So how do we navigate expectations and assumptions (those of others and our own)? We stay present and clear. We stay tuned in. We remember we all have unconscious expectations and assumptions; so then we stay in our lane, show up in a way that is true for us, check ourselves, and name our expectations and assumptions as clearly, cleanly, and proactively as possible.

Part IV—Contagious Leadership: Inspire and Grow Others

Bring People With You. Enroll and Serve Them.

Masterful leadership inspires, enables, and creates more positively contagious leaders, who inspire, enable, and cre-

The intention of service can help us focus on what matters most, get out of our own way, and unleash the most potent version of ourselves in service of others.

ate more positively contagious leaders, and on and on and on—all in service of creating positive impact.

So how do you grow other leaders? How do you inspire, enable, and enroll them not only in being more positively contagious, purpose-driven leaders but in paying it forward?

Consider the following five core components of creating other leaders.

#1. The Powerful Intention of Service. If you're on purpose, driven, and feeling in flow, it's probably not just because your leadership is directing you to be or because you're supposed to for your job. It's something way bigger than yourself or your desire for comfort. Underneath it all is likely the intention of service. The intention of service can help us focus on what matters most, get out of our own way, and unleash the most potent version of ourselves in service of others. From here, our leadership is no longer about surviving or looking good or being right or careful—it's about people. Any conversation, feedback, or act of leadership when tied to the intention of service becomes easier, clearer, and more compelling to whomever you're doing it for.

#2. Don't Empower Them: Hold a Big Container and Set Them Up to Win. One of your greatest duties as a leader is to hold space for the people you lead. The container is the energetic space you hold for someone to grow, do the best work in, and show up as powerfully as possible. The size of the container we hold for another can impact who that person becomes. If we don't believe in someone and hold a small container, he or she will likely sense it—and show up accordingly. If we believe in the person and hold a large container, he or she will sense that too—and show up accordingly.

#3. Give Productive Feedback. To lead well, you must get good at feedback. This includes giving it and receiving it. Make sure the feedback is in service of your person, clean, clear, and specific. See the humans you are giving the feedback to—they are just like you with hopes, dreams, fears, heart, and a desire to do well. Love them. Remember that their growth (and your honesty) is more important than your comfort.

#4. Enroll, Recognize, Honor, Value, Trust, and See the Humans You Lead. Remember that you are leading human beings. You must see them, their values and their value. You are "response-able" to them, not responsible for them. You may be their boss or their mentor, but you are not responsible for their success. They are. You are "response-able" to lead them, to be direct and clear, to help them navigate their path, and to help them learn, fall down, get up, and become the best leader they can be.

#5. Let Them Lead. Your job as leader is not to be followed. It's to create, nourish, and grow other leaders. One of the ultimate forms of contagiousness is contagious leadership. In order to do this you will need to take care of a few things: your ego (i.e., your pride), your congruency, your growth, your mentorship, and your presence, purpose, and play.

Part V—Contagious Impact: Be a Force for Good in the World

Create a (Positively) Contagious Culture. Live It.

Now we move into impact. If you're living Parts 1 through 4, impact is easy. It's happening. But is it sustainable? Is it real? And how do a bunch of contagious yous do it all together?

Organizations that have been integrating this work during the past few years were interviewed about where they are now, how they have applied this work, how it has grown, and what works. Best-practice beliefs and mindsets emerged in the following five areas:

- Simple awareness, being present, knowing we're contagious, "seeing" people, acknowledging and honoring them, and taking a pause were part of the magic sauce that got them started and made this work real.
- Taking care of themselves really did make them better for others.
- Being a positively contagious culture didn't just stay at work—it followed people home, impacting their

marriages, kids, families, and other aspects of their personal lives.

- Little things mean a lot. It's often not a huge overhaul or initiative that's needed. Sometimes it's simply owning (and shifting) presence, connecting with intention, being kind, and/or choosing to integrate one idea at a time that makes the most real and sustainable changes.
- It's a journey. Creating or changing culture takes intention, time, and practice. You've got to do the work, and the work starts with you.

Vivayic, a learning services company with the purpose of "building others' capacity to do good in the world," has been integrating the IEP Model over the past three years. All new employees are introduced to IEP during the two-week onboarding process, and they attend a two-day live IEP event as quickly as possible. Components of the IEP Method are written into Vivayic competency models and creative operating procedures so that IEP will be part of ongoing processes, growth, and development conversations.

Emily Kueker and Carrie Derner, two of the owners, reflected on what they've learned to build a positively contagious culture for their team of 30-plus employees all working virtually.

"Creating awareness about the contagious nature of energy has been essential in giving us a common language to address the presence each of us brings into conversations," shares Emily. "We know we've been successful in establishing the IEP Method when a teammate volunteers, 'I need to reboot,' during a meeting."

The company has excellent employee engagement scores, which has led to extraordinary client engagement. The company recorded a Net Promoter Score of 82 in its most recent survey. This has led to Vivayic earning a spot on the Inc 5000 list for fastest-growing private companies four years in a row.

Our best bet for leadership is us. It's being the change we want to see. It's leading ourselves so we can lead others. It's getting command of our state, thinking, and well-being. It's loving ourselves and each other so much that we can't help but show up and lead better. It's having a mindset that we are in service of others. It's being clear and rooted in our intention.

Choose what you want to be contagious for, and get out there and lead.

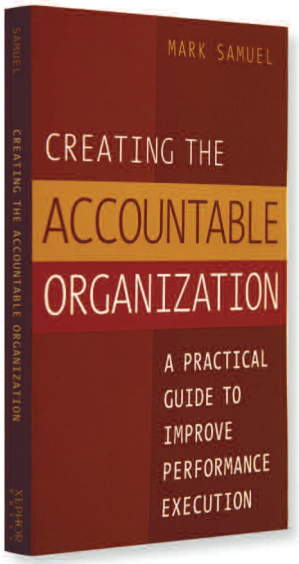
Creating the Accountable Organization

A Practical Guide to Improve Performance Execution



by Mark Samuel

THE SUMMARY IN BRIEF

Creating the accountable organization means developing a culture where people at all levels of the organization can be counted on to keep their commitments and agreements. Author Mark Samuel describes strategies and techniques for increasing both individual and shared accountability. This includes within and between teams as well as between different departments.

The guidance offered is for leaders and change agents at any level within an organization who are ready to move to the next level of excellence and success.

Based on practical experience — more than 20 years of implementing change, research and learning from mistakes as well as successes — *Creating the Accountable Organization* challenges preconceived notions of leadership and accountability and shows readers how to lead a business so it remains effective, competitive and successful in the face of continual pressure to perform at higher levels. It also provides practical strategies and tools used by leading organizations in diverse industries to achieve breakthrough results.

IN THIS SUMMARY, YOU WILL LEARN:

- How to transform meaningless activities, such as ineffective meetings, overused task forces and never-ending restructuring, into meaningful actions.
- How to develop a culture where people at all levels of the organization can be counted on to keep their commitments and agreements.
- How to address nonperformers who survive at the expense of hard-working top performers.
- How to achieve what matters most to you and your company by understanding the principles and realities of accountability.

THE COMPLETE SUMMARY:
CREATING THE ACCOUNTABLE ORGANIZATION

by Mark Samuel

The author: Mark Samuel is a leader in the Personal and Organizational Accountability Movement, firmly committed to inspiring excellence using the principles found in this book. He is president of IMPAQ, a California-based, worldwide consulting firm that teaches organizations how to thrive in the competitive 21st-century global marketplace.

PART ONE: BREAK AWAY FROM OLD LEADERSHIP PARADIGMS

Unleash Ability Through Accountability

Personal accountability is a key driver for organizational accountability. However, organizational accountability goes beyond personal accountability.

Within your organization, you will find some managers and employees functioning at lower levels of accountability and others functioning at higher levels.

There are five levels of accountability:

Level 1: Entitlement. When an organization is plagued by an attitude of entitlement, employees are paid for showing up on the job regardless of performance. Convenience determines effort. Morale is low from the indifference that everyone has for his or her own performance and for each other's performance.

Level 2: Individual Accountability. Individual accountability is an improvement on entitlement. At this level, employees take responsibility for completing their own assignments based on their own job descriptions, without concern for the impact they may have on others. People are competitive with their teammates and support is minimal.

Level 3: Work Unit Accountability. Teams are another stage on the route to organizational accountability. At this stage, the success of the team is more important than any particular individual's success. Competition among team members is lower, but territorialism between teams is high. Teams address individual poor performance and behaviors that keep the team from being successful.

Level 4: Cross-Functional Accountability. Business outcomes determine the makeup of the team to get the job done regardless of function. Decisions are made to include as many functions or departments as are affected. Achieving defined outcomes is more important than the success of any one team or individual. Coordination among teams and individuals is high. Territorialism doesn't exist and individual competition is minimal.

Level 5: Organizational Accountability. Business outcomes still drive performance and decision making, but they now include cross-divisional decisions, knowledge sharing and sharing of resources. All levels of the organization are accountable to each other, creating a "fluid" organization. Any person can act as the leader to

Increasing Organizational Accountability

Here are three principles for increasing organizational accountability:

1. Accountability increases one level at a time. It takes six months to a year to solidify each new level.

2. As levels of accountability increase, performance and behavioral expectations increase. As levels of accountability increase, it becomes less acceptable to accomplish individual performance goals without considering the effect on other people in the organization who need to accomplish their goals.

3. The further removed an individual is from the organization's current level of accountability, the greater the pressure will be for that person to leave the organization. This is true whether an individual's level of accountability is higher than or lower than that of the organization.

any other person, regardless of position, when it is necessary for accomplishing business outcomes.

Create an Accountable Culture

You need only look at organizational breakdowns and failures to see that *culture* is anything but a "soft" issue. For example, when one organization lost its competitive edge because it didn't release its new product in time to head off the competition, the issue was cultural, not technical. The organization had a culture of independence where people didn't show up at meetings on time, people constantly checked their e-mail using Blackberries and some would leave the meetings before they were concluded. This resulted in a lack of decision making and not taking the action necessary to complete the new product line.

Culture: The Backbone of an Organization

The culture of an organization involves more than the style, attitude, communication and skill of its managers and employees. The reason it has been treated as a soft issue is that it seems to affect people and morale more than it affects business results. Consequently, we debate which culture is best — team-based, self-directed, empowered, diverse or something else — without reflecting on the primary purpose of any culture, which is to achieve the business outcomes.

An organization's culture involves a *collective mindset* and the linkage between people in the form of *behavior patterns* that support the collective mindset. These behavior patterns between people represent "habits of performance execution" that result in business outcomes. Performance execution is comprised of *habits* that represent the automatic behavior demonstrated on a consistent basis in the organization.

Five Steps to Create Organizational Accountability

Developing a culture that produces breakthrough results involves more than changing behaviors or attitudes or adding new skills to the work force. It involves developing new habits of performance execution. Although it may take years to change all the bad habits of an organization, with focused attention and deliberate methodology, it only requires three to six months to change enough significant habits to achieve measurable impact on an organization's desired business outcomes.

Step 1: Introduce a New Mindset. When any change is implemented in an organization, start by *clarifying the new mindset* in terms of expanding roles and new responsibilities; *identifying how the relation- ships in the organization may be altered* based on the change and desired outcomes being accomplished; and, finally, *clarifying any new expectations* for improved performance or productivity as a result of the change you are implementing.

Step 2: Identify and Reverse Dysfunctional Habits of Performance Execution. The organization needs to identify the "bad" habits of performance execution that have kept it from achieving its previous desired outcomes. Once the dysfunctional habits have been identified, it is necessary to develop descriptions of the desired habits so that people can get a true sense of the ways of successful functioning in the organization.

Step 3: Measure the Effectiveness of the New Habits of Performance Execution. To successfully change a habit, you must *repeat* the new habit until it becomes *automatic* behavior. Although most organizations use measurement to evaluate results, the first purpose of measurement is *focus*. What you measure, you focus on.

For example, top athletes measure how much water they drink, the quantities and combinations of food they eat, and how much they sleep. This doesn't evaluate their skill or performance as an athlete, but it does keep them focused on the aspects of performance execution that lead to top performance.

Step 4: Establish Recovery Systems Prior to Implementation. This is the most important step for ensuring sustained results. You must be prepared with a *recovery strategy* so that you can act when a crisis occurs, when you regress to old habits of behavior or when you discover that the new behavior isn't working as well as desired.

Step 5: Recognize Results and People. Successful recognition involves recognizing the impact that eliminating dysfunctional habits had on the organization's business outcomes. It also involves recognizing people's efforts when appropriate and linking them to the actual improvements and progress made by the organization.

Three Traps of Ineffective Leadership

To develop accountable and effective organizations, you must follow the following guidelines: Focus on the desired outcome rather than on the process; create safety, not comfort; and focus on recovery, not on perfection.

Beware of the three traps of ineffective leadership:

Trap #1: Seeking the perfect process and getting stuck in analysis paralysis.

Trap #2: The desired progress to achieve results comes to a halt because of disagreements regarding the purpose or direction of the goal or project.

Trap #3: Failing to hold people accountable when they are not achieving the outcome.

Benefits of Creating a Recovery System

Creating a recovery system is a way to stay in the game rather than forfeit the game altogether. Mistakes will occur and unexpected events will take place, but for the organization that has a recovery system in place, adjustments can be made swiftly and effectively to achieve the desired outcomes.

Recovery systems are the key to creating an environment of safety that leads to greater accountability. We can solve only those problems that we know about. Without an effective recovery system, problems remain hidden, conflicts remain unresolved and the resulting culture of nonperformance continues as the norm within the organization. ●

The Formula to Achieve Breakthroughs

Guiding people to action helps them move through their fear of change. Before people can be more accountable and take action to pursue a new direction, they must have a sense that, like the beginning skier, they are safe enough to risk action that catapults them out of their comfort zone. Otherwise, taking action in a new direction will feel punishing. Paradoxically, the only way for them to increase their level of safety is for them to be accountable and to take action. As our safety increases through taking action, so does our comfort.

Being safe to take risks does not mean that you feel no pain or discomfort. In a workplace of constant change and pressure to achieve greater results, people tend to respond either with discomfort and pain, or numbness and denial.

When an individual (or group) is in denial, there are three steps to facilitate taking accountability. The first step is to increase accountability by telling the truth about the situation. Once the truth is realized, people will tend to experience the pain or discomfort of the situation.

The second step is to increase safety for the person to experience his discomfort and to prepare for taking action by acknowledging his discomfort without judging him for being uncomfortable and by believing in him and encouraging him to take action.

The third step is providing the person in denial with guidance using specific steps for taking action. By taking action, the person builds his own "safety" and self-confidence to continue taking more accountability. ●

Leadership Roles That Produce Breakthrough Results

Success is more easily sustained when each level of an organization assumes accountability for its distinct role. Here's how success happens when everyone works together:

1. *Senior managers* (catalysts for results and change) should lead and guide the organizational direction and the culture in response to external drivers. This includes translating external drivers into a clear strategic business plan and monitoring and guiding middle management in achieving operational priorities.

2. *Middle managers* (change agents) should guide the culture and operations to ensure effective linkages and the removal of unnecessary obstacles. This includes translating the strategic business plan into a strategic operations plan

Ten Ways to Create Safe Accountability in Your Organization

1. *Set clear and mutually agreed-upon expectations* with people with regard to both performance and behavior.
2. *Share information* openly and at appropriate times to avoid unnecessary surprises.
3. *Surface any conflict directly* with the person involved.
4. *Provide encouragement, guidance and other forms of support* to individuals who need to make a change.
5. *Focus on functional roles and processes* rather than position and power to accomplish outcomes.
6. *Support the development of people and systems* to respond to the needs of tomorrow and to avoid reacting only to crises.
7. *Monitor and measure the results* of each team and individual so that people know exactly where they stand.
8. *Do not allow people to perform or behave poorly* without making it clear that their performance or behavior is unacceptable.
9. *Follow up on commitments* so that people can depend on your words and your consistency.
10. *Let others know the care, appreciation and compassion you feel,* instead of holding back.

by aligning efforts around the operational priorities.

3. Employees (customer activists) should be dedicated to improving their relationships with others and their performance as it impacts the customer as well as the organization. This includes identifying and meeting customer expectations and improving technical processes and individual performance to meet operational priorities.

Ultimately, your goal is to be accountable for your own actions and dedicated to your own improvement so that you can achieve your desired outcomes. With an accountable environment in place, the organization is able to recover quickly — through focus, involvement and dedication at all levels — from any dips in success that may occur. ●

PART TWO: SIX STRATEGIES FOR LEADING WITH ACCOUNTABILITY

Strategy #1: From Empty Platitudes to Clear Direction

The purpose of an effective vision statement is to provide a clear and meaningful direction, inspiring people to attain a new level of excellence. A vision statement represents the intention of the organization, department or team based on the aspirations, values and clear sense of purpose of the authors. When a vision is clear, it reads like an action-oriented story that provides clear accountability, expectations and outcomes that could be measured. The vision statement is your intention.

Creating a Clear Vision Statement

A vision statement needs substance. It must be stated so vividly as to be almost tangible.

A vision statement is characterized by four essential elements. It should be:

1. Responsive. It identifies the external drivers affecting the organization and how the organization needs to change in order to meet these challenges.

2. Customer-driven. It focuses on the organization's distinctiveness and how it wants to be perceived by its customers.

3. Action-oriented. It defines the internal environment that is required for the vision to become a reality.

4. Practical. It describes the contribution to the financial and long-term viability of the organization, its stockholders and the community at large.

Goals are necessary for translating the vision of the organization into meaningful and measurable performance objectives. However, goals must always be subordinate to the *outcomes* described in the organization's vision.

Bottom Line: Accountability

A vision statement sets up accountability. That is its key purpose. As long as the direction remains vague or unclear, people don't have to be accountable for changing their behavior in order to be consistent with it.

Once the vision is clear, the challenge is developing priorities to ensure that you stay focused and clear on what you need to accomplish to be successful. ●

Strategy #2: Translating Clear Direction Into Non-Negotiable Priorities

A midsized biotechnical company went through the process of strategic planning. It approached strategic planning in a comprehensive manner involving an external consultant who helped the company analyze its industry and conduct a SWOT (strengths, weaknesses, opportunities and threats) analysis.

After several months of careful analysis, senior managers identified the business outcomes and deliverables they were expecting. They identified 53 projects and carefully developed objectives and action plans for each.

After six months, the management team found that little progress had been made and that people were feeling overwhelmed and confused about the real priorities. Besides, as the business environment changed, the team had added new priorities and now were up to 65 priorities!

In just a few hours of working with senior management, another consultant firm identified the top 10 priorities and established meetings to track these 10. Within six months, the management team had completed 80 percent of their top 10 priorities and were making great progress on the other 20 percent.

Establishing the Top 10 Priorities

It is the role of executives and senior management to establish direction for an organization. Accordingly, it is important for them to be clear on the "non-negotiable" priorities that must be accomplished for the organization to progress and succeed. Based on strategic goals, managers must agree on the top priorities to ensure alignment and focus for the rest of the organization.

Leaders who have mastered accountability accomplish this role by having managers identify all the possible top priorities. Next, they narrow the list down to what is most

important for the larger organization. This requires each manager to step outside of the box of his or her particular line of authority and to take responsibility for the success of the entire organization. Although the organization is accomplishing more than 10 priorities, the executive team (as a team) stays focused on the top 10 to ensure success.

Cross-Functional Accountability

Each of the top 10 priorities must have a project owner. However, the entire team of managers is accountable for the success of all 10 priorities. That means if any of the projects fail, it is the entire team that is held accountable.

The entire team monitors the progress of these top 10 priorities to make sure the project is on track, and acts as troubleshooters and problem solvers when issues surface that might prevent the success of the projects.

A team's purpose is to accomplish business outcomes in the most effective and efficient way possible. The way a team achieves its purpose is to ensure "shared accountability" is in place so that each person completes his or her commitments of performance and communication so that all the business priorities are accomplished. ●

Strategy #3: Execution: The Key to High Performance

Although ropes courses, experiential retreats and training programs can raise the awareness of working in teams and understanding the impact people have on each other, by themselves, they rarely change habits of performance execution.

Changing habits of performance execution to raise the level of team performance is achieved over time in a systematic way that is tracked and measured until the new habit becomes "the way things are done in this organization." The following three steps are used to improve performance execution:

Step 1: Develop a Team Vision of Excellence — a Stretch. Using the approach previously discussed, your team develops a vision statement representing the highest levels of excellence regarding your reputation with customers, your teamwork and your value to the organization.

Step 2: Develop Success Factors of Performance Execution. Once the vision is clear, the team identifies a list of Success Factors of performance execution, which describe in detail everything that the team will be doing to fulfill its vision.

Step 3: Prioritize Success Factor Improvement Goals. Once Success Factors of performance execution are agreed on by all team members, each team member chooses the top three Success Factors he or she feels would have the biggest impact if improvement took place. As a result, the department agrees on three Success Factors that they turn into *improvement goals*. Team members develop action plans for improving each of the chosen Success Factors and agree to review progress at each of their team meetings. ●

Strategy #4: Proactive Recovery: The Secret to Accountable Performance Execution

What do top-performing basketball teams focus on when they practice? *Proactive recovery*. The coach sets up "what if" scenarios in which the team must deal with the unexpected. What happens when things break down? What happens when the team's outside shots aren't going in or when its star player gets hurt? The coach makes sure that the team practices its ability to *recover* when
various breakdowns occur. Everyone develops the skills to respond to difficult situations, as well as the ability to mobilize the team to recover from breakdowns in the most effective manner.

The team with the fastest and most effective recovery will be the highest-performing team. Its members can respond both to crisis situations and to changes more effectively, because they are best-equipped with the *flexibility* required to continually adjust to change and unforeseen situations that take place.

The Five Stages of Recovery

When a problem surfaces, either a team can recover by surfacing the problem and responding as a seamless operation or drag out the problem by hiding and blaming others for mistakes. To create enough "safety" for people to admit mistakes, raise concerns and hold others accountable, it is useful to understand the five primary stages of proactive recovery. They are:

Stage 1: Self-Correction. First, you have to *become aware* that a problem exists. The fastest way to do that is for you to be aware of your own mistakes as soon as they occur.

Stage 2: Observation by Co-Worker. The next fastest route to recovery is to have a team member observe and point out the problem to the person who is responsible for it.

Stage 3: Coaching by Co-Worker. In an accountability-based organization, a team member will offer to provide guidance or coaching.

Stage 4: Coaching by Manager. Sometimes it is

necessary for the manager to step in and offer his or her perspective, skills, encouragement, and the articulation of clear expectations and deadlines.

Stage 5: Corrective Action by Manager. If the problem continues, the leader needs to move into corrective action with the specific nonperforming team member to ensure that his or her performance improves and that he or she becomes a contributing team member. This corrective action process involves documentation as well as contact with human resources to ensure fairness both to the employee as well as to the employee's co-workers.

Ultimately, the goal is to create teams in which members have the safety to challenge each other in a supportive way and to surface and resolve conflict without getting stuck in hurt feelings, resentment or retaliation. Once teams know how to recover with grace, speed and a united focus, no crisis or change is too great to handle. ●

Strategy #5: Create a Plan for Change That Guarantees Results

Whether the change you are planning involves organizational restructuring, introducing new technology or implementing a culture change, there are certain steps that must be followed to ensure accountability during the change process. Including people in the change without following the steps to ensure accountability creates breakdowns that prevent success. In this case, you are setting people up for failure.

Creating a Plan

Here are nine steps to creating a plan that achieves results:

Step 1: Define a Clear Outcome. Prior to initiating a plan, it is important to have a clear picture of success.

Step 2: Determine Measurable Indicators for Success. The measurable indicators are necessary for acknowledging success afterward and assisting the "naysayers" to come into alignment with the change.

Step 3: Identify Success Factors of Performance Execution. It is important to have a clear idea of what needs to happen during the change effort in order to ensure success afterward.

Step 4: Set Milestones and Timing for Success. Milestones present a road map for accomplishing the plan and provide the means for tracking the results as progress is made.

Step 5: Recognize Challenges, Obstacles and Constraints. Too often, we wait to identify obstacles until implementation begins only to find that it is too late to deal with them.

Step 6: Take Actions to Achieve the Milestones. These actions must not only assist in achieving the first milestone, but they must also be proactive to address future milestones if appropriate.

Step 7: Develop a Recovery Process. Various types of breakdowns are identified and then a recovery plan is established that outlines what resources are needed and how they will be mobilized to get back on track.

Step 8: Assign Follow-Up Accountability. Once a plan has been documented, it is important to establish a regular follow-up system to ensure that each milestone is being completed on time as agreed.

Step 9: Evaluate Results and Recognize Who's Responsible. Once the implementation is complete, it is critical to measure the results in comparison with the desired outcomes. ●

Strategy #6: Communicate to Influence 'Nonbelievers'

When a *mindset change* is necessary for implementing a new organizational structure, new technology or new global processes and procedures, then making buy-in the purpose of communication can be a "death trap." What makes a mind-set change different from other changes is that it requires you to view the project from a new perspective. When you are stuck in your old familiar perspective, you won't necessarily see the *value* of the new mind-set. You have to experience it to grasp its value.

It is only through experiencing the solutions that we will achieve breakthrough results and prevent the natural resistance associated with adopting the new mind-set. This is one of the great paradoxes of leadership.

Stop Selling Change

The term *buy-in* has always carried with it a notion of *selling*. A "sales-oriented" approach creates skepticism, misunderstanding and confusion about the solution once it is implemented. Often, people go through the motions of the change without really understanding why it is being made. Honest and open communication is at the core of accountability.

The following six steps provide a road map for presenting a change effort:

Step 1: Explain the Context for Change.

Ultimately, you want people to understand where the change is coming from and what direction it is supporting in terms of the vision of the organization.

Step 2: Present the Positives and Negatives of the Current Situation. It is important to list both

the positive and negative attributes of the current situation, especially in context with the external drivers that need to be responded to and the vision of a better future.

Step 3: Present the Positives and Negatives of the Proposed Change. Be truthful and provide people with a clear comparison between the current situation and the change.

Step 4: Present the Strategy and Action Plan. Present the strategy and action plan for minimizing the challenges and costs of making the change. Let people know that the negatives of the change effort are temporary as compared to the negatives of the current situation, which are more permanent (because they have never been addressed).

Step 5: Elicit Involvement. For the negatives that still remain to be addressed, you will create task forces made up of volunteers from the group implementing the change.

Step 6: Offer the Final Choice. Give people a clear choice about participating in the change. This is where accountability is established. ●

Get Started: Your Next Steps to Achieve Breakthrough Results

You cannot create an accountable organization through a training program on personal accountability. Although this can help to make everyone aware of being accountable, it won't address the issues of performance execution that involve teams of people working together to define accountable practices and habits. Nor can you achieve an accountable organization by having managers create contracts with each other, because this won't address the issues that arise when someone breaks a contract and doesn't address lower levels in the organization.

If you want to develop an accountable organization, you must improve *personal* accountability, *team* accountability and *cross-functional* accountability.

Creating Organizational Accountability

There are six steps to creating organizational accountability:

Step 1: Clear Directions From Executives. They must be clear on the vision and business strategy for change based on external drivers, internal goals and values of the organization.

Step 2: Shared Accountability With Middle Management. Middle managers are the change agents for creating an accountable organization. They must work together as a team of leaders, directing the organization from an operational standpoint.

Step 3: Personal Accountability for All Employees. Supervisors and employees at nonmanagerial levels must be introduced to accountability and gain clear understanding of the benefits to them and the organization in being accountable.

Step 4: Shared Accountability in Departments, Work Units and Project Teams. When these teams create a clear vision of excellence, followed by the Success Factors of performance that they commit to improving, performance and morale increase at lightning speed.

Step 5: Accountable Performance Management. Managers must have a system for managing performance that enables them to effectively diagnose the improvement needs for each direct report, prioritize the focus of improvement and develop effective "nondefensive" forms of communication to coach people.

Step 6: Measurement, Celebration and Renewal. Having a system to share bottom-line results so the entire organization can benefit from all its successes is necessary to solidify accountability.

Achieving Results

Organizations need to demonstrate accountability to achieve results. It is the core of employee satisfaction and high performance. Without organizational accountability, an organization cannot adapt to change effectively.

Whatever problems are solved by being more accountable, you will create new problems in their place. They will be "higher level" problems, and when those are resolved as you become more accountable, you will have new "even higher level" problems to resolve. The good news is that as you develop higher levels of accountability, you will be able to solve all of those problems and more — resulting in greater strength and much greater success. ●

How Great Companies Innovate at Every Phase of Their Evolution

DEALING WITH DARWIN

THE SUMMARY IN BRIEF

Business is becoming increasingly competitive — globalization, deregulation and commoditization have taken their toll everywhere you look. Companies are forced to innovate or fold; it's a constant pressure that goes beyond mere competition — it's about survival. Who will the survivors be? They will be the ones that win the scarce resources of customer purchases; the ones that gain customer preference because of their innovation; the ones creating next-generation offers and raising the bar for the future. It's evolution in every sense of the word. Survival of the fittest. Dealing with Darwin.

In this summary, bestselling author and consultant Geoffrey A. Moore puts into clear relief the fact that innovation is not an optional "nice-to-have" in business — to innovate forever is a design specification. It's no longer a strategy; it's a requirement. Those companies that survive over the long haul must not only innovate, but they must also deal with the cyclical inertia that affects all organizations. How can you extract and repurpose resources to feed and foster new product offers? How do you differentiate your company's products and services from those of your competition, creating sufficient separation to win revenue? According to Darwin, evolution took millions of years — you don't have nearly that long to build a strong competitive position. You must evolve and innovate now or suffer the consequences down the road.

In addition, this summary will describe the following:

- ✓ ***The Economics of Innovation.*** *Innovation can help you neutralize a competitor's advantages in the marketplace, improve your overall productivity and avoid waste in your business.*
- ✓ ***The Maturation of Offer Categories.*** *Understanding the category-maturity life cycle will help you determine where your offers are in their development before you set your innovation strategy.*
- ✓ ***Recognizing and Managing Innovation.*** *Knowing the types of innovation is the first step toward managing innovation successfully.*
- ✓ ***Extracting Resources From Context.*** *You must build resources for core differentiating activities by repurposing those resources from other areas of various mission-criticality.*

Foundational Models

The economic argument in favor of innovation focuses on pricing power — avoiding commoditization and the resulting vendor price wars brought about by consumers simply searching for the best deal. Over time in these situations, the market stabilizes at prices at or below cost, creating returns for investors below the cost of capital. Investors do not stay in marketplaces like these very long. When innovation is applied, however, offers become more and more differentiated from one another, leading to different ones becoming the preferred choice for different market segments. Vendors in those segments then have pricing power, and the markets stabilize at prices well above cost, creating returns above the cost of capital, attracting more investment.

The Economics of Innovation

When innovation creates differentiation, it creates attractive economic returns. This is not, however, the only possible outcome from innovation. In addition to differentiation, there are three other possible outcomes:

- **Neutralization.** The goal of neutralization is to eliminate differentiation by catching up either to a competitor's superior performance or to a market standard one has fallen short of. Netscape, for example, achieved differentiation with the Internet browser; then Microsoft achieved neutralization with its own browser: Explorer. Neutralizing is an important adaptation to changing competitive dynamics, and it does call for innovation. It does not, however, create as great a positive return as differentiation, in part because its function is to eliminate a negative return.
- **Productivity Improvement.** Here the intent is not to affect market outcomes but rather to achieve them at a lower cost. While productivity improvements can create differentiation if they are radical enough, the majority of them are simply designed to cost-reduce a set of existing processes in order to either invest the savings elsewhere or increase profits. Productivity improvement is essential to evolutionary adaptation because it frees resources that other forms of innovation can use. It requires significant innovation focused largely on reengineering existing processes based on either a better understanding of their dynamics or a better set of tools.
- **Waste.** Waste innovation falls into a number of classes. The first simply comprises those attempts at any of the other three goals that don't succeed. This is just part of business.

The other forms of waste are more pernicious. Neutralization efforts that go beyond the good-enough goal have lower returns because you overspent the market requirement. Productivity efforts that go beyond cost-reduction or cycle-time improvement and branch into nice-to-have enhancements also represent waste. The worst kind of waste, however, occurs when an innovation project actually succeeds in meeting its specified targets but fails to achieve competitive separation in the

(continued on page 3)

Sliding Down the Commoditization Curve

Sliding down the commoditization curve has been the fate of the Chevrolet division of General Motors and the personal computing division of HP, not to mention a whole host of airlines and telecommunications service providers. It is not that these companies do not innovate. It is that their offers do not achieve separation — and here is the kicker — *they were never designed to!*

It's probably hard to picture in your mind a Chevrolet sedan from the past 10 years, but it's easy to recall a Chrysler PT Cruiser, a Hummer or a Mini Cooper. Innovation for differentiation must be bold enough that, if it wins, it achieves separation. That's why Chrysler's failures are more memorable than Chevrolet's successes — the Viper and the Prowler, for two.

The author: Geoffrey A. Moore is the author of four bestselling business books: *Crossing the Chasm*, *Inside the Tornado*, *The Gorilla Game*, and *Living on the Fault Line*. He is a managing director with TCG Advisors and a venture partner with Mohr Davidow Ventures.

(continued from page 2)

marketplace because it *did not go far enough*.

Underperformance

There are two deep-seated causes for innovation underperformance. These are:

1. Risk-Reduction Mentality. This encourages people to shun bold actions that jeopardize existing assets and relationships. It is based on staying close to norms, thereby leveraging the experience of the herd. As such, it is actually a positive evolutionary response to situations that do not reward differentiation. These situations are called *context*. Risk reduction is the sensible strategy for managing context, but it is a horrible tool to deal with core. *Core* describes innovation that creates differentiation. To succeed with core, you must take your value proposition to such an extreme that competitors either cannot or will not follow. That's what creates the separation you seek. So risk-averse behavior here is a losing strategy.

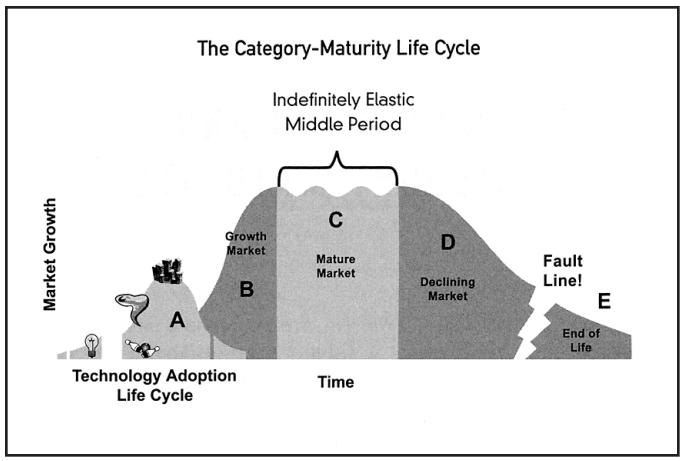
2. Lack of Corporate Alignment. To achieve breakaway differentiation requires a highly coordinated effort across the entire enterprise. At the end of the day, every function in the corporation has to realign its priorities in order to amplify the innovation to breakaway status. Anything less is simply too easy to neutralize.

In order to break away from the herd, we must overcome risk-reduction mentality and lack of corporate alignment. Neither is a natural act.

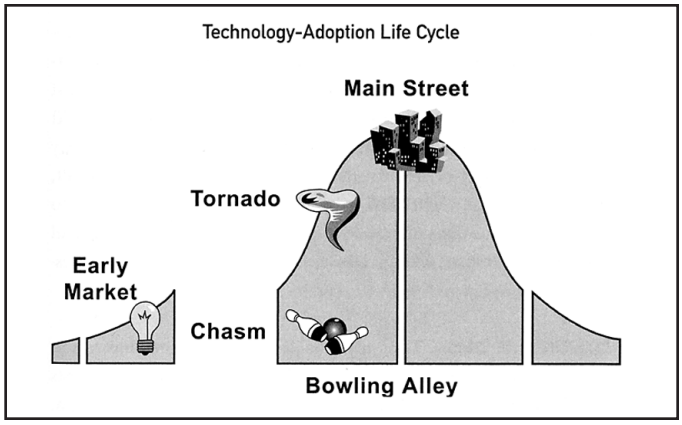
Innovation and Category Maturity

To be successful with innovation, you have to understand that different categories reward different types of innovation at different points in time. It is important to locate where your category is in its life cycle before you set your innovation strategy. The framework for this process is the category-maturity life cycle.

The model comprises five phases: (A) New Category Initiation, (B) Growth Market, (C) Mature Market, (D) Declining Market, and (E) End of Life.



The first phase covers the coming into being of a new category. In the development of any specific market, individual choices are masked in the statistics of the group, resulting in five strategies interacting to create a pattern described by the technology-adoption life cycle.



Here are the six stages to consider:

- **Early Market.** When a disruptive innovation is first introduced, it initially attracts the attention of technology enthusiasts (who see it as cool) and visionaries (who see it as potentially disruptive). The category is given a name, but it is not yet clear if it will be just a flash in the pan.
- **The Chasm.** Having now been in the marketplace for some time, the offer has lost its novelty; visionaries no longer see it as a source of dramatic competitive advantage and pursue disruptive opportunities elsewhere. As a result, the market stalls.
- **Crossing the Chasm.** The only reliable way to exit the chasm is to target on the other side a niche market made up of pragmatists united by a common problem for which there is no known solution. These pragmatists are motivated to help the new technology cross the chasm if it is packaged as a complete solution to their problem.
- **Bowling Alley.** In this phase, the technology has gained acceptance among pragmatists in multiple-niche markets where it enables genuine solutions to uncommon problems. Within adopting niches, the new paradigm builds a loyal following among those who see a market in the making. Outside the niches, it is becoming more widely accepted by the general public.
- **Tornado.** The technology has proved its usefulness in niche markets and, in the process, a killer app has emerged — something that makes it both broadly applicable and highly attractive to a mass audience. Overnight it becomes perceived as necessary and standard.
- **Main Street.** The initial surge of hypergrowth subsides, leaving behind a market-share pecking order that is likely to persist for a long time to come. Customers have selected their vendor of choice and are now focused on deploying the technology more broadly.

(continued on page 4)

Foundational Models

(continued from page 3)

After Assimilation

The technology-adoption life cycle comes to an end once the marketplace has completely assimilated the disruption that triggered it. In the case of automobiles, this happened sometime between World War I and World War II. Once assimilation has occurred, a new set of dynamics emerges. These are reflected in the remaining phases of the category-maturity life cycle. They are:

Phase B, Growth Markets. Even though the technology has been thoroughly assimilated, the offerings it has spawned remain in high demand for a while longer. This is an exceedingly pleasant time to be a manager because you are presiding over what is essentially category growth generating superior economic returns while entailing little company-specific risk.

Phase C, Mature Markets. Category growth has flattened, and commoditization is under way. In Darwinian terms, the boundaries of the niche have been reached and the category is experiencing the condition of scarcity for the first time. Growth must come from increasing the yield from the current customer base, or growing it at the expense of another competitor. Natural selection ensues with a wave of consolidation thinning out the bottom of the pecking order.

Phase D, Declining Markets. The category has become completely boxed in, innovation opportunities harder to find, and even those that dominate the market are experiencing difficulty in creating attractive returns. The market is ripe for some form of disruption, either through an obsoleting technology or radically innovative business model.

Phase E, End of Life. A disruptive technology has emerged and made significant inroads. As a consequence, the incumbent technology has been rendered obsolete. The only customers left are conservatives and laggards. This is a classic time to take a company private to harvest the remaining economic value in the category, brand, distribution channel and customer relationships. ■

Managing Innovation

It is important for you and your colleagues to come to a unanimous consensus around the single most compelling question driving innovation strategy: What type of innovation will we so excel at that we will leave all our competition behind?

Consider each innovation type as an independent vector, an arrow pointed in its own unique direction. Any vector sufficiently amplified will achieve breakaway separation from your competitive set. What would cause you to choose one over the other? Here are three factors to consider:

1. Core Competence. Different companies have different assets to exploit — some latent, some realized, in part a function of their business architecture, in part a function of their particular histories.

2. Competitive Analysis. Different sets of competitors leave different openings to exploit, either by neglecting them altogether or by strategically targeting them.

3. Category Maturity. Different stages of the category-maturity life cycle reward different forms of innovation. As categories mature, certain forms of innovation become outmoded and new ones are called for.

You should commit to an innovation type appropriate to the maturity of your category and forgo types that are not. Consider each innovation type and debate their relative attractions on your way toward choosing one for a strategic focus.

Types of Innovation

To better understand the various types of innovation, it helps to organize those types into clusters. The innovation types fall into these four clusters or innovation zones:

1. Product Leadership Zone.
2. Customer Intimacy Zone.
3. Operational Excellence Zone.
4. Category Renewal Zone.

Product Leadership Zone

A focus on product leadership is intended to contrast with strategies that do not differentiate the offer but rather the customer's experience of it, or *customer intimacy*, or the value chain's effectiveness at delivering it, that is, it's *operational excellence*.

There are four primary types of innovation that leverage product leadership as an underlying value creation engine. These are:

- **Disruptive Innovation.** This type of innovation creates new market categories based on a discontinuous technology change or a disruptive business model. Examples include the technological discontinuity of digital photo processing introduced by Shutterfly and Ofoto and the business-model disruption of digital media distribution heralded by Napster and made far more palat-

(continued on page 5)

Boston Scientific: Disruptive Innovation in a Growth Market

Stents are plastic tubes that are inserted into blocked arteries to open them and keep them open. The problem is that blockages often reform around the stent, requiring additional intervention. Boston Scientific pioneered the introduction of drug-eluting stents that release plaque-reducing chemicals at the point of use. These stents have revolutionized the treatment of arterial sclerosis, and the company dominates the market.

Xerox and Medtronic: Product Innovation in a Growth Market

Xerox introduced the photocopier in 1960, building the franchise in both a complex-systems direction, with copy-center systems like DocuTech, as well as in the volume-operations direction with desktop copiers. Despite failing to commercialize on many of its other product innovations, including Ethernet, Smalltalk and graphical user interface computing, this one major success has led to a $15 billion global corporation.

Another similar story belongs to Medtronic, which introduced the pacemaker the same year Xerox introduced the copier. The company remains the worldwide market leader today, earning about half its $9 billion in revenue from cardiac rhythm management products.

Managing Innovation

(continued from page 4)

able by Apple iTunes. Disruptive innovations are incompatible with existing standards and the existing value chain, and they develop fresh markets.

- **Application Innovation.** Also known as solution innovation, this type develops new markets for existing products by finding unexploited uses for them, often by combining them in novel ways. One example is the adaptation of the Macintosh to desktop publishing in advertising and media. Application innovations introduce new standards but leverage existing value chains, albeit by giving them a new focus.
- **Product Innovation.** This innovation type focuses on existing markets for existing products, differentiating through features and functions that current offers do not have. This form of innovation depends on fast time to market, although patents sometimes keep competitors at bay.
- **Platform Innovation.** This type of innovation interposes a simplifying layer to mask an underlying legacy of complexity and complication, thereby freeing a next generation of offers to focus on new value propositions. The most successful platform innovations reposition an already ubiquitous product to take on this new role. For example, Oracle repositioned its relational database from a component ingredient of the minicomputer to a universal enterprise application software enabler.

Customer Intimacy Zone

Innovation types in mature markets all have an optimizing flavor. They are either leveraging customer intimacy to make the offer a little bit more attractive to the customer or leveraging operational excellence to make it a little bit more profitable to the vendor. There are four innovation types in this zone, arranged in a sequence migrating from closest to the product to closest to the customer:

- **Line-Extension Innovation.** This type of innovation makes structural modifications to an established offer to create a distinctive subcategory. The goal is to expand a maturing market by engaging with a new customer base or re-engaging more compellingly with an old one. For example, when the minivan and SUV were introduced in the automotive sector, the underlying infrastructure of the sector remained unchanged, thereby allowing the vendor to leverage amortized investments and keep development risks low.
- **Enhancement Innovation.** This type of innovation continues the trajectory begun by line extensions, driving innovation into finer and finer elements of detail, getting closer and closer to the surface of the offer with less and less impact on the underlying infrastructure. The goal is to improve existing offers in existing markets by modifying a single dimension, thereby reawakening customer interest in what was becoming an increasingly commoditized category. One example is cherry flavoring in Coke.
- **Marketing Innovation.** This type of innovation focuses on differentiating the interaction with a prospective customer during the purchase process. The goal here is to outsell your competitors rather than "outproduct" them. One example is the use of viral marketing on the Web to create buzz about a new movie.
- **Experiential Innovation.** The ultimate refinement in this trajectory of customer intimacy is experiential innovation, where the value is based not on differentiating the functionality but rather the experience of the offering. This is particularly suited to consumer markets where the product has become a commodity, and the purchase decision has become risk free. Examples include business hotels that remember your newspaper preference, and restaurants that supply patrons with pagers so they can roam while waiting for a table.

Operational Excellence Zone

Complementing the customer intimacy zone's focus on differentiating the offering on the demand side of the market, the operational excellence zone focuses on differentiating on the supply side. Here the primary reward is a lowered cost structure that enables either price reductions, capital reinvestment or higher profits. Innovation types in the operational excellence zone include the following, organized in a sequence migrating from closest to the product to closest to the processes that enable it:

- **Value-Engineering Innovation.** This type of innovation extracts cost from the materials and manufacturing of an established offer without changing its external properties. It usually calls for substituting low-cost standard parts and preintegrated subsystems for an earlier design's high-cost manually integrated custom components. Examples include the television, PC and cell phone, all of which have seen reduced costs from value engineering.

(continued on page 6)

Managing Innovation

(continued from page 5)

● **Integration Innovation.** This type of innovation reduces the customer's cost of maintaining a complex operation by integrating its many disparate elements into a single, centrally managed system. Typically it permits backward compatibility with existing systems.

● **Process Innovation.** This type of innovation focuses on improving profit margins by extracting waste not from the offer itself but from the enabling processes that produce it. The goal is to remove nonvalue-adding steps from the work flow. Examples include Dell's direct-retail model and Wal-Mart's vendor-managed inventory process.

● **Value Migration Innovation.** This type of innovation consists of redirecting the business model away from a commoditizing element in the market's value chain toward one richer in margins. A good example of this is the switch in focus from products to consumables, as with razors to razor blades or printers to ink-jet cartridges.

Category Renewal Zone

Sooner or later all market categories enter into a decline. It is important to remember that when you are faced with a declining market, any market that is still an ongoing concern is in itself a valuable asset. From the vendor's point of view, there are two basic options to explore, usually in tandem: Renew your franchise by refocusing the majority of your resources on a new category while simultaneously optimizing returns for the remainder of the present category's useful life following a harvest-and-exit strategy. The pertinent types of innovation are:

● **Organic Innovation.** On this path the company uses its internal resources to reposition itself into a growth category. In industrial markets, this repositioning typically involves reconnecting with its most valued customers and finding new problems to solve for them, following the approach laid out in application innovation. IBM did this when it repositioned itself as an e-commerce-enabling company. This represents a return to product innovation. The vendor stays within the same sector but repositions its product line.

● **Acquisition Innovation.** This type of innovation solves the problem of category renewal externally through merger and acquisition. One can play this game either as an acquirer or an acquiree. When BEA bought WebLogic, it repositioned itself from the Unix market to the Internet and dramatically improved its performance. On the other hand, when Lotus could not renew itself organically via its Notes platform, it sold itself to IBM, thereby acquiring the sophisticated distribution and services capabilities that Notes required to be successful. ■

Nokia: Organic Renewal in a Declining Market

For most of the 20th century, Nokia was known as a diversified corporation in paper and pulp products, rubber manufacturing, and cable. It was through the cable side of the house, first with coaxial cable for computer networks, that it entered the electronics sector. In the 1990s, it entered the mobile-phone business. The company invested heavily in building handset manufacturing capability, drawing on the cash cows of paper, pulp and rubber products. Once it completed the transition, Nokia divested itself of those other businesses, and today it is the leading mobile-phone supplier in the world.

For additional information on Dell's process innovation in a mature market, go to: http://my.summary.com

Managing Inertia

You have just crafted a superb innovation strategy, one that gives every promise of creating the separation you need from your direct competitors, earning the customer preference your profit margins require. Now you must overcome the inertia of your own organization that fosters resistance to making the changes necessary to implement it.

Inertia is not the enemy of innovation, but it does resist it at the point of change. Therefore, at that very point, management must learn to deconstruct inertia in order to reconstitute it elsewhere. You must extract resources from context in order to repurpose them for core. Context includes most of the things you do to meet commitments to key stakeholders and to comply with industry laws and standards. Core is that which differentiates your company to create sustainable competitive advantage.

Extracting resources from context to repurpose for core accomplishes three key objectives:

1. It solves your balance sheet problem, enabling you to fund your future from your current asset base.

2. It solves your income statement problem, enabling you to increase the revenues and margins earned by your current asset base.

3. It solves your inertia problem. By taking mass out of context, you reduce its inertial resistance to core. The more mass you move from context to core, the more powerful this change dynamic will be.

Extracting Resources From Context

We know that we want to prioritize resource allocation for core, but our decision is complicated by the presence of mission-critical risk. As managers we must allocate resources to guard against this downside. Mission-critical context — product shipments, financial transactions, computer security, inventory supply, etc.

(continued on page 7)

The Five Levers

The five levers represent a sequence of management actions that systematically reengineers mission-critical workloads to first extract risk so that one can then extract resources.

Here's how the five levers play out:

1. Centralize. Bring operations under a single authority to reduce overhead costs and create a single decision-making authority to manage risk.

2. Standardize. Reduce the variety and variability of processes delivering similar outputs to further reduce costs and minimize risks.

3. Modularize. Deconstruct the system into its component subsystems and standardize interfaces for future cost reduction. This requires specialized support, such as consultants or an in-house six-sigma team.

4. Optimize. Eliminate redundant steps, automate standard sequences, streamline remaining operations, substitute lower-cost resources, and instrument the process for monitoring and control.

5. Outsource. Drive processes out of the enterprise entirely to further reduce overhead, variabilize costs and minimize future investment.

Managing Inertia

(continued from page 6)

— is laying claim to the very resources we need to deploy to the next generation of core, but we dare not release them from their current assignments.

To ensure that mission-critical context components do not fail, we assign experienced employees to these tasks and experienced managers to supervise their work. We build systems that track this work and escalate problems should they arise. We tie up many valuable resources to guard against the downside of a mission-critical failure.

What the Future Should Look Like

A desired future state is one in which valuable resources are being extracted and repurposed. Innovation begins where the focus is on core, but the project is contained to minimize risk. This is the domain of nonmission-critical core, an experimental side of the business where risk is encouraged in the quest for differentiation, and the rest of the enterprise is protected by restricting the scope of consequence.

When the innovation is judged ready for wider rollout, it moves into the domain of the mission-critical core. This is the time to release the next generation product line, launch the next new marketing campaign, etc. It is where enterprises expect to make their highest returns because they have distinctive competitive advantage, and they are exploiting it at maximum scale. Innovations stay here for as long as competitive differentiation is sustained, the longer the better.

Eventually, however, Darwinism has its day, and competitors find a way to neutralize the advantages being exploited at their expense. When this happens, the work migrates to the domain of mission-critical context.

Once management realizes that a class of work no longer contributes to competitive advantage, its attitude toward it must change. The work must still be done, but the focus now shifts from differentiation to productivity. Management attention shifts to systems, automation and any other tool that will free up talented people for other tasks.

To maximize resource extraction, companies must convert mission-critical context into non-mission-critical context, wringing out the risks that lay claim to high-value resources. Organizations will still retain a thin veneer of management to oversee pertinent relationships, but the bulk of once-committed, scarce resources can now be released and used to fund the next cycle of innovation.

Repurposing Resources for Core

In the move toward a global economy, work forces in developed economies have been threatened by offshore outsourcers leveraging low-cost labor. This trend shows no signs of subsiding, and companies who do not avail themselves of this opportunity are severely challenged to price their goods and services competitively.

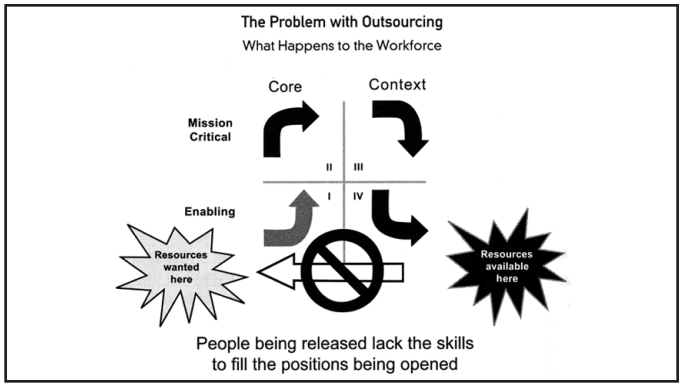
The problem of creating alignment must be solved by the corporations themselves: management and labor collaborating with each other for the collective good of customers, employees and investors. Together they must build a solution that actively embraces both outsourcing and offshoring while simultaneously building a stronger in-house domestic work force compensated commensurately with its local standard of living.

Outsourcing

The essence of the problem with outsourcing is highlighted in the diagram below.

The human resources that are freed up in the context-enabling quadrant IV do not generally have the skill sets required to be repurposed in the core-enabling projects in quadrant I. When layoffs occur, it is Darwinism at its meanest and most parochial, eroding culture and values, devaluing experience and dismissing loyalty. It sends shock waves

(continued on page 8)



Managing Inertia

(continued from page 7)

through the entire work force, diminishing productivity everywhere. This is a very bad model indeed.

But what else can be done? Resources need to be properly recycled. What people in quadrant IV bring to jobs in quadrant III is experience and expertise in managing context. By freeing up someone in quadrant IV, a company can reasonably expect that person to have the aptitude for work in quadrant III.

What people in quadrant III bring to tasks in quadrant II is experience and expertise in managing mission criticality. Whether the work is core or context, if it is mission critical, it must be done on time, on spec and on budget. The class of people who thrive under this kind of pressure are the ones who were getting stuck in quadrant III managing mission-critical context and thus were unavailable in quadrant II to help deploy the next generation of mission-critical core. By recycling people from quadrant IV back into quadrant III to pick up their current workload, these people are freed up to bring about the next generation of innovation in quadrant II.

Finally, what people in quadrant II can bring to tasks in quadrant I is experience and expertise in managing core. Core work is always in some sense unprecedented, or else it would not be differentiating. That typically requires outside-the-box thinking and ongoing iterative experimentation. Quadrant II people don't have to be trained for quadrant I because what they do precedes what trainers would know.

Managing Inertia in Your Enterprise

An aggressive agenda can redirect the inertial momentum of your enterprise from context to core. The seven essential steps of that agenda are as follows:

1. Conduct a core/context analysis of your current business. Begin with categorizing your various market segments in terms of the four quadrants. In complex systems enterprises, these will typically consist of multiple grids to represent how core and context play out by product category, customer industry and geography. In volume-operations businesses, one is likely to develop views by product category, consumer demographics and sales channel. These placements help guide resource-allocation decisions downstream.

2. Conduct a resource-allocation analysis to complement your core/context analysis. Do not get distracted by budgets here. Focus on head count, specifically on identifying and locating your top performers in invention, deployment and optimization, whose leadership or functional expertise can change the outcome of a project. You want to leverage these people's skills to the maximum.

3. Set a more ambitious agenda. Once you have mapped out how things are, turn to determining how you want them to be. How would you improve your enterprise's current performance?

4. Plan out your moves as a team. Extracting resources from context to repurpose for core is a collaborative effort. Don't withhold even a single key resource. Get the timing right — it does no good to free up resources if the work they are meant to do is not yet ready to be done.

5. Focus on time to market. Create a necessary and proper sense of urgency. Make a direct assault on the scheduling assumptions of your plan of record.

6. Get the gears moving. Focus initial efforts on freeing up top-performing deployers from their current mission-critical context assignments. Assign optimizers to attack their workloads with a five-levers approach. Set a date for their last day in their current roles.

7. Keep the gears moving. Once resource recycling has begun, do not let it stop. Each new learning curve is paid for by the margins created by the last curve and in turn is expected to generate high-margin returns to fund the next one.

Evolution in Action

Natural selection is a game with no time-outs. It does, however, allow for unlimited substitutions. Resource recycling not only delivers efficiency; it also provides refreshment. There is respite for the weary as long as it is followed by an energized willingness to re-engage. Communities need abiding sources of employment. Customers need stable sources of supply. Governments need a vital tax base. Investors need opportunities to create attractive returns. We are all more or less strategically aligned. We are just being asked to execute at a new level of competitiveness.

That's what evolution is all about — a continual raising of the bar. It's how countries raise their standard of living. It's why new companies get formed every year. It's why each of us must learn new skills throughout our careers. We may get tired, but we are not likely to get bored. Mostly we just have to perform. ■

Delivering Happiness

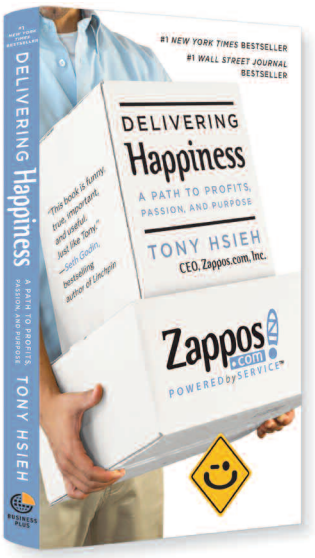
A Path to Profits, Passion and Purpose



by Tony Hsieh

THE SUMMARY IN BRIEF

In 1999, Tony Hsieh (pronounced *Shay*) sold LinkExchange, the company he co-founded, to Microsoft for $265 million. He then joined Zappos as an adviser and investor, and eventually became CEO.

Zappos is an online retailer that's doing more than $1 billion in gross merchandise sales annually. After debuting as the highest-ranking newcomer on *Fortune* magazine's annual "Best Companies to Work For" list in 2009, Zappos was acquired by Amazon in a deal valued at more than $1.2 billion.

In *Delivering Happiness*, Hsieh shares the different lessons he has learned in business and life, from running a pizza business, through LinkExchange, Zappos and more. Fast-paced and down-to-earth, *Delivering Happiness* shows how a very different kind of corporate culture is a powerful model for achieving success — and how by concentrating on the happiness of those around you, you can dramatically increase your own level of happiness.

Ultimately, Hsieh shows how using happiness as a framework can help leaders in organizations of all sizes and types produce profits, passion and purpose both in business and in life.

IN THIS SUMMARY, YOU WILL LEARN:

- How to make customer service the responsibility of the entire company — not just one department.
- How to help employees grow — both personally and professionally.
- How to apply research from the science of happiness to running a business.
- How to focus on company culture as the No.1 priority.
- How an emphasis on corporate culture can lead to unprecedented success.

THE COMPLETE SUMMARY: **DELIVERING HAPPINESS**

by Tony Hsieh

The author: In 1999, at the age of 24, Tony Hsieh sold LinkExchange, the company he co-founded, to Microsoft for $265 million. He then joined Zappos.com as an advisor and investor, and eventually became CEO. He helped Zappos.com grow from almost no sales to more than $1 billion in gross merchandise sales annually, while simultaneously making *Fortune* magazine's annual "Best Companies to Work For" list.

Introduction: Finding My Way

Wow, I thought to myself. The room was packed. I was on stage at our all-hands meeting, looking over a crowd of 700 Zappos employees who were standing up cheering and clapping. A lot of them even had tears of happiness streaming down their faces.

Forty-eight hours ago, we had announced to the world that Amazon was acquiring us.

In November 1998, LinkExchange, the company that I'd co-founded, was sold to Microsoft for $265 million after two and a half years. Now, in July 2009, as CEO of Zappos.com, I had just announced that Amazon was acquiring Zappos right after we had celebrated our 10-year anniversary. (The acquisition would officially close a few months later in a stock and cash transaction, with the shares valued at $1.2 billion on the day of closing.) In both scenarios, the deals looked similar: They both worked out to about $100 million per year. From the outside, this looked like history repeating itself, just at a larger scale.

Nothing could be farther from the truth. To all of us in the room, we knew it wasn't just about the money. Together, we had built a business that combined profits, passion and purpose. And we knew that it wasn't just about building a business. It was about building a lifestyle that was about delivering happiness to everyone, including ourselves.

Time stood still during that moment on stage. The unified energy and emotion of everyone in the room was reminiscent of when I'd attended my first rave 10 years earlier, where I'd witnessed thousands of people dancing in unison with everyone feeding off of each other's energy. Back then, the rave community came together based on their four core values known as PLUR: Peace, Love, Unity, Respect.

At Zappos, we had collectively come up with our own set of 10 core values *[see sidebar, page 2]*. Those values bonded us together and were an important part of the path that led us to this moment. Looking over the crowd, I realized that every person took a different path to get here, but our paths somehow all managed to intersect with one another here and now. I realized that the path that got me here began long before Zappos and LinkExchange. I thought about all the different businesses I had been a part of, all the people who had been in my life and all the adventures I had been on. I thought about mistakes that I had made and lessons that I had learned.

As all the eyes in the room were on me, I tried to trace back to where my path had begun. In my mind, I was traveling backward in time searching for the answer. Although I was pretty sure I wasn't dying, my life was flashing before my eyes. I was obsessed with figuring it out and I knew I had to do it this very moment, before the energy in the room dissipated, before time stopped standing still. I didn't know why. I just knew I needed to know where my path began.

And then, right before reality returned and time started moving again, I figured it out. ●

Section I: Profits

During my junior and senior year in college, I took over the Quincy House Grille, which was an eating area on the ground floor of the Quincy House dorm. Our dorm housed about 300 students and the Quincy House Grille was a late-night gathering spot for students to play foosball and pinball, and satisfy their late-night cravings.

One of my roommates, Sanjay, ran the grill with me. We were responsible for setting the menu and prices, ordering from suppliers, hiring employees and occasionally making the food ourselves.

At the time, a city ordinance prevented fast-food establishments from opening up anywhere near campus, so I decided to take the subway to the next stop to the nearest McDonald's. I talked to the manager there and he sold me 100 frozen McDonald's hamburger patties and buns, which I loaded into a taxicab and brought back to our dorm. For a couple of months, this was part of my daily routine. Because there was no other place on campus to get McDonald's burgers, I was able to charge $3 for burgers that cost me $1 to buy.

I eventually got tired of making the daily runs to McDonald's, so I decided to see what it would take to turn the grill into a pizza business instead. I learned that pizzas were very high-margin. A large pizza costs less than $2 to make but could be sold for $10 (or more with additional toppings). And even more money could be made by selling pizzas by the slice. After some research, I discovered it would cost about $2,000 to invest in pizza ovens. It seemed like it was worth the risk, so I took a deep breath and wrote a check for $2,000.

I also wanted to make the grill more of a place where people wanted to hang out, so I spent many nights recording music videos from MTV onto videotape, pausing the recording anytime a commercial came on because this was the pre-TiVo era. The videos playing in the background turned out to be a big hit and, combined with the new pizza offering, we ended up tripling sales at the grill compared with the previous year. The $2,000 investment was recouped within a couple of months.

It was through the pizza business that I met Alfred, who would eventually join Zappos as our CFO and COO. Alfred was actually my No. 1 customer, and he stopped by every night to order a large pepperoni pizza.

I found out several years later that Alfred was taking the pizza upstairs to his roommates and selling it off by the slice. So I guess that's why we ended up hiring him as our CFO and COO at Zappos.

Zappos Core Values

While there are many subcomponents to each value, we've distilled the most important themes into the following 10 core values:

1. Deliver WOW Through Service.
2. Embrace and Drive Change.
3. Create Fun and a Little Weirdness.
4. Be Adventurous, Creative and Open-Minded.
5. Pursue Growth and Learning.
6. Build Open and Honest Relationships with Communication.
7. Build a Positive Team and Family Spirit.
8. Do More with Less.
9. Be Passionate and Determined.
10. Be Humble.

Ideally, we want all 10 core values to be reflected in everything we do, including how we interact with each other, how we interact with our customers, and how we interact with our vendors and business partners.

This Thing Called the World Wide Web

As the end of my senior year in college approached, Sanjay introduced me to this thing called the World Wide Web. I thought it was a pretty interesting and fun thing to explore at the time, but I didn't pay too much attention to it.

Sanjay and I decided to interview mostly with technology companies. My goal was to find a high-paying job. I didn't really care what my specific job function was, what company I worked for, what the culture of the company was like or where I ended up living.

I just wanted a job that paid well and didn't seem like too much work.

You Win Some, You Lose Some

Sanjay and I both got offers from Oracle.

On the first day of my real job at Oracle, I was shown my desk and told what my ongoing tasks and responsibilities would be. I was making good money. And within a week, I learned that it was actually easy money too.

I felt that I had lucked out because I had such an easy schedule, whereas Sanjay usually wouldn't get home until 7 p.m. I would occasionally ask him how his job was, and he'd shrug and say something like "It's OK. Not that exciting."

I told him that my job was really not that exciting either, but maybe we could work on something during the evenings and weekends together for fun to help combat the boredom.

The Idea Behind LinkExchange

The idea behind LinkExchange was pretty simple. If you ran a website, you could sign up for our service for free. Upon signing up, you would insert some special code into your Web pages, which would cause banner ads to start showing up on your website automatically.

Every time a visitor came to your website and saw one of the banner ads, you would earn half a credit. So, if you had 1,000 visitors come to your website every day, you would end up earning 500 credits per day. With those 500 credits, your website would be advertised 500 times across the LinkExchange network for free. This was a great way for websites that didn't have advertising budgets to gain additional exposure for free. The extra 500 advertising impressions left over would be for us to keep. The idea was that we would grow the LinkExchange network over time and eventually have enough advertising inventory to hopefully sell to large corporations.

Sanjay and I finished all of our computer programming for our experiment in one weekend, and then we sent e-mails to 50 of our favorite small websites that we found while surfing, asking them if they'd like to help test out our new service.

To our surprise, more than half the websites we e-mailed signed up to help us test out the service within 24 hours. As people visited their websites and saw the banner ads, word started to spread about LinkExchange. Within a week, we knew that our project, which was initially meant to fight boredom, had the potential to turn into something big. We decided that we should focus all of our energy on making LinkExchange a successful business.

Rapid Growth

The good news was that the people we hired were smart and motivated. The bad news was that many of them were motivated by the prospect of either making a lot of money or building their careers and résumés. They wanted to put a few years of hard work into LinkExchange and then move on to their next résumé-building job at another company. Or, if things worked out well, make a lot of money and retire. We continued to grow and hire more and more people, and eventually in 1998 we had more than 100 employees in the company.

One day, I woke up after hitting the snooze button on my alarm clock six times. I was about to hit it a seventh time when I suddenly realized something. The last time I had snoozed this many times was when I was dreading going to work at Oracle. It was happening again, except this time, I was dreading going to work at LinkExchange.

This was a really weird realization for me. I was the co-founder of LinkExchange, and yet the company was no longer a place I wanted to be at. It wasn't always like this. How did things change so quickly? What happened? How did we go from an "all-for-one, one-for-all" team environment to one that was now all about politics, positioning and rumors?

Bidding War

Over the previous two years, we had built pretty good relationships with people from Yahoo!, Netscape and Microsoft. Each of those companies had shown a lot of interest in what we were doing and was interested in figuring out strategic partnership opportunities.

To our surprise, all three of the companies said they were interested in possibly investing in our mezzanine round of financing. Even more surprising, Netscape and Microsoft both said that they were even more interested in buying the entire company outright.

We told them that the price tag was going to be at least $250 million. I'm not sure how we came up with that number, but it sounded good to me, and I guess it was a good sign that Netscape and Microsoft both said they wanted to continue talking.

They ended up getting into a bidding war.

In the end, Microsoft offered the biggest number — $256 million — but there were some strings attached to it. They wanted Sanjay, Alfred and me to stay with LinkExchange for at least another 12 months. If I stayed the entire time, then I would walk away with close to $40 million. If I didn't, then I would have to give up about 20 percent of that amount.

Even though LinkExchange was no longer fun for me, I figured that I could stick around for another year at that rate.

The deal was signed a few weeks after our negotiations with Microsoft began. Compared with other acquisitions that Microsoft had done, the LinkExchange acquisition was done in record time, despite some behind-the-scenes drama internally.

Diversify

Although connecting with my new tribe of friends played a big role in increasing my level of happiness, I missed not actually being part of creating something. Just sitting on the sidelines and investing was boring. I wanted to be part of building something, and creating the Venture Frogs Incubator *[an incubator and investment firm]* was an important piece to building my own universe.

Creating a Universe

In addition to signing the lease for the office space of our future incubator, Alfred and I also signed a lease for a restaurant in the same building, which we would call Venture Frogs Restaurant. We hired a handful of employees to keep the incubator offices up and running.

We were creating our own universe.

With the Zappos crew moving into our building (initially into the converted party loft, and then eventually into the incubator office space), I started spending more and more time with the company.

In April 2000, the high-flying dot-com stocks started to crash in the stock market, causing widespread panic throughout Silicon Valley. Many companies went out of business, and the venture-capital firms that we were counting on to take our portfolio companies to the next level scaled back and refused to provide additional funding for almost all of our investments.

A couple of companies moved into our new incubator office space, but without additional funding, they stopped paying their bills and went out of business a few months after that.

Eventually, Zappos was the only company left in the incubator and we weren't optimistic about the prospects of any other companies moving in anytime soon. It was a bad situation for our fund, for the incubator and for Zappos.

A Success Story

Even though LinkExchange had been a bad experience from a culture perspective, financially it was a success story. Alfred and I had used our credibility from the LinkExchange sale to raise the $27 million for our first fund, so we naturally assumed that it wouldn't be that hard to raise money for our second fund.

We were wrong.

I started to have feelings of self-doubt. I wondered whether I had just gotten lucky with LinkExchange. Was I just a dot-com lottery winner who happened to be at the right place at the right time?

Alfred and I had continued to keep in touch with Michael Moritz at Sequoia Capital about Zappos, and despite the progress that Zappos was making, Sequoia was still not interested in investing.

I believe with all my heart that Zappos had a great shot at succeeding. I felt that I needed to prove to myself and to Sequoia that the financial success of LinkExchange was not a fluke, that it wasn't just dumb luck. I wanted to prove to the world that I could do it again.

So I decided to take off my investor and adviser hat and put on my entrepreneur hat again. I joined Zappos full-time later that year. I decided that Zappos was going to be the universe that I wanted to help envision and build. It would be the universe that I believed in.

My search during the past few months was finally at an end. I had figured out what I wanted to focus on for at least the next few years. I had discovered my new passion.

I was passionate about proving everyone wrong.

Section II: Profits and Passion

The next two years were stressful at Zappos. We were just focused on survival. We knew we had no choice but to succeed. We went through a recession, the dot-com stock market crash and 9/11. At every turn, it felt like the universe was testing our commitment and our passion.

Looking at the company's financials, it became pretty clear that just focusing on cutting expenses wasn't going to get the company to profitability. We needed to figure out a way to grow sales.

As I sat in the office at my desk pondering what to do next, I turned to Fred *[Mossler, a Zappos executive]*.

I broke the ice. "So … any ideas on how to increase sales more quickly?"

Fred looked pensive. "I come from a merchandizing background. I like to say that all we need is the right product at the right time in the right quantity and the sales will take care of themselves. The problem is that we don't carry the brands or the styles that I know will sell. We just don't have the right products to offer our customers."

"How do we get the right products?"

"The problem is that a lot of the brands that we want to carry can't drop ship," Fred said. "Their systems and warehouses aren't set up to send the orders from their warehouse directly to our customers. And even for the brands that can drop ship, usually they're sold out of their best stuff, so we wouldn't be able to offer those styles to our customers."

I paused for a moment to think about what Fred was saying. "So how come all the brick-and-mortar stores are able to offer all the best-selling brands and styles?" I asked.

"Because they hold and own the inventory," Fred explained. "The brick-and-mortar retailers future out their orders ahead of time, pay for the inventory and take the inventory risk. If a retailer isn't able to sell something, then that's the retailer's problem, not the brand's or wholesaler's problem. But we can't do that because that's not our business model."

"So … what if we did that?" I said, thinking out loud. "What if we carried all the inventory of the brands and styles you wanted? How much do you think our sales would go up by?"

"Oh, we'd easily triple sales, no question," Fred said without hesitation. "Probably even more than that."

"OK, let's figure out what we need to do to make that happen. If changing our business model is what's going to save us, then we need to embrace and drive change."

Improvising Inventory

Fred was right. By a lot. Our sales did much more than just triple. In 2000, we did about $1.6 million in gross merchandise sales. In 2001, we ended up doing $8.6 million in gross merchandise sales. Our growth rate surprised even us, and everyone was excited about our new business model, which combined drop shipping with selling inventoried products.

Even though our sales were up, we still weren't cash-flow positive because we had to pay for all the extra inventory that we were buying in order to fuel our sales growth. But we knew we were on the right path.

Our strategy of combining inventoried product with drop shipped product continued to drive our sales growth. We ended up doing $32 million in gross merchandise sales in 2002 — almost four times what we had done in 2001.

Internally, we set an audacious long-term goal for Zappos: $1 billion in gross merchandise sales by 2010. It was a big number, but based on our growth rates so far, we felt confident that we could get there. Everyone could feel it: We were at a turning point for the company.

Whatever was going to happen over the next year would either make or break Zappos. ●

Platform for Growth: Brand, Culture, Pipeline

Over the years, the No. 1 driver of our growth at Zappos has been repeat customers and word of mouth. Our philosophy has been to take most of the money we would have spent on paid advertising and invest it into customer service and the customer experience instead, letting our customers do the marketing for us through word of mouth.

So what is great customer service?

It starts with what customers first see when they visit our website. In the United States, we offer free shipping both ways to make the transaction as easy as possible and risk-free for our customers. A lot of customers will order five different pairs of shoes, try them on with five different outfits in the comfort of their living rooms and then send back the ones that don't fit or they simply don't like — free of charge. The additional shipping costs are expensive for us, but we really view those costs as a marketing expense.

365-Day Return Policy

We also offer a 365-day return policy for people who have trouble committing or making up their minds.

At most websites, the contact information is usually buried at least five links deep and even when you find it, it's a form or e-mail address that you can only contact once. We take the exact opposite approach. We put our phone number (1-800-927-7671) at the top of every single page of our website because we actually want to talk to our customers. And we staff our call center 24/7.

It's kind of funny when I attend marketing or branding conferences and I hear companies talk about consumers being bombarded with thousands and thousands of advertising messages every day, because there's usually a lot of discussion among companies and ad agencies talking about how to get their message to stand out.

Customers Remember the Experience

There's a lot of buzz these days about "social media" and "integration marketing." As unsexy and low-tech as it may sound, our belief is that the telephone is one of the best branding devices out there. You have the customer's undivided attention for five to 10 minutes, and if you get the interaction right, what we've found is that the customer remembers the experience for a very long time and tells his or her friends about it.

Too many companies think of their call centers as an expense to minimize. We believe that it's a huge untapped opportunity for most companies, not only

because it can result in word-of-mouth marketing, but because of its potential to increase the lifetime value of the customer.

Marketing departments usually assume that the lifetime value of a customer is fixed when doing their ROI calculations. We view the lifetime value of a customer as a moving target that can increase if we can create more and more positive emotional associations with our brand through every interaction that a person has with us. ●

Section III: Profits, Passion and Purpose

In early 2009, we made *Fortune* magazine's "100 Best Companies to Work" list. We were the highest-ranking debut in 2009. At our offices, we were thrilled because that was an internal goal we had set in the early days of the company, and it came just one month after we hit our $1 billion in gross merchandise sales goal, well ahead of schedule.

Jeff Bezos, founder and CEO of Amazon, first contacted me back in 2005 and paid us a visit in Las Vegas. Even before he flew down, we let him know that we weren't looking to sell the company.

When we started talking to Amazon in early 2009, however, both sides seemed to have a different perspective compared with several years ago.

On the Amazon side, they seemed to be more open to the idea of us continuing to run as an independent entity so that we could continue building the Zappos culture and business the way we wanted to. They had been following our progress over the years and saw that our approach to business was working for us.

On the Zappos side, what mattered the most was continuing to do what we were doing for our employees and our customers while gaining access to Amazon's vast resources.

In our minds, we thought of a potential acquisition scenario more as a great marriage than as selling the company.

Even though our original goal was to buy out just our board of directors and the shares that they held and represented, the more we thought about it, the more that joining forces seemed to make sense. By doing so, all parties would be 100 percent aligned, which was the whole challenge that we were trying to overcome with our current board of directors.

We had originally been resistant to the idea of exploring an acquisition scenario with Amazon, but Michael Moritz convinced us that it could end up being mutually beneficial and the best possible outcome for shareholders and employees. (And, as it would turn out, he was right.)

Halloween Toast

On Oct. 31, at 11:59 p.m. Pacific Time, after months of waiting for regulatory approval, the deal with Amazon officially closed. The total value of the transaction for Zappos shareholders was more than $1.2 billion, based on Amazon's closing stock price the day before.

I happened to be in New Delhi, India, at the time. Alfred, Fred and I had scheduled a conference call together to commemorate the event. In Zappos' tradition, we had planned to take a shot of Grey Goose vodka together over the phone.

We all toasted. It was official. Zappos and Amazon were married. We could finally start working together to combine our respective strengths of art and science, of high-touch and high-tech.

We were excited about the possibilities of what was yet to come.

We were excited about what we were about to build together.

The future was waiting for us. ●

End Game

In 2007, I started getting interested in learning more about the science of happiness.

I started reading more and more books and articles about it.

And then one day, it hit me. It had everything to do with Zappos.

Happiness is really just about four things: perceived control, perceived progress, connectedness (number and depth of your relationships) and vision/meaning (being part of something bigger than yourself).

Happiness Framework

What's interesting about this framework is that you can apply these concepts to your business as well.

- **Perceived Control.** In our call center, we used to give raises once a year to our reps, which they didn't really have any control over. We later decided to implement a "skill sets" system instead. We have about 20 different skill sets (analogous to merit badges in the Boy Scouts), with a small bump in pay associated with each of the skill sets. It's up to each individual rep to decide whether to get trained and certified on each of the skill sets. If someone chooses not to get any, then he or she simply stays at the same pay level. If someone is ambitious and wants to

gain all 20 skills sets, then we let the rep decide on the right place to achieve that. We've since found that our call center reps are much happier being in control of their pay and which skill sets to attain.

- **Perceived Progress.** In our merchandising department at Zappos, we used to promote employees from the entry-level position of merchandising assistant to the next level of assistant buyer after 18 months of employment (assuming that they met all the requirements to qualify for the promotion). We later decided to give smaller incremental promotions every six months instead that together were the equivalent of the previous single promotion. After 18 months (three six-month periods of smaller promotions), the end result was still the same — in terms of training, certification and pay — as the previous promotion schedule. We've found that employees are much happier because there is an ongoing sense of perceived progress.
- **Connectedness.** Studies have shown that engaged employees are more productive and that the number of good friends an employee has at work is correlated with how engaged that employee is. This is one of the reasons why we place so much emphasis on company culture at Zappos.
- **Vision/Meaning.** The books *Good to Great* and *Tribal Leadership* discuss how a company with a vision and a higher purpose beyond money, profits or being No. 1 in a market is an important element of what separates a great company (in terms of long-term financial performance) from a good one.

Delivering Happiness to the World

My hope is that through *Delivering Happiness*, established businesses will look to change the way they are doing things, and entrepreneurs will be inspired to start new companies with happiness at the core of their business models, taking with them some of the lessons I've learned personally as well as the lessons that we've collectively learned at Zappos. My hope is that more and more companies will start to apply some of the findings coming out of the research in the science of happiness field to make their business better and their customers and employees happier.

My hope is this will not only bring *you* more happiness, but also enable you to bring other people more happiness.

Hopefully I've succeeded in getting you to start asking yourself the right questions.

Are you working toward maximizing your happiness each day?

What is the net effect of your existence on the total amount of happiness in the world each day?

What are your values?

What are you passionate about?

What inspires you?

What is your goal in life?

What are your company's values?

What is your company's higher purpose?

What is *your* higher purpose?

I hope you are now inspired to …

… make your customers happier (through better customer service) or …

… make your employees happier (by focusing more on company culture) or …

… make yourself happier (by learning more about the science of happiness). ●

Epilogue

As a guiding principle in life for anything I do, I try to ask myself, *What would happen if everyone in the world acted in the same way? What would the world look like? What would the net effect be on the overall happiness in the world?*

This thought experiment has been useful to me when thinking about whether to share how we do things at Zappos, or whether to get upset at the waitress who accidentally got my order wrong, or whether to hold the door open for a stranger who's a slightly inconvenient distance away.

The same questions are just as important for deciding what *not* to do, even if not doing anything is the default choice.

Join the Movement

The ideas for delivering happiness could end here. You can choose to do nothing and move on with the rest of your life or you can be a part of a movement to help make the world a happier and better place. The choice is yours. ●

Doesn't Hurt to Ask

By Trey Gowdy

Trey Gowdy is a former state and federal prosecutor who experienced the criminal justice system firsthand for nearly two decades. In 2010, he was elected to Congress, where he chaired the House Committee on Oversight and Government Reform and the Select Committee on Benghazi. After serving four terms, he decided to leave politics and return to private law practice. Gowdy is the co-author of the New York Times bestseller Unified.

Using the Power of Questions to Persuade

Trey Gowdy spent sixteen years as a prosecutor, advocating for victims in a courtroom. He went on to spend eight years in Congress, where he did his level best to advocate for his constituents. In those realms he had to become competent at moving people towards a desired conclusion. He had to persuade others to see his perspective, analyze their own, and come to believe wholeheartedly what he believed. Gowdy's persuasion happened mostly in courtrooms and legislative hearings, but this communication skill is "every bit as essential" in homes, conference rooms, classrooms, or front porches. Gowdy says, "The skill set needed is the same whether the issue is murder, marketing, or motherhood."

Convincing a jury that the person sitting before them committed a heinous crime is difficult, to say the least. The most important act Gowdy used to get jurors to go his way was to ask questions. Questions allowed him to get jurors to "arrive at the truth of their own accord." No one likes to be told what to do or what to think. People want to convince themselves, not be convinced by others. This is why questioning someone "is an indispensable part of persuasion at the highest level." Asking "the right questions, at the right time, in the right order" can move someone towards a position or move people towards each other.

People who want to be heard, be understood, or compel someone to see things a different way need to sharpen their skills of persuasion. In ***Doesn't Hurt to Ask,*** Trey Gowdy teaches readers "how to persuade, why it is the most worthwhile skill set to adopt, and all the tools readers can use to become persuasive on the issues that matter in life." Persuasion moves people to change their beliefs and in doing so, it can change lives. Gowdy invites readers to "get moving."

The Essentials to Know Before You Start Speaking

Before learning specific strategies for persuading effectively, you need some foundational understanding of how people are persuaded and why questions are such an important component of bringing others around to your way of thinking. In the first part of the book, Gowdy shares how he came to rely on questioning

so heavily, why stupid questions are better than stupid statements, what conditions need to be met in yourself and others for persuasion to take place, and the single most important piece of advice he ever received from another person.

Gowdy discovered the efficacy of questioning when he began employing it as a defense mechanism to mask his own gaps in knowledge. He never felt he was "smart enough to participate in conversations with smart people" but somehow he managed to surround himself with the highly intelligent. When in these situations, he had a choice. He could sit in awkward silence, ruminating internally about his lack of contributions to the dialogue, or he could ask questions.

He started doing the latter, to great effect. He found that asking questions accomplished two things: he was able to cover up any inadequacies in the subject matter and he filled up his side of the conversation. Everyone desires to be heard. When you use questions in conversation you leverage this great need that all humans have.

The old adage says that there is no such thing as a stupid question. Gowdy doesn't think that is entirely true, but he does believe that stupid questions are way better than stupid declarations. When you ask questions you are only guilty of seeking more information. When you make false declarations, you discredit yourself immediately. "The minute you make a false declarative, you lose credibility with the person with whom you are talking or whoever might be listening."

Learning how to effectively persuade people is not simply about "winning people over." It is also about "bringing people together." When handled the right way, persuasion through questioning involves both participants in a give and take where both are listening and speaking in equal measure. Over time with this type of discourse a person can be moved incrementally from one position to another. Change is not sweeping and quick. It takes time.

In order to persuade others, we have to be open to persuasion ourselves. We have to be willing to consider a different perspective, alter our own viewpoints, or take a new position inside ourselves before we can hope to accomplish the same with another person. Those who are persuadable themselves have the ability to become the most persuasive. Persuadable people have asked themselves "difficult questions and have looked at every side of the argument in an effort to seek truth." This ability and practice "makes them not only empathetic but master persuaders."

If you stand a chance at persuading someone to come to your side, you must know every aspect about the position you are taking. You must carefully consider every angle with thoughtful examination. You must gather facts, which are "the single most foundational element for constructing a winning argument or position." You cannot present what you feel or think. You have to present verifiable facts. Feelings and opinions and emotions are "subordinate to facts." Facts have the capacity to "change your entire perspective on an issue." They "impact conclusions," so we must keep uncovering them until they are all revealed. Facts will not make you persuasive in and of themselves, but they are necessary evidence to support your position.

If you hope to move any people you have to learn to understand all people. You have to meet your audience where they are, not where you want them to be. People hold different values, fears, prejudices, biases, and strengths. We come from a variety of socioeconomic, educational, familial, and cultural backgrounds. We are motivated, inspired, challenged, and moved by different things. The successful persuader will learn to understand these differences and seek to communicate with their own "jury" in the most effective way. "We do not have the luxury of unpicking our jury in real life, as we can in a courtroom. We should embrace the complexity and simplicity of the human experience, and this is best done by listening and trying to understand how someone got to where they are."

When your objective is to persuade, you have to determine how hard you may have to work to win the position. You have to ask yourself, "How much evidence and advocacy will I need to win this discussion and accomplish my objective?" Gowdy calls this "marrying the burden of persuasion or burden of proof with your end objective" and it is essential for success. The good news is that most of us have a solid gut feeling for this decision. Small movements require less on your part than those "big asks" that have greater consequences.

David Stephens is a mentor of Gowdy's who was a state and federal prosecutor who litigated better than anyone Gowdy has ever seen before, during, or since Stephens' illustrious career. He gave Dowdy a piece of advice that is "the single best advice you will ever get about effective communication and the hardest to perfect." Stephens said, "The secret to being a good communicator, Trey, is sincerity. Once you learn to fake that, there is nothing you cannot do." Now, Gowdy does not encourage his readers to find a way to fake it. In fact, if you try, it will lead to harsh reactions. Rather, he compels us to put forth only that which we are passionate about. If we really believe what we are saying, everyone else will believe it, too. "Real emotion moves. Contrived emotions repel."

Two Intentions of Questions

Gowdy has laid out a compelling case for the use of questions to drive a persuasive point. He dedicates the second part of the book to teaching readers "specific types of questions you can use as well as tools to help formulate those questions." In some cases, you will be trying to gain information from the person you are questioning. At other times, you will be attempting to "elicit a reaction." Gowdy's direction guides you in how to do both with concrete, specific strategies.

Questions have one of two objectives. They are asked either to corroborate or contradict. "They either advance your own point or slow down the other person's point." Asking questions instead of making value statements allows you to covertly prove or disprove the point in question. It is also the best way to ensure that you are "accurate, fair, and complete."

Softball questions are easy questions that are "designed to credit, corroborate, or advance a position of person. Those who ask them can increase their "credibility, believability, or likabil-

> You can communicate more effectively in general and be more persuasive specifically when you understand when and how to use the different types[of questions].

ity" in the eyes of the person they hope to persuade. Hardball questions are difficult questions that "contradict, undercut, or impeach" the position of another person. Those who ask hardball questions seek to shine a negative light on the person they are questioning. They can result in a decrease in "credibility, believability, or likability." If you are questioning a friend or ally, throw softball questions. When encountering a foe, hardball questions are warranted.

At many points in our lives, we will find ourselves pulled into a conversation that bears weight. When engaging in a discussion that is important and significant, Gowdy highly recommends that your "opening utterance be a question." Most people are tempted to begin with something along the lines of, "let me tell you what I think." Resist that temptation. In some cases, the exact same wording of a question can be used with "decidedly different" intent. Gowdy reminds us that there are only ever one of two intentions when asking questions: to corroborate or contradict. Now that we know "the two purposes or objectives in asking questions, we can move on to the two and a half types of questions."

Two and a Half Types of Questions

There are two main types of questions we can use to move someone towards our position. Those two types are leading and non-leading questions. Gowdy "adds a (nearly) third category" called the "why questions." You can communicate more effectively in general and be more persuasive specifically when you understand when and how to use the different types.

Non-leading questions are what you encounter most frequently in daily life. They "usually begin with who, what, when, where, and how." These types of questions are seeking information and thus the focus is on the answer, not the questions themselves. Non-leading questions are affirmative and proactive because they are direct. There are several benefits to using non-leading questions. The person you are questioning will be more likely to develop a good rapport with you when being asked non-leading questions. They are by nature "open-ended" and so they tend to not inflame or offend the person being asked. They also "allow the person to make his or her point in an uninterrupted way."

There is also a downside, however. You give up control over the direction of the conversation when you stick to non-leading questions. Sometimes the person answering non-leading questions starts talking and doesn't want to stop. When they finally do, you may well have forgotten what you asked in the first place.

Leading questions are those that "suggest the answer, put the focus on the person asking the question rather than the person answering, and are oftentimes confrontational." These are the types of questions you hear in courtroom cross-examinations. Leading questions can scarcely avoid being confrontational and argumentative. They state an "assertion" that the person answering can either affirm or refute. The person asking the questions is in complete control, asking questions that are designed "to pin someone down." Within the question itself, the answer is given and the person being questioned is asked to simply agree.

"Why" questions belong in a half category all to themselves. In countless circumstances, "why" can be the absolute most important question in the world. It can "mitigate a killing from murder to self-defense," "a lie to a necessary evil," or a crime like theft to a justified act for one's survival. Gowdy illustrates this with a pertinent example. If you killed someone to protect a child from an act of violence, your act is no longer a crime. Your "why" elevates you to hero status, not criminal. But you must be careful. Asking "why" opens you up for a loss of control as to the direction of the conversation. You have to balance that risk with the potential benefits you can achieve, such as discovering a person's motive, intent, or reason.

Doesn't Hurt to Ask accomplishes two great feats for readers. It explains how we can become more persuasive and why doing that matters. Gowdy knows that most of us want to see change in the world. We look around and notice that there are things that are heading in the wrong direction. We can see the oncoming train but feel powerless to change its direction or stop it from running us down. Gowdy asserts that we are more powerful than we think. We can be the change we wish to see in the world. We just have to know how to pull people in our direction and understand that it is our right and in fact, our duty, to step up and do just that.

Gowdy leads readers to a foregone conclusion, employing his own tactic of questioning and proving its efficacy once and for all when he asks, "If I believe strongly, passionately, and logically about an issue, why is it not also my responsibility to advocate for the change I want others to effectuate? Why would I wait for someone else to do it?" You should not wait. You should start questioning now, in all matters, big and small, and see things incrementally change in your direction thanks to the power of persuasion.

Drucker on Leadership

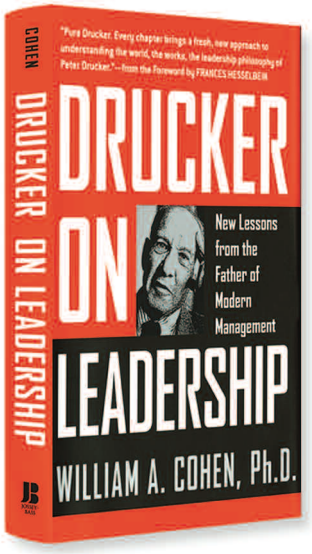
New Lessons from the Father of Modern Management



by William A. Cohen, Ph.D.

THE SUMMARY IN BRIEF

Although Peter Drucker, "The Father of Modern Management," died in 2005, his timeless teachings are studied and practiced by forward-thinking managers worldwide. His lessons and wisdom on the topic of leadership — the central element of management — are in constant demand, yet he wrote little under that actual subject heading.

In *Drucker on Leadership*, management expert and author William A. Cohen, Ph.D., explores Drucker's lost leadership lessons — what they are, why they are important and how to apply them.

While Drucker struggled with the concept of leadership, he was well aware that it had a critical impact on the accomplishment of all projects and human endeavors. There is no book from Drucker specifically dedicated to leadership, but a wealth of information about leadership can be found scattered throughout his 40 books and hundreds of articles.

Many of the leadership concepts revealed in *Drucker on Leadership* will surprise, and perhaps shock, Drucker's followers. Written for anyone who values the insights of the man whose name is synonymous with excellence in management, this summary offers a deeper understanding of what makes an extraordinary leader.

IN THIS SUMMARY, YOU WILL LEARN:

- Why Drucker believed that the best book on leadership was written almost two and a half millennia ago.
- How to predict your organization's future by creating it.
- Why leaders must determine what business they are in and who their customers are.
- How Drucker's teachings about leadership can save many corporations from failure and help guide others to outstanding success.

THE COMPLETE SUMMARY: **DRUCKER ON LEADERSHIP**

by William A. Cohen, Ph.D.

The author: William A. Cohen, Ph.D., is the president of the Institute of Leader Arts. A retired major general in the U.S. Air Force Reserve, he was the first graduate of Drucker's executive Ph.D. program. He is the author of many management books, including *The Art of the Leader* and *A Class With Drucker*.

Introduction: Peter Drucker and Leadership

There is little doubt that Peter Drucker, the "Father of Modern Management," considered leadership the essential management skill. As early as 1947, he declared, "Management is leadership." Seven years later he wrote: "Leadership is of utmost importance. Indeed there is no substitute for it." However, despite these clear early statements, Drucker did, at times, seem to equivocate about leadership. Only a few short sentences after the statement about the importance of leadership, for example, he added, "Leadership cannot be taught or learned."

Clearly, Drucker was ambivalent about leadership — or at least the idea that it could be taught — and he remained so for much of his career. In 1973, he reiterated, "There is no substitute for leadership. But management cannot create leaders."

Drucker's Evolving Attitudes Toward Leadership

By 1996, Drucker had reversed himself completely. In his foreword to *The Leader of the Future*, he wrote, "Leadership must be learned and can be learned."

Toward the end of his career, Drucker concluded not only that leadership could be learned, but also that it *should be presented* as a topic separate and distinct from management.

While Drucker did not leave us with a unified model of his concepts about effective leadership, *Drucker on Leadership* presents a distillation of his published work to provide readers with a clear and cohesive presentation of Drucker's views on leadership that, until now, have been widely scattered.

Drucker's Model for Effective Leadership

Drucker believed effective leadership rested on five basic components:

- **Strategic planning by the leader as a foundation.** The leader has to make decisions *now* to create a desired future.
- **Business ethics and personal integrity as necessary conditions.** If strategic planning was the foundation of leadership, ethics and personal integrity were necessary conditions for leadership effectiveness.
- **Leadership as taught in the military as a baseline model.** Drucker wrote, "The Army trains and develops more leaders than do all other institutions together — and with a lower casualty rate."
- **Correct perception and application of the psychological principles of motivation.** The best way to motivate employees is to treat regular, paid, full-time staff as if they were volunteers.
- **The marketing model as an effective general approach.** By describing leadership as a marketing job, Drucker meant that leaders must know and understand those they wished to lead, and lead in a way followers could relate to.

Part One: The Leader's Role in Shaping the Organization's Future

In Drucker's view, a leader's primary responsibility was to think through the organization's mission clearly and then promote it throughout the organization, setting goals, priorities and standards to measure progress along the way.

Drucker taught that determining what business you are in is essential to creating an organization's future and, therefore, is any leader's primary responsibility.

Leaders must make choices and concentrate their always limited resources where they will do the most good.

Today, we call this definition a "mission statement." Drucker's favorite mission statement, though not recent or short, came from a very old business, Sears Roebuck. Simply stated, it was to be the informed and responsible retailer, initially for the American farmer and, later, for the American family. It changed Sears from a struggling mail order house, which was sometimes close to bankruptcy, to the world's leading retailer, all within 10 years.

Of course, there is only one leader, and ultimately this leader is responsible for the final mission statement and the business.

The Process: Creating a Strategic Plan

Drucker's definition of strategic planning was "the continuous process of making present entrepreneurial *(risk-taking) decisions* systematically and with the greatest knowledge of their futurity; organizing systematically the *efforts* needed to carry out these decisions through *organized systematic feedback*." Implicit in this definition is that the leader is responsible for everything that happens or fails to happen in the organization.

Drucker stressed that the leader's view of the future must represent what he called "the entrepreneurial view"; that is, a willingness to think in terms of contribution, customer satisfaction and benefit to the market and the economy.

He believed that leaders must have the courage to make the future happen and that this courage must not be wasted. The decisions taken must meet the test of practicality and operational and economic validity; that is, these decisions *must be actionable* and be *able to produce* real economic results. Finally, Drucker stated that leaders must be personally committed to what they envisioned. In addition, he believed that whatever reaching the future entailed, it must be risky because the one idea about the future that was certain to fail was the riskless idea.

Look, Listen and Analyze: The Information the Leader Needs

Drucker said he "looked out the window" and noticed what was going on in order to predict the future. When asked how this worked, he answered, "I listen." After a dramatic pause of a couple of seconds, he added, "to myself." Pressed on this issue, Drucker answered that you had to go one step further and ask yourself what the things you had seen or heard would mean for the future. Thus, leaders need to observe what is going on, and then take the additional step of analyzing this information and deciding what is likely to happen as a result of what has taken place.

Drucker recognized that analyzing only internal information — cash flow, liquidity, productivity, competency, resource allocation and so on — was useful only as a short-term tactic. Drucker knew that strategy of any sort had to be based on information about "markets, customers and non-customers; about technology in one's own industry and others; about worldwide finance; and about the changing world economy."

Methodology: Developing Drucker-Based Strategies

Although Drucker never revealed his methodology for developing strategy as a step-by-step process, the following 10 principles have been developed from his work:

1. *Commit fully to a definite objective.*
2. *Seize the initiative and keep it.*
3. *Economize to mass your resources.*
4. *Use strategic positioning.*
5. *Do the unexpected.*
6. *Keep things simple.*
7. *Prepare multiple simultaneous alternatives.*
8. *Take the indirect route to your objective.*
9. *Practice timing and sequencing.*
10. *Exploit your success.*

To develop strategy, Drucker saw that three elements — the principles of strategy, the resources of the firm

Drucker on Staffing

Drucker suggested the following decision steps to help leaders in their staffing decisions:

1. Think through the assignment so that you understand what needs to be done.
2. Look at a number of potentially qualified people.
3. Decide who can actually do the job best, ignoring irrelevant weaknesses.
4. Discuss each of the candidates with several people who have actually worked with them.
5. Make certain that the appointee understands the job.

and what he called the "fixed certainties" — needed to be brought together.

Taking Action: What It Takes to Implement Your Plan

Implementing your plan means initiating and putting your plans into action. As with any project, your strategic plan needs leadership and management. This requires that tasks be broken down, assigned and scheduled. Resources must be allocated, performance expectations defined, metrics established, and a system for periodic and ad hoc reviews and feedback implemented. In short, as leader you are responsible for and must implement the plan.

To do this, a leader needs controls, which, according to Drucker, have three major characteristics. They can be neither objective nor neutral; need to focus on results; and must consider measurable and non-measurable events.

Both choosing the correct metrics and making the correct decisions about them are incredibly important to achieving any goal, whether strategic or everyday. ●

Part Two: Ethics and Personal Integrity

Drucker saw strategic planning as the foundation of leadership for all organizations, and ethics and personal integrity as necessary conditions for successfully building this foundation. In his earliest writings on the subject, he stated that leadership was exercised through character, and though followers might forgive a leader much, they would not forgive a lack of integrity.

Drucker believed social responsibility was part of a leader's ethical behavior, but cautioned that, under certain conditions, what was considered a corporation's social responsibility should not be undertaken and was unethical. Drucker's positions form the basis of his ideas about leadership.

Drucker believed that leaders should adopt the following two concepts into their personal philosophy of ethics:

1. The ethics of personal responsibility from the physician Hippocrates: "*Primum non nocere*," which translates as "above all [or first] do no harm."
2. The mirror test: What kind of person do I want to see when I look into the mirror every morning?

Effective Leadership and Personal Integrity

Drucker made a clear distinction between the law and personal integrity. Personal integrity, he felt, had to be a part of everything that a leader did; without it, leaders had no legitimacy and their followers would eventually desert them. He wrote, "In military training, the first rule is to instill soldiers with trust in their officers, because without trust they won't fight."

The need for personal integrity is integral to all of Drucker's views of leadership. Integrity means adherence to a moral code; particularly, adherence to such a code under all conditions and regardless of whether anyone knows it. To Drucker, integrity is critical because "the spirit of an organization is created by the people at the top." The proof that leaders mean what they say is uncompromising integrity of character, which permeates through the organization.

The Seven Deadly Sins of Leadership

Drucker counseled leaders to avoid these Seven Deadly Sins of Leadership:

1. The Sin of Pride. Generalized pride — as opposed to being proud of specific things — is the most serious leadership sin because it can easily lead to the other six.

2. The Sin of Lust. In any workplace, this sin creates jealousies, feelings of favoritism and lack of trust, damaging people, relationships and more.

3. The Sin of Greed. This is a sin of excess. Leaders have power and, unfortunately, having power has a tendency to lead to corruption.

4. The Sin of Sloth. The sin of sloth is often an unwillingness to do work the leader considers beneath the dignity of the office.

5. The Sin of Wrath. Leaders need to avoid repeated and uncontrolled anger because it can damage their leadership and destroy morale.

6. The Sin of Envy. With the sin of envy, the leader is envious of what is enjoyed by someone else. This sin usually leads the leader to make decisions and to take actions that will harm the object of the envy.

7. The Sin of Gluttony. Drucker drew a parallel between high executive salaries and the demands of unions for more and more benefits without an increase in productivity. He said we would pay a terrible price for these examples of gluttony and that it is never pleasant to watch hogs gorge.

Effective Leadership and Corporate Social Responsibility

Drucker recognized and was one of the first to teach that people were not a cost — they were a resource. In

his view, workers in and out of the workplace were as much the responsibility of the corporate leader as profits, survival and growth of the business or organization. Social responsibility and leadership went hand in hand.

As Drucker saw it, even a company's negative impacts could and should be examined to turn, if possible, something that the company was doing that was causing harm into something positive. He saw that in the early 1920s, DuPont, a major chemical company, set out to eliminate some of the poisonous and unwanted byproducts of its manufacturing. In the process, it invented a new system of toxic control that was so successful it was developed as a separate business. Yes, it is the old lemons-into-lemonade idea, but it has been very successful for the companies attempting it.

The Responsibility of a Corporation: First, Do No Harm

Drucker summarized what he expected from the leader with *primum non nocere*; in plain English, "above all, do no harm."

Frequently, well-intentioned acts of leaders can do precisely what Drucker cautioned against. The harm done can be much greater than the good originally sought.

Moreover, Drucker taught that good intentions were not, in themselves, socially responsible. When social responsibilities are undertaken that hurt the organization's ability to accomplish its mission, the resulting harm is the reverse of social responsibility. ●

Part Three: The Military: Drucker's Model Organization

One of Drucker's five components of effective leadership had to do with following the recommendations of a classic book on military leadership.

Drucker believed that the best book on leadership was written almost two and a half millennia ago by Xenophon, a Greek general who had fought in Persia. In *Kyropaidaia*, Xenophon wrote about leadership in battle. Thus, the "Father of Modern Management" recommended a book on combat leadership as the best book written on leadership for business leaders, simply because it taught good leadership.

Leadership Lessons From Xenophon

After becoming commander and creating subordinate generals, Xenophon called the new generals together and instructed them on leadership. He said:

1. Leaders set the example.
2. Leaders need to be braver than those they lead and must be the first to do hard work.
3. Leaders must be in control and exercise discipline, otherwise nothing useful ever gets done.
4. Leaders train their soldiers to think about positive action that each must take to be successful, otherwise they think about "what is going to happen to me?"

The basis of leadership about which Xenophon wrote, the lessons of his experiences, the principles of integrity, commitment, duty and other concepts, are in no way altered by even the most recent research on leadership. Whatever the leadership challenges in whatever organization, much can be learned from Xenophon's experiences and writings.

Training and Developing Leaders

Drucker came to appreciate that not only was leadership learnable, it was up to the organization to teach these skills.

Drucker cautioned not to focus only on skills for the immediate future, but to build for the leader's entire career and life. He emphasized that mentoring and training, both theoretical and practical, are critical in that they focus on what the developing leader is doing right rather than what had been done wrong. He quoted the pastor of a church from which many successful leaders had emerged, who tried to provide four things to newly developing leaders:

- A mentor for guidance.
- A teacher to develop skills.
- A judge to evaluate progress.
- An encourager to cheer them on.

This is a good description of how the military develops leaders and how any organization can and should develop them as well.

Promotion and Staffing

Drucker argued strongly for a rational system of promotion. He recognized that undeserved promotion not only resulted in higher incidences of failure and mediocrity, it also tremendously de-motivated both those more deserving who were passed over and those who simply observed dysfunctional management promotion decisions. He cautioned against two common errors: promotion to get rid of someone performing poorly and failure to promote someone considered indispensable in a current position. Finally, he listed several characteristics of a rational system:

- Consideration of all eligibles, not just those highly

visible.

- Consideration of all functional backgrounds.
- Normal promotion from within, but consideration of desirable outsiders.

The Heart of Leadership

If you follow these eight universal laws, your chances of leadership success are much increased:

1. **Maintain absolute integrity.** Drucker said, "A leader can be well-liked and popular and even competent and that's all well and good, but if he lacks integrity of character he is not fit to be a leader."
2. **Know your stuff.** Drucker wrote, "Leadership rests on being able to do something others cannot do at all or find difficult to do."
3. **Declare your expectations.** Drucker wrote: "Each manager, from the 'big boss' down to the production foreman or the chief clerk, needs clearly spelled out objectives …"
4. **Show uncommon commitment.** Drucker said, "Commitment comes from a worthy mission and then strong commitment."
5. **Expect positive results.** "One cannot be negative and succeed in anything," Drucker explained.
6. **Take care of your people.** Drucker wrote: "A leader has responsibility to his subordinates, to his associates."
7. **Put duty before self.** Leaders have a duty to accomplish the mission and a duty to take care of those for whom they are responsible. Addressing a leader's own needs must come only after fulfilling this duty.
8. **Get out in front.** "… as junior leader or as CEO the leader must be where the work is the most challenging," Drucker said. ●

Part Four: Motivation and Leadership

Although he continued thinking and writing about motivation over the years, Drucker did not make a connection between motivation and leadership, probably because he did not attempt to unify his theories of leadership until relatively late in his career. Yet Drucker did list *motivating* as one of the "basic operations" of a manager's work.

Leadership Style as a Motivator

Douglas McGregor was a professor at the MIT Sloan School of Management. McGregor concluded that managers led by one of only two general theories of motivation. Leaders following Theory X (which closely resembled the carrot-and-stick approach) assumed that employees primarily work for money or when threatened with punishment and will avoid work if possible. As a result, such employees must be closely supervised and controlled, using incentives to reward those who perform adequately and punishment for those who do not.

Theory Y leaders' assumptions and style of leadership were quite different. They assumed that employees were ambitious, self-motivated and eager to accept greater responsibility for work outcome, if only encouraged and allowed to do so. Tight control and supervision was not the way to motivate them. In fact, it was counterproductive.

Drucker agreed that Theory X was not the final answer. Drucker's "knowledge workers," equipped with brainpower and a constantly expanding universe of intellectual and experiential resources, were increasingly needed for the organization to be competitive. Drucker concluded that the carrot-and-stick approach no longer worked for knowledge workers and, in developed countries, it didn't work for manual workers either.

Each worker must be treated differently, and there are times when each must be treated differently from his or her norm. Without this, the organization will never achieve the maximum productivity sought.

Motivating to Peak Performance

The goal and outcome must be *outstanding performance*, achieved, of course, through worker responsibility.

Drucker said a leader must create "a responsible worker," and suggested four ways to accomplish this task. These aren't alternative approaches; all four must be used to achieve the desired results:

1. **Place workers carefully.** Drucker taught that a systematic, serious and continual effort to put people in the right jobs was a prerequisite to high motivation.
2. **Demand high standards of performance.** For peak performance, workers need work that engages and challenges their abilities and motivates them with high standards.
3. **Provide the worker with information needed.** Only with information can workers control, measure and guide themselves to reaching the goal and accepting complete responsibility for it.
4. **Encourage managerial vision.** Drucker's main

reason for encouraging managerial vision had to do with workers' seeing their work as contributing to the survival or success of the enterprise.

Charisma as a Motivator

Drucker was not a fan of charisma, despite its known power to motivate. He wrote, "Indeed, charisma becomes the undoing of leaders. It makes them inflexible, convinced of their own infallibility, unable to change." Yet, in writing about what effective managers should do, Drucker provided a description that closely parallels many of the actions of charismatic leaders.

Drucker recommended that the leader motivate by actions clearly characteristic of a charismatic leader:

- Lead, don't manage.
- Know who you are leading.
- Treat each individual differently depending on what motivates each.
- Treat groups differently depending on what motivates each.
- Lead individuals and groups differently, at different times, depending on the situation.
- Remember that those led need to know the organization's mission and believe in it.

The Volunteer Paradigm

Drucker spent the last 15 to 20 years of his life focused on nonprofit organizations, many of which had more volunteers than paid employees. From his experience with these organizations and their members, he formulated a concept that he articulated in the book *Management Challenges for the 21st Century*, where he stated that full-time employees must be managed as if they were volunteers.

He reasoned that the workplace, even in non-volunteer-staffed corporations, had changed to such an extent that a complete makeover in how workers were treated and motivated was needed.

He noted that pay was no longer the main motivator except under extreme economic circumstances. "We have known for 50 years that money alone does not motivate to perform," he wrote.

Change was necessary because, unlike their counterparts in the past, knowledge workers had mobility; they could leave one firm and go elsewhere with relative ease. Moreover, they had their own means of production, that is, their knowledge. From these facts, Drucker concluded that what motivates unpaid volunteers should be used to motivate regular full-time employees.

Part Five: The Marketing Model of Leadership

Drucker stated unequivocally that leadership was "a marketing job"; however, he did little to develop this concept.

Modern marketing rests on something called the "marketing concept." The basis of the marketing concept is that firms should seek to discover and then satisfy the needs of their customers rather than persuade customers to purchase existing products or services in which they might not be interested. Since Drucker taught that if marketing were done perfectly, selling would be unnecessary, to practice marketing correctly, it would be necessary to understand the needs of each group or customer segment, including their values and behaviors, so as to approach them in their preferred manner and allow them to relate to the product or service without interference. In Drucker's terms, if the marketing aspect of leadership were done perfectly, the persuasion element would be unnecessary.

Applying Marketing to Leadership

The marketing concept states that organizations must analyze the needs of their customers and then make better decisions than their competitors' to satisfy those needs.

Certain elements are required, including focusing on the buyers and satisfying their individual wants and needs, viewing the entire organization as part of marketing, supporting the marketing effort, having what the buyers want and attending to the welfare of both the buyers and society. This is the ideal. When organizations fall short, marketing is deemed less than optimal and, in the case of lapses in considering buyer or societal welfare, even unethical or illegal. One can easily say the same about leadership.

Leaders must begin with a mission they believe in, one that is believable by those they lead. Making this mission believable, communicating and promoting it, is a continual process. At the same time, leaders must proceed to developing the strategies to reach the goals and objectives required to achieve, communicate and promote that believable mission.

Applying Segmentation to Leadership

The marketing concept of segmentation coincides with Drucker's belief that human beings are different and must be treated differently.

The concept of appealing to different groups in their preferred way and in accordance with their interests is

correct. However, the leader must be careful to maintain a consistent story, even if the story is presented with a different emphasis to different groups. What a leader or marketer says or promises can't change with different groups or the leader loses credibility.

The basic idea of one-on-one segmentation is to concentrate on providing services or products to one customer at a time by identifying and then meeting his or her individual needs. It then aims to repeat this many times with each customer, thereby forging powerful lifelong relationships. One-on-one segmentation is a near-perfect example of segmentation and the marketing approach to leadership.

Applying Positioning to the Organization and the Leader

The marketing concept of positioning has to do with the communication process and how to use that process effectively to persuade a target audience.

To develop your position or to reposition yourself or your organization, you must start with two vital pieces of information:

- Where are you now?
- Where do you want to be?

It is critical that you be congruent with the position you want to occupy.

Drucker wrote that leadership is marketing because he knew that leadership dealt with people and influencing them to achieve their maximum potential. He knew that this could not be accomplished without communication. The concept of positioning is cutting-edge communication technology for the leader.

The Role of Influence and Persuasion on Strategy and Tactics

The basic difference between *influence* and *persuasion* is that influence is an act that produces an effect without apparent effort, whereas persuasion requires effort to produce a desired effect. In both cases, an effect is sought.

Influence and persuasion focus primarily on the tactical implementation of both marketing and leadership, but they affect decisions at the strategic level as well. As leadership tactics, direction and permissiveness are corollaries to influence and persuasion.

A leader who is thinking ahead rather than responding to a problem must first consider the environment in which these alternatives will be implemented at the tactical level, which makes it part of a strategic decision. ●

Ten Ways to Motivate Employees

Here are the top 10 factors employees consider most important in their jobs and therefore what motivates them to peak performance:

1. Work with people who treat me with respect.
2. Interesting work.
3. Recognition for good work.
4. Chance to develop skills.
5. Work for people who listen if you have ideas about how to do things better.
6. Chance to think for myself rather than just carry out instructions.
7. Seeing the end results of my work.
8. Working for efficient managers.
9. A job that is not too easy.
10. Feeling well informed about what is going on.

Epilogue: Drucker's Legacy

Drucker was passionately devoted to his profession. He did not quit thinking, analyzing and perfecting his powerful ideas and concepts because he never considered them complete and finished. As he wrote, "Anyone who continues to do what made him successful in the past is doomed to failure." Times change; new technologies are developed.

Although Drucker asserts that the basics of leadership haven't changed over the millennia and that Xenophon's book on leadership written 2,000 years ago is still the best, not all of Drucker's vision can be applied without first adapting it to present conditions.

Much of Drucker's work on leadership must be continued by others. Hopefully others will seek to continue his legacy through further development of his work, especially on leadership — the most important aspect of management. ●

THE SUMMARY IN BRIEF

What is it about the top tech product companies such as Amazon, Apple, Google, Netflix, and Tesla that enables their record of consistent innovation? Most people think it's because these companies are somehow able to find and attract a level of talent that makes this innovation possible. But the real advantage these companies have is not so much who they hire but, rather, how they enable their people to work together to solve hard problems and create extraordinary products.

The goal of ***Empowered*** is to provide you, as a leader of product management, product design, or engineering, with everything you'll need to create just such an environment. A natural companion to the best-seller ***Inspired, Empowered*** tackles head-on the reason that most companies fail to truly leverage the potential of their people to innovate: product leadership.

Empowered puts decades of lessons learned from the best leaders of the top technology companies in your hand as a guide. It shows you how to become the leader your team and company need to not only survive but thrive.

IN THIS SUMMARY, YOU WILL LEARN:

- The difference between "feature" teams and empowered product teams.
- Why coaching is essential to innovating at scale—and how to do it.
- To redefine the relationship of product teams to the rest of the company.
- To transform your organization into empowered product teams.

Lessons from Top Tech Companies

In so many companies—even companies trying to do true, technology-powered products and services—product teams are too often not *allowed* to work the way they need to. It's not just the techniques that strong product teams use to discover successful products, but the differences between how great product companies work and the rest run much deeper.

So many companies still have the old IT mindset when it comes to technology. It's viewed as a necessary cost rather than the core business enabler it needs to be.

There is little if any active coaching of the people on the technology teams. And even if they wanted to coach, the managers often don't have the experience themselves. So problems perpetuate.

Most of these companies recognize that they don't have the staff they need, but they have very misguided ideas about how to correct that and what to look for in product staff. Moreover, these companies rarely have an inspiring, compelling product vision.

It's not that these companies don't want to transform, it's that transforming is hard, and they just don't know how. Or even what it really means to transform.

What they need is to move to empowered product teams.

Behind Every Great Company

Let's highlight the differences between how the best companies create technology-powered products and how most companies create products.

Culture is extremely important, but there is something about great product companies that is more fundamental. There are three critically important differences between the strongest product companies and the rest:

The first is how the company views the role of technology. The vast majority of companies view technology as a necessary expense. They know it's important, but they think of it more as a cost of doing business. In most companies, technology teams exist to serve the business.

In contrast, in strong product companies, technology is not an expense; it *is* the business. In strong product companies, the purpose of the product team is to serve customers by creating products customers love, yet work for the business.

That is a profound difference, which impacts nearly everything about the company and how it works, and results in much higher motivation and morale. And most important, it results in a much higher level of innovation and value for customers and the business.

Pixar has shown the film industry what is truly possible when technology is at the core of an animated feature film, rather than just a necessary cost. Pixar uses technology in ways far beyond traditional film-making, and the technology teams are as valued as the creative teams.

The second is the role their product leaders play. In most product companies, the role of true product leadership is largely missing in action. In most companies, there is no product strategy.

In strong product companies, the product leaders are among the most impactful leaders in the company. They are responsible for staffing and coaching the product teams; they are responsible for the product strategy and converting the strategy into action; and they're responsible for managing to results.

Empowered product teams depend on skilled product managers, product designers, and engineers, and it is the leaders and managers who are responsible for recruiting, hiring, and coaching these people.

The third is how the company views the purpose of the product teams—the product managers, product designers, and engineers. In most companies, the technology teams are not empowered product teams; they are feature teams. Feature teams look superficially like a product team. They are cross-functional, with a product manager, a product designer, and some number of engineers. The difference is that they are all about implementing features and projects (output) and, as such, are not empowered or held accountable to results.

In contrast, in strong product companies, teams are instead given problems to solve rather than features to build, and most important, they are empowered to solve those problems in the best way they see fit. And they are then held accountable to the results.

Coaching

Coaching is more essential than ever. If you hope to innovate at scale, it is simply not optional. Problems escalate faster, relationships are damaged much more easily, and collaboration is harder.

Coaching is what turns ordinary people into extraordinary product teams.

In the technology industry, we focus so much on the core skills and competencies used by product managers, designers, and engineers but so little on the skills and competencies of managers and leaders. Yet it is these managers and leaders who are responsible for molding people into effective teams.

The logic is simple: Your company depends on successful products. And successful products come from strong product teams. Coaching is what turns ordinary people into extraordinary product teams.

More than anything, good coaching is an ongoing dialog, with the goal of helping the employee to reach her potential.

The Coaching Mindset

Let's talk about the necessary mindset of you as coach. A coaching mindset provides a foundation of intent. It is the framing that directs your application of coaching techniques, and your guiding principle for taking action and making decisions around developing a team.

Developing people is job #1. If you are a manager, you should be spending most of your time and energy on coaching your team. This means expending real effort on things such as assessing your team, creating coaching plans, and actively helping them improve and develop.

Empowering people produces the best results. Many new managers see their job as driving their team's task list. But empowering means creating an environment where your people can own outcomes and not just tasks. This doesn't mean less management—it means better management.

Beware your own insecurities. Be aware of your insecurities, and understand how your behavior can interfere with empowering your team. Most good managers have a healthy level of humility and are always exploring and working to improve their own performance and growth.

Cultivate diverse points of view. Good leaders know that they will get the best results when they are able to consider diverse points of view. They also know that they don't have a monopoly on good ideas and that the best ones may come from others.

Seek out teaching moments. Reaching potential requires working through adversity. As a coach, you are always looking for opportunities that encourage your people to stretch beyond their comfort zone.

Continually earn the trust of your team. None of your coaching efforts will be effective without trust.

The One-on-One

This is the foundation of coaching. The primary purpose of the 1:1 is to help the product person develop and improve. This is a relationship that depends on trust. The product person must understand and believe that you as the manager are genuinely and sincerely committed to helping her reach her full potential.

Onboarding. With most new product people, there is a necessary and critical onboarding period where the person acquires the skills and knowledge required to get up to speed (reach competence). Normally, this period of close oversight lasts on the order of two to three months, and it is a much more intense coaching relationship than the ongoing coaching that happens once the product person is deemed capable.

Frequency. The 1:1 should be no less than 30 minutes, once per week, and this session is sacred and not to be another one of those "You okay with skipping this week?" kind of meetings.

Sharing context. If you are to empower your product person to solve problems in the best way her team sees fit, as a leader and manager you must provide her with the strategic context.

Homework. There's simply no substitute for the product person doing her homework. It is the foundation for competence, and it's the main activity during the onboarding period. What does homework really mean? For a product manager, it means learning the product inside and out.

Thinking and acting like a product person. What

does it mean to think like a product person? It means focusing on outcome. Considering all of the risks—value, usability, feasibility, and business viability.

What does it mean to act like a product person? Listening. Collaborating. Shared learning. Evangelizing. Inspiring. Giving credit and accepting blame. Taking responsibility. Knowing what you can't know and admitting what you don't know. Demonstrating humility. Building relationships across the company. Getting to know customers on a personal level. Leading.

Providing feedback. Also known as "tough love" or "radical candor," honest, constructive feedback is the main source of value you provide as manager. Feedback should be frequent and as timely as possible (at the first opportunity to discuss privately). Remember to praise publicly but criticize privately.

Staffing

It's important to coach and develop your people. Now let's talk about how to find these people. Staffing is one of the clear and essential differences between strong product companies and the rest.

There are three higher-order problems in companies when it comes to staffing: The first is that there is often very fundamental confusion about what to look for when hiring strong product people. Too often the company thinks that, if they want to compete with the likes of Google and Amazon, they need to hire exceptional people. This is a dangerous misconception.

The best product companies hire competent people of character and then coach and develop them into members of extraordinary teams.

The second is that, in far too many companies, the leaders equate staffing with hiring. But it's a much larger problem than just hiring, and in fact, if you focus just on hiring, you will dramatically reduce your chances of building the organization you need.

The third higher-order point is to realize that staffing is the responsibility of the hiring manager. Hiring managers often believe this is the responsibility of HR and think of themselves as just a passenger on the journey and not the driver.

Competence and Character

Let's discuss the characteristics you should consider when recruiting and assembling strong, cross-functional, empowered product teams.

Competence. Table stakes for any of your hiring onto an empowered product team is competence. The person must have the necessary skills—as an engineer, a product designer, or as a product manager. Without competence, the person and the team cannot expect to be trusted by management or leadership. So there is no lasting empowerment without competence.

Character. Once we know the candidate has the required level of competence, most companies focus on what is usually referred to as "cultural fit." This is probably one of the most damaging concepts for your efforts to build a great organization.

For too many organizations, cultural fit is the politically correct term for what essentially translates into "Hire people who look and think like we do." It's not that the way we think is bad; it's that what we really need are people that think differently from us. The chances of solving hard problems goes up substantially if you can approach the problem from several perspectives.

So, rather than looking for people like yourselves, make it an explicit point to look for people that are clearly not like yourselves. People who come from different environments. People who were educated differently. People with different types of work experience. People with different life experiences.

When candidates are viewed through this lens, there are many excellent candidates to be found, all over the world. Often, they are hiding in plain sight in your own company. Just make sure they are competent.

Recruiting

Most people think that staffing begins with sourcing, but in strong product companies staffing begins with active recruiting. In an HR-driven approach to hiring, a hiring manager might provide a job description, but things don't really get going until HR starts providing resumes (known as sourcing).

For strong managers, it's the opposite. The hiring manager identifies what she wants, and then she goes out and recruits. The truly strong manager knows that, through recruiting, she is crafting product teams and not just a collection of people.

So, where do you find these people? Building your network

of potential recruits is an ongoing activity—not something you start doing once you have an opening. You meet people at industry conferences and professional meetups, at competitors, during visits to partners and customers, via introductions from referrals, and even socially.

You can host talks at your office with selected industry speakers who can attract candidates and also help build the reputation of your organization. Another great technique is a company blog written to demonstrate your dedication to the craft of great product.

> The product vision is one of our primary tools for keeping the organization truly focused on what the customer cares about.

Hiring

Much of the hiring process will be dictated by HR compliance and compensation, but there are some essential points for the hiring manager.

First, if you have found a truly strong candidate, then it's critical to move quickly. Strive to produce an offer in 24–48 hours. Beyond that, you may lose a good candidate. And even if not, it demonstrates to the candidate that the company has a hard time making decisions, which is not a good look.

Second, take reference checks seriously, and do them personally—don't delegate this to anyone else. Be sure to ask if the person would hire the candidate again. One of the most important goals of a reference check is to try to identify candidates that are going to prove toxic due to their personality.

Go beyond a reference check. One of the surest ways today to spot toxic personalities is to explore the candidate's behavior on social media. Find their profiles and look at how they interact with others.

The official offer may come from HR or from the hiring manager, but in either case, what is most important is that the hiring manager call the candidate, and explicitly tell the candidate that if she joins and commits to putting in the effort, then you will promise to personally invest in coaching and developing the candidate to reach her potential.

If the candidate is especially good, it's very possible that she will receive multiple offers, so you should request that the CEO or other key leader reach out and offer to talk. This sends a very valuable message to the candidate and can also help get the relationship off to a good start.

Product Vision and Principles

Most companies have some sort of mission statement that summarizes the purpose of the business, but a mission statement typically says nothing about how we plan to deliver on this mission.

This is the critical role of the product vision. An inspiring and compelling product vision serves so many critical purposes that it is hard to think of a more important or higher-leverage product artifact:

- A good product vision keeps us focused on the customer.
- A good product vision serves as the North Star for the product organization so that we have a common understanding of what we are hoping to accomplish together.
- A good product vision inspires ordinary people to create extraordinary products.
- A good product vision provides us with meaningful work.
- A good product vision leverages relevant industry trends and technologies that we believe can help us solve problems for our customers in ways that are just now possible.

When done well, the product vision is compelling, inspiring, and empowering—leaving the product teams feeling excited to begin the hard work of making this vision a reality.

Creating a Compelling Vision

So, what makes a strong and compelling product vision? The product vision is one of our primary tools for keeping the organization truly focused on what the customer cares about. While we need to understand the impact on our company, we need to never forget that all of the benefits derive from providing real value to our customers.

When we tell the story of the product vision, we do so from the perspective of our users and customers. The idea is to demonstrate how their lives will improve in some meaningful way.

North Star. The product vision, done well, serves as the North Star for the product organization. Just as the North Star can guide people to their destination even when they're scattered across the globe, the product vision provides this purpose for all of the product teams, no matter where they are in the organization or on what piece of the larger product they're working.

Scope and time frame. Many companies make the mistake of describing a product vision that is not ambitious or meaningful enough. The product vision stands little chance of being perceived as compelling or meaningful if the team thinks it's just a matter of a few features. The product vision describes the future you are trying to create. In what ways will you improve the lives of your customers?

Normally, the time frame for the product vision is between 3 and 10 years out. Very complex products and devices are at the longer end of this range.

Leveraging industry trends. There are always emerging trends, typically enabled by new technology. There are also fads that get some hype for a while, then fade away. As product leaders, you need to decide which are trends and which are fads and, most important, which trends have the opportunity to substantially help you deliver innovative solutions for your customers.

Remember that customers don't care about our technology—they care about how well we solve their problems. So, while we may make a bet on specific technologies, we must always keep in mind the purpose of that technology is to solve problems in ways that customers love.

Product Strategy

Ultimately, empowered product teams are all about giving teams hard problems to solve and then giving them the space to solve them.

But how do we decide which problems they should solve? Answering that question is what product strategy is all about. An effective product strategy is absolutely essential to enabling ordinary people to create extraordinary products, because it focuses and leverages their talents.

Whatever the goal is, your strategy is how you're planning to go about accomplishing that goal. Strategy doesn't cover the details—those are the tactics we'll use to achieve the goal. Strategy is the overall approach and the rationale for that approach.

Product strategy means, how do we make the product vision a reality, while meeting the needs of the company as we go?

Why is product strategy so hard? Because it requires four things that are not easy for most companies:

1. The first is to be willing to make tough choices on what's really important. Choices mean focus. Deciding what few things you really need to do, and therefore all the things you don't do. Focus comes from realizing that not everything we do is equally important or impactful, and we must choose which objectives are truly critical for the business.

2. The second involves generating, identifying, and leveraging insights. While product strategy starts with focus, it then depends on insights. And insights come from study and thought. These insights come from analyzing the data and from learning from our customers. The insights might pertain to the dynamics of our business, our capabilities, new enabling technologies, the competitive landscape, how the market is evolving, or our customers.

3. The third involves converting insights into action. Once we have decided what's critically important (focus) and studied the landscape to identify the levers and opportunities (the insights), then we need to convert those insights into action.

In a company that's serious about empowered product teams, this means deciding which objectives should be pursued by which product teams, and then providing those teams with the strategic context necessary for them to solve the problems we need them to solve.

4. The fourth involves active management without resorting to micromanagement. Reality is never static or predictable. As product teams pursue their objectives, some make more progress than others, some need help or encounter major obstacles, some find they need to collaborate with other teams, some realize they're missing key capabilities, or any of a hundred other possible situations. Properly managing this activity requires smart, engaged leaders practicing servant leadership.

The bottom line is that product strategy requires choice, thinking, and effort.

Ultimately, the only thing that will truly motivate a company to change to the empowered team model is results—business results.

Business Collaboration

Having strong product leaders and empowered product teams is necessary, but it's usually not sufficient. That's because product work happens in the context of the broader company. Your CEO matters, as do the rest of your key executives and the various stakeholders representing other key areas of your business.

However, establishing the necessary working relationships with the rest of your business is a different level of hard. It requires a lot more sensitivity and nuance.

Realize that your company is currently used to feature teams that exist very clearly to serve the business, and now you're trying to replace them with empowered product teams that exist to serve your customers in ways that work for the business.

What this really means in practice is that you need to move your product organization from a subservient model to a collaborative model.

At a very human level, you're asking very senior executives to think differently about teams comprised of ordinary people—individual contributors—who have been coached into extraordinary teams.

This is a very significant change, especially as it impacts the rest of your business. So let's discuss the implications of this change and how you, as a product leader, can guide your company through this change in mindset and responsibilities.

The Role of Product Leaders

Moving the product teams from the subservient feature team model to the collaborative empowered product team model begins with trust—especially between the product organization and the rest of the leaders of the business. The keys to that trust are the product leaders, especially the head of product.

Without a strong head of product who inspires confidence and is trusted by the CEO and the other key executives, it will be a long and very difficult road.

Note that there is a big assumption here, which may not be true in your organization: The assumption is that the product leaders are generally at the same peer level with the other key executives and stakeholders in the organization.

In any case, the product leaders must establish a direct relationship with the CEO (or general manager in a very large company) and the other key executives. That's usually the heads of sales, marketing, service, finance, legal, and business development. But this list varies at each company.

The basis of this relationship is that the executives need to believe the product leaders have a deep understanding of the business and are committed to ensuring that the solutions provided will work for the various aspects of the business.

This is table stakes for the product leaders. Beyond that, there are three aspects the product leaders will be judged on:

Business results. Ultimately, the only thing that will truly motivate a company to change to the empowered team model is results—business results. The reason the company even began on this journey is very likely because the old way was not delivering the necessary results. So it's important that the product organization deliver the results. And to do that, it's important that the organization have an intentional and focused product strategy, and that the product teams are empowered and accountable to the results.

Product strategy. It's important that this strategy be shared with the executives because that will communicate the reason for the focus and for the decisions on what to work on. Note that it's common that one or more of the most important insights were first discovered by one of the key executives or stakeholders, and in such cases, it's important to be generous in crediting the source of that insight. You want to build a culture that encourages the constant seeking and leveraging of these insights.

Product teams. Companies in the empowered product team model quickly learn that the real work occurs in these product teams, and their ability to solve hard problems for the business depends very much on the people on the team, especially the product manager. So be aware

that they will be judging the product managers and, indirectly, the product leaders.

Product leaders are only as strong as their weakest product manager, and this is why. This is also why it's so important during new-employee onboarding that the manager make sure that the new employee (this mostly pertains to new product managers) has done her homework and truly understands the customers and the business before she interacts with the key executive or stakeholder. Without this deep knowledge of customers, there will be no trust.

Inspired, Empowered, and Transformed

Great teams are made up of ordinary people who are inspired and empowered. They are inspired with ideas and techniques for quickly evaluating those ideas to discover solutions that work—that are valuable, usable, feasible, and viable. They are empowered to solve hard problems in ways their customers love, yet work for their business.

Empowered teams that produce extraordinary results don't require exceptional hires. They do require people who are competent and of character so they can establish the necessary trust with their teammates and with the rest of the company.

Meaningful Transformation

Inevitably, once you realize the scope and scale of what is necessary to work the way the best companies work, it raises the question of how to change from the way you're working today to the way you believe you need to work tomorrow. And this is essentially a question of transformation.

What does it really mean to transform to empowered product teams? The prerequisite for this transformation is getting your senior leaders—typically starting with the CEO—to understand the necessary role of technology as the key enabler of the business and not just a necessary cost of doing business. Without this understanding, your chances of success are low.

At the highest level, there are three major steps. And as a general rule, they need to happen in the following order. First, you'll need to ensure you have strong product leaders in place. Second, you'll need to give those strong product leaders the ability to recruit and develop the staff required for empowered product teams.

Third, for the product teams that are ready to operate in the empowered product team model, you will need to redefine the relationship with the business. With the empowered product team model, the idea is to be true partners with the business—collaborating to come up with solutions that customers love, yet also work for the business.

You will always have strong competitors that covet your customers—but now you are equipped to not just fight back but to grow and thrive by continuously innovating on behalf of your customers.

THE SUMMARY IN BRIEF

If you've made the challenging but rewarding leap to first-time manager, you might not be sure what your next move is. What made you a successful employee won't necessarily make you a great manager, and most people don't receive formal leadership training until 12 years after their promotion into management.

FranklinCovey's ***Everyone Deserves a Great Manager*** delivers the guidance you need when you're promoted: the support, understanding, strategies, and tactics to develop as a leader and turn your people into an engaged, high-performing team. Based on nearly a decade of research, the six critical practices will give you a head start in building the competence and confidence you need to succeed as a first-time manager.

The FranklinCovey leadership experts not only teach you how to think like a leader; they also give you practical tools and actionable steps to implement on the job. Approachable and engaging, ***Everyone Deserves a Great Manager*** provides the blueprint for becoming a great manager.

IN THIS SUMMARY, YOU WILL LEARN:

- To develop a leader's mindset.
- To stop monitoring your people and, instead, coach and support them.
- To use the FranklinCovey Change Model to steward your people through challenging organizational changes.
- To manage your time and energy and coach your team to do the same.

Introduction

First-level leaders have never been more relevant. Executive adviser and best-selling author Ram Charan observes that the rapid digitization of information has eliminated massive layers of leadership in organizations. Work is collapsing down, not up. Which means that the vast majority of people are reporting to first-level leaders, who now assume unprecedented influence and responsibility.

In the "olden" days, first-level leaders had multiple managers above them who had steadily climbed the leadership ladder, accumulating experience along the way. Junior managers could draw on their expertise for mentorship and feedback. But today, most of those layers are gone, often leaving first-level leaders without sufficient resources or support.

In this role, you're supposed to know the strengths and weaknesses of your team members, appear to have all the answers, and transition from focusing on your own results to achieving the team's results. Overnight.

Despite being the new performance linchpin in your organization, you're often the least experienced and least trained. You're learning by trial and error because you have no other choice. Researchers in the *Harvard Business Review* found that, on average, people take on their first leadership role at age 30—but don't receive their first leadership training until they're 42.

Imagine a physician, a pilot, or an engineer operating untrained for a decade—it's unfathomable. Why would we tolerate a lower standard for the linchpins of our organizations?

To give you the confidence and competence you need to meet the inevitable challenges of managing, FranklinCovey has shrunk the bewildering world of first-level leadership down to the six most critical practices for leading a team. These practices have been field-tested by thousands of actual leaders working with real teams. This content expands upon FranklinCovey's leadership solution ***The 6 Critical Practices for Leading a Team***, now adopted by thousands of companies, governments, nonprofits, school systems, and universities around the world.

Employees often report that their relationship with their direct leader is the most meaningful relationship in their professional lives, and determines whether they stay with a company or move on. If you become a great leader using the following insights and skills, you'll find greater job satisfaction, opportunities for advancement, and the chance to affect the lives of others for the better. You'll become the manager you and your team deserve.

Practice 1: Develop a Leader's Mindset

Paradigms are the lenses through which we view the world, based on how we were raised, indoctrinated, and trained to see everything in front of us. We all wear these metaphorical pairs of glasses, and they vary in accuracy. They might be the right prescription or slightly off. In some cases, you might have a metaphorical cataract.

Your job as a leader is to continually assess your paradigms for accuracy and ensure they reflect reality. So ask yourself what you believe about leadership, your team, and yourself. Maybe you believe that the colleagues who think like you are high potentials and those who challenge you aren't. Perhaps you believe you're not really leadership material and someday everyone will find out.

As Dr. Stephen R. Covey taught, if you want to fundamentally change your results, if you want long-term sustainable impact, you have to challenge your mindset.

From Individual Contributor to Leader

Most high-performing, driven people promoted into leadership realize that they must now fundamentally change their approach. But many of the paradigms that got you promoted won't make you successful as a leader.

Practice 1 mindset shift. When you become a leader, your definition of results needs to change. When you were an individual contributor, your results were the work you did. But now you're a first-level leader, so you own the results of everybody on your team. Your first job is not to get results alone but with and through others. In other words, your people are your results.

You might be thinking, "I didn't even hire these people!" But part of your job is to discern the talent, coachability, and potential of each member of your team, whether you hired or inherited them. You have to learn who can—or can't—rise to the new standard you're requiring. But before you consider dismissing an employee, remember that they might just need a leader who can challenge and inspire them to a new level of contribution. That leader might be you.

Keep the following questions in mind:

- What kind of leader does your team need right now?

One of the ways to assess and strengthen the collective capabilities of the team is to get to know them better.

- What kind of leader does your organization need you to be?
- What do you need to learn (or unlearn) to become the leader they need?
- Picture yourself 10 years from now. What results will you and your team have delivered? How would you want your team to describe your leadership?
- What do you need to do in the coming months to make your vision happen?

The only way to check your paradigms is to compare them to reality. One of the ways to assess and strengthen the collective capabilities of the team is to get to know them better. Pick a few of the following questions and go through this activity once a year as a team or whenever a new member joins the team. It's an exercise to challenge your paradigms.

- What's something about your background that others at work may not know about you? For example, something about where you grew up, your family, culture, or beliefs.
- What's important to you outside of work? For example, being physically active, community service, trying new restaurants, relaxing, or other hobbies.
- Tell us about a prior job that had a big influence on who you are today. What did you like or not like about it?
- Tell us about one of your goals. For example, a short-term goal related to your current role, a long-term career goal, or a personal goal.

Practice 2: Hold Regular 1-on-1s

People rarely quit their jobs based on compensation; rather, they quit their manager. Or they quit the culture. So it's imperative to consider the conditions you are creating for a compelling work environment.

Because you're a leader, you're noticed. Every time you communicate, every time you open your mouth, you create culture. And 1-on-1 interactions are one of your best tools to build and reinforce the type of culture every team member deserves. Strategically planned and executed, 1-on-1s are arguably the best way to create the conditions for high engagement and ensure your team members are connected to you as their leader.

If our main interaction with our team members is to check that they've hit key benchmarks, we become our team's monitor. You might get incremental improvements this way, but you're just as likely to deflate people's energy, zap their creativity, and drive them to do the minimum.

Effective leaders use 1-on-1s to coach. They create the conditions for engagement by meeting regularly with each team member, drawing out issues through open-ended questions and empathic listening, and helping people solve problems.

Skill 1: Prepare for Your 1-on-1s

Let's establish some best practices for 1-on-1s. Schedule them in advance as recurring calendar appointments. Reserve at least 30 minutes, because it's difficult to have meaningful conversations in less time. Hold them regularly—the gold standard is weekly—and commit to that date and time without moving the appointment if possible.

Don't cancel unless absolutely necessary. Canceling a 1-on-1 is a huge withdrawal—it clearly communicates to the team member that they're not important.

Prepare an agenda. Collect your thoughts ahead of time and ask your team member to do the same. Avoid talking about the same things over and over. Remember that the purpose of this meeting is to lift the engagement of your team member. Let them be part of creating the agenda, or invite them to take the lead.

Account for your energy. Ask yourself at what point of the day are you at your highest levels of energy—physically and intellectually? At what points are you at your lowest? Don't schedule 1-on-1s when your energy wanes or schedule them back-to-back without a break.

Skill 2: Coach During the 1-on-1

In this practice, we're shifting from monitors of actions

to coaches of people. That requires you to no longer tell people what to do, but to ask them how they would do it. When you make this transition, you'll move from directing and informing to inspiring and engaging.

Coaching means respecting your team members' abilities and believing they have the capacity to grow. It means encouraging them to problem-solve, think in new ways, and develop their talents. Some colleagues will resist solving their own problems because they lack confidence. Coaching builds that confidence and minimizes dependencies.

Ask coaching questions. Coaching questions are open-ended and can't be answered with a simple yes or no. They encourage reflection and invite team members to do the majority of the talking and solve their own problems. Instead of "Are you liking your job?" ask "What do you like about your role? What would you like to see change?"

Listen with empathy. Empathic listening is listening with the intent to understand. The essence is not that you agree or disagree with someone; it's that you fully, deeply understand that person emotionally as well as intellectually. Suspend your thinking long enough to get inside another person's frame of reference, looking out through it, and trying to sincerely see the world the way they see it. You understand their paradigm and begin to understand how they feel.

Create commitments at the end of the 1-on-1. 1-on-1s also require you to share insights, ideas, and frameworks to coach, support, and develop your team members. Wrap up by reviewing action items from last week. If they didn't complete the previous week's commitments, you should listen, understand the reason, and coach your team member about how to move forward. Don't fall into the trap of telling your team member what to do; let them articulate their commitments.

Practice 3: Set Up Your Team to Get Results

Many people come to work every day and have no idea why they're doing what they're doing. If people are doing their jobs solely because their boss told them to, it sucks engagement right out of a team.

If you're not delegating, you're an individual producer masquerading as a leader. You may think nobody knows. In fact, they do . . . everyone knows.

In contrast, the effective mindset helps your team become invested in decisions and understand the big picture behind the daily grind. But it does require an ongoing investment of time, patience, and maturity. Great leaders plan goals with their teams rather than for them and delegate tasks without abandoning or micromanaging. They shift from telling team members what to do, to aligning their work to greater purposes and supporting their efforts.

Skill 1: Align Goals to Organizational Priorities

By focusing on the right priorities, you can achieve amazing results; but with the wrong focus, you can take the ship down.

Choose a few measurable goals. Limit your goals to the most important. If you have discretion about setting your goals, involve your team in formulating them. Not only will they be doing the work, they'll often have a perspective you don't. Your goals must be specific and measurable. They usually contain a starting line, a finish line, and a deadline. For example, "increase customer-satisfaction scores from 88 percent to 90 percent by January 31."

Use a scoreboard. A scoreboard can help people see where they are against their goals relative to where they should be. It can be a fun way to motivate people—and keep your goals top of mind. Four key traits of an effective scoreboard are to keep it simple, visible, updated frequently, and as engaging as your culture allows. For example, one scoreboard featured leaders slowly sinking into quicksand unless metrics improved.

Hold team accountability meetings. Bring the team together regularly for brief team accountability meetings, dedicated to moving the needle on the scoreboard. Don't discuss anything unrelated to your goals, the scoreboard, or your commitments. Keep the meeting as short as possible, 10 to 20 minutes max, and have a consistent agenda.

Skill 2: Delegate

How you handle delegation affects your team's growth, engagement, and motivation. Consider using the following process to delegate effectively:

Define the project. What are the objectives and deadlines? What skills will someone need to complete the task? How much time will it take? Have you defined what success looks like and identified key metrics to pursue?

Decide if the project should be delegated. You might be tempted to hoard things, because you want to own them and get them done according to your standards. On the other hand, if you overdelegate, you can get a reputation of not doing any of the work. Be delib-

erate about delegating authentically.

Decide whom to delegate the project to. For each team member you are considering delegating a task to, think through this quick checklist: Do they have the time? Is this something they've expressed interest in? Do they have the skills needed? How much coaching will be required? Do they typically meet deadlines?

Scope the project with the team member. The clearer you describe the purpose, vision, and expected results, the less you have to manage the process itself. In other words, explain the "why" and let the team determine the "how."

Support. Support your team member in their new assignment, calibrated to their experience and confidence. Remember, it's healthy for your team to make some mistakes—that's how people learn. Even when you've been enormously clear, there are going to be less-than-perfect results as people level up their skill sets and knowledge.

People want to have fun in their jobs. They want to feel appreciated. So after you've worked your heart out to achieve a goal, take some time to celebrate.

Practice 4: Create a Culture of Feedback

As a leader, your job is to summon the courage and consideration to provide actionable, specific, and sometimes tough feedback to your employees. It's an art, not a science, and it's learned through repetition. It isn't just a nice-to-have skill; if you want to be an effective leader, you *must* learn to do this.

The common manager mindset is to think of yourself as "the fixer": your team has problems, so you think it's your job to point out what they are doing wrong through feedback. In contrast, the effective mindset is all about unleashing the potential in others—including yourself, when you seek feedback.

Giving feedback comes down to motives. Your team has to know your intent is to help them develop their skills and talents. They have to feel secure and safe with you. And that doesn't happen overnight; you have to build a reservoir of trust.

Skill 1: Give Reinforcing Feedback

Positive feedback is encouraging but doesn't provide specific enough information about what the person did well. Reinforcing feedback clearly communicates that a team member's behavior, attitude, or work is outstanding and that they should keep it up. It can influence behavior change and increase engagement.

Find the right frequency and format. Notice and learn how people prefer reinforcing feedback: through email, in private, verbally, during your 1-on-1s, in public during a team meeting, to their peers, to your boss—and how often.

Giving feedback comes down to motives. Your team has to know your intent is to help them develop their skills and talents.

Praise specific behavior and describe the impact on the team, goals, or project. "Great job" isn't instructive. Help your employees know exactly what they did right so they know what to keep doing.

Connect the behavior to their intrinsic motivation. During your regular 1-on-1s, you've hopefully uncovered what motivates your team members and revealed their vision for long-term development. Show how their good work is helping them get there.

Skill 2: Give Redirecting Feedback

Redirecting communicates that the employee is capable of a stronger performance with some guidance. It's feedback intended to let someone know that a behavior, an attitude, or a result needs to improve—and you believe it can.

Decide if you should give feedback. Here are a few instances where redirecting feedback is a no-brainer: if a team member's behavior is a serious infraction or has immediate, substantial, and recurring negative consequences; if you believe the team member isn't likely to correct the behavior on their own; if reinforcing feedback and modeling haven't worked.

Prepare. Carefully plan how, when, and where you will share your feedback and how you will handle the response. Identify the specific behavior you've observed and its impact. Omit any judgments of the person's character

and stick to the facts. Plan what you'll say so you eliminate ad-libbing, which can take you down a rabbit hole.

Begin the discussion by stating your intent and priming the team member to listen. Be absolutely clear that your intent is to build the team member up, in an atmosphere of trust.

Ask the employee what they think about the particular situation. You can save a lot of time and energy by first checking if the person is already aware of their behavior.

Describe the specific behavior you noticed and its impact. Redirecting feedback is about behavior, not character. What you say should feel neutral and nonjudgmental so the other person doesn't feel shame or become defensive. You're keeping it professional, not making it personal. Use terms like "I noticed that . . ." and be specific about the impact.

Listen carefully to the recipient's response, and react appropriately. It's hard to predict how someone will respond to redirecting feedback, though the more you know about your people, the better you can anticipate their reactions.

Help your employee take responsibility for changing their behavior. If the person avoids taking any responsibility, continue to present examples about the extent of the problem and its negative impact.

Codevelop an action plan. Develop an action plan together. The person should understand what behavior you expect and should find that expectation reasonable. In most cases, you'll get better results if the action plan comes from that person rather than from you.

Summarize the discussion and thank the team member. Once you have both agreed to an action plan, recap what was agreed on, both verbally and in a follow-up email.

Provide support. Heading in the right direction is the key here, not overnight perfection. Give them time to make adjustments. Provide reinforcing feedback every time they change their behavior.

Practice 5: Lead Your Team Through Change

When change comes your way, it is arguably one of the strongest tests of your leadership capability. Nothing will shape your team's ability to adapt to change more profoundly than the way *you* approach it. If you resist change or feel overwhelmed, confused, or skeptical, your team will adopt that same frame of mind.

The FranklinCovey Change Model is a tool to help all of us move through four common zones of adopting change, based on our natural emotional responses:

Zone 1: Status quo. You and your team are doing business as usual before the change occurs, and everyone is relatively comfortable.

Zone 2: Disruption. Emotions run high and results suffer as everyone reacts to the news and its implications for them personally. It's a time of great stress and uncertainty. As information is shared and the process becomes somewhat clearer, you stop reacting and begin consciously developing a plan of action for your team and yourself.

Zone 3: Adoption. Resistance and stress turn into acceptance, and for others, resignation (sometimes literally). You and your team identify ways you can adapt to the change and learn new ways of doing things.

Zone 4: Better performance. The change initiative has largely been implemented and, ideally, you and your team are getting better results. But even if the change initiative fails (and many do), you and your team have likely increased your resilience and earned a brand of leading out when the next change comes your way.

Change is a sloppy process, but it can be better adopted with awareness of these four zones, especially if you can help make them short and shallow. You can also use the model to diagnose where each team member is on the emotional curve at a given time.

Skill 1: Prepare for change in Zone 1. Communicating change simply, clearly, and with respect for the concerns and experience of your direct reports is key to kicking off a change initiative in a positive way. Preemptively address messaging with your boss and/or the appropriate stakeholders. Follow up on news of a company change with the whole team, preferably in person. Be candid, comprehensive, clear, and fair. Use "we" and "us," not "they" and "them." Clarify how the change will affect your team. Explain why the change is happening, and acknowledge people's feelings.

Skill 2: Manage the disruptions in Zone 2. This zone can be the toughest. All change creates disruption on some

To feed your brain, you need to manage your time and energy, and for long-term results, you must coach your team to do the same.

level—from lost time and increased costs, to intangibles like increased stress or damage to your culture. Even when employees feel positive about a change, factors like uncertainty and a steep learning curve can decrease productivity, increase downtime, and replace motivation with frustration. Check in with each team member frequently. Walk your talk. Address cynicism, and confront chronic resistance and regression.

Skill 3: Adapt quickly to change in Zone 3. This is where stuff gets real. When you begin this zone, you're in a results abyss. Your people have spent all their time adapting to new rules, technologies, procedures, culture—essentially reinventing how they work. And now your job is to help them pivot from learning back to execution in this new reality.

Reset and reprioritize expectations at both the team and individual levels. Focus on what matters (and say no to the rest). Use a scoreboard to track progress. Learn from mistakes. Create and celebrate early wins. Have regular, open conversations about the change and its effects with your team as a group and/or in 1-on-1s. Don't "spin" or downplay the difficulty of the situation. Ask your leader for feedback and help.

Skill 4: Seek feedback and celebrate success in Zone 4. You begin to see real benefits from the change that you've struggled through. You take control of the change and use it to your advantage. Here, the results you get begin to look better than when you first started out. Chart key learnings about what worked and what didn't during the change initiative; do it with your team if you can.

Seek feedback on how to better lead change. Make new goals, if needed. Build team capability for future changes. What mistakes could have been prevented? What best practices should be preserved for future changes?

Practice 6: Manage Your Time and Energy

To feed your brain, you need to manage your time and energy, and for long-term results, you must coach your team to do the same—especially because we're now working more than ever, burning out more than before. Gallup reports that about two-thirds of the workforce is now struggling with professional burnout.

As you progress on your leadership track, you must decide how you're going to work, balance your life, and renew yourself. Establish the patterns now that will serve you long term.

Skill 1: Manage Your Energy

The five energy drivers are sleep, relax, connect, move, and eat. Understand how vital sleep is to your overall health, specifically your brain health. Seven hours of sleep is the standard; don't be shamed into believing the myth that four hours of sleep is sustainable.

Don't confuse relaxation with numbness. If your idea of fun is primarily TV binges, gaming marathons, or long naps, your relaxation might be draining rather than renewing you. Note how you feel afterward. Do you truly feel better? If not, try swapping those "relaxing" activities for a hobby that actually increases your energy.

Connect by volunteering, investing in your social network, creating special moments, and reaching out to someone in need.

For movement, think outside the gym. Research shows that it's not how much time you spend there that counts, but how much movement you incorporate into your everyday life. So get up and move from your desk. Pick any activity you enjoy that increases your pulse. Having a training partner increases the likelihood that you'll actually work out.

Remember the main purpose of eating is to fuel yourself with energy. We eat to boost brainpower, not just to satisfy hunger. Inventory your food choices last week. How much of your diet consisted of energy-sustaining foods vs. energy-depleting foods? If you're not where you want to be, try one of the great tools and apps that track your nutrition.

Skill 2: Manage Your Time

Many of us spend our time and energy reacting to whatev-

er stress, demands, or urgencies come our way—whether or not they help us achieve our highest priorities. Managing time in this environment is as much about choosing what not to do as choosing what to do.

Define the leader you want to be. To know what to say no to, you must first define your big yes—what's most important to you. Years from now, what do you wish your team would say about you? What are your leadership values and priorities?

Stay flexible when urgencies arise. Even if you've carefully structured your time, the day will not go as planned and urgencies will arise—more or less depending on the nature of your work. So leave some space in your schedule for unexpected emergencies.

Make time for your priorities through weekly planning. At the beginning of each week, put the "Big Rocks"(your priorities based on your values) in your schedule first, and let the gravel (smaller tasks and minutiae) fill in the schedule around them. Take 10 minutes each day to modify your plan based on current conditions.

Skill 3: Coach Your Team to Manage Their Time and Energy

Just as you are responsible for the results of your team, you are also in some ways responsible for the energy of the team. Leaders need to be mindful of when creativity has lapsed or when people simply need a break to recharge.

Be a role model. As a leader, your behavior by default becomes the standard for everyone else. Unless you deliberately, clearly, and repeatedly set expectations, your team will interpret how *you* work as how *they* should work.

Create more energy. In your meetings, pay attention to the task at hand and your team's energy level. If you sense a gap, set the tone, pace, and engagement level. Don't think you need to be the cheerleader and muster up the energy for everyone. Instead, simple activities can boost energy, like beginning the meeting with quick life updates from volunteers, asking everyone to stand up, or getting into pairs to brainstorm about a solution to a key project.

Researcher and leadership expert Liz Wiseman asks, "Are you the genius in the room or the genius maker?" This is one of the most insightful questions in leadership. You can't be both at the same time—you have to choose.

Leaders with enduring careers are genius makers. You have to figure out what kind of leader your people need, which could be different from the leader you might have been trying to be.

Becoming a great leader takes time, repetition, successes, and failures—they're all equal parts of the formula. So relax, and give yourself some space. It's a journey, and it's worth it.

THE SUMMARY IN BRIEF

Organizations face many challenges in today's shaky economy — com-petitive battles, increased costs, decreased margins, and a host of other internal and exter-nal forces. In order to shore up their companies' respons-es to these factors, today's leaders must be able to take the goals they set for their organizations and turn them into results. Unfortunately, too many companies struggle to bridge the gap between goals and results — they cre-ate solid, logical, even bold plans, but are unable to execute properly.

Honeywell CEO Larry Bossidy and management advisor Ram Charan contend that the reason for this gap is that businesspeople do not think about execution as a discipline or a cornerstone of a business' culture —and they must. From middle management all the way up to CEO, a compa-ny's leaders must recognize execu-tion as the most important collective set of activities in which they can engage. No more is there room for leaders who rely merely on their vision to get from goals to results; to survive, they must get more involved in the details of execution. There is much work to be done, and ***Execution*** shows you how to do it.

IN THIS SUMMARY, YOU WILL LEARN:

- Why Execution Is Necessary.
- Seven Essential Behaviors.
- Creating the Framework for Cultural Change.
- The Three Core Processes of Execution.

Why Execution Is Necessary

While there exists an enormous amount of scholarship and research on management techniques and strategic thinking, hardly anyone speaks of execution in the same terms. To understand execution, you must keep three things in mind:

1. **Execution Is a Discipline.** No worthwhile business strategy can be planned without taking into account how to execute it. Execution is a systematic process of rigorously discussing hows and whats, questioning, tenaciously following through, and ensuring accountability.
2. **Execution Is the Major Job of a Business Leader.** Many business leaders like to think that the top dog is exempt from the details of actually running things, that setting strategy from the mountaintop is enough. In reality, only a leader can make execution happen, through deep personal involvement.
3. **Execution Must Be a Core Element of a Business Culture.** Execution must be embedded in the reward systems and in the norms of behavior that everyone practices.

The Forgotten Skill

Every truly great leader has an instinct for execution, but that instinct is not typically cultivated in the selection, training and development of leaders. A high proportion of those who actually rise to the top of an organization make their mark as high-level thinkers, uninterested and (as a result) uninvolved in the "how" of getting things done. Many do not realize what needs to be done to convert a vision into specific tasks.

The crucial component of dialogue between leaders and those subordinates who help them execute a strategy is typically lacking. Leaders don't know to involve people from all affected areas of a strategic plan's outcome in the initial shaping of the plan. They don't think to ask those people about the hows of the plan's execution. As a result, leaders never set milestones for the progress of the plan, nor do they put contingency plans into place to deal with unexpected issues.

In other words, when leaders are allowed to remain detached and rendered incapable of developing skills and experience related to execution, efforts at creating and running an execution strategy will fail, from the top down.

Compaq Vs. Dell — Execution Made the Difference

Former Compaq CEO Eckhard Pfeiffer had an ambitious strategy — before any of his competitors, he saw that the so-called Wintel architecture (the combination of the Windows operating system and Intel's constant innovation) would serve for everything from handheld computers to linked networks of servers. Pfeiffer broadened Compaq's base through numerous acquisitions in an attempt to serve all the computing needs of enterprise customers. He moved at breakneck speed on his bold strategic vision and, by 1998, was poised to dominate the industry.

In the end, though, the strategy failed to achieve such stellar results. Integrating the acquisitions and delivery on promises required better execution than Compaq was able to achieve. In addition, neither Pfeiffer nor his successor pursued the kind of execution necessary to make money as PCs became an increasingly commodity business.

Michael Dell, on the other hand, understood that kind of execution. His directsales and build-to-order approach formed the core of his business strategy, and stands as the chief reason Dell passed Compaq, both in market value and as the biggest maker of PCs.

Building Block 1: The Leader's Seven Essential Behaviors

What exactly should you as a leader who is in charge of execution do? How can you keep from being a micromanager, caught up in the details of running the business? The answer is to exhibit the seven essential behaviors of successful execution management:

- **Know your people and your business.** Leaders have to live their businesses. In companies that don't execute, the leaders are usually out of touch with day-to-day realities. The bulk of information that reaches them is filtered — presented by direct reports with their own perceptions and agendas.
- **Insist on realism.** Many organizations are full of people who try to avoid or shake reality, because it is

Jack Welch's Hands-On Management

In the mid-1990s, a friend told Jack Welch, General Electric's CEO, about a new methodology for making a quantum increase in inventory turns in manufacturing operations. It was thought that GE could generate cash if it could increase its inventory turns across the company. The leading practitioner of the methodology was American Standard, whose plants had achieved as high as 40 inventory turns per plant, compared to the average of four at most companies.

Welch wasn't content to just get the concept, or to send some of his manufacturing people out to investigate it. Instead, he paid American Standard CEO Emmanuel Kampouris a visit, in order to understand the workings personally. He also accepted an invitation to speak at the company, and spent the better part of one evening's dinner querying two successful American Standard plant managers about the details of their respective operations — the tools, the social architecture, and how they overcame resistance to the new methodology.

By involving himself deeply and personally with the subject, Welch learned what it would take to execute such an initiative at GE, and was able to get the necessary changes rolling quickly throughout his huge company. By the time of his retirement in 2001, Welch saw GE's inventory turns double.

uncomfortable, or too revealing of mistakes made. Yet, realism is the heart of execution, and must be made a priority in every organization.

- **Set clear goals and priorities.** Leaders who execute focus on a very few clear priorities, for a number of reasons: 1) focusing on fewer (three to four) priorities will produce the best results from the resources at hand; and 2) people in contemporary organizations need a small number of clear priorities to execute well.
- **Follow through.** Clear, simple goals mean little if nobody takes them seriously. The failure to follow through is widespread in business and a major cause of poor execution. Leaders must surface conflicts that stand in the way of achieving results, and create follow through mechanisms, such as follow-up meetings, to ensure everyone will do what they're supposed to.
- **Reward the doers.** If you want people to produce specific results, you must reward them accordingly. Many corporations do such a poor job of linking rewards to performance that there's no correlation at all. When companies don't execute, chances are they don't measure, don't reward, and don't promote people who know how to get things done.
- **Expand people's capabilities.** One of the most important parts of a leader's job is passing on his or her experience and wisdom to the next generation of leaders, thereby expanding the capabilities of the entire organization.
- **Know yourself.** Everyone pays lip service to the idea that leading an organization requires strength of character; in execution, however, it is absolutely critical. Without such emotional fortitude, you can't be honest with yourself, deal honestly with business and organizational realities, or give people forthright assessments. This emotional fortitude is comprised of four core qualities: authenticity, self-awareness, self-mastery, and humility.

Building Block 2: Create the Framework For Cultural Change

When a business isn't doing well, its leaders often think about how to change the corporate culture. While they are correct in their assertion that the beliefs and behaviors of their people are at least as important as the strategies they execute (or, in some cases, fail to execute), most efforts at cultural change fail, in part because they are not linked to improving the company's outcomes. Cultural change gets real only when your aim is execution.

A New Way of Thinking

There's an adage that holds true in this discussion —we don't think ourselves into a new way of acting; we act ourselves into a new way of thinking.

This begins with demystifying the word culture. Stripped to its essence, the culture of an organization is the sum of its shared values, beliefs, and norms of behavior.

Some who endeavor to change an organization's culture often start with the intention of changing its values — its fundamental principles and standards, such as integrity or respect for the culture. What they should instead focus on changing are the beliefs within a company that influence

specific behaviors, things that are conditioned by training and experience. Behaviors are beliefs turned to action, the things that deliver results. To deliver better results, start with examining whether your organization's ingrained beliefs are helping the business perfect its execution.

Change Behavior by Changing Rewards

A business' culture defines what gets appreciated, respected, and, ultimately, rewarded; those rewards and their linkage to performance are the foundation of changing behavior. If a company rewards and promotes people for execution, its culture will change. However your organization determines rewards, the goal should be the same — your compensation and reward system must have the right yields. You must reward not simply on strong achievements on numbers, but also on the desirable behaviors that people adopt. Over time, your people will get stronger, as will your financial results.

The Importance of Dialogue

Another cultural factor to recognize is the importance of robust dialogue. You cannot have an execution culture without such a dialogue — one that brings reality to the surface through openness, candor, and informality. Your people must enter into such a dialogue with open minds, uncluttered by misconceptions or propaganda. Everyone must be open to speaking candidly, and to receiving the real opinions of others as well.

Building Block Three: Have the Right People In the Right Place

An organization's workers are its most reliable resource for generating excellent results year after year; their judgments, experiences and capabilities make the difference between success and failure.

Yet, the same leaders who exclaim that "people are our most important asset" usually do not think very hard about choosing the right people for the right jobs. Typically this is because they're thinking too much about how to make their companies bigger or better positioned globally. Over time, however, it's choosing the right people that creates competitive advantage.

Why, then, are the right people not in the right jobs? Here are some of the reasons — and what you can do about them:

- **Lack of knowledge.** Leaders often rely on sometimes fuzzy or prejudiced staff appraisals when placing people into positions. They should, instead, define the job in terms of its three or four nonnegotiable criteria —things the person must be able to do to succeed.
- **Lack of courage.** There are innumerable cases of the wrong person being kept in the wrong job, simply because the person's leader doesn't have the emotional fortitude to take decisive action, confront the person, and make a change. Such failures do considerable damage to a business; indeed, if the non-performer is high enough in the organization, he or she can be particularly destructive.
- **The psychological comfort factor.** Many jobs are filled with the wrong people because the leaders who promote them are comfortable with them, and the employees are loyal to those leaders. However, if that loyalty is based on the wrong factors (social reasons, rather than professional, etc.), it could be damaging. Often, breaking free of this comfort factor is exactly what a leader must do to bring about change.

When Reginald Jones — a cerebral, well-spoken person — selected Jack Welch — a blunt, irreverent, from-the-gut leader — to replace him as CEO of General Electric, many questioned the move. Jones, however, knew GE had to change, and that Welch possessed the right kind of personality and professional approach to get the job done. Jones broke free of the comfort factor, to the benefit of the company and its shareholders.

The People Process: Linking Strategy and Operations

The people process is more important than either the strategy or operations processes; if you don't get the people process right, you will never fulfill the potential of your business. A robust people process does three essential things:

- Evaluates individuals accurately and in depth.
- Provides a framework for identifying and developing the leadership talent the organization will need to execute its strategies in the future.
- Fills the leadership pipeline that is the basis of a trong succession plan.

A robust people process provides a powerful framework for determining the organization's talent needs over time, and for planning actions that will meet those needs. It is based on four building blocks: 1) linkage of people to strategy and operations; 2) development of the leadership

Strategy Milestones

NEAR TERM (0-2 YEARS)	MEDIUM TERM (2-5 YEARS)	LONG TERM (5+ YEARS)
• Expand beyond existing product line toward selling solutions • Launch new initiative to expand services to installed base • Secure new expertise in technology	• Further expand penetration in existing customer segments • Develop intermediate approaches to selling solutions to new customer segments • Evaluate and engage alliance partners	• Become pioneers of leapfrog technology • Build more useful alliances • Develop low-cost sourcing ideas

pipeline; 3) dealing with nonperformers; and 4) linking human resources to business results.

Linkage of People to Strategy and Operations

The first building block of the people process is its linkage to the strategic milestones (see example at right) over the near (0-2 years), medium (2-5 years) and long terms, as well as the operating plan targets. Business leaders create this linkage by making sure they have the right kinds and numbers of people to execute the strategy.

Be prepared to make tough decisions. The strategic milestones you set might necessitate a reevaluation of your leadership team, should you determine that the skill sets required to meet your near-, medium- and long-term goals will be beyond the reach of your current staff. This is a difficult social process — no one wants to tell good people they aren't capable of moving to the next level — but it must be done.

Development of the Leadership Pipeline

Meeting medium- and long-term milestones depends largely on having a pipeline of promising and promotable leaders. To determine the ability of current staff to take on larger responsibilities, you must conduct an assessment of their skills. This will reveal the adequacy of your leadership pipeline in terms of quantity and quality.

Analyzing succession depth and retention risk analysis is the essence of talent planning and building a leadership pipeline of high-potential people. The retention risk analysis looks at a person's potential marketability, as well as the risk a business faces if he or she leaves. Succession depth analysis determines whether the company has enough high-potential people to fill key positions. It also looks at whether there are high-potential people in the wrong jobs and whether key people will be lost if a job is not unblocked for them.

Such analysis helps an organization avoid two dangers: organizational inertia (keeping people in the same job too long) and moving people up too quickly.

Dealing with Nonperformers

Even the best people process doesn't get the right people in the right jobs 100 percent of the time; like-wise, it can't make everybody into a good performer. The final test of a people process is how well it distinguishes between those who have been promoted beyond their capabilities and need to be moved to other positions, and those who simply must be moved out.

Linking Human Resources to Business Results

Human Resources has to be integrated into the business process. It must be linked to strategy and operations, and to the employee assessments, across the enterprise. This is a different approach than many companies have taken in the past. At one time, managers might assign HR personnel to recruit or execute specific elements of a strategic plan, such as negotiating with a union if a plant would need to be shut down.

In today's execution-minded companies, HR is different. Personnel within the department are expected to have a point of view about how one achieves a business objective or strategic plan, just like any other participant in the management process. HR people must not only be well

trained in how to develop and retain people —they must also possess the business acumen, critical thinking skills, and ability to link strategy and execution. In other words, they must have the same tactical skills as any business leader.

The Strategy Process: Making the Link with People and Operations

A good strategic planning process requires the utmost attention to the hows of executing a strategy. A robust strategy is not a compilation of numbers, nor is it a

"crystal ball" forecast of extrapolated numbers for the next ten years. It must be an action plan that business leaders can rely on to reach their business objectives.

You need to identify and define the critical issues behind your strategy. You need to question the assumptions on which your strategy is based, and determine whether you have the organizational capability to execute the plan. You also need to link your strategy to your people process (to determine whether you have the right people in place to execute the strategy) and to your operating plan (to get your organization properly aligned to move forward).

Key Questions

A strong strategic plan must address several key questions:

1. What Is the Assessment of the External Environment? Every business operates within a shifting political, social and economic context. Your strategic plan must explicitly deal with those external forces and the assumptions they generate.

Examine everything from economic and demographic trends to new technologies and alliances between competitors, in order to anticipate changes that can affect your business.

2. How Well Do You Understand Existing Customers and Markets? People tend to look at their businesses from the inside out, choosing to focus so strongly on making and selling products and services that they lose awareness of the needs and buying behaviors of their customers.

Who makes purchasing decisions for your customers?It's likely different from customer to customer. In large companies, for example, purchasing agents might do the buying, while at smaller companies, your buyer might be the CFO. Each requires a different approach, which you can only take if you have that intimate customer knowledge in hand.

3. What Is the Best Way to Grow the Business Profitably? What are the obstacles to growth? Does your business need to develop new products or does it need to take existing ones into new channels and to new customers? Does it need to acquire other businesses to meet key customer needs?

Finding your best growth opportunities is key to building on successes and staving off failure.

4. Who Is the Competition? Sometimes businesses miss the emergence of new competitors who have more attractive value propositions for their customers.

Most often, companies underestimate the responses of competitors, or are so consumed by dealing with one set of competitors, they fail to see new competition come on the scene. Sometimes, however, they have the opposite problem — they overestimate the competition because they haven't asked the right questions, and they miss valuable opportunities to gain advantage.

5. Can the Business Execute the Strategy? An astonishing number of strategies fail because leaders do not make a realistic assessment of whether their organization can execute the plan. That won't be a problem if you're intimately involved in your business' three core processes. You should also be listening to your customers and suppliers, and encouraging your leaders to do the same.

6. Are the Short Term and Long Term Balanced? Strategy planning needs to be conducted in real time,

Dell Addresses The Future of the PC

In 2001, Dell Computer was beginning to face its critical issue — the dim long-term outlook for PCs. No matter how much market share Dell stood to gain, the market itself had no foreseeable heady growth. Initially, the company formed an alliance with EMC to market EMC's storage equipment. An even stronger option was to expand into the adjacent segment — servers — where the growth potential dwarfs that of PCs.

But the question remains — can Dell's low-margin, high-velocity model, which works so well for PCs, be effective with more technologically sophisticated servers? The jury, at this time, is still out.

Cross Pens and Market Segmentation

One way to effectively find your best growth opportunities is by mapping your market segments. To illustrate, consider A.T. Cross' segmentation of the luxury pen market. A simple map of Cross' market segments identifies three different consumers:

- **The individual who wants to buy such a pen for him or herself**
- **The person who buys a pen as a gift for another individual**
- **The corporation that buys thousands of pens, with its logo on them, for use as institutional gifts**

For each market segment, the product is essentially the same, but demand is different, as is the strategy. Each requires Cross to deal with different competitors, channels, economics and pricing.

connected to shifts in the competitive environment and the business' own changing strengths and weaknesses, which means you must define your company's mission in the short to medium term, as well as the long term.

By breaking down the plan in this manner, you bring reality to the plan and give your business an anchor for continued growth.

7. What Are the Critical Issues Facing the Business? Every business has a half dozen or so critical issues — the ones that can hurt it badly or prevent it from capitalizing on new opportunities or reaching its objectives.

8. How Will the Business Make Money on a Sustainable Basis? Every strategy must lay out clearly the specifics of the anatomy of a business — how it will make money now and in the future. This means understanding several key pieces of information — the drivers of cash, margin, velocity, revenue growth, market share, and competitive advantage. What pricing model will you follow, and are customers willing to pay a premium for your goods? How much cash do you require for working capital? What will your competitors' reactions be?

The Operations Process: Making the Link with Strategy and People

The strategy process defines where a business wants to go, and the people process defines who will get it there. The operating plan provides the path for those people, breaking long-term output into short-term targets.

An operating plan includes the programs (product launches, marketing plan, sales plan, etc.) that your business will complete within one year to reach the desired levels of such objectives as earnings, sales, margins, and cash flow. The assumptions on which the operating plan is based are linked to reality and are debated among the finance people and the line leaders who must execute. Indeed, while the leader must be intimately familiar with each of the processes involved in executing the strategy, he or she is not the only one who must be present and involved in operations planning; all of the people accountable for executing the plan must help construct it.

The starting point in creating an operating budget is a robust dialogue among all the relevant business leaders, who sit down together to understand the whole corporate picture, including all of the relationships among its parts. All leaders and their direct reports have been given the initial cut of the budget, as well as the assumptions for the external environment, competitor analyses, and targets for the year.

The plan is then built roughly as follows:

- Those present focus on the roughly 20 budget lines that typically account for 80 percent of the impact on business outcomes, such as product mix, operating margins, manufacturing costs, and so forth. Each function represented presents its action plans for meeting the proposed budget.
- With each presentation, the leader questions the assumptions to test their validity and asks how each action plan will affect the other businesses.
- After every function has its say, the group breaks up into subteams. Each subteam discusses alternatives and the effects other plans will have on their operation.
- The groups reconvene and load all their information into a common spreadsheet program. They can then see a picture of the budget, what makes sense, and what doesn't, as well as how each component synchronizes with all the others.
- The group repeats the process again, to reshape and refine information and alternatives, until the basic

budget and operating plans are complete. Typically, it requires four such cycles to come up with a winner.

As you go through the process above, keep in mind two important issues:

- **Synchronization**. All the moving parts of the organization must have a common understanding of the external environment and other crucial factors — in other words, the left hand must know what the right hand is doing. Synchronizing includes matching the goals of the interdependent parts and linking their priorities with other parts of the organization. That way, when conditions change, synchronization realigns the multiple priorities and reallocates resources.
- **Assumptions**. An operating plan addresses the critical issues in execution by building the budget on realities. How well your business leaders understand these realities is a key factor in the success of your plan. Debate on underlying assumptions is one of the most critical parts of any operating review — you cannot set realistic goals until you have debated the assumptions behind them.

Once you've built an operating plan, you must then monitor its outcomes over the course of the year. One outcome of the operations process is identifying targets that clearly and specifically reflect not only what a business wants to achieve, but what it is likely to achieve —because they are based on the most realistic assumptions and on the hows of achieving them.

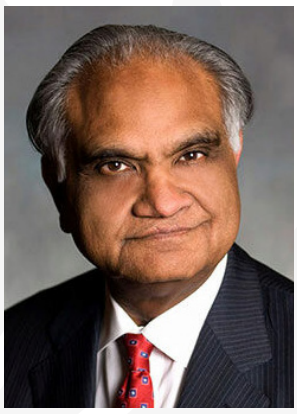
In addition to establishing clear targets, you can learn a lot from building an operating plan. When you participate in such a review, you debate the very guts of your business. All involved parties get to see the company, both as a whole and as a collection of independently moving parts. They also learn how to allocate and reassign resources when the environment changes.

GM's Synchronized Response To September 11

The events of September 11, 2001, created real concern in Detroit that demand for vehicles would significantly decrease. In response, Ron Zarella, General Motors' vice president for North America, conceived of zero percent financing, and implementing it put demand into high gear. His timing was perfect — in November, the Federal Reserve reduced interest rates to a 40-year low of 1.75 percent. Consumers were able to refinance and gain cash for down payments, which sent demand skyrocketing.

The move required an operating plan to reprogram and reallocate resources to synchronize GM's various moving parts, helping the company determine what kinds of vehicles to build, in which plants, and where to send them, how much advertising money the company should spend, where they should spend it, and on which products. Synchronizing production and advertising was crucial — with margins cut by the zero percent financing, an imbalance between production and advertising would both lose sales and raise costs.

As it turned out, the program opened up a big opportunity for GM. Though other automakers joined the financing bandwagon, GM's swift execution and pinpoint synchronization gave the company an immediate boost in market share.



Larry Bossidy is Chairman and former CEO of Honeywell International. Ram Charan is an advi-sor to CEOs and senior executives and author of ***What the CEO Wants You to Know*** and other books.

THE SUMMARY IN BRIEF

The way we work and what we expect from our work is not the same as it was a few decades (or centuries) ago. So, why does the way we lead continues to remain the same?

The book, ***Expand the Circle: Enlightened Leadership for Our New World of Work*** gives us a kaleidoscopic view of what modern leadership looks like. It gently peels the layers of the "Expand the Circle" framework. Throughout our voyage across the book, we learn how to lead ourselves, others, our teams, our organizations, and finally, the world.

Author Matt Poepsel ushers us into the next era of leadership by helping us learn the enlightened leadership principles, aspire to bring them to our organizations, and make the necessary effort to move beyond our self-imposed limitations. He familiarizes us with a comprehensive set of hard-hitting truths and actionable tools to help us take on the enlightened leadership approach.

IN THIS SUMMARY, YOU WILL LEARN:

- About the Expand Your Circle Framework.
- How to overcome your self-imposed limitations.
- How to cultivate an enlightened leadership approach.
- How to Assess, Aspire, and Act your way toward enlightened leadership.

Introduction

Many workers today find they can adequately meet their basic and even mid-level needs through virtually any employer. Beyond that, the work they do fails to satisfy them and kills their productivity, engagement, performance, and intent to stay.

This view of the work and the worker implies that an inherent disconnect exists in the modern workplace. What's missing is something that can help workers meet their existential needs while performing meaningful and necessary work in organizations. Fortunately, enlightened leadership can make that critical connection. It is a leadership approach characterized by opening oneself to new beliefs and practices inspired by ancient wisdom and grounded in modern science.

In the chapters that follow, we'll see the benefits that stem from the techniques I've incorporated into my Expand the Circle enlightened leadership framework. This framework includes five progressive layers: Lead Yourself, Lead Others, Lead Your Team, Lead Your Organization, and Lead the World.

Part 1: The Map

Chapter 1: Lead Yourself

As a leader, before you effectively lead others, you must learn to lead yourself. This involves investing in personal reflection and self-mastery to deepen your leadership capacity. Leading yourself is about building the pillars of awareness, acceptance, confidence, authenticity, and transcendence.

An enlightened leader is a self-aware leader. Examine your personal values, guiding beliefs, strengths, limitations, and motivation to lead. Make checking in with yourself a regular habit. Shift from avoiding negative experiences to appreciating them. Remember, no leader is perfect. Rather than hide away your perceived flaws, accept that they're an essential part of you. Learn from your setbacks and your shortcomings.

The road to confidence starts from the expectation that you will succeed. Build on that foundation by appreciating the value you create as a leader. Remember that self-confidence and self-esteem precede competence. Be fully authentic. Strive to exhibit the values, attitudes, and behaviors that align with your most authentic self. Understand that transcendence is about thinking bigger. Your willingness to transcend self-absorption and self-limiting boundaries will unlock your next leadership level.

Chapter 2: Lead Others

When we Expand the Circle beyond ourselves alone, we arrive at our relationships with Others. This step requires mastering the art of empathy, altruism, trust, fairness, and connectedness. Move beyond your self-interest by concerning yourself deeply with others' experiences, objectives, strengths, limitations, and circumstances. Put their welfare and success on par with your own.

Exercise your empathy muscles by pausing to consider what those around you may be feeling. Push past any reservations and take steps to improve the well-being and circumstances of others. You may not directly experience a corresponding benefit in the short term, but leadership is about the long game. Remember, trust increases speed and reduces effort. Extend trust early and willingly by making yourself trustworthy and investing in building and maintaining trust in your relationships with others.

Enlightened leadership is also about equanimity and exchange. Seek equity in your relationships with others, not by pretending that you have no biases but rather by being aware of them and offsetting them to your best ability. Increase your awareness and appreciation regarding how we're all intrinsically connected in ways we don't always consider. Finally, tap into our unique human bond to boost the flow of positive intent and action between us.

Chapter 3: Lead Your Team

When we Expand the Circle beyond relationships, we reach the level of our Team. Enlightened leadership helps balance complex team dynamics while improving the team's performance, welfare, and commitment.

Recognize that a team can accomplish exponentially more than isolated individuals. Create conditions for team success by applying enlightened leadership principles at the collective level. Clarify your objective to create energy and momentum. Hone your ability to craft compelling stories and make a habit of sharing them with your team to keep them moving in the right direction.

Remember, humans are wired with a need to belong. Foster a tangible identity for your team and ensure that team members see the inherent benefits in group membership and the collective pursuit of the team objectives. Enhance collaboration and mutual sacrifice in pursuit of team objectives and the overall welfare of team members.

Psychological safety is a prerequisite to effective teamwork.

Create an environment where team members are unafraid of the repercussions of membership, offering a counterpoint, or highlighting risks and challenges. Difficult times can either pull your team apart or bring it together. Strengthen the bonds between team members through recognition, appreciation, and honesty to create an enduring connection.

Chapter 4: Lead Your Organization

When we Expand the Circle beyond a single team, we reach the level of the Organization.

But an organization is like a freight train. It takes a great deal of energy to get it started, and its momentum can make it difficult to maneuver. So always stay vigilant at the controls. Be intentional when defining and supporting your mission and purpose. Its magnetic qualities will keep you on track and propel your forward.

Always stick together and act as one. With culture, consistency and reinforcement are key. Communicate your culture broadly and take steps to ensure attitudes and behaviors constantly reflect it. You can only achieve a multiplier effect from aligned efforts. Be mindful of the competing goals and splintered interests that naturally crop up in complex situations.

Focus on the wellness of the workplace. By making employee wellness a priority, you care for those who make everything possible. Their health and happiness will show up in the workplace and beyond it.

Chapter 5: Lead the World

Just when we feel we can't Expand the Circle any further, we discover that we can pass beyond the boundaries of our organizations and out into the world. Make an impact on the world at large by extending your leadership beyond the traditional confines of your organization and let it repay you for your effort. Rather than attempt to leave work behind, consider what lessons, tools, and techniques may help you leverage your leadership. A little creativity will go a long way.

Remember, your community is full of people who work together to support one another. Bring enlightened leadership into your everyday interactions and exchanges. While it may seem as if we are separate from one another, we share a common bond of humanity. This is a time when it pays not to mind your own business.

We are also imposing an increasingly high toll on our planet. Shift the balance by making it a priority to create and participate in sustainability programs and education. Finally, don't ignore the existential questions that shape our lives and our work. Go beyond. Push past the boundary and connect with your enlightened leadership potential.

Part 2: The Path

Chapter 6: Becoming An Enlightened Leader

The path toward becoming an enlightened leader comprises three steps: Assessment, Aspiration, and Action. The following pages will guide you through each of these steps toward enlightened leadership.

The Assessment guide will help you pinpoint areas where you'd most like to improve. Creating an Aspiration framework (or goal setting) will help you set realistic and achievable goals. Taking Action will help you make real progress and gain confidence in your capabilities.

Chapter 7: Assessment – Know Thyself

The self-assessment area presents Yes or No questions related to the topics found in each layer of the Expand the Circle framework. These layers include: Lead Yourself, Lead Others, Lead Your Team, Lead Your Organization, and Lead the World. By responding to these questions, you can raise your awareness of specific layers or elements where you would like to concentrate your focus and improvement efforts. Considering "today" as your baseline, you can return to this assessment later to compare how your responses may have evolved.

Chapter 8: Aspiration – The Will Before the Way

Becoming an enlightened leader is a transformative experience. A successful journey requires three key elements I refer to as know, how, can do, and want to. We're each presented with opportunities to practice an enlightened leadership approach nearly every moment, which means any of us can do it. The aspiration we declare signifies we want to improve and grow.

It will help you know how to Expand the Circle. You can do it based on your opportunity and ability to practice enlightened leadership every minute of every day. If you develop your want to by cultivating a sincere wish to liberate yourself and serve others, you will prepare yourself to follow through on your aspiration.

Chapter 9: Action – Steps Along the Path

Now that your preparation work is complete, you're ready

to take action.

The exercise for increasing your self-awareness involves identifying your most closely held personal values: Accountability, Courage, Creativity, Dedication, Discipline, Efficiency, Empathy, Enthusiasm, Humor, Persistence, Positivity, Resilience, Support, Transparency, Trustworthiness, and Vision.

Choose your top ten values from the list. Narrow your values to the top five, top three, and so on. Finally, choose your single most closely held personal value, the one you would most like to amplify in your leadership.

The exercise for boosting your capacity for acceptance involves identifying self-judgment triggers. It involves asking the Who, What, and When questions. Who made you discount your own achievements by accomplishing something? What characteristic of thought or behavior do you dislike about yourself? When did you experience a failure that caused you to discount your self-worth? After determining these triggers, focus on accepting the totality of yourself, including your less desirable characteristics.

The exercise of confidence involves assessing forces that erode your confidence and determining how you can remedy them in your leadership. It is all about gaining clarity about what it means to live a life that is in harmony with our true selves and involves answering the Person, Project, and Purpose questions:

- "Who is a person in your life who you thoroughly wish to be successful?"
- "What is a project or initiative that you would like to see be successful?"
- "What is a movement or a change in the world that you would like to see be successful?"

After uncovering the first layer of the Expand the Circle framework, it's time to progress through the other layers until you finally become an enlightened leader.

Part 3: The Lamp

Chapter 10: Lighting A Lamp for Other Leaders

Enlightened leadership can transform your approach, but you don't have to stop there. Engage other leaders and invite them to step onto the path as well. Take time to fully immerse yourself in the framework and exercises.

Be prepared to connect the dots for decision-makers. Use your organization's current challenges and opportunities to highlight the framework's business benefits and corresponding elements. Consider beginning with a small-scale pilot program; your executive leadership team may be an ideal place to get things moving. Always think big. Even after you've built sufficient momentum, simply keep going.

Chapter 11: Tips for Executives

As an executive, you have three significant advantages: your voice is heard the loudest, you're the chief decision-maker when it comes to time, money, effort, and attention, and finally, you establish the priorities for your organization.

Your aspiring leaders look to you to set an example. So, use your elevated position to bring enlightened leadership into your organization. Remember, business issues are an indication that a better leadership approach is needed. Give your level-down leaders the resources and support they need to rise to the challenge. Tap into your position to create better operating efficiencies, more flexibility, and an attractive landing spot for high performers. Provide mechanisms where leaders can learn and apply new skills without fear of failure. Remember, when it comes to people, fast is slow, and slow is fast. Although changing longstanding patterns of thinking and doing is difficult, always be patient and celebrate continuous improvement.

Chapter 12: Tips for Team Leaders

As a team leader, your leadership as well as that of your team members is required for collective success. Take advantage of your proximity to your team members. Give them constant feedback and support and offer autonomy to increase your team's enthusiasm and follow-through. Look for team-oriented improvements that will allow everyone to work together in each area of development. When you've been inspired by something that helps you raise your game, consider sharing it with your team. Remember, professional growth takes time. So be sure to reinforce development exercises and topics until they become automatic.

Chapter 13: Tips for HR Leaders

As a Human Resources leader, you play a critical role in helping your organization and leaders at every level perform at their collective best. Do everything you can to create a people-first perspective. Executives are paying significantly more attention to people issues that affect the business. Take advantage of the shift by being strategic and opportunistic in your approach. Ask thoughtful questions

about the business and look for those areas where an enlightened leadership approach could pay dividends. Rather than fixate on the here and now, imagine how the organization will need to operate differently in the future.

Conclusion: The Formula

The final formula for increasing our capacity as enlightened leaders is:

Enlightened Leadership Capacity = (Mindfulness + Compassion + Wisdom)/Self-Interest

Our new world of work asks leaders to be more selfless than ever before. While minimizing our self-interest is far from easy, we must strive to do exactly that if we're to embrace an enlightened leadership approach. Minimizing our self-interest helps us heighten our mindfulness, compassion, and wisdom.

Pause for a moment to ponder what's possible and what's next. Your very next interaction can reflect an enlightened leadership approach if you're willing to seize the opportunity. You now have everything you need to send out wave after beneficial wave as you Expand the Circle.

Matt Poepsel is a writer and speaker focused on leadership, organizational performance, and personal growth. He holds a PhD in Psychology, an MBA, and a Certificate of Management Excellence from Harvard Business School. He's built a reputation of crafting stories and techniques that are as engaging as they are informative. Over the past two decades, Matt has motivated and inspired leaders at every level to boost their performance and positivity. He draws on his experiences as a software executive and consultant, a US Marine, an IRONMAN triathlete, and a student of Buddhist philosophy.

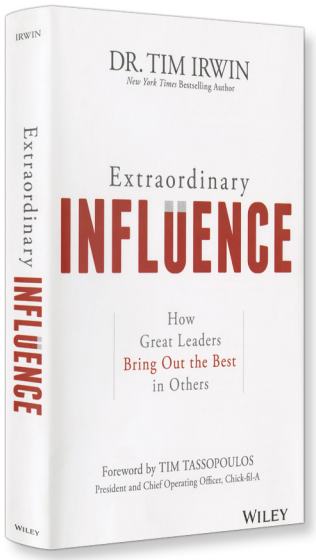
Leadership

Extraordinary Influence

How Great Leaders Bring Out the Best in Others



by Dr. Tim Irwin

THE SUMMARY IN BRIEF

Leaders have long searched for the key to help others excel and realize their potential. What if we could transform those under our influence and light fires of motivation? What if those we lead found great purpose in what they do and worked at their jobs with all their heart? Ultimately, don't we hope to foster intrinsic motivation so that the individuals we lead become better employees?

Recent discoveries of brain science and the wisdom of top CEO's that Dr. Tim Irwin interviewed for *Extraordinary Influence* provide exciting new answers. Irwin reveals that in most organizations, the methods used to provide feedback to employees, such as performance appraisal or multi-rater feedback systems, are not up to the task. Top CEO's confirm that these methods tend to engage a natural "negativity bias" that is hardwired in us all.

Instead, science in recent years has discovered that affirmation sets in motion huge positive changes in the brain. It releases certain neurochemicals associated with well-being and higher performance. Mobilizing this discovery, *Extraordinary Influence* offers a compelling new approach to align workers with an organization's mission, strategy and goals.

IN THIS SUMMARY, YOU WILL LEARN:

- Research showing that affirmation works better than constructive criticism.
- How to use Words of Life to strengthen people's core.
- The meaning of Alliance Feedback and how to use it most effectively.
- To motivate high-potential people and reinvent performance feedback.

Part I: The Science of Extraordinary Influence

Many Leaders Create an Effect They Did Not Intend

The age-old question for every organization is, how do we bring out the best in those we are responsible for leading? How do we get them to care? How do we ensure productivity, quality, timeliness and great attention to customers? How do we help them love their jobs? The answer to these questions seems to vary widely among different employees.

How we motivate another person or group of people to do something and do it well is a conundrum. It is surprising how often we resort to a default position of a negative consequence for not doing something versus an approach that actually results in a better worker and a better person.

We gain an extraordinary ability to transform others when we affirm them versus when we apply what might euphemistically be called "constructive criticism." Here are some phrases we hear routinely from the task-driven style of leadership.

- "I need to light a fire under her." — A phrase originally used to motivate chimney sweeps who feared climbing to the top inside a high chimney.
- "I'm going to hold you accountable." — Accountable is derived from the Old French word *acont*, such as counting money. The connotation is the thinly veiled threat that "You better do what I said to do."

The inherent belief reflected in these sayings is that "I'm going to get you to do something you are fundamentally resistant to doing." They suggest that workers or students or players or children are lazy, irresponsible, lacking ambition, and less intelligent and, therefore, require constant scrutiny to ensure that work gets done.

We might say, "That's a bit harsh." True, but in our drive to get results out of the people we manage or teach or coach or parent, we may adopt methods that appeal to our fundamental need to control outcomes.

It's now clear from a growing body of research that for a leader to be effective, it's vital that we spend time and energy in both task-oriented management as well as a framework that values the emotional and relational dimensions of the people we lead.

Here's the challenge: Recent brain research argues that many of the things we do to motivate others, in fact, accomplishes the exact opposite of what we intend. We inadvertently engage the wrong part of the brain, thus short-circuiting what influence we might want to have.

What if we could get people to work with all their heart? What we want as leaders, parents or teachers is to transform the attitudes, the work habits and the passion of those we influence — to get them to do the assigned task with a sense of commitment and energy.

New Brain Research Explains How We Bring Out the Best in Others

Why do we want affirmation? Of course, it feels good, but why? Aristotle observed that every person is drawn by a telos, or purpose, in their lives. Deep down, we want to know that we gave it our all to pursue high and noble ends and to realize a deep sense of significance in our lives. We long for confirmation that, in fact, our lives count for something more than just fighting gridlocked traffic.

The right kind of affirmation satisfies this compelling need. Deep affirmation gets to our core and affirms who we aspire to be. Although it is very satisfying to know deep down that we are pursuing purpose, perhaps the most powerful personal affirmation occurs when another person acknowledges the strength of our character.

When someone of significance affirms us particularly in a deep way, certain beliefs are formed. These beliefs are stored in our core — that person living inside us who thinks, feels, forms opinions and quietly speaks to us. As opportunities and circumstances occur, beliefs direct our actions. Affirmation from others whom we respect forms beliefs in our core that guide our actions.

Our brains benefit dramatically from affirmation. They *light up* with electrical activity. We feel more optimistic and work more productively. Conversely, criticism activates different parts of the brain that metaphorically make us go dark.

Brain research indicates that affirmation

- Buffers stress and improves higher cognitive thinking and problem-solving.
- Positively affects a region of the brain associated with subjective value, that is, the location of self-worth. The ventromedial prefrontal cortex evaluates how we subjectively feel about ourselves.
- Improves self-control and makes us more efficient.
- Makes us happier and more productive.
- Activates the ventromedial prefrontal cortex, which is related to positive behavior changes.
- Activates brain circuits that are affected by the release of hormones like oxytocin and vasopressin, both known for their role in trust and attachment.
- Fosters innovation — it activates areas of the brain associated with calmness and openness to new ideas.

In most organizations, the methods used to provide feedback to employees, such as performance appraisal or multi-rater feedback systems, often accomplish directly the opposite of what was intended because the recipients unrelentingly focus on their deficits. Brain science tells us that these methods tend to engage a natural *negativity bias*, which is hardwired in us all. In many respects, it also just seems easier to criticize.

There are methods to engage parts of the brain that are inherently better at problem solving and innovation. Great leaders work hard at not tapping into the negativity bias inherent in our brains and, instead, focus their energy on accessing the parts of our brains that make us innovative, better at solving problems and more resilient.

There is a clear case for discussing and remedying the behavior of followers who are out of alignment with the goals we've set, but we now have irrefutable evidence that how we bring about alignment makes a huge difference in the motivation and effectiveness of workers.

Let's establish that positive influence is the outcome we seek. If we want to exert extraordinary influence and bring out the best in those around us, we must master the art of affirmation. We must learn how to affirm individuals, teams and even whole organizations.

Part II: How Extraordinary Influence Works

Tactical Affirmation: Affirming Style and Competence

Affirmation must be thoughtfully directed to three dimensions in the human psyche, which makes any transformative influence we might exert with another person more effective. Affirmation varies according to

1. **Customary style** — those observable patterns that consistently characterize us. Our style determines how well others receive us and our ideas.
2. **Competence** — our skills, abilities and knowledge behind effective actions. Our competencies determine what we are able to do.
3. **Core** — our inner person — the leader inside us. Our core determines who we are — our character.

Affirmation of our style and competence belong in the category of *tactical influence*. These dimensions are the ground level, daily, transactional initiatives we use to do our jobs. Leaders use affirmation day-to-day, week-to-week.

Affirming someone's core is *strategic influence*. Strategic means far reaching, deeper, transformational and overarching. Strategic influence potentially changes those we lead in their inner person. Leaders use affirmation less frequently and more opportunistically.

Great leaders create an intentional culture of affirmation using the appropriate content of tactical and strategic affirmation. A healthy, well-functioning organization (or a family or a team) needs both tactical and strategic influence.

We all have our customary style, which defines us in fairly consistent ways others come to expect. Our style

exerts a huge impact on how well we wear on others. Most importantly, it determines how others receive us and our ideas. Our style also wraps around our abilities and skills — our competencies — and substantially determines how effectively those abilities can be deployed.

To affirm the style of those we lead, we must develop a vocabulary of style. As in most areas of human behavior, our customary style contains a light and a dark side. The four types of style — doer, advocate, idealist and challenger — include characteristics that tend to wear well with others as well as those that interfere with effectiveness.

For example, the doer uses focused action to accomplish tasks. Upsides of the doer include being practical, organized, focused and rational. The possible downsides include lack of attention to the interpersonal dimension, being low on passion and creativity, and displaying disrespect for those who lack technical skills and logic. Typical affirmations include, "Thank you for your focus on meeting the deadline" and "Thank you for bringing the discussion back to the real issues."

Our competencies, like judgment, make a huge impact on our success in work and in life. Praising the competence of anyone we seek to lead is vital. A number of CEOs interviewed spoke about how to affirm the work of our subordinates. These recommendations are summarized in the following five guidelines:

1. Show appreciation for the competencies underneath the actions.
2. CEOs recommended accomplishments be affirmed but also kept in context — why it mattered at the time.
3. Affirmation must be timely — real time.
4. Trust must precede feedback, particularly if the feedback is contrary.
5. Affirmation must emanate from an authentic place when feedback is given.

When a boss affirms a worker's style or competence, he or she grows in the conviction, "I am competent. I can do this." When new or more challenging circumstances arise, the affirmed person acts in concert with these beliefs.

Strategic Influence: How to Give Words of Life

To truly bring about personal transformation, we must reach a person's core with Words of Life. Our core has a voice, which social scientists sometimes call self-talk. Whether we are aware of it, there is a steady conversation going on inside us, and when we learn to pay attention to that voice, the revelations about ourselves can be at least informative if not startling.

Our core learns, forms opinions and serves as the chief repository of our beliefs. Our beliefs provide a major governance factor in our behavior. When our beliefs are sound and true, they lead to effective leadership. When those beliefs are errant, and we act on those errant beliefs, the results can be catastrophic.

Words of Life transform us, because they speak the language of the core. They are significantly different from the words we might use to affirm another's style or competence. Words of Life transform us and bring out the best in the important people we long to influence.

The act of affirming someone with Words of Life implants redemptive beliefs in a person's core, which, in turn, produces redemptive actions. Redemptive here means lifesaving, liberating, nurturing and transformative.

What is the common thread in Words of Life? These powerful words speak about our character — the unassailability of our inner person. They involve qualities such as integrity, courage, humility, judgment, authenticity, self-regulation, wisdom, candor, resilience and influence.

For example, one might praise another's authenticity by saying, "Your team really respects and trusts you. I believe that results from being truthful and realistic with them. You don't try to manipulate them with rosy forecasts not grounded in reality. Your peers really trust you as well. They believe whatever you tell them is true. Your authenticity is a huge asset, and I wish more people followed your example."

In most cases, leaders tend to affirm an action someone has taken. A far more powerful step is to affirm some dimension of a person's core which prompted the desired action.

How do we best convey Words of Life?

- We must have an intact core ourselves.
- We must be authentic.
- Our words must be carefully considered.
- We must use the right vocabulary — Words of Life draw from the well of character.
- Words of Life are conveyed upon a foundation of trust between the giver and the receiver.
- Words of Life may be given spontaneously or planned, as long as they are thoughtful and sincere.
- Words of Life must be given when the receiver is the sole focus at the moment.

Words of Death: Constructive Criticism Fails Because Our Brains Are Hard Wired for Something Better

Even if we possess an emotionally stalwart constitution, our spirit can still be crushed when we are the recipient of withering criticism, ridicule or shame from an important other, such as a parent, a coach, a teacher, a peer or a boss.

When we give feedback to a subordinate absent concern about his or her person, we bypass the parts of the person's brain that powers innovation, problem solving, creativity and self-worth. What's worse, we engage the part of the brain that shuts out any positive influence we might intend!

Here are some findings from brain research about what happens when we diminish people with criticism:

- Criticism engages our amygdala, the part of the brain that houses the "fight or flight" response.
- During criticism, our brains have less access to some of the most positive resources of the brain, such as higher order thinking, self-reflection, creativity, problem solving and stress regulation.
- During criticism, the recipient absorbs the negative emotions of the critic.
- Abusive supervision leads to extreme negative consequences such as decreased creativity, productivity, commitment and increased depression and anxiety.
- When employees don't see criticism as accurate and relevant to themselves, they become hostile and fail to see validity even when the feedback is applicable.
- There is a trickle-down effect wherein abusive department leaders create abusive team leaders.

Whether intended or not, the recipient of critical feedback hears that it's not *what we did*, but it's more about *who we are*. Disapproval and disparagement from an important person sends us a fundamental message that we're not okay. Criticism diminishes our self-worth, and our brains react with profound negativity. A key to happy and productive employees is a leader's consistently supportive behavior.

Like a family unit, positivity and negativity are often carried on across generations. A negative leader is more likely to groom negative leaders under his or her charge. Negativity is contagious, so it perpetuates negativity among those over whom we have influence.

Culture significantly influences our leadership behavior. An organizational culture that emphasizes structure, obligations and punishments for deviant behavior further diminishes followers' creative insight and attention span.

One of the phrases that we've heard all our lives is "constructive criticism." What it usually means is that "I'm going to gut you emotionally, but my motives are positive." There is usually nothing constructive about it and telling us in advance puts us on hyper alert. The term "constructive criticism" should be eradicated.

Alliance Feedback: What Seasoned CEOs Know About Helping Others Change

Without the use of negative feedback or criticism, how do we persuade those we lead to change what they are doing when they are off track, being ineffective, making mistakes or not acting consistently with the mission, goals or values of the organization?

Alliance Feedback describes how to get people in line with their own espoused values and aspirations and/or the mission, strategy, goals and values of their organization. Alliance Feedback points out contradictions between a person's intentions and his or her present behavior in a supportive manner.

There are two types of Alliance Feedback.

Aspirational Feedback tends to be focused on an individual's hopes and dreams. "You are more likely to achieve your aspirations if you do this." The fundamental idea is to be sure we create a linkage between something the person aspires to achieve and a change he or she needs to make.

Missional Feedback builds upon a boss and employee's mutual or collective desire to accomplish our organization's mission and mutually determined performance goals that they both believe are valuable contributions to the overall enterprise. When an employee departs from actions that support the mission and goals, it provides an opportunity to point out these incongruities.

The most important feature of the Missional Feedback conversation between a boss and subordinate is the establishment of a connection between the employee's work and the mission and goals which they mutually agree are relevant and important. There are eight conditions that make the above approach effective. These perspectives will galvanize our perspective and lay the groundwork for effective Alliance Feedback:

1. **Remember that our amygdala possesses an ever-present negativity bias**. It's wired to detect threats. In war zones, enemy combatants sometimes lay out trip wires with transparent fishing line connected to the detonator of an explosive charge.

When we want to help someone grow, we avoid their trip wires and are intentional about making the conversation feel safe.

2. **Be sure that we stay grounded ourselves.** We need to set aside distractions and make sure the recipient knows that he or she is our only focus at that moment. We need to prepare for the conversation and to make sure the timing is right for both of us.
3. **If we know deep down that a person is for us, we can hear just about anything they convey to us.** One way to avoid engaging the defensive side of a person's amygdala is to make sure the person feels safe.
4. **Attribute positive motives to the recipient** of Alliance Feedback.
5. **A critical aspect of Aspirational Feedback is that we want to help those we lead to become more self-aware** about how their actions potentially create a barrier to their aspirations.
6. **Some CEOs stressed that feedback should be encouraging and challenging** at the same time.
7. **The tone of the Alliance Feedback conversation must be professional** and adult at all times.
8. **There is a huge difference between discussing an action versus criticizing a person.** Alliance Feedback should be helpful without being demeaning.

Extraordinary Influence for Underperformers: Bringing Out the Best in Someone Who Has Lost His Way

Though not always, performance problems are typically rooted in a person's ineffective style, their lack of competence, or a breached core or some combination of the three.

One problem we all experience in vetting the talent and condition of someone's core is that a person's real self surfaces only with time and stress. We are always who we are given enough time and enough stress. Still, we must be good stewards of our organization's resources (time, energy and, often, money). We must be able to quickly size up whether we should deploy resources to get a person in line with the mission, strategies, goals and culture of the company.

When a person works in our organization and exhibits poor performance, how do we make the distinction between a person with a problem and a problem person? A series of questions help to get to the right answer quickly.

- Is the person performing their job overall with excellence? (Yes or No.)
- How well do the person's skills, ability and temperament fit the requirements of the position? (Great Fit/Adequate Fit/Poor Fit.)
- Does the person's poor performance seem to be temporary, circumstantial or more enduring? For example, does the person need to acquire technical knowledge or other skills to perform well in their job? Are there circumstances that account for an individual's temporary drop in performance, such as an ailing parent who needs special attention? Does the person work under a perpetual cloud of tension or constantly seem out of synch with the team?
- What is the likelihood that the person in question can perform well in their job in the future within a reasonable time frame? (High Likelihood/Low Likelihood.)

In answering the fourth question, it behooves us to be brutally honest.

A major dilemma is that we cannot exert extraordinary influence over everyone. Some individuals struggle within themselves such that no amount of affirmation or Alliance Feedback or other developmental resources can bring them in line inside the boundaries of our organization. Any number of resources may help heal a person's core, but any job with even normal day-to-day stresses is not the best place to get well, especially when their problems impose themselves on others. No one is perfect, and we all have a shadow in our core. We must have compassion for all while also recognizing that even healthy organizations are fragile. Compassion must be married to judgment and courage when dealing with a problem person.

Helping problem people leave the organization is, in fact, a key element to bringing out the best in others. The impact of a problem person can be so toxic if not removed that a leader forfeits the opportunity to bring out the best in those needed to conduct the vital work of the organization.

Part III: Special Applications of Extraordinary Influence

Extraordinary Influence for Teams: Three Levers for High Performance

A constant interplay exists among three dimensions in our lives — the I, the We and the It.

The I represents our individual hopes, dreams and concerns. The We represents the collective aspirations, interests

and potential conflicts among the group members. The It expresses our purpose, mission, task or quest.

A lever can be thought of as a great effect from a small cause. For a leader, these three dimensions function as levers. A leader's attention to the individuals, the group and the task constitute levers a leader uses to manage a team or even a whole organization. For a team to perform with excellence, all three require balanced attention. When any of the three is over or under emphasized, problems ensue. Despite the constantly shifting needs of a normal team, a skilled leader must learn to lever all three dimensions to restore the team to balance.

Individual team members — the I. We might ask, "Why do individual concerns need attention — we're building a team?" Individual team members must also be developed according to their specific needs and acknowledged for their individual contributions. Compensation, titles, special recognition and career paths represent just a few examples of actions that can be considered for individuals on even the most healthy and well-functioning teams. Attention to individuals does not reflect inattention to the team.

Asking a question or two that each team member answers about himself/herself gets a meeting rolling. For example, where did you grow up? What did you do after high school? Give a 60-second summary of your career highlights. What is an interesting but unknown fact about you? Who has been the person of greatest influence in your life? A warm-up exercise, such as these sample questions, engages the I and creates a readiness to attend to the We and the It.

Extraordinary influence on the We. To harvest the benefits of teamwork, an effective team leader must generate a strong sense of the We. Like any enduring relationship, the potential synergy of working with others does not spontaneously materialize. It requires disciplined intentionality.

The We also has a collective core, which reflects the team's character. When a team is healthy and well-functioning, Words of Life should be spoken to the team's core. When a team is dysfunctional, Alliance Feedback is in order.

Extraordinary influence on the It — the mission or quest of the team. When thoughtfully formed and skillfully communicated, a purpose or mission (the It) provides motivation for the team. A great mission becomes a quest. A team leader exerts extraordinary influence with this powerful tool. It contains the potential to take even the most mundane work or project and lifts the collective self-esteem.

The leading hotelier in the world and founder of the Ritz Carlton Hotel Company and Capella Hotels, Horst Schulze, makes a practice of personally opening all his new hotels. We would probably agree that public perception ranks some hotel jobs lower on the desirability scale, such as housekeepers. Yet, Schulze urges his housekeepers to be the best in the world. During training, he stresses to housekeepers, "We are ladies and gentlemen serving ladies and gentlemen."

Along with many other supporting policies and expectations, housekeepers are empowered to make many decisions in the interest of providing a superior customer experience to all guests. Schulze's mission to be the best, supported with hundreds of other quality practices, led to the Ritz Carlton receiving the prestigious Malcolm Baldridge award, not once but twice, thus making it the only company in the hotel industry to achieve such a distinction.

The accomplishment of a great mission provides the leader with tremendous opportunities to affirm the team.

Motivating High Potentials: The Four Transformations to Extraordinarily Influence the Best

One of the great tests of leadership is the development of other leaders. The senior leaders of many organizations know that some subset of their workers is more talented, smart, clever, hard-working and has better people skills than others. Many organizations refer to these individuals as high-potential employees/leaders, or HiPos.

The general view is that HiPos should be given an enriched or higher octane set of job experiences and development or training resources to prepare them for bigger jobs in the future. In addition to whatever technical skills might be important to acquire, there are four actions we must take to accelerate our HiPos' development.

1. **Affirm HiPos' style and competence but especially their core**. Give HiPos Words of Life. Provide frequent Alliance Feedback, and be sure to connect the feedback to HiPos' personal aspirations — their hopes and dreams. Encourage self-affirmation. We foster self-affirmation by asking questions like, "Tell me what you feel you did well in the meeting today."
2. **Encourage HiPos to actively build and guard their core**. A strong core comprises the most important element of great leadership. The condition of our core determines the course of our lives, in general, and our effectiveness as a leader, in particular. In most cases, a strong core is the differentiator between those who build a great legacy versus those who end up in cataclysmic failure, such

as those who were fired from their organization because of a breach of their core.

3. **Urge HiPos to lead from influence and not from position or power**. Position power is overrated! Leaders must thoughtfully place HiPos in positions that require they learn to lead by influence and not by position power. We want to mentor our HiPos to lead with influence for one main reason. It engages those workers we lead to adopt higher levels of commitment to the mission, strategies and goals. It creates ownership, whereby followers take ownership of the outcomes.
4. **Help HiPos develop courage**. Our affirmation of someone we mentor is highly effective in transforming that person, especially when we speak Words of Life into their core. In particular, we want to foster the development of courage, a vital attribute for senior management roles. By the very nature of the job, leaders must take risks. Our HiPos will not achieve their potential without developing courage. To develop great leaders, we must encourage them. Words of Life result in the *encouragement* of the recipient.

Performance Appraisals That Lead to Extraordinary Influence

Performance feedback meetings are probably the most universally hated experiences in many organizations, both from the giver's and the receiver's perspective. In most cases, managers intend their feedback to improve employees' performance and increase their value to the organization. The reality is that most performance appraisals accomplish the exact opposite of what's intended. They close off communication and create stress and resentment on the receiver's part.

It seems obvious that the basic premise of most performance appraisal systems throws the hyper-defensive part of the brain (the amygdala) into overdrive. Some large companies are addressing common problems with the traditional systems. For example, Microsoft, Lilly, GE, Dell, The Gap, Accenture, Adobe, New York Life and others are getting rid of rating categories. Goldman Sachs, known for their highly mathematical 1-to-9 scales, recently stopped rating employees with numbers.

What must any reinvention of performance feedback include? A check-the-box system may inform, but it will not transform. Ultimately, a leader's transformational influence depends upon *the person of the leader*. It's the personal deepening of the leader who must learn to connect with his or her followers in a more substantive way. A leader's solid core makes transformation of others possible.

The perspectives and practices to be valued when an organization wants to reinvent its performance review system include timeliness and affirmation of the core.

One of the most profound changes is frequency. There are a few irrefutable laws of human behavior. One law maintains that the closer to the occurrence of a certain behavior feedback ensues, the more effective the feedback.

The most important opportunities for transformation occur in our core. Affirmation of someone's core is likely less frequent but highly impactful when given. Affirmation of style and conduct lend themselves to frequent feedback. Affirmation of a person's core is likely more opportunistic.

The What, How and Who dimensions must be included in any re-engineered performance management system. Most legacy systems focus on *what* a person accomplished. The *how* may sometimes be included, but the *who* is where true transformation occurs. Brain research makes it clear that the most powerful Alliance Feedback ties performance comments to the standard of an employee's personal hopes, dreams and aspirations.

Tying development to the achievement of personal career goals connects with the parts of our brain responsible for innovation and resourcefulness.

Build trust. Have a foundation of trust, and be sure that the recipient of your feedback knows that, down deep, you are really "for them." This is particularly important when giving Alliance Feedback.

Think about the amazing world we could create for our organizations, our families and our communities if affirmation flowed freely and criticism became rare.

Let's just start by making a lot more affirming statements and a lot less diminishing ones.

Extreme Ownership

How U.S. Navy SEALs Lead and Win

By Jocko Willink and Leif Babin

Jocko Willink was a Navy SEAL for 20 years, rising through the ranks to become commander of Task Unit Bruiser—the most decorated Special Operations unit of the Iraq War. After retiring, Willink continued on the disciplined path of success, co-founding Echelon Front, a premier leadership and management consulting company, writing several #1 New York Times bestsellers.

Leif Babin served 9 years as a Navy SEAL. He was in combat in Iraq during the Battle of Ramadi, a conflict that resulted in numerous medals for his efforts. After his tours, Babin served as a Navy SEAL instructor before forming Echelon Front with Jocko Willink, a leadership training group that uses the lessons and expertise the pair learned as SEALs to train leaders beyond the military.

A Book Review by Soundview

Fulfill Your Ultimate Purpose

In ***Extreme Ownership: How U.S. Navy SEALs Lead and Win***, Jocko Willink and Leif Babin explain and illustrate how good leadership relies on a set of concrete principles. These principles stand whether the leader in question is leading SEAL teams in Iraq, leading in the boardroom of a Fortune 500 company, or is leading a small non-profit. The skills Willink and Babin acquired in the military helped them launch their own civilian company in which they help struggling leaders turn their teams around by changing their own actions.

As retired SEALs, they do not allow leaders to pass the blame on to their team members. They believe in the concept of extreme ownership, and they expect every leader to take full responsibility for their team and the actions and outcomes that are derived from the work of the team. While this is true of the people at the top of the leadership chain, it is also true of leaders all the way down the ranks. As Willink and Babin believe it is important for people to understand what it is they are asked to do, they provide plenty of examples to help explain to their reader how and why these principles work. To do this, they begin each chapter with a detailed anecdote of a situation they encountered in Iraq or through training that demonstrates the need for the principle. They then describe the principle and finally conclude the chapter with an example of how the principle works in businesses in the real world. Their book also contains numerous photographs taken in Iraq during wartime.

Winning the War Within

The first of three parts of *Extreme Ownership* deals with winning the war within and explains the concept of extreme ownership. Throughout their book, Willink and Babin discuss the difficulty of urban combat in Iraq. The environment they were in where streets and buildings were not marked made determining who the enemy was and where both the enemy and friendly troops were difficult. On one night, hindered by darkness and the confusion of the presence of many troops, the tragedy of blue-on-blue assault ensued. This means that American and Iraqi forces were firing on soldiers on their own side. Willink describes it as "the worst thing that could happen." Afterwards, people

up the chain of command wanted to know why and how this could happen. Such a breakdown occurred because people at all levels made mistakes. When attempting to piece together what happened, Willink came to one final conclusion: "I was responsible for everything in Task Unit Bruiser. I had to take complete ownership of what went wrong. That is what a leader does - even if it means getting fired. If anyone was to be blamed and fired for what happened, let it be me." When meeting to discuss the incident, Willink took full ownership of what happened. Because he took ownership on himself, the leader, and because he took full responsibility for his people, his commanding officer and master chief developed more, not less, trust in him, and relevant parties were able to review the situation and make changes that could make such an incident less likely to happen again in the future.

Willink and Babin believe that quality leadership is vital, and that leads to the title of their second principle: "No Bad Teams, Only Bad Leaders." In this section, they write about the importance of standards. They do not believe what a leader says is as important as the behavior they either will or will not tolerate from those beneath them. This is so important because poor performance can ensue if leaders do not hold their subordinates accountable for high performance. To exemplify how important leadership is to a team, Willink and Babin discuss the performance of boat crews during Hell Week. During the competitions of one particular Hell Week, one team continually performed well, and one consistently performed poorly. Babin explains how they switched the leaders of these two teams, and suddenly the performance of the lower performing team came up on par with that of the previously best team. The good leader elevated his new team while the cohesion he developed in his previous team did not slack once he left. In short, the problem was not the team, but the leader.

Willink and Babin's third principle states, "In order to convince and inspire others to follow and accomplish a mission, a leader must be a true believer in the mission." In short, this means that leaders must understand why it is they are engaging in the mission they are in, so they can communicate that to others and so that they will be willing to take the risks necessary to carry out the task. They describe one business client that rolled out a new compensation plan for employees. Managers became angry at the new plan because they believed their people would seek out employment elsewhere when the plan rolled out. Once the CEO explained the rationale for the new structure and how it would help both individuals and the company, the managers came on board with it. Willink and Babin maintain that it is important for leaders to understand why they are asking their subordinates to perform certain tasks, and if they do not understand the rationale themselves, then they must ask those above them for clarification, so they can lead their team well.

The fourth and final principle related to "winning the war within" is to "check the ego." Willink writes about how one SEAL commander suggested letting Iraqi troops figure out how to manage the space themselves rather than train them because he was afraid that the Iraqi troop was getting so well prepared that they could outperform the SEALs. This could lead to the SEALs losing their mission. Willink insisted that they must do what is best for the mission even if that means the SEALs being relocated. This was not an isolated incident with one commander as Willink saw it elsewhere as well. He insists that "Ego clouds and disrupts everything: the planning process, the ability to take good advice, and the ability to accept constructive criticism." While everyone has an ego, he insists that people keep it in check so groups can perform optimally.

Laws of Combat

The first law of combat the authors discuss is entitled "cover and move." They explain that the basis of cover and move is teamwork. Teams must avoid performing in silos and pay attention to those around them. Since even the best member of a team fails if the team fails, teamwork is important for all. To illustrate this concept, they discuss a company in which the production manager has serious issues with a subsidiary company his team must use for transportation. In his estimation, this subsidiary company was incompetent and hurt his own objectives. Willink explains that the fact that both companies are owned by the same parent company should help them rather than hinder them because their objectives should be the same. He then explains how since their overall mission, what is best for the parent company, should be the same, and they should be working together to achieve that mission. He recommended that the production manager speak with the other team and find out a way to work together. When the production manager did this, he learned that the other company was seriously understaffed. Because he now understood that this company was not out to sabotage his own, they were able to work together to find solutions. They started working together for the betterment of all.

Willink and Babin's second law of combat is to simplify. In this chapter, they discuss a proposed patrol that Willink found to be unnecessarily complex, especially in the dangerous area they were operating in. Because they simplified the patrol, when the patrol was attacked, they were closer to support and were able to get the help they needed. He explains that a more complicated plan could have been catastrophic. He also explains that it is not just in combat that things go wrong especially if they are too complex. Things go wrong all the time in all sorts of contexts, and simplified plans help people deal with these unexpected problems. Along with this, a leader's team must understand the plan clearly. If they do not understand the plan, it may need to be simplified. He writes, "You must brief to ensure the lowest common denominator on the team understands."

Next Babin goes on to explain prioritizing and executing, the third law of combat. To explain this law, he describes a situation in Iraq in which the troops were in a building, and when they went to leave it, they learned that there was an IED near their only viable exit. The fighters made their way to an uncovered roof top, and one of the men fell many feet to the ground between buildings and needed rescue. To get out of this predicament safely, leadership had to prioritize and execute. In short, they had to determine what needed to be done first, and then do it before moving on to the next objective. Because they used this technique, all of the fighters were able to get out of the situation safely, including the man who had

> *The idea of prioritizing and executing can help when people find themselves overwhelmed."*

fallen. He explains how problems can snowball in combat, and it is the job of the leader to remain calm. To remind themselves of this, they say, "Relax. Look around, make a call." It does not work to try to complete multiple tasks at one time. The idea of prioritizing and executing can help when people find themselves overwhelmed.

The last law of combat they describe is that of decentralized command. Willink explains how he expects his subordinate officers to lead when they are in the field, and he expects them to lead aggressively. This is an important concept because if subordinate leaders lead well where they are with their teams, that leaves Willink and other more senior leaders to focus on the bigger picture. He explains that there is no one to look at this bigger picture when he, himself, becomes tangled up in problems his subordinate leaders can and should handle. To enable this, frontline leaders must trust their senior leaders, and they also must understand their mission. It also requires senior leaders to trust their subordinate leaders. Willink explains how military leaders throughout the centuries have learned this task, and he observed the principle in MOUNT training undergone by Task Unit Bruiser. During this training, the SEAL leaders attempted to control everything. At times, this meant one person was overseeing over thirty soldiers. People simply cannot control that many people. To correct this problem, they broke the soldiers up into smaller groups containing between four and six SEALs. This allowed for multiple levels of leadership, and each leader had a manageable number of soldiers to lead. Willink and Babin maintain that "Human beings are generally not capable of managing more than six to ten people, particularly when things go sideways and inevitable contingencies arise." When teams are broken down into multiple levels, it becomes important that leaders at all levels understand what it is their teams must do and why. In addition, junior leaders must understand which decisions they do and do not have the authority to make, and they must communicate this with their more senior leaders.

Sustaining Victory

The first principle relating to sustaining victory is to plan. In this section, Babin discusses a hostage rescue. The SEALs worked with an Iraqi security force to complete this rescue. They were able to successfully complete this mission because they planned well and executed the plan. He describes mission planning as "never taking anything for granted, preparing for likely contingencies, and maximizing the chance of mission success while minimizing the risk to the troops executing the operation." He explains that SEALs can never be sure there is no danger in what they are setting out to accomplish. When performing the hostage rescue, his team learned that there were deadly threats, but this did not hinder them because they had already taken these threats into account during their planning process.

Willink and Babin assert that "planning begins with mission analysis." A clear understanding of the mission is key if leaders are to have a strong focus and solid execution. A solid mission "must be carefully refined and simplified so that it is explicitly clear and specifically focused to achieve the greater strategic vision for which that mission is a part." This mission then must be explained to leaders down the line. Leaders at different levels must understand both the purpose and the desired result of the mission if planning is to be effective. That means the mission must be clearly articulated and then clearly communicated to the leaders at various levels. Willink and Babin maintain that if a brief is to be successful, "all members participating in an operation will understand the strategic mission, the Commander's Intent, the specific mission of the team, and their individual roles within the mission." They will also understand various contingencies and what they should do when faced with those contingencies. It is important that even the busiest of groups takes the time to analyze its plans continuously in order to improve future missions or projects. This planning process should be standardized across an organization. Babin explains that he took this principle to a business he was aiding. He helped them standardize their processes using some of the tools that SEALs use.

Willink and Babin then move on to discuss both leading up the chain of command and leading down the chain of command. Babin first discusses leading down the chain of command. To explain this, Babin discusses his thought processes when his time in Iraq was coming to an end. He and Willink discussed all they were able to accomplish with their team in Iraq. Despite the crushing loss of fellow combat warriors, they understood that they had successfully taken control of important neighborhoods from insurgents and that populations were now more safe from insurgents. Despite this, when he returned to the States, Babin heard pundits discussing those lost in ways that made them seem like they were just numbers. SEALs themselves would at times criticize the work of those on the front lines. Babin was sure that if anybody truly understood what they accomplished in Iraq, they would see the tremendous benefit of the work they did. When Willink put together a presentation of their accomplishments in Iraq, Babin realized that even as second in command, he did not fully understand the work they did. This made him realize that if even he did not understand the full implication of what they did, then surely his frontline troops who were not privy to such information would struggle to understand it. Willink and Babin both learned that they needed to lead better down the chain of command by asking

more questions of those above them and giving more plan ownership to those down the chain of command on the front lines. It is imperative that senior leaders communicate to junior leaders everything it is they need to know to be successful. This is what they mean by leading down the chain of command.

When discussing leading up the chain of command, Willink and Babin state that a person should take direct responsibility if their boss "isn't making a decision in a timely manner or providing necessary support for you and your team." This means that a leader must look to his or her superior for the information or resources needed and ask for them clearly. They acknowledge that leading up the chain of command takes more tact than leading down because a person does not have the authority that comes from rank when dealing with those of a higher rank. Leading up also requires the humility to understand that a person may not have all the information their leader has and that a person's team or objective might not be the highest priority at the moment to the leader. People need to ask questions of those above them in order to understand more while still understanding that one of their most important jobs is to support their own leader.

The two last principles discussed are decisiveness and uncertainty and discipline equals freedom. Regarding uncertainty, they maintain that a leader very frequently does not have all the information they need to be sure of their path. Despite this, they must avoid letting fear paralyze them and must act with decisiveness. They must make this decision with the information that is available. In regards to discipline, Willink discusses the searches his people were tasked with completing in Iraq. These searches could take considerable time and at times resulted in missed details because they were not carried out with discipline. Once this problem was realized, they worked to create a structured process for these searches. While his people were at first reluctant to carry out searches in this manner, fearing they would take too long, they learned that they shortened the time it took to perform the searches and made them more effective. Discipline ultimately gives people freedom, Willink and Babin maintain. Discipline makes it easier for teams to adapt and be flexible.

The principles Willink and Babin discuss in their book were learned through their time in combat and while training the SEALs. The principles helped them lead in the most dangerous parts of Iraq during critical periods in the war. The principles do not just apply to warfare, however. They apply to leaders at all ranks. They share these principles both in their book and with the companies they consult for, taking wartime principles to companies and organizations of all sizes. Because of this, Willink and Babin are able to demonstrate that great leadership is great leadership wherever it is found, especially when it is centered around the concept of extreme ownership.

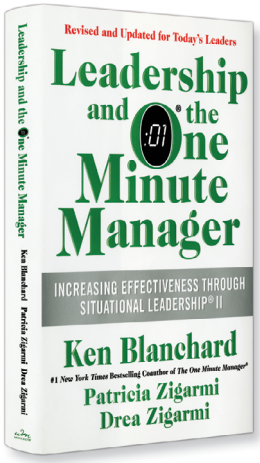
LEADERSHIP AND THE ONE MINUTE MANAGER

Increasing Effectiveness Through Situational Leadership® II

by Ken Blanchard, Patricia Zigarmi and Drea Zigarmi

© 2013 Harper Collins, 143 pages



Ken Blanchard first developed the concept of Situational Leadership® in collaboration with the late Paul Hersey at Ohio University in the late 1960's. Additional research combined with feedback from practicing leaders led to the development of a revised model — Situational Leadership® II — in the 1980's that was presented in the first edition of *Leadership and the One Minute Manager* in 1985, co-authored with fellow founding associates of The Ken Blanchard Companies, Patricia and Drea Zigarmi. The first edition featured the One Minute Manager as part of a series of books and training materials designed to teach effective management and leadership skills. This newly revised and updated edition, released in 2013, presents the Situational Leadership® II model in the form of a business parable featuring an entrepreneur who is eager to improve her leadership abilities and an organizational leadership team, led by the One Minute Manager (OMM), who guide her through the principles and tenets of the model.

The entrepreneur, who is never named, is overworked and frustrated by her apparent inability to find leadership team members who were "willing to work as hard as she was." As a result, she finds herself unable or unwilling to delegate tasks because she doesn't have the confidence in her direct reports to complete those tasks to the same high level of quality that she could deliver if she did them herself. Through a series of conversations with the OMM and individual members of his leadership team (each one representing a specific leadership model component), the entrepreneur is introduced to a leadership philosophy that challenges her own preconceptions and presents alternative methodologies to better manage her people. In place of distinct chapters, the story is told primarily through dialog vignettes, interspersed with quotes and motivational aide-mémoires.

Different Strokes for Different Folks

The writers introduce the foundational concept of Situational Leadership® by inverting the traditional top-down organizational pyramid in favor of a bottom-up leadership approach. From this vantage point, the entrepreneur is challenged to consider leadership as a position of service rather than of responsibility. Rather than having employees responsible for helping leaders to achieve their goals for the areas for which they are held accountable — "planning, organizing, and evaluating everything that happens in the organization" — effective leaders should, it is argued, focus on providing those employees with the skills and resources needed to achieve the goals that are agreed between them. Since those goals will be agreed with individual employees, leaders will then need to be responsive to the specific needs of each employee, rather than just enforcing company-wide command-and-control policies that are more concerned with catching employees doing something wrong.

The entrepreneur is understandably reticent to embrace the concept of being responsive to each individual member of her team — "I don't have time to be responsive to the needs of all my people." — but the OMM quickly clarifies that each of those team members will need varying levels of direction and support to be effective, and that by following a model of Situational Leadership®, those varying levels can be identified, prepared for, and managed in a more efficient manner than her current frustrations with simple task delegation.

Leadership Styles

The first conversation between the entrepreneur and the OMM reverses her perception of leadership from consistent enforcement of policies and procedures to: "how you behave over time, when you're trying to influence others, as perceived by them." How your team perceives your leadership style can be very different from your intent, and the larger the disconnect, the more likely it is that your communication and your team will struggle.

The writers extrapolate this point by having the OMM make members of his leadership team available for one-on-one conversations with the entrepreneur. She meets the first three as a means of reviewing different leadership styles:

• Larry McKenzie, recently appointed VP for people and talent development for the OMM's company, benefits from a directive leadership style from the OMM. Since "people development is [the OMM's] baby," Larry expects a direct approach from his boss and is happy for his expert input. Since Larry was promoted from compensation and benefits, he is appreciative of the OMM's willingness to trust Larry's knowledge and experience in those areas.

The Four Leadership Styles

Style 1 — Directing
Style 2 — Coaching
Style 3 — Supporting
Style 4 — Delegating

• Cindy Liu, director of finance, describes a very collaborative leadership style from the OMM with a lot of support and encouragement in recognition of her more than fifteen years of experience in finance.

• John DaLapa, director of operations, describes a less definitive leadership style from the OMM, where the approach varies according to different aspects of John's complex role in the company. Areas where John is left alone with minimal oversight are, from his perspective, reflective of trust, respect and confidence in him based on proven performance. In areas where John has less expertise and confidence, the OMM takes a more supportive role and can be directive if needed.

The Skills of a Situational Leader

Once the entrepreneur has been introduced to Situational Leadership® in action, the OMM simplifies the model into three skills:

1. Goal Setting (as part of an overall performance management system).
2. Diagnosis of the individual development needs of your team members.
3. Matching — learning to use the appropriate style of leadership for individual team members in providing specific combinations of direction and support in multiple scenarios.

Performance Management

The writers introduce the entrepreneur to the importance of goal setting through a meeting with a fourth OMM leadership team member – Randy Rodriguez in the people and talent development group, who designed the company's performance management system. The system is divided into three parts – performance planning, day-to-day coaching, and performance evaluation. He discusses goal setting as a critical component of performance planning and contrasts the emphasis on clear and mutually agreed goals as a foundation for successful performance as being distinct from the traditional approach of formal performance evaluation as a starting point. The former maps out a plan for positive achievement with clear expectations on both sides, whereas the latter tends to emphasize promissory goals that are never agreed upon and usually ignored when, for whatever reason, performance targets aren't met.

Once goals are agreed upon by both the team member and the leader, performance standards are then set for each goal through an alignment conversation that uses the acronym S.M.A.R.T to ensure that the goals are both attainable and motivational. SMART stands for:

• **S**pecific — so that each person knows what they are responsible for and when it needs to be done.

• **M**otivating — so that your people are inspired to do their best work.

• **A**ttainable — so that each person feels that the goals can be achieved as opposed to being a de-motivating exercise in futility.

• **R**elevant — ensures that the employee sees his or her role in the greater organizational framework.

• **T**rackable — this element is a critical part of the agreement reached by both employee and leader. Knowing what is expected of you and when depends on regular feedback on your progress, but too frequent feedback using metrics that don't seem to relate to the goal can be perceived as controlling and even punitive.

The writers address any confusion over the difficulties in reaching agreement on every goal with every

employee by presenting their own Golden Rule — "Whoever owns the gold makes the rules." In other words, the company is committed to a collaborative goal-setting process but since ultimate responsibility for the achievement of those goals lies with the leader, there has to be a final word.

Diagnosis

The second skill of Situational Leadership®, diagnosis, underlines the importance of day-to-day coaching in reinforcing the successful achievement of goals. Without the coaching element, the leadership style simply reverts to what the OMM describes as 'seagull management.' "After goal setting, seagull managers are never around until you make a mistake. Then they fly in, make a lot of noise, dump on everybody, and fly out."

In a conversation with a fifth OMM leadership team member, Kathy Gupta, leader of the IT Group, the entrepreneur learns how to diagnose an individual's development level for a specific goal or task. That level is measured using two factors: skill, experience and past performance are recognized as competence, with a combination of confidence and motivation recognized as commitment. Using these two factors, Kathy outlines four development levels:

1. D1: Low competence and high commitment
2. D2: Low to some competence and low commitment
3. D3: Moderate to high competence and variable commitment
4. D4: High competence and high commitment

The writers flesh out these four development levels with labeled examples of each one:

• D1 (low competence and high commitment) is labeled as an "enthusiastic beginner," with lots of confidence and motivation but lacking enough skills and experience to know what you don't know.

• D2 (low to some competence and low commitment) is labeled as a "disillusioned learner," where you have picked up just enough skills and knowledge to identify just how much more work lies ahead of you, which lessens your motivation.

• D3 (moderate to high competence and variable commitment) is labeled as "capable but cautious contributors," who have developed some competence and experience but still lack the confidence to work independently of direction from their leader.

• D4 (high competence and high commitment) represents the "self-reliant achiever," who is highly motivated and can be counted on to work without direction.

The writers make an important distinction in presenting these levels as a scale. While D4 is aspirational, being a D1 or D2 for a particular task or goal should not be seen as a negative assessment, but rather as a pragmatic acknowledgment that no one can be good at everything and that everyone will be presented with a task for which they have limited experience. Situational Leadership® enables leaders to provide the appropriate amount of direction and support for that specific task, rather than the traditional scenario of leaving the employee to sink or swim. If that employee is already overwhelmed, he may be desperately trying to 'fake it until he makes it,' which could have negative consequences for the company. This perspective is summed-up in a simple statement: "Everyone has peak performance potential — you just need to know where they are coming from and meet them there."

One Minute

Take a minute out of your day to look into the faces of the people you lead and realize that they are your most important resource.

Matching

The third Situational Leadership® style, matching, is introduced in a conversation with the OMM that revisits the entrepreneurs' meetings with his leadership team as a means of explaining the four leadership styles. In the same way as development levels are a combination of competence and commitment, the four leadership styles represent different combinations of two leadership behaviors: Directive behavior, defined by such terms as "decide, teach, observe and provide frequent feedback", and Supportive behavior, defined as, "listen, involve, facilitate and encourage":

1. S1: Directing — High directive and low supportive
2. S2: Coaching — High directive and high supportive
3. S3: Supporting — Low directive and high supportive
4. S4 Delegating — Low directive and low supportive.

The four styles are further explained by demonstrating how three of the OMM's team members can be seen to align to a specific style:

• Larry McKenzie needs an S1 (Directing) approach because he is self-motivated but lacks the experience in his new role to be fully independent.

• Cindy Liu needs an S3 (Supporting) approach because she is highly competent, needs little direction, and is supported through a collaborative relationship with her leader.

• John DaLapa, by contrast, has a complex role that warrants a combination of styles according to the specific task or goal.

As the conversation between the OMM and the entrepreneur continues, the natural alignment between the four development levels and the four leaderships styles is explored:

• The D1 enthusiastic beginners need a S1 (Directing) approach where the high directive style balances their low competence, and the low supportive style allows their high commitment to flourish.

• The D2 disillusioned learners benefit from a S2 (Coaching) approach where the directive involvement continues to support their growing competence, and the high supportive style provides reassurance for their reduced confidence.

• The D3 capable but cautious contributors benefit from a S3 (Supporting) approach where the low directive allows their developed skills and experience to shine, and the high supportive style offers encouragement to test their growing skills.

• The D4 self-reliant achievers benefit from a S4 (Delegating) approach where they have clearly earned your trust and confidence and therefore need a low directive style with a collaborative relationship that makes you available when they need you.

Communication and Transparency

The writers present a clear and logical development of employee competence and commitment managed by a carefully balanced combination of directive and supportive leadership behavior. However, a successful implementation of Situational Leadership® depends on open communication as to what is happening in the company. As the OMM warns, if a diagnosed D4 employee suddenly sees less of you as you adjust to a S4 leadership style, your perspective on that transition would most likely be positive, since you would be, in effect, delegating more responsibility to that employee. From his perspective, however, your sudden absence could be interpreted as abandonment or abdication rather than increased trust and confidence. At the other end of the scale, a D1 employee might interpret your increased presence as micromanagement and a clear sign of a lack of confidence in him, as opposed to a sincere effort on your part to be more supportive and committed to his success.

One Best Way

The entrepreneur begins her journey in search of one best way of leadership that will accommodate all of her current delegation headaches and basically make her life easier. Situational Leadership® may not be easier, but it clearly delineates a leadership approach that is more representative of her earnest desire to provide clear direction to those who need it while giving greater freedom and opportunity to those who do not. Beneath it all, there is a clear commitment to supporting the success and personal development of her team.

WHY YOU WILL LIKE THIS BOOK

This parable approach to leadership succeeds in presenting a well-traveled topic from a fresh perspective. The use of a practical setting with recognizable business characters facilitates both comprehension and adoption of the material. The Situational Leadership® II content can easily be adapted to graphical presentation for visual learners, and the examples used would resonate with a diverse audience across a range of industry sectors.

The authors: Ken Blanchard is the co-author of *The One Minute Manager®* and over fifty other books. He is the chief spiritual officer of The Ken Blanchard Companies, a full-service global management training and development company that he and his wife, Dr. Marjorie Blanchard, founded in 1979. **Patricia Zigarmi** is VP for business development at The Ken Blanchard Companies. With her leadership, ongoing initiatives for SLII® training have been implemented with several major corporations. **Drea Zigarmi** is the president of Zigarmi Associates, Inc., and the director of research and development for The Ken Blanchard Companies. He has co-developed several Blanchard training and development products, including its "Leader Behavior Analysis" instruments.

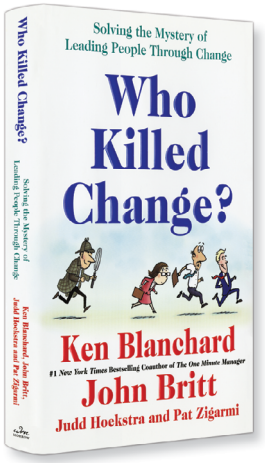
WHO KILLED CHANGE?
Solving the Mystery of Leading People Through Change

by Ken Blanchard, John Britt, Judd Hoekstra and Patricia Zigarmi

© 2009 Harper Collins, 143 pages

Change initiatives are among the most difficult projects to manage. Launched with much fanfare and exhortation, the shelf-life is often short before the project either dies on the vine or is overtaken by yet another newer initiative. The post-mortem (assuming there is one) usually reveals a string of causes so that no one person can be held solely accountable. In *Who Killed Change?* Ken Blanchard and his co-authors explore the challenges of effective change management through the experienced eyes of Agent Mike McNally in this humorous and insightful business parable. Written in the style of a 1930's film noir whodunit with McNally as the cynical detective who has seen it all before, the failure of a change initiative at the ACME organization is examined as a homicide — the third that McNally has seen this month. In fact, McNally is an expert in "Change fatalities," and it is his insights, derived from years of experience in investigating organizations, that provide the core tenets of this book.



Scene of the Crime

The events that typically precede McNally's arrival have established a clear pattern over the years:

"Change would be introduced to an organization with varying degrees of reception. From all appearances, Change would begin to integrate into the organization and then, without warning, Change would be found dead, quite often with no apparent injury. The evidence was always scant and a sole perpetrator had never been identified."

The Usual Suspects

With an initial assessment from the medical examiner of death by poisoning, McNally is assigned an assistant, Anna, and begins his investigation by rounding up the usual suspects — the primary drivers in any Change initiative. Each alliterative character is interrogated, with McNally's expertise and experience revealing significant weaknesses and dysfunctionality. Each character professes innocence of the crime, but McNally's tough interrogation style pushes beyond their superficial summaries of their involvement with and responsibility for Change to identify critical failures in how Change was introduced, integrated and supported:

1. Carolina Culture: Rather than defining the: "predominant attitudes, beliefs and behavior patterns that characterize the organization," Carolina is timid and reticent, blending into the background of every department, and only coming to life when asked to recite ACME's value statement, which she does in her loudest possible voice:

- **V** is for Very Efficient
- **A** is for A Customer Focus
- **L** is for Lots of Teamwork
- **U** is for Understanding
- **E** is for Excellence

2. Chase Commitment: Chase misinterprets his responsibility to the Change initiative as motivating the organization through inspirational sermons rather than motivating each individual to engage in the new behaviors required by the new initiative. He sees himself as being passionate about Change and about the "fairly predictable concerns" his employees have when Change is introduced. Even though ACME has had multiple Changes over the years, Chase has consistently

been unsuccessful in leveraging his knowledge and experience to convince leadership to fully resource and support each project. He sees his own exhaustion as a sign of the amount of communication needed, but McNally sees it as a case of commitment not being supported by active engagement.

3. Spence Sponsorship: As a senior leader, Spence has the authority to deploy the necessary resources to support the successful implementation of Change. This should include modelling the appropriate behavior to reflect the organizational commitment to Change — "walking the talk" — as well as selecting the right members of each department for the Change Leadership Team. Spence's interpretation of his role is more inspirational in design — kicking off the initiative with a speech that incorporates all the relevant keywords and mantras, and then delegating the remainder of the workload to his direct reports. McNally's assessment is very direct: "You're over-estimating the power of your words. As Sponsorship, you must do more than introduce Change. You must be visible and supportive way beyond the introductory meetings. Your actions are much more powerful than your words."

The Primary Suspects

Culture, Commitment, Sponsorship, Change leadership team, Communication, Urgency, Vision, Plan, Budget, Trainer, Incentive, Performance management, Accountability

4. Chester (aka "Pecs") of the Change Leadership Team: In the absence of proactive leadership from Spence and the support of team members who have an established track record of successful Change initiatives, Chester's role has been relegated to supporting Change by simply holding him up, rather than carrying him forward and out into the organization. The consequences of this for Chester's physical appearance are significant, leaving him with "pencil legs" and the upper-body strength of a professional bodybuilder, earning him the nickname "Pecs." The lack of direct engagement from both Spence and the Change Leadership Team leads to a failure to overcome the usual cynicism and resistance to yet another Change initiative. From McNally's perspective: "The key is balance — doing some of the heavy lifting at the front end and then continuing to support Change throughout the change process."

5. Clair Communication: With dead batteries in her hearing aid and chronic laryngitis, Clair's ability to support Change in getting the word out to those members of the organization who would be directly impacted by the new work environment is severely limited. That absence of information is quickly filled with mixed messages that become: "an easy excuse for people to ignore Change."

6. Ernest Urgency: Ernest's lack of concern for the murder of Change because of all the other: "things on my plate that I have to take care of," is a clear indicator of misplaced priorities. Rather than outlining the nature of the business crisis that prompted the need for Change, he spends more time trying to convince people to just accept change as a necessary evil. By investing time with those managers and employees and asking them why they thought the organization needed Change, the emphasis on the pain of the status quo would have provided a positive introduction instead of needing a pushy sales pitch.

7. Victoria Vision: The fact that Victoria wears rose-colored glasses gives McNally the same concerns as Clair Communication with her chronic laryngitis and a non-functioning hearing aid. Her overly-optimistic perspective fails to deliver a clear and detailed vision of what would be happening before during and after the arrival of Change at ACME. As a result, there is no buy-in to a detailed picture of how the organization would operate after the Change initiative had been completed.

8. Perry Plan: Since Change cannot take place in isolation as the sole priority of the organization, the responsibility for clarifying: "the priority of the Change relative to all other initiatives and responsibilities," should fall to Perry. As a pilot, however, Perry interprets his role as a "big picture" strategist preparing ACME for the Changes that are coming. The equally important tactical component, from his perspective, can be delegated to others — in this case, Prioritization, Infrastructure, and Measurement — to do the detail work with Bailey Budget and Peter Performance Management. As a result, Perry is happy to attach his name to any and all strategic Changes without any concern for the minutiae of implementation. The irony of a pilot needing the support of an air traffic controller and experienced ground crew to complete a successful flight is completely lost on him.

9. Bailey Budget: Bailey takes her responsibilities at ACME very seriously. She acknowledges the work that the managers do: "in their respective areas," but she sees her job as: "carrying the weight of fiscal responsibility for ACME on my shoulders." Her interpretation of that role involves rescinding the funding of any given Change if she determines that the work being done by all of the other primary drivers is insufficient to deliver a successful outcome: "If these characters aren't doing what's necessary to enable Change, there is no reason for me to commit any funds to a Change that's destined to fail." Taking a leadership role in determining the appropriate allocation of limited resources to ensure a positive return on Investment (ROI) before Change is initiated, seems to be beyond her comprehension, and it comes as no surprise to McNally that several of her colleagues think that she murdered Change.

> "Change can be successful only when the usual characters in an organization combine their unique talents and consistently involve others in initiating, implementing and sustaining change."
>
> — *Who Killed Change?*

10. Terry Trainer: Terry, the gum-chewing, sloppily dressed trainer, sees himself as being stuck between Change wanting as many practice sessions as possible and Bailey Budget refusing all requests for funding for those sessions. He would like to "play the game" and coach the employees in the new skills and commitment they will need to play on the new field that Change is building, but in the absence of funding, all he can do is watch ESPN highlights in his office. Any obligation to get everyone on the same page in support of the follow through needed for Change to be successful is, from his perspective, out of his hands.

11. Isabella Incentive: Isabella's role, while dismissed as "cheerleading" by Terry, is vital to the reinforcement of desired behaviors and results to enable Change. Recognition and rewards typically have a monetary component, but with Bailey Budget watching the checkbook, all requests were denied. From McNally's perspective, while Isabella may not have been a prime suspect, her choice not to engage any of the other team members to go to bat against Bailey qualifies her as an accessory to murder.

12. Peter Performance Management: Visiting Peter's office and seeing the stacks of paperwork on every surface gives McNally valuable insight into the highly stressed environment of Performance Management. Peter was supportive of Change but constantly worried about everyone staying on top of their regular tasks while dealing with the new responsibilities that Change usually brings. His documentation reveals that the resources Change was asking for were not outrageous — "just the basics" — but they were automatically denied by Bailey Budget.

13. Aidan Accountability: The responsibility for follow through should fall squarely on Aidan's shoulders. Behaviors and results should be closely measured to make sure they are in line with goals and expectations. If there are any deviations, it should fall to him to institute consequences to get Change back on track. Aidan's interpretation of the role is a little different. He built a department that included Delegation (a minimum-wage role), Follow-up (an unpaid intern), and Consequences who is: "here on some kind of grant." The result was that Aidan was able to move a lot of issues off his plate with no concern for resolution. This, in turn, gave him the objective insight to determine that Change was not murdered but rather committed suicide in the face of a failing project initiative. It falls to McNally to point out the irony that Aidan sees no sense of accountability on the part of his department in Change's struggle.

Super Cops & Stakeholders

After spending a day-and-a-half investigating the usual suspects, McNally realizes that he has made a mistake by not interviewing any of the stakeholders who were directly impacted by Change at ACME. He identifies two employees from a project that was going well, and two from a project that was struggling in the hopes of getting a more detailed picture of what went wrong. What McNally finds instead are four other characters that contributed to the death of Change:

- **Super Cop:** Any employee who blocks forward progress with any new idea by posting barriers and signs reminding everyone involved that: "We've Never Done It That Way Before."
- **Reprimand:** Shows up: "only when an employee makes a mistake…informing everyone how stupid they are."
- **Hypocrite**: A chameleon character who sings from the "we, we, we" hymn sheet and then goes off and does his own thing — usually the exact opposite of "we, we, we."
- **Convertible:** Wants to drive everything his way or the highway, without involving anyone who really understands the impact that Change will have in the running of his department.

The Autopsy Report

McNally finishes his investigation with a conversation with the medical examiner over the comprehensive autopsy report. Change, it turns out, wasn't deliberately poisoned. He suffered heart failure as a result of the build-up of a toxin known as C-15 (named after the 15 other Change deaths that had occurred when the toxin was finally identified.) A thorough review of Change's medical records revealed that he arrived at ACME in good health, but within six months he had lost twenty-five pounds and was struggling with insomnia, anxiety, nervousness and fingernails that were: "chewed down to the quick."

Whodunit

In true whodunit fashion, McNally calls all of the suspects together in one room to review the results of his investigation and, everyone assumes, to reveal the murderer of Change. The result is a detailed assessment of how Change was allowed to fail at ACME. McNally brings his extensive experience to bear in critiquing each of the usual suspects by outlining how they should have supported Change in comparison to what they actually did (or didn't do) here. It falls to Ernest Urgency to demand to know who killed Change, but McNally's answer is not what any of them wanted nor expected to hear:

"All of you killed Change…The poison that killed [him] did so very slowly. I can't prove it but I believe the poison was neglect — your neglect. He tried to survive without the support he needed from you but ultimately, his is not a one-man job. He finally lost his heart."

The book concludes with McNally getting a call that another Change character is in the hospital after being stabbed in the back. He is still alive, and McNally rushes to his aid. The reader is left with a comprehensive summary of McNally's extensive investigative techniques, including the recommended questions to ask of your usual suspects if you are committed to helping Change thrive in your organization.

WHY YOU WILL LIKE THIS BOOK

The use of a business parable built around a whodunit mystery is a very creative and humorous approach to a classic business problem. Each alliterative character is given enough of a unique personality for the reader to recognize similar character traits in their own organization and the timeline that McNally builds during his investigation is very accurate. The damage done by these characters, often in the naïve or oblivious belief that they are helping Change, will resonate with both novice and experienced managers alike.

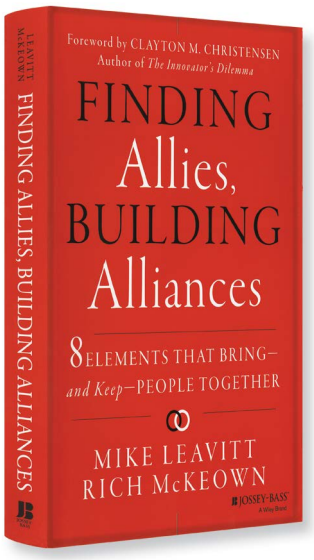
FINDING Allies, BUILDING Alliances

8 Elements that Bring – and Keep – People Together



by Mike Leavitt and Rich McKeown

THE SUMMARY IN BRIEF

The challenges facing your organization extend far beyond your employees and your business. From the competitors within your industry to the regulators outside, solving large issues in today's complex world requires cooperation among diverse stakeholders. Solutions to even the most complicated problems are attainable for leaders who learn how to turn competitors into collaborators.

Finding Allies, Building Alliances is a guide for anyone tasked with fostering and maintaining an effective, productive and collaborative venture. The first step is to carefully choose a network of participants that will become a powerful alliance. With the right team in place, a framework of eight elements will help your group work together for the mutual benefit of all parties.

Mike Leavitt and Rich McKeown base this framework on their distinguished work building collaborative networks both in government and in the private sector. Their unique and proven methodology will not only generate lasting solutions for any business issue but also boost competitiveness and resilience in all sectors.

Whether you're launching a new partnership or rehabilitating one already in progress, *Finding Allies, Building Alliances* will help you find workable solutions to even the most complex problems.

IN THIS SUMMARY, YOU WILL LEARN:

- The benefits and key elements of a value alliance.
- The differences between conveners and leaders.
- The importance of finding representatives of substance.
- How to brand your alliance as a "northbound train."
- How to recognize and use collaborative intelligence.

THE COMPLETE SUMMARY: **FINDING ALLIES, BUILDING ALLIANCES**

by Mike Leavitt and Rich McKeown

The authors: Mike Leavitt served as governor of Utah for three terms and then as secretary of Health and Human Services and administrator of the Environmental Protection Agency in the cabinet of President George W. Bush. A seasoned diplomat, he has led U.S. delegations to more than 50 countries, conducting negotiations on matters related to health, the environment and trade.

Rich McKeown is cofounder, president and CEO of Leavitt Partners, which advises clients in the health care and food safety sectors. Before serving as chief of staff during Leavitt's terms as governor of Utah, administrator of the EPA and secretary of HHS, McKeown was an educator, a lawyer and a mediator.

Introduction

Today, competing global economies engage in contests to produce the best value — the best product or service at the lowest cost. The old models — huge, bureaucratic and singular — are increasingly disadvantaged, as they are unable to provide the value, speed and innovation people need. Collaborative alliances or networks, however, can do so. The best of them open new frontiers of productivity, and perhaps even more important, they're able to solve challenging problems that single entities cannot crack. A diverse alliance, well led and well managed, can bring resources to bear on a problem that no organization can match.

Technology makes collaboration feasible, connecting diverse organizations and individuals around the world. The sociology of collaboration, though, is the tricky part of the equation. Connecting people, unlike connecting networks, is much more art than science. Assembling a diverse group of individuals and organizations, facilitating their work together, and sustaining it long enough to get the job done is an ambitious goal — but it is a more achievable goal if eight key elements are present.

- *A common pain*: A shared problem that motivates people and groups to work together in ways that could otherwise seem counterintuitive.
- *A convener of stature*: A respected and influential presence who can bring people to the table and, when necessary, keep them there.
- *Representatives of substance*: A group of collaborative participants who bring the right mix of experience and expertise for legitimacy, along with the authority to make decisions.
- *Committed leaders*: Individuals who possess the skill, creativity, dedication and tenacity to move an alliance forward even when it hits the inevitable rough patches.
- *A clearly defined purpose*: A driving idea that keeps people on task rather than being sidetracked by complexity, ambiguity, and other alternatives or distractions.
- *A formal charter*: A set of established rules that create stability and help resolve differences and avoid stalemates.
- *The northbound train*: An intuitive confidence that an alliance will get to its destination and achieve something of unique value and that those who aren't on board will be disadvantaged.
- *A common information base*: A shared pool of information that keeps everyone in the loop and avoids divisive secrets and opaqueness.

Creating or joining a value alliance should be every leader's goal. To achieve this goal, though, you need to understand what a value alliance is and how it can confer competitive advantage on its members.

The Collaborative Foundation: What It Is and Why It's Essential Today

Any organization seeking to increase the efficiency of its problem-solving efforts needs to understand the foundational concept of a value alliance. A *value alliance*

is a group of participants with aligned interests pursuing an outcome with value for each of them. It is a formally organized entity following a process that has been deliberately designed to achieve a collective advantage. In such an alliance, the pursuit of *value* is the purpose, and *alliance* is the platform. Collaboration is the means.

While value alliances can be formed in pursuit of joint opportunity, they most often coalesce in response to a complex but common problem. Once groups get past the initial challenge of dealing with the tough issues, they begin to realize that they're not just eliminating a negative; they're also capitalizing on a positive. In collaborative terms, this simply means that when organizations come together to solve a complex problem, they may well discover that it is an opportunity in disguise.

It turns out that even bitter competitors can work together and achieve a goal that benefits all participants. Five key traits exist in every value alliance. Collaborative efforts often lack one or more of these traits, and their absence hampers the group's effectiveness from its inception. Therefore, before embarking on any formal collaboration, make sure these traits are in place:

- *Multiple interests.* While multiple interests can create tension in a value alliance, they also produce creative conflict along with a range of resources and perspectives.
- *Self interest*. Self-interest is what drives participants to work long and hard and, with multiple parties, to come up with solutions.
- *An incremental surrender of independence.* From a psychological perspective, a shift from independence to mutual dependence is necessary, or participants will engage in power politics that will destroy the alliance.
- *A free-standing governance process.* Executives operate with no strings attached (to their other companies). The executive committee makes decisions on its own and not in consultation with the participants' other employers.
- *Value that continues.* It doesn't matter whether the value alliance is temporary or permanent. Its benefits are ongoing. If it solves one problem, the value of that solution continues long after the value alliance dissolves. And permanent value alliances provide a series of solutions year after year.

The Value of a Value Alliance Today

Since the 1990s, the world has experienced a confluence of new economic forces. In this environment, people and organizations no longer have the luxury of inefficiency. No one can afford to operate slowly or at a financial disadvantage globally. With these new financial parameters, efficiency has become a matter of survival.

The problems facing organizations today have become so complex that it's unrealistic to expect any single company — even one as large and dynamic as General Electric, Wal-Mart or IBM — to solve them on its own. When affected parties collaboratively gang up on complex problems, value alliances produce superior results for at least four reasons:

1. Multiple perspectives provide a more complete picture of a problem, creating more options, synergies and solutions.
2. Trust produces efficiency.
3. Shared investment and reduced litigation help limit financial risk.
4. Speed improves when agreed-upon standards reduce friction.

A Common Pain

When people are motivated by their own problems, they often discover that they can find solutions to them by responding to the interests of others. Value alliances, therefore, exist at the intersection of self-interest and common interest. Typically, individuals become collaborators when they realize that they cannot solve a problem on their own.

While a collaboration can seek to capture an opportunity, success is most likely when the motivator for an alliance is shared pain that requires mutual action to bring about relief. Pain is the catalyst that helps people overcome their natural distrust of outsiders.

Three Types of Motivation

Common pain drives people to collaborative groups for three reasons:

- *Fear.* The calculation or feeling that the odds are too high that something unacceptable will take place.
- *Greed*. The calculation that people will make more by collaborating with others than by going it alone.
- *Touch the hand of greatness.* This phrase is used to suggest that people are motivated by being part of noble and influential undertakings.

All three of these factors may be active in the formation of any value alliance, but fear is the primary catalyst. In the business world, little motivation exists to form a value alliance when profits are high and the status quo seems likely to maintain itself. When change strikes, however, leaders feel a motivating and intuitive anxiety about growing problems or missed opportunities.

The Common Pain Index

Measuring the pain felt by essential collaborators is a litmus test of how committed the key parties will be to a shared effort. The more intense and widespread the pain, the more firm the commitment. The Common Pain Index can help you gauge pain in your organization as well as in prospective collaborators.

Assign yourself a numerical value between 1 and 10 for each of the following factors (10 being the highest pain), and then average the total:

- *Significance of the problem*. What is the impact of the problem on an enterprise's success? A problem must cause significant pain for an enterprise, or its people will not give up the independence and control that collaboration requires.
- *Dependence on others.* A problem is not particularly painful if you believe you can solve it through your own resources. Even if the pain is significant, you are going to be reluctant to cede control to others to solve it if you are confident you can handle it on your own. Leaders of enterprise need compelling reasons to cooperate with others.
- *Relative influence.* Influence is the trickiest factor in that you must assess not only the importance of your own involvement to the collaboration but that of others as well. Not all collaborators are equal. If they won't come to the table, then the pain level could be too low.

Score each participant on a scale of 1 to 10. A score of 8 to 10 indicates intense common pain; four to 7 suggests significant pain; three and below implies tolerable pain. Look at the scores as a whole, and make a determination of whether you believe this proposed alliance passes the common pain test — and be sure to factor your own score into the mix.

A Convener of Stature

At its core, a value alliance requires a convening power: someone with the stature to bring together a group of independent parties and have them work in an aligned way to create something of value. While common pain may provide the motivation for various groups to participate in a collaboration, they still need a convener of stature to capitalize on that motivation, providing credibility and cohesion.

What Makes a Convener of Stature?

Conveners of stature can have three forms: an individual, an organization, or a combination of individuals and organizations.

Combinations are sometimes necessary to secure participation from a critical mass of groups that a single convener couldn't secure alone. For instance, in his work on the Clinton Health Access Initiative, President Clinton co-convened various efforts in Africa with the administrators of local hospital districts because their stature had greater resonance in those remote areas.

At times, organizations are more effective conveners than individuals. A variety of organizational types — a company, a trade group, a community-based entity, a think tank — can use organizational structure and reputation to provide convening power to solve complex problems. For instance, a local PTA convenes leaders from various parts of the community to combat the growing problem of gang violence.

In some instances, multiple organizations can act as conveners. A few insurance companies, two hospitals, a large medical clinic, a long-term care facility and a local community health organization all helped convene a value alliance that established a more efficient way to manage patient care in their community.

Seven Essential Qualities

Conveners may have very different personalities and leadership styles and may be either individuals or organizations. Nonetheless, the most effective ones share seven traits:

1. *Trusted brand*. Prospective conveners, whether individuals or organizations, come to the task with a personal brand — a reputation that defines expectations of potential participants. For successful conveners, this brand must include fairness — the reputation for being even-handed and honest in their dealings with employees, the community, competitors and others.
2. *Relevant reach*. When conveners recognize intuitively or through investigation that their influence is too limited to get the value alliance going on their own, they may wish to partner with another convener (an individual or organization) to fill in the gaps in their influence.
3. *Adequate independence.* Those who come to a collaboration with a solution that benefits their own company far more than other collaborators will not be viewed as credible. Similarly, those who are seen

as being beholden to special interests or as having a reputation for favoring one group over another will lack the independent stature necessary to be effective conveners.

4. *Diplomatic skill.* Because the main function of conveners is to bring the right parties to the table, they must be proficient in the art of diplomacy. Perhaps most important of all, conveners must gain contingent agreements among separate parties to join the collaborative entity and then bring them together into a functional whole.
5. *Instinct for stage setting.* A sense of stage management also comes in handy for conveners in need of a dramatic demonstration of the importance of the alliance. Sometimes using a prestigious setting to make an invitation does the job.
6. *Astute perception.* Whether by intuition, instinct or a learned skill, conveners need to be perceptive of what motivates people to participate in an alliance of people or entities.
7. *Ability to apply pressure.* The convener of a value alliance sometimes needs to skillfully apply action-motivating pressure to clarify and create the reality of the common pain strong enough to make collaboration an attractive alternative.

Five Responsibilities of a Convener

Convening a group of people to create value collectively is an act of leadership. Conveners must complete the following tasks:

1. Define the problem and consequences of inaction contrasted with what the value alliance aspires to accomplish.
2. Organize a structure that furnishes the alliance with people, perspectives and an orderly method of operation.
3. Create a system of accountability.
4. Mold a culture of productivity.
5. Recognize good performance and respond to poor behavior.

Representatives of Substance

The top priority for conveners is identifying the right people and securing their participation in a value alliance. Finding the right ensemble of people — individuals with talents that blend well — is essential. We refer to participants in a value alliance as *representatives of substance.* As a group, they need to possess the collective influence in the marketplace of ideas to bring about a solution to a shared problem. We look for participants who possess at least one and ideally all three varieties of substance: authoritative, cognitive and reputational.

People with authoritative substance possess the legal capacity to make or influence decisions on behalf of their organizations. Cognitive substance involves special knowledge that is sometimes needed to understand the implications of certain alliance issues. This may include scientific understanding or a working knowledge of process. Reputational substance suggests those for whom respect is more important than likeability or collaborative intelligence. Such representatives often hold strong views that may be controversial or unique.

Observing the Representatives in Action

Sometimes substance can be an illusion. You assume a given individual possesses expertise, then discover that you're wrong. You figure that an organization has many resources that it can lend to a collaborative effort and discover that those resources are already stretched tight. Observation can play a critical role in reconfiguring the group you recruit for collaboration. For this reason, holding a preliminary meeting of representatives can provide insights that will help you determine if you need to add or subtract members to achieve the right collective substance.

Warning signs to watch for during early meetings include negativity, key functions that aren't being covered, or participants who aren't fully invested in the mission.

Committed Leadership

Indecisiveness often accompanies collaborative problem solving, and value alliances need clearly designated and committed leaders who will push, pull or cajole progress through the muddle.

Be aware that leadership does not emerge naturally within a collaborative framework. One of two scenarios generally occurs. In the first, no one steps up and takes charge; participants limit their involvement to attending meetings and carrying out definable tasks. In the second, most if not all representatives compete for control of the alliance.

The typical scenario comes closer to the first one, where people want to be in charge during meetings, but their commitment isn't necessarily strong enough to keep them involved and energized between sessions, or when the collaboration encounters roadblocks, or when their regular jobs demand their attention.

In some ways, committed leadership is even more important in value alliances than in established hierarchical organizations. As a new entity, an alliance lacks a history, culture and decision-making structure to facilitate implementation. More important, a new network is generally a collaboration among equals. Lacking a clear pecking order, networks need leaders to step forward and facilitate the decision-making process, and they require leaders who display a flexibility that may not be needed in more traditional corporate structures.

Committed leaders often need to wear a number of hats, use their influence to keep the collaboration together (at least until a problem is solved), and work very, very hard.

The Consensus Question

A value alliance is a powerful instrument for the same reason it is a fragile one — voluntary participation. If participants ever feel their best interest is served by leaving, they can and will leave. If at any point the consensus tips too far in one direction, a critical mass of participants will withdraw, and the value alliance will quickly die. Yet if committed leaders can consistently achieve consensus, they will move the alliance forward. Finding consensus is an art form that leaders must master.

Think about the collaborative environment as different from the traditional organizational one, and recognize that the role of leader changes somewhat in this environment as they try to stimulate discussion and ensure that all have been heard, rather than making decisions.

A Clearly Defined Purpose

Without a clear, well-defined purpose, collaborations fail or drift into unproductive and endless discussions. More specifically, the collaborations experience "purpose creep" — an inexorable broadening of scope that eventually makes it impossible to relieve the common pain that drew the group together in the first place or that creates lethally low morale as the collaboration struggles with overly ambitious and varied goals. Without a clearly articulated and written purpose (which will then be incorporated in the formal charter), each representative of substance may define the purpose differently. Unless the real purpose is articulated, memorialized and ratified by the participants, they will all shape it with bias toward their own parochial interests.

To use purpose so that a collaboration becomes a value alliance, you need a guide. Here are seven steps that will help you develop a purpose in a collaborative setting:

1. Begin with a problem-solving, pain-mitigating mindset.
2. Frame problems and pain judiciously.
3. Match purpose to representatives' capabilities.
4. Create the purpose through discussion and consensus (rather than brainstorming and politicking).
5. Be flexible in the type of purpose statement you create.
6. Put the purpose in writing and in participants' consciousness.
7. Have a process in place to revise or reformulate the purpose.

A Formal Charter

If participants lack common expectations about how the alliance will go about its business, they are unlikely to accomplish anything. Hence the need for a written charter. A formal charter confers official status on the group and also creates the structure necessary for productivity.

A prerequisite to writing the formal charter is developing a sufficient degree of camaraderie and purpose. Until participants relieve the tension that naturally builds at the beginning of the process, conveners, leaders and representatives of substance will find it difficult to accept a charter.

Creating a formal charter gives participants an opportunity to vent their self-interest and move forward with the greater work of the collaboration. Perhaps as much as anything else, creating and signing a formal charter provides a moral buy-in. The formal charter cements the purpose, creating a moral commitment. Charters function like a combination of bylaws and operating plan.

Here are the matters a charter must address: who the members will be, who the leaders will be or how they will be chosen, how meetings will be called, how decisions will be made, how to make financial arrangements, what time frames are relevant, who is responsible for what tasks, how members share information, what level of confidentiality is acceptable, and how to amend the charter.

The Northbound Train

People want to invest their time, money and reputation in things that will make a difference. The phrase "northbound train" is shorthand for "Decisions that matter to me are going to be made, and I need to be there. The train is headed north, and I want a seat on it."

Every value alliance has a brand in the community of interest it serves. That brand is shaped by the degree to

which people believe the alliance is a northbound train, likely to reach an important destination. At the same time, conveners and committed leaders need to recognize when that brand is being diminished in any way. What can stall, even kill momentum? In short, failure to meet expectations. Sometimes, participants can point to a particular metric — a beta test that failed, for instance. In other situations, it's less tangible — a waning of enthusiasm from both the leaders and participants.

Whatever causes this perceived stall in momentum, it robs the collaboration of energy and sense of mission, and it often spells the beginning of the end if the northbound perception isn't restored.

You can monitor your progress toward creating a northbound train through tangible and intangible means. From a tangible standpoint, assess and determine that you're receiving the resources necessary for the alliance to solve the problem it faces — resources that range from money to equipment to facilities. If your resource levels are at least adequate and at best abundant over a sustained period, then it's likely that the alliance has momentum on its side. Less tangibly, there's a clear sense of purpose and optimism surrounding the alliance. This sense of a northbound train is a hallmark of a value alliance, and it's what can sustain the collaboration over the rough patches and provide the momentum to implement its problem-solving plan.

Defining Common Ground

Defining common ground, the eighth and final element of a value alliance, is often a predictor of success. To function effectively, the parties need to develop trust in each other and the processes that govern them. Achieving trust requires an unusual degree of transparency as the parties determine the underlying assumptions, sources of information and standards upon which they will rely. Effective collaboration requires that these be part of a common information base, permitting everyone the chance to operate with the same information.

When a convener and committed leader identify common linchpin issues involving assumptions, standards, and sources and resolve them early, the chances of alliance success increase dramatically. Among other advantages, such early resolution is a strong indication that participants are willing to work collaboratively to solve problems.

Mitigating Disagreement

When an alliance cannot reach consensus or near consensus on a critical assumption, source or standard, the leader must find a way to move the alliance forward. When disagreement exists over assumptions, sources or standards, the momentum diminishes. If this lack of commonality isn't addressed, the alliance will probably topple.

Here are some techniques to regain momentum in the face of disagreement:

- *Operate on a non-consensus majority.* In the absence of consensus or near consensus, the leader can simply move forward (rather than stay mired in momentum-killing disagreement). Acknowledge the objection of dissenters, making it clear to them that the alliance can revisit the issue as new ideas or options come on the table.
- *Allow the convener or another trusted third party to decide.* In situations where the alliance is divided among multiple options, the leader can propose that the convener be asked to make a decision, thus enabling the work to go forward.
- *Put together a blended decision.* Sometimes it is possible to integrate input from differing participants to achieve acceptable assumptions, standards and sources.
- *Operate in a range.* This means that you regain momentum by agreeing to a range of acceptable standards with an understanding that a more precise decision will have to be made in the future.
- *Hold a focused session to reengineer the problem.* Sometimes, representatives disagree about an assumption, standard or source because of misunderstanding or bias. Through a facilitated discussion, people can view the problem differently and understand it better, or they can recognize how their unconscious bias is causing them to resist agreement on commonalities.
- *Strike a grand bargain.* Here, the leader's strategy is to foster agreement by finding a way to reposition an assumption, standard or source so that it makes concessions to both sides in a dispute. When each side gets something they want, it is easier for them to accept something they initially didn't want.

Collaborative Intelligence

Not everyone has a natural aptitude or appetite for collaborative problem solving. Though effective collaboration requires a skill that can be learned and improved, some people are naturally better at collaboration than others.

Alliance success is threatened when the wrong people — those lacking collaborative intelligence (CI) — participate. CI, the ability to work productively together for a common goal, is a critical ingredient for successful value alliances. If an alliance possesses a sufficiently high level of CI, it can

overcome participants' natural resistance to ceding control to an independent entity, and it can facilitate productive interactions among diverse individuals and organizations.

It's not just the capacity of one individual that matters, but the collective CI of the group. Invariably, a diverse group will possess representatives with varying degrees of CI. Therefore, your assessment of CI needs to focus on the whole rather than the parts. You need to look at the collective CI of the group and determine if it's sufficient to solve the complex problem the group has been convened to address.

This factor is key to determining if you should become involved in building or joining an alliance. Increasingly, the world is organizing itself into collaborative networks as a means of achieving competitiveness. In the future, success will be defined by the collaborative alliances you form or join. Participation in an alliance is an investment decision because it allocates your resources, including time, money and people. Not every alliance is worth your time and effort, so you need to be astute in your assessment.

What Does Collective Collaborative Intelligence Look Like?

In environments where high CI exists, people react differently to common work situations. For instance, when low-CI work groups face a crisis, failure or serious problem, people tend to react with cynicism, negativity and blaming. In a high-CI group, the typical reaction is increased productivity. This group understands that the solution to the problem resides in applying their collective knowledge and skills to help each other work toward a solution, and that means that problems or setbacks catalyze a greater output of energy and effort. Another characteristic of collectively high CI is that people share ideas and information all along the way, not just at the end. Doing so helps the group work more productively and with less friction.

Low-CI people hoard information for a number of reasons. If they're in a group with competitors, they fear what their competitors will do with the information they share. Information hoarding often prevents the group from functioning effectively.

An effective collaborative group works smoothly in the face of tension between self-interest and the interest of the group. Don't assume that when you see a gathering of high-CI individuals you're viewing an altruistic, self-sacrificing group. What's distinctive is that they are sufficiently solution-oriented that they overcome their reluctance to share information, ideas and resources with outsiders. They reach across the aisle and initiate discussions, volunteer assistance and listen receptively.

Alliance Enterprises

Value alliances are created to solve problems, so logic suggests that when a problem is solved, the need for the value alliance is gone. In some instances, the value alliance dissolves even when the problem isn't completely solved but the common pain has eased sufficiently. In other instances, it ends when the problem has changed in scope and type and requires a new value alliance. And in still other situations, the collaboration closes up shop because the problem has proved too intractable for participants to resolve.

Some value alliances, however, put down roots. We call these long-term arrangements *alliance enterprises.* People or organizations band together to ease the common pain, then recognize that the new network is better than any of them at solving a range of present and emerging problems.

Three characteristics differentiate permanent alliances from temporary ones: legal status, business model and self-perpetuation corporate governance. These characteristics don't necessarily make alliance enterprises better than value alliances, but they do make them better suited to certain groups in certain situations.

A Time for Great Collaborations

The opportunities to collaborate are numerous and multiplying, but capitalizing on them requires reliance on a structured and disciplined methodology. Collaboration is a skill or competency that can be improved with study, practice and experience. Current business environments dictate that now is the time when honing this skill is essential. Good collaboration is not a casual undertaking. It requires effort, leadership, structure, process and commitment.

Fearless Leadership

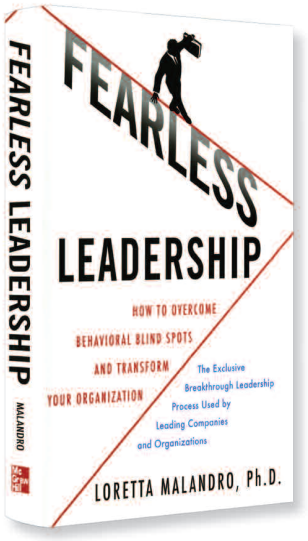
How to Overcome Behavioral Blind Spots and Transform Your Organization



by Loretta Malandro, Ph.D.

THE SUMMARY IN BRIEF

Do you want to move your company in a new direction? *Fearless Leadership* provides you with the tools to successfully drive change, overcome obstacles, and engage and align people to achieve your business objectives.

Leadership guru Dr. Loretta Malandro has developed a groundbreaking behavior-based methodology that is used around the globe to create top-performing leaders and high-performance organizations. It is based on a simple but profound concept: In order to change your organization, you must be willing to alter your behavior and help others choose to change their behavior. This means demanding 100% accountability™ from your people — and yourself.

In today's ultra-competitive business environment, a new leadership approach is needed. *Fearless Leadership* takes readers step-by-step through the process of raising behavioral standards that directly impact the bottom line. It shows you how to act courageously when faced with uncertainty, take bold stands and engage with people in very real ways.

Too many people in leadership positions attempt to enact change through systemic means such as restructuring or altering processes. The secret to real and lasting change lies in changing behavior — how people work together. Change the level of ownership and performance of people and you will transform your organization.

IN THIS SUMMARY, YOU WILL LEARN:

- How to confront the blind spots that sabotage success.
- How to overcome the success-strangling "need to be right."
- How to build committed partnerships.
- How to gain full support and alignment.
- How to confront difficult situations head on.

THE COMPLETE SUMMARY: **FEARLESS LEADERSHIP**

by Loretta Malandro, Ph.D.

The author: Loretta Malandro, Ph.D. is president and CEO of Malandro Communication Inc., a firm with 30 years' experience working with clients worldwide across diverse industries. The company is known for rapidly transforming organizational effectiveness and business results through high performance leaders, teams and cultures.

Adapted by arrangement with The McGraw-Hill Companies, Inc., *Fearless Leadership: How to Overcome Behavioral Blind Spots and Transform Your Organization* by Loretta Malandro. Introduction

CEOs, executives and leaders want to know how to take intellectual abstraction and turn it into practical action that can be integrated into the fabric of their organizations.

By the time executives and leaders call on Malandro Communication, they are either frustrated with the slow pace of change or completely unhinged by the fact that change isn't happening at all. They tell Malandro's experts that they have tried everything but still have unaligned leaders, disengaged employees, silos and unhealthy competition. These leaders are unwilling to settle for less; they know exactly what they want: the shortest and most effective route to mobilizing people to deliver unprecedented business results.

Malandro's leadership experts identified and documented common blind spots of leaders and teams that derailed major initiatives, process and system changes, careers, and long-term organizational success. What became evident was the courage required of leaders to successfully transform their organizations. These fearless leaders confronted their blind spots, turned values into explicit behavioral standards, provided people with the tools to learn and apply new behaviors, and integrated those tools into how business was conducted on a daily basis.

PART I: IDENTIFYING BLIND SPOTS AND WHAT TRIGGERS THEM

We need fearless leaders. Not one but many. In times of chaos and uncertainty, as well as in good times, we need leaders who take a bold stand, act decisively and engage with others in an extraordinary way.

You have the power to shape the future. This is not in question. But do you have the courage to take a bold stand and transform the capacity and capability of people and an organization to achieve much more?

Fearless leadership is not a concept; it is an action. It is defined by the choices you make, how you take accountability for results and people, and how you interact with others.

Fearless Leadership: *The courage to take a bold stand, act decisively and engage with others in an extraordinary way.*

The Promise and Results of Fearless Leadership

Your business success as a leader is measured by the speed at which you produce results and bring new realities into existence. Fearless leadership provides you with the methodology and tools to unite and mobilize people to work together effectively in a way that drives change throughout the organization.

The promise of fearless leadership is fast individual and organizational transformation. You have the ability to influence change and dramatically increase engagement, alignment and business results. As a fearless leader, you have:

- The capacity to eliminate barriers that block your leadership effectiveness.
- The courage to take a stand and act decisively with renewed confidence and passion.
- The freedom to choose a new level of participation and engagement.
- The methodology and tools to transform individuals, teams and organizations.

Organizations move rapidly from an ad hoc

management approach to building a standard process and foundation for a world-class company. People, strategies and operations come together in a simple, fast and effective manner as everyone applies a shared methodology for working together as committed partners.

"What is holding leaders and organizations back?" Transformation begins when leaders *choose* to change their behavior. The frequently misunderstood barrier to change is *behavioral blind spots* — automatic and unproductive behavior that blocks leadership effectiveness, organizational change and business results.

Behavioral Blind Spots: *Unproductive behavior that undermines business results and working relationships.*

The Blind Spots That Derail Leaders

Here is a list of the 10 most common blind spots that derail leaders:

1. Going it alone. When you go it alone, you create a high level of stress and frustration in others. While you are internally focused on what you need to do, others experience an elevated state of anxiety. Because you are not focusing externally on others, your ability to pick up cues about their needs and reactions is greatly diminished.

2. Being insensitive to your impact on others. Leaders who are insensitive to their impact on others do not have a clear understanding of how they come across. They miss completely how their choice of words, tone of voice and nonverbal behavior send a message of disapproval and dissatisfaction.

3. Having an "I know" attitude. Leaders with an "I know" attitude have an answer for everything. Others perceive them as petty tyrants, solution machines, human bulldozers and command-and-control autocrats. They leave others feeling exhausted, diminished, angry and insignificant.

4. Avoiding difficult conversations. When leaders avoid tough conversations, problems remain unresolved. Poor performance continues, less-than-acceptable products and services are produced, and morale plummets. When leaders soften the message, the other party walks away confused.

5. Blaming others or circumstances. Pointing the finger at others is much easier than taking accountability. Blame is often used as an offensive tactic to avoid defending one's position. Blame in an organization creates a volatile environment.

6. Treating commitments casually. When people cannot trust your words, they judge you as unreliable. People notice when you break a promise.

7. Conspiring against others. When you conspire against people or ideas — whether by participating or by silent endorsement — you are perceived as weak, deceitful and dishonest. Others withdraw their trust, and your credibility takes a nosedive.

8. Withholding emotional commitment. When you claim to be aligned or supportive but withhold your emotional commitment, others perceive you as disengaged and disingenuous. People know when you are not fully on board. They see it in how you behave and how you speak.

9. Not taking a stand. People lose confidence and their desire to contribute when you are indecisive and unwilling to take a stand. Without your stand, forward motion comes to a halt, and critical actions are delayed.

10. Tolerating "good enough." People are discouraged when leaders apply personal preference to leadership initiatives and ignore critical needs of the business or delegate them.

As a fearless leader, you must be willing to help individuals and teams talk openly about honest mistakes and learn from them.

The Need to Be Right

There is nothing wrong with the need to be right; it is instinctive and natural. The problem rests with our inability to recognize when we become stuck in unbending and unyielding views and do not know how to move beyond them.

The mechanism that explains the need to be right and keeps it in place is automatic listening. Automatic listening is the process of unconsciously filtering and distorting information to support your views and beliefs. From start to finish, the entire process is designed to give validity to your interpretations. It ultimately shapes how you behave and the choices you make.

Automatic listening starts in the mind as a "wonder about," such as "I wonder if I can trust Jack" or "I wonder if the company will really succeed." But early doubts pave the way for fixed thinking and harsh judgments. Since there is not enough time to do exhaustive research on every situation or person you encounter, you pay attention to trigger features — small aspects of a larger situation used to infer additional information. Trigger features are an automatic means of eliminating ambiguity, making a decision or inferring a judgment.

When you stop "wondering," you euphemistically say,

"I have made up my mind." It would be more accurate to say, "I have made up my story," because what you have done is invented your own interpretation of reality.

The automatic listening cycle is a closed loop. Once it has begun, all information and evidence are distorted to support your beliefs. The cycle is self-fulfilling — you get what you believe. If you do not intervene and break the cycle, it gains momentum and rigidity over time.

How Assumptions Become the Truth

Automatic listening starts the moment you notice a trigger feature — a single point of data — and make assumptions. In the mind, assumptions are treated as the truth, and they gather steam as you gather evidence.

Your automatic listening prevents you from seeing any other interpretation, and your freedom to invent the future is gone.

Fearless leadership provides you with the road map for gaining immediate access to transformation. When you can truly understand how others experience your behavior, without defending or judging, you then have the ability to produce a breakthrough in your leadership and team. Everything starts with your self-awareness. You cannot take charge without taking accountability, and you cannot take accountability without understanding how to avoid it.

As a fearless leader, you must learn how to bring compassion and understanding when you and others are stuck in your point of view. We must understand that the need to be right is automatic and learn how to recover quickly when it occurs.

Victim Mentality and Playing Small

Fearless leadership begins when you choose to *play big* — without limits on what is possible — despite difficult or challenging circumstances. When you play big, your behavior is consistent with your values and beliefs; you throw your hat in the ring and fully engage.

However, even with your zest and commitment, you will fall into automatic behaviors that keep you playing small.

Defining Your Personal Context

The first step in transformation is to move beyond denial. When you are in denial, the problem will either not appear on your radar or will appear as the fault of others or circumstances. With this limited view, you lose the ability to act, and you are left only with the ability to react. Denial not only impacts decision-makers, but it also slows the organization to a snail's pace. But when you acknowledge that there is a problem and that you are part of the problem, you can take action.

In order to play big, you must (1) move beyond denial; and (2) expand your personal context or framework for how you relate to yourself, others and your company. Here's what is essential to understand:

1. You have a personal context — a framework of thinking and beliefs — that defines whether you play big or small and determines your capacity to succeed.
2. You vacillate between playing small and playing big depending on how you interpret a given situation.
3. Your personal context shrinks when you are willing to confront your blind spots, your need to be right and your victim mentality.

Providing the Organizational Context

As a leader, you provide organizational context every time you speak about the purpose of the organization and what you want to achieve.

Similarly, your personal context is the framework for how *you* relate to the organization, other leaders and colleagues. A small personal context limits you, while a big context gives you access to a new domain of thinking and the power to break down barriers and shape the future.

Taken together, organizational and personal context define the potential of the enterprise to excel by powerfully connecting people to its strategic objectives. Your challenge is to ensure that organizational and personal context converge so that people are emotionally engaged and act with urgency to achieve the mission of the organization.

How Resignation Creeps In

Playing small occurs when resignation sets in and you believe that the status quo — people, circumstances, or the organization — is more fixed than it actually is.

When you become resigned you continue to work hard, but your personal context shrinks; the game becomes smaller; and you lose interest, heart and enthusiasm. To the outside world, you are still highly committed, but *you* feel the difference.

The Victim Triangle

Victim mentality and resignation go hand in hand. When you become resigned, you inadvertently adopt victim thinking and behaviors that lead to viewing others as the opponents. Because victims see others as adversaries, they feel as if outside agents or forces control their actions and their future.

Victim mentality is based on three interdependent roles: the persecutor (the person or circumstance you are blaming), co-conspirators (people who agree with you and your point of view) and the victim who has been unjustly wronged.

The roles constantly change in the victim triangle, and you may find yourself in any one of the three roles in different situations. There is a fourth role that takes you outside of the victim triangle: the role of a fearless leader. The victim triangle is sustained by being right and not taking accountability, but when you add fearless leadership, the cycle is broken and victim mentality cannot endure.

The salient point to bear in mind is that a victim triangle can form in an instant, creating silos and "enemies" where there should be none. Any group or individual can unwittingly become the persecutor, victim or co-conspirator. That of course, leads to resignation and the loss of focused and aligned people. This jump is automatic and seriously damages the ability of the organization to perform.

PART II: TAKING A STAND AND TRANSFORMING YOUR ORGANIZATION

Fearless leadership is not the absence of fear. It is the courage to confront fear and solve problems from a radically new direction.

Think of your behavior as fitting into one of two categories: moving toward generating something or moving away from discomfort and fear. Avoidance takes considerably more energy than creating a new reality.

Consider the amount of time you spend worrying or thinking about a sensitive conversation, a difficult person, a potential conflict, a tough decision, misalignment of leaders or an unresolved situation. It takes a substantial investment of energy to defend, be right and avoid — much more than is required to step into your discomfort, take a bold stand and act decisively. When you change your direction, you change what is possible for you and others.

The Price of Admission: Five Requirements to Becoming a Fearless Leader

Fearless leadership is a big game; it has a higher purpose and operates with a different set of rules. The price of admission is based on five choices only you can make:

1. Take *100% accountability* and act as an owner.
2. Take a *bold stand* and act decisively.
3. Be *courageous* and openly discuss your blind spots.
4. Build *committed partnerships* to achieve business results.
5. Be *unreasonable* and make the tough calls.

How to Take a Bold and Compelling Stand

When you take a stand, you commit yourself emotionally and intellectually, and you ask others to learn with you so that together you can achieve the business objective. People want a challenge, and they need new tools and skills for expanding their capacity. People enthusiastically engage when they discover that they have the power to make a difference. When you provide people with the tools to learn how to work effectively together and quickly eliminate barriers, they will surprise you with their results.

To gain a fuller understanding of what it means to take a bold stand, let's break down the elements for uniting and aligning people to take productive action. The primary elements are these:

- Be open and talk about blind spots.
- Call for committed partnerships first and engage people emotionally and intellectually.
- Focus the committed partnerships on your mission-critical objectives.
- Learn how to be a committed partner and ask others to do the same.
- Leave them with an inspired vision of the future.

Standing for the Success of Each Other

To raise the level of performance, you must foster an environment in which aligned leaders and engaged people are bursting with enthusiasm to help the organization excel. For this, you need *committed partnerships*: people who act as owners and stand for the success of each other and the organization.

The causal chain is clear: It is the relationships that people have with one another and the organization that drive business results and make system and process changes viable. The success of your organization or team depends on the willingness of people to change their behavior and expand their capacity to work together in a focused and disciplined partnership.

It is troubling that most business-as-usual associations are relationships of convenience or unstable alliances in which people work together only when absolutely required. These traditional relationships, for the most part, are politically motivated or pursued for reasons of

personal gain. What is disturbing is that they are pervasive throughout organizations and representative of the low quality of relationships. The debilitating downside is that most businesses operate with an inherently defective platform for aligning and mobilizing the very faction that determines what the organization can achieve: people.

Without committed partnerships throughout your organization, you cannot achieve the interconnection and synergy needed among people, strategy and operations. But when you provide people with a disciplined methodology for working together, they will successfully navigate any challenges and achieve the objectives of the company.

Committed Partnerships: *Standing for the success of each other both privately and publicly.*

Because relationships are in a constant state of flux, often vacillating between breakdown and recovery, leaders must have the ability to talk about concerns and fully resolve them so they are not carried into the future. Decision-making and alignment must be effective and swift so that flawless execution is ensured.

The Five Agreements of Committed Partners

There are five agreements that committed partners align on and use daily to hold each other accountable:

1. We stand for the success of each other both publicly and privately.
2. We honor and fulfill commitments.
3. We talk straight responsibly.
4. We align emotionally and intellectually.
5. We hold each other accountable.

Committed partners agree to stand for the success of each other in all conversations — one-on-one, in meetings and electronically. They master specific skills for strengthening the working relationship: conspiring *for* each other, listening for positive intention, and cleaning up and recovering quickly when breakdowns occur. ●

Honoring and Fulfilling Commitments

In a culture of 100% accountability, there are only authentic commitments. Committed partners either commit or do not. "Yes" is a clear and unconditional statement with no strings attached. In this type of culture, committing is not a weak promise; it is a high-performance action. When people commit in a high-performance culture, others take the commitments seriously and respond with full support.

Honoring Your Commitments: *Doing what you say you will do and communicating responsibly when you don't.*

Committed partners learn to quickly recognize casual, slippery or pie-in-the-sky promises. In their place, such partners insist on authentic commitments without conditions or an escape hatch. They ensure that commitments have clear actions and deadlines and a responsible way to revoke them, when appropriate.

Let's start by defining what a commitment is in a high- performance culture. A commitment is an action designed to turn ideas into reality. It is a clear stand to deliver a specific result within an agreed-upon time frame, regardless of unforeseen circumstances or challenges. Manage commitments and you manage results.

One of the reasons people do not commit is that they are worried about failing. This is another example of backward thinking: In order to bring a new reality into existence, *you must first commit.* A commitment is a stand and an action in high performance. It is not elusive and vague. Commit first and then work out the complete plan on how to fulfill your commitment. A commitment — big or small — sets new thinking and behavior in action. For example, if you commit to your team that you will be on time to meetings, and you authentically communicate this, you have taken an action. You have publicly declared your intent and stand, and your committed partners will support you and hold you accountable.

In a culture of 100% accountability, commitment drives results and circumstances do not get in the way. An authentic commitment means, "We will deliver in spite of challenging and tough circumstances." So-called good reasons and excuses are not used to avoid fulfilling a commitment. ●

Talking Straight Responsibly

Talking straight responsibly in precise terms is being emotionally honest and communicating responsibly as soon as you recognize there is an unresolved issue. There are two criteria for measuring your success:

1. Your communication advances the business objective.
2. Your communication strengthens the relationship with the individual or team.

Talking straight responsibly is a learned skill that demands a high level of accountability and trust. Not only are you accountable for the content of your message, but you are also accountable for its emotional impact. If you are saying to yourself, "How people react to what I say is beyond my control," remember that you are accountable for making sure your message is under-

stood in the way in which you intend it. Of course, you cannot control how people react, but you can make an extra effort to ensure that you are doing everything possible so that your message paves the way for a more effective partnership.

Be Willing to Be Uncomfortable

Your discomfort is not an acceptable excuse for avoiding what needs to be said. Your mission is not to eliminate your discomfort but rather to increase your comfort with being uncomfortable. This is another marker of fearless leadership — the ability to persevere even when a situation is unpleasant or disquieting. At all times you must remember that fearless leadership is not the absence of fear or discomfort; it is doing what needs to be done in spite of these feelings.

When you leave communication to chance, you are saying, "I am not accountable for the accuracy, precision and impact of my message." People need to know where you stand and how you feel. The question that must be answered is this: "*Are you willing to talk straight responsibly even when you are uncomfortable?*"

Be Emotionally Honest

Leaders who talk straight responsibly leave nothing to interpretation. They know that saying something or writing it in an e-mail does not mean that others heard or understood their message. You must act as the responsible agent for how others respond to your communication. Everything you communicate must be consistent with your agreements as committed partners and with your stand for the success of one another. ●

Aligning Emotionally and Intellectually

If you rely on group agreement, you will be disappointed. Agreement is fleeting. Its temporary nature leaves you with unsustainable action and the half measure of compromise. But with authentic alignment you gain sustainable commitment and coordinated action even when people do not agree.

Authentic alignment is an indispensable leadership behavior that requires teams to learn how to interact in a new way where they set aside their personal preferences, political agendas and pet projects. These teams innovate and discover solutions without compromising the quality of decisions to appease dissenting group members.

In the alignment process, committed partners fully dialogue for the purpose of supporting the decision both emotionally and intellectually, as if they authored it themselves. They agree to (1) dialogue responsibly without holding anything back; (2) support the decision emotionally and intellectually, both privately and publicly; and (3) communicate immediately to the appropriate person if they discover they are no longer aligned. Leaders are committed to sustaining alignment and are quick to take action the moment they realize they are off track.

Authentic Alignment: *Setting aside your personal preference to support the decision from an enterprise perspective — emotionally and intellectually — as if you authored it yourself.*

Authentic alignment is an extraordinary behavior that harnesses the power of people — their energy, passion and vitality — and focuses it where it belongs: on business objectives. When alignment is used as a technique where people agree but do not emotionally and intellectually commit, it is ineffective. This false sense of alignment lacks the glue for sustainability.

Strengthen Relationships

High-performance teams learn how to constructively intervene and keep the group on track while simultaneously strengthening relationships. They are imperfect but committed teams who never stop learning and practicing. ●

Holding Each Other Accountable

A culture of 100% accountability is a self-correcting environment in which leaders at all levels actively coach one another and intervene in unproductive behavior. They accept nothing less than what an individual or team is capable of achieving. They hold people up to high standards of behavior instead of focusing on their limitations.

In a high-performance culture, holding one another accountable is an essential behavior to help others excel. By calling for the best in performance, committed partners transcend perceived limitations and go beyond past successes. When people are motivated by this greater purpose of being the best, barriers dissolve quickly and people energetically push one another to achieve more.

High-performance teams, like any other teams, become trapped in automatic behaviors. The difference is the speed at which they recover.

Holding each other accountable is a high-level skill that committed partners master through practice. It is the final agreement of committed partners and is by far the most challenging because of our fear that we will make things worse instead of better. ●

100% Accountability: A New Canvas on Which to Paint the Future

The following actions do not require the approval or agreement of others. They are within your power and sphere of influence:

1. **Make a purposeful choice to play big.** You have two choices in front of you: You can choose to play big and expand your purpose so you can *be* more, which is the key to achieving more, or you can choose to play small and sacrifice the ability to shape the future.

When you act as an owner and take a bold stand and decisive action, the future alters. You behave differently, you make different choices and your actions create a ripple effect in the organization.

When you choose to play big, the behaviors with which you meet your challenges are taking 100% accountability, regardless of what others choose, working together as committed partners, and taking a bold stand and acting decisively.

Stop wishing for others to change and transform yourself.

Fearless leadership is a transformational methodology for excelling and achieving results. You can apply it to a team, business group or the entire organization.

2. **Elevate the context and engage others at the highest level.** One of the most powerful tools for engaging people is a compelling context that captures both hearts and minds. Every time you speak to a group or an individual, you have an opportunity to provide them with a framework that powerfully connects them to the larger purpose.

Context determines how people perceive reality. Context defines focus, meaning, purpose and direction, and it defines what people observe, act upon and produce.

When you provide only an intellectual context, you will engage some people but lose the majority. However, when you provide an emotional and intellectual context, people are inspired to act.

3. **Learn together and step into greatness.** When people learn how to be committed partners, they discover a new way to communicate with one another that they did not have access to before. This is far more impactful than leaders realize. When people discover that they have the power to influence others and shape the future, they apply new skills and behavior to all areas of their lives — at work and at home. The positive results they produce drive them to learn and achieve more. The new behaviors become embedded because people make a *life choice* to change their behavior. This crossover between work life and personal life is a powerful testimony to what people want and need: a way to be more effective in all areas of their lives.
4. **Build networks of committed partnerships everywhere.** Does your group or business unit have committed partnerships with both your internal and external customers? If this is something you believe will add value to the bottom line, then start by building committed partnerships within your group. Everyone must operate with the same methodologies and skill sets.

When your group genuinely accepts ownership of the problem or breakdown, you are ready to engage with the customer group. Being a fearless leader lets you think big and build committed partnerships with customers, the community and other stakeholders.

5. **Measure your success.** Teams and individuals often lose sight of how radically they have changed their behavior unless they measure their progress and record their breakthroughs. Record team breakthroughs so that everyone can see how their behavior directly impacts business results.

Your New Canvas

As a fearless leader, you must be proactive and continually ask questions that expand your scope of vision: What am I not seeing? What opportunities and possibilities are right in front of me? What can I learn from this breakdown or situation?

What is right in front of you, which is often missed, is the fact that you have the choice and capacity to play big at any time. You have the ability to transform yourself and move people and the organization to a higher level of effectiveness. Your willingness to be relentless in changing your behavior and modeling how leaders are expected to behave is your ticket to success.

Be fearless and lead the way for others. The footstep of one person creates a path for everyone. ●

How to Lead Change Effectively

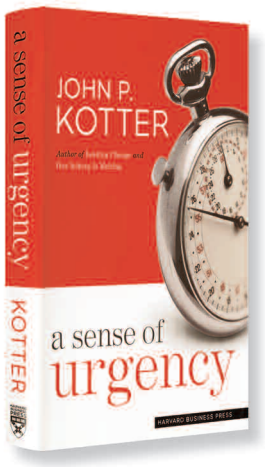
Review by Tom Moore

A SENSE OF URGENCY

by John P. Kotter

Harvard Business Press, ©2008
196 pages, $22.00 (ISBN 978-1-4221-7971-0)

"The only constant is change, continuing change, inevitable change," opined science fiction writer Isaac Asimov. Although this quotation often is invoked in outright capitulation to the convulsive forces sweeping through our economic, social and political worlds, it has profound implications for every organization. For it is our response to change — and not change itself — that determines our future. Either we can choose to react to change and play the victim or we can respond to change in a purposeful and effective manner.



John P. Kotter, widely regarded as one of the world's foremost authorities on leadership and change management, in his provocative new work, *A Sense of Urgency*, clearly prefers the proactive approach and compellingly urges us to follow suit. Not only does his meticulous analysis demystify the origin and impact of change, it offers a road map for how we can successfully navigate the shifting currents of change. But he takes us beyond simply crafting a timely and appropriate response to change; he provides the tools and techniques to initiate that change. Embracing the "if it ain't broke, break it" school of thought, he fervently believes that the best organizations are those that drive constant and profound change.

His insightful analysis, based on years of research involving hundreds of companies, demonstrates that attachment to the status quo is a silent but deadly killer. He introduces this research, brought to life with real-world case studies, using pinpoint accuracy and laser-like intensity to demonstrate how ideas and necessary change elements stall, and how atrophy afflicts organizations of all shapes and sizes. In so doing, he holds up a mirror to painfully reveal our own attachment to these shortcomings.

It doesn't have to be this way, according to Kotter, who in his professorial style shakes us by our lapels and snaps us from our doldrums with a provocative program to instill a sense of urgency in all that we do. Properly led, organizations — and the people who work in them — come alive and respond with clarity, creativity, energy and engagement when faced with challenges as pedestrian as installing a new information technology system or as formidable as exploring an acquisition or reorganization.

The underlying theme that runs throughout *A Sense of Urgency* is that these responses can — and should — be programmed. What's missing, he argues, and is needed in almost all organizations today is a real sense of urgency — an intentional attitude that leads people to view change as an opportunity and to seize the initiative while avoiding the inevitable hazards along the way.

Listening to a Favorite Professor

If all this sounds familiar, it's because it is. Creating this sense of urgency is the first step in Kotter's eight-step process for implementing successful transformations, which he first articulated in one of his earlier books, *Leading Change*. Other steps he advanced were to form a guiding team, to orchestrate visions and strategies, to communicate effectively, to empower committed individuals, to achieve short-term wins that pave the way for even greater progress, to relentlessly pursue the

> "All too often, people get caught up in the activity ... assuming that it represents true urgency, only to encounter problems and setbacks that are distracting at best and destructive at worst."

vision while, at the same time, fighting complacency; and to institutionalize change in the corporate culture.

Leading Change was based on the analysis of about 100 efforts in organizations to produce large-scale change. Incredibly, Kotter found that in more than two-thirds of the situations where substantial changes were clearly needed, the change efforts failed. He also found that in about 10 percent of the cases, people achieved more than would have been thought possible. He followed that seminal treatise with *Our Iceberg Is Melting*, a business parable that dealt with organizational change from the fun and refreshing perspective of a penguin colony.

But Kotter's absorption with change is no laughing matter. He has discovered that not only was increasing urgency the toughest of the eight steps to implement, it lacked the comprehensive treatment needed to drive fundamental change. Thus, Kotter revisited this seemingly narrow issue — shoring up central tenets and management practices that ensure its vital importance in today's fast-moving, turbulent era.

Yet, while Kotter infuses *A Sense of Urgency* with all the intellectual gravity of a graduate level business course, take comfort in the fact that it comes across in such a fashion as if we were listening to a series of lectures from one of our favorite professors who knows how to get a message across in a memorable and effective way. The narrative forces us to pause frequently as we unpack Kotter's findings, pose questions of ourselves and our organization and challenge our individual status quos. But just as quickly as the able-minded professor sends us off into the wilderness of self-analysis, he ropes us back in with his insightful program. Whether by design or default, Kotter has created a companion on our change journey.

The Evil Enemies of Urgency

Kotter sets the stage for his analysis with a compelling, if haunting, review of complacency and false urgency — what he terms the greatest barriers to creating a sense of urgency and progress. Compelling in the sense that if these evils are not eradicated from our companies, they become a cancer that consumes our potential. Haunting in the sense that through the judicious deployment of examples from his research, Kotter forces us to confront our often ineffective effort to keep these attributes at bay.

The dictionary defines complacency as "a feeling of contentment of self-satisfaction, especially when coupled with an unawareness of danger or trouble." For Kotter, two words in that definition emerge especially important. The first is *feeling*. In other words, people usually treat complacency as a state of mind that can be changed solely with "the cold, hard facts." The second key word is *self*. Complacency is a feeling that a person has about his or her behavior, about what needs to be done or not done. Properly diagnosing complacency and overcoming it becomes essential for any change initiative.

A more insidious deterrent to change is false urgency, according to Kotter. While complacency embraces the status quo, false urgency often is disguised as a flurry of frenetic activity and "drop-everything" tasks, both of which threaten to undermine legitimate performance and progress.

The problem is confusing false urgency as real urgency. All too often, people get caught up in the activity (running from meeting to meeting, endless PowerPoint presentations, long to-do lists) assuming that it represents true urgency, only to encounter problems and setbacks that are distracting at best and destructive at worst. *A Sense of Urgency* is designed to guide us in recognizing false urgency and complacency and, by so doing, to transform each into a true sense of urgency and, ultimately, value for the organization.

Why Kotter's obsession with urgency? His answer is simple: because change is shifting from episodic to continuous and he wants to ensure that organizations adopt a proactive mindset that equips them for excellence. "With episodic change, there is one big issue, such as making and integrating the largest acquisition in a firm's history," he writes. "With continuous change, some combination of acquisitions, new strategies, big IT projects, reorganizations, and the like comes at you in an almost ceaseless flow. With episodic change, the challenge of creating a sufficient sense of urgency comes in occasional spurts. With continuous change, creating and sustaining a sufficient sense of urgency are always a necessity."

From the Outside Looking In

A Sense of Urgency provides a precise road map to counteract the twin enemies of complacency and false urgency that, if followed diligently, will bring purpose, direction and improvement to any company.

The first step is to train our organizations to look through the opposite end of the telescope. Kotter

rightfully believes that underperforming, reactive organizations tend to spend too much time navel gazing. In so doing, they lose sight of both the threats and opportunities that exist in the outside world. They get lost in the internal processes without fully grasping how these translate in the real world.

"An inwardly focused organization inevitably misses new opportunities and hazards coming from competitors, customers, or changes in the regulatory environment," Kotter explains, using his enviable logical prose. "When you don't see opportunities or hazards, your sense of urgency drops. With less urgency, you are even less inclined to look outside for the new possibilities and problems. Complacency grows."

If, on the other hand, we vigilantly scan the horizon in search of any potential problems that could change the way we do business or we expose ourselves to best practices that could enhance the way we do business, we overcome complacency by infusing a sense of purpose and urgency into our culture. The attitude of being open to a world of exciting, new possibilities (as opposed to rejecting them with "not invented here" condescension) not only helps to enhance job satisfaction, performance and security, it helps us to create a call to action, even in enterprises that have been totally content with the status quo.

Again, Kotter offers a prescription to dissolve the barriers that typically exist between the inside and the outside of an organization. These include listening to the junior level associates who often have the most interaction with the customer; using the power of video to bring important issues alive; sharing news — good and bad — with all members of the organization; sending people out as scouts to gather intelligence; and bringing key customers, prospects, new hires and information into the organization.

Aligning Words and Actions

The context of what we say — when, how and where we speak — is even more important. Do meetings start on time? How are alternative viewpoints received? What actions take priority?

Kotter decouples the attributes of speed and urgency. Behaving urgently "does not mean constantly running around, screaming 'faster, faster,'" he writes. Not only does that create additional stress, it ultimately leads to frustration when initiatives aren't accomplished on time. "People who fail to understand the basics — a faster-moving world, the need for more urgency — fall into this false-urgency trap far too often," according to Kotter.

Rather, successful organizations in Kotter's research separate accomplishments from activity. They adopt what he terms "urgent patience," an almost Zen-like attitude of working each day with purpose and intentionality on important goals (as opposed to busywork) but having a realistic view of time.

Setting the Floor on Fire

Kotter's research reveals that most people hold one of two perspectives on the nature of crisis. The first group, which he says is by far the larger, takes on a victim mentality. People in this group view crises as harmful, even malicious events that can hurt people and cause devastating damage to an organization or a community. So pervasive can be this damage that whole industries and management theorems have been established to mitigate the effects of crisis.

> "Properly understood and managed, any crisis forces us to re-evaluate our current practices and make improvements that ... may actually be necessary to succeed in an increasingly changing world."

However, a more effective response — and one employed by the most effective change agents — is to look beyond the crisis to discover potential opportunity. "They don't panic and make the situation worse," according to Kotter. "They don't automatically go into crisis management mode and hand the reins over to damage control experts. They take carefully considered action to convert initial anxiety and anger into a determination to act now and win."

Kotter describes this perspective with the vivid metaphor of a "burning platform." In this perspective, a crisis should not be viewed as evil. In fact, properly understood and managed, any crisis forces us to re-evaluate our current practices and make improvements that, under certain conditions, may actually be necessary to succeed in an increasingly changing world. Complacent organizations are seen to be the real danger, and even people who are most solidly content with the status quo will begin to act differently if a fire starts on the floor beneath their feet.

Using the inherent logic of the burning platform, if the platform doesn't catch fire, we should torch it ourselves, says Kotter. That way we spark a sense of urgency within our teams. This can be accomplished through a number of efforts, such as setting goals that cannot be reached using business as usual, proactively taking the pulse of customers and prospects, listening to customer-facing employees, and looking beyond the corporate walls.

Deal With Naysayers

Although Kotter peppers his book with real-world examples to help create an emotional link with the reader, NoNo, a fictionalized character introduced in *Our Iceberg Is Melting*, makes a return appearance in *A Sense of Urgency* to drive home another of Kotter's tenets. NoNo represents those people whose reaction to any new idea is "No, no, you see …" Although endearing, the character embodies all the characteristics of employees who undermine progress and discredit people who are trying to make improvements.

To sidestep the toxic environment left in the wake of NoNos, Kotter recommends three effective solutions: actively distracting these distracters, expelling them from the organization and exposing their behavior in ways that allow natural organizational forces to reduce or stop it.

An Appeal to Emotion

What makes Kotter's prescription so compelling is that in developing a strategy to combat the malicious undercurrents of complacency and false urgency, *A Sense of Urgency* aims not just at the head but also at the heart. He provides countless strategies and tactics — validated through his casework — for making an emotional connection that creates a sense of urgency and energizes employees, including sharing good and bad news, eliminating time-consuming meetings, and empowering our people. Kotter's program helps to inoculate businesses against many of the common diseases that consume many a business such as the allure of interesting but unimportant issues, a lack of execution, turf wars, time-consuming activities, and irrelevant goals.

"Mindless emotion is not the point," he writes. "Generally, the challenge is to fold a rational case directed toward the mind into an experience that is very much aimed at the heart. The winning strategy combines analytically sound, ambitious, but logical goals with methods that help people experience new, often very ambitious goals, as exciting, meaningful, and uplifting — creating a deeply felt determination to move, make it happen, and win, now."

"Thanks in no small measure to Kotter's groundbreaking work, we can understand that although urgency is an important motivator for change and improvement, it does not, and cannot, remain strong without conscious effort."

Properly conveyed, these emotional connections lead us to set and achieve higher goals, to challenge the status quo and to work beyond our comfort zones. Ultimately, we chafe at the gap that exists between where we want to be (our potential and our possibilities) and where we are, and we are compelled to act.

Thanks in no small measure to Kotter's groundbreaking work, we can understand that although urgency is an important motivator for change and improvement, it does not, and cannot, remain strong without conscious effort.

In other words, rare are those organizations that have successfully ingrained it in their culture. Natural forces tend to push us toward stability and contentment. "The basic pattern is simple," Kotter writes. "Urgency leads to success leads to complacency."

Armed with his insights, our job is to break that cycle and to sustain a strong sense of urgency over time and realize the potential to become a high-performance machine, where results go from good to great and beyond. What are we waiting for? ●

The author: John P. Kotter, the Konosuke Matsushita Professor of Leadership, Emeritus, at Harvard Business School, is the author of the international bestseller *Leading Change*, which outlines an actionable eight-step process for implementing successful change efforts, and *Our Iceberg Is Melting*, a business parable based on the same principles. He has written 16 previous books, 12 of which have been business bestsellers and six of which have won awards or honors. These books have been published in more than 100 foreign-language editions.

He is also the author of several articles in the *Harvard Business Review*. A graduate of MIT and Harvard, he joined the Harvard Business School faculty in 1972. In October 2001, *Business Week* magazine named Kotter the top "leadership guru" in America.

How Ups and Downs Move Us Forward

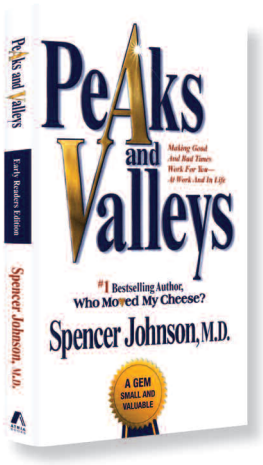
by Chris Lauer

PEAKS AND VALLEYS: MAKING GOOD AND BAD TIMES WORK FOR YOU — AT WORK AND IN LIFE

by Spencer Johnson, M.D.

© 2009, Atria Books, $19.95, 103 pages, ISBN 978-1-4391-0325-8

Business fables are more than simple fairy tales placed in a business setting. While both genres are fictitious, imaginative and entertaining, the element that separates the two is the extent of their link to reality.



A good fairy tale gracefully removes readers from reality by exploring magical realms where anything is possible, even the unbelievable. But a good business fable serves a completely different purpose. Instead of taking its readers away from reality, it helps them to get closer to it through a smart story that connects them to the deeper meanings that real-life stories can sometimes miss because of the specificity of their details. The best of these fables leave us with relevant wisdom we can apply directly to our organizations, our careers and our lives. In his latest book, *Peaks and Valleys*, best-selling author Spencer Johnson shows readers what a great business fable can do by providing volumes of wisdom in a short story that fills just 101 pages.

Business fables have been around for many years, helping people focus their skills and ideas so they can become more successful in their organizations. There was a time when publishers wondered whether business fables would ever grow beyond a niche and move into the mainstream of the business book market. Johnson is one of the authors who settled all doubts about the validity of the business fable as a bestseller.

Johnson co-authored *Who Moved My Cheese?* with Ken Blanchard. In that book — perhaps the world's most widely read book on change — the authors use fictional people and mice in a maze to demonstrate how we can all improve the ways we cope with life's inevitable changes.

Who Moved My Cheese? also helped millions of readers realize just how valuable a good business fable can be to those seeking an entertaining way to learn strategies to excel personally and professionally rather than reading case studies and best practices in non-fiction business books.

Proliferation of Business Fables

After the success of *Who Moved My Cheese?* dozens of other writers began dabbling in business fables to transmit their own business acumen to the world. Many of these fables have become valuable learning tools because their general tales about business struggles and successes allow them to transcend specific circumstances so they can be applied to innumerable situations.

For example, one author whose books have become bestsellers because of his succinct business fables is consultant Patrick Lencioni. His many books, such as *Silos, Politics, and Turf Wars; Death by Meeting; The Three Signs of a Miserable Job*; and *The Five Dysfunctions of a Team*, have all helped businesspeople understand their work and their lives better by presenting fictitious char-

acters who deal with very real organizational issues. The lessons they pass on transcend the fictitious nature of their stories and help real people in the real world improve their professional work and their personal lives.

Lencioni is only one of dozens of writers who have turned to the business fable as a way to help them share their unique ideas. Although several other book authors have made successful careers out of writing business fables, Johnson remains one of the most respected authors and self-help gurus in the world because he has mastered the art of writing business fables that tell important stories using fictitious characters whose make-believe adventures reflect the journeys that many people take through the real business world.

A Story Within a Story

In *Peaks and Valleys*, Johnson tells the story of a man who is looking for help during a tough time in his work and life. In a small café, he meets a friend of a friend who has had similar experiences, but she is now in a better spot because she found a useful, new philosophy. She tells him how she was once at the top of the world, but she soon found herself losing steam when her team at work began to become complacent after recent successes. When the stress at work became too much, she found an antidote to her doldrums in the form of a story she was told by someone who helped her solve many of her problems. She then tells that story to her new acquaintance.

The story she tells fills *Peaks and Valleys* with a parable about a young man in a valley who seeks a better way to live and work. To improve his position and gain a better perspective, he ventures to the top of a nearby mountain that looms above his valley. After some struggles, he finds himself at the top. Not surprisingly, he finds a wise man living there. As they talk, the old man shares some sage wisdom with the young man that he can take back into the valley to improve his work and life. The old man calls his way of thinking his "Peaks and Valleys philosophy."

After the young man returns to the valley, the old man's advice works for a little while, but the young man finds himself losing ground once again, so he climbs back up the mountain for a refresher course in the old man's philosophy. During both trips, the old man on the mountain, who is a peaceful and successful businessman who has had his own ups and downs in life and business, helps the young man develop a better way to deal with the peaks and valleys he finds in his life. The old man plays the role of sage to his younger counterpart.

The Universal Principles Are Basic

Johnson's story within a story breaks down the complexities of business and personal life into a parable that offers many principles that are universal in their application. While some might say they are too simple or abstract for the highly complex digital age of the 21st century, critics need only look at the list of salient points that Johnson encapsulates throughout his book to understand that these universal truths are important, yet so basic that they are often forgotten in the whirlwind of daily life. The simple reminders Johnson provides about what is important and how to get from a low spot to a higher spot, and how to stay at a higher spot for longer, are wonderful remedies to the complicated information overload we often experience during the daily business grind.

"Part Buddhist master, part shaman and part business guru, Johnson uses his simple tale to distill daily and corporate life into a straightforward business treatise, offering all readers a basic philosophy that can help them both personally and professionally."

Part Buddhist master, part shaman and part business guru, Johnson uses his simple tale to distill daily and corporate life into a straightforward business treatise, offering all readers a basic philosophy that can help them both personally and professionally.

Johnson's message transcends the parable in which it is contained because the circumstances faced by his characters are as real as any difficulties we experience in our own lives. By showing how our perceptions of situations influence the duration of our good times and our difficult times, Johnson helps readers deal with the challenges they face at work and at home. The stories he reveals demonstrate how a longer-range perspective can improve both work and life by making them more peaceful and productive.

Arrogance Pushes Us Off the Peaks

In a recent interview with Jerome Ritchey on Studio 10 TV in St. Petersburg, Fla., Johnson explained several of the pieces of wisdom that he develops in *Peaks and Valleys*. One of them is the idea that "arrogance, masquerading as confidence" can be one of the reasons why somebody on a peak loses his or her place, only to sink back down into a valley. Similarly, he explained, the inverse is just as profound. The reason why people get stuck in valleys for too long is because

of fear, which can feel like comfort to the valley dweller and keep him or her down longer than necessary.

During the interview, Johnson said, "All of us have ups and downs. But if we realize that arrogance takes us off the peaks, we'll stay humble. We'll be grateful. We'll not spend all of our money. We'll look at the truth. We won't become self-centered. That's a mistake that many of us make when we're on a peak, and we pay a big price for it because we create more of our valleys than we think.

"We've been raised to think peaks and valleys happen to us, but it's the mistakes you make on a peak that create your valleys, and it's the wise things you do in a valley that take you to your next peak," Johnson continued. "And fear immobilizes you. Fear is not realistic."

Fear Keeps Us in the Valleys

Johnson admits that some fear can be useful because it helps us remain awake and aware, but it can be harmful when it keeps us from seeing the truth in a situation that can take us out of a difficult time.

Johnson's book is not the first to tackle the impact of fear in the pursuit of excellence. There have been other titles in the past that acknowledge the role of fear as a motivator, even going so far as to suggest that it is necessary for reaching greater levels of success. Johnson does a great job of separating the existence of fear from the idea that it's an integral part of self improvement. His musings on fear in *Peaks and Valleys* will provide executives with a better base from which to handle a very common hurdle.

Another message Johnson shares in his book is the idea that we can learn much about the Peaks and Valleys philosophy by looking at the tracings of a heart monitor. The line of a heartbeat goes up and down with small, flat lines in between. He points out that this heart tracing is very indicative of the way life works.

First, peaks are always followed by valleys, and valleys are always followed by peaks. Neither is permanent. Second, there are times when a flat line appears between peaks and valleys. These times represent the short plateaus of rest and renewal we need in order to perform better during our ups and downs. And third, as the old man in Johnson's story says, the heart tracing is a reminder that the Peaks and Valleys approach must be used with your heart. In other words, how you *feel* about the insights gained during peak or valley experiences is as important as what you *do* with those insights.

We Need to Be Realistic About Life

Throughout *Peaks and Valleys*, Johnson describes how humility is key to the Peaks and Valleys philosophy. He explains that this merely means being realistic about your life.

The old man at the top of the mountain reminds our protagonist that he must stay focused on what is true, and not get bogged down in either irrational fear, which keeps people down in a valley for too long, or ego-driven arrogance, which can knock anyone off a peak too early.

The humility of realism also helps people who are in a valley because it allows them to see past their current difficulties. One of the ways people can get out of a slump is

Five Business Fables

The business fable has proven popular in the 21st century. Here are a few of the most popular titles in this genre:

- Fish! A Remarkable Way to Boost Morale and Improve Results by Stephen C. Lundin, Ph.D., Harry Paul and John Christensen. Hyperion (2000). This business fable offers a philosophy that helps people at all levels of a company bring more energy and passion to their work.
- The Five Dysfunctions of a Team: A Leadership Fable by Patrick Lencioni. Jossey-Bass (2002). In this business fable, Lencioni offers leaders a model they can use to overcome the common hurdles that prevent them from building effective teams.
- High Five! The Magic of Working Together by Ken Blanchard, Sheldon Bowles, Don Carew and Eunice Parisi-Carew. William Morrow (2000). Management guru Ken Blanchard and his three co-authors describe how teamwork can be built in any kind of organization.
- The Paradox of Excellence: How Great Performance Can Kill Your Business by David Mosby and Michael Weissman. Jossey-Bass (2005). This groundbreaking book describes how the more good work you do in your job, the more invisible you can become.
- Walk Softly and Carry a Big Idea: A Fable — The Seven Keys to Finding Meaning, Passion and Balance in Your Life and Work by Don Jones. John Wiley & Sons Canada (2002). This fable is about the soft skills that make a hard difference at work and in life.

to ask one of the primary questions Johnson poses in his book, "What is the truth in this situation?"

Instances like the above are what lend strength to the business fable as a teaching tool. Johnson is able to use the plot of his fable to express his exact point. He doesn't have to attempt to draw parallels that may or may not hold water upon further scrutiny by readers. Additionally, the business fable prevents him from having to use case studies from recent events. The business fable, much like its fictional counterpart, has a timeless quality that won't lose its shine once certain companies are no longer making headlines.

Valleys and Peaks Are Temporary

One of the underlying truths about valleys, Johnson points out, whether they come in the form of economic recessions, difficult times at work or family struggles, is that they will pass. This is also true about peaks. Remembering this and remaining realistic during peaks and valleys is a key to staying peaceful. For example, when everything is going well at work, instead of letting the ego take over and create the arrogance that can push people away, looking truthfully at a situation can remind the person at the top of his or her game that this peak is only temporary. In other words, don't alienate other people by bragging about your peak experience because you might need those people when you are back down in a valley.

During a peak time, Johnson explains, celebrate your success, but remain humble by staying grounded in reality. Likewise, during your time in a valley, learn from your mistakes, but don't get scared. We all make mistakes. The people who learn from their mistakes and see them as steppingstones to better decision-making are the people who spend less time in a valley.

"During a peak time, Johnson explains, celebrate your success, but remain humble by staying grounded in reality. Likewise, during your time in a valley, learn from your mistakes, but don't get scared. We all make mistakes. The people who learn from their mistakes and see them as steppingstones to better decision-making are the people who spend less time in a valley."

Time in a valley can actually be very useful if it is spent creating a sensible vision of a better future, Johnson adds. By remembering these realities, we can become less stressed and more successful.

Today Affects Tomorrow

In today's turbulent business and economic climate, Johnson's message is a relevant reminder of truths that are easy to forget when we get wrapped up in our daily struggles: What we do today affects how well we do tomorrow. By demonstrating the interconnected nature of our ups and downs — our mistakes connect to our successes, and our successes can lead to our failures — *Peaks and Valleys* provides pertinent principles that help us create a more realistic view of our long journey through work and life. ●

The author: Spencer Johnson, M.D., is the author or co-author of 11 internationally best-selling books. In 1998, he published the bestseller *Who Moved My Cheese?® An A-Mazing Way to Deal with Change,* which has sold more than 10 million copies worldwide, becoming the most widely read book on change. He is also the co-author (with Kenneth Blanchard, Ph.D.) of T*he One Minute Manager,* the world's most popular management method for more than two decades.

Johnson received a bachelor's degree in psychology from the University of Southern California and M.D. status from the Royal College of Surgeons. He completed his medical clerkships at the Mayo Clinic and the Harvard Medical School. Johnson has served as Leadership Fellow at the Harvard Business School and is currently Advisor to the Center for Public Leadership at Harvard's John F. Kennedy School of Government.

The Associated Press, the BBC, CNN, *FORTUNE* magazine, *the New York Times*, the *Today* show, *Time* magazine, *USA Today* and United Press International have all featured Johnson's work. More than 46 million copies of his books are in print worldwide in more than 47 languages.

Make Leadership History

Learn From the Past to Forge Your Path to Future Success

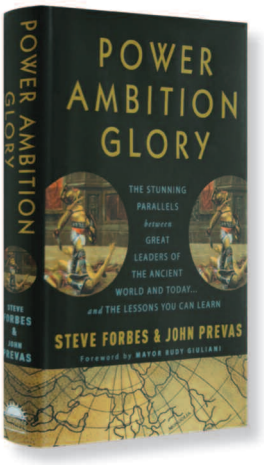
Review by Andrew B. Clancy

POWER, AMBITION, GLORY

by Steve Forbes and John Prevas

Crown Business, © 2009, 308 pages, $26.00, ISBN 978-0-307-40844-0

In 1818, the poet Percy Bysshe Shelley published his short poem "Ozymandias." The rhyming lines detail the dilapidated remains of a giant statue upon whose base were written the words, "My name is Ozymandias, king of kings: Look on my works, ye mighty, and despair." The fact that the shattered statue is all that remains of what the reader assumes was a once-great kingdom reveals that every empire — and its emperor — one day fall to ruin. This lesson, repeated time and again, is never completely learned. Every era of human history has seen the rise and fall of kingdoms and empires. At the forefront of each has been a leader, in some cases benevolent, in others tyrannical, but mortal on all counts.



Steve Forbes, chairman and CEO of Forbes Media, and author John Prevas see the strong comparisons between the empires of the ancient world and the corporations that rule modern society. In their new book, *Power, Ambition, Glory: The Stunning Parallels Between Great Leaders of the Ancient World and Today … And the Lessons You Can Learn*, the pair set out to provide modern executives with a leadership course that's more likely to take place at an archaeological site than a boardroom.

The backstory of the book is as interesting as the content itself. Forbes never intended to write a history-based business title. He is, after all, the author of previous works such as *Flat Tax Revolution: Using a Postcard to Abolish the IRS* and *A New Birth of Freedom*, books rooted in solving the problems of the present. Whether the Greek deities known as the Fates were involved in Forbes' plans is anyone's guess, but something moved his hand toward a book on Carthaginian general Hannibal one day while he was browsing in a Florida bookstore. The book, *Hannibal Crosses the Alps*, was written by John Prevas. Forbes was impressed by Prevas' bravery in researching and writing the book. Not content to limit his research to the wilds of an academic library, Prevas climbed the Alps in an adventurous journey for the truth behind Hannibal's legendary accomplishment. Prevas' efforts produced an excellent book, and Forbes expressed his opinion as such in a review in *Forbes* magazine.

This led Prevas to contact Forbes about the possibility of a collaboration. Originally, according to a *Soundview* interview with Forbes, the intention was for Prevas to write a book about figures from the ancient world and Forbes would contribute a page or two concerning a figure from today's business world that paralleled the historical counterpart. The pair rapidly found that limiting this comparison to one or two pages was impossible.

Over the next three years, Forbes and Prevas carefully crafted *Power, Ambition, Glory* in an attempt to provide executives with the best possible examples of the importance of character, the need for teamwork and the destructive power of ego.

Executives who have an interest in history will be instantly drawn to *Power, Ambition, Glory*. The biogra-

phies of each historical figure are condensed for purposes of brevity, but readers will enjoy learning about individuals from history that may be less well known. One unique note is the examination of the Persian empire, which today forms parts of Iran, Iraq, Afghanistan and Pakistan. This may be the only business book where readers can read language that isn't politically charged about this region. Forbes and Prevas do an excellent job of giving the history of Persian emperor Cyrus the Great and demonstrating the necessity of tolerance when one has plans to expand globally.

> "Great leaders are known for their aggressive pursuit of more customers, more stores and, ultimately, more sales. What separates the great leaders from the select few at the highest peak of management is the ability to know a company's limits."

The Power of Parallels

The obvious question that critics of the book ask is whether or not the parallels are as "stunning" as the authors' subtitle proclaims. This is answered through the selection of modern figures to whom the ancient leaders are compared. The book is not a "Who's Who" of industry giants. It would have been easy for Forbes and Prevas to type up a list of the CEOs with the highest name recognition and simply try to match them up with Caesar or Alexander. Yes, there are comparisons involving former GE CEO Jack Welch. The names of Google founders Larry Page and Sergey Brin appear in the book. However, readers can get to the end of *Power, Ambition, Glory* without reading about Virgin CEO Richard Branson or, and this may shock some people, Microsoft founder Bill Gates. The fact that Gates, Branson and several other notable names are not included demonstrates that Forbes and Prevas wanted to offer more than just convenient comparisons for the sake of audience approval.

After all, not every comparison in *Power, Ambition, Glory* is positive. One of the great aspects of the book is the cautionary tales it tells about dangerous behavior patterns. The sections on Alexander the Great and Julius Caesar are important for their examples of unchecked ambition and raging egomania. Again, there may be some critics who would scoff at the notion of comparing anything in the modern world to men who proclaimed to be living gods, but look closer at the time period in which *Power, Ambition, Glory* hit bookshelves. The world economy saw glimpses of its own potential apocalypse as the United States experienced the subprime mortgage crisis. Forbes and Prevas detail the role Countrywide Financial founder Angelo Mozilo played in contributing to the overall disaster. The lure of making money in a market that was concerned with volume rather than quality easily compares to an emperor who worries more about acquiring territory and less about being able to manage his conquest.

The mortgage crisis comes up more than once in the book, as does the danger of overexpansion. The chapter on Alexander the Great offers executives an important insight into the latter. Growth is an essential and necessary part of the success of any business. Great leaders are known for their aggressive pursuit of more customers, more stores and, ultimately, more sales. What separates the great leaders from the select few at the highest peak of management is the ability to know a company's limits. Alexander suffered from an inability to halt his desire to conquer more and more territory. This eventually led to even his own soldiers begging him to return them to their homes. Forbes and Prevas do a great job in comparing this folly to the efforts of former Time Warner CEO Gerald Levin, whose successor Richard Parsons was forced to unload many of Levin's acquisitions as a means of reducing Time Warner's tremendous debt at the time.

A Seamless Collaboration

The structure of *Power, Ambition, Glory* is such that executives will find the authors' lessons tucked neatly amongst interesting bits of history. The book does not suffer from the segmented feeling one often sees in books that make historical comparisons. It's not a case of story-lesson-story-lesson. Instead, the work flows with a nice narrative. This will prevent anyone from being able to read the book piecemeal, but Forbes and Prevas' choice of subject matter is likely to erase any thoughts of skimming anyway. Prevas' strengths are brought to the fore during the biographies, while anyone familiar with Forbes' previous books will see that he's lost none of the forthrightness that made *Flat Tax Revolution* such a success when it was released in the 1990s. The pair's writing styles are well suited to one another and there aren't any ill-fitting passages to lead the reader astray from the main focus of the book.

As the book's title suggests, ambition plays a key role in the lessons taught by the study of history. The authors use Julius Caesar as the model of how a leader's ambition and ego can evolve over time. For Caesar, as for many CEOs over the course of the last 50 years, the very per-

sonality traits that allowed him to push the parameters of success also led to his eventual downfall.

Despite the warnings offered in the book, it's important to make the distinction that Forbes and Prevas don't take some sort of monastic stance against ambition. They acknowledge it as a necessary trait for achieving one's goals. The difference, they note, is the ability to recognize when ambition begins to exceed the needs of the company. Too often, unchecked ambition leads an executive to a critical fork in the road and pushes him or her down the path to ruin.

Forbes and Prevas could have looked to Petronius, a philosopher who lived during the era of the emperor Nero, for an explanation of the importance of knowing one's boundaries. "Moderation in all things," Petronius is alleged to have written, "including moderation." Ignoring the moderate path when it comes to ambition leads executives into dangerous territory, as it did for Caesar. While, thankfully, this no longer involves finding oneself facing literal daggers from one's colleagues, backstabbing of the modern variety is a certainty.

Caesar: the CEO of Rome

The authors cite the disastrous path taken by former Macy's CEO Edward Finkelstein. At the dawn of the 1980s, Finkelstein took control of the underperforming department store chain with hopes of removing it from the public. While this initial effort was deemed a success by those allowed to purchase the private stock, Finkelstein used the credibility he gained to pursue riskier ventures. As the authors write, "Macy's creditors finally did to Finkelstein what the senate did to Caesar."

The discussion of Caesar creates an interesting point for executives reading *Power, Ambition, Glory*. Executives are encouraged to use the chapter on Caesar to spur a look at their own ambition. Caesar and Finkelstein both lacked the ability to be open to the suggestions of the people who surrounded them. An integral part of the ability to lead is the ability to listen.

For all of Caesar's greatness, regardless of the end to which he came, his successor Augustus rivals or surpasses the former's achievements in the eyes of many historians. The period of history in which Augustus operated would cause many readers to think they were in for another disaster story from the annals of history. Augustus presided over the end of the Roman republic and the foundation of the Roman empire, serving as its first emperor.

Forbes is quick to point out that despite taking part in situations that would have caused others to go mad with power, Augustus maintained a level of clarity about his situation and responsibility to the people.

"One of the things Augustus did, after seeing what happened to his uncle Julius Caesar, was to make it a point to consult people," Forbes told *Soundview* in a recent interview. "He knew, human nature being what it is, he could go down that power path. It's like an addiction, a drug addiction, the intoxication of having supreme power."

Forbes recognized that Augustus' unique standing among Roman leaders offered a point of reference for today's CEOs. "With leaders," he suggests, "recognize what your shortcomings are and put together a team where you can get feedback."

Teamwork is a principle that is often overlooked in books discussing what separates legendary leaders from run of the mill executives. Forbes and Prevas work diligently to foster understanding of the importance of the individuals behind the scenes to the growth of any leader and his or her company. All of the leaders covered in *Power, Ambition, Glory* have military experience to some extent. Their ability to command troops in an era when manpower alone conquered countries may seem to some to not mesh with today's management world. It's important to remember that while technology gives today's leaders the ability to quickly reach anyone, large organizations still deal with the same spatial issues that caused many an empire to disintegrate.

The repeated theme of empires crumbling will lead readers to rightly ask what it takes to maintain a large organization once it reaches a considerable size. In the case of Augustus, he tried to break down the divisive aspects of the traditional class systems and culture of Roman society. The authors point to the emperor's decision to award to common men the purple sash that had previously been the sole right of the aristocracy. Today's leaders can translate this into the need to spread power to a diverse and multi-faceted leadership team.

Augustus is the last figure examined in *Power, Ambition, Glory* and executives reading the book will get the impression that he is seen by the authors as the best representation of the qualities that make a great leader. The chapter dealing with Augustus and his contributions to the Roman empire seems to contain a few more superlatives. This is likely due to the fact that Augustus maintained a level of humility that could have well served the individuals behind the recent global financial crisis.

Forbes reveals that there is some truth to this speculation. He told *Soundview* that not only were Augustus' achievements and diplomacy admirable qualities, but it was the context in which he began his leadership career that served as an inspiration point.

"For [Augustus Caesar]," Forbes says, "seeing what

happened to Julius Caesar was a cautionary tale. That's one of the reasons why John and I wrote this book. Instead of a leader having it happen as closely [to himself] as Augustus did with Julius, leaders can see what happened to these leaders of the past. Recognize that this can happen to you. Times may change, but human nature does not."

The notion that human nature remains unchanged is given a great deal of support as readers make their way through *Power, Ambition, Glory*. The book will very likely cause executives to perform their own comparisons, on a micro and macro scale, between historical figures and today's leaders. Media outlets with a more political bent will doubtless apply the book's themes to both the current president and his immediate predecessor. What's humorous is that both men will likely be compared to the same figures from history depending on which network or blog is drawing the line.

Forbes and Prevas smartly avoid bringing current American politics into the mix. The temptation must have been great, particularly for Forbes. His established opinions of the ineffectiveness of the American tax collection system could have led him to use a fallen empire as a metaphor for the Internal Revenue Service. Instead, readers will be glad to see that the book remains unclouded by rhetoric. What the authors propose is a straightforward system of beliefs.

An important part of staying on the ethical path is dispelling what Forbes and Prevas refer to as the "Heroic Myth." This is the tendency for an organization to pin its success and chances for further advancement on the work of one individual. While this type of problem has existed during the entire length of corporate history, the glare of the spotlight seems to have turned this into a modern phenomenom.

The problem grew to absurd heights during the 1990s with the appearance of the media label "rock star CEO." This was the leader whose resume needed to include a list of panel appearances on CNN, CNBC and any number of talk shows, as well as a list of completed objectives that lined shareholders' pockets. Unfortunately, many of the best examples of the "rock star CEO" profile were at the helm of Internet companies whose star fell as quickly as it rose during the early part of the current decade.

The Need for Self-Examination

Much of what executives take away from *Power, Ambition, Glory* will depend on the reader's strength at self-examination. The pace of modern business puts leaders in an unenviable position of needing to deliver results in an ever-narrowing window of time. In some respects, this time-crunch for success may be partly to blame for creating a modern Caesar or Alexander. Those CEOs who are able to outlast the predicted executive lifespan of less than five years are quickly lionized by their constituents, and the ego train starts to barrel downhill shortly thereafter.

This is why one cannot fault the authors' insistence that character lies at the heart of what makes a leader great and, more importantly, sustainable. Critics will dismiss the assertions of Forbes and Prevas as simplistic, but if character is so easy to comprehend as a key for great leadership, why is it so elusive? The fact that it requires putting the best interests of others before one's own opportunities for success provides a hint as to why too many executives are unable to last.

Forbes points to Xenophon as a leader who held the understanding of the importance of character. "He knew when to be out front and when to pull back," Forbes told *Soundview*. "Character is the hardest thing to win and the easiest thing to lose."

Fortunately for readers, *Power, Ambition, Glory* provides enough examples, both good and bad, that today's leaders will not have to search high and low to find a reputable guide to the top. The book should help prevent executives from suffering the fate of Shelley's Ozymandias, whose statue stands shattered while "the lone and level sands stretch far away." ●

The authors: Steve Forbes is chairman, CEO and editor in chief of Forbes Media. He twice campaigned for the Republican nomination for the presidency. He is the author of *Flat Tax Revolution: Using a Postcard to Abolish the IRS* and *A New Birth of Freedom*. He is widely considered an expert in the areas of finance and corporate leadership.

John Prevas is an author and classics professor. He is the author of *Hannibal Crosses the Alps, Xenophon's March* and *Envy of the Gods*. Prevas' exploits include climbing the Alps in search of the pass used by Hannibal to invade Italy.

Sustaining Emotional Intelligence Over the Long Haul

How to Infuse Your Workplace With Hope, Compassion and Caring

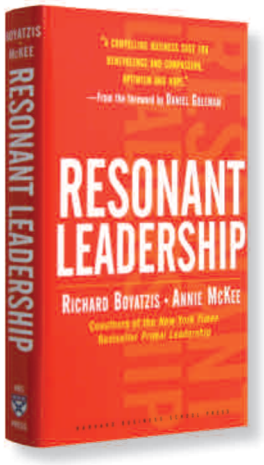
Review by Chris Lauer

RESONANT LEADERSHIP

by Richard Boyatzis and Annie McKee

Harvard Business School Press, © 2005, 286 pages, $25.95, ISBN 1-59139-563-1

More than a decade ago, Daniel Goleman published his seminal business book *Emotional Intelligence*, which finally put into words one of the most important concepts that many successful leaders had been thinking about for years but had difficulty finding the proper vocabulary to discuss. With his best-selling book, Goleman helped to give business leaders a new set of workplace competencies that improve how they manage their feelings, interact with each other and communicate.



Goleman's work described how ultimately, people's emotions play a pivotal role in leadership, and how those who master their emotions and use them in their work with others can create the positive relationships that lead to organizational and personal success. The "domains" of emotional intelligence Goleman describes in *Emotional Intelligence* are awareness of one's self, the management of one's self, being socially aware and the ability to manage relationships.

Several years later, Goleman followed up his best-seller with *Primal Leadership*, which he co-authored with fellow leadership experts Richard Boyatzis and Annie McKee, two professors who share Goleman's belief in the importance of emotionally intelligent leadership in the workplace and beyond.

In *Resonant Leadership*, Boyatzis and McKee follow up their previous work with more guidance on how to improve leadership by breaking through stress with the skills that create hope, compassion, mindfulness and connecting with others. They call the people who master these skills "resonant" leaders.

While the emotionally intelligent, resonant leader offers organizations many positive benefits, outlined with new research and compelling stories throughout *Resonant Leadership*, the emotionally ignorant, "dissonant" leader is the antithesis of the leader who works hard to capture the benefits of emotional connections. Instead of creating harmony within their organizations, the authors write, dissonant leaders become ineffective because the job stress they internalize quickly spreads throughout their organizations. This dissonance takes the form of distress, exhaustion, anger, fear, frustration and antagonism. These volatile, negative emotions lead to reactivity that can deeply damage relationships and organizations.

Mastering the Cycle of Sacrifice and Renewal

By dismantling the "power stress" that comes with leadership into its basic components, such as complex decision making and the loneliness it breeds, the authors describe how power-related stress can lead to chronic stress, which can hurt leaders and the people around them. While power stress usually comes with the territory of leadership, the authors point out that its chronic nature can force leaders into unhealthy habits that display themselves in such detrimental ways as constant distress and burnout. They write that the key to managing stress, dissonance and what they call "the Cycle of Sacrifice and Renewal," is

returning to the healthy benefits of resonance.

Positive messages pour out from every chapter in *Resonant Leadership*. Boyatzis and McKee are such seasoned veterans of the leadership realm that each page of their book exudes confident management wisdom. Their stories and research demonstrate the joys of resonance in the workplace and the home. Building strengths in the supposedly "soft" regions of leadership is often the most difficult part of a leader's journey to excellence, so their advice is a welcome addition to the leadership lexicon.

> **"Mastering one's emotions can be a daunting task, but these leadership experts offer a welcome guide to tapping into the power of some of the most basic and overlooked tools for work and life satisfaction."**

Mastering one's emotions can be a daunting task, but these leadership experts offer a welcome guide to tapping into the power of some of the most basic and overlooked tools for work and life satisfaction. They skillfully use science and experience to describe relationship-building tools that hit the reader deeply, thanks to many fascinating stories and research results. The enduring power of self-renewal and relationship growth through hope, compassion and caring is a subject the authors deliver with beautifully balanced grace.

For starters, they appropriately define the challenges leaders face in this tumultuous world of rapidly shifting business changes. Then they describe how crises and chronic stress often create exhaustion, fear and anger, and how these emotions in a leader can harm an organization and its people, or at least become detrimental to its goals.

Two Very Different Leaders

To exemplify the challenges people face in their daily work, the authors look closely at two very different leaders: the fictionalized "Eduardo" and Southwest Airlines' Colleen Barrett. Eduardo represents the leader whose successes helped him rise up the corporate ladder, but when he loses sight of the real goals of his organization and falls into dissonant patterns that drive people away, his bad behavior eventually leads to organizational failure. Through his story, readers get a realistic view of the damaging effects of stress and negative emotions in the workplace. On the other hand, the story of Barrett's experiences as a leader at Southwest Airlines shows readers what the resonant leader does to create a positive workplace culture that succeeds through even the toughest times. Her story shows how a resonant leader puts time and effort toward creating and sustaining healthy working relationships. By contrasting the work styles and approaches of these two leaders, the authors offer readers a compelling view of how dissonant leaders prevent success and resonant leaders breed it.

Along with true stories from the front lines of leadership, the authors present the latest research that backs up their case studies with hard data. For example, after presenting the stories of Eduardo and Barrett to demonstrate the importance of the work cultures leaders create, the authors support the ideas in their book with the results of a study showing that "the culture of an organization, and in particular the way people feel about the climate, can account for nearly 30 percent of business performance." Hard facts show that the "soft" skills of the resonant leader are vital to his or her organization's success.

Although hope, compassion and caring are not the usual terminology used by the tough-minded leaders from the command-and-control era of organizational management, the authors of *Resonant Leadership* break these lofty yet vital concepts down into terms anyone can understand.

Inspiration and Challenges

Everyone can recognize that stress, dissonance and burnout at work can be hazardous to people and their organizations. Working to move groups of people in a common direction tends to create chronic stress in leaders, the authors write, but it doesn't have to lead to negative results like it did when Eduardo lost his way and failed to use emotional intelligence in his work. The authors recognize the chronic nature of a leader's stress, but they also offer a solution to the problems it creates. The trick is to add renewal to the mix.

Renewal for the resonant leader entails taking time to address one's emotional and personal needs, which requires a deeper awareness of what those needs are. The authors write that knowing one's self is the only way to know how to create the renewal that allows a leader to stay effective in his or her role. Finding the parts of the job that offer a leader hope, inspiration and challenges is a first step on the road to renewal. Creating time in the day to be alone and reflect is another way to sustain the resonance that helps a leader succeed. By offering leaders tips on creating and sustaining resonance in their lives, the authors present a variety of tools they can use to avoid dissonance and counteract the stress that comes with a leader's job.

The Sacrifice Syndrome

The underlying mission of *Resonant Leadership* is to keep leaders from becoming the ineffective, irritating,

abrasive and oblivious people who can run a company or a relationship into the ground. It can happen to even the best leaders. Even the most experienced leader can become overwhelmed by the daily pressures of a difficult job when he or she loses resonance. The authors call this problem "the Sacrifice Syndrome," and explain that it occurs when a leader gets overwhelmed by the stress of his or her job.

When the day-after-day pressures and sacrifices of a power position become too much, a leader can fall victim to the stresses, crises and exhaustion leadership can create. Once the Sacrifice Syndrome kicks in, defensive routines can keep the leader from recognizing what is really going on inside him or her as well as within the organization. As a result, the entire organization begins to exhibit dissonant behaviors that can even become institutionalized. This negative spiral can lead to the negativity and dissonance that can destroy a leader and even an organization.

A Pernicious Affliction

The trouble with this downward spiral is that, although everyone notices it, nobody is willing to step up and tell the truth to a leader who is in denial about the results of his or her behaviors. This "CEO Disease," the authors write, leads to overly cautious underlings tiptoeing around a leader whose habits are wreaking havoc on the workplace. The authors write that most leaders are susceptible to catching the CEO Disease. When they do, communication breaks down, the leader becomes distant and the malady gets worse. When leaders deny their vulnerability to this pernicious affliction, the stress of leadership can slip out in negative behaviors. When resonance is lost, relationships crumble and even the best leaders become less effective. Over time, anxiety and tension rear their ugly heads and destructive dissonance dominates where resonance once reigned. As a result, leaders stress out their managers, managers spread their tension to front-line workers and the entire organization suffers.

Dissonance can take many shapes. By telling the pertinent stories of people who have suffered from dissonance, the authors reveal its manifestations as well as the sources of renewal to counteract its power to drive people and organizations into the ground.

The rising expectations that come with leadership roles can become sources of "power stress," the authors write. When ignored, this stress can lead to the dysfunctional coping mechanisms that ruin families and friendships. Resulting problems can sap confidence and cause people to shut down. Denial pushes leaders deeper into disengagement, which, according to the authors, is another sure sign of dissonance.

Renewal

Boyatzis and McKee write that renewal is the key to fighting power stress. They explain that some kind of renewal process is vital to keeping a leader energized. To back up their remedy for dissonance, they present the results of many recent scientific studies from a variety of fields. For example, they explain that new research shows how renewal has positive effects on our mood because it releases helpful hormones in the brain and takes our brain pattern to a healthier place. Once our perceptions begin to shift, our behavior begins to change. The authors explain that the effects of renewing the mind, body and heart are critical for improved relationships and effective leadership.

Through a variety of experiences and studies, the authors offer leaders a straight path to greater resonance. The story of Reuters chairman Niall FitzGerald describes the tale of a resonant leader at the top of his game who slipped into the Sacrifice Syndrome and found himself sliding down toward dissonance. The wake-up calls that alerted him to his problems consisted of problems at work, lost friendships, a broken marriage and the last words of a dying friend. Suddenly, he realized he was not living the life he wanted. This self-awareness opened the door for FitzGerald to seek resonance by engaging in real change in his life and work.

The authors explain that wake-up calls are only the first step toward creating change. They write that engaging in real change requires capturing dreams and plotting a path toward them. Research shows that articulating a compelling dream for the future is the next step. Then, the authors write, a leader needs to look at what he or she needs to change in order to improve. Finally, they add, renewal needs to become a way of life.

"Dissonance can take many shapes. By telling the pertinent stories of people who have suffered from dissonance, the authors reveal its manifestations as well as the sources of renewal to counteract its power to drive people and organizations into the ground."

Mindfulness, Hope and Compassion

The authors' prescription for renewal and resonance has three active ingredients: mindfulness, hope and compassion. This powerful triad offers a clear path to good feelings and healthier relationships that lead to the resilience needed to face

difficult challenges. Cultivating these habits helps renewal become a continuous source of power to fuel a leader's journey to effectiveness and resonance. Although finding his path to resonant leadership cost Niall FitzGerald his first marriage, the authors' advice helps others prevent his mistakes.

The authors point out that being honest and true to one's self helps a person get in touch with the values that often get left behind in the pursuit of ambitious career objectives. Old habits die hard, but the authors include a variety of exercises and research results that offer leaders the support that encourages resonance. Simple reflection points and personal exercises, such as a worksheet for determining the rhythm of changes in an active career, offer readers opportunities to interject themselves into the authors' scenarios for growth so that deeper learning about emotional intelligence and resonant leadership can take place.

The Ideal Self

Once a leader is ready to change, the authors write, he or she needs to develop an image of his or her *ideal self*. This image of what a person wants out of life, and who the person wants to be, then leads to a personal vision of the differences between the ideal self and the real self, including strengths and weaknesses. By showing leaders how to capitalize on their strengths in order to move closer to the ideal self, the authors help them experiment with new habits, reinforce positive attributes and develop and maintain the positive personal relationships that help people move toward the renewal leading to resonance.

When the authors discuss mindfulness, the first element in their cure for dissonance, they are writing about the "capacity to be fully aware of all that one experiences *inside the self* — body, mind, heart, spirit — and to pay full attention to what is happening *around us* — people, the natural world, our surroundings, and events." Tuning in to ourselves, our environment and other people keeps us mindful, they add. When a leader remembers to be mindful, he or she can better avoid uninformed decisions that lead to negative results.

Hope is the second part of the antidote that helps leaders fight the disease of dissonance. According to the authors, studies show that hope leads to other good feelings, more positive thinking, better coping skills and less depression. Better coping skills and positive emotions lead to improved reasoning, interactions with others and personal effectiveness. The authors write that these attributes lead to more openness, "cognitive flexibility, problem-solving abilities, empathy, willingness to seek variety and persistence." All of these terrific results stem from the clarity, goal setting and sense of well-being that are part of what hope is all about.

Empathy and Caring

The authors explain that the third active ingredient in the remedy for dissonance is compassion. Through real-life stories of empathy and caring put into action with creativity and resilience, the authors complete their potent formula for resonance. By adding the virtue of benevolence to their work and lives, leaders gain a valuable way to connect with others, help them meet their needs and also enjoy the benefits of the renewal that results from their individual efforts. One tip the authors offer as a starting point for compassion is as simple as it is effective: listen. By pointing out the sometimes obvious benefits of becoming an in-tune, listening and caring person, the authors remind us about the basic human values that often get overlooked when people get more power in their jobs.

Throughout *Resonant Leadership*, powerful neuroscience, physiology, psychology and true business tales support the authors' process for creating organizational and personal success. Compelling data and fascinating results give *Resonant Leadership* a solid backbone of facts and humanity to support the many counterintuitive techniques proposed by the authors. By helping to inject the difficult yet vital subjects of hope, compassion, caring and renewal into the daily lives of leaders, Boyatzis and McKee offer welcome relief to those struggling with dissonance in their lives. ●

The authors: Richard Boyatzis is a professor in the departments of Organizational Behavior and Psychology at Case Western Reserve. He is also Visiting Professor of Human Resources at ESADE in Barcelona.

Annie McKee is co-chair of the Teleos Leadership Institute and teaches at the University of Pennsylvania Graduate School of Education.

Leadership Lessons for the Realistic Optimist

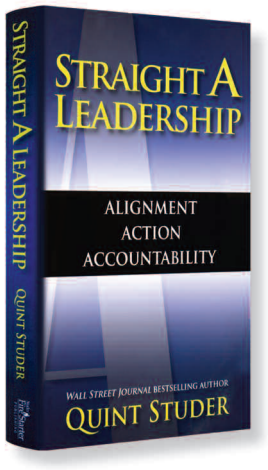
Review by Chris Lauer

STRAIGHT A LEADERSHIP: ALIGNMENT, ACTION, ACCOUNTABILITY

by Quint Studer

Copyright © 2009 Studer Group, LLC.
Fire Starter Publishing. 264 pages, $28.00, ISBN 978-0-9840794-1-4.

The title of best-selling author Quint Studer's latest book on leadership in the healthcare field could have easily been *The Realistic Optimistic*. With *Straight A Leadership*, Studer continually advocates level-headed optimism as well as a realistic perspective on organizational leadership. He also explores the idea that great leaders must be adept at shifting from "long-term optimism to short-term realism." By showing leaders how to do this quickly, he helps them keep up in the rapidly changing field of healthcare as it is being bombarded every day with more and more changes.



Humility is another key ingredient in Studer's prescription for better leadership because acknowledging weakness is an essential skill for people who want to grow. Being humble also helps leaders build the trust they will need to implement the best practices that he proposes throughout the book. Adaptability is also a major part of his recipe for leadership success in the healthcare field. Without it, a leader will probably just keep doing the same things in an industry that is undergoing more change these days than just about any other field. With an underlying foundation of realistic optimism, humility and adaptability, leaders will have a better chance at transforming the valuable strategies, tools and tactics Studer prescribes in his book into growth and success.

Beyond Titles

Studer continues to rise above his titles. As the CEO and founder of a world-renowned coaching company, he continues to make a name for himself in the healthcare field by helping leaders implement systems and practices for better results. By staying on the cutting edge of organizational improvement, Studer has proven himself to be a valuable corporate adviser and executive coach. While helping leaders improve their businesses, he has become a master of gathering and spreading best practices from hundreds of organizations and thousands of other leaders. In fact, he has been so successful as a hunter, gatherer and transmitter of great ideas that *Inc.* magazine named him a Master of Business. When he received this honor, he became the first recipient of the award who works primarily in the healthcare field.

Studer has also been recognized internationally for his first book, *Hardwiring Excellence*. With more than 350,000 copies sold so far, it has become one of the best-selling leadership books ever written about the healthcare field. His second book, *Results That Last*, is also a best seller.

The primary obstacle that Studer aims to help leaders tackle with his suggestions and ideas in *Straight A Leadership* is the leadership crisis that is taking place within many of the best healthcare organizations. The problem, he explains, is not a shortage of a workable plan. The real problem is the difficulty of executing that plan since it has become harder and harder for healthcare organizations to face changes in the external envi-

ronment. Internal operations must be brought into line with those changes while also being made more flexible so leaders can deal with those changes every day.

Consistency

One of the main points Studer makes throughout his book is that healthcare leaders need to get on the same page. They need to create a cascading communication channel that moves all ideas and information throughout the company. Nobody can be left out, because gaps between executives, middle managers and employees create the types of misalignment that crumble organizations. The key to a great system of communication is consistency, Studer writes. To keep results predictable and people throughout the system working toward the goals set by top leaders, a consistent approach is vital. Consistency creates collaboration and coordination, which is how better results are built.

All of the alignment in the world is not going to do much good for your organization if you and your people fail to take action.

How do you get all of the leaders in an organization on the same page? Alignment. This is the first "A" on which Studer focuses in his book.

Alignment

When Studer writes about alignment, he's talking about connecting the dots within your organization. The best way to do that, he explains, is by always looking at your organization as "a continuous performance improvement process." In other words, you should always be striving to be better than you are right now. Healthcare organizations can never rest on their laurels. Since new technologies will always be important, great employees will always need raises to keep them on board, and new equipment will always be necessary, healthcare organizations are always fighting an uphill battle. Standing still is not an option. Staying the same in a turbulent industry, Studer explains, simply means getting worse.

That's why leaders must always be working together toward common goals. One way to do that is by creating systems through which top leaders can obtain and send information to supervisors and managers, who will then spread that information to their people. Newsletters are a great way to share ideas, Studer writes, but they must be done correctly. A poorly executed company newsletter can become a dull photo op for senior leaders, or a place to dump disconnected information. On the other hand, a well-executed company newsletter connects the dots for everyone in the organization by not simply mentioning the external environment, but describing how those in the organization can respond to outside events. Success stories about role models can help employees feel that they are empowered to take action. Another way leaders can use a newsletter to connect the dots within their organization is by sharing it with their direct reports. When employees see that their boss is sharing the newsletter's articles and information in his or her rounds with staff, they will recognize its importance.

Other effective tools for promoting alignment include company bulletin boards and employee forums, Studer writes. A communication board can connect people to the organization as well as its external environment by exposing everyone to recent data, news and studies that pertain to their jobs. Employee forums can also be used to explain changes in the external environment, share ideas, discuss plans and provide new perspectives. Through stories about successfully conducted employee forums, Studer shows leaders how these meetings can help them gain support for their initiatives while also obtaining new ideas about ways to improve their organizations.

Action

All of the alignment in the world is not going to do much good for your organization if you and your people fail to take action. This is the second "A" in Studer's recipe for leadership success. Execution is essential to becoming a high-performance healthcare organization. To help healthcare leaders improve how they focus their actions, Studer presents his coaching company's performance assessment. By completing the Studer Group's assessment, leaders can learn where they are performing at their best, and where they need to improve. The survey not only helps leaders document where they are today, but it also helps them set realistic yet challenging goals for the future, devise better systems for performance counseling and address performance issues.

Some of the most important things that leaders need to do, Studer writes, is "deal with low performers, move middle performers up and reward high performers." Without a system in place that charts how well people are doing their jobs, he adds, an organization will soon find itself filled with low performers at all levels.

Accountability

The best way to avoid this tragedy is to create the third "A" in Studer's prescription for better performance: Accountability. No organization is going to improve if its people are not held accountable for their

work. The solution to the problem of low-accountability is leader evaluations, Studer writes. Getting people to sign a "Standards of Behavior" contract is not enough, he adds, since most organizations these days have their people sign these contracts, and very few are performing at higher levels.

A leadership assessment is a better way to find the gaps between leaders' knowledge and the organization's ability to tackle tough challenges from the external environment, Studer explains. When that gap is evaluated, solutions can be found and the gap can be bridged with new learning and behaviors.

Assessment

The first part of *Straight A Leadership* delves deep into the 16 questions of the Studer Group organizational assessment by working through each of the questions and providing insight into the types of information that an organization can gain by answering them. For example, the first question asks a leader to define his or her role. This information can help the organization find out what top executives, managers, doctors, department directors and other groups feel about their roles and the direction of the organization.

Once leader groups are identified, then the rest of the information that the assessment brings to the surface can be better understood. For example, the second question on the assessment asks respondents to list the "top three things your organization does well and should continue to do." Studer presents a sample grid from one organization that demonstrates how different the perspectives of leaders can be. For example, all groups list "quality of care" as something their organization does well. But the groups diverge from there, with senior leaders focusing on financial performance, physicians focusing on educational opportunities and managers focusing on patient safety. This wide variety of responses demonstrates the dramatic differences between what senior leaders see in their organizations and what others judge to be important.

Closing the Gap

Similarly, when leaders are asked to look at what they would improve in their organizations, most leader groups from one sample survey list communication and accountability as areas where there are opportunities for improvement. Studer points out an interesting theme that occurs when the responses of senior leaders are compared to those of their managers and supervisors: Senior leaders are less likely than managers and supervisors to list communication as a top area for needed improvement. This could mean that top leaders see themselves as terrific communicators while their underlings see greater room for improvement in that area.

Senior leaders are less likely than managers and supervisors to list communication as a top area for needed improvement.

By encouraging their leaders to take the survey, organizations can get a deeper sense of where they should focus their efforts and actions. By seeing the gaps between what an organization wants to do well and what it views as lacking, any organization can find better ways to close real and perceived gaps between each of its groups of leaders. When the distance between leaders' perceptions and reality decreases, Studer writes, organizational performance increases.

Studer's assessment also draws out the barriers to improvement that prevent an organization from moving forward. By showing leaders how to analyze results, he helps them overcome obstacles. For example, when the assessment reveals problems with how people spend their time, Studer takes that information and shows leaders how they can improve the productivity of their people. If you think you are wasting your time in too many dull meetings that seem to get nothing accomplished, Studer writes that your problem might not be your number of meetings. Maybe your meetings are just poorly led. Studer suggests creating a more efficient standardized meeting template. Training your leaders to facilitate meetings better can also help, he adds.

Battle Mediocrity

As an industry insider, Studer understands how difficult it is for organizations and people in the field to perform at the top of their games. But he also understands how vital it is that they do so if they want to continuously improve. That's why he offers leaders some helpful advice for dealing with all of the different types of performance they will encounter while struggling through good and tough economic times. He explains that there are three types of conversations that leaders will need to have with their people.

The first kind of conversation is with high performers. He reminds leaders that these are the people who they want to keep, so leaders must always be re-recruiting them. To keep them involved and interested, Studer writes, ask them to mentor others to pass along their skills. Help them see that they are part of a winning organization during one-on-one coaching sessions, and be specific with all feedback. Learn what you can do to keep them around. Giving them more

responsibilities or better opportunities can encourage them to stay, he adds.

The second type of conversation leaders must have with their people is with middle performers. These people, who make up the majority of employees, must be made to feel that they are valuable parts of the organization, Studer writes. The more specific you can be with your feedback, the better. To help middle performers move up to the ranks of the high performers, help them grow by setting up professional development programs. This will demonstrate your commitment to them as well as your belief that they can improve. When they feel good about themselves and the organization, Studer adds, they will be more motivated to get better at their jobs.

Poor Performers

The most difficult conversations leaders must have are with low performers. Although these people usually make up about 8 percent of the average workforce, Studer writes, they often take up a much larger percentage of a manager's time. You don't want these people to drag down your middle performers. That's why Studer encourages leaders to get good at the tough conversations that are required to move these people up or out of the organization. Don't let these people blame others for their shoddy work, or use their personal problems as excuses. Go to Human Resources to discover what options are available when dealing with these low performers, Studer suggests. He writes that one way to get better outcomes is by using the "D-E-S-K Approach":

- **D**escribe the poor performance.
- **E**valuate processes, steps, procedures and standards not followed.
- **S**how what needs to be done and how.
- **K**now the consequences of continued low performance.

Deadlines for performance improvement will help you follow up on low performers, Studer explains. When somebody refuses to improve, consider termination.

External Environment

The key to continuous improvement and "Straight A's" is staying tuned in to the external environment, Studer writes. This basic leadership trait is vital to a leader's ability to adapt to industry and organizational changes. That's why he dedicates so much of his book to advocating better ways for leaders to remain vigilant about how the external environment is affecting the organization's actions and goals. By showing leaders how to connect their daily operational tactics to a regular influx of information from the external environment, Studer helps leaders stay in line with the realities they must face today and the challenges that the future will undoubtedly bring.

How can a leader stay connected to the external environment? Studer describes many ways. For example, leaders can create scouting reports with which they track their people and determine who should be recognized and what issues in the organization need to be addressed. Rounding for external environment issues is another best practice that can help a leader gather more information than can be found by simply waiting for information to filter its way up the organization's hierarchy. Regarding rounding, Studer offers this tip: Capture the information that is found while walking among your people. A "rounding log" can help you keep track of any issues that get brought up during conversations with employees.

With many suggestions like these, and hundreds of examples from the real world to back them up, *Straight A Leadership* goes beyond best practices by walking healthcare leaders through the steps that will lead them to high performance. With positive encouragement along the way, and numerous tools for building a sturdy organization that is firmly planted in the realities of the external environment, Studer's latest book offers leaders the principles that can help them succeed. With an optimistic long-range vision that also maintains a realistic perspective on short-term goals along the way, Studer's expert advice provides valuable help where and when it is needed most.

The author: Quint Studer is founder and CEO of the coaching firm Studer Group. He is also the author of *Hardwiring Excellence* and *Results That Last.* Studer was chosen on two occasions by *Modern Healthcare* as one of the 100 Most Powerful People in Healthcare.

How to Master the Challenges of Change

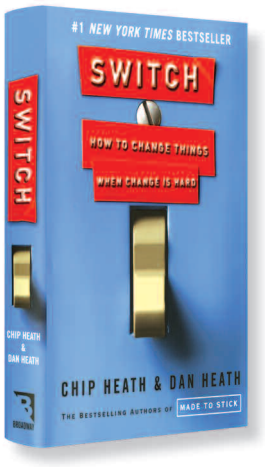
Review by Chris Lauer

SWITCH: HOW TO CHANGE THINGS WHEN CHANGE IS HARD

by Chip Heath and Dan Heath

Copyright © 2010, Broadway Books, 305 pages, $26.00, ISBN 978-0-385-52875-7

As two thought leaders who dwell at the juncture where research converges with daily life, Dan Heath and Chip Heath have mastered the language of change while adding many ideas of their own to the lexicon of shift. While digging under the surface of why change can often be so difficult, they have exposed a variety of easier ways we can accelerate and improve the change process.



Most changes are tough to accomplish because we are always engaged in a constant balancing act between our emotions and our logical brains. Promoting changes at home or new initiatives at work can be complicated tasks, but the Heath brothers have figured out how to simplify the steps of making change happen into some thoughtful visual images and ideas that can help us find a better way forward.

The Elephant and the Rider

One of the ideas that the co-authors describe in their latest book, *Switch*, is the wonderfully descriptive metaphor of the elephant and the rider, which they glean from psychologist Jonathan Haidt's book *The Happiness Hypothesis*.

The human brain is not simply an emotional hurricane or strictly a rational machine, and the conflict between our emotions and logic is not a simple tug of war. Instead, the brain is like an elephant with a rider on top. Our emotional side is like a 20,000-pound elephant being tenuously controlled by a much smaller rider, who represents our rational side. The size difference makes it very difficult to be the rider, and struggling with an unruly animal can be very tiring. In the same way as the rider needs a break after working to keep the elephant in check for any length of time, our brains get worn out from too much emotional strain and need some time to recover. The next time you are faced with an important decision remember that scientific research has found that holding back our emotions for too long can make us extremely susceptible to the powerful effects of our untamed emotions.

Initiate a Change

The theory works both ways, so if we want to change how other people behave we cannot forget that they have their own elephants and riders with which to contend. If you want to help people change their habits or initiate a change initiative in your workplace, keep in mind that you will need to address both their elephants and their riders when motivating them to change their work or their behavior.

That's just the type of metaphor that epitomizes the insights on change that the Heath brothers bring to light in *Switch*. While presenting several different ways of looking at problems in our personal and professional lives, and showing us how to put into practice the ideas

found in the latest research studies and product breakthroughs, they help us improve our chances of success when change is needed to get us to a better place.

The authors move the theoretical results of new scientific studies into helpful daily practices by providing an easy-to-use framework on which to build any needed change. Taking the elephant-and-rider analogy to the next level, they turn it into a three-part framework that explains the most important things to keep in mind when trying to wrangle our erratic elephants and their weary riders.

How You Can Shape Paths

To start, the Heaths explain, if you want to motivate people to make a change, embrace a change or become involved in a change, remember that they will need some help. Elephants and their riders benefit when you "shape the path" they are on. In other words, working with the environment in which you want a change to take place will make it easier for you to get other people's riders and elephants moving in the right direction. The path is the situation you are in, and there are always ways that you can change a situation so people will have more tools to help them stay on course. Paths can come in a variety of forms, so keep your eyes open for the unexpected ways you can smooth a route to the change you desire.

Switch presents guidance for anyone with a desire to make any type of change. The change principles the Heath brothers present ... are universal in scope and application.

For example, movie popcorn can teach us something important about shaping paths. Studies show that if you give people larger buckets of popcorn at the movie theater, they will eat more popcorn than people who are given smaller buckets of popcorn, even if the popcorn is terrible. We might not want to eat more popcorn, and we might not even realize that we are eating more popcorn, but researchers have found that we tend to eat more popcorn from giant tubs than from little buckets. And if you want people to eat less popcorn, telling them to eat less is not as effective as simply giving them a smaller bucket. What does this research teach us about change? By shaping a situation to motivate people to change their behavior, we get better results than we do by merely telling them to change how they act.

The Heath brothers dedicate a large portion of *Switch* to showing us how different types of people and organizations have shaped the paths of others to help them facilitate changes. Although business leaders can benefit greatly from its many lessons, one of the great things about *Switch* is that it is more than a how-to manual for marketers. *Switch* is designed to help people who do not have the authority or resources to simply command a change into existence. Filled with dozens of examples of people at all levels who were able to implement and promote effective changes in their lives and organizations, *Switch* presents guidance for anyone with a desire to make any type of change. The change principles the Heath brothers present throughout their book are universal in scope and application.

Take Steps to Deal with Emotions

The second element in the Heath brothers' three-part framework for change is the idea that the elephant needs to be motivated. In other words, never forget about the emotional side of people's brains when you are trying to make an appeal for change. The Heaths explain that sometimes what you are seeing when you are looking at the emotional response of others is not what it seems. Since there is always an emotional element to the choices people make, including a decision to change, it is useful to address those emotions when trying to motivate them to adopt a change in behavior.

For example, in *Switch*, the authors describe a public health campaign in West Virginia that used social marketing methods to try to reduce the consumption of whole and 2 percent milk, and increase the consumption of low-fat and no-fat milk products. One way the Center for Science in the Public Interest (CSPI) sought to do this was by making people aware of the massive amount of saturated fat that they could eliminate from their diet each year by simply switching from whole milk to 1 percent milk. To make the emotional side of its appeal, the CSPI ran evocative television, newspaper and radio ads for two weeks. During one press conference, CSPI scientists demonstrated the amount of fat in a half-gallon of whole milk by presenting a tube full of fat. This is the type of emotional appeal that gets people to take notice of a change that could really help them, the Heaths point out. The positive results of the group's media campaign showed that the "emotional elephant" had been greatly motivated, and the change in milk-purchasing behavior was still apparent after six months in both of the West Virginia communities where the media campaign took place.

The CSPI scientists are not the only people to use such an appeal to help people change their diets. The New York City Department of Health recently used similar emotion-laden imagery in its campaign to promote healthier choices among New York City residents.

Public health officials wanted to help city residents become healthier by spreading the word that sodas and other sweet drinks are part of an obesity epidemic. Through posters placed in the city's subway system and in a multilingual health bulletin, the agency ran the campaign for three months in 2009. Knowing that vague appeals to become healthier are not as effective as more specific messages, the agency used emotional imagery to make its point. In the posters, a flowing drink from a soda bottle turns into disgusting blobs of yellowy, gelatinous fat by the time it reaches the overflowing glass below. The advertisement's copy asks readers, "Are you pouring on the pounds?" This question is followed by the simple admonition, "Don't drink yourself fat." Then it advises readers to "Cut back on soda and other sugary beverages. Go with water, seltzer or low-fat milk instead."

The poster campaign was so effective that the agency created a matching video campaign in 2010, in which viewers see a man pour and drink globs of flowing fatty fluid from a glass. Along with the poster's tag line, a statistic is added: "Drinking one can of soda a day can make you 10 pounds fatter a year." Why did the ads have such an effective impact on the people who saw them? In their *Fast Company* column describing the ads, the Heath brothers write, "Change comes from feeling, not facts. Furthermore, the ad is masterfully simple: Sugary soda equals fat." With this combination of emotional and rational appeals, the New York City Department of Health's ad campaign also followed the third part of the Heaths' framework for change: "Direct the Rider."

'Direct the Rider'

Getting back to the elephant-and-rider metaphor, the co-authors explain that motivating the elephant and preparing the situation so change can be adopted more smoothly are only the first two parts of the three-prong approach they describe throughout *Switch*. The third element in their framework addresses the need to make a straightforward rational appeal as well.

Be clear about the directions you give your people. Sometimes they just need to know the facts so they know their emotions are leading them in the right direction. Without a clear look at the reality behind a change, people are likely to resist a change rather than embrace it. We recognize that animal fat looks disgusting and makes us want to cringe when we see somebody drinking it out of a glass or pouring it out of a soda bottle, but also stating the fact that soda has been proven to make people fatter helps to complete the formula for helping people embrace the move from soda to a healthier choice.

Be clear about the directions you give your people. Sometimes they just need to know the facts so they know their emotions are leading them in the right direction.

Tweaking the Environment

While trying to motivate other people to change, it is easy to imagine that the people who resist making the change are simply being defiant. But this can be a mistake. Studies show that sometimes the situation surrounding a change initiative is the culprit that is preventing people from making a desired change. By simply "tweaking the environment," the Heaths write, you can make your change initiative more effective.

For example, the co-authors describe one study in which two groups of students are defined as either highly altruistic or unlikely to give to a charity. After both groups were given a request for a canned food donation, the results of the canned-food drive were just as the researchers expected: Some of the "saints" made the donation and none of the "jerks" gave a thing. But, when more specific and detailed instructions were given to both groups so they knew exactly what, when and how to make their donations, the researchers were surprised by their findings: Five times as many of the "saints" made a donation and 25 percent of the "jerks" also donated. In other words, one quarter of the worst donators were inspired to donate because they were simply given a little help along the way. This is just another example of how a simple "tweak" to a situation can guide people to change their behavior. The lesson here is that what we think is a people problem might really be a problem with the situation we've created. Since situations are usually easier to control than people, focusing on the environment surrounding a change is a great place to look for opportunities for improvement.

Another way to promote change and keep that change in place is to help people build better habits, the co-authors write. And since our environment deeply affects our habits, a shift in our environment can make all the difference when promoting a change in behavior. For example, studies show that smokers often find it easier to stop smoking when they are on vacation. This is because there are fewer things around them that remind them of their usual smoking habits.

Action Triggers

Like shifting the environment or breaking a change down to specific actions, laying the "mental ground-

work" for a change can also be a very effective way to help people make a shift in their behavior. One example of this is what researchers call an "action trigger." An action trigger, according to psychologist Peter Gollwitzer, is something that sets off a preloaded decision. This means trying to associate a common action with doing something else that might be a little more difficult to motivate. For instance, one study showed that action triggers had a dramatic effect on the recovery time of patients who had undergone hip- or knee-replacement surgery. Those who were told to plan their therapeutic walks ahead of time — by writing down specifically when and where they planned to walk — recovered in half the time as those who did not write down their plans. According to Gollwitzer, action triggers create "instant habits" that help people adopt changes more quickly. New behaviors can be made into habits by applying this type of "behavioral autopilot" to make the changes more likely.

Compelling case studies coupled with clearly defined actions for getting the most from the latest science fill every chapter.

Switch is filled with a slew of strategies like these for getting change to stick. Compelling case studies coupled with clearly defined actions for getting the most from the latest science fill every chapter. Finally, after all of the examples and experiences are woven into a fascinating tapestry of change inspiration, the Heath brothers offer a one-page cheat-sheet for recalling their advice on making a switch. Along with this useful document, the Heaths have also included a list of common obstacles to change and the ways they can be overcome. These types of resources, along with all of the stories that fill *Switch* from end to end, offer readers dozens of lessons that can help them work through any change initiative.

Made to Stick

The Heath brothers have obviously figured something out. As columnists for *Fast Company* magazine, the Heaths have made a name for themselves as change experts while honing their ability to translate the latest science, business research and real-world experiences into applicable change strategies.

Their first book, *Made to Stick: Why Some Ideas Survive and Others Die* was an incredible success for exactly the same reason that *Switch* is so compelling: It is fun to read. That's why *Made to Stick* spent 25 months on the *BusinessWeek* Bestseller List, became the top book in the *Globe and Mail* newspaper and has been translated into more than 24 languages. Stellar reviews in *Time*, *People*, the *Washington Post* and *Psychology Today* turned *Made to Stick* into a worldwide hit.

Stickiness

By simplifying the ideas that anyone can use to promote change, whether it comes in the form of change initiatives at work or efforts to change oneself, the Heath brothers have created a winning formula for enhancing the stickiness of the latest advances in behavioral and business sciences. While the work of Malcolm Gladwell follows a similar path into new science, as do the works of Steven Levitt and Stephen Dubner, the Heath brothers offer a relevancy and clarity of focus that surpass their predecessors.

Throughout all of their work, whether in their magazine columns or their books, the Heath brothers translate the metaphors and studies from today's top scientists into basic steps that can be used by anyone to safely navigate a changing world of life and work that becomes more complex every day.

In *Switch*, Dan Heath and Chip Heath have translated the best work and research on the subject of change into witty stories, pertinent lessons and illuminating images we can all use to improve our change-filled work and lives. ●

The authors: Chip Heath is a professor at the Graduate School of Business at Stanford University. Dan Heath is a senior fellow at Duke University's Center for the Advancement of Social Entrepreneurship (CASE). Previously, he was a researcher and case writer at Harvard Business School, as well as the co-founder of a college textbook publishing firm called Thinkwell.

Champion of Capitalism

Alan Greenspan's Memoir Is an Endorsement of Free-Market Economics

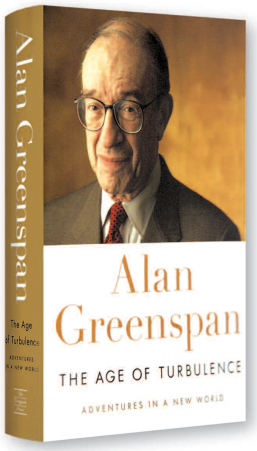
Review by Stephen Wolter

The Age of Turbulence

by Alan Greenspan

The Penguin Press, $35.00

In the year 2000, one of the country's best-known journalists, Bob Woodward, wrote a book-length profile of Federal Reserve Board Chairman Alan Greenspan; he called his book *Maestro.* The title was appropriate, for not only was Greenspan the person so many economists, business people and Wall Street investors looked to as a source of economic guidance, he was also considered a master in his field. How exactly a self-confessed math geek, who rose to the top post of an institution most Americans know little or even nothing about, became someone whose name is recognized by nearly every informed American remains something of a mystery, even to Greenspan himself.



In his new memoir, *The Age of Turbulence: Adventures in a New World,* the man who served as the Federal Reserve Board's chairman for 18 years still seems puzzled by the amount of influence his pronouncements in his former position seemed to have. Nevertheless, his book, for which he reportedly received more than $8 million dollars, is probably the most discussed Washington-insider memoir of the last few years, giving credence to the notion that his word still carries a good deal of weight.

For a man who was lampooned by pundits and cartoonists as someone who spoke the language of economic mumbo jumbo whenever he testified before Congress in his role as Federal Reserve chairman, Greenspan's book is surprisingly readable, written in clear, concise, almost workmanlike prose. He displays flashes of self-deprecating humor throughout. He also demonstrates, for this day and age, a remarkable amount of civility in his assessment of the many powerful figures he crossed paths with during his years of public service. Those readers looking only for the typical tell-all autobiography, in which criticism is freely assigned to everyone the author dislikes, will come away disappointed.

That's not to say Greenspan is afraid to recount the disagreements he had with government leaders, including presidents. But it's just not part of his intent to tear down the reputations of the individuals he interacted with during his time in Washington.

Greenspan states in the book's introduction that his memoir is divided into two parts. As such, it is really only the first half of the book that qualifies as memoir, where he describes the entire arc of his life, from his birth in 1926 until his final days as chairman of the Federal Reserve Board.

No doubt it is the first half of the book that many readers of Washington memoirs will be drawn to, but to consider only that portion of the book as relevant would be a mistake. Greenspan's mission in telling his life story in the book's first half is not just to write an autobiography, but also to present the history of our world during an "age of turbulence," as seen through a specific lens — that of an economist dedicated to free-market capitalism.

In doing so, he sets the stage for the second half of the book, where he describes the challenges that capitalist societies will have to face in order to raise the standard

of living for everyone and, in the process, defeat those extremist forces that seemingly wish to see the world's great economic powers spiral downward into anarchy.

Beginnings

The introduction to Greenspan's memoir recalls one specific day in his 75th year of life. He writes about where he was and what he was doing on September 11, 2001. It's not uncommon in the last few years for autobiographies to begin with 9/11 as a jumping-off point, and apparently Greenspan was drawn to this way of beginning his book as well. And why not? Not since World War II has there been such a defining moment in American history. Along with the fear, outrage and sadness that affected all Americans as a result of 9/11, Greenspan — in the most significant position an economist in the United States can hold — was faced with dealing with the economic impact that would ripple throughout the world as a result of the terrorist attacks. "The possible economic crises were all too evident," Greenspan writes. "The worst, which I thought highly unlikely, would be a collapse of the financial system." For the record, on 9/11, Greenspan was flying back to the United States from Zurich, Switzerland, where he had attended a meeting of international bankers.

After this brief introduction into what America was facing in a post-9/11 world, Greenspan continues his autobiography in a chronological fashion. His description of his early life is written in an almost conversational tone, and the reader senses that even though this is a published memoir, Greenspan still wants to keep parts of his life private.

"It's also telling and somewhat humorous when Greenspan, describing his days as a musician, shares that when the rest of the band was in the backroom partying between sets, he was reading books about J.P. Morgan or, on occasion, working on his bandmates' tax returns. 'I was known as the band's intellectual,' he writes."

For example, he covers his brief first marriage and subsequent divorce in the space of a single paragraph, declares that he was the main problem for the marriage's failure and writes that the woman he was married to is an extraordinary person with whom he remains friends to this day. Despite several shallow passages like this one, we still glean some interesting aspects of Greenspan's early life.

The Education of an Economist

Greenspan's parents divorced before he could even remember them being together as a family. He credits his mother with instilling in him her love for music, and when he was still in high school he took up playing clarinet and saxophone in jazz bands.

Rejected from military service during World War II — an X-ray revealed a spot on his lungs that indicated a possibility of tuberculosis — Greenspan studied clarinet for a year at Juilliard before hitting the road with a 14-man jazz ensemble called the Henry Jerome Orchestra. Who but the most dedicated Greenspan watcher could picture the chairman of the Federal Reserve playing in a jazz band? It's an interesting revelation into Greenspan's life that helps to humanize him to the general reader. It's also telling and somewhat humorous when Greenspan, describing his days as a musician, shares that when the rest of the band was in the backroom partying between sets, he was reading books about J.P. Morgan or, on occasion, working on his bandmates' tax returns. "I was known as the band's intellectual," he writes.

As the war came to an end, Greenspan watched as former soldiers, many the same age as he was, headed off to college on the GI Bill. Several years before, he had not had any interest in higher education, but now, cleared of any signs of tuberculosis, Greenspan realized he might live a healthy life after all and decided to enroll in New York University's School of Commerce, Accounts and Finance.

Greenspan writes that in the early post-World War II years, economics was a hot topic, because the world appreciated the way the U.S. economy had responded to the industrial challenges during the war. It was also a time, as Greenspan puts it, when "new economic institutions were being created and a new economic order was taking shape right before our eyes."

Many of his classmates were followers of the ideas of the 20th century British economist John Maynard Keynes, whose writings would eventually be given the label of *macroeconomics.* Keynes' theory, as Greenspan puts it, provided the "intellectual underpinning" for Roosevelt's New Deal. Simply put, Keynes argued that free markets, left to themselves, did not always deliver the greatest good for societies. There were specific times, such as periods of high unemployment, when government intervention was needed to improve the economy.

Greenspan admits that while he found Keynes' mathematical innovations fascinating, he was not interested in his economic policy ideas. It is a theme that is repeated throughout the book, as Greenspan remains an ardent defender of the free market, with as little government

interference as possible.

Perhaps the most interesting story Greenspan tells about his education in economic theory was his relationship with author Ayn Rand, whom he writes was one of the two most influential teachers he had. (The other was Arthur Burns, his faculty advisor when he began work on his Ph.D.) Rand — whose books *The Fountainhead* and *Atlas Shrugged* have an almost cultlike following today — was a Russian immigrant who despised Soviet-style communism. Greenspan met Rand through a friend of his first wife and soon became part of a small social group that would meet at Rand's apartment once a week to debate any number of topics involving society and economics.

Although Greenspan was working on a doctoral degree in the 1950s, he abandoned his studies in 1953 and founded an economic forecasting firm with William Wallace Townsend, a man 38 years his senior. He seems to have been quite happy in his work as an economist over the next 14 years.

He may never have left his firm, but in 1967, the finance professor at Columbia University — with whom Greenspan was co-authoring an economics textbook — was asked by Richard Nixon to join his presidential campaign in the role of chief policy advisor. Not long afterward, Greenspan was invited by this same professor to help write speeches and develop policy for Nixon, and so began a career of nearly 40 years in government service.

The Public Servant

Greenspan's time in Washington forms the core of his autobiography. From Richard Nixon to George W. Bush, he would serve in some capacity under six presidents. His service to Nixon, however, was brief and limited almost entirely to the presidential campaign.

He tells the story of a meeting a week before the Republican convention in 1968, when Nixon called for a gathering with 15 members of his staff. Greenspan, who was present, sat down for what he assumed would be a policy discussion. Instead Nixon launched into a profanity-laced tirade about how the Democrats were the enemy. Greenspan writes that he was stunned; this was his first exposure to Nixon's dark side. After the election in November, Greenspan turned down an offer from Nixon to join the White House staff. It was Nixon's dramatic personality shifts that steered Greenspan clear of wanting to work for him. Nevertheless, he claims that Nixon was one of the two most intelligent presidents that he worked with; the other president was Bill Clinton.

In 1974, at the height of the Watergate scandal, Treasury Secretary Bill Simon asked Greenspan if he would take over as chairman of the Council of Economic Advisors (CEA). The CEA chair, according to Greenspan, was one of the top three jobs an economist in Washington can hold (the other two are Treasury secretary and chair of the Federal Reserve). Despite the importance of the position, he resisted accepting it because he didn't want to be part of Nixon's administration. After an appeal from his old graduate school professor Arthur Burns, who told Greenspan that the government was paralyzed and he should take the job for the good of the country, Greenspan reluctantly agreed. As it turns out, his confirmation hearing before Congress was on August 8, just hours before Nixon announced his resignation on nationwide TV.

So began a three-year stint under Gerald Ford, serving on the CEA. His appraisal of Ford is the most touching portrait in the book, especially in light of Ford's death in late 2006. Greenspan has great admiration for this president who was never elected and looks back on Ford's administration with a sense of nostalgia. Specifically, he misses the civility with which Ford led the government and the general good will between politicians of the day. Greenspan longs for a return to that kind of political discourse. He also praises Ford for his actions toward deregulation, which he calls the administration's "great unsung achievement." As a disciple of free-market trading, Greenspan writes that it is hard to overestimate the benefits of deregulation — even if some of those benefits took years to unfold.

With Ford's defeat by Jimmy Carter, Greenspan was once again a private citizen. But four years later he served as an advisor to Ronald Reagan during the 1980 presidential campaign, and after Reagan became president, Greenspan was appointed to chair a commission that explored ways to keep Social Security solvent. But it was his appointment by Reagan in 1987 to chair the Federal Reserve Board that would make Greenspan the best-known economist in America.

"So began a three-year stint under Gerald Ford, serving on the CEA. His appraisal of Ford is the most touching portrait in the book, especially in light of Ford's death in late 2006. Greenspan has great admiration for this president who was never elected and looks back on Ford's administration with a sense of nostalgia."

The Federal Reserve and Beyond

In the second half of the book, Greenspan turns more philosophical as he examines

numerous issues facing the global economy today and in the near future. If timing is everything, then Greenspan's appointment to the Federal Reserve in mid-1987 could not have been more dramatic. Just a few months later, on October 19, the stock market took its greatest one-day drop in history — 508 points, which at the time was 22.5 percent. "The Fed's job during a stock market panic is to ward off financial paralysis," Greenspan writes. He details the steps he and his staff took in the aftermath of the crash to prevent an economic disaster. By early 1988, he writes, the economy had stabilized and the Dow had reached the same level it had been at in early 1987.

Greenspan admits that even now he is still unable to identify any single factor that led to the market crash on Black Monday in 1987. His only explanation is human nature — investors were gripped with an irrational fear that made them sell off shares even if it didn't make financial sense.

Readers continue to follow Greenspan through his years at the Federal Reserve as he describes the stagnant economy that plagued the first President Bush (Greenspan reveals that Bush blamed him for his election loss in 1992), to the boom years of the 1990s, to the recession of 2001, and finally, to the challenges the country faced in the wake of the 9/11 terrorist attacks.

Readers also get a detailed explanation of his speech from December 5, 1996 to the American Enterprise Institute, which contained what is probably his most famous quote: "But how do we know when irrational exuberance has unduly escalated asset values…?" It was "irrational exuberance," of course, that the press latched onto, and which became a sort of catchphrase for the economic outlook of the day.

As mentioned earlier, the second half of the book contains Greenspan's observations of where the world economy is heading. Chapters are devoted to China, Russia and Latin America. Greenspan addresses the relationship between education and income equality, and why Americans must be ready to accept the costs of education reform. And he concludes the book by giving some predictions about where America's economy might be in 2030. Much of this has been covered by other authors — Thomas Friedman's *The World Is Flat* being one notable example — so some readers may find this portion of the book less interesting than the biographical section. But there's no reason why someone with Greenspan's knowledge shouldn't weigh in on these topics, especially when his arguments and observations are so clearly written and convincingly presented.

If there is one theme that runs throughout the entire length of the book, it is Greenspan's belief in the necessity of the free market. He is vehemently opposed to the concept of "central planning," that tool of government that interferes with the natural ebb and flow found in a capitalistic system.

His strongest example of the failure of central planning is how the economies of East and West Germany stacked up against one another during the era of Soviet dominance. Greenspan describes the economic disaster that East Germany had become after the fall of the Berlin Wall — one that was worse than even the most dedicated capitalists had imagined.

He is not so naive as to think that all the world is about to embrace free-market capitalism anytime soon. Even in the United States, he still finds a "latent protectionism" that could hurt our free-market economy. Nevertheless, he writes that after the fall of European communism, "the verdict on central planning has been rendered, and it is unequivocally negative."

In his public appearances, Greenspan may not have come across as the most demonstrative character in Washington. However, his book reveals a true passion for his chosen field of economics, a passion that can't be faked. *The Age of Turbulence* is rousing celebration of the capitalist system and an entertaining look into one man's richly led life. ■

The author: Alan Greenspan earned a Ph.D. in economics from New York University. In 1954, he co-founded Townsend-Greenspan & Co., an economic consulting firm. He served as chair of the Council of Economic Advisors under President Gerald Ford from 1974 to 1977. In 1987, he was appointed chairman of the Federal Reserve Board by President Ronald Reagan. Greenspan served as chair until his retirement in 2006.

How to Lead a Million Employees

Life at the Top of the World's Largest Restaurant Company

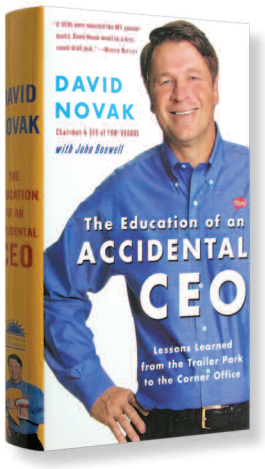
Review by Chris Lauer

THE EDUCATION OF AN ACCIDENTAL CEO: Lessons Learned From the Trailer Park to the Corner Office

by David Novak with John Boswell

Crown Business, © 2007, 303 pages, $25.95, ISBN 978-0-307-39369-2

Don't let the title of CEO David Novak's autobiography fool you: His rise to the top of Yum Brands is no accident. Although there is plenty of education taking place in the story of his life in *The Education of an Accidental CEO*, the story written by Novak (and seasoned co-author John Boswell) describes a climb up the corporate ladder that was nothing less than a calculated effort to reach solid goals set along the way through a remarkable professional career.



While the stories Novak tells are all reality-based, the subtitle of his book — *Lessons Learned from the Trailer Park to the Corner Office* — is almost as deceptive as its title. The trailer parks of Novak's memory were not the impoverished homes of struggling families implied by the stereotype of an American trailer park. Instead, Novak remembers the trailer parks of his childhood as wonderful places to be raised. His family lived in trailers only because it traveled from town to town while his father worked for the U.S. Coast and Geodetic Survey. Poverty had nothing to do with the trailer parks from Novak's childhood. Alternatively, he describes an early life filled with adventures from a journey around the nation that took him to more than 20 states before he was in the sixth grade.

Mobility and Mentors

Despite its truth-stretching title and subtitle, Novak's exceptional book imparts a captivating story about a man who made the most of the natural people skills he cultivated while changing schools on a regular basis throughout his mobile childhood. Moving around the country with 14 other families on his father's survey team started Novak on a life filled with new people. These early experiences helped him eventually master the social skills a CEO needs to create a successful business.

What makes Novak's journey from student to leader so engaging is not his ability to create a whole new set of rules to make a business hum. Instead, his story shows one man's keen ability to learn from a variety of people and put into action the best lessons he learns while moving through a variety of professional roles.

Novak's unusual upbringing is filled with mentors and family members who help him see his potential and master his strengths. He explains how both his father and his love of sports helped him learn about leadership during his youth. Novak describes how he still motivates his people with humor and recognition using the same skills his father taught him in Nebraska while coaching his baseball team.

Natural Adaptation

This kind of natural adaptation of leadership skills from others is really what *The Education of an Accidental CEO* is all about. Novak's story offers numerous ways anyone can become a leader without an MBA. Novak's tale provides a detailed description of how smart philosophies, listening

"Throughout his book, readers follow Novak's unique journey through a career that taught him many guiding principles he applies to his work every day."

skills and good advice can be incorporated into a leadership role. For example, when Novak was the editor of his high school's newspaper, he learned the importance of brevity and a supportive leader from his teacher, Mr. Harp, who encouraged Novak's writing talents. He also learned the value of "breaking through the clutter" to get a message through.

The clear style found throughout Novak's book shows how his supportive teacher was right when he pointed out young David Novak's exceptional writing skills. Novak's simple yet direct style, filled with affability and self-deprecating humor, balances out the sheer authority he has over his topics. Since it is both autobiography and business book, *The Education of an Accidental CEO* reflects the life story of a man who took the lessons he was taught by the positive influences in his life and turned them into an impressive career filled with many valuable experiences worth sharing. Those experiences provide a compelling backdrop for the important people-centered lessons Novak delivers.

Reward and Recognize

Throughout his book, Novak continually explores specific moments in his life that taught him how to be a better leader. Sprinkled throughout those remembrances are solid bits of advice from other leaders whose lessons helped Novak grow.

For example, while writing about his time in an ad agency, Novak takes the opportunity to share some wisdom from advertising guru David Ogilvy about how employees can be demoralized when incompetent employees continue to fail and how important it is to fire bad eggs. Ogilvy's advice leads nicely into one of Novak's key tenets: Employees must be rewarded and recognized. Much of the rest of Novak's book extols the virtues of employee recognition and motivation while offering dozens of practical ways to keep people happy and productive.

While describing his early advertising copy writing job, Novak also recalls his admiration for the account executives he saw working closely with the firm's customers. This is where his long-term goal for the greater financial rewards of higher positions first materialized.

Engelbert Humperdinck

Throughout his book, readers follow Novak's unique journey through a career that taught him many guiding principles he applies to his work every day. For example, a night job at Holiday Inn taught him the power of "service with a smile." At that job, he also learned from Engelbert Humperdinck the importance of feeling appreciated at work. This lesson arrived when Novak was given no tip by the superstar after he stayed at the hotel. This lesson helped to bolster Novak's understanding of the immense value of rewarding people for doing their best work. Thus, *The Education of an Accidental CEO* is the only book where readers will find Engelbert Humperdinck's stingy behavior transformed into the cornerstone of the leadership philosophy of one of the world's top CEOs: Recognize and reward people.

After a stint in an ad agency near Washington, D.C., Novak was hired by a top firm in Pittsburgh as an account executive, which gave him the chance to work with marketing guru Tom James. James taught Novak lessons that would help him rise higher in his career than he ever imagined possible. Those lessons included the art of critical analysis, which he still uses to keep his words and memos brief and to the point. James also taught Novak the marketing mantra he continues to use today: "What consumer perception, habit or belief do you have to either change, build or reinforce in order to grow the business?" Novak explains that he used this marketing lesson at Taco Bell to help its customers break the hamburger habit and "think outside the bun."

Frito-Lay

A few years later, people in the marketing industry began to notice Novak's skills. With James' help, Novak got his foot in the door of a bigger marketing agency in Dallas. This job soon connected him with Frito-Lay and the brand's parent company, PepsiCo. While working on the Frito-Lay account, Novak was on the team that came up with the taste sensation of Frito-Lay's Cool Ranch Doritos.

After being put in charge of Frito-Lay's account at the age of 27, Novak writes that he learned more valuable rules of leadership from the image consultant Jack Byrum. These lessons included ways to exude authority through personal style and self-awareness, such as remaining conscious of the image he was trying to project. He writes that he also learned the value of controlling his ego, not intimidating others and not being intimidated by others. Judging by the down-to-earth way he describes his own personal style with subordinates and others, it is clear that Novak took Byrum's messages to heart.

Beyond Advertising

When a position opened up in PepsiCo's restaurant division for senior vice president of marketing at Pizza Hut, Novak tapped the connections he had made while

working with Frito-Lay, another one of PepsiCo's brands. Based on the impressive work he had done for Frito-Lay, Novak got the job. This experience exposed him to another valuable business lesson: "It's not what you know or who you know — it's both."

At Pizza Hut, Novak made a name for himself with smart decisions and long-term thinking. His experiences in the large corporation led him to another lofty goal: to become a company president before he was 40 years old. Novak attributes this desire to the questions other people asked him about his future plans. One day, when somebody else got a division president seat at PepsiCo, he was asked by several people whether he was disappointed by the board's decision to pick somebody else. Although Novak writes that he hadn't really thought about becoming a president until that moment, the notion planted a seed in his mind that would grow into his goal to attain a top leadership position.

Team Building

While waiting for his chance to move up, Novak kicked his management skills into high gear. At Pizza Hut, he created a top-notch team of experts by recruiting the best people in the business. Soon Novak and his newly assembled group of high-profile marketers created the advertising campaign "Makin' it great," which caught on quickly with the public. Then they improved Pizza Hut's prices to compete with Dominoes and other competitors. Then they developed a number of specialty pizzas, such as the Meat Lover's Pizza and the Cheese Lover's Pizza. Suddenly the company went from a struggling enterprise with slow sales to a booming business filled with new devotees.

Novak writes that during this time, he discovered that making the customer happy is at the core of any customer-centric business. He also began to understand how his own enthusiasm as a leader could energize his people to excel in their jobs. While capturing what he had learned in his role as a leader at Pizza Hut and sharing it with the company's franchisees in creative group presentations, Novak began to develop a knack for turning his unbridled enthusiasm into inspirational messages for his people.

"At Pizza Hut, Novak made a name for himself with smart decisions and long-term thinking. His experiences in the large corporation led him to another lofty goal: to become a company president before he was 40 years old."

But enthusiasm is only part of Novak's leadership tool kit. He learned that sustaining enthusiasm among team members and franchisees requires more than spirited presentations. He explains that he also learned the importance of getting everyone involved in problem solving and company improvements. By starting monthly department meetings, he learned that brainstorming sessions and recognition awards truly energized his people. Next, he began to institutionalize feedback sessions, formal recognition programs and corporate rewards. Powerful results showed him that his efforts were paying off for the company.

Success at PepsiCo

After doubling sales at Pizza Hut and turning around its lagging profits, Novak was offered the job of executive vice president of marketing and sales of PepsiCo's beverage division, which included more visibility and responsibility than his job in the company's restaurant division. After taking the job, he learned more about the value of finding a way to get something done, which he explains might be a leader's most important leadership skill.

In the beverage division, Novak's team developed Mountain Dew's "Do the Dew" advertising campaign. His highly successful efforts earned him the respect and recognition from his superiors that helped him grow. Soon his team created its first bottled water product, Aquafina, which has become the biggest brand of bottled water in the world.

While working in PepsiCo's beverage division, Novak writes that he also learned vital lessons about keeping his own ego in check. One experience that showed him the value of listening to critics was his foray into creating a Pepsi spinoff called Crystal Pepsi, a clear, lighter-tasting version of the company's most visible product. When the product failed miserably after a brief initial success, Novak writes that he learned the importance of staying open to feedback from critics. Although he could have been fired for the debacle, he writes that he also learned how much PepsiCo values innovation and the risk-taking that it requires.

Make Things Happen

The next decision in David Novak's career that helped propel him to an eventual top spot was his choice to pursue a chief operating officer (COO) job when the company was restructuring its organization chart. As one of two company COOs, he writes that he learned how to make things happen. He explains that this requires focusing on the things that matter the most by getting the fundamentals in place, as well as finding the right

answers by looking to people within the company rather than seeking outside experts.

After getting the results sought by PepsiCo's top brass, Novak was offered the job of president of KFC. When he agreed, he was suddenly put in charge of 5,000 restaurants with 100,000 employees. After success in his new role, PepsiCo made the decision to spin off its restaurant group as a new company. Having already headed up two of PepsiCo's three restaurant brands, Novak was in a perfect position to lead the spinoff company.

The Birth of Yum

To help Novak make the transition from division president to the CEO position of a whole new company, PepsiCo's CEO and chairman Roger Enrico chose Andy Pearson to be the first CEO of the new company. Pearson had earned the distinction of one of the "10 toughest bosses to work for in America" from Fortune magazine thanks to his tough-as-nails reputation in the business world. The original plan was for Pearson to step down as CEO after three years of shaping Novak as his successor. After only two years of working (and sometimes living) together as chairman and vice chairman, Andy Pearson handed over the CEO position to the 46-year-old David Novak. What began as Tricon Global restaurants, which included Taco Bell, KFC and Pizza Hut under its umbrella, soon became Yum Brands with the addition of Long John Silver's and A&W All American Food to its roster.

By centralizing the company's culture, Novak helped Yum and its million employees become a powerful global corporation. Some of the lessons he learned during his first year as CEO became the building blocks on which his company's success are based. These include basics such as "recognition works everywhere"; "show your face" by making appearances at your franchises; "surround yourself with opinionated people" who aren't afraid to voice their ideas; and "celebrate performance, but perform before you celebrate."

Admirably, throughout his book, Novak keeps his messages down to earth by revealing many of his fears and toughest moments. For example, he describes the time he was left shaking after he was attacked in Germany by animal rights activists. One day, two activists who were posing as journalists dumped a bucket of red dye on him and covered him in feathers. They said they targeted Novak because he was the head of KFC, the internationally recognized chicken brand.

While describing the incident, Novak addresses his feelings about People for the Ethical Treatment of Animals (PETA), such as his agreement with their desire for KFC to kill chickens as humanely as possible. He writes that he also believes that PETA has unfairly singled out his company as a target of attacks. By including the traumatic incident in his book, Novak gives readers a deeper look into the personal trials and tribulations of a 21st-century CEO.

Feeding Hungry People

As an executive in the restaurant industry, Novak also describes his belief in the importance of feeding hungry people, including the poorest people in the world. That's why all the money he makes from *The Education of an Accidental CEO* is sent to the United Nations World Food Programme as part of Yum's philanthropic giving efforts. As the director of the Friends of the World Food Programme, Novak follows another one of the business principles he extols throughout his book: walk the talk.

The Education of an Accidental CEO offers readers a revealing look into the inner thoughts of a powerful leader as well as the inner workings of a powerful company. Thanks to David Novak's superior storytelling skills and leadership acumen, the lessons found inside present readers with an education of their own. By applying the skills and advice Novak describes, any leader can improve how he or she works with people and builds the strong foundation on which a thriving business can succeed.

The authors: David Novak is chairman and CEO of Yum! Brands, Inc., home to KFC, Pizza Hut, Taco Bell, Long John Silver's, and A&W All American Food. All of his proceeds from the book will be donated to the United Nations World Food Programme in conjunction with Yum's global hunger relief efforts.

John Boswell is a literary agent as well as an author or coauthor of 17 books including the *New York Times* bestseller *What They Don't Teach You* at Harvard Business School.

The Ups and Downs of Turnarounds

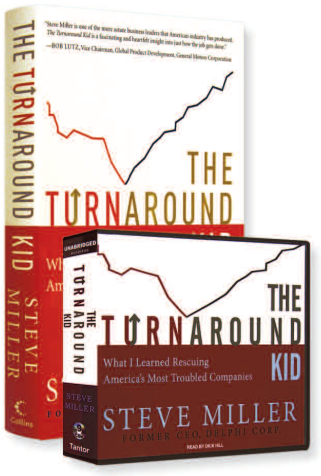
Review by Andrew B. Clancy

THE TURNAROUND KID

By Steve Miller

Published by Collins © 2008 252 pages, $25.95
Unabridged Audio CD published by Tantor Media, Inc.
© 2008 Robert Stevens Miller, 9 CDs, $34.99

Newspapers around the globe enjoy a good rescue story. Whether it's climbers found shivering but alive hundreds of miles from civilization, or a lifeguard braving a riptide to save someone who wandered too far from shore, a rescue is welcome news. In the business world, the process of resuscitating a failing enterprise is big news on the financial pages. The news isn't always pleasant, as creditors, executives and employees sweat out months of negotiations and decision making. Sometimes, despite everyone's best efforts, the business cannot be salvaged and the impact, at least economically, can be felt around the world.



Over the last two-plus decades, Steve Miller has frequently sat at the glowing core of many a corporate reactor verging on meltdown. Hundreds of jobs and millions (if not billions) of dollars have hung in the balance as he attempted to avert disaster for a number of big-name corporations. In his book *The Turnaround Kid: What I Learned Rescuing America's Most Troubled Companies*, Miller offers a rare glimpse into the pressure-packed world of business turnarounds. He also balances the black-and-white world of number-crunching with a moving story of dedication and the enduring love he shared with his late wife Maggie.

Heartache and Hard Work

While many executives start their memoirs with an anecdote about meeting a foreign dignitary or giving a commencement speech at an alma mater, Miller gives readers and listeners a view from where he's so often been forced to stand. *The Turnaround Kid* begins with a description of the last moments of his beloved wife's life. Miller is unafraid of recounting what is certainly one of the darkest moments of his life. He shows a humanity that is often called into question when the public imagines the life of a CEO or top executive.

The author himself makes this point in a memorable way. He describes his effort to take care of the mind-numbing details that follow the loss of a loved one, all while protestors shouted for his head outside the windows of his office at troubled auto parts maker Delphi, where he served as CEO at the time. It caused Miller to hearken back over the many years he had spent in the eye of one corporate hurricane after another. He muses on whether or not the many banks, executives and workers with whom he dealt ever stopped to consider that he is, in fact, as human as the rest. This question does a great deal to break down any negative preconceived notions readers may have about someone in Miller's position and makes the narrative very palatable. It is an advantage of the audio edition of the book that listeners can hear Miller's tale told with emotion.

While some might feel Miller had it relatively easy growing up, he truly wasn't spared a hard day's work. His grandfather, owner of a lumber mill on the southern

coast of Oregon, instilled a work ethic in Miller from the moment he was able to lace his work shoes. Miller even spent time as a logger, and the arduous demands of the job gave him eternal respect for the efforts of the worker. This admiration most likely remained in the back of his mind while negotiating corporate survival strategies that usually didn't leave workers in the unemployment lines. He never forgot the place from which he came, and readers get the feeling that the author operated a good deal of the time with the specter of his grandfather peering over his shoulder.

It is easy to see the tremendous impact that this period of Miller's life had on his future. He gives vivid descriptions of the sights and sounds of life in the mill and the little community that surrounded it. Sadly, as frequently occurs in *The Turnaround Kid*, Miller's observations serve as a reminder of the state of American industry. Perhaps the loss of a factory town to globalization like Miller's Bandon, Oregon, is what makes him miss it all the more and fight harder than most to preserve domestic businesses when possible. He is a believer in the American spirit, and readers may find themselves inspired by Miller's reaffirmation of the "can-do" attitude. It is particularly beneficial in trying economic times to be open to change and exploration, something the author reminds readers of in several spots.

"He is a believer in the American spirit, and readers and listeners may find themselves inspired by Miller's reaffirmation of the 'can-do' attitude."

Eye to Eye with Iacocca

After business school, Miller, his wife and their children began a globetrotting life on par with a military family. Taking a position with the Ford Motor Company, the young executive held positions at outposts in Mexico, Australia and Venezuela. While he relished traveling and working on the fringe of the traditional corporate ladder, Miller could not have predicted the way in which he found himself wandering back to Detroit. He had been contemplating a move to a position in a less stressful industry. Instead, an old boss who had recently been lured to Ford's competitor Chrysler called with a major opportunity. Miller didn't necessarily jump at the chance, and his description of why not would quicken the pulse of any CFO.

By 1979, Chrysler had drawn dangerously close to making Detroit the home of the "Big Two." Long considered the third-place finisher in a three-horse race, the automaker was drowning in debt. Its dynamic new CEO, Lee Iacocca, took what was considered an unprecedented step by petitioning the federal government to guarantee a complicated bail-out package. Miller, after much deliberation, accepted the offer to become Chrysler's CFO. He had the daunting task of restructuring more than $1 billion in debt spread across hundreds of banks. All this was taking place during the economic malaise of President Jimmy Carter's administration when, as Miller points out, the demand for new vehicles was down 30 percent.

Miller's time at Chrysler fills a good portion of *The Turnaround Kid*, and it provides some of the most riveting reading. It becomes obvious that the author's incredible intellect is equaled by his ability to seemingly parachute into a company and within 10 days time master its industry and financial situation. He paints an amazing picture of the state of the auto industry and Chrysler's production and spending philosophies in the early 1980s. Time and again Miller breaks the number-cruncher stereotype by providing interesting passages that simplify issues involving billions of dollars. One gets the feeling that a CEO, CFO and director of human resources could each read the book and find unique takeaways from the same set of pages.

In the work that began his legendary career, Miller first helped Iacocca win over the federal government. He then began the painstaking process of restructuring the entirety of Chrysler's massive debt. It seems as though Miller's life in this period became one eternal meeting, as he visited one bank after another. The sheer labor of saving one of America's largest employers (at the time) resonates from the page and it is impressive to note that all the work was done in the pre-Internet, pre-cell phone world of business.

No punches are pulled as Miller depicts his relationship with Iacocca, whose level of public visibility was in the 1980s what Jack Welch achieved in the new millennium. The audio edition of the book is particularly enjoyable, as the narrator's voice gives one the fly-on-the-wall feeling of sitting in secret strategy sessions. Iacocca and Miller tussled on several occasions during the initial period after Chrysler achieved its government backing. Many of the decisions, particularly the choice to debut a new vehicle that critics dubbed the "minivan" and the purchase of the Jeep brand, helped Chrysler catapult back into a position of profitability. In fact, Chrysler's new products and smart, ruthless cost-cutting strategies gave the company the potential to pay off its debts seven years in advance.

For Miller, the choice was an obvious one. He wanted to rid Chrysler of any involvement with the federal government. In his opinion, having observed similar

government bailouts in Great Britain, governmental caretakers tended to create a welfare state where the business becomes dependent rather than independent. Something about the prospect of Congress dictating Chrysler's moves seemed un-American to Miller. What seemed un-American to Iacocca was forgoing the windfall destined to land in stockholders' laps for the sake of early payment on a few loans. Common sense, thanks to Miller's determination, won out, and it's certain that members of Chrysler's board were thankful in a decade's time when the auto market in the United States again began to slide.

"While not all of his efforts led to success, he fought hard in every case to see that customers, workers and even shareholders benefited equally. Perhaps this underlying theme of equal prosperity is the greatest lesson to CEOs."

"Need to Knows" for CEOs

The problems between Miller and Iacocca continued until a seemingly innocuous story in a business publication led Miller to find himself in the CEO's crosshairs. The downward spiral continued when Miller wrote a letter concerning the succession of the CEO position. The letter's damning prose, no matter how truthful, caused it to be known in auto circles as "The Black Letter." The damage was done, and by the early 1990s neither Iacocca nor Miller would be involved with the company they jointly saved from destruction.

The issues between CEO and CFO in *The Turnaround Kid* are not unique to the Chrysler story. Accountants, bookkeepers and controllers, regardless of industry, will likely be drawn to the audio version of the book, if for no other reason than to hear their common plight given voice and emotion. It would seem that CEOs are often the target for much of the criticism generated by the author. However, he admits that some of this may be undeserved. In many corporations, leadership decisions are spread out across such a great number of individuals, all of whom are beholden to stockholders, that pinning the tail on one man or woman is unfair.

The Turnaround Kid does offer executives an interesting set of ideas to help keep their power and decision making couched in responsible business practice. Miller devotes an entire chapter to disastrous decisions made by power-hungry leaders, and one would hope that readers will be able to scan the checklist of warning signs without seeing their organization's leader reflected in it. It is clear from his anecdotes that communication and the removal of silos are essential to keeping a business, particularly a troubled one, from crumbling to dust. Many of the CEOs detailed in the book appear to have either walled themselves off from the realities of what was occurring or had intimidated staffers to the point where bad news was purposely hidden to avoid the boss's wrath. Neither of these practices puts the news (good or bad) up front where Miller believes it belongs. The truth needs to be told, he muses, even if it hurts.

A great takeaway for leaders is Miller's repeated emphasis on information gathering from all levels of an organization. As noted earlier, his career was based on dropping into a troubled company and needing to master its operations, budgetary methods and brand as quickly as possible. It is a key point that he did not rely solely on reports from advisors or a mixture of earnings reports and press releases to guide him. The author showed willingness to explore opinions from workers in every corner of a company. During his time at ailing construction company Morrison Knudsen (MK), Miller pursued a mission of independent fact-finding by heading to the company cafeteria, piling up his tray and sitting amongst the workers. Not only did it help him gain a better understanding of what was going wrong on a ground level, but it also helped to dispel suspicions that he was a grim reaper looking to mow down lower-level jobs to preserve high-paying executive positions.

Truth is continually referenced as the single most essential element to success in *The Turnaround Kid*. Beyond even employees, Miller attests that there is no greater source of this verbal gold than the minds, hearts and mouths of a company's customers. While this can make for painful listening to many an executive, the author would encourage readers to bear the brunt. Inevitably, he points out, even somewhat disgruntled customers have positive things to say. Part of what led to their anger is a sense of disappointment because they believed in the problem company at one point in time. Miller demonstrates repeatedly that he is counted among the believers with each company that he elected to aid. While not all of his efforts led to success, he fought hard in every case to see that customers, workers and even shareholders benefited equally. Perhaps this underlying theme of equal prosperity is the greatest lesson to CEOs.

Navigating Dark Skies Ahead

When one considers the time period covered by Miller in *The Turnaround Kid,* the book is as much a history lesson in American industry as it is a memoir.

The causes of the crises that beset many of the companies Miller attempted to rescue could easily be lumped under a single banner. The firms operated under the industrial practices that led to their initial success, even after the evolution of the marketplace called for change. By leaving it too late, changes that could have been implemented for a consistent cost became massive undertakings that required nearly all of a company's assets to achieve.

It may be hard to imagine, considering the shambles that Miller often saw around him, but the author remains optimistic throughout the book. The only area where he loses some of his cheerfulness is the section that deals with his involvement at Delphi. In part due to the personal tragedy of his wife's brain cancer diagnosis, Miller also suffered with what many economists hold up as the iceberg waiting to sink the Titanic of American manufacturing: the auto industry. A three-way collision of a powerful union, a sinking global economic position and a crippling benefit system made Delphi perhaps the most daunting challenge of Miller's career.

The last two chapters of the book may prove to be the most beneficial to readers. The problems at Delphi could be viewed as the plaque that lines the arteries of the American economy. Miller is more than willing to rub the paddles together and provide defibrillation in the form of brutal honesty, but it remains to be seen whether or not the country will be able to respond to the shock. The Delphi battle is a microcosm of problems that politicians and doomsday business scribes deem pandemic to the United States. Pension and health care promises were made with the best of intentions by companies. However, they were made in an era when retirement took place at 65 and death followed at 67. In today's economy, retirement can take place as early as 52 and life expectancy continues to creep closer to the century mark. Footing the bill for this set-up drains company coffers faster than an IRS audit. In some cases, there are more retirees drawing a check from a company than current full-time employees.

In addition, Miller adds a third timely flashpoint to the explosive problems plaguing businesses. Since many of the positions he held were at companies in the auto industry, he is acutely aware of the energy crisis. Auto manufacturers feel the pinch from every side; they face skyrocketing fuel costs to build their product, potential government intervention on efficiency and consumer demands to immediately offset the rising costs at the pumps. Now try to imagine solving these problems with every step having to go through prolonged negotiations with labor unions that are bent on protecting the interests of workers despite the damage that it may cause in the long run. Not a pretty picture, to be certain.

The Turnaround Kid concludes with Miller attempting to answer the three-dimensional pension/health care/energy riddle that even he admits comprises government's daily struggle. Could this challenge be so great that it defies even the heroic strength of a legendary business savior? Miller's solutions are certain to cause lengthy debate. For example, one feels that the audio edition of the book probably should have required the narrator to whisper the caustic phrase "national health care." The food for thought provided by Miller should give executives plenty to chew on while examining the giant holes that pension plans rip into their companies' budgets. Still, in the end, Miller remains confident that a combination of honesty, respect, integrity and empathy can lead any company, and hopefully the nation, out of any crisis. ●

The author: Robert S. Miller is former chairman and CEO of Delphi Corporation. He serves on the boards of Symantec and United Airlines. In 1979 he was recruited by Lee Iacocca to lead the financial negotiations with 400 banks and the federal government to orchestrate the bailout of Chrysler. That led him to become the vice chairman and CFO of Chrysler. From that point he began a succession of restructuring efforts at various corporations, which earned him the reputation of "the turnaround kid." The book is dedicated to his wife of 40 years, Maggie Miller (1937-2006), with whom he shares the credit for his success.

THE SUMMARY IN BRIEF

After discovering data showing 76 million babies were born in the US between 1946 and 1964, a researcher gave the generation a name--Baby Boomer. And following were Gen X, Millennial, Gen Y, and Z. It doesn't matter what generation you belong to. What matters is how we get along, so we can stay strong and move along.

In ***Fisch Tales***, Bob Fisch shares motivational lessons learned from his years in retail, notably as CEO of Rue21. Millennial Baby Boomer captures the idea of staying ageless. An MBB is a bit of a chameleon, someone with a survival instinct. Each of us is a one-of-a-kind creation who never stops being a work in progress. If you're not always moving forward, you stop growing.

That is part of what being a Millennial Baby Boomer is about: shared values that can, and should, connect generations more closely and more productively. If separate generations can learn to empathize more openly with other generations, their shared values have a chance to benefit everybody.

IN THIS SUMMARY, YOU WILL LEARN:

- Lessons for passing on what you have learned.
- The role of good listening to influence others.
- The necessity of measured risk-taking for success.
- To help new leaders own their vision and their future.

Introduction

Vision is vital. If you have a vision to build something, it won't happen unless you can get people to go along to see and execute your vision. If it sounds simple, it's anything but. It takes constant pushing in motivating people. People want to feel they belong. You need to create a culture that supports your business vision. Fisch's lessons for leaders guide the way.

People

Whether hiring or aligning, value authenticity, dedication, curiosity, and tribal knowledge. Tribal knowledge is based on authentic wisdom that accumulates over time, from experience. It requires a strong work ethic. It feeds on reliable information and intangibles. It's organic, as in hard-won knowledge; it's not synthetic, as in assumed or imagined expertise.

Get a Mentor

One way for millennials, or someone of any age, to achieve their goal is to seek the guidance of a mentor. Learning the ropes from the right person is a proven way to increase your value to your employer. It's like being an apprentice. Even if you are not totally new at your job, there's always something to learn from more seasoned people willing to share their professional knowledge and street smarts. It is one of the best ways to move past colleagues who may be competing with you to land a coveted position.

If you don't make a focused effort to find a mentor, the alternative is to hope that maybe someone will take you under his or her wing. Wrong! "Hoping" gets you nowhere fast. "Maybe" doesn't cut it. Don't wait to seek help from those ahead of you in the journey.

Persona Versus Personality

It takes all kinds of personalities to make a company succeed. No manager should try to change someone's personality to fit in with others. If the person is skilled enough to keep on board, but challenging to work with, that's a behavioral issue that you try to work out. Someone's persona, however, is a different story. A persona can be developed to help someone communicate and relate better with colleagues. A persona is not always a precise mirror of personality; a persona may, in fact, mask it. Work closely with people to help them solidify a persona. Push them to do things they don't think they can do.

It's essential to be aware of how people perceive you. It's perfectly OK to have a personality that is shy or soft-spoken. What's not OK is to let it hold you back from speaking up for yourself, for your ideas, and your accomplishments.

Culture

Culture describes how a company's attitude and behavior are demonstrated in day-to-day business dealings. Relationships are a vital part of culture.

Could You Care Less. . . Or More?

Caring genuinely about people is a desirable core value, but caring is only half of it. The other half is not hiding it. Show them that you care. It's therapeutic. For those not in a leadership role, show your boss that you care about more than a paycheck. Demonstrate clearly that you have a personal stake in the performance of the whole company by asking questions, offering to help with tasks not in your job description, or volunteering to help a coworker. The simple act of offering assistance sets you apart from your peers.

Praise people who deserve it. By making everybody believe they are critical to the company's success, a manager helps others reach their goals. Some believe millennials are especially sensitive to being recognized for their efforts. But that's a legitimate expectation by people of all ages. It's never a bad idea to show people working for you some love. That doesn't always involve a monetary reward or a title change. An achievement award goes a long way too. Meeting associates halfway in recognizing a job well done is an excellent way to encourage their positive attitude and amp up their output at the same time.

Think Like a Bezos

Whether you're in charge of a company, a division, or a project team, the most important thing to remember is this—there is no secret sauce for success! People at the top of their game, such as Amazon founder Jeff Bezos, tell us it is not genius that creates game-changing projects, products, and business models. It is good, old fashioned sweat and the iron will to do whatever it takes to put your vision into action.

Bezos invested countless hours in years of relentless experimentation and unbridled imagination to create Amazon. The company he built continues to take risks in pursuit of profitable new ideas because Bezos' knows that as hard as it is to get to the top, it's even harder to stay there. If you only do things where you know the answer in advance," Bezos says, "your company goes away." He adds, "It's the lessons you learned along the way."

Alignment

All team members must be on the same page, pulling in the same direction, carrying their weight. The key to alignment is communication.

Speak Plainly and Directly

No matter who you are communicating with, whether it's a subordinate or a boss, speak plainly and directly. Walk around every day to interact with as many people as possible. Keep the lines of communication open. You can't give direction once, walk away, and think your expectations magically will be met to your satisfaction. It requires repeated back and forth, always digging deeper to work it out. You set goals, delegate authority to achieve them, and monitor progress. That's the way to succeed in business.

Learn to Listen Critically

Listen analytically to make better decisions. There will be differences of opinion. Being selective in how you listen and who you listen to is critical. Listening to the wrong advice or misinformation can turn dangerous. It takes some practice to learn to detect that the people talking maybe don't know what they're talking about, or have a hidden agenda that is at cross purposes with your best interests.

How to Weaponize Listening

You can weaponize listening. Let's say you were dealing with people inside your own company. Make a point of using your listening powers to move the company ahead. One time, a CEO stunned a senior executive. He asked him about his wife and kids—by name. The executive couldn't believe the big boss would remember the names of one person's family members in a company of thousands. The CEO's secret was writing down such details after first meeting someone. The concern for each individual creates a powerful personal connection. He was an empathetic listener. Being a good leader is more than crunching numbers.

Risks and Diversification

Playing it safe may keep you securely in place, but also will get you nowhere fast. The road to success is paved with risks worth taking. Trends and markets are in constant flux, so reinvention and innovation must be constant.

Dig Beneath the Data

Accumulate as much information as possible to guide your decisions. Understand how things work in every corner of the company. A smart manager immerses herself in the collective tribal knowledge of the entire company. Information is more than data. It includes intangibles that don't show up in hard numbers. Know which intangibles create success.

To get that hidden information, you have to read between the lines. Don't let data be your only guide to making the best decisions. There is always more to the story that you need to know.

Prepare, Don't Panic

Take advantage of your experience to guide your decision-making process. Bring your tribal knowledge into play. Whatever you do, do not panic! Yes, the world changes, but it usually returns to its previous position. Much about the business world marketplace is cyclical. Position yourself to be in a position of strength when a course correction restores normalcy to your business. Success belongs to those who dig in their heels and trust their instincts.

Speed to Market

A good rule for time management: move toward your goal as quickly as you can without being deterred.

It's Disruptors Against the World

Being a disruptor means being an innovator, the proverbial mover and shaker. Disruptors blaze new trails by going against the flow. By definition, then, they are in the minority. Everybody else falls into one of two camps. There are the interrupters. They get in the way of the disruptors for one reason or another. Or it may be competitive, with both vying to move up the corporate ladder when only one position is open. Or the interrupter may be a contrarian with a stubborn streak. But the disruptors and the interrupters are activists.

The other, and most common, type of person in this scenario is the passive bystander. Rather than rock the boat, bystanders are content to hang back, watch the disruptors and interrupters duke it out, and then go with the flow riding the coattails of whoever prevails. They're the opposite of risk-takers. In short, the disruptor acts, the interrupter reacts, the bystander spectates.

Hit 'Em Where They Ain't

There once was a New York Yankees Major League Baseball player who explained his success at the plate with the quirky remark that he hit him where they ain't. What he

meant was that the way for a batter to reach base safely is to hit the ball anywhere in the field except where there is someone in a position to catch it for the out. It's the same for success in business.

Confidence

Confidence in yourself and your business allows a strength of focus that refuses to allow the doubts and criticisms of others to weaken your resolve.

You Can Go Your Own Way, Or. . .

People who possess tribal knowledge don't try to dazzle with fancy footwork. They move with focus and with purpose in a straight line. They deliver results reliably by doing whatever it takes. It's hard to do that alone, though.

A mentor can't create instincts but can help refine them. Sometimes, it means holding the person's feet to the fire, pushing him or her hard toward the goal line. Whether you are the mentor or the one being mentored, the key is to harness the passion and instincts already there to help both the employee and the company.

Capturing Confidence

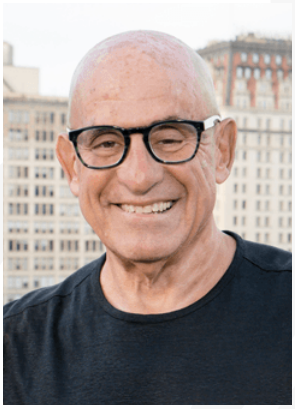
You need to overcome doubts to sell yourself . . . to you. Confidence comes from two places: your head and your heart. Sometimes they don't see eye-to-eye. In your heart, you may feel an intense passion that you have what it takes to get the job done. Your confidence fills you up with energy. Then after a couple of missteps or disappointments, your head starts playing tricks on you. You begin to doubt yourself. Stop! Trust the confidence you began with.

Confidence means focusing on what is important and ignoring unimportant nonsense that doesn't move you closer to your goal. Confidence means not letting the criticisms or doubts of others undermine your strength of purpose. Car pioneer Henry Ford put it this way, "Whether you think you can, or you think you can't. . . you're right."

Don't Doubt Yourself Just Because Others Might

Baker Mayfield virtually willed himself to be a superstar athlete. As a football quarterback in high school, he wasn't recruited by big-name colleges. One reason was his height: Six foot one isn't that big among today's towering quarterbacks. "No problem," thought Mayfield. Without being invited, the Texas native walked on the field to try out for Texas Tech. He not only made the squad; He became the first freshman to start a season-opening game for a major college football team. What motivates Baker Mayfield? He says, "I hate losing more than I love winning."

Life is like a puzzle. When all the pieces come together, you can see the big picture. Each one of the pieces shapes the journey. You determine when the puzzle is complete—more pieces can and will fall into place. Whether Millennial, Baby Boomer, or both, The Best Is Yet to Come!



An innovator in specialty apparel retailing, Bob Fisch orchestrated one of the most dramatic turnarounds in recent retail history. As Founder and CEO, he led rue21 from Chapter 11 to the largest specialty apparel retail chain in store count with over 1200 stores. Always eager to raise the bar through new challenges and opportunities, his varied roles currently include author, mentor, investor, consultant, and motivational speaker. "I push people to take charge of their own destiny," he says, "so they have no regrets and can enjoy life to the fullest. It worked for me."

Flamin' Hot

The Incredible True Story of One Man's Rise from Janitor to Top Executive

By Richard Montañez

Richard Montañez is an inventor, entrepreneur, philanthropist and business executive whose inspirational journey has taken him from the barrio to the boardroom. A sought-after motivational speaker, he may be best known as the creator of Flamin' Hot Cheetos—the billion-dollar brand and worldwide phenomenon. Hailed as the Godfather of Hispanic Marketing, Montañez began his tenure as a janitor at Frito-Lay/PepsiCo before rising up through the ranks to head his own division. He serves on several nonprofit boards and is widely recognized as one of the most influential Latinos in corporate America.

From Janitor to Top Executive

In ***Flamin' Hot: The Incredible True Story of One Man's Rise from Janitor to Top Executive***, author and businessman Richard P. Montañez traces his journey from janitor to top executive. Always thinking outside of the box, Montañez was responsible for bringing to life Flamin' Hot Cheetos, a snack treat that he intended to essentially be a Cheeto covered in chili. He was able to achieve all of this while overcoming numerous obstacles including institutional hierarchy, saboteurs, and a lack of formal education. Because of where he started, many people did not want to listen to him or listened to him with disdain believing he was stepping out of his boundaries. Despite this, with ingenuity and a belief in both himself and his product, he created a phenomenally successful brand, and in this book, he shares what he learned along the way in the hopes to help others unlock their potential and achieve their wildest dreams. *Flamin' Hot: The Incredible True Story of One Man's Rise from Janitor to Top Executive* is part biography and part business book that equips the reader with both a belief in the possibility of greatness and some of the tools to help them achieve that greatness.

Montañez had a rough childhood. The son of poor people and brown skinned, he had all of the odds stacked against him. Montañez maintains, however, that all that a person was in the past can help them become what they will in the future. All of his difficulties as a child and as a young man helped him focus on the very things he needed to do in order to achieve his destiny. In his view, all of the different jobs he took and learned from provided him with "a graduate degree in survival education on the streets." He felt empowered to write his own future. Eventually when he got the job at Frito-Lay it was a big deal because it was quite a jump from working in the fields. When his grandfather heard about the job at Frito-Lay, he gave him valuable advice: to put his name on all that he does until he becomes "a person of value to your company and to yourself."

Think Like an Executive Act, Like an Owner

One of the major principles Montañez lives by and encourages others to live by is to "think like an executive and act like an owner." This was a lesson he learned early on that helped unlock his own creativity and a desire for more. In businesses

where most frontline workers do not feel empowered to think in these ways, this can be a risk. Montañez was not afraid to take risks from the very beginning, and he used his hunger to alleviate his fears. As he writes, "let your hunger be your guide and see just how far you can go."

Montañez, the son of migrant workers, always saw the value of and took pride in hard work. In his early twenties, he acquired a job as a janitor at Frito-Lay. Despite working hard his whole time on the job, he was almost let go early on for showing no initiative. This surprised him, but he realized what he was doing wrong. Instead of finding new things to work on when he finished his own tasks, he would just go back and redo them. This is not what the company wanted. Luckily he was given another chance and was able to demonstrate his value to the company, and Montañez started doing everything he could to figure out where he could add value to the company, and he learned about as many different processes as he could. He was always eager to learn more and willing to put in the time to acquire ever expanding insights into how his company worked.

When Montañez started to think like an executive, he started to get some pushback. Supervisors and others would caution him that he better not be on the clock when he was on his mission to learn all that he could about the company. Montañez believes that people do not need permission to start carving out their own future. He recommends that his readers learn the history of the company they work for. He also urges people to "learn the difference between excellence and competence." Excellence refers to a person being the best they can be whereas competence refers to being the best at something in particular.

Childhood Story

Montañez tells a story about his mother. When he started going to a school with many white kids, he felt out of place at lunch because he brought a burrito instead of a sandwich. When he asked his mom to give him sandwiches instead, she decided to give him two burritos: one for himself and one to share. Within a few days, Montañez was bringing many burritos to school and was selling them to interested classmates. He believes that in order to succeed wildly, a person needs to be willing not to fit in. Many people are afraid of doing this because they do not want to appear foolish. Montañez offers numerous pieces of advice to overcome this, but in short, he recommends people lighten up and stop being so afraid of failure. He recommends people let their hunger guide them.

A Winning Idea

His life changed when future PepsiCo CEO Roger Enrico made a video for all employees urging them to start to act like owners of the company. Instead of going to outsiders to solve problems, Enrico wanted to tap internal resources. Things were getting bad for Montañez because workers' hours were being cut, and he hated to see his family go hungry. Montañez saw this as an opportunity. He believed that if he could come up with a solution to help the company grow, then hourly workers like him would have more access to working hours. It was not long before Montañez got the idea that would, after a lot of time and hard work, launch him to career heights he had never dreamed of. After seeing a street vendor selling elote, Montañez got the idea of putting chili on a Cheeto. The next day, he brought home some unflavored Cheetos from work, and he and his family set about creating Montañez's vision. Eventually they managed to find a winning combination, and they shared some of their product with people close to them. Everyone loved them. Not knowing the proper etiquette for contacting higher ups, Montañez took the bold step of calling Enrico directly with his proposal. Enrico liked his idea and said he would travel to the plant in two weeks to hear his presentation. Throughout his journey, Montañez has come to believe that "when you allow yourself to imagine a better future, your vision will show you the way to that awesome destiny."

Obstacles and Empowerment

At Frito-Lay Montañez started to learn ways that waste was being created. Montañez brought these ideas to the people with the power to make changes, and he was pleased to discover that these ideas were implemented, and he was given credit for them. Other people, however, were threatened by ideas coming from below and told him to stay in his own lane. These detractors are just one obstacle he had to overcome in his career.

Some people fear they do not have the ideas necessary to make change. To these people, he suggests starting to think like an executive. Some of his recommendations for doing this are to focus on being a problem solver and to come up with creative solutions to problems. Sometimes mistakes can lead to great opportunities for creative solutions. Once a person comes up with an idea, they should consider whether it is the right time for the idea and whether it is a hot idea. Then he recommends creating demos or prototypes. With his Flamin' Hot Cheetos, he did this in his own home with his family and loved ones. He does not believe people need permission to act on their ideas; people should take the chance.

There are two important questions Montañez urges people to ask: "what if" and "what then." He thinks that almost all important business ventures began when someone had the courage to ask what if. These words, he claims, can lead to self-empowerment and creativity. Once a person comes to grip with their answers to their what if questions, they can then proceed to question what then and lay out a plan for what the next steps should be. Montañez believes deeply that people need to feel empowered to be key actors in their lives. This empowerment can help shield people from those who seek to work against their success. People also, he says, need to learn to trust their instincts.

Sales Pitches and Novel Marketing

Montañez then turns his attention to sales pitches. His own sales pitch was important for his success because he needed those higher up to buy into his idea of Flamin' Hot Cheetos or else he would have to look for some other avenue with which to bring his idea to fruition. He learned that in order to sell

> . . . in order to sell someone on an idea, he would need to focus on a problem that his product could solve."

someone on an idea, he would need to focus on a problem that his product could solve. This problem for his company was that there was a large and growing Hispanic buying population, and the company had no snack directed to them and their considerable purchasing power.

Once a person matches a need with a solution, they then need to make sure to match the novel with the familiar. These are the general principles he used in crafting his presentation to the highest executives in his company. While he was nervous presenting in front of all of these people, all of whom had more corporate power and education than he did, he realized that the other key to a successful presentation was for him to be himself. By the end of the presentation to a group of largely hostile listeners, he was able to win over those he needed to.

Despite having a winning idea, Montañez faced many obstacles to getting his product the attention it deserved. Many were working against him, and one way they did this was by not giving his product the budget or launch it would need. Instead of letting his product fail, Montañez and his family went out to local stores in the LA test market and purchased products themselves. They would then ask the store owners to stock more of the item. This was crucial because since the owners only were given small quantities of the product, they did not have the motivation to order more until what they had was selling and was in demand. Once Montañez started to do this, growth in the product expanded, and then he moved on to African American communities with the same tactics. He created personal relationships with people and got his product into the hands of those who made the decisions in the family. Without these moves, Flamin' Hot Cheetos very well may have been dead before it was ever truly launched to the world.

Leading Others

In his penultimate chapter, Montañez turns his attention to leadership. "Leadership," he says, "comes alive when you begin to become as invested in the success of others as you are in your own success." Montañez sees two types of leaders: Pharaohs and Deliverers. Pharaohs expect to be served while Deliverers try to bring people to greater "freedom and growth." Not unsurprising coming from his own background, Montañez stays committed to the idea that frontline workers should be allowed to be leaders. One of the most important aspects of leadership, he maintains, is the ability to communicate. This communication includes the words people use to describe themselves and the self-talk they allow themselves to indulge in. His second leadership lesson involves leading by example. Through his accomplishments, he hopes to be able to show others what is possible.

Montañez ends his book with a discussion about the importance of believing in oneself. He had all of the odds stacked against him coming from a century of poverty in his family line. Slowly he started to believe in himself, and when he finally realized he was worthy of and capable of greatness, he was able to unlock what was inside of him. He was blessed with a family who believed in him, and he was able to find mentors who helped him along the way. He believes in the concept of "faith it until you make it" which requires a person to believe in their worthiness of greatness and then take a leap of faith to act on that.

Richard P. Montañez started out his life in the barrio, and before his retirement, he made it all of the way to the boardroom. He achieved high levels of success that led him to be invited to the White House by numerous presidents. As the executives he was mostly closely aligned with started to leave the company, Montañez decided that it was his time, too, to leave.

He now dedicates him time to helping others. Montañez's book, *Flamin' Hot: The Incredible True Story of One Man's Rise from Janitor to Top Executive*, is his story of rags to riches, but it goes further than that. While his story is meant to inspire, the business wisdom he conveys in this book gives practical advice to his reader. He believes all people are meant to be leaders and are capable of greatness. In his work with local communities and in the text of his book, he hopes that his life and his actions can help pave the way for others to follow him from the barrio to the boardroom and beyond.

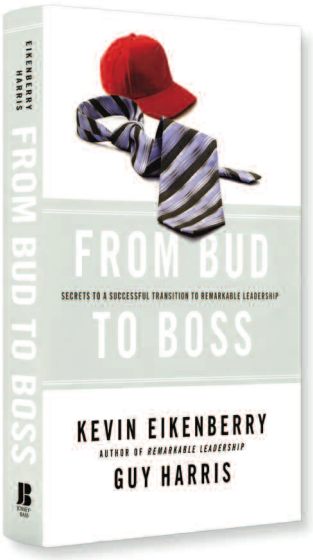
Leadership



From Bud to Boss

Secrets to a Successful Transition to Remarkable Leadership

by Kevin Eikenberry and Guy Harris

THE SUMMARY IN BRIEF

The most challenging leadership experience anyone will face isn't the one at the top but the *first* promotion to a leadership position. It can be overwhelming to deal with the change and uncertainty that come with a new job, requiring new skills and the promotion from peer to leader.

If you (or someone you work with) have been promoted to a position of leadership for the first time, *From Bud to Boss* is an important book that offers insight from the best leadership and management thinking, and puts the focus on the challenges faced by novice leaders. In down-to-earth terms, the authors show how to adopt the mindset of a leader and develop the skills needed to communicate change, give feedback, coach employees, lead productive teams and achieve goals.

Authors Kevin Eikenberry and Guy Harris fill *From Bud to Boss* with practical ideas and helpful advice. Their book offers readers a clear road map to leadership success.

IN THIS SUMMARY, YOU WILL LEARN:

- How to get a clear understanding of your new role as a leader.
- How to develop your ability to solve complex leadership problems.
- How to talk about the expectations you have of your new reports.
- How to ask people about their expectations of you and request their help and patience.
- How to get beyond the stress and fear of leading employees for the first time and put your energy into becoming the most effective leader you can be.

A Note from the Authors

Congratulations! You are now the supervisor. The manager. The foreman. The boss.

Your role has changed and you are being asked to be a leader.

Before getting into all the specific principles, techniques and ideas, we need to talk about *you and your belief in yourself.*

- Someone (or many people) think you can succeed or you would not have the new role.
- Those who care most about you think you can succeed — if you aren't sure, just ask them.
- We believe you can succeed — because we believe that anyone can bring his or her unique strengths to the role and be successful.

The Toughest Professional Transition

You are embarking on perhaps the toughest professional transition you will ever make. Going from being an individual contributor to being the leader, especially when those you are now leading are your former peers (and perhaps your friends), is tough.

It isn't going to be easy. And since it isn't going to be easy, it is extremely important that you bolster your belief in yourself.

However you feel about what is in front of you, remember that your confidence in your ability to succeed is important. We aren't talking about an outward "of-course-I'm-a-rock-star" bravado, but a quiet, modest belief that while you may not get it right the first time, or every time, over time you can and will become a very successful (we'd say remarkable) supervisor/manager/leader.

The two most important building blocks for your success in the transition from Bud to Boss are the *desire to succeed* and the *belief that you can succeed.* ●

Succeeding in Your Transition to Leadership

Developing your ability to solve complex leadership problems, such as those that you will face as a leader, demands that you have a large "leadership toolbox." We suggest that you learn multiple change management, communication, persuasion, coaching, team-building, conflict resolution and goal-setting skills and techniques, and that you practice applying them in different situations so that you can learn to identify the best approach to use in your environment.

In *The Psychology of Science*, Abraham Maslow, a sociologist and organizational behavior researcher, said: "I suppose it is tempting, if the only tool you have is a hammer, to treat everything as if it were a nail." In this statement, Maslow points to a common challenge we face when we approach complex problems: We tend to limit our view of the problems to make them fit neatly within the limits of the tools we have. So that you do not exemplify the thought behind this quote, keep building your leadership toolbox. Make it big and full.

Remarkable leaders learn to use a wide range of communication, conflict resolution and team-

building approaches and techniques so that they know the best tool to use for a given situation.

Role Changes

When you moved from an individual contributor position to a leadership position, the entire focus of your role within the organization changed. You have gone from being responsible for yourself and your work output to being responsible for the work output of a team. This dual responsibility means:

- You represent the organization to your team.
- You represent your team to the organization.

The Organization's Mission, Vision and Values

As the organization's representative to your team, you are responsible for communicating and representing the organization's mission, vision and values to your team. You can only successfully fulfill this role to the extent that you understand and accept the organization's mission, vision and values.

We start with the assumption that you buy in to the overall direction and mission of your organization even if you have concerns about some details or specifics on a few issues. If you cannot accept the overall mission and vision of your organization, you will experience a constant struggle in your role as leader.

In those situations in which you encounter difficulty understanding or accepting a specific decision, task assignment or rule change, we recommend that you adopt this policy for your communications up and down the organizational structure: *disagree in private and agree in public.*

Recognizing the dual nature of your role as a leader, you need to do the work in advance with your boss before you speak with your team to make sure that you understand the changes or directions you need to communicate, and that you can deliver the communication with authority and conviction.

Relationship Changes

The role changes you confront and work through often lead to major changes in several professional relationships. This includes your relationship with your former peers. You were part of the team, now you aren't.

One of co-author Guy Harris' friends noticed this upon his promotion to plant manager. After the promotion his former peers stopped calling. No dinner party invitations. No barbecues. No ball games.

Although your experience might not be this drastic, there is no denying that the change can be difficult.

The Decision to Accept the Change

When people feel that they are a part of the change, and when they are more engaged, they will accelerate the decision to accept the change. The goal of your change communication should be to create that feeling. The goal of your behavior should be for that feeling to be more than just a perception, it should become reality. How do you do that? People must take ownership of the vision of the changed state. Remember that one of the keys to a successful change vision is that it is personal.

As you begin this transition into your role as a leader, you might experience some tension and friction in your relationships with the people you now lead and once worked with as peers. The good news is this: You can manage this transition successfully. Some will expect special favors or treatment. Some might resent your promotion. On average, though, most people will accept your new position well.

The Impact of the Change

You must constantly be aware of the impact and the magnitude of this change on and in these relationships. This relational change plays a role in everything you do as a new supervisor-leader — especially until you get these relationships stabilized in a new comfort zone for all of you.

One temptation for many leaders is to work to be friends with the people they lead. Be on guard for this temptation.

Work to create a positive, supportive and friendly environment. Be willing to spend time talking with and listening to people. Show an interest in them and their families. And know where to draw the line between personal and professional relationships. ●

Change

Change is emotional.

- Change can be associated with loss:

"When I got promoted, I felt like I lost the friendships of my peers." The loss may or may not be factually so, but the feeling of loss can have an impact on our thinking and actions.

- Change can be associated with the unknown:

"When I got promoted, I was scared — I wasn't sure what was next." Change events may be fact based, but our response is often about our emotions. If we are

scared or anxious, it will change how and what we think and do.

• Change can also be associated with excitement and anticipation:

"When I got promoted, I was excited! I have been looking forward to a new challenge. I don't know exactly what it all means, but I am excited." There really isn't a question that excitement will affect our behavior and thinking, is there?

So our emotions in a change situation are real. *And they are real for everyone else, too.*

There is an emotional component to change. If we deny or ignore it, change will be drastically slowed or it won't happen at all.

Change Is Situational

What we think and how we feel about change (and therefore how we will behave in the face of it) depends both on the context and our recent personal experiences with change.

Context matters. Some people are more comfortable with changes in certain situations (like at work) — even if they are less so in other situations (like at home). The opposite is also true.

If someone has recently gone through, or is in the midst of, a difficult change situation in one part of his or her life, that person will be more cautious and hesitant with other changes at the same time or soon after. Alternatively, people who are feeling good about things that are changing in their lives will generally look more favorably on other changes at the same time and soon thereafter.

The Leadership Implications

All of this is true for everyone. But not everyone has the same recent experiences, and not everyone has the same thoughts and emotions about a given change. This difference between personal perspectives explains why change for an individual is one thing, and why crafting a change across a group, whether of three or 300, is much more challenging. Each individual within the group is in a different place mentally and emotionally about the change.

So think about this: As a new leader, you need to manage, lead and somehow get everyone on board to make a change really happen. Welcome to leadership.

The good news is that there are tools, strategies and actions you can take that will make all of this complexity less confusing and more doable. At the same time, this complexity is real and must be noted.

How to Communicate Change Most Effectively

Though change affects all parts of your life, when you become a leader you are often the mouthpiece for change or the instigator of it. From a leadership perspective, the real bottom line often comes down to this: How well can you communicate the change to those you wish to influence?

To address this important concern, we've developed 10 specific steps to help you. These steps can be a lesson plan for your growth in these areas, but, more immediately, they can be a checklist to help you with a specific situation of communicating change.

Here are the steps:

1. "Sell" individuals. To sell change requires one-on-one, personal conversations. Remember, people choose to change based on their perceptions. So, to help them feel the dissatisfaction, see the vision, understand the steps and reduce the risk requires less PowerPoint and more conversation.

2. Help people take ownership. You must help people create their own vision of the personal benefits for the change situation.

3. Let people in on your process. One of the biggest mistakes in communicating change that leaders make is waiting too long to communicate.

4. Call it a journey. Especially if the change is big and relatively complex, help people see that this won't be like a light switch. Let them know that the change will take time to implement, and that they will have time to learn and adjust to the changes.

5. Ask questions. Use questions to open others up and get them talking about the change. Ask questions to understand their feelings about the change. Talking openly about the change often helps people adjust more quickly.

6. Sell small — build a new status quo. Help people make small changes. Advance the status quo a little bit at a time. Not only is this approach the easiest way to help people through changes, but it makes the sell easier too.

7. Ask questions. Why is this here again? Because you must ask questions to be an effective change communicator.

8. Give it words. When you can label the change, you help people grasp it and make it easier for everyone to communicate about it.

9. Celebrate progress. One way you can communicate is through celebration. Celebrate *progress*, not just

completion. If you want to maintain and build momentum, if you want to keep people on track, you must celebrate progress.

10. Take responsibility. As a leader, you have a responsibility for making your change happen. ●

Communication

Would you have a larger circle of influence if your communications were powerful, persuasive and memorable? We think you would.

Here are our top communication tips:

- **Speak *with* people, not *to* them.** Ask open-ended, non-accusatory questions and make fewer statements. Open-ended questions engage people and invite conversation.
- **Speak with people the way that they want to be spoken with.**
- **Demonstrate unqualified respect.** Always show respect for people regardless of their behavior. "Unqualified respect" means that you do not require that people earn the right for you to communicate respectfully with them. Remember that you can treat people with respect and still hold them accountable for their behaviors.
- **Speak about what you want rather than what you don't want.** To really make your communication powerful and persuasive, say what you *do want* people to do rather than what you don't want people to do.
- **Use *And* more than *But*.** Imagine that you are in a conversation with someone and that you have just shared your opinion with him or her.
  Compare these two possible responses:
  1. "You know, that's a good point, but …"
  2. "You know, that's a good point, and …"
  With the first reply, it almost doesn't matter what the speaker says next. Hearing the word "but" probably triggered your defensive mechanisms.
  The second reply creates a more positive lead-in to the second part of the statement. Even if the speaker offers an interpretation of the facts that is different from yours, he or she has avoided triggering your defensive mechanisms early in the process so that you might receive what he or she has to say with an open attitude.
- **Tell them, give them "What's in it for them."** When you communicate with your team members, you will often be asking them to take an action of some kind. When they take the action, it will cost them something in the form of time, effort and energy. In return for that investment, they are looking for a corresponding benefit.
  When you communicate in direct and specific ways about how a decision, corporate goal, organizational objective or request for help affects people personally, you improve the odds that you communicate in a powerful and persuasive way.
- **Engage them in the conversation by listening to their responses.** When you have a dialogue with people rather than two simultaneous monologues, you improve your persuasive power.

A Kick Start to Winning Presentations

Moving into a leadership role sometimes means that you need to make presentations to groups of people. In general, people with the ability to stand before others and speak well are perceived as more powerful, persuasive, capable and intelligent.

Six important points to get you started are: use purposeful stories, simplify statistics and data to make them memorable, show less PowerPoint and more you, make it personal, close strong and include a clear call to action. ●

Coaching

Ken Blanchard, best-selling author of *The One Minute Manager*, said, "Feedback is the breakfast of champions." Feedback is required for anyone to continue to improve his or her performance in any skill and in any setting.

A Practical Coaching Model to Help You Succeed as a Coach

In real life, most coaching happens in some sort of meeting, whether formal or informal, long or short. One of the most important keys to any meeting is to have a plan. The coaching model shown in this summary as Figure 31.1 (*reprinted from From Bud to Boss, p.191*) is that planning tool for coaching.

Consider this model a roadmap for your success in coaching others. It can be used in a micro way to help you determine what you need to do right now in a conversation, and it can be used in a macro way as a roadmap for helping an individual improve (or overcome a performance issue) over a period of days, weeks or months.

About the Model

This model is circular to show that while there are steps, coaching and learning are more fluid than that. In a given moment you may recognize you need to move

to a different place in the model. That is OK. It was built it in a circular way to remind you of and reinforce that fact.

The six steps sit on top of a bed of support. The steps, individually and collectively, work better when done in supportive and caring ways. Whether you use this exact model or not, this concept of using supportive behaviors is critically important to your success in coaching.

Executing these steps successfully requires your communication skills — including thinking about the style and approach of the other person, your listening skills and more. To coach successfully requires understanding why people choose to change and how to help them do so.

About the Steps

Take what you already know and apply what you are learning to this model as you continue to master the craft of coaching:

Step 1: Identify expectations. In order to coach someone successfully, you must be clear on where you are coaching him or her to. What are your expectations for this person's performance and/or behavior? What are your short-term and long-term expectations for him or her? You need answers to these questions, but you need more than this — you also need to understand this individual's expectations.

Step 2: Define impact. Remember that people do things for their reasons, not yours (and not the organizational reasons either). The key is to help them develop personal benefits for moving to the new level of performance.

Step 3: Plan for success. Now you have clear expectations and a reason to move toward them. The next logical step is to build a plan to get there. The best plan will be one that is co-created with the people being coached, because it is harder for them to resist or defer a plan they helped create.

Step 4: Gain commitment. Once a plan is in place, you want to gain their commitment to follow it to its intended results. The only way to gain commitment is to ask for it. If you don't get it, or if you sense there is hesitancy or resistance, stop, slow down and explore the resistance. Your goal is for them to state their commitment to you.

Step 5: Follow up. Once a plan is in place and there is commitment to implementing it, it is your responsibility to check in, to see how things are going, and to offer assistance and feedback as necessary. This is your chance to provide encouragement and reinforcement.

Figure 31.1 A Coaching Model

Step 6: Don't give up. Your people are worth your best efforts. You need their performance, and when you know they are capable of it, you will stick with them. People may start to lose momentum or hope. Their attention or focus might get diverted, but by following the process you should minimize this likelihood.

Collaboration

Groups and teams are both made up of individuals. We contend that the biggest difference between a group and a team is organization around and alignment with a common goal. Teams are focused on achieving a common goal. Groups are not. **Every team is a group, but not every group is a team.**

One of your responsibilities as a leader is to help the group you lead to become a team. Maybe you already have the good fortune of leading a highly functioning team that knows how to get things done. If this describes you, you are in the lucky minority!

The more common case is that you have inherited a group of people that is somewhere between all individuals working totally on their own and the whole group working collectively and collaboratively as a team.

Both together and separately, there is a wide range of behaviors — good and bad — that contribute to overall team performance.

Understanding What Happens When Groups Become Teams

The team, or group, that you have is what you have. It is where it currently is because of a number of factors. If you want to lead that team to a new way of working together and interacting, you first need to assess where it is and where you want it to go. In other words, you have to clearly define the starting and ending points of your "trip" together as a team.

There are predictable patterns of team development. When you understand their patterns, you can use them as guides for diagnosing or evaluating your current situation more objectively, and for mapping where you want to go and how you want to get there.

Tuckman's Stages of Team Development

One of the patterns you can use to better understand team dynamics comes from a model describing the stages of team development proposed by Bruce Tuckman. His model, introduced in 1965, says that small groups go through four stages of development as they start to focus on a common goal and become a team.

To paraphrase Tuckman, in the ***Forming stage*** people begin the process of coming together; learning about each other's likes, dislikes and preferences; clarifying the tasks to be accomplished; and defining the roles to be filled. The most significant issues before the team at this stage stem from interpersonal, or people-related, concerns.

The ***Storming stage*** is when interpersonal conflicts start to develop as people start to wrestle with the relationship dynamics; the differences in perspective, problem solving and approach to tasks among people; the assignment of specific roles; and the tension of determining group or team expectations and rules. There is some shift toward a task focus in this stage, and the biggest team issues are still interpersonal ones.

In the ***Norming stage***, teams start shifting their focus away from each other and more toward task accomplishment. The team is getting things done, and they are still a little tentative in their approach. The relative tentativeness of the team's approach comes from some sensitivity left over from the Storming stage and some continuing relationship development. The focus at this stage seems to be pretty evenly split between issues of task accomplishment and relationship development.

When a team reaches the ***Performing stage***, they have developed an approach that sounds like: "Get it done. What's next on the agenda?" Team members generally operate at a high degree of trust and cooperation, and their relationship issues have mostly been addressed. As a result, the team is now ready to focus almost exclusively on the task.

Most Teams Go Through Predictable Stages of Development

In general, most teams go through similar and predictable stages of development and —

- *The stages are not rigid, well-defined boxes.* Instead, they are general descriptions of what happens within a team over time.
- *The stages are cyclical and fluid.* Any change in membership, role assignment, goal or work process can move a group that has become a team back to the Forming stage.
- *The stages do not necessarily happen exactly as shown.* For example, a team at the Performing stage might revert back to Storming on a given topic or situation.
- *You need to focus on people issues first.* While the purpose of a team is to accomplish a common task or achieve a common goal (task accomplishment issues), the initial factors that limit or hinder task accomplishment are mostly relational (people issues). ●

Commitment to Success

Many goal-setting resources talk about and teach SMART goals. In case you have never heard of it, SMART is an acronym that suggests all goals should be:

Specific

Measurable

Action-oriented

Realistic

Time-bound

As a leader with massive potential, you should go beyond SMART.

Nine Keys to Better Goal Setting

1. Write goals down. Clarity comes in writing goals down, and this is just as true for individual goals as for team goals.

2. State goals in the present tense. Our subconscious minds, which are exponentially more powerful than our conscious minds, like to solve problems. When you state your goals as if they have already occurred, you stimulate and challenge your subconscious mind to seek opportunities to reach the goal.

3. Visualize the purpose — personally and organizationally. Our minds can't tell the difference between something real and something vividly imagined, which means that

the more vivid, multi-sensory and real you can make the picture of how things will be when you have achieved the goal, the more powerfully drawn to it you will be.

4. Focus on the "Big Why." The goal isn't enough; you need to know why you want to achieve it. It is your why that will keep you motivated and moving forward.

5. Align goals with your values. If your goals aren't aligned with your personal or organizational values, they are likely to be weak and unsuccessful. Chances are your goals will be aligned with your values, and as you set your goals make sure they are.

6. Find the Bigness Balance. Although you need to find a balance, generally speaking, when in doubt, go bigger.

7. Consider the timeline now. When you set the goal, start your planning process, including a rough timeline of the steps and when you need to reach them in order to achieve your desired outcome on time.

8. Think about barriers now. You won't know all of the challenges you will face, but you probably know some of your barriers now. Write them down. If you have ideas for overcoming them, write them down too. By identifying some of the barriers, you expedite your planning and improve your chances for success.

9. Commit to an action plan. Now you must commit to completing the plan and implementing it. If you aren't willing to do these two steps, how likely are you to achieve the goal?

Moving From Goal Setting to Goal Getting

Once you have set the goal and built the plan to achieve it, there is that little thing called doing the "work" that still needs to happen.

Knowing that it will take effort and knowing human nature, we can understand why many goals are never reached — people don't put in the requisite effort.

Leadership Steps for Goal Achievement

As a leader, there are a number of things you can do to improve the likelihood that the goals set by and with your team are reached. The steps that follow are specific and direct things you can do to improve the success of your team in achieving their goals:

- *Visualize.* Visualization will help make the goal more real, and realizing our goals allows us to realize our goals. The bigger the goal, the more important visualization becomes. As goals get bigger, it is important to make even more effort to help people visualize not only the end goal, but also the major milestone points along the way, and even to visualize success in managing the plan itself.
- *Flex.* You need to be willing to flex your plan and your timeline to meet new realities, and maybe even flex the goal itself. Plans are important and they will be more effective when they are flexible.
- *Implement consistently.* As a leader, if you are serious about goal achievement, you must feverishly focus on implementation.
- *Provide time.* Google is famous for giving people one day per week to work on whatever projects they want — outside of their "regular" job. Although you may dismiss the idea out of hand as Silicon Valley silliness, the practice has led to innovations that are significant contributors to their bottom line (Google Mail is just one example).
- *Schedule time.* If you are serious about achieving the goals you have set, and you want your team to be serious too, put goal time on the calendar. Until you schedule it in everyone's calendar (including yours), you won't achieve as many of your goals as you could.
- *Provide resources.* As a new leader, you may not realize all the resources you have at your disposal, but you have them. Use them abundantly in support of goal achievement.
- *Make it a priority.* If the goals aren't a priority for you, they certainly won't be for your team. If they are a priority for you, make sure you are showing obvious and outward proof of this fact.

Ultimately what matters isn't goal setting, it is goal *getting*.

A Final Thought

Now it's your turn. Now that you're engaged in goal setting to successfully transition to leadership, it is time to show your commitment to success through your actions. You have to do the things necessary to improve if you want to turn those goals into reality.

Your work will be richly rewarded when you do it. It's time to get to work. ●

Mastering the Language of Leadership

GENERATING BUY-IN

THE SUMMARY IN BRIEF

A former senior correspondent and anchorman at CNN, Mark S. Walton draws on his rich communications background to help leaders master the language of leadership with Generating Buy-In.

Walton describes "buy-in" as getting understanding, commitment and action from others in support of a person, idea, proposal, product, service or organization. He explains that buy-in is the essential emotional ingredient needed for any collaborative effort to be successful.

Generating Buy-In *shows leaders how they can get buy-in by recognizing situations that call for renewed commitment from others, creating strategic stories that generate enthusiasm, and calling for action to get the job done.*

Walton stresses that generating buy-in isn't done haphazardly, and provides an overall framework and step-by-step procedures for building momentum by getting people on your side.

What You'll Learn In This Summary

✓ **The human mind thinks in stories.** Telling strategically created stories that project a positive outcome is essential for generating buy-in.

✓ **Capture people's emotions, not just their intellects.** Stories that cause an emotional response in others help get buy-in. Simply providing heaps of information won't do the trick.

✓ **Follow the rules when creating persuasive stories.** Go step-by-step as you determine your objective, establish your story line, target your audience's agenda, and call your audience to action.

✓ **Follow the Rule of Threes.** "When people ask me about this company, I tell them three things," says Steve Ballmer, CEO of Microsoft. The mind retains information best when it's presented in a group of three.

✓ **Use real-life examples.** Vivid, authentic examples influence decision-making more than abstract information, and are more helpful in generating buy-in.

GENERATING BUY-IN

by Mark S. Walton

— THE *COMPLETE* SUMMARY

UNDERSTANDING THE LANGUAGE OF BUY-IN

What Triggers Buy-In?

The term "buy-in" can be defined as understanding, commitment and action in support of a common goal.

Companies that advertise on television are masterful at generating buy-in for their products: cars, clothes, investments, vacations, you name it. What's at the heart of their success at generating buy-in? They speak to us in *strategic stories* designed to project a positive future.

To illustrate this, think about this phrase for a moment: a perfect summer afternoon. What does this simple phrase conjure up in your mind? For most people it is a mental story with images of warm weather, bright sunshine, a clear blue sky, and enjoyable activities with friends and family.

We think in stories filled with pictures — images of life — that are the language and currency of our minds.

Aristotle Knew: Stories Trigger Buy-In

In his essay *On Memory and Reflection*, Aristotle said, "It is impossible to even think without a mental picture."

The human mind is like our own private screening room that continually shows complex mental stories that have the power to soothe, frighten or stimulate us. If it's true that the mind thinks this way, the most effective way to stimulate the mind is to communicate with it in its most basic language: a story.

If our goal is to trigger buy-in from people for a creative idea or a new product or business proposal, the story that is most likely to succeed is one that projects a positive future that happens because of that idea, product or proposal. ■

The Story of McDonald's

The McDonald's hamburger chain had about 700 stores in the mid-1960s, with sales of $171 million. By 1972, sales totaled more than $1 billion from the company's 2,200 outlets. What happened? A national TV advertising campaign that said virtually nothing about food.

Instead, it used music and images, reinforced by a clown named Ronald, to tell a strategic story of a positive future: McDonald's is "Your Kind of Place" where "You Deserve a Break Today."

McDonald's is now the world's largest fast-food chain, with more than 30,000 restaurants and annual sales of nearly $4 billion. Despite ongoing refinements, the central story line remains the same.

Every Leader Tells a Story

When he was running for president, Ronald Reagan verbally painted a picture of a national renewal, a "Morning in America." Many voters bought into Reagan's strategic story and elected him president in a landslide.

In his inaugural address, Reagan made sure that Congress, the next audience whose buy-in he needed, heard his story loud and clear. "It is time to reawaken this industrial giant," Reagan declared, "to get government back within its means, and to lighten our punitive tax burden. And on these principles, there will be no compromise."

Reagan's "Morning in America" story was so compelling and projected such a positive future for the country that it was difficult, even for his political opponents, not to buy into.

From his inauguration to the end of his time as

Every Leader Tells a Story

(continued from page 2)

President, Reagan literally governed with this story, won re-election with it, and never strayed from its basic structure.

In his farewell address on Jan. 11, 1989, Reagan said, "I won a nickname: 'The Great Communicator.' But I never thought it was my style or the words I used that made a difference. It was the content. I wasn't a great communicator, but I communicated great things."

In the 1920s, Coca-Cola president Robert Woodruff created a strategic story for the company's employees. His objective was to increase their commitment and productivity and subsequently increase Coca-Cola's market share. Woodruff's storyline was to make sure that Coke is always "Within an Arm's Reach of Desire."

Donald Keough, a former president of Coca-Cola, explains why Woodruff's storyline worked so well: "That story created vending machines. In my day, when we traveled by car, you'd go into a gas station and the first thing you'd do is pull open that box that had ice and cold Coca-Cola in it. That's one way that they put Coca-Cola within an arm's reach of desire."

Over the years, Woodruff's strategic story passed from employee to employee and nurtured an almost evangelical corporate loyalty. ■

'Neutron Jack' Brings Good Things to Life

Jack Welch became CEO of General Electric Corp. at a time when the company was drowning in its own bureaucracy. In order to rekindle the passions of GE's thousands of workers, Welch had to craft a story they could buy into.

If GE could embrace the massive layoffs and restructuring he recommended, Welch reasoned, it would become number one or number two in all of its businesses.

From the day he started at GE, Welch told his story, which was built around three key messages:

- ✓ **GE is a place where ideas win.**
- ✓ **At GE, people flourish and grow.**
- ✓ **At GE, the excitement of our employees' work life is transferred to their whole lives.**

Welch made certain his story of the future never changed, regardless of current circumstances. Over the 20 years that Welch was its chairman and CEO, GE's stock price climbed 2,876 percent.

Strategic Stories Will Get You 21st Century Buy-In

Why is the "language of buy-in" more relevant and powerful today than it has ever been? And how will mastering that language give you a competitive advantage in the marketplace?

The answer is *access* and *impact.* Strategic stories will give you the key to people's attention, emotions and memories.

In the age of cell phones, cordless phones, telemarketers, pagers, voice mail, e-mail, junk mail, FedEx, faxes, newspapers, 24-hour news networks, newsletters, news magazines and news groups, it is not easy to grab people's attention. Stories are the key. As Ken Sacharin, media director at Young and Rubicam, explains: "Stories offer fast access. They can get attention any time, any place."

Why else would tens of millions of overcommunicated, overstressed people glue themselves, night after night, to TV sitcoms, dramas and "reality-based" stories?

You Will Influence People's Emotions

When strategic stories capture people's attention, it's important to capitalize on the situation.

Today, people are deluged with information — statistics, graphs, charts and facts — so giving them more information will not make them notice you. The way to achieve real buy-in — getting people's understanding, commitment and ultimately, their behavior — is to impact their emotions, not just their thinking.

And that's exactly what stories do. For example, people in a movie theater will laugh, cry, cringe and cheer, even though they're only watching a movie. Then, they'll go out and purchase millions of dollars in merchandise related to the movie.

"This is not a touchy-feely prescription," says neuroscientist Antonio Damasio. "Emotions are a very intelligent way to drive an organism toward certain outcomes."

Strategic stories can evoke practically any emotion or feeling. Here are some prime examples:

In 1996, President Bill Clinton's campaign strategists created a storyline that characterized Clinton as "a bridge to the 21st century." That story helped to give voters enough confidence in Clinton to get him re-elected by a landslide despite growing evidence of personal misdeeds.

In its advertising, the Motel 6 chain creates an image of friendliness, security and a pleasant experience with its "We'll leave the lights on for you" campaign. The

(continued on page 4)

Strategic Stories Will Get You 21st Century Buy-In

(continued from page 3)

chain's success is largely due to the effectiveness of this story.

The U.S. Navy's strategic story reminds prospective recruits that a stint in the Navy is "not just a job, it's an adventure." Every year, this story of an exciting Navy career convinces thousands of volunteers to enlist.

In the 21st century, appealing to people's intellects might pique their interest, but it won't close the deal. To accomplish that, you must appeal to their emotions. "The essential difference," explains neurologist Donald Caine, "is that reason leads to conclusions, while emotion leads to action."

You Will Program People's Memories

The impact of strategic stories never ends. They automatically replay themselves, generating buy-in for days, years and even decades into the future.

Think of how many Bible stories still influence your behavior. How many stories of successful people still affect the daily decisions you make? And how many sports or love stories affect your emotions?

"A story is like mental software," says researcher Annette Simmons, who adds that strategically designing a story "is as close as you can get to programming someone else's brain." ■

The Coca-Cola Story

In 1886, a chemist named John Styth Pemberton concocted a drink of gooey brown syrup mixed with carbonated water and carried it in jugs to an Atlanta drugstore. This new soft drink, soon to be known as Coca-Cola, became popular in the years to follow. But in 1929, it emerged as a national phenomenon.

As America's economy crashed during the Great Depression, Coke's marketers transformed their product's image from a soda pop into a sunny story, a "Pause That Refreshes" in an otherwise gloomy world. It was a stroke of brilliance that, even now, remains the fundamental story line behind the number-one brand on earth.

SPEAKING THE LANGUAGE OF BUY-IN

A Framework for Buy-In

Developing strategic stories is not complicated. In our personal lives, maybe without even realizing it, we develop strategic stories all the time. It's our natural way of relating to and getting buy-in from others.

People, all people, are much more likely to do what you want them to do if it leads to a future they want.

The following step-by-step guide illustrates the story development process:

Goal Setting: Determine your buy-in objective. What action do you want your audience to take regarding your idea, proposal, product, service or organization?

First Step: Establish your strategic storyline. To generate the action you want, what is the "big picture" or vision of a positive future you want your audience to see?

Second Step: Develop your storyline in three chapters that target your audience's agenda. What are this particular audience's needs, wants and future goals? In the future you are projecting, what are the three most important ways in which this audience's agenda will be fulfilled?

Third Step: Call your audience to action. Ask for a commitment or first step toward the action you want. ■

Developing Your Strategic Story

Imagine owning the number-one product in your industry — a brand that has earned your company billions of dollars in sales year after year. Then one day, your competitors come along and legally take it away. Not only do they manufacture your product, they sell it for a fraction of the price your company has been charging for it.

It would be like General Motors building Toyota Camrys and selling them for $5,000 each, or Seven-Up brewing Coke and charging a nickel a bottle.

That's the real-life nightmare the leaders of one of the world's premier pharmaceutical companies lived as they gathered in New York for their annual sales meeting. Months before, their patent on a blockbuster drug had expired and generic, less-expensive copies of the drug were being produced by rival pharmaceutical firms.

The company's revenues were already decreasing because of "generic erosion" as more drug companies rushed to market cheaper versions of the product. Sales projections indicated things would only get worse.

Entering the Buy-In Zone

Many top executives finding themselves in this type of situation would feel demoralized or even devastated,

(continued on page 5)

Developing Your Strategic Story

(continued from page 4)

but not this company's newly appointed CEO. As a former pharmaceutical sales rep, he had faced tough audiences before. He saw this challenge as another test — the biggest one he had ever faced — of the buy-in skills he had honed throughout his sales career.

He set the stage for the strategic story he had carefully developed to generate buy-in from the sales executives attending the annual meeting. Here is how the story took shape:

Goal Setting: Determine Your Buy-In Objective

Like any strategic process, developing a story for buy-in starts with goal setting: a beginning with the desired end in mind. Before writing a word of his presentation at the sales meeting, the pharmaceutical CEO addressed a crucial question that anyone seeking buy-in must answer: *What action do you want your audience to take?*

Why should action be the goal when generating buy-in? We can capture people's minds and emotions effectively, but if we don't motivate them to act — to endorse our ideas, to vote for us, to approve our proposals or purchase our products or services — we haven't benefited from all those efforts. Action is the bottom line of buy-in.

In the case of the drug company CEO, generating understanding and goodwill was essential, but it wouldn't be enough to save his job or the organization.

The action the CEO wanted was for his sales force to stay with the company. But that wasn't all. His salespeople couldn't just stay and sell at their usual level — in order for the company to succeed in the new environment, the sales force had to produce sales and income faster and more effectively than the competition.

The CEO gave himself a two-pronged objective: To have his salespeople stay on board, and to have them sell harder and smarter than ever, despite the fact that the company no longer had its patented blockbuster product. With his buy-in strategy in place, the CEO was ready to build a strategic story that would enable him to reach those goals.

First Step: Establish Your Strategic Storyline

Plato said, "The beginning is the most important part of any work, for that is the time at which the character is formed and the desired impression more readily taken."

The first step in developing — and in delivering later — your strategic story is to establish its beginning and basic premise. Writers call this the storyline. The storyline is the strategic story's central message, title and theme. Its purpose is to grab attention and communicate, in "big picture" terms, what the story is all about — a positive future.

How do you develop a strategic storyline? Brainstorming this question is a great way to start. To generate the action you want, ask yourself, "What is the 'big picture' or vision of a positive future that you want your audience to see?"

Beginning his presentation at the sales meeting in New York, the pharmaceutical company CEO established his storyline like this: "I wanted to visit with you personally this morning to share some feelings and thoughts I have about you, us, our company's future and what we will do to assure that future is what we all want it to be."

Note that the CEO started out by focusing on "you, us and a future we all want." The moment the CEO delivered this storyline, the tone of the sales meeting began to change. Hundreds of sales managers and salespeople, who arrived picturing a bleak future for the company, now began to envision a new, positive future.

Second Step: Develop Your Storyline in Three Chapters

Whether you're recruiting, leading, managing, campaigning for political office or marketing, generating buy-in requires that you know how your audience wants the future to be. What are this particular audience's needs, wants and future goals?

Michael Quinlan, CEO of McDonald's Corporation for ten years, sums it up this way: "Unless you can walk in their shoes, unless you're intelligent and sensitive enough to put yourself in their shoes," you won't get their buy-in. "You have to understand their hopes, fears strengths, weaknesses and frustrations."

Former President of Coca-Cola Donald Keough adds, "When you're ready to communicate with that group or that individual, you know what you're talking about."

(continued on page 6)

Well-Known Strategic Storylines

AT&T: "Reach Out and Touch Someone"
Clinton for President: "Bridge to the 21st Century"
Coca-Cola: "The Pause That Refreshes"
Federal Express: "Absolutely, Positively Overnight"
General Electric: "We Bring Good Things to Light"
Microsoft: "Where Do You Want to Go Today?"
Marlboro: "Come to Where the Flavor Is"
Motel Six: "We'll Leave the Lights on for You"

The Pharmaceutical CEO's Strategic Story

Buy-In Objective

✓ Have Sales Force Stay and Work Harder

Strategic Story Line

✓ You, Us and a Future We All Want

"I wanted to visit with you personally this morning to share some feelings and thoughts I have about you, us, our company's future and what we will do to assure that future is what we all want it to be."

TARGETED CHAPTER 1

✓ Targeted Message (Audience's Agenda: New Products)

"This company, based on our pipeline of medicines and your time-tested performance as a sales force, is and will remain the best-positioned pharmaceutical firm in our industry."

Supporting Evidence

"Starting later this year, we will bring to market, each and every year, a minimum of two important new drugs. I define that word 'important' in actual dollar terms, words that you and I as salespeople can connect with. I know what's in our R&D pipeline and I can assure you, having reviewed it thoroughly, that we will deliver on that commitment." (The CEO then describes in detail the types of new drugs under development, their status, and the markets to which they will be targeted.)

TARGETED CHAPTER 2

✓ Targeted Message (Audience's Agenda: Comparison and Support)

"We've undertaken a careful review of budgets everywhere in our company. What you need to know is that we will put more money, not less, into things that impact and improve your performance. We will increase our investment in you to make you even more successful."

Supporting Evidence

"Where will we invest our dollars? In more sales training and development, more people, better sales support and, as you're about to see, much better compensation for performance. We know this makes sense. Together, we will grow our way into the future." (The CEO continues by unveiling a new compensation package which, combined with investments in sales training and support, would enable the sales force to hit new sales targets and earn bigger commissions than ever, despite the loss of their leading product.)

TARGETED CHAPTER 3

✓ Targeted Message (Audience's Agenda: Recognition and Pride)

"We will always appreciate you. I'm here today to tell you that there's a clear understanding on the part of senior management that it is you and your performance that have fueled the success of this company."

Supporting Evidence

"This could not have been made clearer than it was last week. I was at a conference in Los Angeles. An old friend introduced me to a hospital administrator I'd never met. And right away that woman said to me, 'I want to tell you that your firm is extraordinary. Why? Because of your salesperson. The level of service she provides our hospital goes way beyond the call of duty. And it has given me a feel for the kind of people and the kind of company you are.'

"What she said brought home to me what I have always known. That you are what makes our company great. And, in this case, I want to say a special thanks to Mary Richardson [gesturing] ... I'm so very proud of her and each and every one of you."

Developing Your Strategic Story

(continued from page 5)

When the pharmaceutical company CEO stood before those salespeople to retain and motivate them, he knew his target audience intimately.

He was a sales rep early in his career, so he personally experienced the needs, wants and goals of people who work on the road, delivering sales pitches and drug samples to physicians. He understood first-hand what a positive future would look like from the salespeople's point of view:

- He knew that the salespeople's most important need, having lost their patented blockbuster drug, was for drugs that sold extremely well.
- He recognized that they would want to be well-compensated and supported during the time it takes for new products to become popular with physicians and the public.
- He appreciated that, in addition to money, sales people are motivated by personal factors such as recognition and pride.

His challenge was to project his story of "You, Us and a Future We All Want" in a way that would credibly fulfill this target audience's agenda. His story consisted of three specially targeted chapters. A targeted chapter is a projection of a future in which a target audience's specific needs, wants and goals are fulfilled.

The section above, "The Pharmaceutical CEO's Strategic Story," illustrates how the CEO's targeted chapters answer the key question: What are the three most important ways that the action he wants will give

(continued on page 7)

Developing Your Strategic Story

(continued from page 6)

the salespeople the kind of bright tomorrow they want?

Third Step: Call Your Audience to Action

Shakespeare said, "It is by entrances and exits shall ye be known." That is true of every strategic story and storyteller trying to get buy-in.

At the New York meeting, the pharmaceutical CEO took a calculated risk. He let the salespeople know his vulnerabilities and the difficult struggle he and the company were facing.

Despite that perilous situation, he told a strategic story that projected a positive future in which their specific needs, wants and goals would be fulfilled.

Now it was time for him to ask his audience to take the actions he proposed, to call on them to move forward and make the story become a reality.

This was his call to action: "Let's prove to our industry, to our customers, to ourselves, how truly unstoppable this sales force is. Let's show them that there isn't a single target or goal that, together, we can't attain. Let's build that future we all want. And I have no doubt that we can, because we'll provide you everything you need to succeed. Do I have your commitment to go forward?"

The Outcome

The CEO won the salespeople's commitment and achieved his buy-in objective in a big way. Not only did he retain the sales force, he expanded it significantly in the years following his New York presentation.

Despite the loss of a hugely successful product, the company brought several new, high-selling drugs to the marketplace, and overall sales remained strong. ■

For Additional Information on strategic story lines, go to:
http://my.summary.com

The Rule of Threes

"When people ask me about this company, I tell them three things," says Steve Ballmer, CEO of Microsoft.

The mind receives, retains and recalls information most easily when it is presented in groups of three. How do you feel when you listen to a speech that contains fourteen key points you're supposed to remember? When a salesperson sells you on eleven important features of a product? When you try to follow a ten-step process?

Overwhelmed, right? It's very difficult to remember long lists of details; it's much easier to remember things presented in threes. Notable examples of lists of threes from the business world come from the Ritz-Carlton Hotel and Ford Motor Company. The Ritz Carlton trains its employees to always provide "three steps of service" when interacting with hotel guests:

1. A warm and sincere greeting.
2. Anticipation and compliance with guest needs.
3. A fond farewell — give guests a warm goodbye and use their names if and when possible.

Ford Motor Co. chairman and CEO William Clay Ford, Jr. announced his company's strategy for the 21st century was to "build a stronger business" by making its automobiles more affordable in three ways:

- Economically
- Environmentally
- Socially

If people welcome information delivered in groups of three, they'll react the same way to strategic stories designed with this formula in mind. ■

When Times Get Tough, The Smart Get Buy-In

In mid-1994, a flaw was discovered in millions of Pentium microchips from Intel, the largest manufacturer of personal computer chips in the world, maker of the ubiquitous Pentium processor.

Word of the problem spread fast on the Internet, and concerned customers contacted Intel headquarters in Santa Clara, California. Intel CEO Andy Grove instructed his employees to tell customers that no technology is perfect, that the problem affected only high-level scientific computations, and that, for the average computer user, a problem might occur once in 27,000 years.

For PC owners, that wasn't good enough. They contacted CNN, the *New York Times* and the *Wall Street Journal*. The media coverage prompted IBM to stop all shipments of its Pentium processor-based PCs. That triggered a stock slide that cost Intel more than a billion dollars in market value in a few days.

No Excuses

As brilliant as Grove is, he missed a crucial point: Customers didn't want excuses or a technical analysis of the Pentium chip. They wanted to know that their computing needs would be met, then and in the future.

From the many angry calls Intel received, the company knew what its customers needed and wanted: the option of receiving replacement Pentium chips at no cost or inconvenience, and the assurance that any future problems would be quickly, reliably handled.

Grove took action. He enlisted the help of communi-

(continued on page 8)

When Times Get Tough, the Smart Get Buy-In

(continued from page 7)

cations experts to develop a strategic story to regain customer commitment. The main points of his story were presented in a group of three:

- Intel would provide free replacement Pentium chips to anyone who wants them.
- Intel would provide in-home or office service to those who want chips replaced.
- Intel will always stand behind everything it makes and, should anything go wrong with its products, the company will move quickly to make things right.

Once the correct decision was made and the right strategic story was communicated, Intel regained its market value and reputation. In fact, the firm benefited from the publicity the incident received — consumers admired the company's commitment to correcting the problem. ■

The Best Evidence

"Connect with people's gut concerns and they'll go anywhere with you without asking for details," says *New York Times* columnist Thomas L. Friedman. "Don't connect, and you'll never be able to show them enough details to get them to follow."

The best supporting evidence for a story or message about the future is a credible, real-life example from yesterday or today.

In the mid-1970s, Nobel Prize-winning psychologist Daniel Kahneman and fellow researcher Amos Tversky demonstrated this in their research on a brand-new field that would become known as behavioral economics. Kahneman and Tversky found that:

1. First impressions shape subsequent decisions.

2. Vivid examples are overwhelmingly more influential in shaping decisions than abstract information, even if the information is more accurate.

Using real-life examples to shape opinions is a persuasive approach that can be applied to any effort to obtain buy-in.

Advertisers do it all the time. Many of their commercials feature customers and celebrities who have tried their products. Lawyers seek out witnesses who were at the scene of a crime. Reporters look to interview people who are directly involved in a story. So do public relations practitioners and communication strategists. ■

PUTTING THE LANGUAGE TO WORK

Questions Executives Ask About the Language of Buy-In

1. Where is the best place to use the language of strategic stories?

As with any language, this language can be spoken, written, printed or expressed in a variety of media and formats. Great advertising, packaging and promotional materials are perfect examples of strategic storytelling. Through words and images, they promise a positive future if we buy into the products or services involved. The bottom line is: You can speak it, write it, picture it or even act it out before a target audience of any kind.

2. How do you find out what a target audience wants for the future: their needs, desires and goals?

Ask and listen. Carefully asking and listening is an underlying element of all types of successful advertising, marketing and political campaigns. Whether they use simple personal interviews or sophisticated technologies that read a focus group's brain waves, smart companies use the "asking and listening" method to determine what turns people on. The company leverages that information to communicate the right story to a particular target market or demographic group.

3. After you've developed your strategic story, how often should you tell it?

The key to maximizing the impact of any strategic story is to repeat it as often as possible for as long as possible. The longer and more frequently you repeat your strategic story, the more likely you are to be successful.

4. What do you do when there's no good news to deliver and therefore no positive future to include in your strategic story?

You can't sugarcoat bad news and maintain your credibility. You've got to be upfront and honest with people. After acknowledging the current realities, the challenge of leadership is to create a bright tomorrow, to focus on what can and will be done to make the future better. Without denying the downside, you must create and communicate a brighter tomorrow to generate buy-in, even if you have to create that tomorrow yourself.

5. What should you do if your strategic story isn't working as well as you'd like it to?

If your story isn't producing the buy-in you want with a particular target audience, it might need adjustment. Review your strategy, especially your research on the target audience's needs, wants and future goals. Keep in mind that people's needs, wants and goals can and do change quickly. Usually, when a strategic story is producing insufficient results it's because the target audience research is insufficient, faulty or outdated. ■

Get On the Bull

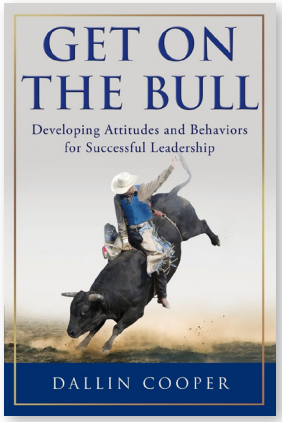
Developing Attitudes and Behaviors for Successful Leadership



by **Dallin Cooper**

Contents

Introduction
Page 2

The Bull Rider Attitude
Page 2

Bull Rider Behaviors
Page 2

Conclusion
Page 4

THE SUMMARY IN BRIEF

Through the mindset of a bull rider, Dallin Cooper takes readers on a motivational journey to better their own lives. Dallin has definite ties to bull riding. He grew up listening to stories from his father and former bull rider Steve Cooper. He was fascinated by his father's lifestyle and the daily trials and tribulations on the trail to succeed in rodeo.

Dallin explores all the elements of what a bull rider goes through to achieve success and how it relates to the lives of everyone. In ***Get On the Bull***, Cooper creatively conveys his points by sharing the traits and actions that make up the bull rider attitude. The readers can relate to overcoming obstacles and adversity just like bull riders do every time they climb aboard a 1,500-pound bull who wants to throw them off into the arena dirt.

As Dallin writes, plenty of people—not just bull riders— face overwhelming daily challenges. Some people overcome those challenges. Others don't.

IN THIS SUMMARY, YOU WILL LEARN:

- Why bull riders are the ultimate example of leadership in action.
- The four attitudes that leaders can learn from bull riders, and how to put them into practice in real-world applications.
- The four behaviors of bull rider-type leaders, and how they work and provide benefits in action.

Introduction

Bull riders are masters of moments. On the back of a bull, eight seconds can feel like a lifetime. For perspective, the 2021 PRCA World Champion Bull Rider, Sage Kimzey, successfully rode 88 bulls at competitions. That amounts to approximately twelve minutes of bull riding throughout the entire year.

Hundreds of hours in training, both physical and mental, went into making sure that he could instinctively make the right decisions in those split-second moments when he was on the bull–a year of work and effort defined by twelve minutes.

Leadership is defined by moments. It isn't a title or position. Leadership is a lifestyle. All the seemingly insignificant moments work together to define our habits and character. The attitudes and behaviors that we develop in our day-to-day lives determine how we act in pivotal moments. The attributes of effective leadership need to be so ingrained in us that they become second nature.

But bull riders aren't the only ones who confront the seemingly impossible. Plenty of other people face overwhelming challenges every day. Those challenges may not have hooves or horns, but they're no less dangerous. Some people overcome those challenges. Others don't. Some people talk about starting a business. Others go out and create one. Some dream of their potential. Others take steps to reach it. Some wait to be led. Others lead.

Some choose to walk away and take the easy way out. Others get on the bull.

The Bull Rider Attitude

The bull rider attitude goes far beyond just doing something that most people think is crazy. It's present in all aspects of their lives. It's how they see themselves and those around them. It's how they handle setbacks and mistakes—as well as their triumphs and successes. Bull Riding isn't just a sport. It's a lifestyle.

Leadership must be part of your lifestyle. You can't have an "ethical leader" mode at work that you turn off when you leave the office. Like a bull rider, your attitude at home, work, and everywhere you go will determine your success. And I'm not just talking about your financial success, but also success in your relationships, hobbies, and anything else you value. Success in anything begins with your attitude.

There are four elements of a bull rider attitude that you can start applying in your life immediately to become a better leader, a better friend, and a better person.

Determined Optimism

Whether from nature or nurture, determined optimism comes easier to some people than others, but anyone can develop this attitude. To view yourself and the world with hope and positivity is a choice. When you choose to alter your thought processes, you can literally rewire your brain to think more optimistically. And these brain changes can happen more quickly than you'd think! One study found that significant neurological changes occurred within two months of consciously changing thought patterns.

The first step is to make the choice and commit to yourself that you're going to practice determined optimism, even when the obstacles seem overwhelming.

Humility

An effective leader knows they'll make mistakes. But they acknowledge their mistakes, learn from them, and try to do better. They know that blaming others or trying to make excuses only degrades trust and stifles their ability to learn. This level of accountability requires humility.

Acknowledging mistakes, accepting failures with grace, and being present with your team are only a few aspects of humility. Truly humble leaders demonstrate humility in everything they do. It isn't something that can be faked. But just like the act of smiling can make you feel happier, behaving humbly can help you become more humble.

Gratitude

Bull riders are the superstars of the rodeo world. They get the most hype, the coolest headlines, and the biggest jackpots. Bull riding is usually the last event in a rodeo, acting as the grand finale. You would think that this environment would cause bull riders to be pretty full of themselves. But if you ask a bull rider who the most important people in the rodeo are, you'll probably get one of two answers. One of the most common answers you'll get is, "The bullfighters."

Bullfighting is no laughing matter. Their job is to distract the enraged bull after a ride so the rider can escape to safety. So yeah, if you think the bull riders are hardcore, take a second to think about the guy who steps between them and the bull and says, "You run, I'll hold him off!"

That is exactly how you should feel about those you lead. If

a great leader accomplishes anything amazing, it is because hardworking individuals are making it happen. And they don't get the praise and recognition they deserve from the general public, but they better get it from their leader.

Perspective

The best way to develop perspective is to recognize that your perspective isn't the only valid one. Then try to gather new information to expand your understanding. Some ways to practice "perspective-getting" include:

Work on active listening. Ask clarifying questions to make sure you understand what you're being told and that you're interpreting it the correct way.

Avoid assumptions. They're usually wrong and prevent perspective-getting behaviors.

Understand your own perspective. Maslow's Hierarchy, The Bible, and airplane safety procedures all agree that you need to help yourself before you can safely help others. It's difficult to understand someone else's feelings and worldview if you don't even understand your own. Make an effort to identify your own thought patterns, biases, priorities, and cognitive blind spots.

Bull Rider Behaviors

Your changes in attitude will naturally change your behavior and make you a better leader. But can you also make conscious changes to your behavior to help change your attitude? It's a classic chicken-and-the-egg dilemma. Does your attitude dictate your actions, or do your actions change your attitude?

The answer? YES!

Mindset and behavior are intrinsically linked. As you change one, the other is affected. By actively working on both, your growth as a leader and well-rounded person can be significantly accelerated.

Margaret Thatcher once said, "Being powerful is like being a lady. If you have to tell people you are, you aren't."

We can apply that same principle to leadership. If you have to tell people that you're a great leader, you probably aren't one. Instead, great leaders show their quality through their behavior. The behaviors discussed in this section will help you act in a way that makes you a powerful leader, regardless of your title.

Honesty

You may think that developing honesty would be as simple as "just stop lying." But unfortunately, there are a lot of deeply ingrained habits in most people that prevent honesty, such as justification, telling partial truths, and obscuring the truth. You'll have to identify these habits and recondition yourself so that honesty becomes your default behavior. Here are some ideas on how to start.

At the end of each day, write down any instances of dishonesty and deception that you noticed throughout the day. Ask yourself what fear or discomfort you were trying to avoid. Brainstorm how honesty could have helped the situation.

When you notice yourself bending the truth, quickly correct it. Often, when we find ourselves tending towards dishonesty, many of us double down on our lies. Instead, a simple, "Sorry, I was wrong" followed by the full truth can usually fix the situation with minimal awkwardness–and certainly much less than when the truth comes out later.

Authenticity

Because authenticity requires your beliefs, actions, and behaviors to align, it's important to be aware of your beliefs, thoughts, and actions. Here are some tips for discovering and then aligning these important elements of your character:

Brainstorm your beliefs. This doesn't mean writing down a bunch of religious doctrines. It's about making sure you can verbalize what's important to you. You may want to sort these beliefs in order of priority. This helps you see if what you say is "most important" aligns with how you spend your time.

Be deliberate. This is in the same vein as being honest and following the cowboy code of "Talk less, say more." Slow down and make sure the things you say and do align with your beliefs. Words and decisions made in the heat of the moment are less likely to be authentic to your values.

Get help. Someone who knows you well, like a spouse or close friend, can let you know when you're contradictory, inconsistent, or inauthentic. If you ask someone to help you identify your inauthentic moments, listen to them! Even if it's hard.

Grit

Believe it or not, grit isn't just a slang term to refer to people who don't give up. It's actually an official term used in the study of human psychology. The American Psychological

Association defines grit as:

"A personality trait characterized by perseverance and passion for achieving long-term goals. Grit entails working strenuously to overcome challenges and maintaining effort and interest over time despite failures, adversities, and plateaus in progress. Recent studies suggest this trait may be more relevant than intelligence in determining a person's high achievement. For example, grit may be particularly important to accomplishing an especially complex task when there is a strong temptation to give up altogether."

Since grit is a mindset put into action, you can develop it by improving the mindset. In addition to the items listed below, use the action items under "Determined Optimism" to help you develop grit.

Read/Listen to stories about grit. Part of the reason motivational speakers exist is because they work. When people hear stories about success and determination, they gain a desire to succeed themselves and to work harder to do so.

Write down your goals and put them somewhere visible. Our dedication to a goal increases when it's written down and increases even more when it is somewhere we see often.

Share your successes. While keeping humility in mind, celebrate victories with those close to you, even if they are just small victories along the way. Taking note of progress is important to help keep you from getting discouraged.

Service

Serving others builds their trust and loyalty, but only when that service is sincere. Service that comes with strings attached, such as vendors wine-ing and dining big clients, does work. But at that point, it stops being service. It becomes a marketing tactic and a subtle transactional dance. And while it may be effective, it isn't going to transform relationships, inspire trust, and build loyalty in the same way that sincere service does.

Actively look for opportunities to serve. Don't wait for people to come to you or say, "Let me know if you need anything." Be proactive in finding ways to help.

Conclusion

Sometimes, there's just no substitute for actual experience. Training, workshops, podcasts, and books like this one all have a valuable place in teaching us lessons and providing new insights. But they won't make you a great leader. There comes a time where you have to put down the book and start practicing the principles in the high-risk environment that is the real world. You'll mess up. You'll make mistakes that leave you winded in the dirt of the arena of life. But that's okay. Own those mistakes. Learn from them. It's the only way you'll ever become the life-changing leader that you're capable of becoming. It's time to put down the book and get on the bull.

Dallin Cooper is an author, speaker, and entrepreneur. He primarily writes and speaks about leadership, ethics, trust, and relationships. When he isn't writing books or speaking on those topics, he makes lighthearted YouTube videos about them.

Page 5

THE SUMMARY IN BRIEF

How do you transform a typical organization into one that is *perpetually* agile, innovative, fast-paced, and crackles with heightened expectations and intensity? What could you achieve if you harnessed the methods of the most innovative companies? Those with a *winning mindset* that drives relentless experimentation that runs through the entire organization, from top to bottom. These types of firms have key ingredients that enable them to pull it all off.

Going on Offense: A Leader's Playbook for Perpetual Innovation provides practical, actionable advice on how an organization can attain and sustain the mindset needed to continually adapt to new environments and expand into new territories–and minimize the need for radical transformation. Author Behnam Tabrizi draws on in-depth research from centerpiece companies and their leaders to share methods that can vault your organization to the same ultra-successful heights. Whether you are a frontline employee, a middle manager, an executive, or a CEO, this book is designed to show you the key characteristics companies need and give you practical steps so that you and your organization, or the area you control, can reach your full potential.

IN THIS SUMMARY, YOU WILL LEARN:

- The challenge that stops large organizations from being innovative.
- How a spirit of generosity lays the foundation for perpetual agility.
- The role ferocity plays in cultivating a start-up mindset.
- How companies can act courageously to make sustained change.

Seeing the Challenge

Many leaders treat the idea that large organizations can transform into perpetually innovative firms as a myth. Even tech companies that used to be nimble in the 2000s, such as Facebook, and Google, are now a shadow of their former, stunningly innovative, selves. Nokia had a major share of mobile phones before Apple's entry in 2007 but came to a devastating end due to a laser focus on operational metrics, failure to cultivate a cultural transformation, and a lack of courage in creating products that customers would love. Now, impressive advances in artificial intelligence are adding yet another disruption to many markets. Agile innovation is becoming more important than ever–and further out of reach for complacent giants.

Becoming an agile innovator requires always being on the lookout to reimagine and implement new processes, partnerships, products, markets, and services and improve existing ones. Innovation is essential in order to thrive in our increasingly disruptive markets. Agility is necessary to move quickly to address opportunities and threats. Being agile is about a mindset first and it's a critical element of a culture that responds quickly to change.

The impediments are daunting and human nature is the main obstacle to change. First off, people are conditioned to be dependent. In the workplace, we're comfortable ceding our power to the bureaucratic hierarchy so we settle into a predictable, stable set of routines and tasks.

Second, it's human nature to be self-interested and proud. Most managers in large companies have a touch of that, making them embrace command and control to maintain their fiefdoms.

Third, people tend to commit themselves and resist change when they have invested significant resources in a project or strategic direction. They persist even when abandoning that course of action makes long-term financial sense.

Finally, the sort of change that can break through the inertia of tradition takes tremendous resolve. Agility and innovation require a kind of alertness and flexibility that demands enormous mental and physical effort. And it definitely requires more energy than most people want to devote to their work.

Even with all of that, transforming big companies is not an impossible dream. They need a holistic approach that instills the discipline and generates the emotional energy necessary to thrive in a time of disruption. Leaders have to put aside personal wishes and transform for a larger purpose. In other words, they must open their eyes and "see" that they can't continue business as usual.

Part One: Generous

Setting an Existential Purpose

Perpetual Innovation is hard work, and only positive motivation can bring out the energy and enthusiasm necessary to sustain it over time. So the work has to start with a spirit of generosity. Like many big organizations, Microsoft became a victim of its own success. Responding aggressively to initial opportunities, it had brilliantly exploited a new and fast-growing market, but once it got there, it lacked an existential vision to stay dynamic.

Microsoft's board in 2014 promoted Satya Nadella to CEO. He had a simple solution: to "rediscover the soul of Microsoft, our reason for being." He had a larger vision than just corporate strategy. But the bulk of the organization remained in the old perspective.

Large, successful companies inevitably resist the effort necessary to remain perpetual innovators. They've built structures to scale up and deliver reliable profits, so they naturally resist bold, disruptive experiments. To change, they need something more.

People need a deep-seated conviction in order to summon the energy to recognize a powerful purpose to animate his or her life. Companies are not people, but they need a similar reason for being. An existential commitment provides direction as well as motivation.

The answer to "Who am I and what is my purpose?" is central at the organizational as well as individual level. It inspires members to imagine what the organization could become. It also embeds and energizes everyone in the transformation to get there. It goes beyond the usual talk about purpose nowadays, which is shallow and feel-good.

Existential purpose is hard and deep; it gets to the company's identity and reason for existence. It has real trade-offs; it closes off attractive opportunities and strategies. It should make some people leave. But only a hard, existential commitment to that purpose will force companies out of settled structures and toward perpetual innovation. An existential purpose aligned with an individual's own existential commitment to the organization will make people feel they have a stake in the transformation process.

To sustain a company's discipline–to avoid the complacency and internal politicking that come from success, you need an external tug as well.

Customer Obsession

Existential purpose can falter after a while, especially when the business model proves itself. To sustain a company's discipline–to avoid the complacency and internal politicking that come from success, you need an external tug as well. You can leave your rivals in the dust and still lose sales at the cash register. People will still pester you for lower prices, higher quality, added features, or all of these at once.

To compete in this type of environment, you have to be obsessed with satisfying your customer. It's a kind of emotional commitment that makes the company accommodate, listen to, and attune itself to customer's challenges, no matter how frustrating or contradictory.

It forces the company to make some questionable choices in the short term to pay off over time, not just in customer satisfaction, but also in employee engagement and overall quality. Customer-obsessed companies also tend to be the first to realize when and how markets are shifting.

This obsession doesn't simply mean surveying to find out what people want and giving it to them. Customers must come alive to developers and that happens with cocreation and empathetic imagination.

To cocreate with customers means to obtain their input at every stage of production. Companies act based on what customers say they want, making the customers the experts. But it should be done with *empathetic imagination*. The focus should not be on finding out what customers think *right now*. Instead, they should ask, "What would a product that could improve the *future* lives of customers look like?" That focus may come into conflict with short-term profitability, but has a greater potential long-term payoff.

Beyond employee attitudes, customer-obsessed companies fret about satisfying customers. They invest in infrastructure to achieve high levels of customer satisfaction, not just through the usual call centers, but also by looking for potential pain points. Customers love knowing that their complaints are being listened to, but nothing can top the experience of having no complaints at all. Mistakes happen everywhere, obsessed companies want to make up for problems that you nearly notice, on principle. Customer obsession plays out in many ways, but its foundation is a deep-seated commitment to the well-being of users.

Pygmalion

Existential commitments and obsession are qualities that are hard to promote through direct personal interactions. As companies grow to thousands of employees, how can they create cultures that drive agility and innovation?

The solution comes from the simple ancient story of Pygmalion, a male sculptor in Cypress who had contempt for the women around him. In his frustration, he shaved his ideal woman out of ivory. After generously pouring his heart and soul into the sculpture, he named it Galatea and fell in love with it.

At a festival in honor of Aphrodite, Pygmalion offered sacrifices and wished for a bride that would be the "living likeness of my ivory girl." On returning home he discovered that Aphrodite had granted his wish. The statue had become a real woman. Pygmalion married Galatea, had a daughter, and lived the rest of his life with the woman of his dreams.

The key to the story is that Pygmalion imbued the best characteristics he could imagine into Galatea. His deep-seated commitment and attention to detail enabled him to create something beyond what should have been humanly possible.

Steve jobs, Jeff Bezos, and Elon Musk did the modern equivalent in their companies. They achieved a Pygmalion effect, instilling values and mindsets into the fabric of their company as a whole through their company culture.

Curating an organizational culture becomes more difficult as a company grows. Founders and CEOs can easily mold those around them, especially those who they interact with personally, but it's nearly impossible to mold an entire organization. That's what makes modern-day Pygmalions so special.

To achieve the Pygmalion effect throughout their organizations, leaders must not only live out these values in their management, but also instill them into the fabric of their

company. That's especially difficult as a company grows. By chiseling specific attributes into a company's DNA, they sculpt employees they never see.

Part Two: Ferocious

The Start-Up Mindset

Existential commitment is necessary for companies to thrive in our current era of rapid technological advancement and uncertainty. There are practical consequences of that commitment, and how it can energize not just a few leaders, but many people in the organization. The challenge is to turn that commitment into the kind of mindset that helps start-ups succeed despite immense obstacles.

Grit, along with a deep purpose, enables people to start driving for ambitious goals. After all, most start-ups aren't really trying just to earn more than the cost of capital. They have a big agenda.

To spread that feeling beyond founders or leaders, large companies need people not just committed to an existential purpose, but who feel a sense of ownership for the company's trajectory. These people believe that if they don't perform, then the company can't achieve its noble purpose. They're missionaries, not mercenaries.

Here it helps to follow the lean start-up loop of build, measure, and learn. Companies can design, launch, assess, and iterate on new and old goods thanks to this never-ending cycle. Each stage in the loop involves developing a minimum viable product and testing hypotheses against market reactions, then embodying new hypotheses in an adjusted version.

People can follow the loop as masters of their own destiny, free to pursue what needs to be done, even if it's quite different from what's been done before. The lean start-up approach has the advantage of working under tight budgets, which makes it easier for leaders to give product teams the autonomy they need. Those teams can now go boldly and ask for forgiveness rather than permission.

Some people fall behind, unable to keep up. But the intensity of the start-up mindset usually attracts more than it repels people's best work. That's the heart of the start-up mindset. It pushes people to overcome daunting challenges by calling up energies they didn't realize they had.

It's not for everyone, but many talented people find it exhilarating. And together they can shake a mature company out of its settled ways.

Managing the Tempo of Change

The world of business is about more than just speed. It's also about tempo–controlling the pace of activity, speeding up or slowing down as needed. Moving fast all the time isn't sustainable, but too many companies settle for a fairly fixed, somewhat relaxed speed. Perpetual innovation companies have a high tempo culture.

Tempo is about decisions as well as movement. That's the first simple rule. Jeff Bezos outlined something similar in business when he distinguished between type-one and type-two decisions.

Type-one corresponds to high magnitude decisions with low reversibility. They involve a lot of data and deliberation, as the stakes are high. You're still on offense, but you move deliberately. Type-two decisions on the other hand are highly reversible and less important. These can be made by a skilled person quickly, with limited data.

Differentiating between these types of decisions can be the difference between a slow-moving organization and a quick one. Getting a type-two decision wrong can be a bump in the road, while extending thinking on it is disastrous.

The reverse is true for type-one decisions, where deliberation is appropriate–though even these decisions can't be put off for long. At some point the organization has to move. Bottling up skilled workers, in an organization too scared to push the limits, is the recipe for stagnation.

Tempo is more than just speed, though. Here are a few more simple rules:

- Stay alert
- Stay paranoid
- Look broadly
- Eliminate barriers
- Purge inefficiencies
- Set clear goals
- Establish frequent check-ins

Big companies have a lot of advantages, but they'll get passed if they lose control over the tempo. Don't let up.

Bimodal

Perpetual innovators tend to operate in two modes: compression for predictable or commodity activities, and experiential development for new or differentiated areas.

A tepid, cautious approach to products and services won't work because it won't draw on the emotional energy that comes from boldness.

Other companies typically settle into a single mode, usually a lighter version of compression, so they fall short both in cutting costs and in creating new kinds of value.

At least since the 1990s, companies have been shedding non-core assets and activities. Many have contracted for everything from managing the cafeteria to marketing, manufacturing, distribution, or even product development, when these are not intrinsic to the strategy. This outsourcing led to a wave of downsizing as companies focused on their core competencies.

Yet a great many activities have remained that companies cannot fully outsource, usually because these are too complex or integrated into the main operations. The solution for ambitious companies is compression, or accelerating the overall ongoing push for efficiency.

Compression adds discipline and urgency, especially for complicated operations that haven't already been routinized. The goal here is to standardize, automate, and push hard to remove cost.

Agile innovators relegate complex but predictable projects to compression. But they go in the opposite direction for most of their core strategic operations. Here they downplay efficiency altogether and encourage managers to pursue multiple options and hypotheses. Their experiential approach emphasizes learning and discovery, though still with a focus and milestones to ensure discipline and accountability.

The bimodal approach divides the organization into activities to be compressed and activities to be developed experientially. That division continues over time, separate from short-term changes in speed.

Part Three: Courageous

Go Boldly

Companies need to act courageously to make sustained change. A tepid, cautious approach to products and services won't work because it won't draw on the emotional energy that comes from boldness. Overcoming tough problems can create enormous value.

Elon Musk, at Tesla, SpaceX, and other companies, has essentially turned that approach into a strategy. Boldness is risky, but success is the ultimate differentiator, and it catapults his companies from their competition. After all, if you refrain from boldness, you'll always have to deal with rivals, and you'll never get much respect from investors.

Besides impressing investors, a strategy of boldness has two major benefits. One is that trailblazers can achieve sustainable competitive advantage if they continue to invest and focus on innovation. Even now, Tesla's cars offer features that the legacy car makers, from their foundation in combustion engine technology, have failed to match.

The second is that boldness attracts high-level talent. Ambitious people want to work for ambitious companies because they know they'll work on major innovations that could change the world. With high-level talent, bold companies are in a better position to achieve their goals than companies with less-skilled employees. Boldness, when carried out with the other elements discussed in this book, becomes a positive feedback loop.

It's easy for a startup to move boldly, but much harder for a large, established company that has already achieved success. Big companies have established structures and routines designed around reliability, not major innovation. Even if the founders are still in charge, they're likely to remember their difficult early times and prefer the current smooth sailing.

As a result, most successful companies lapse into conformity. Sometimes that conformity is obvious, as when the firm copies every move of a successful competitor. Sometimes it's sneaky, where the company digitally replicates a physical product that people already love, without making improvements.

It takes boldness to actively resist the tendency to stick to the safety of conformity. A heroic leader, for example, can move a mass of people in a new direction through force of will or charisma. Yet organizations can become bold at every level.

Start with you. Boldness has to start somewhere, and it has the greatest effect from the top. Know, be, lead: This organizing principle should guide how company leaders go

about any sort of institutional change.

First, articulate your great dream for the organization. Then know yourself, your strengths, your weaknesses, and your ultimate desires. Know what compromises you can make, and know what you absolutely will not settle for.

Then, actually become this bold person, inwardly and outwardly. Take advantage of your strengths, improve on your weaknesses, and ensure that your inner values are reflected in any changes you make. Finally, lead others to do the same, and trust that they are emboldened by the example you have set. The energy you'll get from pursuing your dream will catalyze energy in others.

Radical Collaboration

More often than not, two heads are better than one. At work, at school, and at home, the biggest challenges we face are always easier to overcome as a team than alone. It stands to reason that the larger the organization, the more complex its challenges. So why do some organizations achieve collaboration more than others?

It comes down to the power of silos. When companies are small, everyone knows everyone else and it's both easy and essential to collaborate across the organization. But if the company succeeds, it typically grows and expands its offerings. It now has so many people and so many complicated activities that each function becomes a world in itself, with less to do with the other functions.

In this new state, leaders often take survival for granted and start building mini-fiefdoms under their management. Everyone is looking for security, and a solid organization that they control often appears to be the best way to get there. The most successful companies grow and diversify so much that they must create discrete, stand-alone operations. All those silos are good for handling complexity, but at the cost of making it difficult for people to work across functions and divisions.

Silos are essential for scaling up complicated processes. You need people specialized in each area who can run those processes reliably and at a low cost. Silos are how we got the abundant, high-quality products and services of the mid- to late-twentieth century.

Silos made sense then, but now they're risky as companies face upheaval from technological advances. Upheaval doesn't happen in a neat way; it affects activities throughout the organization, and overcoming it requires rapidly collecting information, generating new ideas, and pivoting to exploit them. Hence the need for radical collaboration–an environment where people seek solutions for their organization unhindered by structural or cultural constraints.

The problem is not the structures themselves, but the attitudes that turn those structures into silos. Perpetual innovators still need to organize their activities, and those structures need not be counterproductive. What matters is the company's readiness to reap the benefits of extensive collaboration regardless of how it is organized. That readiness comes from the following:

- An openness to new solutions, no matter where they come from or how unprecedented they are.
- A company ethos that encourages collaboration and puts little emphasis on fiefdoms.
- A structure that's porous enough to allow broad collaboration.

People need to be comfortable working with others across functions, people who may respect them only for their expertise. The company must value results and be willing to disrespect silos and hierarchies in order to achieve them.

That's the essence of radical collaboration. It goes beyond the ordinary collaboration that encourages people to get help for complex problems. Perpetual innovators believe that only by collaborating aggressively can they keep up with fast-changing markets. The key to their radical collaboration is as much structural as cultural.

A collaborative organization can take many forms. Some perpetual innovators are extremely decentralized. Others, like Apple, are highly centralized and organized functionally, in order to generate revolutionary, user-friendly innovation.

Another approach is to employ a conventional organizational structure but lay over it collaborative work teams that do the main work of innovation. That's what Amazon does. By relying on cross-functional teams for innovation, it makes this internal collaboration necessary for success.

At the end of the day, embracing collaboration in all its forms, and organizing your company around it, is vital. Companies that collaborate not out of necessity but as a way of life make collaboration truly radical. If they can sustain that embrace, they can achieve impressive results.

Putting it All Together

In order to transform your organization for long-term success, you'll likely need all eight drivers described here

to some degree. Above all, you need a deep commitment–transformation is not a one-day event or corporate initiative, but a continual and self-sustaining effort.

A company that has been losing steam can still achieve a significant transformation. But getting there takes the strong direction and concerted effort that only someone in leadership can achieve. It helps if that person is the CEO, but if you are a manager or above, you can still apply the concepts eight to your team or department and succeed beyond expectations.

Behnam Tabrizi is a renowned expert in Transformation, bestselling author, and award-winning teacher and scholar. He is a Professor (consulting) at Stanford University's Department of Management Science and Engineering and an authority on corporate and leadership transformation. He has written seven books on managing change and transformation, and as an advisor to many Fortune 500 companies, the U.S. President, and several governmental agencies, he has helped thousands of leaders plan, mobilize, and implement transformational initiatives that have elevated organizational performance and created unprecedented results.

THE SUMMARY IN BRIEF

The story of disruption in the digital era is almost mythical: The Silicon Valley whiz kids sweep in with agility and new ideas, attacking the established pecking order. In every industry, customer loyalty is up for grabs, long-term leaders are on the defensive, and yesterday's skills are no longer enough.

But the story is changing. ***Goliath's Revenge*** describes how established businesses can stop focusing on the threat and start recognizing the unique advantages of their position. By following six new rules of innovation, you can reset your company's strategy to become a digital disruptor and carve out your future leadership position.

Stop trying to mimic the disruptors, and reclaim your rightful place at the top of the business hierarchy. The six rules will help you break out of the "me too" trap by identifying the strengths that are unique to you and your organization.

Even in this age of digital disruption, established leaders already have the advantage. ***Goliath's Revenge*** will teach you how to use it.

IN THIS SUMMARY, YOU WILL LEARN:

- The six rules of Goliath's Revenge and how to use them.
- The importance of crown jewels and how to identify them.
- Why your company needs to pursue both Big I and Little I innovation.
- To use networks to accelerate innovation.

How Much Time Do You Have?

If the business world actually reflected the biblical story of David versus Goliath, established companies built over generations would struggle valiantly against the digital upstarts but would be so visually impaired and unimaginative that they would not be able to see the rock coming.

Unicorn private companies from San Francisco, Shanghai, Berlin, and Tel Aviv would upend the status quo in industry after industry, leading to bankruptcy for established companies and unemployment for their workforces. In this updated version of the historic story, David's sling would be an artificially intelligent robot. We would all know how the story ends but still enjoy reading about the heroic struggle these established companies mustered before their eventual demise.

For some established companies, that is actually how the business version of David versus Goliath is playing out. We've all seen that Blockbuster was destroyed by Netflix, Nokia was beaten by Apple, and that thousands of retail entrepreneurs "retire early" as Amazon gradually takes their customers away.

Goliath Strikes Back: Six Rules of Goliath's Revenge

But something much more interesting is afoot. It's called "Goliath's Revenge." Established companies are getting wise to David's strategy, tactics, and tools. They have seen some of their traditional competitors succumb to the digital attackers that are resetting the rules for their industries. Instead of waiting for their businesses to be disrupted by some Silicon Valley whiz kid, they are saying, "Why can't we use those same strategies, tactics, and tools for ourselves?"

Some are setting their sights even higher. They are simultaneously protecting their core businesses from digital disruption while also running the disruptors' playbook to expand into high-growth adjacent markets.

In industry after industry, a similar trend is unfolding. Established companies of all sizes, and the people who work for them, are taking bold steps to shift from being disrupted to becoming disruptors. They are shifting from a mindset of "Defend the way we do things for as long as possible" or "I just hope I can retire before this really hurts my business" to one of "We need to move aggressively now to leverage our unique capabilities in a way that disrupts the disruptors."

Six rules govern how established companies and their teams are adjusting their vision, strategy, and execution to achieve Goliath's Revenge. The eventual split of mind share and market share between established companies and digital disruptors will be governed by how well individual companies respond to these new rules. These new rules will also determine your career prospects as the industry you work in undergoes its digital transformation:

- **Rule 1: Deliver step-change customer outcomes.**
- **Rule 2: Pursue Big I and Little I innovation.**
- **Rule 3: Use your data as currency.**
- **Rule 4: Accelerate through innovation networks.**
- **Rule 5: Value talent over technology.**
- **Rule 6: Reframe your purpose.**

The hard truth is that digital disruptors are waking up every day trying to reset the pecking order of your industry and gain mind share with your most important customers, employees, and shareholders. Only you can answer the question of how much time you and your company have to align with the six rules before your industry's digital disruptors are too powerful to overcome. You are in a foot race whether you realize it or not.

The first step in deciding how much time you have to turn the tables on these digital disruptors is accurately understanding your starting point. Are you and your company ready to achieve long-term success and profitable growth in spite of the digital gyrations impacting your industry? One thing is clear—just working harder to defend the status quo is not a path to success.

Three Key Questions

Goliath's Revenge is structured around three major questions you need to answer:

1. How will my industry, company, and career be impacted by digital disruption?
2. What steps can I take to position myself and my company for long-term success?
3. How should I prioritize my efforts to get the maximum return with the minimum risk?

The next step is for you and your colleagues to have a frank discussion about which of the new rules your company is acting on effectively, which you've collectively swept under

Crown jewels are assets or capabilities that form the starting point for your company achieving Goliath's Revenge.

the rug, and what needs to be done to better position your organization for Goliath's Revenge. It is time to understand the incumbent's advantage.

The Incumbent's Advantage

It is time to pause and think hard about what you are uniquely good at. Specifically, what are your crown jewels? These are not just any random advantages that are available to you. Crown jewels are assets or capabilities that form the starting point for your company achieving Goliath's Revenge.

They are the source of your incumbent's advantage and the foundation for how you and your company are going to shift from defense to offense as the first step in disrupting your industry's digital disruptors. To qualify as a crown jewel, each of these assets or capabilities must pass three tests. They must be

- Essential to customer value;
- Uniquely controlled by you;
- Hard to replicate by others.

Defining your specific crown jewels is going to require an honest self-assessment. You need to go beyond "What are we good at?" and get to "Why those things matter" to your customers as digital competition reshapes your industry.

The established companies that are effectively turning the tables on digital disruptors tend to have crown jewels across multiple areas of their businesses. There are seven areas to explore: self-funding innovation, brand reach, existing customer relationships, installed base, data sets, blocking patents, and standards influence. Let's discuss two of these.

Self-funding innovation. Established companies almost always enter the fray of digital disruption with an existing core business that is capable of self-funding at least some of their required innovation investments. Microsoft has the massive Office and Windows businesses that have provided the multibillion-dollar cash flow needed to compete in the high-growth IaaS (infrastructure-as-a-service) market globally. In fact, Microsoft has made big enough bets early enough to establish itself as a clear market leader alongside Amazon Web Services.

Existing customer relationships. In nearly every industry, the cost of acquiring a new customer is three to five times the cost of selling a new offering to an existing customer. This simple math can gradually but irreversibly tip the scales in favor of established companies. For most digital disruptors, nearly every dollar of revenue growth is coming from selling to new customers, while in established companies of all sizes, new deals within long-established customer relationships account for the majority of revenue growth.

Mass-market customers simply do not like starting from scratch with companies they do not know. People buy from people. The multiyear, sometimes multidecade, professional relationships between your company's sales representatives and your customers' buyers are much stronger than you give them credit for.

Your homework is to identify your potential crown jewels, then score them against the tests above (essential to customer value, uniquely controlled by you, and hard to replicate by others). The ones that pass all three tests represent your basis for the incumbent's advantage and your starting point in applying the six rules of Goliath's Revenge. Let's now dig into Rule 1.

Rule 1: Deliver Step-Change Customer Outcomes

Every organization, no matter how large, has a fixed amount of energy, talent, and capital to spend on innovation. You must concentrate your efforts on the step-change customer outcome that is most likely to deliver profitable growth for your company and an upward career trajectory for you. As Steve Jobs said, innovation-driven growth is as much about choosing what not to do as it is about going all in on the specific innovations that you ultimately decide to pursue.

How do you make these pivotal innovation prioritization decisions for your company? There are three steps:

Step 1: Pick a destination: thinking customer-in. Jim Collins and Jerry Porras introduced the notion of a BHAG—a big, hairy, audacious goal—in their 1994 book called ***Built to Last***. Google's early BHAG was to "organize the world's information"—a customer outcome that harnessed the internet's ability to disseminate massive amounts of information with a search engine that could help humans make sense of it all.

Whether your company sells to consumers or to other companies, it is time to set aside your dusty inside-out mission statement about the new revenues and profits you want to capture. Think customer-in, and define in 10 words or less what your BHAG should be. This first step in your journey to Goliath's Revenge will likely guide your innovation investments for a decade or more, so take some time to get it right. You need to answer two fundamental questions:

- What big, hairy, audacious customer problem is your company in service to?
- Why are you uniquely qualified to solve that problem?

The key point is that you are aiming for the opposite of "slightly better than last year" or "new and improved." You are raising your sights to define your industry's version of the game-changing customer outcomes that digital disruptors are already investing in.

Step 2: Plan your journey: the stairway to value. The right customer segmentation approach in pursuing Goliath's Revenge is called a stairway to value. The stairway to value segments your current and potential customers based on their innovation adoption behavior.

On the top step, visionaries want to adopt a disruptive innovation far ahead of others and have a single purpose in mind—game-changing competitive advantage. They are very helpful in uncovering the step-change customer outcome that your organization should aspire to over a three-to-five-year period.

On the bottom step, conservatives aspire to the same step-change outcome as the visionaries, but they do not want to go there in one big step. Conservatives say, "Give me the slimmed-down version of the disruptive innovation that mere mortals can implement today, delivers a hard-dollar ROI, and gets us ready to step up the stairway over time as the innovation matures."

On step 2 of the stairway, you'll find the pragmatist in pain. These customers have an immediate need to address a broken, mission-critical process. You do not have to convince them that they are sick; you just have to supply the cure for what ails them. Their fundamental motivation for adopting your disruptive innovation is the avoidance of pain.

The buyer persona on step 3—the pragmatist with options—is primarily motivated by the capture of gain. Pragmatists with options want to have their cake and eat it too—they demand rapid deployments and the path to a sustained competitive advantage.

Think hard about the adoption motivation specific to each of the four buyer personas. Define a mini-version of your overall step-change customer outcome that fits perfectly with each of those motivations yet still provides a clear path to the top step once your innovations are ready to deliver it.

Step 3: Get going: whole offers by step. Each step in your stairway to value represents an intermediate outcome on the road to the step-change customer outcome that you will deliver over time. Within each step, you will now prioritize a set of repeatable solutions that can deliver that step's promised customer outcome.

These repeatable solutions are called "whole offers." The difference between a whole offer and just an offer is that you have thought through every capability the customer requires to secure the outcome the customer wants, whether you provide that capability or not.

For example, Uber's go-to whole offer is an inexpensive spontaneous private trip from point A to point B—what it calls "uberX." The critical capabilities that Uber delivers to enable its go-to uberX whole offer include a mobile app that knows where you are, a cloud-based optimization algorithm that matches riders and drivers, and a payment processing system that moves money from you to the driver, with a little off the top for Uber itself.

To complete the whole offer, Uber orchestrates a massive ecosystem of drivers who provide the labor to get you from point A to point B along with providers of funding who deliver the capital some drivers need to afford the late-model car that will be your temporary mode of transportation.

Start with step 1, and think about the simplest whole offer that your company could deliver now or in a short period of time—six months at the latest.

Rule 2: Pursue Big I and Little I Innovation

Now is the time to start delivering on the innovations required for that BHAG while buying time for it to pay off

through the continual improvement of your core business.

No company aspiring for Goliath's Revenge gets a free pass. It would be easier if you and your team could focus exclusively on either the future or the present. Unfortunately, that is not the world you live in. Your shareholders, who might be just you in a small company, demand both near-term performance from your core business and long-term, profitable growth in markets beyond it.

Achieving both requires a balanced diet of Big I disruptive innovations and Little I continual improvement. Big I changes the game while Little I plays the current game better. This requires focusing on six priorities: differentiate Big I from Little I, nurture a company-wide innovation culture, act fast on Little I ideas, unlock the power of "and," launch your venture investment board, and run the Big I relay race. Let's discuss a few of these.

Differentiate Big I from Little I. Whether you are part of a small, medium, or large company, turning the tables on digital disruptors requires a structured process for putting good ideas to work. This process starts with using a wide funnel that is open to ideas from all sources and that doesn't presuppose the role each might play in your innovation portfolio.

While the mouth of your innovation funnel must be wide, it should narrow quickly to concentrate your resources on the ideas with the greatest likelihood of success. Give each idea in your funnel a "yes" or "no" on five criteria: could the innovation be critical in delivering your step-change outcome; produce a crown jewel that adds to your incumbent's advantage; fundamentally redefine the cost structure of your industry; be a direct threat to your current business model; or act as your springboard to grow into an adjacent market?

An idea that gets zero or one "yes" is pushed to the Little I side of the funnel for evaluation as an incremental improvement by core business stakeholders. An idea that gets two or more "yes" answers has Big I potential.

Nurture a company-wide innovation culture. How can you ensure your innovation funnel is always full of actionable Big I and Little I ideas? The key is making innovation a fundamental part of your company culture, not just a slogan printed on the wall near the employee entrance. Think through how to solicit innovative ideas in a way that fits the style and tempo of your organization. You need to implement a formal program, not an ad hoc contest or campaign.

Pfizer's program, called Dare to Try, is sponsored by its CEO, Ian Read. That top-down commitment makes idea generation a priority for every employee. Dare to Try encourages employees to think big about new product and service offerings. Employees are given access to facilitation, design, and prototyping resources to shape their ideas into investable opportunities.

Act fast on Little I opportunities. Nike has it right—just do it. That should be your mantra when it comes to Little I. Put your team's energy into acting on ideas instead of building Excel models or PowerPoint slides about them. Distill each Little I proposal down to the main idea that is most actionable and has the greatest potential business impact—the minimum viable idea, if you will. Now, just do it. Follow four steps to put your Little I ideas to work: charter, resource, implement, and learn.

> Data-rich companies are tapping into vast new revenue streams and profit pools.

Rule 3: Use Your Data as Currency

As the world moves from analog to digital, data is the new currency. Data-rich companies are tapping into vast new revenue streams and profit pools. Data-poor ones are facing diminished market power, industry relevance, and profitability.

Focusing on three areas will add a new crown jewel to your arsenal: building your data balance sheet, valuing data optionality, and maximizing return on data. They will position your company to deliver the step-change customer outcomes you committed to under Rule 1, and accelerate the Big I and Little I innovations you prioritized under Rule 2.

Build your data balance sheet. If your goal is becoming data rich, then the first order of business is building your company's data balance sheet. What data assets does your company control that will allow you to apply data science and machine learning for industry-shaping insights? What data liabilities do you have such that you "owe" data or payments associated with data to third parties?

Aspiring Goliaths rate the assets on their data balance sheet against seven indicators of data quality: freshness, duration, context, consistency, attributability, reach, and exclusivity.

Value data optionality. More data today means better algorithms tomorrow, resulting in more data the day after that. It is a self-reinforcing cycle. The challenge is, how do you get that cycle jump-started? How can your company gain access to enough data fast enough to secure an algorithmic advantage?

It means spending heavily now for a hard-to-model future return and at least some improvement in corporate longevity. It requires your organization to value the second- and third-order effects of assets in your data balance sheet, not just the first-order ones.

In the early 2000s, Microsoft's Hotmail and Google's Gmail both offered "free" email in return for the right to analyze every word you wrote. They sold insights based on those analytics back to advertisers in the form of highly tailored marketing campaigns. Facebook is the modern equivalent.

In the 2010s, Progressive Insurance "paid" for data on individual driver behavior by offering auto insurance discounts and "free" monitoring devices that customers inserted into their cars' diagnostic ports. More recently, Monsanto acquired Precision Planting for $210 million and The Climate Corporation for $930 million to aggregate data on customer use of Monsanto products.

Maximize return on data. Your company needs to master machine learning before it masters your industry. A robust data balance sheet and the willingness to grow it by valuing the optionality of data are useless if you cannot turn data into insights and insights into actions. The digital value stack consists of digital data aggregation, continuous machine learning, and digital customer segments. Building your data balance sheet addresses the first of these.

For digital customer segments, your efforts to maximize your return on data need to focus on four customer segments: internal make-it and sell-it teams, as well as external supply chain partners and customers. Your goal is to augment the expertise of the people in that segment in order to make better decisions faster and more often.

To master machine learning, focus on the algorithms that realize the value of your data for each of those four digital customer segments. The range of algorithms is broad, but most companies focus on five algorithm categories: asset optimization, operations optimization, risk optimization, pricing optimization, and sales optimization.

Rule 4: Accelerate Through Innovation Networks

As you've worked through the first three rules of Goliath's Revenge, you have almost certainly committed your company to deliver more innovations on a faster timeline than your current capabilities make possible. The wrong answer to this mismatch is dialing back on your goals. You are in a race with other established companies, as well as with your industry's digital disruptors, to bring step-change customer outcomes to market.

Instead, put open innovation on equal footing with your internal efforts to achieve more in less time with lower risk. This requires action on four fronts: overcoming the curse of "we know everything," opening up innovation channels, becoming easy to innovate with, and expanding your corporate development toolkit.

Overcome the curse of "we know everything." Your first task in pivoting your organization to an open innovation strategy is having a dispassionate discussion with your peers about which of the following eight inhibitors your company faces: business model gravity, engineering pride, risk aversion, incentives mismatch, scarce talent, limited imagination, grinding gears, and standard operating procedure.

Open up innovation channels. There are eight specific innovation channels that can add Big I and Little I ideas to your innovation funnel: research universities, strategic suppliers, strategic customers, private equity firms, startups, corporate venture groups, business incubators, and open innovation platforms. Think about each of these channels as buying an option to evaluate new ideas that can augment your internal R&D efforts.

Become easy to innovate with. Most established companies struggle to ramp their innovation ecosystem up to a material scale before their attention shifts to the next important project. Follow these eight best practices from companies that are winning with open innovation: demonstrate commitment, set clear objectives, dedicate resources, empower an investment committee, adopt a lean process, minimize legal friction, build an innovation sandbox, and install a culture of exploration.

Expand your corporate development toolkit. Every strategic initiative needs a focal point. Your toolkit should

Honoring institutional knowledge prevents a cultural divide of new-hire haves and legacy employee have-nots that plays into the hands of digital disruptors.

include some combination of six main structures: corporate venturing, IP licensing, corporate incubation, spin-outs, joint ventures, and acquisitions.

Rule 5: Value Talent Over Technology

When most people hear news about accelerating digital disruption, the rise of AI, or improvements in robotics, they think, "My company needs to get that technology deployed as soon as possible." It is a natural reaction. However, the necessary technology is actually widely available.

The hard part is translating those digital innovations into real business results, not science projects, or worse, white elephants. Doing so requires a clean-sheet approach to sourcing, developing, integrating, and retaining talent.

Time is of the essence. Having the right number of the right people with the right skills at the right time is likely the biggest determinant of your company's success. Successful Goliaths are taking six actions to make talent the centerpiece of their digital innovation: honoring institutional knowledge, going beyond 3D digital roles, committing to preemptive skill development, valuing venture general managers, optimizing the AI-human balance, and improving digital dexterity. Let's discuss two of these.

Honor institutional knowledge. Established companies tend to overweight technical skills in their digital transformations. It feels like progress, announcing a big-name technology executive that is going to lead your organization into a digital future. However, bringing in a CDO may be like wedging a Ferrari engine into a Yugo—the car makes a lot of noise, but it's still slow.

Aspiring Goliaths are installing a two-speed organizational model that values rapid learning at parity with near-term financial performance. They are integrating seasoned employees into teams seeded with talent from outside their company and often from outside their industry. They are rewarding those teams with two-speed metrics that value both learning and business impact.

Honoring institutional knowledge prevents a cultural divide of new-hire haves and legacy employee have-nots that plays into the hands of digital disruptors. Make this principle the starting point of your talent strategy.

Go beyond 3D digital roles. Aspiring Goliaths are hiring for two classes of digital roles—immediate and coming soon. The immediate roles can be called "3D"—design, development, and data science. Each is fundamental to executing on your transformation plan and positioning your company for digital success. 3D roles harden your core business in anticipation of digital disruption while powering Big I innovation teams.

Unfortunately, 3D talent is no longer enough. Your company is probably already late in hiring these coming-soon roles: product incubation managers, behavioral scientists, journey mappers, business modelers, solution finders, and emerging-technology specialists. These six roles are difficult to fill through an external contract, so now is the time to start staffing them inside your organization.

Rule 6: Reframe Your Purpose

Reframing your purpose is really about opening up the range of growth options that your company is willing to consider. It is about raising your sights from your current industry position, business model, and product offerings to allow you and your peers to pursue the adjacent market opportunities that digital disruption creates.

Doing so requires six actions: raise your sights, answer the Five Whys, embrace smart cannibalization, engage the next generation, align top down, and lead by example. Let's discuss three of these.

Raise your sights. Reframing your purpose involves changes to both your mission and vision. Your mission shapes your organization's tone and culture. It focuses the energy of the company on how to deliver value to your customers day in and day out. Your vision defines your company's aspirational goal in terms of the big problems you solve and how solving those problems contributes to the greater good.

Your purpose is why you exist as a company. Don't think about this in terms of the corporate doublespeak of large organizations. Even the smallest company needs to be crystal clear on its reason for being and the idea that its purpose is broader than its current capabilities.

Raising your sights literally provides room for your company, you, and your people to grow. It creates space for exploration, experimentation, and breakthrough innovation. It focuses your attention on serving the needs of existing and new customers alike.

Engage the next generation. Today's 140 million so-called digital natives—the millennials and Gen Zers—represent 25 percent of the workforce and nearly $2 trillion of buying power. These are your future employees and, if your company is consumer facing, your future customers.

Digital natives are always connected and deeply mission driven. They are highly influenced by the social graph and exhibit a swarm-like behavior that multiplies their influence based on the relative size of their personal networks.

This next generation tends to expect business leaders to weigh in on important issues, such as immigration, sexual harassment, racial discrimination, and climate change. They yearn to be part of efforts that make our world more inclusive, accepting, socially aware, and environmentally responsible.

Reframe your purpose with digital natives in mind. Focus your purpose on why you matter to the world, and digital natives will be flocking to your door to join the cause. One way to achieve this is to express your reframed purpose in terms of your triple bottom line—that is, your social, environmental, and financial measures of success.

Unilever is specifically developing products tailored to meet the needs of impoverished, developing parts of the world while preventing harm to our environment. Nestlé is promoting water accessibility and sustainable food products for everyone on the planet.

Lead by example. In order for your troops to line up and march into the midst of digital competition, they will rightly expect your CEO and other leaders to be out in front leading the charge. Future leaders must live their lives in a way that reflects the future purpose of the company. The days of your personal life staying separate from your professional one are long past. Leaders must be all in on your reframed purpose.

Mary Barra is a great example of this, as she personally is leading the charge on GM's zero-zero-zero mandate—zero crashes, zero emissions, and zero congestion. Leaders that live by their own triple bottom line will be in great demand to run companies pursuing Goliath's Revenge.

Now it's time to go be a disruptor inside your Goliath and beat David at his own game.

Good Leaders Ask Great Questions

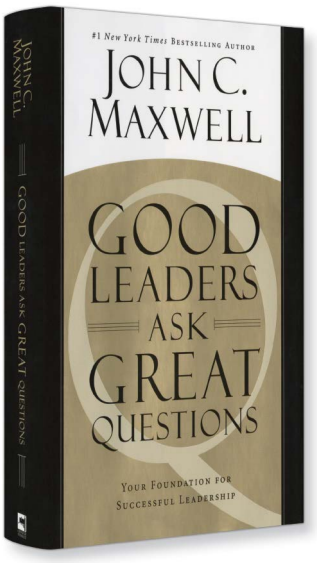
Your Foundation For Successful Leadership



by John C. Maxwell

THE SUMMARY IN BRIEF

Leadership authority John Maxwell has mastered the art of asking questions, using them to learn and grow, connect with people, challenge himself, improve his team, and develop better ideas.

Questions have literally changed Maxwell's life. In *Good Leaders Ask Great Questions*, he shows how they can change yours, teaching why questions are so important, what questions you should ask yourself as a leader, what questions you should be asking your team.

Maxwell also opened the floodgates and invited people from around the world to ask him any leadership question and he answers 70 of them — including "How do I get started in leadership?" "What are the top skills required to lead people through sustained difficult times?" and "How would you work with a difficult leader who lacks vision?" No matter whether you are a seasoned leader at the top of your game or a newcomer wanting to take the first steps into leadership, *Good Leaders Ask Great Questions* will change the way you look at questions and improve your leadership life.

IN THIS SUMMARY, YOU WILL LEARN:

- Why it's important to ask great questions, now and throughout your career.
- The key questions to ask yourself and your team.
- Why leading others depends on leading yourself.
- How to weather poor leadership and develop emerging talent.

PART I: QUESTIONS I ASK

Why Are Questions So Important?

If you want to be successful and reach your leadership potential, you need to embrace asking questions as a lifestyle. Here's why:

You Only Get Answers to the Questions You Ask. Asking the right question of the right person at the right time is a powerful combination because the answers you receive set you up for success. IBM founder Thomas J. Watson said, "The ability to ask the right question is more than half the battle of finding the answer." But that's true only if you are willing to ask the question.

Questions Unlock and Open Doors That Otherwise Remain Closed. In life's journey we face many doors. Hidden behind them are all kinds of possibilities leading to opportunities, experiences and people, but the doors must be opened before we can go through them. Questions are the keys to opening these doors.

Questions Are the Most Effective Means of Connecting with People. I often watch speakers stand before an audience and work to build a case for their ideas. They would be more successful if instead they tried building a relationship with the people in the room. The most effective way to connect with others is by asking questions.

Questions Cultivate Humility. Isn't it strange how we must surrender being right in order to find what's right, how humility enables us to be authentic, vulnerable, trustworthy, and intimate with others? People are open to those who are open to them.

Questions Help You to Engage Others in Conversation. I want people to know that I value them and that, if possible, I want to add value to them. To do that, I believe I must get to know them. That requires that I ask questions, they talk and I listen.

Questions Allow Us to Build Better Ideas. Any idea gets better when the right people get a chance to add to it and improve it. And good ideas can become great ones when people work together to improve them. What is the key to shared thinking? Asking the right people the right questions.

Questions Give Us a Different Perspective. By asking questions and listening carefully to answers, we can discover valuable perspectives other than our own. That's valuable because we often make faulty assumptions about other people. We can correct those wrong assumptions and prevent miscommunication by asking questions.

Questions Challenge Mindsets and Get You Out of Ruts. Too many people have flat-lined mentally. If you want to make discoveries, if you want to disrupt the status quo, if you want to make progress and find new ways of thinking and doing, you need to ask questions. Questions are the first link in the chain of discovery and innovation.

Never forget: good questions inform; great questions transform! What questions have others asked of you that have made a positive difference in your life? What questions have you asked others that are helping you even today? Become intentional from this point on in being a questioner. You should even ask questions of yourself.

What Questions Do I Ask Myself as a Leader?

As a leader, I can allow others to ask me the hard and important questions, or I can take responsibility, be proactive and ask those questions of myself. I pass these questions on to you as a guide, with the suggestion that you develop your own list.

Am I Investing in Myself? A Question of Personal Growth. The most important investment you and I will ever make is in ourselves. That investment will determine the return that we get out of life. Three main factors come into play. These will determine if or how you will invest in yourself: your self-image, how you see yourself; your dream: how you see your future; and your friends: how others see you.

Am I Genuinely Interested in Others? A Question of Motivation. Someone once said, "People have two reasons for doing anything — a good reason and the real reason." For you to be a good leader when dealing with people, the good reason must be the same as the real reason. Your motives matter.

Am I Grounded as a Leader? A Question of Stability. Just as leaders are vulnerable to acting for their personal advantage, they are also susceptible to having an overblown sense of their own importance. That's why they need to remain grounded. Good leaders need to exhibit three important qualities: humility: understanding your place in light of the bigger picture; authenticity: being comfortable in your own skin; calling: having a purpose that is bigger than you.

Am I Adding Value to My Team? A Question of Teamwork. Here are my suggestions for adding value: promote full commitment, create an environment of encouragement and support, identify adversity as an opportunity to develop character, and consider each person's strengths and weaknesses.

Am I Staying in My Strength Zone? A Question of Effectiveness. Staying in your strengths gives you an advantage. In a world where people spend much of their time shoring up their weaknesses, your focus on maximizing your strengths will set you apart from others. The more you focus on your strengths, the better you will be positioned to see and seize opportunities as they arise.

Am I Taking Care of Today? A Question of Success. Good leaders naturally look to the future. They are known for vision and for leading others to new and higher destinations. However, the future isn't where anything gets accomplished. That happens today. That's why you need to take care of it. To best use my time correctly, there are five areas where I want to make sure I'm taking care of business: faith, family, relationships, mission and health.

Am I Investing My Time with the Right People? A Question of ROI. The greatest legacy any leader can leave is the other leaders he raises up before he's finished. That means finding the right people and investing in them continually.

Socrates is quoted as saying, "The unexamined life is not worth leading." I would add that the unexamined leader is not worth following. Leaders who never take time to ask what they are doing and why they doing it are unlikely to stay on track, lead at their best, and reach their potential. That is why we need to keep asking ourselves tough questions.

What Questions Do I Ask My Team Members?

I want to give you a picture of leadership that is not commonly envisioned: It's of a leader asking questions of team members and then really listening to what they have to say. Good leaders ask great questions that inspire others to dream more, think more, learn more, do more, and become more.

What Do You Think? Mark Cole, CEO of my organizations, explains, "When you ask for my skills, you get my strengths. When you ask for my passion, you get my heart. When you ask for my ideas, you get my mind. But when you ask me for answers, you get my strengths, heart and mind."

How Can I Serve You? I believe leadership is servanthood. It's my responsibility to make sure my people have what they need to succeed and get their work done. If you are a leader, that is your responsibility too. Asking, "How can I serve you?" not only helps others, it also helps prevent me from developing a positional mind-set whereby I start thinking I'm somehow "over" or better than everyone else on the team.

What Do I Need to Communicate? Success in communication comes from knowing the context more than the content. When I ask this question, I'm not trying to find out what content to deliver. I'm trying to find out who the people are, what the situation is, what happened before I arrived to speak, and how I can connect and help.

Did We Exceed Expectations? It's not enough to simply finish a job. You need to perform it with excellence, without cutting any corners. Every time you bring

something to completion, try to find out not only whether you were able to help, but how much you were able to help. If you make it your goal to exceed expectations, you can continue to learn, grow and improve.

What Did You Learn? The question "What did you learn?" is not just for parents with impressionable children. It's equally valuable in a work setting. I ask it all the time because it keeps my staff sharp and growing. It prompts people to evaluate their experience and make an assessment. And as I've often said, experience isn't the best teacher — *evaluated* experience is.

Did We Add Value? My desire in life is to add value to leaders who multiply value to others. That's why I ask this question.

How Do We Maximize This Experience? We too often take opportunities and experiences for granted and don't make the most of them. That's a shame, because everything we do for others and every experience we have has so much potential. By asking how we can maximize our experiences, we make the most of them. Anything less and we're actually wasting parts of our lives.

What Do I Need to Know? I often ask, "What do I need to know?" when I'm about to enter a meeting or engage in a phone call. It invites the team member to give me an overview of the situation, provide vital information, and prioritize what he or she believes will be most important.

How Do We Make the Most of This Opportunity? The door to one opportunity often comes from another. If you pursue an opportunity, it almost always leads to other opportunities. People who wait for the one great opportunity often keep waiting. The way to find the best opportunities is to pursue the one at hand.

How Are the Numbers? Numbers count. They tell a story. They let you know what the score is. They show you where you're winning and where you're failing so you can make adjustments. They show trends. They reveal weaknesses. They are tangible evidence of how well you're doing.

What Am I Missing? Two of the fastest ways to connect with another person are to ask questions and to ask for help. Most people genuinely want to help others. And most people enjoy being an expert in their field and sharing their wisdom and experience. The only time these things don't seem to be true is in an environment that discourages asking genuine questions and listening to honest answers.

If you lead a team, start valuing the contributions of your teammates ahead of your own. And remember that when the best idea wins, so does the entire team.

PART II: QUESTIONS LEADERS ASK ME

What Must I Do to Lead Myself Successfully?

Many people understand intuitively that if you can't lead yourself effectively, everything else in your life will be a struggle. Self-leadership comes first. It makes every other kind of leadership possible. That's where personal credibility is established.

Some of the challenges you face may come from the way you lead yourself. You may attribute them to someone or something else, when you actually need to look at yourself as the source.

Why Does Leading Myself Seem More Difficult than Leading Others? We have blind spots preventing us from seeing where we have problems and fall short. What are blind spots? They are areas in which people continually fail to see themselves or their situation realistically. Everybody has some; few people recognize their own. While blind spots cause all people problems, they can be especially harmful in leaders. Because leaders influence others and their actions affect a team's, department's, or organization's outcomes, the problems that come from their blind spots are exaggerated. The four most common and destructive blind spots among leaders include having a singular perspective, insecurity, an out-of-control ego and weak character.

What Are the Most Important Values for a Leader? Here are the leadership values that I believe are most important:

- **Servanthood:** Leading well means serving others. If you are willing to embrace servanthood, not only will you become a better leader, you will help your team, help the people your team serves, and make the world a better place.
- **Purpose:** Let your *why* direct your *what*. Success comes from knowing your purpose in life, growing to your maximum potential, and sowing seeds to benefit others.
- **Integrity:** Live the life before you lead others. When you become a leader, you must focus more on your responsibilities than on your rights. You must do more than you expect of others. If you live the life first and lead well, others will respect you. And the chances are good that they will be willing to follow you.
- **Relationships:** Walk slowly through the crowd. Leadership impact is drawn not from position or title

but from authentic relationships. How do you develop authentic relationships? You live with authenticity. You treat people with kindness and respect. And you go to where they are to connect with them.

- **Renewal:** Replenish yourself daily. If you don't make an effort to replenish your energy, feed your soul, and renew your mind, you will run out of gas.

What Is the Most Effective Daily Habit for Any Leader to Develop? If you could cultivate only one habit to practice every day of your life, I believe it should be this: giving more than you receive. Giving acknowledges that others have helped us, and giving requires us to get beyond ourselves. Giving is by nature intentional. And giving changes the world — one person at a time.

How Do You Lead with Humility When in the Tough Corporate World It's Viewed as a Weakness? I think this question reveals a misconception about the corporate world. People in business don't automatically see humility as weakness. They see weakness as weakness — weakness in preparation, skills, work ethic, etc. People who achieve at a high level of excellence can smell weakness.

That brings up the question of what humility is. Humility doesn't mean being weak. It just means thinking of yourself less. It means being realistic and grounded. It means valuing others and their contributions. People like working with a leader with those characteristics.

How Does Leadership Work?

Leadership starts with influence and builds from there. Keep that in mind as you read these questions.

Does Everyone Have the Potential to Be an Effective Leader? Everyone has the potential to lead on some level, and anyone can become better at leading. While it is true that some people are born with traits that help them to become better leaders than others, those natural traits are only the beginning.

Three main components come into play in the development of a leader: Environment: the incarnation of leadership. Leadership is more caught than taught; Exposure: the inspiration for leadership. Plan to go hear someone you admire speak; and Equipping: Intention for Leadership. The one thing you can do to have the greatest impact on your leadership potential is to be intentional every day about becoming equipped to lead. Every book you read, every lesson you absorb, every principle you apply helps you to become a better leader and takes you another step forward in your leadership potential.

What Is the Greatest Challenge in Answering the Call to Leadership? The greatest challenge in leadership is making decisions that affect other people. If you want to become a better leader, become willing to make tough choices and uncomfortable decisions. Those may include the following: courageous decisions: what must be done; priority decisions: what must be done first; change decisions: what must be done differently; creative decisions: what might be possible; people decisions: who should — and should not be — involved.

What Are the Top Skills Required to Lead People Through Sustained Difficult Times? Tough times show us ourselves. The people we lead find out who they are. As leaders, we also find out what we're made of. The best way to approach tough times is to try to see them as opportunities. Here is how I would recommend that you lead and serve people during difficult times:

- **Define Reality:** As the leader of a team, you need to help people define the things that are holding them back. Then you need to define the things that will free them up. People cannot make good choices if they don't know what these things are, and many have a hard time figuring them out on their own.
- **Remind Them of the Big Picture:** Leaders are keepers and communicators of the vision. They bear the responsibility for always seeing the big picture and helping their people to see it. People need to be reminded of why they are doing what they do, and of the benefits that await them as a reward for their hard work.
- **Help Them Develop a Plan:** Before you can develop a strategy to get out of a difficult situation, you must know where you are and where you want to go. The next task is to identify the steps required to go from here to there. Not everyone finds it easy to do that.
- **Help Them Make Good Choices:** People's choices define who they are and determine where they go. It's true that we don't choose everything we get in life, but much of what we get comes from what we've chosen.
- **Value and Promote Teamwork:** No team can win and keep winning unless everyone works together. It's the responsibility of leaders to promote teamwork and get team members cooperating and working together.
- **Give Them Hope:** Crisis holds the opportunity to be reborn. Difficult times can discipline us to become stronger. Conflict can actually renew our chances of building better relationships. It's not always easy to re-

member these things. As leaders, our job is to remind people of the possibilities and to help them succeed.

How Do I Get Started in Leadership?

How you come into a leadership role matters less than how you handle it. And the key question you need to ask yourself is, "Why do I want to lead?" I ask that question of any person who says he wants to get into leadership. If you want to help other people, your team and your organization, you're starting on the right foot. If your desire is to fulfill a worthy vision, one that will help people and make the world a better place, you're headed in the right direction. If you're doing it to add value to others and not just yourself, you are seeking to be a leader for the right reason.

How Do You Determine Your Leadership Potential? Examine four areas to get a sense of whether it is time for you to step up and lead:

1. **Pay attention to the need you see:** Leadership begins with a need, not when someone wants to fill an empty leadership position. There are many needs in this world. Are there some that strike a chord in you? If you see a need that you feel a strong desire to address, and it moves you to action, that is a sign that you have the potential to lead in that area.
2. **Use your natural abilities to help others:** You have gifts, talents, and skills that you can use to help people. It is your responsibility to learn what those abilities are and develop them. If you're not sure what they are, ask others who know you well. In addition, look at the areas where you are naturally intuitive, productive, satisfied and influential.
3. **Make the most of your passion:** Passion in a leader is compelling to others. People want to follow passionate leaders. It makes them want to jump on board and join them.
4. **Develop your influence:** If you want to lead , you must persuade people to work with you. People who think they're leading but have no one following them are only taking a walk.

What Advice Would You Give to an Aspiring Leader Trying to Take the First Steps into Leadership? Try to take the long view of leadership. If you work hard, learn how to connect with people, develop credibility, and prove yourself every day, after a while people will begin to believe in you. You will have influence, and you will be able to get things done. Try not to worry too much about what people think about you. Do your best. Work hard. Keep growing. And eventually you'll be able to make a positive impact as a leader.

How Do I Resolve Conflict and Lead Challenging People?

This is one of the most difficult areas for most leaders. You can do all the right things, but there is no guarantee others will change, succeed, or do well. People who do not want to follow or be productive members of the team will not change. And that doesn't make you a bad leader. It just means you have someone who's bad for the team and organization.

How Can Leaders Help Individuals Move Past Their Mistakes and Get on a Path of Success Toward a Better Future? Many people get emotionally stuck when they make a mistake or suffer a loss. They often become overwhelmed by regret. If the regret takes hold for too long, it can turn into guilt, resentment, and self-pity. When we experience losses, we need to learn from them and let them go. If we focus on the loss instead, it can bring us down.

Some losses require time because they cut deeply. We need to grieve. We need time to heal. But many small losses and problems don't warrant much energy. Most of the time we need to learn the lesson from the loss, and then move on. Help people to think about what they can do right, put energy into healing, increase self-reliance, gain hope, and move forward toward the future.

How Do You Inspire Your Team to Make Its Current Work a Career and Something to Be Proud to Do, and Not Just Another Job with a Paycheck? No job has a future. Only people have a future. If people keep growing, learning and expanding their potential, their future is bright. If not, it's uncertain at best. That's why I often remind people that the greatest threat to tomorrow's success is today's success.

Share your passion. A leader's passion is contagious. Paint a picture of people's future that inspires them to work harder today. Tell them who they can become. Show them what they could be someday doing. Show how their role makes a difference. Finally, challenge them to keep growing. People who make growth their goal — instead of a title, position, salary, or other external target — always have a future.

How Do You Know a Relationship Is Broken, and How Can You Save It? These are the most common signs: It's hard to have an honest conversation. If you try

to start one, the other person will refuse to engage, or become defensive or combative. There's a lack of trust, and there's a lack of passion to continue the relationship.

Your goal should be to repair the relationship, but to do it with integrity. Here's what I think it takes to do that:

Initiate fixing the relationship with them. It's hard to rescue a relationship if you don't take responsibility for initiating.

Give them the benefit of the doubt. I always go into that conversation assuming that I've done something wrong. I've discovered that if there's hope for helping a relationship come back, the conversation goes better if I'm open and willing to take the blame. It's difficult to move forward with relational baggage weighing you down.

Be willing to walk the second mile. In relationships, I believe the stronger person is the first one to come back and offer to reconcile. The stronger person is the first to ask for forgiveness. Usually that's the leader. Even if the leader has been the injured party, he needs to initiate.

Speak well of them afterward. After I've talked to people and tried to resolve whatever issues we've had, my goal is to have no unfinished business with them. Whether we resolved the issues and mended the relationship, or had to part ways, I don't want there to be any kind of grudge between us, and I want to say only positive things about them.

How Can I Succeed Working Under Poor Leadership?

Bad bosses often shirk their responsibilities and try to place them on the follower — on you — and you end up carrying the load. Whenever this happens, as far as it's possible, you should attempt to ask questions of your leader in such a way that the responsibility goes back on his or her shoulders where it belongs.

How Would You Work with a Difficult Leader Who Lacks Vision? Without vision, leaders lack the ability to convey motivation, drive and purpose to their people. If you are going to stay and work under a leader who lacks vision, what can you do?

- **Tap into the organization's larger vision:** When the vision of the organization is clear, the vision of any individual leader, team or department within the organization should contribute to that larger vision anyway. It should work within that context.
- **Identify a vision for the organization, and share it with your leader:** If you do this, just be sure that the vision is consistent with the values and goals you know your leader possesses. If it's not, your leader will probably not welcome it.
- **Develop your own sense of purpose:** You cannot allow your leader's lack of vision to keep you from making progress in life. Connect with and develop your own purpose. As long as you are doing work consistent with it, you won't be as bothered by your leader's lack of vision for the organization. You will just need to be certain that you are doing what you were created to do.

How Would You Work with a Difficult Leader Who Has Attitude and Character Problems? One of the great dangers in working for leaders who have attitude and character problems is that they are continually trying to drag you down to wherever they are. Bad attitudes are contagious. If you are determined to stay in such an environment, the best thing you can try to do is lift people to a higher level.

First, live on a higher level yourself. One of your goals as a leader and person should always be to be a positive influence on others in the critical areas of attitude and character. Second, if you've done your best to help your leaders but you start to feel their influence negatively affecting your attitude or values, separate yourself from them as much as you can. Finally, if you can't leave right away or if you need to stay for some reason, put as much communication as you can in writing. You will want to be able to show evidence of your right-doing if at some point your boss is accused of wrongdoing.

How Can I Successfully Navigate Leadership Transitions?

Life means transition. Most people intuitively understand that the world is moving fast, yet they still have a difficult time with it. Brian Tracy was right when he said, "In a time of rapid change, standing still is the most dangerous course of action." If you don't learn how to make good transitions, you either get run over or get left behind.

When Is the Right Time for a Successful Leader to Move On to a New Position? Leaders often get restless. When they do, they start exploring opportunities and new mountains to climb. The key to knowing whether it's time to transition is recognizing that there are two kinds of restlessness: good and bad. Good restlessness is healthy. It pulls you forward toward improvement. It comes from your desire to grow, to make a greater impact, to serve others more effectively.

Bad restlessness comes from being bored or unhappy. It comes from a desire to escape. It causes you to be impa-

tient. You often jump out of where you are, but not to anything specific. And as a result, it can actually put you in a worse place.

Ask yourself whether you have given the best you have where you are now. Don't move anywhere else until you have. Don't seek a move just to make things easier on yourself. To transition with integrity, you need to have done your best work possible. Then you can leave with a clear heart and mind.

What Leadership Principles Enable a Failed Leader to Lead Again Successfully? If you've failed as a leader and lost your position, you need to consider the following before attempting to return to leadership:

Evaluation: What went wrong? Before you can move back into a leadership role, you need to fix whatever problems you have in your leadership. You can't do that if you don't know what they are. Where did you go wrong? Was it a mistake in strategy? Did you lack skills necessary for good leadership? Do your problems stem from poor self-leadership?

Emotional strength: Can you bounce back? If you've failed, you need to be able to face your failure, own up to it and process it emotionally. And you also need to regain your footing and rebuild your emotional strength and resilience before you try to lead others again.

Evolution: Can you make the adjustments needed for future success? You need to make the changes in yourself to set you up for future success. Maybe you need to put yourself on a personal growth plan whereby you read a dozen books and attend some conferences. Maybe you need to seek counseling to help you with character issues. Maybe you need to find a mentor. Maybe you need to further your education.

How Can I Develop Leaders?

If you want to make an impact on your world, you must help others to become better leaders.

How Do You Help People Realize the Talent Within Them? Perhaps the most rewarding aspect of leadership is seeing people with hope believe in themselves, develop themselves, and blossom into effective leaders. If you desire to help your people do that, proceed in this way:

Find evidence that they want to grow: People worthy of your time and attention have a learning attitude. They're open to instruction and hungry to grow. They may not yet be convinced that they can reach what you recognize as their potential, but they have the desire. And they are already making an effort to grow.

Identify their strengths: The people you lead may not know what they're good at. As a leader you need to help people figure out where they have potential and should grow.

Give them a place to practice. Training is good. Mentoring is fantastic. Development is incredible. But if you don't give emerging leaders a place to practice, their knowledge will never become practical experience.

Coach them to improvement. People always learn more from their failures than they do from their successes. Walk alongside them to give them security and to help them through the most difficult problems. Share with them where they made mistakes and how they can overcome them. Tell them what to work on. And encourage them to keep trying.

Keep increasing their responsibilities. Allow your leaders to benefit from your experience until they are capable of doing your job. That takes security on your part. But if you do that, when it comes time for you to move up to greater responsibility or move on to a new challenge, you will have people who can step in and take your place.

What's the Most Important Thing a Leader Must Learn in Order to Be a Leader of Leaders? There's only one way to lead leaders. Become a better leader yourself. Good leaders do not follow poor ones. People naturally follow leaders stronger than themselves.

So if you want to be a leader of leaders, you will need to earn the right. You will need to achieve success first. You'll need to keep raising your leadership capacity. You'll need to make growth a major goal and dedicate yourself to it. And you'll also have to keep your ego in check. If you have a compulsive need to be the alpha dog, the other top dogs won't want to work with you. No leader can know everything, be an expert in everything or do everything. It takes a team to be successful. As you move forward, remember that good leaders ask great questions. They may not always know the answers, but they are made better simply by asking them.

Hacking Leadership

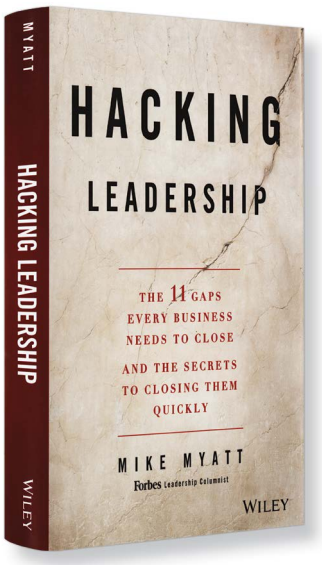
The 11 Gaps Every Business Needs to Close and the Secrets to Closing Them Quickly



by Mike Myatt

THE SUMMARY IN BRIEF

The follow-up to Mike Myatt's internationally acclaimed *Leadership Matters*, *Hacking Leadership* is for leaders who feel that their performance falls short of their potential and who want to know why. It's for leaders who understand that in business today, the rule is adapt or die. And it's for anyone who wants to expand their leadership acumen or for leaders interested in shaping a sustainable culture of leadership.

As Myatt explains, core leadership principles have remained largely the same since the dawn of time. The trick is learning how to integrate those principles with evolving leadership practices engineered for 21st century success.

Enter *Hacking Leadership*. It delivers a proven approach to identifying your blind spots and closing leadership gaps. With the help of in-depth case studies chronicling his work with leaders at many of the world's leading organizations, Myatt identifies the 11 leadership gaps which can be fatal to your health as a leader. These include gaps in the key areas of leadership, purpose, future, mediocrity, culture, talent, knowledge, innovation, expectation, complexity and failure. More importantly, he arms you with actionable leadership and management hacks to bridge those gaps in order to create a true culture of leadership within your organization and drive record-breaking bottom-line and top-line business results.

Offering a bold new approach to leadership development and powerful tools for achieving your full potential as a leader, *Hacking Leadership* is must-reading for anyone who refuses to think of leader as merely a job title, but as their life's mission.

IN THIS SUMMARY, YOU WILL LEARN:

- To challenge your presuppositions and reframe your thinking about leadership.
- To gain a sharper perspective on your performance as a leader.
- To gain deep insights into your perceptual biases and self-imposed limitations.
- To understand and address the 11 leadership gaps most relevant today.

Prologue

Nothing impacts our world like leadership, and sadly, the practice of leadership is broken. The pace of change has never been faster and more dramatic, yet our leadership practices have remained painfully stagnant. It's time for a fresh perspective — it's time to begin Hacking Leadership. Core leadership principles need not be abandoned, but outdated and ill-conceived practices must be hacked in order to reestablish leadership equilibrium.

My definition of hacking is to discover an alternate path, clever and skillful tricks, shortcuts and workarounds, breaking the code, deciphering complexity, influencing outcomes, acquiring access, and creating innovative customizations to existing/outdated methodologies.

Hackers are innovative thinkers who acquire and distribute knowledge, tips and tricks for solving complex problems — they reinvent strategies, protocols and practices to create more effective solutions to both existing problems and new challenges. They adopt the mindset of innovating around best practices in pursuit of next practices.

In many respects, leadership is nothing more than identifying personal, team, organizational and market blind spots and then dealing with them in the most effective fashion. Therefore, it's critically important for leaders to understand that most blind spots exist in the form of gaps — positional gaps, philosophical gaps, strategic gaps, operational gaps, expectation gaps, knowledge gaps and so on. Gaps exist in every organization: The issue is whether you recognize them, and if so, how you choose to deal with them.

Hacking the Leadership Gap

All truly great leaders have one thing in common — they have a clear understanding of their strengths and weaknesses. They've learned to check their ego, enhance their level of self-awareness, and understand how others perceive them. They are clear thinkers who understand their role and are prepared to act accordingly.

The Leadership Gap Defined

The seminal question you must ask yourself as a leader is why should anyone be led by you? To consistently receive the right answer, a leader must first gain an understanding of the three critical leadership gaps:

- **The Development Gap:** The gap between how you assess your current leadership ability and your true potential as a leader. Understanding this gap indicates whether you see leadership as a destination or as a continuum. It is impossible for a leader who is not growing and developing to lead a growing and developing enterprise.
- **The Influence Gap:** The gap between your self-assessment and the assessment of your leadership ability by your peers. Your understanding of this gap and willingness to do something about it will determine your ability to build a cohesive team. Leaders who don't have the trust and respect of their team won't be able to generate the influence necessary to perform the expected levels.
- **The Reality Gap:** The difference between how you view yourself and how those you lead feel about you. A leader who loses the faith and confidence of their workforce won't be able to attract and retain talent, will have a culture on life support, and subpar performance that ensures a limited shelf life.

Rate yourself as a leader on a scale from 1 to 10, with one representing the worst in leadership and 10 being the best. Not your leadership potential, but rather how you are currently performing as a leader.

Leaders consistently overrate themselves. How do we know this? Because we have surveyed thousands of subordinates and peers as well as those whom the leaders report to. They rate their leaders lower, so if you rated yourself an 8, then your coworkers likely rated you a 6. If you rated yourself a 6, then they likely rated you a 4.

The difference between your self-assessment score and how others rate you is the leadership gap. Whether the leadership gap is perception or reality doesn't really matter — it's nonetheless the gap all leaders must learn to hack.

Hacking the Control Gap

The most common mistake leaders make is to attempt to lead through control. As counterintuitive as it might seem, in order to gain influence, you must surrender control. The purpose of leadership is not to shine the spotlight on yourself but to unlock the potential of others so they can in turn shine the spotlight on countless more. Control is about power — not leadership. Control restricts potential, limits initiative and inhibits talent. Surrender fosters collaboration, encourages innovation and enables possibility. Controlling leaders create bottlenecks rather than increase throughput.

When what you seek is to build others more than glorifying self, you have developed a level of leadership maturity that values surrender over control. What you do or don't surrender to will define you.

Hacking the Status Quo

Leaders who are bored, in a rut, or otherwise find themselves anesthetized by the routine have a huge problem — *they are not leading.* Real leaders are always looking beyond *what is*, thinking about the possibilities of *what if*, and acting to ensure *what's next*. Don't make excuses — make changes. If you're stuck in a leadership rut, use the following five hacks to help you find your path back to real leadership:

- **Go Break Something:** Try changing the corporate landscape by shifting existing roles and responsibilities or by bringing in fresh talent from outside. Overlay a new business model on top of the existing one, and look for ways to create new advantages and make needed improvements.
- **Recharge Your Brain:** The brain needs to be nourished in order to evolve. Subject the brain to new and creative ways of thinking.
- **Get Some Help:** The best leaders surround themselves with wise counsel and make a habit of seeking out sound advice.
- **Have a Vigorous Debate:** By seeking out dissenting views and differing opinions, you open your mind to new ideas and perspectives.
- **Fire Yourself:** If you can't or won't fix yourself or allow yourself to be developed by others, then it's time to pass the baton.

Hacking the Purpose Gap

Purpose-driven leaders have fueled the greatest accomplishments in world history. Why would anyone believe that a business should operate apart from or without purpose? The reality is that many organizations in today's world have devolved to the point where there is no clear purpose, and therefore, there exists no real leadership.

The Movement Hack

The secret sauce to purpose is found in a leader's ability to scale personal and professional purpose into a cause embraced and evangelized by others. It's time for a leadership movement that values engagement, open dialogue and candid discourse above personal gain. A movement requires a vision that's inclusive, collaborative, and has an orientation toward service. Most of all, a movement requires people committed to change. These things can only be accomplished if fueled by a shared purpose.

So, what's your cause — your greater purpose — your opportunity to create a movement? Pursue those things. Rally people around this newfound shared purpose, and go change the world.

Individual Purpose: Hacking the Purpose Continuum

The best leaders understand the critical importance of transforming personal values into a greater sense of purpose. Real leadership means you care first and foremost about something beyond yourself. If you're chasing a position and not a higher purpose, you may want to rethink your approach.

There exists a gap between success and significance. Most people use their knowledge, resources and experience to acquire things in an attempt to satisfy their personal desires, which in their minds constitute success. Contrast this with leaders who use their knowledge, resources and experience to serve and benefit others, which by my standards constitutes significance. Significance is

purpose-driven by personal values and is a gift that cannot be purchased.

Organizational Purpose Begins with Hacking Why

At its core, leadership is the business of defining and articulating vision (why) and then aligning people (who) with said vision. Many organizations attract people with compensation — the great organizations attract people with a clearly articulated and compelling purpose. In recent decades, when people thought of purpose-driven organizations, their minds would naturally gravitate toward the nonprofits. But times have changed, and it's catching many for-profit businesses by surprise.

What many leaders fail to understand is that purpose drives profit, but rarely does profit create purpose. Moreover, purpose can drive profit and align interests with more cohesion, velocity and scale than any other alternative substitute. Profit is not the reason a business exists; it's a by-product of a purpose-driven business.

Hacking the Future Gap

Innovation, growth and development cannot occur by pretending we live in a world that has long since passed us by. All great leaders are forward thinking and leaning. The best leaders understand the present is nothing more than a platform for the envisioning of and positioning for the future. Focus only on aspects of the present that lead you toward the future.

Hacking the New Normal

Businesses are navigating new levels of technical complexity, economic uncertainty, political acrimony and consumer cautiousness. That said, the new normal should be embraced. Smart leaders recognize economic slowdowns are not all doom and gloom. In fact, the smartest executives understand that swimming upstream against the conventional wisdom of the risk averse can actually create significant opportunities for growth. This is the lens smart leaders use to view the new normal.

Great leaders not only embrace the new normal, they look to constantly create the next version of it. The new normal affords leaders the opportunity to reexamine everything, abandon outdated thinking and challenge dominant logic. What's the next new normal for your organization? I would suggest you create the new normal by design. This is best accomplished by learning to pull the future forward.

Great Leaders Hack the Future

The most successful leaders don't move toward the future; they bring the future to them. To understand the future, one must truly, deeply and richly understand people. It's the people who make today's decisions (good and bad) that pave the path into the future. Following are three hacks to help you better understand the people:

- **The Motivation Hack:** You must be able to reasonably predict the actions of people, so you must understand their motivations. Their motivations speak to who they are, what they value, how they work, and why they do what they do.
- **Hacking the Rhetoric:** More important than what people say is what they do. There is no reason to be surprised by people's behavior, unless you've failed to observe it.
- **The Observation Hack:** Look into any leadership failure, and you'll find indications of failure were everywhere well in advance of the event itself. Visionary leaders refrain from the common delusion of seeing what they choose to see.

Hacking the Mediocrity Gap

Leadership exists to disrupt mediocrity. Why is mediocrity so prevalent? It requires no courage. The best leaders exhibit the strength of character to move past the ordinary to reside in the realm of the extraordinary. The status quo is mediocrity's preferred weapon of choice. Great leaders must hack the mediocrity gap or face the consequences.

The best defense against mediocrity is not to let it get a toehold to begin with. Smart leaders don't wait until someone's been deemed at risk to implement triage, nor do they simply focus efforts on their high-potentials. Look at the entirety of your team as being high-potentials worthy of development, investment and, most of all, your attention.

Hacking the Impulsivity Gap

Countless leaders suffer from self-inflicted wounds created by impulsivity. Do not confuse creativity with impulsiveness. Creativity is born from insightfulness, whereas impulsiveness is birthed by naiveté and/or arrogance. Ultimately, it's a leader's lack of focus or focus on the wrong area that allows impulsive thoughts to be acted upon.

Few things positively impact an organization like a stable tone from the top. A humble and resolute confidence, a sure hand, and a steady calm inspire belief in a leader's competence and capability. If you want to become a more

stable leader, pay attention to the following four pillars of stability:

- **True North:** Stable leaders have an open mind, but they also have strong convictions and principles. You might not always agree with stable leaders, but you never have any doubt as to where they stand.
- **You Play How You Practice:** Your performance is always tied to your preparation. Training, development and continuous lifelong learning are the foundational cornerstones of stable leadership.
- **Lead with Compassion:** Stable leaders have a natural bias toward empathetic and compassionate behavior. When those you lead know you care, it creates a sense of trust and stability.
- **Freedom to Fail:** If the people you lead are afraid to make mistakes, you'll never see their best work — you will have led them to a perpetual state of mediocrity. Smart leaders make it safe for people to think big, take risks, and try new and different things.

Hacking the Safety Gap

One of mediocrity's greatest protectors can be found in the rationalization of safe behaviors and decisions. While good decisions measure and manage risk, they are rarely risk-free. Leaders who look for risk-free decisions do little more than cede opportunity to others. Following are five types of decisions that many see as the safe decision — savvy leaders understand they're anything but safe:

- **The Politically Correct Decision:** Real change is built upon seeking the truth and not some watered down version thereof. The first step in solving problems is to deal in whole truths, not untruths or partial truths.
- **The Talent Decision:** The reason companies make bad hires is that they compromise, settle, play it safe — they don't hire the best person for the job. If you don't believe you can hire world-class talent, don't be surprised when others begin to share your opinion.
- **The Values Decision:** Rewarding performance over values might seem to be safe or smart, but it is neither. The best leaders have a zero-tolerance policy for actions and/or decisions that constitute a violation of corporate values.
- **The Managed Decision:** When decisions are over-managed, they tend to be under-effective. Build the right team, and have the confidence to allow decisions to be made closest to the point of impact.
- **The No Decision:** Not making a decision is still a decision — it's usually just not the right decision. The greatest security is found by teaching others to make great decisions and then granting them the responsibility and authority to make them.

Hacking the Culture Gap

The phrase "toxic work environment" is code for bad leadership. Toxic cultures occur where arrogance, ignorance, ambivalence and apathy are present, but again, not where steady leadership stands at the helm. A toxic culture simply cannot coexist in the presence of great leadership.

Great corporate cultures are intentional — they are built by design. Creating a healthy culture is a matter of making a focus point within the corporate values, purpose, vision, mission and strategy.

Culture is a construct that must be embedded into the very fabric of the corporate identity. It must be part of the ethos that describes why the enterprise exists, what and who it values, and how it will behave. This is why culture must be created from a design perspective — it must be intentional and purposeful. It must be part of the strategy that dictates acceptable behaviors, how decisions will be made, and what will drive operational focus.

When culture is not understood, not integrated, not led and allowed to be amorphous, it can spin out of control. Culture can become distracting or, even worse, destructive. Culture run amok can kill companies. But if culture is not driven by strategy, then said culture will likely become little more than a very dangerous intoxicant.

Healthy cultures can't be built by setting boundaries, through the enforcement of arbitrary rules or bureaucratic mandates, and you certainly can't manage culture by instituting intricate processes. Culture shouldn't be imposed upon people — as co-creators of the culture, the people are the culture. Culture is not something to be managed but rather something to be led. Leading culture involves actions such as creating a culture of leadership, investing in people, developing "next practices," encouraging risk, collaborating, embracing dissenting opinion and others.

Hacking the Courage Gap

Creating a culture of leadership is not for the faint of heart — it takes great courage. Courage is having the strength of conviction to do the right thing when it would be easier not to do things right. Leadership absent courage is nothing short of a farce.

The best thing about courage is that a lack of it can be overcome. Courage isn't a skill; it is a decision. In the corporate world those who demonstrate courage stand apart as innovators and opinion leaders; those who display a lack of courage are viewed as yes men who are the politically correct defenders of the status quo.

Hacking the Talent Gap

Leaders don't put people in boxes; it's their obligation to free them from boxes. True leadership is about helping people reach places they didn't know they could go. It is one thing to be able to recruit talent, something altogether different to properly deploy talent, and quite another thing to have your talent play nicely in collaboration with one another. It is the responsibility of leadership to set the tone with a great talent strategy.

The number one reason companies make bad hires is they compromise, they settle, they don't hire the best person for the job. Compromise has its place in business, but it has no role in the acquisition of talent. It doesn't matter whether candidates have great potential, what diversity segment they represent, if the hire is an internal or external candidate, whether or not they have industry experience, or where they earned their degree. Smart leaders don't "give" people the job because they've been with the company longer — they select the best person for the job regardless of how long they've been with the company.

A values-based approach to hiring increases performance, enhances collaboration, reduces turnover, improves morale, and creates a stable culture. Don't just hire a top producer or the candidate who graduated from the best business school, but rather hire a person whose values are in alignment with the organization's core values and vision and who also happens to be talented.

Hacking the Turnover Gap

Regardless of tenure, position, title and so on, employees who voluntarily leave generally do so out of some type of perceived disconnect with leadership. Following are 10 reasons your talent will leave you — smart leaders don't make these mistakes:

- You failed to unleash their passions.
- You failed to challenge their intellect.
- You failed to engage their creativity.
- You failed to develop their skills.
- You failed to give them a voice.
- You failed to care.
- You failed to lead.
- You failed to recognize their contributions.
- You failed to increase their responsibility.
- You failed to keep your commitments.

If leaders spend less time trying to retain people and more time trying to understand them, care for them and lead them well, the retention thing would take care of itself. Employees who are challenged, engaged, valued and rewarded rarely leave, and, more importantly, they perform at very high levels.

Hacking the Knowledge Gap

Knowledge matters; but when it comes to leadership, knowledge isn't about being right — it's about achieving the right outcomes. The biggest barrier to the acquisition, distribution and application of knowledge is a leader's ego. The most important hack is for leaders to get out of their own way and out of the way of those they lead.

A corporation's employees must be able to acquire knowledge (learning), transfer knowledge (out of the head and into an information system), apply knowledge (from the information system into an actionable event), manage knowledge (execute with focus, timing and precision) and secure knowledge (keep it from evaporating or even worse from walking out the door to a competitor).

Some say we've moved from information and knowledge workers to entire knowledge enterprises. While this may be true, all the institutional knowledge in the world won't protect you from leaders who can't separate useful knowledge from useless knowledge and from leaders who don't know how to leverage knowledge into competitive advantage.

Hacking the Decision Gap

The great benefit of knowledge and experience is the hope that they will lead to wisdom. The best leaders use their knowledge to not only make better decisions for themselves but to help those they lead to make better decisions. Most leaders who rapidly progress in their career path do so largely based on their ability to consistently make sound decisions.

Understanding that a hierarchy of knowledge exists is critically important when attempting to make prudent decisions. Not all inputs should weigh equally in one's decisioning process. By developing a qualitative and quantitative filtering mechanism for decision making, you can make better decisions in a shorter period of time. The hierarchy of knowledge is as follows:

- **Gut Instincts:** An experiential and/or emotional filter that may have no underpinning of hard analytical support.
- **Data:** Raw data is comprised of disparate facts, statistics or random inputs that in and of themselves hold little value.
- **Information:** Simply an evolved or more complete data set derived from a collection of processed data where context and meaning have been added to disparate facts.

• **Knowledge:** This is information that has been refined by analysis such that it has been assimilated, tested and/or validated. Knowledge is actionable with a high degree of accuracy because proof of concept exists.

Decisions made at the gut instinct or data level can be made quickly but offer a higher level of risk. Decisioning at the information level affords a higher degree of risk management but is still not as safe as those decisions based upon actionable knowledge.

Hacking the Innovation Gap

The need for change exists in every organization. If your organization doesn't innovate and change in accordance with market-driven needs and demands, it will fail — it's just that simple. Agility, innovation, disruption, fluidity, decisiveness, commitment and, above all else, a bias toward action will lead to the creation of innovation and change.

Too many companies are long on ideas and short on execution. Ideas don't equal innovation. Not only do raw ideas have little intrinsic value, but they are often very costly. The difference between an idea and innovation is execution — ideas are ethereal, and innovation adds value. Don't be the "idea" person; be the innovator.

Most innovators view innovation from one of two perspectives: those who believe disruptive innovation is superior to incremental innovation and those who take the opposite side. The real trick is to focus on incremental innovation that becomes disruptive. This combination allows innovators to have their cake and eat it too. This is what levels the field by bringing disruptive opportunities in reach of companies that don't have the time or resources to create new markets. Disruptive innovation isn't limited to a sole focus on creation of something new. Disruption can occur by disintermediation, refining, reengineering, or optimizing a product/service, role/function/practice, category, market, sector or industry.

Hacking the Next Level

At one time or another all great leaders experience something so big and so impactful it changes the landscape — a game changer. The message here is simple — don't copy; create. The goals are to create, improve on and innovate around best practices in order to find next practices. The following six steps represent my personal process for finding and implementing game changers — I call it SMARTS:

• **Simple:** Realistic, cost effective, quick to adopt and fast to implement. Don't get entangled in complexities — become heavily invested in simplicity.

• **Meaningful:** Game changers have great purpose, meet a need, solve a problem, serve an existing market or create a new one.

• **Actionable:** If you cannot turn an idea into innovation, then it's not a game changer.

• **Relational:** Game changers enhance, extend and leverage existing relationships as well as serve to create new ones. All business boils down to people, and people mean relationships.

• **Transformational:** A game changer causes change. You cannot experience sustainable improvement without transformation.

• **Scalable:** True game changers are built with velocity and sustainability in mind. The best thing about real game changers is they build upon themselves to catalyze other accretive opportunities.

Hacking the Expectation Gap

Managing expectations is gamesmanship — aligning them is leadership. What leaders say, how they say it, and whether or not they follow through on what they say matters greatly. Leaders can overcome many mistakes, but rarely can they overcome a loss of trust and credibility stemming from a failure to keep their commitments. Equally as difficult to overcome is a gap in trust that occurs when leaders ask for one thing but hold people accountable for something altogether different.

Aligning expectations doesn't need to be difficult — set them, align them, stick to them and execute on them. The best leaders make a practice of saying what they mean, meaning what they say, and doing what they say they'll do.

The following three practices will help create an organization that delivers on its commitments:

1. **Collaborate Early and Often:** Decisioning in a vacuum or without all the facts will place you in a deficit from the beginning. Before making promises or commitments, collaborate with all concerned parties to ensure that expectations are understood.

2. **Resist Making Verbal Commitments:** Most broken commitments result from impulsive verbal promises made before all the details were sorted out. Place your understanding of the deliverables in writing by outlining key business points, and circulate the document for review and comments.

3. **Treat Promises Like Projects:** Build a culture that breaks down all commitments into deliverables, benchmarks and deadlines. This will help manage performance risk and will also create continuity of process and delivery.

Hacking the Complexity Gap

Complexity is the enemy of the productive — it stifles creativity, slows progress, increases cost, inhibits confidence and erodes culture. Most businesses have too many people and too many resources focused on things that don't matter. All businesses can benefit from a focus on simplicity.

The most effective way to deal with complexity is to strip it away through refining efforts rooted in simplicity. But simplifying something doesn't make it a trite or incomplete endeavor. Simplification makes for a more productive and efficient effort that is often more savvy than other, more complex alternatives. Simplicity also serves as a key driver of focus, which enables greater efficiency, productivity and better overall performance. Keeping things simple allows you to focus on one thing at a time without the distractions that complexity breeds by its nature alone. Break down every key area of your business, and attempt to simplify your processes, initiatives and offerings.

Hacking Smart

Business people are smart people, and smart people like smart things. But when it comes to business, what we really need are more dumb businesses. That might sound strange, but the dumber your business is, the better off you are. The truth is that great companies are those that can thrive and prosper in the absence of complexity and sophistication. As odd as it sounds, businesses that are not dependent on smart talent, capital or technology can scale faster and easier than those businesses burdened with the aforementioned dependencies.

Simplicity matters. It matters to the consumer and matters to your workforce, and it matters to the growth and the sustainability of your enterprise.

Hacking the Failure Gap

The only real leadership failure is failure to focus on the main thing — serving those you lead. Most leaders go out of their way to hide their fears and explain away their failures rather than confront them and learn from them. Leaders must understand how to give permission to fail in a way that moves things forward, not sets them back.

Fear in and of itself is not a bad thing; rather it is how people choose to cope with fear that will determine its effect on their life. Fear is a warning sign that needs not to be ignored or hidden but understood and addressed.

The greatest fear most professionals struggle with is the fear of failure. Oftentimes this fear of failure governs how much risk businesspeople will take and in turn how successful (or not) they are likely to become. Under the right circumstances, failure is absolutely the best experiential learning tool available.

Hacking Perfection

Leadership requires attention to detail and a commitment to quality, but rarely does it require perfection. Perfectionists tend to be very busy, but rarely are they productive. Moreover, the pursuit of perfection rarely results in a competitive advantage, but it will result in time delays, cost overruns, missed deadlines and unkept commitments. Rather than seeking what cannot in most cases ever be achieved, it makes more sense to seek the highest standard of quality that can be delivered in the shortest period of time. The best leaders are able to make very complex decisions on short time frames and with incomplete information. Agility, fluidity, decisiveness, commitment and focus all lead to the creation of speed that results in a certainty of execution.

Final Thoughts

In the final analysis, leadership is less about structure and more about vision and philosophy. Nothing inspires change and innovation like great leadership. Put simply, the greatest testimony to the power of real leadership is what happens in its absence — very little.

RECOMMENDED READING LIST

If you liked *Hacking Leadership*, you'll also like:

1. ***The Leadership Challenge*** **by Barry Z. Posner, James Kouzes.** A trusted source on becoming a better leader, The Leadership Challenge has been updated and revised for a new generation of leaders living and working in a global environment.

2. ***Tipping Sacred Cows*** **by Jake Breeden.** Breeden offers proven, powerful strategies for handling the seven most common "sacred cows" so that you can gain a clear path to reaching your fullest potential at work.

3. ***The 360 Leader*** **by John C. Maxwell.** You can learn to lead up, lead across and lead down. Only 360-degree leaders influence people at every level of the organization, and by helping others, they help themselves.

THE SUMMARY IN BRIEF

David Gergen was immensely grateful for the opportunity to have worked for four presidents in the White House but he had grown disillusioned with the direction in which our politics was headed and wanted to pass on to the next generations the key leadership lessons he had stockpiled from half a century in the public arena. This dream has taken on great urgency.

Who could have imagined that our democracy might be on the brink of collapse? Who could have imagined that serious observers would be debating whether we are heading toward a civil war? But here we are. It's time to face a stark reality: much of our future now rests upon an infusion of fresh blood into our civic life. We need new, talented leaders who are looking for paths forward, not obsessing over past differences, who put country before party, unity before division. In ***Hearts Touched with Fire: How Great Leaders are Made***, through stories and reflections from his half century in the public arena, David Gergen shares what he has learned about the development of young, passionate leaders and why he is encouraged.

IN THIS SUMMARY, YOU WILL LEARN:

- How to become the author of your own life
- The four keys to resilience as a leader
- How to manage up, down, and sideways.
- The seven deadly sins of leadership

Part One: Your Inner Journey

Hearts Touched with Fire

Oliver Wendall Holmes, Jr. dropped out of Harvard to serve his country in the Civil War. He suffered grievous wounds that shaped and strengthened his public leadership. He rose to become one of the nation's most influential and eloquent jurists, named to the Supreme Court by Teddy Roosevelt and serving until FDR reached the White House. In a speech on Memorial Day in 1884, describing how military life had inspired his generation, he said, "***In our youth, our hearts were touched with fire.***"

What a glorious way to capture what so many young men and women have experienced in one era after another in committing themselves to civic life, seeking to create a fairer, more just, and more peaceful world. Life will hold perils, but in devoting yourself to the service of others, you find a satisfaction that transcends your troubles. As many have discovered, service and leadership are inextricably bound together. Indeed, leadership at its best is service to others.

Experts disagree whether the qualities and talents of effective leaders are in their DNA. You may have been born with some natural advantages, but if you want to excel as a leader, you have to work steadily over a long period of time. Frequently, personal development depends heavily upon your own patience and persistence.

It is only through first mastering your own intentions, coming to understand your values, and then leading increasingly large groups of followers that one can truly become an effective leader. The journey is not straightforward and is sure to be full of failures large and small, but leading can prove to be one of life's most meaningful endeavors.

Becoming the Author of Your Own Life

Leadership starts from within. It's important to learn how the world works, but it is even more important to learn how you work. As the preacher Peter Gomes used to say, you must learn to lead yourself before you can serve others. In short, you must wrestle early on with your own self-awareness and you own self-mastery. Each of us must discover for ourselves who we are, what we believe in, and what dreams we have for the future.

In our own time, we continue to ask ourselves about our purpose. Hundreds if not thousands of essays about leadership have agreed that a clear understanding of yourself is the foundation upon which to build an integrated life. But those essays are all over the lot about how to get there.

The people who have achieved the greatest understanding of their inner selves have been "reflective practitioners"– those who have welcomed a wide array of experiences, have read history and biographies with care, and have had a series of conversations with their inner selves, exploring ways to build that foundation.

One of the best essays on leadership was published in 1999 by Peter F. Drucker, the foremost management guru of the twentieth century. In "Managing Oneself" Drucker wrote that to become self aware, a person should ask herself or himself a set of basic questions to discover their strengths and weaknesses.

Obviously, people are better at working from strength. The trouble, Drucker argues, is that most people think they know what they excel at but are usually wrong. Candid feedback thus becomes essential. Finding the right formula to achieve self knowledge is a fluid undertaking. Whatever test you use, Drucker argues, you should learn several basic things about yourself:

- How do you learn? Are you a reader or a listener?
- Where do you lie on the introvert/extrovert scale?
- How do you respond to stress?
- Are you a good number one but a better number two? Some people are terrific subordinates or CEOs but terrible at the top–and vice versa.

Self-awareness is a foundation of your journey, but for a potential leader, the secret to long-term success is to build upon your self-understanding in order to achieve self-mastery. Too many lack self-confidence or find the obstacles too big. They give up their quest too soon and ultimately fall short. But history shows many, many examples of others who persevered against all odds–and became authors of their own lives.

Surviving the "Flaming Crucible"

"Crucibles" mold a public leader. For a long while, leadership scholars saw crucibles as a form of adversity and focused on ways that leaders cope with setbacks. More recently, crucibles have gained a spotlight of their own as biographers and others have come to see how much leaders transform themselves during key moments in their lives. There is no better example than FDR and his battle living and leading with polio.

. . . the skills required to conquer adversity and emerge stronger and more committed than ever are the same ones that make for extraordinary leaders.

As Doris Kerns Goodwin, the wonderful historian, wrote in her book ***Leadership in Turbulent Times***, "Franklin Roosevelt's ordeal provides the most clear-cut paradigm of how a devastating crucible experience can, against all expectation and logic, lead to significant growth, intensified ambition, and enlarged gifts for leadership."

One danger of leadership studies and books is that most people will not become the president or prime minister of their country, much less FDR. So it's tempting to shrug at the example. But crucibles are more universal than something we include in stories of a great president to humanize him or explain his rise. Crucibles, as one scholar put it, "may be found woven into the fabric of daily life."

A wife is unable to say goodbye to a husband as he dies from COVID-19; a father watches helplessly as his tiny daughter drowns; a Black mother is devastated when her twenty-five-year-old son is shot dead jogging through a white neighborhood by white men who say they mistook him for a burglar. The human experience is such that each one of us will likely encounter acute suffering at one point or another. These events can allow us to reshape our visions of ourselves and the world around us.

Warren G. Bennis and Robert J. Thomas popularized the importance of crucibles in the literature of leadership. They wrote, "One of the most reliable indicators and predictors of true leadership is an individual's ability to find meaning in negative events and to learn from even the most trying circumstances. Put another way, the skills required to conquer adversity and emerge stronger and more committed than ever are the same ones that make for extraordinary leaders.

The Keys to Resilience

Beyond the obvious foundational qualities of all leaders–character, integrity, courage–there are four other key qualities that characterize men and women who have responded to crucibles with resilience:

1. A Sunny Temperament: having a positive, optimistic outlook
2. Adaptability: a willingness to change course without hesitation or fear
3. Hardiness: an unflappable commitment to the cause
4. Stoicism: emphasizes liberty, independence, self-command, stern self-mastery, putting aside of passions, restraints, and a resolute devotion to honor.

A sunny temperament, adaptability, hardiness, stoicism–these four qualities remain the hallmarks of those who successfully respond and ultimately conquer their crucibles with an inner resilience.

There is no guarantee, of course, that if you have all four qualities, you will emerge as a promising, resilient leader; but if you lack them, there is a good chance you will wind up a loser.

Turning Adversity into Purpose

Tough times call forth strength and bravery from an alert citizenry. Time and again, public leaders knocked down repeatedly have rebounded and actually grown stronger.

In many instances, those who were struck have also acquired a new moral purpose in their lives. Leaders are pitched into a crucible–suffering, floundering, sinking–before resilience sets in and then, thankfully, one finds a purpose and a path toward generosity and wisdom.

Leaders rise to the challenge, bouncing back through a determined resilience. And even more impressively, each has reexamined life's possibilities and embraced a new destination. They grow in inner strength, dedicating their lives to a higher moral purpose. They give proof that William Faulkner was right when he said that "man will not merely endure: he will prevail."

Part Two: Your Outer Journey

Learning to Lead Up

In our twenties and thirties, when most of us start our outer journeys, we might entertain visions that within a few years we will be running our own organization and telling others

what to do. After all, we think, we have addressed our inner issues, studied hard, and our credentials are in order. Surely, we are the ones our new boss has been waiting for. Wrong! Little do we appreciate when young that the path forward will possibly be a lot longer and more complicated than we think.

Those on promising leadership paths are still learning how to manage–manage not only yourself but your boss, your colleagues, your team, and even your outside collaborators. There is an art to managing up, sideways, and down–especially when done at the same time.

To lead is to effectively organize and interact with those with whom you work, to understand the priorities and goals of your colleagues, and see that those goals are put into action. Every leader knows how to manage, but being a manager in itself does not make for a great leader. In other words, management skills are a foundation upon which leadership is imagined and built.

So, how can you best support your boss, making them as well as your team more successful? What follows is an overview of the best ways to manage up, with most of the takeaways applying to support jobs across the organizational landscape.

In the Early Days of a Job, Figure Out Your Boss and Play to Their Strengths

In managing up, you embark on your outer journey–learning how to help your boss navigate and succeed as a leader of others. What do you see in your bosses? What are their strengths? Their weaknesses? How can you build up one and diminish the other? A good staff brings out the best in others, starting with the boss.

Keep One Eye on Today, the Other on Tomorrow

In addition to getting each day's work done well, a smart staff member also pays serious attention to what's coming down the pike. What is just over the horizon but will be hitting us sooner than we think? How can we get out in front? What should our strategy be? What preparations would help?

Speak Conscience to Power

The traditional rule of thumb, of course, is that a good staff member should speak truth to power. We hear that so often that it almost goes without saying. But the more meaningful occasions have come when followers speak conscience to power. That often takes courage because you are challenging the judgment and even the ethics of your boss. Speaking conscience to power is not only the right thing to do–it can also build your reputation.

Argue Your Case, Then Get on Board

A good organization encourages dissenting voices, but once the boss makes a decision, a staff member salutes and gets to work. If you can't live with the decision, there's the exit door. Even if it doesn't go well, every single staffer must lock ranks and cheer it on. That's the way it's supposed to work.

A No-Surprise Rule

Increasingly, good leaders now push responsibility deeper into the ranks. From cabinet officers to executives in the corner office, top leaders remain responsible for developing strategies, but they empower leaders one or two tiers below to execute.

There's much to be said for that approach. But it comes with one catch: It is essential that leaders up and down the ranks must be transparent and candid with one another. "No surprises!" Otherwise lack of trust will break down and metastasize. It's especially important to know bad news and act on it before it reaches the press.

Serve as Good Eyes and Ears–As Well as Chief Diplomat

One of the hardest challenges for a boss is to have a clear, honest reading of his or her own team members. Someone has to have a finger on the pulse, quietly keeping the boss well informed. No surprises, remember?

Conversely, that same person ought to be the chief diplomat for the boss, reaching out to colleagues beyond the inner circle, keeping them informed about the morale, moods, anger swings, and perspectives of the leader in the front office. Absent a steady flow of information, members of the team may begin to feel distant and distrustful. Rumors can spread and morale can deteriorate.

Leading Your Team

Leadership studies have historically focused on lone, heroic individuals grappling with the forces of darkness. But much has changed over the years. In this new century, rather than battling alone, leaders are often embedded in teams, their success resting heavily upon how well they and all other parties collaborate with each other. "Creative collaboration" has become the new model of well-run organizations.

The most memorable photo of President Obama, for

We want our leaders to be caring and compassionate when they should be but also be tough, deceitful, and cunning when they need to be.

example, is not in the loneliness of the Oval Office but in the Situation of the West Wing, where he and half a dozen members of his national security team are huddled together, electronically engaged with Navy SEALs halfway around the world, ridding the world of Osama bin Laden. Working closely together–a tight, effective team.

Black Lives Matter was created in 2013 by three young Black women. Soon after the acquittal of George Zimmerman in the fatal shooting of Trayvon Martin some thirty communities had organized local chapters and formed alliances with other like-minded groups.

But BLM resisted the notion of empowering a single, heroic figure to represent it publicly. It was to be decentralized. Its founders intentionally wanted power to flow from the bottom up instead of top down. The rise of BLM and other bottom-up structures has clearly taught us that in this new century, teams have become as important as individuals in shaping our future.

That doesn't mean we no longer need to develop individual leaders of character and courage. Far from it–we need them more. They remain indispensable in pulling together organizations, determining strategy, and inspiring others. But in today's world, a leader's principal job is also to recruit and empower members of a good team. Going forward together is now the way to get big things done.

Part Three: Leadership in Action

When Journeys Converge

We have explored the inner and outer journeys that develop leadership capacities. Now opens a conversation about the integration of one's inner and outer journeys–and how that integration can lead to the ultimate goal of leaders these days: getting big things done. The inner and outer journeys of a leader can converge and create meaningful change in our national life.

Moving into leadership takes many shapes. Integrating your inner and outer journeys looks different for each leader, but taking the time to combine the two is essential for those stepping into power. As individuals take the reins, a careful, consistent vision and an understanding of one's circumstances are also necessary precursors to effective leadership. You must become a student of your context before you can become its master.

How Leaders Lose Their Way

Leadership in the public arena can be one of the noblest and most fulfilling experiences that you can undertake. But it comes with temptations that have time and again been the undoing of men and women who lose their way. Leaders often veer off course, abandoning their True North and often self-destructing.

There exists the "low arts" of leadership, as Hamilton called them, and a paradox of American politics: how we want our leaders to be caring and compassionate when they should be but also be tough, deceitful, and cunning when they need to be. When–if ever–should principled leaders resort to the low arts, and how should they defend themselves from others seeking to drag them down?

The Seven Deadly Sins of Leadership

Over time, Catholics have identified seven of the deadliest sins and have drawn upon them to instruct their flock in virtuous living: pride, greed, lust, anger, gluttony, envy, and sloth.

As Catholics have learned, the best way to counter these sins is not to hate sin but to love virtue more. Embracing the virtues diminishes the possibility of personal derailment. In that spirit arises the Seven Deadly Sins of Leadership and an offsetting virtue for each.

1. **Hubris vs. Humility**: In leadership, the number one danger is that success will go to your head–that you will begin to think that your very success means that you are different, that you are above mere mortals, and that, in fact, the rules don't apply to you. Ambition leads to self-confidence, which leads to arrogance, which leads to self-destruction. There is but one clear answer to hubris: HUMILITY!

2. **Narcissism vs. Empathy**: Closely related to hubris is an excessive love of self that we see in narcissists. Some can succeed despite themselves, especially if they can make up for it with empathy and a common understanding. As a leader, you must keep your ego under control and remember, it is not about you.
3. **Greed vs. Modesty**: Among leaders who grew up with modest means and then rose to power, there is a natural tendency to want a more secure financial base. Many become greedy, but many others are driven by their hardscrabble lives to make the world a more supportive place.
4. **Obstinacy vs. Resolution**: We praise leaders who are strong and decisive. Yet we have also learned that if a leader carries a strength too far, it can turn into a weakness. Certainly we have learned that resolution–carried on too long in the face of growing arguments to the contrary–can turn into obstinacy and become the undoing of leaders.
5. **Imprudences vs. Wise Judgmen**t: Our culture celebrates leaders who are bold, decisive, and willing to take risks. But there is a fine line between smart versus rash, prudent versus reckless. Good judgment is indispensable to good leadership. And that judgment must be found through a blend of experience, mistakes, study, and reflection. You aren't born with it. Like so much else in life, you must earn it.
6. **Basic Dishonesty vs. Straight Shooting**: Honesty and transparency are some of your best tools in building trust and a connection with the public. There are times when a leader must lie for the sake of national security. But when lies become chronic, nothing that a leader says can be accepted at face value.
7. **Distrust vs. Openness**: Trust must run in both directions in a democracy: Followers must trust their leaders to tell them hard truths, while, similarly, leaders must trust followers will believe in them. Today, public trust in our national leaders has plunged to dangerous levels.

Leading Through a Crisis

Leaders must frequently struggle with crises in their individual lives–crucibles as we called them. Crises have come and gone over time, but we have now entered an age when they are striking the world with a force, frequency, and intensity most of us have never experienced before. And if the past is prologue, even nastier crises lay ahead. There are personal qualities that seem most essential for leaders coping with crises today.

There are qualities leaders should have regardless of circumstance or sector: character, courage, integrity, moral purpose, vision, adaptability, grit, and persuasion foremost among them. Those same qualities remain essential in times of crisis. There are four other qualities essential for effective leadership in a crisis:

1. **"A Great Carelessness of Self"**: Among the leaders we most admire, we so often find this sentiment today. They put the lives of others first, showing great carelessness of self.
2. **Prudent Judgment**: A prudent leader must be informed by experience and have a curiosity about the world, a grasp of relevant data and information, a sense of responsibility for their team, and the patience and perseverance to see it through hard times.
3. **Fingerspitzengefühl**: This is a German word that means "fingertips feel"–an elusive concept describing how a person might have an instinctive feeling or intuitive flair. Those who possess it often have a feel for how events are likely to unfold and can prepare themselves early.
4. **Coolness under Fire**: It is critically important for leaders to remain cool in a crisis.

We judge leaders by their legacies. The America that the World War II generation created was united and well led, proving that when inspired, we are a can-do people. Those lessons from another generation are of growing significance today.

Once again, we are facing an existential threat to the republic. Once again, we hear a clarion call for unity and action. Once again, we face the questions: Will our citizenry answer the call? Can the next greatest generation rise up to lead us to brighter days ahead?

The nation needs you; indeed, the world needs you. We must have new, forceful leaders who have found their True North and can navigate past the crises that are coming their way. We need passionate idealists who will stand up to those blocking our way toward a more giving and just society. We need men and women of character and honor.

We need you to step into the arena, your hearts touched with fire.

David Gergen has been a leader in the public arena for more than half a century. He has served as a White House adviser to four US presidents of both parties: Nixon, Ford, Reagan, and Clinton. Gergen then served as the editor of US News & World Report. For the past two decades, he has served as a professor of public service and founding director of the Center for Public Leadership at the Harvard Kennedy School. He is also a senior political analyst for CNN where he is a respected voice in national and international affairs.

THE SUMMARY IN BRIEF

How to Lead When Your Boss Can't (or Won't) written by leadership expert John C. Maxwell explores one of the most common and frustrating challenges professionals face: working for a leader who can't—or won't—lead. Many people operate in the middle of an organization without official authority, left feeling stuck despite having ideas, initiative, and the desire to contribute. Maxwell makes it clear that "everything rises and falls on leadership," and when guidance is absent, teams drift, decisions stall, morale drops, and vision inevitably leaks.

It explores what happens when leaders neglect their responsibilities—how vision dissolves, how organizational energy fractures, and how even talented employees become discouraged. Yet Maxwell does not leave the reader powerless. Instead, he reveals a path to influence that does not rely on titles or formal authority. Through practical principles, he shows how individuals can lead themselves well, support their leaders effectively, build relational chemistry, avoid destructive workplace landmines, and cultivate influence at any level.

Grounded in real organizational dynamics and timeless leadership laws, ***How to Lead When Your Boss Can't (or Won't)*** empowers readers to rise above challenging circumstances, add value where they are, and develop the kind of character, credibility, and influence that creates lasting impact, regardless of who sits above them on the organizational chart.

IN THIS EXECUTIVE BOOK SUMMARY

- Learn how to lead effectively even without authority or formal power
- Discover strategies for supporting weak leaders while protecting your influence
- Apply relational skills that build trust, credibility, and upward impact
- Review methods for avoiding workplace landmines and navigating challenging leadership gaps

CHAPTER 1

What Happens When Bosses Don't Lead

Many professionals work in the middle of organizations under bosses who can't or won't lead.

You don't have any "official" power to make changes, so you feel stuck. You have ideas. You want to make a contribution. You want to make things happen. But the person you work for makes it difficult.

Everything rises and falls on leadership. It really does. If you don't believe it, put together a group of people without a leader and watch what happens:

- decisions are delayed
- agendas multiply
- conflicts are prolonged
- morale declines
- productivity decreases
- success becomes difficult

One of the worst things that happens when bosses don't lead is that the vision of the organization suffers. If a team starts out with a vision but without a competent leader, it is in trouble. The vision leaks. It will dissipate. And the team will drift until it has no sense of direction.

If you have any leadership ability, you have ideas about vision. You want to go somewhere, and you want to take people with you so that you can achieve something together. But how you respond matters. Take a look at the following ways people react to vision.

- **Attack it**. They criticize and sabotage the vision—often because they didn't help create it, don't understand it, disagree with it, or aren't ready for it.
- **Ignore it**. Some people may not attack the vision, but they don't support it either. Instead, they pretend it doesn't exist and do their own thing.
- **Abandon it**. They leave the organization when the vision violates their principles or doesn't align with what they value.
- **Adapt to it**. They find a way to align with the vision, even if they did not help create it.
- **Champion it**. They actively promote the vision and work to turn it into reality.
- **Add value to it**. They go beyond championing the vision and actively strengthen it.

Bad Bosses

All good leaders share many characteristics, but bad leaders come in quite a few varieties. Here are a few:

Insecure leaders think everything is about them. When someone on their team performs exceptionally well, they fear being outshone. If you work for an insecure person, not only will you have to work to deflect that individual's insecurity from yourself, but you will also have to work harder to "break the chain" and create security for the people who work for you. If you don't, the people under your care will suffer.

Visionless leaders lack vision and create two immediate problems for the people who work for them. In this case, you may need to communicate the organization's vision to the members of your team and remind them how your team contributes. You can show passion, even if your boss doesn't.

Incompetent leaders are ineffective, and they often stay that way. If you work with them, everyone on the team will have to work harder to make up for their deficiencies.

Self-centered leaders attempt to advance at the expense of everyone around them. Resist the urge to mirror that behavior; instead, build influence by sharing credit and supporting those around you.

Chameleon leaders shift positions and reactions unpredictably, leaving others unsure which version of them will show up. Insulate yourself from their mood and personality swings and focus on delivering results rather than trying to anticipate or please them.

Political leaders prioritize personal advancement over the organization's mission, making decisions based on alliances rather than principles. Stay out of political maneuvering and anchor your work to the organization's goals and values.

Controlling leaders want to be in the middle of everything you do, continually interrupting progress by micromanaging. They are often driven by perfectionism or the belief that no one can do the job as well as they can. Lead yourself well and communicate consistently about what you are accomplishing to reduce their impulse to control.

One of the toughest things about working for a weak leader is that you often can't be sure of where you stand. Adding to that tension are some other factors:

- lack of empowerment
- undermined initiative
- an environment that doesn't value leadership
- lack of clear job parameters
- lack of appreciation

> Leadership begins with influence—not title or position.

CHAPTER 2

Lead Yourself Well Before Anything Else

If you want to be successful in your career, you cannot afford not to lead yourself well. While it's true that all leaders must become good at self-leadership to lead effectively, it's also important to note the power self-leadership has with others.

Nothing will make a better impression on your leader and those you work with than your ability to lead yourself well. It means managing yourself, learning to make better choices by thinking the way a leader does, and developing a better attitude. This develops credibility which reduces a lot of friction people experience, including with their bosses.

Credibility Through Self-Management

Most people put too much emphasis on decision making and too little on decision *managing*. We often think that self-leadership is about making good decisions every day, when the reality is that we need to make a few critical decisions in major areas of life and then manage those decisions day to day.

If you want to gain credibility with your boss and others, focus on taking care of business in these seven areas:

1. **Emotions**. Determine when to display emotions and when to delay them. Put others, not yourself, first in how you handle and process them.
2. **Time**. Every day determine which tasks are most important and do them first. Ask yourself how much time a task is worth before you start it and try to complete it in that timeframe.
3. **Priorities**. Focus 80% of your time to work where you are strongest, 15% where you are learning, and 5% on other necessary areas. Trade duties where possible, stop unnecessary tasks, and delegate.
4. **Energy**. Protect your energy by doing your most important work when your energy is high and your mind is sharp, and reserve low-value activity, unresolved burdens, and lingering conflicts for slump times.
5. **Thinking**. Carve out focused think-time. Use a list of items that need reflection, evaluate decisions, develop strategy, and be creative. A minute of thinking can be more valuable than an hour of unplanned work.
6. **Words**. Make your words count. If you have something worthwhile to say, say it briefly and well; if not, remain silent.
7. **Personal life**. You can do everything right at work and manage yourself well there, but if your personal life is a mess, it will eventually turn everything else sour.

Making Better Decisions

If you are already good at managing yourself, you're on a good path. But self-leadership also involves thinking the way a leader does and making decisions based on it. Here are the things you need to keep in mind as you develop these skills:

- **Think longer term**. Good self-leaders look ahead. This impacts where the organization will thrive tomorrow and today.
- **See within the larger context**. Most people evaluate events in their lives according to how they will be personally affected. To lead yourself in a way that better serves the organization, you need to think within a broader context. Look at how something will impact those above, beside, and below you.
- **Push boundaries**. Learn to think outside the box. Push boundaries tactfully and take responsibility for finding a better way for making improvements.
- **Put greater emphasis on intangibles**. Leadership is a game of intangibles because leadership is influence. To lead yourself and others well, learn to read between the lines and pay attention to morale, motivation, momentum, attitudes, atmosphere, timing, and organizational culture because the stated problem is often only evidence of a deeper issue.
- **Learn to rely on intuition**. Leaders learn to work with intangibles by relying on intuition, sharpening it by focusing on principles instead of practices and filing away what they observe. Intuition alone may not be enough, but it should never be ignored—pay attention to your instincts and learn from them.
- **Invest your power in others**. To become a better leader, look for ways to share whatever power you have, because leading is not about controlling; it's about re-

leasing. Invest in good people, coach and encourage them, and empower them to perform—even to the point where they outshine you.

- **See yourself as an agent of change**. Leaders do not see accomplishment as a fixed state; they desire innovation, welcome new challenges, and take responsibility as change agents. Because leadership is a moving target, get comfortable with change and learn to think like a leader—think people, progress, and intangibles.

Develop and Maintain a Great Attitude

To lead yourself exceptionally well, you must develop a great attitude. People who work for bad bosses often feel unrecognized and unappreciated. They don't get the credit or recognition they desire and deserve. It's difficult to be a team player, remain positive, and keep contributing in those circumstances. Here are practical ways to maintain a positive attitude despite those challenges:

- Concentrate more on your duties than your dreams
- Appreciate the value of your position
- Find satisfaction in your contribution
- Embrace compliments from peers who share similar circumstances
- Avoid self-promotion and intentionally promote the contributions of others

Good leadership always gets noticed. Legendary Green Bay Packer coach Vince Lombardi said, "We will all be judged by only one thing—the result." If you take care to do what you need to do and do it well, you will put yourself in a position to start developing your influence.

CHAPTER 3

Find Ways to Work with Your Boss

Few things can be more maddening to anyone with leadership potential than working for a leader who doesn't lead. What may be most frustrating is that the majority of bad bosses have no idea how bad they really are as leaders. People with high levels of skill can always assess those with lower skills than their own, but people with low levels of skill can never accurately assess the abilities of those at a higher skill level.

It's not your job to fix your boss. Some people can fix themselves if they realize they have a problem, want to fix themselves, and are willing to work at it. Instead, find ways to work with your boss, not against them. That process needs to start with a change of heart.

1. **Develop a genuine relationship with your boss**. Resist the natural urge to withdraw. Instead seek common ground and build a solid professional relationship. Reaffirm your commitment to the organization's mission; your boss's inability to lead does not make them your enemy.
2. **Identify and appreciate your boss's strength**. Everybody has strengths—even an ineffective leader. Look for positive traits, skills, and experiences, and consider how those strengths can benefit the team or organization as a whole.
3. **Commit yourself to adding value to those strengths**. Once you have discerned your boss's strengths and how they can be an asset, look for ways to help your boss leverage them. Helping your boss succeed ultimately helps the organization succeed.
4. **Find ways to complement your boss's weaknesses**. Wise leaders staff their weaknesses, so be tactful and avoid pointing them out directly. Instead, ask where your boss would like more help and offer to fill that role—or support someone else in doing so—freeing your boss to focus on what they do best.
5. **Expose your leader to good leadership resources**. Thoughtfully share books, audiobooks, or videos you have found helpful. Make the recommendation naturally—using a connection or hook that may appeal—and follow up if it is well received.
6. **Publicly affirm your leader**. As long as your affirmation is truthful and focuses on your boss's strengths, it will not compromise your integrity, since others already recognize an ineffective leader's limitations. Public affirmation strengthens your relationship and increases your influence.

Build Relational Chemistry

All good interactions between people are based on relationships. The key to working well with your boss is developing relational chemistry, even if it does not come naturally. Lead up by intentionally strengthening that connection through the following actions:

- Understand what truly matters to your boss
- Know your boss's priorities
- Catch your boss's enthusiasm
- Try to support your boss's vision

> If you don't make an effort to strategically talk your craft with those ahead of you in experience and skill, then you're really missing great learning opportunities. ”

- Connect with your boss's interests
- Understand your boss's personality
- Earn your boss's trust
- Learn to work with weaknesses
- Respect your boss's family

How to Lift Your Boss's Load

Responsibility weighs heavily on leaders, and your boss may carry more of it than you realize. You can either make that load lighter or heavier.

When you help lift the load, you position your leader and yourself for success but your load certainly gets heavier. You're taking on more when your work situation is already difficult. Know that the lift you give to the boss often leads to the boss lifting you.

In case you aren't sure of where to begin, start here:

- Consistently do your job well
- Any time you find a problem, provide a solution
- Tell your boss what he needs to hear with tact
- Go the second mile
- Stand up for your boss
- Stand in for your boss whenever you can
- Ask how you can lift the load

Your underlying strategy should be to support your boss, add value to the organization, and distinguish yourself through excellence. If done consistently, your influence will increase, trust grows, and you will have more opportunities.

CHAPTER 4

Develop Your Influence Wherever You Are

Most people who work for a boss who can't or won't lead typically want one thing: a new position with power that will free them from their boss. But a position isn't the answer.

The number one misconception people have about leadership is the belief that power comes from having a position or title. In the Law of Influence in *The 21 Irrefutable Laws of Leadership*, I state clearly: "The true measure of leadership is influence—nothing more, nothing less."

You don't need to possess a position to lead or get things done, nor do you have to work for a great boss to be successful. The best way to get work done, get along with colleagues, lead a team, and work better with a boss, is to develop your personal leadership influence.

The Five Levels of Leadership explain how influence develops over time. At the lowest level, Position, people follow because they have to; at higher levels, they follow because of relationships, results, personal development, and ultimately respect. The key insight is that leadership begins with influence—not title or position—and you can start building that influence wherever you are.

Why People Often Wait to Develop Influence

Too many people wait too long to start working to develop influence in their organizations. They often wait because they buy into myths that make them believe it's too early to begin leading others.

Take a look at these reasons:

1. **The destination myth**. "When I become the boss, I'll start learning to lead." Leadership is like training for a marathon; preparation before the race is essential.
2. **The inexperience myth**. "When I'm the boss, I'll be able to control what happens." Without experience, you tend to overestimate how much control a position actually provides; real leadership still depends on influence, not title.
3. **The freedom myth**. "When I become the boss, I'll do what I want." Being the boss doesn't mean you don't have limits.
4. **The potential myth**. "I can't reach my potential until I'm the boss." Often you can make the greatest impact from somewhere other than first place, as long as you have developed influence.
5. **The all-or-nothing myth**. "If I can't be the boss, there's no point in trying to lead." You can make an impact from wherever you are in an organization but it takes influence.

How Developing Influence Makes a Difference

Leadership is using influence to help others. Good leaders maximize team performance, inspire, set direction, and get results. They bring out the best in others, add value to leaders above them, and allow top leaders to focus on priorities. Leadership throughout an organization ensures growth, innovation, and succession.

People follow those they know, trust, respect, and admire. Qualities of an influencer include integrity, nurturing, faith, listening, understanding, enlarging, navigating, connecting, and empowering.

Leadership begins where you are. If you want to get the chance to lead on another level, then your best chance for success is to lead well where you are now. Leadership is action, not position. Taking action and helping others to do the same in a coordinated effort is the essence of leadership.

CHAPTER 5

Avoid Landmines

If you're facing the challenge of working with a boss who can't or won't lead, you're already in difficult circumstances. Applying the strategies outlined here to build influence and strengthen your relationship may improve your situation, but there is no guarantee things will get better—and missteps *can* make matters worse.

Actions can be taken to avoid many common landmines that threaten to blow up a relationship with a boss. It's essential to maintain a sense of positive contentment despite the challenges. Success is more a matter of disposition than position. With the right mindset and the right skills, people can influence others no matter where they are in an organization.

The following practices help cultivate contentment and fulfillment while working for a difficult boss:

1. **Develop strong relationships with key people**. The key to fulfillment isn't making every interaction with others go smoothly; it comes from developing strong relationships with people. It's more important to get along with people than to get ahead of them.
2. **Engage in continual communication**. As you interact with your boss, let him know how you are advancing the vision. Get feedback and ask questions to find out if there are other things you should know to more effectively pass on the vision to others.
3. **Gain experience and maturity**. Maturity does not come automatically, but you can develop it with experience if you maintain a longer view. Focusing on responsibilities with excellence and maintaining a long view develops patience, which has great value.
4. **Put the team above your personal success**. When the stakes are high, good team members put the success of the team ahead of their own personal gains. They work together, and they receive the satisfaction of achievement together.

Stay Away from Office Politics

When you work for a bad boss and everyone on the team knows it, you're in a difficult situation. When people on the team say negative things about your boss, you may internally agree with them. However, to help the organization, the best course of action is to support them publicly and actively try to help them succeed.

There seem to be two main paths for people to get ahead in organizations. One way is by doing the work. The other is by working an angle. It's the difference between production and politics.

Political people are fickle and opportunistic. People who might be described as "political" are fueled by their desire to get ahead instead of a desire for excellence, productivity, teamwork, or consistency. Whatever values and skills they have are secondary to their ambition.

Some working environments seem to draw people toward political behavior. To avoid getting pulled in, refuse to engage in gossip or petty disputes, evaluate issues objectively, act with integrity, and communicate clearly and directly.

Never Make Your Boss Feel Like You're Wasting Their Time

For all leaders, time is precious. You show your value when you show that you value your boss's time. The best way to do that is to spend ten minutes preparing for every minute that you expect to meet, think for yourself rather than relying on the boss to do so, and bring something to the table.

Timing is always important. To be successful, know when to push and when to back off. Here are four questions you can ask yourself to help determine if it is time to push:

- Do I know something my boss doesn't but needs to?
- Is time running out?
- Are my responsibilities at risk?
- Can I help my boss win?

> When you learn how to work with difficult people, be productive in challenging situations, become a valuable contributor, and develop yourself as a leader, everything changes.

If you push your boss inappropriately too often, your boss might push you right out the door. If you're not sure whether it's time to back off, ask these five questions:

- Am I promoting my own personal agenda?
- Have I already made my point?
- Must everyone but you take the risk?
- Does the atmosphere say "no"?
- Does my request exceed the relationship?

You can tell a lot about the character and motives of people in the middle of an organization by watching when they push and when they back off. If you have a bad leader whose motives are also bad, you have twice as many landmines to avoid. Still, try to keep moving forward. Just use common sense, keep building your relationship with your boss, and try to remain positive.

CHAPTER 6

Prove Your Worth Daily and Never Stop Growing

Few things speak more loudly than excellence at one's craft. If you become excellent at what you do, others notice, and they will seek you out. Expertise always has value.

Become an Expert at Your Craft

Most people don't start out as leaders. They demonstrate skill or ability in a particular area, and they get recognized for it. Expertise in a craft or profession does not make someone a leader, but it often gets a person promoted into leadership. It gives them their chance.

The key question is, what can you do every day to become better at your core competency?

Once you reach a degree of proficiency in your craft, one of the best things you can do is talk about your craft with others on the same and higher levels.

If you don't make an effort to strategically talk your craft with those ahead of you in experience and skill, then you're really missing great learning opportunities.

The only way to improve at your craft is to practice it until you know it inside and out. The more you practice your craft, the more you know and the more you recognize what you *don't* know.

Do Jobs Others Won't

Being excellent at what you do will make you valuable. One way to prove your worth is to take on jobs others won't, even if they are outside of your craft or comfort zone.

Few things gain the respect of a boss, a team, and the top leaders of an organization more quickly than someone with a whatever-it-takes attitude. These things are what often create job security, elevate them above their peers, and get them promoted time and again.

The following behaviors set high performers apart:

- Take the tough jobs
- Pay your dues by sacrificing comfort and gain
- Be willing to work in obscurity
- Succeed with difficult people
- Put yourself on the line
- Admit faults but never make excuses
- Be the first to step up and help
- Take responsibility for your responsibilities
- Perform tasks that are "not your job"

Become Your Boss's Go-To Producer

Becoming an expert at your craft is driven by a desire for excellence, and taking on jobs others won't reflects a willingness to contribute anywhere. Being a producer, however, requires the will to win.

Here are key ways you can consistently prove your value as a go-to producer:

1. **Produce when the pressure's on**. Go-to producers are the people who find a way to make things happen no matter what.
2. **Produce when the resources are few**. If you can be innovative and productive when you have little or nothing to work with, people will begin looking to you for leadership.

3. **Produce when the momentum is low**. When momentum is low, choose to be a Momentum Maker—the kind of person who moves things forward instead of merely flowing with circumstances or undermining progress. Go-to producers create momentum rather than waiting for it.
4. **Produce when the load is heavy**. Be available and willing to carry your leader's burden (not only when your own load is light) because lifting the load when it matters builds influence.
5. **Produce when the leader is absent**. If you step forward to lead when there is a leadership vacuum, you have a very good chance of distinguishing yourself.
6. **Produce when the time is limited**. Deliver no matter how tough the situation is.

Maintaining Your Balance as You Prove Your Worth

The things you must do to prove yourself are not easy. And they can produce a lot of stress, especially being asked to take the high road as you work with your boss. But doing these things will give you the best chance to shine and succeed, even working for someone who doesn't lead. Maintaining grace, tact, and calm under pressure requires intentional discipline. Focus on the following practices:

- Find a way to relieve stress
- Know what to "own" and what to let go
- Never violate the trust of your boss

Never Stop Growing as a Leader

The final step you need to take in order to be successful working under a bad leader is to keep growing and improving as a leader. The better you become, the more people listen, the greater your value today, and the stronger your potential for tomorrow.

There is no downside to making growth your goal. If you keep learning, you will be better tomorrow than you are today, and that opens the door to a better future, whether in your current organization or in another.

Conclusion

When you work for a boss who can't or won't lead, you feel trapped in a no-win situation. But when you learn to work with difficult people, be productive in challenging situations, become a valuable contributor, and develop yourself as a leader, everything changes.

Do your best, and your time will come. And when you get your chance to be the boss, you will do a better job. You will value and empower people, and they will spend their time being productive, instead of trying to figure out how to work around a boss who doesn't lead.

John C. Maxwell is a #1 New York Times bestselling author, speaker, coach, and leadership expert who has sold more than 34 million books worldwide. His work has been translated into dozens of languages and used to train millions of leaders across industries and nations. He is the founder of Maxwell Leadership, a global organization dedicated to developing leaders who create positive change. Maxwell also founded the nonprofit organizations EQUIP and the Maxwell Leadership Foundation. His teachings emphasize values-based, people-centered leadership. He has been recognized as the world's most influential leadership expert by *Business Insider* and *Inc.* magazine and is a recipient of the Horatio Alger Award and the Mother Teresa Prize.

THE SUMMARY IN BRIEF

What is the manager's task? What do managers do? What are the skills required for managers to do it? These are all questions people struggle with in taking on a management position and becoming successful at it. The aim of this book is to give practical advice to managers and team leaders on how to manage the people in their departments or teams- getting the best results from them and dealing with any problems that may arise. The book focuses on what front-line managers have to do themselves. A business may have all sorts of human resource policies, but it is the managers who bring them to life.

In ***How to Manage People***, Michael Armstrong provides the reader with the tools to be an effective leader. By using motivation, rewards, and great leadership, managers will be able to get the most productive work from their employees while maintaining a great work environment. This book can also assist with the difficult tasks of how to conduct disciplinary meetings and how to deliver bad news.

IN THIS EXECUTIVE BOOK SUMMARY:

- Learn the real role of a manager
- Discover how to get work done through people
- Explore how to lead, motivate, and engage people and teams
- Find out new ways to conduct people management activities

Part 1: Managing People

Getting Things Done Through People: The Manager's Role

THE MANAGER'S TASK

Managers have to be specialists in ambiguity. Unexpected events ambush them. Decisions lead to unforeseen consequences. They spend a lot of their time dealing with people who can sometimes be difficult, unpredictable or uncooperative. And they have to achieve a delicate balance between being too close or too distant from their team members.

WHAT MANAGERS DO

They use interpersonal skills to get their team into action, handle operational issues involving people, treat employees fairly and with consideration, communicate information, provide feedback on performance, coach employees, respond to suggestions and deal with problems involving individuals and teams.

THE SKILLS MANAGERS REQUIRE TO DO IT

People have to have to exercise leadership, motivate their staff, and enhance their engagement.

Managing People for the First Time

APPOINTED FROM ELSEWHERE

There are four things that you need to do:

1. Learn in detail what the department or team is expected to do and the resources
2. Find out how the department or team is organized and what each member of the team does
3. Get to know the team members.
4. Take the first steps in earning the respect of team members

PROMOTION FROM WITHIN THE TEAM

As the new manager, you will be managing a group of people, some or even all of whom you counted as your friends. You can go on being friends but the relationship at work must change.

Treating People Right

Treating people right means treating them fairly and with respect, amongst other things.

The seven principles of treating people right are:

- Treat people with respect
- Treat people fairly
- Create the right work environment
- Help people to develop their capabilities and skills
- Provide leadership
- Get to know team members
- Define expectations and ensure they are met

Working with HR

PARTNERSHIP BETWEEN LINE MANAGERS AND HR

A partnership between line managers and HR specialists means working together to deal jointly with issues, people problems and, importantly, implementing HR strategies and new HR policies and practices.

WORKING WITH HR BUSINESS PARTNERS

HR business partners work alongside their line management colleagues in order to develop and implement an HR agenda.

Part 2: Getting Work Done Through People

Organizing

THE PROCESS OF ORGANIZING

The formal process of organizing can be described as the design, development and maintenance of a system of coordinated activities in which individuals and groups of people work cooperatively under leadership towards commonly understood and accepted goals.

AIM

The aim of organizing in a typical business or business unit could be defined as being to optimize the arrangements for conducting the affairs of the business or business unit. Organizations function informally as well as formally. The form of organization will depend on its purpose, activities and context.

ORGANIZATIONAL GUIDELINES

There is no such thing as an ideal organization; there is never one right way of organizing anything and there are no absolute principles that govern organizational choice.

> Managers must give out work, which means telling people to do something or, if they want to be less authoritarian, asking them.

Defining Roles

DESIGNING ROLES

Managers:

- Have to define the work the members of their team do
- Need to know how to get the best results by designing roles that maximize the engagement of role holders with their work by providing interest, challenge, variety and autonomy
- Need to ensure that everyone is aware of what they have to achieve in each of the main aspects of their role
- Do this by preparing role profiles that provide the essential information needed by role holders to carry out their role and by managers to manage the performance of role holders

GIVING OUT WORK

Managers must give out work, which means telling people to do something or, if they want to be less authoritarian, asking them.

Communicating

THE NATURE OF COMMUNICATIONS

Communicating with people is about conveying a message – by word of mouth, in writing or non-verbally. To get the message across it is important to use the right medium or combination of media.

BARRIERS TO COMMUNICATIONS

- Words mean different things to different people
- Hearing what we want to hear
- Ignoring conflicting information
- Perceptions about the communicator
- Influence of the group
- Non-verbal communication
- Emotions
- Noise
- Size

EFFECTIVE COMMUNICATION

- Adjust to the world of the receiver
- Use feedback
- Face-to-face communication
- Use reinforcement
- Use direct, simple language
- Suit the actions to the word
- Use different channels
- Reduce problems of size

HOW TO LISTEN

Effective listeners concentrate on the speaker, respond quickly, ask questions frequently, and make many comments and notes. They also stay alert with minimum interruption.

Delegating

WHAT IS DELEGATION?

Delegation takes place when you deliberately give someone the authority to carry out a piece of work that you could have decided to keep and carry out yourself. The main advantage of delegation is that it enables you to focus on the things that really matter in your job – those aspects that require your personal experience, skill and knowledge.

APPROACHES TO DELEGATION

Managers should know:

- When to delegate
- What to delegate
- Who does the work
- Clarifying expectations
- How to monitor performance

Managing Hybrid Workers

APPROACH TO HYBRID WORKING

It is necessary to consider carefully:

- The scope for hybrid working

- How to respond to requests for hybrid work
- How remote work should be organized
- The provision of advice to hybrid workers
- How the work objectives should be clarified
- How the performance should be managed
- How to encourage team working
- How to support

Managing Change

THE PROCESS OF CHANGE

The process of change involves moving from the present state, through a transitional state, to a future desired state. It starts with an awareness of the need for change or that change is happening.

KOTTER'S 8-STEP CHANGE MODEL

1. Establish a sense of urgency
2. Form a powerful guiding coalition
3. Create a vision
4. Communicate the vision
5. Empower employees
6. Create short-terms wins
7. Consolidate improvements
8. Institutionalize new approaches

10 GUIDELINES FOR CHANGE MANAGEMENT

1. Requires strong commitment and visionary leadership
2. Proposals should be based on a convincing business case by practical implementation
3. Change is inevitable
4. Have hard evidence and data on the need for change
5. People support what they help create
6. Change will always involve failure as well
7. It's easier to change behavior by changing processes, structure, and systems
8. There are always people who can act as champions of change
9. Resistance to change is inevitable
10. Every effort must be made to protect the interests of those affected by change

Part 3: Leading, Motivating and Engaging People and Teams

Leadership

WHAT LEADERS DO

Leadership is the process of developing and communicating a vision for the future, motivating and guiding people and securing their engagement. The three essential roles are to define the task, achieve the task, and maintain effective relationships.

LEADERSHIP STYLES

The main types of styles are autocratic or democratic, controlling or enabling, and task oriented or people centered.

WHAT MAKES A GOOD LEADER?

Effective leaders are confident and know what they need to do. They have the ability to take charge, convey their vision to their team, get their team members into action and ensure they achieve their agreed goals.

Motivating People

MOTIVATION DEFINED

Motivation is the process of getting people to move in the direction you want them to go. Intrinsic motivation is when the work someone does is personally rewarding. Extrinsic motivation is what is done to or for people to motivate them.

MOTIVATION THEORIES

Goal theory states that motivation and performance are higher when individuals are set specific goals and when there is feedback on performance. Expectancy theory states people will be motivated when they are clear about the goals they are aiming for and are aware of the rewards they will get from achieving the goals.

Enhancing Engagement

DRIVERS OF ENGAGEMENT

Engagement is best enhanced when employees have meaningful work that effectively uses their skills and provides them with freedom to exercise choice.

WHAT MANAGERS CAN DO

Managers play a vital and immediate part in increasing levels of employee engagement. They do this by exercising leadership and ensuring that their team members are clear about what they have to do, acquire the skills required, and appreciate the significance of their contribution.

Managers play a vital and immediate part in increasing levels of employee engagement.

Part 4: People Management Activities

Recruitment and Selection

THE NATURE OF RECRUITMENT AND SELECTION

Recruitment is the process of finding and engaging the people you need. Selection is that part of the process concerned with deciding which applicants or candidates should be appointed jobs.

DEFINING REQUIREMENTS

It is necessary to define in a role profile what you are looking for. This provides the information required to post vacancies, brief agencies or recruitment consultants, and assess candidates.

SCREENING APPLICATIONS

Screening applications to decide who should be interviewed means reviewing responses to an invitation to apply for a job. These can be sorted initially into three categories: possible, marginal, and unsuitable.

SELECTION INTERVIEWING

The most important skill required in selection interviewing is conducting a structural skill-based interview. This is one based on predetermined questions put to all the candidates so that they can be compared against the same criteria.

Developing People

HOW LEARNING HAPPENS IN THE WORKPLACE

Research has established that 70 percent of learning takes place as a result of the individual's work experience, 20 percent from colleagues, and only 10 percent from formal training courses.

HOW MANAGERS HELP PEOPLE TO LEARN

Specific steps to help individuals learn:

- Induction
- Continuous learning
- Job instruction
- Preparation
- Presentation
- Demonstration
- Follow-Up
- Coaching
- Mentoring

Managing Individual Performance

WHAT IS PERFORMANCE LEADERSHIP?

As performance leaders, managers set the direction by clarifying roles and objectives, make available the resources needed to get results, motivate their team members, help people to develop their skills, monitor their progress, provide feedback by means of constructive conversations, and ensure that corrective action is taken when necessary.

PERFORMANCE LEADERSHIP SKILLS

Defining objectives: Objectives indicate what has to be accomplished. From time to time, a more formal review of objectives can be undertaken to make sure they are aligned to the goals and properly reflect requirements.

Feedback: Feedback is provided by managers informally during the year or formally in performance review meetings.

Managing Team Performance

AGREEING PERFORMANCE OBJECTIVES

Performance objectives for teams are agreed in much the same way as individual objectives. They will be based on an analysis of the purpose of the team and its accountabilities for achieving results.

AGREEING PROCESS OBJECTIVES

Process objectives describe how the team is expected to function in achieving its performance objectives. They are best decided by the team getting together and agreeing how they should conduct themselves as a team.

CONDUCTING TEAM PERFORMANCE REVIEWS

Team performance review meetings analyze and assess feedback and control information on their joint

achievements against objectives and project plans. It could include general feedback and review, work reviews, group problem-solving, and updating objectives.

Managing Reward

REWARD SYSTEMS

A reward system consists of explicit practices and procedures that are organized and managed as a whole.

APPROACHES TO REWARDING PEOPLE

Financial rewards: Such rewards should be perceived as fair, equitable, and consistent. They will work better if the system is transparent.

Non-financial rewards: This can be recognizing their contributions, giving people more responsibility, and providing them with the opportunity to achieve or grow.

MANAGING WITHOUT A REWARD SYSTEM

If you do not have the support of a formal reward system, you may largely have to make decisions yourself on what people should be paid.

Part 5: Handling People Problems and Issues

Approaches to Handling People Problems

PRINCIPLES

Four principles:

1. Be really clear with staff members
2. Your tone matters
3. Talk, don't scold
4. Try writing out talking points and practicing them beforehand

APPROACH

Basic approach in tackling people problems:

1. Get the facts
2. Weigh and decide
3. Take action
4. Check results

Dealing with Disciplinary Problems

TAKING DISCIPLINARY ACTION

Whether or not there is a formal procedure, you need to take the following steps when planning and conducting a disciplinary interview:

1. Get all the facts in advance
2. Invite the employee to the meeting in writing
3. Ensure they have reasonable notice
4. Plan how you will conduct the meeting
5. Line up another member of management to take notes
6. Start by stating the complaint and refer to the evidence
7. Give the employee plenty of time to respond and state their case
8. Take a break as required to consider the points and relieve pressure
9. Consider what action is appropriate
10. Deliver the decision, explain why it was taken, and confirm it in writing

DISMISSING AN EMPLOYEE

If you have to dismiss an employee you should:

- Meet when the office is quiet
- Keep meeting formal and organized
- Write what you are going to say in advance
- Be polite but firm
- Ensure the employee clears their desk
- See the employee off the premises

Dealing with Individual Performance Problems

You have to spot that there is a problem, understand the cause of the problem, and decide on a remedy and make the remedy work. Poor performance can be the fault of the individual but it could arise because of bad leadership or problems in the system of work.

10 Steps to dealing with the unsatisfactory performance:

1. Identify the areas of under-performance
2. Establish the causes
3. Agree on the action required
4. Ensure the necessary support is provided
5. Monitor progress and provide feedback
6. Provide additional guidance
7. If under-performance persists, spell out precisely what improvements are required

8. If there is no improvement, consider an alternative job
9. Issue a written warning of dismissal
10. Take the action required to dismiss the employee

Dealing with Negative Behaviour

CAUSES OF NEGATIVE BEHAVIOUR

There are many causes of negative behavior, which could include; a real or imagined slight from a colleague, feeling of being put upon, belief that the contribution is neither appreciated nor rewarded, resentment, or anger directed at the company or you.

DEALING WITH THE PROBLEM

If you have to deal with this problem, it is best to handle it as it is happening. The discussion should have three clear objectives: to discuss the situation with individuals, to establish the reasons for the individuals' negative behavior, and to discuss and agree on any actions individuals could take to behave more positively.

DISCUSSING THE PROBLEM

S tart by asking generally how individuals feel about their work. You will then have to discuss the problem. If the response you get does not bring out the problem as you see it, then you have to explain how the behavior gives the impression of being negative.

ESTABLISHING CAUSES

If the negative behavior is because of a grievance that you or the organization have done, get individuals to spell this out precisely as possible. It may emerge that the problem may be family troubles or worries about health or finance.

TAKING REMEDIAL ACTION

If the problem rests with the individual, the objective is to get them to recognize that corrective action is necessary and what they need to do about it-with your help as necessary. If there is anything specific parties involved in the situation can do, then a joint problem-solving approach can be adopted.

Dealing with Absenteeism and Timekeeping Issues

ABSENTEEISM

In the case of persistent absenteeism, start with a review meeting to discuss the causes and agree on what needs to be done to improve it. Indicate that you expect absence levels to improve and if this does not happen the individual can expect more formal disciplinary action.

HANDLING POOR TIMEKEEPING

If you are faced with persistent lateness and your informal warnings seem to have little effect, you may be forced to invoke the disciplinary procedure. This can go through the successive stages of a recorded oral warning, a written warning, and a final written warning. After that, disciplinary action would have to be taken.

Handling Challenging Conversations

THE NATURE OF CHALLENGING CONVERSATIONS

Challenging conversations may arise when it is necessary to:

- Investigate a complaint
- Deal with a grievance
- Comfort or reassure someone
- Tackle a personality clash
- Deal with delicate situations

Approach to handling a challenging conversation

1. Prepare for the conversation
2. Plan the conversation
3. Carry out the conversation
4. Reach a conclusion

Tips for handling challenging conversations.

- Don't wait too long
- Set the right tone from the start
- Focus on the issue
- Allow people to have their say
- Keep an open mind
- Acknowledge their point of view
- Discuss the options for the situation
- Define the way forward

Giving Bad News

How to give bad news

1. Think hard and carefully before breaking bad news
2. Don't put off doing it
3. Explain the business context clearly
4. Understand how the news might be received by different people
5. Be as honest and open as you can
6. Give time for the news to sink in

7. Listen to reactions and respond appropriately
8. Be supportive and caring

Managing Bias

MINIMIZING BIAS IN ORGANIZATIONS

The types of bias, the reasons for bias, and what can be done about it needs to be covered in depth in induction and leadership development courses.

MINIMIZING BIAS AT THE INDIVIDUAL LEVEL

The best way to prevent bias from influencing the way you think or make decisions is by being aware that it exists in the first place. If you appreciate how you might be biased, you can take steps to avoid or at least minimize biased judgements and decisions.

Dealing with Bullying and Harassment

WHAT THE ORGANIZATION CAN DO

Organizations should have an anti-bullying policy which states that bullying will not be tolerated and that those who persist in it will be subject to disciplinary action, which could be severe.

WHAT ACTUALLY HAPPENS

The problem is while organizations may have bullying and sexual harassment policies, they depend on their line managers to implement them.

WHAT YOU CAN DO ABOUT IT

First you have to recognize that bullying and sexual harassment are real problems. Next you should familiarize yourself with your organization's bullying and harassment policy to make yourself aware of what you should do to minimize it in your department and how you should deal with it when it occurs.

Managing Conflict

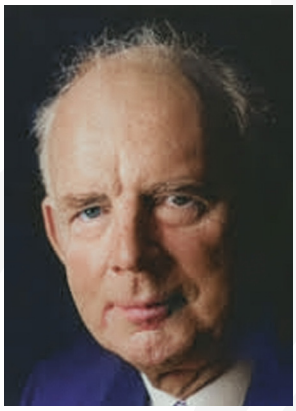
HANDLING INTER-GROUP CONFLICT

There are three ways of resolving inter-group conflict: Peaceful coexistence, compromise, and problem solving.

HANDLING INTERPERSONAL CONFLICT

The approaches to dealing with interpersonal conflict are withdrawal, smoothing over differences, reaching a compromise, counseling, and constructive confrontation.

The role of manager is oftentimes not easy, and in many times it becomes hard to navigate what the company needs. However, real management starts with self-awareness and emotional intelligence. In doing this, people are able to not only set an example for their employees, but can start to create an environment that nurtures people to work their best. Author Michael Armstrong starts from the basics for new managers while also providing valuable information for veteran leaders. He covers topics relating to achieving results through people management, leadership styles, types of motivation, delegating tasks, interviewing candidates, managing performance, rewarding employees, and handling various problems that arise in the workplace. With this comprehensive information, every front-line worker will have the tools to make a happier and more functional workplace.



Michael Armstrong is a Companion and former Chief Examiner of the Chartered Institute of Personnel and Development (CIPD), a managing partner of E-Reward and an independent management consultant. Prior to this he was an HR director of a publishing company. He is based in London, UK. He is the UK's bestselling author of Human Resource Management books including *Armstrong's Handbook of Human Resource Management Practice*, *Armstrong's Handbook of Strategic Human Resource Management* and *Armstrong's Handbook of Reward Management Practice.*

THE SUMMARY IN BRIEF

People are complex, unpredictable, and endlessly fascinating. Unlike machines, they cannot simply be fixed when something goes wrong. Yet so often, we fall into the trap of trying to "fix" others—or even ourselves—when challenges arise. We assume there must be a flaw to correct, a behavior to change, or a problem to solve. The truth is, people are not broken; they are shaped by their experiences, their history, and the world around them. Understanding this is the first step toward building better relationships, whether at work, at home, or in our wider communities.

In ***How to Succeed with People: Remarkably Easy Ways to Engage, Influence and Motivate Almost Anyone***, Paul McGee explores the principles and strategies for dealing effectively with people, drawing on real-life examples, psychology, and decades of experience managing individuals from all walks of life. From recognizing the impact of past experiences and generational differences to learning when to challenge, when to step back, and how to communicate in ways that truly resonate, the focus is on influence rather than control. By investing in relationships, showing respect, and fostering understanding, we can create environments where people thrive and where our interactions are more productive, meaningful, and positive.

IN THIS EXECUTIVE BOOK SUMMARY

- Learn to recognize how past events shape behavior, attitudes, and responses in daily interactions
- Discover strategies to influence and motivate others through clear communication, feedback, and balanced assertiveness
- Develop the ability to manage change and resistance by guiding teams effectively
- Review your attitudes, biases, and expectations to improve relationships, practice empathy, and respond thoughtfully

SECTION ONE

Stop, Understand

People Can't Be Fixed

Clare seemed very distressed. "I'm thirty years old, unemployed, and still live at home with my parents. There are only two reasons why I can't get a job: either there's something wrong with the world, or there's something wrong with me. Clearly, the world isn't to blame, so the problem lies with me. I need fixing. Can you help?"

Clare had a very black and white view of life. But she fell into a trap many of us can fall into—believing people can be fixed. People are not machines. A car or computer may need a faulty part replacing, but people are more complex. As soon as you start looking to "fix" people or "fix" yourself, you're in trouble.

We're so used to getting "things" fixed that we start believing we can do the same with people. But there are no instruction manuals when it comes to dealing with people. We're complex, inconsistent, and react differently depending on our mood. You cannot treat everybody the same and expect the same outcome.

So stop looking to fix people. People cannot be fixed—only helped, encouraged, understood, and influenced.

The Mystery of History (Part 1)

Imagine managing people from different backgrounds and nationalities, aged between 17 and 35, for over 25 years. Imagine your performance being judged not only by your boss but by millions around the world—every move scrutinized by the media. Welcome to the world of Sir Alex Ferguson, manager of Manchester United from 1986–2013, winner of 38 trophies, and proof that results can be achieved through people.

Sir Alex would never sign a player without exploring their history and background. To him, success was not just about talent, but also character. Everyone we encounter has a history. The more we understand it, the more we can understand their behavior and how to deal with them.

History matters. It shapes our values, perceptions, and ways of dealing with life. It explains differences across generations—Baby Boomers, Generation X, Millennials, and Gen Z—all shaped by vastly different worlds.

People's behavior often stems from their past experiences. Resistance, negativity, and even cynicism may come from past hurts. As Rachel Held Evans said, "Cynicism is calcified anger."

If you work with, live with, or love someone, their history offers clues to understanding them.

The Mystery of History (Part 2)

During the Covid-19 pandemic, many people worked from home, enjoyed greater freedom and flexibility, avoided the daily commute, and reassessed their priorities. Having grown accustomed to this way of life, some now feel entitled to work on their own terms, which explains organizational challenges. Young people's education and social lives were disrupted too, and it may be years before we see the full impact.

A previous work culture also matters. People may have worked in a very different work culture than the one they're in now. So if you're facing challenges with your team, find out how they were previously managed or what their expectations are. Depending on what they say, you might have to revise those expectations.

People's upbringing will also influence how they both see and interact with the world. Everyone has a backstory, and that history could be vastly different from yours.

Spend more time being curious about people, and less time judging them. Differences are not always visible.

Most People Suffer From S.A.D.S

Ever known anyone for years and then realized you know lots about them, but they actually know very little about you? Or someone who seems very insightful about everyone but themselves?

Then you've probably met someone with S.A.D.S.—Self-Awareness Deficiency Syndrome. The very nature of this condition means the person suffering from it is entirely unaware of the fact. They're oblivious to their behavior and the impact it has on others.

You yourself may be prone to bouts of S.A.D.S. Rarely do we truly see ourselves as others see us.

The condition can appear in varying degrees of severity. In extreme cases, there may even be a medical reason for people's seemingly gross lack of interpersonal skills and self-awareness.

Although you may encounter people who show clear signs of this tendency, we can all experience mild symptoms. This insight will help you understand why some people you en-

> People cannot be fixed—only helped, encouraged, understood, and influenced.

counter will be very difficult to deal with, but it will also keep you humble enough to recognize that none of us is immune from it, and that we all need help to improve from where we are now.

Some People Are Lightbulbs

The author, Paul McGee, trained to be a probation officer as part of his degree. People and how they behave fascinated him, but after four years, he decided not to pursue it as a career. During interviews for other jobs, he didn't want to get bogged down explaining why, having already fallen into that trap before. So he came up with a cunning plan.

Interviewer: "So why didn't you want to pursue a career as a probation officer?"

He replied: "How many probation officers does it take to change a lightbulb? One—but only if the lightbulb wants to change."

Most interviewers smiled and moved on. His plan had worked. But there's a deeper point: some people are lightbulbs—they refuse to change. Don't waste vast amounts of time and energy trying to change people who don't want to.

So why might someone behave like a lightbulb and not want to change? Some people want attention; others cling to fixed beliefs because it feels safe. Change requires courage and humility—qualities not everyone has. But people don't have to remain "lightbulbs." They can change, if *they* want to.

Why Intelligent People Do Stupid Things

Ever witnessed the behavior of someone and thought, "I can't believe they'd do something so stupid?" Ever thought to yourself, "I can't believe I just did that. What was I thinking?"

When we're closely involved in a situation or physically and emotionally tired, our rational perspective often takes a back seat. In its place steps up our emotional brain and takes a firm control of our decision-making—sometimes with dire consequences.

When you're feeling mad, bad, or sad, you're not thinking straight—our brains drive us to act, not think. Never ever assume that logic is running the show. It isn't. And drugs and alcohol will exacerbate our "stupidness," but so too will increased stress.

You Get What You Tolerate

If you're managing people, you'll probably find these two statements useful: "We receive the performance (or behavior) we are willing to tolerate," and "My silence, denial, or avoidance gives approval to the situation."

Simple statements, yet very powerful.

Let's start with the first one: "We receive the performance (or behavior) we are willing to tolerate." If you tolerate people being continually late without there ever being any consequences, guess what will continue to happen? Tolerate people underperforming in your team, and they'll see no reason to change.

The question is, are you happy with what you're currently tolerating? Or do you just simply moan about it but continue to accept it?

Now onto that second statement: "My silence, denial, or avoidance gives approval to the situation." Let's chew over that one for a moment. In a nutshell, the reality is that your non-actions still have an impact. Doing nothing is still doing something.

When you stop tolerating and start talking, you lay down the path toward a better and potentially more positive relationship. And by doing so, you're more likely to succeed in dealing with people.

Why Change Is Complicated

Benjamin Franklin was a writer, inventor, scientist, and one of the Founding Fathers of the United States. Amazing what people did with their time before social media. He's often credited with the following quote: "In this world nothing can be said to be certain, except death and taxes." If he was alive today, he might add a third—change.

Do we really hate change? There's a common, widely held belief that people don't like change.

The fact is, we're quite comfortable with change when. . .

- It's our choice
- We're in control
- We see the benefits of changing
- We see the downsides of not changing

We might not actually hate change as much as we're sometimes led to believe, but it can still be very challenging.

People have a love–hate relationship with change, and that's why change is complicated.

Five reasons people resist change:

1. Change can be seen as a threat
2. Change can lead to a loss of status
3. Change can lead to a loss of control
4. A poor relationship with those implementing the change
5. Previous experiences of change

Humiliation Is for Amateurs

When it comes to dealing with people, humiliation is a sign of someone who has their own self-esteem issues or an indication of a complete lack of knowledge and experience in dealing with others.

Deliberately humiliating someone is not a form of motivation, but it is laying down the foundation for bitterness, resentment, and perhaps, even revenge in the future.

If you do have to give someone some challenging feedback, remember this: Where you say it and who's present when you say it can be just as important as the actual words you use.

So if you want to influence and engage people and switch them on to your way of thinking, then take humiliation for a hike.

To make sure your communication is seen as less of a personal attack, and in order to soften the blow, if you have something to say try, "Do you mind if I play devil's advocate for a moment?" You're actually gaining the other person's permission to challenge their ideas.

Remember that people often find it easier to hear hard truths from themselves rather than from someone else. Instead of stating your critique outright, try asking, *"What've you learned from that experience? If you had a chance to do that again, what would you do differently?"*

People may need to be challenged, but they do not need to be humiliated. Ever.

Being Nice Won't Always Work

There's a huge myth around dealing with people that states you should always be nice to them. If your main goal in life is to be popular, go and sell ice cream.

Here's the deal: if you want to make a positive difference in life, you need to recognize that you're not always going to be liked by everyone. Being too nice can send mixed and unclear messages. The reality is that people can exploit your niceness as a weakness. You're not succeeding with people with this approach. You're failing. To be successful with people, it's more important to be respected than to be liked by others.

You may of course have built up such a good relationship with people that you're respected and liked. Great. Wonderful. But if you had to choose which of the two matters most, choose respect.

Now please don't go out of your way to be nasty. But if an underperforming team member sees you as less of a soft touch, then perhaps you're discovering the benefits of not being too nice. You don't have to ditch your diplomacy to do so, but you do need to ditch the need to always be liked.

It Takes Two to Tango

Very often when we begin to recount a particular event or incident, we'll have a tendency to immediately tell it with a certain degree of bias and emphasis. And to be fair, it's unlikely we'll want to present ourselves in the worst possible light. As a consequence, when we're telling our version of events, certain information may be completely left out, and the context or background to the event may be entirely overlooked.

So it's helpful to understand that we can all be prone to putting our own particular angle on a story and tend to subtly alter and distort the facts in our favor, sometimes without realizing we're doing so.

That's why when it comes to succeeding with people, we need to be especially aware of our own personal built-in bias to do this. So remind yourself that on occasions, it does take two to tango.

No Investment, No Return

Recently, a branch of a poorly performing retail store had been turned around by the introduction of a new manager.

That's not the most surprising thing you'll ever read, is it?

> Where you say it and who's present when you say it can be just as important as the actual words you use.

But the next bit might be.

The hundred or so full- and part-time staff of the store reported one of the main reasons for their improved performance and increased morale was this: the new manager used and remembered everyone's names.

They actually showed an interest in them as people, not just in their performance. Never underestimate the large impact of a small gesture. It's easy to see people every day and yet not really know them. Great relationships with customers, colleagues, or loved ones don't just happen magically. They take time. When you fail to invest any time with people, don't be surprised when you fail to see any return.

If you really believe people are important, then quit hoping to *find* the time to invest in those relationships. *Make* the time.

If you're a manager, remember investing in people will also mean investing in their development. Recruiting talent can be a costly and time-consuming exercise, but if you want to retain people, recognize that you will need to invest in them if you want to see a return on their talent.

SECTION TWO

Move On

Have Realistic Expectations

Perhaps at the root of some of our disappointments, frustrations, and conflicts are the unrealistic expectations we have of other people and how they should respond and behave in situations.

At times, we may even try to justify these feelings by saying, "I would never behave like that if I were them." But that's the point: you're not them.

You won't always know their history, background, values, or who their own role models have been. You don't necessarily know what current challenges and concerns they may be facing, or insecurities they're struggling with.

It's understandable that you want others to live up to your standards, but it's not always realistic.

Let Sleeping Dogs Lie ... Sometimes

On some occasions, it might be best to accept a situation or behavior for the benefit of a long-term relationship.

Some may see this as contradictory advice—it isn't.

If you want to succeed with people, you need to avoid a one-size-fits-all approach. Being flexible and adaptable is crucial to dealing with people, so sometimes a different approach or strategy is required.

But what "things" might you want to tolerate? That's for you to decide. Assertive people sometimes choose not to be assertive. Perhaps an important question to answer is, "By letting sleeping dogs lie, am I comfortable both with the consequences of my decision and my reasons behind it?"

Choosing to lose the occasional battle in order to win the overall war can be an effective strategy. Choosing to be assertive all the time over every single issue is both tiring and boring. It can lead to issues escalating when they didn't need to, feelings being hurt and relationships being damaged.

Check Out Your Attitude

If you've ever changed cars, moved house, or been pregnant (or known someone close who has), you'll probably be aware of a strange phenomenon. Psychologists call it "attention awareness." When you're thinking of buying another car, you suddenly start spotting that particular model everywhere. When you put your house up for sale, you can't drive down a road without noticing "For Sale" signs. And when your partner is pregnant, you notice just how many women are also expecting.

Humans are very adept at noticing what is relevant or important to them at that particular time. If you notice and talk about a particular positive or negative trait in another person, you'll then continue to notice it. What you focus on magnifies. Your negative attitude toward someone is fueled by noticing negative things about them, which in turn reinforces your negative views of them.

So if you're not looking for the positives in people and only focusing on the negatives, guess what ends up in the junk box? Their positive traits and behaviors.

Be Willing to Be Wrong

We like people who are decisive, don't we? People who are clear about what they think and believe. People who don't dither or change their minds on a whim. Focus, determination, and confidence are all traits to be admired. They're signs of strength. They're traits every leader needs to possess to succeed.

And yet these qualities could also be the cause of your downfall. Focus can lead to being blinkered. Determination could result in stubbornness to change despite what the facts are telling you. Confidence could lead to a dangerous cocktail of arrogance and complacency.

Rarely at the top of a list of leaders' top traits would be "humility" and "a willingness to be wrong." But such traits could be invaluable if you're to succeed in life and with people.

An overused strength can actually become a weakness. There may only be a subtle difference between determination and stubbornness, but one leads to success whilst the other makes you look stupid.

A willingness to be wrong and an openness to listen to others' views can be invaluable. It's not a sign of weakness to admit you may be wrong; it's often a sign of wisdom.

Don't Treat People as You Want to Be Treated

It seems, on the surface, such a noble suggestion: treat people as you would want to be treated. And to be fair, it's pretty good advice—up to a point.

Treating people with the degree of respect and courtesy that we would appreciate does seem a fairly reasonable starting place when dealing with others. But please don't fall into the trap of thinking that what floats your boat also floats mine.

In fact, treating people as you want to be treated could have disastrous consequences and be the reason why you don't succeed with people.

Perhaps your relationship with someone has stalled because you've not taken time to consider what it is they see as important and what they would value. This applies equally at work as it does at home. Don't assume people value the same things you do. Our personalities are different, our interests may too, and perhaps more importantly, so may the things that do and don't motivate us.

Remember, what fits you might not fit them, so start treating people as they want to be treated. And if you're not sure how people want to be treated, ask.

How to Make Change a Success

If you're going to succeed with people, you'll need to know how to help them deal with change. Change can be embraced or fiercely resisted. To make it less scary and more achievable, apply these five strategies:

1. **Give clarity.** When people feel in the dark, they draw negative conclusions. Silence creates an environment where people speculate and anxiety escalates. Be clear about the situation and answer questions such as "How will this change affect me?" and "What's expected of me?" A lack of clarity breeds confusion.
2. **Develop competence.** People feel threatened when they're out of their comfort zone and lack the tools or training they need. Support them and recognize that some will adjust faster than others.
3. **Nurture confidence.** Confidence is rooted in competence and experience. Give feedback, encouragement, and help people focus on progress, not perfection.
4. **Give control when possible.** To positively embrace change, people need to feel consulted and involved in as many aspects of the change as possible. When there is an opportunity to give people some control, no matter how small it might be, take it.
5. **Help people feel cared for.** Treat them as individuals, not numbers. Keep them informed, be available, and show you have their back.

Four Killer Questions You Have to Ask Yourself

Think of a person with whom your relationship is important—someone where a breakdown would have consequences. With this person in mind, reflect on these four questions:

1. What's going on in their world at the moment?

   It's easy to be wrapped up in your world and fail to show interest in others. If your answer is sketchy, spend more time asking about them.

2. What's important to them at this time?

   People may need feedback, time, support, or space.

3. Are you listening to understand or listening to defend?

   Try lowering your defense. Listening to understand doesn't mean you agree—it means you value their perspective.

4. Have you clearly communicated your perspective?

   Don't assume people know your priorities. Explain the "why" behind your actions.

> When there is an opportunity to give people some control, no matter how small it might be, take it.

How to Make Criticism Count, Not Crucify

Have you ever received criticism or had to give feedback to anyone? It's not easy, is it? Sensitivity, diplomacy, and a balanced, constructive approach are required when feedback could be construed as criticism. No matter how self-assured you are, you're more likely to fast-forward past "constructive" and pause on "criticism." Using certain words can backfire, so stay clear of "weaknesses" and avoid using the phrase "constructive criticism" altogether.

Challenging people without undermining their confidence is not easy. Rather than sugar-coating or attacking, focus on solving issues—not fixing blame. When giving feedback, talk about "what worked well" and "even better if..."

For example: "What worked well was the start of your presentation." "Even better if you gave more thought to how you ended it."

You've made your criticism count, not crucify.

Fix problems, not blame.

Work Out Why They're Whinging

There's a lot to moan about in the world, but negativity is normal. In fact, it might even be necessary. An over-optimistic approach can lead to self-delusion. The issue is not whether people are negative, but what has caused them to feel that way and how long they're likely to stay in that mindset. Negative people can often be mocked and dismissed. But rather than ignore their behavior, try to uncover "what you don't see." Be less dismissive and seek to understand why people are thinking and behaving as they are.

Some people wear their coat of negativity like an old friend—it's comfortable. They may never become naturally optimistic, but you can help them manage it and focus more on the positives. Others may lack self-confidence; their negativity could be a confused cry for help. Encourage them and play to their strengths.

Sometimes negativity comes from a perceived sense of injustice. Appreciate where they're coming from. Your goal is to help people identify the reasons for their negativity and help them through it.

How to Make People Feel S.P.E.C.I.A.L

Have you ever thought about why people fall out with each other? Behind all the gossip and fallout lies a simple fact: "I didn't feel important." Feeling ignored, ridiculed, or taken for granted can trigger frustration and hurt. When you peel back the layers of anger, you'll often find someone who doesn't feel valued or important.

When people feel valued and important, you'll find them easier to communicate and deal with, reduce the amount of conflict you experience, and increase the quality and depth of your relationship with them, both in and outside the workplace.

To help us achieve that outcome, remember S.P.E.C.I.A.L.:

S – Serve

Focus on meeting others' needs. Success comes from helping others achieve their goals. Serving is an attitude from which your behavior flows.

P – Personalize

Make encounters personal. Treat people as unique individuals, not one of the crowd. Showing thought, even in small ways, has a huge impact.

E – Encourage

Encourage others. No one ever says, "I've had too much encouragement." The word means "to give courage"—to start, not to quit, or to aim higher. Words are powerful; they build up or bring down. In a world of setbacks and criticism, everyone needs the oxygen of encouragement.

C – Courtesy

Courtesy lies at the heart of showing respect for others. It is about thinking of other people's needs as well as your own—replying to emails, returning calls, being on time, and not checking your phone during conversations. When you show courtesy, you build likeability and increase your chances of influencing others.

I – Interest

Be interested in people. Stop obsessing about your own world. Ask questions and listen to answers. Remember what's been said; it helps you stand out.

A – Appreciate

Show appreciation. Don't take others for granted. Write a note, send a text, make a call, or give thanks—just do it.

L – Listen

Listening is hard, but it helps others feel understood and important. Sometimes people don't want advice—they just want to be heard.

How to Pick People Up When They're Feeling Down

When someone is feeling dejected or demoralized, help them recognize that emotional responses to setbacks are normal. Feeling mad, bad, or sad is okay, but people can stay "wallowing" too long, which can lead to irrational judgments.

Help them see their emotions as temporary. Reframe failure: failing isn't final, and it doesn't make someone a failure. It's simply a part of their learning journey. Acknowledge disappointment, then help them see it as feedback for next time. Look for positives. Point out successes without dismissing pain and ask questions to help them identify positives themselves. Go for quick wins. Small accomplishments build confidence and momentum.

Focus on progress, not perfection. Then ask, "What's the one action we can take now that shows progress?"

Change location. A new environment—pub, cafe, countryside, or a few days away—can provide perspective, stimulate ideas, and help people rebuild, recover, and recharge.

How to Talk So People Listen

To successfully influence, engage, and motivate others, it's important to understand what does and doesn't work when communicating. Three common mistakes switch people off:

1. Drowning people in detail
2. Failing to make your message relevant to your audience
3. Focusing on facts while forgetting feelings

People seek clarity amidst clutter, so brevity is best. Make your message relevant by considering what your audience needs to hear. Appeal to both intellect and emotion; facts alone rarely bring change.

Here are five practical solutions that can help you communicate in a way people listen to:

1. **Recognize their reality** by understanding their needs and concerns.
2. **Remember the 90/90 rule**: 90% of your impression is made in the first 90 seconds.
3. **Begin with the end in mind** by being clear on the purpose and outcomes of your communication.
4. **Point out the pain before providing the prescription** so people feel the problem before accepting a solution.
5. **Invest in yourself** by practicing and applying these approaches. Communicate facts and feelings to engage people and prompt action.

The Ball's in Your Court

Applying even a few of the ideas we've explored can be life-changing in both your personal and professional lives. But whether they make a difference is entirely up to you.

Your challenge is not acquiring more knowledge. It's not even about coming up with new ideas. It's about doing something with what you know. Everything we've explored so far is easy to do—but it's just as easy not to do.

The hope is that you now feel equipped and inspired to leave your own legacy in people's lives. The great thing is, you can—you can actually start today if you want to.

The ball is in your court.

Paul McGee's career has been anything but linear—from working as a probation officer in West Yorkshire to managing a team in a beefburger factory in East Anglia. After developing ME, a chronic fatigue syndrome, in his twenties, he rebuilt his life by starting his own business and eventually became an international speaker, coach, and bestselling author. Over the last 30 years, Paul has spoken in more than 40 countries on change, resilience, self-leadership, and communication. In 2019, he was awarded the title of Visiting Professor by the University of Chester. He enjoys warm days outdoors, comedy, football, and time with his wife, children, and cats.

THE SUMMARY IN BRIEF

This book offers an actionable, experimental resource for leaders to increase their personal and professional quality of life. You're not a leader trying to be human. You are a human first, trying to lead other humans. As we hear more and more often, there are no hard and soft skills, only human and technical skills. This book will help you exponentially grow your human skills while fostering the resilience and curiosity you need to bolster your technical skills. There is no secret sauce that's already bottled and ready to be bought. Each of us needs to make our own secret sauce, and that takes a lifetime.

Human First, Leader Second: How Self-Compassion Outperforms Self-Criticism is less "prescriptive inspirational quote over heavily filtered mountaintop picture" and more "you and me in the kitchen tweaking the recipe together and taste testing as we go." In short, Massimo Backus won't tell you what to do, but his book will help you discover what you already know deep down. In every chapter, you will find real-world examples, questions for self-discovery, and practical exercises to apply the concepts of self-compassionate leadership.

IN THIS EXECUTIVE SUMMARY:

- Identify which outdated leadership personas limit potential.
- Learn why self-compassion is crucial in leadership.
- Grasp how the Ward Model helps navigate leadership challenges.
- Comprehend how self-compassion can transform organizational culture.

The Two Jobs: Take Off Your Leadership Costume

There is a universal struggle many leaders face: the tension between self-perception and the reality of how others see us.

We all carry outdated stories and limiting beliefs that shape our behavior, often leading us to hide our vulnerabilities and adopt protective personas, or "WIMPs" (Well-Intentioned, Misinformed Protectors). These personas aim to protect us from perceived dangers but often prevent us from reaching our true potential. The effort spent on maintaining these facades can drain our energy and stifle growth, both personally and within our organizations.

The Perfectionist

The perfectionist seeks external validation instead of intrinsic self-worth and sets unattainable goals and expectations for themselves and everyone else. Perfectionists strive to meet their personal standard of perfection, which isn't clearly defined, so they're doomed to failure from the start. They are always chasing an elusive ideal, never reaching it, then mercilessly judging themselves for being a failure. We are humans first, leaders second. To be human is to be imperfect and fallible and still know that we deserve love and respect.

The Hard-Ass

The hard-ass is more concerned with being right than being perfect and has high standards, always knows best, and refuses to accept being wrong. A hard-ass is hardest on themselves and wouldn't ask anyone to do anything they aren't willing to do themselves. Relentlessly pushing their team to achieve their best, the hard-ass is focused on accomplishing tasks rather than considering how people feel in the workplace. It's business, not personal. If fear is what turns a hard-ass into a bully or a jerk, self-compassion is what gives us the courage to explore the worst parts of ourselves instead of becoming defensive and recoiling in shame.

The Achiever

The achiever exhibits a perpetual sense of urgency, always asking, "Are we there yet?" Impatience characterizes their approach. Afflicted with an intense fear of missing out, they are constantly worried that if they're not on their game 24/7, someone younger, hungrier, and better will surpass them. The more we pursue external confirmation of our internal worth and let the world dictate whether we feel like "enough," the harder it is to escape that trap. By helping us calibrate and balance the external and internal, the doing and being, self-compassion allows us to loosen our grip to escape the trap.

The People Pleaser

The people pleaser conforms, avoids conflict at all costs, manages other people's emotions, and focuses on everyone else's needs to uphold harmony. Driven by a fear of not being liked or included, upsetting others, or making situations worse, people pleasers are scared to rock the boat and tend to go along to get along. They often say "yes" when they want to say "no" and find it challenging to establish clear boundaries. They prefer to absorb any underlying tensions and stress rather than face direct conflict. Labeled as peacekeepers, servant leaders, or doormats, people pleasers place a priority on being liked rather than respected for delivering hard truths or practicing candor.

The Imposter

The imposter feels undeserving of any success they've earned. Always worried about being found out for "who they really are," imposters feel like they've somehow cheated their way into whatever position they hold. They constantly minimize their abilities, lack self-confidence, and are notoriously bad at taking compliments. Their default response is self-deprecation.

The Contrarian

The contrarian goes against the grain, frequently playing devil's advocate and challenging norms. Contrarians habitually zig when everyone else zags. They "think differently" from everyone else—and "different," in their estimation, means "better." They're overconfident in their ideas and perspectives, considering anything new or norm-defying superior to established practices.

Understanding and integrating these protective aspects with self-compassion can transform them from leadership kryptonite into assets. By embracing our vulnerabilities and accepting our imperfections, we can foster a more authentic and empathetic leadership style. Ultimately, self-compassionate leadership is about recognizing that our greatest strength lies not in invulnerability, but in our shared humanity and the courage to be authentically ourselves.

Zero-Fluff Zone: What is Self Compassionate Leadership?

Early in his career, Sam Ramji climbed the corporate ladder at a leading global software company, eventually being

Repressing our needs, especially as leaders, is reckless and can have serious consequences.

offered a general manager position. However, after receiving a 360 assessment, Sam learned that while he pushed his team to excel, he often fell short in his own performance. The feedback led him to decline the promotion and return to his home state, where he spent the next five years focusing on his own growth as an individual contributor. This decision, which may have seemed like avoiding a challenge, was actually an act of self-compassionate leadership.

By stepping back from leadership and focusing on his personal development, Sam eventually returned to executive leadership with a renewed sense of purpose, and co-founded a new company.

Self-compassionate leadership starts with acknowledging our humanity and embracing awareness, acceptance, and accountability.

Self-compassionate leadership isn't about avoiding responsibility or indulging in self-pity. It's about recognizing our strengths and weaknesses, understanding our emotions without harsh judgment, and holding ourselves accountable in a way that fosters growth and resilience. This approach requires courage, vulnerability, and a willingness to face discomfort as we challenge old beliefs and embrace our authentic selves.

Awareness, acceptance, and accountability are the pillars of self-compassionate leadership. This holistic approach not only helps us lead more effectively but also allows us to bring our whole, authentic selves to our roles, ultimately creating a more empathetic and resilient leadership style.

The Ward Model: Navigating the Roundabout of Self-Compassionate Leadership

The concept of breaking free from destructive cycles is at the heart of the Ward Model, a framework designed to help leaders understand and manage the tensions between competing needs and impulses. The Ward Model guides us through six directions: Inward, Outward, Backward, Forward, Leeward, and Windward. Each of these represents a path to self-compassionate leadership.

The model emphasizes the importance of balancing these directions, and offers a flexible approach to leadership, helping individuals and organizations navigate these tensions with self-compassion, leading to more balanced, resilient, and effective leadership.

Awareness: Balancing Being and Doing

Repressing our needs, especially as leaders, is reckless and can have serious consequences. Research shows that leaders are more prone to anxiety, depression, and even heart attacks due to the high demands of their roles.

To truly lead effectively, we must cultivate awareness of our internal states—our physical, emotional, and mental well-being. This awareness allows us to engage more meaningfully with the world around us, both as humans and as leaders. Ignoring these aspects not only harms our health but also diminishes our ability to lead with authenticity and compassion.

The key to overcoming these challenges lies in understanding the connection between our gut, heart, and mind.

By embracing our emotions and understanding their connection to our values, we can make more informed decisions and lead with greater empathy and authenticity. This process requires self-compassion, which helps us navigate the complexities of our emotional landscape and align our actions with our core values.

Ultimately, leveraging our quality of being—our physical, emotional, and mental states—allows us to lead more effectively. By creating spaces that welcome vulnerability and genuine engagement, we can transform our working relationships and lead with humanity. The Ward Model, which balances the tension between being and doing, provides a framework for cultivating awareness and acceptance, the foundations of self-compassionate leadership.

Acceptance: Understanding Context and Clarity

During a workshop, Mehrsa, a successful corporate attorney, shared her experiences growing up in an immigrant family, burdened by high expectations and facing constant bigotry. Her tough exterior, once a necessary protective shell, had become restrictive, limiting her ability to connect with herself and others. She felt lost behind the armor she had built, but in that room, we all realized that we wake up every day trying to be someone we already are. The collective sigh of relief from the participants highlighted the importance of embracing our full humanity to grow as leaders.

The idea that we must disconnect our human suffering from our work personas is a misconception. In leadership, biases and false narratives often cloud our judgment, leading to fear-based decisions. However, by cultivating self-compassion, we can embrace flexibility, learn from our mistakes, and expand our leadership abilities.

Self-compassion provides a way to navigate suffering, whether it's stress, burnout, or pain, by acknowledging it, accepting it as part of life, and practicing kindness toward ourselves. This approach doesn't make us weaker; it strengthens us to face challenges head-on, transforming suffering into a catalyst for growth.

Understanding our values and purpose is crucial for leading a fulfilling life. Many of us struggle to identify our core values, often adopting those imposed by family, culture, or society. True self-reflection, supported by self-compassion, helps us uncover our authentic values and align our lives with them. This process may be uncomfortable, but it brings clarity, calm, and a sense of direction.

Ultimately, self-awareness and acceptance of our current reality are essential for designing the life we want, becoming the leaders we were meant to be, and living according to our highest values. By taking accountability and embracing our humanity, we can navigate the challenges of leadership and life with resilience and authenticity.

Accountability: Finding Comfort and Courage

Jess Almlie, an executive adviser with a relentless drive, has always felt a deep responsibility to be strong and perfect, a role shaped by her upbringing as the oldest of ten children. This pressure to be perfect led her to push herself relentlessly until she was diagnosed with Hashimoto's thyroiditis, an autoimmune disease that left her unable to function.

She described her WIMP as a relentless, anxiety-driven force that she tried to ignore by burying herself in work. But her fears about confronting it kept her from acknowledging its presence. The challenge lies in balancing this internal dialogue, understanding that sometimes we need to lean into discomfort and other times seek shelter.

Our WIMPs, though often seen as villains, are actually trying to protect us. They caution us against taking risks, but as adults, we have the ability to decide when to heed their warnings.

Understanding that our WIMPs are part of us, not separate entities, is crucial. We need to accept that they serve a limited purpose but don't have to dictate our actions. Self-compassion allows us to gently acknowledge these parts of ourselves and choose a different path.

Self-kindness is not a luxury; it's essential for accountability. It helps us set healthy boundaries, take care of ourselves, and model these practices for others. Self-kindness isn't about avoiding responsibility; it's about holding ourselves to a high ethical standard while being gentle with ourselves. Research shows that self-compassionate individuals take more responsibility for their actions and strive for higher moral standards.

Self-compassion is like having two best friends: one who comforts and supports us, and one who challenges us to grow. Both are necessary for balance and accountability. By continually practicing self-awareness, acceptance, and accountability, we can evolve into self-compassionate leaders who lead with both courage and kindness.

Perfectly Imperfect: How to Practice Progress

Carlos, a self-identified people pleaser, constantly sought approval and recognition for his hard work. At work, he felt frustrated by having to pick up others' slack, yet he found validation in being the rescuer and helper. His need for external validation led to him frequently doing extra work without receiving the rewards he believed he deserved. Carlos started an appreciation practice, where he identified three things he appreciated about himself daily. This practice shifted his focus from seeking external affirmation to building internal validation, slowly improving his self-worth.

Self-compassion helps us achieve our goals by normalizing the challenges and setbacks we encounter.

This shift demonstrated Carlos's growth as a leader—he acted with self-compassion, which made him more resilient and emotionally agile. His experience illustrates how deploying self-compassion can improve individual leadership and, when modeled in the workplace, can transform an organization's culture.

By refusing the tyranny of perfection and embracing setbacks as part of the human experience, we can adopt a more open and resilient approach to achieving our goals. This mindset allows us to focus on progress rather than perfection, much like adopting Adam Grant's "scientist mind" from ***Think Again***. This approach encourages questioning assumptions, accepting new information, and caring more about self-improvement than proving oneself.

Self-compassion also plays a crucial role in fostering well-being at work. Research shows that self-compassion activates the soothing system in our brain, helping us feel safe and connected, which is essential for maintaining mental health in the workplace. As leaders, modeling self-compassion and creating a safe environment for vulnerability can significantly impact team dynamics and overall organizational health.

Navigating difficult conversations with self-compassion and curiosity, rather than with cruelty disguised as "brutal honesty," helps build trust and resolve conflicts without burning bridges. Feedback, a challenging aspect of leadership, should be approached with a focus on intent and impact. While positive intent is important, it doesn't guarantee a positive impact. Leaders must be aware of how their communication is received and adjust accordingly.

Self-compassion helps us achieve our goals by normalizing the challenges and setbacks we encounter. By setting goals aligned with our values and creating personal connections to them, we increase the likelihood of success. Using if/then statements to plan for potential obstacles can also enhance our ability to stay on track.

In the process of achieving goals, it's important to celebrate progress, focusing on what has been accomplished rather than fixating on the end result. This approach fosters a sense of agency and growth, ensuring that progress is made even when the ultimate goal seems distant.

In summary, self-compassion is not just a personal practice but a leadership tool that can transform both individuals and organizations. By embracing self-compassion, we can create environments that foster growth, resilience, and collaboration, ultimately leading to more effective and fulfilling leadership.

Ripple Effect: Tiny Transformations Lead to Massive Change

Navy SEALs undergo a rigorous test called "drown-proofing," where they're bound and thrown into deep water. Surprisingly, the key to survival isn't strength or endurance but surrendering to the situation—letting yourself sink, then gently pushing off the bottom to rise for a breath. This counterintuitive approach parallels self-compassionate leadership, where letting go of outdated leadership methods and embracing our humanity allows us to navigate challenges with calmness and resilience. As leadership expert Marshall Goldsmith famously said, "What got you here won't get you there," meaning that old ways of thinking and leading must be reworked for us to reach our true potential.

Many leaders carry "armor"—emotional defenses like bravado, detachment, or people-pleasing—that they believe are necessary for success. However, this armor actually limits us. True leadership comes from embracing our shared humanity and letting go of behaviors that, while once protective, now hinder growth. Self-compassion helps us remove this armor and replace it with skills that allow us to lead with strength and grace.

The "hedonic treadmill" refers to our tendency to quickly return to a baseline level of happiness despite positive or negative events. This constant pursuit of fleeting pleasures, such as promotions or material gains, can lead to burnout. Instead, leaders should focus on personal growth, meaningful relationships, and a deeper sense of purpose, finding balance and contentment through the Swedish concept of lagom—"just the right amount."

Applying self-compassion in leadership creates the capacity to extend it to others, helping them grow and succeed. Effective leadership involves acknowledging each team member's humanity, supporting their growth, and creating an environment where resources and support are readily available. This approach can transform not just individual leaders but also entire organizations by fostering a culture of compassion, collaboration, and continuous evolution.

Leadership can often feel lonely due to competitiveness and the pressure to maintain one's position. However, self-compassion can combat this loneliness by connecting leaders to the shared struggles of others, reducing burnout, and fostering a sense of belonging. When leaders practice self-compassion, they model this for their teams, leading to higher engagement, resilience, and overall performance.

Traditional leadership models that rely on punishment and fear may yield short-term results but lead to long-term burnout and dissatisfaction. In contrast, self-compassion and positive reinforcement foster a growth-oriented mindset, motivating us to improve and achieve long-term success. Leaders who embrace this approach can transform their organizational culture by focusing on strengths and fostering resilience and innovation.

Elevated leadership comes from fully embracing our humanity, not from treating ourselves or others like machines. Leadership rooted in compassion recognizes the complexities of human life and focuses on the quality of our internal states, which in turn shapes our external results. By acknowledging our limitations and embracing our strengths, we can create a new narrative that empowers us to lead with dignity and purpose.

To close, leadership coach Bob Dunham offers a powerful declaration that encapsulates the essence of self-compassionate leadership: "I am a human being, and that is enough." This declaration serves as a reminder that we are not machines striving for perfection but humans with the power to create a future we care about by embracing our humanity and leading with compassion.

Finding Your Way Home

Self-compassionate leadership is not merely a strategy but a profound shift in how we perceive ourselves and our roles as leaders. By removing the "leadership costume" we open ourselves to a more authentic, resilient, and effective form of leadership. This approach acknowledges that our greatest strength lies not in invulnerability, but in our shared humanity, which allows us to connect with others on a deeper level and create environments where everyone can thrive.

As we navigate the complexities of leadership, self-compassion helps us balance the pressures of performance with the need for personal growth and well-being. It empowers us to embrace our imperfections, learn from setbacks, and lead with both courage and kindness. By modeling self-compassion, we not only transform ourselves but also inspire those around us to grow, collaborate, and innovate. It reminds us that being a leader is not about being perfect, but about being fully human, and that in embracing our humanity, we find the true essence of leadership.

Massimo Backus is a master facilitator, speaker, leadership coach, and the host of The Leadership Mind podcast. He has coached and consulted companies such as Amazon, Nintendo, Salesforce, Fox Entertainment, and Cisco. He holds a bachelor's degree in Psychology and a master's degree in Organizational Behavioral Psychology along with certifications and credentials in DISC, MBTI, Hogan Assessment, Korn Ferry Architect, Co-Active Coaching Certification, ORSC (Organization and Relationship Systems Coaching) Certification and is a Hoffman Process Graduate.

THE SUMMARY IN BRIEF

The most successful leaders practice a defined list of principles, and they practice them on a constant, consistent basis. They understand all of this:

In this summary of business and leadership expert Clint Pulver's ***I Love It Here*: *How Great Leaders Create Organizations Their People Never Want to Leave,*** you'll learn about all of these principles in-depth and how you can apply them in your organization, whether you're an already-thriving organization or looking to take the next step towards your future.

IN THIS SUMMARY, YOU WILL LEARN:

- How to change the way you interact with your employees and organization to become a mentor first, manager second.
- How to hire the right people so that when the time comes, you actually want to retain them.
- How to spark feelings of possibility and ownership in your organization and its people.
- How to plan for disaster and keep your plans simple enough to be executed on consistently.

A Single Moment in Time

According to the Work Institute's 2020 Retention Report, 2 27 percent of U.S. employees quit their jobs in the previous year. And, among those, 78 percent left for preventable reasons, such as scheduling problems, a desire for more positive relationships with management, a lack of growth opportunities, or dissatisfaction with compensation and benefits. That's a lot of people quitting because of a disconnect between what they need and what their employer is providing.

What if we could change that?

What if we could bridge the gap between employees and employers by having a genuine conversation with both? What if we could understand the needs and feelings of employees, then bring those needs to organizational leaders so they'd have real data to draw from? With such a bridge in understanding, both employers and employees would benefit.

Using this information, employers could implement new strategies. And those strategies would actually work, because they would target the true needs of the employees. This is the missing link that could solve the disconnect between employers and their employees-real honest answers to real honest questions.

Are You the Problem or the Solution?

Disengaged employees will undermine your workplace and make it impossible to build anything close to the kinds of cultures of top-performing organizations, and the financial consequences are not to be overlooked, either. "According to Gallup, disengaged employees have 37% higher absenteeism, 18% lower productivity and 15% lower profitability, writes Karlyn Borysenko in Forbes. "When that translates into dollars, you're looking at the cost of 34% of a disengaged employee's annual salary."

And having loyal and engaged employees makes work more enjoyable for everyone, along with any benefits it adds to your bottom line. Don't we all want to work with people who like their jobs and who respect and appreciate both their co-workers and their employers? Don't we all want to feel valued in the place where we spend so much of our time?

Here's what we know: If your employees don't feel valued, and if they don't share-or even know-your company's vision and how it helps them live a more fulfilling life, they will go elsewhere. Your job as a leader is to show them- every day- why they should stay. That comes down to making sure they're engaged, and that's what you'll learn throughout the rest of this book summary.

Creating Your Dream Team

In order to retain the right people, you have to start by hiring the right people. This ultimately comes down to four basic principles.

Hire the right person, not the convenient person.

Don't settle on the wrong employee or person in a leadership role in order to meet a looming deadline. This is a backwards view of the workplace, in which deadlines are more important than the work you're striving to accomplish. When you hire an employee as quickly as possible because your workload is too much, you're using short-term thinking to create a long-term problem— an employee who's not suited for the role they're in.

Hire internally when possible.

The smartest place to look for a new hire is within your own company. More often than not, companies hire from the outside because they believe it will save them money. But this discourages employees from seeing any future growth within the company, which in turn discourages them from their work. This will lead to even greater costs down the road.

Hire for the ABCs: attitude, behavior, and character.

Skills and expertise can be trained. Attitude, behavior, and character are much more difficult to train. In the past, hiring managers have focused on where candidates have worked and what they've done, how many degrees they have, and where they went to school. But the world is changing, and creativity, adaptability, collaboration, teamwork, and communication skills are now considered more essential than any training.

Let your employees focus on what they do best.

Exceptional leaders understand that hiring and developing great employees is about putting people in the places where they'll shine, and where their strengths and passions can best serve the work they do. It's always evident when an employee is shining where they stand— working in their element and doing what they do best.

The Mentor Manager

Good leadership requires empathy-this is wisdom that has been espoused by human relationship experts from Oprah Winfrey to Daniel Goleman. A manager's ability to relate to and connect with their staff is as important to an employee's engagement as that manager's level of expectations and standards. Together, these two components have been a common thread in the four types of managers we find across virtually every organization.

In fact, these two factors-their level of connection to their employees, and the level of expectations/standards they set for their employees have been so commonly linked to successful workplaces in our research that we now use them to assess managers.

Connection is the link that forms when people experience a consistent, high level of trust, love, empathy, kindness, and care. This link can look different for each person and each relationship-some want to share their life dreams, others are more private but still appreciate being valued for who they are. (You can show interest without prying; take your cues from each person, and remember that developing relationships takes time.) The spectrum of connection is limitless, and always unique.

In addition to connection, employees value clear expectations and an understanding of the rules and standards. It's safe to say that most employees are familiar with their job descriptions when they enter an organization. Unfortunately, however, many don't know the finer details of what's expected of them. Yes, their job titles might be clear, but if new hires don't receive the orientation and training they need, then the logistics of why, when, and how they're supposed to take care of their duties might remain a mystery. Your expectations can be as high or as low as you want them to be, but if they are not clear, your ship will sail nowhere.

Sparking the Possibility

We don't always have a clear understanding of what's in front of us or what lies within ourselves— until, that is, someone changes our perception. Once our perception is changed the way we view and internalize information also changes. Our reality begins to shift, and our behavior follows suit. You have the opportunity to change the perception and shift the reality of the people who work with you and for you. You can be someone's transformation agent.

If you think of worth and potential as two locked boxes that sit inside each person, what then are the keys? Helping someone recognize their own worth takes recognition. And allowing someone to realize their potential requires giving them lots of opportunities for growth.

You can remind an employee of their worth simply by recognizing them for a job well done. Or you can go further and show them recognition on a deeper level: I see you. Likewise, you can help your employees see their own potential-and help them reach it— by giving them opportunities to take on new challenges and expand their skill set.

Without recognition and opportunities for growth, your employees' ability to find worth in their work and see their potential for success is greatly dampened. As their Mentor Manager, you are responsible for creating an environment where these qualities can been couraged and fostered.

Keep It Simple

Of all the practices we have seen implemented by exceptional bosses, one of the greatest is a consistent effort to keep things simple. And this effort extended to every aspect of their oversight: business model, mission statement, even down to their personal life. The art of simplicity has been a major key to their success and their overall ability to lead, and it's had a huge impact on the lives of their employees. The people we interview at these companies who say they love their jobs always mention the simplicity of the culture, the leadership, the direction of the organization, and their job responsibilities.

Give Them the Wheel and Let Them Drive

Ownership is a game changer. When employees take ownership of their work, it completely changes the way they treat the business they work for— and the way they treat its money. There's a shift in perspective that takes them from "I work here" to "I'm building something here."

When a person takes ownership, things matter more. They become more driven and motivated, take more initiative, and seek creative and innovative ways to improve what they're doing. When an employee is invested in their work in this way, they no longer coast or go through the motions; they become more intentional about their time and experience, and they're more present each day. The working environment becomes positive, productive, and uplifting— even for managers. In short, a company with employees who are given the opportunity to take ownership is a company that is moving forward.

Always Be Flying the Airplane

A pilot knows that every plane, flight, and situation is different. It's similar to mentorship in the workplace. One of your goals as a leader should always be achieving and maintaining healthy stability for your employees. You should constantly be asking yourself: "Are they stable— are they in a place where they can continue to grow and thrive in their work environment?" Because, as a leader, not only do you get to help create that work environment, you are also responsible for sustaining it. You want to keep your employees here, both physically and mentally-to keep them from quitting emotionally or from actually walking out the door. So, like the doctor, like the pilot, observe and adjust: check status-evaluate-determine needs-create action plan-check status-evaluate-determine needs- -create action plan... and so on. Constantly, for each employee.

Brace for Impact

If your organization weathered a crisis, like the COVID-19 pandemic, analyze what worked and what could have been done better. If you're leading a new organization (or one that's new to you), start scenario planning now for the next personal, local, or national crisis. How flexible are your sick leave and bereavement leave policies? What kinds of work could be done remotely? How well do you pay your employees? Is it enough so they can create cushions of their own? When someone needs help beyond what you can provide, do you have a network of professionals you can refer them to? Look at your financials; make a business continuity plan; run emergency drills; do whatever it takes to get as prepared as you can.

Your Personal Board of Mentors

Typically, a public company will have something called a board of directors. This group is made up of trusted advisors who have been elected by senior members of the company. They can come from inside or outside the ranks, and they're primarily responsible for the oversight of the company's progress. They weigh in on major decisions, and bring advice, wisdom, and guidance. This board is key to keeping the company moving forward.

If you want to keep moving forward, you'll need your own kind of board of directors. Not a formal corporate board, with official roles and duties and a row of head shots listed in your annual prospectus. This is your personal board of directors-call it your "board of mentors.

The people you choose for this board don't necessarily need to be affiliated with your company, nor would they have any legal or contractual authority over company decisions.

They're simply a group of people, hand-selected by you, who you feel inspired by or want to emulate. These are the people who you turn to when you need advice, or who can provide you with a challenging or unique perspective that you can't see yourself.

Small Things over a Long Period of Time

Being a mentor and a leader is a role that should not be taken lightly. I can't think of another position that gives you as much opportunity to influence the lives of others for the better. You have the chance to create connections with your people in a way that will have a lasting and powerful effect on who they are and who they become.

Clint Pulver is a professional keynote speaker, author, musician, pilot, and workforce expert. Known as the leading authority on employee retention, Clint has transformed how corporations like Keller Williams, AT&T, and Hewlett Packard create lasting loyalty through his work and research as the Undercover Millennial. He has been featured by BusinessQ Magazine as a "Top 40 Under 40," and, as a professional drummer, he has appeared in feature films and on America's Got Talent. In 2020, Clint won an Emmy Award for his short film Be a Mr. Jensen, which tells the story of how a single moment in time—and one particular mentor—can change the course of a life.

Inside the Leader's Mind

Five Ways to Think Like a Leader

by Liz Mellon

THE SUMMARY IN BRIEF

High-performing leaders, irrespective of race, age or gender, think in remarkably similar ways. For some, these ways of thinking come naturally; for others they need to be cultivated.

Inside the Leader's Mind reveals the five common ways effective leaders think and gives you the tools you need to evolve your thinking and become a better leader. Drawn from the collective wisdom of 20 world-class leaders, *Inside the Leader's Mind* shows you how to think your way to the very top.

Practical and straightforward, *Inside the Leader's Mind* will show you how to think differently so you can become a world-class leader.

Based on extensive global research, case studies and interviews with great leaders, *Inside the Leader's Mind* identifies the five key ways of thinking you need to develop to accelerate your own leadership journey.

IN THIS SUMMARY, YOU WILL LEARN:

- How to learn to live with loneliness and face the unknown without fear.
- Methods to embrace uncertainty and ambiguity and to develop the power of surprise.
- A way to sharpen your inner compass so it guides you to do the right thing.
- How to juggle living in three timezones — past, present and future — without jetlag.
- A strategy to love your work and represent your whole enterprise.

Introduction

Everyone has an opinion about what leadership is. We may not be able to agree on a description, but, like fine art, we all know a good leader when we see one. If you are in the spotlight as a leader, everything you do is dissected. And in today's globally wired world, we don't miss a thing.

Let's be clear — leadership is universal, whether you are the chief executive officer of a global company or the director of a local volunteer charity organization. It makes a difference to lives and to organizations.

Leaders, would-be leaders and researchers have mulled this over for years. We've thought about the personality of a leader, and we have concluded that personality alone can't explain why one person is a leader and another person is more likely to be a follower. We've spent a lot of time thinking about how a leader behaves, too.

Yet, something was missing. We still haven't captured the essence of leadership. We have overlooked how leaders think. Yet it is how we think that determines if and how we act. Effective leaders, irrespective of race, age or gender, think in remarkably similar ways.

Five Ways of Thinking Like a Leader

Let's cut to the chase. The reason we can't capture the essence of leadership is because we have focused too hard on behavior — naturally enough, because it's easy to see and measure. What we have overlooked is how leaders think. In a series of interviews with 20 leaders of enterprise, in the hundreds of hours of conversation with them, a different pattern of ideas emerged from those who were at the top or destined for the top.

Behavior alone cannot forecast good leadership. The most successful leaders link in five remarkably similar ways. When a select group of leaders was asked for their reaction to these five ways of thinking, they were overwhelmingly positive. As one remarked: "What you have done is to describe what happens in practice and then to derive principles from it. You are on to something here."

Experts and executives have been so focused on monitoring how leaders behave that we have all but overlooked how leaders think. The five ways of thinking provide a shorthand for you to understand better your own leadership and how and what you need to develop — a self-assessment framework. They will also help you to think about leaders that you guide and mentor.

The executives interviewed for *Inside the Leader's Mind* are very senior. They run multi-million-dollar/euro global enterprises. People in these very senior executive positions have evolved their thinking to a different level. This doesn't mean that less elevated senior executives think in unacceptable or inadequate ways. Not at all. They, too, are strong and effective players, who have assimilated and learned from experience over the years. They have that job close to the top because they have earned it.

The problem is, thinking like a senior executive will get you close to the top but no further.

People in the search business will tell you that there is a big difference between the top 50 and the handful of the most senior leaders in a global organization. When you get up close, you can see the difference. This "good, but insufficient for the top job" thinking gets you just so far.

It's as much about wanting to be a leader — and accepting all the hard work and endurance that goes with the job — as it is about talent.

Each of the five ways of thinking provides a step forward to a more senior role. Evolving your thinking will take you to the next step. It's time to stop relying on generic leadership advice, which is often pretty formulaic and quite basic for many high-performing executives.

You don't need to take these steps in any particular order, although they are set out as a numbered sequence. Think of them as dance steps to be mastered. They aren't steps to be laboriously climbed or arduously sequenced. Leaders try to think in all five ways simultaneously.

Five Steps to Move Upwards

Step one: No safety net. As a senior executive, you already have a well-developed and business-minded outlook.

The next step is to recognize that you are alone.

It's not that you lose the ability to take advice. But you know that if you don't push the boundaries, no one else will, and you will slowly but surely sow the seeds of failure. You are willing to lean into unknown risk and take the step that so many others fear. And you are not waiting for permission or for someone else to ask you to take it on.

Your next step is to move the organization into uncharted territory.

Step two: Comfortable in discomfort. You are smart and decisive. Over the years, you have honed these decision-making skills, and you know that being decisive is an important part of your job. At the very senior level, the complexity of the situations and decisions you face expands rapidly. Now comes the moment where you understand that stopping to gather yet more data won't cut it. You must live with the discomfort of knowing that the solution is not easy or straightforward. To develop this way of thinking, you must learn to live with ambiguity, even to thrive on it. You can consume the tension, and the uncertainty doesn't consume you.

Your next step is to move beyond the data and make a judgment call.

Step three: Solid core. You exude confidence. When you say "let's go," people follow because they believe that you can lead them somewhere better.

To take the next step is to think in a way that adds an inner sense of purpose and strength to your authenticity. It is a heightened sense of integrity, and it is strongly driven from within. Whether you have a clear strategic direction for the future or not, you have a strong sense of knowing, from within, the right thing to do. This gives you the strength, self-insight and capability to move.

Your next step is to trust your inner compass to guide you to do the right thing.

Step four: On my watch. You spend the majority of your time, as a successful senior executive, making sure that the business stays on track and afloat. You listen to advice that suggests you try to be more strategic and look ahead, but in reality 70 percent of your time is spent fixing the here and now. This is vital work, and it keeps the organization in business.

Of course, you do have to shift to spending more time focusing on building the future, which means leaving a lot more of the "here and now" to others, but there is an important nuance here. You need to capture specific elements of the enterprise heritage, so that you can help others to understand the bigger purpose, the broader story and see what is unique about your organization. You respect the past and integrate its story into the present, but you can also move away from it, change the direction. You want to sustain success beyond your time in the organization.

Your next step is to become a steward, so that success continues after your watch.

Step five: I am the enterprise. In your senior role, you already know that you are good at getting things done. You deliver results. You are happy to step forward and to be held accountable. Now it's time to extend your thinking. No longer just think about your part of the business; start to think about the impact of your actions and decisions on the whole business. You should come to represent the whole enterprise. You live its values as if they are your own; everything you say and do embodies what the enterprise stands for.

Your next step is to represent the enterprise faithfully, as if you were one and the same.

Where Does This Thinking Come From?

Let's pause to consider the context facing you today. Globalization has led to firms operating in 80-plus countries and employing hundreds of thousands of people. This scale has brought with it complexity of every kind — cultural, economic, social, political and technological.

Have successful leaders evolved these five ways of thinking because of these new pressures? Some of the leaders interviewed said that they have always thought in this way, since they were aged 15 or so. Others said that they have developed one or more of these ways of thinking slowly over the years, as a result of experience and maturity. What is clear is that if you don't think in these five ways, you risk getting left behind. The good news is that if you don't yet think in this same way, you have the potential to do so.

Your ability to change will depend on your capacity to move away from your comfort zone.

No Safety Net

Why are we starting with *no safety net*? Because this is where it starts — with your inner conviction that you will take the step that others may fear or that they may not even see.

It's your job to push the boundaries, to make the case for driving forward into the unknown. There are five pieces to *no safety net*.

1. You are alone. In the interviews, of the five ways of thinking, *no safety net* was often the one that grabbed the leaders' attention first. These senior leaders love the adventure of breaking new ground and moving the organization forward. If they don't push forward, no one else is about to. As a senior leader, you have never been busier, worked so hard or commanded so many resources. In the middle of all that noise and bustle, you will never have been so alone. Ronnie Leten, the CEO of Atlas Copco, says, "As you build up more confidence in your role, you can take more 'alone-ness.'"

2. Take the first step. Taking the first step across the abyss, from here to the future, is hard. It takes courage. Jasmine Whitbread, Chief Executive of Save the Children, is a no-nonsense kind of woman. She says, "We have agreed to create one Save the Children globally out of the 29 existing entities. We are deep into uncertainty. This is uncharted territory. At the end of the day it is clearly the right thing to do, so you just have to do it. The choice is to do it in the right way possible."

3. Don't get too far ahead. It's your job to be out in front, taking the risky first step. Here is the new idea. If you get too far ahead, they won't go with you, and you'll be left stranded. Look over your shoulder, and you should see followers. If no one's there, then you are not a leader — by definition. We are never, ever, as human beings, as comfortable with other people's ideas about change. So in taking that first step, think ahead first. How are you going to get others to follow you?

4. You can't separate this from self-doubt. Having the courage to step into the unknown is not the same as placing a blind bet. So here is where we introduce self-doubt as an important part of the package. In this context, self-doubt means that you don't always think you are 100 percent right or have all the answers. There is a fine line between the courage it takes to take the first step and, as one CEO put it, "believing in your own press." As a leader, if you have the courage to make the move, ensure that its companion is the courage to listen to divergent or opposing views without feeling threatened.

5. Are you brave enough to fail? Lack of failure in your life can lead to complacency and an inflated sense of your own importance or invulnerability.

The stakes are high and leaders love it — because if they succeed, they are out ahead of the pack. If you are afraid — of taking a risk, of losing your job, of damaging your reputation — it's unlikely that you will ever take the first step. There is that thread of certainty and conviction when faced with a large and complex challenge. Accept that, despite experience, skill and a good intuition, sometimes you will make mistakes; you will not get it right. Can you welcome this rather than avoid it?

Comfortable in Discomfort

A new trick to thinking is to have the courage to take the decision when you don't have all the information, when you are struggling to find the answer but you know that you have to move — now. And to live with the discomfort it brings, the uncertainty, the nervousness, the tension. And not to mind. Think *comfortable in discomfort*. There are five aspects to comfortable in discomfort:

1. Living with grey. One leader had a particularly forthright view about the usefulness of facts in big, complex, strategic decisions. For this individual, while it's about balanced risk, it's also about instinct — and instinct that builds the business for the long run, not the short haul. He said, "You have to build the business for the longer term, not just rely on measuring short-term results, or you will be caught out by the business cycle."

Think about your own leadership for a moment. Do you spend time thinking about what your organization needs to become, rather than extending current reality into the future?

2. Learn to love ambiguity. One CEO offered this advice, "Live with shades of grey successfully, and you move up higher than those who can't. Eat the uncertainty." What does this advice tell us? That means that the ambiguity and uncertainty sit inside you and that you don't pass them on. You live with the ambiguity, and any tension you feel doesn't transmit itself to others. For the people who follow you, you look comfortable in the situation, and so they, in turn, feel comfortable to follow you.

3. Don't close down too early. Never rush to close any decision. Often there are delicate negotiations to be done or persuading to do. Being decisive is still a good

thing — just not always immediately. You have to get the timing right. But followers need to feel sure that you are delaying for a reason, not prevaricating. Sometimes you don't want to decide, even if you have all the information that you need, because you sense that it's the wrong time to make a move.

4. The power of surprise. The leaders we admire seem to be at ease with the job, however big and challenging. But that's only part of the story.

Paul Thurston, Group Managing Director of HSBC Group, states, "It's about the power of surprise. True leaders will take the conversation in a different direction — to take us to a new level — we got here, so now we are moving on. They constantly take you forwards. They are never satisfied with themselves — you can't read or anticipate them." If you are comfortable in discomfort, you will not always be predictable.

5. The vision thing. Despite the fact that you are trying to move forwards but not always sure exactly where, and despite the fact that your stakeholders want different things from you, you still need to compile a credible and coherent story about where you are headed. You need to hold up an exciting picture of the future to engage others along the way.

Leaders feel vulnerable. You need to accept that you will make the wrong decision from time to time and that you need to look confident despite this. The important thing is that whatever route you choose, when you set off, as you look over your shoulder you see that people are actually following you. It is not your job to be right all the time. It's your job to be a convincing leader, whatever you feel like inside.

As a leader, there will never be enough clarity, you often won't know the exact right next step for the enterprise, your decisions may be flawed and you will make mistakes. Yet, if you can think in this way, you will be able to make a good decision in the moment, without all the data. Or you will be able to delay taking a decision even with all the information available to you, to get the timing right.

You won't be driven by the data. You will be in the driving seat.

Solid Core

Look at yourself. As a senior executive, you look the part of the leader. You seem confident, and you can inspire confidence in others. You have learned, painfully at times, to manage your outward appearance so that you can be a better leader. You have listened to the feedback and taken steps to change. Some things you changed so long ago that they now feel like natural parts of you. So, what comes next? Soul. In conversations with leaders throughout the world, it was surprising how often that noun was used.

As a leader you have an instinct around the right thing to do. You have character, and you lead from the inside out. You have a *solid core*. It means that even if you don't know where you are going, you need to understand where you are coming from. That is, you have to look inside and understand what is really important to you, the standards by which you live your life.

The best metaphor for this way of thinking is a compass — and inner guidance mechanism. You need an inner compass that can keep you on the right path, even when others doubt your destination and means of getting there.

If the leaders of our giant corporations lack character; if they see only short-term profit as their goal; if they cannot distinguish straightforwardly between right and wrong, then we are lost. Where regulation struggles to cross national or regional boundaries, there is a moral imperative for self-regulation. The power of the too-powerful global company is an uneasy burden. Like any leader, the corporation can choose to use its power for good or for evil — and it is the leader who decides.

Beyond Executive Thinking

There are several aspects to this way of thinking. The first is to find, test and learn to trust your own inner compass — your instinct around the right thing to do. Then, make sure everyone knows what you stand for, the personal standards that underpin how you work. After that, for every big decision, spend time thinking about the right thing to do — whatever the data may or may not be telling you. Next, be authentic as a leader, but learn to balance the strong ego that got you the job with the capacity to be humble.

Niall FitzGerald, Deputy Chairman of Thomson Reuters, says, "Many of the corporate blunders of the last 10 years have been because leaders have asked 'Is it legal?' rather than 'Is it right?' We need to be soul searching about this. My mother told me: 'If you take a decision you're not sure about, look in the mirror. If you can't look yourself in the eyes, you'll know it was the wrong decision.'"

Leaders are not so well known for being introspective or reflective. Reflection takes time, and it means pausing in the relentless drive for change. However, the best leaders also make time for reflection — and have thought about the importance of the inner resources that underpin the individual.

Get Good Feedback

As a leader, you can become remote from reality. The power that goes along with the position, the executive perks such as the executive jet, the personal assistant, the lavish expense account and the chauffeured limousine, can make you lose perspective. When you start to believe yourself above the common laws that bind others, then you are in trouble as an executive. It takes strength of character not to believe your own press.

Martin Spurling of HSBC states, "People stop giving you feedback when you get more senior and just tell you how good your are, if they say anything. Luckily, I have a circle of close friends who I rely on to give me honest feedback, so there is no chance of me getting an inflated view of myself."

The essence of a solid core is that you relax into having "made it." This gives you the confidence and inner certainty to become the leader your followers need, rather than still trying to prove that you deserve the job.

Where does this inner certainty come from? For some, like Stephen Green, their values have a religious base. For others, like Jasmine Whitbread and Niall FitzGerald, it comes from a nurturing upbringing. There is likely to be not just one source but a myriad of influences. The result is that you think with a personal inner compass that gives you a values-driven approach to business and to the world.

On My Watch

We have now reached the fourth way of thinking. The core idea is that you only serve for a period of time. As a leader, you inherit the organization from others and, as you step away, new people take over.

As the leader of an organization, you inherit its past, you manage its present and you plan for its future. So, what is your next step? It's to put into context the bit part that you are playing in a much longer movie. It's a story that was started before you arrived and will continue after you have left. Can you live in three time zones (past, present and future) without getting jet lag? Can you think about your role being loaned to you, just for now? Think *on my watch*. What will happen on your watch?

Let Go Gently

Jasmine Whitbread understands that the future needs to be rooted in the past, not uprooted from it. She says, "When I joined Save the Children, I looked into the past to chart a way to the future. That's the enterprise; it's a continuum. I am a "passing through" person — it's on my watch."

It's perfectly OK to move away from the past, as Nokia has achieved in spectacular fashion. Just do it with respect. Be seen to build on a proud heritage, not trash it. Without its past, the organization has no solid core.

It's not just about demonstrating the importance of living in the future time zone by doing it yourself, as a role model. It's also about engaging others in the future, too.

Dennis Nally, Chairman of the PricewaterhouseCoopers International Network, said, "The job of the CEO is to create the ambience where this happens. Driving operating results today versus setting a direction towards the future are fundamentally different. The pace of change is so great that if you don't consider the 'what ifs' you will be caught looking in the rear view mirror."

The future is not created by extending the past forwards — or driving through the rear view mirror. The future is created by living there, with all the uncertainty, ambiguity and complexity that this implies. You have to eat, breathe and live in the future — for about half your time.

Living in Three Time Zones

It was a typical scorching day in North Carolina. Blair Sheppard was still the CEO of Duke CE at the time and would not move on to become the Dean of the Duke Fuqua School of Business for another four years.

Twenty-four mining executives listened attentively as Blair told the story of how the Duke family had used their wealth, founded on the tobacco industry, to create and build Duke University. How they had attracted top teaching talent to attract the best students.

Blair then moved on to talk about the university today, with its wealth and breadth of departments and institutes, world-class research and award-winning faculty. The story ended with a look ahead and a view of how the richness of the present would provide the foundation for a bigger global role for Duke University in the future. This story provided an effortless example of a leader at home in three time zones. Reverence for the past. Affection for the present. Aspiration for the future.

We can't predict the behaviors you will see to indicate that the leader thinks *on my watch*. The behaviors will vary as widely as the personalities of the individual leaders.

What we can predict is that if you think in this way, others will be willing to engage and commit to the journey with you, because you will have shown that you understand the history and past successes and their importance in shaping the future. Your watch will be a good one.

I Am the Enterprise

And so to the final way of thinking — although remember that the five don't happen in any particular order. It depends on you.

Where are you now as a leader? As an effective senior executive, you focus on achieving your targets. You understand exactly how your organization operates. You know where you should and shouldn't tread, where the skeletons are hidden and the frustrations are felt. You use this information to make sure that you cooperate well with colleagues and that they cooperate with you. It means that business gets done, there are no stalemates and everyone moves carefully forward together.

The next step is to think beyond the zero sum game. It's about more than just your results; it's about how the enterprise as a whole is doing. You have to live it. You think *I am the enterprise*.

Matryoshka Doll

You know the Russian nesting doll? There is no better analogy for this way of thinking. These leaders live, embody and represent their organizations — there is no separating them. Cut them open, and the same values run inside them at every layer. Open up the enterprise, and there is the leader, nestling neatly inside — a smaller replica of the bigger whole.

I am the enterprise may well be the hardest way of thinking, because this is where the sacrifices are the biggest.

Always On

Irene Dorner, the President and CEO of HSBC Bank USA describes "I am the enterprise" thinking this way: "You have to manage yourself constantly and look as if everything is okay ALL the time. It's essential for staff. Even my driver, the bedrock of my life, cannot read me. You cannot be Eeyore in face or words; you have to look happy and confident." The bad news is that this level of commitment takes a lot of hard work. To quote one CEO, "If you are worried about work/life balance, I don't need to worry about you getting my job." As Thomas Edison said, "Many of life's failures are people who did not realize how close they were to success when they gave up." This is a charter for hard work and endurance.

Irene continues, "You have to pump energy into that level of understanding; being in control and understanding yourself at all times. My constant priority is, how do I make myself every day focus my talents on being the CEO."

Become the Enterprise

Take some time to become the enterprise before you do anything. Let the people you are about to lead feel comfortable that you get it, believe in it and live it.

Sir Stuart Rose, CEO of Marks & Spencer, states, "We're simple shopkeepers whose job is to satisfy customers. It has been about … five words that describe what we do: quality, value, service, innovation and trust. I dusted those words off when I came in 2004."

This short quote resonates with so many other parts about how a CEO thinks. It reminds us of Jasmine Whitbread and how she set about finding that the values of the Save the Children organization were the same as hers. But more than anything else, this quote tells us that Rose was able to "dust off" and adopt for himself core values held by the organization.

Though there has been a lot of talk about self-sacrifice, CEOs are just humans; they are not saints. They are nonconformists who dare to do what most of us disdain to consider. So it is fair to say that it doesn't feel like self-sacrifice to the leader in the job — in fact, it doesn't even feel that big a deal.

As one CEO put it, "On my best day I am the company. Whether I have a good day or not, every action and inaction reflects the company as well as changes the company." Leadership as this level is about building a healthy, sustainable organization. This is a big shift from performing against business results or personal targets. Can you put the organization ahead of your own needs? Can you be? "I" and "we" at the same time?

Keep on Developing

One of the most interesting aspects of the interviews was how the five ways of thinking rang true with all these leaders. The majority of them said that they had adopted at least four of these five ways of thinking. They readily identified areas that were soft spots for them — areas where they didn't believe that their thinking was sufficiently evolved. And, without being asked, they started talking about how to develop further in these areas. They saw the five as a holistic, interdependent system.

These very powerful and successful leaders were humble in the interviews. They appreciated a concise description of what distinguishes them and also found it a helpful way of thinking about their own next steps in development. Most of all, these leaders love their jobs. They are passionate about what they do, and they have a lot of fun doing it.

Taking Your Next Step

The most important next step in your development is to assess yourself on how you think now. There are three ways in which you can develop: You can change your way of thinking directly, you can get a coach and you can take on a big leadership assignment. These three ways are easy to describe, but they all require a sophisticated level of self-awareness, determination and hard work:

1. Lucid development. The first method of development is to change your way of thinking directly, as an effort of will. It is pointless to look outside yourself and ask someone else for advice on what motivates you; this knowledge can only come from within. This process requires reflection, focus and honesty. Take real situations in your life and work them through to find examples of occasions when you can say that you acted or decided in a certain way.

2. Get a coach. Another approach to development is to find a good adviser or coach who can help you to think through how you will make the necessary changes. This requires four actions on your behalf: A desire to be challenged, a willingness to gain deeper insight through self-reflection, being open to unlearning something that has been part of your success formula and to be willing to learn something really new.

3. Supersize it. The third method of development is to take on a big leadership assignment. Leaders generally develop best from "stretch" or challenging assignments, given to them as young as possible.

A good way to develop the five ways of thinking is to step forward and volunteer for an assignment that will challenge you and through which you can develop.

Another Growth Spurt

At the top, everyone thinks that you have made it. And in one way you have, because you have been successful in gaining the ultimate prize — the boss's job.

But as conversations with enormously successful people demonstrate, the journey doesn't stop there. Being above average in intelligence is one of the reasons a leader gets the job in the first place. Be careful not to stop listening and continuing to learn. Once you cross that threshold into the executive suite, there is still further to go.

A Learning Mindset

Inside the Leader's Mind strongly supports the notion that your mindset determines your actions. That is, the way you see the world will determine how you react to it.

Sometimes, personal development starts with understanding your own mindset. Unless you change your mind, you won't change your outlook, opinion or behavior. There is such a thing as a learning mindset. Research conducted by Carol Dweck, a psychologist from Stanford University, has concluded that if the learner has a growth mindset and believes that she or he can improve their abilities and accomplishments through purposeful effort, the student excels — both at studies and in life.

Dweck contrasts this with people who have a fixed mindset, those who believe that their intrinsic worth is set, and so they stagnate. She also mentions the role that effort plays in learning and the impact of believing that sustained effort will get you where you want to go. Those with a fixed mindset are prone to blame everything and everyone except themselves for their own failings. Achievement is not effortless; it takes hard work to learn and improve.

Today, Dweck is working at Bing Nursery School at Stanford, trying to instill into 4-year-olds a belief in their capacity to be "good" — to learn how to do better — even though they may have been "bad" in the past. She is teaching them how to learn.

Final Thoughts

There were some surprises in the research that are important to share. The first surprise was how closely the leaders identify with their organizations. The leader relies on the organization for survival and vice-versa. The second was how cheerful and optimistic they are. Whether they are "always on" and managing their bad days or just really upbeat makes no difference on the receiving end.

The last was how humble these powerful leaders are. They spend a lot of time thinking about who they are and what they should do for the common good.

THE SUMMARY IN BRIEF

Want to create an inspiring workplace? In ***Inspiring Generational Leadership: Your Guide to Design a Conscious Culture***, DeLinda Forsythe shares her passion and success in developing tomorrow's leaders. This guide takes readers on a journey revealing the financial, societal, and emotional benefits in leading, building, or working for a conscious business enterprise.

DeLinda's absorbing storytelling style and her inclusion of intimate interviews with other conscious leaders and educators guides readers along the rewarding mentoring path. *Inspiring Generational Leadership* provides tools to create an ideal workplace for leaders and their organization that is passionately alive with ethical values and purpose.

IN THIS SUMMARY, YOU WILL LEARN:

- What leadership tools and skills are needed to motivate and inspire Millennials and the emerging Gen Z cohort.
- That mentoring future generations is more of a gift you give to yourself than to another.
- How to continue your business' legacy by selling it to your mentee.
- How to consciously develop a business and personal brand based on excellence, best business practices, and values that resound equally with all stakeholders, and then understand how to reinforce and cultivate this brand awareness within your company and the community.
- How to inject your gift of intuition—your transcendent guide—into your business to validate in practice what you might already intuitively know.

Introduction

Business in America is changing. Business leaders no longer have the indulgent shortcoming of leading within their personal limited and limiting belief systems. Leaders must engage all perspectives and entertain other belief systems to find innovative problem-solving solutions.

The overlap of conscious capitalism values with the espoused values and perspectives of the Millennial and Gen Z generations is a major factor in the escalation of conscious social enterprises. As you positively influence your work teammates' lives, you also affect the well-being of their children and family members, and ultimately, create an opportunity to make an imprint on your entire community by initiating a ripple effect, potentially influencing future generations and other businesses by modeling this "doing good—doing well" perspective.

Conscious Capitalism, Millennials, And An Evolving Perspective

Employers who offer "super mentorship" opportunities will enable people to reach their potential and aspirations and better prepare them for the future by providing advanced training programs and employee development. Corporate cultures that empower individuality, creativity, and lifelong learning will continue to attract and retain elite team members.

Millennials' personal values as employees and their purchasing power as customers cannot be minimized. Gaining their commitment and loyalty requires a consistent and highly educated awareness, but business leaders who boldly lead with purpose and meaningful action as agents for equitable change will not only reap the benefits of a resilient business, but will make the world a better place.

Begin With The End In Mind: Mentorship

Business can and should be an enjoyable journey for all parties involved. Having an open mind allows ideas and creativity to naturally flow and organically leads to the development of more gratifying and more authentic relationships.

Accomplishments happen because of aspirations. Our aspirations create and support our corporate belief system of the importance of the individual, their work, the concept of equality, etc. We unconsciously endeavor to match our words and our actions, valuing equally aspirations and accomplishments, and over the years, this has created an inherent social contract of unconditional trust. And, of course, trust is the foundation for every relationship; without trust, social contracts are meaningless.

A Culture Of Gratitude Bonds Our Humanity

As you get to know what motivates other people, you connect in profoundly different ways. This intimate knowledge creates our interconnectivity. As we slowly became more bonded in our humanness, we began to identify more as individuals than as coworkers. That is the trick to a really powerful and influential corporate culture.

It really is important for leaders and managers to understand what motivates the Millennial and incoming Gen Z generations. Living a balanced life is a necessity to them. Leading an organization with a gratitude mindset, based on methodology that produces these emotions, is a joyful experience. It is a far more holistic approach and offers the greatest potential for positive and expansive outcomes. When you work for a company that applies this holistic approach, you have a greater opportunity to reach your potential in every facet of your life.

Embrace Workplace Family

Work is important, but so are all our values and our family-centric culture. We've tried consciously to integrate our workplace family and our actual families. Our teammates actively embrace this unification, which has changed how they view the workplace. I think this unification has a lot to do with how Millennials have redefined the concept of success.

Staff Meetings Build A Collective Mindset

By simply sharing in detail with specific field examples on how they had or were implementing their specific strength, group members naturally moved into acknowledging how they had experienced each other's strengths, noting the overlap and affect each one brought to each project, their project management department, and the organization as a whole. The exercise revealed how they each use their skills and the personal tricks they had developed for themselves and collectively for the project management department.

A sense of personal contribution and acknowledged respect for each individual is highly empowering; imagine if your individual efforts were acknowledged in such an affirming manner how that would motivate you to do more, think outside the box, and experience a sense of value and inclusiveness.

Deliver Excellence: We Are What We Repeatedly Do!

Our goal is to build a robust, highly interconnected culture, so we actively work to maintain the "begin with the end in mind" principle. Everything we do, both significant and insignificant, is designed to develop and maintain culture. It's a lot of work, but once you make it a habit, it becomes integral to how you approach daily challenges and internal corporate messaging.

I have never experienced a more successful way to inspire and motivate another individual than by simply valuing the work they do. Every person in your company can and should be a sales ambassador, and when every employee can visually see what your company produces and how it affects and improves others' lives, you create excitement, pride, and deep understanding. This leads to a natural sharing of what we do with friends, family, and others—a natural pride of ownership.

The Higher Purpose Journey

In the past decade, thousands of articles, books, and blogs have been written about the transformational power of having a well-articulated higher purpose in our personal lives. Contributing to something bigger than ourselves that is not simply profit-driven has proven to be one of the most powerful motivators for not only performance, but life satisfaction, physical well-being, self-esteem, and happiness. All of this content confirms that discovering our purpose leads to fulfillment in both our personal and our work lives.

To build an inspired, committed workforce, everyone must understand how they personally are a purpose-driven driver. Your organization's purpose will have more sway if your team understands and can not only articulate but are personally connected to your mission. They need to embrace your corporate vision. For maximum efficacy, your purpose needs to permeate every aspect of your corporate culture.

Create Raving Fans

It's an "unexpected gift" to receive a high level of service. If your company develops a reputation for delivering extraordinary service, you will potentially experience tremendous growth.

Failure has always been a huge motivator for me, especially the fear of failure. I also honor the humility it can create in each of us. Humility is not an easy virtue to attain, and acknowledging failure can encourage humility to grow within. Humility is the center of a moral life and can be a powerful quality in a leader. Humility is not easily forged through success; failure forges humility!

Vulnerability In The Workplace

When you show up every time as your most authentic self, speak your mind unequivocally, and care more about the message than your image, you increase the potential for others to be more authentic. When others realize they don't have to be guarded and the space is safe, you increase the potential to influence positive transformation within people, in the community, and in your company.

To live the fullest life possible, including having better health, more wealth, more happiness, and a life with an abundance (not scarcity) mindset, you might want to take the time to invest in the only thing you have control over: you. I recommend you identify and break the old habits holding you back. Many coaches and products can help with this.

Doing Well And Doing Good Need Not And Should Not Be Mutually Exclusive

Millennials crave and seek association with organizations that postulate higher purpose, shared values, and a commitment to responsible corporate citizenship. They want to work for companies that are not simply profit-driven but focus on and enable societal transformation.

Corporate America and business leaders need to implement profound structural change. Businesses have the moral imperative to implement resonating and meaningful modifications. Our political system and our American way of life appear to be at risk if we don't transform the definition of capitalism and begin to rebuild our institutions, creating shared value for all individuals.

Become An Authentically Magnetic Leader!

As Millennials continue to emerge as the majority workforce, this focus on ethics will continue to gain traction. To become an authentic leader, it's more effective to lead with a focus on others. The focus of an authentic leader needs to be on the development of individuals and encouraging the development of future leaders.

Real leadership affects the people you lead in every aspect of their lives. If you're not affecting that kind of real change, you're thinking and acting small. People want leaders who inspire and motivate them, who are positive influencers who affect positive behavior in others. No longer is there a separation between a business leader and their personal life. Here is where authenticity comes into play even more.

Fostering Community

Physical environments can and should be designed to generate highly cooperative engagement that fosters a spirit of play, which often leads to innovative productivity.

"Doing well and doing good need not and should not be mutually exclusive." Many organizations do not understand the enormous success that can be achieved when organizations and communities are in alignment. Nothing connects facts and statistics better than a personal narrative.

Begin With The End In Mind: Succession Planning

Many owners who desire better outcomes—such as higher growth, better work life balance, or a successful exit— fall short because they do not have a process in place for creating future leaders for their Company. They especially do not think of developing future leaders that can take over some of the entrepreneurial duties of the Company, scale their business, or mentor toward succession.

Thinking about your succession plan early can enormously benefit the organization in nuanced ways. A succession plan is not limited to just finding a successor; it benefits the company as a whole. When looking for a successor to your business, first select an individual who has a passion for your industry and is in alignment with your vision for the company. You might identify this person through previous employment, volunteer engagements, or through personal referral. You get to know a person's character, how they handle stress and crisis, when you work closely together, and this process can take years. It should be a natural and organic process. A great successor will want to take the business to levels you might not have visualized.

Conclusion

If business' new purpose is to elevate humanity, how can we best accomplish this? Mentorship and succession planning certainly offer great hope. Businesses that offer life coaching skills that improve employees and their families' lives also offer optimistic potential. Imagine just how much more successful a company would be if they encouraged everyone, not just their star performers or "heir apparent," to commit to personal growth and helped their staff to discover their "why?"

Leadership Lessons From Lewis and Clark's Daring Westward Expedition

INTO THE UNKNOWN

THE SUMMARY IN BRIEF

Into the Unknown *charts the lessons in leadership that were learned by Meriwether Lewis and William Clark during their two-and-a-half year adventure into the American Northwest. Against staggering odds, these unique men inspired such absolute loyalty in each other and in their group of explorers that they are still regarded as the most successful leadership team in American history. To help business leaders navigate their way through the rugged terrain of modern business, consultant and author Jack Uldrich presents Lewis and Clark as examples of leaders who were able to take their team through the roughest terrain and the toughest challenges.*

Throughout Into the Unknown, *Uldrich shows readers how they can use Lewis and Clark's example to persevere through crises and even change course in the face of insurmountable adversity. By presenting the lessons they learned on their seminal journey to explore the interior of the North American continent and reach the Pacific, Uldrich offers 10 timeless lessons from their experiences that can inspire business leaders to take their teams to new adventures of great discovery in any era.*

What You'll Learn In This Summary

- ✓ Why Lewis and Clark matter as leaders to be followed.
- ✓ How to think strategically.
- ✓ How to make tough, timely decisions.
- ✓ How great leaders surround themselves with good people.
- ✓ How to manage limited resources.
- ✓ How to motivate a team and interact with different cultures.
- ✓ How to assimilate information from multiple sources.
- ✓ How to balance long-term goals against short-term realities.
- ✓ How to learn from mistakes and try new approaches.

INTO THE UNKNOWN

by Jack Uldrich

— THE *COMPLETE* SUMMARY

PART ONE: WHY LEWIS AND CLARK MATTER

Lewis and Clark: Leaders For Their Time — and Ours

Into the Unknown does not attempt to retell the Lewis and Clark story as a narrative of their expedition with the Corps of Discovery. Rather, it examines their expedition through the lens of leadership and applies the extraordinary leadership lessons of Lewis and Clark to today's rapidly changing and often unknowable business environment. Even though their expedition took place 200 years ago, the challenges these two captains faced and those confronting the leaders of today are more similar than most might expect. The advancements of technology and knowledge itself are propelling us faster and faster downriver and, like Lewis and Clark, we don't know what is around the next bend. Similarly, the relentless force of globalization is introducing us to new cultures and hurling unexpected challenges and opportunities at us to the same degree that Lewis and Clark had to respond to — and deal with — dozens of new and different Native American tribes and cultures.

Who better to turn to for guidance when dealing with the unknown than those who have already demonstrated that they were capable of successfully conquering the unknown?

There are many parallels that make Lewis and Clark useful and solid examples for today's business executives. Like today's business leaders, Lewis and Clark were driven by an important mission and were determined to succeed at all costs. Those struggling with organizational issues can find guidance in the experiences of Lewis and Clark and the ways they handled and overcame similar challenges.

They masterminded the expedition's success, and their leadership skills lie at the heart of the mission's extraordinary accomplishments. Team member Private Whitehouse spoke eloquently about their leadership prowess when he described the captains' skill, courage and humanity filling "the breasts of the men who were under their command ... and the President of the United States not misplacing his judgment when he appointed them to command this party." ■

PART TWO: THE LEADERSHIP PRINCIPLES OF LEWIS AND CLARK

The Principle of a Higher Calling

Lewis and Clark's mission of discovery was dedicated to nation building, the Manifest Destiny of the United States to expand to the Pacific, land exploration, scientific and cultural discovery, and commercial trade. Along the way, they also filled their journals with one and a half million words about everything they learned — from the land, animals and Native Americans they encountered to the flora, fauna, fish and fossils they found. They chronicled a virtual treasure trove of scientific and cultural information for the entire civilized world to digest. In their day, Lewis's surveys on the Native Americans represented the rest of the world's first glimpse of those peoples and cultures, and Clark's maps served as invaluable guides to the first generation of explorers who helped settle the American West.

The two captains also stand apart from earlier explorers because of their commitment to a higher purpose. As men of the Enlightenment, Meriwether Lewis and

The Principle of a Higher Calling

(continued from page 2)

William Clark wanted to leave their mark on the world by expanding the base of human knowledge, and, as patriots, they wanted to further the cause of liberty by extending the great American Experiment of democracy to the recently purchased Louisiana Territory and beyond to the Pacific. Their commitment to these higher purposes, which transcended the mere worldly aspirations of power, glory, ego or money, shine through their journals, and it is clear that this commitment affected virtually every action and decision they made.

Passionate Purpose

In July 1803, as the expedition was in its preparation stage, the United States purchased from France the Louisiana Territory, which doubled the size of the country overnight. The U.S. government needed to understand what it had just purchased and required a small team to explore this new land and report back on the opportunities and challenges that the new territory represented.

When setting out on the expedition, and agreeing to share command with each other, both Lewis and Clark sought to align their own self-interest with the national interest and the greater good of mankind. By advancing knowledge for mankind and fostering liberty, they were confident that they would also personally benefit.

More Than Making a Profit

Lewis and Clark are not unique in their commitment to a higher purpose. In fact, this commitment almost appears to be a recipe for success. Among the great innovators and businessmen of the past two centuries, there is one common theme that unites them all. That is the belief that business is something more than just making a profit.

"To live for mankind" and "to relieve distressed humanity" were not just throwaway phrases for Meriwether Lewis in the way many companies' mission statements are today. The phrases provided real guidance to the Corps of Discovery. From insurance companies to cosmetic companies, businesses are staying competitive and profitable by committing to purposes that transcend money and employing other lessons of Lewis and Clark's "passionate purpose."

As officers in the Army and as agents of the U.S. government, Lewis and Clark were really working for their fellow citizens. In this sense, the citizens were their customers. Their actions demonstrated that they never forgot this fact. On every step of the expedition, they always took the extra effort to diligently record new information, or explore and document new areas for the benefit of those who would follow after them. Basically, they were always thinking of the customer first.

Align Personal Interests With the Common Good

Doing what is right is not incompatible with making a profit. William Clark profited from his experience — and Lewis likely would have if he had not died shortly after the expedition in 1809.

Because the captains knew they were pursuing a worthy purpose, their actions had a clarity and consistency that transcended the short-lived goals of money, power and fame, and provided a strong foundation for everything they did.

Lewis and Clark's commitment to a loftier purpose was essential to the expedition's success. Their commitment to a higher purpose helped optimism prevail over pessimism, curiosity over arrogance, compassion over callousness, and risk taking over comfort. It strengthened the captains' resolve during times of danger, helped stave off defeatism when defeat seemed imminent, and served as a constant motivating force to themselves and the Corps of Discovery throughout the challenges of their expedition. ■

Men of the Enlightenment

Meriwether Lewis best espoused the philosophy of the American Enlightenment in his journal entry of Aug. 18, 1805:

"This day I completed my thirty first year, and conceived that I had in all human probability now existed about half the period which I am to remain in this Sublunary world. I reflected that I had yet done but little, very little indeed, to further the happiness of the human race, or to advance the information of the succeeding generation ... and resolve in the future ... to live for *mankind*, as I have heretofore lived *for myself*."

For Additional Information on a company with a higher purpose, go to: http://my.summary.com

The Principle of Shared Leadership

As the world gets more complicated, information continues to grow, and new technologies threaten to overwhelm many businesses, the benefit of having a true partner is more apparent than ever. All of these factors make Lewis and Clark's example of shared leadership extremely relevant. The following characteristics that made their partnership work can be instructive for today's business executives as well:

(continued on page 4)

The Principle of Shared Leadership

(continued from page 3)

● **Equity in Word and Deed.** Lewis and Clark really were, in Clark's famous phrase, "equal in every aspect." That none of the Corps' men ever knew of Clark's lower rank is proof that Lewis adhered to this principle. The captains' actions stand in quiet contrast to many recent examples of co-leadership that have ended in failure. BankAmerica, Pharmacia, BP Amoco, Citigroup and DaimlerChrysler have all recently tried co-CEO arrangements that have failed. The reason they failed is because for co-command to work, it must be real in both word and deed. In most cases, one of the co-CEOs actually held more power in the arrangement.

● **Trust.** Both Lewis and Clark knew the other man's word was his bond. In 1803, after learning from the Secretary of War, Henry Dearborn, that Clark could only be offered a lieutenancy instead of the rank of captain that Lewis had been promised — and promised Clark when organizing the expedition — Lewis wrote Clark that his rank would "by G-d" be the same as his own.

● **Mutual Respect.** From the planning stages of the expedition, when Clark accepted Lewis's offer to join the expedition by writing, "My friend I do assure you that no man lives with whom I would prefer to undertake Such a Trip," to the very end, or when Lewis fought for equal pay and compensation for Clark, it is clear the two men had a great deal of respect for each other. Without respect, a productive partnership is impossible.

Compensating for Deficiencies

● **Different Skills.** Lewis and Clark's partnership worked in large measure because each man added real value. Lewis was the better botanist, zoologist and doctor. Clark was the better boatman and cartographer and had more rapport with the men. Their skills compensated for deficiencies in the other and allowed each to concentrate his efforts where they were most effective.

● **Common Experience.** Both Lewis and Clark were military officers with years of experience on the frontier. As such, they shared common experiences and could communicate with each other based on those experiences. They were both entrepreneurial and comfortable with assessing and taking risks, and the daily rigors of the expedition required flexibility and an ability to handle ambiguity, which helped their partnership function so well. Their shared philosophical outlook also helped them understand one another.

● **Communication.** As officers on the frontier, Lewis and Clark undoubtedly debriefed each other on an almost daily basis. Not only did this allow them to share information, they could also use the opportunity to review decisions in an environment free of outside intervention. For any partnership to work, communication must be frequent and honest.

● **United Front.** Even though the two captains must have had differences of opinions during their 8,000-mile journey, there was never any indication that their decisions were anything but unanimous. For a shared partnership to work, disagreements must be aired privately. However, once a decision has been made, the "public" face of that decision must be unanimous. ■

Leapfrogging Captains

In addition to getting more work done and bringing different skills to the table, Lewis and Clark's shared leadership allowed the two to split up on occasion and leapfrog one another. There are at least five examples of this. Once, when the men were concerned that they were following the wrong river, the captains agreed to send Lewis ahead to determine if their decision was the right one. If it weren't, then Lewis would return immediately to correct the decision as quickly as possible.

Upon reaching the Great Falls, which confirmed they were on the Missouri, shortly thereafter, Clark went ahead and surveyed the route and found the quickest path to portage. While he did so, Lewis stayed behind and prepared the party for the portage. A month later, as the captains became nervous about the prospect of finding the Shoshone, Lewis ventured ahead to expedite finding them. When the Shoshone informed the captains that the Salmon River was not navigable, Clark went ahead to check it out for himself.

In every instance, the decision to split up produced fruitful results by saving time, increasing morale, or yielding valuable new information.

The Principle of Strategic Preparation

Although two centuries have passed between Lewis and Clark's experiences and the challenges that confront today's business executives, there are still a striking number of parallels with modern business and some very tangible lessons for today's leaders. These include:

● **Learn from and study others.** Lewis and Clark studied those who explored the West before them, and were able to succeed on a scale that surpassed their predecessors. In this sense, Lewis and Clark were not significantly different from companies that have come to market late only to end up dominating it. Similarly, Microsoft Corp. did not invent the Web browser, FedEx

(continued on page 5)

The Principle of Strategic Preparation

(continued from page 4)

was not the first priority air-freight service, and Procter & Gamble did not invent the disposable diaper; yet each company was able to become a market leader by assessing the market and learning from those who came before. They learned the essentials and incorporated new, improved ways of doing business.

- **Think long and hard about the future.** Lewis and Clark conducted extensive research and consulted with a variety of people before departing on their expedition. Advance preparation helped them think through possible contingencies, and business leaders can do the same.
- **Allocate resources in advance.** Lewis and Clark, by virtue of their due diligence, had a good idea of how many and which native tribes they would encounter on the first leg of their journey. As a result, they were able to allocate and budget their resources accordingly. Their advance work ensured they would not "overtrade" and deplete their resources. By understanding the time frame in which early milestones need to be reached, a business can constantly stay apprised of its situation and, if necessary, adjust its behavior accordingly.
- **Get the best equipment.** Given an original budget of only $2,500, Lewis could have easily been tempted to save some money by purchasing lower-quality rifles or by forgoing the expenditures on medicine or portable soup, but he didn't. Instead, he bought the best equipment available and purchased supplies and trade goods he felt were essential to the mission's success. Regardless of what it is, if it provides a significant competitive advantage, quality should not be sacrificed.

Essentials for Providing a Strategic Advantage

- **Focus on essentials.** Although only appropriated $2,500 by Congress, Lewis and Clark were armed with a letter of unlimited credit from Thomas Jefferson. Instead of purchasing items that were useful but not essential for the expedition's success, they focused on essentials and did not run out of the few items that were absolutely vital to their success: guns, ammunition, paper and ink. It can be easy for a new business to overspend on office space, equipment and furnishings. This tendency can be avoided by focusing only on items that are essential for providing a strategic advantage.
- **Remember that some things can't be rushed.** Lewis was forced to wait for an essential keelboat to be made before the expedition could begin. Although he lost some valuable time, the boat served its purpose and brought the expedition to its destination. Lewis's decision and the patience he demonstrated are analogous to a business waiting until a new product is ready before rushing to market. There is no substitute for quality.

Question Everyone

After Lewis and Clark descended the Ohio River in the fall of 1803 and made camp near St. Louis for the winter, they continued their meticulous preparations. They interviewed many individuals, including James Mackay, perhaps the most experienced Missouri River trader of his day. They even developed a comprehensive questionnaire that was sent to people who might have useful knowledge of the Missouri River. The survey was so far-reaching that future president William Henry Harrison, then governor of the Territory of Indiana, received it and responded. All told, the captains spent their time during that winter wisely. Their efforts were extremely beneficial in identifying crucial information about the native tribes they would encounter.

- **Focus on efficiency.** Many items served dual purposes on the expedition. Oil cloth could be used for sailing or keeping items dry. Tomahawks could be used to forage or fight. These allowed the expedition the flexibility to perform its daily chores. Similarly, today's businesses must determine whether there are certain strategic resources that can serve dual or multiple purposes. Businesses need to remain vigilant for opportunities where they can recycle, reuse or resell components that have outlived a particular function.
- **Pay attention to detail.** The captains practiced loading and unloading the keelboat many times, a decision that proved to be crucial. Likewise, small preparations, such as keeping extra supplies on hand and making special accommodations for foreign customers, can mean the difference between success and failure.
- **Leave things in reserve.** Lewis and Clark cached many items along the way to lighten their load and prepare for their return trip, creating the equivalent of a rainy-day fund. Businesses should also determine how many and what types of items they need to keep in reserve because of economic uncertainty. ■

The Principle of Diversity

Most of today's corporations are extending into new markets and new geographies — a situation that is not much different from that of Lewis and Clark. By selecting people with a variety of skills and hailing from a multitude of cultures, they were prepared to handle many types of situations. Business executives can learn

(continued on page 6)

The Principle of Diversity

(continued from page 5)

from their approach to diversity in the following ways:

- **Diversity's value must be cultivated.** Sacagawea's Native American skills and knowledge helped the expedition in numerous crucial ways. When given the chance, she and York, William Clark's black slave, became fully trusted members of the expedition.
- **Diversity has intangible value.** The fact that York and Sacagawea were physically different contributed to the Corps of Discovery's success. Sacagawea, by virtue of her womanhood, brought an element of humanity to the expedition and helped convince native tribes of the expedition's peaceful intentions. Businesses must realize that people can add value through more than their specific experiences or qualifications. Similarly, along with being just as skilled as their counterparts, those with disabilities can also bring a unique perspective, based on their experience, to a particular problem.
- **Diversity is not just racial or ethnic.** While racial and ethnic diversity are important, diversity of sex, age, physical ability and geography are equally important.

Merit-Based Hiring

- **Forgo the familiar and hire only the best.** Lewis and Clark hired the members of their expedition on the basis of merit. This sentiment is captured in *The Book of Leadership*, in which Harold S. Geneen, the former CEO of ITT Corp. wrote, "We set out to hire only the very best people ... I did not want glamourous, glib-talking men who got by on their coiffured good looks or family connections."
- **Cast a wide net.** By soliciting members from every corner of the United States, the captains guaranteed that they were able to select from a pool of people who possessed a variety of different skill sets. The regional differences also provided a wider menu of problem-solving approaches. Companies must recognize that it is not enough to just pay lip service to diversity. They must actively work to expose themselves to diversity. ■

Cultivating Diversity

One company that is taking a proactive approach to cultivating diversity is Shell Oil Co. Eager to capture the greater creativity and innovative problem-solving skills that diversity has been shown to create, Shell not only benchmarks itself against the diversity levels of other global leaders, it makes a point of asking its employees, on an annual basis, how the company can better utilize and develop people's skills.

The Principle of Compassionate Discipline

Although Lewis and Clark used corporal punishment with a whip, a discipline method that cannot be used today, there are still valuable lessons contemporary leaders can learn from their experiences. These include:

- **Start out easy and inform people of the rules.** The captains did not immediately administer discipline in a harsh form before the expedition began. Instead, they called everyone to order and explained the rules. They then reinforced the rules by issuing written orders. In the case of most of the soldiers, once they understood what was expected of them, there were no more disciplinary issues.
- **Attune disciplinary tactics to the situation.** In some instances, especially when lives are on the line, there is simply a need for a "zero tolerance" policy.
- **Look for ways to apply discipline constructively.** Lewis and Clark looked for constructive ways to apply discipline when they felt they could send a strong message without resorting to physical means. The primary purpose of discipline is to avoid a repeat mistake, and managers must balance the preventative aspect of discipline with the overall goals of the mission.
- **When possible, look to peers to administer discipline.** If certain actions of an expedition member threatened the cohesiveness of the team — rather than their own direct authority — Lewis and Clark had the members themselves decide on the penalty.

Discipline From the Top

- **When necessary, do it yourself.** There are times in business when the issue of discipline cannot be delegated. When a leader's direct authority is undermined or an employee's action threatens the success of an organization's mission, discipline must come from the top.
- **Use positive incentives when they will work better in uncertain situations.** As the Corps of Discovery entered undiscovered territory, Lewis and Clark adopted a more positive, incentive-based system of motivation to allow for more operational flexibility. One reason so many companies offer positive incentives, such as employee recognition events and flex time, is because they give business leaders tangible ways to reward initiative and creative thinking.
- **Accept that discipline will always be necessary.** If it is company policy to "always do what is in the best interest of customers," even the best employees cannot be allowed to avoid some form of discipline if they violate this cardinal rule. ■

The Principle of Leading From the Front

Lewis and Clark stood their ground when faced with hostile Sioux, and made vital choices when choosing the right waterway for their expedition and choosing to separate and find supplies to sustain them across rugged mountain terrain. There are many practical lessons of "leading from the front" that can be learned from their experiences and ability to assume complete responsibility for their mission's success. These include:

- **Stand your ground.** In a pivotal confrontation with the Sioux, Lewis and Clark knew that giving in to the tribe's demands for more trading goods would weaken their position with other tribes. Similarly, giving in to a large customer can weaken a company's ability to build strong relationships with smaller clients. Developing a pattern of providing preferential treatment only encourages the recipient to make more demands.
- **Put yourself in the line of fire.** In the confrontation with the Sioux, Clark did not retreat, nor did he hesitate to express his displeasure to the Sioux leader. He stood his ground and spoke directly to him. While executives can delegate tough responsibilities, tackling these situations themselves establishes an authority that can enhance their respect in the eyes of clients and others.

Determine the Right Way to Go

- **Go into the field yourself.** The success of the expedition was Lewis and Clark's responsibility, so they both went into the field when their subordinates could not determine the right way to go. Executives can rely on consultants, but when their analysis does not lead to a clear decision, executives must go out into the field.
- **Go with your gut.** Even after Lewis and Clark went out into the field and gathered as much information as was possible, they still had to rely on their gut instincts to make their final decision, even if it ran counter to the opinions of everyone else in their group.
- **Remember, with responsibility comes more responsibility.** What happens after a decision is made is as important as making the decision. Lewis and Clark, like good bosses, not only clearly communicated their decision, they also outlined the issues leading up to the decision and explained how it would be implemented.
- **Persist in the face of adversity.** Finding the Shoshone was critical to the expedition's success, and it took Lewis and Clark four attempts to find them. This is analogous to finding new customers in an economic downturn. In critical situations, it is the responsibility of the leader to deliver success. Persistence is the key.
- **Do something.** To keep the group together and give it hope when the situation was desperate, Clark decided to lead an advanced scouting mission. His example reminds us that at the end of the day, it is the responsibility of the leader to not only provide hope, but to actively deliver it when necessary. ■

The Principle of Learning From Others

Lewis and Clark's experiences highlight six benefits that protégés can expect to derive from a meaningful mentor relationship. They are:

1. Mentors can expand your horizon. Thomas Jefferson helped Lewis understand that the mission was not just about commerce; it was about nation building and the Manifest Destiny of America.

2. Mentors can introduce you to other people who can further your career. Without Thomas Jefferson's assistance, Lewis would not have been introduced to the most skilled and trained doctors, botanists and astronomers of his day. Good mentors will similarly put their protégés in contact with the right people.

3. Mentors can help you develop a new approach to your work. General Anthony Wayne's methodical approach to warfare, while difficult for the young and impatient William Clark to understand, eventually helped him recognize the importance of training and preparation. Because good mentors have made mistakes of their own, they can help younger leaders view things differently, as well as reprioritize their responsibilities.

Providing Focus

4. Mentors serve as reality checkers. In 1803, Lewis considered using the winter months to explore the New Mexico Territory. Jefferson put an end to the idea by reminding him that the purpose of his mission was much larger and the country could not afford to lose him in a side trip of limited value. Because of their experience, good mentors can help assess risk, identify potential threats and opportunities, and provide focus.

5. Mentors set high expectations for performance. Mentors must not only set high expectations, they should also provide a realistic and often critical look at whether protégés are meeting those expectations.

6. Mentors act as confidants and help build self-confidence. Good mentors, through example and advice, provide their protégés with the confidence to believe in themselves. That Lewis and Clark never doubted themselves and only expressed the greatest optimism can, in part, be attributed to the influence of Thomas Jefferson on Lewis and George Rogers Clark on his younger brother William Clark. ■

The Principle of Positive Thinking

Lewis and Clark approached every difficult situation by emphasizing the positive. By employing these six traits of positive thinking, they were able to meet every challenge and overcome every obstacle in their path:

1. Start with the right mind-set. Lewis and Clark contemplated and visualized success. In a 30-year study, Dr. Martin Seligman, the author of *Learned Optimism*, discovered that one of the most significant predictors of success is optimistic expectations.

2. Keep events in perspective. When Lewis and Clark had difficulties with their men early in their trip, they saw each event as an isolated event. By doing so, they were able to keep things in perspective and did not become overwhelmed by the situation.

3. Understand the difference between an obstacle and a barrier. The captains held fast to two beliefs: If others before them had done it, they could also do it. And if others said it couldn't be done, they possessed enough self-confidence to do it.

4. Refuse to be pessimistic. Lewis and Clark never complained or felt sorry for themselves. On first seeing the Great Falls, instead of viewing it as a massive obstacle, Lewis focused on its natural beauty. Instead of worrying or complaining about a new competitor that has entered the market, business executives should view the competition as an opportunity to improve.

5. Be realistic, but always keep a positive forward-focus. When Lewis looked over the Continental Divide and saw there was no easy way across, he immediately changed his focus and emphasized that they were now, at least, on the "downhill" road. Today's leaders can provide positive motivation for their employees by finding and focusing on pockets of hope during tough times.

6. Optimism requires action. When Lewis and Clark saw the Rocky Mountains, they embraced reality and did not hide from it. This approach allowed them to stay flexible and open to new ideas and new approaches. Never stop working to improve your situation. ■

The Principle of Aggressive Analysis

Managing risk is one of the most important functions of any leader. Lewis and Clark's experiences hold many lessons for today's business executives. These include:

- **Deal with known problems first.** When facing the choice between dealing with a known problem or keeping something in reserve to handle potential future problems, Lewis and Clark chose to deal with the present.
- **Favor forward movement.** The risks of moving forward are not often very different from those of staying put. As an example, JetBlue Airways, a company that doubled its fleet shortly after the 2001 terrorist attacks, was one of only two airlines to make a profit in 2002.
- **Limit your downside.** Lewis and Clark often hedged against failure by sending one of the co-commanders ahead in case they were wrong. Likewise, making an investment in a promising startup can provide a company with a strategy for minimizing a downside.
- **Demonstrate patience.** Lewis and Clark refused to be rushed into hasty decisions on several occasions. In the same way, businesses should not take the risk of rushing to market with an inferior or a flawed product.
- **Reverse course when appropriate.** Although Lewis and Clark had many amazing successes throughout their trip, when they were confronted with a return trip over the Bitterroot Range of the Rocky Mountains, they turned around. They did not let their previous successes blind them to real dangers. A bad business decision, such as New Coke, can and should also be reversed. ■

The Principle of Developing Team Spirit

The goal-oriented exploration, the challenging terrain, and the constantly changing conditions of Lewis and Clark's expedition closely parallel those faced by business leaders today. Here are some valuable lessons executives can apply to cultivate teamwork in their firms:

- **Lead by example.** Lewis and Clark, even if they never consciously thought about developing "team spirit," did it nonetheless. They also led by example by giving up comfortable lives, diligently preparing themselves, sharing leadership, and doing many other things that demonstrated they were committed to the success of their mission. The goal of any organization is to serve shareholders and, more important, society at large.
- **Start early and demonstrate trust.** When Lewis and Clark disembarked on their expedition, they immediately put their main party in the same boat. This implied that they were all in it together and needed to work together as a team to succeed.
- **Celebrate success.** The captains often took time to recognize and reward individual effort as well as celebrate team success. Leaders who wait too long to celebrate often lose excellent opportunities to bolster employee morale, which is vital in achieving goals.
- **Groom future leaders.** Lewis and Clark started from the premise that individuals could handle responsibility, instead of first making them earn it. This trust allowed the captains to focus their time and talent elsewhere and gave team members the experience and confidence they needed to become leaders themselves. ■

THE SUMMARY IN BRIEF

If you're a CEO, manager, executive, or HR leader in your company, you want your company, your team, and your department to be fantastic. In fact, you'd like your company to be so great people consider it "irresistible." Driven by a series of lightning-fast changes in technology, globalization, and social consciousness around the world, the rules of business have changed, resulting in extraordinarily profound rethinking of where, how, when, and even why people work today.

This book teaches seven management principles that will truly make your company irresistible–more focused, purposeful, and aligned. Your company will become more agile, more responsive, and more profitable. But even better, your employees, customers, and other stakeholders will be drawn to your company like magnets. It is possible to create such a place and in ***Irresistible: The Seven Secrets of the World's Most Enduring, Employee-Focused Organizations***, Josh Bersin shows you how.

IN THIS SUMMARY, YOU WILL LEARN:

- The new organizational model: a network of teams
- Why we should focus on the work, not the job
- The new leadership model: leader as coach
- The pandemic-inspired focus on employee experience

teams, not hierarchy

Today's new business drivers–speed, agility, engagement, and empowerment–have created a new organization model identified as the "network of teams." Fundamental to this definition are two ideas: first, that teams are the center of work; and second, that the company operates as a network, not as a hierarchy.

Regardless of existing organization charts, in reality, people work in cross-functional teams. There are design teams, sales teams, business unit teams, manufacturing teams, and dozens of others. It is possible to formalize, manage, and organize this way–with tremendous scale, power, and employee success–in a flexible work environment.

Teams make sense for many reasons: they are more engaging, they are quick to form and disband, and over time they generate camaraderie and trust. In today's irresistible companies, teams are multidisciplinary and demographically diverse, clearly defined and measured, and supported with artifacts, measurement tools, and infrastructure to perform successfully.

When people operate in small, empowered groups, they gain a sense of trust. In small teams, employees get to know one another and feel a sense of collective ownership, enabling them to design things faster, serve customers better, and iterate more quickly. Teams learn and adapt faster than individual workers by challenging each team member to come up with more creative ideas. As organizations shift their focus to learning, they will increase their reliance on teams to navigate uncertainty and generate growth.

We know that a strong team outperforms a strong individual. Look at any sports league to see how a losing team becomes a winning team when the right coach comes along. An irresistible company knows this. It facilitates and supports people moving from project to project, from team to team, and from office to home.

It lets people bring their A games–their skills and capabilities–anywhere they are most needed. Employees build skills rapidly through peer coaching, project experience, and senior technical support. Leaders succeed through making connections and winning "followership" rather than through power and tenure. People are evaluated based on their contributions to the team, not rigid performance goals and once-a-year reviews.

As you reconsider the structural modal, many practices become clear.

- First, teams must be aligned by the organizational culture and a set of team practices that companies often formalize.
- Second, a network of teams reduces hierarchy, eliminating a lot of the up-and-down communication that wastes time. The team makes decisions while the team leader maintains alignment with the network of teams openly and transparently.
- Third, in a network of teams, people move easily from team to team. People are sought out to join teams based on their reputation and skills, which encourages them to focus on expertise, not on politics, to succeed.
- Fourth, there must be people, infrastructure, and a culture focused on information-sharing and collective intelligence across teams. Meetings focus on coordination and information sharing, leaving detailed decisions to the teams themselves.

High-performing teams are exciting and fun; they empower and energize people; they thrive on purpose and mission; and they have a unique combination of leadership, clarity of roles, and self-determination.

A network of teams requires people who are self-motivated, passionate, and excited about their ability to have an impact. All humans seek this kind of work. The key is to give them an environment that makes it possible.

work, not jobs

We have moved from an economy where your employer defines your career to one where your skills, experience, and ambition drive success. Formal job descriptions and hierarchies are going away, and internal job marketplaces are becoming increasingly common. It's time to focus on the work, not the job, to manage, lead, and build a career.

As companies develop new products, shut down divisions, digitally transform the enterprise, and adopt flexible work strategies, people find that their jobs have to change. The up-or-out career growth model doesn't apply in a dynamic, changing business. More and more, companies are adopting the "talent marketplace" model.

People move all over the company to find new opportunities or projects, and they learn and grow along the way. Internal mobility is now one of the most important management strategies of all. People who move from one function to another (from HR to sales, from sales to marketing, and from

Rather than spend your energy trying to negotiate your way to the top, spend it trying to expand and improve your skill sets.

finance to operations) always outperform their peers.

Think about your company as a giant consulting firm. In a consulting firm, people are always working on projects. When a project starts, it's staffed up, and when it's completed, people are evaluated for that project and move on to the next one. Management is even treated this way.

Client partners who know the firm well move into management roles through a peer-review process. They gain three to five years of management experience, and then they often go back to being client partners. Very few managers are institutionalized in their jobs, giving the company tremendous dynamism and flexibility. This is happening all over business.

In a company organized as a network, business managers, designers, and engineers work together on projects, and team leaders select teammates based on skills, reputation, relationships, and followership. Individuals have career and personal goals, so they seek out projects and work based on their interests and desires.

The project manager or leader's goal is to find these people, build a team that fits, and manage the project so everyone feels they can succeed. The team decides who is responsible for what work, and while some people have functional specialties, the actual jobs may vary from team to team. Over time, as teams grow or change, people move from team to team.

Shifting from jobs to work centers the company on constantly developing, sharing, and rewarding skills. This means people have to upskill, reskill, and rethink their work every year. Rather than spend your energy trying to negotiate your way to the top, spend it trying to expand and improve your skill sets.

If we want to take advantage of this transition, we must change the way we hire. Irresistible companies hire employees based on how well they fit the purpose of the work, rather than on conventional metrics such as education and pedigree, experience, and skills. The good news is that managers and leaders can implement these changes relatively easily.

- Eliminate hierarchical and rigid job titles.
- Reduce the number of levels.
- Start to pay people based on the demand for their services and expertise rather than on their tenure or level.
- Inspire, reward, or force managers to encourage people to leave their teams, perhaps even evaluating managers on how many people do so.
- Provide career coaching inside the company.

Taken together, these steps will help your irresistible company adapt to thinking more about work than about jobs.

coach, not boss

The most effective leaders who stand the test of time know how to get the best out of their people. The more driven, aligned, and empowered your teams are, the faster your company will grow, the better its products and services will become, and the more service and support you'll provide to customers. It's quite simple. What is the new leadership model for this new world? It's simple: leader as coach.

Leaders are here to drive strategy, lead projects, help grow people, and identify the experts, innovators, and project managers we need. Leaders must understand the network, they must understand how the company makes money, and they must have the influence and followership to persuade people to move in a given direction without just telling them what to do.

And on the people side, they must have a deep instinct for talent and people. The simplest way to think of this is that leaders today must shift from being the boss to being the coach.

The role of a manager at irresistible companies is to get work done, not to manage people. This means we have two types of managers in companies going forward–those who manage projects and work, and those who lead and coach people, or "people leaders."

A new model is emerging, one of human-centered leadership. This means the leader connects the business to communities, society, and the local economy.

Today's successful leaders lead by example, empowerment, and inspiration instead of by position, level, or title. Irresistible leaders excel at moving people into the roles that are right for them and the organization. They align teams, develop networks, and reinforce culture and adherence to the organization's values.

In sports, great coaches make everyone feel powerful and engaged. They know how to put people into the right position, where they can succeed. They give team members the subtle guidance they need to improve while the game is being played, rather than just handing down judgment when the season is over. Great coaches help keep people focused on the ultimate goal and ask team members questions they may not have asked themselves. This archetype shatters many of the traditional models of leadership in business.

High-performing business leaders, in fact, share many similar traits with sports coaches:

- **They communicate a clear direction:** They have a crystal-clear understanding of where they are going. They help a team win through the clarity of their vision.
- **They are good judges of people:** They put the right people in the right positions to play to everyone's individual strengths.
- **They develop winning game plans:** They have an uncanny ability to take complex problems and quickly break them down into step-by-step solutions.
- **They focus on developing people:** They focus on individuals, their strengths, opportunities, and areas of improvement.

The single most important lesson in culture and performance is really simple: the boss becomes the coach. Irresistible companies give people the ability and the responsibility to manage themselves while leaders or coaches align and improve them.

culture, not rules

Whether employees work on-site or remotely from home, irresistible companies are pursuing a workforce strategy that elevates employee health, safety, and wellbeing. How do we define the workplace in businesses where people work in teams and share information electronically while managers are often busy doing their own work, not watching over our shoulders? And how do we build a work environment that overinvests in creativity and agility and focuses less heavily on operational execution?

The answer is a new workplace defined by culture, not rules, with a focus on flexibility, freedom, and fairness.

There are five discussion-worthy aspects of irresistible culture:

The work environment–the physical, environmental, and virtual experience

Workplace design really does matter. There is an almost perfect correlation between an employee's level of engagement and his or her satisfaction with the physical workplace. Choice and control are key–giving employees, regardless of their role and hob, the freedom to work the way they find is the most productive, supportive, and enjoyable for them. In a sense, the entire workspace should be focused on physical, cognitive, and emotional wellbeing.

Wellbeing–how the organization supports health, safety, physical, mental, and financial wellbeing

The most important aspect of the "culture, not rules" mindset is a massive focus on employee wellbeing. In the last decade, the focus has transitioned from encouraging health and fitness to promoting wellbeing as a driver of performance. More and more companies are starting to realize that wellbeing is also a strategy for engagement.

Managers have a much bigger role than just driving results. We are responsible for taking care of people, monitoring our own behavior, and making sure we are creating a net-positive impact on the entire organization. Irresistible companies are moving wellbeing out of the "benefits department" and making it part of the corporate culture.

Inclusion–how diverse, open, inclusive, and transparent the work environment is

In today's era of team-centered organizations, nothing is more valuable to employees than a sense of feeling included and respected at work. In irresistible companies, diversity and inclusion are not just HR programs; they're also critical to creating the right work environment. Diversity and inclusion must permeate all aspects of work and affect employee performance and engagement at all levels.

Recognition and reward–how the company treats and rewards people

Much of corporate culture revolves around the way people are rewarded and rewards go far beyond money and bene-

. . . people are promoted, but that is not the goal; rather, it is the outcome.

fits. Recognition has a tremendous impact on performance. The research for this book suggests that companies with high-recognition cultures have as much as 30 percent lower voluntary turnover ratios on average.

Paying people fairly in the age of transparency

Employees can look up their job title, level, tenure, and location and almost immediately see what others are making. HR managers used to buy this data from survey firms; today, it's freely available on the internet. Paying a fair wage attracts stronger candidates, increases the level of commitment to the company, and creates a more productive workforce. Pay should be based on multiple factors: job performance, skills and capabilities, reputation, network, the ability to lead, and the potential to grow.

growth, not promotion

If you want your company to be irresistible, you need the organization to learn as fast as it can. This means that learning should be essential to your entire people strategy so that people can grow, earn more money, and advance–regardless of level or job title.

The research for this book has continuously found that the highest performing companies always have one thing in common: they embrace a culture of learning. People are able to take time to learn, they have a culture of sharing and development, and managers are coaches, mentors, and educators at heart.

Organizational learning takes many forms. In some cases it's teams taking time to step back and talk about what's failed. In other cases it's giving someone a new assignment to help them develop new skills. And in others it means taking a course, completing an assessment, or finding a mentor. When you have a skill gap, you could try to hire someone to fit it, but people you hire from the outside may be expensive, hard to find, and often don't fit your culture. Sending an existing employee to a boot camp and giving them time to learn the new skill can be significantly cheaper than hiring from the outside. Irresistible companies focus on growth, not promotion, as their learning strategy.

In a nutshell, the "growth, not promotion" management principle simply means that we optimize around growth in everything we do. Yes, people are promoted, but that is not the goal; rather, it is the outcome.

As companies become more and more networked, we have to create this environment inside companies and let people grow regardless of whether they are promoted or not. That's not to say that promotion is bad, but when people know they're learning and improving their skills, they know their market value is going up even if their job title doesn't change.

Since technology development is dynamic, everyone in every function must constantly learn new ways of performing their essential functional tasks. Not surprisingly, technical skills are in high demand–but so are skills in sales, customer service, healthcare, and general project management. A good career is one that builds all these skills together. For you as an employee or a manager, continuous learning has become one of your most valued skills.

At an organizational level, these are issues of life and death: if we cannot attract and retain the most highly skilled people, we are doomed to fall behind. At a personal level, career development is essential to our lives. We all have to get better at "personal reinvention."

Stop thinking about yourself as a sales person or as a senior consultant. You can be whatever you want to be–this is the new way to manage a career. Rather than go to school, get a job, and retire, we now live in a world where we learn, work, and hopefully enjoy our lives in a series of continuous cycles well into our 70s and beyond.

Irresistible companies are figuring this new model out. They focus on an individual's growth, not promotion–moving forward in responsibility, expertise, and salary without necessarily being forced up the pyramid. We now know that a fulfilling career involves formal learning, stretch assignments, new projects, and opportunities to contribute across the company on many different teams.

People feel a sense of continuous personal progress, they learn new skills, and they steadily become more valued without a choreographed ascent through management ranks. Careers are experiences, not ladders. Employees are allowed to build skills on demand, explore new disciplines, and learn from their peers.

purpose, not profits

Profits are important to a company because they affect the company's ability to secure financing and attract investors who can increase working capital and fund business growth. But purpose is the real fuel of a company. It gives people the energy, enthusiasm, and creativity to add value in many ways.

And today, amid worries about income inequality, immigration issues, bias, and discrimination, purpose has shifted into a new era of "citizenship." This means helping the society around us. In a business, we want our people to always think about what they can do to make the company better, what they can do to make their teammates successful, and, of course, what they can do to please customers, shareholders, and the community.

When you get on a plane, shop on Amazon, walk into a store, or go to a restaurant, you don't just want a good seat, good electronics, and good food; you want a good experience. This means that companies must give their people a sense of empathy, understanding, and true concern for their customers. It means shifting focus from revenue and sales to customer satisfaction and retention–and showing their people why and how their mission matters.

A large portion of global equity markets continues to focus on financial results, embracing the idea that business exists for that purpose alone: to make a profit. While profits fuel a company's growth, irresistible companies are essentially institutions that garner loyalty, commitment, and energy from their employees. And in today's service-driven world, they attract the same level of energy and loyalty from customers. Profit, rather than being a goal, is an outcome.

There's even a term for this now: "conscious capitalism," which is the conviction that businesses must operate ethically and with a higher purpose as they pursue profits, serving the needs of humanity and the environment. The word "citizenship" best explains this strategy.

In the context of a company, it means taking care of your employees, your customers, your shareholders, and the communities in which you live. Well-run companies are good for everyone: employees, customers, and investors.

employee experience, not output

Among the many changes driven by COVID-19, the biggest of all was the new focus on what's called employee experience. The idea, put simply, is that we can't just design jobs and work practices; we have to look at employees' total experience at work.

In the past, companies focused on engagement surveys to understand employee satisfaction. Today, this is a discipline of design: studying what employees do, understanding their work and job needs, and then designing the systems, workplaces, and rewards that help them thrive.

Research for this book revealed that among all the things we can do to make work better for employees, a focus on trust, productivity, inclusion, and belonging win out. Throwing perks and benefits has little real impact.

Irresistible companies understand this, and they build employee-centric systems, frontline worker platforms, and many forms of listening, communication, and feedback to make sure employees are supported. These are the practices that create results–not pushing for output.

Like any tipping point, the transition to hybrid workspaces and flexible work arrangements is in its nascent, imperfect stage. We know some of the downsides of remote work, such as Zoom fatigue, overwork, and rising stress and anxiety. We are also aware of the positive effects, such as equal or enhanced productivity.

Meanwhile, advances in artificial intelligence, voice and face recognition, virtual and augmented reality, chat and conversational systems, and technologies that read and analyze data and text are all moving at light speed. The issue for us is how fast we can design, invent, or discover new jobs as machines come in and automate more work.

Irresistible companies understand that by unleashing the power of the human spirit, their company can go faster and farther than ever expected. Business should not be an effort to force labor to do what managers want; rather, it should be an enterprise to empower people to build organizational success. Irresistible companies attract top people, customers, and partners. It is one that people admire and respect, and it is one that adapts, grows, and endures.

The seven innovations detailed in this book represent a set of new management philosophies in HR, all of them underpinned by an essential truth: people are still the most important element of a business. A shift from hierarchy to teams, jobs to work, will empower people, create more energy, passion, and commitment, and propel employees forward on a journey of mutual value.

Josh Bersin is an analyst and thought leader focusing on the global talent market and trends impacting business workforces around the world. He is frequently featured in publications such as Forbes, Harvard Business Review, HR Executive, Fast Company, Wall Street Journal, Economic Times, Financial Times, and Washington Post. He has more than 850,000 followers on LinkedIn. Josh Bersin founded Bersin & Associates in 2001 to provide research and advisory services focused on corporate learning. In addition to the company's ongoing research, Bersin and his team created the Big Reset, a series of collaborative sprints for HR executives, to tackle the workforce challenges of the pandemic and beyond.

THE SUMMARY IN BRIEF

Most people who find themselves in a leadership role want to do something awesome and impact the world. But leadership is difficult—it goes against most of the instincts that kept us alive before the modern age. The hard truth is that leadership isn't about you. Great leaders put their personal agendas aside to ensure their team members succeed first. If you are playing for your own success, you are a boss, not a leader. Leaders change things; they push the human race forward.

It's Never Just Business: It's About People is intended to help you develop and refine your leadership skills, whether you're trying to build a company, keep up with the innovation required to be competitive today, or just change the world.

Author J. Scott, a down-to-earth leadership consultant whose purpose is to inspire people to reach for their potential, explains how to lead, with or without formal authority. The first step: celebrating your and your team members' mistakes and learning from them. You needn't be a "born leader"—talent is a fragile illusion, and grit is the secret to sustainable success.

IN THIS SUMMARY, YOU WILL LEARN:

- What motivates people (beyond basic needs - it's not money).
- How to talk to your team members so they'll listen.
- How to make meetings work for you and your team.
- How to be a true leader, not just a boss.

Leadership Versus Authority

Leadership isn't about dominance, control, and self-interest, but rather about collaboration, intentionality, and service. Authority is telling others what to do. Just because an executive has authority over employees doesn't mean the employees will follow them.

Leadership is a choice, and you don't need any positional authority to be a successful leader. When team members choose to follow you, it's because they feel positively connected to either your vision or to you. Connection is the key to leadership, and in the work world the only way to connect is by actively listening to each other.

The difference between a leader and a tyrant is that a leader works hard for the sake of everyone else, while a tyrant makes others work hard for them. Leaders don't dictate an outcome; they help their team members focus on what can be done versus what can't be done. Leaders help their team members prioritize their workload and run interference when anything threatens to distract them. Leaders sincerely care about the success of their team members and focus on solutions, leadership style, coaching, and mentoring in ways that enable their team members' success.

Leaders play for the team. To help your business, help your team members succeed. Really listen to them. Understanding how people are feeling is important. And team members need to understand how we are feeling. Are we sincere? Do we care about them? All these emotions are conveyed mostly via tone of voice and body language.

Leadership is about helping your team come up with the best ideas, not shoving your ideas down their throats. If you bring a fight, expect to meet resistance. You want your team to push back on your ideas and advocate for their own. You want them to feel ownership. It's not about building consensus. Develop an idea and get it out there. Let everyone challenge it; don't worry about it being perfect. Instead, ensure everyone is heard, drive toward an outcome, prototype, and assess the results. Repeat if necessary. If you wait for consensus, you're too slow and not as agile as you need to be.

Beyond our basic needs, people are motivated by autonomy, mastery, and purpose. Your team members need autonomy, which means you can't tell them what to do. They need mastery, which means they need to contribute and add value. And they need purpose: a plan and an organization that stands for something they believe in.

When Leadership is Necessary

Leadership is about taking an organization and its people on a journey. Simply put, leadership is about change, and change is about your team's culture. Great leadership is necessary when change is imminent or desired. Even if your company is succeeding today, it's likely that without change you will fail to draw new customers and keep your current customers infatuated.

As a leader, it's important to be intentional about driving change: identify small changes you want to make regularly and then be intentional about introducing them. Share your reason for the changes, tie them to your team's purpose, get their input, and then get their commitment. Work that change until it is inculcated. Don't introduce a new one until the last has been mastered. A good leader will try to understand the competition and the current customers. Fall in love with the competition and you will find out what your former customers want and why they are leaving.

Your goal as a leader is mass adoption of incremental change. This requires understanding the law of diffusion of innovations, which discusses how, why, and at what rate new ideas and technology spread. The first 2.5% of people are innovators. Early adopters make up the next 13.5%. The early majority is 34%, another 34% is the late majority, and 16% are the laggards. The tipping point is when you reach 15%–18% of mass market acceptance of a change.

Leadership is encouraging people to participate so they feel like what is happening is in service to them, not being done to them. People don't fear change, they feel the potential loss to them associated with the change, and people are terrified by the unknown. Human nature is to assume the worst, so management needs to be transparent in order to get employees behind a change strategy.

Truly listening to understand builds connection, and with connection comes trust. If you want your team members to lean in and play for the team, they have to trust you are playing for them. As you listen, ask questions. Paraphrase your understanding. Ask open-ended questions. Challenge assumptions.

Leadership Requires Preparation

To get leading right, you have to prepare and consider what's ahead of you, what you need to accomplish, whom you need to pull it together, and how you can serve them.

In leading a team through a problem-solving discussion, there are three objectives: solve the immediate problem,

learn what could have been done to achieve a better outcome, and put that knowledge to work in the company to ensure the same mistake isn't made twice. Assume your team will be defensive—that's human nature. You need to encourage people to open up. Make it safe, and more than that, give it rock-star status! Make vulnerability sexy! If you shoot the messenger, you kill innovation.

Leaders Need Leadership

Be careful—since we communicate to lead, speaking carelessly equals leading carelessly, which has consequences. Say what needs to be said when it needs to be said, and attempt to say it in the way it needs to be heard. If you aren't getting the outcomes you need, it's not about communication; it's about leadership.

While you're encouraging your team to come up with solutions, you're not going to like everything they come up; that's part of the critical-thinking process. Don't dictate outcomes! Say something like "Well, if our goal is X, how does your solution get us there?" If you help them get clarity, you are leading.

Meetings Are Where We Lead

In meetings, leaders gain agreement in the form of decisions, create and commit to solutions to solve problems, or identify and assign tasks to move toward the completion of a business objective. Productive meetings require preparation.

Meetings are fundamental in providing a safe place to build trust and honesty. They are where we model leadership, establish commitments, and help people be accountable—all publicly. Adoption of change needs to be visible. This starts by mastering meetings, modeling good habits, and achieving the planned outcomes. If your team is uncomfortable talking about problems or possible dysfunction, you have to find a way to move past it. If you're not having tough conversations, you're not innovating anything. You're probably not growing quickly, and you're not change-ready.

Prepare a meeting agenda that clearly identifies the meeting accomplishments necessary to achieve the desired outcomes, identifies only the team members with the expertise and authority to define and agree to next steps, and plans the expected duration of each agenda item.

Here are the ten good rules of engagement for meetings:

1. Meetings are to move forward. Talk about possibilities rather than fixate on obstacles.
2. State facts—not opinion or speculation alone—so good decisions can be made.
3. Listen to the question being asked and respond to it in context.
4. Respond to statements or direction given by explaining how you understand them.
5. Offer counter-direction or alternate proposals only after restating the other person's position.
6. If you have a concern, participate by asking questions; assume you are the one who doesn't understand.
7. When addressing a mistake, our purpose is to create an approach to a better future outcome. It's not about blame.
8. No team member needs to defend themselves—if you make it safe for them to be open.
9. Participate actively. Don't multitask, which sends a message that you have no interest in playing for the team.
10. Take individual responsibility for the outcome of each meeting. Don't blame others. Don't judge your teammates.

Commitments come from meetings, and good commitments are:

- Public (They create multiple memory anchors to help remind us to be accountable).
- Active (Ask questions, restate your understanding of what you're committing to, and negotiate if necessary).
- Voluntary (If people can't say "no," they fail to deliver on every "yes").
- Explicit (Be clear about the basics: who, what, why, when, and where).
- Mission-based (Explain why the task is needed).

Communicate to Lead

Communication is just a vehicle that's used to accomplish many things, including leading. Don't blame it for failures. If you want your team members to be more articulate, focus on improving their communication. If you want them to improve their ability to achieve the desired outcomes, focus on improving your leadership acumen.

The problem with focusing on improving communication as a way of improving your outcomes is that it almost always leads to more communication, which creates the need for more processes and governance over communication.

If you aren't getting the outcomes you need, the problem is you. Accept it, stop focusing on the symptoms, and focus on improving leadership skills. Keep a weekly leadership performance journal to develop your leadership skills. To lead your team, spend time with its members. You can be efficient with things, but not with people. If you need to tell a team member that their work doesn't meet your expectations, go over it with them in person so they can learn from it.

Take Responsibility for What's Heard

A leader takes responsibility for both good and bad outcomes. A great leader will go as far as taking responsibility for what their team members hear when they are making a commitment.

When you collaborate with a team member to define a necessary outcome, ask them to repeat back to you their understanding of what they're committing to and what their next steps will be. If their description doesn't reflect the outcome you need, you can clarify in the moment.

Instead of pushing people who don't accomplish what they commit to, start asking questions, with empathy, about why their words are not congruent with their actions. This can help them realize their unconscious resistance based on deep-seated emotions and allow them to recommit and set different goals or realize they're in a position at a company that isn't right for them.

A Culture of Accountability

Leadership works only if team members own their responsibilities. If they continually fail to offer solutions to situations, the leader will eventually have no choice but to tell them what to do.

Accountability is Generous and Kind

The cornerstones of a high-performing team are trust and accountability. From a young age, we tend to see accountability as a negative, a punishment, but to a leader, accountability is simply acknowledging that something has stalled so a way forward can be found. When a leader is willing to have an uncomfortable conversation to help a team member be more successful, it is both generous and kind.

Publicly take responsibility for your contribution to the team's outcomes if you want your team members to do the same—it makes it safe and shines a spotlight on those who don't or won't take responsibility. When there is a problem with a team member's work, shift the focus away from the team member having failed to keep a commitment to the blocker that caused the breakdown. The old guilt-and-blame paradigm has always burned precious time we don't have in a rapidly changing economy.

Nobody follows process; they follow culture. Culture is a system of habits. Changing those habits starts with a blueprint or a document. Then the work begins. If you want to change something, create a cadence of accountability and lean hard on the law of diffusion of innovations. And if you want to be a great leader, help your team members reach for their potential.

From the start of his career spent jumping out of helicopters in the United States Navy, J. Scott has a long history of leadership, servanthood, and bearing witness to the transformative power of getting shit done. Since starting 120VC he's personally overseen the global transformational efforts within organizations such as DirecTV, Trader Joe's, Blizzard Entertainment, Sony Pictures, Mattel, and others. His team's unique, irreverent approach to change has generated breakthrough results and created meaningful jobs.

The 8 Skills That Separate People Who Perform From Those Who Don't

KNOW-HOW

THE SUMMARY IN BRIEF

Legendary executive adviser and author Ram Charan has developed an integrated, holistic approach to what executives and managers must do and be to become successful leaders. According to Charan, leadership is a messy phenomenon because there are a number of things that influence it. Therefore, he has identified the skills that are required by today's business leaders, the personal traits and emotions that can help or interfere with these skills and the cognitive traits that can improve them.

In this summary, Charan presents a framework for leaders in the 21st century. By taking a broad view of the landscape to see how it is changing over time, Charan shows how leading a business is an ongoing process in which leaders must repetitively deploy and redeploy their know-how, which he defines as the quality that separates leaders who perform — those who deliver results — from those who don't.

This summary reveals Charan's perspective on the underlying foundation of business success, key components of which are his eight know-hows. These are specific skills Charan has identified that range from being able to position and reposition a business to dealing with societal forces beyond the market. Command of the know-hows, he says, can provide leaders with both practical and human-based perspectives that will enable them to meet situations with creative instead of standard approaches. Each of the eight is illustrated with detailed case-history material.

In addition, this summary will show you:

- ✓ ***Why these know-hows must be put at the core of what business leaders do every day.***
- ✓ ***How these competencies can be mastered as the basis for future success.***
- ✓ ***How to use a holistic approach to lead an organization.***
- ✓ ***How to shape your value proposition so it fits with the changing external landscape in a way that delivers on your moneymaking aspirations.***
- ✓ ***Ways to deal with forces outside your control.***
- ✓ ***Why the ability to listen is essential when confronting special-interest groups.***

Know-How

Know-how is what separates leaders who perform — who deliver results — from those who don't. It is the hallmark of people who know what they are doing, those who build long-term intrinsic value and hit short-term targets.

What gets in the way of finding people who can perform is the *appearance* of leadership. All too often people are chosen for leadership jobs on the basis of superficial personal traits and characteristics. Certainly intelligence, self-confidence, presence, the ability to communicate and having a vision are important. But being highly intelligent doesn't mean that a person has the knack for making good business judgments.

Personal attributes are just one small slice of the leadership pie, and their value is greatly diminished without know-how — the eight interrelated skills that bring leadership into the realm of profit and loss.

We need leaders who know what they are doing. Change is always with us, but its current magnitude, speed and depth are unlike what most executives and managers have experienced in their lifetime.

A Google-type company can come from nowhere and grow into a multibillion-dollar business in a few short years, becoming one of the world's most highly valued companies. However, alongside such huge opportunities, there are also pitfalls that can swallow up whole companies and industries.

The Eight Know-Hows

Here is a breakdown of the eight know-hows:

1. Positioning and Repositioning: Finding a central idea for business that meets customer demands and that makes money.

2. Pinpointing External Change: Detecting patterns in a complex world to put the business on the offensive.

3. Leading the Social System: Getting the right people together with the right behaviors and the right information to make better, faster decisions and achieve business results.

4. Judging People: Calibrating people based on their actions, decisions and behaviors, and matching them to the non-negotiables of the job.

5. Molding a Team: Getting highly competent, high-ego leaders to coordinate seamlessly.

6. Setting Goals: Determining the set of goals that balances what the business can become with what it can realistically achieve.

7. Setting Laser-Sharp Priorities: Defining the path and aligning resources, actions and energy to accomplish the goals.

8. Dealing With Forces Beyond the Market: Anticipating and responding to societal pressures you don't control but that can affect your business.

Command of the eight know-hows enables you to diagnose any situation and take appropriate action, lifting you out of your comfort zone of expertise by developing skills that prepare you to do what the situation requires, not just what you've traditionally been good at.

The know-hows do not, however, stand alone. There are a million things that can block human beings from making sound judgments and taking effective action. That's where personal traits, psychology and emotions enter the leadership picture. But instead of trying to define and adopt the ideal set of personal traits, it's more useful to focus on a simple question: How do your

Know-How

(continued from page 2)

personal psychology and cognitive abilities affect the way you cultivate and use the know-hows?

Know-how is about what you must both do and be to lead your business in what is shaping up to be the most challenging business environment in decades. It plants business leadership squarely on a foundation of profit and loss, capital utilization, resource allocation, productivity and consumer satisfaction while never losing sight of the fact that leaders are human beings.

Personal Traits

The eight know-hows are especially influenced by a handful of personal traits that can affect leadership: ambition, drive and tenacity, self-confidence, psychological openness, realism and an insatiable appetite for learning.

It is important to understand that these personal traits interact with one another and with the know-hows, for better or worse, and that, in excess, they have a dark side. Overconfidence combined with excessive drive, for instance, can lead to narcissistic behavior, overcompetitiveness and distrust of others. Combine those traits with being psychologically closed and overoptimistic, and you are sure to shut down anyone hinting at bad news or suggesting that there are practical limitations to your plans.

Personal Traits and the Know-Hows

The following are the personal traits that can help or interfere with the know-hows:

✓ **Ambition** — to accomplish something noteworthy BUT NOT win at all costs.

✓ **Drive and Tenacity** — to search, persist and follow through BUT NOT hold on too long.

✓ **Self-Confidence** — to overcome the fear of failure, fear of response or the need to be liked and use power judiciously BUT NOT become arrogant and narcissistic.

✓ **Psychological Openness** — to be receptive to new and different ideas AND NOT shut other people down.

✓ **Realism** — to see what can actually be accomplished AND NOT gloss over problems or assume the worst.

✓ **Appetite for Learning** — to continue to grow and improve the know-hows AND NOT repeat the same mistakes.

The best leaders have distinct cognitive abilities that go beyond simply being bright. Their thinking encompasses a wide range of altitudes from the conceptual to the specific, they have a broad cognitive bandwidth, meaning they see things through a wide lens, and they are good at reframing issues and problems, looking at them from various points of view. ■

The Foundation: Positioning and Repositioning the Business

Positioning is the central idea of your business and the foundation for whether or not you are making money. The true test of your positioning is the real world. If people like what you have to offer and you can sell it at a profit, you'll make money. If they're confused about what your business provides or they don't like it, you won't.

Positioning is not for eternity. The frequency, depth and abruptness of change in the world today means that you will be frequently shaping and reshaping your business so that it fits with the ever-changing landscape in a way that delivers your moneymaking aspirations.

Over the course of a 40-year career, most 21st-century leaders will have to reposition businesses four or more times. That means making basic decisions about what to add to the business and what to take out. It also means spotting new opportunities for profitable growth, resegmenting markets and deciding which technologies to adopt.

Knowing how to position and reposition a business is among the most demanding requirements of the 21st-century leader. While all eight know-hows are important, the know-how of positioning is first among equals. If you don't get it right, the foundation of the business eventually crumbles.

CEO Lee Scott Repositions Wal-Mart

Under the leadership of CEO Lee Scott, Wal-Mart has taken some dramatic steps to reposition the business, experimenting with new merchandising concepts to appeal to relatively higher-income consumers. This includes offering fine wines and making major moves into fashion. Wal-Mart has placed an eight-page advertising spread in *Vogue* magazine, presented a fashion show in New York, opened an office in Manhattan's Fashion District and hired a senior executive from Target for a top job.

Does the development of a new positioning of appealing to higher-income consumers, along with the traditional ones, run the risk of confusing the image of the Wal-Mart brand? No doubt the leaders of Target are

(continued on page 4)

The Foundation: Positioning and Repositioning the Business

(continued from page 3)

watching Wal-Mart like hawks. If Wal-Mart successfully repositions, Target's relative positioning will consequentially be altered. ■

Before the Point Tips: Pinpointing Emerging Patterns of External Change

Business has always had to contend with a changing world, but the pace and abruptness of change are new to this generation of business leaders. Your job as a leader is to deal with that change, to get and stay ahead of the curve, ensuring that your business is positioned to make money now and in the future. It takes a special know-how to mentally process the complexity and deal with the ambiguity to form a view of the patterns that are emerging. It is this know-how of pinpointing external change that allows you to make a sound judgment about where the world is going and put your business on the offensive.

From World War II through the mid-1990s, change in the United States tended to be relatively linear, continuous and predictable. Now, however, abrupt, exponential change is the norm — witness, for example, the sudden and steep rise of China, and subsequently India, resulting in a disruption in the traditional flows of trade and the supply and demand of commodities, such as oil, in turn causing flux in political alignments.

Few Reference Points From the Past

Many people continue to look backward for a reference point they can understand, but matches with previous patterns and cycles are nearly impossible to find. China is not Japan in the 1970s, nor is the Internet like jet transportation.

Never before have macroeconomic trends had such fast and devastating impact on companies and whole industries. Traditional ways for making business and economic assessments neither correlate with nor explain the reality of what is actually happening in the world today as they have in the past.

The opportunities have perhaps never been greater for those who are ahead of the curve and able to take action ahead of the competition. Google shaking up the media industry, FedEx expanding into Asian markets and Apple with its iPod phenomenon are just the tip of the iceberg.

Looking Outside In

The earlier you can detect changes, the more time you will have to generate and test hypotheses, mobilize resources and, if necessary, reposition the business to achieve your moneymaking targets.

Looking beyond the usual boundaries of the business environment helps you detect changes early on. For instance, the political process has far more impact on business now than ever before, and it is essential that you know and understand the ramifications of legislation and regulations for your business and industry, as well as special-interest groups that may have an impact on you.

People with extraordinary know-how for detecting patterns in the external environment fly at a higher

(continued on page 5)

Detecting Patterns in the Complex World

Here are seven simple questions that can help you sort through and detect patterns in the complex world around you:

1. What is happening in the world today? The most significant trends affecting business transcend company and industry.

2. What part of my frame of reference has worked for me? What hasn't worked for me? The construction of your own frame of reference based on previous experience is a large part of learning to detect changes in external patterns.

3. What does it mean for anyone? The newspaper industry is undergoing vast changes as a result of the Internet and Google.

4. What does it mean for us? Once you have the big picture, you can begin to examine what it means for your own company's strategies. That's what General Electric's CEO Jeff Immelt did when he decided to meld several of GE's businesses into the infrastructure business to sell items such as energy equipment and services, railroad locomotives and aircraft items — all necessary ingredients in rapidly growing economies.

5. What would have to happen? Apple's invention of the iPod would have been considerably less successful had it not created iTunes, the online source of downloadable music.

6. What do we have to do to play a role? GE's decision to market its infrastructure products in emerging markets required it to reorganize those businesses in a way that recognized the difference between selling a power plant to an American utility and selling that same power plant to a foreign government.

7. What do we do next?

imaginative altitude than others. They see things that others miss, seek sources others don't and piece things together in their own creative ways. ■

Herding Cats: Managing the Social System

Perhaps the biggest untapped opportunity for your success as a leader is shaping the way people work together to deliver the numbers. Your own performance depends on your ability to get other people to commit to and deliver their common goals.

But as every leader knows, getting people to align their efforts is a lot like herding cats. You can put a lot of energy into it and they still do as they damn well please.

Understanding the social system of your business is the best way to get a handle on the otherwise mysterious subject of managing and changing how people work together to meet ever-changing business requirements.

Every company — from a big business to the smallest two-person shop — has a social system. As people meet, they influence each other for better or worse. They develop relationships and feelings about each other. They share information and make necessary trade-offs and decisions. How they work together determines whether they deliver on the commitments they make to each other.

Managing the social system has two parts:

- **Determine what critical decisions and trade-offs must get made, and by whom, to accomplish your business goals.** Then you use that insight to design disciplined, routine, regularly scheduled meetings — operating mechanisms — to bring the right people together at the right frequency with the right information to make those decisions.

- **Actively shape the behaviors that are displayed in making those decisions.** People may be hoarding information, going off on tangents and not getting to the nub of the issues. They may also be driving individual agendas, not surfacing conflicts and failing to reach clear resolutions. Shape the content of these discussions and ensure that the right behaviors are taking place in them and the output links to results. Actively design and lead the social system of your business, which comprises all the operating mechanisms, the connections among them and what happens in them.

Non-Negotiable Criteria

As you're moving leaders to new jobs, you have to know the person, but you also have to be sure you understand what each job really requires to succeed in it. Contrary to common belief, long lists of criteria don't clarify what's required. The opposite is true: Lengthy lists indicate fuzzy thinking and are inherently too general to point to the person who has the best chance of succeeding in that job. You have to have a laser-sharp view of what is absolutely required for a person to do well in a job and define the three or four non-negotiable criteria, things you cannot compromise on.

After years of hiring people in the retail business, Ben Cammarata, the highly successful founder and chairman of the $15 billion off-price retail chain TJX, has had a high batting average over a 30-year period recruiting, developing and retaining leadership talent. His non-negotiable criteria are simple and clear. You must be street smart, have great people skills and be intuitively good at merchandising — none of which, he believes, can be taught.

Diagnosing, Designing and Leading

Know-how in diagnosing, designing and leading the social system is how some leaders are able to mobilize people to deliver results and transform an organization from, say, a bureaucracy to a well-oiled machine, as Jack Welch did as CEO of GE, or from an entrepreneurial culture to one that coordinates actions without sacrificing flexibility, as Bob Nardelli did as CEO of The Home Depot. It provides the tools for actually getting things done.

Look at your business through the lens of the social system. Look at the interaction among people, the information flows and the anatomy of decision making. You have to be able to map your operating mechanisms, ensure that each of them is geared around a business result and diagnose how each of them is actually working.

If new ones are required or existing ones are obsolete, it's your job to change them. And if the people are not having the right discussions in them or behaving in the right way, it's your job to correct those behaviors, using persuasion, power and rewards, whether money, recognition or promotion, as necessary.

That's how the social system changes — through your conscious actions in designing and redesigning the operating mechanisms and conducting the dialogue in a way that shapes people's behaviors. As you do this repetitively, with discipline, you change the quality and substance of business decisions, and because the behaviors that get

(continued on page 6)

Herding Cats: Managing the Social System

(continued from page 5)

shaped in the operating mechanisms carry over to people's everyday work, you sustain a change in how people work together. With this know-how, you accomplish the elusive goal of culture change and develop the ability to deliver on commitments and achieve business results. ■

How Leaders Are Made: Judging, Selecting and Developing Leaders

A sure sign of the know-how of selecting and developing leaders is that you leave the organization stronger relative to the competition than it was before you took over.

Effective leaders go on the offensive and actively search for people with leadership potential and create opportunities that leverage their abilities, test them further and allow them to grow.

That's what Jack Welch did when he lifted a young Jim McNerney (now CEO of Boeing) from vice president of marketing in GE's second-smallest business unit to be a general manager of a small P&L center in a different industry. He did an outstanding job, and one year later Welch appointed him executive vice president of GE Capital. Similarly, he boosted a young Dave Cote (now CEO of Honeywell) several levels, from his financial analyst position to general management.

The know-how of selecting leaders and helping them reach their potential means focusing on people first, not jobs — actively searching for leadership talent throughout your organization, creating career moves for those individuals that test their ability to take on more complexity or learn new skills, and creating processes to do it on a disciplined, regular basis. You have to develop and improve your judgments on people, which means spending time and energy on it daily, weekly, monthly, not just during once-a-year talent reviews or succession-planning sessions.

As you practice and improve your observational powers, you have to prevent your own psychological blockages from getting in the way of perceiving people accurately. People grow and change, and jobs continually evolve, so you have to be psychologically open to continuously update your judgments on people and their fit with the job. It's up to you to spot leadership talent, grow it and build a pipeline of leaders.

Your know-how in judging, selecting and developing leaders doesn't automatically improve just because you hire and fire a lot of people. You have to reflect on your accuracy in crystallizing what a person is good at, what his or her potential is, and what he or she needs to improve. ■

Unity Without Uniformity: Molding a Team of Leaders

Taking the time and effort to assemble smart and talented people who are your direct reports is crucial. But the bigger challenge is molding these high-energy, high-ego people into a working team of leaders who synchronize their efforts and propel the business forward.

Individual team members naturally focus on their own functional specialties and have their own personal ambitions, but those differences often cause them to pull in different directions. As the leader, you have to get your direct reports to submerge their egos, aggression and personal agendas so they're pulling together. You can't mediate every dispute, ensure that every trade-off is properly made or that information is flowing as it should on a daily basis, but if you use the know-how of molding a team, your direct reports will do those things as a matter of course and the business will perform better.

A Common Picture of the Total Business

The centerpiece of this know-how is getting your team to understand, focus on and commit to the total business. You have to help them create a common granular picture of the business in its external context as you see it. That way, they'll know how their respective areas fit together, and they'll have both the motivation and information they need to keep their efforts aligned.

Most of the work of molding a team happens in group settings, which may require that you change the way you lead. You have to help the group create a picture of the total business and correct any divisive behaviors in the presence of the team, so you need the emotional strength to direct and stand up to powerful individuals on whom you depend. The more people can see the total anatomy of the business, the intersections of its moving parts and the broader context in which it operates, the better job they do.

Here are the principles of molding a team of leaders:

1. Share numbers, reasoning and results to shape a common view of the business. A team of leaders starts being molded when everyone is on the same page. The entire team needs to know what you know.

2. Have the psychological courage to confront behaviors that harm the team's effectiveness. If you want to mold a team of leaders, you must have the inner courage when an individual's behavior is destroying the team to confront that person head on and say it isn't acceptable and has to change.

(continued on page 7)

Unity Without Uniformity: Molding a Team of Leaders

(continued from page 6)

3. Anticipate, surface and resolve conflicts. As the leader, you have to be sure that an overly competitive team member doesn't exploit another's vulnerability when discussing problems or concerns.

4. Pick the right people. You may have the best expert possible in a particular field, but if his or her ego cannot be submerged to work with the team, you have to decide what is more important to you: the person's expertise or the working of the team.

5. Provide prompt feedback and coaching. Feedback is most effective in written form, given frequently.

6. Recognize and avoid derailers. The single biggest reason for teams not performing effectively is the psychology of the leader. It often lies in a profound discomfort and even fear of giving the candid feedback that helps mold direct reports into a team. ■

The Buck Starts With You: Setting the Right Goals

Goals are the destination you want to take your business to. Once stated clearly and communicated to the organization, goals align people's energy, and when they're linked to rewards, they have a powerful effect on people's behavior. Goals set the tone for decisions and actions that follow and greatly influence the business results that get delivered.

Selecting the right set of goals is the ultimate juggling act. The goals have to be of the right type and magnitude to be both achievable and motivational. They have to be acceptable to investors, most of whom care more about the short term, but also ensure that the business can make money in the long term. Because the pursuit of one goal necessarily affects the others, the individual goals have to be balanced with one another. Above all, the goals must reflect the opportunities in the external world, while taking into account the existing and potential ability of the organization to pursue them.

More Than One Goal

There's a know-how to setting the right goals, in the right combination, with the right time frame and at the right level. You can't set goals by looking in the rearview mirror at what was accomplished last year and adjust this year's numbers accordingly, and you can't go by what is being projected for the industry or the economy overall. Goals should reflect the opportunities that lie ahead and what is possible *for your business* as it goes forward.

You have to choose more than one goal to keep the organization in balance, and the goals don't all have to be financial and quantitative. Goals must be clearly defined with specific time frames at the start. Then you must be willing to adjust them as the world changes and the opportunities and organizational capabilities expand or contract. ■

It's Monday Morning — Now What? Setting Laser-Sharp Priorities

Priorities are the pathway for accomplishing goals. They provide the road map that organizes and directs the business toward its goals. When the priorities are unmistakably clear and specific, people know what to focus on and, therefore, what should get their attention, resources and follow-through. The right priorities, combined with appropriate follow-through, keep the truly important things from being driven off the radar screen in the day-to-day hurly-burly of life at work where everything can seem urgent and important.

The right priorities help you rise above the constant demands that create stress and confusion. They enable you to provide clarity and focus for yourself and the other people in your organization.

Ground Level

Goals are set at 50,000 feet. Priorities are set at ground level where you must have the tenacity, attitude and willingness to probe the messy details to think through and define what the most important actions should be and what their second- and third-order consequences will be. Priorities determine how resources are allocated and thus have the potential for touching off clashes as resources are moved from one person to another.

Once set, you must repeat the priorities over and over again and follow through on them to be sure that people understand them, buy into them and act on them so the organization executes them and doesn't deviate from the course the priorities set.

General Electric's Priorities

When GE's CEO Jeff Immelt determined that one of his primary goals would be to achieve an 8 percent rate of organic growth, he had to set the priorities that would ensure the business could achieve that ambitious goal. It was clear that the emerging nations, particularly China and India, would grow much faster than the developed world, so he set as one priority that GE would derive 60 percent of its growth from the emerging markets. And

(continued on page 8)

It's Monday Morning — Now What? Setting Laser-Sharp Priorities

(continued from page 7)

since those countries would need infrastructure in the form of turbines, water purification, railroads and airlines, all businesses in which GE had a stake, he set as another priority the reorganization of those infrastructure businesses to better tap those markets.

Investing in technology — refurbishing existing GE research labs and opening labs in China and India — became a priority, as did the realignment of GE's vaunted talent planning and succession process, to define and incorporate the criteria for future growth leaders. Finally, Immelt shifted the social system by creating a new operating mechanism called the Commercial Council and changing the reviews of growth projects. He now has 80 projects of $100 million or more on his dashboard and personally reviews 10 a month. ■

Societal Forces: Dealing With Forces Beyond the Market

Every business today operates in a complex societal and political milieu that demands more of it than just profits. Business leaders have to be able to deal with market forces, and over the years they've learned to live with them. In the 21st century, business leaders will be required to deal with issues that go beyond the market.

Companies that are on the wrong side of an issue can suffer immense damage if it gains traction, which many special-interest groups know how to accomplish. They know how to organize, get access to the media, form coalitions with groups with different causes, raise money, and influence customers and governments. They have unprecedented access to information through the Internet and can disseminate their views widely at low cost. Even an individual can exert influence through a blog.

The challenge is to keep abreast of changing societal expectations and adapt your business accordingly while avoiding the landmines. Many special-interest groups raise legitimate issues, and you need to understand and respond to them. Dealing with external constituencies may not *create* shareholder value, but the failure to do so most certainly can *destroy* it, and a leader who shies away from the challenge will often wind up looking for a job.

Forces Outside Your Control

The know-how of dealing with forces outside your control is to identify new interest groups that are emerging and to discern which groups are gaining influence and have legitimate issues. You have to build relationships and understand the real motivations and attitudes of those groups and their leaders. You have to look for ways to communicate, knowing that if you bridge the gaps soon enough, you can help reshape the issues and outcomes. If the issues are legitimate, you should respond, maybe by building coalitions among your peers so the industry doesn't continue to be attacked.

While you have to be prepared to resort to legal channels and, frequently, negotiated settlements, you can't depend on them, because many battles take place in the court of public opinion and are won on the basis of emotional appeal rather than legal argument. Each move requires new analysis, like an evolving chess game where you have to see several moves ahead.

Adjusting Your Attitude

You'll never master the know-how of managing external constituencies if you're not psychologically willing to deal with the inherent ambiguities and lack of control. Most leaders get into trouble because they simply ignore advocates of change whose demands don't fit squarely with a business and economic rationale.

The most effective leader is psychologically open and willing to negotiate, adept at understanding that no matter how irrational the interest group's position may seem, it makes perfect sense to the opponent. The ability to listen with an open mind and determine what the group or its leaders are really after is essential. Leaders of the future have to like this or at least not resist it. Otherwise, their organizations may be put on the defensive. Leaders must be psychologically able to anticipate such forces and deal with them effectively.

Young leaders may have something of an advantage in accepting societal pressures on business, but it's a challenge for every leader to develop a methodology and the judgment to handle it well. Clearly, being a business leader in today's world is not for the faint of heart. ■

THE SUMMARY IN BRIEF

Transformation is hard, which is why most efforts will fail. Having guidelines to lead dramatic change can significantly improve outcomes, taking organizations and teams to the next level.

Lead Extraordinary Change: The Proven Playbook for Driving Successful Organizational Transformation has been called "the best kind of business book, because rather than academic analysis, it is based on [a] wonderful career path."

Author Mamie F. Jones has over 35 years of experience of leading transformation efforts with multiple organizations and teams. Based on her know-how, Jones developed a proven playbook for anyone who wants to drive dramatic change and produce extraordinary results.

IN THIS EXECUTIVE BOOK SUMMARY:

- Adjust your own mindset and approach to leadership to make transformations easier.
- Create the right environment for change.
- Inspire others to embrace change, moving the transformation into high gear.
- Develop a transformation culture within the organization.

Chapter 1: Ingredients for Success

What drives the need for transformational change in an organization? Usually it's because the company, business unit, or team is not performing against the organization's vision or strategic goals. It often faces competitive threats, industry disruptions, or other organizational challenges. When a company faces the need for extraordinary change, the organization's leadership looks for people who can come in and alter the trajectory of the current state.

If this describes what you are facing, then you need to start by assessing if you're in a position to drive the change.

To be successful, you must evaluate your current work environment and the leadership willingness and capability to support change. This the foundation of any transformation effort, and if this foundation is not in place, your efforts may be jeopardized.

What fits your situation?

(A) You've been asked to join a new company that wants you to lead or help drive transformation

(B) You've recently joined a company that's asked you to lead or help drive transformation or

(C) You've been working in a company for a while and have been asked to lead or drive transformation

Whether you are (A), (B), or (C), you might not realize that you can assess the environment you are working in or are about to join and determine if you're in the right position to be successful in the difficult journey of transformation. Many people might think they know the environment, but they will need to follow the same process I'm proposing, as there are many aspects that will surprise you in conducting your evaluation.

There are several ingredients for success, and while each one is important, they may not all be present in your environment. However, a good portion should be present to varying degrees.

1. Support

You obviously won't have everyone's support, but you do need to have the right support.

2. Autonomy

There is nothing more important than having autonomy. The opposite of autonomy is micromanagement. If you are being asked to take on a significant task, fraught with risk, you need to know whether you have the right kind of independence to make the required important but tough decisions.

3. Meritocracy or Biased Performance Management

Does your organization recognize employees based on their demonstrated abilities and merit? In a meritocracy, this is imperative. Without concrete goals, the wrong people will be rewarded or promoted—and often not based on their achievements. This creates a negative culture that employees will despise.

4. Compelling Vision

Everyone hates empty slogans, and for good reason, but having a great, compelling vision is imperative. Otherwise, people will just continue doing what they've always done, which of course limits what you can achieve. There is a wonderful saying that I use frequently: "The thinking that got us here won't get us out."

5. HR Support

You will step on toes when it comes to making people decisions. Some employees will leave voluntarily while others will leave involuntarily. The question here is whether HR is ready to support you in making tough people decisions.

6. Data or Supposition?

When "I think," "I feel," and "I believe" phrases are being used to make decisions, it is a bad sign. This where you need to look at whether your organization is making decisions based on facts or feelings.

Once you have assessed your environment for the ingredients for success, there are other important elements that you will need to focus your attention on:

- Identify great talent
- Identify change agents
- Make a statement early
- Expect resistance
- Document current state and demonstrate small wins early
- Be persistent

In meetings where there may be differences of opinion, active listening is even more important.

Chapter 2: Listen and Learn

The goal of this stage in the process is to understand what is happening in the workplace on a grassroots level by actively listening and learning.

Regardless of your situation, you really have one shot to get this Listen and Learn stage of the playbook right. It sets the stage for the rest of the playbook, and you may find yourself coming back to this section as a refresher.

It all begins with active listening. I can't stress how important this skill is. You might agree to the idea in theory, and find many others who will likewise agree, but you will be surprised to find how little active listening actually occurs.

In meetings where there may be differences of opinion, active listening is even more important. Contention can often stem from a person's emotional attachment to a particular point or idea, and they are "taking up all the oxygen" in the room. This where diplomatic curiosity comes into play.

As you begin interacting with your team, you will be creating an environment where people will come to know you as an active listener and that you want to learn from them in a genuine way. You will hear from your team and the relevant stakeholders, some of which will highlight different aspects of the culture. As you do this, you will begin to understand the organization and the team culture more deeply.

Listen and Learn starts with understanding the current state of your organization. As mentioned earlier, the current state is the baseline for measuring improvement. If you do not set a baseline, your goals will not be based on concrete data, and results will be difficult to prove.

Spending time with your team members and understanding what's on their mind is key to the Listen and Learn process. Here are the steps I follow:

- Talk to every team member
- Make it safe—and be genuine
- Use a script
- Capture quotes
- Assemble the themes and quotes
- Share what you have learned with your direct leadership team
- Prepare for an all-team off -site

Remember: the biggest change you will face in your transformation efforts is the people. You can't just flip a switch. Transformation is an ongoing process that takes patience and persistence. You will find when you start making talent changes to the team, negative feedback can follow from others. Relationships have been forged over time, and when you disrupt these relationships that serve others well, it results in difficult conversations. Yet as you make positive changes to the team and begin showing results, you will build trust over time with those that challenge you.

Chapter 3: Bring the Burning Platform to Life

The Listen and Learn process begins to create the right environment for change. Now it's time to bring the burning platform to life through capturing hearts and minds.

The phrase "burning platform" is often used in transformation efforts and refers to getting people to understand for themselves that there is a desperate need for change and no time to waste—that they are standing on a "burning platform." Up to this point, your team knows that you have been brought in to fill a leadership role, but many do not know the extent of what needs to change. Others already know they are on a "burning platform," but they don't know what to do about it.

To bring this burning platform to life, the next step is to share all you have learned up to now with the whole team in a two-day off-site. This takes place after your Listen and Learn interviews and after you have documented your themes and quotes.

The objective of the off -site is to get as many team members as possible into the same room for two days and have them understand the current state—and then take ownership of the needed change.

I've learned that you cannot move into the broader team off-site without bringing your leadership team on board. The leadership team needs to understand, at a high level, what is going to be on the agenda—but not all the details or activities. They need to experience the off -site for themselves and will need to make their own commitments to move forward. However, they do need to know that you have a plan, and you have certain requirements for them.

This all will get them prepared for the larger upcoming team off-site. Here is what you need to do in this meeting to help prepare your leadership team:

- Set the tone
- Observe
- Give time for reflection
- Engage in some dialogue, get some feedback

Checklist for the Off-Site:

1. Select and book a venue for accommodations and meeting room—for local team members, pick a venue that is centrally located so travel time is considered.

2. Design meeting room with hotel liaison (ballroom).

- Round tables with chairs with floor-length tablecloths to accommodate ten people.
- Determine decorations for room, tables, etc. Hotel liaison will help with this.
- Create decorations for themes (on the wall, hanging from the ceiling, tents on the table are all options).
- Order audiovisuals for room: projector, screen, podium, podium microphone and handheld microphones for open discussions, video recording for commercials, etc.
- Select and play upbeat music in the meeting room when the team enters and at all breaks. - Tables needed for food and snacks.
- Table and chairs for executive coordinators.

3. Create team table assignments.

4. Select and order food with hotel liaison (really important) and ensure all food options include options for vegetarians, vegan, paleo, keto, gluten-free, etc.

- Breakfast with coffee and continental breakfast.
- Morning snacks (be creative).
- Lunch buffet.
- Afternoon snacks (be creative).
- Dinner in the venue or adjacent to the venue.
- Have goodies on the tables like candies, stress balls, etc.

5. Materials needed for meeting.

- Name tags.
- Flip charts for each table.
- Writing utensils for each table.
- The name of the theme on the table should be very visible—tents.
- Pens and writing tablets for each team member on the table.
- Create a large board to highlight themes and for the team to select the top three themes.
- Sticky circles for the team to select top three themes.
- Create PowerPoints for the team to work from (their homework the first night).
- Create PowerPoints to give team instruction for activities (commercial). This is included in the overall PowerPoint for the entire off -site.
- Create overall PowerPoint to show agendas, and it runs for the entire off-site with timing to stay on track. Ensure ample breaks.
- Buy props and bins for the commercials and have these under the theme tables (whacky items along with appropriate props to create commercial based on industry).

6. Arrange for executives to attend the meeting for the commercial and judging portion.

- Have awards created for first, second, and third places.

7. Arrange for entertainment (after dinner on the first night).

8. Have at least two coordinators in the meeting at all times. Distribute name tags, create all the PowerPoints, work with the hotel liaison for food timing and snacks, address issues as they arise, etc. This is typically executive assistants who address all issues and help keep the meeting on track.

Chapter 4: Kick-Start the Journey

Up until now, you have engaged in active listening, done your homework, understood where many of the challenges were, have gained a good understanding of the culture, and taken all that you learned to your off-site. Here you

I find the hardest part of implementing change is the need to upgrade talent.

brought the burning platform to life and captured the commitment from your team on what needs to be tackled. If all has gone well, they are on board, and it's time to springboard off that momentum.

It's now time to kick-start the journey by making bold moves and taking big swings. This revolves around setting aspirational goals within each of the three pillars of People, Process, and Platform. I find the hardest part of implementing change is the need to upgrade talent, which is the focus of the People pillar. It requires hiring the right leadership and talent, and it requires setting skill and behavioral goals. As you introduce these changes, some people will struggle and need to adapt to a new way of thinking, working, and learning. For many, these changes can introduce uncertainty, which can trigger a stress response; for others it is a welcome change and infuses excitement. There are still others that will experience anxiety when they realize they will need to improve their skills, adopt new processes, and lose their comfortable routines.

There are three areas of focus that need to be addressed as you begin your talent upgrade:

1. Your leadership team
2. Setting aspirational goals
3. Addressing behaviors

The next step involves transforming your process.

When making this kind of process change, there is typically an S-curve experience, which basically means you need to "go slow to go fast." The S-curve shows a new process from its slow early beginnings to an acceleration phase. As the process matures, it moves to stabilization over time, as was the case for us. I needed to reassure our teams that this was normal. I also told them there would be an initial dip in productivity, but they needed to trust that once the teams were up to speed, our speed of development would actually accelerate.

We monitored our progress through daily stand-up meetings ("daily scrums"). These meetings keep people informed, aligned, and focused. They are fifteen minutes long, are done in the morning, and are conducted with everyone on the team. Three simple questions are asked every day for each person on the team to address:

- What did you accomplish yesterday? (This updates everyone on tasks that are completed and shows who met their agreed-on commitments)
- What will you do today? (This updates everyone on tasks planned for the day)
- Are there any blockers or impediments? (This allows for issues to be discussed and/or resolved)

The purpose of the meeting is to gain alignment and clarity on project progress, and it holds everyone accountable for their daily outcomes. You will find that some team members have not carried their weight in the past, and this process exposes any weaknesses in the team. It's a powerful accelerator.

While addressing the three themes of People, Process, and Platform is the focus of your initial transformation, you will also need to put emphasis on a number of additional themes that are essential to complete the process:

- Talent (people)
- Development and release process (process)
- Infrastructure (platform)
- Communication and collaboration
- Innovation
- Speed-dedicated teams
- Application performance
- Incident management

Chapter 5: Commit to Stay the Course

The flywheel has begun—and it's time to accelerate the momentum.

Transformation is not a "once and done" initiative. You must be constantly looking for ways to drive the flywheel forward.

You are not just moving the organization from point A to point B but working to change the culture and complexion of the team so they can adjust as new technology develops, new trends arrive, and the market landscape changes. Our CEO, Brad Smith used to have a saying: "You need to repair the roof while the sun is shining." If you wait until the rain begins, your task ahead will be messy. When things are going well, that's the best time to be shoring up what you have and looking for the next innovations and ideas.

Your organization needs to commit to always looking forward and persevering down new avenues.

Encouraging your teams to investigate new innovations and technologies and explore new ways of thinking is how you keep your teams motivated in the organization. As you build this new culture, it is very rewarding to see teams deliver on capabilities they never dreamed possible, all the while gaining the respect of not only their fellow team members but others across the company, as you publicize their successes.

To stay the course and continue to transform your culture, there are three key operational mechanisms I use. These build momentum, keep communication open, and monitor how well we are progressing toward our goals.

- An annual senior staff meeting
- A quarterly extended leadership off -site
- A quarterly all-hands road trip

Chapter 6: Nurture Change

As I have been writing this book, my mind fondly recalls the names, faces, and lives of those people I worked with who truly impressed me with their passion, skill, and approach to everything they did. Many of these people have told me, in the years afterward when we've been able to put some time aside to catch up, how much I impacted them, and I often think of how much they impacted me. We did great work together. And, even more, we grew as human beings.

Leading extraordinary change will bring you many rewards that will last a lifetime, but this can only be experienced if you take a very intentional, personal approach to how you lead. I have often repeated the adage, "You hire employees, and people show up." When you embark on any significant change that affects people, you must do this with enormous care to achieve the results you seek. This is why the final phase in my playbook, Nurture Change, is the most important.

Nurturing change should be integrated in everything you do. It's the glue that binds everything together. Why? Because when you nurture change it truly changes people, and when people change, the culture of an organization is transformed.

I have three broad categories that reflect the heart and philosophy behind nurturing change, and these will get you started in your thinking about how you can begin to nurture change in your organization. These strategic practices keep me personally connected to the people in my organization and sets them up to succeed. Nurturing change incentivizes people to bring the best work of their lives to the workplace, and that, in turn, contributes the same to the team, with a passion to see the whole organization succeed. The three ways are:

- Recognize people publicly, coach them privately.
- Make the workspace fun.
- Be personal—and listen!

Leading extraordinary change takes a tremendous amount of energy and mental capacity, which can be draining. Your calendar is full, the days are long, you're persistent in everything you undertake, and there is always more to do. But, as part of modeling the way as a leader, you also need to model how to stay healthy and take appropriate time off.

Taking a break often gets you out of the way so that people can grow and take their own opportunities to the next level. It can be very hard to do when you think you're indispensable, but you're not. A true test of leadership is not how things work when you are there but how things work when you are not. As you empower others to take the reins, it begins to establish your successors, which is what I want to address as I close this book.

In the introduction of this book, I outlined how leadership is not about you. While you will enjoy success, influence, and well-deserved awards for your incredibly hard work and long hours, you will need to implement the final phase of transformation to include what happens when you exit the organization. Transitioning your role is not something that happens overnight. Succession planning takes careful consideration.

Giving other leaders the chance to step in when you're out of the office is crucial in identifying succession candidates. Give over the controls when you recognize leaders have the necessary competency. Take your vacations and give people responsibility. Trust them to do it—and let them shine. Ask for people to step in for you at meetings. When they have a

taste of what you are doing, they will not only respect you more, but you can trust them better.

Conclusion

Keep the gas pedal down in driving momentum in your transformation. People need to be constantly motivated and inspired. But you have to stay the course and keep things fresh, nurturing the change, otherwise you will stagnate—as will your pace of change.

As I've said, when I begin a transformation effort, it usually takes eighteen to twenty-four months to get into a rhythm. Consistency and persistence are key. You will be amazed at what you can achieve in just a few months and how an organization can evolve with the right playbook!

Remember to look for the ingredients for success. If the ingredients are in place, then be gutsy, take risks, and seize opportunity. Don't be swayed when things aren't going quickly enough. Be tough and persistent.

But most of all, enjoy the journey!

Marilyn (Mamie) Jones is a consultant, speaker, author, and former SVP executive. Her thirty-five-year corporate journey has been marked by outstanding achievement and transformative influence. Mamie has held numerous senior leadership positions at notable organizations including Sabre, Travelocity, and Dun & Bradstreet, culminating her formal career at Intuit. For her thoughtful and dedicated leadership, Mamie has won numerous awards including the Tech Titan CTO award for North Texas and the coveted CEO Leadership award at Intuit.

THE SUMMARY IN BRIEF

Whether you've led for years or are new to the role, being a leader is a responsibility that doesn't come with instructions. Many leadership books focus strictly on tips for the business world. Others offer analysis but lack strategy, while most are confounding and complicated. To be a leader in today's world, whether in your personal or professional life, you need a simple philosophy—one with proven results.

In ***Lead Well,*** leadership consultant and serial entrepreneur Ken Falke introduces you to the ten principles you need to become an impactful leader. With tactics that are easy to understand and even easier to implement, this book is packed with Ken's insight from more than four decades in business, nonprofit, and military leadership. You'll learn how to be the best version of yourself before inspiring others to contribute ideas and accomplish goals. Good leaders know that character and morals matter as much as profit and loss. *Lead Well* is your practical guide for understanding the leader within and becoming the person you need and want to be.

IN THIS SUMMARY, YOU WILL LEARN:

- How to master yourself before leading others.
- How to communicate your vision, and achieve goals that align with that vision.
- How to listen well, lead with kindness, and create a culture where people want to spend time.
- How to lead with courage and give back often, and why it matters.

Introduction

Despite the fact that there are hundreds, if not thousands, of books on the subject of leadership, the truth is that good leaders remain far too rare. I have had the opportunity to work for a few great leaders and, unfortunately, many more toxic ones. A key reason why leadership proves so challenging for so many is that we overcomplicate things. Over the decades, I have developed a leadership philosophy that is simple, effective, and easy to understand and implement. Given how badly our country and world need good leaders, I feel it's time to share my philosophy in the hope that it will help you lead well, effectively supporting and guiding those you influence.

In the book *The Cathedral Within*, Bill Shore said the definition of leadership is simple: helping others get to a place they can't get to on their own. Leadership is a verb, not a noun, and requires action—lots of action. Leadership starts at home, with learning how to lead yourself first, and then applying a strategy this book presents to lead others. Great leadership is authentic, deeply personal, and sustainable.

The key to leading well comes down to ten timeless principles—The Lead Well 10.

Lead Yourself First

The daily news is filled with stories of leaders who inflict their lack of wellness on others through inappropriate behavior. The consequences of their behavior can and do cripple the people and organizations they're leading. Unfortunately, I can tell you dozens of stories of unwell leaders I've encountered that prove the point. That's why I begin the Lead Well 10 with this: To lead others well, you have to be well.

I believe that the first key to successful leadership is self-awareness, which leads to self mastery. You must lead by example, not by living the life of "do as I say, not as I do." Unwell leaders let their egos get the best of them and adopt an egocentric, smarter- and holier-than-thou attitude that ultimately leads to a failure to treat others fairly.

No one is perfect; I understand that. But by leading yourself first and ensuring that you are the best role model possible—then owning your mistakes and failures—those you lead will be inspired to follow your example.

Create and Clearly Communicate Your Vision

People want and need to feel fulfilled in their work. People take satisfaction in knowing that they're working toward a shared purpose. If they're simply showing up to collect a paycheck, your organization can't succeed. It's the leader's responsibility to prevent that— and that begins with defining and conveying your vision.

And that's the second principle to leadership. Speak it, write it, draw it. Keep it simple and make sure it's understood. Repeat it frequently.

Everyone on your team must know where they are going and why. And I'm not suggesting that your vision is something on a tablet you hand down from on high. A good leader is curious, a teacher and a student, a constant learner—and that begins with how they go about developing a vision for their organization.

Set and Achieve Goals that Align with Your Vision

If you want to lose fifty pounds, don't try to lose fifty pounds. That's your destination, your vision for wellness. Try to lose two pounds a week instead— that's your initial goal. Once you achieve it, then set a new goal: lose two more pounds the next week too.

If you don't set personal goals, you'll end up living the life of the proverbial dog wagged by its tail. The same is true of your organization. If you regularly set goals, you will also join some rarified air; only 3 percent of people in the world regularly set goals, and they are light-years more successful than their counterparts in the 97 percent. So that's Lead Well #3: Set and achieve goals that align with your vision.

As a leader, the vision you develop with your team defines where you're going as an organization. The goals you develop next define how you're going to get there and should be focused on results. They clarify the steps you need to take to establish the momentum that can carry you to your objectives as an organization.

Listen Well

Leaders who are unwell and lack self-awareness are prone to a dangerous assumption. They think they're the smartest person in the room. That could be true—but if it was

always so in the past, it certainly is not anymore. Technology has leveled the playing field when it comes to knowledge. There is much more knowledge in your cellphone than anyone can hold in their brain. Today the most junior person in the room has access to information that enables them to get answers to questions instantly.

Leaders who lack self-awareness are also prone to the belief that they can solve all problems. No one can. I'm sixty years old now, with a pretty vast background in leading others, and there are lots of things I'm not an expert in. I love cars, and always have. That doesn't mean I'm a mechanic. I can recommend a great mechanic, but I'm not the guy to fix your car. Effective leaders don't begin with answers. They begin with listening and they do it well.

Lead with Kindness

If you feel that every time you bring a problem or concern to an authority figure—your parents, your boss—the answer is going to be no, then you tend not to bring things forward. When we don't have the opportunity to engage with our leaders and seek support and guidance, small problems and concerns fester and become big problems. Chaos and frustration ensue.

But when you work for people who are open to these discussions and are good listeners, the opposite is true. You want to bring your questions and concerns to them, before issues get out of hand, so your organization thrives, and your people do too. When people see that their leader brings passion to the cause and shows kindness toward others, it sets a positive, infectious tone.

I mean "infectious" in a very positive and concrete way. For most humans, we become the product of our training in life, beginning in early childhood at the hands of parents, teachers, relatives, and friends. The learning never stops. If you're spending time with people who are kind, that tends to rub off. Kindness ripples from person to person in any environment, including the workplace. The same is true of spending time with toxic people.

Hire Quality People

At Harvard Business School, where I studied executive leadership, we learned a simple concept: hire for attitude, train for skills. When recruiting, elite military units turn the same concept into three questions.

- Can they do the job?
- Will they do the job?
- Are they a good fit?

The first of these questions relates to things like technical expertise and physical abilities. Obviously, you need fine motor skills to be in the bomb disposal business. If your hands shake, no amount of motivation can qualify you for this work.

But the second question is all about motivation. Does this person have the motivation required to understand, learn, and do the job? Will they come to work every day with the fortitude required to complete the tasks they're given? It's all about will, and not everyone has it.

The third question is about culture, which in organizational terms, I define culture as how we get things done. Leaders establish culture, and to succeed on a team, its members need to be cultural fits.

Create a Culture of Loyalty and Satisfaction

Building a culture of loyalty and satisfaction is an incredibly fragile process— but one that's absolutely essential as a leader, even in the strongest organization, to cultivate continuously. The work never ends. The more you know the people who work for you, the more you know how to work with them. It goes back to this book's definition of leadership: helping people get to a place they can't get to on their own.

Your leadership activity should be focused on developing and guiding your employees to the place where they're great employees. Great employees make a great company, not the other way around. Success begins with fostering a culture defined by great employees.

Hold Yourself and Others Accountable

In 1989, I was severely injured in a parachute jump in Puerto Rico. We were not supposed to jump in winds higher than eight knots unless it was a combat situation. They put us out that day in gusts over thirty-five knots. I hit the ground hard—feet, ass, and head instead of feet-side-shoulder—and broke my back, dislocated my shoulder, and got a severe concussion. The following week a good friend of mine died in another parachute jump. He had been among the guys out drinking heavily the night before. His main chute failed, and

by the time he realized he needed to pull his reserve chute, he was on top of the trees. It was too late.

The nature of the two incidents is different. But together they illustrate the importance of Lead Well #8: Hold yourself and others accountable. As leaders, when we fail to learn from our mistakes, to hold ourselves and others accountable for actions and their results, the consequences spread like a virus. Poor performance and even destructive behavior become the norm. Doing the wrong thing is okay. The results can cripple your organization

Lead with Courage

The definition of courage is not the absence of fear. In fact, the definition of courage is the opposite: the ability to do something that frightens you. To lead with courage, you have to have the confidence to stare your fears in the face—from something as simple as speaking in public to crawling on your hands and knees to clear a minefield. Courage is the characteristic that separates good leaders from great leaders. Courage is also one of the hardest skills to teach in a book because courage requires experience and failures!

As a bomb disposal person, you're so highly trained that it tends to minimize the fear. The fear rises when you're faced with something you weren't trained to do—but it's still the training and experience that enables you to face it. Clearing a minefield in daylight with the proper equipment where the location of the mines is clearly identifiable is much different than lying on your belly in darkness, wearing night vision goggles, with no clue how the minefield might have been laid and working as quickly as you can because there are people behind you who need to get somewhere fast. You couldn't do either of these tasks without the training.

Give Back

The Navy reinforces the idea of giving back with its own giving campaigns and the message its best leaders sent: find a passion and a cause greater than yourself and embrace it. When I was stationed in Maryland, we prepared Thanksgiving dinners for civilian families living just outside the base; while stationed in Scotland, I played for a hockey team that raised money for a local hospice.

I tell these stories to illustrate Lead Well #10: Give back. When you engage in these activities, performing acts of kindness, you gain perspective on what really matters in life— and at least in a small way, make the world a better place, too. I believe it's a central element of leading from spiritual wellness.

Conclusion

One Navy Chief had a saying, "When you leave the Navy, it's like putting your hand in a bucket of water and pulling it out. After the water settles, nobody knows that you were ever there." But this is a cynical attitude toward leadership.

Great leaders aren't cynical and don't think of themselves as a hand in a bucket of water. They know they can have a lasting impact, for better or for worse. They know we all have the opportunity to contribute and grow. Today, the world needs great leadership as much as ever, if not more. May you be the leader, and may you lead well.

Ken Falke spent twenty-one years in the US Navy as a bomb disposal specialist, leading troops on thousands of high-risk missions. After retiring from the Navy in 2002, Ken started his first company, A-T Solutions, a counter-terrorism company, and in 2008 sold the business. In 2011, Ken started his second company, Shoulder 2 Shoulder, and sold his stock to his business partner in 2017. In addition to Ken's two for-profit companies, he founded two nonprofit organizations, beginning with the EOD Warrior Foundation to support the families of severely wounded military bomb disposal personnel.

Lead Your Boss

The Subtle Art of Managing Up

by John Baldoni

THE SUMMARY IN BRIEF

Are you ready to take the jump from your current role — technical expert, quality producer or people person — to that of highly effective leader who gets noticed and rewarded?

Lead Your Boss will show you how. This invaluable guide helps you cultivate the balanced, cohesive and passionate leadership style called "managing up." It's a style that works from the middle ranks, where leadership often entails influencing your boss, your peers and those who report to you — all of whom are favorably affected by your commitment and contributions. Managing up is about building those traits that are most admired and appreciated, such as integrity, energy, empathy, resilience and big-picture thinking — classic leadership traits that propel people from any organizational rank on a fast track upward.

Filled with inspiring stories of people who accomplished great things by employing their skills, energy and influence for the greater good and packed with practical strategies and useful advice, *Lead Your Boss* helps you unite all members of your organization for an all-around win.

IN THIS SUMMARY, YOU WILL LEARN:

- How to think strategically, challenging yourself and your team to be more innovative.
- How to persuade others to listen to your ideas, overcome obstacles and turn influence into leadership.
- Strategies to challenge assumptions without challenging the individual above you, and break down resistance to change.
- How to exhibit resiliency in the face of adversity, turning setbacks into comebacks.
- A method to put people into positions where they can succeed.
- How to prevent yourself from getting in the way of others' best work.

Prologue

Your organization needs a strategic resource allocation plan. With budgets being squeezed and headcount being trimmed, you need direction on what projects you should pursue and within what time frames. You have discussed this many times with your boss, but for some reason that you do not understand, she has not acted.

So what do you do?

You take action. You take the lead for your boss. You develop the plan on your own and submit it to her for approval. And if she approves it, you ask for permission to move it forward. In doing so, you are filling the leadership void through prompt and decisive action. You are demonstrating what it takes to lead your boss.

But, as you will discover, "leading your boss" is really a metaphor for leading from the middle. Those who lead from the middle are those who think big picture and can do what it takes to get things done so their bosses and their teams succeed. Very often such individuals lead their bosses, but they may also be leading their boss's boss as well as their own colleagues and direct reports. Those who succeed at leading from the middle are artful and adept managers; they utilize their management skills to establish goals, plan projects, organize people and execute projects on time and on budget.

Not so easy to do, but it is possible when you rethink and reframe what you want to accomplish and how you want to do it. That is, you are not acting for yourself, but you are acting for the good of the organization. This requires initiative, persuasion, influence, persistence and no small amount of passion. Taken together, this is what experts call "leading up."

PART I: WHAT DOES THE LEADER NEED?

Leading Up

Eleanor Roosevelt was born to privilege, and she used it not for power, but for influence. Leading up starts with identifying an opportunity and then acting upon it. Roosevelt demonstrated what it means to lead through others, the very essence of what it means to lead up. Additionally, Roosevelt possessed something that is critical to leading up: energy. Energy is a matter of drive, the will to make things happen. As such, it is a vital leadership attribute and one that must be cultivated. One who leads up may face varying degrees of opposition and resistance, thus it is necessary to keep oneself not only focused, but energized by the task at hand. Energy not only fuels the individual; it sparks the organization and, for that reason, those who lead up must use it wisely.

Energy is especially important for those seeking to lead their bosses and their peers; it becomes the fuel that leads to the enthusiasm that is so necessary to driving change throughout an organization.

I read recently about an executive who said that his day was focused on getting up each day and doing as much as he could until he felt he could do no more. He was working for a nonprofit, but his schedule was a recipe for organ failure, starting with the brain. No matter how much good intention you have, you need to stop and take a deep breath. Working nonstop day after day without time off breeds narrow thinking and diminishing results.

Persuade Up

Leadership depends on persuasion. You need to give a reason for people to believe in what you stand for.

Politicians do this in public; corporate types do it behind closed doors. The challenge for both is to present their ideas in such a compelling way that people not only want to believe, they carry them to fruition.

Assert Yourself Diplomatically

Managers on the way up want to make certain that they are "assertive enough," while those at or near the top are sometimes advised to be "less assertive." Assertive leaders are confident as well as decisive; they radiate power and seem in total control.

There is another side of assertiveness, however, that is less talked about. Let's call it "reflective assertiveness," or a form of quiet power. It is confidence that emerges from experience, of having endured trials as well as triumphs. It may be a form of resilience, too. Getting knocked down a few times takes the edge off the ego, but getting back up again enhances the ego. Why? Because you know you have what it takes to persevere, to get back into the game and ultimately succeed. Reflective assertive leaders know they can do it because they have done it. Such assertiveness is wise to cultivate.

The boss needs someone who can think, act and be accountable for results. Those are the cornerstones upon which the leading up process rests. But in leading up, the person leading up demonstrates a degree of selflessness so that the organization can benefit. ●

Thinking and Acting Strategically

"We knocked the bastard off" were among the first words that the world at large heard from a lanky, muscular New Zealander, Edmund Hillary, who together with *[his Sherpa guide]* Tenzing Norgay had just scaled the world's tallest mountain, Mount Everest.

Hillary lived to serve a greater cause. Climbing Everest was a beginning for Hillary. In time, he saw his life as one where he could leverage his celebrity, which was enormous, to a greater good. Through a trust in his name, Hillary raised money for the Sherpas and devoted his own time and resources to creating a new infrastructure for the people he so admired.

One of the most common frustrations I hear from leaders who are asked to lead up is the challenge to think strategically. Often they get this admonition from their boss during an annual performance review. The comment may be valid, but the insight is vague because the boss seldom defines what is meant by "strategically." By nature most middle management jobs are tactical.

When you are challenged to be strategic, however, you need to take a step back from tactics, that is, from the "doing," in order to give yourself distance from the task at hand. You must learn to think big picture.

Edward de Bono, the father of lateral thinking, advocates looking at a problem sideways, or adopting an alternate point of view. For example, compare Target to Kmart. Most shoppers to both stores are female; though for years Kmart stocked shelves closest to the door with automotive supplies, things that men wanted. Target, by contrast, is more inviting, not only to women but to all customers. Is it any wonder that Target has thrived while Kmart has struggled?

Creativity and innovation should be cultured and nurtured. Bill Joy, former chief technology officer at Sun Microsystems and frequent commentator on technology issues, believes in innovation on a small scale, as peopled by the "number of seats at a table at the local restaurant." By enabling a group to get together informally to eat, discuss and debate, new ideas may take root. Very importantly, Joy believes that if no "radical" ideas are generated, "the groups should be disbanded without retribution."

Apply What You Learn Strategically

The gifted writer and psychologist Mihaly Csikszentmihalyi has developed a theory about living the purposeful life. He calls his theory "flow," which he defines as living connectedly with others in ways that add meaning to whatever it is we do. Integral to the concept of flow is communication. Communication is the means by which individuals connect with one another on multiple levels: information, purpose and community. The challenge for leaders is to use their communication for just those ends. Specifically, managers need to turn information into meaning, that is, knowledge they can use to improve performance. The trouble is that we live in a world where we are bom-

What Edmund Hilary Teaches Us About Leading Up

In climbing Mount Everest, as well as throughout his life as an adventurer and philanthropist, Edmund Hillary worked the system. He knew how to operate as a member of a team, as on Everest, but he also knew how to create a team, as in his efforts to improve the infrastructure of Nepal. Hillary also knew when to go outside the system, as he did so often in order to get things done. Working the system begins with prioritization. That is a lesson that anyone seeking to lead up needs to understand and implement.

barded by information 24/7; therefore, keeping up with the stream of information is not only impossible, it is overwhelming. However, the solution is not to seal yourself off from the world like a hermit — rather, accept the information, but in ways that add meaning to what is important. ●

Pushing Back the Right Way

While many in senior leadership positions do acknowledge the virtue of honest criticism, they bristle when that critique comes from those subordinate in rank. The boss's attitude is, "How dare she speak to me like that?" Well, truth be told, the question should be, "How dare she NOT speak that way?" Criticism rooted in fact about the business or about the management of that business is necessary.

Since honest feedback is essential to running any organization, it should be cultivated so that employees feel free to critique their higher-ups; and in turn, those higher-ups feel comfortable accepting such feedback. Giving criticism to a boss requires the velvet glove treatment. Here are some suggestions:

Be Diplomatic. If you are going to criticize your boss, you'd better be right as well as diplomatic. For example, if you have a boss who's heavy-handed with subordinates in meetings, cutting them off before they can make their points, it is acceptable to offer constructive criticism. Do not say, "You're being mean." Focus instead on what the boss is doing wrong and how it is affecting the performance of others. You may need to cite specific incidents, e.g, a staff meeting or a project review.

Find the Right Way to Disagree. Part of leading up means disagreeing with your boss. There is a right way to do it and a wrong way. The right way is to act like the professional; the wrong way is to act impulsively.

Play it straight. Let the boss open the argument. Allow her to explain her case; she will regardless. Remain calm. Do not try to interrupt. Ask questions that elicit information, but do not seek to interrupt needlessly. Then when the boss is finished, ask to make your case. Be organized as well as straight to the point. Invite dialogue. Listen to her objections. Hold firm to your convictions. When you conclude, allow your boss to have the last word. Assure her that you will support her decision. That may be painful, but it will demonstrate that you are willing to go along with the flow. It may also open the door to future discussions and disagreements, some of which you may win.

Agree to Disagree

Act professionally. Most of the time, if you and your boss disagree, she will win the argument because she holds power over you and your peers. Accepting that fact does not mean you are a pushover. It is a sign of organization savvy.

Never acquiesce in matters of conscience or ethics. If your boss asks you to do something illegal, a flat no is the only acceptable answer. This is very easy to say but can be hard to implement if you fear losing your job. However, losing your job may be preferable to a jail sentence. There are many people serving prison time for going along with a supervisor's scheme. Stand up for what is right. That is the ultimate measure of leading up.

Bosses are owed open and honest feedback just as employees are. A coaching conversation opens the door for genuine dialogue. Position yourself as the big-picture thinker, that is, providing insight that the boss can apply to his situation. Frame your conversation in ways that demonstrate that you are interested more in what's good for the team than what is good for yourself. ●

PART II: WHAT DOES THE TEAM NEED?

Letting Others Create the How

A leader who puts others ahead of self is one who leads physically from the front where he can be seen in times of strife, but leads metaphorically where he cannot be seen so that others share the credit for things that go well. In this sense the leader has created conditions where people can lead themselves.

Every manager needs to set clear expectation for performance. Leaders who lead up gain in influence by giving their power away and, in return, the organization operates more effectively.

How each department conducts itself should be in line with the values and culture of the organization. Management, especially those in the middle, and employees can work together according to a model that boils down to three key elements:

Coordinate with others. Never assume that people will work together; make it known that it is a requirement.

Cooperate. Every manager needs to communicate why employees need to cooperate. Cooperation within the team is working together for a joint purpose.

Collaborate. Collaboration is the art and practice of two or more people pooling resources and talents to get the job done in a timely and efficient manner.

Compromise

In a free market society, conceiving, developing and delivering a product or service is filled with hundreds of compromises that balance the needs of the consumer to obtain value with the needs of the producer to make a profit.

Compromise is not a betrayal of values; it is an agreement over a position where both sides come away with something to their liking. Not every compromise is a good one. General Motors' (GM's) compromise with its unions over health and pensions has resulted in legacy costs of at least $1,400 per vehicle; that was a contributing factor to GM's financial collapse that required the intervention of the federal government and bankruptcy to save it. On the other hand, compromise between oil producers and the environmentalists has resulted in the implementation of drilling methods that are more ecologically compatible as well as the creation and preservation of natural habitats.

Get the Job Done

As much as managers in the middle might strive for team harmony, there are many times when reality dictates that the job comes first. In other words, managers must ask their folks to put up and shut up. Such occasions occur when resources are tight, manpower is in short supply and time is of the essence. Crises provoke urgency, and managers must act first and play to the gallery later. Take the example of an engineer responsible for quality improvement who inherits a project that is floundering. The best way forward is to ask the team what they would suggest and then implement their ideas quickly, together with the manager's own best ideas. When the project is righted, the manager who leads up can focus on the human equation. ●

Breaking Down the Doors

Experts who have studied influence from a behavior standpoint posit that influence comes down to two dichotomous strands: push and pull. Push indicates someone is forcing or compelling, typically by virtue of position or authority. Those on the receiving end must accept what is being offered.

Push is rooted in power. Pull, on the other hand, implies persuasion, typically where the person pulling has little or no authority. The party who is being influenced has the right of refusal. Both power and persuasion are forms of influence; both are important tools in the process of leading up.

The View Looking Up

A while back, I received an email from a young man requesting my advice on gaining the ear of senior management for his ideas. As he explained in his e-mail, he was a good communicator in social situations, but wondered how he could become a better communicator in upward business communication. He seemed to be doing all the right things, working hard, showing willingness to make a positive contribution and generating ideas that complement strategic goals. The situation facing this young man — that he was not connecting his ideas to the needs above him — is not unique, sadly, it happens all too often. The consequences of failing to be heard can be costly. So, let's show how a manager who needs to sell an idea upward can do it:

Know the real situation. A misstated or misused fact will give those against you the ammunition they need to destroy your argument and perhaps you in the process. If you are proposing a new product, process or service, know how it will benefit the company financially (improving the bottom line) as well as performance wise (improving work conditions). Be certain to include the competition in your analysis. Companies, like ideas, do not operate within a vacuum.

Develop your story. Fact checking is only step one. Develop an argument, both written and oral, that presents your ideas in terms of the business case. You can be artful in your formal presentation: tell a story, paint a picture or even develop a skit. What you want to do is make your idea come alive, not simply in terms of business metrics, but in what the idea will mean to people — employees, customers and shareholders. Also, make certain you craft a 30-second elevator speech that captures the essence of your idea.

Build a coalition around your ideas. You need allies. Start spreading the word among your peers. Win them over to your side with the strength of your argument as well as an offer to do something positive for them, e.g., support one of their ideas.

Leverage your customers. If you frame your idea in terms of what they are asking for, you will stand a better chance of being heard. By adopting your customers' point of view, you become their advocate.

Keep pushing. Too many good ideas are forfeited the first time someone says no. Find out why the idea was rejected. Perhaps you need to make an adjustment in the idea, add some new element or combine it with another idea from someone else. If you keep pushing, sooner or later your tenacity will win you some points, as long as you are earnest, courteous and in keeping

with corporate strategies. In other words, your idea might not fly, but your career will. ●

Working the System

Those who are in the middle of the hierarchy are well poised to challenge assumptions because they see the effect of assumptions that do not work. At the same time, those in the middle find it uncomfortable to go against those in authority. That is a natural feeling, so what the manager who seeks to lead up needs to do is find ways to challenge assumptions without challenging the individual above him or her. That is, frame the challenge over ideas not personalities.

Establish Meaningful Priorities

Crises cannot be predicted, but they can be planned for, subsequently managed and even worked into the normal job flow with enough forethought and, yes, you guessed it — prioritization!

Knowledge is power. Unlike information, which can be withheld, knowledge resides within the capability of people to do their jobs. Sharing knowledge is paramount; effective teams are those where managers and members share what they know and do in order to get things done the right way. Such cooperation has another benefit — it evokes trust.

Manage the Mind

While managers need to stop doing day-to-day tasks, they should never surrender their skill set. One reason why so many companies stumbled and fell in this last recession is that they had outsourced key decisions to strategic consulting firms and seemed incapable of making decisions themselves.

Keeping a hand in the doing is essential to management, especially those leading up. Yet it can have a downside. Too much doing will be interpreted as micro-management; too little doing will be regarded as loafing. ●

PART III: WHAT CAN I DO TO HELP THE LEADER AND THE TEAM SUCCEED?

Bending But Not Breaking

Answering the question of what you can do to help both the leader and the team succeed requires the ability to match skills and the ability to do the right thing. Such a leader must be tough and resilient, a teacher of others, and one who leads with authority and presence.

So often leadership is needed not when things are going well, but when things are going, or have gone, bad. It is times like this that you need a leader to rise up, look the odds in the eye and persevere.

It takes a leader with a good sense of self to survey the landscape and assess the chances for success as well as failure. The concept of SWOT analysis (Strengths, Weaknesses, Opportunities, Threats) demands this discipline. Leaders who look at the odds, even though formidable, owe it to their people to communicate them.

Acknowledge Failure

Somehow in management, we forget the learning curve and expect perfection immediately. This leads to projects that prematurely stall or to teams being disbanded before they have the opportunity to click. CEO of Starbucks, Howard Schultz, keeps copies of a publication, *Joe*, that the company bankrolled; it was an utter failure. The copies serve as reminders of failure, but also of the need to keep going. Acknowledging the odds and the setbacks can lead to learning lessons.

Treat People with Fairness and Equality

There is another side of resilience that pertains to middle management: the need to be tough for the good of your organization. The Constitution ensures equality in terms of gender, ethnicity, conditions and treatment. It does not, however, mandate that bosses treat performance equally. Good performance must be demonstrated and managers must ensure that it is maintained.

Let me illustrate with a story. Say you are the owner of a restaurant and the hostess comes in late; you fire her. If a waitress is tardy, you dock her an hour's pay. If the dishwasher strolls in an hour past clock-in-time, you get him a cup of coffee, sit him down at the table and ask, "What's going on? Anything I can do for you?" Why would an owner do this? Because you don't want to spend the night washing dishes!

Fairness must be a cornerstone value of every enterprise; so too is equality. Every employee deserves the right to be provided the tools, resources and conditions to succeed. However, when employees outperform the standards, they deserve recognition and reward, be it in the form of a bonus, a raise or a promotion. Yet discussions with managers show, time after time, that managers often end up mistreating top performers while rewarding underperformers, like the tardy dishwasher. Why? Sometimes, as in the case of the dishwasher, an underperformer is doing a job no one else wants to do. Or, more often, it's because the manager feels sorry for the laggard and, in a misguided way, lets the slacker off the hook.

Integrate Fairness Into Change

Managers owe it to their employees to be fair in all dealings, particularly when it comes to performance evaluations. Often, performance objectives are set early in the year. Those objectives may be challenging, but they should be attainable. What happens, however, is that changing conditions internally or externally necessitate change, so employees are given new priorities or even new reporting assignments. What fails to keep up is the performance objective process; new objectives never seem to become written objectives. Therefore, managers owe it to their employees to keep real-time track of objectives and metrics so that performance is evaluated fairly.

Promote the Stars

Just as underperformers may be asked to show improvement, those who achieve should have opportunities for advancement in pay, rank or both. Treat those who produce well and the rest of the business will take care of itself. This is wholly fair. What is not fair is withholding opportunities for people to show their mettle. Fairness dictates that people be given resources and timelines to succeed.

Doing good for the organization requires resilience because you are pushed and pulled by forces above and below you. Remember then that resilience is rooted in your character; it dictates how you think and act. Every successful leader, especially those in the middle, has dealt with adversity. The bigger the challenges surmounted, the greater the reservoirs of resilience. The challenges to our resilience are constant throughout every phase of our lives. How we rebound and cope with them marks our character as well as our capacity to lead. ●

Preparing Others to Lead

Leading up requires the ability to develop the talents of others. This is important for two reasons: one, you need to demonstrate that you know how to lead others; and two, putting others into leadership positions gives you the time you need to think and act strategically, that is, to lead your boss and your team more effectively. Senior leaders value these skills, thus, it is critical that you practice them so that you prove you are ready and prepared to assume roles of greater significance and importance as your career progresses.

Differentiate Between Talent and Skill

Developing others begins with learning how to differentiate between talent and skills. In this I defer to the definition that Marcus Buckingham and Curt Coffman use in their book, *First Break All the Rules*. According to these two consultants from the Gallup Organization, talent is the proclivity for doing something; skill is your ability to do it. The two are not synonymous. For example, an engineer has a talent for uncovering why things are the way they are. His skill set is the processes he has mastered to analyze and problem solve. Putting him in a situation where he can apply his skill set to diagnose problems and devise solutions is ideal. On the other hand, if you put this engineer in a sales role where he must call on customers all day, the situation is less than ideal. Finding the right slot for this engineer is the job of management. Often, the biggest challenges in management are dealing with people who have been placed in the wrong slots.

Look Under the Surface

We are all familiar with the way coaches move players from one position to another; for example, a running back becomes a defensive back or a receiver becomes a safety. When those position swaps work, it is a credit to the coach who took the time to evaluate each player and match according to team need. The same rule applies to managers. Employees may hire in at one level but, in time, develop skills that are best suited elsewhere. They will never get the opportunity to move, however, if they are not asked.

Create Challenges

All of us like our comfort zones; it is where we are productive. But in an organization where things change rapidly, your comfort zone is someone else's target of opportunity. Therefore, it is up to the manager to challenge her people by pushing them to develop their skills and tackle more demanding roles of responsibility. The manager does this by coaching workers and discovering what they are capable of doing and what they want to do. Such challenges are not for everyone, but for those people looking to move up the ladder, such challenges are welcome opportunities.

Humanize Supervision

Supervision is integral to management and is something that those leading up must practice daily. Supervision requires a deft touch as well as occasionally a swift kick. How you communicate can give you clues on when you nudge or when you back off. If an employee seems at sea on a problem, you have a conversation for three reasons: one, to find out what is going on work-wise and what actions you need to take to achieve results; two, to discover how your people

think and act and what makes them tick; and three, to gain insight into yourself and what you need to do or not do the next time.

Address the Negatives

Few managers walk into a new department without challenges. The manager may be hired from the outside, may be younger than most on the team or may have been promoted over others in the organization. None of these factors should have any bearing on the manager's competency, but unless they are addressed and defused they will fester and foster the development of factions, those for and against the new manager. Make it known right from the start that you want everyone's input and support and that you expect it. Furthermore, make it known that you will support them, too. For example, you can cozy up to a veteran by asking his advice in navigating bureaucracy. And when things go well, make certain he gets immediate credit. ●

Leading With Presence

Passion, like the attributes of energy and resilience discussed earlier, is essential to leading up because it means you genuinely care about results and how to achieve them. Passion in leaders is rooted in a concern for people, specifically in mobilizing them for a greater purpose.

Passion and enthusiasm combine in the leader to create a sense of presence. More specifically, leadership presence, which I define as "earned authority." Presence is the tangible essence of power that flows from an individual's ability to do a job — and, more specifically and importantly, to enable others to do their jobs individually and collectively. Those seeking to lead up must communicate passion for the work in two ways: one, a passion for the work itself; and two, a passion for the people who do the work.

Talk Up the Work

Entrepreneurs excel in this aspect of business-building. They are enamored with the process of getting their product or service to market. When you are around such people, you can feel the enthusiasm they have for their work. And if the idea is good enough, others are attracted by the business and join it. They, too, talk up the work and how it benefits their customers.

Recognize the Work of Others

You create passion the same way you lead — by example. When a manager opens a staff meeting with a "pat on the back" to those who have done a good job, she is sending a message that contributions matter. When people feel their work is important, they feel more important. And in time they may even feel some passion for what they do.

Understand the Need for Optimism

If you have enough optimism, you can accomplish great things. Optimism is essential to leadership. One reason is that leadership, by nature, is aspirational. It appeals to people to look up rather than down, to look at possibilities rather than obstacles and to see opportunities where others see defeat. Optimism is rooted in hope. It provides people with a reason to believe in something better, that all things are possible.

Optimism is rooted in the art of making things happen. When problems occur, think first of ways to overcome them. Then look deeper to ways to capitalize on them. Entrepreneurs are preternaturally optimistic because they see opportunities where others see failure.

Looking up, as optimists do, can cause you to run off the road or even into walls. Too much optimism is like putting sugar on sugar-coated cereal or adding salt to potato chips. It's an overdose. Too much optimism is seen as naiveté. People want their leaders to have a firm grasp of the situation, and to be realistic about problems as well as possibilities. One who smiles at problems rather than tackling them is perceived as a lightweight. But throughout tough times we want to follow someone who understands the severity but can still manage to be optimistic.

What You Need to Do to Lead with Presence

You need to lead yourself before you can lead others. You need to know what you are made up of. Character and conviction matter. You must also act the role of a leader by being present and available. Leaders set the right example. In truth, example is what counts most. It creates the foundation upon which trust can flourish. Your example is your character in action. Words matter sometimes; actions matter more. ●

THE SUMMARY IN BRIEF

be successful. If they aren't nimble and ready to adapt, they won't survive. The key is to learn how to leadershift.

In ***Leadershift***, John C. Maxwell helps leaders gain the ability and willingness to make leadership changes that will positively enhance their organizational and personal growth. He does this by sharing the 11 shifts that leaders need to be successful over the course of their careers. Each shift has the potential to change a leader's trajectory, set them up for new and exciting achievements, and strengthen and sustain their leadership abilities.

Among those leadershifts are the Focus Shift from Soloist to Conductor, the Production Shift from Ladder Climbing to Ladder Building, and the Influence Shift from Positional Authority to Moral Authority. Each shift requires leaders to change the way they think, act, and ultimately lead so they can be successful in a world that never remains the same. In ***Leadershift,*** Maxwell leads the way to new levels of leadership.

IN THIS SUMMARY, YOU WILL LEARN:

- The mindset needed to leadershift.
- To identify the "costs" of becoming the best leader you can be.
- To shift from claiming positional authority to developing moral authority.
- To become a transformational leader and find your calling.

Why Every Leader Needs to Leadershift

The future seems to be coming at us faster than ever. To go forward, we need to move faster. And as leaders, we need to stay ahead, we need to see more than others, and we need to see before others. The more nimble, adaptable, and flexible we are, the more quickly we can move and change.

We have to change, reread our situation, and change again. And continue changing. How does a leader do more than just hang on and survive in such an environment?

The key is to learn how to continually make leadershifts. What is a leadershift? It is an ability and willingness to make a leadership change that will positively enhance organizational and personal growth.

Perhaps at no other time in recent history has adaptability been more important than it is now. If you want to be successful as a leader, you need to learn to become comfortable with uncertainty and make shifts continually. You need to be flexible and deal with uncertainty without losing focus.

Leaders who leadershift must be like water. They have to be fluid. Water finds a way, then makes a way. First it changes with its circumstances. The environment dictates the change. But moving water is also forceful. It first moves around an object, but at the same time it begins moving the object. It can wear down solid rock over time. A seemingly small shift can make a big difference.

The truth is this: every advance you make as a leader will require a leadershift that changes the way you think, act, and lead.

Before we talk about the 11 practices involved in leadershifting, let's lay the groundwork by describing the mindset needed to leadershift. How open are you to change? Are you willing to start asking more questions instead of giving more answers? Are you willing to become a better listener, a better observer? Are you willing to rely more on your intuition and your creativity?

Leadershifting will require you to rely on values, principles, and strategy, but it will also push you to rely on innovation, to seek out options, to harness creativity. You'll also need to let go of some things and be dedicated to getting better.

If you answered yes to these questions—or you're willing to move in the direction where you'll be able to answer yes—then you're ready to start leadershifting.

Soloist to Conductor: The Focus Shift

One of the first and most important shifts anyone must make to become a leader is from soloist to conductor. You can be a successful person on your own, but not a successful leader.

The potential of a group is always greater than that of an individual. People working together possess limitless possibilities. They can work together to do something greater than themselves. However, that doesn't mean that working together doesn't have its own challenges. When you transition from soloist to conductor, there are some realities you have to face:

Going slower so you can go farther. To lead others successfully, leaders need to travel with their people, not run or climb ahead of them. This requires a leader to do the leadership dance. To do the leadership dance, you must step ahead of people, staying close enough for them to see you; step beside people, listening to them and talking about the journey; and step behind people, sharing words of encouragement to keep them going. Doing this dance keeps you connected to your people and energizes everyone.

Recognizing that you need others. You can't produce the music of an orchestra when you're trying to be a one-man (or one-woman) band. Make it a goal to cultivate an environment where you put completing one another ahead of competing with one another. A "completing" culture has an abundance mindset, thinks win-win, practices shared thinking, and includes others.

Making the effort to understand others. Many entrepreneurs and high achievers are able to work alone. Like good soloist musicians who choose to play in the subway, they can create music without the assistance of any other musicians. But no one can become a good conductor without making the effort to understand other people. To make the leadershift from soloist to conductor, consider everyone else. Understand and embrace their thoughts, desires, talents, contribution, and journey.

Wanting others to shine more than you do. Good leaders do what they can to put others in position to win. Here's a simple formula to lift up people.

- See the possibilities in all people;
- Honor them in front of others;
- Invite them to help achieve the vision;
- Notice what they do well and compliment them; and
- Thank them to make sure they know they're valued.

When you get better, it makes you bigger. Growth is sustaining. Growth is the only guarantee that tomorrow. will be better than today.

Goals to Growth: The Personal Development Shift

There was a time when people in the inner circle of Truett Cathy, the founder of Chick-fil-A, were pressing him to expand the organization. "We need to get bigger," they kept telling him. Truett's response: "If we get better, our customers will demand that we get bigger."

That's also true of personal growth. When you get better, it makes you bigger. Growth is sustaining. Growth is the only guarantee that tomorrow will be better than today.

Making the leadershift from goal-oriented to growth-oriented isn't complicated, but it isn't easy, either. It requires a shift in mindset. It takes time, but it's well worth it. If you shoot for goals, you'll achieve your goals, but you may not grow. If you shoot for growth, you'll grow and you'll achieve goals. To start making that shift, do these things:

Embrace change. It's human nature to desire improvement and resist change at the same time. And that's impossible. If you want to become a better leader, a better employee, a better person, you must shift from a fixed mindset to a growth mindset. Why?

A fixed mindset believes intelligence is static, avoids challenges, gives up too easily, and ignores constructive criticism. A growth mindset believes intelligence can be developed, embraces challenges, persists when faced with setbacks, and learns from constructive criticism.

A fixed mindset results in an early plateau, achieves less, and hinders people from reaching their full potential, whereas a growth mindset fuels people to a higher level of achievement.

Develop greater humility. Are you willing to be criticized for the sake of improvement? Are you willing to admit you're wrong in deference to your desire to change and grow? Are you willing to drop bad habits, change wrong priorities, and embrace new ways of thinking? That's what it will take to make the leadershift to growth. You must be willing to admit where you're wrong so that you can discover what is right. Anyone can make that choice, but it requires humility.

Embrace layered learning. Layered learning involves one life lesson applied upon another and another, each gaining greater insight, depth, and weight. It is wisdom acquired and applied over time. Author and professor C.S. Lewis said that learning isn't so much like a train going from one station to the next, so that we leave one place and move on to somewhere else. Instead, our growth is similar to that of a tree. As we learn and grow, we add new rings of understanding without giving up the older ones. We build, using the past to strengthen us, and create something new.

Perks to Price: The Cost Shift

When people are asked why they want to be leaders, sometimes their answers reveal that their motivation is really about the perks of leading. They want to be in control. They want others to do what they say. They want a nicer office. They want a higher income. They want a better parking place.

But focusing on perks won't take you anywhere worthwhile because deep inner fulfillment never comes from perks. What they offer is ultimately hollow. And they have never helped a leader to reach his or her potential.

Leaders who focus on perks end up misusing their leadership, and because they love perks more than people, they are continually tempted to misuse people to receive, maintain, or improve their perks.

If you want to reach your potential, become the best leader you can be, and make the greatest impact, then you must shift from perks to price in your leadership. A price is what stands between you and your potential.

If you want to be a better leader, you need to pay for it. Here are some common costs that every leader needs to take into account:

Reality: Leaders recognize that everything worthwhile is uphill. Here's the reality of your leadership

potential: It's uphill all the way. No one ever coasted to success. No successful person has ever experienced accidental achievements. Nothing of genuine value is easy, quick, and downhill. If we want to succeed in leadership, we must do what we don't want to do, so we can do what we need to do. We must be willing to pay the price.

Example: Leaders acknowledge they must climb the hill first. All people with leadership ability have one perspective in common: before and more. They see things *before* other people do, and they see *more* than other people do. However, what sets great leaders apart from all other leaders is this: They *act before* others and they *do more* than others. Great leaders face their uncertainty and doubt, and they move through it to pave the way for others. And because they are willing to pay the price first and often pay more than others do, they can say with moral authority, "Follow me."

Consistency: Leaders understand they never get to stop climbing. There is a reason that sports teams seldom have back-to-back championships. The perks that come with the first championship often become a hindrance to achieving the next one. When a team earns the first championship, they don't get the next one free. If you desire to go to higher levels of leadership, you need to keep paying the price. That price will be higher than you think, and it will have to be paid continually and consistently.

Pleasing People to Challenging People: The Relational Shift

Pleasing people is not the same as leading people. If you're a leader, you can never make everyone happy. And wanting to do so is a setup for disappointment or failure.

You can never really lead your organization, serve your people, or reach your leadership potential if you're always trying to make others happy. You have to put doing what's right for your people and organization ahead of what feels right for you. To make that shift, you need to do these things:

Change your expectations toward leadership. If your leadership is motivated by pleasing others or receiving approval, you need to change your expectations. Shift your focus from what you gain to how you can help people, improve your organization, and achieve your vision. Otherwise, your leadership will always be limited.

Work to establish expectations up front. As a leader, you can either set expectations on the front end and set up the working relationships for success or leave expectations unstated and deal with disappointment on the back end for both you and the people you're leading. Up-front expectations increase the value of any meeting, and up-front questions are the quickest way for people to understand one another and increase the value of their time together.

Balance care with candor. As a leader, you need to bring both caring and candor into the relationship. Care values the person, establishes the relationship, shores up weakness, offers comfort, and makes the team pleasant. Candor values the person's potential, expands the relationship, brings out strengths, offers a challenge, and makes the team productive.

Maintaining to Creating: The Abundance Shift

Have you ever thought about the expectations your profession or industry places on you? Are people in your leadership position expected to hold the line? Maintain the course? Change direction? Get out of the box? Blow up the box?

We all tend to fall into one of four different zones when it comes to innovation, which impacts how we live, how we lead, and what we achieve:

- **The Coasting Zone**—"I do as little as possible."
- **The Comfort Zone**—"I do what I have always done."
- **The Challenge Zone**—"I attempt to do what I haven't done before."
- **The Creative Zone**—"I attempt to think what I have never thought before."

The creative zone is where we experience abundance and expand our potential. If you want to take your leadership to ever-higher levels, you need to make the leadershift from maintaining to creating and try to live in the creative zone.

If you want to shift from maintaining to creating in your life and leadership, then you need to take your crayons back. Here's how:

Build a creative culture. As Josh Linkner recommends in ***Disciplined Dreaming***, fuel passion and celebrate ideas. Foster autonomy and encourage courage. Minimize hierarchy and reduce rules. Fail forward and start small.

Make plans but look for options. Good leaders are

If you want to bless your success, mess with it. Get another perspective. Listen to other voices.

flexible and their plans are fluid. They allow for creativity. They plan, but they look for options. And that's important. Options always present themselves soon after action is taken on a plan. If we don't open ourselves up to those options, we miss the chance to innovate, to create, and—sometimes—to win.

Seek out and listen to different voices. Creativity thrives when one subject is approached from many different perspectives. It short-circuits the kind of one-way thinking that interferes with better solutions. If we get into single-perspective thinking, we find ourselves in ruts. If you want to bless your success, mess with it. Get another perspective. Listen to other voices. Have the courage to let go of your certainties, challenge your assumptions, and change your way of doing things. It will make you more creative.

Ladder Climbing to Ladder Building: The Reproduction Shift

This leadershift is about changing from being a personal producer to an equipper of others. It's a shift that takes your leadership math from addition to multiplication. It takes you from the solitary climb to the top of your ladder, where you might enjoy the view and wave to the people down below, to watching many people climb to the top of their own ladders, and you all enjoy the view from the top together.

Here are the four stages to help you make this shift in your leadership:

1. **Ladder climbing—"How high can I go?"** Wanting to climb the ladder yourself isn't a bad thing, because credibility in leadership is often built on personal success. So the first step in leadership is not leading others. It's leading yourself; it's showing you are capable of climbing the ladder yourself. If you need help in figuring out how to do that, ask yourself these three questions: "What are my strengths?" "What are my opportunities?" "Am I taking steps every day"?
2. **Ladder holding—"How high will others go with a little help?"** When you want more for others and you're willing to give them some help, it's like holding the ladder for another person, giving them a secure base, empowering them to take moderate risks, and allowing them to climb higher. Ladder holding begins with a serving attitude, requires availability, attracts people who want to climb, is a pre-qualifier for discovering a person's potential, and multiplies effectiveness over time.
3. **Ladder extending—"How high will others go with a lot of help?"** The next step in the process is to extend the ladder for others. When you do that, you empower them to climb higher and go to entirely new levels. How do you do that? By intentionally and strategically mentoring them. To be a good mentor, remember that ladder extenders are successful, are specialists, mature, practiced in the art of asking great questions, and humble.
4. **Ladder building—"Can I help them build their own ladder"?** Ladder building is all about giving another leader the permission, equipment, and empowerment to create their own ladder. As a leader, if you surround yourself with excellent people with high potential, there will be a time when you should allow them to build their own ladders. That's the time when you release them to lead on their own.

Directing to Connecting: The Communication Shift

If you want to become the best leader you're capable of being, you must learn to connect with people. To do that, you must find ways to overcome the challenges of connecting and finding common ground. Here are some of the most important things for a leader who wants to connect with others:

Curiosity—ask people questions. Too many leaders don't ask enough questions—of themselves or others. This happens because they assume they have the answers; they value what they think more than what others think; they prioritize directing others over understanding others; they don't

recognize the need to find common ground; and they don't understand that questions help to manage expectations.

Disappointment is the gap between expectations and reality. How do we close that gap? By asking questions so that we can adjust our expectations.

Effort—go out of your way to connect with people. If you care about people, you will be capable of coming up with ways to create connecting experiences with others. But it will take effort. And it will take even more effort to follow through on those ideas.

Listening—open the best door to connecting with people. If you never listen, before long the people around you will stop talking to you, and you'll become isolated as a leader. If you do listen, not only will they tell you things you need to know, but they will also connect with you because they see that you care and that you value what they have to say.

Encouragement—give people oxygen for their soul. As leaders, we must never underestimate the value of reminding others that we believe in them. That's why George M. Adams called encouragement oxygen for the soul. When you interact with others as a leader, what is your mindset? Is your intention to correct them or connect with them? Do you keep them down or lift them up? You have that choice every day—with those you lead, with those who lead you, with your friends, family, and colleagues.

Team Uniformity to Team Diversity: The Improvement Shift

A definition of "team" in the ***Harvard Business Review*** is "a small number of people with complementary skills who are committed to a common purpose, set of performance goals, and approach for which they hold themselves mutually accountable."

This definition assumes that there is a variety of skills. That implies diversity. Our differences really can make a difference in our teams, our organizations, and our individual lives.

Diverse teams fill in the knowledge gap. As a leader, it's important to know what you don't know. If you include a variety of people, then someone on your team will be able to help you.

Diverse teams fill in the perspective gap. Malcolm Forbes said diversity is the art of thinking independently together. When everyone thinks and says the same things, it's the end of creativity and death to an entrepreneurial environment.

Diverse teams fill in the experience gap. A little bit of experience outweighs a whole lot of theory. The greater the differences in personal experiences, the greater the team's ability to achieve, and the greater number of "tools" the team has at its disposal.

Here are three suggestions for how to leadershift to diversity and inclusion:

Create a culture of sharing. No matter how diverse the workplace is, teams will not embrace creativity unless there is a culture conducive to interaction and sharing of knowledge. This requires de-emphasizing titles, positions, and roles. It means inviting everyone to speak up. It means giving people opportunities to lead before they have an official role—and sometimes even before you feel they are fully ready. And it means being more open to differences.

Broaden your perspective on diversity. Equality isn't just about giving everyone the same things; it's also about giving unique people what they need. Bernard Tyson, CEO of Kaiser Permanente, said, "We've evolved from equality to equity. Equality says everybody gets equal. Equity says no, everybody gets what they need. Part of building an inclusive environment is not how you're going to change the person. It's how you're going to change yourself and the environment in which the person is going to be successful." That requires us to think differently and treat diversity differently.

Provide solid leadership for diversity to be effective. As much as diversity can help a team, it can also challenge a team. Bringing together a diverse group of people isn't easy. The strength of diversity is problem solving and idea creation. The weakness comes in decision-making and implementation. Good leadership can help bring strength to both ideation and implementation.

Positional Authority to Moral Authority: The Influence Shift

A leadership position does not give someone leadership authority. Having a title is not the same as having influence.

Moral authority is the highest level of influence. Moral authority is the recognition of a person's leadership influence based on who they are more than the position they hold. It is attained by authentic living that has built trust, and it is sustained by successful leadership endeavors.

If your actions inspire people to dream more, learn more, do more, and become more, then you are a transformational leader.

Moral authority is grounded in four things: competence, courage, consistency, and character.

1. **Competence—the ability to lead well**. Competence is the core of moral authority. If you can't do your job, if you can't deliver the goods, if you can't lead the team well, why would anyone want to follow you? You can't cultivate moral authority unless people respect you. How do you build a foundation of competence? By giving your best, starting with the small stuff.
2. **Courage—moving forward in the face of fear**. Leadership authority shrinks or expands with a person's courage. C.S. Lewis said, "Courage is not simply one of the virtues but the form of every virtue at the testing point." Without courage, you can't live any other virtue consistently. With courage, especially when facing great obstacles, you begin to gain moral authority. Courage encourages people during difficult and uncertain times; enables people to maximize their potential; and helps leaders find their voice.
3. **Consistency—doing well all the time, not just sometimes**. Internal consistency between values and actions is essential to a leader's success if he or she desires to gain moral authority. Equally important is the ability to be consistent over time. Consistency establishes your reputation, makes team members more secure, allows for accurate measurement of your growth, models your expectations for others, and maintains your message.
4. **Character—being bigger on the inside than the outside**. While much of leadership is outward and public, the right motives and the good character traits we need to become leaders with moral authority are won in private. These two aspects of leadership, public and private, resemble the two parts of a tree. One part you see: Our public leadership is like a tree's trunk and branches. That's the part that bears fruit. But who leaders are in private is what can't be seen, like tree roots.

What does it mean to develop deep roots as a leader? It means having strong character. Good character demonstrates integrity, authenticity, humility, and love.

Trained Leaders to Transformational Leaders: The Impact Shift

The impact shift from trained leaders to transformational leaders will bring the greatest change to your life and the lives of those around you.

If your actions inspire people to dream more, learn more, do more, and become more, then you are a transformational leader. You influence people to think, speak, and act in ways that make a positive difference in their lives and the lives of others. That kind of leadership can change the world!

Trained leaders know how to lead, are liked, influence today, love to lead, help people, have a career, and impact a few. Transformational leaders know why they lead, are contagious, influence today and tomorrow, love the people they lead, help people change, have a calling, and impact many.

If you desire to make the impact shift from trained leader to transformational leader, start doing these actions:

Possess a clear picture of what transformational leaders do. Many people see problems and shake their heads. Transformational leaders ask "Why not?" because they're always thinking about trying to create a better future. Transformational leaders leverage their influence by speaking bold words about a better future. These leaders believe they can make a difference. That becomes their passion. Transformational leaders also believe in others. They are belief magnets.

Take positive action based on your internal changes. Transformation is a result of application, not education. That's why Gandhi said, "An ounce of practice is worth more than tons of preaching." To lead transformationally, you must first live transformed. That takes courage, the courage to let go of the familiar and set off on a better way.

Create an environment that promotes positive change. Here are the essentials for what creates an ideal environment: leaders who are passionate about transformation, resources that teach good values, small groups where people learn and participate, and commitment to reproduce leaders.

Career to Calling: The Passion Shift

How do you currently think about what you do for a living? When you have a job, your main goal is often to earn a living and support your family. You may not think beyond the time you spend on the clock. You may do your job with excellence or you may simply mark time, but either way, when you finish your day or your shift, you walk away and don't think about it.

When you have a career, the implication is that you are headed in a direction. You're making progress attaining positive achievements. An upward trajectory of skill mastery, larger responsibilities, and greater earnings are all marks of a successful career.

Your calling will result in the merging of your skills, talents, character traits, and experiences. It will make use of your experience, your gifts, and the lessons you've learned. It will be represented by a deep desire to create, lead, inspire, and make a difference.

Finding your calling is like finding your why—the reason you exist, your purpose for living.

Your calling matches who you are. If you could do one thing for the rest of your life, even if you never got paid for it, what would you do? What do people often ask for your help with? What experiences have you had that you desire to help others with?

Your calling is important to you, but it's not about you. A true calling is never about the person being called. It's about helping others. A calling moves us from the center of everything in our world to becoming the channel through which good things come to others.

Your calling changes your perspective. Having a calling makes you see your world differently. Where you once saw only obligations and responsibilities, you will begin to see options and opportunities. No longer will you be focused on the tasks you are required to do. A whole new world will open up to you of things you want to do.

Remember, every advance you make as a leader will require a leadershift that changes the way you think, act, and lead. The better we can lead and help others to lead, the greater and more fulfilling our impact will be.

John C. Maxwell is a #1 ***New York Times*** best-selling author, coach, and speaker who has sold more than 30 million books in 50 languages. He has been identified as the #1 leader in business by the American Management Association and the most influential leadership expert in the world by ***Business Insider*** and ***Inc.*** magazines. He is the founder of the John Maxwell Company, the John Maxwell Team, EQUIP, and the John Maxwell Leadership Foundation, organizations that have trained millions of leaders.

Leadership Blindspots

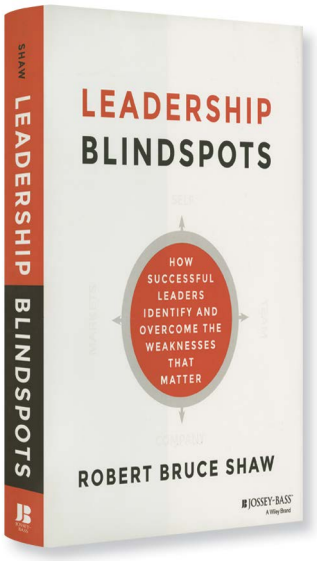
How Successful Leaders Identify and Overcome the Weaknesses That Matter



by Robert Bruce Shaw

THE SUMMARY IN BRIEF

Good leaders become great by skillfully managing their own vulnerabilities. *Leadership Blindspots* is a comprehensive guide to recognizing and acting on the weak points that can impair effectiveness, diminish results and harm a career.

The blindspot risk is that leaders fail to respond to weaknesses or threats due to a variety of factors, including the complexity of their organizations, over-confidence in their own capabilities, and being surrounded by deferential subordinates. *Leadership Blindspots* provides a useful model for understanding how blindspots operate and why they persist, but at the same time suggests real, actionable steps to improvement. Author Robert Bruce Shaw details a range of techniques that make blindspots stand out in sharp relief, so action can be taken before severe damage occurs — to a leader or his or her company.

The one characteristic great leaders share is the constant desire for self-improvement. Good can always be better. Some weaknesses and threats are blindspots because they are invisible to the individual but have the potential to wreak havoc on one's reputation and long-term success. Identifying and fixing crucial problems is the leader's job, and sometimes the most debilitating problems are with the leaders themselves. *Leadership Blindspots* is the first step toward owning and addressing one's vulnerabilities and, as a result, becoming a more effective leader.

IN THIS SUMMARY, YOU WILL LEARN:

- Why blindspots and strengths often come from the same source.
- How to balance confidence and humility in leadership.
- The 20 most common blindspots in which leaders lack awareness.
- How to overcome blindspots in individuals, teams, organizations and markets.

THE COMPLETE SUMMARY: **LEADERSHIP BLINDSPOTS**

by Robert Bruce Shaw

The author: Robert Bruce Shaw works with senior executives on the management of strategic organizational change and leadership development. His clients span a variety of industries, including pharmaceuticals, animal health, financial services, telecommunications, industrial products, defense, power utilities, technology and consumer goods. He holds a Ph.D. in organizational behavior from Yale University.

Introduction

The term *blindspot* refers to an unrecognized weakness or threat that has the potential to undermine a leader's success. Unlike so-called black swan events, which are unpredictable, uncontrollable and rare, and situational blindness, where the environment makes recognition of a weakness or threat almost impossible, blindspots are recognizable if one looks for them.

Blindspots, however, are not just cases of failing to see ourselves or our actions accurately. They are evident in the way we view our teams, organizations and markets.

Two surprising qualities of blindspots are worth noting: First, leadership strengths are often found in close proximity to blindspots. Leaders who are deeply passionate, for instance, can believe in their own views to the point of dismissing contrary views or information that doesn't fit with their beliefs or plans. Visionary leaders, in particular, are often driven individuals who can become prisoners of their own assumptions. Second, blindspots may be recognized, only to reappear again later in a leader's career. In other words, awareness of a blindspot doesn't mean it disappears.

Some blindspots, in some situations, are adaptive and serve a leader well. Blindspots, however, always come with a price. They increase the risk of becoming overly detached from reality and failing to see or act on a significant weakness or threat. Learning to recognize and deal with blindspots is a task in understanding the sometimes counterintuitive aspects of how they operate and then more effectively managing yourself and others with that knowledge.

Blindspots are worthy of attention because the costs of neglecting them can be so high. A single blindspot in a critical area can undercut even the most talented leader. Blindspots can also take a toll on those who live with the consequences of a leader's decisions. Blindspots matter because leadership matters.

SECTION I: WHY BLINDSPOTS MATTER

The Dangers and Rewards of Being Blind

Successful leaders balance two conflicting needs. The first is to act with confidence in their abilities and faith in their vision for their organizations. This allows them to pursue ambitious goals and push forward despite obstacles that would intimidate if not overwhelm most people.

The second need for leaders is to be aware of their own limitations and avoid the hazards that come with overconfidence and excessive optimism. The classic case of this need is found in entrepreneurs, who are more likely than others to make overly optimistic projections of their chances for success, overvalue their own capabilities, and neglect to adequately plan for potential problems.

Leaders thus need to be supremely confident and, at the same time, see themselves and their situations accurately. Bob Sutton, a management professor, suggests that the best leaders hold the following belief: "I strive to be confident enough to convince people that I am in charge but humble enough to realize that I am often going to be wrong."

Balancing Confidence and Doubt

The balancing act is complex, as confidence and doubt are often adversaries, each seeking to defeat the other. Moreover, the right balance between confidence and doubt varies within each individual. Psychologists, however, have found there are benefits to being slightly more confident than one should be. An *optimal margin of illusion* occurs when individuals have a small, positive distortion about themselves. A positive bias is useful because it increases an individual's motivation to move forward in risky situations and persevere in difficult situations.

The role played by blindspots is to mediate between the poles of self-confidence and self-doubt. A leader with too many blindspots can be overconfident, even blindly arrogant, and exposed to a range of risks. In contrast, a leader with too few blindspots may be too realistic and overwhelmed by the very real obstacles ahead. All in all, leaders are forced to manage the ongoing tension between confidence and doubt — between believing in yourself and realizing that you have gaps in your knowledge and may be wrong in the decisions you are making.

But blindspots are not simply problems to be identified and fixed. Managing blindspots is learning to accept them as inevitable and, in some respects, positive because they force you to remain vigilant. Knowing you have blindspots forces you to look more carefully and deeply at your own behavior and situation. In this regard, they both threaten and protect.

How to Spot Blindspots in Yourself and Others

One sign of self-awareness is realizing when you are getting in your own way. There is a difference between a weakness we recognize and a weakness we don't recognize. These unknown areas often pose the greatest risk because no corrective action is possible without awareness of the need to act. Leaders get into trouble when they don't know what they don't know in the areas that matter.

Four types of leadership awareness are

- **Known Strengths: you know what you know.**
- **Known Weaknesses: you know what you don't know.**
- **Unknown Strengths: you don't know what you know.**
- **Blindspots: you don't know what you don't know.**

Blindspots are the areas of unrecognized weakness that place a leader at risk because corrective action can't be taken without an awareness of a need to do so. The first improvement occurs when a leader becomes more aware of his or her blindspots as well as unknown strengths. The second improvement occurs when a leader develops new capabilities in targeted areas and replaces weaknesses with strengths.

Degrees of Blindness

One of the complexities of blindspots is that they can include gray areas where leaders both know and don't know that which threatens them. The three levels of blindness are

Lack of Awareness: The most extreme form of a blindspot is a complete lack of awareness regarding a weakness or threat. These are cases where the leader is said to be blindsided — surprised by events that he or she doesn't see coming.

Faulty Assessment: The second level of blindness can be described as denial, which is the refusal to fully face unwelcome realities that pose a risk to a leader and his or her firm. In this case, a leader may be aware of a weakness or threat but doesn't analyze it in sufficient depth to understand its causes and potential impact.

Failure to Act: The third level of blindness involves a leader's willingness or ability to act on a known weakness or threat. There are cases when a leader knows that trouble lies ahead but fails to take action due to a range of factors, including a lack of skill.

The Common Blindspots Holding Leaders Back

Successful individuals who sometimes stumble often do so because they have no one who can protect them from themselves. High achievers are frequently driven by a singular focus and an associated lack of perspective — which can be their defining strength and most significant weakness. Great achievers, however, carry with them the potential for equally great acts of self-delusion — for having weaknesses and threats that they don't see or that they rationalize as being unimportant in comparison to the goals they are pursuing.

Here are 20 blindspots worthy of your attention as you examine your own beliefs and behaviors. These are not the most common leader weaknesses, but rather those areas in which leaders lack awareness of their weaknesses.

Self

1. Overestimating your strategic capabilities.
2. Valuing being right over being effective.
3. Failing to balance the what with the how.
4. Not seeing your impact on others.
5. Believing the rules don't apply to you.
6. Thinking the present is the past.

Team

7. Failing to focus on the vital few.
8. Taking for granted your team model.
9. Overrating the talent on your team.
10. Avoiding the tough conversations.
11. Trusting the wrong individuals.
12. Not developing real successors.

Company

13. Failing to capture hearts and minds.
14. Losing touch with your shop floor.
15. Treating information and opinion as fact.
16. Misreading the political landscape.
17. Putting personal ambition before the company.

Markets

18. Clinging to the status quo.
19. Underestimating your competition.
20. Being overly optimistic.

Why Blindspots Are an Ever-Present Challenge

Blindspots are often found in close proximity to a leader's strengths. As a result, they can reappear over time as a leader does what he or she does best. Factors that give rise to blindspots and make them an ongoing challenge are

Experience Gaps: A leader's history is often missing particular experiences that make blindspots more likely in specific areas or situations. In this case, leaders don't see or fully understand what they have never experienced. More specifically, past experiences result in leaders' extrapolating from what they have experienced in the past to what is needed in new situations, particularly when they or their firms have achieved successes using a particular approach. In so doing, they assume that they are now facing a similar situation when, in fact, the demands are quite different.

Information Overload: A second factor in the persistence of blindspots is the tendency of people to simplify an overly complex world in order to focus on tasks that require their full attention. The total amount of cognitive energy we have is limited, and it is adaptive to pay attention to some issues while ignoring others. In so doing, people automate or make habitual many of the decisions they make because the energy required to pay attention to everything going on around them would soon overwhelm them.

Emotional Bias: A third factor to consider is how an emotional investment in a particular outcome can influence how an individual views a situation, with the "facts" being slanted to support a preferred outcome.

Cognitive Dissonance: Social psychologists have studied what occurs when one holds two conflicting views, particularly when those views are related to one's self-image. The term they use to describe this uncomfortable state is *cognitive dissonance*. The conflict is resolved through rationalizing one's beliefs or actions in a manner that sustains one's positive self-image.

Consider the individual who views himself as an honest person but then engages in acts that could be seen as dishonest or unethical. This creates a conflict for the individual. He will then change how he views the situation in order to uphold a positive self-image.

Misaligned Incentives: Compensation systems are designed to focus attention and effort within an organization, with the result being that people focus more on some areas than on others. For instance, a company may reward the achievement of quarterly sales targets and the aggressive management of budgets. However, it may have no formal metric for assessing customer views of the company and the products or services it provides. The result can be blindspots in particular areas.

Hierarchical Distortions: As an individual rises in a firm, the information that he or she receives is sometimes incomplete, distorted or even false. Leaders can become detached from the lower levels of their organizations, as time is consumed by corporate-level meetings and the needs of stakeholders. As a result, senior leaders rely more and more on secondhand information gained through a variety of people and systems.

Second, some people defer to those in positions of authority and offer little or no challenge to the leader's beliefs and plans. Thus, a leader with blindspots may not receive contrary feedback because others are afraid of the consequences if they come forward with a contrary point of view. Third, more powerful people generally pay less attention to less powerful people. Some leaders are less aware of how people below them are responding to them as leaders and, more generally, less aware of what is occurring in their teams and organizations.

Overconfidence: Perhaps the most important factor to consider regarding the persistence of blindspots is the tendency of people to overestimate their own capabilities. Self-assured leaders can easily come to believe that their skills are the primary factor producing positive outcomes (rather than the contributions of many others, or even luck). These leaders can also believe their skills are applicable to a wide range of challenges, some beyond what they have experienced in the past.

SECTION II: HOW TO SURFACE AND OVERCOME BLINDSPOTS

See It for Yourself: Customers, Colleagues and Outsiders

Many leaders feel less power than they felt would be the case on moving up in their companies, particularly in regard to managing their schedules. Internally, time is consumed in dealing with a range of important topics such as developing long-term strategies and solving operational issues. Externally, particularly for those in senior roles, there are obligations to industry groups, institutional shareholders, financial analysts and the media. Executives can, as a result, work for months without leaving the confines of their headquarters building. Customers and frontline employees easily fade into the background.

In order to see what is going on for themselves, leaders need to develop practices that increase their awareness in four areas: customers and markets, frontline colleagues, high-potential talent and outsiders.

Awareness of Customers and Markets: The retired former CEO of IBM, Sam Palmisano, told an interviewer that he learned from his predecessor in that role that the best way to analyze problems was by looking at them from the viewpoint of customers and markets. A recent example of someone who exemplifies this type of thinking is Jeff Bezos of Amazon. He strives to ensure that key decisions in his company are driven from the perspective of the customer. "We innovate by starting with the customer and working backwards," he says.

In fact, he wants his people thinking more about how to please customers than how to beat Amazon's competition. One well-known illustration of his "outside-in" mentality is Amazon's one-click ordering, which drastically reduces the information required of customers to place an order. Bezos wanted to make ordering online as easy as possible and, in so doing, bring customers back to Amazon for a wide variety of products.

Awareness of Frontline Colleagues. Most leaders are overly optimistic in that they believe their initiatives are being implemented more effectively than is actually the case. But some leaders make spending time with frontline colleagues part of their regular routine. Macy's CEO Terry Lundgren devotes time each week to shopping in one of his stores. "I just go and pop into a store. And so we walk through the floor, and they have no time to prepare for my questions, they've had no time to prepare the store ... I learn as much by walking through a store as anything I do ... Much more than sitting at my office at my computer or holding a big meeting."

Awareness of High Potentials: Leaders also benefit from increasing their awareness of high-potential individuals at various levels of the organization. These individuals often see things differently as a result of being, in most cases, younger than leadership team members and working at levels below that team. They can surface issues or inconsistencies that may be blindspots not only for the leader but also for his or her leadership team. Spending time with high-potential individuals also gives a leader an opportunity to personally assess the next generation of leadership in his or her firm.

Awareness of Outsiders: One of the most common traps for a leader is to become a prisoner of his or her own industry or firm, with a corresponding diminution of awareness. Many individuals spend their entire careers in one industry and, in some cases, in one firm. These leaders can take for granted assumptions about their markets and how their industry is evolving.

One way out of this trap is to gain exposure to outside views, including those from other groups or industries. Possible target groups and individuals include those from

- *Outside industries* that are addressing challenges that your company is facing today or will encounter in the future;
- *Other regions* of the world than those in which your industry or company has typically worked;
- *Academic institutions or think tanks* that specialize in areas likely to become increasingly important to your company;
- *Consulting practices* with expertise and experience in areas likely to be increasingly important to your company.

Seek Out That Which Disconfirms What You Believe

One of the most robust findings in the research on decision making is that people tend to see what they want to see, and they interpret new information within the

context of their existing beliefs. This makes seeing something different from what they already know or want to occur very difficult.

Disconfirming Data

To counter this, leaders need to surface *disconfirming data* — which is defined as information that challenges the basic assumptions and beliefs of a leader. One of the keys to surfacing such data is asking the right questions. In seeking information that challenges your existing views, you will want to focus on these areas: your leadership impact, your team's strengths and weaknesses, your organization's strengths and weaknesses, and the markets and industry in which you compete.

- **Surface Disconfirming Data About Your Leadership Impact:** One helpful technique for maximizing self-awareness is an annual self-assessment of lessons learned about one's own leadership effectiveness. Many firms ask leaders to assess their progress against a formal set of objectives. Less common is a focus on deeper insights regarding one's leadership over the course of a year, which can involve both successes and failures. Some leaders summarize these lessons in a two-to-three-page, year-end memo that outlines what they learned and, in some cases, what they need to improve on as leaders in the upcoming year.
- **Surface Disconfirming Data About Your Team:** Many leaders believe that their team is operating more effectively or team members are more aligned than is actually the case. To learn what is working well in the team and what needs to change, assess your team's effectiveness. The assessment of the group typically includes input from team members and, in many cases, from selected individuals working at the next level of management. In most cases, the assessment includes open-ended questions regarding what the team should continue, stop or start. Another useful technique is to give team members assignments that stretch them and, in so doing, provide input on their capabilities. A leader might give a superb operational leader an assignment to develop a new strategy for the firm in an important area such as a new emerging market or product category.
- **Surface Disconfirming Data About Your Organization:** Leaders also need regular input on how their organizations are performing, beyond the obvious financial metrics. One technique is to review strategic performance metrics with your team. Each leader needs a few carefully selected macro metrics that clarify to the leadership team and beyond what is important and how the performance of the organization will be measured. Metrics, when properly designed and used, make it difficult for the leader and his or her team to ignore weaknesses. Another strategy is to solicit input from newcomers, outgoers and outliers. Bringing new people into an organization can result in productive challenges to the status quo and make more visible weaknesses that need to be addressed. The challenge is to fully leverage the benefits that newcomers bring to a firm. A leader can reach out to newcomers to ask their views of how the leader's team is operating as well as their thoughts about the larger organization. These discussions focus on the business but also on the organization's way of operating.
- **Surface Disconfirming Data About Your Markets:** One technique to identify disconfirming data in regard to customers, markets and competitors is to identify and engage sentinels. Leaders need to identify the areas or specific competitors that need to be monitored. One way of doing this is to identify a point person or, in some cases, groups to be a sentinel responsible for collecting and analyzing data about the identified areas, including the actions of current and emerging competitors. The sentinel's role is to be fully informed of trends in the targeted areas and to be an advocate for appropriate concern around the threat that is emerging (or the opportunity that should be seized).

Develop Peripheral Vision and See What Others Miss

Leadership often demands bold moves — an industry-altering acquisition, a major investment in an innovative technology, the opening of a new regional market, a wide-ranging reorganization. The best leaders use both hard and soft data to improve the quality of their decisions in such areas. This requires that they take advantage of the views of others, especially those who are in the best position to assess the consequences of a particular course of action, as well as to point out a leader's potential blindspots or biases.

For a variety of reasons, individuals often communicate in subtle or even misleading ways to those above them. In some cases, those at the top of the organization and those at lower levels participate in an unspoken collusion, with the goal of avoiding conflict.

Effective leaders create a culture that promotes straight talk, but also pay attention to the nuances of communica-

tion in the decision-making process. Several actions are important for the leader who wants to develop peripheral vision:

Know Your Team Members: The senior leader needs to get to know his or her team in depth in order to determine how to best interpret the subtleties of team-member behavior. Some team members are comfortable with letting events unfold, while others prefer to resolve issues quickly. Some like to collect and analyze a wealth of data before making a decision, while others rely more on their intuition. Knowing how to "read" team members includes having not only an awareness of each person's tendencies but also an awareness of deviations from his or her typical approach. Leaders need to understand the traits and tendencies of those with the power to impact their success.

Pay Attention to Behavioral Flags: The leader needs to be aware of subtle cues that surface in a variety of settings. Here are the types of warning signals to watch for and possibly investigate further: nonverbal behaviors, silence, nonanswers, omissions, specific language, shifting positions, off-line input and email traffic.

Create Openings for Contrarians: Most corporations need formal or informal mechanisms to encourage views that are different from the dominant culture or prevailing point of view on any given issue (including the leader's own thinking). A leader needs to encourage these viewpoints, particularly in regard to the vetting of a full range of views on key decisions or areas of the business.

Leaders can use roundtable discussions to surface concerns. One of the best approaches for surfacing divergent views in leadership is simply to allow silence to enter the conversation, either when meeting one-on-one with people or in group meetings. Also, leaders often need to follow up team meetings with one-on-one discussions with particular individuals.

Establish a Three-Strike Rule: Mark Ronald, former CEO of BAE Systems, Inc., used an approach that he called the *three-strike rule* to encourage those with concerns about a particular decision to be tenacious in advancing their recommendations. The leader emphasizes that any area of concern that affects the larger enterprise should be given three opportunities for a hearing by the leader and his or her team. It may be accepted for further action at any time, but if it is rejected three times, it will not be debated again. With this approach, the leader is saying that he is not the final line of defense in determining what needs attention for the organization to be successful.

Listen Differently: Carlos Ghosn, CEO of Renault and Nissan, believes leaders need to be open and empathetic to others, taking into account their points of view. He suggests that leaders listen openly before a decision is made and then become drivers of results once it is reached. You want to ensure, in situations that demand it, that you understand the point of view of others before pushing forward with solutions. In some cases, you also may have a sense of the issue, but you need to be careful not to look simply for input that confirms your assumptions. It can also help to repeat back to individuals, in your own words, what you are hearing from them, to ensure that your understanding is accurate.

Build a Network of Trusted Advisors in Critical Areas

Some individuals, on being promoted into senior leadership roles, experience a distinct sense of being on their own. They are now responsible for decisions that will determine the fate of their companies or groups — with implications not only for themselves but also for their colleagues, customers and shareholders. Leaders also realize that many of those who provide them with advice on key decisions have their own agendas — including in some cases a desire to enhance their power and position within the company.

Successful leaders learn to discern the extent to which the advice they are given is limited by the knowledge or motives of those offering it. Leaders will want to consider the following steps as they work to build a network of trusted advisors:

Target the Areas Where You Need Advice: Dan Vasella, former CEO of Novartis, suggests that every leader needs a close confidant who can listen to his or her concerns — a board member or advisor whom the leader respects and can speak to in total candor. These people have a deep understanding of the leader's strengths and weaknesses and the challenges he or she faces. They show good judgment and can be trusted to keep conversations confidential.

Leaders also need other advisors in a wide range of areas and are best served by identifying people who can provide value in each area, given their particular strengths and backgrounds. Advice is often needed by those in leadership roles in these areas: markets and strategy, technological innovation, organization and people, political dynamics, crisis management and personal impact.

Match the Type of Advisor to Your Need: One of the burdens of moving up in a company is that the com-

plexity of the decisions leaders face increases at the same time as their ability to reveal their vulnerabilities decreases. In addition, leaders may need several types of advisors in targeted areas.

Consider these types: **Experts** are individuals who have deep knowledge in targeted areas, such as strategy or technology. **Coaches** observe the leader in action and have knowledge of best practices in organizational and leadership behavior. **Mentors** have been in a role similar to the one occupied by the leader or to which the leader aspires. **Sponsors** see a leader's potential and support his or her career advancement. They provide backing when needed but don't provide ongoing mentoring or coaching.

Promote Productive Team Fights on the Vital Few Priorities

Building a strong team is one of the most important actions a leader can take to surface and manage blindspots. In many respects, the leader creates the team, and the team then creates the leader — as a primary source of feedback and advice, it becomes a key influence on the leader's thinking and behavior. The best teams have the skill and confidence to challenge a leader when he or she is viewing a situation in an inaccurate or incomplete manner.

A leader who seeks to create a leadership team that can surface and address blindspots needs to take action in the following areas:

Hire a Group of Smart, Diverse and Passionate People: In staffing a team, the leader will want to look at the total portfolio of talent in his or her group and not simply the strengths of each individual in relation to the role he or she fills. In particular, the best leaders hire those who have capabilities that the leader lacks or capabilities that balance the capabilities of others on the team. Increasing diversity also means that you want to source from different backgrounds, and you also need team members who are loyal but willing to tell you the hard truths when necessary.

Focus the Team on the Vital Few Priorities: High-performing teams obsess over the core work and stubbornly refuse to be distracted by peripheral concerns. The team needs to address the innovations that will drive future growth and the risks that can threaten the firm's viability. The question for each team leader is the extent to which important issues are pushing out the truly vital issues.

Embrace High-Level Conflicts; Shun Low-Level Conflicts: Effective teams raise the level of "heat" in their interactions when needed in order to fully understand the complex dynamics and potential trade-offs in the decisions they are making. People in these types of groups will openly express their own points of view and challenge those with whom they disagree.

Not all conflict, of course, is productive. Many teams experience low-level conflict in which people fight over the less important issues, including mundane operational concerns or, in some cases, interpersonal differences. A team that engages in low-level conflicts consumes valuable time and energy in dealing with issues that are of little value compared to the more critical challenges facing the organization.

Ensure One Voice on Execution: In the best firms, there is active debate before a decision is reached and strong alignment once a decision is made. Management author Jim Collins suggests that this ability "begins with having the right people — those who can debate in search of the best answers but who can set aside their disagreements and work together for the success of the enterprise." Consensus is not the goal — instead, conflict is encouraged as a means of making better decisions.

Those who work with leaders know that they can be flawed human beings with weaknesses and even illusions that stand in stark contrast to their considerable strengths. We shouldn't assume that greatness and awareness are found in the same person. To believe otherwise is to deny the complex character of leaders and the burdens of leadership.

Blindspots don't just disappear when you become aware of them or take action to address them. They resurface over time or are displaced by other blindspots that become salient as you face new challenges. Remaining aware of blindspots requires vigilance and humility as you come to appreciate, and perhaps even value, the limits of your knowledge and skill — and how to lead forcefully even with that awareness. That's a lesson worth learning.

THE SUMMARY IN BRIEF

Up and coming leaders face a unique challenge. How can you enhance your company's culture when you play a relatively small role within your organization? How can you establish yourself as a true leader that's capable of turning your organization into something greater than the sum of its parts?

Even if you're not an executive or high-level leader, you still have the power to have an outsized influence on your organization's culture from the inside out— helping raise your profile and career fulfilment along the way.

Author, speaker, and trainer Jim Knight's ***Leadership That Rocks*** is a powerful, music-inspired guide to becoming a culture-driven and versatile manager that's a true catalyst for change within your organization. If you want to turn your cultural impact up to eleven, this rock-and-roll guide to leadership is written unlike anything else and will provide insights you won't find in other, similarly focused books.

IN THIS SUMMARY, YOU WILL LEARN:

- How to impact your company culture for the better, regardless of your role.
- Why culture-driven leaders are more effective, and how to become one yourself.
- How to be a catalyst for change within your organization in your attitudes, the people you hire and manage, and the projects you choose to pursue.
- How to make mentorship a powerful part of your organizational culture, and why being a mentor can be a transformative force in any organization.

Setting the Stage

How can you enhance your company's culture when you have no direct reports and you're not an executive?

Of course, every person in a company contributes to its culture, but sometimes it takes a little extra explanation to persuade junior leaders that they do indeed have the ability to amp up their environment. In fact, this question is one of the main reasons for this book summary. It's an opportunity for leaders at any level, in any industry, to have the strategies that create a culture professionals dream about every day.

As environmental activist Greta Thunberg says: "You're never too small to make a difference."

To be fair, she was talking about everyone's personal responsibility for saving the planet. But her sentiment works perfectly for any level of leadership affecting a company's culture. You absolutely can make a difference.

The real impact will come when you put in the work of studying and implementing the suggestions you'll find here. Consider the main lyrics of the overall tune, so you don't get lost in the melody or the beat. Invest in your future—the future of your career, the future of your business, and the future of an integral piece of your company's identity, it's culture. Through thick and thin, good times and bad, a business thrives and flourishes based on the strength and authenticity of its culture. Companies with strong, anchored cultures will grow and prosper, while those with weak, frail cultures will wilt and eventually die.

But the greatest accelerant to a cultural flame is leadership.

Culture-Driven Leaders

Many companies ignore organizational culture. It's not important to them. For decades, business leaders have been conditioned to focus exclusively on strategy and operations, with the hope that a strong culture will eventually be developed once they attain some success. It's totally understandable— and completely wrong.

As serial entrepreneur, bestselling author and media mogul Gary Vaynerchuk (or "Gary V" to his fans) famously said: "Company culture is the backbone of any successful organization."

The reason leaders of great brands focus on organizational culture first and foremost is to drive a business' ultimate success. Focusing exclusively on tactical nuts and bolts will keep a company from becoming legendary -and companies that succumb to this small-time thinking will wallow in a malaise, constantly pushing the strategy-of-the-day to attain financial success.

Rock star leaders understand the difference between the two approaches and seek a higher purpose. They opt for the long-term sustainability of culture versus the limited focus of an annual strategy.

Tony Hsieh, the late, iconic founder of Zappos, put it this way: "If you get the culture right, most of the other stuff will just take care of itself."

Hsieh was so right. Unlike processes, tools, products and strategies, all of which can be easily copied, culture is unique. So unique, in some cases, that replicating it is too hard for competitors to even attempt. And that's the advantage. A great organizational culture provides differentiation for consumers and employees alike. It should be hard to copy. But it shouldn't be hard to understand.

Rock Bands & Business Brands

A company's culture is the brand's personality. It's a living organism—like a culture in a petri dish, where people are the microorganisms. The brand's personality changes as different 'microorganisms' affect it. Each person comes to the table with their own culture shifts and their own learned behaviors, and the culture of any organization can only exist because of the people embodying it.

Famous author, brand executive and chair of the board of AARP Libby Sartain put it this way: "If a brand doesn't live on the inside, it can't thrive on the outside."

As a company both succeeds and struggles through the years, its culture becomes more profound, wielding greater influence on all the stakeholders within to conform to its organizational norms. In this perpetual cycle, employees strengthen the brand's culture, and so define the brand's personality.

Take note: This doesn't just apply to positive organizational cultures; it is simply how a company establishes its 'personality.' An organization's founders and leadership may hope that their culture is positive and that it won't change over time, but it will. People come and go all the time. Just like a rock band, a culture is only as strong as the people currently employed and collectively making up the heart and soul of the organization. That's why it's up to you as a leader to choose your people wisely and foster the kinds of behaviors you want your customers to experience.

Combine passion, commitment, and a hard work ethic with thinking fast, creating alternatives and marshaling resources to achieve results; develop your 'hustle muscle.'

Start with You

When it comes down to it, changing the culture of an organization you love will be among the most challenging responsibilities you'll face. It takes time, patience, persistence, effort, know-how, and passion. But it's not impossible— and it's completely worthwhile.

Like most things in life that require an overhaul, culture change starts on the inside. That's not referring to the 'below the surface' processes of the company. It's referring to something even more internal. Culture shifts start with each one of us. They start with you.

Look at every experience as something that happens for you, not to you. Commit to growing with a company that has a value orientation aligned with yours. If you don't love your brand, it will reflect in your lack of passion for your work.

This alignment between your individual values and the company's identity is key to your personal fulfillment and your effective participation in the brand's future. But, if you relish the leadership role you're in, for a company that you truly love, all while acknowledging that it needs a bit of a cultural revolution, then a deep emotional connection with the brand will make you a catalyst for change.

Be the Catalyst for Change

We can all name people who are loyal to an organization for a long time, individuals who have watched their ideas come to life, take flight, and even grow into organizational norms. These brand ambassadors dig in to move mountains and shift cultural identities. They don't just ride the back of the organization for their own interests; with the passion and commitment they put into the business' success, they earn the right to represent the company culture. Partly because of tenure, but mostly because of dedication and fearlessness, they attain the status of 'culture catalyst' and the implied permission to influence the organization.

To shift the cultural pillars of a company, someone's got to be the catalyst— the change agent.

Leaders at all levels need to understand that employees are the conduit for the changes that lead to any desired results. Surrounding yourself with different yet like-minded people with a passionate mission is one way to positively affect company culture. Inspiring the individuals you supervise is important, and focusing on who you bring on to the team may be just as critical for culture change.

This is where diversity can pay big dividends.

The value of a diverse workgroup has been long touted by human resources professionals and organizational psychologists alike. They maintain that a diverse workforce fosters better, more creative solutions to problems, thereby leading to sustainable growth. When that happens, the culture becomes even stronger.

Lay the Groundwork

Wanting change is one thing; making it happen isn't so easy. Whether you have joined a company that just needs an adrenaline shot or you've been hanging out in an organization that requires major surgery for its failing heart, any company can be enhanced for the better. But this requires leadership. And to be an effective leader of others, you have to lay the groundwork in yourself first.

Be obsessed with results. Combine passion, commitment, and a hard work ethic with thinking fast, creating alternatives and marshaling resources to achieve results; develop your 'hustle muscle.'

Instead of immediately revolutionizing the company, start small and crush a few things first; once you've earned trust, you will garner bigger responsibilities and influence.

Inevitable resistance can be mitigated if the change is carefully discussed, planned, embraced, communicated, and ultimately defended.

Never Stop Playing Your Part

Being a leader in a business culture that rocks is a massive undertaking, but it garners epic, long-term results. In fact, performance-oriented cultures possess statistically better

financial results. For culturally strong brands like Whole Foods, In-N-Out Burger, LEGO, or Walt Disney World, there is no doubt about the validity of their results in almost every area. Employee morale is higher and turnover is lower than their industry norms. People are passionately and actively engaged in the business. And because of these internal factors, organizational alignment filters through the entire brand, all focused onc collectively achieving the company's goals, including the all-important financial ones. What starts out as an internal approach becomes external, profitable, and sustainable results.

Since we know that organizational cultures can only be affected by people and their behaviors, it should be clear that everything starts and ends with leadership. Regardless of position, any leader can enhance a company's environment, so never stop playing your part to advocate for and drive the culture.

Mentorship is Instrumental

One way to affect culture change is through personally developing others and being willing to be developed by others. So, humility is important here as well.

You are who you are today because of learned behavior, so humility may be one of those elusive leadership characteristics that takes a lifetime to embrace, especially if it is not part of your natural disposition. But if the selfless and humble side of you authentically exists, then you are ready for the next step. Mentorship is perhaps the greatest level of leadership maturity there is. And if mentorship is or becomes a widely celebrated part of your organization's learning environment, you can expect an army of culture catalysts to positively push the brand to new heights.

Light It Up

By definition, a person who starts an organization should be considered a catalyst. To create a culture so crystal clear that the company's 'personality' is apparent to all requires deliberate thought, strategy, and action. Such business leaders recognize the staying power of a strong brand personality; they aspire to positively ingrain the brand's culture into the end user's psyche— from genesis to nirvana.

Perhaps one day, you'll start your own business, but even if your current role is a new up-and-coming leader or middle manager, you should still think like a founder. We can learn a lot from their grit and innovative thinking.

Conclusion

Focusing on the company's culture may be new to you, but the benefits are Herculean. Building a strong culture creates an enjoyable, encouraging, and inspiring work environment that everybody wants to be part of. Your brand will see undeniable benefits when you do it right. But talk and thought are cheap.

You have to put in the work to truly start your cultural revolution. It is not enough to just fondly think of these proven best practices from time to time and expect better results— you have to act. Decisions are made by those who show up.

It's time to show up.

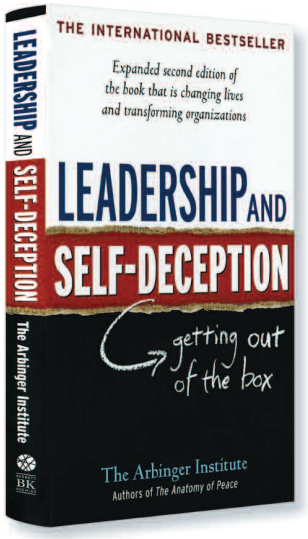
Leadership and Self-Deception

Getting Out of the Box



by The Arbinger Institute

THE SUMMARY IN BRIEF

Since its original publication in 2000, *Leadership and Self-Deception* by The Arbinger Institute has become a word-of-mouth phenomenon. Its sales continue to increase year after year, and the book's popularity has gone global, with editions now available in more than 20 languages.

Through a story everyone can relate to about a man facing challenges on the job and in his family, the authors expose the fascinating ways that we can blind ourselves to our true motivations and unwittingly sabotage the effectiveness of our own efforts to achieve success and increase happiness.

This new edition has been revised throughout to make the story even more compelling. And drawing on the extensive correspondence the authors have received over the years, they demonstrate the many ways that "getting out of the box" can help readers improve their lives and workplaces. The principles can be applied to team building, conflict resolution, and personal growth and development, to name a few.

Read *Leadership and Self-Deception* and discover what millions already have learned — how to consistently tap into an innate ability that dramatically improves both your results and your relationships.

IN THIS SUMMARY, YOU WILL LEARN:

- How each of us has the problem of not knowing we have a problem.
- How to help rehabilitate employees who will lose their jobs unless some serious changes are made.
- How to institute a new way of tracking problems in your company.
- How to move from merely dreaming about a culture of responsibility-taking and accountability to actually experiencing it.
- A model for solving every problem encountered by your organization.

THE COMPLETE SUMMARY: **LEADERSHIP AND SELF-DECEPTION**

by The Arbinger Institute

The authors: The Arbinger Institute helps organizations, families, individuals and communities worldwide to correct the trouble created by the little-known but pervasive problem of self-deception. Arbinger is led by founding partners James Ferrell, Duane Boyce, Paul Smith and Terry Warner. Headquartered in the United States, Arbinger now has operations around the world, including throughout the Americas, Europe, Africa, the Middle East, India, Oceania and Asia.

Preface

For too long, the issue of self-deception has been the realm of deep-thinking philosophers, academics and scholars working on the central questions of the human sciences. The public remains generally unaware of the issue. That would be fine except that self-deception is so pervasive it touches every aspect of life. "Touches" is perhaps too gentle a word to describe its influence. Self-deception actually *determines* one's experience in every aspect of life. The extent to which it does that — and in particular the extent to which it determines the nature of one's influence on, and experience of, others — is the subject of this book.

More Stuck Than Ever

To give you an idea of what's at stake, consider the following analogy. An infant is learning to crawl. She begins by pushing herself backward around the house. Backing herself around, she gets lodged beneath the furniture. There she thrashes about, crying and banging her little head against the sides and undersides of the pieces. She is stuck and hates it. So she does the only thing she can think of to get herself out — she pushes even harder, which only worsens her problem. She's more stuck than ever.

If this infant could talk, she would blame the furniture for her troubles. After all, she is doing everything she can think of. The problem couldn't be *hers*. But of course, the problem *is* hers, even though she can't see it. While it's true she's doing everything she can think of, the problem is precisely that *she can't see how she's the problem*. Having the problem she has, nothing she can think of will be a solution.

Self-deception is like this. It blinds us to the true causes of problems, and once we're blind, all the "solutions" we can think of will actually make matters worse. Whether at work or at home, self-deception obscures the truth about ourselves, corrupts our view of others and our circumstances, and inhibits our ability to make wise and helpful decisions. To the extent that we are self-deceived, both our happiness and our leadership are undermined at every turn, and not because of the furniture.

A Solution to a Central Problem

We have written the following story to educate people about a solution to this most central of problems. Our experience in teaching about self-deception and its solution is that people find this knowledge liberating. It sharpens vision, reduces feelings of conflict, enlivens the desire for teamwork, redoubles accountability, magnifies the capacity to achieve results, and deepens satisfaction and happiness. ●

PART I: SELF-DECEPTION AND THE 'BOX'

Bud

My name is Tom Callum. It was a brilliant summer morning shortly before 9:00, and I was hurrying to the most important meeting of my new job at Zagrum Co. As I walked across the tree-lined grounds, I recalled the day two months earlier when I had first entered the secluded campus-style headquarters to interview for a senior management position. I had been watching the company for more than a decade from my perch at one of its competitors and had tired of finishing second.

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor In Chief; **Andrew Clancy**, Senior Editor; **Chris Lauer**, Contributing Editor; **Amanda Langen**, Graphic Designer

After eight interviews and three weeks spent doubting myself and waiting for news, I was hired to lead one of Zagrum's product lines.

Now, four weeks later, I was about to be introduced to a senior management ritual peculiar to Zagrum: a daylong one-on-one meeting with Executive Vice President Bud Jefferson. Bud was the right-hand man to Zagrum's President Kate Stenarude, and he was about to become my new boss.

A Man of Apparent Contradictions

Bud Jefferson was a youngish-looking 50-year-old combination of odd-fitting characteristics: a wealthy man who drove around in an economy car without hubcaps; a near-high school dropout who had graduated with law and business degrees, summa cum laude, from Harvard. Despite his apparent contradictions, and perhaps partly because of them, Bud was revered as something of an icon. He was universally admired in the company.

As I scaled the Central Building's hanging steel stairway up to the third floor, I reviewed my performance during my month at Zagrum: I was always among the earliest to arrive and latest to leave. I felt that I was focused and didn't let outside matters interfere with my objectives. Although my wife Laura often complained about it, I was making a point to outwork and outshine every co-worker who might compete for promotions in the coming years. I nodded to myself in satisfaction. I had nothing to be ashamed of. I was ready to meet Bud Jefferson.

A minute or two later, there was a brisk knock on the door and in walked Bud.

What No One Wants to Hear

"Tom," said Bud abruptly, "I've asked you to come today for one reason — an important reason."

"OK," I said evenly, trying to mask the anxiety I was feeling.

"You have a problem — a problem you're going to have to solve if you're going to make it at Zagrum."

Finally I managed to say, "A problem? What do you mean?"

"Do you really want to know?" asked Bud.

"I'm not sure. I guess I need to, from the sound of it."

"Yes," Bud agreed, "you do." ●

A Problem

"You have a problem," Bud continued. "The people at work know it, your spouse knows it, your mother-in-law knows it. I'll bet even your neighbors know it."

Despite the digs, he was smiling warmly. "The problem is that you don't know it."

How could I know I had a problem if I didn't even know what the problem was? "I'm afraid I don't know what you mean," I said, trying to exhibit calm.

"Think about these examples, for starters," he said. "Remember the time you had a chance to fill the car with gas before your wife took it, but then you decided she could fill it just as easily as you, so you took the car home empty?"

I thought about it for a moment. "I suppose I've done that, yes." *But so what?* I wondered.

"And," he continued, "have you ever kept some important information to yourself, even when you knew a colleague would really be helped by it?"

I had to admit that I had done that.

He paused for a moment. "What do you do when you're confronted with someone you believe is lazy or incompetent?"

I thought about it. "I suppose I get after some of them pretty hard. But some people don't respond well to that, so I try to get them going in other ways. Some I cajole, others I outsmart. But I've learned to keep my smile with most people. That seems to help. I think I do a pretty good job with people, actually."

Bud nodded, "I understand. But when we're finished, I think you'll feel differently."

Doing More Damage

The comment unsettled me. "What's wrong with treating people well?" I protested.

"But you're *not* treating them well. That's the problem. You're doing more damage than you know."

"Damage?" I repeated.

Attempting to keep my emotions under control, I said, "I'm afraid you're going to have to explain that to me." The words sounded too combative, even to my own ear, and my cheeks flushed all the more.

"I'll be happy to," he said calmly. "I can help you learn what your problem is — and what to do about it. That's why we're meeting." He paused, and then added, "I can help you because I have the same problem."

Bud rose from his chair and began pacing the length of the table. "To begin with, you need to know about a problem at the heart of the human sciences." ●

Self-Deception

"I was a young lawyer at the time," Bud began, "working long hours at one of the most prestigious firms

in the country. One of the deals I worked on was a major financing project that involved about 30 banks worldwide. Our client was the lead lender on the deal.

"A week after I'd been assigned to the project, my wife Nancy and I found out she was pregnant. Our son David was born eight months later, on Dec. 16.

"But then came a phone call. It was Dec. 29. The lead partner on the deal was calling me. I was needed at an 'all hands' meeting in San Francisco.

"With a photo album under my arm, I tore myself away from them and turned through the doors of the terminal of what used to be called National Airport.

"I worked from 6 a.m. till after midnight every day. If you had asked me at the time what my objective was I would have told you that I was 'drafting the best possible documents to protect our client and close the deal,' or something to that effect. But you should know a couple of other things about my experience in San Francisco.

"All of the negotiations that were central to the documents I was working on were happening on the 25th floor. But I didn't go up to 25 much.

"Now, let me ask you a question, Tom. Just from the little bit you know about my San Francisco experience, would you say that I was really committed to 'drafting the best possible documents to protect our client and close the deal'?"

"No," I said, shaking my head. "It sounds like you were preoccupied with something else. It doesn't seem like you were engaged in the project at all."

The Bigger Problem

"I was uncommitted, was disengaged, hadn't caught the vision and was making things more difficult for others on the deal. That's all true. And that's a problem — a big problem. But there was a bigger problem — and it's this problem that you and I need to talk about."

He had my full attention.

"The bigger problem was that I couldn't *see* that I had a problem."

Bud paused for a moment, and then, leaning toward me, he said in a lower, even more earnest tone, "There is no solution to the problem of lack of commitment, for example, without a solution to the bigger problem — the problem that I can't see that I'm not committed."

I suddenly started to be uneasy and could feel my face again sag to expressionlessness. I had been caught up in Bud's story and had forgotten that he was telling it to me for a reason. This story was for me. He must have been thinking that I had a bigger problem. Despite my efforts to stay coolly detached, my face and ears began to heat up.

"Tom, there's a technical name for the insistent blindness I exhibited in San Francisco. Philosophers call it *self-deception*. At Zagrum, we have a less technical name for it — we call it 'being in the box.' In our way of talking, when we're self-deceived, we're 'in the box.' You're going to learn a lot more about the box, but as a starting point, think of it this way: In one sense, I was 'stuck' in my experience in San Francisco. I was stuck because I had a problem I didn't think I had — a problem I couldn't see. I could see matters only from my own closed perspective and I was deeply resistant to any suggestion that the truth was otherwise. So I was in a box — cut off, closed up, blind. Does that make sense?"

I nodded.

"There's nothing more common in organizations than self-deception," he continued. "Remember how I mentioned that you needed to know something about a problem in the human sciences?"

"Yes."

"This is it. Self-deception — being in the box — is the problem I was talking about. Of all the problems in organizations, self-deception is the most common and the most damaging."

Bud paused, then continued, "At Zagrum, Tom, our top strategic initiative is to minimize individual and organizational self-deception." ●

PART II: HOW WE GET *IN* THE BOX

Kate

I had met Kate just once. She'd been the final of my eight interviewers during the hiring process. I liked her instantly, as I'd since found out was common to nearly everyone in the company. Her story was in some ways the story of Zagrum and, like Zagrum's story, Kate's was freely passed along to new employees. She had joined the company fresh out of college some 25 years earlier, with a degree in history. One of the first 20 employees at Zagrum, she started as an order-fulfillment clerk. In those days, it seemed that Zagrum's future was in perpetual doubt. After five years, Kate, by then Zagrum's director of sales, left the company for a better opportunity, only to change her mind after a last-ditch personal appeal by Lou Herbert, the company's president at the time. Since that time, and until Lou's retirement, Kate had been second in command at Zagrum. At Lou's retirement, she was elevated to president and CEO.

"Hello, Tom," she said, extending her hand to me. I

was returning to the Central building after a lunch break and Kate joined me as we walked up the stairs. "It's good to see you again. Is life treating you well?"

"Yeah, I can't complain," I said, trying to ignore for the moment my surprise at meeting her. "How about you?"

"Never a dull moment, I'm afraid," she said with a chuckle.

"I can't believe you remember who I am," I said.

"What? Forget a fellow St. Louis Cardinals fan? Never. And besides, I'm coming to meet with you."

"With *me*?" I said incredulously, pointing at myself.

Self-Betrayal

"Hey Kate," Bud said warmly as we walked through the doors of the Eastview Room.

"Hi Bud," she said. "Sorry, I ruined your surprise."

"I didn't intend your coming as a surprise, actually," he said. "Let's all sit down and get to it."

Bud rubbed his chin. "Well, Tom," he said, "we're certainly going to get to how we get out of the box. But first we have to understand how we get in it.

"Now at first you're going to think this is a silly story. It's not even a workplace story. We'll apply it to the workplace when we get a little more under our belts. Anyway, it's just a simple little story — mundane even. But it illustrates well how we get in the box in the first place.

"One night a number of years ago, when David was just an infant, I was awakened by his wailing cries. He was probably 4 months old or so at the time. I remember glancing at the clock. It was around 1 o'clock in the morning. In the flash of that moment, I had an impression or a sense or a feeling — a thought of something I should do. It was this: 'Get up and tend to David so that Nancy can sleep.'

"If you think about it, this sort of sense is very basic," he continued. "We're all people. And when we're out of the box and seeing others as people, we have a very basic sense about others — namely that, like ourselves, they have hopes, needs, cares and fears. And on occasion, as a result of this sense, we have impressions of things to do for others — things we think might help them, things we can do for them, things we want to do for them. You know what I'm talking about?"

"Sure, that's clear enough," I said.

"This was such an occasion — I felt a desire to do something for Nancy. But you know what? I didn't act on it. I just stayed in the bed, listening to David wail."

I could relate. I'd waited out Laura and our son Todd plenty of times.

"You might say I 'betrayed' my sense of what I should do for Nancy," he said. "That's sort of a strong way to say it, but I just mean that in acting contrary to my sense of what was appropriate, I betrayed my own sense of how I should be toward another person. So we call such an act 'self-betrayal.'

"Now, in this moment, as I'm just lying there listening to our wailing child, how do you imagine I might've started to see and feel about Nancy?"

"Well, she probably seemed lazy to you," I said.

Characteristics of Self-Betrayal

"To begin with, think about this: When did Nancy seem worse to me, before I betrayed myself or afterward?"

"Afterward, for sure," I said.

"Yes," said Bud, "and when do you suppose sleep seemed more important to me, before I betrayed myself or after?"

"Oh, I guess after."

"And when do you suppose other interests — like my work responsibilities the next morning, for example — seemed more pressing to me, before I betrayed myself or after?"

"Again, after."

Bud paused for a moment.

"Now here's another question: Take a look again at how I started to see Nancy. Do you suppose that in reality she's as bad as she seemed to me after I betrayed myself?"

"No, probably not," I said.

"That's true," Bud agreed.

"Yeah, but what if she was?" I interjected. "I mean, what if she really *was* a lazy and inconsiderate person? Wouldn't that make a difference?"

"That's a good question, Tom," Bud said, rising again from his chair. "Let's think about that for a minute."

He started to pace the length of the table. "Let's just say, for the sake of argument, that Nancy *is* lazy. And let's assume that she's generally inconsiderate, too. Some people are, after all. Here's the question: If she was lazy and inconsiderate after I betrayed myself, then she must've been lazy and inconsiderate before, right?"

"Yes," I answered. "If she's lazy and inconsiderate, she's lazy and inconsiderate. Before, after, it wouldn't matter."

"OK, good," said Bud. "But if that's the case, then notice — I felt I should get up and help her *even though* she was lazy and inconsiderate. Before I betrayed myself,

I didn't see her faults as reasons not to help her. I felt that way only *after* I betrayed myself, when I used her faults as justifications for my own misbehavior. Does that make sense?"

I wasn't sure.

"So think about it," Bud continued. "Here I am in self-betrayal, and I think that I'm not getting up to help Nancy because of what she's doing to me — because she's lazy, inconsiderate and so on. But is that the truth?"

"No," I said, beginning to see the picture. "You *think* that's the truth, but it's not."

"That's right. The truth is, her faults seemed relevant to whether I should help her only *after I failed to help her.* I focused on and inflated her faults when I needed to feel justified for *mine.* After I betrayed myself, the truth was just the opposite of what I thought it was."

"Yeah, I guess that's right," I said, nodding my head slowly. ●

Collusion

In the top left corner of a dry-erase board, Bud wrote the following principles about self-betrayal:

1. An act contrary to what I feel I should do for another is called an act of "self-betrayal."
2. When I betray myself, I begin to see the world in a way that justifies my self-betrayal.
3. When I see the world in a self-justifying way, my view of reality becomes distorted.
4. So — when I betray myself, I enter the box.
5. Over time, certain boxes become characteristic of me and I carry them with me.
6. By being in the box, I provoke others to be in the box.
7. In the box, we invite mutual mistreatment and obtain mutual satisfaction. We collude in giving each other reason to stay in the box.

Kate said, "So you see, Tom, from within the box, I end up undermining the effectiveness of everything I do. And the problem isn't merely that the box makes me ineffective, it's that it makes me *destructive.* Because from within the box, I end up inviting more of the very thing that I'm complaining about, as well as other behaviors that I will hate just as much, if not more."

"But that's crazy," I said, after a moment's reflection. "Why would you — or anyone else, for that matter — ever do that? Why would we keep such a destructive cycle going?"

Kate paused for a moment, apparently collecting her thoughts. "I believe the answer to that, Tom, is that my box *needs* for it to continue."

"What?" I said reflexively. The answer didn't make any sense to me.

Kate smiled. "I know, it sounds absurd, doesn't it? Who would ever get themselves into a position where they actively invited others to continue treating them poorly, even miserably? Who would do that?"

"Exactly," I echoed, "who would do that?"

"And the answer, Tom, is that *I* would. And you would. And Bud would. And everyone else here at Zagrum would. Whenever we are in the box, we have a need that is met by others' poor behavior. And so our boxes encourage more poor behavior in others, even if that behavior makes our lives more difficult."

"How? Why?" I asked.

She said, "When I'm in the box, there's something I need more than what I think I want most. And what do you think that is? What do I need most when I'm in the box?"

I wasn't sure.

Kate leaned toward me. "*What I need most when I'm in the box is to feel justified.* Justification is what my box eats, as it were, in order to survive."

"Once in the box," Bud said, "we give each other reason to *stay* in the box. We do this not only by mistreating the other person directly, by the way, but also by how we might begin to talk about or gossip about that person with others. The more people we can find to agree with our side of the story, the more justified we will feel in believing that side of the story. Whether at home or at work, boxes want to spread in order to gather additional justification. And with every mistreatment, we give each other further justification for staying in the box." ●

PART III: HOW WE GET *OUT* OF THE BOX

Lou

The next morning, Bud wasn't in the conference room yet. It was 8:15, and I was starting to wonder if I'd heard him correctly about our meeting's start time. Suddenly, the doors burst open and into the room walked an elderly gentleman.

"Tom Callum?" he said with a hearty smile, extending his hand.

"Yes."

"Glad to meet you. My name's Lou. Lou Herbert. Bud's on his way. He's just checking on a couple of

things for a meeting we have this afternoon.

"Look, Tom, go ahead, sit. Bud asked me to get started with you before he arrives."

I sat in my familiar chair from the afternoon before, and Lou took the seat across from me.

"So how was yesterday?"

"It was quite an amazing day, actually. Quite amazing."

"*Really?* Tell me about it," he said.

"Well," I said, "I hardly know where to begin. I learned a lot yesterday. But let me start with my son."

Over the next 15 minutes or so, I told Lou about my experience the previous night. It was the best night I'd had with Laura and Todd in at least five years. It was extraordinary because I simply enjoyed being with them without anything extraordinary happening. I cooked. I laughed. I had my son teach me how to tune up the car. For the first time in I didn't know how long, I enjoyed and felt grateful for my family. And for the first time in a long time, I went to bed with no hard feelings toward anyone in my home. ●

Toward Being Out of the Box

Lou said, "Think about your time last night with your family. What were they to you last night? Were you seeing them as people or as objects?"

"They were people," I said, amazed by the discovery.

"So if last night you were out of the box," Lou said, "then you already know how to get out of the box."

"But I don't," I said in protest. "I have no idea how it happened. In fact, I didn't even know I was out of the box last night until you just pointed it out to me. I couldn't begin to tell you how I got out."

"Yes you can. In fact, you already did."

"What do you mean?" I was completely bewildered.

"I mean, you told us about yesterday and about your experience last night, about how you went home and spent the evening with your family. That story teaches us how to get out of the box."

"But that's my point. I don't see it," I said.

What Doesn't Work in the Box

1. Trying to change others.
2. Doing my best to "cope" with others.
3. Leaving.
4. Communicating.
5. Implementing new skills or techniques.
6. Changing my behavior.

"And this is my point: Yes, you do. You just don't realize it yet. But you will," Lou replied. ●

The Way Out

Lou said, "It's futile to try to get out of the box by focusing further on ourselves: In the box, everything we think and feel is part of the lie of the box. The truth is, we change in the moment we cease resisting what is *outside* our box — others. Does that make sense?"

"Yeah, I think so."

"In the moment we cease resisting others, we're out of the box — liberated from self-justifying thoughts and feelings. This is why the way out of the box is always right before our eyes — *because the people we're resisting are right before our eyes*. We can stop betraying ourselves toward them — we can stop resisting the call of their humanity upon us."

"But what can help me to do *that*?" I asked.

Lou looked at me thoughtfully. "There's something else you should understand about self-betrayal — something that may give you the leverage you're looking for. Think about your experience yesterday with Bud and Kate. How would you characterize it? Would you say that you were basically *in* or *out* of the box toward them?

"Oh, *out*, for sure," I said. "At least most of the time."

"But you've also indicated that you were *in* the box toward your wife yesterday. So there is a sense in which you were both in *and* out of the box at the same time — in the box toward Laura but out of the box toward Bud and Kate."

"Yeah, I guess you're right."

"This is an important point, Tom. Toward any one person or group of people, I'm either in or out of the box at any given moment. But since there are many people in my life — some that I may be more in the box toward than others — in an important sense, I can be both in *and* out of the box at the same time. In the box toward some people and out toward others.

"This simple fact can give us leverage to get out of the box in the areas of our lives where we may be struggling.

"Here's how we might depict what you were like yesterday," Lou said. "You were in the box toward Laura but out of the box as you engaged with Bud and Kate. Now notice: Although you were resistant to Laura's needs because you were in the box toward her, you nevertheless retained a sense of what people generally might need because you were out of the box toward others — namely, Bud and Kate. This sense that you felt honored regarding Bud and Kate, combined with the continual call of

Laura's humanity to you — which is always there —is what made getting out of the box toward Laura possible.

"So although it's true that there is nothing we can think of and do from within the box to get ourselves out, the fact that we are almost always both in and out of the box at the same time, albeit in different directions, means that we always have it within our capacity to find our way to a perspective within ourselves that is out of the box. This is what Bud and Kate did for you yesterday — they supplied for you an out-of-the box environment from which you were able to consider your in-the-box relationships with new clarity. From the context of your relationships with Bud and Kate, you were able to think of a number of things you could do to help reduce your in-the-box moments and heal your in-the-box relationships. In fact, there is one thing in particular that you did while you were out of the box toward Bud and Kate that helped you to get out of the box toward Laura."

Question Your Own Virtue

My mind searched for the answer. "What did I do?"

"You questioned your own virtue. While you were out of the box, you listened to what Bud and Kate taught you about being in the box. And then you applied it to your own personal situations. The out-of-the-box nature of your experience with Bud and Kate invited you to question whether you were, in fact, as out of the box as you had assumed you were in other areas of your life. And what you learned from the vantage point of that out-of-the-box space transformed your view of Laura.

"Now that probably didn't happen right off the bat," Lou continued, "but I'd bet there was a moment when your blaming emotions toward Laura seemed to evaporate and she suddenly seemed different to you than she had the moment before."

That was exactly how it happened, I thought to myself. I remembered that moment — when I saw the hypocrisy in my anger. It was as if everything changed in an instant. "That's true," I said. "That's what happened."

"You were seeing and feeling straightforwardly. Laura seemed different to you because in the moment you got out of the box toward her, you no longer had the need to blame her and inflate her faults." ●

Another Chance

Bud pulled something from his briefcase. "Merely *knowing* the material doesn't get you out of the box. *Living* it does. And we're not living it if we're using it to diagnose others. Rather, we're living it when we're using it to learn how we can be more helpful to others.

"Here are some things to keep in mind while you're trying to do just that," he said, handing me a card.

This is what it said:

Knowing the Material

- Self-betrayal leads to self-deception and "the box."
- When you're in the box, you can't focus on results.
- Your influence and success will depend on being out of the box.
- You get out of the box as you cease resisting other people.

Living the Material

- Don't try to be perfect. Do try to be better.
- Don't use the vocabulary — "the box," and so on — with people who don't already know it.
- Do use the principles in your own life.
- Don't look for others' boxes. Do look for your own.
- Don't accuse others of being in the box.
- Do try to stay out of the box yourself.
- Don't give up on yourself when you discover you've been in the box. Do keep trying.
- Don't deny that you've been in the box when you have been.
- Do apologize; then just keep marching forward, trying to be more helpful to others in the future.
- Don't focus on what others are doing wrong.
- Do focus on what you can do right to help.
- Don't worry whether others are helping you.
- Do worry whether you are helping others.

I put the card in my briefcase, then stood up and turned to thank Lou.

"Just remember," Lou said, shaking my hand with a firm grip, "we won't know who we work and live with — whether it be Bud, Kate, your wife or your son — until we leave the box and join them." ●

Leadership and the Art of Struggle

How Great Leaders Grow Through Challenge and Adversity

by Steven Snyder

THE SUMMARY IN BRIEF

Leadership is often a struggle, and yet strong taboos keep us from talking openly and honestly about our difficulties for fear of looking weak and seeming to lack confidence. But *Leadership and the Art of Struggle* shows that this discussion is vital — adversity is precisely what unlocks our greatest potential.

Using real-life stories drawn from his extensive research studying 151 diverse episodes of leadership struggle — as well as from his experiences working with Bill Gates in the early years of Microsoft and as a CEO and executive coach — Steven Snyder shows how to navigate intense challenges to achieve personal growth and organizational success. He details strategies for embracing struggle and offers a host of unique tools and hands-on practices to help you implement them.

By mastering the art of struggle, you'll be better equipped to meet life's challenges and focus on what matters most.

IN THIS SUMMARY, YOU WILL LEARN:

- How to stay grounded in the midst of struggle.
- How to turn your energy into adaptive energy to become resilient.
- How to make sense of a chaotic world.
- How to navigate tensions by finding new, creative paths.
- How to savor the leadership marathon.

PART 1: BECOMING GROUNDED

Struggle Is Not a Four-Letter Word

Many leaders unconsciously categorize the word "struggle" as negative and off-putting, a taboo, which makes dealing with struggle even more difficult than it needs to be. This can become especially problematic when leaders find themselves facing significant challenges.

When external pressures for positive spin create dissonance with reality, leaders may ignore the incongruity they feel in their guts and stifle the candid conversations that could guide them forward. They may unconsciously compare themselves with others and allow this comparison to diminish their self-image and curb their potential. They may fall into the trap of thinking that leaders are supposed to be perfect or at least perfectly capable of dealing with struggle. Consequently, they can feel embarrassed and stigmatized, thinking, *Something must be wrong with me. I'm not like all the other successful leaders out there.*

But, of course, no leader is perfect. All human beings have their own unique flaws and frailties. And, of course, struggle is a natural part of leadership.

Instead of denying struggle, or feeling some degree of shame, savvy leaders embrace struggle as an opportunity for growth and learning, as an art to be mastered. They come to see struggle as a universal rite of passage without allowing themselves to become mired in it.

Defining Elements of Leadership Struggle

Struggle occurs when a difficult or complex situation arises that presents some challenge or adversity. The details can vary considerably from beginning a new job or confronting a major disappointment to facing a difficult decision or managing an unexpected external event. But in all examples there are three fundamental conditions that determine the nature of the struggle and serve as its defining elements: change, tensions and being out of balance.

Change. Change stands at the heart of leadership struggle. Every struggle is triggered by some type of change. Change may be imposed on a leader by a new set of enterprise-related circumstances caused by loss of key personnel, financial constraints, competitive pressure or some other setback.

External change, whether desired or not, always carries with it seeds of opportunity and growth. The struggle may come from discerning the best way to take advantage of those opportunities or how to do so with limited resources.

In still other cases, change comes from deep within a leader's inner world. As the heart and the mind expand to take in new ideas, feelings and perspectives, struggle comes from the process of clarifying newly emerging values and identity.

Tensions. The process of change creates a natural set of tensions, the second defining element of leadership struggle. Tension points stem from individual and institutional traditions (past) and aspirations (future) as well as (outward) relationships and (inward) identity.

Being out of balance. The third element of leadership struggle is that change and its ensuing tensions throw a leader off balance. Sometimes the imbalance is felt in subtle ways: a quiet voice, a nagging concern in the leader's gut, or reluctance toward or procrastination of an important task. Sometimes the fears are deeper and the emotions are more powerful. A leader may lose

confidence and feel the weight of the world on his or her shoulders. ●

Adaptive Energy

Adaptive energy is the force that propels you to reach your dreams, pointing you toward the goal line and warning you when you veer off course. It aligns your actions both with the *external* criteria necessary for success and with your *inner* values and principles. Through adaptive energy you listen to and assess feedback from multiple sources and incorporate this new learning in future actions, all the while remaining true to yourself.

Harnessing adaptive energy can inspire you to come up with innovative ideas when no immediate solution is evident. It can also steer you to build lasting and fulfilling relationships. Even though your interactions might involve conflict, you gain the acuity and the agility to manage the conflict so that it does not stand in the way of what needs to be done.

Everyone has negative thoughts and bad moods, but leaders who can access their adaptive energy are able to channel their adverse emotions into creativity and goal-oriented pursuits.

All leaders have the potential to channel their energy in ways that are adaptive and aligned with their purpose. How they do that is the central question. As an art, leadership struggle cannot be reduced to a simple formula, but a key concept is this: The more self-aware you are, the more capable you will be of adaptively channeling your behavior. Leaders who wish to become more self-aware need to understand the nature of their automatic and reflective minds.

The Automatic and Reflective Minds

The *automatic mind*, the faster one, reaches judgments and conclusions quickly but often prematurely, making associations with information already stored and easily accessible. Many people intuitively call it "automatic pilot," with the connotation that decisions are made routinely, out of habit, subject to preprogrammed routines.

The *reflective mind* is slower and more methodical. It is capable of reason, logic and metathought — the process of consciously observing one's own thought process, as if looking down on oneself from the balcony. It challenges assumptions, generates multiple alternatives and evaluates them systematically, and is capable of objective analysis. It is the spark for conscious and intentional action. But it tends to be lazy, often ceding control to the automatic mind, which can lead to regrettable consequences. ●

Turn Your Energy Into Adaptive Energy

Consider two leaders who set out on a complex and difficult endeavor. Let's call them FM and GM. FM and GM are equally matched with respect to their abilities and motivation, yet these two leaders approach a task very differently. FM, a cyclone of unfocused energy, does not learn from feedback opportunities and appears frenetic, chaotic and haphazard overall. GM is more organized and systematic and carefully considers all feedback. FM's counterproductive whirlwind is no match for GM's logical and calibrated approach, and GM easily outperforms FM by a significant margin. What can account for such radical differences?

It turns out that FM and GM were prototypical participants in a very clever psychological experiment. FM refers to those who approached the task with a *fixed mindset* — the assumption that their abilities were innate and not subject to change. GM refers to those who approached the task with a *growth mindset* — the belief that their ability level was nothing more than a snapshot in time and eminently changeable as they continued to learn and develop.

A Fixed Mindset

Psychologist Carol Dweck argues that conditioning, beginning at a very young age, implicitly imposes a fixed mindset. Virtually every adult has at some point told a youngster who did something well, "You are so smart!" According to Dweck, such messages build a belief that it is our inherent smartness that leads to good performance, not the effort that is exerted.

When things go well, we think it's because of how smart we are. When things don't turn out as we had hoped, we begin to doubt our ability.

This mental model is a proven recipe for suboptimal performance over the long term. It becomes especially problematic when individuals with a fixed mindset suffer a setback or make a mistake. They automatically associate their disappointing performance with an immutable deficit in abilities. This can diminish their confidence and spark an escalating spiral of negative emotion as they compare themselves unfavorably with others. More time spent in negative ideation means less time thinking about creative ways to improve performance.

A Growth Mindset

A leader with a growth mindset is consciously aware that ability is not innate and unchangeable but instead a malleable quality that can continuously be augmented

through practice and persistence. In a growth mindset, you pay conscious attention to cultivating abilities through continuous learning. You seek out new learning opportunities by pursuing challenging assignments instead of taking safer and easier routes.

The first step in adopting a growth mindset is to pay attention to what's going on around you and give the reflective mind a mandate to take control. You can begin simply by elevating your awareness.

Making Sense of a Chaotic World

Seeking to discern the specific tensions underlying a challenging situation is a good next step toward managing through the complexity. With a better understanding of how these tensions work, you will gain a clearer perspective and make better choices.

Not only is change at the heart of leadership struggle, it is also a source of the emotional and physical tension a leader feels as a result of that struggle. Joe Dowling's story captures the multifaceted relationships among change, tension and struggle. His cautionary tale also illustrates four tension points that grow out of struggle: tensions of tradition, tensions of aspiration, tensions of relationships and tensions of identity.

Power Struggle

When in 1978 Joe Dowling landed the top job of artistic director at the Abbey Theatre, the National Theatre of Ireland, he made a big splash. At 28, he was the youngest artistic director in the theater's history.

Dowling's vision for the Abbey and for himself as artistic director was thwarted by disagreements with the board of directors. Stemming from a time when there was no professional management, the board made all the important decisions, including the selection of plays.

Dowling brought a very different understanding of the respective roles of the board and its artistic director. He saw the artistic director as the CEO, who should command considerably more authority in the theater's management, including the selection of plays. Dowling was eager to steer the Abbey in this direction, which put him in direct conflict with the board.

• **Tensions of Tradition.** Throughout its history until Dowling arrived, the Abbey's board had played an integral role in the management of the theater. Perhaps the board did not see as clearly as Dowling did the opportunities that professional management could afford.

At the Abbey, however, play selection was more than a matter of management and artistic vision. The board saw itself as a steward of a national institution, whose mission was, in Dowling's words, to "reflect back to a nation itself, through theater."

Tensions of tradition occur as leaders confront the implications of breaking with patterns from which they and others have become accustomed. In organizations these practices are generally rooted in previous adaptations; at some point in the past, they were most likely healthy and appropriate.

• **Tensions of Relationships.** In any organization, managing relationships is critical to getting things done. But even more important, relationships form the basis of connection from one human being to another that can bring fulfillment in everyday exchanges. In a healthy relationship, virtually every interaction generates positive energy. Even when there is a difference of opinion, respectful dialogue can build trust and foster mutual satisfaction.

At the Abbey, the opposite seemed to be true. Interactions between Dowling and the board did not build positive energy and in many cases were an energy drain.

• **Tensions of Aspiration.** Tensions of aspiration are forward looking. They arise as an organization mobilizes around a dream or vision for the future. Sometimes these tensions bubble to the surface when different stakeholders bring different visions or values into proposed solutions or goals, as was the case at the Abbey Theatre. Sometimes they manifest when short-term incentive systems do not completely align with long-term organizational values. Sometimes the culprit is sheer ambition, as tensions manifest through the natural energy that is created when people with differing agendas work together on difficult endeavors in which more than one path appears viable.

• **Tensions of Identity.** Tensions of identity can occur as leaders wrestle with issues surrounding their values, integrity and authenticity. These tensions are the ones that can shape a leader's character and have a lasting impact. It is in these defining moments that leaders grapple with the core issues of who they are and what they stand for.

In Dowling's case, tensions had escalated to such a level that he could see no viable solution other than to publicly confront the board through his resignation. In his mind the issue of his authority became a matter of principle.

As Dowling's story unfolds, the tensions both escalate and proliferate. All the while, he is experiencing increasingly intense emotions that throw him further off balance. Ultimately, Dowling reached the point of total exhaustion.

After leaving the Abbey, Dowling was named artistic director of the Guthrie Theater. Dowling would come to understand that his confrontational style may have obscured a blind spot — something he was not aware of or did not recognize as a problem. On one hand, Dowling yearned to be part of a mission that was larger than his personal aspirations. On the other hand, he needed autonomy and freedom to shape the vision of the institution. The paradox is that to be part of a larger mission, he needed to make space for the visions of other stakeholders who yearned to be part of that larger mission, as well. The supportive environment at the Guthrie was a perfect place to resolve this paradox. In so doing, Dowling has emerged as a remarkable leader.

During Dowling's chaotic struggle at the Abbey, he had not yet learned that winning personal battles of power is not as lucrative as the win-win outcomes that evolve when people move from "I" to "we" and open up a larger space for creative collaboration. Ultimately, his struggle would lead him to a place where he achieved this learning, realized more of his full potential as a visionary artistic director, and yet was also part of a larger mission.

Dowling's tumultuous tenure at the Abbey Theatre illustrates how easy it is to be thrown off balance during a struggle episode. When egos and expectations clash, emotions can overwhelm rationality. It's a leader's job to make some semblance of sense out of chaos. The first step is to gain a clear understanding of what's causing the underlying tension. With a clear grasp of these tension points, a leader can become centered and determine the best way to navigate through the tension. ●

Regain Balance

Center Your Mind, Body and Spirit

All leaders need some way to anchor and balance themselves in times of turbulence when forces beyond their control begin swirling around them with chaotic intensity.

Leaders use a variety of practices to remain centered and grounded. Some focus on diet and exercise. Some seek to connect with something greater than themselves, either through organized religion or a more secular spiritual connection. Some find peace and tranquility by deeply connecting with nature. Others seek calmness and clarity through journaling. Many create their own unique blend of these practices and others.

One particular practice seems to function on a higher plane, transcending these other more traditional approaches. This is the practice of *mindfulness*. The central focus is awareness. Mindfulness practices teach us to become more aware and more fully present while remaining peaceful within, even as chaos rages all around.

Through the practice of mindfulness, we learn to objectively observe ourselves during stressful situations — as if both experiencing the situation and simultaneously watching ourselves. The simple reflective act of naming our emotions as we experience them grants us a new power to more intentionally choose how we respond.

The practice of mindfulness trains us to maintain awareness of the space between our thoughts, short-circuiting the knee-jerk reactions of the automatic mind and engaging the reflective mind in creative new ways. As the automatic mind cedes authority to the reflective mind, the speed of life slows down, allowing us to consciously choose more-thoughtful responses to difficult and challenging situations.

Find the Support You Need

In this section our focus is directed outward so that you can develop relationships and support systems to connect with others, seek their guidance, learn from their experiences and receive valuable feedback. All the while you will be receiving the nurturing energy — and perhaps a healthy dose of tough love — that's inherent in supportive relationships.

First write down all the people you can rely on for support. Now make a list of your needs for support. Don't just think of your current needs; think also of what your long-term needs may be as you develop and grow in your career. Think of the types of people you need who can guide, advise and inspire you on your journey.

Remember, an integral part of the art of struggle is breaking out of old patterns and creating new habits to channel your energies in adaptive ways. Creating a community of people whom you can connect and bond with and from whom you can seek advice and feedback is a great way to get started. ●

PART 2: EXPLORING NEW PATHWAYS

Navigate Tensions

Two strategies can guide you through navigating your tension:

Focus on the situation, packed full of tension, and think of a creative way to reimagine the situation that enables you to get through it.

Focus on you. Figure out how you contribute to the tensions and how you might change.

As you explore these new pathways, try to break loose from the world that exists today and imagine the world that is possible tomorrow. Aim high, engage your adaptive energy and search for solutions until you find the path that's right for you.

Reflective Exercise: Reimagine Your Situation

Try to envision a pathway through whatever challenges you're facing. To get started, consider the following questions:

• *Do you feel that the pressures of the short term are keeping you from important long-term tasks?* Author Stephen Covey popularized a time management matrix that consisted of four quadrants: important urgent, important not urgent, not important urgent, and not important not urgent. He recommended clearing all the not important stuff off your plate so that you have more time to deal with the important issues, urgent or not.

• *Do the obstacles ahead make you question whether your goals are really attainable?* In any difficult situation, there are bound to be times when you don't see a clear path to your goal — or the path you do see is obscured by roadblocks and minefields. Perhaps different people have different visions for the future, with those disagreements diverting energy away from charging forward. It may be that organizational incentives are not aligned with what the organization has asked you to do.

Whatever is going on, the key is aligning your adaptive energy to break out of old habits and expand the menu of alternatives you consider.

Reflective Exercise: Reinventing Yourself to Adapt to Your Current Situation

Answer these questions:

Are my old models and styles of leadership working for me right now?

What do I need to change about myself to better adapt to my current situation?

Probe the underlying models, assumptions and philosophies that frame your leadership. Leadership growth often means shedding outdated approaches in exchange for newer, more adaptive ones.

Remarkable transformations are sparked by some underlying tension that acts as a catalyst for change. Try to identify a behavior you're engaging in that may be creating unnecessary tension in your workplace, then consciously work to put a stop to it. You may be surprised to see how a situation cools down when you stop stoking the fire. ●

Illuminate Blind Spots

I'm defining blind spot here as anything that can hinder or undermine your performance that you are either unaware of or have chosen to overlook. My research has identified five different types of blind spots: experience, personality, values, strategic and conflict.

Experience Blind Spots. The experience blind spot is most likely to come into play when leaders move to a new role or a new company. They arrive so eager to show off what they know that they don't pay close enough attention to their new circumstances. The experience blind spot can also be problematic when leaders have become entrenched in a job and something significant changes in the environment.

Personality Blind Spots. Just as past experience can produce tunnel vision in leaders who are not self-aware enough to notice it, the structure of your personality — your predisposition to think and act in certain ways — can lead you to erroneously process information and miss subtle cues unless you are self-aware enough to monitor your thoughts and make appropriate course corrections.

Values Blind Spots. Values blind spots occur when a leader's attitude and actions are not aligned with core values. Unfortunately, not all values blind spots become illuminated in time and some can have far-reaching consequences. Remember, a blind spot doesn't necessarily mean that you are unaware of a problem; blind spots can occur even if you have some level of awareness but fail to take appropriate action.

Strategic Blind Spots. Experience, personality and values blind spots focus largely on individual failings. Strategic blind spots cast a wider net because their influence is felt on a larger level, affecting a group, a company or an institution. They are products of a collective worldview that becomes self-reinforcing around a set of practices, assumptions or beliefs yet are potentially maladaptive for the long-term health of the organization.

There are often incentives, either explicit or implicit, that reward conformance to the norm and punish critical or questioning voices. These incentives, which often are tied to short-term objectives, can detract attention from critical long-term implications, hindering open, honest dialogue and cogent analysis. Strategic blind spots can occur in virtually any area of an organization. Any initiative, practice or custom is a potential focus point.

Conflict Blind Spots. This last blind spot takes center stage when a struggle involves significant elements of destructive conflict — conflict so extreme that it interferes with the mission of the organization. When a conflict intensifies, perceptions can become significantly distorted. Everyone convinces themselves that they are right and the other person is wrong.

The conflict blind spot can cause someone to interpret every interaction through a distorted lens. Even if the other person did not intend any harm, the blind spot reinforces the perception that the other person is in the wrong, intensifying the emotions. This leads to further escalation, and the pattern becomes more ingrained. Issues become blown out of proportion, and emotions boil over.

By definition, you are blind to your blind spots. That's why it's so important to proactively seek to discover them.

Preventing blind spots from undermining your leadership requires rigorous, continuous discipline. Awareness is the first step, but the best leaders learn how to become their own change agent. ●

Transcend Conflict

A certain amount of conflict can be healthy, especially in an atmosphere of trust. Diverse viewpoints can be expressed. Challenges to the status quo can push learning and innovation. Issues can be debated openly, often leading to better solutions. The trouble comes when the energy driving the conflict moves from positive and productive to negative and counterproductive. Conflict can then become destructive, often with disabling effects, undermining the very objectives to which the participants aspire.

Destructive conflict can occur between a boss and subordinate, colleagues within a team, two departments or business units within a company, or business partners. The power dynamics can vary greatly, depending on circumstances.

The deep feelings of distrust in destructive conflict are often accompanied by fears of diminished power. Motivations for every idea and action are called into question. Such a toxic environment does not support the high energy, creativity and synergy that participants would ordinarily strive to bring to their projects. But we live in an imperfect world, and acknowledgment that we live in the world as it is, is foundational to recognizing the potential for growth in any situation, even in the midst of destructive conflict.

It's crucial to keep in mind that the people you are in conflict with are flawed human beings like yourself, with insecurities, fears, and emotional and psychological wounds — all of which color the way they perceive other people, the world and the nature of conflict itself. Honoring the human face of conflict is the first step toward resolving that conflict in the healthiest way possible. ●

Discover Purpose and Meaning Through Struggle

The choices you make — large and small — are the most vivid expression of your leadership. They reflect who you are as a person. It's one thing to talk about your values, but through the actions you take and the choices you make, they become visible for the whole world to see.

You may already have a vision statement. If you do, find it and read it. You may even want to read it aloud so that you can hear the sounds of the words. Does it still feel right to you? Do your current circumstances suggest any changes?

With your vision clearly articulated, you are better equipped to assess how well your current activities are aligned with that vision. You can start by taking another look at the hard questions you asked yourself earlier: Do I feel energized by what I am doing in my career and in my life? Does it fill me with meaning and purpose? What's keeping it from being satisfying?

Now take it one step further. Ask yourself, Am I willing to rededicate myself to my current endeavors, or do I need to segue to something new? And if I do choose a new route, what should it be?

Essentially, you have three options: The first is to recommit to your current direction. The second is to pivot, or make a midcourse correction. The third option is to make a more dramatic leap, perhaps into a totally new arena, far beyond the comfort zone of your previous experiences. ●

PART 3: DEEPENING ADAPTIVE ENERGY

Peer Into the Future

Good leaders learn to intuit the link between their current circumstances and future potentialities. They develop the capacity to supplement logic and reason with the intuitive ability to synthesize an almost endless array of variables to anticipate what the future might hold.

Through effort and experience, you can sharpen your intuition and become more adept at orchestrating the delicate dance between your automatic and reflective mental processes.

You can learn to anticipate and prepare for the future in several ways. You can envision opportunities — changes in markets, technology or competition — that create windows for innovation and ingenuity. You can learn how to anticipate potential obstacles — constraints and pitfalls that could potentially derail your plans. You can nurture your adaptive energy by growing your skills and capabilities to tap into the potential of what's ahead.

Prepare for What Lies Ahead

Spending time with Bill Gates in his formative leadership years gave me a privileged perch for observation. It turns out that Gates' sagacity and insight do not stem solely from innate genius. He surrounds himself with very smart people, and he's a voracious reader. Every year he goes off for what he calls "think week." He takes a mountain of books (or nowadays, perhaps, an electronic book reader), pores through them and sifts through the nuggets upon which he wants to act.

You too can become hyperinquisitive and actively seek out the thought leaders in your industry or field. Get yourself connected and inspired. Attend professional conferences or idea conferences, like TED or the Aspen Ideas Festival. If you can't go in person, search the Web; a lot of great talks are available for free. Talk to smart people. Follow thought-provoking blogs. Read books. Create your own vision for the future.

It is not always easy to identify which skills will help you maximize your leadership potential. But one core leadership capability that is crucial to the theme here is emotional intelligence, which implies self-awareness, the maturity to manage your own emotional state and the ability to notice social cues so as to maintain good relationships with others. ●

Savor the Marathon

"Leadership is a marathon, not a sprint," an astute leader told me. Like long-distance runners who take in nourishment along the way, you need to continually nourish yourself, replenishing the energy you've lost and sustaining yourself through life's difficulties, all the while continuing your path of growth and mastery.

Great leaders bring a high level of discipline to their roles and their lives. This discipline manifests in the form of habits — behavioral routines that play out over and over again. Typically, these routines produce some kind of reward of which you may or may not be fully conscious. The trick is to find just the right routine and just the right reward to transform your habits into a self-perpetuating adaptive engine.

Celebrate What's Precious

As you race through your life, pursuing your goals and ambitions, you may find it transformative, as I did, to continually remind yourself to slow down — to breathe, to notice, to celebrate what is precious.

What is it that you appreciate? What are those special moments with family and friends or colleagues that are etched in your mind and maybe even on your soul that nourish you each time you recall them? Do you have a habit of pausing to express your appreciation?

At the end of the day it is best to not judge ourselves by how our own life measures up to that of other individuals. Instead, a more useful yardstick is how well we find our unique path, tapping into our potential, becoming the best person we can possibly be.

The art of struggle lies not in achievements but in the ripples from the journey and how we've grown along the way — the lives we've touched, the kindness we've shown, the ways we've brought to life our most important values. It is the accumulation of all of life's choices, big and small, that creates our unique and personal gift to the world — the world we will bestow on our children. ●

Leadership: The Inner Side of Greatness

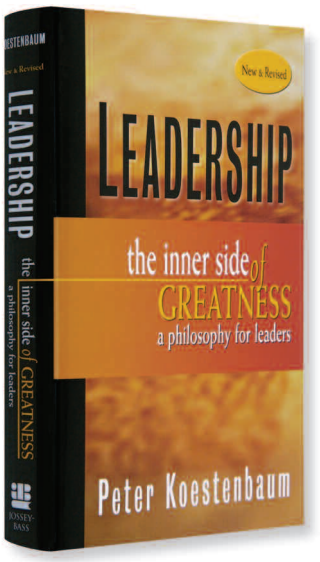
A Philosophy for Leaders



by Peter Koestenbaum

THE SUMMARY IN BRIEF

In *Leadership: The Inner Side of Greatness*, legendary business philosopher and thinker Peter Koestenbaum invites managers to break out of the ordinary managerial mindset. He reveals how striving for greatness enables managers to focus their efforts and grasp new ideas and insights by bringing intensity and meaning to their work — thereby improving their ability to achieve bottom-line results. He also demonstrates that when leaders live out their deepest and most personal commitment to excellence, they bring out what is great in others as well.

Koestenbaum encourages managers to give meaning to their lives through the quality of their work. He offers an insightful look at the characteristics great leaders have in common — vision, reality, ethics and courage — and identifies the strategies all managers can use to achieve and sustain both personal and organizational greatness.

Leadership: The Inner Side of Greatness expands on Koestenbaum's leadership theories and reflects the challenges of today's business environment. It also includes a wealth of new intervention tools, techniques and strategies, and contains reflections on moral and cultural issues that emphasize the importance of authenticity in leadership.

IN THIS SUMMARY, YOU WILL LEARN:

- How to develop long-term vision and marshal the courage to take risks and act with sustained initiative.
- How to live a courageous life and manage anxiety.
- How to reach greater heights of ethics and responsibility.
- What managers must be to become truly effective leaders.

The Oath of Inner Greatness: Nine Keys to Business Wisdom

What are today's key business issues? What must you really know to run a successful enterprise? What must you understand to be an effective leader? In short, what really matters?

Here are nine basic themes that can serve as answers. None is new. Plato said that knowledge is recollection; the following is to remind you of what you already know:

1. Personal Responsibility. Leading requires ownership of the meaning of personal responsibility and accountability. It means fully internalizing the human truth that, in your world, nothing happens unless you make it happen.

2. Business as a Vehicle for Achieving Greatness. Business, as commerce, is above all a vehicle for achieving personal and organizational greatness. It is for accomplishing something worthy and noble. Business is an institution that can enable you to make significant contributions to society. Connect your work with your personal depth.

3. Two Sides of Leadership. Leadership has both a strategic and a personal side: one left-brain, the other right-brain; one tough-minded, the other tender-minded.

4. Personal and Strategic Parts of Leadership. The business objectives of a company are the four *p's: profits, people* (or morale), *products* (or services) and *pride* (preeminence, prestige and social significance). If we integrate these four business objectives with the primacy of the personal side of leadership, we get the secret of gaining the competitive advantage: Where people grow, profits grow.

5. Teamwork as a Requirement of Leadership. The leader has the special skill of combining aggressive personal ambition, independence of thought and individual resourcefulness on the one hand with thinking always in terms of cooperation, communication, concern for others, doing things together, motivating people, interesting them in growth and enlisting their help on the other.

6. Transformation as a Requirement of Leadership. Leadership requires a change in how you act, preceded by a conversion-like transformation in how you think.

7. Greatness in Leadership. A leader is a person who is truly effective in achieving worthy results in any field, no matter what the obstacles and with unfailing regard for human beings.

8. Greatness in All Things. This transformation, to be authentic, must occur in all six arenas of life: work, family, self, social responsibility, ecological responsibility and financial strength.

9. How Greatness Is Achieved. You lead by empowering your people, by developing them and by educating them to be leaders. The leader is a teacher, and you lead not by only creating systems and assigning work, but by developing people. Effective empowerment is based on a simple formula, the product of autonomy, direction and support: E=A*x*D*x*S. ●

Part One — The Model: What Is Inner Greatness?

Greatness lies at the center of the Leadership Diamond model; the space it inhabits results from the simultaneous

activation of four fundamentally different styles of thinking or ways of greatness: *vision, reality, ethics* and *courage.*

To work smarter means to make the commitment to the leadership mind. It's as if you were to take an oath — the oath of leadership — that, henceforth, your mind shall always function in accordance with the criteria of the Leadership Diamond.

There is a pragmatic and philosophical definition of greatness. The pragmatic definition consists of 10 propositions that seem to work in practice. The key word here is effectiveness. The deeper, philosophical definition of greatness centers on character, that is, human authenticity and depth — the fully developed mind.

Ten Leadership Propositions

1. Be effective. Emphasize results, both through management by objectives and by process.
2. Understand that leadership is a mindset and a pattern of behaviors. It is to have made a habit of a new way of thinking and a new way of acting.
3. Be prepared to wake up, and to change your perceptions and concepts radically (transformation, conversion) with respect to the human potential and to cultures (corporate, ethnic, national).
4. Lead by teaching leadership, by empowering (releasing people's volcanic energy and creativity), by fostering autonomy, providing direction and lending support. A teacher is an experienced and relentless learner.
5. Have faith that leadership can be learned and that it can be taught.
6. Know that the leadership mind can hold opposing ideas and contradictory feelings at the same time. It can achieve comfort with the tensions of ambiguity, polarity and uncertainty.
7. Be a leader in all six arenas of life: work, family, self, ecological responsibility, social responsibility and financial strength.
8. Inform your products and services with a leadership-teaching component. You do not sell a product or service; you help customers buy leadership in support of their own values.
9. Use both reasons or models (living from the "outside in") and instincts or intuition (living from the "inside out").
10. Expect leadership to lead you and your organization to a higher state of health. Your state of mind influences your body's health. ●

The Leadership Diamond: Four Strategies for Greatness

The Leadership Diamond is taught through its four core dimensions or dominant leadership strategies: *vision, reality, ethics* and *courage*. Each strategy is buttressed by four resources, called supporting tactics; each is a technique or teaching device to help bring about leadership intelligence. In order to be meaningful and make a difference, your understanding of these styles of thought and modes of greatness must be substantiated with past examples and must prescribe future behaviors and actions designed to have visible influence. In this, we merely follow John Dewey's famous prescription of learning by doing.

In each strategy, the tactics form a sequence; their order is important. They start with the simple, the practical, the measurable and move down more and more deeply into the under-girding philosophical structures of the leadership mind itself. Each tactic represents a different level: professional, social, psychological and philosophical. As we go down these stages, their leverage to improve leadership effectiveness increases, because depth equals truth and truth begets results.

Strategy Is Not Enough

The strategic side of leadership, as usually conceived (the abstract and rational analysis of corporate direction, especially in its larger financial aspects) is not enough. It is on the personal side of leadership — in the sense of greatness and inspiration, focus on people, their meanings, their souls and hearts, their destinies — that the next breakthrough in business will occur.

The Leadership Diamond methodology is devoted to understanding and teaching the personal side of leadership. Its goal is to train the individual leadership mind. Results are measured by the business objectives achieved. ●

Vision: Thinking Big and New

What are the leadership elements of vision? There are four:

1. Abstract Reasoning and Analysis. You find abstract reasoning and analysis in intelligence tests. It is called logical intelligence, which is the most widely used predictor of success in our society. College and university admissions, job recruitment and promotions, for example, depend heavily on one's performance on this kind of intelligence test. Scholastic Aptitude Test (SAT) questions measure abstract reasoning and analysis.

2. Systemic and Strategic Thinking. Systemic

thinking, coupled with abstract reasoning and analysis, targets assumptions. Always examine the assumptions behind your actions. Be sensitive to the unconscious, the social, the ethnic and the economic forces that silently lead you and that may prevent you from seeing what might have been.

To have vision is also to have developed strategic intelligence and systems thinking.

3. Creativity and the Unconscious. Always monitor, review and assess what you are doing and ascertain how you could do better and what you could do differently, especially when you think you are doing well. Think in terms of continuous improvement.

The visioning mind is always conscious of the need to be creative. It always reminds itself that it must be creative; it never descends into sloth.

4. Awareness of Possibilities. The key step to take to understand the fourth tactic — awareness of possibilities — is reflection. We do not *do*; we *reflect* on what we do. Reflection creates distance, separation and space. And the space it opens is the experience — or the perception — of consciousness itself. It is also the perception of space and the perception of time.

Reality: Having No Illusions

Realism in general (and by way of definition) means to have no illusions. That is the formula statement for reality.

The supporting resources, or tactics, that teach the leadership mind and develop realism in leadership intelligence, in order of their increasing philosophical depth, are the following:

• *Realism means paying meticulous attention to practical details and to the precise needs of your immediate and end customers.* Visionaries often have trouble with these details. They do not comprehend that the forest is made of trees. It appeared early in 2002 that the collapse of Enron might be a case in point. As the Enron bankruptcy story began to unfold, it seemed that the company's leaders had overemphasized strategy (vision) at the expense of realism (reality), cutting ethical corners (ethics) in the process. The strategy of translating an energy company into a financial broker had been brilliant, and Enron — six times honored by *Fortune* magazine as the most innovative company in America — had made the strategy work. In the end, however, it appeared that founder and chairman Kenneth Lay lost control of what often was referred to as Enron's "Byzantine financial structure."

• *Realism as strategy is a commitment to obtain extensive information and maintain a stance of aseptic objectivity.* Leaders who are realistic are well informed. They thoroughly understand the company, the business, the industry and the national and international political, social and economic realities that their organizations confront. Leaders with a highly developed sense of reality keep up with their professions, continuously updating their skills.

• *Realism is sharply focused attention on survival.* Surviving means, first, taking care of yourself; then being relentless, as well as realistic, in your pursuit of results. Realism in business means first and foremost a market orientation. It is a form of perception, a pervasive attitude toward life itself. Peter Drucker has said that marketing is everything. Business is an attitude — the attitude to be totally and fully in touch with the reality of the market and respond to it effectively and successfully.

• *At the philosophical level, a strategic commitment to reality means direct contact and embodiment with yourself, with other selves and with how others perceive you.* Realism as direct contact is a fundamental metaphysical category. It means to be in touch with what is real, to be connected, either as a unit (like a bond) or in dialogue (like a dance). Contact represents an overall orientation toward life and is a key to emotional health. Full contact means presence, being fully present in the world. In the authentic leadership life, you are fully present to yourself, recognizing that all the world exists now, only at this precise moment. The question is always: What is the nature of reality?

Ethics: Providing Service

The formula statement for ethics is "Be of service." "Generosity is the best policy" is a good summation of the meaning of ethics. In practice, this can mean, for example, the simple matter of willingly sharing the blame for failures, especially when coupled with the preeminence of team spirit.

In business and the professions, the term *ethics* often refers to quality in products, services, customer contact and management. The four supporting tactics, or resources, in order of their increasing depth and leverage, are as follows:

1. Ethics means teamwork. Teamwork is a critical success factor.

2. Ethics is meaning. Ethics in leadership means having a passion for meanings. To be ethical is to understand that a life not devoted to superordinate goals is of little value. It is to understand our need to make a commitment to people, organizations, meanings and ideals that survive us. It is to have feelings, as well as obligations to establish a moral world order.

3. Ethics is also, and centrally, love. Love means that you really care about people, whether you are a mother or a general. To love is to communicate intimately in the sense of establishing an inter-subjective field — a joint ego or communal self. Love establishes a higher unity, a spiritual connection and an emotional bond.

4. Ethics means integrity, morality and principle. The deepest tactic of the dominant leadership strategy of ethics is principle, the integrity of your value system. Ethics means that your organization is differentiated by its values. It is your serious commitment to them that makes you and your organization strong. You and your organization need to have ideals, a sense of destiny, to know the value of greatness. It is their undeviating commitment to values that makes companies great.

Courage: Acting with Sustained Initiative

We now explore in greater detail the supporting tactics of the strategy of courage. The goal is to challenge you to connect ever more deeply with the very source of your power.

• *Aggressive education and management of your markets means stretching markets, not merely understanding and responding to them.* Anything that you create and offer to others is a product. Your service to your superiors is a product; your service to your subordinates is a product. You have external and internal customers; you have immediate and distant customers. Whatever you offer them is your product.

Remember Peter Drucker's edict: The only reason for the existence of a business is creating satisfied customers.

• *Courage is the ability to exhibit personal autonomy and independence of thought, to take initiative, to be a self-starter.* To be courageous is to be prepared for the isolation of leadership. Thus, to be a self-starter is to be autonomous, to have given up the helplessness and dependency that are often fostered by the presumptive security of larger organizations.

• *Courage is the free decision to tolerate maximum amounts of anxiety, to manage your anxiety constructively, to understand that being anxious is what it feels like to grow.* The most difficult aspect of courage is its psychological dimension. It is therefore critical to understand that anxiety is the key to courage, for courage is the decision to tolerate maximum amounts of anxiety. You should face your anxiety, you should stay with your anxiety and you should explore your anxiety.

• *Courage requires a clear comprehension of the fundamental and difficult philosophic concept of free will.* The very heart of courage, the philosophical core, is our human freedom. That is the fourth tactic or resource — the critical success factor. Freedom is a fact inside your heart. It is your most precious possession. It gives you power over your life. It gives you the benefits of being responsible for your existence and accountable for your life.

Irvin Yalom writes about "leverage-producing insights" that stimulate you to claim your freedom. They are called insights because they are truths. Once we recognize them as such, we are provoked to courage.

Service

Being of service means seeing things from another person's point of view. It means having the ability to put yourself into the mind of another person. It is also having the desire to do so, to find meaning and value in your interest and concern for another human being. Such is the definition of *care*.

Part Two — The Context: The Search for Greatness

The key issues confronting business today are leadership issues. The twin challenges that organizations must meet are (1) to develop leadership intelligence and (2) to universalize that intelligence throughout the organization.

A Credo

What is the essential message of philosophy in business, of teaching leadership and, in particular, of the Leadership Diamond model? First, organizations are successful to the degree that they think and therefore act with leadership greatness (that is, leadership intelligence). They must do so as organizations and as individuals. Leadership greatness applies not only to implementing strategy but to the creation of strategy. Therefore, the challenge to leadership greatness is an organization's ultimate action tool.

Second, the purpose of philosophy in business is to help individuals and organizations find and meet their objectives by challenging and supporting them in their leadership greatness.

Third, leadership intelligence is a way of thinking, perceiving and acting that is different from ordinary models of consciousness. Fourth, leadership intelligence can be described, taught and learned. It can be challenged and it can be supported. Fifth, the how — the methodology — is to train executives to lead by teach-

ing leadership. To teach is systematically to help others learn to think and act as leaders do and to integrate leadership intelligence into the achievement of organizational goals. Sixth, the what — the content — is the Leadership Diamond.

'Think and Behave as Leaders Do'

The principal critical success factor in meeting the competitive stresses of today's organizations is to meaningfully challenge organizations to greatness in leadership and then to support them in that leadership greatness. This leads to a set of specific and ongoing behaviors rooted in the depth of the human soul. These actions can ensure that, individually and collectively, organizations think and behave as leaders do. ●

Developing the Mind

Leadership means control over the mind. The authentic leader does not accept the mind as he or she finds it but chooses either to construct or "wake up to" the leadership mind: an inner space, unified, with enough room for conflict, paradox and contradiction, committed to greatness in vision, realism, ethics and courage.

The Leadership Diamond model is the basic tool for training the leadership mind in leadership intelligence, for releasing leadership power and creativity in managers and employees.

Greatness

Greatness lies at the center of the diamond, because leadership means greatness first of all. The space it inhabits results from the simultaneous activation of the four dominant strategies or dimensions of leadership: vision, reality, ethics and courage. These four points on the compass of the leadership mind keep it stretched; their tension creates an arena that makes room for contradictory ideas and conflicting emotions.

The greater the space thus created, the better the leadership. If even one strategy is dysfunctional, however, the amplitude of the space in the mind of the leader collapses. Hitler may have had vision, realism and courage but he certainly had no ethics. The result: His was a collapsed leadership mind.

The concept of the collapsed leadership mind is important. Each strategy is like a resource. They are all needed, although not to the same degree in all circumstances. In an emergency, realism may be more important than vision; in great sorrow, ethics may be more important than vision; and so forth. As a rule, however, leadership means actualizing all four strategies. Problems, more often than not, are the result of neglecting one of the corners of the Leadership Diamond. In that case, solving the problem consists of building up the deficit or leverage corner. ●

Implementing the Leadership Diamond

Successful application of the Leadership Diamond model requires succinct images of the leadership mind and practical recommendations on how to develop leadership intelligence. The following steps show what you must consider and the choices you must make to cope with the demands of your leadership life — not in a good way but in a great way:

1. Preparation. There are several steps we can take to hone the mind as a way to heighten its capacity to use the Diamond methodology: Select a target, exercise caution, lay a foundation and strive for greatness.

2. Strategies and Tactics. *Systems* can be understood through such esoteric subjects as the study of logic, the philosophy of science, the philosophy of language, the theory of numbers and epistemology (the theory of knowledge), as well as through such pleasures as chess, bridge and related intellectual games. *Survival* means that you willingly take the risk to think the way a predatory animal does — a wild animal cornered and fighting for its life. *Team* involves making up your mind always to remember what a good team is. In a good team, each person knows the importance of teamwork, and each takes individual responsibility for the team's effectiveness. *Free will* is the most fundamental element of human nature.

3. Critical Success Factors. The critical success factors are systems, survival, team and free will. These supporting tactics, if interlaced, show the highest correlation with actual living, practicing, successful, admired, lionized, written-about and imitated leaders. If you are more practical than idealistic, these are the tactics on which to concentrate.

Improving Your Leadership Thinking

How do you improve your leadership thinking? Such questioning must never end, for it is the task of a lifetime. Development can be stimulated in two dimensions: by strategy and by level.

One way to develop leadership intelligence by level, as opposed to by individual strategy, is to direct your energies toward socially accepted and institutionalized programs. For example, the professional level can be developed through traditional academic and intellectual pursuits. In fact, a good, balanced college career, at a

minimum, enhances this professional level of the leadership mind.

Applying the Leadership Diamond to Organizations

To teach leadership greatness is to help others learn how to think and act as leaders do. It means to challenge their will, to release people's latent greatness and to empower teams for extraordinary accomplishments. That is a service orientation, a commitment to caring, compassion and love. It is also a challenge to courage and character.

You do not teach leadership to organizations. You help them learn it. Resistance is eventually overcome by a dedicated organizational sponsor who has the courage to be prescient, persistent and patient. A developed, widespread leadership consciousness elevates the health, personal fulfillment and productivity more than any other single identifiable factor. The result is organizations that survive profitably, have high morale and are respected.

The essential element of bringing about the challenge to leadership greatness in organizations is the leadership-greatness manager or educator, and that role requires three basic empowerment skills: teaching, psychotherapy and modeling. ●

Part Three — The Real World: Leadership Strategies in Action

Whatever you do, whether you are building your career and wishing to be more effective in your job, dealing with your relationships and your family, or focusing on your inwardness and your spiritual life, always ask the same questions, derived from the Leadership Diamond:

- Am I being visionary enough?
- Is this a breakthrough, in visionary terms? Or is the vision incremental?
- Am I displaying (or is the situation manifesting) the four tactics of this strategy? In other words, is the reasoning brilliant?
- Is there enough systemic and strategic visioning?
- Is this work based on an understanding of the infinity of inner space-time?
- Has the unconscious been properly enlisted for creativity?

Continue this way with all the other strategies. In other words, whatever team or colleague you seek to inspire and motivate, always raise the same set of questions. Does the action conform to all the criteria of the Leadership Diamond model? If not, what needs to be done to improve effectiveness? ●

Psychotherapy and Modeling

Psychotherapy is merely another form of teaching, that is, teaching through experiencing, much of it based on the method invented by Socrates and exemplified in many of the dialogues of Plato.

Modeling is based on the theory that leadership is contagious. When you see it in operation, you recognize it as one of your own possibilities. You imitate the actions of your model and are inspired by that spirit.

Expanding Organizational Skills

What is philosophy? Philosophy deals with the purely human, with the eternal questions.

Philosophy represents the in-depth mindset required for leadership. At the level of behavior, we resort to the techniques developed by the behavioral sciences, among which are psychology and sociology. But to understand them, we must return to the regions of depth explored in philosophy. The actions recommended or taken by this process are strategies and practices. These, we hope, will lead to results, which should be the business objectives of the organization. To make sure that we know what we are talking about, we require measures; we must monitor results. Thus the philosophical roots of the Leadership Diamond strategies are seen most clearly in the philosophic-level tactics, or resources.

Philosophical Roots

The philosophical roots of an executive's capacity for visioning is found in the structure of pure consciousness — a field that requires both conceptual and experiential training in philosophy for its exploration.

The philosophical roots of the reality strategy lie in the connection between the ultimate subject and object of all experience, the intricate yet mysterious dance that occurs between what is experienced as *me* and what is *not me*, and the desire and the fear that exist in the tension between these polar opposites. Reality, as direct contact, is the mysterious stress between self and world, between here and there, between subject and object, between the inner and the outer worlds, between male and female, young and old, between (in the immortal words of Martin Buber) the "I-Thou" and the "I-It."

The philosophical roots of ethics lie in what the German philosopher Immanuel Kant so aptly expressed

in the conclusion to his *Critique of Pure Reason*: "Two things fill the mind with ever-increasing wonder and awe, the more often and the more intensely the mind of thought is drawn to them: the starry heavens above me and the moral law within me."

Courage

Finally, the philosophical roots of courage lie in the full understanding of freedom as the ultimate structure of our being. Freedom explains the world, but the world cannot explain freedom.

The fundamental rule of health is that the problems are created at the philosophical level of depth, and it is there that they are resolved. Significant change, therefore, can occur only to the degree that the mind returns to its philosophical source. In Leadership Diamond language, the best results come from activating the philosophical tactic of each dominant leadership strategy. Philosophy can reveal to us our most powerful resources. ●

Diamond Relevance to Current Crises

In terms of the simplest fundamentals, we need to consider several so-called deep structures of human existence. We need, for example, minds that understand the meaning of *ethics* — both of caring and of principle — and that have made ethics part, not only of how they behave, but of how they are, exhibiting that in their being as humans. Ethics means, among many things, love.

Ethics needs to be counterbalanced with one of its opposites: reality. A leader knows that life is harsh and the world is unforgiving. We may not like it, preferring to be cared for within a warm family that loves us unconditionally. The truth, the rude awakening, appears when we discover the cruel jungle into which we are thrown, the indifferent competitiveness, the fickle recognition of our efforts to be good. We are abandoned in the world to test whether we can survive. That is reality. It exists to say no to you! It is there to defeat you! To be a leader is to win against the universal *no*.

'Bury Me Standing!'

There is more to leadership. We cannot blame others, we cannot feel sorry for ourselves, we cannot whine or whimper. We must stand up, erect and strong. Leadership is the spirit of the phrase, "Bury me standing!" That is courage — the courage to manage anxiety.

Until the leap of courage has been taken, no person has entered the realm of truly mature authenticated leaders. In the end, there is *vision*, the use of our brains, the capacity to grasp the big picture and see ourselves, not only as of today, but also from what Spinoza called "the aspect of eternity," where we fit into the unfolding history and even beyond, that of geology and of stellar evolution.

These so-called deep structures of human existence are not mere concepts. They are the sunburst of life itself, something we call greatness. ●

CONTEXT and UPDATE from Peter Koestenbaum

Leadership: The Inner Side of Greatness is the fulcrum of a long-term research project — which is called PiB® (Philosophy-in-Business™) and the Leadership Diamond®.

The history of ideas, the study of the humanities and particularly the great philosophers highlight all-time key insights about the human experience. Condensing this vast treasure into 12 categories of personal and organizational behaviors gives us the critical leadership risk factors to look out for in all aspects of business and public service. They are the single most powerful road to today's sustained competitive advantage.

The basic tool is a master checklist against which all leadership is measured. It includes three axes of competencies:

I. Leadership Capacity: Ethics (values and what is worthy); Reality (facts and truth); Vision (what is possible and innovative); Courage (action, initiative, self-reliance and commitment).

II. Leadership Readiness: Each leadership capacity is amplified by Going Deeper, Searching for Greatness, Facing the Shadow and Managing Polarity.

III. Leadership Transcendence: We add the ubiquitous phenomena of free will and systems-thinking interactivity, understanding Being, and we begin with the history of ideas, where leadership data are located.

This universal leadership template concludes with four simple questions for each check point: What does it mean to you? Is it relevant to you? How will you use it for better business? How will you measure results?

This foursome upgrades you and your company to your next level of Greatness. There are no substitutes.

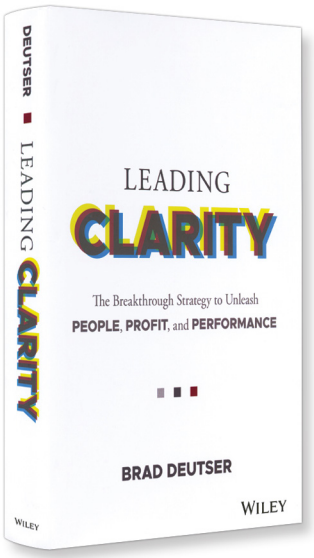
Leadership

Leading Clarity

The Breakthrough Strategy to Unleash People, Profit and Performance



by Brad Deutser

THE SUMMARY IN BRIEF

Today's business environment is more complex than at any time in history, with greater ambiguity, chaos and uncertainty. Too often, individuals and organizations become bogged down with competing priorities and the constant press of daily demands. This tangled mass of noise effectively handicaps every facet of business.

Leading Clarity offers a bold proposal that changes the trajectory of your business and leadership. Author Brad Deutser shares the secrets of his proven blueprint for creating clarity, the key measure of unprecedented success and a vital factor in productivity, engagement and performance. He takes you beyond understanding the strengths and weaknesses of individuals and teams and guides you through a dynamic process that unveils what is most critical and enduring about your business.

Clarity is the dynamic force that aligns and connects the most critical business principles. *Leading Clarity* moves you beyond preconceived limitations and sets new direction, expectation and pathways for success.

IN THIS SUMMARY, YOU WILL LEARN:

- To lead teams and individuals with clear direction and purpose.
- To value inside-the-box thinking and innovation.
- To identify the impact drivers that keep your employees happier, more engaged and performing at their peak.
- To address common misalignments and masqueraders of clarity.
- To infuse positivity into your organization's DNA.

THE COMPLETE SUMMARY: **LEADING CLARITY**

by Brad Deutser

The author: Brad Deutser is a thought-provoking counselor and trusted confidant to leaders in diverse industries around the world. As a business advisor, culture authority, creative strategist and executive coach to CEOs, board chairs and top corporate management for high-profile organizations, Brad leverages his unique perspective and pedigree to drive organizational performance. As president and CEO of Deutser, he is the visionary behind this innovative consulting firm focused on helping organizations and their leaders achieve clarity to drive business performance.

The Clarity Conundrum

With all the business tools and approaches that are routinely deployed, there is one outlier that is consistently misunderstood, misapplied and vastly underrated. While it may be harder to measure than those most often relied on to create stability, it has been shown to improve performance, profitability and, ultimately, the viability of a company.

What is this mystery function? Clarity. Clarity operates on the truth that everything is connected. We are never going to "have" clarity. It isn't ours to own. Clarity isn't an arrival point, a vista or a destination.

Clarity is the foundational fabric that weaves together dreams, goals, initiatives, concerns, challenges and triumphs. Clarity is all about people. People make organizations. It is how we hang tough when called upon to do so and bring forward something wonderful when the weave works. Clarity can't be simply communicated. It needs structure and has to be constructed.

Instead of *finding* clarity, real value occurs when you, and ultimately your organization, are *in* clarity, which is a state that has both a form and methodology that can be relied on and can facilitate quick, and sometimes effortless, recalibration when faced with challenge. Being in clarity opens a way of creating personal capital that allows you to be steady in any storm.

Considered as a destination, clarity can be lost or obscured the moment the landscape changes or environmental factors dim your view. In clarity, we can see all factors, recognize them for what they are and what they can become, and create connections that can be relied on to establish or re-establish equilibrium and an environment for growth.

What starts happening when clarity is actively pursued? It gives leaders a tool with which to more effectively lead. It gives everybody a place to unite, creating employees who are better-performing and more engaged, happier and increasingly committed rather than merely compliant. It gives the external constituents of a business, including customers, vendors and partners, something more defined, authentic and aligned with which to connect. Clarity delivers an organization that is fully functioning on all cylinders. Clarity delivers results.

Think Inside the Box

The concept of "thinking outside the box" has been the go-to, we're-all-about-it superstar for decades. Proponents say thinking outside the box fires up creativity and that it can result in inventive solutions to an organization's most nagging problems.

But for all the positive promotion it's received over the years, that philosophy may be putting too much emphasis on the wrong side of the box. You have a much better chance of success if you understand the parameters you're working *within* as an organization, and then see if you can stretch the box to meet your goals and vision.

Taking into account real-world limitations — such as budget constraints, industry regulations, looming deadlines — can actually help to spark creativity by keeping it focused rather than using an open-ended, anything-goes approach that doesn't reliably result in ideas that can be implemented from a practical standpoint.

The construct of each box is unique. Companies across the world devise strategies to create an original and appropriate box for their industry, markets, products, services and realities. While the challenges for each company are unique, the components and framework are consistent.

The four sides of the box are direction, operations, people and engagement. These four components are the critical factors that contribute to and directly affect performance and culture. Each side also has three dimensions that bring color and definition to the side.

Side one: Direction. Direction affects every aspect of the company and its ability to connect with and move its people to a shared vision of where the company is going. The three dimensions for direction are vision and values, strategy and leadership.

A strong and well-defined vision creates a momentum that compels others to follow and actively promote it through their work. Values set the standards of what is important to your company. Your strategy tells the plan of where your company is headed — it is your definition of change. Finally, it is up to the leadership to establish a purposeful culture and empower a consistently productive working environment.

Side two: Operations. This is the company's ability to respond to external changes as well as employees' ability to respond to organizational changes. The first dimension is adaptability. In a purposeful organization, the box creates an optimal environment in which adaptability is part of the way the company operates, not an individual struggle.

The second dimension is performance management. Operating in clarity means having clear data metrics in place that measure those behaviors, actions and outcomes that are an integral part of key initiatives. The third dimension is systems and processes, which exist to streamline work.

Side three: People. The people of a company are what motivate growth and sustain the parameters of the box that you define. Without their investment in the vision and their understanding of the pathways in place to reach optimal performance, your strategy will inevitably fall short of its expected outcomes. The first dimension for people is coaching and development. The onus is on the leadership to recognize the talents, sometimes hidden in an employee, and help to elevate them to a new level of performance with focused coaching and development.

The second dimension is talent management, a critical factor in clarity as teams and individuals grapple with increasing demands placed on them, including the pace with which we work, technology updates and demands, and general uncertainty. The third dimension is team capabilities. When collaboration and co-creation are valued, hired for and expected, it releases the need to be the smartest person in the room. Teams add to clarity by providing sounding-boards for ideas and possibilities.

Side four: Engagement. Engagement focuses on having engaged employees but also examines the extent to which an organization engages with other stakeholders, both internal (including board members and volunteers) or external (including clients or customers). The first dimension here is employee clarity and fit. In addition to the requisite skillset, employees should be hired, evaluated and trained based on shared values and core competencies.

The second dimension is customer focus. Companies and customers enter into an exchange of expectations and delivery of goods and services. As with internal culture, these expectations can be clear and purposeful, or they develop unintentionally as either an informal or even a more formal social contract. The third dimension is communication effectiveness. In clarity, communication evokes a connection, a response, and establishes transparency and authenticity as its goal. With this style of communicating, everyone involved wants to interact with it and contribute to it.

The reality is that when everyone is holding onto the same box, they come alive, encourage responsible creativity and drive real innovation.

The Six Sides of Clarity

The organizational box is actually a cube with four sides but also a top and a bottom. The fifth and sixth sides of the box add dimension to our box and keep the tasks of the four sides both contained and connected.

The bottom of the box, which is the fifth side, starts with **identity**. Organizational identity is the enduring essence of an organization, the unique product of its history. Identity is not something that can be copied from others, and it serves as the anchor that grounds an organization and acts as the filter through which it screens its actions. Four key elements make up identity:

Characteristics are what is central, enduring and distinct about the organization. An organization's characteristics answer the question, "Who are we?"

Purpose is why an organization exists. It is the glue that binds people together in common cause, answering the questions, "Why do we do what we do? What needs do we fill? What impact do we have?"

Values are the beliefs and motives that leaders and employees hold in common.

Traditions are the beliefs, behaviors and activities that have been passed down within the organization that set it apart from others and help foster a sense of shared identity.

The sixth side, or top of the box, is **environment**. This side encourages us to ask three broad questions to get a sense of how our characteristics, purpose and values align with the outside world. When we define our organizational identity, we must then ask, "What are our stakeholders saying, what are our stakeholders doing and how are our stakeholders feeling?" These three elements make up the external yin to our internal yang.

What people say, how they act and what they are really feeling is not always clear or completely in alignment with our internal culture. In contract negotiations, we may be dealing with someone on the other side of the table who says they care about relationships and hold values like integrity in the highest esteem. But when the going gets tough, will they live their espoused values? Will they follow through on their commitments if their business hits a hard patch? Can you trust what people are saying without a proper accounting of their recent actions and the nature of what is going on around their business?

Whether it is a startup, a nonprofit, a 100-year-old thriving business or publicly traded company, there is immense value in going back to identity and understanding the environmental factors that will ultimately shape your future. You may not be able to control the factors around you, but you can and must be aware, react, prepare for them and anticipate what will happen next.

Misalignment Will Derail You

Misalignment is the weak link in your structure that stresses the whole of your organization and creates a workplace ripe for chaos, disagreement and dissension. Misalignment keeps organizations from actualizing their purpose because the flow is off, and additional effort and resources are required simply to get things back on track, much less move them forward.

If you commit to the process and state of being in clarity, you'll have a much better shot at recognizing misalignments before they spread and send energy and resources in directions that are off plan or even completely outside your box.

Common misalignments include vision vs. execution; status quo vs. moving forward; communication vs. intention; founder vs. leader; front of house vs. back of house; values vs. strategy; people vs. profit; present vs. future; systems vs. silos; boards vs. leadership; franchisee vs. franchiser; and responsibility vs. personal profit.

Communication vs. Intentions

For example, let's look at communication vs. intentions. When the people on the front lines are left to interpret the words and intent of the leadership, it creates gaps in understanding and action, causing misalignment.

An international company with offices in the United States, South America, Egypt, Australia and the United Kingdom faced a challenging situation after the company republished its core values across the world to all employees. Before this republication, their values were pushed only in the United States. They thought it would be a good idea to "share this in the spirit of transparency and communication."

But they weren't looking at the dynamics of the full box. They had missed the people component of cultural differences, and this action led to great disparity of understanding and misalignment across the globe — causing employees in South America to literally define one value as an unpleasant bodily function, in Australia to reject it because it was offensive, while in the United States, it had been a call to rally because of the spirit it represented.

The fundamental definition of the values was not what was in question; rather, the choice of words and open interpretation they allowed. The leaders initially missed the opportunity to listen and understand across the globe how that one value could be adjusted to unite across cultures rather than to divide and be left open for interpretation.

Boards vs. Leadership

Increasingly, CEOs are spending time simply managing up to their boards and fulfilling requests for their bosses. Some boards struggle with understanding their role in defining a vision and the CEO's role in setting the strategy to achieve it. Other boards overstep their bounds and get into the operational arena of the institution, most times to leverage their immense professional talent, although other times to undermine the CEO. Some boards create misalignment with the leader simply because they, as a board, do not agree on some issue, and factions need to create the misalignment to ensure that progress from the CEO is halted.

The reality is that all businesses, in every state of success, experience some form of misalignment at some time in their existence. The key is to recognize the signs and to quickly get to the root of impediments and the misalignments that take the company and their people off track. Being in clarity demands not only an active

view of the misalignment but a determined leader willing to do what he or she needs to break through the clutter and chaos misalignments create.

Performance by Design

Performance by design is about connecting where you are *now* with where you want and need to be. There's already a space where you can be better than your currently known best, and the true secret is *you already know it*.

In clarity, there is a deep comprehension of what needs to come together and connect in order to draw forth the necessary energy, ideas and resources. Design serves as your bridge from where you are to where you want to be, and gives you a touch and glimpse of the potential to get you there.

For example, let's consider the power of symbols. There is nothing more intentional than symbols in our lives and our work. These symbols help us to identify with companies, people and groups. A critical part of branding, they give us a quick cue that we've found one of our own, something that by design fits with a part of our identity, needs and wants. They help to form, communicate and protect culture on the inside of the box and communicate, inspire and make a deep connection in the environment outside our box, extending our reach to our stakeholders.

Think of the tied yellow ribbon hoping to bring someone home, for example. Sports organizations have also understood performance by design for many decades, knowing that their symbols, colors and team spirit are inseparable, and fans fill the stadiums excited to share a common experience, which has been methodically crafted.

Positivity

The power of the mind for convincing people that they can achieve at higher levels than they ever imagined is core to our success. Defining the expectation and then living up to it is at the heart of purposeful design.

For example, a high-end retail company has been successful by remaining true to their core product. They experienced double-digit growth year after year by focusing on what they did best. Then the market changed.

Imports (not American-made) became the industry norm. The economy turned and a slew of competitors entered the market. Their core product no longer enjoyed the same success they had previously experienced. They literally watched their industry change around them — secondary products, with much greater margin than their core products, were afterthoughts to them.

Then, a leadership change occurred, accompanied by a mandate of immediate growth and increased returns to their parent company. The area for immediate impact was obvious — this underperforming segment. Before changing the display or bringing in extra product, the new CEO designed his effort around his team that sold the product. He convinced the organization that this segment was important. He positively included it in every message, in every report and in every personal interaction with salespeople.

More than anything, he convinced the entire workforce that this was important and that they could be successful. He was right. After three months, performance in that area alone increased by more than 180 percent, proving that if you design to believe, you can achieve. By altering the expectations in the workforce and incentivizing them to buy into and believe in the new approach, the rest will follow as their actions realign.

Design is the medium that helps to define the soul of an organization, directing the interactions that take place there, the way people perform and the impression that gets left behind. Whether you are creating a customer experience, building and outfitting an office space or creating the iconic symbol that you will become known by, the design process is inextricably linked to everything that your company will be.

Impact Drivers

What makes a positive culture? Leaders in touch with their people and people aligned with the organizational expectations.

The Deutser Company's work and research have identified 11 levers that together will shift the organization toward positivity and drive performance. Let's look at a few of these levers and discuss their importance.

Lever: Organizational audit. Compliant companies are conducting annual surveys to assess organizational awareness, understanding and engagement. However, more and more, leaders believe conducting the survey is enough — rarely sharing the results back to their employees in a meaningful way. Employees invest the time but are not sure their voice is heard.

To be committed and create impact,

- Standardize a survey establishing a benchmark.
- Communicate responses with actions.
- Set up third-party administration and evaluation to encourage acceptance by the workforce.

- Address gaps and share the expectations to ensure accountability.

Lever: Behavioral alignment. Compliant companies often weight knowledge, skills and abilities over behaviors in their hiring and development processes. Some companies unintentionally allow competing models across the organization and do not link behaviors and values.

To be committed and create impact,

- Set clear expectations — identify levels and behaviors.
- Align behaviors with values.
- Understand important traditions.
- Educate and engage employees around your values and behaviors: what they mean and what successful actions look like.
- Integrate values and behaviors into how you hire, evaluate and develop your people.

Lever: Organizational communication. Compliant companies place great effort into communications. They have newsletters, videos and other web-based tools. They focus on delivering the message du jour, rarely linking it to organizational strategies and priorities or taking into account the manner in which it is received by employees. They value communicating over engaging. They focus on different messages to different audiences, often with an obsession on the external customer.

To be committed and create impact,

- Develop an organizational communication platform with all constituencies identified.
- Align communications with strategy and culture, not just operations.
- Create internal focus first.
- Promote face-to-face communication when possible.

Lever: Customer experience modeling. Compliant companies focus on the customer experience with a variety of tools. Many place a heavy emphasis on one or two key touchpoints at the expense of all others. There is a lack of focus on the totality that a touchpoint on a customer, internal or external, will have with the organization. This produces an inconsistent understanding of the customer, an uneven narrative and an unfulfilled experience.

To be committed and create impact,

- Identify all touchpoints for customer experiences.
- Develop a plan for each touchpoint before, during and after the experience.
- Identify "100 little things" that can transform a customer experience.
- Develop a purposeful experience plan targeting a minimum number of changes each quarter.

When the right levers are pulled with the right force, the fusion of information and engagement creates a chain reaction that catalyzes all dimensions of performance.

The Energy of Alignment

Alignment is all about a different level of engagement and energy. It isn't about right and wrong; it isn't about only one way to do things. Alignment becomes the power source in an environment in which we are clear about what we're doing and why, what our role is in the shape of what's to come, and even clear about what our reward will be for bringing more than "good enough" to the table.

Alignment occurs when people are acknowledged for putting themselves out there and yet clear about what the boundaries are.

Alignment generates energy that propels us to do our part, which brings us into constant awareness that our part is essential to the overall process and the whole of success.

Alignment creates energy that others want to share in. People want to belong to a dream, plan or initiative that is bigger than their individual experience. In clarity, we can see where the connections need to be made and design for them accordingly.

Alignment also supercharges creativity. A startup that had increased the number of its employees by more than a thousand people in its first year took a very purposeful, proactive approach to creating a fully aligned organization with natural energetic pathways to support work being conducted across the United States.

Their intentionality was clear from the first day of operations, when they went through strategic and culture-defining exercises, even though at that time the organization consisted of only three passionate professionals. It was their intention to create the expectations and encourage alignment with each future acquisition and hire.

On its one-year anniversary, in an attempt to take all the words — the vision, the values, the behaviors — they had put together to define the company and bring it to life, the leaders rolled out a boots-on-the-ground tour. They gathered people in town hall formats and reiterated what made their company so different. The words were powerful and inspiring.

But, more so, it was the leader standing out in the open, with no notes, simply being himself and telling the story of where they were going together. He was genuine in his delivery and perfect with his words, authenticity and appeal. People were inspired and they believed. At the end of the presentation, the leader said, "They don't call this the boots-on-the-ground tour for nothing" — before he pointed to the corner of the room, which was stacked with boxes of new branded boots for every employee.

The creativity of the delivery and the positivity that his words and actions injected were lasting and meaningful. It was also measurable, as their results hit every goal they set. Most important, they established that they cared about one thing — doing things the right way for the employees.

What matters most about alignment is that it changes the flow of things. You begin to see that your efforts are both bringing intended results as well as attracting other positives, resources and assets you hadn't imagined. It creates an ease within the effort, not one that suggests you sit back but, rather, one that propels you forward because you can feel the surge of energy that surrounds your efforts and even your solutions.

Masqueraders of Clarity

There is a category of energy wasters that masquerade as something or someone who will bring value and forward motion, but in reality, are tricksters. In their best light, they waste your time. In the revealing light of clarity, they can be found to cloud thinking and often put teams and organizations on an imposter's path that leads to somewhere else, taking them away from their core and creating the fractured energy of something that is not what it seems.

The waste of time, energy and money that is invested and often exhausted on these masqueraders can be significant. Understanding and being able to recognize them is fundamental to operating and leading in clarity. Let's consider a few:

Suck-ups and people pleasers. Suck-ups are *yes* people and, as such, oppose clarity. When generous, they are telling you 50 percent of the truth and withholding the other 50 percent to serve their own purpose and to use strategically when it will best enhance their position. They masquerade as leaders, often found on the ladder to top positions or as a staff member whom the leader relies heavily on and, as such, has the leader's ear, attention and time. Where the masquerade begins is when their own ambition or self-protectionism taints the flow of data and information up the chain of leadership. They are often manipulating information and data — and always manipulating access.

Past performance. History, while it can be an indicator, does not dictate or ensure future performance. Yet, all too often, organizations are stymied by the constant reliance on the past; for example, "This always works"; "Why change what's working?"; "I've always done it this way." The reliance on and connection to the past disallows our energy to be in the present or to morph into a necessary future state. It makes us derivative instead of original, meek instead of bold, and can trick us to be like the frog in a pot of boiling water that doesn't notice that the temperature is rising.

Policy. Policy is often code for "this is what we least like to deal with, so here's our policy on it." Plain and simple, policies exist as a perceived protection — for a company, its employees or an individual. Predictably, they serve as basic, average rules instead of commonsense guidelines. They are engineered to strip people from making individual decisions, thereby providing perceived protection for the employer. Clarity allows space and structure for something other than a narrowly prescribed code of behavior, and encourages openness and dialogue when there is a difference of opinion or insight into guidelines.

Politics. By its very nature, politics is one of the great and most destructive masqueraders. Politics is rarely, if ever, about doing what is right for the whole of a company or organization. Politics is about serving someone's or something's best self-interest. Politics masquerades as leadership, but in fact, it is only survival of the weak-minded elected or appointed official. This can occur in organizations in which the CEO is caught between board members pushing for change and those holding on for the status quo, or worse, when CEOs acquiesce to a board's shortsighted directive against the long-term best interest, solely for survival.

The clarity comes when the politics are pierced and doing right prevails, even when that means taking the ultimate professional risk and doing what is right over the objection of a senior leader demanding some other solution.

These masqueraders are a form of survival mechanism that are used far too often, sometimes accidentally and other times intentionally. But all the same, they end up degrading the interactions in the in-between and redirecting the outcome that best serves neither the organization nor the leader.

Clarity as Process, aka Magic

In the traditional use of the word, alchemy is a biochemical process through which something is

transformed. In clarity, this transformation occurs as the energy created by each component begins to travel through and permeate the organization. As alignment takes place, the energy lifts the known, manages the unknown and becomes that magical something where the expected and unexpected meet and fully form something much larger and more glorious than the original sum of the individual parts could promise.

The energy behind that alchemy begins when people become clear on who they are, what they do and how they do it.

Operating in clarity creates an environment in which people become the heart of everything. When they become the heart and soul of everything, lives are changed — both those who work for the organization and those who are touched by its work and outreach.

This was especially true when the Deutser Company was hired by a financially strapped healthcare system that played a major role in a mid-sized market. This system, which was acquired by a larger institution, was given an abrupt 90 days to turn their business around. And by business, they meant everything. Deutser was basically brought in to save the day.

The Deutser team knew that one thing could quickly unite all, and that was the deep caring of what could happen to these patients. It seems obvious that healthcare is about the patient. Unfortunately, this is not always the case — there are times where it is about something or someone different.

But in this case the research was clear. And so was the directive. Put the patient in the center — not with words but with real, meaningful and measurable expectations.

The Deutser team started its effort with two letters: CE — clinical excellence. There was so much negativity swirling around the health system, and rumor and innuendo ruled the narrative. The Deutser team held true to the belief that simplicity is power. They needed to bring that concept together in a way that people could see it, feel it and understand it. And they could remember it and put it into their daily actions.

The strategy focused on the people. The culture exercise focused on the people. The outreach and education focused on the people. The financial conversations always went back to the people. The biggest shift was the care and concern focused on the people. Everyone rallied around the idea that if the system failed, then they would all fail.

The vision was clear. The expectation was clear. The expected behavior was clear. So too, was the changing identity becoming clear. Every aspect of their box was clear. But the one thing that was missing was the collective belief in and positivity that the future could be different from the past.

The initiative most remembered for bringing the system, and more importantly, the people, together in clarity was an interactive event and whole-system planning exercise. More than 7,000 people inside and outside the system were figuratively transported to the future. People were formally invited to a Disney-like experience in which every detail was considered. It was about transporting the minds, hearts, souls and bodies of each person connected, regardless of how, around the new vision and strategy. It became a push-and-pull experience inside the organization and outside the organization. And, as the expectations changed, so did the results.

A community of physicians, caregivers, administrators, board members, community leaders and supporters, media allies, and even some competitors as well as philanthropists alike were transported by possibility and aligned through clinical excellence.

Magic is the convergence of all the strategies discussed above. And, when magic does happen, we are able to achieve a measure of impact that is beyond our wildest expectations.

Life is a never-ending road. There will be places to speed up and slow down, places to turn right and left, as well as opportunities to explore new paths. But most important, you have to first get on the road and always lead with clarity.

MORE SV CONTENT ON LEADERSHIP

Access these and more in your Soundview Online Library:

Summary: *Smart Trust* by Rebecca R. Merrill, Stephen M.R. Covey, Greg Link. The authors share enlightening principles and anecdotes of people and organizations that are achieving unprecedented prosperity from high-trust relationships and cultures.

Webinar: *Leading With Credibility* by Barry Z. Posner, James Kouzes. James Kouzes and Barry Posner explore why leadership is, above all, a relationship, with credibility as the cornerstone, and why leaders must "say what you mean and mean what you say."

THE SUMMARY IN BRIEF

To thrive in today's economy, it's not enough for customers to merely like you. They have to ***love*** you. Win their hearts, and they will not only purchase more—they'll talk you up to everyone they know. But what turns casual customers into passionate promoters? What makes people stick with you for the long haul?

For more than 30 years, the customer loyalty experts at FranklinCovey have been observing, leading, coaching, and conducting research inside thousands of organizations to help clients adopt behaviors that earn their employees' and customers' unwavering loyalty. As a result, the co-authors of ***Leading Loyalty*** have identified the key differentiators of loyalty-leading organizations.

Full of eye-opening examples and practical tools, ***Leading Loyalty*** helps you infuse the principles of empathy, responsibility, and generosity into every interaction, and reveals the practices of everyday service heroes—the customer-facing employees who cultivate bonds and lift revenues through the roof.

It's time to invest in building loyalty. ***Leading Loyalty*** will show you the way.

IN THIS SUMMARY, YOU WILL LEARN:

- The three key traits of the Loyalty Leader Mindset.
- How to genuinely connect with customers and colleagues.
- The true meaning of being responsible to your customers and employees.
- To infuse your organization with generosity that surprises and delights.

The Foundation for Leading Loyalty

Author and researcher Seth Godin makes a useful distinction between two kinds of loyalty. The first kind of loyalty is the loyalty of convenience: "I'm going to look around, sure, but probably won't switch. Switching is risky; it's time-consuming. Switching means I might make a mistake or lose my frequent flyer miles or have to defend a new decision." Convenience loyalty results simply from habit: We can take the same bus every day and still hate the bus company.

Godin describes the second kind of loyalty—which can be understood as true loyalty—as, "I'm not looking, and I'm not even interested in looking." This is the loyalty of someone who doesn't want to know there's a better deal somewhere else. This type of loyalty is more anchored in emotional commitment than inertia. Doesn't that describe how we feel about our favorite brand or business?

When American Express studied 1,620 customers under laboratory conditions, 63 percent said "they felt their heart rate increase when they thought about receiving great customer service." These thoughts "triggered the same cerebral reactions as feeling *loved*. The takeaway? When it comes to customer service, it's not about what customers think. Great service is about *feelings*."

Leading loyalty is about the intense positive emotion that can be created through our personal engagement with other people. It results from specific underlying principles that drive loyalty, enabling businesses to crack the code to customer devotion. These principles are both timeless and universal.

Loyalty Leader Mindset

The Loyalty Leader Mindset can be expressed as "I earn the loyalty of others by having empathy for them, taking responsibility for their needs, and being generous."

Our mindset relative to loyalty is profoundly influenced by our understanding of the answers to these questions:

Why does loyalty matter? Stores with high customer-loyalty scores are rewarded handsomely. In fact, if the average stores in a chain could raise their loyalty scores just a quarter of the way toward those of high-performing stores, overall profitability would rise a stunning 20 to 30 percent!

Top-performing stores earn a lot more loyalty because they deliberately focus on earning loyalty—not by chance but by choice. They start with clarity about exactly what a great customer experience looks and feels like.

Who is most responsible for creating loyalty? The CEO, right? Well, certainly he or she plays an important role. But the CEO is not the primary driver of loyalty. It's all of us—the people who serve customers inside and outside the organization every day. FranklinCovey found that truly loyal customers are rarely found in places without strongly committed employees, and the behavior of employees directly serving customers is often the deciding factor in whether customers are loyal.

Anyone can adopt a Loyalty Leader Mindset. You don't need a formal title. You can be the most experienced executive in the company or the cashier who was just hired yesterday. It doesn't matter.

How can you earn the loyalty of your colleagues and customers? The Three Core Loyalty Principles for earning loyalty in any relationship are empathy, responsibility, and generosity.

We earn the loyalty of our customers and co-workers when we have empathy for them—the power not only to hear what they are saying but also to feel what they feel. To show empathy, we need to make a genuine human connection and listen to learn the hidden story.

We earn loyalty when we take ownership for what should be done. We don't simply give people what they ask for; instead, we *own* the goals and outcomes for our customers and colleagues. To take responsibility, we need to discover the real job to be done and follow up to strengthen the relationship.

We earn loyalty when we are generous with others. By giving from our heart and giving more than is necessary or expected, we transform customers and co-workers into *advocates*. To be generous with other people, we need to share insights openly and surprise with unexpected extras.

You can bring the Loyalty Leader Mindset into practice by holding short, targeted meetings—huddles, if you will—to teach and reteach the loyalty principles to your team. A brief weekly, or even daily, huddle to move the needle on customer loyalty is the key to influencing loyalty behavior.

What should you do in these loyalty huddles? First, recognize success in increasing loyalty and applying the principle or practice discussed in the most recent huddle. Most important, **celebrate** individuals who are creating customer promoters.

The next agenda item in the loyalty huddle is to **learn** about a principle or practice that creates loyalty.

> If we want loyal customers, empathy cannot be one priority among many. It has to be at the top of our list... for every person in the organization.

The third item on the huddle agenda is to make **commitments** to apply what was learned in the huddle to create more customer promoters. Before leaving the huddle, make sure you schedule the next huddle meeting and assign a person to read the chapter ahead of time to lead that huddle.

To implement the loyalty leader mindset with your team, see the huddle exercise on page 27 in ***Leading Loyalty***.

The Principle of Empathy

Perhaps we'd like to think we are all rational and entirely logical beings—that we make sound buying decisions based on facts and analysis. In reality, it's just not so.

Neurologists have identified that the decision to buy is made in the limbic part of the brain—the primitive, more emotional area that doesn't respond well to analysis or rational thought. The decision-making center of the brain does respond to empathy, the first of the Three Core Loyalty Principles. Empathy is our ability to understand and share the feelings of another person. We may not agree with the person, but we get where they're coming from. More than that, we feel what the other person feels. For the other person, it's almost like they're looking in a mirror: We reflect their feelings as if we felt similarly ourselves.

If we want loyal customers, empathy cannot be one priority among many. It has to be at the top of our list—not just for the front-line customer-service team but for every person in the organization, including people who work on product development, systems design, manufacturing, sales, marketing, or billing.

Kanyon Hillaire is a Safelite AutoGlass technician in the northwestern United States. He is also a member of the Native American Lummi Nation. "They are a great people, very loving," Kanyon says of his culture. Every morning, Kanyon phones his customers to talk about repairing the glass in their automobiles.

One day, he learned that one of his appointments that day was a hearing-impaired individual, and he was immediately concerned about that person. He felt empathy. Customers must understand what they can expect during the appointment, how long it will take, and when it's safe to drive the car once the repairs are done. Kanyon was concerned whether he could communicate these things adequately to his customer.

Kanyon contacted a friend who knew American Sign Language and asked her to record a video message for the customer on his smartphone. "I could have written everything down for my customer," Kanyon explained. "But have you ever seen someone after you've spoken to them in their native language? If not, try it some time. Just learn a little bit, and that person becomes more relaxed, and they feel more comfortable. For me, customer service is more than just doing a good job. When the customer saw the video, he was nodding his head and laughing with joy, and so grateful. The walls between us did fall."

Kanyon's mindset drives him to exhibit empathy with every customer.

To implement the principle of empathy with your team, see the huddle exercise on page 43 in ***Leading Loyalty***.

Make a Genuine Human Connection

Showing empathy for someone else starts by making a connection with him or her. A genuine connection promotes a feeling of belonging, of acceptance.

Ultimately, making a genuine connection begins with our mindset. If we adopt the mindset that connection matters, that it is a priority, we see people in front of us instead of problems. We see human beings, not hassles.

How do we make a genuine connection with everybody?

Smile and greet others with a warm welcome. Gordon Wilson managed one of the top Apple Stores in the United States and emphasized this rule with his team: "Approach customers with a personalized, warm welcome." Notice that there isn't a script the retail associates need to follow. Everyone who enters an Apple Store gets that warm welcome at the door.

Observe, then serve. What unexpressed emotions do you sense? What is the customer's demeanor? Sad? Rushed? Eager? Hesitant? Curious? Overwhelmed? What about their tone of voice? Angry? Excited? Pleading? Worried? Ho-hum? If you want loyal customers, you'll be watchful. You'll pick up these nuances of behavior and allow your empathy and connection to kick in while you match your own behavior to theirs.

Connect warmly with your eyes. It is intuitive that eye contact is essential to making a human connection, and while it's common sense, it's not always common practice. Further, if we want to make a genuine connection, we can soften our gaze and smile to add warmth.

Acknowledge others. Sometimes all it takes is a smile and a sincere "I'll be right with you" to connect with the customer. It doesn't require much, really. We can't show empathy or connect with customers if we don't acknowledge that they're standing right in front of us.

Be available, but don't hover. The best practice is to "make yourself available." Make warm eye contact, smile, and greet customers. Then let them know you're available by saying, "I'll be right over here if you need anything." Periodically, check in to see if they have any questions, but generally be aware of physical proximity, and avoid making them uncomfortable by being in their personal space.

To make a genuine human connection with your team, see the huddle exercise on page 60 in ***Leading Loyalty***.

Listen to Learn the Hidden Story

Every customer has a hidden story. By making a genuine human connection and listening to learn, we uncover their story, which then allows us to feel and convey empathy.

You may be thinking, "We don't have time to listen to every customer's story," and of course there's some truth to that. But FranklinCovey teaches, "With people, fast is slow and slow is fast." If we are sincerely interested in earning someone's loyalty, it often pays to slow down just a little bit and listen to learn.

The listening-to-learn behavior is rooted in the principle of empathy because it is about fully understanding and empathizing with the story of another. "Story" is defined as the person's emotions, knowledge, experience, and point of view—the narrative behind the need.

There are four things you can do to listen and learn:

Stay silent until the person has finished talking. Keeping quiet until the other person has completely finished talking takes discipline. But it can be mastered with practice, and it goes a long way toward communicating to others that you genuinely care about their thoughts and feelings.

Listen with your ears, eyes, and heart. "Listen with your heart" means you grasp the feeling as well as the content of what is said, and this behavior is rooted in empathy.

Don't worry about how to answer—focus on understanding. Whether it's their social conditioning, shyness, time pressure, or distraction, customers don't often chatter during simple transactions. Ask simple, friendly questions. "What's the occasion?" "What are you thinking of doing with this [product]?" Make the question as easy and sincere as you can in order to get the story.

Ask open questions, not closed or yes/no questions, and ask burning questions. Burning questions are those that are likely to be important, critical, and urgent. For example, "What problem are you trying to solve?" "What are you hoping to accomplish?" "What's the biggest challenge you're having with your deck?"

Rephrase what was said and check for understanding. Empathic Listening is the skill of reflecting both the content of the person's concern and the feeling he or she has about it. This process has the incredible ability to uncover what's really on someone's mind, and it's also a critical skill when there's emotion in the conversation.

A customer could come to you angry or excited about a purchase. A colleague could come to you frightened or enthusiastic about an upcoming change in the business. Observe how they feel; really listen to what they are saying.

Then, reflect what they've said in your own words. You might choose to reflect only the emotion or only the content of what they've said, or you might reflect both.

To listen to learn the hidden story with your team, see the huddle exercise on page 75 in ***Leading Loyalty***.

The Principle of Responsibility

Responsibility is the second of the Three Core Loyalty Principles. The best businesses are ready to take responsibility for our problems, our needs, and their relationship with us. They meet us at the door. They return a text immediately. They answer the phone. They empathize with us, do

the job we need done, then follow up to make sure it was done right. All of this conveys that we are important to them, and it goes a long way toward earning our loyalty.

Empathy is the principle of understanding other people so they feel valued, while responsibility is taking ownership for the actions that follow such an understanding to help people achieve their goals.

It's natural to wonder, are we expecting too much of front-line people by asking them to

- Take responsibility for the customer's problem?
- Foresee potential problems customers may have with their products?
- Find an exact fit with each customer's needs?

This depends on how we define the job of our people. If we see their role as taking responsibility and solving problems, then meeting the needs of each customer will come naturally.

A cancer survivor told of his experience with two very different nurses—one who displayed empathy, connection, listening, and responsibility, and one who did not. Notice the different impact generated by each experience:

"When the nurse standing in front of me told me I had lymph cancer, she went straight into the 'protocol' with precision and efficiency: 'Here's what you're going to do, what we're going to do, what's next, what you can expect. Do you understand?'

"Well, I didn't understand a word. I'd heard nothing after she said the word 'cancer.' I felt like my stomach had been kicked in and my life was over. I sat numb while the nurse finished up her instructions and left the room. I was shocked, alone, and, frankly, scared.

"Another nurse came in the room to take over my case. This second nurse sat down and looked at me. 'It's just the worst, isn't it?' And then she listened to me as I choked up and babbled and cried. I could feel that she felt with me. 'I'm going to stay with you all the way through this,' she said. And she did, week after week. One day during my treatment, I was lying there really depressed when she came in my room carrying scissors and some old magazines and said, 'Now cut out all the happy pictures and paste them on construction paper.'

"I thought, 'How stupid,' but we did it together and talked and laughed a bit. Then she took me down to the children's ward where we posted the pictures on the walls to cheer up the little kids with cancer. I felt almost human again."

The first nurse was doing her job—and was probably really good at efficiently handling patients—but clearly struggled to feel empathy for the patient and take responsibility for the client's need (which at that moment was to feel comforted).

By contrast, the second nurse connected immediately with his overwhelming need. She also recognized that her job was not just medical care but also emotional care. Her kindness, her ingenuity at doing the real job, and her willingness to follow up is what it means to take responsibility for the customer.

> Discovering the real job to be done allows us to make sure people achieve the solution or outcome they are really seeking.

To emphasize the principle of responsibility with your team, see the huddle exercise on page 92 in ***Leading Loyalty***.

Discover the Real Job to Be Done

We assume responsibility for the other person's goal or problem by discovering the real job to be done. We may be doing a great job at taking responsibility for the client in the moment, but if we rush to deliver the client's request, it's not entirely clear our solution is aligned to what that person truly needs. Discovering the real job to be done is the functional application that allows us, as responsible people, to make sure people achieve the solution or outcome they are really seeking.

In many cases, it's easy to assume we already know what the customer needs. We've heard the same question from dozens of customers before, so we just jump to the answer. Shifting our paradigm from one of "having the answer" to "discovering the need" can make all the difference in our ability to earn loyalty.

In order to discover the real job to be done, we need to do three things:

Be curious, not pushy. Most customers don't want to be barraged with questions. A simple "I'm glad to help you; let me just make sure I understand what you need so that we don't spend time on the wrong solution" is a great way to begin the conversation without seeming pushy.

Ask for context. A few simple, open-ended questions like "What are you hoping to accomplish?" or "What would you like this product or service to do for you?" or even "Why are you interested in this product or service?" will create a dialogue that quickly gets to the customer's job to be done.

Lead with the need. Look at these two sentences. How are they different?

"You'll want cushioned racing shoes."

"To do well in the upcoming marathon, you'll want cushioned racing shoes."

The mentality behind Sentence 1 is, "I have a product to sell you." The mentality behind Sentence 2 is, "You have a job to do, and this product will help you do that job." Maybe it doesn't seem like much of a difference, but actually there's a huge gap between these two mentalities and what they convey to the customer. "Lead with the need" is simple—it means talking about the need before you talk about the product.

To discover the real job to be done with your team, see the huddle exercise on page 105 in ***Leading Loyalty***.

Follow Up to Strengthen the Relationship

Those who have engendered true loyalty effectively follow up with their customers. It goes with doing the "job to be done." How can we know if we actually did the job right unless we follow up to find out?

Our service might have been just fine, but that doesn't mean it stayed fine. And we can always improve. Unless we're constantly upgrading what we do, the loyalty of our customers may be at risk. Follow-up is not hard if we really mean to be helpful.

As marketing expert Rebecca Wilson points out, follow-up is more than just a courtesy. It's an opportunity to build the relationship, and that may be the best reason of all for doing consistent follow-up. If we see a customer interaction as a one-off event, that customer isn't likely to feel connected to us.

There are five "A's" to remember when doing follow-up, especially in a conflict situation:

Assume others have good intent. If we assume unhappy customers are trying to take advantage to get "freebies," we will come across with an attitude that puts them immediately on the defensive. Instead, we need to give our customers the benefit of the doubt, even if temporarily. In showing empathy, we'll hear them out and do our best to understand their point of view.

Align with the person's emotions. This does not mean you should get angry if the customer is angry. "Alignment" means getting on the customer's side, even if temporarily. We need to make the emotional connection first and then deal with the job to be done. Use your empathy skills to make a warm connection and listen to learn. Stand with them, not against them.

Apologize with your heart and without a hint of defensiveness. A heartfelt apology not only melts anger, but it is also the right thing to do when we're at fault. Even if we're not at fault, we can practice empathy by feeling "with" other people and expressing regret for a bad experience. Getting defensive is a recipe for escalating conflict and never a good idea.

Ask how you can make things right. Maybe it's personal service. Maybe it's a free-rental day. Maybe you pick up the check. Whatever it is, offer it—the gesture might help win you the person's loyalty after all.

Assure the person you will follow through, then do it. Specify the job you will do and when you will do it.

Practice the same follow-up guidelines with team members. Assume that your team members have good intent, even when there's a problem. Certainly they don't come to work planning to mess up. Align with their emotions, even if temporarily—make sure they know that you understand their feelings. Above all, follow through on any commitments you make to one another.

To follow up to strengthen the relationship with your team, see the huddle exercise on page 119 in ***Leading Loyalty***.

The Principle of Generosity

Generosity, the third of the Three Core Loyalty Principles, is straightforward. Generous people are kind. They extend themselves to help others. They think of new, creative things they can do for customers and co-workers. They may not save pennies in the short term, but they earn big dollars in the long term. More than that, they love people and treat them like guests.

Generous people and organizations show kindness first; then they do whatever possible to give more than is expected.

Generous people and organizations show kindness first; then they do whatever possible to give more than is expected. Zappos helps customers find shoes they don't have in stock. Dick's Sporting Goods accepts expired coupons. These are just ordinary courtesies, but ordinary generosity can be extraordinary—and it can earn real loyalty.

What gets in the way of us being generous? Probably the biggest barrier to generosity is fear. Being generous can be risky. Customers might want more of our time and resources than we can give and still stay in business. Team members might demand more than their contribution justifies. In fact, a generous act can be as simple as opening a door, answering the phone on the first ring, or rounding out a transaction in the customer's favor.

To emphasize the principle of generosity with your team, see the huddle exercise on page 137 of ***Leading Loyalty***.

Share Insights Openly

Embracing the principle of generosity means constantly thinking about new ways to make life easier and better for others by contributing thoughts, feelings, knowledge, and innovative ideas. The necessity of this contribution calls for a key behavior—share insights openly. But to do so without the governing principle of generosity relegates this practice to complaints, criticism, and, in the ever-expanding world of self-service automation, indifference.

Here, information sharing is an aspect of coaching to help other people get better. A great insight isn't worth much if we can't share it effectively and get others to act on it. Here are some loyalty-building guidelines for effective coaching:

Recognize a job well done. People will be more open to our insights and coaching if we begin by letting them know we respect and recognize the good work they are already doing.

Ask permission to share insights. Something as simple as "Would it be OK for me to share a thought with you?" can be a good icebreaker. Asking permission shows respect and allows the other person to tell us if they are busy right now and when they will be free.

Declare your intent. State up front that you just want to share an idea to help them, not to criticize them in any way.

Be positive and encouraging. Our tone of voice and body language need to be warm and welcoming. The other person should feel we are on their side and only interested in their continued success.

Share information that helps people make better choices. An effective way of doing this is to ask thoughtful questions. Give the other person an opportunity to share their observations and feelings. Then, after listening to learn and showing empathy for their situation, share the insight you feel may be helpful.

To share insights openly with your team, see the huddle exercise on page 151 of ***Leading Loyalty***.

Surprise With Unexpected Extras

A client of FranklinCovey told this story: "Several years ago, our family dog was acting ill, and we took him to the veterinarian. We got the devastating news that our dog had cancer that was well advanced and that he would not recover. We were crushed. The staff at the animal hospital was overwhelmingly kind, and it was clear they knew how difficult this was for us. After the diagnosis, one of the technicians took Milo for a few minutes and brought him back wrapped in a blanket. We said our goodbyes.

"A few days later, we got a package in the mail. In those few minutes with Milo, they had taken a picture and an imprint of our dog's paw, framed them and sent the gift to us along with a note of condolence. It meant so much to our grieving little family."

In building loyalty, there are few spotlights as bright as the unexpected extras that make customers smile, glow, and rave about us. Sending personal messages, remembering names, experimenting with surprising new service ideas—these simple gestures endear us to customers and increase their loyalty. And they also bring meaning and joy to the work we do each day.

How do we surprise with unexpected extras? First, brain-

storm ideas with your team; then run thoughtful experiments to see what works. To brainstorm with your team, ask them, "What could we do for customers that we have never done before to make their experience better? How could we exceed customer expectations and show customers how much we really care about them?"

To generate ideas, think about things that potentially annoy or stress out customers or waste their time. When do customers hesitate or look confused? What questions do clients ask that they shouldn't have to ask? What would make them feel more valued and appreciated? These things do not need to cost a lot of money.

To surprise with unexpected extras with your team, see the huddle exercise on page 166 of ***Leading Loyalty***.

Implementing Loyalty

Your Legacy as a Loyalty Leader

Someday you will leave the job you're in now. How do you want to be remembered? How will things be different because you were there? In other words, what *loyalty legacy* do you want to leave?

Those who inspire true loyalty predominantly focus on the emotional intelligence of the heart. Employee engagement is about the heart, too. But in too many workplaces, there is no heart to be found. Employees feel little if any loyalty to their employers and have practically no emotional investment in their jobs.

Loyal employees produce loyal customers. So, how do you win the hearts of employees, who in turn can win the hearts of customers? By modeling, teaching, and reinforcing the ideas above. It's the most important thing you can do to boost loyalty, and it costs very little. Armed with those loyalty principles, practices, and tools, you can build a legacy of loyalty.

To emphasize your legacy as a loyalty leader, see the huddle exercise on page 175 of ***Leading Loyalty***.

True loyalty starts with you. A Loyalty Leader Mindset, based on the enduring principles of empathy, responsibility, and generosity, starts in your head. Then, as you live these principles each day, you teach others how to cultivate them in their hearts. As a result, employees will treat one another and customers the way they are treated.

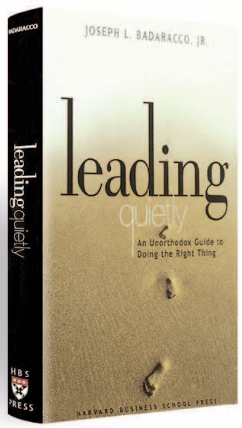
SOUNDVIEW Executive Book Summaries®



Joseph L. Badaracco, Jr.

An Unorthodox Guide to Doing the Right Thing

LEADING QUIETLY

THE SUMMARY IN BRIEF

Every profession and walk of life has its great figures, leaders and heroes, people who are exalted for their achievements and treated as role models. Yet, in day-to-day life, we often find that the most effective leaders are rarely public heroes; they maintain a low profile, yet they do what is right (for themselves and their organizations) inconspicuously and without casualties.

These are the "quiet leaders" Joseph L. Badaracco, Jr. studies and celebrates in his book, those whose modesty, restraint and patience are in large part responsible for their impressive achievements. Through four years of research, Badaracco identifies a set of common guidelines all quiet leaders follow, and notes how the seemingly small steps these leaders take often result in the biggest, most successful actions of an organization. Leading Quietly *offers a broader perspective on what constitutes responsible, effective leadership.*

What You'll Learn In This Summary

Among the guidelines of effective quiet leadership are the following:

✓ **Don't Kid Yourself.** Effective leaders are honest about how well they understand a situation, or how much they control.

✓ **Trust Mixed Motives.** In difficult situations, effective leaders expect their motives to be mixed and even confused. This conflict can actually be useful in solving problems or forging compromises.

✓ **Buy a Little Time.** If a situation is uncertain or hazardous, leaders may find it necessary to engage in stall tactics or organizational games, to gain enough time to think a situation through.

✓ **Invest Wisely.** Truly effective leaders count their political capital before proceeding in an uncertain situation and spend that capital wisely.

✓ **Drill Down.** Any given situation may involve a morass of technical, bureaucratic or legal details, all of which a leader should understand fully before proceeding toward a solution.

✓ **Craft a Compromise.** Quiet leaders see the crafting of creative compromises as an invaluable practical art and the essence of responsible leadership.

Don't Kid Yourself

Quiet leaders are realists; they see the world as it is, and, in the process, tend to have similar ways of viewing their professional environment. They recognize that anything can happen and, in the course of doing business, people and events can surprise, dismay and astonish. Things can turn out to be better or worse than expected, requiring leaders to move carefully and seize opportunities while they can.

Quiet leaders view the world as a kaleidoscope, rather than a fixed target or a well-mapped terrain; self-interest, shortsightedness and chicanery often tumble together with shards of loyalty, commitment and integrity. The churning is continuous, propelled by forces as far-reaching as the global economy, or as personal as human nature.

A Personnel Crisis at St. Clement's

In 1997, Rebecca Olson became CEO of St. Clement's Hospital in Omaha, Nebraska. Although there were several longstanding hospital executives who might have filled the role, Olson's management experience was viewed as just the panacea the hospital needed to turn around its troubling finances. Within days of taking office, however, Olson was faced with a troubling personnel issue — the hospital's vice president of operations, Richard Millar (one of the executives many thought would get the CEO position) was about to be the subject of a sexual harassment complaint.

Olson immediately went to work on the problem, engaging the hospital's lawyer to conduct an investigation, the result of which left little doubt in Olson's mind that Millar should be fired. Rather than letting him go, however, Olson decided to try to get Millar to resign. She prepared a detailed report on the investigation, spent hours with legal counsel and convinced key members of the board that Millar had to go. Finally, Olson presented Millar with the case against him and offered a severance package if he would resign. He grudgingly did, leaving Olson with the impression that her first big problem as CEO had been conquered.

A month later, however, Millar went to the press to complain about his "firing" and unfair treatment. Both Olson and the woman who initially charged Millar with harassment received threats, and the hospital's overall morale was rife with feelings of paranoia and persecution. Only after Millar took another job on the West Coast did things settle down.

Lessons from Rebecca Olson's Approach

Although the law was on her side, Olson took what many might term a "cop-out" method toward solving the hospital's problem, but which was actually an unsentimental, realistic approach, one that helped resolve the problem in a practical and responsible way. She saw the situation for what it was, and viewed people and situations in terms of four guiding principles:

- **Recognize that you don't know everything.** To survive and succeed in situations that require quiet leadership, you must be realistic and not exaggerate how much you really understand. Olson was new at the job when the Millar case was brought to her attention; she didn't know who her allies were, who was competent, or how the harassment fight was going to pan out. In a situation rife with uncertainty, you must likewise approach your problems with modesty and humility, and be willing to accept how much you don't know.
- **Realize you will be surprised.** Quiet leaders try to see a few moves ahead on the chessboard, taking great care to analyze, prepare, plan and think about unknowns before making judgments about them. Even after all this effort, though, these leaders still expect people and events to surprise them.
- **Keep an eye on the insiders.** Most organizations are divided into relatively secure insiders (those who wage a long, intense struggle for senior positions) and expendable outsiders (those who operate in distant, tangential orbits, usually under the watchful eyes of the insiders).

Don't Kid Yourself

(continued from page 2)

When Olson, an outsider with a position typically reserved for insiders, moved to get rid of Millar, she had to get the blessing from insiders on the board, building relationships and credibility in a short period of time.

● **Trust, but cut the cards.** For quiet leaders, trust resembles a fine piece of crystal—it is hard to create, very valuable and very fragile. They give their trust carefully and work hard to earn the trust of others, expecting them to do the same. Quiet leaders proceed very carefully with those whose trust they know they will never earn. ■

Trust Mixed Motives

Why do some men and women take action when the safe and sensible thing to do is get out of the line of fire? The answer is that sometimes people find they can't walk away from a person or a situation — something engages them, then they go to work, resolutely and creatively, and persevere despite inconveniences and other professional hazards.

Other times, people have basic instincts that are less noble and more complex. In other words, while we might care about others, chances are we care more about ourselves, our organizations and our jobs.

For a couple of reasons, mixed and complicated motives are, in fact, key to a quiet leader's success:

● **Mixed motives make for more effective leadership.** Quiet leadership is a long, hard race, run on obscure pathways, not a thrilling sprint before a cheering crowd. If leaders did not act with mixed motives — if they acted only out of a spirit of altruism and self-sacrifice — they would act less often and less effectively.

● **Sustained leadership usually means becoming an insider.** This gives leaders the opportunity to use power and influence responsibly, on many issues and over extended periods. They must, however, also look out for themselves, protect their positions and stay at the table so they can continue to lead.

Leaders who embrace complexity, both in the world around them and within themselves, are more likely to succeed at difficult everyday challenges than individuals who try to airbrush away those stubborn realities and mixed motives.

The Mixed Motives of Elliot Cortez

Elliot Cortez was an experienced marketing executive at a major pharmaceutical firm, who felt uneasy when his company asked its reps to start promoting a popular depression drug for other uses. While the company encouraged reps to discuss unapproved uses in sales meetings, Cortez limited himself (at least initially) to answering questions about these alternatives only when doctors raised those questions on their own. While he didn't want to break any federal laws barring such discussions, he also didn't want to limit his pay or promotion prospects.

In time, however, doubts crept in, and Cortez stopped answering questions about unauthorized uses, told several other reps about what he was doing and brought the issue up with his manager. He was afraid someone would get hurt by using the drug for something other than depression, but he was also concerned that, if he were reported for breaking any federal laws, his company would absolve itself of any responsibility for encouraging this marketing strategy, leaving him to face charges alone.

Lessons from Elliot Cortez's Actions

It is clear that Cortez acted out of a combination of altruism and self-interest, leaving us with several lessons to be learned from this case study in mixed motives:

(continued on page 4)

The Implications of Motives On Leadership

The best way to realistically judge the motives of leaders is to look at their implications; for men and women who want to do the right thing in difficult, shifting, or turbulent circumstances, four lessons stand out clearly:

✓ **Have a bias for action and don't get bogged down in the morass of motives.** Because motives are complicated, they can be the subject of much speculation and interpretation, and these discussions can go on interminably, leading to passivity and inaction. When this happens, it's time to take a break, talk with someone and then move on to a plan of action.

✓ **Don't think you are disqualified or exempt from exercising leadership because your motives are mixed or complicated.** In order to really understand why people do what they do, we have to be realistic and see others and ourselves as we really are. Recognize character and motivation are fluid and complicated, and do not be afraid to act.

✓ **Trust yourself and your motives, especially when they pull you in different directions.** Internal conflicts are often telling you something important. If you can stay calm when everyone else is confused and upset, you may not really know what's going on.

✓ **Before taking on a serious ethical challenge, be sure you really care.** Quiet leaders get off the sidelines and take action because they care about helping others AND because their interests are at stake.

Trust Mixed Motives

(continued from page 3)

● **Stop playing "Gotcha."** When discussing others, some people like to counter noble motives with low ones, or good deeds with bad ones, in order to cut the subject of the conversation down to size. This game of "Gotcha" assumes that genuinely ethical people act for reasons uncontaminated by their own self-interest; in reality, however, this is rarely the case.

● **Be sure you really care.** Successful leaders do not merely think they should act; they feel they must. They need to test the strength of their motives, as well as the morality of their motives. In Cortez's case, his self-interest was fused with a concern for others; had he not had that concern, he would have been less likely to act.

● **Don't try to save the world.** Some might ask why Cortez didn't do more to change the way his company was pressuring reps to act. Because his motives were mixed, he focused on what was reasonably attainable and avoided making a grand gesture that would have been less effective. He recognized that he had been dealt a modest hand, and he played it carefully, prudently and honorably. ■

Buy a Little Time

When faced with a challenge, effective leaders rarely rush forward with "The Answer"; instead, they often look for ways to beg, borrow and steal a little time. They recognize the positive effects time can have on a difficult situation:

● It lets turbulent waters settle and clarify, giving people the opportunity to discuss their situations with others and think things through on their own.

● It gives people a chance to assess their real obligations, giving sound instincts a chance to emerge.

● It gives people the opportunity to observe and learn, understand the subtleties of interaction and look for patters and opportunities in the flow of events.

The dynamic, unpredictable nature of our times often makes it impossible to instantly design answers for fluid, multi-faceted problems. You don't want to miss the options, nuances, contingencies, ripple effects or pitfalls that might have greater effect on you further down the line; buying time gives you the chance to see all those things, by creating a buffer zone before you make a decision or take action.

How to Buy Time

Buying time sometimes means playing some basic organizational games, taking steps to delay action, dissipate pressure, or divert the attention of superiors who might be breathing down your neck. No one views these games as the ideal ways to deal with problems; at best, they are a second or third option. But responsible managers recognize the need, on occasion, to play these games to buy the time required to make the right decision.

Games Managers Play

The games that managers play fall into two categories: quick fixes and strategic stalling.

Quick fixes are the small things that enable you to deflect or delay something or someone. They involve few risks, and buy just a little time, but they can be effective. They might include the following:

● **"I'm booked; can I get back to you on that?"**

● **"The server has been losing my e-mails."**

● **"Look, I'm late for another meeting."**

● **"Can we settle this in the morning?"**

In most cases, these tactics also have the advantage of being true or close enough to the truth; most people are indeed busy, for example, and computers are notoriously unreliable.

Strategic stalling involves tactics that buy large amounts of time — increasing the challenge and level of risk proportionally. In such cases, the rationale for a significant delay should be substantive and should look like and be something that an effective manager would do in a particular situation. Some typical strategic stalling techniques include the following:

● **Get the Staff Involved.** Ask for a meeting with a staff members outside your normal operations — human resources, for example — to learn about the policies, procedures, or processes that must be addressed in order to proceed with a course of action.

● **Dot I's and Cross T's.** Once you understand the full set of requirements and procedures you must follow to complete a task, you should begin to comply with them—slowly, carefully, bureaucratically, asking questions along the way, just to ensure you're getting things right.

● **Scenario Planning.** Make sure you're considering all possible scenarios, evaluating all options, gathering all relevant data, putting contingency plans into place and getting the right people involved. Such planning tactics can add copious amounts of time to any endeavor.

● **Communicate by Pony Express.** Select slower means of communication, such as face-to-face meetings, using regular ("snail") mail rather than voicemail, voicemail rather than e-mail. Make sure all steps you take in the process are documented, under the guise of protecting the company against further hassles, lawsuits and the like. ■

For an example of a successful quick fix, go to:
http://my.summary.com

Invest Wisely

Before effective leaders get involved in risky or uncertain efforts, they check to see just how much political capital they have — an intangible entity consisting mainly of the person's reputation and relationships at work, the perception others have of that person. When quiet leaders take action on a difficult problem, they pay close attention to how much of this intangible capital they are risking and the likely returns on their investment.

Quiet leaders know that problems that seem simple and familiar are sometimes risky and complicated; hence, before they put their political capital at risk, they think about those risks and the possible rewards, considering what course of action would have the greatest possible impact with the least risk and cost. In the best case, doing what they feel is right will improve their reputations and relationships.

Three Key Questions

The risk-return approach involves asking and answering three questions:

- **How much political capital do I have in the bank?** This question is not easily answered, because political capital is so intangible, and so often not connected with the quality of one's work (how many merely adequate workers get advancements over better-qualified counterparts, simply because they have a stronger reputation?). Your reputation is enhanced by getting consistently excellent results, and by getting them the right way — by being a team player, "playing the game," and avoiding moral grandstanding.
- **How much political capital am I placing at risk?** Does the situation require that you stake your reputation on something, or risk losing face in front of your peers and/or superiors? Do others have their reputations or relationships on the line, or in some way connected to the decisions you make? The answers to these questions help leaders determine how much effort to inject into a course of action, or how loudly to speak against or in favor of something.
- **What are the likely rewards, for others and myself?** This question asks people to think clearly and specifically about the returns they are seeking on their investment. This means one must make choices and set priorities, just as investors have to choose between short-term and long-term stocks, or between risky, high potential stocks and more stable, secure ones.

This question is largely a matter of probabilities— how likely are you to achieve what you're setting out to accomplish? How complicated are the motives and actions of others involved in the situation, and how likely are they to be amenable to your actions?

The Unwanted Perfect Score

Captain Jill Matthews was company commander of a headquarters group of 75 soldiers in the Airborne Corps of the U.S. Army. The staff officers who reported to her were responsible for particular activities such as operations, intelligence and supply. Matthews' group supported five battalions that maintained transportation equipment and transported troops.

Captain Matthews' group underwent an Annual General Inspection (or AGI) that covered every area of Matthews' responsibilities — vehicle maintenance, safety, barracks maintenance, arms room controls and supplies. It was in supplies accountability and maintenance that Matthews knew her operation had its greatest deficiency and, although she and her staff worked hard to overcome it, she figured it would be graded poorly on the AGI.

Matthews was surprised, then, when the supplies operation was given a perfect score on the inspection. Her first sergeant told her why — inspectors had merely entered the supplies warehouse, filled out their score sheets and left, without truly inspecting anything.

Matthews then faced a dilemma — accept the perfect score and stay quiet about the bogus inspection, or report the problem to the inspector general and risk hurting her career, as well as those of her battalion commander, her sergeants and the inspectors.

She reported the incident, and, instead of getting into trouble, received all assurances from the inspector general that the incident would be investigated. She could also keep her company's perfect score, on the condition that she continue to work on her supply area's problems.

Matthews risked a great deal of political capital on reporting the incident, getting very little in return— there was never any proof that the inspectors who passed her company were ever investigated; in fact, her reporting the problem might have simply driven the shoddy inspections further underground. Her courage, conviction and quiet leadership cannot, however, be denied.

Unfortunately, the complexities and obscurities of organizational life can sometimes make the answer to this question difficult. ■

Drill Down

Something important is missing from most stories of heroic leadership: the technological and bureaucratic complexity that pervades life and work today.

The absence of this attribute simplifies the stories we hear, making them more vivid and powerful at the cost of realism and relevance. All around us, life and work are rapidly subdividing into ever more focused spheres of specialty. Because of these developments, people working in organizations face problems made more complex by technological, bureaucratic and legal issues. Under these conditions, stories of heroic endeavors are of little use to leaders; the basic need isn't to summon courage, moral vision, or the corporate credo — it is to understand what is really going on.

Four Guidelines

Quiet leaders know that moral commitment and high principles are no substitute for immersion in the complexities of a particular situation — they recognize that a responsible effort to execute their duties as decision makers can only happen when they possess the specialized knowledge required to inform those efforts. They drill down into complex problems, using four basic guidelines:

● **They remember their responsibilities.** Complexities cannot obscure responsibilities; corporate and political history is rife with people who use complexities to hide their own nefarious actions [see sidebar].

For people with sound ethics, complexity creates another problem: it can lead to fatigue and confusion. Sorting out complicated issues is draining work, and often places greater responsibilities on the ones who delve deeper into the issues (since they are likely the only ones who understand it in any great detail).

Ironically, this responsibility often leads to further complexity. When a problem is complicated and technical, it is tempting to think that the solution lies somewhere in the details — if only you could find the right formula or read the fine print correctly all would be well. However, once you grasp the full realm of complex issues inherent to a situation, you must still make choices and/or commitments, then take action. Understanding alone does not relieve you of that responsibility.

● **They work hard and continuously.** Drilling down can be hard work. Understanding complexities in technological, bureaucratic or legal matters may require gaining valuable perspectives from experts in other areas. It may require taking your knowledge and your need to other, higher, layers of leadership in your company. It may require revisiting ideas or policies you already know, or reinterpreting them in new contexts.

Drilling down can cause a leader to be obsessive, a trait that often enables people to bore deeply into complicated, intimidating problems and emerge with ways of seeing things that they never anticipated.

● **They enlist the assistance of others.** Effective leaders avoid the impulse to be a hero and resolve complex problems on their own. No amount of obsessive behavior can substitute for training, experience and expertise. People with training and experience simply know more about particular problems; they also tend to have a "feel" for problems, an intuitive sense of what is really happening and how to search for answers.

● **They are not afraid to back off.** Sometimes a problem is so complex that no amount of reflection, analysis, or consultation can provide a solid basis for action. In these cases, the responsible thing for leaders to do is to wait, buy more time and try to get the problem into the right hands. This is not another way of saying leaders should shirk their responsibilities; it is, quite simply, common sense. If you're in over your head, do not be afraid to back off.

Are You Over Your Head?

Some signs that you might be in over your head include the following:

● **Consultation leads nowhere.** When your experts can't agree about what's going on and what can be done, you must proceed with extreme caution.

(continued on page 7)

When Scoundrels Use Complexity to Hide

Complexities should not be allowed to obscure leaders' responsibilities. One popular example of this is Michael Milken, the legendary financier, felon and philanthropist. Some of Milken's financial transactions were so novel and complicated, he was often the only person who truly understood their intricacies. This enabled him to bury violations of securities laws so deeply, it took investigators years to unearth them. In this instance, Milken showed just how well complexity can serve as a smokescreen for wrongdoing.

In another, less publicized incident, a talented but unscrupulous chemist in charge of handling quality control for his company, regularly faked the results of important tests required by the Environmental Protection Agency (EPA). Even though his work was checked by both the EPA and his company, he was able to get away with his actions for years, simply because he understood the tests and their underlying science better than anyone else around him.

In short, complexity creates elaborate mazes, with lots of places for skunks to hide.

Drill Down

(continued from page 6)

● **Inability to simplify an issue.** The odds of succeeding at almost anything are much lower if you cannot break a problem down into simple, easily understood issues or facts.

● **Conflicting instincts.** When you are pulled one way and then another on an issue, barreling forward is the wrong thing to do.

● **The last piece doesn't fit.** If you have a nagging detail that simply will not be resolved on its own, make sure you get it nailed down before proceeding. ■

Bend the Rules

Bending the rules isn't something we associate with responsible leadership; real leaders, according to the conventional view, obey the law and play by the rules, because they see it as their duty and it sets the right example for others in their organization. Day-to-day life situations are, however, often more complicated, revealing cases in which strict adherence to the rules may do more harm than good.

Seize Opportunities

Because the world is ambiguous and uncertain, quiet leaders must respond in a particular way. They typically are reluctant to break the rules, but they don't want to obey them mechanically and cause harm. In these instances, they look for imaginative or creative ways to bend the rules without breaking them. When they find a way to bend the rules, they seize the opportunity and use it to uphold their values and commitments. They all tend to follow a certain set of guidelines:

● **They take rules very seriously.** When quiet leaders find themselves in complex ethical dilemmas, they follow two modes of thought. One tells them to take the rules very seriously, and the other tells them to look for ways to follow the spirit of the rules while simultaneously bending them. While less ethical people cast rules aside, quiet leaders obey them because of their strong moral weight. They also know the consequences of violating rules, and avoid violations in order to protect their reputations, networks and career prospects.

● **They look for "wiggle room."** Quiet leaders realize that following rules sometimes can have harmful results, so they try hard to find some room to maneuver, doing so within the boundaries set by the rules. Life seldom presents challenges and problems in the form of stark, either-or choices. Yet, rules also provide security, a needed commodity in certain stressful situations. In these cases, it takes courage and determination to find that "wiggle room" and do the right thing, even though it may mean bending a set policy or guideline.

● **They practice entrepreneurial ethics.** Sometimes, following either guideline can present a leader with problems. Some people in leadership positions hide behind rules, evading responsibility by taking the rules too seriously. For quiet leaders, taking the rules seriously doesn't mean treating them as a paint-by-numbers exercise. When things get complicated, quiet leaders take initiative, trust their creativity and work hard to create room to maneuver. They approach ethical problems as entrepreneurs, not clerks, enabling them to address the multiple levels and deep intricacies of many day-to-day problems. ■

Nudge, Test and Escalate Gradually

Despite their best, most careful efforts (such as drilling down or checking how much political capital they have), a leader's commitment to solving a problem might lead them into situations in which the path ahead is far from clear, leaving them with no choice but to improvise to find a solution. This means finding ways to nudge, test and carefully escalate their efforts. Instead of trying to crack the case, they look for ways to work the problem.

Prudence and Modesty

There are several reasons quiet leaders take this approach. One of them is prudence — they would rather not risk their careers and reputations by betting all their political capital at once. Another reason is modesty — quiet leaders often do not believe they are smart enough to answer difficult questions solely by thinking about them, so they drill down, gather facts, perform analysis and look for creative ways to find room to maneuver.

In fluid situations with many contingencies, the solutions to problems aren't always readily apparent. In these cases, successful leadership depends on learning, and learning, in turn, involves taking the right small steps, getting a sense of the flow of events, hazards to be avoided and opportunities they can exploit.

Nudging, testing and escalating gradually are often the best and fastest ways to make the world a better place. At some point, however, nudging and patient escalation must come to an end, and choices must be made. Even when the moment of choice arrives, quiet leaders continue to avoid taking strong stands, preferring instead to craft compromises that work. ■

To learn how Charles de Gaulle nudged, tested and escalated, go to: http://my.summary.com

Craft a Compromise

When principles are at stake, compromise is morally suspect; it smacks of mutual back scratching and the transactions of politicians and lobbyists in smoky rooms. People with strong values don't wheel and deal on matters of principle and deep conviction.

The ethical problem with compromise is that it seems to be basically a matter of splitting the difference, as a salesperson and a customer would in a negotiation over a product (each side has a starting offer, from which they negotiate a deal somewhere between the two points). When important principles are at stake, however, such an approach seems wrong; people should, in other words, do the right thing, not half of it.

Quiet leaders accept this view of fundamental moral principles, but they don't find it particularly useful in most situations. They know there are times when matters are clear-cut and a basic principle must be defended; in these cases, most men and women will draw lines they will not, under any circumstances, cross.

Quiet leaders view these approaches as last resorts, because they view compromise in a different light. They regard them as challenges to their imagination and ingenuity and as occasions for hard, serious work. They believe that crafting a compromise is often a valuable opportunity to learn and exercise practical wisdom, and to defend and express important values in enduring, practical ways. The other guidelines that quiet leaders follow are all critical steps toward this final goal of developing workable, responsible ways to resolve everyday ethical problems. Crafting a compromise is often the best way to do this.

Four Critical Factors

There are four critical factors toward achieving compromise:

- **Pragmatism.** The first guideline of quiet leadership — "Don't Kid Yourself" — applies when forging a compromise. In any given situation, there might be a wide range of uncertainties, risks and interests between you and the party or parties at the other end of the compromise. Recognize these things and prepare to deal with them.
- **Honesty about conflicting motives.** Responsible compromises begin with courageous honesty, and this honesty often reveals conflicts of feelings and interests within a person's heart. These conflicts can create biases and preconceptions and, as a result, they must be addressed and overcome. Such conflicts can also help people understand, fully and realistically, the problems they confront. This knowledge keeps people from sweeping way the complexities of a problem and succumbing to an oversimplified, one-sided cure.
- **Refusal to accept either-or choices.** Quiet leaders recognize the ethical stakes in the situations they face, but they move beyond thinking about their situations in purely ethical terms and see them in another light — as challenges to their imagination, managerial skills and ability to navigate difficult, sometimes treacherous waters.
- **Rethinking, reimagining and recasting.** Compromises sometimes hinge on a leader's ability to get involved parties to see the situation from a different angle, and to use that new line of vision as the basis for redefining the issue and achieving compromise. When Abraham Lincoln gave his famous Peoria speech against extending slavery to free territories in the United States, he recast the entire issue of slavery, moving it from the ethical plane to the economic one, opposing it as an unfair competitive practice rather than a morally wrong action. By recasting the issue and avoiding an either-or moral presentation of it, he achieved buy-in from a core economic constituency, thus enabling him to push toward winning the moral battle. ■

To access a copy of Lincoln's Peoria speech, go to: http://my.summary.com

King Solomon's Compromise

When King Solomon had to decide which of two women was really the mother of an infant they both claimed to be their own, he proposed cutting the child in two. The baby's real mother cried out at this horrible idea and offered to give up the child. Her reaction told the king everything he needed to know. He understood that people with strong values do not haggle with others when principle and conviction are at stake.

King Solomon's actions teach us additional lessons about leadership and compromise. He was the leader of his community, a man trusted with the welfare and safety of his people, yet he had no way to determine which of the two women was truly the baby's mother, and an error on his part would forever separate a family. He seemed doomed to make a momentous decision by flipping a coin.

He could have tried to fake it by pretending that his ruling was grounded in fact and law, but he would know the truth. Moreover, others would suspect or know what he had done, undermining his authority and the system of justice.

Fortunately, King Solomon did not hide behind a show of judicial or kingly authority, nor did he look for some technicality on which to base a decision. He dug deeply into the problem, moving beyond the legal and factual issues to create a creative, ingenious response. As a result, one woman revealed her bitterness and detachment, the other her love and devotion. Moreover, there were no doubts about the king and the community's system of justice.

THE SUMMARY IN BRIEF

No country or company was equipped for the internet bubble collapse of 2000, 9/11, the global financial crisis, or the COVID pandemic, which offered a discouraging education around the failures of modern-day leadership. In 2020 alone, the world experienced the worst public health threat since the 1918 flu, the global economy saw its sharpest downturn in decades, and the US witnessed the largest social disruption since the 1960s. The travel industry imploded, China saber-rattled, disinformation collided with facts, and Capitol Hill was assailed by a mob.

The business landscape of today is so foreign from that of two decades ago that figuring out how to deploy business and leadership lessons and skills needs to be reimagined and retaught. We are living in a new normal or, rather, a new abnormal. Traditional leadership models no longer work due to an intersecting set of tectonic, permanent fissures that have come together to reorganize what it means to do business today. In ***Leading Through Disruption: A Changemaker's Guide to Twenty-First Century Leadership***, former Dow CEO Andrew Liveris highlights the biggest issues businesses and business leaders face today, along with a few possible solutions to bring us strongly into the future.

IN THIS SUMMARY, YOU WILL LEARN:

- What ESGs are and how business metrics are tied to them.
- How societal factors call for Inclusive Capitalism.
- Three leadership lessons to take into 2050.
- Why geopolitics and government matter more than ever.

The New Role of ESG

The successful stewardship of a twenty-first-century enterprise needs to exist alongside the stewardship of our communities and the Earth. If they haven't already, today's enterprises need to go beyond compliance and adopt forward-looking ESG metrics that create sustainability and social standards for the rest of the world. Society today demands nothing less.

ESG stands for the three separate pillars of environmental, social, and governance, but it's also widely used as a synonym for sustainability. Two decades into a new century, we are at a cultural, social, and demographic inflection point.

Companies are under growing pressure to establish sustainable enterprise-wide visions and strategies that benefit the environment and society, while maintaining ethical and transparent corporate governance. From the perspective of all its stakeholders, a company's focus on sustainability, diversity enhancement, and exemplary governance affects its license to operate in this century.

The social license to operate, or SLO, refers to the ongoing acceptance of a company's methods, practices, and procedures by employees, stakeholders, and society. A company's SLO builds up incrementally over time. At its foundation is trust, and consistent values and ethics.

Today, companies' SLOs are under close review. The era of shortcuts and abstract promises is over. Society is demanding zero carbon, zero fossil fuels, and more equitable global access to education and opportunity. Today's businesses need to respond more aggressively.

Profit and purpose have converged. Doing well *and* doing good should be in the DNA of what it means to be a leader. That means that one challenge of present-day leadership is combining "doing good" with more pragmatic concerns, including ensuring profits and finding science-based solutions that benefit humankind.

The New Common Good

Inclusive Capitalism is a policy movement focused on creating long-term value not just for shareholders but for *everybody*. Its premise is that business has a critical, if not the *most* critical, role to play in creating equality of opportunity and access across all levels of society, regardless of people's backgrounds, genders, ethnicities, races, religions, ages, or economic standing.

Inclusive Capitalism starts with the notion that capitalism, and the business world in general, has for way too long been narrowly and selfishly focused on profits and the enrichment of a single entity, that is, the shareholder.

In an era of widening inequality between the rich and everyone else, society is insisting that an enterprise's license to operate means distributing wealth more equitably across all levels of society. Business is being asked to address the bigger role capitalism plays, redress past mistakes, and do better in serving *all* levels of society, so that capitalism works not just for the few but for the many.

Countries need to grow and maintain capitalism by allowing entrepreneurs to access finance to create new goods, products, and services. But governments and businesses also need to provide access, latitude, and greater opportunity to citizens around the world who through no fault of their own were born into the bottom half of the social and economic ladder.

In a world where poverty is a worsening issue in both western and developing countries, missing today are metrics that quantify not just profits and ESG factors but *societal factors*. This means the captains of industry and government must come together to create a new collective bargain that considers all the stakeholders in our society.

The words equality, accountability, and responsibility need to be embedded in every company and boardroom, not as narratives or forgettable words but as practical measurement tools.

This doesn't mean that profits, or shareholders, will cease mattering, because nothing could be further from the truth. Business must take up the cause of fairness and equality, though not at the expense of the shareholder or the many millions of people who have emerged out of poverty in the past century thanks to capitalism.

Inclusive capitalism should not reward stakeholders at the expense of shareholders. Every stakeholder in a company's value chain exists to ensure it's right to operate as a business.

Leadership Lesson 1

The Leader You Think You Are Going to Be Is Different from the Leader You Have to Be

People who arrive at a leadership position–whether they're CEO or prime minister–got there thanks to the same foundational skills they end up using in those jobs. Those skills

History tells us that strong leaders transform themselves into the leaders they must be when the moment requires it.

and capabilities may be content rich, but they haven't been tested yet in unfamiliar and unpredictable contexts of this century's 360° bandwidth model.

History tells us that strong leaders transform themselves into the leaders they must be when the moment requires it. They do this by narrowing their focus on the fight before them. It's not about the war itself or about any future battles. If they don't win the fight they are currently fighting, there might not be another.

It's tempting for inexperienced CEOs to behave in ways they think leaders *should* act. This is counterproductive and a time waster. Hit the ground running. Respect your company's past, but don't let corporate tradition slow you down or compromise your vision or strategy. Don't discount your own intuition and emotional intelligence. Trust your judgment. Be the leader you *need* to be, not the one you *expected* to be.

The New Role of Geopolitics

Hindsight, as they say, is everything. What if we could apply the lessons of hindsight to this century's geopolitical stage? In the case of China, and its growing strength and influence, we can. Most analysts and experts agree that the 21st century world stage will be dominated by two powers, the US and China, who together represent roughly 42 percent of the world's GDP.

Of all the tectonic shifts, one of the most pressing is the geopolitical evolution–and revolution– likely to play out in the next few decades. Less obvious than two global powers staring each other down is the formation of a new shadow map of regional alliances and trading blocs that form a labyrinth that today's leaders and businesses must understand and navigate.

We are, in short, in the early stages of a new world order that will define the world going forward. Unlike the world of the previous century, this one is defined not by big continents but by relationships based on shared value systems. Yet most businesses and CEOs don't know how to make sense of these alliances. Many present-day institutions were built in the 20th century *for* the 20th century. More recently formed companies have been slow to consider what the effects of a transformed geopolitical chessboard will have on their enterprises. Nor are governments able to offer guidance or a way forward. All companies and leaders are on their own.

Some of the questions CEOs should be asking themselves nowadays are:

- Who are our partners?
- Where will we keep our technology?
- How do shifting regional alliances and trading blocs affect our workforce as it relates to immigration?
- With whom should we ally, economically, politically, militarily, and even within our own country and communities?
- Against a backdrop of political and cultural division, should we as CEOs remain agnostic, or should we take a stand?

As the Russian invasion of Ukraine in 2022 taught us, these are some of the conversations businesses and leaders need to be having *now*. First, leadership must *embrace reality*. *Reality* in this case means that leaders recognize the qualities and characteristics of this moment in time. Next, is to begin to uncover solutions, not based on last century's lobbying and advocacy, but on *strategic insight*.

CEOs are being asked more and more to take political and moral stances in public, both in the US and overseas. CEOs of inclusive organizations–that means everyone–need to realize that this is a new facet, and description, of contemporary leadership.

The New Long-Termism

Companies, executives, investors, and boards say the same thing: the long view matters. Seldom, though, do they follow through. The prospect of weaker quarterly performance persuades most companies, leaders, and investors to put aside longer future growth in favor of shorter term gains.

Whether you are a company or a country, it's not a question of choosing between short-term metrics and long-term strategies. It's not either/or, it's *and*. Put another way, companies and leaders need to build for the long term while executing on their short-term objectives. To many companies, this probably sounds like a stretch. but it *must* be done.

Most of today's businesses are busy creating product lines or transitioning their model from yesterday's products to tomorrow's innovations. To do that, naturally they need to invest in long-term R&D. But few investors are willing to tolerate a time span that is long and indeterminate.

Investors are both unwilling to support industries and enterprises as they seek to invest in innovation and R&D and *demanding* that those enterprises align with today's (and tomorrow's) ESG metrics. It's a conundrum.

One solution? The metrics that determine whether an organization is successful must change. Instead of ROI on invested and tangible capital, leaders of today need to contemplate the long-term capacity of their enterprises to create sustainable businesses via their investments. The behavior of boards and CEOs must be altered to do this.

Boards need to ask themselves three questions:

- First, are ESG metrics embedded in our enterprise scorecard and are the CEO and management reporting those metrics to the board at every meeting?
- Second, are our company's ESG metrics expressed as *financial* outcomes, including all long-term costs and investments associated with those outcomes?
- Third, does our board include one or more directors who bring long-term thinking, strategic planning, and strategic direction to our organization?

CEOs need to ask:

- Have you shifted earnings reports to twice a year versus every quarter?
- Are you educating asset owners and asset managers without being told to?
- Is your enterprise committed to a zero-impact-on-the-planet strategy, and will you hold it accountable via the appropriate allocation of capital?

Corporations, asset managers, and asset owners alike have begun to recognize the convergence of values and value–the idea that combining strong values with serving the interests of all major stakeholders maximizes financial value in the long term. Longer-term ESG principles need to permeate a company's strategy.

The New Role of Boards

Today's business leaders find themselves operating in a society that requires more from its institutions than the baseline enrichment of shareholders. Boards today have no choice but to be diverse and inclusive, made up of individuals who reflect a diverse society. The businesses that will survive and thrive in the next few decades are ones that serve the interests of *all* their stakeholders and that allow board members to govern as *owners*.

Among the factors that will help are new models of leadership, new institutions, new ways of running those institutions, and new individuals entering government and serving on corporate boards. Enter the Enlightened Board, who have a few key characteristics.

Depth

The Enlightened Board consists of verticals and horizontals. *Verticals* are board members with deep expertise or experience in a single subject, for example consumer markets or financial portfolios. *Horizontals* refer to individuals whose expertise is more widespread and encompasses a wide variety of subjects and areas.

Size

Most boards have too many people on them. The Enlightened Board should consist of eight to ten members, though in some cases, a company's desire for inclusiveness can push that number up to ten or twelve.

Rigor

Enlightened Boards should be made up of directors who can take the same heat in the medium to long term as the CEO does. Board members also need to do the work. They should know about the business and the sector in depth.

Inclusiveness

It's time boardrooms more accurately resembled the makeup of the world in which they operate. CEOs have no choice but to incorporate the historically excluded percentage into their thinking, perspective, strategy, and vision. Quite simply, it is what's happening today in society, and incorporating it gives CEOs additional bandwidth on everything their companies need to consider now and in the future.

Markets aren't a substitute for the long-range, strategic thinking that is historically the responsibility of government.

Blend

Enlightened Boards should be a well considered blend of the company's stakeholders. If a board is engineered exclusively for the financial community, employees, customers, governments, and members of the community will end up short-changed.

Long-Termism

CEOs must be agile, adroit, and knowledgeable enough to manage multiple layers of the board that represent all the company's stakeholders while never forgetting that the board is a hitch point that connects company executives and stakeholders. It is the CEOs job to determine financial priorities and manage board members accordingly.

The Enlightened Board may not yet be ubiquitous, but establishing it will go a long way toward creating what the enterprises of this century have no choice but to become.

Leadership Lesson 2

Never Let a Good Crisis Go to Waste

What sets a winning institution apart in the end is the strength, depth, and integrity of a company culture. A company and its leaders must create a culture that allows the business to evolve *away* from its founder or founding family and *toward* the leader who is creating the culture of tomorrow. Not the company or the culture of ten, twenty, or fifty years ago, and not even the ones from today.

Many companies have incumbency and strength. Yet time and again, they find themselves literally losing their right to operate as new, unplanned-for, and unforeseeable paradigms–environmental, regulatory, and market-based–hit them from all sides.

As most people know, Western democracies aren't big fans of top-down anything. Market economies believe markets should drive all the answers and facilitate all productivity, efficiency, and innovation. Yet the tectonic shifts we have witnessed in this century, whether connected to climate, social justice, equality, trade, or energy, make it painfully clear that the playbook from last century no longer applies.

A crucial difference in this century is that humans have a new digital toolbox at our disposal. And we are increasingly making sure that the things we invent, make, and sell don't end up destroying the planet we all share. If you are able to accept this premise–that inventing, making, and selling is the core economic activity of humans–how can we design a future to facilitate an advance of our own DNA?

We need to design contemporary, state-of-the-art factories in buildings that are operationally best in class, that don't damage the environment or our fellow citizens, and that deploy technology and artificial intelligence, with both firmly in the control of human beings (and not machines).

Governments have a strong role to play in this ecosystem by developing systems that ensure that everyone in society has equal access to opportunity. This is how to install top-down rules taken from an industrial age and put them to work in a digital era.

The New Role of Government

In general, companies and CEOs dislike the idea of government interfering in the economy. Most leaders believe that the best and only way to trigger growth and jobs is by letting markets rule. Even if you are a believer in the power of free markets, and don't advocate for *bigger* government either, that doesn't mean there aren't areas where markets are out of their depth.

Markets aren't a substitute for the long-range, strategic thinking that is historically the responsibility of government. Government alone creates the policy frameworks that allow businesses to do what only they can do, which is creating value, jobs, and growth.

What we need is the formation of a smarter, more thoughtful government that provides both homegrown and foreign-based companies with some degree of predictability and certainty if they choose to invest in the US. One of government's roles is to enable businesses to realize prof-

its *and* be responsible citizens *and* consider every possible constituency *and* ensure no one is left disadvantaged or unprotected. In this century, being pro-government is a requisite for being pro-business. Instead of *hands-off* or *hands-on* government, an ideal solution is *hands-together* government.

This requires a new mindset. Business and government must put aside their mutual suspicion and form a partnership devoted to serving the greater good and the national interest. First, the public and private sectors need to agree on what the framework might look like. Second, they need to start a dialogue in Washington, D.C., and across state capitals. Elected leaders must assume good faith on the part of business leaders and vice versa. History and countless new business models and innovations born with the help of government investment shows us this makes all the difference.

Leadership Lesson 3

Disrupt Yourself Whenever Possible

Today's companies can be dethroned in a second, for any number of reasons. The time-tested idea of leaders and companies learning strategy by *doing* simply cannot stand up against the realities of doing business in this era. This century requires leaders who are comfortable with, if not exactly overjoyed by, rapid disruption.

Whether related to cyber, blockchain, artificial intelligence, cryptocurrency, or augmented reality, numerous present day concepts and the language we used to describe them didn't exist a year or two years ago. This adds complexity to what it means even to *engage* in disruptive innovation.

What should a leader or a business do to survive and thrive in this environment? The first, somewhat obvious, piece of advice is to identify the problem or issue at hand. Does it relate to ESG factors, government regulation, geopolitical considerations? Recognize it. Define it.

Next, ask, "What tools, or even what toolbox, is needed to deal with this problem?" Leaders shouldn't underestimate themselves or think that companies over a certain size are too slow to wage battle against crisis or change. Leaders need to disrupt *themselves*.

Persevering in a leadership position has never been harder. It's little wonder many CEOs call it a day after only a few years. Remember, most CEOs are surrounded by sycophants who want only to keep their own jobs and tell you what you want to hear. The burden is on you to transform, refresh, and disrupt yourself, however which way you can.

The New Role of Science

Today, the language of science is lost to most of the people who could benefit most from the discoveries that improve the quality of our lives, including medicine, clean water, food safety, efficient transport, the internet, and space exploration. Most, if not all of these things, we take for granted. We consider them our birthrights, door prizes handed to us for being human. This perspective must change.

The scientists and mathematicians of this century need to communicate better how they discover, invent, develop, scale, produce, and market products for everyday life and human progress, so that we can continue supporting our goals in areas like sustainability and the elimination of poverty.

As countries compete for jobs based on twenty-first-century skills, the division between the haves and the have nots will only widen. In the next two decades, access to the digital toolbox and the development of a digital workforce will matter more and more. Among the core skills required for this century's workers is a facility in science, mathematics, and engineering. It's a race to the top, and it's winnable, but we need to start *now*.

The New Tomorrow

A merger of AI and humanity is often perceived to be impossible, but even the most doubting or regressive thinkers believe it is imminent. By 2050, we will be halfway there.

Think about it: if you wed anti-aging advances with human biology, and artificial intelligence with biology, you will have dreamed up a completely new human. it may sound science fiction-like, but it's not. Accept it as a vision born of the technology revolution that none of us could have imagined even thirty years ago.

Looking wider, by 2050 we will see the advent of new global institutions and stronger regional alliances. More of the world's population will have access to food, water, and shelter, with the quality of life in advanced nations more equally distributed.

A new cadre of global leaders will be in office, their mandate being to create new values-driven, socially and morally conscious blueprints for humanity to continue living on our planet. Society will drive the economy, not the other way around.

All this means is that right now we should be thinking ahead. What will be the policies corralling this technological evolution? How can we spread advances evenly across humanity, from rich countries to the poorest areas of the world? How will global institutions work?

This 2050 vision also makes clear that any corporation or enterprise that hasn't incorporated digitalization and modernity into its processes will be left in the dust. Unless you are digitally efficient and automation efficient and have a highly trained, skilled workforce, your business will vanish.

It's worth repeating: the institutions of this century that need to be changed are unlikely to change from within. The incitement for change must come from business, from business leaders, and from youth and communities. As the challenges of the upcoming century mount, we need everyone, using all their talent and wisdom, to step up and do their part to lead us forward.

Andrew Liveris AO is the former Chairman and Chief Executive Officer of The Dow Chemical Company and former Executive Chairman of DowDuPont. A recognized global business leader with more than 42 years at Dow and experience in manufacturing, engineering, sales, marketing, and business and general management. He served as chair of the manufacturing council and a member of the apprenticeship of the future task force under President Trump. Previously he served as co-chair of President Obama's Advanced Manufacturing Partnership committee, working closely with President-elect Joe Biden, and as a member of the U President's Export Council.

Leading Without Authority

by Keith Ferrazzi

Keith Ferrazzi is an American entrepreneur and recognized global thought leader in the relational and collaborative sciences. As Chairman of Ferrazzi Greenlight and its Research Institute, he works to identify behaviors that block global organizations from reaching their goals and to transform them by coaching new behaviors that increase growth and shareholder value. He is the #1 *New York Times* bestselling author of *Who's Got Your Back*, *Never Eat Alone*, and *Leading Without Authority*. He has contributed to *Harvard Business Review*, *Forbes*, *Fortune*, and *The Wall Street Journal*. His mission is to transform teams to help them transform the world. *KeithFerrazzi.com*

Transform Teams; Transform the World

We are living in a dichotomous time with equally abundant amounts of opportunity and disruption. Technological innovations are springing up all around us that are designed to make work easier. Yet, workers at all levels in every type of organization are tired and overwhelmed in their roles. This "era of explosive change" has brought into focus the inherent flaws that exist in traditional organizational charts and leadership. Work relationships are getting less productive and the time to make fundamental changes to the way we work is long overdue.

Author Keith Ferrazzi has spent his career practicing what he calls "leading without authority." He credits this way of working with catapulting him up the chain to an executive-level position followed by his becoming the youngest-ever partner at his first employer, Deloitte. In his next role as Chief Marketing Officer (CMO) for Starwood Hotels, he became the youngest CMO at any Fortune 500 company at the time. It was in this role that the principles of leading without authority revealed themselves to be critical not only to his own success, but to that of an organization as a whole.

Ferrazzi was a "natural" at leading without authority. He was afforded some authority of his own at Starwood so he "didn't spend as much time building strong relationships as he had at Deloitte." This ultimately led to him having no authority at all and his role was eventually eliminated. This was a professional defeat, no doubt, but it led Ferrazzi to write his first book, the huge hit, *Never Eat Alone*, and catalyzed his coaching and entrepreneurial career.

He has "decades of team coaching" under his belt and he has "come to see how many people are making the same mistakes he made at Starwood so many years ago." Managers rely on title, budgetary control, and hierarchy to get things done instead of spending that energy on "leading others to collaborate and seek audacious new solutions." Ferrazzi believes that people who are not given formal authority to lead are frequently sidelined, waiting for their turn when they could be jumping in "to get extraordinary things done." Command-and-control decision making is out. Employers need team members who will take the initiative to achieve great things, building value for the company, with or without express authority to do so.

Leading without authority is becoming *the* 21st century organizational model. The problem is that most managers do not know how to implement it within their teams. Until now. *Leading Without Authority* is the manual for learning how to play this new organizational game. It is the first book that "gives readers a complete, holistic, and proven methodology for succeeding in a world in which the ability to lead without authority is an essential workplace competency." Ferrazzi calls on readers to become awakened to this new mindset and begin working within the "operating system of co-elevation." The concept of co-elevation and how anyone, regardless of title, can harness it like a superpower, are explained as a set of rules.

Rule One: Who's Your Team?

Most managers see their "team" as the list of their direct reports as stipulated within the org chart. In order to lead without authority, this idea must be banished. As Ferrazzi explains, "Your team is made up of everyone who is critical to helping you achieve your mission and goals." Managers need to get behind the idea that the team is actually made up of a much broader group of people than what is defined as those people whom they supervise. Managers need to be able to "inspire commitment and performance among people over whom they have no official authority." It is a shift in mindset and is the very first step toward leading without authority.

Teams need to be loosely organized and cross-functional. Leaders must be fully committed to every one of those team members, whether they report directly to that leader or not. The leader of this broader team must "extend the same degree of care, concern, commitment, and camaraderie to all of the new team members." As a leader, assume that there are people on this newly imagined team that have ideas that are better than yours. This is the path to achieving extraordinary results. To lead without authority is to "lead a team of your own creation."

Rule Two: Accept That It's All on You

Organizations and companies with hierarchical cultures need leadership transformation desperately. These cultures get bogged down in "the way we do things here" even when those ways are rigid and filled with inefficiencies. Dramatic impacts can be accomplished in these hierarchies by people who are willing to lead without authority.

The fundamental message behind the second rule of leading without authority is that "when we think and act like co-elevating leaders, our potential as leaders will get recognized—sooner rather than later."

Regardless of someone's status within the organization, they can become a leader by starting to lead... now. Ferrazzi advises, "Do the job before you have the job." That's your choice. All you have to do is accept that "it's all on you." You cannot wait for others to recognize your value. You have to step up and create it. It is about inviting and encouraging others to do things in a new way. Successful leaders without authority genuinely care about other people's success and take on problems mutually, so that everyone learns and grows. When people feel genuinely cared for and connected to their leader, collaboration naturally follows.

Rule Three: Earn Permission to Lead

Leading without authority requires us to bring people into our work and personal lives in bold and deep ways. After all, we are inviting them to make valuable and important contributions to our mission, whatever it may be. The connection has to run deep, which requires us to give "even more than we ever expect to receive in return." We have to "earn the trust and faith necessary to lead" in order to "engage and enlist others in this way." This engagement requires the leader to be direct, vulnerable, personal, and generous from the very beginning.

This can be shocking to the person you are inviting into your team. If you want a perfect stranger to enter into "a co-elevating relationship that will take you higher together" you first have to "earn permission" to do so. Leaders need to become well-versed in opening themselves up to their teammates as well as opening up all teammates to the mission at hand. This is hard work and requires the leader to let go of ego and defensiveness. The effort must include "sharing their time, energy, resources, and knowledge." Ferrazzi adds that "this ability to enlist team members and sustain their commitment is perhaps the most undervalued competency among leaders attempting to achieve transformational change."

Rule Four: Co-Elevating Collaboration

Radical transformation creates what Ferrazzi sees as "impossible situations that require impossible solutions." For Ferrazzi, the solution lies in a deeper kind of collaboration among cross-departmental teams that he calls "co-elevating collaboration." He has a simple formula:

Transformative Outcomes = Radical Inclusion + Bold Input + Agility

Radial Inclusion calls for a complete commitment "to true diversity of voices and inputs in the collaborative process." People from engineering, legal, art, design, marketing, and more are all brought together from the very beginning to weigh in and provide input. This will result in gathering opinions and points of view from the "widest possible range of departments and areas of expertise."
Bold Input is what a leader gets when you ask for "candid and courageous feedback" from this wildly inclusive team of collaborators. All ideas are thrown into the ring and debated in an open dialogue among the team members.
Agility refers to the short project cycle that requires frequent check-ins and resulting pivots that "drive the pace of change forward." Co-elevating collaboration leads to "authentic co-creation" which results in far better outcomes.

Rule Five: Co-Development

Ferrazzi lets readers in on a universal success secret. The key

> **'Never doubt that a small group of thoughtful, committed citizens can change the world: indeed, it's the only thing that ever has.'** *Margaret Mead*

to "transformational performance" is having every person on the team committed to a "shared mission" where everyone has each other's back, coaches each other, and helps one another "grow and develop." This way forward not only accomplishes the goal, it also makes everyone on the team happier and more fulfilled.

When people are engaged in open, honest discussions where they express themselves completely, they are part of a "highly supportive coaching culture" that exceeds performance expectations. Unfortunately, most businesses do not have this kind of coaching culture. Ferrazzi points out that this "coaching vacuum" is a ripe opportunity for anyone to step up and provide feedback, support, and leadership, whether it is officially in their job description or not.

Peer-to-peer co-development is at the heart of leading without authority, according to Ferrazzi. This idea gets more pushback from Ferrazzi's students than any of the other rules. People find it difficult to deliver feedback tied to a colleague's job skills. They would rather be nice and play it safe. Ferrazzi points out that even though these conversations are difficult, they demonstrate a leader's commitment to the mission and to the teammate, who is struggling and needs support.

Rule Six: Praise and Celebrate

A little praise goes a long way. Small doses of "focused, positive energy" can create ripple effects throughout an entire organization. Ferrazzi writes that leadership without authority relies on championing and cheerleading as one of the leader's "highest-leverage responsibilities."

Praise and celebration go hand-in-hand with care and accountability. They act as "accelerants" to opening people up to radical transformation. Praise and celebration delivered regularly makes it much easier to deal with challenge and hardship when they inevitably come. As a bonus, being the leader who is behind all this positive energy lifts the leader up right alongside the team members. This feel-good energy impacts us in endless positive ways, including job performance.

Rule Seven: Co-Elevate the TribeQA

The leader, Ferrazzi points out, is responsible for the energy and engagement levels of the team, and the quality of the outcome is directly tied to the cohesion of the team. Leaders without authority are tasked with creating a "culture of co-elevation." This is accomplished with the help of others in the "tribe." The leader first gains support with a limited number of trusted team members who they know they can recruit to get on board. They begin co-elevating the energy of each other and each become leaders without authority themselves, enlisting still others in the cause. This spreads to a wider group of team members until, finally, the entire culture is on a shared mission.

Ferrazzi calls this "leveraging the tribe for the tribe." The leader without authority calls on everyone to commit to co-elevation. They go on to "initiate their own co-elevating relationships and ultimately share the responsibility for promoting a co-elevating culture." At this point, all of the teams are working toward the same mission, speaking the same language as a "tribe of people" co-elevating and co-developing, together. It all starts with the leader without authority asking the question from rule number one, "Who's my team?"

Rule Eight: Join the Movement

The world is changing, quickly and continually. Ferrazzi believes that co-elevation "will become a core human competency" in an increasingly diverse, always evolving, "interdependent world." The "simple practices" taught in his book have the power to "bring about real cultural transformation" at work and in the "world at large." Those who practice the habit of co-elevation will see their professional and personal lives transform in incredibly positive ways.

Inevitably, this transformation will spill out into the lives of those around the leader without authority. Ferrazzi implores readers to move the focus outward. He has taught readers how to change their behaviors, co-elevate with others, and enjoy greater success together. He doesn't want readers to stop there. He challenges leaders without authority to spread the message and contribute to starting a movement that positively impacts people beyond the workplace.

Ferrazzi points to a quote from renowned anthropologist, Margaret Mead: "Never doubt that a small group of thoughtful, committed citizens can change the world: indeed, it's the only thing that ever has." That message is made clear throughout *Leading Without Authority*. Heady "idealistic visions" take hold, movements begin, and society changes into a new normal. Ferrazzi believes that a "radically interdependent and transparent world" is in our future. He dreams of the time when the value of "co-creation among a diverse set of perspectives" is fully embraced as the best way to find solutions to problems of any kind.

Those who have a hard time dreaming big will find Ferrazzi's goals too lofty, but for those who dare to manifest and believe in the power of "we," co-elevation delivers just the right medicine at just the right time.

THE SUMMARY IN BRIEF

What kind of character strengths must leaders develop in themselves and others to create and sustain organizational growth and performance? John J. Sosik answers this question by reviewing what is known about the connection between transformational leadership and positive psychology.

Sosik's approach illustrates 23 principles of leading-with-character strengths and virtues, using examples from the lives of well-known individuals who personify each. Some are obvious — the courage of Dr. Martin Luther King Jr. and Rosa Parks, the humanity of Mother Teresa and the commitment of Nelson Mandela. Others are less expected — poet Maya Angelou and NFL star-turned-Army-recruit Pat Tillman. Through these latter examples, Sosik suggests that good leaders do not have to be saints, nor do they have to be elected to high office.

Each possesses the virtues of wisdom, courage, humanity, justice, temperance and transcendence, as well as their associated character strengths. Besides generating astonishing results for their purposes, these individuals reaped numerous physical, mental, social and spiritual benefits from their character.

By portraying the varied and interesting mix he has chosen, Sosik offers future leaders a means to fill what some have termed "the leadership vacuum." This summary helps to turn the tide away from the many recent high-profile failures and ethics scandals and return focus to the positive, successful styles he describes.

In this summary you will learn:

- ✓ ***Why character counts and how to become an authentic transformational leader of character.***
- ✓ ***How to achieve performance excellence while avoiding ethical fiascos.***
- ✓ ***How to use innovation, inspiration and role modeling to develop followers in ways that bring about positive change.***
- ✓ ***How to recognize and deploy the virtues and character strengths associated with authentic transformational leadership.***

LEADING WITH CHARACTER

by John J. Sosik

— THE *COMPLETE* SUMMARY

The Leadership Crisis

A 2005 Harvard University study of confidence in leadership found that almost two-thirds of Americans think that we are suffering from a leadership crisis. The study's respondents showed little confidence in the honesty, integrity and ethics of leaders in sectors ranging from business and religion to local, state and federal government. They also showed little faith in our leaders' knowledge, skills and capability to inspire loyalty and enthusiasm from followers.

How can this be possible given the increased prominence of leadership topics in our culture today and the proliferation of leadership training in organizations and educational institutions? One possible answer is that we are ignoring what really constitutes leadership. We may have focused too much attention on issues of style, while ignoring issues of true substance — character and virtue. ■

Making the Case for Authentic Transformational Leadership

Leadership scholars around the world have been working to expand research on the kind of leadership that involves being ethical, positive and true to oneself. This form of leadership, called authentic leadership, proposes that a leader's character is central to the development of positive relationships with followers.

A Society Looking for Answers

In the late 1970s, political scientist James MacGregor Burns defined transformational leadership as influence that "occurs when one or more persons engage with others in such a way that leaders and followers raise one another to higher levels of motivation and morality."

Interestingly, the need for today's leaders to provide higher levels of motivation and morality in our society appears quite pressing. Consider the results of recent studies by the Gallup Organization indicating that 55 percent of the U.S. work force is not engaged or motivated by their work and another 17 percent is actively disengaged or demotivated by their work. These adverse results have been estimated to cost the U.S. economy as much as $300 billion every year in lost productivity.

Motivation and morality are not the only issues when it comes to leadership. A variety of social problems — racism, ecological challenges and education — plague the United States and other countries. Over time, these unresolved social problems often result in widespread negativity about leadership and, if left unchecked, can result in anger and violence.

Who Are Transformational Leaders?

Transformational leaders act in ways that turn followers into leaders. By empowering their followers, they build excitement around an appealing vision that creates performance excellence in challenging economic and political times.

Research has found there are several distinctive and unique behaviors that transformational leaders display. It also indicates that you can learn to display transformational leadership behaviors to produce these powerful effects on your own people, teams and organizations.

The Four I's of Transformational Leadership

Transformational leaders display the following four behaviors:

Idealized Influence: Leaders display pro-social and positive behaviors to model organizational values such as high levels of ethical and performance standards.

Inspirational Motivation: Leaders use this behavior to energize their followers to do more than is expected.

Intellectual Stimulation: Leaders use this quality to

(continued from page 2)

get followers and constituents to re-examine assumptions, seek different perspectives, look at problems in new ways and encourage nontraditional thinking.

Individual Consideration: Leaders use this behavior with their followers to recognize their unique potential to develop into leaders themselves. ■

For additional information on the four leadership types, go to: http://my.summary.com

Virtues and Character Strengths

A recent CNN/Gallup poll reported that virtue and character strength issues represented the most important factor in determining the voting results in the 2004 presidential election. The perception by voters regarding what values each candidate stood for played a key role in the election's outcome.

Positive psychologists Christopher Peterson and Martin Seligman identified 23 character strengths, clustered within six virtues, associated with positive personal qualities and related to beneficial outcomes for individuals. Virtues are core characteristics universally valued by moral philosophers and religious thinkers as exemplars of good character.

The six virtues are wisdom and knowledge, courage, humanity, justice, temperance and transcendence. These virtues and character strengths provide the foundation for authentic transformational leadership. ■

For additional information on positive psychology, go to: http://my.summary.com

Wisdom and Knowledge: Strengths for Stimulating Vision and Ideas

Authentic transformational leaders get things done in ways that exceed expectations because they possess the wisdom and knowledge needed to influence followers to act. Knowledge is the process of collecting facts, while wisdom is the process of applying the facts in an efficient and effective way to solve problems.

Creativity

Creativity is a strength that provides a solid foundation for displaying intellectual stimulation and inspirational motivation. This characteristic is also associated with nonconformity, flexibility in perceiving and thinking, and unconventional and risk-taking behavior.

Creativity allows you and your organization to challenge the status quo, identify opportunities and may also help leaders intellectually stimulate their followers. Such was the case for Brian Wilson in 1966. He challenged the other members of the Beach Boys to move away from their formula for hit records toward the innovative and harmonious sound of their album *Pet Sounds*. Like Brian Wilson, creative leaders possess the cognitive and behavioral flexibility to produce innovative products by challenging the basic assumptions of followers. When a leader demonstrates creativity, chances are that his or her followers will model this behavior. This develops organizational cultures that value changes, and makes innovation possible.

Curiosity

Wise and knowledgeable individuals often have many interests and are open to new experiences. Curiosity has been linked to positive feelings and emotions, willingness to challenge stereotypes, and being close with people.

Former president John F. Kennedy's thirst for information on topics of interest helped him tap into his curiosity and use it to his advantage in critical leadership situations. Like JFK, transformational leaders possess a strong desire to collect information about all kinds of people, processes and things.

People who are curious challenge stereotypes and the many assumptions people commonly take for granted. They engage themselves in greater learning, are more enthralled with their work and, as a result, perform better than less curious people.

Open-Mindedness

Open-mindedness may help leaders build a collective vision that satisfies the requirements of a wide range of diverse followers. Think about the wide array of constituents who are inspired by the visionary blueprints for the future of the computer industry drawn by Bill Gates. Open-mindedness is likely to promote the display of inspirational motivation because envisioning the future requires being open to the perspectives of different stakeholders as possible avenues for achieving success. By collecting software performance information from customers, Bill Gates is including Microsoft's customers in his company's leadership system and organizational vision.

Love of Learning

Wise and knowledgeable individuals enjoy the process of learning and are motivated by the intrinsic desire to perform a task that they find enjoyable and enlightening. They enjoy methodically adding to what

(continued on page 4)

Wisdom and Knowledge: Strengths for Stimulating Vision and Ideas

(continued from page 3)

they currently know. Love of learning helps leaders encourage the continuous improvement of their followers and organizational processes. It is an important foundation for leaders to identify new trends in the business environment and develop effective strategies for a new set of challenges.

Dr. Condoleezza Rice's education prepared her very well for an exceptional academic career at Stanford University. There she became a tenured Professor of Political Science and then served as Stanford's Provost, a top administrative position in the university. This academic setting allowed her to continue to display her love of learning as she published several books on U.S. foreign policy and also served on the boards of several major corporations and universities.

Always a firm believer of putting theory into practice, Rice then moved her career into the international affairs arena. She became President George H.W. Bush's expert on the Soviet Union and served as National Security Advisor from 2001 until 2005 when she was appointed to replace Colin Powell as Secretary of State. All of these accomplishments were made possible by Rice's never-ending quest for information, her love of learning and her wise application of knowledge to tough situations.

Perspective

Individuals who possess perspective realize larger patterns of meaning and can see into the heart of important problems. Perspective also helps leaders articulate a vision that has broad appeal of "reach" to many followers. This reach is often based on very sensory language that appeals to the emotions of followers.

For Maya Angelou, a great African-American poet, wisdom and knowledge can often be found in her writing. Her ability to inspire others, including Oprah Winfrey and Coretta Scott King, comes from her vast knowledge of what it means to be human. This knowledge does not come from formal education, but from the "school of life." Angelou's brilliance stems from her ability to see life from multiple perspectives, various domains and the many roles she has played in life. ■

Courage: Strengths for Weaving Moral Fiber

You might be familiar with the courage of Socrates. Standing up in an Athenian court, Socrates refused to be silenced in his tireless critique of the assumptions of ancient Greek society. In his defense, Socrates promised only to continue his role as critic, knowing he had sealed his death sentence. He stood up for his principles and was true to himself to the bitter end.

Bravery

To be a transformational leader requires hardiness and self-confidence. For example, Dr. Martin Luther King Jr. faced death threats that shook his confidence in his ability to lead. Despite these threats, he always regained confidence in himself by deciding that he needed to carry on by "walking in faith, not in fear." Like King, leaders need to be resilient and bounce back from the many public and private setbacks they face. Brave leaders demonstrate courage by taking appropriate risks. Likewise, brave leaders are likely to understand these risks and accept the consequences of their actions.

Persistence

Courageous individuals remain industrious and persevere despite obstacles, challenges and setbacks. They take great pleasure in finishing tasks that they start. They get things done and follow through on their intentions.

Joe Namath shared a vision of winning Super Bowl III with the New York Jets. To help achieve this vision, he built up his teammates' confidence levels by working hard at practices, and acted as a positive role model by overcoming many physical injuries during his career. Namath also emphasized the importance of teamwork and showed respect for all his teammates. His actions on the field reflected the values of hard work, teamwork and appreciating people for their unique talents, skills and personal styles.

Persistence has been linked to entrepreneurial success, goal attainment, enjoyment of subsequent successes, improvement of skills, resourcefulness and self-efficacy. Yet some undertakings are truly impossible and, therefore, persistence may lead to escalated commitments and fruitlessly expended resources. Leaders need to know the difference.

Integrity

Courageous individuals act with honesty and authenticity. When a leader persistently displays idealized behavior over time, despite challenges from others, he or she demonstrates consistency among values, attitudes, beliefs and behavior.

When it comes to integrity, most people, including Dr. Martin Luther King Jr., considered Rosa Parks to personify this character strength. Born in Tuskegee, Ala., Parks grew up on a farm where she began her lifelong membership in the African Methodist Episcopal Church. What she might be known best for is her famous bus ride on Dec. 1, 1955, when she refused to move from her seat for a white man and was subsequently arrested.

(continued on page 5)

Courage: Strengths for Weaving Moral Fiber

(continued from page 4)

She refused because of her firm convictions, strong determination, and clear belief that the bus seating law was a violation of her constitutional rights. Parks did not refuse to move from her seat because she was tired. She was simply tired of giving in.

Vitality

Leaders who seek to maintain a sense of integrity must value mental and physical vigor. The notion of being full of zest, enthusiasm and contagious energy is one way to explain vitality. Vitality is what author and innovation guru Tom Peters referred to as "tons of animal energy" and is an important element of what makes a successful leader.

In response to the events of Sept. 11, 2001, the Arizona Cardinals' football star Pat Tillman turned down a $3.6 million NFL contract and enlisted in the U.S. Army. After serving as an Army Ranger in Iraq, Tillman had the opportunity for an "early out" from the service. Instead, he chose to complete his three-year service requirement in Afghanistan, where he was killed by friendly fire in April 2004.

Although Tillman had been considered too small to play college football, he was voted PAC-10 defensive player of the year in 1996 while at Arizona State University. While at ASU, he befriended a student with Down Syndrome and graduated with a 3.84 GPA in three and a half years. Tillman never was one who could stand still; he believed that there always was another experience for him to live to the fullest.

But everything changed on Sept. 11; Tillman felt compelled to do something meaningful by serving his country. Ironically, Tillman never actively sought to be a leader. Instead, he was rather humble and unassuming. Yet his vigorous behavior exemplified charismatic leadership and his many accomplishments in life reflected the extraordinary achievements associated with such leadership. By serving as a positive role model, Tillman gained many more loyal followers after his death than some leaders today have during their life. ■

Humanity: Strengths for Developing Others

Charles Dickens' timeless *A Christmas Carol* illustrates the amazing moral transformation of Ebenezer Scrooge and raises important leadership issues about the role of business in society, self-knowledge, human nature and the ties that bind people together.

Humanness and genuine concern for others are not traits people are born with, but instead are learned through our experiences and self-revelation. Authentic transformational leaders do not gauge success by the money they acquire through life, but by the number of people they have positively influenced through their leadership.

Love

To love an individual is to be close to him or her in a caring and emotional way. Research indicates that love is linked to a variety of positive outcomes for adults, including less deterioration of trust and intimacy in the initial phases of relationships, fewer psychosomatic symptoms in response to stress, using compromise rather than destructive strategies of conflict resolution, and higher self-esteem and less depression. Together, these correlates suggest that those who show love form relationships that are enduring and satisfying.

As pope, John Paul II demonstrated what it means to be a humane leader. He was a pilgrim pope who sought out to be a bridge between peoples, traveling more than 725,000 miles while making 104 foreign trips. In essence, John Paul II was a pope for people of all ages. He was able to make a connection with people from all over the world because he understood the essence of what it means to be human: to love and be loved.

Kindness

Kindness has been linked to a variety of helping behaviors, including volunteerism and its correlations to mental and physical health. By showing kindness to your followers, you make a very important statement to them: They are more important than the tasks that you require of them. The tasks will always be there, but your people may not.

(continued on page 6)

The Three Components of Love

Leaders, as humans, need to experience and demonstrate love since they work every day with human followers. Love also is an important prerequisite for leaders to provide highly committed and long-lasting coaching and mentoring efforts. Love is composed of three elements:

Attachment – the powerful desire to be in another's presence, to be approved of by another and to be cared for.

Caring – the willingness to sacrifice oneself for the sake of the other person.

Intimacy – the passionate desire for physical and emotional closeness. This bonding involves agreement between leader and follower on important beliefs and guideposts for behavior.

Humanity: Strengths for Developing Others

(continued from page 5)

Love and kindness are integral elements of the leadership of Mother Teresa of Calcutta, the Albanian nun who founded the Missionaries of Charity. At the age of 12, she joined the Sisters of Loreto and began her missionary work in India. In 1950, she started her own order of nuns, the Missionaries of Charity, whose purpose was to serve "the hungry, the naked, the homeless, the crippled, the blind, the lepers, all those people who feel unwanted, unloved, uncared for throughout society."

Her vision to care for the poorest of the poor in Calcutta, India, expanded into a worldwide religious order and social services organization. Mother Teresa's global work of care-giving earned her numerous awards, including the 1979 Nobel Peace Prize. After expanding her work to other countries, Mother Teresa led a global organization in 123 countries staffed by more than 4,000 sisters, 300 brothers and more than 100,00 lay volunteers by 1997.

Mother Teresa championed authentic leadership as she encouraged people to let their actions speak for them: "There should be less talk; a preaching point is not a meeting point. What do you do then? Take a broom and clean someone's house. That says enough."

Social Intelligence

In order to show kindness, leaders need to understand their own feelings, and relate well and empathize with their followers. Leaders need to be intelligent enough to carry out abstract thinking about the similarities and differences among people, to realize relationships within and between people and situations, and to recognize patterns of behavior in others.

Social intelligence also includes emotional intelligence and personal intelligence:

Emotional Intelligence: Recognizing, understanding and controlling one's emotions and the emotions of others. An emotionally intelligent leader uses emotional information to stimulate appropriate thinking and behavior. For example, when Shirley Chisholm, the first African-American and first woman to make a serious run for U.S. president, was presented with racial and gender slurs during her life, she showed amazing calm and conviction as she logically argued against her detractors.

Personal Intelligence: The knowledge of how well one performs tasks, understands one's own thought processes, reacts to a variety of feedback, and develops a self-concept or identity that is different from others. Personal intelligence can help transformational leaders be more self-aware. ■

Justice: Strengths for Role Modeling

If there is one virtue that people have demanded of their leaders over the ages, it is justice. Whether it is human rights, civil rights, women's rights, religious freedom or labor privileges, we have always fought for a sense of justice to ensure the rights and obligations of all members of our society.

Citizenship

The just individual demonstrates a sense of loyalty and social responsibility and also values teamwork. Transformational leaders often place a high value on citizenship since they sacrifice self-gain for the gain of others. When they create a sense of joint mission and ownership, transformational leaders display idealized influence that reflects a sense of citizenship.

The notion of citizenship also extends to the workplace. Some leaders, like Lawrence Babbio Jr. of Verizon, work to help the less fortunate among their coworkers. Others, like Frances Hesselbein, former CEO of Girl Scouts of the USA, build teams to improve the conditions within their own organizations. Former Governor of North Carolina James Hunt is known for his advocacy of education and excellence in schools, which has helped him create teams of educators who share a common passion for improving the future of the children in North Carolina's public school systems.

Fairness

Fairness has been linked to the development of a strong moral identity. Being perceived as an ethical, caring and compassionate teacher enhances a leader's ability to coach and mentor followers. Such behavior is prosocial, altruistic and caring because it shows that the leader is interested in developing the follower to his or her full potential.

Through her successful TV talk show, Oprah Winfrey has worked to provide social support to victims of sexual abuse so they can overcome their adversity and help put the perpetrators of such crimes behind bars. This demonstrates fairness by giving balanced and equitable consideration to the legitimate rights of and caring for all members of the organization and society. ■

Temperance: Strengths for Keeping the Ego in Check

Being able to place reasonable boundaries or limitations on personal desires and aspirations is a core virtue known as temperance. This virtue is reflected in strengths that protect against excess. Indeed, philoso-

(continued on page 7)

Temperance: Strengths for Keeping the Ego in Check

(continued from page 6)

phers and religious thinkers have discussed notions of temperance or self-control over the centuries as important for overcoming the human tendency to become self-centered.

While delivering a graduation address at Stanford University in June 2005, Apple Computer CEO Steve Jobs spoke of the tempering effect that his bout with pancreatic cancer has had on him. In the past, Jobs was well known for possessing a big ego and a bad temper, which often drove his employees crazy. Today, his leadership is tempered with a more disciplined self-control and understanding of others.

Forgiveness

When an individual does us harm, it is normal for us to experience a negative shift in attitude toward the transgressor. Calmness erupts into anger and resentment. Trust erodes into distrust. Leaders and followers form relationships based on mutual trust and loyalty; unfortunately they don't always follow through on their part of the deal. Leaders may fail to provide the support they promised or act in unethical ways. At the same time, followers may neglect to perform.

The problem with holding on to grudges is that they weigh heavy on our psyche and become toxic. They make us feel tense and nervous. They put us on the defensive. They sometimes put us on the offensive — when we offend not only the target of our hostility, but also others around us.

Nelson Mandela and Forgiveness

Repairing damaged relationships requires leaders and followers to be forgiving and merciful. Throughout the late 1940s and through the early 1960s, Nelson Mandela led many of the African National Congress' (ANC) attacks against military and government targets. In 1962, he was imprisoned for his connections with the ANC and other anti-apartheid groups, which had been banned by the government of South Africa. Mandela spent 27 years in prison, where he helped provide leadership for the struggle against apartheid. On Feb. 11, 1990, he was released from prison, and in April 1994, Mandela was the first democratically elected president of South Africa. He did not seek vengeance against the former government officials who had unjustly treated him, the ANC and the black South Africans. Instead, Mandela initiated a tempered response of forgiveness and reconciliation.

Humility

One of the things that prevents people from forgiving is their ego. Nowhere is pride more poisonous than in leadership positions. It is psychologically healthy for leaders to think good of themselves. However, too much pride or narcissism can blindside leaders and put them on the track for career derailment. Consider the downfall of leaders at Enron and WorldCom.

In contrast, leaders like Warren Buffett, who aspire to display authentic transformational leadership, tend to be more humble and modest than narcissistic. Research on humble leaders who underestimate their display of transformational leadership indicates that they are excellent mentors and highly trusted by followers.

Prudence

Leaders who are prudent think and care about the future of their organization. By carefully and cautiously planning for their long-term goals, these leaders are able to achieve success.

Andy Grove, co-founder of Intel, is well known for his prudent approach to leadership, which is crafted with careful planning and strategic thinking, coupled with the use of exacting mathematical decision making tools. Grove's prudence has paid off. He is widely recognized as making contributions in both the fields of systems engineering and management.

Self-Control

Leaders who self-regulate their behaviors pay attention to the feedback followers give through verbal and nonverbal expressions. These leaders adjust their behavior to meet or reshape norms or followers' expectations by controlling their impulses and emotions.

Transformational leaders need to be aware of the impression they make while communicating with followers and others in order to sustain long-term organizational effectiveness. Scott McNealy of Sun Microsystems, Steve Jobs of Apple and Carly Fiorina formerly of Hewlett-Packard represent charismatic leaders who vary in terms of awareness of the images they present to the public, yet these leaders have produced a range of organizational outcomes. ■

Transcendence: Strengths for Inspiring Greatness

Transcendence is a form of reaching out spiritually and psychologically in ways that rise above limitations placed on us by others or that we have placed upon ourselves. This is reflected in strengths that connect to the larger universe and provide meaning for life.

(continued on page 8)

Transcendence: Strengths for Inspiring Greatness

(continued from page 7)

Appreciation of Beauty and Excellence

Studies suggest that individuals who appreciate beauty and excellence may experience important outcomes such as motivating self-improvement, personal change, altruistic actions and dedications to others and the community.

How do many of today's CEOs focus their business activities on an appreciation of beauty and excellence, and do this profitably? As founder and CEO of The Body Shop, Anita Roddick's 30-year-old company has 6,000 employees in 1,980 stores in 41 countries. Her advocacy of recycling and refilling containers has encouraged others to protect the environment. And her emphasis on appreciating women as they are, leveraging diversity, and valuing human rights rather than maximizing corporate profits is refreshing.

Gratitude

Transformational leaders not only appreciate the best of their work force, they are grateful for the followers who work hard each day but are not necessarily the stars of the organization. The most gracious leaders recognize and celebrate the achievements of these followers.

For example, when Fred Rogers accepted his Emmy Award for Lifetime Achievement, he made one request of the audience: "All of us have special ones who have loved us into being. Would you just take, along with me, 10 seconds to think of the people who have helped you become who you are?" By demonstrating gratitude, Rogers taught an audience of celebrities the lesson he had taught children over the years: Be grateful for what you have, who you are and where you came from.

Hope

No follower will believe in a pessimistic or self-doubting leader. Followers like to be around leaders who are optimistic because hope can be a satisfying and motivating force. It encourages leaders and followers to overcome challenges and achieve difficult missions.

When Chrysler faced possible bankruptcy in the 1970s, Lee Iacocca initiated restructuring initiatives, encouraged innovative design projects, and acquired an unprecedented loan guarantee from the U.S. Congress. These actions provided hope to Chrysler employees that eventually spurred the company's economic recovery.

Humor

Transformational leaders sometimes use humor to take the edge off of frustrating events. They like to have fun and to be around followers who are also jovial. Organizations such as Ben & Jerry's Ice Cream, Geek Squad and others credit their success, in part, to cultures that value humor.

Besides working for top executives, humor serves as a "social lubricant" that make interactions easier in meetings. Former U.S. President Ronald Reagan used self-deprecating humor to teach his cabinet members not to take themselves too seriously. It's the same attitude that helped Reagan react with humor to being shot and to being verbally attacked by political adversaries.

Spirituality

Religion and spirituality provide meaning for transformational leaders, particularly those who face hardships and suffering while leading missions of change. Without meaning and purpose, there would be no reason for transformational leaders to endure their struggles. In addition, transformational leaders generate faith by connecting behaviors and goals to a dream or vision of a better future.

Former New York City mayor Rudolph Giuliani gained wide acclaim for his effective leadership during and after the 9/11 terrorist attacks on the World Trade Center. Giuliani relied on his faith and belief that as a leader, he couldn't do it all by himself. ■

1. ***Leading with Integrity*** **by Alan Kolp and Peter Rea.** A discussion of seven classical virtues and modern values that encourages ethical practices and open communication.
2. ***Riding the Dragon*** **by Robert J. Wicks.** The author's 10-point personal-growth program will challenge the way readers deal with problems.
3. ***How Full Is Your Bucket?*** **by Tom Rath and Donald O. Clifton.** An exploration of how positive psychology used in everyday interactions can dramatically change lives.
4. ***Leading With the Heart*** **by Mike Krzyzewski.** The author transforms his experience as a basketball coach into advice for business managers.
5. ***Mastering Self-Leadership*** **by Christopher P. Neck & Charles C. Manz.** This research-based book explains the authors' position that you must learn to lead yourself before you can lead others.

Reaching a Higher Level of Leadership and Prosperity

Possessing the ideals, virtues and character strengths described is a necessary, but not sufficient, condition for being an authentic transformational leader. Turn your attention from the self-development of your character to the development of character in others. This "other-orientation" is what political scientist James MacGregor Burns described when he challenged all of us to use transformational leadership to eliminate world poverty. He wrote, "While leadership is necessary ... its vital role is to create and expand the opportunities that empower people to pursue happiness for themselves." By helping others to develop character, we can help them prosper. ■

THE SUMMARY IN BRIEF

Workers want and need to know their work is appreciated. And showing gratitude to employees is the easiest, fastest, most inexpensive way to boost performance. New research shows that gratitude boosts employee engagement, reduces turnover, and leads team members to express more gratitude to one another—strengthening team bonds. Despite these benefits, few executives effectively utilize this simple tool.

What accounts for the staggering chasm between awareness of gratitude's benefits and the failure of so many leaders to do it—or do it well? In ***Leading With Gratitude,*** Adrian Gostick and Chester Elton identify the widespread and pernicious myths about managing others that cause leaders to withhold thanks. The authors also introduce eight simple practices that leaders can use to show employees they are valued.

Showing gratitude isn't just about being nice; it's about being smart—really smart—and it's a skill that everyone can easily learn. For those seeking to learn this invaluable skill, ***Leading With Gratitude*** will lead the way.

IN THIS SUMMARY, YOU WILL LEARN:

- To recognize and overcome the gratitude gap.
- Why fear is not a good motivator for employees.
- To assume positive intent and walk in employees' shoes.
- To use expressions of gratitude to reinforce core company values.

The Gratitude Gap

Gratitude is one of the most misunderstood and misapplied tools of management. That's a shame, because it is also one of the single most critical skills for managers to master if they want to enhance their team's performance and develop their leadership credibility.

Research shows that there is a staggering gratitude deficit in the work world. In fact, a recent study found "people are less likely to express gratitude at work than anyplace else."

Meanwhile, 81 percent of working adults say they would work harder if their boss were more grateful for their work, and a whopping 96 percent of men and 94 percent of women acknowledge that a boss who expresses gratitude is more likely to be successful.

Why is there a chasm between knowing that gratitude works and the failure of so many leaders to actually practice it . . . or to do so well? This is called the gratitude gap.

Developing genuine gratitude involves carefully observing what employees are doing, walking in their shoes, developing greater empathy, and sincerely trying to understand the challenges they face. It is about seeing good things happening and then expressing heartfelt appreciation for the right behaviors.

On the flip side, managers who lack gratitude suffer, first and foremost, from a problem of cognition—a failure to perceive how hard their people are trying to do good work—and, if they're encountering problems, what they are. These ungrateful leaders suffer from information deficit.

The Negativity Bias

Another part of the ingratitude explanation lies in fundamental human nature. Research in psychology has shown we have a built-in tendency to give more attention to problems and perceived threats than positive things happening around us. That is dubbed the negativity bias.

In every organization, sources of stress abound. Competitors are nipping at heels, margins are tight, new products are about to be launched (late!), regulators are breathing down their necks, the CEO is new, and so on. How can managers afford not to spend more time on the lookout for and attending to problems than looking for opportunities to be grateful? It's a survival thing.

Fair enough. But this is not a zero-sum issue. Scanning the tundra, if you will, for potential predatorial problems and devoting considerable time to preempting and/or solving them in no way precludes a leader from paying sufficient attention to the contributions of one's team.

Some leaders think it is necessary to withhold positive sentiments at times in order to keep pressure on team members. "If we keep them on edge, they'll work harder" is the thinking. That mentality is about as valid as a Blockbuster Video free-rental coupon. Pressure like that increases anxiety, and anxiety undermines productivity.

In comparison, research from Robert Emmons of the University of California, Davis, shows that a leader who is more grateful amid difficult circumstances can help people cope. "In the face of demoralization," he explains, "gratitude has the power to energize. In the face of brokenness, gratitude has the power to heal. In the face of despair, gratitude has the power to bring hope."

The Payoffs of Getting It Right

The payoffs of getting this right come not only in boosting performance and morale but in gaining a better understanding of your people, how they are contributing, and frankly, what more they may have to give. Leaders who get this right also identify obstacles that thwart performance and are able to reinforce the right behaviors and fine-tune through positive direction.

A 200,000–person study found that more grateful managers lead teams with higher overall business metrics, including up to two times greater profitability than their peers, an average 20 percent higher customer satisfaction, and significantly higher scores in employee engagement, including vital metrics such as trust and accountability.

There is a more positive, hopeful future out there for us all. No matter where you are starting from, no matter the challenges you face, as you apply these concepts, you will begin to benefit from the transformative power of gratitude.

The Ingratitude Myths (That Are Holding Leaders Back)

Myth: Fear Is the Best Motivator

Fear at work is manifest in a myriad of ways. A manager who lacks confidence can spread fear around a workplace as fast as a funky cologne. He might be intimidated by employees who shine and feel it's necessary to put them in their place, or he may utter such motivating words as "If we

Research shows that what younger workers are really looking for is not praise for praise's sake but guidance.

don't hit our goals next month, I don't know if I can protect you guys." Or "There's a long list of people who'd love your jobs." His employees can then spend their afternoons realizing how lucky they are. Or not.

Another example? While many managers do not consciously try to fan fear's flames, they aren't exactly trying to stamp them out, either. Hey, if their people feel a little extra pressure, then is it really their responsibility to put it to rest? They just have to toughen up. Fear comes along with the paycheck. Whatever doesn't kill you makes you stronger. And so on.

All of this depends on one thing: that fear doesn't tie people up in knots. Which is too often the case. When it comes to our daily work and broader life challenges, fear is most definitely not the best motivator. Not even close. It causes a host of ill effects that undermine the quality of people's work and overall team performance. That's because at the heart of fear is doubt, and in doubt-filled cultures—with people wondering, "Will I be in trouble, get yelled at, be fired?" the constant uncertainty kills motivation, not to mention innovation.

Myth: People Want *Way* Too Much Praise These Days

Many managers say employees are way too hungry for approval these days. This sentiment has flared up in recent years as millennials and Gen Zs have become the majority of the workforce, bringing with them distinctive expectations about work-life balance, a need for meaning, a penchant for Top Ramen, and a fearlessness to change jobs if they don't like what they find.

Many managers complain that younger generations are immature and needy—often invoking the popular notion that helicopter parenting has made them praise-crazed. They worry if they give out more praise, their workers will get big heads, become overconfident, and start to slack off. And worst of all, they may demand more money.

But research shows that what younger workers are really looking for is not praise for praise's sake but guidance. Clear direction and feedback. They want to know what they're doing that's right and what they're doing that may be off course. Those who do seek praise often have high self-esteem. For them, gratitude provides clarity about whether the work they are doing is correct, valued by the boss or others, and making a significant contribution to the business.

Rather than seeing younger workers as problem children making demands for praise, consider that they are offering invaluable insight into how managers can better motivate and steer all their people.

Myth: There's Just No Time

Busyness is by far the most common excuse for not expressing gratitude. But practicing gratitude well doesn't take that much time, and the returns in productivity far outweigh those of any other management practice.

Most leaders who subscribe to the Time Myth believe gratitude is nice and all, but their effectiveness is about the hard stuff, not the soft stuff. With the speed of business today, the onslaught of data to be analyzed, and competitive pressures more intense than ever, management is about finding insights and ahas. It's about developing knowledge of the competitive landscape and reporting up what they find. It's about fixing, not thanking.

Yet, competitive pressures make effective people management more critical than ever. Workers leave for competitors more readily today, and turnover is one of the greatest expenses and productivity killers of our day. Conservatively, Deloitte estimates the cost of losing each employee ranges from tens of thousands of dollars to one-and-a-half to two times the employee's annual salary.

Myth: I'm Not Wired to Feel It

Research suggests there are very real differences in brain structure with people who tend to be more or less grateful. One such study found those naturally prone to feeling gratitude have more gray matter, or volume, in the part of the brain linked to interpreting others' intentions. Which means if we have a tendency to believe that the people we meet are helpful and kind, more out to help us than hurt us, then we will naturally be more thankful.

Other studies have suggested that specific genes underlie a naturally more or less grateful disposition. In one study, researchers asked each member of a married couple whether he/she, "thanked my partner for something that I appreciated" each night for a two-week period. Partners with one particular variant of a gene (CD38) thanked their partners more than 70 percent of the days, which is waaaaay more frequent than the population at large.

But genetics and neuroscience have also shown that we are by no means slaves to our predispositions. Our personalities and general temperaments are not set in stone. Brains were once thought to be largely fixed after childhood; scientists now understand our brain structure has been shown to be pliable, or, as neuroscientists say, to have plasticity.

That means it's no longer good enough to claim "I don't *do* gratitude." All of us can choose to practice behaviors that don't come naturally to us—like hugging in-laws—and by doing so, we can make them more natural.

Myth: I Save My Praise for Those Who Deserve It

Managers who believe the "I save my praise" myth withhold their gratitude because they harbor a fundamental disrespect for some types of work and some workers. To these folks, everyone is just a number.

As the television show *Undercover Boss* showcased, the value being added by many people on a manager's own team and in support functions around the company is often overlooked or discounted. Whole departments are commonly left out when it comes to who gets credit for success. In a sales-driven company, for example, there may be little appreciation for the people in, say, billing, even though without them sales are not fully made.

It's likewise uncommon in an operations-focused organization, such as a construction company, to see people in marketing rewarded, for example, even though they do a lot to burnish the brand and help land the big deal everyone is working on.

As for the so-called basic support jobs, *Undercover Boss* shows how freakin' hard such work can be, not to mention how important the jobs are to actual customers. As that realization dawns on the executives—who are struggling to make a pizza to specifications in just minutes or sorting recycling for an eight-hour shift all while wearing a fake beard and Mr. Magoo's spectacles—they are not only humbled but filled with gratitude for the talent and fortitude so many unsung heroes bring to their jobs day-in and day-out.

Myth: It's All About the Benjamins

Many bosses believe the only truly meaningful expression of gratitude they could offer is padding employees' wallets with raises and bonuses. This is a tricky issue, because money absolutely matters—it's what separates us from the animals. . . that and hats. So it's vital to pay people appropriately.

That being said, there is usually only so much money to go around. While gratitude is not a zero-sum game, by contrast, compensation almost always is. If someone gets a big raise, then others on the team usually are balanced out with less. And those decisions can be extremely hard for a leader.

Using monetary rewards alone does not motivate people—at least not for long—and it can even backfire. Focus on monetary rewards alone can create a mercenary environment in which people will leave for a little more at the drop of a hat. Some of the highest-paying companies have insane turnover rates.

Another reason monetary rewards usually don't pack a punch of deeply felt gratitude: The rewards are few and far between and often come during annual reviews, so they are seen as a matter of management process rather than an expression of sincere gratitude for valued work.

Myth: They'll Think I'm Bogus

"How can I just come in one day and be this new person—handing out gratitude right and left?" If a boss has been so busy that he's been heads-down, holed up in his office all the time or constantly away in meetings and then all of a sudden shows up by their desks patting their backs and giving out thanks like cigars from a new father, who wouldn't wonder what's going on?

Unless there is a complete lack of trust in a team (which is rare), managers can be confident that employees will appreciate a change of this kind, no matter how neglectful or hard-nosed they've acted in the past. Humans are generally supportive of other people's efforts to make positive changes in behavior, especially if it benefits them.

Worrying about how we'll be perceived as we go through a transformation like this is part of the human condition; it's woven into the fabric of our being. But the irony is that when we're trying to control how others see us, that's when we usually come across as inauthentic. We also cut ourselves off from important insights into how we're actually being perceived.

If leaders could see themselves on film, tracking the way their teams see them, many of them would be stunned.

It would not be a leap to realize that, clearly, their team members would be receptive to a change, even if it doesn't at first seem the most natural thing in the world.

The Eight Most Powerful Gratitude Practices

Let's now discuss the eight most effective approaches for showing gratitude. As managers adopt these behaviors, their people find them authentic and motivating—and there's usually a corresponding uptick in morale and engagement.

These concepts are grouped into two categories: seeing and expressing. Seeing involves ways leaders can ensure they'll spot great work being done, and expressing covers the best ways managers voice and show their thanks. Let's start with the practices involved in seeing.

Solicit and Act on Input

Henry David Thoreau may have been speaking up for employees when he wrote, "The greatest compliment anyone gave me was when they asked me for my opinion and then attended to my answer."

The advice to actively solicit input from employees is not new, but managers rarely do it. Even more rare is to see them follow through on suggestions. Let's face it, many ideas won't be viable, and yes, some people might get upset if their contributions aren't acted upon if you don't explain why. But openly discussing with them the reasons their ideas are not feasible and conveying authentic appreciation for the input assures them you've given thoughtful consideration.

Here are some guidelines for getting this right. One of the first suggestions is to avoid the "over-ask"—expecting too much from employees with questions out of their purview (e.g., "How can we solve our pricing problems?") Only a few people in your entire organization would have ideas about solving something so complex, and that kind of ask might make people feel diminished.

Another guideline: Make sure the "specificity fits," so that you ask the right question to the right people in the right way. For instance, "How can we reduce fuel consumption while we are making deliveries?" is a question focused to solicit ideas to cut gasoline costs from anyone even remotely involved in the process of sending your goods out the door.

Every day workers will face challenges in their work, and each of those problems can spark ideas for improvements. The best leaders harvest those ideas to enhance performance. At Amazon, for instance, the company's intranet features an online suggestion box for employees to propose anything they think will make the company better, which is how free shipping was first suggested by software engineer Charlie Ward. That idea emerged in the insanely popular Prime program.

> If leaders could see themselves on film, tracking the way their teams see them, many of them would be stunned.

Assume Positive Intent

Let's accept that all of us can do some pretty boneheaded things now and then. But the vast majority of people do care about their work and are trying to do a good job. Almost no one clocks in wanting to fail. All too frequently employee performance is hampered by a key set of factors largely out of their control, such as the lack of proper tools, thorough training, and clear direction, which might be due to changing priorities or confusing explanations on the part of the leader.

Indra Nooyi, retired chairman and CEO of PepsiCo, said, when asked for the most important leadership advice she had been given: "Whatever anybody says or does, assume positive intent. When you follow this advice, your whole approach to a person or problem becomes very different."

It can be upsetting and even outright infuriating to hear that something's been screwed up. To keep your cool and get the information you need, coach yourself to follow these steps. First, instead of firing off a rushed text or email, pick up the phone or go see the person (if at all possible)—forcing yourself to speak voice-to-voice to those involved to get to the bottom of the conflict, not to assign blame but to understand the thought process on the issue.

Second, take the time necessary to gather all the facts before making any decisions or conclusions. Often your direction will change as you realize your first assumptions weren't correct. Third, take a forward-looking approach. Instead of asking, "Why did you do that?" you might ask,

"What could we do differently in the future when faced with this situation?"

And fourth, pay close attention to all communication about the issue to avoid passive-aggressive language and set a positive tone.

Walk in Their Shoes

Many leaders know little about the challenges their people are wrestling with in their daily work. In part that's because they've never done their jobs themselves, but it's also because they don't take the time to ask about the difficulties their team members may be encountering.

Leaders who develop empathy for others are great enablers of authentic gratitude. While empathy is often seen as a mental exercise—imagining how someone is feeling—the best way to be truly empathetic is to roll up your sleeves and actually walk in their shoes.

As leaders interact with employees in this way, they can observe carefully and ask how things are really going—taking away layers of hierarchy until they are literally face-to-face with employees in their natural habitat.

If a leader doesn't have the kind of time to literally step into people's jobs, the good news is there are many other ways to get the insights they need. Coaching yourself to regularly ask people about how they're approaching their work and for them to share some recent accomplishment can bring you into their world in a much more revealing way.

To get the scoop on the important things they are doing, consider watching them for a while. Sometimes leaders may hang around and watch employees going about their work, which can lead them to notice aspects of excellence they may not have been aware of. These are not only opportunities for gratitude, but the tips learned may also be shared with others around the organization. Explain that you're going to be taking some time to observe them because you want to understand better what they are dealing with and how you can be more helpful.

Look for Small Wins

Harvard Business School professor Teresa Amabile and writer Steven Kramer conducted extensive research on creative breakthroughs in organizations. They found, "Of all the things that can boost emotions, motivation, and perceptions during a workday, the single most important is making progress in meaningful work. And the more frequently people experience that sense of progress, the more likely they are to be creatively productive in the long run."

Great executives notice and express appreciation for small-scale efforts as much as they celebrate major achievements. They look for incremental wins every day that they can acknowledge. This allows them to find ways to inspire all their people to stretch and grow. Here are some simple ways to elicit the help of others in spotting them:

- Ask team members to give shout-outs to each other.
- Ask team members to toot their own horns.
- Set and then reward achievement of daily, weekly, or 30-day goals.
- Spotlight those who speak up and offer ideas.
- Recognize those who find new productivity hacks.
- Thank those who find solutions to resolve conflicts.
- Make great use of anniversaries.

Let's now discuss the practices involved in expressing gratitude.

Give It Now, Give It Often, Don't Be Afraid

Like ripe bananas, gratitude does not keep. The closer to an achievement a leader expresses her appreciation, the better. Too many leaders figure they'll stockpile their praise and share it all at once, maybe in a quarterly one-on-one, or even all the way at the end of the year in a performance review.

Some managers have also said that they believe discussing accomplishments during performance reviews is a more formal, and therefore more meaningful, approach to gratitude. Performance appraisals can certainly be effective, providing valuable evidence-based assessments of employee results, as well as setting concrete individual development goals.

One much-discussed problem with the annual review is that sometimes it is overly weighted toward criticism and can feel punitive to the employee. Even well-intended reviews can cause intense employee resentment if they are not tempered by frequent positive reinforcement throughout the rest of the year.

The infrequent formal feedback process leaves so many day-to-day achievements unacknowledged. That wastes golden opportunities to provide immediate positive reinforcement of the behaviors a leader is looking for, day in and day out.

Surveys from Gallup show members of the most engaged teams report feeling some form of acknowledgment of their

Gratitude offers an opportunity to put the flesh of specificity on the bones of core values.

contributions from their leader or fellow teammates about once every seven days. If you don't have your calculator with you, that's 35 times a year for each person you manage, or about once every week to two weeks.

Even with large teams, there are many ways to ensure people receive frequent expressions of appreciation for jobs well done, if not from you then from their immediate colleagues. Key for a leader is to set the pace and explicitly ask everyone on the team to help out.

Tailor to the Individual

More than 75,000 people have taken the Motivators Assessment, which highlighted that each person on this planet has a unique combination of what drives him/her on the job. The assessment revealed 23 workplace motivators: autonomy, challenge, creativity, developing others, empathy, excelling, excitement, family, friendship, fun, impact, learning, money, ownership, pressure, prestige, problem solving, purpose, recognition, service, social responsibility, teamwork, and variety.

The nuances in a person's specific nature show up not only in which of these are most important to him or her but also in the particular order of priority—from one to 23. Some people working in the same jobs might be especially jazzed by collaborating with a team, while others are more driven to learn something new by themselves, and yet others want to help their colleagues develop their own talents.

Smart leaders use that knowledge of individual motivators to tailor expressions of gratitude to each team member. For instance, someone driven by concepts such as autonomy and excelling might feel best recognized when given a chance to work independently on an important project.

When it comes to expressions of gratitude, a generic "thank-you" isn't anywhere near as good as a custom offering. Brad White will never forget receiving a personalized reward on his 10-year work anniversary as vice president of sales at AddVenture Products in San Diego. The company's owner, Alan Davis, presented his salesman with two baseballs autographed by White's favorite player, former Major League Baseball star Rickey Henderson.

"I stood in front of the entire company accepting this gift, completely awestruck, honored, shocked, grateful, and thrilled," White said. "The value of having an employer who truly cares for you, who knows who you are as a person, and who goes the extra mile to show their appreciation, that value can't be measured."

Reinforce Core Values

A common theme among leaders interviewed is that expressions of gratitude should be connected to behaviors that are in line with the company or team core values. Appreciation is a powerful way to reinforce the importance of those vital principles.

Showing gratitude is one of the most effective and memorable ways to reinforce leadership's commitment to values and offers powerful opportunities to communicate why these grand ideals are so important—not to mention what can go wrong if they aren't demonstrated. Gratitude offers an opportunity to put the flesh of specificity on the bones of core values.

One laundry employee at a hotel chain was rewarded for living the firm's value of integrity. She had found a large bundle of cash stuffed in a guest's pillowcase that had come down to the laundry for cleaning. She rushed to her manager's office, burst in, and reported the finding.

The manager happened to be in with an upset guest at the time. It seemed the man had lost a sum of money in his room. Long story short, the cash and guest were reunited, and the laundry employee was recognized for her integrity in front of the entire hotel staff.

What a terrific learning moment it was as the manager said in his expression of public gratitude: "Integrity is essential. If our guests can't trust the hotel, they won't stay here—it's that simple."

When gratitude is consistently and meaningfully given to those who live the values, team members become your greatest advocates. A host of positive employee comments about an organization and culture on social media and

career websites is priceless—helping recruiting efforts and building a brand as a top choice for candidates.

Some important tips for tying gratitude to team or organizational values include kicking off the process pre-hire, asking the team to tie appreciation to values, and conducting rituals that provide opportunities to live the values.

Make It Peer to Peer

When employees are grateful to each other, they affirm positive, vital concepts typically valued in their colleagues such as trustworthiness, dependability, and talent. Peer-to-peer gratitude is particularly powerful because it comes from the people who are most respected—their fellow team members. And this can have an invigorating effect on organizations overall.

Leaders can make use of online systems or apps that have been developed to facilitate team-based gratitude. They're called social recognition systems. These systems can help build bonds outside of immediate teams, break down silos, and help workers in different locations feel more connected to one another.

At JetBlue, which has been named by J.D. Power as the highest in customer satisfaction among low-cost carriers for 11 years running, co-workers can nominate other crew members for everyday contributions as well as above-and-beyond work or effort, through a program called Lift. Successes are shared throughout the company on an internal newsfeed.

JetBlue data shows that for every 10 percent increase in people reporting being recognized, it sees a 3 percent increase in employee retention and a 2 percent increase in engagement.

Another great use of freely available online technology is posting complimentary videos of one of your fellow star employees on YouTube or the company intranet.

Because so much communication is online nowadays, handwritten notes can also be one of the most meaningful forms of gratitude. Taking the time to write with a pen boosts the gratitude factor by a ton.

Author Brené Brown has said, "In my 12 years of research on 11 thousand pieces of data, I did not interview one person who had described themselves as joyful who did not actively practice gratitude. "It's not joy that makes us grateful," she sums up, "it's gratitude that makes us joyful."

Start small. Start today. Choose just a few of the practices to focus on for a beginning.

You'll see out-of-this-world results.

THE SUMMARY IN BRIEF

We've all worked at places we dreaded going to every day: jobs where we didn't feel valued, trusted, or heard; places devoid of trust, effective communication, and true motivation. In workplaces like these, loyalty goes out the window, little work gets done, and everyone looks out for themselves. Meanwhile, as we suffer, so does the quality of the product or service we're providing. Ultimately, no one is happy. We feel taken advantage of, overwhelmed, and helpless to make changes, and our employer is frustrated by the lack of productivity of his employees.

When experiencing these feelings, most of us will gossip rather than communicate openly, blame others rather than examine our own behavior, make assumptions rather than ask for clarification. These behaviors are at the root of a toxic workplace. In ***Leading with GRIT®***, Laurie Sudbrink walks readers through the GRIT® system, designed to enhance communication, improve productivity, and maximize overall organizational health for any organization, large or small.

IN THIS SUMMARY, YOU WILL LEARN:

- Why the principles of GRIT® have been proven effective.
- How to apply GRIT® in communication for better productivity.
- How each person in an organization affects those around them in unexpected ways.
- How to cultivate a positive, constructive attitude for less stress and more growth.

Introduction

Your workplace may not be a total disaster, like some, but it could certainly be improved. Perhaps it could benefit from a decrease in complaining, or more willingness to share information, or maybe just a little less stress and a little more productivity. Whatever the level of misery, there is usually room for improvement. Sometimes a one to two-degree shift in perspective can produce a big difference. If we are mindful of some simple concepts, we can make that shift.

Leading with GRIT® provides a roadmap to improve individual and organizational health. In today's challenging times, we need tough characters to get the job done. While grit— having courage, resolution, and fortitude— is something we strive for, GRIT® provides the way. The principles of GRIT®— generosity, respect, integrity, and truth— create personal accountability, inspire ourselves and others to do our best, enhance team performance, and develop authentic leadership.

Freedom to Choose

Many of our experiences are based on the choices we make, either consciously or subconsciously. Our life is a reflection of our own beliefs and choices, and often we don't even realize that we are making choices. Sadly, it usually takes tragedies, near-death experiences, getting fired, or other forms of loss to wake us up. When these life events happen, reality hits us so hard that it makes us aware of life and the choices we have. But do we really need that kind of shock treatment to wake us up? Experiencing a tragedy is also no guarantee that we will wake up and recognize our options and choices. Just imagine if we could become aware and see the value of making positive changes in our lives without first enduring that tragedy. We could realize our plight and potentially prevent negative repercussions, all by making different choices.

We can't always control what happens in life, but we can control the way we react to it. We can blame others or bad luck, or we can ask ourselves what we can learn from our experiences.

We can use the faith we have in ourselves and other people to help us through. We can choose to live life to the fullest and do our best with the hand we're dealt. We can find humor in the situation and lighten up a little. Just making a choice to be grateful, appreciative, and happy will return joy to our lives, at work and at home.

Truth: The Core

The notion of truth, above all, connotes honesty. Are you honest with yourself? Do you really know who you are and what you believe in? Or are you wearing masks just to please others?

Can you look objectively at your situation, while still having confidence in yourself? Or are you playing victim, so others feel sorry for you? It's about being who you really are, fearlessly, rather than worrying what others think about you. When you're aligned with your truth, you don't change who you are to meet someone else's expectations; you change only to align better with your personal truth. (We'll cover aligning to your truth more in the next chapter on integrity.)

Brené Brown, in *The Gifts of Imperfection*, says, "Authenticity is the daily practice of letting go of who we think we're supposed to be and embracing who we are" (Brown, 2010). In the GRIT® model, authenticity combines both truth and integrity. Authenticity is aligning to your truth. But first we must start at truth so we have something to align to. This is where we begin to examine our beliefs and what is truly important to us. Throughout our lives, other people have influenced us. Along our path, many of us have lost ourselves; we're out of touch with who we truly are and what makes us genuinely happy. We've altered our behavior or made choices to please our parents, teachers, partners, or friends. Once we come back to the core truth that defines us, we begin the path to GRIT®.

Integrity: Aligning Your Truth

Think back to a time when you did something because someone else wanted you to, even though you really didn't want to do it. You said 'yes' to a project that you didn't have time for, or you agreed to have that tough conversation with a coworker that the boss should have had. Or maybe you gave up an important personal commitment for work. What was your energy level like? What were you feeling? For most of us, our energy level is low, and there's usually some negative emotion involved. We feel overwhelmed, drained, and resentful. If we pay attention to this, we'll know when we are not in integrity.

Integrity is aligning your actions with your truth. If you look up the definition of integrity, you'll see it's about honesty and moral character, being whole or complete, and being unimpaired or perfect. In GRIT®, integrity is about being in alignment with your truth, and in that context, we

are looking at it as being whole, complete, or balanced. You are doing the things that you say are important to you, in a balanced way.

Respect: It's a Two-Way Street

Respect is a word we've heard a lot, from our parents telling us to respect our elders to Aretha Franklin belting out each letter, soulfully demanding respect. Respect is about having admiration for someone; it's about accepting what is without attempting to change it; it's caring about a thing or a person, having consideration, objectively looking at a person or situation; it's acknowledgment and courtesy. Respect can be both given and received, and if we don't have self-respect, it's difficult if not impossible to respect someone else— or to be respected. People will value and respect you in accordance with the value and respect that you place upon yourself.

Respect should not be confused with tolerance. Tolerance is putting up with something or someone. Your energy is more negative and focused on yourself in tolerance. With respect, you are more focused on the subject, and you feel more positive or at least neutral. For example, rather than putting up with your employees, you see them as the vital ingredient for success. Effective leadership is virtually impossible without respect: respect for yourself, respect for the people you serve, and respect for the reality of your situations.

Generosity: The More You Give, the More You Get

Can you imagine if you genuinely felt like you had plenty of time: plenty of time to do the things you wanted to do, plenty of time to listen fully to your child, plenty of time to help your coworker, plenty of time to hear what is being said? How would it feel to not be rushed, overwhelmed, stressed out; to actually feel happy and productive on a consistent basis?

When you are living in integrity with your truth, and you respect yourself and others, you will naturally feel generous; it's not forced. You'll have aligned yourself properly, so your generosity is channeled in a way that makes sense for you. You have enough to go around. You've charged your own battery, you're happy, and you care about others. You feel like you have enough time, you have enough patience, you have enough energy— you simply have enough! Generosity is the reward for the work put in with truth, integrity, and respect.

The Key to Efficient Change

Any way you look at it, change is growth. Change stretches our brains, and our brains actually love the exercise of change. It's what keeps us young and happy, if we embrace it rather than resist it. You can change your thoughts and beliefs about change. Think of change as improvement, and no matter how painful, believe that it is always leading to something better. Those first few days when you start working out and your muscles are screaming- you know it's leading to something better. It may not always feel that way, but trust in the laws of nature and remember how much our thoughts and beliefs control us. "Your life does not get better by chance, it gets better by change," said Jim Rohn.

Okay, we all know that stuff happens! When something happens that you find yourself resisting, remember to stop and say, "I chose this; I want this," even if you don't believe it and even if it sounds crazy. Remember, your mind is a tool. Convince your mind that you chose the change, and you will feel completely different. Since you can't change it once it's happened, you may as well accept it and move on. The only way to change the future is by changing the present.

Can You Hear Me Now?

When we are completely present and listening with our hearts, it is a gift to those on the receiving end. This is pure generosity, and it sets the law of giving and receiving in motion, as we saw with the driver. Because many people don't receive enough of this kind of listening, it's safe to say that most of us could improve our listening skills, especially within the relationships that are most important to us.

As we dug into GRIT® earlier, we discovered that when we know our priorities, and we stay aligned, we respect ourselves and others and are generous in the right places. Listening is a prime example of this, one that's crucial for any relationship.

What Message Are You Sending?

While listening skills are critical to communication, equally important is the message you send. Since beliefs are internal and invisible to the outside world, words and actions are the only tools we have to communicate these beliefs and inspire trust. When we improve our messaging, listening becomes easier for others. It's a win-win.

I find it ironic that we're supposed to have the most sophisticated communication system of all animals, and quite frankly, we're not so good at it. We avoid saying what we really should say, we don't listen with the intention of understanding, we judge what someone is saying, and we start arguing before we even understand. We don't have to like or agree with everything, but if we could just reach a level of understanding, there would be a lot less miscommunication and negative drama.

With GRIT®, we are more mindful of the messages we send. We're thinking about what the other person is receiving. We strive to provide the truth, use the best method to communicate, think of everything the person may need to know, and say it the best way we can, so they can hear it. Our intent is to help, and, hey, maybe we can lighten up and give the gift of laughter to help people relax and enjoy life a bit more.

Just Say It!

Whether it's saying no, standing up for yourself, pointing out something that needs to change, or even saying something positive, ironically, the things we need to say the most are the things we avoid saying. Or we wait until we're so frustrated or angry that we lash out with hurtful words or talk behind the person's back-damaging important relationships. Why does this happen?

There could be a number of reasons that we don't say what we need to. Sometimes we're afraid it will be taken the wrong way, or we just don't know how to say it. Often we want to avoid conflict altogether. Many of us don't want to open that can of worms. When we communicate with GRIT®, there is no avoidance, no hesitation, no effort. It's easy to say what you need to say.

The Ripple Effect

When we feel we have no control over circumstances, it can be easy for us to then use those circumstances as an excuse to blame and complain and even become stuck, waiting for something to change. If we realize this is the reality of the situation, and then we consider how we can make an impact, we will shift to feeling that we can make a difference. Sure, maybe we don't own the company, or we feel like we don't have a high enough position to make changes, but we can still have an impact. It's been frequently reported that people don't leave companies; people leave their managers. As a manager, you have a direct influence on your team, and you can make a difference. Leaders set the stage. We are responsible for creating the culture that people are attracted to and feel committed to being a part of.

Conclusion: Keeping On Track

Transforming your workplace culture begins by envisioning a new one— one in which people can't wait to come to work. They are open, friendly, communicating clearly and directly, and helping each other stay on track. But if we want our people to step up and take ownership, we have to empower them. That's how good intentions become the GRIT® system in practice for not only the immediate present, but for the future.

Laurie Sudbrink established Unlimited Coaching Solutions, Inc. in 1999. Her proprietary system of GRIT®(Generosity, Respect, Integrity and Truth) has inspired tens of thousands of participants to take control of their own happiness and productivity at work. She is widely known as a dynamic speaker whose work ranges from small organizations to fortune 500 and has delivered workshops and keynotes at business and higher education conferences around the world.

Growth Matters
Page 6

Preparing the Next Generation of Leaders
Page 7

THE SUMMARY IN BRIEF

Leading with Kindness identifies six ingredients of kindness — compassion, integrity, gratitude, authenticity, humility and humor — none of which might readily spring to mind when envisioning the archetypal business leader. But they are absolutely essential to powerful leadership. William Baker and Michael O'Malley also point out obstacles to each of the six qualities and offer real-world, everyday management and leadership approaches that build and demonstrate each one.

While every good leader is eager to promote the growth of his or her charges, truly kind leaders know that part of growth is the experience of failure. Kind leaders will not shelter their employees from every single setback or mistake, but rather offer the response and guidance that will help employees learn from mistakes and unforeseen circumstances and build knowledge for the future.

You can't assume that you are a respected leader simply because you are nice, fun, and nonthreatening. But if you are truly kind—that is, genuinely committed to the welfare of your company and your people through thick and thin—you will reap the broad and sustained benefits of trust, honesty, commitment and loyalty from every corner of your organization for years to come.

IN THIS SUMMARY, YOU WILL LEARN:

- The six virtues that cultivate and reinforce relationships.
- The benefit and necessity of kind leaders in and out of the workplace.
- How to nurture all employees universally while recognizing unique talents.
- Tips for preparing the next generation of leaders.

What Kind Leaders Do

Enter Lady Macbeth. Reflecting on a witch's prophecy that her husband will become King of Scotland, she wonders if, despite his ambitions, he is too soft, "too full o' th' milk of human kindness," to do what it will take when the current king, Duncan, drops by.

At least since the time of Shakespeare, many have questioned the awkward alliance between kindness and leadership. Although the imperatives of leadership are not as extreme as murder, they may involve decisions that involve doing what is best for the company at the expense of other concerns: decisions, for example, that can cost others their livelihoods or affect the well-being of entire communities. In these situations, kindness is perceived as a self-defeating obstruction.

Kindness and leadership are complementary, and this combination specifically gives a leader a crucial edge. Our conclusions are based on our personal experiences, an understanding of the academic literature, and interviews with many business leaders who have quietly made a difference to their companies, their industries and, in some cases, their country.

Industrial Age Bosses

Kindness is not the first word associated with business. The image of business still largely includes old scenes from industrial America in the early 20th century: the age of hard work and tough bosses. Back then the goal was to keep production lines efficiently moving by any means necessary.

Today, the pressure for unremitting productivity from the forces of fierce competition in the global marketplace continues. New, unforeseen market entrants can suddenly emerge from anywhere in the world with a new technology, better business model or improved product to exploit a company's weaknesses and rob it of customers.

What every business presumably needs is a leader who is calculative, single-minded in the financial purposes of the enterprise and, perhaps, competitive to a fault: to the point of being overbearingly aggressive and belligerent.

The abiding impression of the modern manager remains haunted by images of past generations of over-controlling thugs: the new company man or woman who has just the right amount of indifference and interpersonal distance to make the unthinkable possible. He must get people to do their jobs the very best they can—without caring too deeply about their burdens.

Since many employees have had to endure the dismissive and erratic treatment of "shouters" during their tenures, our point is proven by that experience. We have a very long way to go before universal decency prevails within management.

Despite living in an era of unprecedented economic progress and scientific enlightenment, management practice remains primitive, with the incidence of buying in the workplace increasing, not decreasing, as one might have surmised.

What Kindness Is Not

Kindness is not a word that spontaneously comes to mind when we think of business, and its acceptance as a workplace virtue is made more quaint by highly salient experiences we have all had with loathsome, capricious bosses who somehow manage to escape detection and, inexplicably, ascend the corporate ladder.

Kindness comes packaged with many traits; thus leaders' own unique qualities give them a distinctive style. Kindness is part of a good leader's constitution, and others are able to brush aside some of the other qualities that leaders possess in order to see their compassionate centers.

Think of kindness as a key ingredient in a robust stew. The character of the stew is defined by all of the ingredients in combination, but omit just this one and the fine flavor is lost. Kindness, like many other traits, has an optimal level that makes it a virtue as opposed to a vice. Too little or too much transforms it into something ugly or suspect.

The Benefits and Necessity of Kind Leaders

In order for companies to improve, the people of the organization have to become smarter and more resourceful and work together more effectively over time. For this to occur, people actually have to care about their work, the company and one another. This requires the expert orchestration of a kind leader.

There is no shortage of rhetoric on leaderless groups or, what amounts to the same thing, groups in which everyone is equally conceived as a leader. True, many people are called upon at different times to assume greater authority, but the presumption of leaderless or, more accurately, leader-full groups tends to marginalize the role of one person in charge of it all.

Even well meaning, energetic people at times are unable to spontaneously ignite, and a very good reason why a leader is needed in most situations is to light the fuse. Everyone periodically suffers from inertia or self-doubt, is seduced into following an errant course or becomes distracted. Leaders

are needed because we cannot perform optimally without them. It takes a leader with unique abilities to achieve superior results. This homogeneous collection of abilities is referred to as "kindness."

The near-term goal of leadership is organizational survival by nurturing individuals' development and putting their expanding abilities to good use. The long-term goal is to produce individuals with the requisite capacities to lead by instilling those qualities that permit chronic expressions of kindness.

Who Kind Leaders Are

Warren Buffett summed it up best in mentioning three things required for success: integrity, intelligence and energy. He adds that if you are missing the first, the other two will kill you. That is, success can't be unqualified; it must be guided by conscience so that both the end results and the person achieving them are worthy of respect.

Personal Connection, Not Charisma

Yes, a great leader has to be able to organize his thoughts, communicate exceptionally well and have some sense of drama to be effective, but he needs something more to get the words to resonate with others. The words have to be spoken by someone who is concerned about you, who understands what you need and want for yourself, and who is unafraid to reveal that he or she—like you—is a member of the human race.

Kindness is an apropos term to apply to leadership because it implies precisely such root connections among people engaged in meaningful, reciprocal relationships. Those relations are cultivated and reinforced by six virtues, which are the ingredients of kindness that place encounters within the workplace in context:

Compassion. Compassion in the workplace matters because it provides employees with that extra amount of strength they need to perform, whether it's overcoming personal problems, trouble at home or job-specific challenges. The leader needs to have empathy: to understand what another is feeling and care enough to do something about it. Compassion provides the motivation to help, presenting the leader with an array of options to pursue, such as soothing and encouraging, guiding and coaching, or teaching and demonstrating.

Integrity. The distinguishing feature of companies that espouse integrity is that they make it clear that it really matters, and they are prepared to act on their principles. People with integrity reliably, consistently and predictably act on a set of values that ensures safety in interpersonal encounters. They keep promises and confidences, remain forthright and non-evasive, and are unbiased and even-handed.

Gratitude. Kind leaders have gratitude. To be grateful is to realize that one's life story includes many important characters, good and bad, and that one has benefited from the goodwill and sacrifices of others. In addition to having a sense of abundance and an aptitude to derive pleasure from the little things in life, gratitude is also revealing of an attitude. Fundamentally, in order to receive the gift of kindness, you have to accept that you cannot succeed alone.

Authenticity. Authenticity, in its various guises, matters to leadership. It is a valued commodity, both interpersonally and, as manufacturers can attest, in the marketplace, where producers are desperate to apply the label "genuine" to anything from leather goods to fine wines. Our view of authenticity and its antonym, fraudulence, is related to what we mean when we say that someone is a poseur. The way in which poseurs present themselves has no correlation to their inner lives and convictions. That is, they don't behave in a way that reflects what they truly think and feel.

Humility. The value of humility to leadership—and the reason it emerged as such an important asset among our cohort of leaders—owes to the "groundedness" of the people who have it. Humble leaders demonstrate two sides of realism. First, they temper their optimism with astute and honest assessments of corporate capability. They are pragmatists who understand what the organization is able to do and how quickly it can move.

Humor. Among other things, humor is a wake-up call to lighten up and view problems in a different light. And there is much to recommend for humor: A sense of humor has been related to interpersonal competencies such as warmth, ability to listen, flexible thinking and perspective-taking, openness, maturity and kindness. It is no wonder, then, that the leaders with whom we spoke included humor on their list of essentials for like leadership.

These are not optional character traits that are simply nice to have but are required if you want to be an effective leader.

Expectations Matter

How do we get someone who has basic intellectual aptitude and a healthy reservoir of knowledge to take nec-

essary actions and perform well? Michael Cherkowsky, former CEO of Marsh & McLennan Companies (MMC), offered us a three-part recipe for capturing performance potential based on three constituent ingredients: clarity, accountability and consequences.

Clarity. Clarity exists at different organizational levels. At the macro level, it involves articulating meaning and vision for the company, its value system and its strategic pathways. At the micro level, it involves framing communications that elicit action and defining specific goals in the service of the company's overall mission.

Accountability. Bridging the gulf between the acknowledgement of what must be accomplished and actually dong it involves recognition both that one is well equipped to act and has an obligation to do so.

Consequences. Usually when you try to invent or innovate, failure comes first. Roxanne Quimby duly notes that "Brilliance looks like devastating failure at some point in the process." There is no complete script to follow, no foolproof method. Risking failure is the natural price to pay for progress.

Doing Better: Process

Continuous improvement requires sound processes. Processes based on the storehouse of organizational knowledge and capabilities force the company to define how it will do its work. That is, routines are expressions of the best, most efficient ways to accomplish organizational objectives. Most importantly, routines impose discipline and define how members of the organization communicate and how operational problems are resolved.

We don't think the actual program a company adopts matters as much as the way it formalizes communications and problem solving. In general, the methods involve analyses of interdependencies, testing of causes and effects, making connections to and borrowing from other domains of knowledge and so forth.

Doing Better: Contingency Management

Rewards and punishments are part of any discussion of consequences. Put simply, the basic idea is that behavior is initiated and maintained by a host of consequential environmental factors that levy costs and benefits. People do things for which there are both tangible and intangible rewards and avoid engaging in activities when there are adverse consequences.

Good leaders realize that the best results are intrinsically motivated: that is, guided by a person's reason and internalized values. Highly motivated, achievement-oriented people can be self-sustaining for lengthy periods of time, requiring only periodic motivational boosters and occasional pit stops for tune-ups and repairs. The best leaders are able to keep employees engaged and performing with the throttle open.

Doing Better: The Opposite of Listening

All great leaders are superb listeners. But there is another valuable side to listening that is particularly important in shaping meaningful exchanges and quality performance: talking. The opposite of listening isn't not listening but rather talking and making sense. Thus, listening itself provides incentive for another to speak clearly and use all the facts on hand.

For kind leaders who listen, the difference is that they don't use numbers as blunt instruments to castigate and blame. They see measures as organization-wide indices performance that requires collective analyses and problem solving.

If, in your organization, you are reluctant to ask for help for fear of appearing weak or because of possible repercussions, ranging from public belittlement to career suicide, there is something very wrong with the leadership.

The Truth Matters

Given the importance of facing the facts in both organizational and personal development, it seems reasonable to ask why misrepresentations, distortions and other ways of concealing the truth abound. Why would those in business want to fool or mislead others?

Deceiving Others

It's hard to say, for example, that our company provides awful customer service, that an employee has "weaknesses" that need shoring up or that earnings growth has precipitously fallen. Any time we become evasive about the truth, we make the same assumptions about employees that the doctor may make about an ailing friend: that the truth is too frightening to confront and that the people of the organization are incapable of doing anything about it.

Shading reality shows a profound disrespect for both the character of people and the value of facts. Individuals need challenges to overcome, and living slightly off center as opposed to in quiet comfort makes us feel alive. Companies that create environments of faux bliss will get little in return.

In contrast to our kind leaders, who want the facts as people see them, flawed leaders view bad news as too

great a personal affront or too anxiety provoking to regard as welcome. If, to preserve a fragile ego, a leader takes the stance that he can do no wrong, then over time employees will oblige him and offer only glowing reviews, while hiding important but negative information.

Mostly Harmless Self-Deception

Humans as a species appear to be hard wired for a degree of self-deception: We lie to ourselves quite naturally. We adeptly manage our self-images so we appear more virtuous and competent than objectively warranted. We do this in three ways:

1. Self-Serving Attributions. People tend to attribute positive outcomes to personal factors such as ability or effort and negative outcomes to external factors such as bad luck or insufficient resources.
2. The Better-Than-You Effect. Studies have shown that self-evaluations of traits, abilities and performances are uniformly higher than if evaluated by others or based on an independent assessment of the facts.
3. The Bias Blind Spot. Typically, though people believe that others are vulnerable to bias and distortions, we think that we are not so affected. Miraculously, we see ourselves as more objective and self-knowing than others.

Art and Leadership on Common Ground

Poet Dana Gioia, chairman of the National Endowment for the Arts, once stated, "Art awakens, enlarges, refines and restores our humanity." One could add, "So does leadership." Both are expected to fulfill eudaemonistic functions of enriching our lives. A work of art by contemporary artist Bruce Nauman titled "The True Artist Is an Amazing Luminous Fountain" displays these words on a transparent, rose-colored Mylar shade that is hung over a window. The viewer is compelled to look through the working on the shade in order to see the outdoors and, in so doing, to reflect upon the artist as the generative source of one's vision.

If you replace the word "artist" with "leader," you have an equally poignant abstraction with which to probe an essential aspect of leadership: truth. The fact that Nauman's piece applies equally well to both leadership and art is probably indicative of their common heritage.

With that introduction, here are eight leadership principles, occasionally using Nauman's piece and other art as metaphorical points of departure:

1. **Craft Matters.** Everyone knows the truism that technically skilled people don't necessarily make the best managers. That obscures the fact that no one wants to be led by someone who is not proficient in her area or has a scarcity of domain knowledge. That is, we lose sight of the fact that even geniuses have mastered their respective craft.
2. **Leadership Is Based on the Ordinary.** Nauman's work exposes the hubris of the elite class. The use of a fountain as a metaphor for creative genius is part of the satire. Nauman is relying on our conventional notions of artists (or leaders) as separate from the everyday.
3. **Work Invisibly.** Fountains are places where people gather. Leaders, like fountains, provide a focus for action. They initiate it, encourage it and structure it but do not get in the way of it. They spontaneously stimulate the liveliness of a plaza without themselves becoming the center of attention.
4. **Leadership Requires Introspection.** Nauman's work also reminds us that art and leadership act as mirrors. The introspective aspect of the arts challenges the viewer to form an opinion, to question why he or she feels a particular way, to come to terms and perhaps to take a stand. One of the most basic questions a leader can ask himself is, "Why am I reacting this way (to a statement, idea, event)?" It is a question that puts him in control of the situation versus being controlled by it.
5. **Leadership Is Life-Affirming.** The best leaders ask us to adopt a new perspective on matters — to see things in new ways — and, further, get others to see themselves as members of communities. Invariably, great leadership, as with art, is life-affirming. Neither great leaders nor great artists require us to agree with their theses, but they do ask us to contemplate the human condition and to discover in our encounters that which has meaning.
6. **Leadership Is a Distillation of Chaos.** The Nauman piece reminds us that producing stirring images that capture attention requires extraordinary skills. It is the leader's job to assemble and depict fragments of reality in a manner that conveys an identifiable message, while simultaneously reducing distractions. A messy array of stimuli is distilled to a few ideas, and the leader's work suc-

ceeds or fails by the clarity, elegance and force with which these ideas are related.

7. **Leadership Requires a Novel Way of Seeing.** The frame and the colored Mylar covering also signal a purposeful attempt to hold something out as art. Viewers are being asked to suspend their customary way of perceiving and to adopt a particular attitude toward what the leader-artist is trying to accomplish through words, actions, symbols and such. That is, a leader or artist not only wants others to attend to and observe his representations but to look at them differently.

8. **Leadership Is About Keeping Passion Alive.** The word transformational, in both art and leadership, generally refers to a work's ability to challenge convention, to open new awareness, inspire new goals and stimulate actions consistent with those insights and revelations. But there is a more fundamental sense of the word: the ability to help others remain interested in and receptive to what leadership or art has to offer.

Good leadership meets us where we are. True leaders enable us to recognize in their messages those things we care most profoundly about, without distorting or minimizing the essential facts.

Great leadership, like great art, is filled with humanity. And like art, leadership is a human creation that is not so easily divorced from the human condition.

Growth Matters

Sometimes companies and their financial sponsors are born dumb, and the premises of their businesses are so far-fetched that there never was a chance of market success. And sometimes, technological change is as cataclysmic as a meteor pounding the Earth; the company has too little time to adjust.

But there is a vast region in between in which companies have been blessed with baseline capabilities, a decent product, and sufficient capital and time yet look on as it all falls apart. For companies to survive and flourish, they must acquire new organizational knowledge and repertoires that enable them to mobilize and react to potential environmental hazards in appropriate ways. That is, they must learn and grow.

Adaptive Options

Generally speaking, companies have only four ways to adapt at their disposal. Each maneuver is intended to align an organization's goals and capabilities with the demands of the environment.

1. **Accommodation.** The most familiar strategy is one of accommodation. The company changes itself to meet new environmental threats or to take advantage of new opportunities.

2. **Assimilation.** A company also can use assimilation strategies. A company that assimilates incorporates customer needs into existing operations.

3. **Enrichment.** A third adaptive strategy is enrichment. In this case, a company attempts to keep suitors for its customers away; bluntly, the goal is to occupy a monopoly position.

4. **Exit.** Finally, there always is the option to exit. A company can decide that it can't compete in its environment and that no other strategy can cost-effectively rectify that.

Prerequisites for Change

Although companies in the midst of technological and market upheavals may truly believe that the only constant is change, in practice all of the adaptive methods are used in combination, and a modicum of institutional stability is a prerequisite for change. While the world outside may seem chaotic, the world inside the organization can't be.

First, if a system is totally reactive to environmental conditions and pressures, it will never learn. Systems in constant flux can never retain and transmit any information and, thus, can never stabilize. At the other extreme, ultra-stable systems don't transmit information effectively either, and they, too, never change, or change only marginally. As such, neither system is capable of adaptation. For an organization to be able to change, a condition between chaos and fixation must be achieved.

Second, a system can only do what it is capable of doing. If an organization cannot reconcile the confusion, or doesn't contain the requisite capabilities or adequately coordinate functions, it will not be able to perform reliably and consistently. Put simply, superior execution is very challenging.

Very few companies operate as if the fire alarm just went off; instead, they manage to formulate and stick to some steady-state methods and procedures that at one time, at least, functioned efficiently. Successful adaptation, however, partly involves deviating from those states or replacing them entirely.

Execution presumes that basic abilities will develop and become increasingly complex in order to both extend the corporation's reach and recognize and react to new circumstances. The people of the organization must always be developing.

Fighting Cynicism

The pathology facing many companies runs much deeper than employees who are uncommitted and have emotionally removed themselves from the workplace. Rather, the pathological manifestation of maladaptation is cynicism. It is much worse than being disengaged and uncommitted. It is the attitude that all attempts at positive change and adaptation are doomed to failure and the most advantageous course is one of resignation: that the best one can do is tolerate one's circumstances as they exist. This is a sad state for individuals and for organizations, since the will to change has been lost.

You can imagine an employee asking, "Why bother?" "What's the use?" "What's the point of trying?" And they do ask. Viewed through the lens of maladaptive functioning, the organization is deprived of what people do best: think in a natural, healthy way. Instead, the organization is systematically impaired, and that intrudes upon or disables normal drives and activities. The result is a company that is competitively handicapped.

Let's find out how the vitality of organizations is lost. Or, conversely, what makes organizations vibrant, mindful and alluring places to work? In either case, leaders are the culprit or the inspiration, respectively.

Openness Versus Complacency

Open people tend to be imaginative, curious, independent thinkers who welcome novelty and variety and who are amenable to new ideas, approaches and perspectives. In contrast, those people at the opposing pole of this trait dimension are more comfortable with the familiar and conventional. In organizations, these latter people are defenders of the status quo and tend to gravitate toward methods and solutions that rely on tried-and-true ways of doing things. Leaders who are open are seldom content with the way things are and appreciate the potential for improvement and change. They are always on the lookout for how to make things better, even if everything seems to be working just fine the way it is.

But every company needs to create and innovate in order to adapt and grow. It helps if the leader is disposed toward continuous improvement. Regardless, there are principles to keep in mind that can facilitate an organization that is willing to experiment and change.

1. **Having a Prepared Mind.** Many people before Sir Isaac Newton watched apples falling from trees, but he was looking and observed what even those who were scientifically knowledgeable failed to notice. Serendipitous observations aren't made without curiosity.
2. **The End of Talent Management.** The quest for talent is a lot like looking for the snark. It is a search for a fiction. Exceptional achievements are more likely products of blends of attributes, including the substances of passion, discipline and stamina. The most talented people have a wealth of experiences to pull from. Thus, if you are looking for "talent," you would look for people who knew a lot about lots of different things.
3. **Finding Versus Solving Problems.** The most important and inspiring problems don't present themselves ready-made but are discovered by imaginative people who are able to see through the disorder of daily living and realize there is still much to be done. You want talent? Find someone who is willing to peer into the unknown and bring you problems.
4. **Create Obstacles.** It's common to think of obstacles as something to be avoided: If encountered, obstacles will stop you in your tracks. Thus, people often avoid roadblocks and look for the paths of least resistance that allow them to keep doing what they do best or have handy in their bag of tricks. But confronting obstacles head on does force you to reformulate your working assumptions and focus anew on the nature of the problem.

Preparing the Next Generation of Leaders

Good leadership is like leading people across a high suspension bridge. First, followers have to feel secure enough to venture out, and they need to trust that the leader will be there is needed and will not let them down. Secondly, they must convey that getting to the other side is a valuable endeavor or a worthy pursuit. Third, despite the fact that the trip may be treacherous, the leader must help followers to overcome their fears and to press on despite setbacks and unforeseen forces that urge them to turn back.

Companies that are known for their superior management acumen exercise kind leadership. They offer exhilarating jour-

neys that enable those who reach the other side to step off the bridge a different person. In preparing the next generation of leaders, what is it that we will want them to know and be?

In the business setting, we would minimally want our charges to qualify as good business people by becoming technically proficient in their fields and facile with the myriad aspects of general management. There are a few essential characteristics that not only foster leaders' own successes but are critical in developing future leaders who share the same ideals and attributes.

So what qualities do these leaders have and what types of people do kind leaders engender?

Self-confidence. There is nothing more indispensable to one's personal welfare and effectiveness than knowing that one is the competent agent of what life has to offer: that we are the authors of our development, growth and self-renewal.

Self-control. A well-adjusted adult is able to control his impulses in order to maintain a healthy perspective on what is most important and advantageous to his welfare in the long run. Self-control does not involve the repression of thoughts and emotions that arise from stressful encounters but, instead, the management of them, in order to maintain proper perspective on what is most important and to achieve longer-term goals.

Self-awareness. Great leaders recognize self-awareness and personal examination as virtues because these keep leaders attuned to the kinds of people they wish to be. Leaders will tell you that it is common for interests and values to collide within the marketplace and that the most important orienting device when navigating through dilemmas is one's soul.

Self-determination. The definition of self-determination is that the ownership of results resides with each individual. Responsibility for one's actions can't be carved up or displaced. It means there is always choice, and, yes, there are consequences for the choices we make.

Conclusion

Students increasingly are interested not only in careers with "big bucks" but in doing work that benefits society. Generation Y brings this ethic to the workplace where, as employees, its members expect to find a sense of purpose and connection, among many other qualities discussed in this book and engendered by kind leaders.

Generation Y should be admired for its audacity and optimism. Its members are filled with potential and promise, and we have high hopes for them. They are why leading with kindness matters so much, now more than ever before.

A few final words—these from Albert Schweitzer—on preparing the next generation of leaders: "Example is not the main thing in influencing others; it is the only thing."

THE SUMMARY IN BRIEF

Society has a greater need than ever for talented, effective leaders. We live in a time when too many role models in the media represent styles of leadership that are far from ideal. Given the enormous social and economic challenges we face, organizations are desperate for people of every background who can formulate a compelling vision and inspire others to help make that vision a reality.

Developed from author Ron Williams's personal and professional journey, as well as experiences of America's leading CEOs, ***Learning to Lead*** is a master class on leadership, providing practical, tested leadership advice and strategies, whether you're searching for a new career, looking for proven management solutions, or seeking to transform your organization.

Learning to Lead will help you master a more creative, positive, and honorable way of leadership that will enable you to solve problems that appear unsolvable and to achieve levels of success you may never have previously imagined.

IN THIS SUMMARY, YOU WILL LEARN:

- Wisdom and strategies for leading yourself, teams, and organizations.
- The importance of reframing and asking the right questions.
- To define what's most important and plan intelligently.
- To create a positive company culture.
- To practice communication as a team sport.

PART I: LEADING YOURSELF

Find Your Challenge: Launching Your Career Quest

Some have called me the least likely person ever to lead a $34 billion corporation. I grew up in the 1960s in a working-class family in one of the poorer neighborhoods of Chicago, then one of the most segregated cities in the nation.

The cultural, educational, and economic opportunities around me were sparse. But I inherited a strong work ethic from my mom and dad, and I was determined to make something of myself. After graduating from high school, I made my way to Southeast Community College of Chicago, then to Roosevelt University, where I majored in psychology.

After a brief stint working in the office of Illinois Governor Richard Ogilvie, I launched a business career—first as a consultant, then as an entrepreneur, and then as an executive at Control Data Corporation, Blue Cross of California, and WellPoint Health Networks. By the time one of America's biggest insurance companies was foundering, I'd established a reputation as a go-to guy—someone with a knack for making things happen in tough situations where others struggled.

Making Things Happen

I was recruited to help turn around Aetna in 2001. After a year as executive vice president, I was named president and a member of the board, and in 2006 I added the titles of CEO and chairman. Aetna had recorded an annual loss of $292 million in 2001. However, by the time I stepped down in 2011—thanks to a tremendous amount of hard work and creative thinking by thousands of dedicated Aetna employees—that loss had been transformed into an annual profit of $1.97 billion, and the company had become one of the most admired in the industry.

As even this brief summary shows, my background and experiences are definitely unusual for the head of a Fortune 100 company. But much more important are the philosophies, methods, and principles that helped me achieve success. I've tried to be both a dedicated student and a successful practitioner of the art of leadership.

Along the way, I learned lessons that have helped me succeed—and that, I suspect, many other people may find valuable. Here's the first lesson I'd like to emphasize: Growing into leadership begins with self-leadership—which starts with discovering and nurturing the inner drive that will spur you to seemingly impossible achievements.

I've also learned that having an overwhelming personal passion that guides and shapes your life isn't essential to business success. Two things are essential: a deep, personal commitment to excellence in everything you do and a commitment to continual improvement.

Career Step One: Take a Chance!

Here are some specific suggestions to consider as you tackle some of the early career decisions that will shape your lifetime path:

Reject stereotypical thinking. Don't let other people define who you are, what you can become, or what you can accomplish. Feel free to disregard the familiar assumptions that define the characteristics of a business leader.

Take a calculated risk. Which is the better choice for a young person coming out of school—a job with a big, established company or one with a tiny startup? If both job assignments appear equally appealing, my counsel is to take the job that you perceive as carrying the bigger risk. That's probably the job where you'll face the greatest challenges—and therefore learn the most.

Keep your future options open. When making any career choice, think in terms of increasing the number of options you will have in the future. Ask yourself, "If I take this job, will I have more choices at the end of the day?"

Exceed your job description. Team members who never provide any extra value—who avoid special assignments, ignore opportunities to take on new challenges, and never offer ideas for improving the organization—are asking to be passed over when promotions are being considered and are not investing in improving their own value to current and future employers.

Redefine What's Possible: The Art of Reframing

Every worthwhile leadership journey encounters roadblocks and detours. Unfortunately, far too many people succumb to frustration and give up the quest prematurely. Often they blame themselves. Sometimes they blame a business world that seems to throw up barriers for leaders who don't fit the traditional mold, like women, people of color, or those with unusual educational and career histories.

When you learn and practice the art of reframing, you'll find that almost any situation. . . can be transformed into a growth opportunity.

In either case, they fail to recognize that most of the limitations we experience in business and in life are self-created and therefore capable of being overcome. The ways we think define the box in which we find ourselves.

Reframing is about creating a new mental landscape with a larger scope of freedom, a greater degree of flexibility, and a set of alternative ways of approaching any problem—which can often lead to new and unexpected solutions.

A New Face in the Mirror: Reframing as a Career Tool

Sometimes reframing is about seeing *yourself* in a new light. During my early years I didn't see myself as a potential business leader. I came from a minority-group heritage and an inner-city neighborhood; I didn't match up in an obvious way with the conventional image of a leader.

Thankfully, over the past 50 years, social changes driven by the civil rights movement, the women's movement, and the gay rights revolution have done much to broaden the way we think about leaders.

Moreover, studying organizational dynamics offered me an entirely new way to think about business leadership. A corporate manager or executive didn't have to be a charismatic member of the "boys' club" who led his colleagues using the power of personal charm, social status, or flamboyant oratory. He (or she) could also be an introvert, someone deeply analytical, with a scientific bent, a gift for accurate observation, a strong sense of logic, and patience and determination. Someone like me.

Open Up to New Perspectives: How to Make Reframing Second Nature

One effective way to improve your talent for reframing is to deliberately open yourself up to new perspectives. Don't talk only to people from inside your own organization or even from your own industry. Meet, swap ideas with, and learn from people who come from different walks of life and apply quite different perspectives to the challenges and opportunities of life.

Immersing yourself in business history can also be a great way of developing your reframing skills. Study how innovative business strategies have been created simply through an adroit reframing of conventional thinking about an industry. Many of the famous breakthroughs by leaders of the past were the products of such reframing.

In the 1980s and 1990s, Howard Schultz took a commodity sold cheaply, practically everywhere, and made it the basis for a high-margin, worldwide business—Starbucks—by reframing coffee as an affordable, everyday luxury and reframing the coffee shop as a neighborhood hangout where people can work, socialize, and hold meetings. He created an experience rather than a product.

When you learn and practice the art of reframing, you'll find that almost any situation, even one that may appear hopeless, can be transformed into a growth opportunity.

Start with Minor Miracles: The Tougher the Challenge, the Bigger the Opportunity

Most businesspeople don't want to go anywhere near a company or a division that's in trouble. They fear being overwhelmed by the challenges and perhaps being tainted with the label of "loser." Yet, troubled businesses offer great opportunities for learning and growth, particularly to aspiring leaders who may not otherwise have a ticket to the fast track.

When you're willing to take on the tasks others shun, doors begin to open for you. Those at the top of the corporate hierarchy are likely to give you responsibilities and opportunities far greater than those you might otherwise enjoy. That's how many leaders—especially those from atypical backgrounds—get the chance to build a reputation as someone who gets things done, even when the company finances look dire, competitive pressures are intense, and employee morale is at its lowest.

Elease Wright worked with me at Aetna as senior vice president of human resources. Years earlier, she'd been a

rising star in the HR department when she dared to take on an incredibly challenging systems reengineering project that her boss warned her might be a career killer.

"I got sympathy cards, because everyone thought I'd been demoted," Wright recalls. "I lost my office, got stuck in a temporary cubicle, and had to beg for an assistant. But through hard work and by picking the brains of everyone in the organization with a creative idea, I made the project work. It ended up being one of my most powerful learning experiences as well as a stepping-stone to quicker career advancement."

Actually, Wright's willingness to take on a reengineering job that no one else would tackle was characteristic of her personality. Years earlier, upon graduating from the University of Connecticut, she began her job search in the middle of a serious recession—not exactly ideal timing. She ended up becoming one of the first women to work in an all-male maximum security prison, serving on the psychiatric staff as an inmate intake specialist.

Her job involved giving the new prisoners a psychological assessment and determining where to place them within the system. "When your first job is that challenging and depressing," Wright now says with a laugh, "you have no place to go but up."

Suffering isn't worthwhile in itself. Not every tough job is guaranteed to be a great learning opportunity. But many are. If the first few days or months of an assignment feel exhausting, overwhelming, or even painful, don't jump ship. Hang in there. There's a good chance that one day you'll look back on that job as the most difficult yet worthwhile growth experience you ever had.

PART II: LEADING OTHERS

'It Can't Be Done': Meeting the Toughest Leadership Challenge

There are plenty of obstacles to achievement in many organizations today. They include complacency, lack of clear goals, flawed assumptions, poor communication, inconsistent incentives, dysfunctional teams, and many others. One of the worst is sheer blindness—the systemic failure to accurately define the real challenges confronting the organization and the steps needed to meet them. That's the biggest problem I faced when I came to Aetna early in 2001.

I was recruited to join Aetna to help participate in a much-needed company turnaround. Like most executives joining a new team, I devoted my first few weeks on the job to getting the lay of the land—meeting key people, acquiring a sense of the corporate culture, studying the strategic position of the company, and asking managers from throughout the firm to share their perspectives on Aetna's strengths, weaknesses, challenges, and opportunities.

After that first month, it had become clear to me that the organization had tons of data but a severe shortage of timely information. Numbers? We had them aplenty. But they flowed across our desks too late, organized in ways that shed little light on the critical issues we faced and the choices we needed to make. We were like pilots flying in a dense fog, relying on instruments with a built-in lag in reaction time.

Transforming the Way We Think

So one of the first projects I undertook in my tenure at Aetna was to spearhead the creation of a new management information system that could enable us to—finally—get a grip on the problems the company faced. You might assume this would be a purely technical challenge—a task we could delegate to a few of our top finance, actuarial, and IT experts.

But the problem turned out to be much bigger and much tougher than that. It involved not only technical specifications and software design but deeply ingrained perceptions, attitudes, and relationships shaped by years of dysfunctional behavior at every level of the corporation. Fixing the system required hacking away at the roots of that dysfunction, including the sense of frustration, fear, anger, and helplessness that had gradually permeated Aetna, leaving thousands of bright, talented people sincerely convinced that our problems were simply too overwhelming to solve.

A technical problem? Sure. But it was also a matter of transforming the way we thought. The creation of what came to be called our executive management information system (EMIS) proved to be a turning point in the history of Aetna and in the lives of many of us who participated in it. It was an opportunity for me to apply some of the most important leadership tools I'd learned and honed throughout my career—and to begin spreading the use of those tools throughout the organization.

Together, my leadership team at Aetna discovered the effectiveness of asking questions that challenged deeply ingrained assumptions, the transformative power of fact-based decision making to inspire a vision of shockingly greater achievement, and the enormous value of investing

time and effort in rigorous planning before tackling any crucial project.

Building our new information system didn't only revolutionize our ability to run the corporation effectively and profitably—though it did that, in spades. It also taught us that there was almost nothing we couldn't accomplish by applying some clear thinking, tough-minded and open communication, a lot of hard work, and a bit of creativity. It's a lesson confirmed by the years of turnaround, rejuvenation, and growth that followed the crisis—and one that I'm convinced can be applied with equal success in almost any organization.

> Sometimes the most effective leader is one who knows what he doesn't know. . .

Changing the Problem Changes the Solution: Reframing for Business Leaders

In business and in life, the questions you ask invariably determine the value of the answers you get. Aetna executives had gotten into the habit of asking themselves, "How much have we grown this year?" Since the answer was always "a lot," they assumed that the company's overall state was healthy.

Beyond the "how much have we grown" question, Aetna's leaders should have also been asking, "Do we have a sustainable business model that is adapting to changes in the economic environment? Do we have the information, people, processes, and technologies needed to integrate the companies we've acquired? Are we maintaining good relations with our key stakeholders, and are we making sure that our company's reputation for integrity and service is being protected?"

Because of the failure to ask this broader array of important questions, the magic that Aetna's leaders were counting on failed to materialize. Financial losses continued to mount. Making matters worse, Aetna's failure to successfully integrate and operate the acquired companies led to a crisis of stakeholder relations. The overall poor leadership in the 1990's culminated in a series of costly lawsuits, judgements and settlements with patients and providers.

Working with CEO Jack Rowe, I helped Aetna's managers to begin focusing on our patients, customers, and questionsabout our business model, information, people, and technology.

In operating reviews, we started asking our executives, "How much money has this division made this year? And this one—and this one—and this one?" The answers would help the company determine which businesses to keep and grow and which to sell off. One by one, we identified the businesses that made no sense for Aetna to retain.

The philosophy Aetna applied in making these winnowing decisions recalls a famous dictum of General Electric's legendary longtime CEO Jack Welch—"If you're not number one or number two in a particular market, get out." It worked for GE, and it worked for Aetna, too. Over time, the company gradually divested businesses with a total of some eight million customers. Those customers didn't join the ranks of the uninsured; their policies were taken over by competing insurers in their specific markets.

The Search for Truth: Asking Questions that Open Minds

We sometimes assume that the leader in a group is the person who knows the most. It's not always true! Sometimes the most effective leader is one who knows what he doesn't know—and uses well-crafted questions to uncover hidden realities that make innovations possible.

In crafting an inspiring vision of change, a leader is likely to encounter barriers of many kinds—in particular, mental barriers—those unquestioned assumptions, unexplored options, or unchallenged rules of thumb that keep people stuck at a low level of achievement. Thus, an essential skill for anyone who wants to do the impossible is the ability to ask questions that expose and remove those mental obstacles.

The challenge is to frame questions that can provoke people into thinking about the problems they face in a new way—questions that guide people toward recognizing and reexamining the mental barriers that are holding them back—and to ask these questions in a style that doesn't elicit defensiveness, resistance, or fear. Here are some suggestions for positive, constructive questioning that you may find effective.

Avoid starting questions with the word "why." It's often important to get at the underlying reasons for people's behavior. Yet somehow that innocent word "why" has a way of sounding like an accusation. The question "Why did you do X?" seems to inevitably convey the implication that X was a stupid thing to do. I've found that I can elicit a less defensive, more forthcoming response to the same fundamental question by using a phrase like "what is the reason"—for example, "What is the reason you tackled the problem that way?" This wording assumes that there was a reason for the person's behavior and encourages them to share freely . . . and that's far more likely to enable you both to get to the heart of the problem more quickly.

Don't ask questions for which you think you already know the answer. The goal of asking questions is to garner information and to inspire creative thinking—not to quiz people, put them on the spot, or trap them.

Actively listen to the answers people give you. Don't be dismissive or scornful of the answers, even if you consider them misguided. Even answers that are factually incorrect are valuable in that they give you greater insight into the way a team member thinks and feels—and if one person thinks and feels that way, the chances are good that others do, too. Use "wrong" answers as an opportunity to introduce alternative ideas.

Ask follow-up questions. In many cases, the answer to one question merely points in the direction of the truth without delving deeply into it. One, two, or several follow-up questions may be needed to elicit a full picture of what is happening, and to open up the possibility of change.

Define What's Really Important—Then Make It Happen

One of the most crucial tasks of the leader is to help her team members set priorities and stay focused on the tasks that are most important. It sounds simple—but, in practice, it's quite difficult to do.

When you are receiving a steady bombardment of bad news—negative financial reports, customer or client complaints, key employee defections—it's easy to start responding in knee-jerk fashion to the latest bulletin rather than taking the time to sort out what's truly important from the merely urgent. Here are some questions you can ask that can help you determine whether an issue is truly important or simply eye-catching:

- **Financial impact:** If this issue were left unaddressed, how could it affect the finances of our organization over the next week? Over the next month? Over the next six months? Over the next five years?
- **Stakeholder impact:** How directly and significantly is this issue likely to affect our organization's key stakeholders, including customers, employees, investors, suppliers, business partners, and community members?
- **Future scope:** How probable is it that this issue will become more serious or widespread? How quickly is this likely to happen?
- **Reputational impact:** What is the likely impact of this issue on the reputation of our organization?
- **Underlying cause:** How likely is it that this issue is caused by underlying problems that are not yet presenting themselves directly? Is addressing this issue likely to help us uncover and begin to deal with those underlying problems?
- **Degree of uncertainty:** What is the degree of uncertainty regarding our knowledge of this issue? How confident are we that we understand the nature and the scope of the issue?

The answers to these questions can help you gauge the real importance of the issue before you.

The Neglected Art of Smart Project Planning

Some leaders routinely respond to important problems by asking team members to perform heroic feats of exhausting, frantic work. Occasionally, there's no way to avoid such drastic measures. But they can exact a high price in terms of focus and morale—particularly when they are made necessary by mismanagement or poor planning, or when they become habitual rather than rare. It's far better if you can avoid crisis mode through smart, deliberate planning.

Smart planning requires paying attention to the process rather than rushing through it. When scheduling a complex project, you should start by breaking it down into its component parts. List them in the order in which they need to be done. The parts of the project now become steps in a process that you and your colleagues will be carrying out.

You then should list the resources your team needs to perform each step. Be sure to note which resources will require help from other people or organizations. For each step, you should estimate the time required, taking into account other demands on the people involved. If several steps appear to

The collaborative process of exploring, defining, and implementing a set of ethical standards and values for Aetna eventually became codified in the 'Aetna Way.'

be especially lengthy, look for ways to streamline them.

Finally, you should define the results to be achieved in each step as clearly and specifically as possible, along with communication methods to be used to keep the whole team informed about what is happening.

PART III: LEADING AN ORGANIZATION

What Only the CEO Can Do: Creating a Positive Company Culture

When I joined Aetna, one of my most important tasks was to help reposition the company from being viewed as "one of those self-serving, greedy health insurance companies" into one that insiders and outsiders alike could regard as a progressive organization helping to lead America toward a more humane, efficient, and inclusive health-care system.

Before I joined Aetna, company leadership had tried a very different approach to employee motivation. The first line of the mission statement was something like "We will deliver a financial return of X percent to our shareholders." Of course, shareholders are important and so are financial returns. But this was the wrong message to send to employees.

Highlighting financial results in the first line of the mission statement said to everyone at Aetna, "It's all about the shareholders." It implicitly put everyone else—clients, customers, health-care providers, patients, even employees themselves—on a lower level.

The symbolism of that mission statement helps to explain the poor state of employee morale at Aetna during that period. It also explains some of the strategic mistakes the company was making at the time.

For example, when Aetna went on its acquisition binge, buying smaller insurance companies without thinking about how they would fit into the business or how they could be integrated culturally, it was being driven above all by the need to produce a high financial return for the shareholders.

I started by taking steps to figure out the underlying causes of the problem. Simply talking to as many Aetna team members as we could was part of the process. We also conducted a single annual survey that was thoughtfully designed and administered to yield meaningful results. We used employee town halls and other gatherings as venues to discuss some of the questions, complaints, and comments we encountered during the survey process.

Distilling the Aetna Way

We took our employees' concerns seriously. We started by addressing the financial and strategic issues that had led many workers to question the soundness of the company's management and the strength of its culture. On the ethical front, we responded by meeting with the people who were concerned and addressing their questions directly.

The collaborative process of exploring, defining, and implementing a set of ethical standards and values for Aetna eventually became codified in the "Aetna Way." This was a written document that spelled out the guiding principles behind our company's strategies and the decisions we made on a daily basis.

It placed customers at the center and identified four core values that we strove to embody in all our actions: integrity, quality service and value, excellence and accountability, and engaged employees.

The Aetna Way proved to be a powerful tool for leading the company toward a values-driven future.

Making Connections: Communication as a Team Sport

When you need to turn around a troubled organization or guide one through a complex change process, you need to engage the support of a critical mass of team members.

You don't necessarily need to capture the hearts and minds of 100 percent of your people, although of course you'll want to get as close to that goal as possible. But if you can

get a solid 10 percent of opinion leaders firmly in your corner, you can begin to make progress. Your first cadre of supporters will help spread your message through their daily words and actions. And over time, as signs of progress begin to appear, the remainder will gradually follow.

The first challenge for any leader in stressful times is to win over that critical 10 percent. That requires working hard to get your message clear in your mind and to communicate it as accurately and compellingly as possible. Fortunately, you shouldn't have to manage the messaging process completely on your own.

Identify a colleague or friend who can give you frank, specific, intelligent advice about how your messaging efforts are coming across. Practicing your speech in front of an advisor of this kind can help you lift your performance from the B-minus level to an A or even A-plus.

Multi-channel communication and feedback. When you have a message that everyone in your organization must understand, try to communicate it through every possible means—and keep repeating the message, even past the point when you are certain that everyone has been exposed to it.

Creating a common language. Another valuable communication skill for any organization leader is to establish shared definitions for important terms, ideas, and concepts. When these are missing, everyone in the organization is speaking a different language, with the most common result being that they start talking louder and louder—like tourists in a foreign country—trying to make themselves understood. True understanding is often a casualty.

Making human connections. You'll find you can do a much better job of motivating people if they feel they know you and sense that you truly care about them, their needs, and their concerns. One way I tried to do this at Aetna, with the help of my communications team, was through "Ask Ron," a question-and-answer column that appeared on Aetna's intranet every two to three weeks. We invited employees to send in their questions, ideas, or concerns, and for each column I would receive 20 to 25 letters on average.

Ordinary people—people like you and me—can achieve great things if they learn how to recognize and understand the barriers that limit them and then start overcoming them, deliberately, creatively, and persistently.

Your own abilities can suffice to make you an effective leader—provided you focus on the daily challenges around you and then work doggedly, thoughtfully, and positively with the people around you to overcome them.

If you do this, you'll be surprised and delighted to find that barriers you once assumed were insurmountable are beginning to fall, enabling you to achieve goals that once appeared unreachable.

THE SUMMARY IN BRIEF

There have been few periods in human history marked by as much transformation as this current era. From COVID-19 to the climate crisis, the Fourth Industrial Revolution to the rise of misinformation, the world is changing dramatically every day.

In ***Lift***, Faisal Hoque—thought leader, serial entrepreneur, tech innovator, advisor to CEOs and government leaders, and author—offers perspective on leadership at both the individual and organizational level. It explores the intersection of transformational leadership, systemic thinking, and experiential learning in an age of change and disruption, helping leaders of all kinds navigate these challenging waters. This book summary also explores ***Lift's*** perspectives on the importance of emotional intelligence in life and business, and how it can be developed and executed in today's world to massive benefit.

IN THIS SUMMARY, YOU WILL LEARN:

- How to master the intersection of transformational leadership, systemic thinking, and experiential learning.
- How to survive and thrive in the changes and disruptions of the Fourth Industrial Revolution.
- Why transformational leaders who focus on people and long-term solutions are the key to a prosperous future.
- How to become a transformational leader through empathy, execution, and knowledge.

Introduction

In a world being transformed by unprecedented change, effective, meaningful leadership is becoming even more essential. Sweeping change is everywhere, much of it focused on technology. Labeled the "Fourth Industrial Revolution (4IR)," emerging technologies and their interactions with one another are upending how we work, play, educate, and govern ourselves. Artificial intelligence, augmented reality, big data, multidimensional printing, and the development of varied collaborative tools such as "cobots"-robots designed to interact physically with human beings in a collaborative environment—are just a sampling of the power and pervasiveness of technological disruption. But 4IR is not only about smart, connected machines and systems. Its scope is much wider as well.

For instance, waves of further breakthroughs are happening at the same time in areas ranging from gene sequencing to nanotechnology to quantum computing. It is the fusion of these technologies and their interactions across the physical, digital, and biological domains that is transforming how we work, play, live, and communicate.

The Fourth Industrial Revolution

The Fourth Industrial Revolution and other drivers of change have shifted the playing field as far as work is concerned. Although the COVID-19 pandemic was an absolute tragedy in most ways, it did compel people to acknowledge that 4IR has opened up work arrangements and tools that previously received little attention. Moving forward, a number of noteworthy companies and organizations have publicly committed to continue to offer a variety of work options, including full-time remote employment.

One downside to the proliferation of 4IR is a sharpened, justifiable concern over security and privacy, be it proprietary work material or medical records. As technology continues to spread and mature, it will be incumbent upon companies and organizations of all types to invest in and maintain rigorous security measures and protocols. Just as important, they also need to inform employees, customers, and others of all that they're doing to ensure that sensitive information and data remain secure. Lacking that sense of trust, many will be understandably gun-shy about using even the most advantageous and sophisticated technology—particularly so in an age where misinformation can cloud and distort well-intentioned and well-executed policies.

COVID-19

The impact of COVID-19 has highlighted the importance of one element of transformational leadership. Perhaps now more than ever, business leadership needs to emphasize empathy with clients and consumers. The pandemic has served to further consumers' growing emphasis on doing business with businesses that "do good," rather than just the least expensive choices. It's critical that businesses—through various means such as, soliciting consumer feedback on a regular basis—stay in close touch with clients' values and priorities. Price is still an issue but no longer holds the singular dominance it once commanded. To succeed and grow, businesses and organizations of all types will need to empathize with their end users to make certain that their priorities are aligned with the person making a buying or some other sort of decision.

Climate Change

Greater awareness of the impact of climate change mandates a systematic, comprehensive strategy to leverage that shift to the utmost. Here, it can be helpful to subdivide the global topic of planning and execution into two different categories. First is mitigation—those steps that can be taken to minimize and even reverse environmental damage, including retrofitting buildings to lessen environmental impact and leverage clean energy, developing more sustainable transportation, greater overall use of solar and hydroelectric power, and other actions. The second category is adaptation-policies and actions with which to adiust to the realities of climate change. These include preparing for longer and more active fire seasons, updating community disaster plans in anticipation of more severe weather, and other proactive steps that both acknowledge and prepare for climate change events. This two-pronged approach acknowledges the reality that climate change cannot be limited just to corrective action-it also underscores the fact that climate change isn't going to be solved overnight and that proactive planning is necessary to minimize existing damage as much as possible.

Misinformation

Experiential learning can prove central to better educating people of all ages about misinformation and ways to identify it. Whether within the confines of formal education or personal skill development, systemic thinking is absolutely essential to the growth of greater media literacy.

Approach misinformation and fake news with a sense of empathy toward others-not for people attempting to pull off such scams but for others who may be unwittingly taken in by misleading or potentially dangerous falsehoods. If you spot what you believe to be false news, call them out on it. Let the person posting the material know that you believe it to be false and cite your reasoning for doing so. Cite the questions and other means of investigation you used to identify the ersatz posting. Treat those who believe fake news with an understanding of how easy it can be to fall for such mischief.

Individual Opportunity— The Newly Empowered

Experiential learning and close observation are critical to pinpoint just how the individual—including you—is growing in influence and authority. While examples such as health-care portals, growing application of remote and flexible work, and other instances are perhaps the most obvious and visible, keep an eye out for more beneath-the-radar signs that many dynamics of everyday life are increasingly shifting toward the individual. For instance, does your employer seem more interested in soliciting feedback from employees and taking proactive steps to help ensure that the work environment is supportive and constructive? Did a company or organization with which you dealt-which never sent a "How did we do?" sort of email—now shoot you several? Being aware of these and other seemingly minute issues can reinforce your appreciation of your growing influence, further prompting you to act upon that leverage.

Opportunity in Business— Financial and Ethical

A primary opportunity driven by exponential change is the expansion of customer and marketplace appeal beyond issues such as price. Companies that practice an active form of empathy to maintain close contact with their customers' priorities are recognizing that factors such as social responsibility, environmental practices, employee relations, and other issues are playing a growing role in consumer decision-making. However companies maintain that contact—by way of blogs, consumer feedback opportunities, surveys, and other means-will prove essential to staying in step with the shifting values of their markets. And as change continues to take hold and evolve, technologically and otherwise, the more critical that commitment to empathy will become.

Businesses of all sorts also need to keep reminding themselves that this, for better or worse, is a brand-new world where many so-called rules and realities have yet to be firmly established. Accordingly, a mindset that emphasizes and is comfortable with experiential learning is valuable, not merely to identify new opportunities but also to start to learn what sorts of strategies and ideas will prove effective in a constantly evolving environment. The textbook of opportunity has yet to be written in full, so a focus on experiential and ongoing learning will prove critical to navigating change successfully.

Opportunity in Health Care— Shedding a "Sickcare" System

Health care needs to systemically evolve into a more closely coordinated industry in which partners of all sorts cooperate and collaborate much more than they traditionally have done. This can include everyone from the health-care industry itself to pharmaceutical manufacturers to insurance companies. Technology such as Al and other like developments will make such a confluence that much more viable to assemble, not to mention better positioned to analyze and subsequentlv apply conclusions and breakthroughs. Further, technology such as patient portals and other tools can make more complete and detailed information that much more readily available to patients.

Healthcare also needs to be empathetic to the needs and priorities of greatly empowered consumers. This dovetails with a growing emphasis on complete well-being, not necessarily just the physical. Similar to the synergy and cooperation outlined in the prior point, this will mandate closer cooperation between all sorts of health-care providers, including physicians, therapists (both physical and otherwise), and others. Technology can also help to boost the efficiency and efficacy of such cooperation, not to mention involve patients in a more ongoing, comprehensive manner.

Opportunity in the Public Sector— The Rise of the Digital Citizen

Although technology of all sorts holds extraordinary promise, the future of government lies in a decidedly less tech, more human form of operation. Whether a greater inclusion of citizens in the creation of policy or technology that affords greater human contact in government when necessary, a more empathetic approach is shifting the overall focus and activity of government to the end user-those impacted by the laws and regulations that are the purview of government. Ideally, the end result will be better-crafted laws and regulations that prioritize those they will impact.

The Overriding Essential— Emotional Intelligence

Emotional intelligence lies at the heart of effective transformational leadership. Incorporating trust, a willingness to take risks and to let others do so as well, and other traits compose a style of leadership that's in tune with the ongoing flux of today's world. Moreover, the more things change and evolve, the more the value of emotional intelligence will increase and become increasingly applicable and useful.

Empathy is a particularly important emotional component of sensitive, transformative leadership. To elicit the types of behavior and mindset that emotionally intelligent leaders value, it's essential to develop a genuine sense of connection with and understanding of others. A strong group belief in high, meaningful goals and commitment is only possible when a leader truly sees what makes others tick-and what positive actions can be taken to leverage those very personal characteristics. Emotional intelligence doesn't just benefit others. It also works to strengthen your own sense of personal worth, feeling of achievement, and growth. It only makes sense-if everyone around you feels and works better as a result of emotional intelligence qualities, why should you be the exception?

Emotional Intelligence, Systematic Execution

A transformational leader embraces experiential learning. By focusing on policies, practices, and outcomes, a transformational leader is constantly evaluating what's effective in actual practice. From there, a comfort level with adjustments allows the leader to make adjustments accordingly. A transformational leader also recognizes the novelty of many of the leadership challenges change has introduced in all areas of how we work and play. Since the playbook has yet to be written, learning as you go is the only effective way to navigate leadership challenges effectively.

Conclusion

There is no magic bullet. No single approach to making the most of the opportunity of the change we have experienced—and will continue to experience—will prove the be-all and end-all solution to the challenges that change poses for us. Rather, it will be a confluence of ideas, strategies, and actions that will prove effective in managing and making the most of sweeping change. That will involve not only constant experiential learning but also a willingness to experiment and improvise. The world that existed yesterday will be decidedly different from that of tomorrow and the day after. It will take a complete and adaptable toolkit for each of us to cope effectively with that ongoing cycle of reinvention.

But it's also an optimistic time to be alive. However grim reality can often be, mistakes, miscalculations, and even the most significant challenges are as mortal as we are. Approach them with the skills and an attitude born of opportunity and possibility, and the future can make the struggles and frustrations of the past seem like distant memories.

Faisal Hoque is an accomplished entrepreneur, senior executive, author, thought leader, public speaker, and advisor to management teams and BODs with more than 25 years of cross-industry success. He is the founder of SHADOKA, NextChapter, and other companies. They focus on enabling sustainable and transformational changes. LION TAMING

THE SUMMARY IN BRIEF

If you feel like you need a whip and a chair to work effectively with your boss, client or customers, the techniques of real lion tamers can help you achieve better results. Lions are the people in all organizations who wield power and influence, and they are roaming freely in our lives. They act differently because they think differently. But they don't have to be difficult to work with!

Lions are the people all around us with power, responsibility, authority and talent — as well as the people who may simply be preoccupied with gaining more power and authority. They can be leaders, bosses, executives, professionals, managers, owners, partners, boards of directors, elected and appointed officials, colleagues, customers, clients and employees. Lions roam freely everywhere, across all occupations and professions — throughout life. Following the lions in the workplace in order to find out how to act, and as importantly when to act, leads to a twisting trail.

According to Steven L. Katz, a right-hand executive and senior adviser to leaders and executives across the worlds of business, politics, government and nonprofit organizations, lions are never tame, and you need strategies to deal with that. Katz explains that lion taming is really lion teaming. This summary will get you inside the minds of the leaders, bosses and other tough customers in your life, and help you to communicate and work more effectively together.

What You'll Learn In This Summary

✓ **How to establish your presence, authenticity and credibility** with your boss or leader.

✓ **How to identify the lions around you**.

✓ **How to decode the lion's four senses** of dominance, territory, social standing and survival.

✓ **How to avoid being the prey, the enemy or ignored,** and become an influential member of the pride or organization.

✓ **How to establish rapport with the lion** so you can achieve things together that you never could alone.

LION TAMING

by Steven L. Katz

— THE *COMPLETE* SUMMARY

PART ONE: LIONS ARE NEVER TAME

Lions Are Never Tame

We have all stood back from the lions in the office, the boardroom or wherever they appear on the scene. Who hasn't been afraid of getting their head bit off at work?

Many lions look to seize the advantage, even if it is by taking many small unobtrusive steps closer to power over a long period of time. They will patiently plan, wait and make their move. Lions thrive on whatever they get, whether it is information, intelligence, compensation, authority, territory, budget, head count or recognition. We need people who are good at being lions. We need them to use their persona to lead in a new direction; face challenges head on; expand the territory; and put their strength, power or position to use.

Lions at Work Are a Different Species

Of all the realities that must frame your outlook as a lion tamer in the workplace, it is that *you* are dealing with lions. As one executive who spent 25 years working his way to the top of his company observed about the company president, "*He's a different species,* and that's how I treat him."

You need to *feel* that you are a lion tamer before you walk into the equivalent of the steel-caged arena at work. As one astute lion tamer observed, "I know that I am about to enter a cage full of lions, and I think carefully about it before, during and after I go in." You need to be in possession of the self-image and strategies that put you on top of the situation as both a participant and an observer.

Lions in the wild and the workplace share four important traits:

1. **Lions need to be dominant and be secure in the feeling that they are dominant.**
2. **Lions need to control territory and know when and how to preserve, protect and expand it.**
3. **Lions need to know where they stand in the social hierarchy.**
4. **Lions are fine-tuned to any potential threat to their survival.**

Lions in the workplace are always highly aware of the people they encounter and the environment that surrounds them, and they see through any organizational framework to compete for a place in the hierarchy.

Hierarchies are particularly prominent in both the social lives of lions and the social order of the workplace, and have deep and often invisible effects on everyone. Lions often make the effort to operate beyond their existing terrain. But when they do, it is not to interact with just anyone — it is to satisfy their impulse to know where they stand as a lion. They have a need to validate themselves and others that they are lions — and this above all else is something that they must leave the isolation of their own hierarchy to achieve. They have a need for contact with each other, including the need to act aggressively with other lions. It is not just antisocial for them to do otherwise, it is "unbiological," as one scientist noted in the context of real lions. It is equally true in the workplace.

Identify the Lions Around You

No one likes to acknowledge that they may have to play lion tamer to a bigger lion, even though it could be the smartest job skill they ever master. One of the greatest challenges in the workplace is to function as a lion at your own level and as a lion tamer with the bigger lions above you.

The lion tamer is looking for the opportunity to work with the lions in ways that are proactive and productive, not reactive and perhaps disruptive. People who recognize this also know that stepping into the shoes of the lion tamer is something that they do well. ■

Rules for Working a Lion Act

- ✓ Lions are a different species.
- ✓ Respect their power.
- ✓ Recognize the danger.
- ✓ Don't be thinking of anything else.
- ✓ Always maintain visual contact — keep them in front of you.
- ✓ Remain alert.
- ✓ Be determined.
- ✓ Patience is essential.
- ✓ Pay attention.

Get Inside the Lion's 'Skull'

The lions at work act differently because they think differently. In order to understand why and how to communicate and behave, "You've got to get inside the lion's skull."

You must first understand what shapes the lion's perception of the people and the world around them. Lions, including those at the office, make a simple and instinctive calculation the minute any living thing comes into view. ***You are either prey, the enemy or ignored.*** Prey they eat. The enemy they kill. Everyone else they disregard.

In order to work closely and effectively with lions, you cannot afford to be considered either prey, the enemy, or ignored. How do you deal with that? Surprisingly, it is more up to you than to the people who are the lions. You use your lion-taming skills to change your own focus from reacting as if you might be prey, the enemy or ignored. Instead, you make it your goal to communicate to the lions — by establishing rapport, trust and mutual respect — that it is to their advantage to have you working in support of their objectives. *You are aiming to be part of the lion's pride in the office.*

The Lion's Four Senses

The Lion's Four Senses are: Dominance, Territory, Social Standing and Survival. These four senses form the basis for how lions in the workplace determine where they stand and whether something is a good fit for them personally.

Applying the Lion's Four Senses is a good baseline analysis of how the lions are feeling and acting. You can use it to make your own determination as to whether they should feel confident about their degree of dominance, territory, social standing or survival — including what might need to be done to shore up support in any of the four areas.

Additionally, the Lion's Four Senses are useful to pinpoint and possibly remedy feelings of insecurity or uncertainty. If you can help someone see that their dominance, territory, social standing and survival are well established, they are likely to feel and act more confident.

Lastly, the Lion's Four Senses can be used to help the person who is the lion honestly gauge the wisdom of an idea through the way it might affect their position as a lion. While the lions may not like others telling them how to behave, they do appreciate it when people tell them that all the good things that they are doing to maintain their dominance, territory, social standing and survival might be placed at risk because of an idea or approach they are about to undertake. In many cases, this is an advantageous way of saying "no" and still have the people who are the lions respect that you are looking out for their best interests.

Instinctive Thinking

Lions in the wild and in the workplace operate by instinct. It is a unique and primal strength, both conscious and unconscious, that is shared by the lions that we encounter every day. Instinct is not so much unlearned as it is self-learned. In its most primal form, it is a highly personalized sense of knowing. It is the very core of the lion's confidence, and often is what propels them into our lives. Instinctive thinking and behavior is a dominant characteristic, significantly more pronounced and critical to their existence than in anyone else we encounter. As a result, it is worthwhile to magnify the characteristics and significance of instinct in the leaders and bosses around us, and the impact they have on everyone around them.

Every lion tamer in the office needs to be acutely aware of this. It is an important part of the lion's personal tool kit and his or her ability to simultaneously explore, learn, decide and act. Inside the lion's skull, instinct drives his or her behavior not merely to live another day but to survive and live *as a lion in lion society.*

Juggling Perspectives

In the workplace, that often means that the lions react to other lions in the same organization. The people who are lions have an *Instinctive Identity* that enables others to recognize instinctive leaders in all professions, occupations and walks of life by the way they think and act. As ***multidimensional thinkers***, lions are capable of juggling a variety of related perspectives and interrelationships among people, information and events. Be clear and organized in how you present something to them, but do not be one-dimensional. Include perspectives from others whose opinion they might respect or want to consider.

As ***adaptive learners***, they are keenly interested in how change will affect them and are often interested in how they can use change to their advantage. Always be upfront about the possibility of change, the factors that you believe are determinative, and the opportunities and advance preparation that might be required to be ready. Then be ready to help them prepare in advance so that they can both act instinctively and absorb new information while moving at the same time.

Focus on Doing

As people who are ***focused on doing***, lions are not afraid to do things — and while they have their own sense

(continued on page 4)

Get Inside the Lion's Skull

(continued from page 3)

of risk related to their status as lions, they are much more prone to and interested in learning by doing. Since they do not spend time analyzing their own learning process, it is not productive when you work with them to spend much time explaining how you are going to do something. Instead, put them into action as quickly as possible.

As people who must ***demonstrate their instinctive speed and strength upfront***, it is crucial that these lions use but do not abuse the opportunities to demonstrate their instinctive thinking and behavior publicly. The crucial point to remember is the social importance of instinctive thinking and leadership. The value of the lions that fall into this category is not simply triumph of a brilliant or intuitive mind, but the degree and manner in which others learn to look up to them. ■

The Top of the Food Chain

Instinctive thinking is one of the most distinct and important "species characteristics" of the lions. As one lion tamer observed, "The whole art and science of lion taming revolves around species characteristics."

The primacy of the lion's instinctive abilities poses an important irony that explains why the lions in the workplace need good lion tamers around them. The lions establish their territory, but it is your job to create the environment for them to be effective, feel safe and perform well. That includes scanning and interpreting the world around the lion.

Strengths and Weaknesses

There are always certain non-negotiable realities that you have to be prepared to accept and deal with, including:

- ***Individual instinctive strengths can sometimes be weaknesses.*** Instinctive thinkers can pull information from many sources and directions all at once. However, some people are capable of pulling the information without having the ability to organize it. Just as in real lion taming, the lions in the workplace need others around them who know their strengths and weaknesses, help them prepare in advance, and focus their energies so they can leap through hoops of fire without any visible assistance.
- ***Instinctive leadership that is effective in crisis may breed a climate of crisis.*** Some lions are good leaders in a crisis. But no viable organization or situation can remain stable and successful in a constant state of crisis.
- ***The same instincts and intuition, even genius, that gave rise to a great idea can limit its viability and success.*** The inherently personal nature of being a lion in the workplace can lead people in positions high up in the food chain to forget that there is always a supporting structure, framework or organization that also defines their dominance as the lion.

While life at the top of the food chain represents significant challenges and non-negotiable realities in the instinctive behavior of lions, as a lion tamer you have to be aware of the entire range of behavior and how to deal with it. The lion establishes his or her territory, but the lion tamer, as the person who is responsible for creating the right environment for the lion to operate in, must maximize the display of the lion's strengths, while managing the risks associated with the lion's possible weaknesses. ■

Bring Out the Lion Tamer in You

Kevin Patton trained lions and then acquired his own formal graduate education in biology. Here he describes the ways in which working with lions and people in the workplace are parallel experiences: "Choose your battles. Know the difference between when it is vital to have the lion's attention and when it is just convenient. If you see every situation as vital, all your energy will be spent on 'attention getting' and both the lion tamer and the lion will burn out quickly. Lions are not going to simply be soldiers on parade for you. Work on the steps essential to achieving goals and leaping through the true hoops of fire in the arena!"

Communicating and Working More Effectively

Stepping into the lion tamer's shoes is the part of everyone's job related to communicating and working more effectively with people who have more power. Being a lion tamer means:

- **Strengthening your own self-perception and self-image.**
- **Adding a dimension to how you think about yourself in the job you were hired to perform.**
- **Playing a proactive, observant and strategic role instead of having to feel that you are in a subordinate or weaker position.**

The signs that you are bringing out the lion tamer in yourself include:

- **Recognizing who the lions are and what they want to be the lions of.**
- **Trusting your own intuition and instincts while verifying what others see and experience in similar situations.**
- **Feeling and operating less defensively and more proactively with the lions.**
- **Observing more and reacting less.**
- **Establishing your own presence, reputation and authenticity.**
- **Deciding who you want to work with or for, and why.** ■

PART TWO: THE ART OF LION TAMING

The Art of Lion Taming

Contrary to popular ideas and circus posters, the art of lion taming is *not* about driving lions into a snarling frenzy, winning a battle of "man over beast" or sticking your head into the lion's mouth! Lion tamers use brains not brawn. Thinking that you can muscle your boss is a bad idea. Even if you have the ability to escape from the ring unscathed, you still do not have the option of sending the lions at work back to their cages after their act. They are roaming free, and the things that they can do and say will have an impact on you and everyone around you for a long time to come.

At the core of every lion tamer is an acute awareness founded on his or her respect and understanding of the lion. Lion tamers must think on their feet before, during and after they have gone into the ring with the lions. To do so, they must succinctly capture in their own minds the information that is most real and most important.

Just "standing up" to a lion can be suicidal. Only the lion tamer who understands how and where to stand his or her ground while shielding his or her personal fears can take the next steps. These steps are establishing their presence and reputation in the eyes of the lion, and building rapport, trust and mutual respect in order to work together.

Adjusting to a Dynamic Environment

One of the characteristics of a good lion tamer, both in the center ring and in the office, is the ability to accept that the environment is complex and dynamic. It means actively sensing and sorting out what is unfolding around you and why. Some of what you observe is about you, but much is also revealed about the nature of others.

Success does not come from the equivalent of just posing with the lion. As Alfred Court, the revered French lion tamer and animal trainer, wrote: "When does the lion tamer think most productively? When the muscles are warmed up ... the body steams with sweat ... the mind is busy ... a new idea emerges!"

Lion tamers recognize the need to create an opportunity for the lion and the lion tamer to adjust to each other. It is a core requirement in approaching the lion with the aim of having the lion approach you. Lion tamers have an adjustment agenda that precedes, helps establish and serves as a foundation for working toward rapport, trust and mutual respect.

Here are the corporate lion tamer's rules for building trust:

- **Don't bring anything to the table until you totally understand the lion.**
- **Work to create a first impression by getting to know the lion first. If you lose the first impression, it's over.**
- **Find out what makes them tick and what is important to them. Are they trying to accomplish something specific? Help them.**
- **Don't throw yourself at anyone.**

In order for the lions to approach, you must give them the ability and opportunity to AIM directly at you: *Attention*, *Interest* and *Motivation*. ■

Courage, the Whip, And the Chair

Clyde Beatty, the legendary American lion tamer of the big top and the big screen, created the fighting lion-tamer image in popular culture that has lasted across many generations. Standing poised and seemingly fearless in a steel-caged ring full of roaring and ferocious lions, he was protected by nothing more than a whip and a wooden chair.

You cannot afford to reveal either courage or fear in a dramatic sense to the lion, because as one observer stated philosophically, "Courage that is self-conscious betrays great fear." Indeed, in the workplace, the lions may interpret a display of courage as a direct challenge or competition and prey on your fear as a weakness. You will succeed in getting the lion's attention, but not in a way that is useful to anyone. The secret is found in the heart of every successful lion tamer: ***It is the courage not to show fear.***

In lion taming, you need to be more in control of yourself than ever. A truly courageous lion tamer is extremely aware and cautious. When lion tamers list the attributes they consider essential, courage and bravery may be implicitly essential, but *patience* is at the top of the list, and *overconfidence* always ranks at the very bottom.

The Invisible Whip and Chair

Whether you're in a steel-caged arena or the boss' office, you may be telegraphing your deepest feelings in the silent language of your facial expressions and your stance. You will communicate through your words, cues and footwork. Your courage and strength will reflect your mental focus, physical stamina and nerve. Ideally, everything culminates in an arc of understanding and communication that flows between the lion tamer and the lion. In all kinds of lion taming, you need to become aware and in control of yourself and these movements.

The invisible whip and chair can be words and ideas that move someone in a particular direction. You can use them how lion tamers use them — to break the lion's concentration, switch the subject or get things back on track.

Your goal in using courage, the whip and the chair as a lion tamer is not to control the lion, but to move and work in unison together. When it is the lion's turn to perform, it is the lion tamer's job to stand back and let the lion do it! ■

The Lion's Pedestal

How is it possible to meet the lion's need for dominance without giving in entirely to its will? The answer is to *put the lion on a pedestal*. Lion tamers don't do this simply for the dramatic effect or to help the audience see the act better (although it helps). The lion tamers guide the lions to a place where they will feel dominant and secure in the feeling that they are dominant. The lion tamer uses his or her knowledge of the lion's primal needs to establish a safe and secure ground so that the lion has his or her own space from which to begin communicating and working together. That's the real goal.

As one lion tamer explained: "To the cat, his seat is a security position. Other cats won't bother him there — he can't get in trouble for being there. The lion is rarely disciplined there unless he has just returned from a fight and is told that he is being bad."

Attention Getting and Attention Using

The lion's pedestal is the secret to minimizing attention getting while successfully maximizing attention using. Until the lion tamer gets the lion's attention, he or she cannot use it. That is why one of the most valuable secrets of lion tamers is, "If you don't get them to sit, you've got nothing!"

Natural lion's pedestals often exist in formal meeting rooms, such as executive conference rooms. However, it is important to remember that such settings can also change the dynamic of the way you are with each other from a private, one-on-one discussion to a public setting. In private, you can often confront and challenge the lion's views in a more open discussion, but in public the same discussion will be seen as competing with the lion or challenging the lion.

To get the attention of the lion, remember this: When it appears that you may be infringing on the lion's space and you have engaged the lion sufficiently, make sure that you are backing up at the same time to achieve the distance needed to remove the lion's motivation for attacking you. Remember that the motivation is not anything you said; it is the simple fact that you are in the lion's space. In fact, you will probably have to repeat what you said once both you and the lion adjust the space between you. ■

Sticking Your Head in the Lion's Mouth

Despite the popularity and danger of the trick, not all lion tamers believe that sticking your head in the lion's mouth is a feat worth attempting. In fact, some object strongly. Their reluctance provides several valuable lessons for the workplace.

Clyde Beatty addressed the subject as "The Head-in-the-Lion's-Mouth Trick — How It's Done and Why It Shouldn't Be." He may have saved many a future lion tamer the need to discover the apparent truths about "lion's breath." He believed strongly that nothing is so important — not even getting a roar from the audience — that you should put yourself in a totally defenseless position. For Gunther Gebel-Williams, the choice was simple, "I do not do anything ridiculous to show off, such as putting my head into a tiger's or lion's mouth."

There is always a triangle of perception between the lion, the lion tamer and the audience (not to mention the other lions). In the workplace, the triangle exists between employees, managers and executives. In the office, everyone observes the interactions of others, hearing about events they did not actually see, casting judgment, reaching conclusions and acting accordingly. They decide who is strong and who is weak, who is smart, who is a leader and who is dangerous.

The bottom line is that in business, the leaders, bosses and other tough customers are an investment. If you do anything to diminish their value, you will pay for the loss as much as they will, perhaps more.

The list of possible ways that people stick their heads in the lion's mouth at work reads like a coroner's statement of the hasty lion tamer's "cause of death." Whether it is a leader, boss or other tough customer, any of the following is the equivalent of sticking your head in the lion's mouth:

- **Bruising their ego.**
- **Challenging them gratuitously.**
- **Pushing them to do something they fear.**
- **Talking behind their back.**
- **Wasting their time.**

Executives interacting with one another often stick their heads in the lion's mouth. Their biggest weakness is failing to sense — instinctively, intuitively or just reading the sign on the door — when to assume the role of the lion tamer instead of the lion. ■

For additional information on the big fangs,
go to: http://my.summary.com

Lion Taming in Action

These basic laws of lion taming also apply in the workplace:

- **Maintain visual contact at all times.**
- **Keep a positive attitude and a firm, upbeat tone of voice.**
- **Stand back and give the lion room.**
- **Let the lion roar — after all, he's a lion.**
- **Respect the lion.**

When lions are ready to leap through a hoop of fire, your

(continued on page 7)

Lion Taming in Action

(continued from page 6)

job is to stand back — sometimes even very far back.

In lion taming, the painstaking work and patience that go into establishing the trust, respect, rapport and understanding between the lion tamer and the lion will determine the result. In this case, it proves particularly important to work with the lion to build and maintain his or her trust, set and meet expectations, and ensure that the lion does not feel threatened, and that you don't cause him or her to flee, bluster or attack.

In the end, the lion jumps through the hoop of fire on his or her own initiative. Lions in the office want to jump through hoops of fire, they just don't want it to appear that someone made them do it! ■

PART THREE: LION TAMING IS REALLY LION TEAMING

Lion Taming Is Really Lion Teaming

Lion taming is really lion teaming! This is the basis for the one-to-one relationship between the lion tamer and each of the lions. At the same time, it is the concept that connects the lions and everyone that surrounds them in the larger environment. While taking quite seriously the matter of establishing his or her own presence, credibility and reputation with the lions, the lion tamer works hard with a positive attitude to foster rapport, trust and mutual respect. Behind every performance are hours of long training and a sorting of roles between the lion tamer and the lion, and also others around them. It is the building of the lion team.

Hoops of Fire

The purpose of any team is to work toward a set of goals — hoops of fire, you might say. Executives, bosses, clients and customers need to jump through hoops of fire. These are not only identifiable goals, but are often the very reasons that bring people in contact with the lions that they work with every day. Four kinds of hoops of fire — leadership, management, communications and relationships — are good examples. Other hoops of fire may also be related to short-term decision making, direction setting, policy-making, resource allocation or delegation of authority — the hoops of fire that are always visible when you think of the reasons why you are walking into the boss' office.

Despite the appearance of strength and self-sufficiency, lions in the office can and will work with others to see goals, develop the process for reaching the goals, and execute individually and as part of a team. However, never forget that they are still lions.

Lions are hardwired to be dominant, but they are also hardwired as "pride" animals. Lions in the wild and in the workplace are social animals, and to survive as lions, they must operate in two parallel worlds — the hierarchy and the pride or group. Social dominance is meaningless without social context. These worlds are not merely complementary; they are necessary to the lion's survival.

The lion cannot easily camouflage himself. The lavish mantle around his neck and shoulders that shields him against slashing claws and ripping teeth is also a walking advertisement of dominance, strength and virility. When the large males are around, every other inhabitant of the animal kingdom knows it. "Male lions on the hunt look like large haystacks moving through the grass," a naturalist observed.

It is no different in the office, where the boss cannot begin showing up to every meeting. Imagine the chaos this would cause. Tension. Distraction. Stress. Uncertainty. All these limitations of power are the immutable laws of the corporate jungle. If the boss' presence does become too pervasive, nothing would ever get done.

Freedom and Responsibility

You can live and operate in the lion's world, but the lion usually cannot operate in yours. This inherent limitation of movement and relationships creates a need, a role, and responsibilities for others who can move more freely.

A very important role for others exists as part of the lion's team through their ability to operate in the world that the lions cannot easily roam. Because the presence of leaders and bosses can sometimes have unintended consequences, part of your job as a lion tamer is to determine how to help present and portray their presence in the office so that it is productive.

It is the lion's responsibility to see that the lion tamer is respected for his or her unique role. Together they must ensure that the role is viewed as authentic. ■

Bring Out the Lion *Teamer* In You!

When you work with lions, there is no parity, no equality — only rank. Teamwork may sound ironic in the context of leaders, bosses and other tough customers, but it leads to more effective roles and relationships because it complements their natural thinking and behavior in ways that managing your boss or "managing up" does not.

The secret is to recognize the complementary yet distinctively different worlds of the hierarchy and the pride that lions must live in simultaneously. If a lion perceives you as competing with them to operate in the hierarchy of lions, he will resist you and may try to eliminate you altogether. You may be the most capable, expert person to

(continued on page 8)

Bring Out the Lion *Teamer* in You!

(continued from page 7)

do what they need done, but if they view you or your approach as furthering your own importance, not theirs, you'll be up to your neck in teeth!

However, by approaching the lions in the workplace with an attitude of teaming, where the issue of status and roles is undisputed and the focus is on what needs to be done, you can be most helpful, influential and effective.

The lions must always know where you stand in relation to them, that your intentions are consistent with their business objectives, and that they can achieve something by working together that they could not achieve alone.

Contrast and Context

People are surprised at the enormous difference in size between the lion tamers and the lions — surprised in a way that confirms their anxiety on the other side of the steel bars. The same ingredients are needed in the workplace. Lions need other people to provide the contrast and context to reflect the lion's role and actions. Here are three lessons about power and contrast, which show invaluable roles you must play and why lions in the workplace cannot do it alone:

- **Power needs contrast and context:** to shape and present the lion's power — helping even the lion to recognize his or her own power.
- **Power needs communicators:** conduits for inbound and outbound information to organize, describe, condition and project — but not necessarily to speak for them.
- **Power needs other people who have more freedom of movement** because they are less conspicuous than "the boss." These people can represent them, be participant-observers inside and outside the organization, be diplomats ... and bring others closer to them. ■

Perform in the Center Ring

For many, the idea of working with lions arouses a sense of danger and doom. However, others repeatedly demonstrate in both real and corporate lion taming that the ability to spark a positive chemistry has a contagious effect on others around you. Try these techniques:

- **Acknowledge that you have a preference and an ability to work with the lions around you.**
- **Treat your instincts as if they matter.**
- **Recognize that these capabilities genuinely reflect your style of effectiveness.**

You will find that you implicitly communicate this to the people who are the lions. In fact, lions look for and recognize these qualities in the people they work with. It is part of what brings you together as a team in the first place, and is an essential part of the chemistry that enables you to work together successfully.

If you need to stand up to the lion, you need to do it in the right way and at the right time. Here are the strengths and strategies that the lion in the workplace will recognize and respect in this situation:

1. The *authenticity* of your reaction.
2. The lion's *realization* that his or her own actions might jeopardize a valuable and beneficial relationship upon which he or she relies.
3. The lion's perception that you have a capability — including knowledge or relationships — that he or she cannot pinpoint and does not wish to trigger.

The strength of your reaction alone will not suffice. It is the authenticity, timing, speed and proper context that give the lion in the office pause. ■

Build the Lion Team

One lion tamer learned his job by standing behind a more experienced lion tamer and holding on to his belt, following and learning every move, word and gesture. However, before he took on the challenge of entering the ring alone with the lions, he wanted to make sure he had prepared in his own mind:

"On my first solo in the arena, I used only props, no animals, going through the cues repeatedly, practicing footwork, bodily movements, verbal commands and cracks of the whip. While I must have looked rather silly, gyrating and talking to the animals that weren't there, it was worthwhile, for soon I had all the details of the act in mind, ready to carry them out reflexively."

Visualize Lion Teaming

The tool you need to work smarter and more strategically in collaborative relationships with others around you is *visualization — the hybrid of imagination and the way things really are.*

The first step in lion teaming isn't creating the team; it's seeing it. No matter where you work, there are almost always existing relationships, dynamics and perceptions that are embedded in a broader and deeper culture. Imagine yourself moving between pedestals and unlit hoops of fire.

Lions will accept you as a lion tamer if you do three things:

- **Help them succeed in new ways.**
- **Tacitly acknowledge that you can help them in ways they cannot accomplish alone.**
- **Don't be afraid to say no, alert them to consequences and keep them out of trouble.**

Realize that a genuine roar or a snarl may mean you have engaged their interest and involvement as much as if they were smiling. As one corporate lion tamer commented, "I didn't realize I was a lion tamer until I said no to the lion!" ■

How Today's Leaders Build Lasting Relationships

LOYALTY RULES!

THE SUMMARY IN BRIEF

Loyalty, the key to success in today's economy? Be serious! What relevance could such a quaint, old-fashioned notion hold for a world in which customers defect at the click of a mouse and impersonal shopping bots scour databases for even better deals? What good is a small-town virtue amid the faceless anonymity of the Internet's global marketplace? Loyalty must be on the fast track toward extinction, right?

Wrong.

Far from being dead, loyalty is at the heart of every company that boasts high productivity, solid profits and sustained growth. For example, Harley Davidson recovered from near bankruptcy by building loyal relationships with all stakeholders. And Southwest Airlines, which has never had a layoff, is the only consistently profitable major airline in the United States every year since 1973.

According to author Frederick F. Reichheld — who wrote the bestseller *The Loyalty Effect* — the acid test of leadership is the ability to build strong bonds of loyalty in an age when leaders too often confuse profits with purpose, taking the low road to short-term gains at the expense of employees, customers and ultimately, investors.

This summary will show you how to become a loyalty leader — a leader who can transform customer, employee and investor loyalty into a sustainable economic advantage for his or her company. The key is a commitment to what Reichheld calls the six principles of loyalty:

1. **Play to win/win.**
2. **Be picky.**
3. **Keep it simple.**
4. **Reward the right results.**
5. **Listen hard, talk straight.**
6. **Preach what you practice.**

The following pages explore in detail each of these six principles, thus creating a step-by-step handbook on building profit-making loyalty in any company.

Leadership Integrity Key to Employee, Customer Loyalty

We may be in the e-commerce age, but customer loyalty matters more than ever. With the high cost of acquiring customers on the Internet, e-commerce companies can't afford to lose them. Without the glue of loyalty, even the best designed e-business model will collapse.

It's the same for employee and supplier loyalty. Companies can't afford high turnover rates. Customer loyalty hinges, as it always has, on committed teams of high-caliber employees and suppliers, which in turn require a core of owners committed to building an enduringly successful enterprise.

The challenge of building loyalty has become the acid test of leadership.

The challenge of building loyalty has become the acid test of leadership. It's the test most leaders are flunking. Yet the long-term rewards of loyalty ultimately outstrip even the most spectacular short-term profits.

The Six Loyalty Principles

Benchmark scores from top companies reveal that the center of gravity for business loyalty is the *personal integrity* of the senior leadership team and its ability to put its principles into practice. Timeless principles of integrity, such as truth, fairness and responsibility, create the gravitational core for organizational loyalty.

Specifically, loyalty leaders such as Rich Teerlink of Harley Davidson and Michael Dell of Dell Computer share an unbending commitment to six loyalty principles:

1. Play to win/win. Profit at the expense of partners is a shortcut to a dead end.

2. Be picky. Membership is a privilege.

3. Keep it simple. Complexity is the enemy of speed and responsiveness.

4. Reward the right results. Worthy partners deserve worthy goals.

5. Listen hard, talk straight. Long-term relationships require honest, two-way communications and learning.

6. Preach what you practice. Actions often speak louder than words, but together they are unbeatable.

The Loyalty Acid Test

You must measure loyalty as carefully as you measure profits. Satisfaction metrics are a good start, but you can't stop there. Better than satisfaction scores are customer and employee retention rates — real behaviors with real consequences. But even retention rates don't tell the whole story. To get the whole story, you can use the Loyalty Acid Test Survey, which is a relationship report card specifically designed to help leaders evaluate and strengthen key relationships.

The Loyalty Acid Test is designed to prioritize your challenges and create an effective game plan for maximizing the loyalty of your business partners. Visit www.loyaltyrules.com for more information.

The Enterprise Rent-a-Car Story

Loyalty leaders have built loyalty through their personal integrity, superior business strategies and masterful implementation of the six principles of loyalty. Andy Taylor of Enterprise Rent-A-Car is one example.

When Taylor took over the company his father had started 16 years earlier, he had no idea he was on a road that would lead to the top of the car rental industry. It is his father's philosophy that guides him: "Put customers first and employees second, and the rest will take care of itself." Through this formula of service to others, Taylor has built the most loyal group of employees and customers in the industry and turned the car rental industry on its ear. Today, Enterprise is the largest car rental company in North America.

How did it achieve this position? First, by providing

Leadership Integrity Key to Employee, Customer Loyalty

(continued from page 2)

prices 20 percent below the norm, giving door-to-door service, and paying managers far more than the competition. Somehow, profits have taken care of themselves.

A decentralized organization also helped. About 90 percent of the U.S. population lives within 15 miles of an Enterprise branch. These branches provide small, stable teams who are responsive, flexible and accountable. Each branch has free reign to make decisions affecting their customers. Though company owned, each unit is a separate profit center, structured to operate as an independent entrepreneurial business.

Enterprise's compensation structure shows that the company focuses on employee loyalty as well as customer loyalty. Pay starts at $25,000 to $30,000, but can reach $200,000 within ten years of college graduation. The company has no limit on the number of managers who can earn top salaries, and officers in the company receive a base salary of about $35,000 and a portion of the profits earned by all the branches in his or her territory. The end result is a talented group of employees and satisfied customers. ■

Principle 1: Play to Win/Win

Loyalty isn't about frequent-flier miles. It is about earning people's enthusiastic commitment to a relationship that will improve their lives over the long term. When partners trust that you have the capability and commitment to help build their success, they will commit to doing the same for you, and profits will soar. But they must see more than good intentions; they must see a rational strategy for creating superior economics.

Every loyalty leader you will be introduced to in this summary understands that basic premise, and has built structural economic advantages through focused competitive strategies grounded in a thorough understanding of industry economics, customer segmentation and competitor capabilities. They have extended their advantage by ensuring that all partners understand the strategy and their role in making it happen. When partners are convinced that the strategy can create superior value to the ultimate customer, and trust that the leaders will follow high-road principles and work hard to assure each partner succeeds and is rewarded fairly, then they can concentrate their full energies on the most essential goal — delivering customer value.

More Than Profits

An unrelenting focus on customer value provides both economic and ethical superiority. This focus creates a win/win strategy in which the entire chain of relationships with employees, dealers, vendors and investors creates superior value for the ultimate customer. Only the continuous creation of customer value can fund the aspirations of a worthy organization and its network of partners.

If you want to deliver superior customer value, you must refuse to be satisfied. Only by helping partners

(continued on page 4)

State Farm Insurance

Few companies have logged as many miles on the high road as has State Farm Insurance. North America's leader in personal property and casualty insurance has been committed to building trustworthy, enduring relationships with its customers and agents since 1922. State Farm understands that maintaining its relationships isn't always easy, especially when technology and the marketplace create new competitive pressures. For example, in 1996 the company saw a pressing need to alter the basic contract it had with its agents.

State Farm saw that it had to reduce costs and improve customer service to compete with new Internet insurance companies. It needed to begin 24-hour call centers and create an Internet presence at a time when it was becoming harder to make money in the insurance business due to escalating repair costs, legal expense, and the cost of technology improvements. In light of these marketplace realities, the company concluded its existing commission structure was rewarding agents too richly for providing merely adequate customer service.

State Farm's leadership team understands that no partner is entitled to prosper unless he or she is constantly contributing to better levels of value for customers. A leader must never let its partners forget this basic fact because no partner — agent, supplier, employee or investor — is entitled to win individually if the entire network can't deliver superior results to the customer. State Farm used a win/win strategy to make the change.

Unlike some other insurers, State Farm didn't adopt a strategy of setting up alternative channels, including the Internet, to compete with its agents. Instead, it integrated new technology into the old system. Customers who call their State Farm agent after hours are automatically routed to a regional call center. Processing once done by agents has been centralized and automated. Agents were involved directly in the development of the improvements. Slowly, agents have voluntarily accepted the new contracts after seeing that those who deliver excellent service to customers will continue to reap benefits.

Principle 1: Play to Win/Win

(continued from page 3)

reach for the stars — by targeting customer value that is better than the best — can a leader ensure that the organization will stay on the high road to success.

As an aspiring loyalty leader, you must work hard on the continuous improvement of cost and quality in your organization. But even the achievement of Six Sigma standards of excellence does not allow you to ease up on the throttle. To ensure that your organization continues to set the standards of excellence, you must focus on the basics of cost, quality and timeliness and on discovering new levels of excellence.

Play Where You Can Win

Committing to a win/win strategy cranks up the pressure to create truly superior economic opportunity for your organization and your partners. You cannot afford to waste time and energy with businesses and customers with which you don't have a legitimate opportunity to be the very best. You must have the discipline to play only where you can win. Here's how:

You must have the discipline to play only where you can win.

- **Get rid of distractions.** Don't struggle to improve business lines that cannot realistically be expected to deliver the best customer value and that have little strategic importance to the core of the company.
- **Beware of the Rotting Core.** In your attempt to pare away distractions, remember that they don't always come from new ventures. Sometimes, the distraction you need to excise is what was once the core business.
- **Be Wary of Wall Street Wisdom.** Some of the most lethal distractions that suck leadership time and energy away from core priorities are provided by the constant flow of advice from Wall Street. Investors have a legitimate demand for outstanding financial results, but leaders who bow to investor advice on how to achieve them and allow themselves to be distracted from their tried-and-true strategy do so at their own risk.
- **Grow From Positions of Strength.** Your company must maintain a winning level of growth to attract and retain outstanding partners. The source of growth preferred by loyalty leaders is from deepening relationships with existing customers and from developing concentrated positions of strength rather than from spreading resources too thinly.

A second way to growth is to acquire additional customers that belong to the same segment as the firm's existing book of business. ■

How Dell Got Rid Of A Distraction

In 1994, Dell Computers was selling computers directly to customers as it had since the beginning, but had also established relationships with giant retailers like Circuit City and CompUSA. But after four years of effort, the Dell team couldn't find a way to make sales through retailers profitable. Worse, surveys showed that customers who bought Dell computers through retailers weren't as satisfied as those who bought direct. Not only weren't any profits being generated through the retailers, but the retail sales were actually harming the Dell brand. The answer was to concentrate on the original direct sales model and exit the retailer channel.

Principle 2: Be Picky, Membership Is a Privilege

Nothing speaks more clearly about your values and principles than your choice of associates and who you promote to positions of authority. When it comes to running a business worthy of loyalty, not all employees, customers, suppliers and vendors are equally worthy of membership on your team. Loyalty leaders will be the first to admit that they discriminate — not on the basis of race, religion or gender, but on the basis of character, capability and performance. They know it would be unfair and absurd to treat unprofitable customers the same as a highly profitable and loyal ones.

Loyalty leaders are especially concerned about who is invited to join the team. With so many hours devoted to the workplace today, success and happiness can result only when these hours are shared by people with the capacity to create financial results and the character to treat each other right in the process.

Picking Your Employees

Loyalty leaders list employee recruiting and selection among their most vital functions. They know that their employees are ambassadors to the outside world. Employee behaviors and attitudes communicate most directly to customers and suppliers just what the company stands for.

A high degree of initial selectivity lets leaders invest aggressively in each person's success. They can stick with employees much longer than less selective organizations can. Turnover rates will be minimal in companies that get the selection process right.

An example of the benefits of careful employee selec-

(continued on page 5)

Principle 2: Be Picky, Membership Is A Privilege

(continued from page 4)

tion is the success of Chick-Fil-A, the loyalty leader in quick-service restaurants.

Much of Chick-Fil-A's success results from the company's ability to be pickier than the competition, especially for the store operator position. Candidates for this position include graduates of West Point and Annapolis as well as management alumni from talent troves such as Accenture — credentials unheard of elsewhere in the fast-food industry.

The company can attract and retain outstanding talent because it offers a uniquely attractive entrepreneurial opportunity to earn as much as $200,000 to $300,000 with no more equity investment than an up-front $5,000 franchise fee. Its superior operating pool then allows the company to attract a higher-quality part-time workforce. The company targets high end high school students, and offers them scholarships as well as excellent training.

Don't delegate employee selection more than absolutely necessary. Loyalty leaders are involved in this crucial aspect of leadership. For example, at Home Depot, which hires 75,000 workers every year, some delegation had to take place. But leaders worked hard to assure that prospective employees are carefully screened for values and cultural compatibility. Every store has a computer kiosk that includes a screening test for core values important for success as a Home Depot employee.

Be picky about employees' initial experience. The first 40 hours of on-the-job experience make an indelible cultural imprint on employees. It frames their understanding of the company and its business. For this reason, loyalty leaders devote enormous attention to those hours. Most senior executives in high-loyalty firms find the time to get involved personally in employee orientation and training.

Be picky about who stays and who is promoted. When you hire carefully and then invest heavily in your recruits' development and initial career experiences, you can reasonably demand superior performance. Set "stretch goals." Many loyalty leaders have raised performance standards and created up-or-out career paths that make it difficult for executives to coast or become complacent. High-performance cultures cannot tolerate mediocrity.

Select Your Customers With Care

Being picky about customers may be a foreign concept for many companies, but it shouldn't be. Loyalty leaders are very picky about targeting only the right customers – those for whom their firms have been engineered to deliver truly special value. If you want to maximize sustainable growth and profits, focus on the right customers. Every customer acquisition involves an up-front investment that will be paid back only if the customer's loyalty is earned. Attracting the wrong customer will result in costly churn, diminished reputation and unhappy employees.

Pick customers carefully for faster growth. Ironically, by focusing on selectivity and discrimination rather than on unbridled customer acquisition, high-loyalty firms are growing into market leaders. Consider the example of The Vanguard Group, which is on track to become the largest mutual fund family in the world. The company wants loyal, long-term investors and scrutinized redemptions to assure that it is attracting those who aren't inclined to short-term investments.

Pick the right customers to reduce costs. For example, Dell Computer focuses on repeat customers rather than new computer users, because experienced users don't drain support and service assets the way new computer owners do. Dell narrowed its customer segment by focusing on the Internet as its primary consumer channel. Since only customers who already had a computer could get online, they were most likely experienced users and the least expensive to service.

Don't lure butterflies, collect barnacles. Unless you're managing customer acquisitions carefully, you're probably letting the wrong ones in the door. Marketing and sales departments often invest in lures to catch butterflies when they should be searching for barnacles. Consider the menagerie of prospective customers in your industry. Then consider who is the ideal match for the superior, long-term value your company can deliver. These are the customers who are likely to stick around for a lifetime if they are treated right. These are the barnacles. The butterflies tend to flit to today's sweetest deal.

(continued on page 6)

MBNA Attracts Barnacles

MBNA, a leader in the credit card industry, makes every effort to avoid butterflies and concentrate on barnacles. Knowing that mass credit card mailings tend to attract people who need credit now and who are least likely to pay their bills, the company's campaigns focus instead on affiliate marketing. They attract members of clubs and organizations, college alumni, and even fans of sports teams, who want an MBNA account because of the affiliation, not because they have an immediate need for credit. MBNA then carefully measures retention statistics for each solicitation to see how effective it was. Despite its rapid growth, MBNA has its loan losses well below the industry average.

Principle 2: Be Picky, Membership Is A Privilege

(continued from page 5)

Incentives aimed at attracting high volumes of new customers, such as price breaks and advertising campaigns that stress the latest fad, are sure to yield an inflow of butterflies. Unfortunately, butterflies aren't very loyal, and their lifetime value is likely to be the lowest, and may even be negative!

Don't reward volume alone. Don't reward an employee for mere volumes of new customers. Loyalty leaders create incentives for growth in profits and cash generation, not for new account volume. ■

Principle 3: Keep It Simple

Complexity is the enemy of speed and flexibility. Like it or not, the world today runs at Internet speed. Companies must have the capacity for rapid learning and rapid response. The link between loyalty and your capacity for speed and adaptability may not be apparent to everyone in your organization. You must convince them that the past will never be as good as the future. Great leaders know that the best business is so reliable and so adaptable that it does the best possible job in the fastest and simplest way. So to be an effective leader, you must resist the world's inevitable drift towards complexity by simplifying your organization.

Simple rules are golden. Almost nothing reduces complexity and slows organizational progress as severely as uncertainty and confusion about core values and operating principles. Loyalty to a clear and simple set of principles is the basis for flexibility and speed.

Treat them right. Some years ago, a father tried to purchase life insurance on his infant daughter. The company's agent submitted the application with the premium, but the baby's doctor was slow to send the necessary medical records. Finally, after weeks of prodding for the records, the company decided not to issue the policy, and called the father to explain. He told them it was too late, since his daughter had died from sudden infant death syndrome that morning. The insurer decided that if the medical records would have allowed the policy to issue, it would do so. When the records revealed a healthy baby, the policy was issued, and the policy paid. It was the right thing to do, and one of the reasons the insurer is a leader.

Keep score keeping stable and simple. If you want your partners to act according to simple rules, you must help them track their progress. Keeping score is one of a leader's most powerful tools for clarifying the rules and focusing the energies of his or her people. Avoid changing the rules. For example, Chick-Fil-A has kept the same simple pay formula since 1967. Operators earn a base salary, which is updated to account for inflation, and 50 percent of the store's net profits. Even though that means there are operators earning substantial sums, the result is operators who dig in and make their stores highly profitable.

Simplify with small, flexible teams. Loyalty comes naturally in a small town. People know each other and treat one another as neighbors might. Companies should think small if they want to recreate the small town feeling. Create small teams that work together to solve problems. Unfortunately, many growing companies let teams grow out of control rather than develop more small teams.

Teams of ten or fewer are the most effective. Don't be tempted to increase the span of control for supervisors. The cost of supervision may fall, but overall productivity will too.

Simplify by outsourcing. Outsource all functions for which you cannot deliver uniquely outstanding customer value to partners who can. Perhaps the best example of this principle at work is Dell Computers. Dell's partner relationships with the best component suppliers saved the firm from having to pour precious capital and management resources into areas where Dell couldn't create an outstanding customer value. The company also

(continued on page 7)

Avoiding Butterfly Infestations

You can avoid butterfly infestations by doing the following:

- ✓ Analyze a list of your long-term, loyal customers to determine what product or promotional campaign attracted them. Make these the priority marketing investments.
- ✓ Since barnacles are best attracted by referrals and not advertising, invest in referral programs and communications networks.
- ✓ Develop bundled packages that appeal to customers who want to consolidate their purchases with one supplier.
- ✓ Target customers who are interested in procuring services and parts from the same source as their original purchase.
- ✓ Be cautious with young customers; their frequent moves and changes in life situations make them fickle.
- ✓ Avoid price discounts to attract new customers; distribute free samples instead.
- ✓ Avoid business customers with high employee turnover and any consumers who move frequently.
- ✓ Avoid customers known to switch suppliers often.

Principle 3: Keep It Simple

(continued from page 6)

outsources most of its service. It insists on accountability, though. Every replaced component is sent to Dell for analysis, and the reason for the part failure passed on to the manufacturer who supplied the part.

Simplify by shooting high. Many loyalty leaders split off small teams of talented young managers and give them breathtaking challenges with short deadlines. In fact, this strategy may be the single most important step you can take to simplify company focus and create rapid and flexible responses in your business.

At Intuit, for example, an engineer with no general business experience and an MBA were tapped to build the company's online mortgage business into a force in a little over a year. Their job was to build the business from the ground up. They built Intuit into one of the leading providers of online mortgages in a matter of months.

When a small team accepts ownership of a sufficiently challenging mission, a wonderful dynamic emerges. Everyone stops worrying about who will get credit or whether this is a good career move or whether the team will get along. There is no time for petty squabbles. ■

Principle 4: Reward the Right Results

Most companies are shooting themselves in both feet with their reward systems. They pay on results that are easy to measure rather than on the right results. Incentives are misaligned, so individual interests trump team goals. Worst of all, employees and customers aren't rewarded for loyalty. In fact, loyalty is often penalized. High defection rates are the norm for star performers while loyal employees are perceived as lazy, satisfied with modest compensation and content to aim far below their potential.

Zero-Sum Games

Most of today's corporate reward systems are philosophically antithetical to the principles and practices of loyalty leaders. Most systems are designed to be reasonable and to satisfy the board of directors or an outside auditor. But the problem is that loyalty isn't generated by reasonable performance; it is generated by **overachievement** — and this level of performance requires outstanding teamwork by partners who trust one another's commitment to win/win results. Today's compensation systems rarely align partner interests; they create zero-sum games in which one player can win only at another's expense.

Examine Your Own System

Are you measuring the right things? What you decide to measure clearly reflects your values and your priorities. You can talk all you want about creating value, building loyal relationships and putting customers first, but if the majority of your score-keeping efforts go into measuring profits, then your customers and partners will get the unspoken message. To show them that loyalty is at the top of your leadership agenda, you must make sure your central metrics gauge the value you are creating for partners and customers.

Here's how to measure what matters:

- **Measure Retention — Carefully.** The most accurate gauge of whether your company is delivering the best value to your customers is customer retention rates. You must track them. At the *New York Times,* for example, executives track retention on three separate segments: new subscribers (less than 12 months); middle-aged subscribers (13 to 24 months); and mature subscribers (longer than 24 months). For mature subscribers, the retention rate is an astonishing 94 percent, far higher than the closest competition at 80 percent or the average at 60 percent. Using the figures, the company is striving to create even more loyal readers and to become better than the best.

- **Build a Better Dashboard.** Loyalty leaders must customize the right kind of dashboard for steering their company. Standard accounting metrics such as profits must be supplemented with gauges that monitor the creation of partner value and customer value. Many companies now have the technology to track customers very well, sometimes down to what they purchased, how often they buy and how profitable each one is. In some industries, its easy to measure retention, but in others it's considerably harder. For example, car makers have irregular purchase cycles, and fast food restaurants have a hard time tracking individual purchases. Some gauges to consider are those that consider lifetime ownership costs as a measure of satisfaction and those that look at service, product performance and order fulfillment.

- **Align Incentives.** Once you have designed the right gauges for your dashboard, the next step is to make sure the gauges correctly influence the route your organization takes. For example, companies should beware of paying workers based on profits alone, since that can encourage workers to think only of short-term profits, and not long-term ones. When Enterprise, the car rental company, became concerned that branch managers were boosting profits at the expense of quality customer service, the company began surveying customers with a simple two-question survey designed to identify the likelihood of the customer renting from the company again.

(continued on page 8)

Principle 4: Reward the Right Results

(continued from page 7)

Branch profit statements were then redefined so that customer response to the survey was reported along with the profit report. No employee is promoted if his or her branch is below the average in the customer survey.

- **Fix the Misalignments.** There are far too many examples of employee interests in conflict with customer interests. The car salesperson's commission is based on how much he can gouge the customer, the stockbroker is paid whenever he churns the client's holdings. These misalignments must be corrected.
- **Reach for the Stars.** Most reward systems today are too generous to mediocrity and far too stingy in rewarding superior performance. They set reasonable performance goals and define minimum levels of acceptable performance. Forget floors on performance, and get rid of ceilings. Pay rewards according to the real profits generated, not some arbitrary limit. Surround workers with others who want to put in a world-class performance, and they will all strive for gold. Home Depot takes this advice literally, employing more Olympic athletes than any other company. Other Home Depot associates benefit from being around dedicated world-class athletes.
- **Reward Loyal Customers.** Make sure all the partners who create the most value receive the most benefits. Don't reward customer loyalty with abuse! A classic example of this can be observed in the cellular telephone business. Most experience enormous churn rates. Yet they abuse loyal customers by rewarding new ones with the latest technology and free minutes while not offering the same to existing customers. You should share economic advantages with loyal customers. For example, loyal, profitable State Farm customers are rewarded with price reductions every three or four years. ■

How Loyalty Leaders Align Incentives

✓ **Cisco** requires that 20 percent of employee bonuses are driven by performance on customer satisfaction scores. Targets are raised each year.

✓ **MBNA** posts customer-oriented performance metrics daily in the company cafeteria and employee bonuses are funded every day that 90 percent or more of the targets are met.

✓ **Lexus** holds back a part of the sales commission until after the customer comes in for the first service visit, encouraging salespersons to introduce the service department and get buyers to schedule service.

✓ **State Farm** avoids front-load sales commissions to ensure agents will care about keeping customers and sell the right insurance.

✓ **Mary Kay** pays its agents ongoing commissions on the sales of everyone they recruit, encouraging partners to invest in each other's success.

Principle 5: Listen Hard, Talk Straight

The Internet is revolutionizing communications. The capacity to connect your operations with those of your customers and suppliers in a seamless web of digital communications can create enormous efficiencies and profit opportunities. But what we all need isn't more communication; we need better communication.

Too many executives define great communicators as masters of spin. Nothing could be further from the truth. Loyalty leaders tell their partners what they need to hear, even if they don't want to hear it. They want their partners to understand the company's strategy, core principles, priorities and problems. They want them to know what performance expectations are and where each partner stands. Loyalty leaders expect the same from their partners.

If you want to build a business community of enduring relationships, you must help everyone in your firm's network of relationships become more effective communicators. Everyone must:

- **Listen.** Good communication begins with listening.
- **Learn.** Once you listen, you must reflect and analyze so that you learn.
- **Act.** After listening and learning, its time for action.
- **Explain.** Once you act, explain why you are doing what you are doing. ■

Principle 6: Preach What You Practice

Each of us is preaching a sermon with our lives. If building loyalty is to become a central theme of your sermon, then you had better brush up on your preaching skills. You can't go quietly about your business and presume your results will speak for themselves. Unless you preach loyalty's wisdom with power, clarity and conviction, your actions and your words will be drowned out by the chorus of digital-age dogma that maintains that loyalty is dead and it's time to celebrate.

Build a repertoire of teachable stories that illuminate your loyalty principles. Encourage your partners to recognize teachable moments, and communicate them to all your partners. Finally, use case studies to show your organization how to put those principles into practice. ■

THE SUMMARY IN BRIEF

According to a 2018 Gallup poll, 53 percent of employees in US companies are "not engaged"—they're doing the bare minimum. Worse, another 13 percent are "actively disengaged" and trying to influence their coworkers to be just as discontent as they are. This is a problem largely caused by uncaring, misguided employers and it's bad for the employees, the employers, and, more broadly, society.

For company leaders, ***Lunch with Lucy: Maximize Profits by Investing in Your People*** describes how and why a company with an employee-first, empathetic leadership business model is not only a place where people are happy to work but also more profitable than it would have been otherwise. Numerous real-life examples are clarifying and enlivening.

Author Sherry Stewart Deutschmann, with a high school education and grit, determination, and a heavy (at first) sprinkle of delusion, started a company on a shoestring in her basement and grew it to a $40 million enterprise. She attributes this success to the company's culture. The key ingredient of her secret sauce was leadership through empathy.

IN THIS SUMMARY, YOU WILL LEARN:

- Why you should put your employees, not your customers, first.
- How generosity to your employees results in greater profits.
- The benefits of getting to know your employees.
- Things to say "no" to.

First Course - Appetizers

Sherry Deutschmann's philosophy is that customers don't come first. Employees do. If you take great care of your employees, you will create a team of happy people working together to take great care of the customers. Explain this concept to your customers. They'll get it! In fact, they'll love it.

Before she started the company that you'll read about in this book, Sherry worked in sales for a business that grew much too fast, failed to address internal issues, made constant mistakes, and had a CEO who failed to empathize with the effects of these problems on customers or employees. Sherry tried to figure out what the problem was, and it hit her: the employees didn't care about the company because no one cared about the employees.

The leadership team was not interacting with the employees. But it was the employees who had the knowledge, the answers. She made suggestions to improve morale and get everyone in sync, but her boss was dismissive. Eventually, she decided to start her own business and resigned. Her new business, LetterLogic, had caring as its cornerstone.

Second Course – Shared Plates

Lunch with Lucy: Getting to the Heart of the Matter

The title of the book, Lunch with Lucy, stems from one of many innovations at LetterLogic. To lead a true "people first" organization based on an empathetic leadership business model, Sherry had to know her employees better. By this time LetterLogic had grown to over 30 full-time employees. She began scheduling one-on-one lunches with all the employees, giving herself the alter-ego name "Lucy" to remove the anxiety they might feel about having lunch with the CEO. These lunches were not only beneficial to company culture, they also added to the bottom line because they helped retain great employees.

There are many advantages of really getting to know your employees. Employees who are happy and feel connected to you produce better work. Better work leads to happy customers. Happy customers are loyal and willing to pay more for your services and products. They are willing to weather a few difficult storms and stick with you when things don't go as planned.

Get to know your employees and you'll get a better understanding of your company's inner workings. You'll learn when your leaders are truly leading and developing their teams.

Once you really engage with your team members, you'll find that each one of them becomes part of the sales team. They are the ones who make or break the company's reputation in the community.

Fair Pay Is Every Entrepreneur's Privilege. . . and Responsibility

The reality of living on minimum wage is unsustainable. Minimum-wage work forces people to work two or more jobs and struggle to keep food on the table. How can an employee be expected to come to work with a great attitude and focus and produce high-quality goods and services when they're constantly exhausted and all they can think about is whether the electricity will be cut off at home? If you find good employees and pay them a fair living wage, you'll be rewarded with better products and services. When your products and services are superior, people will pay more for them. When people pay more, you'll take more to the bottom line. How dedicated would you be to an employer who paid minimum wage?

Paying employees low wages results in all taxpayers subsidizing their pay through food stamps and other programs. And the employers themselves pay the price too. So few of their employees are truly engaged that it takes two or three times as many employees to get basic tasks completed. Instead of paying one employee $15 an hour, they have to pay two or three people minimum wage.

A Profit-sharing Plan that Generates Even Greater Profits

At LetterLogic, Sherry developed a profit-sharing plan to not just reward but guarantee good results—a plan that would drive engagement and affect behavior. Profits were distributed monthly rather than annually, which made it easier for employees to remember the events that led to a profit or loss. The distribution was tangible. Paper checks were handed out at monthly company meetings. And everyone in the company shared in the profits equally. This showed every single person that their job was just as important as any other.

Don't be afraid of giving some of your profits (LetterLogic gave 10 percent) to your employees. Your company will grow faster because you're investing in your greatest asset, your people.

Empathy Is Contagious

The culture that thrived at LetterLogic was about more than fair wages, profit sharing, and empathetic communication. Everyone truly cared for one another. The positive environment it nurtured made its employees' personal lives better. Sherry wanted to inspire her work family to look out for one another and be quietly alert to challenges or problems that others may face. And they did. Time and time again.

Third Course – Entrees: The House Specials

Major in the Majors

Focus on your company's strengths. Experts may tell you to diversify, to add multiple products and service lines. This might be good advice in some industries or circumstances, but often it's the very reason a company fails. Know who you want to attract as loyal clients. Spend the bulk of your times on things that make the biggest impact to your business. Do one thing. Do it really, really well, and you'll succeed.

Direct, Empathetic Communication

If you want to make any message more palatable or meaningful to an individual, you must start by knowing that person well—and having that person know you well too. It's only then that you can put yourself in the other person's shoes (and them in yours) and be able to speak with directness and kindness as you deliver your message.

The most effective and compassionate way to deliver criticism or tell a customer about a mistake is to be direct. Calling a mistake an "inconvenience" or blaming it on a "glitch" or a "bug" is a total cop-out. Be direct and take full responsibility for a mistake. It will help diffuse the customer's anger and frustration. It's disrespectful to BS your way through a difficult conversation. Be kind. Be honest.

Transparency

LetterLogic had monthly company meetings over lunch. They started with the same announcements you'd expect at a typical family reunion—engagements, weddings, etc. They welcomed new employees. Each department then provided an update on the challenges and triumphs they'd experienced in the last 30 days. They talked about whatever might impact the daily lives of team members and answered any questions.

Then the CFO presented all the key financial figures. The factors that led to any disappointing month were discussed. When people understand how their actions (or inactions) positively (or negatively) affect profitability, they pay more attention. They care more.

This level of transparency fostered trust and confidence in the leadership team that could not have been achieved otherwise. The information they shared helped everyone make better decisions.

Fourth Course – The Sides

Profit Sharing and Living Wages Aren't Enough

On top of fair living wages and equal-distribution profit sharing, Sherry wanted to offer benefits that addressed the real day-to-day needs of her work family and made a real impact on their lives. The company offered tuition reimbursement and paid leave for new moms and dads.

Health insurance. LetterLogic offered excellent health insurance benefits: 100 percent of the healthcare, medical, dental, and disability insurance for all employees.

Home-buying assistance. Sherry encouraged employees to save money to buy their first homes and LetterLogic helped with a cash gift toward the down payment or closing costs.

Bring your kids to work. LetterLogic instituted a policy that allowed all employees to bring their kids to work whenever they needed to (when their usual daycare facility was closed, for example).

Personal loans. Employees who found themselves in a financial pinch had the option to borrow money from the company.

Entrepreneurship assistance. LetterLogic encouraged employees to be open about if they wanted to own their side businesses, and offered advice, mentoring, and financial assistance.

Trucks. The company allowed employees to borrow its company trucks on weekends if they needed them.

Some things didn't work out. On-site gyms, after the novelty wore off. Healthy snacks that almost no one ate. Paying for smoking cessation programs, which didn't have lasting results in most cases.

The biggest lesson was to get to know employees better to understand what matters to them. The company saw mea-

surable positive results from its benefits program because happy, well-cared-for employees are more loyal to the company, produce better products and services that customers are willing to pay more for, and keep customers happy and loyal.

The Power of Saying "No"

Saying no not only opens more doors; it opens better doors. When you say no to business that isn't right for you, you'll get more respect and more opportunities. And you'll close more business and it will be better business.

Salespeople are the lifeblood of a business, but don't say "yes" to every new product or service they ask for because a customer wants it. LetterLogic required salespeople make a business case to show why what they were asking for was financially viable. And since the company's financials were available to them, they could see for themselves the cost of expanding the scope of the business and were more likely to assign themselves with what was best for the company long term. They began to think like entrepreneurs and understand that all opportunities have costs to weigh.

Say no to some new business. All customers and all business are not of equal value to your company. Some accounts will never be profitable. Taking on new clients at the wrong time can create serious problems. And sometimes saying no to business means firing customers.

"Opportunities" to avoid:

- Taking business at a loss, just to get your foot in the door.
- Doing business with friends and family.
- Taking on business that does not fit your business model.

Say no to unnecessary networking events. Too much networking will kill you.

Say no to serving on a nonprofit board or committee until later, when your company is running smoothly. Your experience will be more valuable to the organization you're serving by then.

Say no to lunches, meetings, and lunch meetings. If you're doing well, eventually everyone will want time with you. The best way to handle endless requests for your invaluable time is to ask for an agenda.

Mentors and Coaches

Even the humblest founders have a stubborn streak that makes it difficult for them to see potential pitfalls that are right in front of them. They need a pool of advisors to keep them in check. Start building yours before you really need it. Knowledge and experience from folks who've been where you are can help you avoid the cliffs and pitfalls. And if you end up in a ditch anyway, they'll give you a hand up.

Dessert

It doesn't matter how big your company is. An employee-centric, empathetic culture will make a better company. There are many great examples of big companies, even public companies, that employ this strategy.

Your business will absolutely be more successful if you take better care of your people. Put people first. The profit and peace of mind will follow!

Sherry Stewart Deutschmann is a serial entrepreneur. Her first venture was LetterLogic, Inc., a company she founded in her basement and grew to $40 million before selling it in 2016. Sherry was honored by President Barack Obama as a White House Champion of Change in 2016. Sherry's passion is helping women-owned businesses get better access to networks, capital, and markets, and in 2015, she was appointed to the National Women's Business Council, a small group of women who advise Congress, the SBA, and the president on issues related to entrepreneurship for women.

Making Big Decisions Better

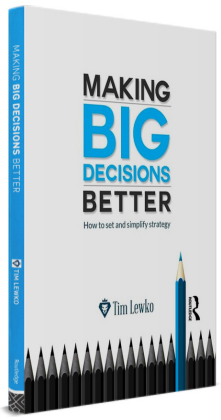
How to Set and Simplify Business Strategy



by **Tim Lewko**

Contents

FIX Your Strategy
Page 2
BUILD Your Strategy
Page 2
USE Your Strategy
Page 3

THE SUMMARY IN BRIEF

With the escalating speed of change, short attention spans, wide range of stated and unstated stakeholder needs, and the insatiable urge to react rather than thoughtfully respond, we must equip ourselves and our organizations with practical strategy tools that enable ownership, promote more visual decision making, and get back to the basics of finding root cause in performance gaps.

In ***Making Big Decisions Better***, you'll discover how companies that are successful and deliver enduring profits in the marketplace have something in common. The executives and managers that lead these companies use a set of tools—the TDG System—a transportable toolkit that equips them to think, develop, and execute strategy better, more simply and devoid of consulting jargon. Strategy needs to be reintroduced as tools for decision making that create agility, are not event-driven and draw in profound competitive insights from the organization to serve its customers better, relative to the competition.

For those companies that choose this path, ***Making Big Decisions Better*** shows how to FIX, BUILD and USE a proven system of tools to deliver more predictable and enduring profitability.

IN THIS SUMMARY, YOU WILL LEARN:

- 4 ways to immediately fix and create a more powerful strategy.
- 3 powerful tools great leaders use to develop strategy and make tough choices.
- 3 must-have areas for setting sound strategic goals.
- 7 criteria to pressure-test the strength of any strategy.

Introduction

The most important role a CEO owns is setting and executing strategy. Strategy can be made to be simple, practical, and most importantly dynamic. Most successful CEOs know that Strategy can no longer be static. The strategy system in my book shows how you can quickly use the powerful system to Fix, Build, and Use your strategy. This will equip you to think about, develop, and execute strategy better and more simply.

FIX Your Strategy

1. You Must Define What Strategy Means

Defining strategy for your company removes the unseen communication gaps and disconnects that undermine your organization's focus and effectiveness when dealing with issues.

Defining it creates focus. Not defining strategy creates chaos. Only you have power to make the simple change in your company or area you lead.

Strategy can be defined as a framework of choices that defines the purpose and path of the organization. This definition returns everyone back to the simplicity of strategy. Namely, it means making decisions with data about what products to offer, what markets to serve, and what capabilities to build—through the eyes of the customer and relative to competition. A successful strategy delivers superior profitability or return on invested capital relative to your rivals.

2. Strategy is a Decision-Making Process not an Event

If your company has no common, replicable and visible process for strategy, it handcuffs profit-generating potential.

Seasoned executives all have strategy processes in their toolkits to move their company forward — faster, with more alignment and with greater results. If your company does not have a process, take these actions to remove this Gap:

- Check to see if you have a common, transportable process for setting and testing strategy – if not …
- Develop or adopt one that integrates these 4 dimensions: Appraise, Decide, Plan, Adjust
- Ensure your process is tied to the fiscal calendar and cadence of your company and is used to assess performance and make mid-course corrections.

3. Don't By-Pass Sweat Equity

The executives, managers and employees you work with know more about the company's issues than any outsider. Targeted expertise, and objective feedback are always welcome, but if you want to set and really implement a strategy to achieve results, you must use those people who understand the nuances and can sweat collectively through the decisions. They will then author and own the outcomes.

The CEO take-away is: Create a strategy with your own executives and people. Don't outsource it.

4. Ensure the Revenue – Cost = Profit equation is clearly understood

Profit is good. It's the absolute hard-dollar output. Profitability is better. It's the return on resources that creates those hard dollars. Profitability keeps businesses sustainable and enables companies to reinvest or distribute wealth to owners.

Too many times, data used to drive decisions is only known at the Gross Margin level, which is not granular enough to make Product by Market decisions. This Gross Margin approach must be avoided as it skews where and how money is actually being made. Looking at consolidated or "rolled up" numbers is a sure way to miss what is really happening.

Further complicating this is a common belief that all your people know the workings of a P&L. Profit is an outcome of Revenue (Sales) minus Cost, these dimensions need to be taught or reskilled in organizations.

Legacy in operational roles and general lack of P&L experience have built a profit blindside into decision making and actions of many executives and employees. This gap needs to be fixed in many organizations.

BUILD Your Strategy

The TDG strategy system enables CEOs (and really anyone with a P&L) to have three one-page tools to set strategy, make better decisions, adjust for course corrections and apportion scarce resources to areas that have the greatest impact on their companies.

1. Strategic Assumptions and Implications — the Future: CEOs need to identify the 5 to 8 forces and factors they believe will unfold, quantify them, and draw out the parallel internal choices — product, market and capabilities — that will mitigate and/or exploit those forces. This connects Outside to Inside and helps avoid internal biases.

2. The Product Market Capability (PMC) Engine – the Decision Hub: This single-page economic decision-making tool visibly shows your product, market, and capability choices (your strategy) and the rationale behind their relative priority or emphasis, i.e. where you are placing your bets and allocating scarce resources.

The PMC Engine illustrates where you choose to play and profit based on external and internal forces and defines your path for growth—by products or markets. It becomes real because it contains the Revenue, Profit and Volume for each Product/Market Cell in a SHOULD versus ACTUAL performance reporting format that equates to your budget.

3. Goals and Gaps —– the Reality Check to Monitor and Make Changes: A company should have no more than three above-all-else goals to focus their resources. Goals have three practical aims in strategy: to force focus, enable accountability, and facilitate finding the cause of positive and negative performance gaps.

Goals with clear metrics, targets, and data source underpin the strategic aim of your company for one calendar year. Everyone in the company concentrates on and connects with these — above all else. They reinforce the competency and requirement of truly finding cause for over- or underperformance.

With these three one-pagers, you can manage, monitor and make critical decisions and more importantly always ask the vital questions to understand why your business is delivering the results it is. These tools connect the external environment to your internal choices, and specifically the goals that define success.

The reality of any company is that financial performance is the sum-total of daily decisions made by each of person. The quality and consistency of those decisions represent 100% of its EBITDA potential. (EBITDA is Earnings Before Interest, Tax, Depreciation and Amortization.)

These three one-page tools will equip your C-Suite and executive team with a common and quantified decision-making hub to enhance strategic thinking and decision-making competencies to gain your right share of profit.

Where Do Good Strategic Goals Come From?

Strategic Goals mirror and define the very definition of strategy. As companies work through the two pillars of setting strategy — defining their strategic assumptions and building a PMC Engine that explains their products to offer, markets to serve, capabilities to build, path for growth — they see the future benchmarks emerge that represent what they must become. Good, sound and practical strategic goals follow these categories:

Emphasis on Profit: Operating Income, Free Cash Flow, or EBITDA metrics for profit are good starting points. The emphasis on profit ties to the belief that if you are not making money that can be reinvested and/or distributed to shareholders, why are you in business? Strategic goals can also include a Revenue target as everyone can relate to it and recognize that Revenue minus Cost gets back to profit.

Product or Market: There really are two fundamental paths for growth — sell more products or sell to more markets. Depending on the path your company selects, you will have one strategic goal that represents your aim for growth. Here the metrics may be revenue, new product introductions, or new customer deals acquired for example.

Key Capabilities is the other category for which you need a strategic goal. Key capabilities are those competencies, skills and processes that drive competitive advantage or will drive advantage for your business in the future. To keep your premium or low-cost position relative to the competition, you need competencies to emerge that most likely support the Product or Market path for growth and deliver the Profit. Key capabilities are the lynch pin for investing in the business that support the other two goals.

In over 17 plus years of working and facilitating strategies for TDG clients, Profit, Product or Markets, and Key Capabilities always emerged as the three natural choices that made sense and provided meaningful focus for the company and its employees.

This simple rationale for setting strategic goals relieved many CEO's and leadership teams because it built in checkpoints that ensured elements in their strategy fit together from top to bottom.

USE Your Strategy

1. Test Your Strategy Against 7 Criteria

Business environments are dynamic and will continue to be. No Strategy ever devised is 100% correct. However, to give your firm a higher batting average in delivering on your strategy, you need to test it systematically when it's being developed and check on it quarterly as progress is made. Any CEO or business leader—no matter what formula or process they use to develop their next strategic path—

should evaluate their strategy against the following seven critical criteria and questions.

Confidence in Data: What level of confidence do we have in our data?

Board Approval: Will this new strategy gain board approval?

Industry Dynamics: Does your strategy have 5 to 8 external assumptions that drive quantified internal decision making and investments?

Cultural Shift: Does your strategy back-cast against the culture of the organization to determine if it can make the leap?

Strategic Fit: Does your strategy clearly outline common criteria to set relative priority on which products to offer(or not offer); which markets/customers to serve (or not serve) and which investments in new capabilities will drive superior and sustainable profitability?

Financial Impact: Are your goals Strategic? Do they follow the SMART (**S**trategic: contains PMC dimensions, **M**inimal: no more than three, **A**vailable: understood by all, **R**eal: no stretch goals, **T**ied to profit) dimensions?

Overall Risk (Probability X Impact=Risk): Are we willing to accept the overall probability of success and the resulting impact of this new path?

2. Reinstate Root Cause

In many organizations at best they ask Why for negative variances but overlook asking Why for the positive variances. These companies are only looking at 50% of what's in their wheelhouse to improve performance. And much of the root-cause thinking or tools at the executive level are either dusty or dismal—in terms of a systematic and common tool for finding cause. So what should we do about this?

We need to reinstate root cause. Establish an executive team routine to look at both positive and negative variances and apply a common process for finding cause. Getting better at finding the cause of negative and positive variations in your strategic performance gives the benefits of speed, it's proactive, uncovers more profit, it's data-driven and simpler.

At the end of the day, the strategy system and tools make the performance of your business visible so you can manage the positive and negative deviations and take action.

3. Check in Quarterly: Use it or Lose it

Quarterly reviews are critical to exposing issues that impede or exploit strategic progress against your three strategic goals. If your quarterly review sessions have turned into static presentations—now is the time to change that. To equip your firm to proactively *respond* to external and internal issues (rather than *react* to them) you should be able to clearly answer these questions:

- How much time do you spend quarterly using and testing your strategy to make mid-course corrections?
- Do you have a set quarterly meeting format to drive strategy meetings?
- Is there a mechanism you have to collect and move strategic issues up to the leadership table?
- Can your executive team distinguish between strategic vs. operational issues?
- How do you build Market and Competitive intelligence into your strategy process or cycle?

The best performing companies and most compelling CEOs can answer these questions and have built a smart review system to check their strategies.

In the end, the sum total of daily decisions made by your people determines the fate of your organization.

Tim Lewko is the CEO of Thinking Dimensions, a best-selling author, and leader of a global movement to simplify strategy for executives through better decision making.

He has worked with thousands of executives in 4 continents over the last 20 years to simplify strategy and ensure companies deliver better financial performance through better decision making. His clients include Private Equity Portfolio, NYSE, NASDAQ and Family Offices. His clients to date have achieved over $1 billion USD in improved EBITDA performance through his advisement and the tools presented in this book.

THE SUMMARY IN BRIEF

Millions have read the all-time global best-seller ***The 7 Habits of Highly Effective People*** by Stephen R. Covey. Both leaders and individuals have been inspired and transformed by its universal principles of effectiveness, including Scott Jeffrey Miller, the new voice of FranklinCovey leadership.

In ***Management Mess to Leadership Success***, Miller offers 30 leadership challenges you can apply now. When applied, these challenges can change the way you manage yourself, lead others, and produce results. The challenges will teach you to lead difficult conversations and celebrate success; inspire trust, actively listen, and challenge paradigms; put the right people in the right roles; create a clear and actionable vision for your team; and much more.

The wisdom in this book was learned through hard knocks and was honed by the FranklinCovey team through years of research and corporate training experience. With ***Management Mess to Leadership Success***, your leadership skills are about to change. Get ready to become the leader you would follow.

IN THIS SUMMARY, YOU WILL LEARN:

- The 30 challenges and how to apply them to your leadership.
- Why humility, trust, and listening are key parts of leading yourself.
- To build relationships, loyalty, straight talk, and coach continuously.
- To get results by identifying Wildly Important Goals® and aligning actions to meet them.

Introduction

Leadership isn't always rewarding. It is exhausting, repetitive, and requires a constant stretch of your emotional and intellectual skills. It demands an "always on" mentality, as you're expected to have all the right answers and make all the right decisions, often on the fly.

Yet, often the things we struggle with yield the biggest return. It's okay if you admit that leadership can be hard and unenjoyable. But the benefits of being successful at it can be life-changing.

Maybe you're ambitious and bright, but leadership hasn't exactly felt like a calling from on high. Perhaps you're the first person in your family to attend college, let alone a board meeting. Or maybe you skipped college altogether. Maybe you're a woman rising to the top of a male-dominated industry or a veteran starting to make their way through the business world and drawing from a very different set of leadership styles and experiences.

If so, consider the following 30 challenges, honed by FranklinCovey through years of research and development, tens of thousands of client implementations, and countless coaching engagements. The challenges will make you a better leader, and are organized into three parts: "Lead Yourself" (Challenges 1–8), "Lead Others" (Challenges 9–21), and "Get Results" (Challenges 22–30).

Part I: Lead Yourself

Challenge 1: Demonstrate Humility

In FranklinCovey's best-selling book ***Get Better: 15 Proven Practices to Building Effective Relationships at Work***, Todd Davis writes, "Those who are humble have a secure sense of self—their validation doesn't come from something external but is based on their true nature. To be humble means to shed one's ego, because the authentic self is much greater than looking good, needing to have all the answers, or being recognized by one's peers. As a result, those who have cultivated humility as an attribute have far greater energy to devote to others. They go from being consumed with themselves (an inner focus) to looking for ways to contribute and help others (an outer focus). Humility is the key to building solid character and strong, meaningful connections."

Pick an initiative you're leading or participating in. Identify someone whose perspective on the initiative is different from yours. Schedule time to listen to their perspective. When they differ substantially, exercise the patience and respect to not just understand but to genuinely consider their point of view. What did you learn that might measurably improve the initiative? The relationship? Your own leadership style?

Challenge 2: Think Abundantly

You've probably had occasion to dine at a buffet. There are two schools of thought when approaching the line: First, there's only a finite amount of food, so grab everything you want before someone else does. On the other hand, you might believe that there's plenty of food to go around, more than anyone could possibly finish, so you can let the elderly man with the oxygen tank go ahead. This is the difference between a Scarcity Mentality (get yours before it's gone) and an Abundance Mentality (there's plenty to go around for everyone). Remember that you'll never have enough until you define how much is enough.

Address areas of your life where scarcity thinking could be limiting you and your ability to lift others up. Envision the impact of having an Abundance Mentality throughout your life.

Challenge 3: Listen First

Listening is one of the most undervalued communication skills, and it's rarely taught to leaders. Instead, we're instructed to clarify our messages, communicate with confidence and persuasion, and master the words we use. To really listen requires discipline, self-control, and a genuine desire to understand the other person's point of view. Listening requires you to care, perhaps even more than you may want.

When someone else is talking, purposely close your mouth and focus on the physical sensation of your lips being pressed together (your own lips, not yours to theirs). And when the other person has paused, count to 7 before responding. Doing so will increase the likelihood that they'll continue, often sharing crucial details about their point of view or situation.

Challenge 4: Declare Your Intent

Absent real facts, people make stuff up. Declaring our intent in conversations, especially in adversarial or high-stakes conversations, is crucial to creating mutual understanding, if not mutual agreement. We spend much of our attention and energy discerning people's intent and working through how we'll respond. But declaring one's intent cuts through much of the noise and mental static that impedes true listening.

Take stock of how often you begin conversations by declaring your intent—are you clear about your goals, or are you leaving people to guess? Early on, ask others to con-

Take stock of how often you begin conversations by declaring your intent—are you clear about your goals, or are you leaving people to guess?

firm they are clear on your intent. Consider how you make it safe (or unsafe) for others to declare their intent. What should you stop doing, do more of, or do differently?

Challenge 5: Make and Keep Commitments

It's rare to see companies or individuals say no to business if it comes at the expense of delivering their best to previous commitments. How many of us have done the opposite and said yes, compromising not only our current commitments but also the ones we just took on? To quote Roger Merrill, Dr. Covey's co-author on the book ***First Things First***, "When you make a commitment, you build hope; when you keep it, you build trust."

Inventory your current commitments. Realistically determine whether you need to unwind some of them. Your greatest gift may be to back out before you fail them and further violate expectations.

Challenge 6: Carry Your Own Weather

When we're triggered emotionally, it's easy to forget we have a choice as to how we will respond. Central to Habit 1: Be Proactive®, from The 7 Habits, is the concept that between what happens to us and how we react exists a space. In that space lies our freedom and power to choose our response.

This is where the choice of carrying your own weather manifests itself. To carry your own weather, define your personal and professional values (from which your behaviors will be exhibited in both good and rough weather). When faced with a situation that threatens to hijack your emotions, stop. Take a breath and think carefully about the response you won't have to apologize for and that leaves people whole. Consciously calibrate your response to avoid a regretful revisit later. Recognize that most flash responses won't represent how you feel an hour (let alone a day) later.

Challenge 7: Inspire Trust

Trust is one of the most written-about and talked-about topics in the business world today. Ask yourself, "Am I more inclined to trust or distrust others?" Is your natural tendency to be suspicious of others, or are you able to extend trust even to those who have not yet fully "earned it"? As Abraham Lincoln famously said, "If you trust, you will be disappointed occasionally, but if you mistrust, you will be miserable all the time."

List all the people in your life who extended trust to you. To the side of their name, jot down a note that reminds you what their trust meant to you. Then, list the names of people on your team, in your division, organization, family, community, etc. Beside their name, write out what extending trust to them might look like—something you've not yet done. Jot down some actions, ideas, or projects that, with trust from you, they could potentially excel at. Be specific. Now, extend trust to them.

Challenge 8: Model Work/Life Balance

Without the energizing and renewing activities that take place outside the office, you can't be "whole" or fulfilled. And if you're not fulfilled in multiple areas of your life, you likely won't be as productive at work. When leaders themselves don't have a life, they not only look pitiful in the eyes of their teams, they also set a very low standard for how others behave, consciously or unconsciously. If you truly want your people to live balanced lives that allow them a sense of renewal, purpose, and increased productivity in the workplace, you have to model it yourself.

Recognize that the most influential people live balanced lives. Make a list of easy-to-implement things you could do to bring better balance. Discuss openly with your team the real pressures everyone faces to grow their careers and enjoy their lives. Make it safe for everyone to take the time they need to do both. Take time off to renew, and encourage team members to do the same.

Part II: Lead Others

Challenge 9: Place the Right People in the Right Roles

Business author and leadership expert Jim Collins famously wrote in ***Good to Great***, "Get the right people on the bus, the wrong people off the bus, and the right people in

the right seats." The challenge for leaders is that there's no shortcut to guarantee you've got the right people in the right roles. This isn't a skill you're born with—there's no workshop or list of absolute best practices to follow. It's an art, not a science—you earn it by learning and living it.

Identify someone's true passions and strengths so you can align those to your business needs. Seek others' ideas about your observations and opinions. Have courageous conversations to address situations around personality, emotional maturity, self-awareness, etc. Exercise the courage to remedy any misalignments.

Challenge 10: Make Time for Relationships

As Dr. Covey liked to say, "With people, slow is fast and fast is slow." Real relationships require us to slow down, even when everything around us is demanding we go faster. Our effectiveness as leaders requires us to take the time to get it right.

Ask yourself, is your default setting "fast"? If yes, is that shortchanging you and others? Is your efficiency mindset undercutting a more beneficial effectiveness mindset? Understand that there's no such thing as developing a relationship "efficiently." Trust, respect, and rapport take time and investment. Intentionally slow down and connect with others in ways they prefer. Commit to ask a team member or colleague how he or she is doing, and really listen to their response. When appropriate, sincerely explore their answer.

Challenge 11: Check Your Paradigms

Dr. Covey popularized the term "paradigm," which comes from the Greek root "paradigma," meaning a pattern, model, or representation of something. Our paradigms are the perceptions, frames of reference, worldviews, value systems, or lenses through which we see everyone and everything, including ourselves. They add meaning, true or false, to the world around us and affect the way we interpret what we see and experience, and how we interact and relate with others. Our paradigms are perhaps the most powerful tools we have in how we interact with others. It's worth serious introspection to check why we view others the way we do and to correct any misperceptions or outdated beliefs.

Make a list of all the people who report to you. One by one, reflect on your current paradigm of them as a professional or their promotability. Are you willing to challenge its accuracy? Could it be incomplete?

Challenge 12: Lead Difficult Conversations

Having to fire someone is a difficult conversation. Giving tough feedback is a difficult conversation. Yet, if you really want to be a leader (and it's okay if you decide you don't), leading difficult conversations is not something you can neglect, even if you're convinced you can work around them or they're not that important, given your long to-do list.

The skill of leading difficult conversations comes with practice. And lots of awkward attempts and outright failures. You have to practice, role-play, and rehearse these conversations repeatedly. You'll get better over time, and it won't be so awful. But here's the part you probably didn't expect: there's a strong possibility you'll provide someone the kind of insight nobody has ever offered them before.

Identify a difficult conversation you need to hold. If you've been delaying it, have an honest conversation with yourself about why. Pinpoint the root cause and address that first. Identify a more seasoned leader with whom you can role-play the conversation. Take a moment and challenge your paradigm—are you viewing the issue holistically? Have you gathered all the relevant facts? Have you considered the other person's point of view, and are you open-minded about the path forward?

Challenge 13: Talk Straight

In his book ***The Speed of Trust***, Stephen M.R. Covey characterized talking straight as "honesty in action," expressed as telling the truth and leaving the right impression. He wrote that effective leaders use straight talk that is "tempered by skill, tact, and good judgment." Leaders who talk straight call things by their right names, using common, plain language; don't spin or position for the sake of posturing; tell the truth in diplomatic yet clear language; and don't try to sound more intelligent than they are.

Think about where or with whom you tend to "spin" or even withhold the truth. Identify possible reasons you are avoiding straight talk. Next time you notice yourself "spinning," pause; then find a more accurate and tempered way to tell the whole truth.

Challenge 14: Balance Courage and Consideration

The best leaders assess their balance of courage and consideration intentionally and repeatedly. How do leaders find this balance while accommodating the diverse needs, preferences, and traits of our team members? By demonstrating courage in sharing opinions, tactfully calling out mistakes (including our own), and diplomatically challenging one's direction while simultaneously accounting for people's feelings, insecurities, and cultural norms.

Find a colleague whom you trust. Ask for specific examples of when they've seen you out of balance. Ask, "When do you feel I'm being overly nice or too considerate? When have you seen me be too tough, abrasive, or "in your face" with others?" Be mindful of triggers that may push you to overdo consideration or courage. These could be specific people, situations, or topics. Have the courage to ask *and* act.

Challenge 15: Show Loyalty

Dr. Covey said, "When you defend those who are absent, you retain the trust of those present." Showing loyalty to others is a simple but profound leadership competency. Stephen M.R. Covey deemed this principle so vital that he included it as one of his 13 Behaviors® of High-Trust Leaders.

Live by the Platinum Rule. Beyond treating people how you'd like to be treated (the Golden Rule), treat them how they'd like to be treated (the Platinum Rule). When someone is absent, speak about them as if they were actually standing there right beside you. Assume your email will be forwarded to the person you're writing about. When composing an email about another person, write as if you know the person will eventually read it. Finally, assume good intent, and presume every private conversation is confidential unless/until you can verify that it's not.

Challenge 16: Make It Safe to Tell the Truth

This is about you, the leader, owning the responsibility to make it safe for others to be truthful. As a leader, you should want to hear the truth for many reasons: to really know how others perceive you, to understand what it's like to be in a relationship (personal or professional) with you, to know your blind spots so you can address them, to assess whether your communication skills lift or diminish others, and so forth.

Here's how to help make it safe for others to be truthful in your presence: Show sincerity in wanting to know their truth. Build their confidence that there is zero downside to speaking up. Convey that you respect their point of view and will be vulnerable. Prove through continued experience that you won't dispute or challenge their position, defend your behavior, or dismiss their feedback out of hand. Perhaps most important, show through your new behavior that you value their risk-taking enough to improve.

Challenge 17: Right Wrongs

The best leaders know how to right wrongs. Righting wrongs starts from a place of humility and is communicated through personal responsibility. When righting wrongs, it's remarkably disarming to take full responsibility. Nothing neutralizes anger more than a sincere, excuse-free apology and an action to correct the situation.

Consider some version of the following when you find yourself having wronged someone: "I want to tell you something very important. I'm truly sorry for the way I behaved. I was wrong. I own it. I'm sorry. I hope you can forgive me, and I intend to make a sincere effort to ensure I don't ever do that to you again or to anyone else. I have learned a hard and valuable lesson, sadly at your expense, and I want you to know how seriously I am taking it. Furthermore, I intend to take [fill in the blank] action to make it right between us. Is that something you would value, or do you have a better suggestion I should consider?"

Nothing neutralizes anger more than a sincere, excuse-free apology and an action to correct the situation.

Challenge 18: Coach Continuously

Fortunately, increasingly rare are the days of the annual, mandated performance appraisal, where you're force-ranked against your colleagues to watch the lowest fed to the lions and the precious bonus pool allocated to the lucky few at the top. The antidote to this is coaching.

Coaching continuously requires a lot of engagement. Consider these behaviors: Be aware of what's happening with the team you lead. Who's struggling and why? Are they properly trained? Aligned? Delivering solid results but perhaps working on the wrong initiatives? Have you clarified what success looks like? Are deliverables clear and goals translated into actions and daily behaviors? These previous points are mainly your responsibility. Recognize the different ways team members want and need coaching. Balance your critical feedback with specific reinforcing praise. Ask how you can help. Ensure that everyone has the resources and tools to complete their work and help others. Add "coaching" to your daily task list.

Challenge 19: Protect Your Team Against Urgencies

It's vital to reduce the tension between the important and the urgent. Finding harmony between the two is often a delicate balancing act. As leaders, we can help protect our teams against urgencies by identifying and rewarding the specific behaviors that lead to achieving our goals. But first, we need to ensure we haven't modeled or reinforced a culture that rewards firefighting more than fire prevention. It's your responsibility to focus your team members on the "wildly important" (important and proactive efforts) and not the wildfires—even the ones you set!

Recognize that you may well be the source of many team urgencies. How do they show up? How will you plan better or say "no" to more? Ask yourself if your need for validation or excitement is undermining the focus of your team. Assign reasonable due dates to future initiatives. Reward proactive and preventative efforts, not just heroic firefighting.

Challenge 20: Hold Regular 1-On-1s

In the long run, nothing is more important than the people you lead (and knowing how to lead them), and you know it. But how you show that importance can be radically different from how they perceive it. As a leader, you know how many "invisible" hours you've dedicated to the success of your team. But what they need from you is time. They need 1-on-1s, to be specific, so they can bring up issues hindering their progress, get feedback and coaching, create a development plan, and problem-solve with you.

If you struggle with holding 1-on-1s, commit to starting slow. Declare your intent with your team. Before the 1-on-1, keep in mind that your team member will "own" the agenda. During the 1-on-1, commit to do no more than 30 percent of the talking. Find out what you can do to support your team member. Remember, coach, don't tell. Seek and give feedback as appropriate. Devote time to development planning and career-path discussions.

Challenge 21: Allow Others to Be Smart

In Liz Wiseman's profound leadership book ***Multipliers: How the Best Leaders Make Everyone Smarter***, she invites leaders to assess several key questions: Are you the genius or the genius maker? Are you a Multiplier (someone who uses their intelligence to bring out the best in others) or a Diminisher (the "smartest person in the room" who shuts everyone else down)?

Here are three skills you can use to empower and engage others to showcase their creativity, experience, and perspectives: Consider the percentage of time you spend talking versus listening. Listening is not just hearing but understanding and caring about what is said. Decide when to be the expert with the "right" answer and when to allow your team to work through the process of coming up with it themselves. Finally, step back from being the driver of the discussion. Ask someone on your team to take the lead.

Part III: Get Results

Challenge 22: Create Vision

Leaders *create* vision until it's shared by their teams and colleagues. They depict a vision so clear and aligned to the organizational mission and goals that anyone could communicate it in 30 seconds or less. Whether you use PowerPoint, pictures, models, or storyboards, creating vision requires others to see it. And because you can't climb into someone's head and know if they see (and understand) your vision, you must ensure that people can articulate it.

Draft a team vision by answering these questions: What contributions can our team make to the organization's mission and vision? If our team could make one extraordinary contribution over the next one to five years, what would it be? Take a moment to remember an inspiring vision that resonated with you. What about it made it personally motivating and powerful? Create a vision for your team by articulating not only the "why" and the "what" but the "how." The "how" may well be the key that brings it to success.

Challenge 23: Identify the Wildly Important Goals (WIGs)

The temptation to say yes to more of the great (even good) ideas that come our way might be the biggest trap leaders fall into. But more is not better; better is better. Wildly Important Goals are the few, highly important goals that must be achieved, or no other goal matters. How do you identify the WIGs for your team? As more fully outlined in ***The 4 Disciplines of Execution***, the best-selling book by Chris McChesney, Sean Covey, and Jim Huling, ask, "If every other area of our operation remained at its current level of performance, what is the one area where change would have the greatest impact?"

Determine a starting line, finish line, and deadline for each WIG. Align the WIGs with your organization's vision, mission, and strategy.

People like to win but not "fake" win. Your team wants to work for it. But they don't want the finish line moved and they don't want to kill themselves in the process.

Challenge 24: Align Actions With the Wildly Important Goals

This challenge focuses on actually getting the WIGs accomplished. For leaders, aligning to WIGs means everyone involved needs to change behaviors. Meaningful change comes from the inside out. It has to start with you as the leader, committing to and then enacting new behaviors. To further ensure your team has aligned the right actions to the WIGs, meet and brainstorm the specific behaviors you need from each other.

Focus your finest efforts on the one or two goals that will make the greatest impact. Choose the battles that win the war. Focus your attention on the critical items that will get you the victory. Veto but don't dictate. Allow your leaders and team members to define the actions that will support your WIGs. Your role is to bring clarity; the leaders below you will bring engagement (if you allow them to). Have a finish line in the form of "From X to Y by When."

Challenge 25: Ensure Your Systems Support Your Mission

In organizations, we settle into acceptable patterns, especially around areas of the business that seem fine. "Good enough" becomes "better left alone." We often step back and allow systems to just do their thing, even when they're not perfectly aligned to our mission and goals. Organizational systems are everyone's responsibility. Not just to complain about but to understand, support, and help improve.

Think about this in terms of your own team—do your systems support your mission? Have you engaged the patience and due diligence to understand how your systems align or misalign to your strategies, your WIGs, and your client needs? How about your employees' needs? Consider the following systems-alignment questions: Are the right people with the right skills doing the right work? Are the right roles and responsibilities in place for people to work well together? Are people recognized and rewarded in the right way? Are the right resources available to succeed? Are the right decisions being made by the people closest to the work? Do we have the right processes in place to get the most important work done?

Challenge 26: Deliver Results

It's not enough to get results; leaders must get the *right* results in the *right* way. "Right results" means what you're accomplishing is the right priority for the organization. It requires constantly recalibrating and checking in with your leader to make sure what you're working on is aligned to what your organization needs. And "right way" means getting the results in a way that won't burn out, injure, or demotivate your team. Leadership isn't about just running the current marathon; it's about that marathon and the next 30 and beyond.

Take the initiative and proactively check in with your leader to ensure you're properly aligned and focused on the right priorities. Goals shift, and you may not always be aware of that in real time. Don't hesitate to seek a reality check about your performance. Don't assume your results speak for themselves; you may need to highlight them or course-correct, based on the feedback you receive. Thoughtfully calibrate the pressure you place on your teams to ensure you are achieving results now in ways that will allow you to achieve them again in the future.

Challenge 27: Celebrate Wins

As a leader, remember that people like to win but not "fake" win. Your team wants to work for it. But they don't want the finish line moved, and they don't want to kill themselves in the process. And when it's over, they want to celebrate the victory. Don't hold back celebrating wins for just "very special days." On the flip side, don't celebrate every accomplishment, because you'll lose credibility and nothing becomes noteworthy. Find legitimate reasons to celebrate, and be generous with your "stuff." If you have a discretionary budget, spend it. Most important of all, use the time you have to invest in recognizing your team's accomplishments.

Plan your team's next celebration. What contributions should be recognized? Outline what you intend to say about each team member. Be specific.

Challenge 28: Make High-Value Decisions

As a leader, your reputation is, in essence, the sum of your collective decisions. Basically, you're paid to decide—it's that

simple. Leaders decide who to hire and fire, what to elevate as a priority and what to push aside, what to celebrate and what to ignore, and what gets funded and what gets starved.

In ***The 5 Choices: The Path to Extraordinary Productivity***, the authors write that high-value decisions result from working on the important, not the urgent—going for the extraordinary, not the ordinary; focusing one's attention on the right things—how leaders prioritize and manage their time; having sustained energy. Leaders who burn out and don't renew their energy won't have the capacity to recognize and drive high-value decisions to completion. In addition, making high-value decisions requires first admitting that it's okay if you don't have the answer. Help build the kind of trust with your leader that allows you to share what you're working on and get input on how to organize and prioritize your time.

Challenge 29: Lead Through Change

According to Alan Deutschman in ***Change or Die***, 88 percent of us take on a pessimistic outlook with change. The emotional impact organizational change has on your team must not be underestimated. Consider these practices for leading through change: Recognize how the change impacts you. How you relate to and experience it will impact how you communicate it to others. Ask as many questions as possible to ensure you can shape the context for your own team. The more you know and understand, the better you can lead them through the process.

Be intentional about what you disclose to ensure your team can process the change at the speed they need to. People can generally handle tough news. What they won't tolerate is the wrong news or no news. Decide what your communication style will be during the change. You may need to balance your own mixed feelings while honoring your professional responsibility.

Challenge 30: Get Better

This challenge isn't about making incremental improvements in your professional development, relevance, or competencies. Be fearless about your own professional development and learning. Make quantum leaps. ***The Speed of Trust*** offers these tips for getting better: Commit to continuous improvement. Increase your capabilities. Be a constant learner. Develop feedback systems. Act upon the feedback you receive.

Now go out there, jump into the leadership arena, and put the 30 challenges into practice. Don't be embarrassed by the bumps and bruises along the way, and engage in that most noble, life-changing, and potentially world-changing endeavor: to be a leader.

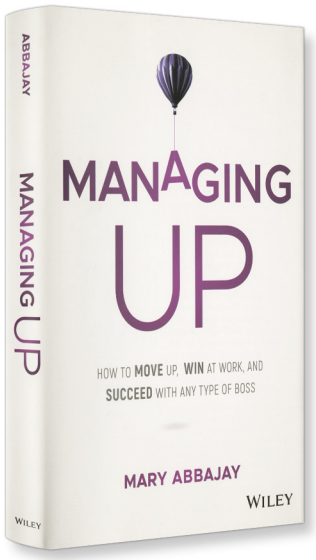
Leadership

Managing Up

How to Move Up, Win at Work and Succeed With Any Type of Boss



by Mary Abbajay

THE SUMMARY IN BRIEF

Managing Up is your guide to the most valuable "soft skill" your career has ever seen. It's not about sucking up or brownnosing; it's about figuring out who you are, who your boss is and finding where you meet. It's about building real relationships with people who have influence over your career.

Author Mary Abbajay helps you build the sort of relationships that foster more communication, collaboration, cooperation and understanding between people at different levels of power, with a variety of perspectives and skills. This type of bridge-building strengthens your reputation for effectiveness and fit, so you can start skipping rungs on the ladder as you build a strong, successful career.

Real-world strategies give you a set of actionable steps, supplemented by expert advice from a top leadership consultant that helps you get on track to advancement. It's never too early or too late to start adjusting your alignment. *Managing Up* is your personal manual for building this vital skill so you can begin building your best future.

IN THIS SUMMARY, YOU WILL LEARN:

- Why learning to follow is a crucial skill.
- To assess yourself and your willingness to manage up.
- Skills to manage both introverts and extroverts.
- Four common workstyle personalities and how to manage them.
- Strategies to identify and manage the top 10 difficult types of bosses.

Introduction

The number-one reason people quit their jobs is still because of their boss. Year after year, studies show that the most common reason people leave their employer is due to having a bad boss or having a bad relationship with their boss.

Could there really be so many bad bosses out there? Or is it that we just don't know how to deal with difficult bosses? Could it be that we have failed to highlight and teach a far more important strategy — how to manage those who manage us?

While there are thousands of books (and TED talks, conferences, YouTube videos, etc.) on how to lead and manage downward, there is very little out there on a far, far more important skill — how to manage up. In other words, how to be a successful follower.

In America, we love-love-love leaders. We talk incessantly about leadership. We preach it, we teach it, we hit everyone over the head with it. We are obsessed with it. But in the real world, where most of us actually live and work, we need to know how to follow, too.

While we might resist the notion of being a follower, the truth is that the majority of us spend more of our working time following than leading. Even a CEO must be a follower, too. Everybody has a boss.

The real world of work requires close integration of leaders and followers. It requires cooperation and collaboration across hierarchies. It's time for us to learn how to be empowered followers, to take an active role in managing our careers, ourselves, our bosses and our experience.

It's time to learn to manage up.

Stop Complaining and Start Winning

Managing Up Is the Key to Your Success

Managing up is not about brownnosing, sucking up or becoming a sycophant. Managing up is about consciously and deliberatively developing and maintaining effective relationships with supervisors, bosses and other people above you in the chain of command. It is a deliberate effort to increase cooperation and collaboration in a relationship between individuals who often have different perspectives and uneven power levels.

Managing up is about *you* taking charge of *your* workplace experience. Here's why it's the key to your success.

Your boss matters. Establishing strong, productive working relationships is the single most effective way to accelerate success in any organization.

People are who they are. Your boss isn't going to change who she is or how she operates just because you would prefer her to be different. By understanding what makes them tick, you can adapt strategies to create a more robust relationship. You can't change how they deal with you, but you can change how you deal with them.

Your career matters. It is your career that will suffer if you and your boss have a bad relationship. Your role in the relationship is to provide your boss with results and performance. You must learn the essence of good "followership."

Choice is empowerment. When confronted with any difficult situation, you always have three choices: change the situation, leave the situation or accept and adapt to the situation.

Time to Man Up

"Man up" is shorthand for managing up. To man up is to take responsibility for your choices, actions and attitudes. It's about doing what needs to be done while keeping your integrity and values intact.

To successfully man up, one must make a rigorous and honest analysis of the landscape of self and others. It's a simple three-step process:

1. **Assess your boss**. Before you begin to manage up, you need to have a good sense of what you are managing up to. What is your boss's workstyle personality? How does she interact with others? How does your boss like his information? How does she prefer to communicate? What are his priorities? What are her goals? What are his concerns, challenges and pressures? What is her experience? How did she get to where she is? What does she expect from you? What truly matters to her?

2. **Assess yourself**. Managing up requires being brutally honest with yourself in terms of who you are, what you want and what you need. It's also about understanding your contribution to the equation. Ask yourself, What is my workstyle personality? How do I like to interact with others? How do I prefer to communicate? What are my priorities and goals? What do I really need to operate at my best? What are my nonnegotiables? In what ways am I compatible with my boss? In what ways am I not? Is my boss really difficult or just difficult for me? What are my workplace strengths? What are my workplace weaknesses? Am I doing the job I was hired to do? Is my job a good fit for me?

3. **Assess your willingness to man up**. Managing up is about deploying adaptive strategies, so in order to work, you must be willing to adapt. Ask yourself, Do I like/love my job itself? Do I like/love my organization? Do I need this job (financially)? Do I need this job (for experience/career development)? Where am I on the scale of happiness/stress? Where is my boss on the scale of difficulty? What are the politics/organizational culture of my company? Is my boss a unicorn, or is his/her style pretty indicative of the overall management style? Am I willing to make changes to my behavior and/or attitude? Do I even want to try?

Managing up is like putting together a puzzle. Part of it is your boss, part of it is you and the rest of the pieces are the strategies you are willing or not willing to try.

Is Your Boss an Innie or an Outie?

One of the first and best things you can do to manage up is to understand whether your boss is an introvert (an Innie) or an extrovert (an Outie) and then adapt your communication and interaction style accordingly.

Extroversion and introversion are core personality preferences that have an impact on two very important workplace elements: source of energy and source of communication style. Building and maintaining a successful working relationship with your boss requires communicating effectively and making sure you are working with their source of energy and not against it.

Introversion and extroversion are personality traits and preferences that are characterized by the following:

- **Source of energy**: Introverts energize from internal stimuli. Extroverts energize from outside stimuli.
- **Direction of energy**. Introverts focus inward. Extroverts focus outward.
- **Response to external stimulation**. Extroverts respond well to higher levels of external stimulation, while introverts prefer less external stimulation.

It's best to think of introversion and extroversion as a continuum, meaning that everybody has a little of both and nobody is 100 percent of anything all the time.

The Outie boss leans towards extroversion. This means the boss readily shares information; sometimes over-shares information; regularly has team meetings; talks a lot at team meetings; can be long-winded; has an open-door policy (and means it); makes an effort to get to know you; feels warm and friendly; reveals his/her thought process; likes to move to action quickly; doesn't mind interruptions; and works frequently with others.

The Innie boss leans towards introversion. This means the boss shares minimal information; team meetings are infrequent; listens more than talks at meetings; can seem overly succinct or terse; often works alone with door closed; doesn't often shoot the breeze; does less relationship building; rarely walks around the office interacting; likes to reflect/process before taking action; is not a huge fan of brainstorming; is less open to interruptions; and you rarely know what they are thinking.

Workplace Styles: Assessing Your Boss's Workstyle Personality

Treat your boss how *he or she* likes to be treated, not necessarily how *you* like to be treated.

To manage up effectively, it's helpful to consider your boss's workstyle personality. Workstyle personality refers to the types of behaviors people tend to use when interacting with others at work. The following four styles are basic workstyle personalities.

The Advancer

Advancers are highly focused on tasks, achieving results and taking action. They are usually less concerned with building warm and fuzzy relationships. They are often perceived as confident, work oriented, efficient and demanding. And they love to be in charge.

Positive traits include being strong, decisive, determined, pragmatic, efficient, objective and businesslike. Potential negative traits including being aggressive, dictatorial, arrogant, insensitive, unbending, dominating and impatient.

Strategies to manage up:

Speed up! Your Advancer Boss is already five steps ahead of you before you even open your mouth. You must move and speak quickly to keep pace and get their attention. Prioritize what you want to say, and get to the point.

Avoid analysis paralysis. Advancers can easily become frustrated or annoyed by lengthy discussions over decisions. They are often willing to overlook minor imperfections in favor of speed, action and impact.

Bring solutions, not problems. When you identify a problem to your Advancer Boss, you must be able to clearly articulate three things: why it is a problem, how it is affecting progress and your idea for a solution.

Don't take it personally. For Advancers, workplace relationships are built through trust and respect, and trust and respect are built by getting stuff done. Their efforts at workplace relationship building are minimal.

The Energizer

Energizers are full of energy, personality and optimism. They are the ultimate "people" people. They are sociable, stimulating, enthusiastic and good at involving and motivating others. They are known for their enthusiasm, humor and risk taking. They are adept at selling their ideas to others.

Positive traits include being enthusiastic, imaginative, extroverted, persuasive, spontaneous and active. Potential negative traits include being superficial, immature, overbearing, impulsive, manipulative, unrealistic and undisciplined.

Strategies to manage up:

Build the relationship. Energizer Bosses are people-focused. Their currency in the workplace is relationships, so take the time to build one. It's time consuming but worth it.

Think fast, move fast. Energizers are fast moving and fast talking. Try your best to keep up.

Don't be an eeyore. If you are always pointing out the problems with ideas right off the bat, the Energizer Boss will quickly get frustrated with you. Even when faced with tough projects, try to be upbeat and optimistic.

Plan and execute. The Energizer Boss loves nothing more than people who can take ideas off his plate and bring them to fruition. The person who can take ideas, put a plan in place and execute that plan is the perfect yin to his yang. You will be recognized for your efforts.

Be creative. The Energizer Boss wants you to bring ideas and solutions, not problems. Stay on the lookout for potential areas for improvement, come up with a few possible ways to move forward, and then bring those ideas to the table.

The Evaluator

Evaluators prize quality, precision and accuracy. They tend to be organized and want all the facts (and history) before taking action or making a decision. Their preferred approach is to minimize risk by looking at all the options before making a decision. They are the quintessential "measure twice, cut once" type. Positive traits include being detailed, factual, logical, systematic, precise, questioning and quality oriented. Potential negative traits include being critical, negative, dogmatic, nitpicking, isolated and inflexible.

Strategies to manage up:

Be prepared. If you are passionate about a particular aspect of your work or you want to inject some creativity into a project, you need to do your homework before unloading all of your ideas on your boss. Without details and facts, your boss is going to be skeptical of anything new and dismiss it for lack of factual support.

Raise your standards. You probably already work very hard and want to produce quality work. Your Evaluator Boss likely has even higher standards. They are perfectionists, after all! Try your best to focus your energy on just a few projects at a time, and pay close attention to detail.

Focus on the facts. Remember that your Evaluator Boss uses data, not feelings or impulses, to make decisions. If you can show your boss that your request makes logical, rational sense, he is more willing to agree with you.

Impress with detail. While some bosses (like Advancers and Energizers) are easily bored with details, Evaluators thrive on them. Make sure you have command of the details and are prepared to demonstrate this knowledge at a moment's notice.

Manage your emotions. If you have a disagreement with your boss, give him details and facts to support your position in a calm, neutral way.

The Harmonizer

Harmonizers value people, relationships, stability and harmony. For harmonizers, the workplace climate is very important. They want to help people be successful and happy. Their favored approach is to get consensus and to mediate between disparate opinions because they believe that the best solution is one where everyone is "on board." Positive traits include being friendly, cooperative, loyal, diplomatic, understanding, helpful and agreeable. Potential negative traits include being soft, indecisive, gullible, too laid-back, cowardly and weak.

Strategies to manage up:

Focus on the team. Your boss is happiest when the team is working well together, and everyone is getting along. Do your part to establish and maintain harmony. If you have a conflict with someone, try to work directly with that person to resolve it.

Think about safety. Do you have a laundry list of ideas that go nowhere with your Harmonizer Boss? Try reframing them in terms of how a change could enhance safety or stability for you, your team or your customers. Your boss is focused on adhering to guidelines and keeping everyone safe (and happy).

Slow down. Harmonizer Bosses are often methodical people. If you barrage them with all your ideas at once or jump from one suggestion to the next, they will feel overwhelmed and shut down. Introduce one idea at a time and provide plenty of detail, steps to accomplish the task and how you will collaborate with others.

Find a mentor. Look for a mentor who is in the next stage of your career and has a different workstyle from your boss. This may be someone in a different department or a different company. It will help you rely less on your boss for professional development and can help you gain leadership skills that your boss may lack.

Difficult Bosses

If you stay in the workforce long enough, at some point you are going to experience a difficult boss. While this is unfortunate, it doesn't have to be the end of the world or a roadblock in your career. Learning to manage a difficult boss means being able to adopt a strategic perspective. It requires you to work a little harder, reflect a little more and make conscious choices.

Here are the top 10 difficult bosses you are likely to encounter in today's workforce:

- Micromanagers
- Ghosts
- Impulsives
- Narcissists
- Pushovers
- Best Friends
- Workaholics
- Incompetents
- Seagulls and Nitpickers
- The Truly Terrible: Psychos, Tyrants and Bullies

As you read through the following strategies, keep in mind the following perspectives:

Appreciate the opportunity and embrace the challenge; you will learn and grow more from a difficult boss than you ever will from a great or easy boss. The most important thing you will learn is what kind of leader you want to be when it is your turn.

Rather than label your boss a difficult person, try to identify the difficult behavior or behaviors. This will help you break down the problem into smaller, more manageable bits.

Assume positive intent. More often than not, many difficult boss behaviors result from a lack of self-awareness, a lack of emotional intelligence or a lack of basic managerial know-how, rather than from an evil intent.

All human behavior stems from some inner drive, want or need. The more you can figure out what the inner driver is, the better you can align your strategy to meet that need.

Finally, one of the most important questions you must ask yourself is, "Can I live with this behavior?" Do you want to make it work? Stay in a place of choice, because a place of choice is an empowered place.

1. The Micromanager

Nobody likes to be micromanaged. Having someone draped over your shoulder, constantly scrutinizing your every move is frustrating and soul crushing. Human beings have an innate neuropsychological need for some level of autonomy, so a boss who denies you this can be very difficult on both an emotional level and a workplace engagement level. Micromanagers who dictate and control your every move prevent you from exercising independent thought, creative problem solving and risk taking — all things that lead to growth.

Strategies to manage up:

Do not resist. Instead, dig in and manage up. Stop being surprised by this behavior. The truth about overcoming this managerial dysfunction is that it requires you to do more in the short run in order to gain more in the long run.

Develop trust. Much of micromanaging is based on fear, so you must develop trust with your boss. Your boss must trust your judgment, your ability to meet her goals and expectations, and your ability to consistently deliver quality work.

Deliver high-quality work every time. Double- and triple-check everything you do before giving it to your boss. Learn what markers of quality your boss wants/needs and her preferences.

2. The Hands-Off, Absentee, Ghost Boss

There are several types of hands-off bosses and many reasons why they ghost. The hands-off boss takes pride in being a macro-manager by delegating and empowering. The too-busy boss may want to provide guidance and support but can't seem to carve out the time. The apathetic boss not only doesn't show up, he doesn't really care. The technical expert is the boss who has the time but not the inclination to manage you

Strategies to manage up:

Do your job. It sounds simplistic, but it can be easy to veer off course when someone isn't supervising or guiding you. As tempting as it may be, resist the urge to pick and choose your work or take long lunches every day.

Build strong team relationships. Do everything you can to support the team and encourage strong team relationships and communication. You can turn yourselves into a self-directed team, which is a team that effectively combines their different skills and talents to work without the usual managerial supervision toward a common purpose or goal.

Find a mentor. Build other mentoring and coaching relationships in your organization and industry. Not only will this help you grow professionally, but it will also help you build a network of resources to help you solve problems and find answers.

3. The Narcissist

One of the most dreaded and difficult bosses to deal with is the Narcissist. Narcissist Bosses have an exaggerated sense of their importance and their entitlement. They care more about their success and self-promotion than they do about the organization or their people. They have an unrelenting need for admiration, praise and ego-stroking. They are quick to take credit for everything and even quicker to place blame on others. The Narcissist is incapable of self-reflection or acknowledging failures.

Thriving under a Narcissist is difficult, which means surviving a Narcissist is often the best option.

Strategies to manage up:

Assess the upside. Is it worth it? Many Narcissists have built huge empires and have blazed trails in new industries. If you are able to navigate the difficulties of the Narcissist Boss, there may be positive payoffs in terms of career success, experience and professional connections.

Protect your self-esteem. When working for a Narcissist, it is important that you don't take her behavior personally. Narcissists' demeaning and demanding behavior is who they are. Do whatever you can to compartmentalize their behavior. Protect your soul.

Get out. Narcissism, like any other personality trait, is a spectrum. Mild or even medium-level narcissism might be manageable. But if you find yourself working for an extreme Narcissist, the best advice is to get out.

4. The Impulsive Boss

Most human beings are wired to seek stability, certainty and homeostasis, so working for a boss who creates chaos and uncertainty can be very challenging. There are multiple reasons that your boss may be impulsive. Some are easily bored, some love change, some are desperately trying to make their mark and some are just incapable of sustained focus.

Strategies to manage up:

Appreciate the intention, and reshape the energy. Impulsive Bosses are often trying to make a positive impact. They probably want to do good and meaningful things; they just may not know how. Try to think of this behavior as a positive energy force that you have to learn to reshape into something useful.

Be open-minded. Don't become so resistant or annoyed by working for an Impulsive Boss that you close yourself off to innovation and good ideas. If your boss has a track record of impulsiveness leading to some successes, then your best strategy may be to buckle up and go along for the ride.

Recap and keep track. Shifting direction is what Impulsive Bosses do best, so they have a tendency to lose track of decisions, priorities, projects and goals. Take responsibility for recapping conversations, project announcements, priorities, assignments, etc. Put them in writing. Recapping helps to focus, clarify and confirm. It also provides cover.

5. The Pushover

Pushover Bosses' inability to take a stand or to have the courage of their convictions can be extremely detrimental to organizational productivity and positivity. Pushovers can't stick to a decision. They allow employees to walk all over them, and they never have your back. Because the Pushover rarely holds employees accountable, the ones who suffer the most are the high-performers, who quickly become frustrated with the lack of direction and the refusal to hold low-performing employees accountable.

Strategies to manage up:

Get to know them. Knowing their history, experience and personality will help you determine how best to navigate them. If they lack confidence because they are new managers, be sure to encourage and support them when they make good decisions. If they are insecure because they are new to the organization, help them understand how things work at your company.

Seek constructive feedback elsewhere. The Pushover is not going to give you any useful or constructive feedback. Look to other high-performing colleagues or mentors to help with your professional growth and development.

Fill the vacuum. A Pushover Boss leaves a power vacuum. Look for ways to fill it (using your powers for good, of course). Take some calculated risks. Look for opportunities to make decisions. Look for ways to proactively solve organizational problems and fill needs.

6. The BFF Boss

There is a big difference between being *friendly* with your boss and being *friends* with your boss. Remember that your boss is your boss first and your friend second. He doesn't love you unconditionally — as a friend would. He loves you conditionally — as long as you perform and give him what he wants or needs.

Strategies to manage up:

Be friendly but not best friends. It's a fine line that you'll have to walk with the boss who wants to be BFFs. You *do* want to engage in friendly conversation and show interest in her life. While getting to know your boss as a person (and vice versa) will help build trust, never forget that it's a slippery slope.

Get busy. While you should accept the occasional invitation to socialize with your boss, you want to limit this so as to avoid crossing the threshold from friendly to BFF. If your boss constantly asks you to go to lunch, have coffee, do happy hour, hang out or talk on the weekends, then you need to get busy with other commitments, real or imagined. Decline with kindness.

Mind the social media. Be careful about including your boss in your social media outlets. Facebook, Instagram, Twitter and the like are potential career land mines. Weigh the pros and cons carefully before accepting the invitation from your boss to follow your feed. Or better yet, let your boss know that you would prefer to connect with him on LinkedIn.

7. The Workaholic

Workaholic Bosses are everywhere. They "live to work" and often expect (and usually) favor those who share their appetite and zeal for this "all-in" work mentality. This "live to work" mentality can be exhilarating and exciting. However, working for a Workaholic can be extremely stressful, overly consuming and downright damaging to your physical, mental and emotional health.

Strategies to manage up:

Isolate the issue. Is it the pace of the workload? The amount of work on your plate? The level of incessant urgency? The number of hours required or expected? Whatever it is, make sure you are clear about where you are struggling.

Align your boundaries with their expectations. It's okay to set boundaries with your Workaholic Boss. Don't be passive-aggressive. Verbalize your needs while still expressing dedication to the job and a desire to meet your boss's expectations.

Decide what you really want and act accordingly. The bottom line is that if you want work-life balance or if you are a live-to-work person, then don't expect to succeed in an organization, profession or industry where workaholism is the path to success. Choose a profession, organization or industry that better suits your life plan.

8. The Incompetent

Organizations love to promote people for technical skills instead of managerial skills. This often creates problems when the technical expert turns out to be a totally incompetent manager. The incompetent boss avoids decisions, prefers inaction, makes bad choices, passes the work and hires the wrong people.

Strategies to manage up:

Diagnose the disorder. Is your boss an Incompetent or a Fraud? Incompetents are often good people who just lack the skills or sensibilities needed for success. Frauds talk their way into positions for which they are not qualified. Try to figure out which one you are working for as it will help you decide if you want to manage up.

Check yourself. Before labeling your boss an Incompetent, take a good look to make sure your judgment is sound and not coming from jealousy, spite or ignorance.

Show them the way. If you suspect that your Incompetent just lacks the experience or confidence, then show her the way. Instead of approaching your boss with disdain and derision, approach with compassion.

Step up, compensate and cover. Become your boss's best asset. Offer to take more responsibility and projects.

9. The Nitpickers and Seagulls

Nitpickers love to, well, nitpick. Nothing is ever perfect enough. They dive into the most miniscule details. Instead of praising (or even acknowledging) the good parts of your work, they focus on the one error they find.

Strategies to manage up:

Learn what they like. In order to please Nitpickers, you need to learn what pleases them. Pay attention to what they nitpick over. Learn their style and preferences. Don't guess. Ask.

Seagulls swoop, and there are actually two types of Seagulls: poopers and poachers. The pooper Seagulls are those who swoop in at the last minute (or at the first sign of trouble), poop on everything and then swoop out. They make lots of noise, create a big mess and leave it to the team to clean up. The second type of Seagull, the poacher, is the boss who assigns you a project and then, when you are almost done, swoops in and poaches it for herself.

Anticipate the swoop. If you have a Seagull Boss, don't let the swoop surprise you. If your boss is a poacher, then pay attention to the types of projects she likes to poach. There is usually a pattern. The more you can anticipate the swoop, the less jarring it will be when it happens.

10. The Truly Terrible — Psycho Crazy Bully Tyrannical Screaming Egomaniacs

The Truly Terrible are everywhere. These are the bosses who are not just difficult to deal with but are truly psycho, crazy, bullying, tyrannical, screaming egomaniacs. These are the bosses who use dominance, power and control to lead. These are the bosses who are emotional (and sometimes physical) abusers. These are the bosses who are unyielding control freaks, blamers, manipulators and tyrants. They thrive on intimidating, bullying, humiliating and browbeating their staff.

No one can work for a psycho, crazy, bully, tyrannical, screaming, egomaniac boss long term and thrive. The following strategies are designed to give you time to look for a better (or just different) job.

Strategies to manage up:

Protect your psyche. This is probably the most important thing you can do. At the beginning of every day, imagine you are putting on a golden shield or force field around your soul. This golden shield needs to keep you from internalizing the behaviors and impact. Visualize your force field or shield blocking your boss's poison arrows. It sounds flaky, but it really works.

Plan your exit. You should start planning your exit as soon as possible. Get your résumé updated. Activate your network. Search out other opportunities both within and outside your organization.

Document everything. It's important to keep a paper trail of your boss's abuse, in case you do decide to go to HR or seek legal recourse.

It's Okay to Quit

While sticking things out is a noble and often useful tenet, there are times when quitting is and should be the best course of action.

Signs it's time to quit include, you wake up miserable every day and dread going to work; you feel unsafe at work; your stress level is permeating your entire life; you've tried to make it work, and nothing makes it work.

Once you make the decision to quit, Get your ducks in a row — get your personal belongings together, gather any company equipment and know what they owe you. Give proper notice, and do not burn bridges. Be as professional and respectful as possible, and be gracious in the exit interview.

Managing up is good for you, good for your boss and good for the organization as a whole. Mastering this rare skill can mean the difference between surviving and truly thriving in your career.

Move Fast and Fix Things

The Trusted Leader's Guide to Solving Hard Problems

By Frances Frei and Anne Morriss

Frances Frei is a professor at Harvard Business School. She served as Uber's first Senior Vice President of Leadership and Strategy, helping the company navigate its crisis in leadership and culture. Frei regularly works with companies embarking on large-scale organizational transformation. Her TED talk on the topic of building trust has had over six million views.

Anne Morriss is an entrepreneur, leadership coach, and founder of the Leadership Consortium, a first-of-its-kind leadership accelerator that works to help emerging leaders thrive. Her collaborators have ranged from early-stage tech founders to Fortune 50 executives to public-sector leaders building national competitiveness.

A Book Review by Soundview

Reinventing the Playbook for How to Lead Change

In their book, ***Move Fast and Fix Things: The Trusted Leader's Guide to Solving Hard Problems***, authors Frances Frei and Anne Morriss use the standard five day work week as a template for solving difficult problems in an organization. They begin by asking their readers to evaluate their own organizations and to determine which of four quadrants their organizations belong to. These quadrants help explain the level of trust within an organization as well as the speed with which things move. Ideally a company can move fast and fix what needs fixing, but many organizations end up either stagnating or moving fast recklessly, breaking things along the way. Frei and Morriss want organizations to move fast, but they want them to do so responsibly and strategically. In their book, they lay out a five step process for identifying and fixing problems with each step representing a specific day of the week.

Monday

Monday represents the first day of the change process. While some organizations prefer to wait until symbolic moments arise to initiate change, like the start of a new year, Frei and Morriss believe that any Monday is a good time to start the process because Monday represents a new beginning built into every week. On Monday, leadership's job is to define a problem and gather the information needed in order to solve the problem. Frei and Morriss advocate using the word "problem" because "it carries a sense of urgency." They believe that most organizations have stories they tell about themselves that are frequently untrue and can lead to stagnation and other issues. The job on Monday is to weed out these false stories so the stories can be corrected. Curiosity is mandatory on Monday, and part of opening up curiosity is to shut down judgment because judgment always inhibits curiosity. Frei and Morriss find that most often leaders find it most difficult to stop judging themselves. They write, "Your organization isn't perfect, and you probably had some role in its imperfection." All this means is that leaders are human.

Once judgment is ruled out and curiosity is opened up, leaders must then assemble a team to complete the Monday activities. They advocate for choosing people for this team who are empathetic and observant and who are comfortable dealing with other people's emotions. They call these people empathy anchors. It is important that people on the team hold different perspectives and represent different areas and levels of the organization. These people are tasked with having difficult conversations about what is really happening rather than focusing on what everyone just assumes is happening in the organization. Every aspect of the organization must be open to discussion. The group should be tasked with answering certain questions, and one particular place where emphasis should lie rests in when the organization has to say no to either employees or to customers and then find out what opportunities are missed because of this no. This leads to questions such as "Who are the organization's gatekeepers, and are they truly serving the interests of the business? What are the fears and anxieties underneath their resistance?" It is important to select a skilled facilitator for this discussion because people will often disagree at this stage. Once problems have been identified, the team needs to select a problem to work on this week. Other problems can still be dealt with as early as next week. To find this problem, it can be helpful to make short summaries of each problem. The team can vote on which problem is most pressing.

Now that the problem to be addressed this week is clearly identified, the group needs to gather Sunday night data. This is data that the organization already has. This data can come in any number of forms including the organization's mission statement, strategy documents, customer surveys, and employee achievement records. It is important for the team to learn all that the company already knows. Then the team can go out and find information they do not know. New information can be gathered by talking with stakeholders both formally and informally with the main goal being to listen to what the stakeholders have to say. It is important to pay attention to both large and small issues because the smaller issues can lead to large effects. By the end of Monday, the group should be in agreement on the problem that needs to be solved.

Tuesday

On Tuesday, "you'll stop pretending that you know how to solve the problem without first testing your ideas and finding out if they work." Frei and Morriss call Tuesday a sandbox day. This is because they want their readers "to get into the organizational sandbox and play." This should be a joyful process, and it requires a willingness to embrace failure. An organization that is not facing failures is not trying enough new things. This attitude requires an experimental mindset. Frei and Morriss suggest trying to experiment with anything that has a decent chance at success.

These experiments should have stakeholders at the center. The focus should be on ways stakeholders have lost trust in the organization. Frei and Morriss believe trust breaks occur because of authenticity, logic, or empathy. Problems with authenticity occur when what the organization says it does is not the same as what it actually does. Problems with logic occur when the organization does not meet stakeholder needs in a reliable way, and problems with empathy occur when the stakeholders do not believe that the organization cares about them. When stakeholders lose trust in an organization, it is likely because the organization wobbles in either authenticity, empathy, or logic.

Once trust wobbles are identified, the reader is called to find good enough plans to fix these problems. The authors suggest looking at logic wobbles that are problematic at the basis of the business model. These wobbles commonly occur when employees cannot meet the needs of stakeholders. Situations like these can be solved by training current employees, changing the way employees work, or finding new employees. Frei and Morriss suggest first looking to develop current employees. This helps build loyalty and makes current employees more satisfied with their jobs. When it becomes necessary to hire new employees, Frei and Morriss suggest first trying to hire within, again to help build loyalty and trust among employees. When a company must turn down a current employee for a new position, it becomes important for the company to do so in a way that builds trust by speaking directly to the rejected employee and helping them grow their career in other ways. Otherwise, "even when you've led a good-faith internal search, there is a risk that a hiring process destroys more trust than it builds." Sometimes it will be necessary to lay off current employees that are bringing the company down. They recommend doing this in a way that minimizes humiliation. Poorly executed separation decisions can actually bring profitability and the job satisfaction of remaining employees down. Still, when an employee is acting in bad faith, these decisions must be made.

Wednesday

Wednesday is focused on inclusion in the workplace as the authors instruct their readers to "make new friends" in their title for the chapter. Inclusion is important as Frei and Morriss state that "Whatever problem you're tackling this week, you're going to be better at solving it with people who don't already think like you do – people with different perspectives, different assumptions, different experiences of moving through the world." They explain that in inclusive companies, people do not just tolerate other people's differences; rather they are celebrated. Inclusive environments help curb the wobbles of inauthenticity, lack of trust, and lack of empathy discussed on Tuesday.

Frei and Morriss list ten benefits inclusive organizations earn. One of these benefits is that organizations will find it easier to recruit high quality candidates if they are inclusive. This is because many talented people seek out inclusion in the workplaces they choose to enter. They also note how inclusive organizations are often more resilient organizations. To demonstrate this, Frei and Morriss explain how during the years between 2007 and 2009, there was a 35% decline in stock performances, but there was actually a 14% increase in performance in inclusive companies. They attribute this difference to the ability inclusive organizations have to be adaptable and to be comfortable with change. Among the other nine benefits inclusive organizations reap is the money more inclusive organizations make. Because inclusive organizations make better decisions and are more

Despite all of the benefits inclusive organizations reap, it can be difficult to achieve true inclusion as it requires more than just a diverse workforce."

highly productive, they often see increases in revenue. Frei and Morriss see "no other distinction that can deliver these kinds of advantages" making inclusion a key facet of organizational culture that leaders should foster.

Despite all of the benefits inclusive organizations reap, it can be difficult to achieve true inclusion as it requires more than just a diverse workforce. Frei and Morriss insist that creating a diverse group will not help the organization unless the environment is truly inclusive. In fact, homogeneous teams perform better than heterogeneous ones do unless the teams are truly inclusive, honoring the unique contributions of all members. One reason diverse teams may struggle is because of the common information effect. This effect explains how people tend to focus on what they have in common with other people. When people in a group have little in common, they have little common information to focus on. Inclusion overcomes this common information effect because inclusive groups celebrate what it is that makes everybody different, opening up more areas for exploration. Frei and Morriss note that "inclusion does not mean exclusion." Every person's perspective should be considered in inclusive groups, not just opinions coming from people in traditionally underrepresented groups.

Frei and Morriss discuss an inclusion dial. There are four distinctions on the inclusion dial: safe, welcome, celebrated, championed. Each step on the dial must be met before an organization can move on to the other steps on the dial. For example, people cannot feel championed unless they are first celebrated, welcome, and safe. In safe environments, people feel safe not only physically but also psychologically and emotionally. In welcoming environments, people feel they can be themselves, and in celebrated environments, people feel celebrated "because of who they are." Finally when people feel championed, an entire organization's culture is inclusive, and inclusion is seen as a moral imperative.

Frei and Morriss urge organizational leaders to survey people in different parts of an organization to determine where people feel the company falls on the dial. Oftentimes leaders are surprised to find that those they lead do not feel as included or even as safe as they previously believed. Furthermore, it will be likely that those who feel the most inclusion will tend to center around good managers and leaders who are particularly good at fostering an inclusive environment. Frei and Morriss go on to explain how they want everyone to move up the dial. In some organizations, men start to feel more insecure about making missteps as women and nonbinary people become more included. This is not ideal as an inclusive environment should make everyone feel more included and secure. "The higher up we find ourselves on the Inclusion Dial, the greater our imperative to reach down and help pull others up."

Thursday

On Thursday, the focus of the organization will change to the story leaders tell about changes to be made. Human beings are story-centered individuals, so the way a story is crafted and shared is of the utmost importance. This story should focus on both the why and the how of the intended changes, and it is based on all that was learned earlier in the week about problems the organization is facing. Crucial to effective storytelling is the ability to tell a story in simple terms. "The objective of change storytelling is to understand the story deeply enough that you can describe it simply to the people you want to act on that story."

First, Frei and Morriss advocate for honoring the past, both the good and the bad. It is important to honor the good because almost all organizations have people who serve as gatekeepers who respect the past history of the organization and do not want to see changes erode what it is they respect and honor about the organization's past. This requires people to focus on the parts of the organization that they do not want to see changed. This will help ease the anxiety of the gatekeepers. These gatekeepers are so important that Frei and Morriss recommend keeping one near so those in leadership can understand the anxieties people face as they attempt to move the organization forward. A sense of continuity is important if leaders want people to get on board with proposed changes. Once the good parts of an organization's history are acknowledged, it is important to then move on to the not so good parts of an organization's history. These are generally places of wobbles found on Tuesday. At this stage, leaders need to focus on both honesty and optimism.

The next step in the storytelling process is to project a tone of both rigor and optimism as leadership lays out the plan for needed change. This can be done by appealing to logic, and data can be a useful rhetorical tool. But when it comes to data, Frei and Morriss urge readers not to inundate people with too much data, instead choosing to focus on what is most important or compelling. The story then needs to be told with optimism because optimism is an important tool because of its highly infectious nature.

All of these points of the story then need to be put together. Frei and Morriss recommend using a three part structure utilizing the following headings:

1. "The Good Ol' Days"
2. "The Change Mandate"
3. "The Optimistic Way Forward."

This story should be practiced and read aloud, and once it has been finely tuned, it should be repeated frequently. Most people do not share the story enough and likely need to at least double or triple the number of times they share the story. Feelings do not need to be ignored. In fact, they can help build both trust and a sense of authenticity.

Friday

On Friday, Frei and Morriss advocate for speed. They start out their exploration of speed by making the assertion that "There is such a thing as being too late" as they believe that when an organization does something matters as much as what it is that it does. Not only is speed important, but if the steps outlined in Monday through Friday have been implemented, the authors believe that a right to speed has been earned. Because the steps have been taken, breaking things is far less likely had action just been jumped into.

Frei and Morriss believe there are ten beliefs that get in people's way of moving fast. The first of these is people's perceptions that change happens slowly. Frei and Morriss believe that "history lurches forward when changemakers decide that the moment that matters most is right now." Frei and Morriss further believe that a belief that things can be done later can lead to a reticence to change. This desire to push change into the future can come with a high price. Another problem people run into is a belief that they need more information in order to make changes. Frei and Morriss counter this belief by sharing Jeff Bezos's belief "that most decisions should be made with about 70 percent of the information you want." Part of the problem of waiting for absolute certainty is that the company is vulnerable while leaders wait to make a necessary change.

One stumbling block organizations come across when trying to implement change at a fast pace is that they have too many systemic stumbling blocks. This often means that decision-making capabilities are confined to too few individuals. This can cause change to get stuck in a pipeline. A solution is to teach people how to think, giving people the required authority to make decisions once they are fully informed about the criteria necessary to make the change.

Another stumbling block organizations face is a reticence to do some things poorly. Frei and Morriss discuss the impossibility triangle. The three points of this triangle are speed, quality, and cost. At most, two of these criteria can be met. Therefore, if speed is important, either quality or cost will suffer. To cope with this reality, leaders are tasked with deciding which tasks can be done poorly. Frei and Morriss use the example of Southwest Airlines. In order to keep costs low while also prioritizing speed and efficiency, they must compromise on service. This can make people uncomfortable at times, but the only way to get people where they want to go at a low cost is to compromise in that manner. When leaders refuse to acknowledge the reality of this triangle, "the alternative is to pretend you can be great at everything and lose trust as you go."

The goal Frances Frei and Anne Morriss set out to achieve in their book is to help leaders analyze their organizations, recognize problems, create solid plans quickly, and implement these plans with a sense of urgency. Frei and Morriss's book focuses on the people in an organization as it attempts to help readers create environments that are conducive to the flourishing of all stakeholders. Underlying their book is the premise that when stakeholders are respected, progress can be made. This is because empathy, logic, and authenticity are all keys to successful organizations and effective change. Along these lines, the authors end their book discussing the weekend. This is a time of rest and replenishment that comes at the end of a week of change and that can lead to recovery. Part of the reason they chose a week as a framework for institutional change is because weeks have built in weekends that can allow for this recovery.

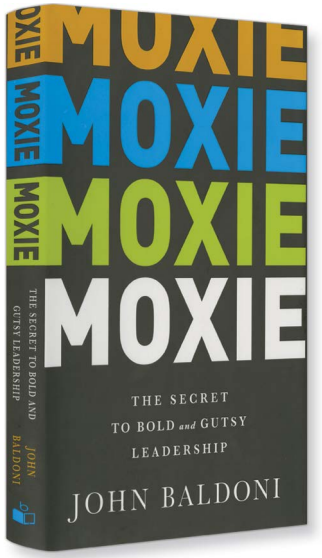
Leadership

Moxie

The Secret to Bold and Gutsy Leadership



by John Baldoni

THE SUMMARY IN BRIEF

Leaders today need to be mindful of their circumstances as well as mindful of their own strengths and shortcomings. They need to have the disposition to succeed as well as the inner resourcefulness to persevere. Leaders must be willing to do things differently but also draw on tried and true traits, such as courage and gumption.

Moxie is a concept that the modern leader is wise to adopt — one part courage, one part can-do spirit and one part recognition. In *Moxie: The Secret to Bold and Gutsy Leadership*, author John Baldoni uses concrete, tried-and-true steps to bring out the inner leader in everyone. For management and employees alike, *Moxie* provides a roadmap to inspire innovation and effective leadership.

Whether you're already at the helm of your organization or still looking for a way up the ladder, *Moxie* is the leadership tool you can't do without. Built on the MOXIE framework, leaders will learn how **M**otivation, **O**pportunity, an **"X"** factor, **I**nnovation and **E**ngagement work together for success.

IN THIS SUMMARY, YOU WILL LEARN:

- Inspiring stories of heroes embodying the principles of MOXIE.
- Why mindfulness is necessary for leadership success.
- Why it's essential to create opportunities both for yourself and for others.
- The most important X factors you need to become outstanding.
- The ground rules for fostering innovation.
- Why listening and commitment are key to engaging your people.

THE COMPLETE SUMMARY: **MOXIE**

by John Baldoni

The author: John Baldoni is chair of the leadership development practice of N2growth, a global leadership consultancy. He is an internationally recognized leadership educator, executive coach, and speaks throughout North America and Europe. He is the author of a dozen books and has authored more than 500 leadership columns for a variety of publications, including *Forbes*, *Harvard Business Review* and *Bloomberg Businessweek*.

Introduction

Moxie! The very word conjures up images of tough-talking guys with bent noses and fedoras pulled down low over their eyes. It is a word that was common in the 1930s and typically associated with people born on the wrong side of the tracks. Common people to whom circumstances had not been kind. They had to make do with what they had, even if it meant using their fists.

Three-quarters of a century later, moxie is not a commonly used word, but it is the essence of what makes a leader tough on the inside and soft on the outside. These people know what it means to get knocked down, but better still, they know how to get back up. They also stick up for others, especially when the chips are down, and you want them on your side. And lucky for you, they most often are.

By definition, moxie is gumption (get up and go), guts (courage) and determination (perseverance) all rolled into one. It is one part courage, one part can-do spirit and one part recognition. Here, we explore how the concept focuses on what leaders need to be as well as what they need to do.

In short, moxie is an acronym. Specifically, leaders need to be **mindful** of their circumstances as well as of their strengths and shortcomings. Leaders must be **opportunistic** in the sense that they want to make positive things happen. They also need to have the **disposition (x-factor)** to succeed as well as the inner resourcefulness to persevere. Leaders know that risk is involved with most ventures, so they must be willing to do things differently. They must be **innovators**. And all good leaders know that they, by themselves, accomplish very little. They must **engage** with others in order to achieve sustainable goals for themselves, their teams and their organizations. Moxie is an attribute that successful leaders use to make a positive difference in the world in which they live.

Mindfulness

People with moxie know that good things happen to those who seek them. Such folks are aware of their situation and, most importantly, are aware of their ability to effect positive change.

Nelson Mandela

World leaders come and go, but few have captured the imagination like Nelson Mandela. Born into royalty in his homeland, he assumed chiefly duties. Seeking wider influence, he soon ran smack into the vicious and oppressive apartheid system designed to keep black Africans, the overwhelming majority, in a state of subjugation.

As head of the African National Congress, Mandela was tried on terrorism charges and sentenced to five years in prison in 1961. He was sent to Robben Island, a remote spit of rock in the Indian Ocean, four miles off the coast of Cape Town.

Later, when his papers were found in a distant farmhouse, Mandela, still in prison, was tried on treason charges and sentenced to death. His death sentence was later commuted, but the hardships endured. He pounded rocks in the blazing sun day after day, years upon end.

It was mindfulness, as well as the cohesion of his comrades on Robben Island, that enabled him and his fellow prisoners to persevere. During this time, Mandela looked forward, and in doing so, learned Afrikaans, the language

of his jailers, as well as Afrikaner culture. He came to understand that, unlike the English, who might re-emigrate to Britain or another commonwealth nation like Canada or Australia, should black people come to government, the Afrikaners, descendants of Dutch farmers who had emigrated to Southern Africa in the 17th century, were home. They referred to themselves as Africa's White Tribe.

After Mandela was released to worldwide acclaim and adulation in 1993, he traveled the world. When it was decided that there would be free and fair elections, he ran for president and won. This thrilled the hearts of his fellow Africans but absolutely terrified the whites.

Mandela, being a wise man with a capacity for human understanding that dwarfed most others, understood that he needed to pull the nation together. His method was rugby. South Africa, long banned from international sports competition, was designated the host nation for the Rugby World Cup of 1995. This was a huge deal for the Afrikaner population, less so for fellow Africans. But Mandela understood that this was his opportunity to make a statement to Afrikaners that he needed them as partners in the government as well as partners in the nation.

Only someone with Mandela's sense of purpose could have shepherded a nation whose government was so virulently racist through a peaceful transition that facilitated reconciliation and allowed the country to survive. Mandela exemplifies what it means to be mindful: aware of your situation but at the same time focused on what you can do to improve it.

Self-Awareness

The capacity to know oneself is essential to being a leader. Self-awareness is the ability to understand yourself as well as to know how others perceive you. Too often, we overlook self-awareness as an important attribute of strong leadership. According to a 2012 survey of 17,000 employees, conducted by the Hay Group, only 19 percent of executives possessed a degree of self-awareness.

How we build our self-awareness says something about how we will succeed as leaders. The first step is acknowledging that we have work to do. Often that comes from feedback we receive from a trusted source, be it a boss or a colleague. Applying that feedback so we make positive changes is essential.

If you are not aware of what others think of you or the situation, then it can be difficult to connect with them. Leadership requires persuasion, and that can only occur if the parties understand each other. Self-aware leaders know what is happening around them; they live in the present but are aware of the future. They know that what they do has consequences, and for that reason they are attentive to how they interact with others.

Self-awareness is fueled by mindfulness, the ability to think and act in the present. Mindfulness is a state of being, and it requires attentiveness to the here and now as well as to what is happening with others.

Mindful Practice: Patience

Savvy leaders develop self-knowledge through mindful practice. It can begin with patience. For the many leaders whose internal motor powers them to act, the concept of patience can seem foreign. It can be perceived as passivity. In actuality, patience is an active process. While we cannot control the situation, we can control how we react to it.

Mindfulness enables us to check our emotions so we can discern things with a clearer perspective. As such, mindfulness enables us to listen, engage and connect with others in a more open and honest way.

Applying patience in the workplace means making time for employees and keeping an open-door policy so employees feel free to come in and chat. It sends a signal that you value their contributions. Mindfulness also means you make time to reflect on what you observe and what you hear. It does no good to listen and not act.

Mindfulness requires practice. You build up the practice of it through disciplined observation and being present but also through physical action. Breath control is key. By focusing on breath, something borrowed from yoga, the individual can slow down the external world and focus on the internal.

We can train ourselves to be mindful of our own thoughts and feelings, and we can do the same with others. And, being mindful of the situation around us is critical to developing an ability to connect with others. It is not easy.

As Rich Sheridan, cofounder and CEO of Menlo Innovations, an Ann Arbor–based software firm, notes, "As a leader you're pulled simultaneously in two directions constantly. And I think that is the challenge of leadership. There's that one aspect of leadership that requires the ability to envision a better future than where you're at today and that requires you to lift your head up and look down the road as far as you can. But that only gets you kind of half the way there because the other part is, what's happening today?" says Sheridan.

Situational Awareness

Another form of mindfulness is situational awareness, knowing where you are and what you need to do next.

Situational awareness is paramount in managerial situations. Managers need to ask themselves what is going on, or not going on, in their departments. The manager needs to know what resources she can share with her team. And most importantly, she needs to evaluate the skills and talents of her team.

Understanding the situation comes from asking the right questions. As CEO of Campbell Soup Company, Doug Conant and his team focused on "listening before leading." Doing so is not as easy as it sounds. In the press of business, as Conant explains, executives are pushed to make decisions out of a sense of expediency with "quick judgments." The challenge, as Conant explains, is to slow down and let things settle a bit.

A mindful leader is vigilant but also attuned to the inevitable forces of change. Mindfulness, then, prepares leaders to focus on the present as well as prepare for the future.

Opportunity

Individuals with moxie do not wait for things to come to them. They seek new opportunities. And that is critical for a leader. Few, if any, are content to sit back and wait for things to happen. They look for windows of opportunity where they can apply what they know and do what needs doing. They are opportunistic in mindset, and their need to succeed drives them to take advantage of what happens next.

Facing Adversity

The heart of a leader's responsibility is to tell the truth. That truth begins with a look inward. In his more than 30 years of research, including collecting best practice stories for *The Leadership Challenge* (now in its fifth edition), Jim Kouzes notes that nearly every story featured offers an example of someone facing a significant challenge. Inherent in facing adversity is a willingness to look beyond the immediate problem to see possibilities over the horizon.

One of Kouzes' favorite quotes is from legendary Hollywood agent and deal maker Swifty Lazar, who said, "Sometimes I wake up in the morning and there's nothing doing so I make something happen by lunch." Kouzes likes to tell leaders to "Post this quote on your wall or computer screen so you can remind yourself to take initiative. Every day when lunchtime arrives, if you haven't made something happen, delay lunch." That's where opportunity enters.

Making Things Happen

Opportunities often arise from disruption. Disruption can be an effective strategy when it comes to doing something different and making it work to build a business. One example is Netflix, which has disrupted the marketplace not once but multiple times.

As TV critic David Carr noted, Netflix first disrupted video distribution by using the U.S. Post Office as its distributor of DVDs. This effort was immensely popular, and the business grew. Then Netflix began streaming video directly to subscribers, who paid a monthly service fee that entitled them to watch as many movies or TV shows per month as they wished. Again, the business model proved successful.

The next disruption was self-inflicted. In August 2011, Netflix decided to split the businesses into two different business units, meaning customers needed to pick which service to use or pay 60 percent more to keep both. The outcry was huge, and Netflix lost as many as one-third of its subscriber base. But, as Forbes.com commentator Adam Hartung wrote, "CEO Hastings actually did what textbooks tell us to do — he began milking the installed but outdated DVD business. He did not kill it, but he began pulling profits and cash out of it to pay for building the faster growing but lower margin streaming business." And it worked. The streaming business grew, and the DVD business declined.

It was now time for its third disruption — creating exclusive content for Netflix. The first major effort was the funding of 26 episodes of a Netflix-only series, *House of Cards*, a political drama starring Kevin Spacey as an ambitious politician on the make. The first 13 episodes were launched in spring of 2013, and the response was hugely positive.

Nothing Netflix did was extraordinary per se, but by looking at what consumers wanted in terms of television watching, it was able to deliver movies and TV shows directly, first through the mail and later via the Internet. Creating its own content was the next huge step, and it shows that innovation need not be totally original; rather, it must be focused on providing something different in terms of convenience.

Taking Opportunity to the Next Level

Successful leaders capitalize on opportunities, but they do something more. They create opportunities for others. The greatest untapped reservoir of organizational strength is purpose. Wharton Professor Adam Grant says, "In corporate America, people do sometimes feel that the work

they do isn't meaningful. And contributing to coworkers can be a substitute for that." Grant's research proves his thesis. Employees are more engaged and motivated when they feel they are contributing beneficially to others.

Grant said, "Many leaders underestimate the power of operating like a giver." It is different from charitable giving and volunteerism. "The giver mindset is a focus on making other people better off…There is compelling evidence that when leaders operate like givers they do better, and so do their organizations."

Purposeful organizations deliver on the service equation, both internally and externally. So how can we show service in the workplace? First and foremost, consider not so much what you do but the outcome of what you do. That is, think, "What effect will doing my job well have on my coworkers?" Next, put your mindset in place. Consider these options:

Listen; don't judge. Rather than preemptively dismissing a comment, keep an open mind, and use this flexible stance as a point of leverage for conversation. Ask an open-ended question, or ask the person to expand on his comment.

Think "want to have" rather than "have to." We all have must-do tasks. Thinking of them as things you want to do to help another person perform her job better reframes the work as a matter of helping, not simply completing.

Put benefits before tasks. Look for ways to turn what you do into things that benefit your colleagues.

Adopt a "me-last" approach. It makes a positive impression when you, as a senior person, defer to a subordinate. It shows that you have respect for others and a sense of humility about yourself.

Step out of the limelight. Let others get credit for a team effort when things go right. And if the reverse occurs, stand up for your team.

X Factor

Each of us has a unique set of talents and skills that we use to make our way in the world. More than just talent, it includes what makes you — your character, convictions and personal beliefs. Consider this set the X factor: what enables you to do what you do and do it well. They are essential to your ability to take charge of your life as well as to radiate the authority you need to bring others together for common purpose.

X factors are integral to leadership because they provide the backbone a leader needs to stand up and be counted, as well as the ability to do so with grace and dignity. Leaders are always on. The higher their profile, the bigger the stage; their words and actions are magnified by the outsize roles they hold. That is, a word from a CEO or commander rings with importance, but it also carries significance. Such leaders hold power over others, and therefore what they do is of consequence.

Key X Factors

It is essential to consider factors in addition to self-awareness that help personal growth. According to the 2013 *Time* Creativity Poll, those surveyed rated the following as the characteristics they most valued in others:

Creativity: Sixty-two percent of those surveyed said that "Creativity is more important to success in the workplace than they anticipated it would be when they were in school." Clearly, creativity is valued, and if organizations do not do enough, then it is up to individuals to develop it in themselves.

Intelligence: Intelligence is the raw horsepower needed to process information and make sense of it. And while processing power is highest in young people, the ability to apply it — knowledge — comes with experience. Intelligence is the baseline for competence.

It would be a mistake, however, to restrict intelligence to verbal and mathematical abilities alone. Harvard professor, psychologist and best-selling author Howard Gardner has championed the cause of multiple intelligences. The multiple dimensions include spatial and kinetic, necessary for athletes; rhythmic, necessary for musicians; and interpersonal, vital for forming relationships, among others.

Compassion: While passion is essential to success at work — you need to love what you do — compassion is the element that others value. People want to know that their leaders care. Compassion is a virtue rooted in the dignity of the individual.

Compassion takes many forms. We see it when employees pitch in to help a colleague in need. Sometimes the aid takes the form of a donation for a medical expense or hardship. Other times we see coworkers offer a fellow employee assistance by cleaning his house or shopping for groceries. And very often if an employee is out, her coworkers will band together to cover for the individual to make certain the work is done on time.

Humor: Life is hard and work is tough. Truisms, yes, but no less relevant in our daily lives! So when people can find laughter, it is something to be valued. Humor adds richness to our daily lives. Those who can look at a situation — whether at work, at home or at play — and find humor are those we like to be around. Having a sense of humor is a good attribute for a leader to possess. This is es-

pecially true when the leader turns the humor on himself. A leader who can laugh at his mistakes and poke fun at himself is one who is confident in his abilities and, at the same time, projects a sense of humanity and fun that draws people to him.

Ambition: While ambitious people can grate on us at times, ambition is an essential component in personal drive. Ambition sparks our internal motivators, it fuels our get-up-and-go, and it prompts us to tackle the challenges of the day. Ambition focuses energy on career goals, but it also provides a stimulus for action and execution.

Curiosity: While curiosity was not mentioned in the *Time* survey, many leaders value it and look for it in others. According to Ryan Lance, a curious leader is one who is trying to figure out why things are what they are. A curious leader is forever asking questions. She does this as a means of discovery, of provoking thought. A curious leader is one who is looking to find possibilities where others may have overlooked them.

Character: As important as the preceding attributes are, none is more important than character. It is the foundation upon which an individual and, certainly, leaders stand. Without it an individual lacks backbone. The elements of character, as OneGoal founder Jeff Nelson sees it, emerge from five aspects: integrity, resilience, resourcefulness, professionalism and the one just discussed — ambition.

Resilience: There is no shame in getting knocked down. It is what you do next that matters most.

Courage: Many leaders have noted that courage is not the absence of fear but rather the management of it. Courage for us means choosing a moral path: putting what's right ahead of what's expedient. In that regard, we make choices to stand by our convictions and, in the process, make sacrifices that may initially hurt us but in the long run instill character. Courage comes in many forms and is integral to the ability to lead others.

Confidence: A leader without confidence is like a boat without a rudder, drifting aimlessly. There are many ways to think of confidence, but I like to think of it as the internal spirit of "can do." It emerges from within us all. Confidence emerges from our accomplishments. It arises from what we have done and what we have learned, so that when we face the next challenge, we have a reservoir of something inside of us that says, "Yes, I can do this."

The challenge for you is to find these factors and incorporate them into your leadership persona. Then you can lead in ways that bring people to you, so that together you can achieve intended results.

Innovation

Individuals who have moxie are not content with the status quo. They are continually seeking to acquire new skills and apply them in new ways.

Sergio Marchionne

He does not look the part of an automotive mogul, with his sweater, cigarette and slightly rumpled clothing. But looks in this case do not tell the story. He may be the auto executive with the most challenging job in the world: reviving the fortunes of two flagging automakers, Fiat and Chrysler. His name is Sergio Marchionne, and as CEO of both automakers, he led a turnaround effort that startled those who do not know him, though it has not surprised those familiar with his track record.

Marchionne was born in Italy but immigrated to Toronto with his family when he was a teenager. The fact that he did not speak English was a stumbling block, and his teen years in school were not marked by academic success. But unlike others his own age, he did have a remarkable ability at cards. His tolerance for risk was high, and he seemed to keep his cool, two traits that would hold him in good stead in his career.

After buckling down to the books, he went to university and did well enough to earn a degree in chemistry. He gained a job with a Swiss company and ended up running SGS, a Swiss subsidiary of Fiat. He turned the company around, which earned him the notice of Fiat's senior management. As the 21st century dawned, the company that had defined Italian manufacturing prowess was foundering. The biggest cash drain was Fiat Auto, and Marchionne was tapped to run it. Urgency was the order of the day, as the company was close to insolvency. Some executives would have withered under the assignment; Marchionne did just the opposite. He thrived.

When Marchionne took over Fiat and Chrysler, heads rolled. But with both companies in dire straits, decisive action was necessary. That said, Marchionne has a sense of humility. When he spoke to Chrysler employees for the first time, in 2009, he said that he needed their ideas and their effort to succeed.

Marchionne likes to be close to the action. At Fiat he spent time walking around getting to know people, and when he identified his key people, he pulled them toward him in a matrix management style that enabled everyone to stay close. At Chrysler he did the same.

Marchionne did not take over the plush office on the top floor of Chrysler's headquarters. Instead, he located his office on the engineering floor, to be close to the people

who were revamping the product line. He insisted that the Fiat engineering team share its expertise with Chrysler engineering teams, a process that would accelerate the development of smaller vehicles to meet the automaker's need for improved fuel efficiency.

In making these changes, Marchionne sent a signal that he was actively engaged in the business but that if the company was to be successful, it would need to think and do differently. It would need to innovate, and in this regard, he is a model of a leader who exemplifies what it takes to energize an organization through the spirit of innovation.

Innovation is applied creativity. Leaders have to enable employees to be creative by providing conditions that let the imagination flourish. They also must take what emerges and push or pull it throughout the organization. And that is not easy.

Setting Ground Rules for Innovation

When Rich Sheridan founded Menlo Innovations with his business partner in 2001, he resolved, "Number one thing, hands down, you have to pump fear out of the room. You cannot innovate in an environment of fear because fear causes your body to produce the powerful chemicals adrenaline and cortisol. These chemicals shut down the most interesting parts of your brain, because the blood is now being channeled to your extremities so you can run and to your heart so you get enough oxygen to run. Blood is channeled away from the front — prefrontal cortex of the brain. And now you've lost all ability to be creative, to be imaginative, to be innovative, because now you're in reptile mode.

"If people aren't afraid, they will begin to trust one another. If they trust one another, they might begin to collaborate. And if they collaborate, suddenly you will get creativity, innovation, imagination! And that's what companies are looking for."

Driving out fear is only the first step; you need to take it further, according to Sheridan: "We want joy here, defined as the people for whom we're designing and building the software love what we've done. They are delighted, and we've made their lives better. So that's that whole idea of working on something bigger than yourself."

"Chalk the Field"

Jim Haudan, CEO of Root, says, "Innovation can only occur with the mindsets that recognize that Big Ss come from small Fs, and that means big successes can only come from small failures. So if we can't fail, we will never succeed." To do that, organizations must "fail forward fast," says Haudan. "You need to hug the failures and embrace the failures" rather than run from them.

Haudan advises leaders to limit risk and go for "small, fast and cheap." For example, go for process improvements and incremental changes to products rather than entire new product lines. Use them as learning lessons rather than "bet-the-company options." Once you have learned, you can take bigger risks, developing entirely new products or even product categories.

Haudan notes a pitfall of innovation: applying it where it is not needed. So he advocates that you "chalk the fields," that is, determine what you will change and why. "There are places where you want absolutely no innovation, because reliability and predictability are key," says Haudan.

People often resist innovation because it disrupts their comfort zone. When it does, they put up resistance. Again, it is necessary to keep trying. It falls to the mindful leader — one who looks for opportunity — to push the organization to do something different in the quest for improvement.

Engagement

Persons with moxie seek to engage with the wider community around them. They are focused on making a positive difference in their teams and in their organizations.

Leaders do not work in isolation. They work with others in order to bring their ideas, their dreams and their aspirations to fruition. To do this they must engage with others. The engagement can be as simple as one-on-one conversations that lead to relationships, or it can be engagement with groups, teams or entire organizations.

There is no one-size-fits-all approach to engagement, but there is a fundamental principle to which all highly engaged workplaces adhere. It is this: there is dignity in work, and when we treat workers with dignity they become contributors to results as well as to success.

Strategy is important but what truly matters, according to Jim Haudan, is "when people come together with aspirations to build something that doesn't exist." The challenge is to focus on purpose, or, as Haudan says, move from the "unconscious to the conscious. [This] invigorates the power of human beings to make a difference."

The question is, how do we engage with purpose? First, leaders must enable others to recognize purpose on two levels — organizationally and personally. Leaders

must instill purpose by linking what a company does (its mission) to what it wants to become (its vision). They do this through their communications and their actions. They leverage purpose as the why of work, that is, why do we do what we do?

Purpose, however, is something to which people relate for one simple reason. It gives meaning to what they do. As Haudan says, it's that "larger than themselves" connection we all crave.

Engagement Begins with Listening

Fernando Aguirre, former CEO of Chiquita Brands, believes that engagement relies upon two important factors: "One is to communicate all the time; and two is to find objectives that are common and that employees can make them their own."

When Aguirre joined Chiquita as CEO, he spent his first 90 days as chairman and CEO "going on a listen and learn campaign and told employees that [he] was not going to make any major decisions in those first 90 days." Aguirre processed what he learned by writing about and reporting his findings to various business units.

The listening and learning continued throughout his tenure at Chiquita. Aguirre says, "Anytime I would visit any of our operations, I would hold town hall meetings with every employee that was in the building, no matter what level, no matter if they had joined the day before or if they had been in the company 35 years. And I would talk a little bit about results. I would talk a little bit about what we were doing strategically, and then I would answer their questions."

Aguirre extended his town hall concept globally. He held quarterly review sessions that were broadcast throughout the company. He says, "I started every single town hall (or quarterly) meeting by reminding folks that the most important part of this session is going to be your questions." As he explains, such commonality ensures that everyone is focused on the same goals, but it also enables managers to implement their own ideas in order to achieve the best results for their business units. In this way, Aguirre says it is employee "ideas that end up influencing the work."

Mindful Engagement

While engagement is nurtured one on one, it will not work if the leader herself is not committed to the process. Personal connection to the work is critical. And that only occurs when leaders and followers are on the same wavelength. When they are both connected to the work and to the purpose, exciting things can happen.

The way to build upon personal connections is to "connect the dots." That is, the leader must relate the work of individuals to the collective work of the team and ultimately the organization.

Engagement as Commitment

One element of engagement that many organizations overlook is commitment. Jim Haudan believes firmly that employees feel more engaged when the workplace is a place where they feel a sense of belonging. In part, this concept is derived from Haudan's approach of viewing employees as customers. Adopting this mindset shifts the balance from what *we do to* an employee to what *we can do for* them. Making the personal connection between the employee and the work is vital to engagement, but more importantly, it creates a bond between the employee and the enterprise. Once an employee feels connected, she will go the extra mile to achieve intended results.

At Root, management fosters commitment in a variety of ways. One method is borrowed from something that Haudan witnessed at a ceremony at Lourdes University in Ohio. Freshmen at the school are given a ceramic medallion. When they graduate, they give the medallion to the person at the school who helped them the most. Haudan adapted that concept to recognize employees. Employees were given a tree and then asked to give that tree to the person who had meant the most to him and helped him feel part of the Root organization.

A leader is more than a sum of what he has accomplished. A leader is judged by how well he enabled others to achieve their aims in ways that benefit the entire organization. That is the essence of engagement — bringing people together for common purpose.

THE SUMMARY IN BRIEF

Consider two dramatically different types of leaders. The first type drains intelligence and capability from the people around them and always needs to be the smartest person in the room. They are Diminishers. Then there are leaders who amplify the smarts and capabilities of the people around them.

When these leaders walk into a room, ideas flow and problems get solved. These are the Multipliers, and the world needs more of them, especially now when leaders are expected to do more with less.

In this revised and updated edition of the best-seller ***Multipliers***, leadership expert Liz Wiseman explores these two leadership styles, showing how Multipliers can have a resoundingly positive and profitable effect on organizations. With two new chapters, this revered classic proves better than ever how the five disciplines of Multipliers are skills that everyone can learn to use.

Just imagine what you could accomplish if you could harness all the energy and intelligence around you. ***Multipliers*** will show you how.

IN THIS SUMMARY, YOU WILL LEARN:

- Three key insights of the revised and updated ***Multipliers***.
- The five disciplines of Multipliers and how to practice them.
- To recognize the Accidental Diminisher.
- Tips for dealing with Diminishers and strategies to become a Multiplier.

Preface

Multipliers began with a simple observation: *There is more intelligence inside our organizations than we are using*. When the book was released in 2010, this idea struck a chord with managers around the world, perhaps because it came on the heels of a global recession, at a time when a tectonic shift was occurring in management and the ground was moving under all our feet.

Ideas that were once considered subversive are the new normal. Diminisher bosses still exist, but like old BlackBerry phones, it is only a matter of time before they become obsolete and people upgrade to newer models. As companies do the math, they realize that they simply can't afford leaders who waste talent, suppress vital innovation, and slow business growth.

In 2011, research showed that managers were utilizing just 66 percent of their people's capability on average. When considering only direct reports, that number increased to 72 percent. Slow, steady improvement has occurred, rising from 72 percent in 2011 to 76 percent in 2016. While managers have become better at estimating their diminishing impact on others, most managers are still overestimating their Multiplier characteristics.

In realizing a richer way of working, many critical questions remain: How fast can we get there? What is the best path to impact? Who can make the shift and who can't? What do we do with those who can't? How do we move and reshape an entire culture?

Three New Insights

Here are the three most essential insights that have shaped this new edition of ***Multipliers***:

- **The need is universal**. People across cultures, across professions, across industries come to work each day hoping to be well utilized—not by being given more and more work but through the recognition that they are capable of contributing in significant ways and doing progressively more challenging work.
- **Sometimes the good guys are the bad guys**. Previously, most Diminishers appeared to be tyrannical, narcissistic bullies. But the vast majority of the diminishing happening inside our workplaces is done with the best of intentions, by the Accidental Diminishers—good people trying to be good managers. Hence, "The Accidental Diminisher" section below is new and offers a glimpse into how our best intentions can go awry and how, with self-awareness and simple workarounds, otherwise good managers can become great leaders.
- **The biggest barriers are contextual and cultural**. To build organizations where intelligence is richly utilized, we need both an offensive and a defensive plan. The reductive effect of a Diminisher is not inevitable. While you cannot change another person, you can change your response and smooth the sharp edges of your diminishing boss or colleague. The new section "Dealing with Diminishers," offers strategies and tactics that help reverse the cycle of diminishing, or at least minimize its effects.

The Multiplier Effect

Some leaders make us better and smarter. They bring out our intelligence. These leaders access and revitalize the intelligence in the people around them. They are called Multipliers.

Multipliers create collective, viral intelligence in organizations. Other leaders act as Diminishers and deplete the organization of crucial intelligence and capability. But what is it that Multipliers do? And what do Multipliers do differently than Diminishers?

Multipliers get more from their people because they are leaders who look beyond their own genius and focus their energy on extracting and extending the genius of others. And they don't get just a little more back; they get vastly more.

2 x Multiplier Effect

Let's begin by examining how Multipliers influence the people who work around them. In interviews, people were asked to identify the percentage of their capability that a Diminisher received from them. The numbers typically ranged between 20 and 50 percent. For Multipliers, the numbers typically fell between 70 and 100 percent. Multipliers got 1.97 times more, an almost twofold increase—a 2 x effect.

The reason for the difference is that when people work with Multipliers, they hold nothing back. They offer the very best of their thinking, creativity, and ideas. They give more than their jobs require and volunteer their discretionary effort, energy, and resourcefulness. They actively search for more valuable ways to contribute.

The Logic of Addition, the Logic of Multiplication

The logic of addition is the dominant logic that has existed

You can often spot Talent Magnets inside organizations because they are the ones who ignore org charts.

in corporate planning: that resources will be added when new requests are made. Operational leaders entrenched in the logic of resource allocation and addition argue, "Our people are overworked; our best people are the most maxed out; therefore, accomplishing a bigger task requires the addition of more resources."

It seems persuasive, but it ignores the opportunity to more deeply leverage existing resources. The logic of addition creates a scenario in which people become both overworked *and* underutilized.

Better leverage and utilization of resources at the organizational level require adopting a new corporate logic based on multiplication. Instead of achieving linear growth by adding new resources, leaders rooted in the logic of multiplication believe that you can more efficiently extract the capability of your people and watch growth skyrocket by multiplying the power of the resources you have.

Here is the logic behind multiplication: Most people in organizations are underutilized. All capability can be leveraged with the right kind of leadership. Therefore, intelligence and capability can be multiplied without requiring a bigger investment.

The Mind of the Multiplier

Diminishers and Multipliers hold radically different assumptions about the intelligence of the people they work with. The Diminisher's view of intelligence is based on elitism and scarcity. Diminishers appear to believe that really intelligent people are a rare breed and that they are of that rare breed. From this assumption, they conclude that they are so special, other people will never figure things out without them.

Multipliers look at the complex opportunities and challenges swirling around them and think, "There are smart people everywhere who will figure this out and get even smarter in the process." And they see that their job is to bring the right people together in an environment that liberates everyone's best thinking—and then to get out of their way and let them do it!

Let's now look at the five disciplines in which Multipliers differentiate themselves from Diminishers: the Talent Magnet, the Liberator, the Challenger, the Debate Maker, and the Investor.

The Talent Magnet

Multipliers operate as Talent Magnets to attract talented people and then use them to their fullest capacity, that is, working at their highest point of contribution. Multipliers have access to the best talent, not because they are necessarily great recruiters but because people flock to work for them.

In contrast, Diminishers operate as Empire Builders who hoard resources and underutilize talent. They bring in top talent and make big promises, but then they underutilize their people and disenchant them. Why? Because they are often amassing the resources for self-promotion and their own gain. Empire builders accumulate rather than multiply; they collect people like knickknacks in a curio cabinet—on display for everyone to see, but not well utilized.

The Four Practices of the Talent Magnet

Research revealed four active practices that, together, catalyze and sustain the cycle of attraction for Multipliers.

Look for talent everywhere. Talent Magnets are always looking for new talent, and they look far beyond their own backyard. Multipliers cast a wide net and find talent in many settings and diverse forms, knowing that intelligence has many facets.

You can often spot Talent Magnets inside organizations because they are the ones who ignore org charts. Such charts are handy for finding out who works for whom and who's in charge if something goes wrong, but these issues are of relative unimportance when you are searching for genius.

Find people's native genius. Talent Magnets know how to uncover and access the native genius of others. "Native genius" means something even more specific than a strength or a skill that might be highly rated on a 360-degree leadership assessment. A native genius or talent is something that people

do not only exceptionally well but absolutely naturally.

Finding people's genius begins by carefully observing them in action, looking for spikes of authentic enthusiasm and a natural flow of energy.

Utilize people at their fullest. Once a Talent Magnet has uncovered the native genius of others, he or she looks for opportunities that demand that capability. Some of these are obvious; others require a fresh look at the business or the organization. Once they've engaged the person's true genius, they shine a spotlight on them so other people can see their genius in action.

Remove the blockers. Talent Magnets go beyond just giving people resources. They remove impediments, which quite often means removing people who are blocking and impeding the growth of others. In almost every organization there are people who overrun others, consuming the resources needed to fuel the growth of people around them.

Sometimes a Talent Magnet removes the prima donna who is blocking the intelligence of others. But sometimes the blocker is the leader him- or herself. One corporate VP had a favorite saying, quoted often and written on her door: "Ignore me as needed to get your job done."

The Liberator

Michael Chang began his career in a small consulting company. As a young manager, he was forceful with his opinions and veered toward brutal honesty.

Michael began to realize that when you become the leader, the center of gravity is no longer yourself. He had a mentor who taught him that the leader's job is to put other people on stage. As he began to shift his focus to others, he became less controlling and learned to give people space.

He found that not only do other people step up, they often surprise you by producing something better than you would have. Today, this manager is the CEO of a thriving startup company. The accomplishment is significant when you consider that the path of least resistance for most smart, driven leaders is to become a tyrant. Even Michael said, "It's not like it isn't temping to be tyrannical when you can."

The Three Practices of the Liberator

Research reveals three common practices among Multipliers.

Create space. Liberators deliberately carve out space for others to be able to make a contribution. They release others by restraining themselves. It is a huge victory to maintain that space and resist the temptation to jump back in and consume it yourself. They shift the ratio of listening to talking. They listen to feed their hunger for knowledge, to learn what other people know and add it to their own reservoir of knowledge. They also define a space for discovery and level the playing field.

Demand people's best work. Liberators defend the standard. As a manager, you know when someone is below his or her usual performance. What is harder to know is whether people are giving everything they have. Asking whether people are offering their best gives them the opportunity to push themselves beyond previous limits.

Requiring people's best work is different from insisting on desired outcomes. Stress is created when people are expected to produce outcomes that are beyond their control. But they feel positive pressure when they are held to their best work.

Generate rapid learning cycles. Liberators give people permission to make mistakes and the obligation to learn from them. When Chris Pirie, the general manager for sales and marketing working for Lutz Ziob at Microsoft, was newly promoted to lead sales for Microsoft Learning, he tried a risky promotion. Unfortunately, it didn't work. But instead of rationalizing the mistake, he went to Lutz and admitted the misstep, diagnosed it, and then tried something different.

Chris said, "With Lutz, you get to make mistakes. But you are expected to learn fast. With Lutz, it's okay to fail. You just can't make the same mistake twice."

The Challenger

Diminishers operate as know-it-alls, assuming that their job is to know the most and to tell their organization what to do. Because they are overly focused on what they know, they limit what their organization can achieve to what they themselves know how to do.

In setting direction for their organizations, Multipliers have a fundamentally different approach. Instead of knowing the answer, they play the role of the Challenger. They use their smarts to find the right opportunities for their organizations and challenge and stretch their organizations to get there.

They aren't limited by what they themselves know. They push their teams beyond their own knowledge and that of the organization. As a result, they create organizations

The secret to a great decision is what the leader does before the debate starts.

that deeply understand challenge and have the focus and energy to confront it.

The Three Practices of the Challenger

Research reveals three common practices among Challengers.

Seed the opportunity. Multipliers understand that intelligence grows by being stretched and tested. One of the best ways to seed an opportunity is to allow someone else to discover it themselves. When people can see the need for themselves, they develop a deep understanding of the issues, and quite often, all the leader needs to do is get out of their way and let them solve the problem.

Multipliers provide a starting point but not a complete solution. In this way, they generate more questions than answers. These questions then encourage their team to fully define the opportunity while giving them confidence that they are building on a solid foundation.

Lay down a challenge. Once an opportunity is seeded and intellectual energy is created, Multipliers establish the challenge at hand in such a way that it creates a huge stretch for an organization. While Diminishers create a huge gap between what they know and what other people know, Multipliers create a space between what people know and what they need to know, and that draws people into the challenge. They establish a compelling challenge that creates tension. People see the tension and the size of the stretch and are intrigued and, perhaps, even puzzled.

Generate belief. Multipliers generate belief—the belief that the impossible is actually possible. It isn't enough that people see and understand the stretch; they need to actually stretch themselves. When people create the plan that they eventually will implement, belief in its viability will be inherently high.

Led by Ray Lane in 1996, Oracle not only built a strategic intent, it also built a deep belief within the organization that Oracle could lead the internet era. Because 250 senior leaders were given the opportunity to co-create the corporate strategy, they understood the challenge ahead and knew what actions would be necessary to achieve it. They had built the collective will and energy needed to execute. The organization was ready to take the challenge.

The Debate Maker

How leaders make decisions is profoundly influenced by how they engage and leverage the resources around them. Research has shown that Diminishers tend to make decisions solo or within a small inner circle. As a result, they not only underutilize the intelligence around them but also leave the organization spinning instead of executing.

Multipliers make decisions by first engaging people in debate—not only to achieve sound decisions but also to develop collective intelligence and to ready their organizations to execute.

The Three Practices of the Debate Maker

In research, Multipliers did three specific things very differently from Diminishers when it came to decision making.

Frame the issue. The secret to a great decision is what the leader does before the debate starts. They prepare the organization for discussion and debate by forming the right questions and the right team. Then they frame the issues and process in a way that everyone can contribute. In framing an issue, there are four parts to a well-crafted frame: What is the decision to be made? Why is this an important question to answer? Who will be involved in making the decision? How will the final decision be made?

Spark the debate. A great debate is engaging, comprehensive, fact based, and educational. There are two key elements that couple and form the yin and the yang of great debate. The first is to create safety. The second is to demand rigor. Multipliers do both.

Multipliers create a safe climate for people's best thinking by removing the factors that cause people to doubt themselves or their ideas. They demand rigor by asking the questions that challenge conventional thinking.

Drive a sound decision. Multipliers may relish a great debate, but they pursue debate with a clear end: a sound decision. They ensure this in three ways. First, they reclarify the decision-making process. Second, they make the decision or explicitly delegate it to someone else to decide. And third, they communicate the decision and the rationale behind it.

The Investor

Multipliers operate as Investors. They invest by infusing others with the resources and ownership they need to produce results independent of the leader. It isn't just benevolence. They invest, and they expect results.

The Three Practices of the Investor

As Investors, Multipliers define ownership up front and let other people know what is within their charge and what they are expected to build. They invest in the genius of others in a similar way. They teach and coach. They back people up, infusing the resources they need to be successful and to be independent.

Defining ownership. Giving someone 51 percent of the vote and full ownership creates certainty and builds confidence. It enables them to stop second-guessing and start getting second opinions. Clarifying the role that you will play as a leader actually gives people more ownership, not less.

Time after time, people say that Multipliers got not only 100 percent of their skills and know-how but 120 percent or even more. One way that Multipliers incite this growth is by asking people to stretch and do something they've never done before.

Investing resources. The moment Investors establish an ownership position, they step in and begin investing. They protect their investment by infusing the knowledge and resources the person will need to successfully deliver on their accountability. Diminishers tell you what they know; Multipliers help you learn what you need to know.

K.R. Sridhar, CEO of Bloom Energy, is a masterful teacher. When the team is wrestling with a technical setback, K.R. engages not with a solution but with a thought-provoking question. He'll ask, "What do we know about what doesn't work?" and "What assumptions led us to these outcomes?" His team pursues these questions in turn, unearthing their individual knowledge and building a collective body of intelligence.

Holding people accountable. Investors get involved in other people's work, but they continually give back leadership and accountability. Give people an opportunity to complete their thinking and their work. Encourage them to stretch and exercise intellectual muscles that might otherwise atrophy in the presence of other smart, capable people. Multipliers never do anything for their people that their people can do for themselves.

Allowing consequences to have their effect allows natural forces to inform intelligent action. It communicates that the manager believes people are smart enough to figure things out. By providing the possibility to fail, these leaders give others the freedom and the motivation to grow and succeed.

The Accidental Diminisher

While the narcissistic leaders grab the headlines, the vast majority of diminishing happening inside our workplaces is done by the Accidental Diminisher—managers with the best of intentions, good people who think they are doing a good job leading.

We all have Accidental Diminisher moments. The secret to the Multiplier effect is knowing what your vulnerabilities are, spotting them in action, and turning these situations into Multiplier moments. Here are a few of the ways that really well-intentioned leaders end up having a diminishing impact on the people around them:

Always on. This dynamic, charismatic leader exudes energy; he or she is always engaged, always present, and always has something to say. They assume that their energy is contagious, like a virus to be caught by anyone in their presence. But, like the common cold, this leader can be draining. As she expands, like a gas consuming all the available oxygen, others suffocate; most find her just plain exhausting.

Rescuer. He is a good manager and a decent person, the type of leader who doesn't like to see people struggle, make avoidable mistakes, or fail. At the first sign of distress, he jumps in and helps. This is the most common way leaders accidentally diminish. Because he interrupts a natural performance cycle, he starves people of the vital learning they need to be successful.

Optimist. This positive, can-do manager always sees possibilities and believes that most problems can be tackled with hard work and the right mindset. She is a "glass half full" kind of person. But when you play the role of the optimist,

People who cope best with Diminishers don't bark at every disturbance. They've learned what to ignore.

you undervalue the struggle the team is experiencing and the hard-fought learning and work. Your staff may wonder if you have lost your tether to reality. When the leader sees only the upside, others can become preoccupied with the downside.

Perfectionist. We all know the leader with perfectionist tendencies: He appreciates excellence and loves the feeling of getting something perfect. He goes beyond setting a high standard for others to follow and wants everyone around him to have the satisfaction of getting it just exactly right. So, he offers helpful critiques and points out little mistakes and flaws. But, while he sees an A+ in progress, others see nothing but red marks all over their work. They see blood and loss and can easily become disengaged and disheartened.

Are You an Accidental Diminisher?

As a leader, how do you know whether you are having a diminishing effect, despite having the best intentions? How do you increase your self-awareness? Formulating and recording your own insights is a reasonable first step, but you'll learn more by asking the people you lead to share their insights. Here are some questions you might use to elicit this feedback:

- "How might I be shutting down the ideas and actions of others, despite having the best of intentions?"
- "How might my intentions be interpreted differently by others?"
- "What can I do differently?"

Dealing with Diminishers

You *can* be a Multiplier while working for a Diminisher. With the right mindset and a set of smart tactics, you can minimize the diminishing effect. There are no templates, just sound ideas that must be executed with discretion and savvy.

Turn down the volume. People who cope best with Diminishers don't bark at every disturbance. They've learned what to ignore. They don't avoid the Diminisher or pretend the problem doesn't exist; they merely tune out some of the interference. They choose to turn down the volume, reducing the Diminisher's intrusion into their head and the other person's consumption of their life and psychic energy.

Strengthen other connections. If you can't get inside the Diminisher's trust circle, build other circles of influence. The individuals who most effectively deal with Diminishers take steps to broaden their support base and strengthen other relationships, much like a torn ligament requires the strengthening of proximal muscles. A petty officer in the US Navy described it this way: "When I find myself dealing with a bad leader, I still take their orders, but I latch on to another leader that I trust, someone who can give me an alternative point of view, especially about myself."

Assert your capability. Sometimes you need to tell an overly helpful manager or colleague that you don't need help. There's no need to throw a tantrum; just announce and assert your capability. For example, you might say, "I appreciate the help, and I think I can handle this one," or "Can I try this by myself and come to you if I get stuck?"

Shop for a new boss. If you are in a diminishing environment, you have to ask yourself if this is the right place for you. If you are being forced into a small box where you can't grow, you might need to take the hermit crab's approach and find a bigger home.

Becoming a Multiplier
