, is most evident in four themes:

1. People feel significant. They believe that they make a difference in the organization's success. That difference may be small, such as stocking an empty snack food rack in a supermarket or inserting a diode in a printed circuit board, but the people who do so believe their presence and labor have meaning and importance.

2. Learning and competence matter. Leaders value learning and competence, and so do their subordinates. Leaders make it clear that there is no failure, only experiences that give us feedback and guidance about what to do next.

3. People are part of a community effort. Effective leaders unite people and give them a collective identity as part of a team or family. This is true even when coworkers don't especially like each other. Some top managers try to create a false sense of unity by calling their work force a "family" or "team," but mere words cannot make it true. A sense of genuine community effort develops and flourishes only under the steady hand of effective leadership. You cannot conjure up a sense of community using smoke and mirrors.

4. Work is exciting. Tasks become stimulating, challenging, fascinating, and fun in well-led organizations. Leaders who make this happen adopt a "pulling" rather than a "pushing" style, motivating employees through identification with collective goals rather than with rewards and punishments. Leaders articulate and embody the ideals toward which the organization strives.

CHANGE — OUR METAPHYSICS

Everything is in motion today. America has transformed from a wilderness to an industrial behemoth to a postindustrial morass, and from an upstart revolutionary to a world power to, in the words of Richard Nixon, "a pitiful giant." Big business has moved to the suburbs, making cities more and more the province of the very rich and very poor abiding uneasily together.

Government has metamorphosed from small and informal to big and effective to big and dumb, firmly bound in its own red tape and functioning much less for us than for itself.

Although capable of destroying the world, we cannot deal with tiny bands of terrorists. The stock market has never been more of a crap shoot. The national debt is mind-boggling. Cigarette consumption is down, but marijuana and cocaine consumption is up. Typewriters have yielded to word processors, yet we seem to have little worthwhile to say, and what we do, we tend to say badly despite all the improved technology.

What's Going on Here?

What's going on is that the people in charge, particularly in business and government, impose rather than inspire change.

We've had far more bosses than leaders, so everyone has decided to become their own bosses. Imposing rather than inspiring change has given us the primitive, litigious, adversary society that we inhabit today. "We have met the enemy," said Pogo Possum, "and he is us."

Managers can effect change through trust and truth or through dissent and conflict. We've tried dissent and conflict, and have not changed but have merely become combative. It's time, then, to try the path of trust and truth.

Only people with virtue and vision can lead us out of this bog and back to the high ground, however.

People of virtue and vision who would spearhead change today must first earn our trust. Next, they must communicate their vision clearly so that we both understand and embrace it. Finally, they must persuade us to involve ourselves. Such actions are simple enough to propose but profoundly difficult to convert to reality, given today's rancorous society.

If you would become a true leader today, you must be both innovative and courageous, someone who is capable of seeing things differently and thinking in fresh and original ways.

Furthermore, you must seek out and use other innovators in your organization. Create a climate that questions and challenges conventional wisdom and tolerates the mistakes that are inevitable whenever people of vision and courage pursue high-risk goals.

Bucking the System

Change is difficult to engineer because organizations are social systems, and social systems have generally accepted ideas of what is right and wrong and how things should be done. People who occupy seats of power, therefore, are usually those who have best conformed to and reflected the organization's ideals. To endorse dissent and innovation typically means to place yourself at odds with the prevailing corporate culture and thumb your nose at "the way we do things around here." These are risks that only the most courageous managers are willing to take, and you do so at your peril.

Still, we have to try. Too many of our organizations and most of our citizens are locked into roles and practices that simply do not work. A recent Harris poll showed that more than 90 percent of the people questioned would change their lives dramatically if they could. They don't like the way they live now, but they don't know how to change. This survey is additional evidence of our leadership drought. It should serve as impetus and inspiration to potential leaders and innovators.

If such people have the determination to achieve their potential, and the rest of us have the courage to follow them, we might finally find our way out of this bog we're in.

THE LONG SLIDE FROM LEADERSHIP

Eighteenth-century America was noted for its geniuses, nineteenth-century America for its swashbuckling adventurers and entrepreneurs, and early twentieth-century America for its scientists and inventors. Today we celebrate the age of bureaucrats and managers.

Unlike either our nation's founders or the industrial titans, those who manage today's gargantuan corporations and the elected and appointed bureaucrats have no gut stake in their enterprises and no vision beyond the bottom line. More often than not, they're just hired guns who follow the money and their own self-interest.

The national rebellion of the 1960s, the "Me Decade" that followed, and today's success-obsessed Yuppies are the blighted fruit of the mistakes and crudities of sterile, detached organization men who had no talent for advancing anything except their own careers. For all their brass and affectations, today's business kingpins are not leaders, merely bosses. Like dinosaurs, they may tower over their surroundings, but they aren't necessarily equipped for survival. These bosses confuse quantity with quality and substitute ambition for imagination.

Much like Washington's tin soldiers and sunshine patriots, they do not understand the world as it is, much less attempt to provide the genuine leadership it needs.

Like them or not, FDR, Truman, Ike, and JFK were all true leaders, the last that this country has known.

True leaders are made, not born, and they are not made as much by others as by themselves. America's founding fathers, adventurers, and inventors were dreamers on a grand scale. Today our dreams have given way to fantasies about such things as money. As a dreamless sleep is death, a dreamless society is meaningless. We desperately need uncommon men and women who, having invented themselves, can reinvent America and restore the collective dream by expressing for and to us that irreverent, insouciant, peculiarly American spirit.

A Withdrawal into Ourselves

People have come to retreat into their electronic castles, working at home and communicating with the world via computers; screening their calls on answering machines; ordering in movies for their VCRs, food for their microwave ovens, and trainers for their bodies; and keeping the world at bay with advanced security systems. Trend spotters call this phenomenon "cocooning," but it might more accurately be described as terminal egocentricity.

Such activity is not all that difficult to understand, given the national siege mentality and disaffected attitudes toward organizations and society in general. Every day we face the possibility of being randomly assassinated by a sniper on the freeway, victimized by backstabbing office politics at work, discovering that a loved one has become hooked on drugs, and hearing that a Congressional investigation has just dragged a rotting corpse out of some high-level government official's ethical closet.

A nation cannot survive without virtue, and it cannot progress without a common vision and high expectations. Just as individuals must continually challenge society to live up to its promises, society must continually encourage individuals to live up to their promises. At the moment, neither the individual nor society seems interested in doing better — except on the most primitive level. It abuses us; we abuse it: We coexist in a atmosphere of mutual contempt.

BACK TO THE FUTURE

In his roles as a college professor, management consultant, and university president, Bennis has been required to believe that people can and will improve — with a little encouragement. In the last two decades, however, he has seen that people either can't be improved or don't want to improve. Our ambitions have killed off our conscience and made competence irrelevant. If competence counted for anything today, would Prince be king, and would Sly Stallone (alias Rambo) be paid $12 million per extended grunt?

What values do we reward today, anyhow?

Alfred North Whitehead wrote, "In this modern world, the celibacy of the medieval learned class has been replaced by a celibacy of the intellect which is divorced from the concrete contemplation of the complete facts." And he didn't even know about Ivan Boesky, Ollie North, or Gary Hart. They, along with their less infamous counterparts all over America, were so egocentric, so absorbed in their own adventures, that they saw the rest of the world as an annoying encum-

The Challenge Is Yours

People in positions of authority are at best agents of adjustments, striving to face things as they are and prepare for things as they will be. Thus, if you believe that competence and conscience must be restored, you must demonstrate both. These are hard times, but true leaders are not deterred by hard times.

That is perhaps what makes them leaders. As Abigail Adams wrote long ago to Thomas Jefferson, "Great necessities call forth great leaders."

brance. To know everything about one thing is to understand nothing about anything.

The social world that we have wrought is vastly inelegant, unpredictable, and unfixed. Made of ambiguity and ambivalence, contradiction and conflict, it is a clown in the temple, a chameleon that changes before our very eyes. Such a world requires alertness, curiosity, impatience, courage, and skepticism — qualities that are in very short supply in everyone over twenty-one, but proliferating in the very young.

Our Cynical Children

Our children know more than we do now, and what they know has made them premature cynics. They may be woefully ignorant of history, philosophy, and literature, since public education in this country has deteriorated into a nationwide system of holding pens, but they are street smart — alert, curious, impatient, brave, and exceedingly skeptical. They are also sad and mad.

We have taught them so badly that they cannot express rage coherently and so must demonstrate it. They are far more comfortable with images than with words, given, like their principal heroes, to "acting out." They say to each other and to us, "get real," but, having created our own reality, which is anything but real, we don't know where to begin.

WHERE HAVE ALL THE LEADERS GONE?

In the last several decades there has been an appalling mortality — both occupational and actuarial — among leaders. We've lost Roosevelt, Churchill, Schweitzer, Einstein, Gandhi, Meir, Sadat, Jack and Bobby Kennedy, and Martin Luther King, Jr. In business, the landscape is equally flat. Ford, Edison, Sloan, Kettering ... all are long gone.

Today's corporate heads are either organization men who have risen to their level of incompetence (such as GM's Roger Smith) or followed the star of celebrity (Lee Iacocca) or become megalomaniacal one-man bands, such as Donald Trump. It's not an accident that the most celebrated captains of industry today are those who spend their time demolishing rather than creating companies. The problem isn't just a domestic one, however. It's global.

Do It Ourselves

Bereft of leaders, finding no one to replace them, we decided to do it ourselves. We questioned everyone in authority and every institution. We formed blocs of like-minded people to agitate for what we wanted and opposed what we didn't want. We went into the streets and onto the barricades. In this light, Lee Harvey Oswald, James Earl Ray, and Sirhan Sirhan could be called the principal architects of America.

As individual autonomy waxed, institutional autonomy waned. External forces impinged and imposed more and more on the perimeter of our institutions. For decades the government had assumed more and more power over corporations and institutions.

Now the people were challenging not only the government but the corporations and institutions, too.

A new form of politics was invented, the politics of multiple advocacy. Its proponents made the law the court of first resort. Our new reliance on the courts has not only diminished the autonomy of institutions, it has threatened the autonomy of the individual. Surgeons, for example, are more likely to do today what they consider legally safe than medically right. The law has been transformed into a weapon, not a tool, and its confusion, ambiguity, and complexity — augmented by conflicting judicial interpretations — tend toward paralysis.

The sense of individual responsibility that animated the Constitution has vanished as both chiefs and Indians now trumpet the new credos: It's not my job and/or it's not my fault. The psychology of entitlement prevails. If some injury befalls you, even through your own negligence, stupidity, or unlawful act, someone else ought to pay. A product's manufacturer, perhaps. Or the victims who defended themselves against your assault.

Where have all the leaders gone? They're out there pleading, trotting, temporizing, putting out fires, trying to avoid too much heat. They're peering at a landscape of bottom lines. They're money changers lost in a narrow orbit. They resign, burn out, or decide not to run or serve in the first place. They motivate through fear, by following trends, or by posing as advocates of "reality," which they cynically fabricate as they go along. They are leading characters in the dreamless society, given now almost exclusively to solo performances.

Thus, precisely at the time when the trust and credibility of our alleged leaders are at an all-time low, and when potential leaders feel most inhibited in exercising their gifts, America most needs leaders — because, of course, as the quality of leadership declines, the quantity of problems escalates.

As a person cannot function without a brain, a society cannot function without leaders. And so the decline goes on.

Bosses as Celebrities

Today we acknowledge executive superstars. Their names, pronouncements, conspicuous consumption, and corporate derring-do in quest of profits are dutifully reported by an eager press.

Armed with briefcases, fax machines, and cellular telephones, this new generation of heroes commutes to its paper war daily in stretch limos or private helicopters.

Why does such a large segment of the population view these people as heroes? One reason might be that CEOs tend to be more important to companies in these troubled times. Another might be that this is the most exhilarating climate for businesses that we've seen in decades. A third, more discouraging reason could be that selfishness is suddenly respectable, and in a status conscious society there's no greater status symbol than occupying the top rung on the ladder in a corporation whose annual sales may rival the GNP of many third-world countries.

There's another explanation: American cultural traditions define personality, achievement, and the purpose of life in ways that shower individuals with glory. In recent generations, however, this tendency has run

amok, eclipsing individualism's opposite — a sense of community, collective aspirations, and public service. No matter how wise, shrewd, or visionary its leader might be, a corporation is a collective endeavor. It needs the aggregate wisdom and vision of all employees to function at the optimum level. CEOs who run companies as extensions of their own personalities and egos take an unconscionable power trip at the expense of employees, stockholders, and the public at large.

Too Many Chiefs

The higher people rise in the corporate hierarchy, the more exposed their weaknesses are. This is particularly true of the relationship between the CEO and the COO.

On paper, the differences between these jobs are clear. The CEO is the leader, the COO the manager. The CEO is supposed to take the long view, concentrate on the what and why, and do the right thing; the COO is supposed to take the short view, focus on how, and do things right. The former is supposed to have vision; the latter, hands-on control.

Trouble develops when one person starts envying the other. The CEO, for example, may wish for the COO's hands-on control. The COO may long for the opportunity to think ahead, dream, and innovate.

When this condition exceeds the boundaries of wishful thinking and border skirmishes erupt between the two executives, their conflict is bound to send shock waves throughout the company.

Simple Solution

The solution to the CEO-COO dilemma is as simple as the structure is complex. The key responsibilities of both jobs should be combined and assigned to a CEO in chief who would reside at the center of the "executive constellation" mentioned earlier. This person would be expected to do the right thing, enabling the managers to do things right, and would also be responsible for blending both long- and short-term views so that today's actions are compatible with tomorrow's goals. He or she would define the whats and whys and assign the hows to associates, would have both vision and hands-on control to ensure that the vision was always realistic, and would think in terms of innovation, development, and the future, while associates took care of administration, maintenance, and the present.

With less structure and more leadership, American business might begin to recover its energy, spice, and fire. But, for the moment anyway, there's little demand for such qualities in the nation's executive suites. Instead, there's an unnatural and unhealthy reverence for the status quo.

THE PERILS OF ACCORD

Corporations in this volatile era tend to create an impression of false accord. Managers usually avoid encouraging what Johnson & Johnson's Jim Burke and Intel's Andrew Grove call "creative confrontation" with associates. These two executives demand dissent in the executive suite and surround themselves with subordinates smart enough to know the truth and independent enough to speak it — especially when it may be at odds with their own perceptions.

If you hope to lead your organization to prominence in the real world, you cannot afford to surround yourself with clones.

Expect dissent, disagreement, and truth from associates and go in search of the truth yourself by spending time in the field, analyzing your own operations and talking with employees and customers.

Effective executives remain inquisitive about everything. They read, look, explore, wonder, and perpetually remind themselves that any product can be improved and any procedure upgraded. In a dynamic world, organizations must, themselves, remain dynamic, and their managers must accept change as a way of life.

When Winning Is Losing

Sometimes it seems that every activity is expressed in terms of competition. At home, at work, and in social situations we talk of winning and losing, scoring, carrying the ball, close calls, and going down to the wire. Preachers and politicians, among others, see this national obsession as good, clean fun. Perhaps, however, it's time to find a new model. Life isn't a baseball game. It's never called on account of darkness or canceled because of bad weather. Business is not, and never was, a sport; thinking of it in those terms was always simplistic. Now it's downright dangerous.

No business can or should be designed purely to win. It should be designed to grow both quantitatively and qualitatively and to vie at least as much with itself as it does with its competition. This is not to say that there aren't winners and losers in the battle for advertising accounts or market share. But aspiring leaders must acknowledge that winning is just one of the many things that a business must accomplish.

Athletes perform in a static environment — the size of the field, the length of the contest, the presence of referees. The universe of business, on the other hand, is volatile. It changes from moment to moment and hardly ever repeats. Companies must constantly cope with the effects of new legislation, changes in competitors strategy, consumer attitudes, domestic and global economic conditions, and waxing or waning social trends.

Clearly, then, there are far more differences than similarities between sports and business. It is a business's ability to adapt to an ever-changing world that forms the basis for both its success and its progress.

The truth is that there is no appropriate model for business except business itself. Business is not a diversion. It reflects the character of life itself; complex, difficult, susceptible to success and failure, sometimes unruly, always challenging, and often joyful.

LEADING TO MAKE A DIFFERENCE

How can we simultaneously exercise our ambition, talent, and capacity for learning and contribute to society and its organizations? Our parents, schools, and organizations all, however inadvertently, conspire against us when they focus on career development and relegate the rest of life to unanticipated consequences.

Several actions characterize genuine leaders. If you aspire to a higher plane of success, embrace these actions and make them your own:

First, resolve to lead an integrated life, one that balances your career and personal roles harmoniously. Professional and private activities complement and enhance each other.

Second, use your ambition, talent, and capacity to learn to serve rather than enslave you.

Third, use those qualities to fulfill your own visions of excellence through the application of passion, energy, and focus.

Fourth, use your qualities to help your own employees fulfill their own visions.

This fourth action is perhaps the most challenging of all, because it isn't always easy to set free the visions of your people. In many cases they have placed artificial limits on themselves or have difficulty seeing themselves in roles different from the one they have filled for several years. The idea of moving into unknown territory may frighten some subordinates, so they may resist your efforts to get them to explore new territory.

Real leaders persist in such cases, however, because they're unwilling to settle for anything less than the best in themselves, their organizations, or their people. In this way, leaders' passion, energy, and focus are contagious; they cause subordinates to conceive and display passion, energy, and focus of their own. In the best-led organizations people are not dutiful. They're inspired.

A Bright Future for Complexity

H.L. Mencken once said, "For every complex problem, there's a simple answer, and it's wrong." But with the complexity of the problems facing us today, the tendency to grasp for simple answers — answers that are easy to understand and accept, even though they turn out to be wrong — is very great.

If you would be a genuine leader in today's crazy-quilt environment, you must challenge yourself to think about things in new or different ways. There are many resemblances between poets, children, and leaders. All are simple but never simplistic; all are full of questions and wary of easy answers; all trust their instincts; all are capable of simultaneous truth and originality. If you aspire to leadership, mold yourself into a practical dreamer who digs deep to view the complex roots of our various predicaments, identifies the real questions, and thereby produces some workable answers.

THE VIRTUES OF A LEADER

Few of us in these fast, mean times seem willing to use our best qualities even 50 percent of the time. Those qualities are, however, the basic ingredients of leadership. Our unwillingness to tap them consistently in ourselves explains, to a large extent, why leaders have become a vanishing breed. If you find these qualities within yourself and display them in both your personal and corporate roles, you can distinguish yourself from the crowd that populates today's business scene.

Integrity

Integrity simply means moral and intellectual honesty. Without it, we betray ourselves and others and cheapen every endeavor. Integrity is the single quality whose absence we feel most sharply on every level of our national life, but the nation's integrity will not be restored until each of us asserts our own integrity. The slogan for these seedy times is, "Everybody does it."

Dedication

Dedicated leaders believe in something passionately. This intense and enduring commitment makes marriages, corporations, and governments work. It's the basis for great works of every kind. If you would be dedicated, give yourself wholly and fully to something beyond yourself.

Openness

Openness means you're willing to try new things, listen to new ideas, and tolerate ambiguity and change. This stance will not make you uncritical. Rather, it will inspire you to be both adventurous and creative.

Creativity

Every child under ten is not only creative but original. Most adults are not only uncreative but also copies of other adults.

Despite the fact that they make a lot of money and have a lot of responsibility, executives often lack either the creativity or even the courage to choose suits that are different. Unfortunately, their minds are generally as conventional as their garb.

To restore your sense of creativity, restore your sense of wonder. Break through preconceptions; force yourself to see things as new and fresh as you did when you were a child. This means making the familiar strange and the strange familiar.

SOUNDVIEW Executive Book Summaries®

10 LaCrue Avenue, Concordville, PA 19331 USA

PURPOSE: To provide complete and accurate summaries of important books on business, as well as books of particular interest to business persons. To make it possible for executives to examine a whole range of new ideas, management methods, business and self-development techniques in minimum reading time.

Use Summaries as a quick, personal business reference library. Individual subscriptions for company executives easily repay their cost. Ask for special rates for multiple subscriptions ordered at one time.

MULTIPLE COPIES of this or any other summaries may be purchased at a discount. Call the numbers listed below.

To subscribe or give as a gift: Send your name and address (plus the name and address of the person who will receive the gift) to Soundview, 10 LaCrue Avenue, Concordville, PA 19331, USA. For faster service, telephone 1-800-521-1227 (outside the USA and Canada, 1-610-558-9495) or fax 1-800-453-5062, and charge to your American Express, MasterCard, Visa, Diners Club or Discover account.

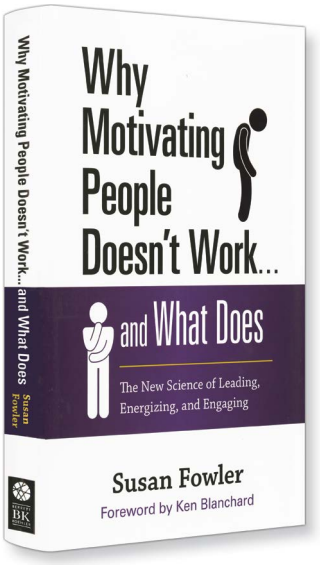
Why Motivating People Doesn't Work ... and What Does

The New Science of Leading, Energizing and Engaging



by Susan Fowler

THE SUMMARY IN BRIEF

Top trainer Susan Fowler tells leaders to stop trying to motivate employees. It's frustrating for everyone involved, and it just doesn't work. Leaders can't motivate employees — not if they want a genuine commitment to excellence.

Fowler lays out a tested process for helping employees motivate *themselves* in ways that not only increase productivity and engagement but also give them a profound sense of purpose and fulfillment.

The old carrot and stick techniques may result in some temporary gains, Fowler explains, but once the bribe or the threat is gone, the employee's commitment flags. Her Optimal Motivation process shows leaders how to move people away from dependence on external rewards and help them discover how their jobs can meet the deeper psychological needs — for autonomy, connection and competence — that science tells us result in true, long-lasting motivation.

IN THIS SUMMARY, YOU WILL LEARN:

- The power of the need for autonomy, relatedness and competence.
- How five workplace beliefs undermine optimal motivation.
- The MVPs of self-regulation.
- Instances when you should conduct an Outlook Conversation.

Introduction: Stop Beating Your People with Carrots

An important truth emerges when we explore the nature of motivation. *People are always motivated*. The question is not *if* but *why* they are motivated.

The motivation — or energy and impetus — a person brings to any action can be *qualitatively* different. Some reasons people are motivated tend to promote well-being for themselves and others — and unfortunately, some reasons don't.

- Motivation that comes from *choosing* to do something is different from motivation that comes from *having* to do it.
- Motivation generated from values, purpose, love, joy or compassion is different from motivation generated from ego, power, status or a desire for external rewards.
- Motivation to compete because of a desire to excel (where the score serves as feedback on how successfully you are growing, learning and executing) is different from competing for the sake of besting someone else, to impress or to gain favors.

One of the primary reasons motivating people doesn't work is our naive assumption that motivation is something a person has or doesn't have. Traditional motivation prompts the questions: Is this person motivated? How much motivation does this person have? These questions reduce your answers to simplistic black-and-white, yes-or-no responses that fail to provide much-needed insight into the nature of motivation. But asking *why* a person is motivated leads to a spectrum of motivational possibilities. Appreciating these possibilities and the implications behind each of them enables you to take advantage of the new science of motivation and guide your people to a more optimal and higher-quality motivational experience.

The Motivation Dilemma

The motivation dilemma is that leaders are being held accountable to do something they cannot do — motivate others. Understanding what works when it comes to motivation begins with a phenomenon every employee (and leader) experiences — the appraisal process.

To experience the appraisal process, think about a recent meeting you attended. Reflect on your different thoughts and emotions as you noticed the meeting on your calendar, jumped off a call and rushed to make the meeting on time. Whether mindful of it or not, you had thoughts and feelings about attending the meeting — you had both cognitive and emotional responses to the meeting.

Is the meeting a safe or threatening event? Am I feeling supported or threatened? Is it a good use of or a waste of my time? Am I excited or fearful? Am I attending because I want to or because I feel I have to?

Ultimately, how you *feel* about the meeting has the greatest influence on whether your sense of well-being is negative or positive. Your well-being determines your intentions, which ultimately lead to your behavior.

Every day, your employees' appraisal of their workplace leaves them with or without a positive sense of well-being. Their well-being determines their intentions, and intentions are the greatest predictors of behavior. A positive appraisal that results in a positive sense of well-being leads to positive intentions and behaviors that generate employee engagement.

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor in Chief; **Ashleigh Imus**, Senior Editor; **Amanda Langen**, Graphic Designer; **S. Dayton**, Contributing Editor

Motivating people may not work, but you can help facilitate people's appraisal process so they are more likely to experience day-to-day optimal motivation.

Optimal motivation means having the positive energy, vitality and sense of well-being required to sustain the pursuit and achievement of meaningful goals while thriving and flourishing. Motivation is a skill. People can learn to choose and create optimal motivational experiences anytime and anywhere.

A Spectrum of Motivation

Asking if you or your staff were motivated to attend a meeting is the wrong question. Asking *why* people were motivated to attend the meeting leads to a spectrum of motivation possibilities represented as six motivational outlooks in the Spectrum of Motivation model.

Suboptimal

- **Disinterested motivation outlook:** You simply could not find any value in the meeting; it felt like a waste of time.
- **External motivational outlook:** The meeting provided an opportunity for you to exert your position or power; it enabled you to take advantage of a promise for more money or an enhanced status or image in the eyes of others.
- **Imposed motivational outlook:** You felt pressured because everyone else was attending and expected the same from you; you were avoiding feelings of guilt, shame or fear from not participating.

Optimal

- **Aligned motivational outlook:** You were able to link the meeting to a significant value, such as learning — what you might learn or what others might learn from you.
- **Integrated motivational outlook:** You were able to link the meeting to a life or work purpose, such as giving voice to an important issue in the meeting.
- **Inherent motivational outlook:** You simply enjoy meetings and thought it would be fun.

The suboptimal outlooks are considered motivational junk food, reflecting low-quality motivation. The optimal outlooks are considered motivational health food, reflecting high-quality motivation.

What Motivates People: The Real Story

Our desire to thrive may be innate, but thriving doesn't happen automatically — especially at work. Human thriving in the workplace is a dynamic potential that requires nurturing. The workplace either facilitates, fosters and enables our flourishing, or it disrupts, thwarts and impedes it. In fact, conventional motivational practices have undermined more often than they've encouraged our human potential.

The essence of motivating people lies at the heart of the science of motivation and the revelation of three psychological needs — autonomy, relatedness and competence. Regardless of gender, race, culture or generation, the real story behind our motivation is as simple and as complex as whether or not our psychological needs are satisfied. I use the terms autonomy, relatedness and competence when exploring the individual attributes of these needs and ARC when pointing out their collective power — which is substantial.

The First Psychological Need: Autonomy

Autonomy is our human need to perceive we have choices. It is our need to feel that what we are doing is of our own volition. It is our perception that we are the source of our actions.

The Second Psychological Need: Relatedness

Relatedness is our need to care about and be cared about by others. It is our need to feel connected to others without concerns about ulterior motives. It is our need to feel that we are contributing to something greater than ourselves.

The Third Psychological Need: Competence

Competence is our need to feel effective at meeting everyday challenges and opportunities. It is demonstrating skill over time. It is feeling a sense of growth and flourishing.

When a person experiences high-quality psychological needs, she will have an optimal motivational outlook. In other words, if her needs for autonomy, relatedness and competence are satisfied, the result is an aligned, integrated or inherent motivational outlook.

When a person experiences low-quality psychological needs, he will have a suboptimal motivational outlook. In other words, if his autonomy, relatedness and competence are not satisfied, the result is a disinterested, external or imposed motivational outlook.

The ARC Domino Effect

Imagine you have a manager with control needs. She micromanages people and projects — whether they need it or not. Her micromanagement is undermining your sense of autonomy — she is controlling your work and not allowing you to think for yourself. You are afraid to

go over her head to complain because you've seen what happens to complainers.

This is how the ARC Domino Effect begins. Your lack of autonomy raises questions in your mind about your competence. Your inability to manage your manager's over-involvement or the organizational politics involved further erodes your competence. Your manager's ineffective leadership, lack of sensitivity to your needs and apparent self-interest prevent any sense of relatedness. Intangible external forces (her micromanaging style and your fear) dictate your internal sense of well-being.

People revel in the positive energy, vitality and sense of well-being that occur when all three psychological needs are satisfied. But — and this is a big but — one depends on the other. The ARC Domino Effect is in full force when even one psychological need is missing. If A or R or C falls, the others are diminished as well.

The real story of motivation is that people have psychological needs for autonomy, relatedness and competence. It is a mistake to think that people are not motivated. They are simply longing for needs they cannot name.

People are learners who long to grow, enjoy their work, be productive, make positive contributions and build lasting relationships. This is not because of motivational forces outside themselves but because it is their human nature.

The Danger of Drive

One of the most popular motivational theories of the past 100 years is called Drive Theory. It made sense based on the idea that we are motivated to get what we don't have. The pervasive use of Drive Theory paved the way to an acceptance of driving for results, driving for success and driving performance. Now we are beginning to grasp the real costs of driving.

Your psychological needs are not drives. In fact, they are just the opposite. Drives dissipate when they are satiated (such as thirst as we drink water or hunger as we eat food). However, when psychological needs are satisfied, you experience such positive energy, vitality and a sense of well-being that you want more! You have probably experienced this with your own positive addictions, such as running, meditating, volunteering, playing with children or being in the flow during an activity. People who experience ARC are thriving. They do not need something or someone else doing the driving.

Dysfunction exists because our psychological needs for ARC are not being satisfied. Armed with understanding, we can do something about it.

The MVPs of Self-Regulation

Self-regulation is mindfully managing feelings, thoughts, values and purpose for immediate and sustained positive effort. You must understand the role self-regulation plays in helping you satisfy your own psychological needs. You must also appreciate your role in creating a workplace that fosters the high-quality self-regulation needed for your people to satisfy *their* psychological needs.

Self-regulation is the mechanism for countering the emotional triggers and distractions that tend to undermine our psychological needs. People need high-quality self-regulation to help manage their workplace experiences if they ever hope to have an optimal motivational outlook. Three potent techniques promote high-quality self-regulation — mindfulness, values and purpose. These are the MVPs of self-regulation.

Mindfulness: The first MVP. Mindfulness is noticing — being aware and attuned to what is happening in the present moment without judgment or an automatic reaction. It is a state of being but is also a skill that requires development through practice and patience.

When we are not mindful, we tend to react with typical behavior patterns — many of which we are born with or have acquired unconsciously through life experience — or uncontrolled emotions when we feel

- We are pressured or lack control over a person or situation (an absence of autonomy);
- A person or organization has disappointed us or let us down (an absence of relatedness);
- We don't have the ability to cope effectively with the person or situation (an absence of competence).

Mindfulness, however, provides a view of reality without the filters, self-centered thoughts and historical conditioning that tint your outlook.

A space exists between what is happening to you and the way you react to it. Mindfulness is that space. This is where you can choose how to respond.

Values: The second MVP. Values are premeditated, cognitive standards of what a person considers good or bad, worse, better or best. Values are enduring beliefs a person has chosen to accept as guidelines for how he works — and lives his life.

Values are at the heart of high-quality self-regulation. Individuals need to identify, develop, clarify, declare and operationalize their own work-related values and purpose — and then determine how they align with the organization's values.

An intriguing aspect of values is that developing them tends to be a mindful process that reflects not only what we

need to flourish but what others need as well. Acting upon developed values helps us satisfy our psychological needs.

To guide your people's shift to an optimal motivational outlook, help them self-regulate by linking assigned tasks, goals or projects to their developed values. For you to do that, your people need to have developed values — and to have you as a good role model.

Purpose: The third MVP. Purpose is a deep and meaningful reason for doing something. Purpose is acting with noble intention — when your actions are infused with social significance.

People are more likely to meet or exceed expectations when they pursue goals within a context of a meaningful purpose. Most organizations have a vision, mission or purpose statement, but few employees have one for their work-related role.

Collaborate with your employees to find alignment between their perception of the role-related values and purpose and your perception. Come to conclusions together that meet both their needs and those of the organization. Acting with a noble purpose reflects the highest-quality self-regulation.

People can counteract everyday drives that undermine their psychological needs for ARC by using high-quality self-regulation through the MVPs.

Motivation Is a Skill

Teaching leaders about motivation is difficult because they believe their job is to motivate others — not themselves.

The three skills for activating optimal motivation are

1. Identify your current motivational outlook;
2. Shift to (or maintain) an optimal motivational outlook;
3. Reflect.

Leader, Heal Thyself

Elaine Brink is a senior vice president of zone sales for Express Employment Professionals. When she attended the Optimal Motivation training, her intention was to learn how to motivate her staff and franchise owners.

"We were asked to learn how to activate optimal motivation for ourselves before applying it with others," explained Elaine. "At first, it was difficult for me because I thought, 'I don't need this; I'm good.'"

As part of the training, Elaine decided to work on an assignment planning and producing an important event outside the United States.

Skill 1: Identify your current motivational outlook. As she worked through the first skill, Elaine realized her sense of well-being was undermined just thinking about the event. She described herself as a no-nonsense, high-energy, get-it-done type of person: "I was getting the job done and gritting my teeth through the entire experience."

It became obvious to Elaine that she was working from an imposed motivational outlook — resentful that she was stuck with a highly unreasonable timeline with no input on the dates. That's when a flood of emotion hit her. She suddenly got in touch with how her negative attitude was infecting her entire team — not only the people she needed to do the job well but also the people she cared about. "Everything I touched was tainted by my suboptimal motivational outlook."

Skill 2: Shift to (or maintain) an optimal motivational outlook. When Elaine got to skill 2 she was able to shift from an imposed to an aligned motivational outlook by aligning her goal to her developed values. "I had not taken the time to consider how important the event was to our business, how appreciative I was to be trusted enough to be put in charge, or how grateful I was to have the skills and experience to pull it off. For the first time, I saw this as an opportunity to develop members of my staff. I was in a position to help them gain skills and experience that would serve them and the organization moving forward. It also dawned on me that I was the one who accepted the offer to take on the event — I could have said no, but I didn't."

Skill 3: Reflect. Elaine said, "I felt an immediate shift in my energy level. I knew I could sustain this positive sense of well-being, even during challenging times, because of the depth of my emotional connection to my values."

Elaine has continued to reflect on her shifting experience: "I now have a template for understanding my well-being, intentions and leadership behaviors — and either shifting to or maintaining an optimal motivational outlook. I have also become much more consciously aware that I might be imposing goals and deadlines on other people. I wondered why leaders do this. My great "aha" is that sometimes as leaders we delegate goals and deadlines to others based on our own enthusiasm, values and purpose without taking the time to understand how what we are delegating lands for the people who must carry our ideas through to completion."

People who work with an optimal motivational outlook generate significant business outcomes when compared to employees working with suboptimal motivational outlooks. They do the following:

- Deliver higher productivity.
- Demonstrate higher creativity.
- Generate increased sales.
- Are more engaged and satisfied by their jobs.
- Are more likely to be considered for or receive a promotion.

Making Shift Happen

A motivational outlook conversation is an informal or formal opportunity to facilitate a person's shift to an optimal motivational outlook. For brevity's sake, I'll refer to these as "outlook conversations."

When to Conduct an Outlook Conversation

Ultimately, a shift depends on how an individual internalizes the situation and the options. Motivating people doesn't work because you cannot control someone else's internalization process. If you try, the likely result is an imposed motivational outlook. Outlook conversations don't guarantee a shift to an optimal motivational outlook, but at the very least, they provide an opportunity for growth and understanding.

An outlook conversation may be appropriate when a situation is negatively affecting the individual — or the person's outlook is negatively affecting the team or the organization. For example, outlook conversations are probably worth the effort when a person

- Misses deadlines, resulting in negative consequences for others;
- Is performing below standard expectations on important goals or projects;
- Doesn't take initiative in circumstances where it is needed;
- Displays emotion that is out of character or seems disproportionate to the situation.

You may need to have an outlook conversation with an individual for your own reasons. For example, an outlook conversation may be appropriate when you

- Think an individual needs help or you want to offer your support;
- See untapped potential and want to promote the individual's growth;
- Are frustrated because nothing you say or do to make the situation better seems to matter;
- Experience an energy drain just thinking about it.

To conduct a satisfying outlook conversation — for both you and, most importantly, the beneficiary of the conversation — avoid the three common mistakes:

- Do *not* problem solve.
- Do *not* impose your values.
- Do *not* expect a shift.

Outlook Conversations — What *Does* Work

You are less likely to jump into problem solving, impose your values or lead with expectations when you do three things:

Prepare. Before entering any outlook conversation, check your own motivational outlook. You need to be conscious and conscientious about the values you demonstrate as a leader. Research shows that the commitment people have to their leader and the organization is profoundly shaped by their perceptions of what the leader values.

To prepare, examine your own sense of well-being regarding the upcoming conversation. Identify your current motivational outlook, and choose a more appropriate or desired motivational outlook if necessary. Then shift your motivational outlook by linking your developed values to the upcoming outlook conversation — or consider how you will sustain the optimal outlook you have. Your shift to an optimal motivational outlook in preparation for conducting an outlook conversation enables you to give those you lead a generous gift — your mindful, non-judgmental attention.

Trust the Process. Follow the three skills for activating optimal motivation as guidelines.

Facilitate Skill 1: Identify the person's current motivational outlook. Get permission to explore the individual's feelings regarding her task, goal or situation.

Does she have a negative or positive sense of well-being? Listen to clues in her language; watch her non-verbal body language. (Does she use phrases such as "I have to" or "I get to"? Does she appear defeated, defiant and defensive or inspired and joyful?)

Is the individual experiencing a low or high quality of psychological needs? (Does this person feel in control and recognize she has choices, feel supported and have a sense of purpose regarding the situation, and feel she has the ability to navigate the challenges posed by the situation?)

Is the individual demonstrating low- or high-quality self-regulation? (Is this person practicing mindfulness, making a values-based decision, or connecting the situation to a higher purpose?)

Is the individual's motivational outlook suboptimal (disinterested, external or imposed) or optimal (aligned, integrated or inherent)?

Facilitate Skill 2: Shift to (or maintain) an optimal motivational outlook. Help the individual understand the implications and opportunities for each of the six motivational outlooks. Ask for examples of the upsides and downsides for continuing in his current motivational outlook. Ask him to identify potential upsides and downsides for shifting to a more optimal motivational outlook.

That shift is most likely to happen through high-quality self-regulation. As a leader, you can facilitate this process through the MVPs:

- Promote the individual's practice of mindfulness.
- Help the individual align the situation with his workplace values.
- Help the individual connect the situation to a noble purpose.

Facilitate Skill 3: Reflect. Guide the individual through a reflection on the outlook conversation experience. What was helpful, awkward, challenging and enlightening? If the individual experienced a shift to an optimal motivational outlook, inquire how she feels. What is different and why? If no shift occurred and the individual remains in a suboptimal motivation outlook, inquire how she feels. Listen without judgment. Practice mindfulness.

Reflect and Close. When do you close an outlook conversation? If you are practicing mindfulness, you will notice when the individual is running low on the emotional energy required to continue examining, exploring or shifting. When you are not attached to your outcomes or expectations, you will be more aware of what the individual is experiencing in the moment. When you close, seek commitment from the individual to maintain his chosen motivational outlook or continue his examination, identification and choice of a motivational outlook. Discuss how the individual might practice high-quality self-regulation and satisfy his psychological needs. Schedule maintenance conversations.

Recognize that when the individual chooses to engage in future outlook conversations with you, he experiences autonomy; your demonstration of support elevates his experience of relatedness; and using the three skills to facilitate an outlook conversation builds the individual's own skill for shifting his motivational outlook any time he chooses, building his sense of competence.

When you help people *identify* their current motivational outlook, help them *shift* to an optimal motivational outlook, and ask open-ended questions to help them *reflect*, you are practicing sophisticated leadership that makes a meaningful difference.

Rethinking Five Beliefs That Erode Workplace Motivation

Too many leaders do not understand how their underlying motivational beliefs shape the problems they face. Unexplored beliefs become the foundation for programmed values. Then these programmed values become the basis for rules, processes, procedures, actions and your leadership behaviors. Your mission, should you choose to accept it, is to explore these workplace beliefs and examine how they tend to undermine your people's optimal motivation and then consider alternative beliefs and best practices.

Rethink the First Eroding Belief: It's Not Personal; It's Just Business

Whatever your beliefs, one thing is true: what you say and do *feels* personal to the people you lead! Therein lies the issue: *feelings*. Do you believe that expressing feeling does not belong in the workplace? If so, challenge yourself by asking, "How did this belief become so commonly held?"

Consider changing the belief that *it's not personal, it's just business* to a belief more likely to activate optimal motivation and others: *If it is business, it is personal.*

Try embracing the idea that all emotions are acceptable, but not all behavior is acceptable. Notice, acknowledge and deal with a person's emotions. Practice self-regulation by listening to your heart and acknowledging the crucial role that feelings play in your work and life.

Rethink the Second Eroding Belief: The Purpose of Business Is to Make Money

Definitive evidence shows that organizational vitality measured by return on investment, earnings by share, access to venture capital, stock price, debt load and other financial indicators is dependent on two factors: employee work passion and customer devotion. It does not work the other way around — organizational vitality is *not* what determines customer devotion or employee work passion.

When you focus on satisfying your employees' psychological needs so they can serve customers' needs, your organization prospers. An old sports analogy works equally well in business: focusing on profit is like playing the game with your eye on the scoreboard instead of the ball.

Challenge the belief that *the purpose of business is to make money,* and consider an optimal motivation belief: *The purpose of business is to serve — both your people and your customers. Profit is a by-product of doing both of these well.*

Rethink the Third Eroding Belief: Leaders Are in a Position of Power

A leader's power affects people's motivational outlooks. Even when you don't have intentions to use your power, just having it creates a dynamic that requires your awareness and sensitivity.

Here are some commonly used types of power:

Reward power is your power to promise monetary or non-monetary compensation.

Coercive power is your power to use threats and punishment if people fail to conform to desired outcomes.

Referent power is based on how your employees identify with you.

Legitimate power is bestowed through a position or title that gives a leader the justifiable right to request compliance from another individual.

Expert power is power that comes through your depth and breadth of knowledge.

The bottom line is that power undermines people's psychological needs. It's not just your use of the power; it's people's perception that you have it and could use it. Your power demands that people need to exert more energy self-regulating to internalize a workplace where they experience autonomy, relatedness and competence.

You can use all your power attempting to motivate people, but it won't work if you want them to experience an optimal motivational outlook. Shifting to an optimal motivational outlook is something people can do only for themselves. But the workplace you create has an enormous influence on how likely — or challenging — it is for people to self-regulate, satisfy their psychological needs for ARC and experience optimal motivation.

We need to change the belief that *leaders are in a position of power*. Consider the difference with this optimal motivation belief: *Leaders are in a position of creating a workplace where people are more likely to satisfy their psychological needs for ARC.*

Rethink the Fourth Eroding Belief: The Only Thing That Really Matters Is Results

A focus on results may yield short-term gains. However, those gains are at risk and compromised when people feel pressure instead of autonomy, disconnection instead of relatedness, and a sense of being used without a sense of the competence they have gained.

The evidence is clear: people can achieve the results you want, even if their psychological needs are thwarted in the process. But their negative energy and lack of well-being make it rare for them to sustain or repeat those results — let alone exceed them.

Reframe the belief that *the only thing that matters is results*. Consider this optimal motivation belief instead: *In the end, what really matters is not just the results people achieve but why and how people achieve them.*

Rethink the Fifth Eroding Belief: If You Cannot Measure It, It Doesn't Matter

Setting measurable goals and outcomes is important. Having a defined finish line in front of you can be positively compelling. However we need to move beyond goal setting and embrace aspects of work that are not easily measured. As in life, the most rewarding aspects of work are those most difficult to measure.

Reframe the belief that *if you cannot measure it, it is not important*. Put this optimal motivation belief into practice instead: *If you cannot measure it, it is probably really, really important.*

The Promise of Optimal Motivation

A great irony of leadership is that motivating your people doesn't work because people are already motivated. People are always motivated. What does work is helping people understand *why* they are motivated. Your opportunity lies in facilitating people's shift to an optimal motivational outlook so they flourish as they succeed. When you activate optimal motivation for yourself, you provide more than a role model — you create a ripple effect that encourages your people's optimal motivation.

Imagine people choosing to come to work because they experience a sense of positive well-being, the feeling that they are contributing to something greater than themselves, and the thrill of continued growth and learning.

People can flourish as they succeed. This is the promise of optimal motivation.

A Self-Made Billionaire Speaks Out On Honesty and Generosity

WINNERS NEVER CHEAT

THE SUMMARY IN BRIEF

Jon M. Huntsman started with practically nothing, and built a world-class business that carried him to Forbes' list of America's wealthiest people. In this summary, Huntsman, chairman and founder of Huntsman Corp., the world's largest privately held chemical company, presents the principled lessons he has learned and followed throughout his lifetime. He also explains how business can return to the days when your word was your bond, a handshake was sacred, and swarms of lawyers weren't needed to back it up.

Huntsman built his career and fortune on ethical principles — from his refusal of the Nixon administration's corrupt demands, to his lifelong commitment to charity, to the way he approaches his biggest deals. In this summary, Huntsman describes how readers can learn to listen to their moral compass, build teams with the highest values, share success, take responsibility and earn the rewards that only come with giving back.

This summary also explains that you don't live these principles just to "succeed": You live them because they're right. In an age of many business scandals, Huntsman's life proves honesty is more than right: It's your biggest competitive differentiator.

What You'll Learn In This Summary

✓ How to win the right way, and win for life.

✓ How to compete fiercely and fairly, and win without cheating.

✓ How you can lead using risk, responsibility and reliability.

✓ How to put the lawyers in their place: Your word and your handshake are more powerful than any contract.

✓ How graciousness is next to godliness, and how to respect customers, partners, employees and even competitors.

✓ How to treat the workplace as an extension of the family.

✓ How to give back, return favors and share your good fortune.

Lessons From the Sandbox

Young children growing up, whether rich or poor, are taught to play by the rules. Be tough, be competitive, give the game all you have — but do it fairly: These are simple values that form the basis for how families, neighborhoods and communities behave. It is a value system that is learned in homes, sandboxes, playgrounds, classrooms, Sunday schools and athletic fields.

Those lessons do not lose their value simply because we're involved in the business world, yet they are missing in segments of today's marketplace. Many CEOs enjoy princely lifestyles even as stakeholders lose their jobs, pensions, benefits, investments and trust in the American way.

Dishonesty in Business

Cooked ledgers, look-the-other-way auditors, kickbacks and flimflams of every sort have burrowed their way into today's corporate climate. Many outside corporate directors bask in perks and fees, concerned only with keeping Wall Street happy and their fees intact. In the past 20 years, investor greed has become obsessive and a force with which CEOs must deal.

In the 2004 U.S. presidential election, morality issues influenced more votes than any other factor, but a Zogby International poll revealed that the single biggest moral issue in voters' minds was not abortion or same-sex marriage. Greed/materialism far and away was cited as the most urgent moral problem facing America today. (A close second was poverty/economic justice.) The question is, why have lying, cheating, misrepresentation and weaseling on deals ingrained themselves so deeply in society? What's needed is a booster shot of commonly held moral principles from our childhood.

Although these childhood prescriptions may appear to have been forgotten in the fog of competition, it is more a matter of values being expediently ignored. Whatever the case, it is time to get into ethical shape with a full-scale behavioral workout. Financial ends never justify unethical means. Success comes to those who possess skill, courage, integrity, decency and generosity. Men and women who maintain their universally shared values tend to achieve their goals, know happiness in home and work, and find greater purpose in their lives than simply accumulating wealth. Nice guys really can and do finish first in life.

Commonly Held Principles From The Playgrounds of Our Youth

- ✓ Be fair.
- ✓ Don't cheat.
- ✓ Play nicely.
- ✓ Share and share alike.
- ✓ Tell the truth.

Deceivers Seem to Win in Life

Michael Josephson, who heads the Josephson Institute of Ethics in Marina del Rey, Calif., says one only has to view popular shows such as *The Apprentice* and *Survivor* to get the notion that life's winners are those who deceive others without getting caught. Yet we all know that when we bend or break the rules, what we are doing is not right. Traditional behavioral values will lead us not into temptation but to long-term success. Forget about who finishes first and who finishes last. Decent, honorable people finish races — and their lives — in grand style and with respect.

The principles we learned as children were simple and fair. They remain simple and fair. With moral compasses programmed in the sandboxes of long ago, we can navigate career courses with values that guarantee successful lives, a path that is good for one's mental and moral well-being, not to mention long-term material success. ■

Check Your Moral Compass

No one is raised in a moral vacuum. Every mentally balanced human being basically recognizes right from wrong. Whether a person is brought up a Christian, Jew, Buddhist, Muslim, Hindu, Unitarian, New Age, a free thinker or an atheist, he or she is taught from toddler on that he or she shouldn't lie, and there are consequences for doing so. There is no such thing as a moral agnostic. An ***amoral person*** is a moral person who temporarily and creatively disconnects his or her actions from his or her values. Each of us possesses a compass or conscience, programmed by parents, teachers, coaches, clergy, grandparents, uncles, aunts, scoutmasters, friends and peers.

Some people point out that today's society tolerates too much questionable activity, making it difficult for young people to get a consistent fix on right and wrong. While society is more permissive today, does anyone today truly condone stealing? Does any student not consider cheating intrinsically wrong, no matter how many of his or her friends do it? Does society accept cooking corporate books, embezzlement, fraud or outlandish perks for corporate executives? The answers, of course, are no. Basic misbehavior is considered as wrong today as it was 100 years ago.

Ethics Versus Laws

We are not always required by law to do what is right and proper. Decency and generosity, for instance, carry no legal mandate. Pure ethics are optional. Laws define courses to which we *must* legally adhere or avoid. Ethics are standards of conduct that we *ought* to follow.

The ingredients for long-term success — courage, vision, follow-through, risk, opportunity, sweat, sacrifice, skill, discipline, honesty — never vary. In the winner-take-all atmosphere of today's marketplace, shortcuts to success are alluring, and lying can often be lucrative. But scammers and cheaters have never lasted for long, and their fall is fast, painful and lasting. ■

The Great, Great Guys Club

A group of young children formed a special club called The Great, Great Guys Club. Members have to be at least 6 years old to attend meetings. It's not permissible to fall asleep, wet your pants or crawl under the table, among other prohibitions. Here are a few standards that the kids established by themselves:

- ✓ Do what you're supposed to when you are told to do it.
- ✓ Kindness and honesty determine heart and character.
- ✓ Never tell lies.
- ✓ Cover your mouth when you cough and sneeze.

Kids know what proper behavior is even if they don't always show it. Their moral compasses, although still developing, are in working order. Ever notice how little guile youngsters exhibit? How honest they are with observations? How well they play with others? How smoothly they compete when adults aren't present? Sure, there are still squabbles, but kids work them out without a 300-page rule book or a court of law.

Play by the Rules

Which rules we honor and which ones we ignore determine personal character, and it is character that determines how closely we will allow our value system to affect our lives. Character is most determined by integrity and courage. *Your reputation is how others perceive you. Character is how you act when no one is watching.* These traits, or lack thereof, are the foundation of life's moral decisions. Once dishonesty is introduced, distrust becomes the hallmark of future dealings or associations. The 18th century Scottish philosopher Francis Hutcheson had this in mind when he wrote, "Without staunch adherence to truth-telling, all confidence in communication would be lost."

Bribes and Payoffs

Bribes have a huge cost. Bribes and scams may produce temporary advantages, but they carry an enormous price tag. They cheapen the way business is done, enrich only a few corrupt individuals, and make a mockery of the rules of play.

In 1980, Huntsman Chemical opened a plant in Thailand. Mitsubishi was a partner in this joint venture, called HMT. With about $30 million invested, HMT announced the construction of a second site. One day, Huntsman received a call from a Mitsubishi executive in Tokyo responsible for Thailand operations. He stated that HMT had to pay various government officials kickbacks annually to do business, and that Huntsman Chemical's share was $250,000 for that year. Huntsman said it had no intention of paying even five cents toward what was nothing more than extortion.

The next day, Huntsman informed Mitsubishi it was selling its interest. After failing to talk Huntsman out of it, Mitsubishi paid the chemical company a discounted price for its interest in HMT. Huntsman Chemical lost about $3 million in the short term, but it was a blessing in disguise. When the Asian economic crisis came several years later, the entire industry went down the drain.

Once a company compromises its values by agreeing to bribes or payoffs, it is difficult to re-establish its reputation or credibility. Carefully choose your partners.

Competition is good. Competition is an integral part of the entrepreneurial spirit and the free market. Cheating and lying are not. If the immoral nature of cheating and lying doesn't particularly bother you, think

(continued on page 4)

Play by the Rules

(continued from page 3)

about this: They eventually lead to failure. Moral shortcuts always have a way of catching up with you.

Make it a point to never misrepresent or to take unfair advantage of someone. That way, you can count on second and third deals with companies after successfully completing the first one. Have as a goal both sides feeling they achieved their respective objectives.

Standards are important. Every family, home and school classroom has its standards. Children observe their elders so they know how to act. Employees watch supervisors. Citizens eye civic and political leaders. If these leaders and role models set bad examples, those following frequently follow suit. It's that simple. There are no moral shortcuts in the game of business — or life.

There are three kinds of people in business and life: the unsuccessful, the temporarily unsuccessful, and those who become and remain successful. The difference is character. ■

Setting the Example

"Whatsoever a man soweth, that shall he also reap." That describes leadership responsibility clearly and concisely, the precise spot where the buck stops. The lesson is clear: Careful cultivation pays off. Parents and employers who nurture, praise, and when necessary, discipline fairly, experience happier and more successful lives for themselves and those in their charge.

Nothing new, you say? We need reminders of this point to help overcome unforeseen or uncontrollable obstacles that cloud end results. What's important is that the person in charge takes responsibility for the outcome, be it good, bad or ugly. Surround yourself with the best people available and then accept responsibility. Anything that happens is your responsibility, even if you don't catch mistakes.

Characteristics of Good Leadership

Leadership is found in all walks of society: business, political, parental, athletic, military, religious, media, intellectual, entertainment, academic and so forth. In every instance, leadership cannot exist in a vacuum. Effective, respected leadership is maintained through mutual agreement. Leadership is not meant to be dominion over others. Rather, it is a composite of characteristics that earns respect, results and a continued following.

Leadership demands decisiveness. That is why it is absolutely critical that leaders know the facts. To ensure that, leaders must surround themselves with capable, strong, competent advisers — and then listen. Unfortunately, many companies and organizations are led by executives who fear bold, candid and talented subordinates. Leaders must show affection and concern for those under their responsibility. Those who would render loyalty to a leader want to know that they are appreciated. Whether or not they realize it, executives in leadership roles solely for the four Ps — pay, perks, power and prestige — are on their way out.

The Core Elements of Leadership

- ✓ Integrity
- ✓ Vision
- ✓ Empathy
- ✓ Confidence
- ✓ Energy
- ✓ Courage
- ✓ Commitment
- ✓ Humility
- ✓ Genuineness
- ✓ Engagement

Leadership is also about taking risks. If your life is free of failure, you're not much of a leader. Take no risks, and you risk more than ever. A 2004 survey found that three in five senior executives at Fortune 1000 companies have no desire to become a CEO. That's twice the number compared to the first survey conducted in 2001. Why? The risks. The chances of making mistakes increase dramatically with leadership, no matter its nature or level, but never having failed is never having led.

Turn Failure Into Opportunity

To succeed, we must attempt new things. Mistakes are not the problem. How one identifies and corrects errors — how one turns failure into a new opportunity — determines the quality and durability of leadership. Those who prefer jeering and ridiculing on the sidelines when the players err or stumble just don't get it. Mistakes and miscues are often transformed into meaningful, successful experiences.

President Teddy Roosevelt had this observation in which he places the participant and the belittler in perspective:

> *It is not the critic who counts; not the man who points out how the strong man stumbles, or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena, whose face is marred by dust and sweat and blood; who strives valiantly; who errs, and comes short again and again, because there is no effort without error and shortcoming; but who does actually strive to do the deeds; who knows the great enthusiasms, the great devotions; who spends himself in a worthy cause, who at best knows in the end the triumph of high achievement, and who at worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who know neither victory nor defeat.*

The greater these attributes, the stronger the leader-

(continued on page 5)

Setting the Example

(continued from page 4)

ship. True leaders ought not worry greatly about occasional mistakes, but they must vigilantly guard against those things that will make them feel ashamed.

Leadership calls for a high degree of confidence, a requirement that keeps many people from wanting to be in charge of problematic situations. There is a great "can do" spirit in each of us, ready to be set free. Leaders are selected to take the extra steps, to display moral courage, to reach above and make it to the end zone.

Humility

In today's what's-in-it-for-me environment, humility is vital for good leadership. Jeroen van der Veer, chief executive of Royal Dutch/Shell Group, says, "The one common value that most leaders lack today, whether in business, politics or religion, is humility."

Leaders need to be candid with those they purport to lead. Sharing good news is easy. When it comes to the more troublesome negative news, be candid and take responsibility. Don't withhold unpleasant possibilities and don't pass off bad news to subordinates to deliver. Level with employees about problems in a timely fashion.

Leadership is a privilege. Those who receive the mantle must also know that they can expect an accounting of their stewardships.

Most people want to be in sync with a leader who they can both admire and respect, and will often parallel their own lives after that person. A good example of this is Mitt Romney, governor of Massachusetts, who returned integrity to the scandal-ridden 2002 Winter Olympics. That classic show of leadership was infectious all the way through the Olympic organization to the thousands of volunteers. As a result, those Games came off the most successful and problem-free in recent Olympics history.

Courage

Courage may be the single most important factor in identifying leadership. Leaders — whether inside families, corporations, groups or politics — must be prepared to stand against the crowd when their moral values are challenged. They must ignore criticism and taunts if pursuing a right and just route. Leadership is supposed to be daunting. Courage is an absolute requisite. Without it, noted Winston Churchill, other virtues lose their meaning.

Following one's moral compass is not for the faint of heart or cold of feet. Leaders worthy of the name understand and accept that they are chosen every bit as much for their values and courage as for their administrative skills, marketing savvy or visionary outlook. ■

Keep Your Word

Shakespeare didn't literally mean it when he said that the first thing we must do is kill all the lawyers, but you can forgive folks for smiling at the thought, given that the legal profession, collectively and with our complicity, is stripping America of personal accountability and trust. Under the guise of legal protection, many corporate lawyers have made it impossible to seal business deals with just a handshake. One's word being one's bond has been replaced with one's word being subject to legal review.

This is a great weakness in our system because most lawyers have little in the way of business experience. They tend to focus on why something should not or cannot be done. As Jeffery Sonnenfeld, associate dean of executive programs at Yale School of Management, put it in a *BusinessWeek* article, corporate attorneys are considered "the vice presidents of No."

Problems nearly always arise when clients allow lawyers to make business decisions they are not qualified to make. In a recent *Inc.* magazine article, author Norm Brodsky says that smart lawyers understand the boundaries of their expertise and limit themselves to providing legal advice. "Not-so-smart lawyers," he says, "charge ahead and screw things up."

Integrity

There are larger issues of personal integrity, ethics and human decency that, on occasion, ought to override the traditional standards of professional practices. Integrity is central to all else virtuous. We can avoid many unpleasantries, legal and social, by offering trust, accepting responsibility and standing by our word, even though it causes some discomfort.

Abraham Lincoln, himself a lawyer, was on target: "Discourage litigation. Persuade your neighbor to compromise whenever you can. As a peacemaker, the lawyer has the superior opportunity of being a good man. There will still be business enough."

Don't misunderstand. It is important that we listen to lawyers, but only for a second opinion. Your opinion ought to be the first — and the last. The CEO is the one who takes the risk, and who must determine the personally decent, ethical route.

Great Resolve

Keeping one's word often requires great resolve. In 1986, after lengthy negotiations with Emerson Kampen, chairman and CEO of Great Lakes Chemical Co., there was an agreement to buy 40 percent of a division of Huntsman Chemical for $54 million. A handshake sealed the deal. After four months, Great Lakes lawyers called to say they would like to draft some documents. That took three months. In the interim, the price of raw materials had decreased substan-

(continued on page 6)

Keep Your Word

(continued from page 5)

tially. Kampen called back, saying the price of Huntsman Chemical had increased greatly during that time, and that he would pay half the increase in value. Huntsman's answer was no. Kampen said it wasn't fair to the Huntsman Co., but Huntsman stuck to its handshake agreement. Kampen never forgot this lesson in fairness.

We need to understand how important it is to keep our word. Trust more in each other and in ourselves. As captains of our own character, it is essential we understand the great legacy of trust and integrity. We will be remembered for truthful disclosures and promises kept. ■

Pick Advisers Wisely

Look for ethical, loyal, talented associates. There are no one-person teams — either by definition or natural law. Success is a cooperative effort; it depends on those who stand beside you.

The first and most important decision in your success is carefully choosing the people who will surround you. Make sure they share your values. Make certain their character defaults to high moral ground in times of stress, ensure they are bright and comprehend results, and be confident of their loyalty.

Although we regularly treat the terms as if they were equals, there is a difference between *popularity* (or admiration) and *respect.* The former has to do with positive, outward attributes; the latter is a positive recognition of one's inner strength and character. If you must choose one, go for respect every time.

Stand for what is right, not what is popular. Ethicist Michael Josephson says ethics is all about how we meet the challenge of doing the right thing when that act will cost more than we want to pay. That takes courage. Courage comes from deep within one's own being. Courage is not the understanding of what is right or wrong. Rather, it is the strength to choose the right course.

When you hire managers, don't ask to see their GPAs or ask about their class standings. Instead of being greatly concerned about their academic majors, search for signs of integrity, commitment and courage. Applicants should get points for holding full- or part-time jobs in high school and college, or underwriting part or all of their educational costs in achieving a degree. ■

The Rules of Teams

If you don't have knowledge of something, find people who do. You need wonderful men and women of talent, skill, energy and promise. They should know that team membership requires the following:

- ✓ Adherence to proper values.
- ✓ Loyalty to the company.
- ✓ Loyalty to the CEO.
- ✓ Competence.

Get Mad, Not Even

In the years following the 2000 presidential election, Al Gore always looked mad and upset. He continued to smart over the fact that he received more popular votes than rival George Bush, but the Electoral College vote went to Bush after the Supreme Court ruled Bush had won Florida.

Many of us have been injured emotionally at one time or another by family, friends, business colleagues or news media, and the urge to strike back becomes our first reaction. We want to do what Ensign Pulver did in the movie *Mister Roberts*. He tossed a large, homemade firecracker into the ship's laundry room as payback for the ship's captain making Lt. Roberts' life miserable.

Put Things Behind You

There's a better way. **Put things behind you and move on.** Accept what has transpired and move ahead in a positive and dignified way.

Don't hold back emotions. Let your feelings come out. Getting mad for a brief time is far better than a long and costly plan to get even. Make your reaction fast, furious and finite. Then say to yourself: "There, I feel better. It's over."

Revenge is counterproductive. If a business competitor has caused you emotional injury, channel your energies into earning a bigger market share and making your company more profitable. Doing better is the healthful response to most anything. In any walk of life, a positive, upbeat outlook trumps any adversarial act. It pays to be positive and upbeat around your opposition. Those who plant mean, vengeful and unjust seeds will reap what they sow. We tend to become what we degrade.

We assume that successful or revered people do not carry around demons like the rest of us. They do. When it comes to grudges, we all have held onto some too long. What separates winners from losers is how fast we banish those demons. Pay attention to that voice inside you saying: "Life is short. Move on." ■

Graciousness Is Next to Godliness

Few human traits are as critical to one's relationship with others as graciousness. It embodies love, kindness, sensitivity and charity — the qualities of people who have great inner faith. One's capacity to be kind, decent and thoughtful is the manifestation of godliness, a demeanor that has earned respect for men and women

(continued on page 7)

Graciousness Is Next to Godliness

(continued from page 6)

of all faiths and backgrounds.

We are taught in our youth to be kind to others as a matter of habit. The lesson doesn't always stick around in adulthood. Decency is lacking in today's highly competitive business world, political arenas and sporting events. All truly successful people demonstrate a sense of decency. There are those who appear successful on the surface, but who really are selfish, unhappy individuals lacking the motivation and capacity to love.

Many would say there is no place for graciousness and the Golden Rule in business, politics, athletics or other highly competitive settings, and that only results count. Hogwash! How you treat others will be your epitaph. Think about what might be said at your eulogy. Businesses, too, have reputations. Many companies are known for their values, customer and employee relations, innovative spirit and philanthropic endeavors. The recent downfalls of Enron, Tyco, WorldCom and others remind us that deception, greed and indecencies are also present in the misty corporate world.

True Fulfillment

The Dalai Lama once observed: "Accumulation of wealth for the sake of wealth alone is self-defeating. Only in seeing one's work as a calling, a means to serve a higher purpose, can we find true fulfillment."

On another occasion, he said, "Relate to others with warmth, human affection, honesty and compassion."

Most companies and individuals seek success and respect. To reach these goals requires a sense of compassion for others and a desire to make others happy. Happiness often comes to us when we try to make others happy. Graciousness is catching.

No one lives or dies unto him- or herself. In his day, Andrew Carnegie made 38 other men millionaires. Each of us has a stake in the accomplishments and failures of those around us; each of us holds an interest in the deeds of others. When one person beautifies the neighborhood, the entire community is enhanced. When a CEO trips, stakeholders stumble. Like the tide that raises all ships, no one can lift others without first being made better him- or herself.

Research suggests a link between the lack of civility and violence. Leaders must instill in others a sense of entitlement, appreciation and loyalty. Watching dreams unfold is one of the great joys of leadership. ■

Your Name Is on the Door

Business is much the same as families. The wise CEO of a publicly traded company will operate as if his or her last name is on the company marquee.

The Profitable Golden Rule

In his book, *There Is No Such Thing as Business Ethics*, John Maxwell maintains that in today's marketplace, 70 percent of the people who leave their jobs do so because they do not feel valued. That's an indictment of how shabbily many executives and directors treat employees. Everyone wants to be valued, to know that he or she counts. People need to be appreciated, trusted and respected in every segment of their lives. There is a practical side to decent behavior, too. Customers, employers and suppliers are people who understand and appreciate kindness and decency. They normally react in kind, and that can be good for profits. Bottom lines would be better served if we put this philosophy into practice. How would I like to be treated in this situation? That's all you need to ask yourself in most instances.

Where appropriate, the workplace should be an extension of the family, a place where appreciation for decency, respect and basic values are encouraged and examples of proper moral behavior are the rule.

Jay Kenfield Morley's description of life sums up how critical it is for the workplace to be an extension of the home: "The recipe for happiness is to have just enough money to pay the monthly bills you acquire, a little surplus to give you confidence, a little too much work each day, enthusiasm for your work, a substantial share of good health, a couple of real friends, and a wife and children to share life's beauty with you."

Emphasize in employee meetings that families come first. Insist that your workplace attempts to be an extension of a supportive home. Everyone wants to feel noticed, respected and valued. Unfortunately, large corporations tend to be run by the book. They frequently are perceived by employees to be sterile and uncaring. Running a business as if you own it prompts a more personal touch. Employees want to be assured the owner or CEO truly cares about them.

Family Businesses

Effective communications are essential. If you run a family business, assure your children, even after most of them are working in the business, that you are a parent first, and chairman of the board second. Employees must be treated as equals. When a company is financially successful, it ought to share its bounty with employees, the community and customers the same as it does with owners or stockholders. Whether one runs a family business or is CEO of a public company, ways must be identified to recognize and give credit to others — at all levels of the organization. The surest path to success is one where others walk with you. Plants and equipment

(continued on page 8)

Your Name Is on the Door

(continued from page 7)

can be replaced easily; hardworking, loyal employees are as valuable as precious gems.

If top executives fail to follow their moral compasses, how can one expect those they lead to adhere to moral values? And if employees in the workplace do not care about ethics or morality, how can they expect their children to be any different? Everyone loses. That's why it is especially critical that employees understand the company's values, and follow them.

All companies — public or private — must create a culture in which employees come first and are treated royally. They always return the favor. ■

For additional information on rules to follow when discussing the "family business," go to: http://my.summary.com

The Obligation to Give Back

Philanthropy ought to be the pre-eminent ingredient in everyone's recipe for material gain. No matter what the field, no star of any success story is a totally self-made man or woman. Along the way, all of us received help from others; most of us were also the beneficiaries of lucky breaks. We owe a portion of our success to others, and the only way to repay that assistance is by sharing good fortune.

All religions of the world reserve a high place on their must-do lists for giving to the less fortunate. The more one gives, the better one feels; and the better one feels about it, the easier it becomes to give. It is a wonderfully, warm, slippery slope. If you require a less altruistic reason to give, try this: ***Philanthropy is plain good business.*** It energizes a company. And publicly owned companies are not exempted from the requisite of returning a portion of their profits to worthwhile causes.

Most People Want to Help Others

In almost every human being, there is an inner desire to help others. Unfortunately, some of us never quite find the time or the reason. But there is no more important human quality than sharing with others. There is no source of true happiness more complete than an act of charity. It is what life is all about.

It is of little consequence where or how or to whom we give. What really matters is our attitude. Donations don't always have to be money. In many ways, time is more precious than dollars. Giving of one's time, lending one's stature, and providing one's expertise can be as meaningful as money. Leaders ought to set aside time for volunteer or public service work.

Giving back applies to everyone, but it surely is not optional, at least for the rich or for corporations. It is the moral obligation of any person of wealth or any business worthy of its name to return to the community some of what it has been given. No less a committed capitalist than Andrew Carnegie lectured the well-heeled in his 1889 work *The Gospel of Wealth* to return their "surplus wealth to the mass of their fellows in the form best calculated to do them lasting good."

Giving is a spiritual obligation. Christianity, Judaism and Islam all make the same point. Yet it is often the wealthiest citizens who find it the most difficult to share, whereas those with little seem to be first in line to give what they have — and usually in greater proportion to their net worth than the rich.

Sharing wealth and kindness, embracing those in need and creating opportunities for others are a societal duty. All that is required to be a philanthropist is a passion for making a difference. Giving enriches one's heart and soul — and it's contagious. ■

The Bottom Line

Society is forever remembering the past as the "good old days." The elders of any society frequently view the young as possessing fewer values than they have, but the fact is we all start out the same. Each generation has unique challenges; no generation has a monopoly on values.

There is, today, a need to reaffirm values that help us determine what is right and what is wrong. This process was passed along and infused into our very beings by the previous generation. We had unwritten rules for the playgrounds, sandboxes, homes and schools of our youth. They spoke to basic fairness, decency and integrity. These principles have not changed simply because we migrated from boxes full of sand to buildings full of desks. ***Acceptable moral values are child's play, not rocket science.***

There's a memorable quote by John Andrew Holmes, a physician who wrote *Wisdom in Small Doses*. It became the entire text of a university commencement address delivered in 2000: the shortest address in modern history. It said: ***"No exercise is better for the human heart than reaching down and lifting another up."*** ■

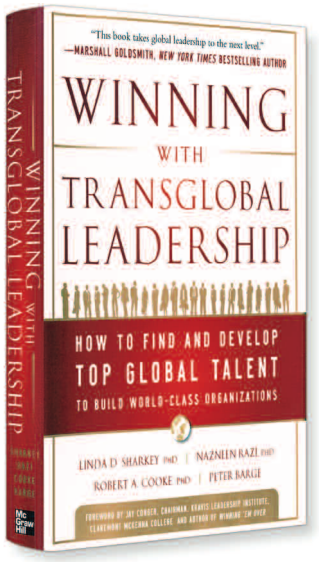
Leadership

Winning with Transglobal Leadership

How to Find and Develop Top Global Talent to Build World-Class Organizations



by Linda D. Sharkey, Ph.D., Nazneen Razi, Ph.D., Robert A. Cooke, Ph.D. and Peter Barge

THE SUMMARY IN BRIEF

Operating and expanding business units offshore, selling in foreign markets, and managing global supply chains are just three of the many challenges that emphasize the importance of leaders that can transcend borders. *Winning with Transglobal Leadership* will help prepare your organization to meet this need head-on with a framework for developing and training leaders that best fit your global growth strategies.

Winning with Transglobal Leadership combines insights from a global team of author-experts. Together, they draw on an impressive range of resources — extensive original research, interviews with world-class high-performing executives, and decades of combined experience as senior executives, researchers, and consultants — to deliver an easily implemented process for accessing your organization's global capability and developing the leaders who will drive success.

For leaders and managers, HR and training specialists, or anybody doing business today, *Winning with Transglobal Leadership* is the definitive handbook on satisfying the demand for specialized leadership skills — now and in the years to come.

IN THIS SUMMARY, YOU WILL LEARN:

- Guidance on measuring and evaluating your organization's capacity to compete globally.
- Five behavioral dimensions that global leaders need to develop.
- Keys to assessing leadership candidates early in their careers.
- The "Transglobal Leadership Matrix," a tool for taking stock of your own skills and behaviors.

THE COMPLETE SUMMARY: **WINNING WITH TRANSGLOBAL LEADERSHIP**

by Linda D. Sharkey, Ph.D., Nazneen Razi, Ph.D., Robert A. Cooke, Ph.D., and Peter Barge

The authors: Linda D. Sharkey, Ph.D., is a founding member of the Marshall Goldsmith Group. A former senior HR executive at Hewlett-Packard and GE capital, her work was named a "best practice" by GE CEO Jack Welch. Nazneen Razi, Ph.D., is the senior vice president and chief human resources officer for Health Care Service Corporation. She has led human resources organizations at several global and multinational companies. Robert A. Cooke, Ph.D., is the CEO of Human Synergistics, emeritus associate professor at the University of Illinois at Chicago, and author of the widely used surveys for organizational research and development. Peter Barge has held CEO and leadership positions in a range of industries on three continents.

PART I: THE CURRENT STATE OF GLOBAL LEADERSHIP TALENT

Survival in a New Global World: Are You Ready?

Corporations are constantly scouting for successful leaders, especially those who can integrate effectively across countries, cultures and geographies, and there is fierce competition for this global leader talent pool.

It takes a special kind of leader to deal with the complex legal, cultural, political and social environments that globalization presents.

We have seen four classic syndromes where ill-prepared leaders have created problems and gotten themselves derailed:

- **The Egocentric Syndrome.** "Things can be done only the way the home country does them."
- **The Language Syndrome.** "The best leaders speak my language. If I can understand them, they must be good."
- **The Western Syndrome.** "We're from the West, and we have been building and developing businesses longer than you, so we are smarter at it."
- **The Cultural Assumption Syndrome.** "We assume we know the other party's culture and that what is relevant in our culture is relevant elsewhere."

This quote from Richard Solomons, CEO of IHG, sums things up well: "Wherever you are assigned or whatever new role or environment you find yourself in, your first priority is to be inquisitive to succeed. It is simply no good going into a new role thinking you know how the world works and you don't."

Interconnectivity in the New Business World

The economic meltdown that started in the United States in 2008 has impacted just about every part of the global economy. The euro zone economic crisis had the world jittery, and the 2011 tsunami in Japan severely impacted the ability of global companies to secure parts and deliver equipment needed for the assembly of products in other parts of the world.

We cannot escape how we are now entwined, and, according to predictions, the interdependencies will increase at an even faster pace. Couple this interconnectedness with the speed of technology, and the impact on businesses and leaders is dizzying.

The plain fact is that you can have all the technology in the world, great cash reserves and good business fundamentals, but in the global arena the real key to success is the people. ●

Why Global Talent Is So Important, Yet in Short Supply

As a result of the speed of business, globalization, erosion of trust, war for talent, and the complexities of everyday life, the traits that successful leaders need to have, particularly successful global leaders, are continually evolving in tandem with their environment.

The world is more demanding and less forgiving of a leader's mistakes today than ever before. As a result of

the growing array of diverse cultures combined with the complexities of global business, ill-equipped and ill-prepared leaders find a minefield awaiting them when they are posted offshore.

Ranjay Gulati puts it this way: "A lot of ex-pats implode from day one, particularly the confident and successful ones in their home market. They cannot see their own implosions and they are often difficult to coach because in their mind it is rarely their fault, and they start to blame everything and everyone else."

According to Clayton Daley, retired vice chairman and CFO of Procter & Gamble, the "skill set of the people and leaders you send in to integrate a global acquisition is critical. It's the know-it-alls, who tell everyone what to do and are not flexible and collaborative, that bring you down."

Why Are These Leaders in Short Supply?

The simple reason is that there are too many leadership competency models that are not well adapted to the global leadership arena. What we need is a simple construct that makes sense for what is important for global leadership. Companies should plan for the inevitability that they will need talent that can function anywhere in the world. We have seen the following:

- Companies have not focused on developing global leaders.
- Even if they've recognized the need to do so, many companies haven't known how to develop global leaders.
- By the time leaders get to the global assignment or have to lead a global team, many leaders see the world from where they hail.
- The types of intelligence needed for global success are neither well articulated nor adequately understood.
- There is a real lack of understanding of what the behavioral requirements are for truly global leaders.

Setting the Stage for the Transglobal Leader

In the global context, intelligence takes on new meanings. It is not enough for leaders to have a high cognitive intelligence, commonly referred to as IQ. They must have other types of intelligence, which can be even more significant. These include:

- **Moral Intelligence:** Having a clear ethical compass and understanding how it plays out in different parts of the world.
- **Emotional Intelligence:** Empathizing and connecting with others on the social and emotional level.
- **Cultural Intelligence:** Knowing the critical cultural norms and mores of the countries and areas in which one is assigned as a leader.
- **Business Intelligence:** Understanding the components of any successful business.
- **Global Intelligence:** Understanding the legal, economic, governmental, and procedural environment in which you will be functioning as a leader.

The Foundation of the Transglobal Leader: The Six Facets of Intelligence

There are various forms of intelligence that, in and of themselves, could predict strong leadership performance but, when synthesized with the other forms of intelligence, can heighten the strength and success of the leaders assigned to manage across multiple geographies.

Cognitive Intelligence (IQ)

Most authorities consider "superior" intelligence to be about an IQ of 130. We see very few companies assess for IQs or ask people for their IQ or SAT scores (which are roughly correlated with IQs) when they are hiring and promoting talent.

Malcolm Gladwell, author of *Outliers*, says that cognitive intelligence is only one factor in one's success. It is the circumstance and the experience that one has that make the critical difference.

GE is not only known for developing top-flight leaders but has also served as a source of CEOs for companies in a wide variety of industries. GE looks for both the intelligence factor and for what Jack Welch calls "the ability to look around corners and see what is coming and anticipate what to do."

Emotional Intelligence (EI)

Mayer and Salovey define emotional intelligence as "the ability to perceive emotion, integrate emotion to facilitate thought, understand emotions, and regulate emotions to promote personal growth."

Daniel Goleman outlined four main constructs relevant to leaders' emotional intelligence:

- **Self-Awareness:** The ability to recognize and understand one's emotions and their impact on decision-making.
- **Self-Management:** The ability to control personal emotions and impulses, and adapt to a different or changing environment.
- **Social Awareness:** The ability to recognize and understand others' emotions.

• **Relationship Management:** The ability to inspire, influence, and develop others while managing one's own emotions.

Business Intelligence (BI)

Drawing on the literature, we have identified five key components of, and questions to ask in assessing, business intelligence:

• **Business Strategy:** Do the leaders have the ability to develop and communicate a well-reasoned strategy for the business that everyone can understand?

• **Customer Focus:** Are current and future customer requirements understood and factored into business decision-making?

• **Process Management:** Are processes aligned and integrated to deliver the expected results seamlessly and flawlessly in response to customer demands?

• **Data and Information:** Are sufficient and timely data and information used by leaders to evaluate the performance of the business?

• **Human Resources:** Are leaders and their people knowledgeable and skilled enough to deliver on the strategy today and in the future?

If these levers are aligned, the results should be forthcoming in the areas of financial performance, customer loyalty and satisfaction, employee retention and engagement, and quality of suppliers.

Cultural Intelligence (CI)

Cultural intelligence is not just about being able to identify or spot the subtle differences between cultures, but rather, it entails interpretation in making an appropriate response. Without cultural intelligence, leaders are walking through minefields never knowing when a bomb is about to explode or even if a bomb is there to begin with.

A culture is made up of shared attributes and rules that have been taught and passed down to members since childhood and continue to be transmitted throughout life by peers, the media, and colleagues. Many of these are unstated practices that are expected by the group, and often they can be picked up only by observation and personal immersion. Culture is not in our DNA.

Global Intelligence (GI)

Sure, leaders need to be able to run and build teams, but transglobal leaders need to run diverse teams. Sure, all leaders need to be able to handle ambiguity, but transglobal leaders frequently need to operate and make decisions in the context of uncertainty.

The challenge transglobal leaders face is in developing strategy, structure, and operating mechanisms while maintaining a working balance between global standardization and local flexibility so as to generate an optimal result.

According to Dalton, Ernst, Deal and Leslie, leaders who possess global intelligence will act in the following ways:

- Create an innovative corporate culture to leverage unique, culture-based knowledge.
- Conduct cross-cultural negotiations effectively.
- Discern and manage cultural influences on marketing and business practices.
- Understand how culture influences the way people express disagreement.
- Use cultural differences as a source of strength for the organization.

Moral Intelligence (MI)

To successfully establish and maintain trust, transglobal leaders need a high level of moral intelligence. In their book *Moral Intelligence*, Doug Lennick and Fred Kiel define it as "the mental capacity to determine how universal human principles should be applied to our values, goals, and actions … In the simplest terms, moral intelligence is the ability to differentiate right from wrong as defined by Universal Principles. Universal Principles are those beliefs about human conduct that are common to all cultures around the world."

Lennick and Kiel believe integrity, responsibility, compassion and forgiveness are critical principles of morally intelligent people.

The more robust their moral compass and the more developed their moral intelligence, the more alignment leaders will display when it comes to their values, their beliefs, and their on-the-ground behavior. ●

What We Did, Why We Did It, and What We Learned

Research activities were implemented based on both qualitative and quantitative approaches, beginning with observations and interviews, moving on to surveys, and then returning to another round of interviews.

The leaders in our sample were identified by asking informed people to name leaders who were successful in global assignments and who seemed to have what it took to work with people with diverse backgrounds.

The final sample of 154 leaders represents more than a dozen nationalities. The leaders ranged in age from 33 to 67, 34 percent were women and 66 percent were men, and all of them had held many and varied positions across more than 20 industries.

• **The self-report survey:** We worked diligently on developing our Quantum Survey (now called the Transglobal Leadership Survey) by writing a series of statements that we believed would capture the behaviors associated with effective transglobal leadership.

• **The descriptions-by-others survey:** We asked the leaders, upon their completion of the survey, to nominate associates to complete a similar survey. Quite a few took the extra step to provide us with the name and email address of a person who could describe them. Of the 154 transglobal leaders who completed the self-description form of the survey, more than half of them (79) were subsequently described by another person.

What We Learned

We learned that five new major dimensions cut through and, in a sense, defined the various behaviors we were measuring:

- Uncertainty resilience
- Team conductivity
- Pragmatic flexibility
- Perceptive responsiveness
- Talent orientation

The second major thing we learned is that these five sets of behaviors are somewhat independent of one another and are not necessarily all displayed together or to the same degree by leaders in global positions. This finding suggests that in today's world people who actively practice all five sets of behaviors are somewhat of a rare breed.

The third and final learning revolves around the role of culture in translating the behaviors of transglobal leaders into effectiveness. Transglobal leaders become successful, at least in part, by creating and reinforcing a constructive culture within their organizations. These leaders accentuate and create a setting that is oriented toward achievement, self-actualizing, humanistic-encouraging, and affiliates of behaviors.

This part goes into detail about the new realm of diversity in which all of us will be immersed as globalization becomes more and more prevalent.

PART II: THE NUTS AND BOLTS OF TRANSGLOBAL LEADERS

The Behavioral Dimensions of Transglobal Leaders: What Sets Them Apart?

When we analyzed our leaders' survey results, we saw that there were real differences between the best transglobal leaders and those who function better in more local settings. We also saw numerous commonalities between the great leaders across our data sets. Both sets of great leaders have a constructive impact on the culture of their organizations.

Transglobal vs. Local Leaders

Great leaders in our sample (both local and global) all possess, at least to some degree, the following traits: strategic orientation, vision, client focus, good people leadership skills, results orientation, team focus, strong moral compass and high integrity, and adaptability.

The differences, however, are quite telling. Transglobal leaders don't have to work hard at inclusion and diversity, for they are unconsciously competent in this area. They don't have to be convinced to try new things; they do it naturally. They have developed themselves to become natural innovators. Local leaders, in contrast, can often be more conforming.

We do not want to imply that transglobal leaders are "good" and local leaders are "bad"; organizations need both depending on where their focus lies in what their strategy is. But one thing is certain: you will not be successful at driving strong results and growing the business if you are a global company with a substantial number of leaders with a local versus global mindset.

We are reminded of the widely publicized experience of Facebook as it tried to do business in China with a local mindset. While it may be true that the Chinese citizenry might have wanted great open space communication, the government clearly did not, and Facebook was resoundingly resisted in that market by the Chinese government. A different approach based on a greater understanding of the political and societal differences might have allowed Facebook to ultimately pursue its open communication value for the longer haul. But now the Chinese government will be suspicious of any efforts Facebook takes to enter the Chinese market.

The Five Behavioral Dimensions of Transglobal Leaders

As we completed our research, we cut through the noise about global leadership and got the essential elements down to five critical behavioral dimensions:

• **Uncertainty Resilience:** Building on differences and complexity. Able to function in ambiguous and vague violence.

• **Team Conductivity:** Working across boundaries and borders. Able to integrate and connect activities and ideas from wherever they are conceived.

• **Pragmatic Flexibility:** Adapting to other cultures both from the organization and the country culture perspectives. Able to flex their value sets to adjust to other mores and norms.

• **Perceptive Responsiveness:** Operating with a high degree of sensitivity to others' needs. Able to function through intuition as well as facts.

• **Talent Orientation:** Focusing on the development of people as a key lever for success. Able and willing to personally take responsibility for talent development.

Traditional Diversity Versus Transglobal Diversity: The New Order and Debate

The most experienced transglobal leaders have moved from a conscious state of seeking diverse talent to a more natural or subconscious state of competence, and building and working with heterogeneous teams.

• Transglobal leaders recognize the significance of diversity and inclusion in a corporate ecosystem and their relevance in today's global markets.

• Transglobal leaders can deal with differences on multiple fronts, including diverse customers, employees, suppliers, and other stakeholders.

• Results for men and women are similar on most of the surveys items with few differences, which implies that women are as suited as men for transglobal leadership roles.

The New Order of Global Diversity

The new global debate related to diversity extends beyond gender, race, age and other demographics. Most importantly, it extends beyond the diversity of customers, suppliers, and employees. Successful transglobal leaders embrace differences in every aspect of the business, and every aspect of human values and principles.

It is experience in a global setting that has shaped the thinking of the transglobal leaders. Their beliefs and behaviors are defined and refined as they recognize the power and synergies created through experience and immersion in different societies, cultures, and geographies.

The terms diversity and inclusion are often bandied about as synonyms. Andrés Tapia, an expert in this area, has stated that while they relate to the same ultimate goal, they are in no way synonymous. "Diversity is the mix. Inclusion is making the mix work."

The Role and Significance of Diversity in the Transglobal Leadership Model

We found that the characteristics of transglobal leaders and their deeply held convictions set them apart from others in driving the diversity agenda almost effortlessly through their organizations. All five dimensions of transglobal leadership serve to enhance the elements of inclusion, selflessness and conductivity, and they bring inclusive diversity into sharper focus. The three that are most distinct are:

• **Perceptive Responsiveness:** Transglobal leaders are skilled at reading people; they have good antennae and are sensitive to individuals' cultural and social norms, behaviors, and biases. They will not condone or promote individuals who are narrow-minded or those who view diversity as an agenda rather than a value.

• **Uncertainty Resilience:** Cultural, racial, gender, generational, religious, social, familial, and other differences can generate behaviors that are not necessarily well understood by most leaders. Transglobal leaders thrive on the differences and welcome the fresh angles that diverse perspectives can offer.

• **Talent Orientation:** Transglobal leaders are personally involved in the development and growth of talent. The leaders we interviewed cited several examples of their personal involvement in discovering and nurturing diverse talent and fostering a culture of inclusive diversity.

PART III: ASSESSING AND DEVELOPING YOUR TRANSGLOBAL LEADERSHIP

This part will help you look at the makeup of your company and assess where the weak points may be and what to do about them. Once you know where you stand, you can then take concrete action to move the needle on the global front.

Where Are You on the Map of Global Capability?

Do you have an organization structure that enables you to tap the globally diverse talent you have at all levels, or do you have a structure that inhibits global talent from getting ahead into roles of increasing influence in decision-making? If your leadership levels and organization structures do not promote mobility and global careers, you will lose talent, and you will most certainly lose the creativity this global talent can bring.

Assessing Your Current Organization

The first step in understanding your ability to compete in the global arena is to understand your current organization and what it looks like from a leadership perspective on three levels: the enterprise level, the business unit and functional team level, and the individual talent level.

At the enterprise level, you should be asking the following questions:

- What is the national makeup of your senior-most leaders?
- Where are decisions made in the organization?
- Where does the power reside?
- Who holds the expatriate positions?
- Is there a pipeline of global talent?

Senior leadership shapes the culture and norms of the company. If you want norms that promote and reinforce a global mindset, you must have leaders who value a global mindset.

Assessing talent in the business units in the functional areas can reveal a lot about the global mindset of the company and its leaders. The same questions asked above can also be asked about the respective business units. You may be a highly global company, but you may have pockets or business units that fall into the local-perspective trap, and don't embrace global thinking and the people they hire, promote and move into expatriate roles.

At the individual talent level:

- Is there a pipeline of top talent in the major countries in which you do business?
- Is there a development plan for the talent that stretches their global acumen?
- What is the ratio of global to local top talent in the talent pool?
- What is the attrition rate of global talent, and where in the organization is it occurring? For example, a country, level, function or region?
- How well is global talent accepted into the organization if they are hired from the outside?

Building an Action Plan for Change

Here are some actions that your organization can take to increase its global acumen and transglobal leadership:

- Actively recruit board and executive committee members with global backgrounds.
- Ensure that you have vetted board and executive committee members for the essential characteristics of transglobal leaders. Do the same for the leadership team that reports to you.
- Build global talent discussions into your overall talent strategy for the company.
- Develop a cadre of top talent who can go anywhere in the world to build the business — make them the exemplars of the leadership model for senior roles.
- Start building functional global pipelines now, before you actually need to expand in a market and find you don't have the talent to do so.
- Make sure you have a pool of functional and line executives who possess a good level of the five global dimensions we have highlighted. ●

Developing Global Capability

We heard time and time again from many of our successful transglobal leaders that they had early experiences that shaped and cultivated their transglobal skills. Some had opportunities very early in life, even before they reached the age of 20, to live in a multicultural environment and to learn from people of various ethnic and cultural backgrounds.

We also found transglobal leaders who did not have these early experiences to shape their leadership style but nevertheless were highly successful in the global setting. We found that these individuals, in their early years, tended to explore new and varied things. They introduced multicultural experiences into their day-to-day activities by reading diverse literature, enjoying music of various genres, attempting to learn different languages, or seeking a deeper learning of history, arts and sciences.

- **Assessing and selecting global talent:** To unlock the secrets of individuals' potential and better gauge their aptitude, we have to probe in the areas of the five behavioral dimensions and ask them to reflect on their formative years, describing the early activities, experiences, and environment. We have found that the mere assessment of cognitive abilities using standard interview protocols is not adequate to draw out the cultural, emotional, and moral nuances and propensities in an individual.

• **Developing the potential of future transglobal leaders:** Companies that benefit the most in building their global talent line are those that offer international assignments and cross-cultural exchange opportunities to their high-potential employees. The earlier these experiences are allowed to take hold in one's career, the longer lasting and more accelerated the development. To build a global talent pool, companies must provide short- and long-term expatriate assignments, job swaps, and long-duration travel assignments that allow executives to spend time in unfamiliar countries and cultures.

• **Accelerating current transglobal leadership growth and capabilities:** The third approach to developing global capability is to accelerate the current leadership growth and ensure that appropriate strategies and interventions are employed for transglobal leadership development. The high-order development takes traditional interventions up a notch: deliberately changing the nature of their assignments to ensure they are globally complex; providing cross-border assignments that present multicultural and diverse team challenges; assisting others to uncover their values; fostering experiential events that shape and cultivate cultural sensitivity; and taking personal ownership of talent development rather than relying on HR.

• **Creating a nurturing and sustaining multicultural global environment:** Regardless of their career stage — entry-level manager trainee to senior C-level executive taking on a new role — they will benefit from and be able to address risks through support and networking on the ground. Assignments that generally turn out positive are those for which the company provides support in making adjustments, either through assigned mentors, networking, or on-the-ground leadership connections. ●

Are You a Transglobal Leader?

One of the first things you should do is to address the question as to whether you currently think and behave like a transglobal leader. If you conclude that some self-development work is appropriate, you should begin identifying and practicing the relevant behaviors.

Steps for Achieving Transglobal Leadership Capability: The Recipe for Success

You must establish your baseline to define your strategy, and to be able to effectively and consistently measure tangible improvement over time. The assessment would require the following analyses and data:

- Critically reviewing the appropriateness of your organization's structure for global talent.
- Understanding the behaviors and skills of your current talent.
- Assessing the success rates of your current transglobal leaders.
- Determining the behavior and skills for the potential successors to the current expatriates.
- Determining what your global talent pipeline looks like.
- Tracking progress, milestones, and improvements at the organization, team and individual levels relative to global talent. ●

Best Practices to Close the Gaps

From our observations of and readings on many companies and interviews with their leaders, we offer and summarize some compelling best practices:

• **On the development front:** Ensure that your organization has a cadre of senior leaders that can move and work anywhere in the world. Expect and reward this cadre to identify and mentor the next crop of leaders. Deploy emerging talent and transglobal leaders to disaster area projects and to support local initiatives. Create development experiences that take people out of their comfort zones. Have leaders teach in local universities and live with a local family during part of their stay.

• **At the organization level:** maintain a consistent focus on the issue of global talent, develop and communicate regularly on the progress and quality of talent, and make global assignments something that talented people aspire to. Ensure that global assignments are seen as career enhancers rather than as career minefields or graveyards. Create overarching frameworks in a constructive organizational culture that guide rather than control the actions of talented and motivated people. Measure and celebrate success through customer and employee case studies and stories.

The most important strategy is to get personally involved in making your team and yourself true transglobal leaders! ●

The 7 C's to Build a Winning Team

Looking to transform your organization? Why not study the work of two men who have done exactly that, everywhere from the locker rooms of NFL success stories to the boardrooms of major Fortune 500 companies worldwide? That's what you get with ***You Win in the Locker Room First: The 7 C's to Build a Winning Team in Business, Sports, and Life.***

Mike Smith is a former NFL head coach responsible for one of the most remarkable and historic team turnarounds in the history of the league. Before he joined the Atlanta Falcons as head coach in 2008, the team had gone 4-12 for the previous season— continuing a losing tradition that had never seen them string together two consecutive seasons of better than 50% win records. Under Smith's transformative locker room leadership, the team immediately earned an 11-5 record, became constant playoff contenders, and made Mike Smith an AP Coach of the Year and peer-voted Coach of the Year three times— in 2008, 2010, and 2012.

Partnering with Smith is Jon Gordon, a best-selling author and speaker on the subject of leadership, personal transformation, and success. His message and principles have made their way into Fortune 500 boardrooms, professional sports teams, non-profit organizations, and more. He's authored 17 best-selling books and been featured on CNN, The Today Show, CNBC, and more.

But despite all of the accolades brought to the table by these two authors, all that really matters is whether this book has 'the goods.' Does it deliver on its promise to help readers build a winning team in business, sports, and life? In most respects, it does so with aplomb. *You Win in the Locker Room First* is a book packed with inspiration, motivation, and guidance for leaders from all backgrounds and in all industries or positions to help transform their organizations from the inside out.

In a compelling and easy-to-follow step by step format, the authors lay out a foundation for building a stable and successful organization, then build on each level with a practical framework that helps leaders succeed. Don't let the simplistic "7 C's" format fool you— Smith and Gordon have dug deep into both

their own experiences and research on leadership to deliver a truly actionable and in-depth guide to leading.

Culture

After an inspiring introductory section that will excite all but the most stony and skeptical readers, Smith and Gordon dive into their self-developed "7 C's" of building a winning organization. First up? Culture, the much-discussed but often-understood foundation to all great and lasting organizations.

You Win in the Locker Room First approaches culture, as it approaches much of organizational theory, with an emphasis on starting from within. They advocate for engaging and encouraging everyone to be involved, from the boardroom to the locker room, and ensuring that everyone around you knows your vision, your purpose, your beliefs, and what you stand for. They make a compelling case that once you know what you stand for, and you and your team know what your team stands for, decisions are much easier to make and require less in-the-moment debate or back-and-forth.

Finally, they emphasize that building a great culture isn't a one-and-done task. You have to live it, value it, reinforce it, and fight for it every day and in every decision you make. That's a lesson many startups in particular could stand to remember.

Contagious

The next C? 'Contagious.' This might not be the most positive buzzword in the world of the pandemic, but Smith and Gordon aren't talking about a virus— they're talking about ideas and attitudes, which spread just as rapidly and can have just as big of an impact. It's up to leaders to decide whether the contagions they spread are positive or negative.

The way they put it? "Decide to be a dose of Vitamin C, instead of a germ."

This memorable message is expanded to speak to the importance of sharing your vision, mission, purpose, and your enthusiasm with your team. When possible, they go further to recommend developing that vision, mission, and purpose as a unit, creating even more buy-in and making the optimism and enthusiasm even more contagious.

In this section, Smith and Gordon memorably describe leadership as 'the transfer of belief and attitude,' a succinct way of communicating what makes leadership so important, and so powerful. As for negative attitudes? "Weed negativity from your team," they write. "Confront, transform, and remove the energy vampires and implement a No Complaining policy."

Consistent

The next C stands for consistency, and this is perhaps one of the strongest sections of the book. The concept of consistency isn't discussed much in books and talks on leadership, which is a mistake. In the world of corporate leadership, particularly in start-ups but even in established enterprises, employees are constantly dealing with changes in management, leadership, executives, and team organization, not to mention re-brands, new products, new directions, and other transformations.

In order to help guide teams through these constant changes and permutations, a leader needs to demonstrate consistency— through the wins, through the losses, and through the unexpected storms that every company must weather.

"Address the disease of complacency," the authors write. "Let go of the past [and] create a fresh start each year. Don't allow your team to rest on their past success. Focus on continuous and consistent improvement. Stay humble and hungry."

As in all things, leaders set the tone for all of these goals. Smith and Gordon advise that you 'be the same leader whether you are winning or losing. Stick to your principles and philosophy through adversity and challenges."

This is a powerful message, one that's woefully underserved in the existing market of leadership texts. By including it in You Win in the Locker Room First, Smith and Gordon have instantly set apart their book from many others in the same genre and with the same end goal.

Communicate

If consistency is a topic rarely covered in leadership books, communication is perhaps over-discussed. Still, You Win in the Locker Room First manages to mine fresh perspectives on communication as it pertains to effective leadership.

For example, Smith and Gordon touch on a vital insight that, when ignored, can absolutely derail an organization: "Where there is a void in communication, negativity will fill it."

This is all too true in organizations both small and large, brand-new and well-established. When teams don't get clear communication from the higher levels of management, they're left to make assumptions— and those assumptions will rarely be positive. 'Management doesn't care, management has no direction, management doesn't respect us enough to keep us in the loop.'

This book also reminds leaders that communication must go both ways— as important as it is to communicate with your team collectively and individually, your team must also feel comfortable communicating with you, their leader. The best way to do this is to reward their communication by genuinely listening, asking questions, and seeking to learn from them at every interaction.

Connect

This section could be considered an extension of the previous one, but it involves going deeper than just surface-level communication to develop true connections with teams.

"Understand that creating a connected team is one of the most important things you can do," the authors write. "Team beats talent when talent isn't a team."

> You can't just be committed—you have to consciously seek out and find ways to show that commitment on a regular basis. "

And while Smith and Gordon don't advocate for doing away with technology-based communication methods, they stress that they cannot entirely replace face-to-face communication, in-person team building, and non-work events outside of the workspace when and where possible.

They also insightfully remind leaders not to assume relationships are strong. Leaders must always continue to foster, feed, and help grow connections with fellow leaders and teams. Otherwise, those relationships are likely to wither and fade away— even without your knowledge.

Commit

The penultimate item in the list of the "7 C's" proves to be one of the most compelling, even as it's the most simple. Commit to your people. Commit to your mission. Commit to your organization. Most of all, commit to the principles outlined in the rest of the book. That's the overarching message of this section, that as a leader your commitment must be greater than anyone else's in your organization. More than that, it must be felt in everything you do. You can't just be committed— you have to consciously seek out and find ways to show that commitment on a regular basis. Demonstrate feelings through actions. Look for opportunities to serve your team and put them first. After all, "You don't have to be great to serve, but you have to serve to be great." The authors end this section with a stark reminder for all leaders: Lose your ego and take ownership, instead of blaming others.

Care

Finally, Smith and Gordon remind leaders to care. Create a culture of caring. They stress that when you truly care about your team members, they will perform at a much higher level— it's been proven in study after study.

"Value each team member as a person, not a number," they write. "Be a transformational leader instead of a transactional leader." This does not, the authors remind us, mean that you can't be tough. In the world of business, the most important kind of love is tough love. When you build a foundation of caring, those 'tough love' moments will never force a rift in your team, because everyone will know that it's coming from a genuine place and a desire to make the team better.

The Big C: Coaching

Gordon and Smith separate one additional C from the others, and for good reason. Coaching, which they call 'the big C,' brings the others together and transforms the principles and ideas listed before into action and leads to a team that wins.

According to the authors, coaching creates culture. They stress the importance of coaching with optimism and positivity, a message that's long overdue in today's climate of negativity, pessimism, and global challenges. When you consistently coach and mentor with trust, you strengthen your employees' trust not only in you but in themselves. By helping them grow through the adversity your organization will inevitably face, you show that you can be committed to their growth and progress. In essence, the message here is that by caring, truly caring, about your employees and people, you empower them to become everything they're capable of becoming.

This section of serves to effectively tie together much of what came before it, and the result is that the reader is left with an inspired sense of purpose as a leader— not only to help their company grow, but to help the people within it grow personally and professionally.

Conclusion

Gordon and Smith have created an action plan for leaders, honed in the high-stakes world of the NFL as well as the boardroom, that will help them create a powerful culture, be positively contagious in their mission, be consistent in their leadership, communicate more effectively, connect with the people that surround them, commit to those people and their mission, and show real care for them as individuals while fostering that care among everyone at the organization.

Overall, this book will help leaders of any organization— big or small— realize they can never truly build a winning team without character at its core, supported by talent and continually nurtured by coaching and mentorship. If you're seeking guidance on how to be the leader you've always aspired to be, *You Win in the Locker Room First* is an incredibly effective guide for helping you— and your people— get there.

THE SUMMARY IN BRIEF

We live in a time when every decision we make as leaders is simultaneously under a microscope, on a virtual billboard, and recorded for posterity in a matter of seconds for all the world to see. Yet, we must make decisions faster than ever because the technology and circumstances of business demand it.

The book ***Zero Latency Leadership: Driving Equity, Trust, and Sustainability with Emerging Tech*** helps leaders align tech resources with trust, equity, and sustainability to shape reliable competitive advantages for their businesses.

By laying out the opportunities and challenges of technology in business, author Beena Ammanath helps readers build a personal leadership framework for making complex decisions at great speed and with purpose.

IN THIS SUMMARY, YOU WILL LEARN:

- How to position noteworthy leadership within technology.
- How to build technical literacy.
- The risks and rewards of embracing technology.
- The characteristics of a Zero Latency Leader.

Introduction

Zero Latency Leadership is about aligning technology with trust, equity, and sustainability to set your business up for success regardless of the competition that surrounds it.

Part 1 of the book establishes a context – both historical and contemporary – for the tools, lessons, and resources available to position trustworthy leadership within technology.

In Part 2 each chapter lays out the opportunities and challenges of embracing that technology, ending with some thought-provoking questions about how that technology may fit into your business model and your professional success.

Part 3 introduces more technologies to consider for the future state to round out a primer for technical literacy. In the final pages, the book journeys through the characteristics of a Zero Latency Leader and the next steps on your leadership journey.

Part 1

Chapter 1: History of Change

For thousands of years, human beings could only imagine the technologies we use daily in the 2020s. Yet we got to where we are from the skills that were commonplace throughout human history: the use of fire and basic tools, the power of observation, and verbal communication. On the way to the present day, our ancestors developed the written language, the printing press, mass production, the steam engine, the combustion engine, airplanes, submarines, space travel, DNA analysis, organ transplant, life support, and the internet.

We can look at the historical adoption of technologies to better understand how new technologies will affect the population. From the innovators who will grasp the newest technologies, hack them, exploit them, and discover new ways to use them to the laggards who will wait it out until they have no choice but to join the club, every wave of technology will wash over us at some point. But technology does not exist for technology's sake. It exists for humans to use and we must learn to use it wisely.

Chapter 2: The Impact of Modern Technologies

Our modern technology has made human reunions and scientific breakthroughs possible. At the same time, it has enabled crimes and attacks against individuals, including children, businesses, charities, entire nations, and nature itself. All our contemporary shortcomings beg the question: As a society, are we socially ready for the next wave of technology? Probably not. But the next wave is coming whether we are ready or not. When it comes, we will benefit as much as we will struggle. However, we will sell ourselves short if we ignore the lessons of our past as we face the future. So let's prepare ourselves.

Part 2

Chapter 3: Quantum Computing

Computing uses qubits instead of the traditional bits that our classical computing systems currently use. Bits are binary; they can be 0, or they can be 1, but they cannot be both. This allows quantum computing to solve problems that are too complex for other computers.

Quantum computing has potential applications in material sciences, medicine, drugs, genetics, military intelligence and warfare, artificial intelligence, communication, economics, transportation, and any discipline that impacts humanity. This technology, however, will come with its own set of risks and implications. Quantum computing will rely on algorithms that will evolve without human interaction, meaning we cannot see or validate the work they would create. This can cause concerns about cybersecurity and exploitation, and more.

The use of quantum computing will advance technology in ways previously thought unknown. However, we will in turn need to ask how it will remain ethical and consider what actions will need to be taken to accomplish that.

Chapter 4: Blockchains, NFTS, and Cryptocurrencies

Blockchains are infrastructures or networks of nodes that support both cryptocurrencies and NFTs, neither of which can exist without blockchain.

An NFT (nonfungible token) is a unique cryptocurrency token that can take the form of anything digital—a drawing, music, a video, or a meme. So NFTs allow you to buy and sell ownership of unique digital items and keep track of who owns them using blockchains.

Fungible means "interchangeable." For instance, any two US pennies in common circulation have the same value. These pennies are fungible items within a system of currency. The same is true with cryptocurrency tokens; any one unit is interchangeable with another.

Blockchains, cryptocurrencies, and NFTs are all innovations with great promise and equally great risks. Blockchains may serve the purpose of democratizing value through a peer-to-peer marketplace of cryptocurrencies and NFTs and create a free market where intermediaries no longer profit from or gatekeeper transactions.

But money itself is a social construct. The new concerns relate to the ease of transactions for criminals and the risk to victims. Leaders must ask themselves, "How do blockchains exacerbate these problems?" and find a way to curtail them.

Chapter 5: Augmented Reality and Virtual Reality

A virtual reality (VR) experience is entirely immersive in a simulated environment. Think of a solo trip to the Holodeck on Star Trek. Augmented reality (AR), on the other hand, allows users to interact with each other through a digitized intermediary. Think of backgrounds in a Zoom meeting that make you look like you're in the same place as your colleagues.

VR interaction may resolve concerns about screen time and sedentary game use among children. It provides extraordinary possibilities for learning. AR unlocks a host of possibilities for fitness and physical activities. On the flip side, VR and AR can take humans away from social interactions that shape their neurological development and social skills and the critical human construct of empathy. Aside from physical dangers, there are many financial and emotional risks associated with AR and VR.

Chapter 6: The Metaverse

There is no "one" metaverse. Rather, there are metaverses—plural. Eventually, meta-verses may converge, but presently they are best known in the realm of gaming. As metaverses were only imagined within the last thirty years and initially actualized in the last twelve, a clear-cut definition is elusive.

A metaverse is the perfect place to simulate comprehensive learning. Imagine visiting the South Pole, the bottom of the ocean, the surface of the moon, or the deepest recesses of the living human brain. The metaverse offers unfettered access to the real and the imagined. It could very well lead to fully digital offices, greatly enhance and realize virtual tourism, and make social media more immersive than ever.

Because the concept of a metaverse is still so new and nebulous, we must assume that the challenges we face with it will be the same as any other emerging technology. We will have those who exploit it, those who are exploited by it, and the rest of us following along until it's no longer new.

Chapter 7: Genetic Engineering

At its most essential, genetic engineering is the manipulation of a segment of DNA to influence the way in which the source cell reproduces, and the traits carried forth in new cells derived from the modified genes in the new cell's DNA.

The manipulation could be limited to copying or cloning an existing cell with no additional modification. However, even a clone cell can be influenced by unintended consequences, which is what makes genetic engineering so mysterious—and potentially so dangerous.

While the ethics of cloning are hotly debated, the first-ever sheep (named Dolly) was cloned in 1996 by scientists. In 2020, scientists cloned the endangered black-footed ferret. Could human cloning be the future of genetic engineering? Could the procedure cause harm to individuals? What are the long-term effects of cloning?

Chapter 8: Robotics

Robots are machines that can be programmed to operate manual tasks without direct assistance from human beings. Robotics as a field emerged from interdisciplinary efforts in manufacturing, engineering, and computer science and has come to embrace medicine, aeronautics, and a variety of environmental applications. Robots in the operating room allow surgeons to accomplish procedures with their minds and mechanical controls that their hands simply could not manage within the same time and space.

But this technology can disproportionately harm the lower-skilled and midlevel workers in geographies where robotics is adopted. Robotics are expensive investments for manufacturers. This gives larger global businesses distinct advantages over smaller businesses without the capital to reap the cost benefits of robotics.

Chapter 9: Edge Computing and 5G

Edge computing is a distributed computing paradigm that brings computation and data storage closer to the sources of data. This method reduces bandwidth to improve response times. Edge computing relies on faster networking to process data closer to where it's being generated, enabling processing at greater speeds and volumes. Faster communication between devices delivers action-led results in real-time.

Cities can become "smart" by using 5G technology to connect many devices and sensors, and when managed well, the city's infrastructure can see improved transparency and efficiency. This technology can also provide more options regarding security and control, making it more cus- itemizable for every business. But edge computing and 5G come with countless privacy and security concerns. When everything is on the same global network, anyone can hack into any device holding private or sensitive information.

Chapter 10: 3-D Printing

"3-D printing," enables us to build a three-dimensional object that was printed from a computer design. The additive process of 3-D printing creates less waste and makes a large investment in materials cost-prohibitive. Unique items are also perfect candidates for additive manufacturing.

Medical devices and dental implants are extremely specific to the person who needs them, and 3-D printing allows for faster delivery of highly specific items at lower costs than those required by traditional manufacturing processes. We are at the point in time when, if you can imagine it, you can make it with a 3-D printer.

Presently, the materials most common in 3-D printing are not as durable as those used in traditional manufacturing. The advancement of 3-D printing is also at odds with other efforts to reduce plastic consumption for the health of our oceans, earth, and atmosphere. Some important questions to ask around this topic include "Who is responsible for weapons or dangerous materials created with 3-D printers?" "What effects will additive manufacturing and 3-D printing have on IP?" "Will traditional IP laws limit the adoption of 3-D printing or additive manufacturing technology by end consumers?" "How would copyright and patent infringements be monitored and addressed?"

Chapter 11: Artificial Intelligence

It is evident that artificial intelligence (AI) is the most transformative technology of the twenty-first century. It already permeates nearly every industry and business function, and its capabilities are only expanding.

This ground truth of AI applies to the many kinds of AI in use today including computer vision, natural language processing, speech recognition, planning and predicting, and recommended systems. The capacity to use AI to create good for all organizations and people is enormous, but for it to reach that full potential, we must contend with some complex challenges along the way.

AI can be considered trustworthy if it hinges on a combination of the following dimensions:

- Fair and impartial
- Robust and reliable
- Respectful of privacy
- Safe and secure
- Responsible and accountable
- Transparent and explainable

Part 3

Chapter 12: The Next Evolution of Humans with Emerging Technology

Part two of this book explained some of the most pressing and prescient technologies to build your technical literacy. This chapter introduces you to additional emerging technologies that may be relevant to your business to expand your awareness of the technology landscape

Biofuel generates electricity from bacteria using microbial fuel cells and is being used in pilot landfills across the globe. Hydrogen fuel-cell energy, which produces zero carbon emissions, is also on the horizon. The detection of BRCA1 and BRCA2 gene mutations is likely to save millions of lives through predictive early monitoring for a variety of reproductive cancers over the twenty-first century. Hyper-personalized technology will eventually include everything from your cell phone to an eye implant.

As we all consider our impacts on the planet, these innovations should remain front of mind for all Zero Latency Leaders. Planning for potential technologies within your organization is crucial to taking proactive action.

Chapter 13: Leadership in the Era of Rapidly Emerging Tech

Leaders should focus on becoming more tech literate to be able to pursue their specific business strategy, aligned with their specific business values. Strong leaders shape an environment where technology is part of the business process and act accordingly. Zero Latency Leaders must use their skill set to navigate (not manage) and thrive in the onslaught of technical opportunities. Some steps you can take toward embracing this change include:

- Become tech fluent
- Collaborate with your competition
- Build diverse teams
- Cultivate an ecosystem
- Focus on Humans with technology
- Learn to fail
- Use technology in your personal life
- Continuously upskill your team
- Upgrade your soft skills
- Be a responsible citizen

Conclusion

Leaders have an intrinsic bias toward action. Sure, leafing about emerging technologies and leadership skills is critical. But putting these learnings into practice is equally important.

Ensure that equity, sustainability, and trust are all cornerstones of your company's mission. Do not fear the future, plan for it instead. To enhance your technical aptitude, don't hesitate to subscribe to a technology newsletter. Constantly assess how ready your company and staff are to meet innovation and bring it into your company in a sustainable, equitable, and trust-driven fashion.

Finally, remember that as a Zero Latency Leader, you're not here to merely make quick decisions for the best business gains. You're here to make a difference in the trajectory and impact of how technology is used in business and beyond. Everything is a choice. Let ours be choices that make meaningful and lasting differences.

Beena Ammanath has been at the forefront of emerging technologies for some of the largest and most prestigious enterprises around the world. A computer scientist by education, she is an award-winning senior business executive with a career that has spanned leadership roles in finance, marketing, e-commerce, telecom, retail, software products, service, and industrial manufacturing domains with companies such as Deloitte, GE, HPE, BT, Bank of America, and numerous start-ups. She is also the founder of Humans for AI, a nonprofit focused on increasing diversity and inclusion.
