Bill Campbell, former CEO of Intuit, began his career more than 30 years ago as a college football coach at an Ivy League university. As a coach he was smart, aggressive, and hard-hitting. When he was recruited into the consumer technology business, he operated in much the same way.

While working under detail-oriented John Scully at Apple Computer, Bill became the ultimate micromanager. He burrowed into every detail in the business and directed every decision and action. He said, "I drove everyone nuts. I was a real Diminisher."

Bill recalls one of his worst moments. During an important staff meeting, a member of his management team asked a simple question. Bill, annoyed at the uninformed manager,

sharply replied (with unprintable colorful language), "That's the dumbest question I have ever heard."

The room went silent. Bill continued the meeting, uninterrupted by any other annoying questions. Over the next few weeks, he noticed that most everyone stopped asking him questions. He had dismantled the group's curiosity.

Counsel from two bold colleagues was just the dose of self-awareness that Bill needed. He could see his need for a course correction, and he made it. He started by listening more and telling less. He began to develop a deep appreciation for what his colleagues knew.

Bill became a better leader over time. It was a steady transition that happened naturally out of his desire to preserve his team and to realize the value of the incredible talent that he had attracted. By the time Bill became CEO at Intuit and led the company past the $1 billion revenue mark in 2000, he had uncovered the Multiplier inside of him.

Five Accelerators

Examples such as Bill Campbell and countless others show that Multiplier practices *can* be learned and developed. The following five accelerators are proven fast-track practices—both for arriving sooner and for staying longer.

1. Start with the assumptions. Because behavior follows assumptions, you can knock out a whole set of behaviors by adopting a Multiplier mindset.

2. Work the extremes. Begin by assessing your leadership practices and then work the two extremes: 1) neutralize a weakness; 2) top off a strength.

3. Run an experiment. Effective and enduring learning involves small, successive experimentation using new approaches—testing new behavior, analyzing feedback, adjusting, and repeating.

4. Brace yourself for setbacks. Give yourself permission to stumble as you cultivate new Multiplier behaviors while transforming old habits. Know that it will be hard.

5. Ask a colleague. If you really want to accelerate your development as a Multiplier leader, let a colleague—an employee, peer, or boss—choose your experiment for you.

Bono, musician and global activist, said, "It has been said that after meeting with the great British Prime Minister William Ewart Gladstone, you left feeling he was the smartest person in the world, but after meeting with his rival Benjamin Disraeli, you left thinking you were the smartest person." The observation captures the essence and the power of a Multiplier.

The choice matters. Which will you be: a genius? Or a genius maker?

Lessons in Strategy and Leadership From General Douglas MacArthur

NO SUBSTITUTE FOR VICTORY

THE SUMMARY IN BRIEF

Gen. Douglas MacArthur's extraordinary life of leadership spanned more than six decades in the military, education, public administration and business sectors. The five-star general, one of only five in U.S. Army history, defined principles of leadership that were decades ahead of their time: principles reflecting shrewdness and wisdom about strategy, motivation, organization, execution and personal growth.

This summary reveals what MacArthur knew about setting the right goals; building sleek, fast-response organizations; inspiring subordinates to unprecedented performance; focusing relentlessly on results; and winning. In No Substitute for Victory, *Theodore and Donna Kinni distill powerful leadership lessons from MacArthur's life and career — lessons you can use, no matter where you lead and what you intend to accomplish.*

What You'll Learn In This Summary

Accept no substitute for victory in your endeavors by learning and applying the key strategies and techniques used by Gen. Douglas MacArthur to:

✓ **Utilize the lessons of Inchon.** Discover how MacArthur conceived and executed the famous amphibious invasion that is still studied by strategists.

✓ **Define victory — and pursue it relentlessly.** Learn how MacArthur's relentless focus on the right goals drove a lifetime of achievement.

✓ **Use *all* your weapons — especially speed and surprise.** See how MacArthur was able to emerge victorious even when he had far fewer resources than the enemy.

✓ **Become an inspirational leader.** Find out how MacArthur used visibility, image and behavior to motivate and inspire his followers.

✓ **Capture the power of language and personal resolve.** Learn how MacArthur used three words — "I shall return" — to turn the course of the war in the Pacific.

NO SUBSTITUTE FOR VICTORY

by Theodore Kinni and Donna Kinni

— THE *COMPLETE* SUMMARY

The Great Commander

Gen. Douglas MacArthur stood at the bow of the *Mount McKinley*, the flagship of Task Force 90, facing the coast of South Korea in the darkness ahead. It was 2:30 a.m. on Sept. 15, 1950. Operation Chromite, MacArthur's audacious amphibious invasion of the port city of Inchon, was scheduled to begin at dawn.

"Within five hours, 40,000 men would act boldly, in the hope that 100,000 others manning the defense lines of South Korea would not die," he later wrote. "I alone was responsible for tomorrow, and if I failed, the dreadful results would rest on judgment day against my soul."

MacArthur's 'Perfect Job'

The story of Operation Chromite begins in the earliest days of the Korean War. On June 24, 1950, when the North Korean People's Army (NKPA) swarmed across the 38th parallel, South Korea and its allies were taken by surprise. By June 28, the South Korean capital of Seoul had fallen, and the defending army was in a state of collapse. On the next day, MacArthur flew to Korea to see the situation firsthand.

The general and his party landed 20 miles south of Seoul at an airport that had been bombed by the North Koreans just hours before. He traveled by car to the Han River on Seoul's south side, to a point where enemy mortar shells were exploding approximately 100 yards away. Here, he stopped to examine the fighting and the deportment of the troops. This personal reconnaissance on a battle's front line was a MacArthur trademark. "I cannot fight them if I cannot see them," he declared.

'Wrest Victory From Defeat'

Later, MacArthur described his thought process while standing on the bank of the Han River. He said, "In these reflections the genesis of the Inchon operation began to take shape — a counterstroke that could in itself wrest victory from defeat." Thus, the conception of the Inchon invasion was firmly rooted in the famous precept that guided MacArthur's approach to command: "In war, there is no substitute for victory."

MacArthur chose the port city of Inchon for his counterattack, but it hardly seemed an auspicious choice. Inchon's 30-foot tides, second only to the Bay of Fundy, are so extreme that it would be accessible to the invasion's landing craft on only two days in September 1950. The daily fluctuations further limited access to three-hour windows. Any delay or unexpected resistance from the North Koreans could easily strand the invaders. Also, Inchon was many miles behind the front lines. If the North Koreans could stop the existing U.N. forces from breaking out at Pusan, they could isolate and overwhelm the invasion force.

These difficulties were exactly why MacArthur was so adamant in his choice of Inchon. "In war, surprise is decisive," said the general. He was convinced that the

(continued on page 3)

MacArthur on the Eve of Inchon

For MacArthur, Inchon was a climactic moment in an extraordinary life. The five-star general was standing at the pinnacle of a career that had stretched for more than half a century. At age 70, he was the supreme commander for the Allied powers, a position that made him the de facto leader of occupied Japan and its 82 million citizens. Simultaneously, he was the commander in chief of the U.N. Command, a position that made him the military leader of the allied forces in the Korean War, which to this point had been a bitterly fought defensive action.

The Great Commander

(continued from page 2)

North Koreans would never expect or prepare for such an attack, so it would succeed.

In fact, it did. By the end of the invasion's first day, the U.S. Marines had captured a secure foothold at Inchon — roughly 150 miles behind the bulk of the NKPA and the hotly contested front lines of the Korean War.

This was a catastrophic surprise to the North Koreans. As U.S. troops and supplies streamed ashore, the NKPA's supply lines were cut from behind, and the enemy army found itself trapped. When the North Koreans turned to face the threat to their rear, the pressure eased on the U.N. forces, which had been bottled up behind the Pusan perimeter, the final 100-mile-by-50-mile foothold in the southeastern corner of the Korean peninsula. South Korea's defenders launched a full-fledged offensive and broke out.

Caught between two pincers, just as MacArthur had planned, the North Korean army was soon decimated. In September, the U.N. Command recorded 130,000 enemy captured and 200,000 enemy casualties. It was estimated that only 25,000 NKPA troops made it back above the 38th parallel. Winston Churchill called it "a perfect job."

The initial goal of the war, the liberation of South Korea, was accomplished in short order. On Sept. 29, MacArthur formally restored Seoul to the Republic of Korea President Syngman Rhee. By the final week of October, the U.N. forces, under the command of MacArthur, had occupied the North Korean capital of Pyongyang and had reached as far as Chosan, a city on the Yalu River — the border between North Korea and Communist China.

Leadership Incarnate

As dramatic and successful as Inchon was, it remains just one event in a life of leadership. MacArthur held an impressive array of top leadership positions in a variety of disciplines — including the military, public administration, education, sports and business.

MacArthur's most dramatic leadership roles were those related to command positions in wartime. He personally led troops in World War I as the Rainbow Division's chief of staff and briefly was its leader and the youngest divisional commander of the war. In World War II, MacArthur first served as the commanding general of the U.S. Army forces in the Far East. He was then appointed commander in chief of the Southwest Pacific area and, finally, commander in chief of the U.S. Army forces in the Pacific. In the Korean War, he served as the commander in chief of the U.N. Command.

Although MacArthur's military accomplishments garnered comparisons with Robert E. Lee and earned him a leading position among the nation's greatest commanders, his work as an organizational leader and public administrator was equally impressive. MacArthur served as the Army's chief of staff through the Great Depression. He was a field marshal in the Philippines and responsible for the development of that nation's military forces. Most notably, he oversaw the occupation and recovery of post-war Japan as supreme commander for the Allied powers.

In the field of education, MacArthur served as superintendent of West Point. In sports, he was appointed president of the American Olympic Committee and led the U.S. team in the 1928 Olympics in Amsterdam. Entering the world of business after his retirement from the armed forces, MacArthur accepted a position as chairman of the board of Remington Rand Corp., which after several mergers, has become Unisys Corp.

MacArthur's accomplishments as a leader in a variety of positions and disciplines suggest that his principles and approach can be effective in a wide range of organizations. The longevity of his career, the diversity of its circumstances and the magnitude of the changes his world underwent (as a child, MacArthur lived on a frontier Army post during the final years of the Indian Wars; in his final years, astronauts were routinely orbiting the Earth) suggest that lessons derived from his experiences can be relevant to today's leaders. ■

MacArthur's Principles of Strategy

First and foremost, great leaders in every field of endeavor are visionaries and strategists. They must be able to choose the goals they and their organizations will pursue, and then design strategies capable of attaining them. MacArthur, a master strategist, was an expert at both tasks. Here are several strategic principles he used:

- **Define and pursue victory.** Every organization strives for victory in one way or another. Victory can mean winning a war, capturing market share or reaching a fundraising goal. Leaders are responsible for defining what victory means, focusing the intention of the organization on it and shepherding their followers in the quest to attain it.

MacArthur defined victory in various ways during his career. As superintendent of West Point, victory meant producing a steady stream of new officers who were adept at modern methods of warfare and management. As Army chief of staff, victory meant maintaining the preparedness of the Army and Army Air Corps in the face of the Great Depression. And, most famously, as a general at war, victory meant defeating aggression and

(continued on page 4)

MacArthur's Principles of Strategy

(continued from page 3)

forcing the enemy to surrender. But one precept always remained fixed in MacArthur's mind: The definition of victory is the first determinate of strategy.

● **Manage the environment.** All organizations are part of a larger environment — a market, an economy or a military theater. The organization's capability to operate within that environment is a primary element in its success. Leaders are responsible for understanding and maximizing that capability.

MacArthur understood that the environment in which an organization operates is *neutral*. That is, it does not inherently favor any one competitor over another. But he also knew that the environment offered powerful advantages to the leader and organization that could best adapt to it. He said, "Nature … if you can get it on your side and the enemy does not, it becomes a powerful ally."

Confound Competitors

● **Utilize surprise.** Surprise is a highly effective weapon in the strategic arsenal and can be a decisive factor in the success of organizational plans. It can confound competitors, undermine their defenses and relegate them to playing catch-up. It can also delight customers, win their loyalty and build market share. Smart strategists incorporate the element of surprise in their plans.

The advantage of surprise is a well-established, battle-proven fact of military strategy, so it is no surprise that MacArthur was a firm advocate of the principle. As previously described, the plan for the Inchon invasion was rooted in the element of surprise. In fact, during the fateful conference that resulted in the operation's approval, MacArthur turned the myriad objections to the plan on their head by appealing to the power of surprise. He told the plan's opponents: "The very arguments you have made as to the impracticabilities involved will tend to ensure for me the element of surprise. For the enemy commander will reason that no one would be so brash as to make such an attempt. Surprise is the most vital element for success at war."

● **Multiply your rate of movement.** The need for speed in organizational movement and response has been widely acknowledged in the past decade. Lumbering corporate giants have either stagnated or disappeared from the business scene. Sleek, fast-moving companies that are able to stay ahead of changes in society and technology have dominated many markets. Leaders in successful organizations have embraced MacArthur's dictum: Multiply your rate of movement.

In his drive to Manila during the retaking of the Luzon in 1945, MacArthur acted, as well as commanded, to increase the speed of the attack. Frustrated by Gen. Walter Krueger's cautious and slow progress with the 6th Army, MacArthur set up his own headquarters 50 miles closer to Manila than Krueger. Over the objections of his staff, he took to touring the front lines of the advance in his jeep, prodding the troops to move faster by his own example. He also peppered Krueger with messages, such as this one on Jan. 30, "There was a noticeable lack of drive and aggressive initiative today in the movement toward Calumpit." In the end, MacArthur ordered three different units to enter Manila, setting off a race to determine which would capture the honor of being first.

To those who would ignore the need for speed, MacArthur warned: "The history of failure in war can almost be summed up in two words: Too Late. Too late in comprehending the deadly purpose of a potential enemy; too late in realizing the mortal danger; too late in preparedness; too late in uniting all possible forces for resistance; too late in standing with one's friends."

● **Ensure supply and support.** The successful execution of strategy is critically dependent on supply and support. In war, it is fatal to launch an attack without adequate ammunition and protective support. Likewise, in business, it is futile to fight for an expanded market share for goods and services you cannot produce or deliver. Leaders in all types of organizations must consider and ensure adequate supply and support to achieve their objectives.

In a very real sense, the story of the Southwest Pacific Theater in World War II is one driven by the flow of supply and support. It started with the very outbreak of the war. The attack on Pearl Harbor cut the U.S. supply lines to the Far East and destroyed the naval fleet on which MacArthur was depending for support. The inability of

(continued on page 5)

Maintain the Element Of Surprise

MacArthur did not simply conceive a plan based on surprise and leave its success to the fates. He frequently used feints and other deceptions to disguise his intent. In preparing for the invasion of Hollandia in New Guinea, the 5th Air Force bombed the more likely targets of Hansa Bay and Wewak as often as the real target itself. Decoy PT boat raids were made, dummy parachutes were dropped, "covert" missions were purposely seen and submarines released life rafts at the alternative targets. MacArthur explained: "Comprehensive deception plans were put into effect to further the enemy's belief that the attack would fall on Wewak and Hansa Bay. He strengthened these positions to the neglect of the real points of attack." On April 22, 1944, the invasion of Hollandia began. In just four days, the area was successfully secured.

MacArthur's Principles of Strategy

(continued from page 4)

the United States to supply and reinforce MacArthur's forces made the loss of the Philippine Islands inevitable.

MacArthur held to this principle of support in planning his operations. He would not outrun his support. In the Hollandia operation, in which he leapt more than 500 miles up the New Guinea coast and beyond the range of the Army Air Forces, MacArthur went so far as to execute a simultaneous invasion at the Japanese airfields at Aitape. Aitape was between existing U.S. airfields and Hollandia, and by capturing it, MacArthur ensured a base from which air support could be launched if needed. ■

For additional information on another of MacArthur's most successful strategic principles, go to: http://my.summary.com

Inspirational Leadership

To effectively execute strategies and successfully achieve goals, leaders must motivate their followers to act. Throughout his career, MacArthur exhibited an extraordinary ability to inspire his followers. He combined command authority, charismatic image and a paternal humanity into a highly effective leadership persona. On his command, tens of thousands of soldiers risked their lives, and 80 million citizens of Japan embraced radical cultural change and a new constitution and government. Here are some of the principles of inspirational leadership MacArthur used:

- **Unify command.** The foundational lesson of inspirational leadership is that there must be a clear leader. Committees and management teams are rarely charismatic; they do not easily inspire the energy and loyalty of followers. Whenever possible, MacArthur insisted on a formal chain of command leading to a clearly identified and empowered leader.

MacArthur was determined to avoid chaos in command in the Pacific, but it was not to be. Instead, the command was split into two regions. MacArthur was assigned the Southwest Pacific region, with its greater landmass; the Navy, under Adm. Chester Nimitz, was given the rest of the Pacific. The result, as MacArthur predicted, was a great deal of interservice rivalry and competition. Often, both theaters pursued different strategies and competed for resources.

- **Be a role model.** For better or for worse, leaders are the most influential role models within their organizations. Leaders' actions, even more than their words, communicate their values, priorities and expectations to their followers. Great leaders live up to their words and offer an example that their followers can emulate because, as MacArthur said, "Soldiers of an army invariably reflect the attitude of their general."

Much of the larger-than-life image that MacArthur created for himself was meant as a model for his officers and troops to follow. He knew that his example as commander set the tone and style of his command. He also knew that his example had the power to inspire others.

MacArthur used his position as leader to model the policies and changes he wanted to implement. While MacArthur was working to implant democratic values in Japan, many of its citizens thought of him as a living god, much like the Emperor. Crowds would gather outside his building to watch him enter and leave. On one occasion, when a woman prostrated herself before him, he helped her to her feet, saying, "Now, now — we don't do that sort of thing anymore."

MacArthur also made sure to exhibit his support for the Occupation's reforms in the area of women's suffrage. In 1946, when the first women elected to the Japanese Diet were ignored by their male counterparts, MacArthur made his feelings on the issue clear by invit-

(continued on page 6)

The Near Disaster at Leyte

During the invasion of Leyte, the Japanese Navy laid a trap for the American fleet. It used a carrier force as bait and successfully drew the 3rd Fleet, under Navy command, away from Leyte. The Japanese then sent their main naval force to attack the 7th Fleet, which was under MacArthur's command and still in the gulf, and the land forces on the beach. The only thing that saved the American invasion force from total destruction was Japanese Adm. Kurita's mistaken decision to break away from the fight. He simply did not realize that he was winning the battle.

MacArthur used the near-disaster at Leyte to reiterate the lesson of unity of command. In December 1944, he drafted a message to the War Department, which said, in part: "After having narrowly avoided disaster in the Leyte operation as the result of the absence of coordinated naval command, we now enter the more difficult Luzon phase under the same handicap … We shall again enter battle with our naval forces split into two elements under commanders who are thousands of miles apart. The fleets themselves will operate in the same waters against the same enemy, covered by air elements under different commanders … The present arrangement divides the potential of resource, and under guise of unity of command in an artificially compartmented area, makes impossible a unified effort. The situation is thoroughly bad and for a local commander who carries responsibility for results is becoming intolerable."

Inspirational Leadership

(continued from page 5)

ing the new female representatives to his office and giving a speech celebrating their achievements, which was released to the press.

● **Visibility matters.** The presence of a leader enhances the morale and accountability of followers. In good times and particularly, in bad times, leaders must share in the action by taking a prominent place in the midst of their followers. Inspirational leaders are visible leaders.

MacArthur was a firm believer in "being there." In 1943, when Gen. Kenney, MacArthur's air commander, was planning the first major parachute jump of the war at Nadzab in New Guinea, MacArthur insisted on accompanying the troops on the flight to bolster their confidence. When Kenney protested that the risk was too high, he replied, "Honestly, the only thing that disturbs me is the possibility that when we hit the rough air over the mountains my stomach might get upset. I'd hate to get sick and disgrace myself in front of the kids." MacArthur was awarded the Air Medal for his participation on the operation.

Visibility also plays a key role in reinforcing a leader's messages. As superintendent at West Point, MacArthur broke precedent by auditing classes and evaluating them with the professors afterward. During the 1928 Olympics, MacArthur not only met regularly with the coaches and players, he took to the field to lend his support during the competition.

Refuse to Hide

MacArthur passed the real test of leadership by refusing to hide when visibility might have harmed his reputation and career. In World War II, when troop and shipping shortages forced the cancellation of the rotation policy designed to return soldiers to the United States after fixed periods of combat, MacArthur took the added steps of writing and personally signing each copy of the order, which was posted at the same time in each of the units under his command.

Col. Aubrey Newman, one of MacArthur's officers, explained, "[The troops] realized he knew what such a reversal of policy meant to them, and he showed his confidence in them as military men that they would understand that this was the proper course to follow, hard as it might be. No one had ever before seen MacArthur's personal signature, much less on an order that, in effect, bypassed every echelon of command to go from him to the individual men in the ranks, explaining directly to them why the decision was made, and that he had made it … As a result there was no loss of morale, only soldierly acceptance of a fact of war." ■

For additional information on MacArthur's approach to public speaking, go to: http://my.summary.com

MacArthur's Principles of Management

By most measures, MacArthur was a superb manager of people. He was an excellent boss who understood the fine balance between personal control and delegation. He knew how to coax the highest level of performance from his subordinates. His poor relationship with President Truman aside, MacArthur was also skilled at managing up. He had an enviable ability to persuade his superiors — from U.S. presidents to the Congress to the Joint Chiefs of Staff — to adopt policies and approve strategic and budgetary plans with which they initially disagreed.

● **Weigh change carefully.** Change is an organizational imperative, but the choice of when — and when not — to change is a fundamental leadership issue. As the turbulent 1960s dawned, MacArthur offered a warning about change — one that continues to be relevant today. He said: "I realize full well that the reckless spirit of the times seeks change. But change should not be made for the sake of change alone. It should be sought only to adapt time-tested principles which have been proven in the crucible of human experience to the new requirements of an expanding society."

Nurture Change Programs

Understanding that change does not take hold instantaneously, MacArthur also preached the necessity of shepherding and nurturing change programs until they are established. "A program, however, is in itself a lifeless thing, a mere skeleton," he said, "and it has been the constant effort of my administration to put flesh and blood upon it and to imbue it with life."

● **Invest in training.** Leaders are responsible for the preparedness of their followers, and training is a foundational element of preparedness. Even when training is essential to the successful execution of strategy, leaders often mistakenly treat it as an ancillary activity — one that can be reduced when budgets are tight and ignored when its need is not obvious. Ironically, those are exactly the times when training is most important.

In the midst of the Great Depression in the early 1930s, military preparedness was not high on the list of priorities of the nation's leaders. Yet, Chief of Staff MacArthur was relentless in his pursuit of training.

He warned: "From the beginning of warfare, professional skill and discipline have invariably been most important, and frequently the decisive factors in battle. To quote instances would imply a necessity to argue the obvious. Yet strangely enough this outstanding lesson of each of our own as well as of all other wars has invariably been the one most speedily forgotten by our people during years of peace. It has been the history of the American

(continued on page 7)

MacArthur's Principles of Management

(continued from page 6)

Army that adequate opportunity for its proper training has habitually been, except in war, injudiciously curtailed."

● **Develop management depth.** In recent years, middle managers have often been maligned. They have been treated as organizational dead wood and their ranks have often been mercilessly downsized. Leaders of large organizations sometimes forget that managers convey and execute strategies. They represent an organization's front-line leadership.

MacArthur needed no convincing that managers were a most important component of an organization. In fact, MacArthur successfully conducted a running battle to maintain the size and quality of the officer corps throughout his tenure as chief of staff. "An efficient and sufficient corps of officers means the difference between victory and defeat," he said, explaining that without the officer corps to train and lead the many civilians who would be drafted into the military in case of war, the creation of an effective fighting force was impossible.

In the 1930s, Chief of Staff MacArthur supported the acceleration of the officer promotion rate and pay scales. These policy revisions were aimed at maintaining a high-quality officer corps, and MacArthur used better pay to attract and retain better officers. Lest MacArthur's largess and concern for his officers seem softhearted, it should be noted that he had good reasons for wanting the best available officers. "[T]here can be no hope of preparing efficiently, or of winning in actual campaigns, without the skilled leadership of trained and devoted officers," he said. And MacArthur was always intent on winning.

● **Manage people positively.** Great leaders tend to be motivational experts. They might choose to use positive methods or negative methods of motivation, or (most often) some combination of both. But no matter the type of organization in which they lead, they are able to create and maintain motivated and energized work forces.

Admiration and Respect

One measure of MacArthur's success was the fact that the more closely people worked with him, the more they admired and respected him. His greatest defenders were often his own staff officers. His greatest critics, on the other hand, tended to be people who either did not know him at all or did not know him with any degree of intimacy.

Praise, a no-cost form of recognition that too many leaders neglect, was one of MacArthur's most effective motivational tactics. In December 1944, for example, two privates in the 11th Airborne requested an audience with the five-star general to find out why their division's accomplishments had not received more press attention. Instead of sending them away, MacArthur met with them, explained that he did not want to endanger the unit by publicizing its position and results, and provided a message of praise for the division and its commander to deliver on their return to combat. ■

A Leader's Personal Traits

MacArthur's achievements as a leader were supported and enabled by his personal beliefs, traits and skills. Great leaders develop and manage themselves before and after they take on the work of leading others. MacArthur embraced his future as a leader at an early age, and he managed his own life and career to maximize that future. Here are some of the leadership principles he used that were guided by his personal beliefs and traits:

● **Study history.** While the Internet boom was driving the irrationally exuberant financial markets at the turn of the millennium, many business leaders and investors believed that a breaking point in economic history had occurred, and that historical measures of performance were irrelevant. They paid a steep price for ignoring history when the boom turned to bust. When it comes to history, past performance is a relevant indicator of future success.

A Student of History

Even a superficial browse through his personal library makes it clear that MacArthur read deeply in the subject of history. Indeed, he was a committed student of history.

In August 1941, at a time when the Nazi war machine appeared unstoppable, correspondent William Dunn was surprised to hear MacArthur predict the outcome of Hitler's thus far highly successful Russia campaign and then, his ultimate defeat. "This marks the beginning of the end for Adolf Hitler," MacArthur flatly declared. This was the first positive comment Dunn had heard, and he replied that many observers were expecting a total Russian collapse.

MacArthur retorted, "They haven't studied their history. Napoleon made the same mistake, and Hitler will wind up just as Bonaparte did, and with infinitely greater losses. The Russians will never surrender. They have unlimited manpower, and they can retreat, mile by mile, clear across Siberia. In two months the rains will start, and a month later the Russian winter will set in. No people in the world can withstand a Russian winter like the Russians, certainly not the Germans."

Two months later, as it became clear that the Germans

(continued on page 8)

A Leader's Personal Traits

(continued from page 7)

had become bogged down in Russia, MacArthur told Dunn, "History, Bill, just history! It was all there, but Hitler didn't read it, or else he didn't believe it."

● **Embrace innovation.** Innovation is the lifeblood of all organizations. It represents the ways and means of improving what already exists and the leaps of creativity that enable breakthroughs into new, uncharted territory. Organizations need innovation to survive and prosper. Leaders provide the encouragement and impetus that the innovative spirit needs to thrive.

Rapid innovation in air force methods and equipment enabled MacArthur's highly successful "hit 'em where they ain't" strategy. For example, the installation of extra gas tanks gave fighter planes added range and were instrumental in MacArthur's successful leaps across the Pacific. They enabled the virtual total destruction of the enemy air power staged at bases the Japanese believed were outside the range of American planes.

● **Accept risk.** Many leaders eschew risk. They perceive it in a negative light and struggle to avoid it. But in Portugal in the 16th century, the word "risk" was used to describe the great sea voyages of exploration, and one of its root meanings was "to dare."

Carefully Manage Risks

Although MacArthur often embraced risk, he was not foolhardy. He well understood that there is risk in every alternative, including the alternative of *not* acting, and he carefully weighed, minimized and managed the risks that he undertook.

The invasion of Los Negros in the Admiralty Islands, which secured a fleet anchorage and provided a key point in the isolation of the Japanese stronghold at Rabaul, is a striking example of MacArthur's approach to risk. The invasion was originally planned for March 1944, but when reconnaissance revealed a dearth of enemy activity, MacArthur made a fast decision to capture it a month earlier than planned (and with only 1,000 troops in the 1st Cavalry Brigade instead of a full division).

MacArthur's staff opposed the operation. It allowed them only four days to mount the invasion, and in light of previous estimates (which turned out to be accurate) of 4,000 Japanese troops on the island, they believed that the invasion force could be easily overwhelmed on the beach. MacArthur overruled them. Based on previous behavior of the Japanese, MacArthur was convinced that they would not mount a major defense on the beach with their full force, and that the surprise attack would succeed.

The risk paid off. The 1st Cavalry Brigade took and held the beach, the Japanese never mounted a concerted attack and the Admiralty Islands were captured by mid-March. The jump to Los Negros enabled MacArthur to eliminate three previously planned operations, with the attendant savings in lives and resources; Rabaul was cut off sooner than had been planned; and the great leap to Hollandia was enabled. ■

'I Shall Return'

In December 1937, MacArthur retired from the U.S. Army, but in July 1941, President Franklin D. Roosevelt recalled the 61-year-old to active duty as a lieutenant general and named him commander of U.S. forces in the Far East. On Dec. 7, the Japanese attacked Pearl Harbor and destroyed the Pacific fleet. That afternoon, a similar attack was launched on the Philippines. Half the U.S. air power in the islands, a critical element in the American defense plan, was destroyed.

MacArthur's ensuing defense of the Philippines was predicated on the eventual arrival of relief. He did not know that Roosevelt had already committed to support the war in Europe as a first priority and there would be no reinforcements. In February 1942, with food and supplies dwindling and no relief in sight, over MacArthur's objections, Roosevelt ordered him to Australia to assume command of the Southwest Pacific Theater.

A Heroic Icon

MacArthur's high-profile role in the Pacific made him a heroic icon in the eyes of the American public, and he used this platform to transform the Philippines into an emotion-laden symbol for victory in the Pacific. Shortly after his arrival in Australia on March 17, 1942, he told reporters: "The president of the United States ordered me to break through the Japanese lines and proceed from Corregidor to Australia for the purpose, as I understand it, of organizing the American offensive against Japan, a primary object of which is the relief of the Philippines. I came through and I shall return."

The last phrase became one of the most famous of the war, and MacArthur plunged into making it a reality. Over the next two years, MacArthur created and executed a series of operations that demonstrated his strategic brilliance. He used a "triphibious" strategy, in which he combined air, sea and land forces to advance hundreds of miles at a clip, and he adopted the "hit 'em where they ain't" strategy to sever lines of supply and communication and isolate Japanese forces. This strategy worked so well that hundreds of thousands of Japanese troops were effectively neutralized, whereas casualty numbers in MacArthur's theater were notably low.

On Oct. 20, 1944, with the most powerful naval armada yet assembled at his back, MacArthur waded ashore at Leyte and proclaimed over the radio, "People of the Philippines: I have returned."

THE SUMMARY IN BRIEF

What if you could predict the trends that will change your business? For the past 10 years, Rohit Bhargava's signature annual Non-Obvious Trend Report has helped over a million readers discover more than 100 trends changing our culture. Now, in ***Non-Obvious Megatrends***, Rohit and his team reveal 10 revolutionary new megatrends that are transforming how we work, play, and live.

How might the evolution of gender-fluid toys change our culture? What can the popularity of printed books teach us about the future of business? Why do machines that diagnose human ailments actually demonstrate the importance of humanity?

The answers to these questions may not be all that obvious, and that's exactly the point. But you don't need to be a futurist or innovator to learn to think like one. The key to growing your business or propelling your career into the next decade lies in better understanding the present. The future belongs to non-obvious thinkers, and ***Non-Obvious Megatrends*** is your guide to becoming one.

IN THIS SUMMARY, YOU WILL LEARN:

- The five key mindsets of non-obvious thinking.
- To use the Haystack Method to curate non-obvious ideas.
- Why digital technologies are spurring demand for tangible products.
- How Flux Commerce is changing the way products are bought and sold.

PART I: THE ART OF NON-OBVIOUS THINKING

Introduction

Seeing what no one else sees is often described as creativity, and we live in a world that celebrates it. But finding the solution to a particularly tricky problem or discovering a world-changing idea takes more than creativity.

Isaac Asimov earned the reputation of "the man who knows everything" by writing nearly 500 books in his prolific lifetime. He is most widely known for his ground-breaking work in science fiction, but he also wrote everything from an illustrated children's guide to dinosaurs to a comprehensive two-volume guide to The Bible.

Asimov credited his creative thinking to his legendary appetite for reading and learning about everything he could from a young age. "I am not a speed reader," he once said. "I am a speed understander."

It's hard to imagine following Asimov's recipe for understanding in today's world. We are inundated by content, and most of it is not good. Digital tools have made it easy for everyone to share ideas, even if they are one-dimensional or idiotic.

To face this landslide of bad content, we are increasingly relying on a combination of algorithms and one-dimensional opinions shared on social media to help us filter the noise. And we've pioneered new methods of skimming out of sheer desperation. We watch television at accelerated speed, use speed-reading apps that flash a single word at a time, and turn to productivity gurus specializing in "time hacking."

Be Intentional

None of these solutions work for long. The problem is that expecting to get smarter from processing content faster is a bit like entering a speed-eating contest to enjoy a good meal. Eating 26 hot dogs in 60 seconds might satisfy your hunger, but you're likely to feel sick afterwards.

You can't understand the world better simply by reading about it as much as possible. You do so by being intentional about what you pay attention to in the first place. What if you could become a life-long learner, curious about the world and able to see, understand, and expect things others miss? What if you could use that skill to understand patterns, spot intersections, and see around the corner to develop an observation of what the future might hold? And what if, once you put all the pieces together, you could actually learn to predict the future?

You can, through non-obvious thinking, and it can change your life.

The 5 Mindsets of Non-Obvious Thinkers

According to renowned Stanford psychology professor Carol Dweck, most people have either a growth mindset or a fixed mindset. People with fixed mindsets believe that their skills and abilities are set. They see themselves as being either good or bad at something and tend to focus their efforts on tasks and careers where they feel they have a natural ability.

People with growth mindsets believe that success is the result of learning, hard work, and determination. They think that they can achieve their true potential through effort. As a result, they thrive on challenges and often have a passion for learning. They are also more likely to treat failure as "a parking ticket, not a car wreck." They're more resilient, have more self-confidence, and tend to be happier.

Beyond having a growth mindset, there are five additional mindsets that non-obvious thinkers have adopted to propel themselves and their organizations toward the future faster than others.

Non-obvious mindset #1: Be observant. Pay attention to the world, and train yourself to notice the details that others miss. Being observant isn't simply about seeing the big things. It's also about training yourself to pay attention to the little things. What do you see about a situation that other people are missing? What do the details you notice teach you about people, processes, and companies that you didn't know before? And how can you use that knowledge to win—even if that victory is something as small as getting your luggage a little bit faster than everyone else?

Our devices excel at keeping us from seeing the world around us. Instead of navigating daily tasks such as walking down the street or taking the subway with your eyes fixed on your phone, try putting it away and looking around. Look for interesting things, observe people's body language, or start a conversation with a stranger.

Non-obvious mindset #2: Be curious. Ask questions, invest in learning, and approach unfamiliar situations with a sense of wonder. We humans are naturally curious but often bury our curiosity because it can seem like a distraction. It is easier to move on than to stop and explore something more deeply.

Good trends always focus on the shift in an underlying human behavior or belief.

Consume "brainful media," content and experiences that fuel your curiosity and make you think. Watch an engaging TED Talk, read a book on a topic you know little about, or attend a lecture on an unusual topic. Read unfamiliar magazines, and ask questions constantly.

Non-obvious mindset #3: Be fickle. Save interesting ideas for later consumption without over-analyzing them in the moment. Often the meaning of ideas and the connections among them surface only after setting the ideas aside. Analyzing them later can give you more ideas and perspectives that enable you to see the connections more deeply.

Save ideas offline. Tear stories out of magazines and put them all in an ideas folder. To avoid the temptation to overanalyze an idea, try using a timer to limit how much time you spend on it. Take shorter notes. Jot down a few words to remind yourself why you found something interesting.

Non-obvious mindset #4: Be thoughtful. Take time to develop a meaningful point of view, and consider alternative viewpoints. The internet is sadly filled with useless, biased, half-thought-out comments and uninformed opinions. Being thoughtful is harder to do when the priority seems to be responding quickly, regardless of what you have to say.

To be more thoughtful, we need to remind ourselves to take a moment and consider the divergent thoughts of those around us, particularly those who may not think the same way we do. Whether you are interacting online or in person, taking the time to think about what you want to say always pays off. Not only will you say what you really mean, but you'll avoid making a gaffe because you haven't considered how others might misinterpret your thoughts.

Non-obvious mindset #5: Be elegant. Describe ideas or insights in more beautiful, deliberate, simple, and understandable ways. Simplicity is fundamental to being elegant in how we express ourselves. When you eliminate unnecessary words, you can distill your ideas and make them easier to understand.

Poets use metaphors, imagery, alliteration, and other tools to express emotion and meaning in their writing. What can you do to use more provocative language and avoid clichés? Everything doesn't need to be "great" or "awesome." Why not describe it as breathtaking or miraculous, or badass, or formidable?

These five key mindsets can help you think differently and escape lazy thinking that leads to obvious ideas. Once you get in the habit of using the five mindsets, you'll be ready to take your non-obvious thinking to the next level: identifying interesting ideas and patterns and curating them into insights that can help you win the future.

The Haystack Method for Curating Non-Obvious Ideas

When thinking about the future, many people encounter the pitfall of describing something that is ultimately transient and meaningless. The problem is, most people don't know what a trend is or isn't. Let's start with a definition: A trend is a curated observation of the accelerating present.

Good trends always focus on the shift in an underlying human behavior or belief. Trend spotting isn't the same as identifying actual trends. When you focus on spotting stories that stand out, you gravitate toward collecting interesting ideas without understanding the broader context of what they mean.

The trend-spotter myth drives many people to equate the process of identifying trends with finding a needle in a haystack. The needle-in-a-haystack cliché is so pervasive that it inspired the name for this process of curating trends: The Haystack Method.

The Haystack Method starts with gathering stories and ideas and sorting them into groups that make sense (the hay), then analyzing each of the groups to see whether they reveal an underlying trend (the needle). There are five steps.

Step 1: Gathering is the disciplined act of collecting stories and ideas while taking notes of why they are interesting. The best way to get value from the daily deluge of media is to form a habit of saving the most interesting stories to examine later. The key is to give yourself a reminder of what you

found interesting about the story when you saved it. This will make your notes more useful when you return to them later. Start a folder, set a timeline, and seek concepts, not conclusions. Perspective often comes from the passage of time and the patience to allow patterns to emerge on their own.

Step 2: Aggregating is the process of grouping ideas together to uncover bigger themes. Once you've gathered ideas, you'll need to identify how they connect to one another. What broad group or demographic do these stories describe? What is the underlying human need or behavior revealed in these stories? What are they an example of? How is the phenomenon the stories describe affecting multiple industries? What qualities or elements make these stories interesting?

Sometimes focusing on the underlying human emotion in a story or idea can help you see why it matters and how it connects with others.

Step 3: Elevating involves identifying the underlying themes that align a group of ideas to describe a single, bigger concept. Consider these questions: What interests you most about this group of ideas? What implications of the stories might you have missed earlier? What is the broader theme that these stories have in common? How can you link stories from multiple industries into a single idea?

As you review your groups of ideas and stories, look for key words that can reveal the common themes among them. When you recognize idea clusters, look for industry-specific clusters to combine with it.

Step 4: Naming is the art of describing a collection of ideas in an accessible and memorable way. A great name should convey the trend's meaning with simplicity and be memorable. How well you name your trend will make it either stick in people's minds and stand out—or be quickly forgotten.

Consider these questions: Is the name already in use or well understood? Is it relatively simple to say out loud in conversation? Does it make sense without too much explanation? Could you imagine it as the title of a book? Are the words in the name unique, not clichéd or generic? Does it describe a topic in an unexpected way?

Step 5: Proving entails seeking out data, stories, and conversations to validate whether a collection of ideas can justifiably be described as a trend. You can evaluate trends using a framework of three key elements: the core idea of the trend, its impact, and its acceleration. For ideas, ask, is the idea unique enough to stand out? Has anyone published research related to this trend idea?

For impact, ask, are the media starting to uncover examples of this trend, suggesting that people and businesses are changing their behavior? Are smart early-moving companies adopting the trend in some way?

For acceleration, ask, are there enough examples of the trend across multiple industries? Is the trend likely to continue for the foreseeable future?

Use authoritative sources. Proving will yield better results if you have sought out authoritative sources to support your trend ideas. In practice, this means gathering stories from reputable media sources, organizations, or academic institutions.

How to Apply Non-Obvious Thinking for Fun and Profit

Trends might offer a signal that you should consider abandoning an existing product line or staying the course in a direction that hasn't paid off yet. Or they could suggest that you should pivot the focus of your career to learn new skills.

What gives you the power to receive these signals and reach these conclusions is intersection thinking, a method for connecting disparate concepts and beliefs from unrelated industries to generate new ideas or products. There are four ways to engage in intersection thinking effectively:

- Focus on similarities.
- Embrace serendipitous ideas.
- Wander into the unfamiliar.
- Be persuadable.

Let's now explore how to put trends to work. Here are five tips for using trends.

Tip #1: Engage your customers. Understanding and leveraging trends to improve how you engage customers starts with building a better picture of how your customers behave. One useful tool is the customer journey map—a diagram that illustrates the phases that typical customers go through when they interact with your product or service. Mapping this customer journey can help you understand where and when in the journey to engage in a trend to improve customers' experience and win their loyalty.

Tip #2: Share your story. A powerful story can inspire support. Unfortunately, the internet is filled with boring "about us" pages instead. These are not the same as a story. A brand story is emotional and human. It inspires people to believe in a product, brand, or message.

Trends can influence how you tell your story. What is the larger purpose behind why your brand exists? What shifts in consumer beliefs or your industry have made your existence more relevant today? These are the sorts of questions that a well-told story can help to answer.

There is a growing understanding that a person's gender can differ from that person's sex.

Tip #3: Evolve your story. Tapping into trends can help you make changes to your company's strategy, whether it's evolving your business model or considering new partners to help you connect with unexpected audiences. Focus on five key areas:

- **Mission:** Why you do what you do and what you believe in.
- **Positioning:** What makes your brand unique compared with that of your competitors.
- **Business model:** How you charge customers and make money.
- **Products and services:** What you sell to your customers.
- **Innovation:** What new products or services you may offer.

Tip #4: Strengthen your company's culture. Contrary to what you might have read, you don't have to provide free food, massages, or ping-pong tables to inspire a great company culture. Workplace surveys after surveys show that what people desire most is making an authentic human connection with their co-workers feeling that their work matters, and having some autonomy over their own time. Tapping into trends can help you strengthen your company's culture in all these areas.

Tip #5: Develop your career. Trends can help you anticipate the growth of an industry or offer insights into what customers are looking for, enabling you to make timely new product or service recommendations at work. They also can help you forecast what new skills you might need in the near future so you can invest time to learn them now.

Let's now look at four of the 10 non-obvious megatrends and learn how to use them.

PART II: THE NON-OBVIOUS MEGATRENDS

Ungendering

Traditional gender divisions and labels are getting replaced with a more fluid understanding of gender identity, forcing a reevaluation of how we see employees, customers, brands, and one another.

We are living in the time of Ungendering. As the stereotypes of feminine and masculine ideals are supplanted, the traditional labels and roles once prescribed to our identities based on gender are no longer as meaningful. This is leading to an evolved view of what role gender should play in the products we buy, the experiences we enjoy, and even the way we define ourselves.

For a growing number of organizations, this is forcing a fundamental reimagining of basic assumptions and messaging in marketing, merchandising (men's and women's sizes), and how they deliver services or even categorize their products themselves.

Gender X

Though the concept of a nonbinary gender identity still might seem like a fringe idea, there are signs that this often-misunderstood label is gaining mainstream acceptance across the world. There is a growing understanding that a person's gender can differ from that person's sex.

A newborn's sex is assigned at birth based on the baby's genitalia. Gender, however, is to many a question of identity; it's how you carry yourself and interact socially with the world. For a growing number of people, gender is never described in singular terms but rather along a spectrum depending on how they present themselves to the world.

Jonathan Van Ness, one of the stars of the Netflix show Queer Eye, perhaps summed up this perspective on gender best in an interview for *Out* magazine: "I'm gender nonconforming. Like, some days I feel like a man, but then other days I feel like a woman."

At the time of this writing, more than 10 U.S. states have passed legislation allowing individuals to select a gender-neutral choice of X (this is the letter used instead of M or F) on their driver's license and ID cards. Over the past decade, about a dozen countries, including Australia, Germany, Canada, and India, also have allowed for a third gender option on passports.

As nations around the world become more accepting of non-binary gender status, companies and brands are responding by reshaping the products and experiences they sell to fit into this new world of Ungendering.

How to Use Ungendering

Remove unnecessary gendering. Look closely at your current products and services, especially how they are packaged and marketed, and consider how you can remove unnecessary gendering and make them more inclusive and expansive.

Encourage nontoxic masculinity. When men or boys express a passion or curiosity for exploring traditionally feminine things, avoid making quick judgments, and instead, encourage them. To reinforce these experiences, consider using nonconforming images and messaging when portraying men and their relationships to women, to encourage nontoxic views of masculinity and ensure the men, and particularly boys, feel it is acceptable to love what they love, share their emotions more openly, and treat all people with respect regardless of gender identity.

Have more gender empathy. Shifting one's thinking to consider gender as being on a spectrum rather than binary is not easy. Yet leaders, teachers, and politicians who do will become far more effective because they will earn the respect and loyalty of those who previously were considered outcasts and finally feel understood.

Revivalism

Long-running magazines such as *Newsweek* and *Teen Vogue* have announced they are shifting to digital-only publications. According to PwC's Global Entertainment & Media Outlook 2018–2022, "sales of physical video games, recorded music, and home video are expected to decline each year, in some instances by double- digit percentages." Yet one form of media has proven remarkably resistant to this shift: printed books.

The same PwC report also notes that sales of physical books are expected to grow modestly during the next several years.

We increasingly value things that we can hold in our hands and experience in a tactile way. These items feel more significant precisely because we spend so much of our lives in the digital realm. The photos we print and display, for example, hold an added significance apart from the thousands we take and then archive in our phones or on the cloud, never to be seen again.

Today we see a broader shift happening. As we become overwhelmed by a general sense that life has become too complex, we are finding solace in items, products, and experiences that are more nostalgic, such as a book or a board game, and reminiscent of a simpler time in our lives.

This shift is at the heart of the megatrend Revivalism, which explains everything from our growing desire for less tech-enabled products, to the resurgent appeal of artisan crafts and iconic retro brands, to our desire to preserve our history and the simpler times and "good old days" it represents.

After 131 years in business, Eastman Kodak declared bankruptcy in 2012. Yet, since 2017, Kodak has been capitalizing on the growing desire for more analog experiences, as well as our good will for the brand by marketing its heritage and analog products heavily. It has relaunched its iconic Super 8 cameras, resumed production of its Ektachrome film for diehard enthusiasts, launched a print magazine called Kodachrome to celebrate "analog culture," and partnered with a fashion retailer on a line of retro streetwear featuring its brand logo.

How to Use Revivalism

Share your history. Whenever possible, preserve and catalog your company's history. One way to do so is to capture your employees' stories about working at your company, building its products, and marketing them. These stories can offer a wealth of content that not only increases engagement with consumers but also yields company lore that contributes to culture building, recruiting and training efforts, and marketing and PR.

Offer a classic mode. Sometimes consumers want to downgrade the functionality in the products they buy. The best companies offer an easy way to do that. For example,

Just as we must serve as role models for our children, increasingly we will need to serve that same role for our technology as well.

whenever Microsoft launches a new operating system, it allows users to revert the interface to a classic view, one from the previous version they were used to.

Make your experience collectible. Part of the appeal of tactile products such as physical books or art comes from the human desire to collect things. We enjoy the sense of achievement when we complete a collection or add meaningful pieces to it. It is the reason that we love getting another stamp in our passports at immigration, or why we like buying products in sets rather than individually. Consider the aspects of your customer experience that you might be able to make collectible in print, so customers come back again and again to collect them.

Protective Tech

As we increasingly rely on predictive technology that keeps us and our world safe and makes life more convenient, we must contend with the privacy trade-offs required to make it work.

Smart, predictive technology not only helps us lead healthier, easier, safer, and more productive lives; it also helps us protect the environment and enjoy a more efficient society. However, the more we get used to these devices, the more blindly we rely on them, which has opened up all sorts of questions—from whether it's a good idea to let technology make certain decisions for us to whether we are leaving ourselves and our democratic process vulnerable to hackers, fraudsters, manipulators, and others who might wish us harm.

To understand what's at stake, there is perhaps no better place to start than health care, where striking the right balance between convenience and privacy can have life-or-death consequences. Facebook has been building tools that can detect content indicating that individuals might be considering harming themselves or others. The goal is for these tools to provide early warning signs to friends and family members so they can intervene quickly.

Health-tech startup FacePrint created a tool that can diagnose Parkinson's disease through using facial recognition software and was inspired by a high-school student's obsession with the work of psychologist Paul Ekman, who studied "micro-expressions."

This is the future of health care, where everything from your facial expression in a selfie to the data streams from a fitness tracker can be used to proactively improve your health, diagnose your ailments, and even predict suicide and intervene before it happens.

The tension between the desire for smart tech to help us manage our lives—in this case, our health—and our worry that it might infringe on privacy will only grow as this tech becomes more ubiquitous. It raises a natural question: Should we cede so many health and life decisions to machines?

How to Use Protective Tech

Be a role model for technology. As learning technology gets smarter, its evolution will largely come from watching humans and parsing the media that humans create—which leads to an unusual challenge for humanity. Just as we must serve as role models for our children, increasingly we will need to serve that same role for our technology as well.

Recognize and appreciate the protection. Many of the ways that technology protects us can become so well hidden that we forget to even acknowledge, appreciate, or value them. In the future, we will need to work harder to remain conscious of where technology offers this protection so we can avoid blind overreliance on it.

Demand more technology transparency. The more potential applications we see for Protective Tech, the more important transparency will become in terms of who has access to provide it on our behalf. The positive or negative benefits to society will increasingly depend on the mission and ethics of those who have earned (or demand) the right to access it.

Flux Commerce

Over the past decade, one of the most wide-ranging trends is the disruption not in what we choose to buy or who is selling it but how those products and experiences are bought and sold.

This megatrend, Flux Commerce, describes how successful companies are increasingly evolving their business models and distribution methods—aspects of the business that were once fixed—and changing how they innovate to keep up.

Capital One, for example, has been transforming bank branches into comfortable cafes and co-working spaces. Retail brands such as West Elm, Muji, Taco Bell, and Armani are all opening their own branded hotels, betting that customers who spend a night immersed with their products might buy more of them.

In the world of consulting, longtime players like IBM, Accenture, PwC, and Deloitte are hoping to make inroads into the marketing industry with their new interactive and creative services groups. Powerful media brands like *The New York Times*, *Wall Street Journal*, *Forbes*, and *New York Magazine* have recently launched their own custom content studios where journalists work on the side to produce high quality content for brands.

How to Use Flux Commerce

Find the blur. As you think about how to transform your business strategy, consider what would happen if you put two unlikely models together. What if you sold cars the way that a donut shop sells donuts? Or what if Airbnb decided to start a pharmacy? These sorts of mind-bending questions encourage us to think outside our comfort zone and find new ideas in the "blur" between industries.

Be strategic, not reactive. Often, companies will mistake invention for innovation. This common mistake can lead to shallow ideation, one-dimensional product or service ideas, and undifferentiated engagement with your customers. Look beyond products to consider new business models that integrate greater purpose and deliver more robust experiences that delight customers.

Seek out and support the innovators. Nearly every successful corporate effort dedicated to innovation finds new ways to bring in entrepreneurs as a first step. Sometimes this takes the shape of startup competitions or newer tactics like the "switch pitch," where established brands pitch to startups the business challenges they face; then the startups partner with the brand to develop solutions. But first look inside your company. Find the employees who are devoted to innovation—and who are often overlooked.

Curating trends is certainly about seeing what others miss. But it's also about developing a mindset of curiosity and thoughtfulness. It's about moving from being a speed reader to being a "speed understander," as Isaac Asimov wrote.

The future will belong to the non-obvious thinkers who use their powers of observation to see connections between industries, ideas, and behaviors and curate them into a deeper understanding of the accelerating present.

THE SUMMARY IN BRIEF

There are moments in just about every leadership journey when the path forward suddenly feels unclear. Struck by uncertainty and a lack of confidence, your sense of self—and your clarity of purpose—is out of balance. It's as if you have ceased to be the hero in your own story. During periods of disruption and transition like these, you need a rewrite.

Executive coaches and leadership experts Rick Lash and Christine Miners wrote ***Once Upon a Leader: Finding the Story at the Heart of Your Leadership*** as a transformative guide to leadership development that illuminates how your internal narrator acts as the operating system of your mind. Through engaging stories, research-backed insights, and techniques, you'll gain the tools to re-engage and update the story you tell yourself so that you can operate at a higher, more effective level.

IN THIS SUMMARY, YOU WILL LEARN:

- How to find your internal narrator.
- The role your narrator plays in leadership effectiveness.
- How your narrator becomes an insufficient partner in your leadership over time.
- The materials and steps you need to find and refine your narrative.
- How to help your internal narrator become a more mature version of itself.

Introduction

This book is divided into two parts, starting with an introduction to your internal narrator, the role it plays in leadership effectiveness, and how your internal narrator becomes an insufficient partner in your leadership over time or during periods of disruption and transition. In the second part, you will go to work on your own leadership narrative.

We will lay out the materials and steps—the recipe—you need to find and refine your narrative so you can, in your own way and on your own time, help your internal narrator to become a more mature version of itself. A narrator that is more intentional, experienced, and credentialed. We have seen firsthand the substantial payoffs—a personal story that is more grounded and anchored in your true self, a story that is less fragile and more resilient, better able to adapt and to withstand the relentless pressures of leadership and your life. Your narrator will earn the right to be your author.

Part 1: Meet Your Narrator

A Leader Is Born

A growing body of research suggests that many leaders develop a core narrative that defines who they are as leaders. The core narrative serves as a system that leaders use to not only convey how they see themselves as leaders, but also as a key source of personal motivation, drive, and action that they continually draw upon to guide their decisions and make meaning of what they do. The research identified four themes that emerged consistently in the leaders' narratives—being born leaders, overcoming struggle and hardship, finding a cause, and learning from experience.

As a senior leader, what holds you back is often not a lack of skills or knowledge, but a fragmented and patchy leadership narrative that is frozen in time—one you rarely go back to see if it needs revision.

The Home Of Your Narrator

Becoming conscious and deliberate authors by intentionally reconstructing our story using the well of autobiographical memories available to us is the most essential task we can undertake in our lives, especially in times of struggle and change when our narrator is most vulnerable and we risk losing our sense of self. It is core to what makes us human.

Throughout adulthood, our internal narrator continues to generate stories. But, more often than not, those stories are a product of a narrator whose active development peaked in the early stage of our lives and is in need of an upgrade. As a result, the narratives it produces are often overly simplistic or merely inadequate for the complex demands of adult life. This is particularly true whenever we face a major career change, experience personal trauma, or must navigate difficult challenges.

Our narrator is operating like a younger version of ourselves that has not benefited from our more mature life experiences and evolving values. If we can teach executives like ourselves how to re-engage and upgrade our narrator, we can become better equipped to make meaning of ourselves in the new and ever-changing context within which we find ourselves, be it at work or in other aspects of our lives.

Why We Give Up Authorship

Existential psychology identifies death, meaninglessness, choice, and isolation as the four ultimate anxieties that all human beings must deal with as a fact of being alive. It claims that much of our narrative-construction work is conducted unconsciously to help us cope with these four existential anxieties. Our need for protective narratives can find fertile ground in organizational life.

Allowing your organization to write your narrative has short-term benefits, but it also can come at a significant cost. Organizations are generally poor caretakers of your leadership narrative. And we know that the connection between your leadership narrative and your core narrative is at the heart of leadership excellence in every regard. In other words, taking back authorship of your leadership narrative is one of the most important exercises you can undertake.

Reinvestment On The Road To Personal Transformation

Your brain has limited capacity to process information. Your short-term working memory can handle only a few bits of information at a time. But with learning and experience, we acquire new memories and two things start to happen that help get around these limitations and reduce complexity: chunking and automating.

When it comes to developing your leadership narrative, it is not about developing new skills or capabilities to become an expert. Instead, you are rewiring memories that are intimately connected with your core sense of self and your

identity as a leader. It is a personal journey of transformation. You have to be willing to deliberately reinvest your spare thinking capacity—to engage your narrator once again—to build your leadership narrative.

Your narrator serves as your composer, and you strengthen it through reinvestment. It is an ongoing cycle—the more you reinvest into your leadership narrative, the more your narrative will help you reduce the complexity of challenges you face as an executive, creating the spare capacity to continually reinvest to grow and evolve your narrative.

What House, M.d. Can Teach Us About Leadership Narrative

As a scriptwriter best known for her work on the network television show House M.D., Pamela is responsible for crafting storylines that are not only engaging but believable. Her career success hinges on her ability to propel the television show's characters through compelling and unexpected growth opportunities.

In a lot of ways, rehabilitating your narrator and authoring your own leadership narrative is like writing a screenplay—but rather than assigning a story to fictional characters, you're reframing your own past in a way that makes you the hero in your future.

If the writer of the episode does their job well, they don't just have believable and entertaining dialogue, but they've taken disparate elements from their lives, melded them together, and embedded them into the storylines of the fictional characters—and the audience is none-the-wiser. Rather, all the viewer sees is a seamless story—one that flows, entertains, and captivates their attention. One they have no trouble believing.

Are You Ready?

Deep work is the heat needed to distill the essence of what will become your leadership narrative. Deep work is precisely the kind of mental activity needed for your narrator to do its work—deliberately reinvesting your spare capacity to build your leadership narrative. You will be reflecting on your past, challenging your deeply held beliefs about yourself and your leadership, connecting new insights to what you know, experimenting with bringing your narrative alive, at times feeling uncomfortable and seeking support from others as you progress on your journey. It takes time, patience, and a high tolerance for ambiguity as you work through the building blocks of your leadership narrative. Deep work provides the gentle heat to create the reduction you need, allowing you to skim off the impurities to gain access to your core leadership narrative.

Part 2: Finding Your Story

There is no final destination on the journey of leadership narrative. Rather, the process is more important than the end product, and it is important that you have the mindset and skills to see your leadership narrative as a process of ongoing reflection, restoration, and renewal.

To do this, you need to have the tools to do the following:

- Productively reflect on your own past and build deeper insights into what motivates you. You need to be able to wade through your feelings, identify what gives you energy, separate yourself from your limiting thoughts and behaviors, and distill your personal story down to a number of key ingredients.
- See the pivotal elements of your story through a fresh set of eyes and rearrange them in a way that suits you better. You need to be able to view your skills, experiences, and backstory from a different angle and reframe your memories in a way that gives you authorship and agency.
- Leverage the insights of others to strengthen your personal story. Seeing yourself from the outside in can help you see yourself in a new light.
- Maintain control of your narrative—even when it meets real life. You need to be able to respond to challenging life events by modifying and adapting your leadership narrative in a way that keeps you on the right track.

Phase 1: Prepare

Collect the materials needed to construct your leadership narrative before you begin to build. Some of those materials will come from mining your autobiographical memories. Some will need to be imported from the outside to provide you with an outside-in perspective, helping you appreciate how others see your strengths and the value you have brought through your leadership. Other elements—your inner motives—are more deeply hidden and must be brought to the surface.

This phase teaches how to:

- Start with the foundation
- Find your power source
- Get the outside view

Phase 2: Build

Having prepared all the building materials, it is time to see how they might fit together. It is in this phase that you will be integrating the complex and sometimes conflicting data sources into a coherent, singular leadership narrative. The analogy of building a house breaks down a bit, however. There is no clear blueprint to guide you. Rather, the blueprint starts to emerge from the assembled materials. It is here where your narrator truly gets down to work, sifting through old memories, shining a light on long-forgotten events, and discovering new meaning, identifying hidden strengths and looking for the strands that connect it all. Patience is key, but the elements of what will become your leadership narrative start to emerge. In this phase, you will seek to answer three fundamental questions that lie at the heart of your narrative: Where do I come from? What do I bring? What impact do I seek to create?

This phase teaches how to:

- Get to work
- Find the connections

Phase 3: Activate

Overall, it is the process of developing your leadership narrative that is transforming. Developing your leadership narrative is not like writing a speech, although you may use elements of it when creating a presentation. It is not writing an essay, although you may choose to include parts of it in your communications. Rather, the process of building your leadership narrative is subtler and harder to get your arms around. Like other executives who have embarked on a challenging but deeply rewarding journey, you will find that the end product is more profound than a concrete product. Like them, you will find yourself using your leadership narrative when you suddenly unearth renewed conviction to express your views at the executive table. You will find yourself using it when making difficult decisions that defy clear answers. And you will find yourself using it when you are at a crossroads and need the courage to choose a different path.

This phase teaches how to:

- Engage others
- Align teams

Conclusion

As you edit and upgrade your internal narrator, you'll develop a personal story that is more grounded and anchored in your true self: one that is less fragile, more resilient, and able to withstand the relentless pressures of leadership—and life.

Valued for his deep expertise and thoughtful, creative approach, **Rick Lash** has contributed to the Harvard Business Review, the Ivey Business Journal, Chief Executive magazine, The Wall Street Journal, Forbes, and the Globe and Mail's Leadership Lab series.

Valued for her depth of expertise, practical approach, and authentic style, **Christine Miners** is a sought-after advisor, facilitator, and speaker.

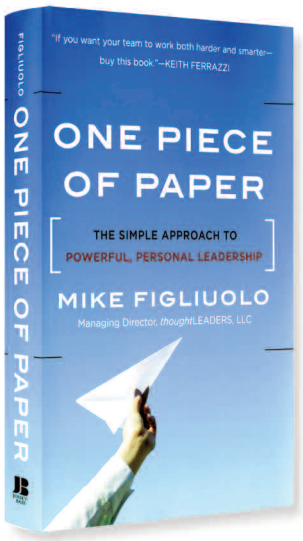
Leadership

One Piece of Paper

The Simple Approach to Powerful, Personal Leadership



by Mike Figliuolo

THE SUMMARY IN BRIEF

Leadership seems complicated to many. With competing philosophies and methods, as well as a rapidly changing workplace, is it possible to clearly, succinctly and simply convey your personal approach to leading others?

One Piece of Paper provides an authentic, accessible model for any leader to do just that. Simple, applicable and without pretense, it's real leadership for the real world.

Based on leadership expert Mike Figliuolo's popular Leadership Maxims training course, *One Piece of Paper* guides you through a simple approach for creating, articulating and living your personal leadership philosophy — one that can be shared on a single piece of paper. Figliuolo's model distills leadership to four easy-to-understand aspects: leading yourself, leading the thinking, leading your people and leading a balanced life.

By answering simple, provocative questions that guide anyone to a set of personal leadership maxims, you build a living document that communicates your personal passions, goals and standards that define your leadership style. The result: one piece of paper that provides an accessible touchstone for both you and your team, enabling you to work together effectively, build your organization and achieve great results.

One Piece of Paper can help anyone achieve his or her true potential as a leader.

IN THIS SUMMARY, YOU WILL LEARN:

- How to determine your rules of personal conduct.
- How to innovate to drive change.
- How to lead a team as individuals rather than faceless cogs in a machine.
- How to achieve equilibrium between work and personal obligations.

Part One: The Leadership Maxims Approach

Imagine being able to explain your leadership philosophy on one piece of paper — a simple 8.5-by-11-inch summation of all you are and all you want to be as a leader. How powerful would it be to have a discussion about that single page with the members of your team? They would be thrilled to have just one page to read, understand and internalize. Envision how that one page could simplify and clarify how you want your team members to conduct themselves. Think about how impressed candidates and new hires would be if they could quickly understand your standards, expectations and goals easily and from one single page.

To get a complete view of your leadership philosophy, you need to evaluate four aspects of leadership:

- *Leading yourself:* What motivates you and what are your rules of personal conduct? What do you want "future you" to look like and stand for?
- *Leading the thinking*: Where are you taking the organization and how will you innovate to drive change? What are your standards of performance for how you will safely get to your destination?
- *Leading your people*: How can you lead your people as individuals rather than treating them like faceless cogs in the machine?
- *Leading a balanced life*: If you are burned out, you are worthless. How do you define and achieve balance?

A maxim by definition is a principle or rule of conduct. In the context of the leadership maxims approach, it is a short, personally meaningful and easily explained statement that reflects one of your beliefs about leadership. Maxims do not contain buzzwords (like *leverage, optimize, outside the box, win-win*). Maxims are simple, clear statements that serve as reminders for how you want your team members to behave. When written well, your leadership maxims become simple daily reminders of how you should behave so your actions are consistent with who you want to be as a leader.

Understanding the Leadership Maxims Approach

Articulating your maxims requires a process of introspection. You need to answer questions pertaining to each of the four aspects of leadership and use those questions to define your personal approach to leadership in that arena. For this to work, your answers must be open

Your One Piece of Paper

You need that one piece of paper staring you in the face every day to reinforce your maxims. It is a snapshot in time of your leadership philosophy.

Your maxims should be 15-25 bullet points, phrases, lyrics, images or sentences. Each one should evoke an emotion or remind you of a story. They need to be as personal as you can possibly make them. No corporate-speak or buzzwords allowed. If you cannot understand a maxim in one quick glance, it is too complex. If you cannot relate a personal story behind the maxim when you share it with someone else, it is not personal enough.

Your maxims will be a constant reminder of what is important to you. They are *your* rules. By evaluating them a few times a year, you can ensure that they stay relevant and continue to push you to grow as a person and as a leader.

and honest; that is what makes your maxims authentic and easily understood by those around you. The synthesis of your answers into emotionally compelling and resonant statements will serve as the foundation for your leadership philosophy. Your answers will eventually become your personal leadership maxims.

The all-encompassing nature of your leadership maxims provides you with a means for living your leadership philosophy during every waking moment of every day. It is the constant application of your leadership maxims that strengthens the leader you are and will become.

Part Two: Leading Yourself

The first step in articulating your leadership maxims is determining how you will lead yourself. Nobody is going to follow you if you do not know where you are going. You need to have a clear set of goals and standards for yourself because it enables you to focus on what's important and it gives your team something to identify with and support. If you don't have a clear direction or well-articulated values, your efforts can become diluted and ineffective, and your team will very likely become confused about who you really are and what's important to you. By creating maxims focused on leading yourself, you can eliminate this potential lack of focus and confusion.

Learning to Lead Yourself

Your ability to define what you want to be in the future and to hold yourself to higher standards is the basis on which all your other maxims will build. If you are unable to inspire yourself, how can you expect to inspire your people? To determine how you are going to lead yourself, you need to explore who you are and who you want to become.

To start the introspection process, there are five questions you need to explore:

- **Why do you get out of bed every day?**
- **How will you shape your future?**
- **What guidelines do you live by?**
- **When you fall down, how do you pick yourself back up?**
- **How do you hold yourself accountable?**

Answering these questions will help you crystallize what motivates you and what your personal rules of conduct are.

Why Do You Get Out of Bed Every Day?

The better you are able to align your work with what you love to do, the more successful and fulfilled you will be as you do it. At some point in your life, there will not be anyone else to excite you and motivate you about your work; you will need to find that motivation internally. Creating a maxim focused on what you love to do will help you choose jobs, positions or projects consistent with your passions. It will also help you avoid roles that are inconsistent with your passions, thereby keeping you out of situations where you will be unhappy with the work you are asked to do.

My maxim that answers these questions is two words: **Light bulbs**.

Light bulbs are the reason why I am excited to get to my desk to start work every day. I teach leadership, communications, strategy, and other business and professional development topics I find fascinating. I cannot help but get excited when I work with energizing and smart clients discussing their most pressing issues. These activities give me a deep sense of satisfaction.

I know that when I am teaching and make a point or connection that resonates for a participant in the class, I have had an impact on him or her. The indicator I watch for is that look on a person's face that says "You made a light bulb go on for me. I get it now. You have helped me have a moment of clarity." Turning light bulbs on for people is why I am excited to go to work.

How Will You Shape Your Future?

How do you define your future self? Focus on yourself and the person you want to become regardless of what happens in the world around you. This is about defining you first, and then, how you will react to the world. This reverses our normal way of thinking, whereby we first define the potential future world and then adapt to that external environment. To make this mental shift, you need to answer two powerful questions:

- **What do I want my epitaph to say?**
- **What do I want the summation of my career (or more loftily, my life) to be?**

These questions focus exclusively on you and what you stand for as a person. They are designed to cut through all the extraneous events and expectations surrounding you and expose the true core of your aspirations in life. Choose a maxim that inspires you to reach for goals that are personally meaningful to you in terms of how they define who you want to become.

What Guidelines Do You Live By?

Ask yourself two direct questions to define your ethical guidelines:

- **What are you willing to sacrifice to reach your goals?**

- **What are your nonnegotiables?**

Those are big, weighty questions. The answers must encompass all aspects of your life, not only what you do at work. The tradeoffs you make at work are important, but by broadening the view of where this maxim applies, you can build consistency into your behaviors in multiple arenas. Consistency will strengthen those "good behavior" muscles you are trying to develop. It will also help you avoid a career-destroying moment that can happen when you have one set of ethical boundaries at work, yet behave in a manner inconsistent with those ideals during your personal time away from work. If your maxim guides your behavior both at work and at play, you reduce the risk that mistakes you make in one arena will cause difficulties in the other.

When You Fall Down, How Do You Pick Yourself Back Up?

A good leadership maxim will be your tool for refocusing yourself. I have found and relied on two maxims to help me during difficult times. One helps me reframe the situation so I can tackle it more professionally and productively. The second helps me pick myself back up after I have been battered.

I have been known to do my fair share of complaining. During one prolonged session led by me, a great boss of mine gave an exasperated sigh and said, "**It is what it is. What are you going to do about it?"**

With one statement and one question, he elegantly pointed out that the past had passed and my job was to lead my team forward. When I returned to my desk I added his comments to my leadership maxims. This maxim helps me admit I have fallen down and the task ahead is to stand up and get back in the fight.

I use something more powerful during times when it feels like the world is coming to an end. I found the perfect maxim a long time ago.

In eighth grade we were required to read *The Old Man and the Sea* by Ernest Hemingway. I read two sentences that have since changed my life on multiple occasions. Hemingway wrote: "**But man is not made for defeat. A man can be destroyed but not defeated."** Hemingway's words were my first personal maxim. I relied on those words to keep me going during the many times I considered dropping out of West Point because the experience there was difficult.

How Do You Hold Yourself Accountable?

How will you define a maxim that will help *you* move from being accountable to being responsible? It needs to be something that drives you to action and keeps you from laying blame at the feet of others. You are trying to write a maxim that pushes you to always be a take-charge type of leader. It is designed to prevent you from ever saying the words, "*That's not my job*." This maxim needs to shift your bias from observing to acting, regardless of the situation. Here are a few questions to get you started:

- **Have you ever taken charge of something not directly assigned to you, after which your involvement helped drive a successful outcome?**
- **Have you ever seen a problem, not taken responsibility for it and regretted it later?**
- **How do you keep yourself from playing the blame game?**

Do not feel limited to only answering these questions. Write down the thoughts, images, phrases and sayings that come to you as you consider the answers. Write down how you will hold yourself accountable. ●

Part Three: Leading the Thinking

Once you have defined how you will lead yourself, you need to create some maxims to get you looking forward and to set new directions for your organization. The status quo is never good enough. In fact, the best leaders I have worked with continuously challenge the thinking, blow up business models and question how they can get their organization to a better place. This is what leading the thinking is all about.

Becoming a Thought Leader

A thought leader is someone who delivers business results by agitating for and leading change.

The following questions can help you explore how you will lead the thinking. Through this part of the process, you will define your own leadership maxims that serve as daily reminders to push the thinking beyond "that's how we've always done it."

- **What standards do you hold your team to?**
- **Where are you taking your people?**
- **How will you foresee the future?**
- **After all that thinking, how will you drive action?**

The leading-the-thinking maxims you define will get you to look at problems differently. They should shake you from your usual daily routine and help you lead your organization beyond business as usual.

What Standards Do You Hold Your Team To?

As you created maxims to guide your own behavior when you defined how you will lead yourself, you also need to provide maxims concerning performance standards for your team. Ideally, these will clearly point your team in the direction in which you want them to go. These standards will keep you and your team on track and ensure that quality remains high as all of you head toward your goals. By creating standards, you help ensure that the actions your team takes are consistent with the vision of what you want your organization to become. This clarity also reduces confusion and inefficiency caused by members of your team trying to figure out your expectations of them.

To generate a leadership maxim to explain your standards, ask yourself, "How do I want my team behaving when I am not there to give guidance? What are my expectations for how they perform?" You also need to set expectations for how you want them to deal with you, as well as what you want them to focus on as they deal with others.

Where Are You Taking Your People?

Whatever your situation or your title happens to be, the simple fact remains — you need to articulate a vision for the future state of your organization. We usually leave this up to the C-suite, but writing a vision statement at any level is a powerful exercise. Your people want to be excited to come to work. They want to be part of something bigger than they are. If you can paint a compelling future picture for them, they will be more excited to follow you to that destination. The earlier in your career you learn how to create vision statements, the more successful you will be at writing them as your responsibilities expand.

When written well, a vision statement can and should be one of your leadership maxims — that is, your vision maxim.

How Will You Foresee the Future?

Vision is great, but action is what gets you there, and for action to occur, you must first identify the opportunities and ideas on which to act.

As you create this maxim, keep two things in mind. First, it must remind you to think beyond the status quo and challenge the way things are usually done. Second, it should articulate to your team your new approach to thinking in a manner such that they too can identify new opportunities.

Here are three questions and ideas to get you started:

- **What is the most innovative or visionary idea you have ever seen?**
- **What is the best idea you have ever had?**
- **What do you believe are your biggest limitations to innovation and how can you remove them?**

Write down the stories, phrases, ideas and memories that come to mind as you consider these ideas.

After All That Thinking, How Will You Drive Action?

Now you need to drive action. Ideas are great, but someone has to set them in motion for them to be worthwhile.

Consider these questions:

- **Do you notice any commonalities between decisions you have made and decisions others have made that you are happy with? If so, what are they?**
- **Are there similarities between decisions you have made and decisions others have made that you are unhappy with? What are they?**
- **Are there similarities between the decisions being delayed? What are they?**
- **What themes emerge as you look across all these decisions and what are your reactions to them?**
- **Does one of your stories stand out as an example you would hold up as the pinnacle of great decision making? Choose one of these stories on which to base your maxim.**

Part Four: Leading Your People

You are a leader. Management and leadership are not the same thing. The difference: *you manage things; you lead people*. Admiral Grace Murray Hopper coined this elegant, clear distinction.

What It Means to Lead Your People

Leadership is people-focused. It is the words spoken and actions performed that inspire something deep within another person that leads that person to act independently to advance the interests of the team. Leadership is inspiring and influencing people to act in ways they ordinarily would not.

The following straightforward questions can help you define a powerful set of maxims for leading your people:

- **What is your natural style?**
- **How will you remember to treat your team**

as individuals?

- **How will you stay connected to your team's reality?**
- **How will you commit to your people's growth?**

The maxims you create to describe how you will lead your people will govern your day-to-day interactions with members of your team.

What Is Your Natural Style?

Authentic leaders' beliefs and values do not change from one scenario to the next. Their reactions to events do not differ depending on who is listening. Their words, perspectives and opinions are spoken from the heart, and they believe deeply in all of them.

Style is the construct through which leaders demonstrate their authenticity. There are many ways to convey ideas, beliefs and values. There are just as many ways of putting ideas into action. By now you have likely found approaches for communicating and acting that are comfortable for you and other approaches that are not. Those comfortable techniques become your preferred style over time.

How Will You Remember to Treat Your Team Members as Individuals?

Write down the names of your direct reports or people you are responsible for leading on a regular basis. Leave plenty of room on the page under each of their names. Now for each person, write down as many personal things you can think of about that individual. Do not include things like their job description or their current project responsibilities. Focus on capturing things that make them unique. If you are having trouble getting started, try answering these questions:

- **Where did he or she grow up?**
- **Does he or she have children? Pets?**
- **What are his or her kids into? Sports? Performing arts?**
- **Does he or she have any hobbies?**
- **What is his or her proudest accomplishment? Biggest disappointment? Career aspiration?**

Use these questions to guide you, but write down anything else that springs to mind.

If the draft maxim you have written does not change the way you view and interact with your people, consider revising it until it does.

Coaching and Feedback

You must also provide coaching and feedback to the members of your team. Regardless of whether someone is in a stretch role or not, you need to provide guidance on a regular basis. It is easy to avoid difficult conversations, but doing so only makes subsequent conversations that much harder. Both you and your team members will benefit from your defining a maxim that pushes you to correct poor performance sooner rather than later.

How Will You Stay Connected to Your Team's Reality?

You need to create a maxim to consistently remind you to get in touch with your team's reality and see the context in which the tasks you are asking them to do must get done. If you understand and appreciate the challenges they face, you can make more reasonable and intelligent requests of them. They will also appreciate and respect you for being cognizant of what they must overcome to achieve the goals you set for them.

To create these maxims, start by getting an understanding of what you know about your team members' jobs. Take notes on the following questions:

- **What are the major deliverables your team members believe are their highest priority?**
- **Which activities consume significant amounts of the team's time yet return little in the way of results?**
- **Which difficult aspects of their jobs would your team members say you appreciate the least?**
- **What subjects would they say you should know a great deal more about?**

Once you have cataloged your lack of knowledge and understanding about what your team goes through every day, you need to do something terrifying — go speak with trusted members of your team and validate your responses to these questions.

How Will You Commit to Your People's Growth?

People expect to grow and be challenged at work. Your responsibility, as their leader, is to create that environment for them. You must calculate the risks of putting people in stretch roles and take those chances when appropriate. You have the power to give or deny them growth opportunities at work, and if you do not create those opportunities for them, either they will get

frustrated and have low morale or they will seek challenging growth opportunities outside your organization. If your development maxim reminds you to take those risks, you improve your chances of retaining and motivating talented people. ●

Part Five: Leading a Balanced Life

The first step toward living a balanced life is realizing that both your life and your work need to be in balance. Many times we perceive this balanced life concept as only pertaining to not working late or on weekends. That is just one aspect of balance.

Another aspect is doing work you enjoy. If work sucks, life sucks. You probably spend more time at your workplace than you do with your family and friends. To achieve balance in your work, you need to define the most rewarding aspects of your job. This definition ties back to feeling challenged and effective in the work you do. Work balance consists of working on enough of the things you love to do to balance out the things you dislike doing but have to put up with at your workplace.

Creating maxims for balance at work requires you to define what is or is not acceptable behavior for you, your boss, your co-workers and your team. If you focus on finding work you enjoy and have passion for, achieving work balance will naturally flow.

There are three questions you need to answer to create your maxims for leading a balanced life:

- **How will you define your boundaries?**
- **How will you keep things in perspective?**
- **What are you passionate about?**

The maxims you build around these questions will enable you to balance your work so that you are working on enough things that excite and interest you. They will also help you put boundaries around how much working and how much living you do, help you regain perspective when you lose it and keep you focused on the most important things in your life.

This last aspect of leadership is critical. Your leadership philosophy must encompass your entire life, not just your work life.

This holistic approach is designed to create integrity and consistency in your leadership approach in any situation. It creates checks and balances between looking internally and externally; short term and long term; at work and at home. If you can have a consistent leadership approach in all these areas, you will be a more comfortable and effective leader.

How Will You Define Your Boundaries?

You are the only one who can protect your time and your interests. You have to establish "the line" you are not willing to cross or allow others to cross. Whether it is the number of hours you work, the work you do (and the work others do) or the physical layout of your workspace, there are parameters that are or are not comfortable for you. The problem is, no one knows where your line is until you tell them they have crossed it.

Unless you let others know what your comfort zone is, they will superimpose their own on you. Nine times out of 10 you will be dissatisfied with their choice. You have to set boundaries to establish those lines.

Your balance maxims must withstand the pressures that work puts on you. Invariably you will be asked to take on tasks at work that are less than exciting. Your work balance maxim is a vehicle for pushing back and trying to get an acceptable mix of exciting and unexciting work. Your life balance maxim must have the power to make you close the laptop and go home.

Creating and maintaining good boundaries helps prevent the pressures of work from pushing you out of balance. Your maxims are simply the articulation of those boundaries and serve as a way to communicate them to others and reinforce them on a regular basis.

How Will You Keep Things in Perspective?

Dan, a Chinese-American director at a financial services firm, had a simple maxim that helped him and those around him maintain perspective: **Calm**.

Dan explained it both humorously and eloquently. "It's pretty hard to miss that I'm Asian, and even though I've lived in the U.S. my entire life, people always ask silly stereotypical questions like if I practice tai chi or martial arts. I always laugh at their expressions when I tell them I grew up in the mean streets of Philadelphia. That said, I have found that I'm able to exude calm during chaotic situations, and people around me respond to my calming influence. My ability to get everyone around me to stop, take a breath and relax, reduces stress and helps me and the team put things in perspective. So that's my maxim — calm. It's only one word, but it reminds me to stop, breathe, focus and then act."

As Dan shared his story, it was clear how his demeanor and this maxim combined to create a powerful means of regaining perspective.

What Are You Passionate About?

A good maxim will remind you that work is a means to an end. It will enable you to make better decisions

about where you allocate your time and energy to ensure that you have a balance between the work you do and the things you love in life.

You might think that creating your maxim for achieving balance in your life will be simple. I will caution you that it is quite difficult. The simplicity stems from your having a deep understanding of what you are excited about in life.

You likely have favored hobbies or pastimes that come readily to mind. It is easy to zero in on those as the source of raw material for creating this maxim. The difficult part is writing your maxim in such a way that the emotional trigger to take action is powerful enough to overcome the inertia of your work life. If the maxim cannot get you to step away from the laptop and leave the workplace, it is worth less than the one piece of paper it is written on. You must find an emotional trigger that creates a visceral reaction inside of you. ●

Part Six: Making It Real

At the beginning of this process, when I told you there was a way to clearly define yourself as a leader on a single page, it may have seemed like a difficult task — perhaps even impossible. But you've done it. And it was simple, wasn't it? OK, perhaps "simple" is too strong a word. Let's use "straightforward." Articulating your leadership philosophy does not have to be complicated.

The hard parts of the leadership maxims process are the introspection about and the personalization of your philosophy. It can be difficult to remove the veil of "professionalism" and accept your own humanity. It is scary to put the real you out there for everyone to see. It is much easier to hide behind terms like synergies, value maximization and employee engagement. It is exponentially more powerful to expose the real you to the people you are supposed to lead. That is what it means to be authentic, and the more authentic and direct your leadership philosophy is, the more powerful it will be.

Living Your Maxims

Having your maxims on one piece of paper is powerful. Eventually they will change your behavior and you can take massive strides toward being the leader and the person you want to be.

Once you have written the first version of your maxims, you can start living by them. Remember, a maxim is nothing more than a principle or rule of conduct. These are your rules. You set them for yourself. You have to live with them and you will be a better leader if you abide by them.

Your maxims will help you make better decisions and choices, especially during difficult times. They will keep you on track to reach your goals and they will guide your behaviors along the way. Your maxims will serve as a tool for setting and maintaining standards for both yourself and your organization. Most important, your maxims will humanize you and help you build the trust critical to running a high-performing team.

Sharing

Share your maxims with others who are interested in your development and growth. Share them with people who care about you and who want to help you be a better leader and a better person. Share them with your team and your boss, your family and friends.

When you share your maxims with your team members, do not simply e-mail or copy your one piece of paper and distribute it without further context. Instead, have either a team meeting or one-on-one conversations with your people. Tell them that you want to share your leadership philosophy with them. Explain how that philosophy encompasses the four aspects of leadership (leading yourself, leading the thinking, leading your people and leading a balanced life). Share the process you went through to generate your maxims and help them understand how you used your personal story to define your leadership philosophy. Make it clear that your maxims are your standards and expectations not only for yourself but for them as well. Talk through each maxim and share the story behind it. Let them know who you truly are as a person. You will be surprised at how warmly your story is received.

Once they have heard your story, allow them to ask questions about it. Help them understand how your maxims will be applied to everyday situations. When they see how you will apply your maxims to situations they are familiar with, you become more predictable for them. As you finish this conversation, make it clear that you will be using your maxims every day. ●

How Nonconformists Move the World

Adam Grant is a researcher, teacher, management thought leader, and writer. In 2009, a young entrepreneur came to offer Grant an opportunity to invest in the company he and three of his college buddies were launching. Grant declined and bills it as "the worst financial decision" he ever made. The company was Warby Parker and it revolutionized the way people buy eyewear. In 2015, it landed the number one spot on Fast Company's most innovative companies list. That same year it reached "$100 million in annual revenues and was valued at over $1 billion." Grant wanted to understand why he reached the decision he did with Warby Parker, which launched him on the track to researching and writing ***Originals***.

In it, he teaches readers how each and every one of us can become more original ourselves and in doing so, make life better for us all. Oftentimes, we come to accept the "dissatisfying defaults in our world" as the natural order of things. If we can think about them in an original way, though, that curiosity allows us to recognize that most of those things are actually social norms created by people. "And that awareness gives us the courage to contemplate how we can change them."

In the foreword, Sheryl Sandberg says that in our lives and in our work we may find ourselves wondering if one person can actually make a difference and if so, could that one person be us? Grant's answer is a "resounding yes." Every person is capable of "championing ideas that improve the world around us." ***Originals*** shows us how.

The Surprising Habit of Successful Originals

Many of the world's "most eminent and influential people" were not geniuses who began life as child prodigies as we may assume. Children who are intellectually gifted often go on to become highly successful in a specialized area of expertise but they don't often spark cataclysmic progress or innovation in the world at large. They work hard at being the very best in a chosen instrument or field of science but they don't compose their own music or produce scientific breakthroughs. "Practice makes perfect, but it doesn't make new." Achievement becomes more

highly valued than creation. "Instead of aiming for unique accomplishments," we take the safer, more certain road to success. Great ideas are lost along the way.

Grant shares examples of how some of the most notorious change agents in history came to their positions only after being prodded, pressed, or pushed in that direction. Martin Luther King Jr. and founding fathers John Adams and George Washington had no intention whatsoever of leading monumental moments of change for humankind. Yet people in their lives exerted their influence to place them in public positions and as a result a country and later, a civil rights movement were born. We may not have huge ambitions on the scale of changing a nation or the world, but we "do have ideas for improving our workplaces, schools, and communities." Few of us take steps to put those ideas into action. We fear that the risk is too great.

A surprising pattern emerges when we study entrepreneurs. Most people think that starting a business requires a single giant leap where all the time, energy, and focus is directed towards the new idea. Studies have shown that the opposite is true. Entrepreneurs who hedge their bets, mitigate risk, and take steps, not leaps, have a far greater chance of launching a business that is built to last. Grant likens it to having a diversified stock portfolio. If you decide to invest in a stock that is unproven, you balance that decision out with a stable stock. A balanced portfolio isn't made up entirely of moderately risky stocks. Entrepreneurs, likewise, do not stick to safe middle ground. Instead, "successful originals take extreme risks in one arena and offset them with extreme caution in another."

Picking Winning Ideas

People are able to generate a hefty stock of original ideas but we lack the ability to pick the ones that will be winners. Grant helps readers identify the challenges encountered and the best practices to put into place in picking original ideas that have legs. Sometimes people get stuck refining an idea they think is great instead of continually coming up with new ideas. Originals need to rely on sheer numbers to increase their chances of hitting on some winners. "Even the most eminent creators typically produce a large quantity of work that's technically sound but considered unremarkable by experts and audiences." Producing a "huge volume of work" is the single most important thing someone can do to be original. Thomas Edison filed nearly 1,100 patents and Mozart composed 600 pieces of classical music. But they are remembered for merely a handful of them.

We have an inherent bias in favor of our own ideas. Our misguided perceptions of quality go hand in hand with the problem of quantity. "Conviction of our ideas is dangerous not only because it leaves us vulnerable to false positives, but also because it stops us from generating the requisite variety to reach our creative potential." We are "not reliable judges of the quality of our ideas" so we have to turn to others for feedback. The most accurate forecasters for an idea's potential are other creators. To assess the merit of an idea, we would be best served in turning to colleagues who have "no particular investment in our ideas" and "enough distance to offer an honest appraisal."

Another trap we fall into when choosing ideas is following our intuition when we don't have the right experience in the domain to rely upon it. It is best to have experience creating things in a particular area such as entertainment, technology, or transportation, before you rely on your gut to predict the success of a novel idea in that area. Intuition is "only trustworthy when people build up experience making judgments in a predictable environment." Analysis is a far better "source of insight" when considering new ideas.

How to Raise Original Children

There is a robust and fascinating area of scientific research focused on birth order. Whether looking at sports, politics, or science, laterborns consistently show greater ease with taking risks, accepting radical ideas, and embracing societal progress when compared to first borns. As Grant dove deeply into this research he came to realize that birth order is not the real reason that we see these patterns emerge. Rather, the parenting practices we typically adopt in relation to later born children are more responsible than birth order itself. Grant "examines the family roots of originality," to determine what impacts siblings and parents have on risk taking and how parents can steer their children into rebelling in a constructive, not destructive, direction.

The impact of birth order on achievement has long been the focus of research. Studies have shown that firstborns are more likely to rise to executive level positions in corporations, win Nobel Prizes, and become congressmen, for example. "Birth order doesn't determine who you are; it only affects the probability that you'll develop in a particular way."

Firstborns are typically more risk averse than laterborns. This tendency can be partly explained by the way parents raise younger children differently. In cases of larger families, it is common for the youngest of the children to have surrogate parents in their older siblings. Siblings do not enforce as many rules or punishments and furthermore, younger siblings learn to follow the lead of the older siblings, doing what they do, rather than following the lead of their adult parents who make more "carefully considered choices." In cases where older siblings are not heavily involved in raising the younger children, parents themselves tend to start off strictly with firstborns and become "increasingly flexible" and relaxed with laterborns.

If we want our children to become original and creative, we have to give them freedom to do so, regardless of their birth order. The challenge is to encourage risk taking in a way that channels that originality in the right direction. We all know rebellion can lead us down a destructive path. There are several factors "that shape whether children use their freedom to become honorable or antisocial, proactive or passive, creative or destructive."

Parents who focus on an explanation or reason-based discipline have favorable outcomes to those who use threats or punishment. A clear rationale helps internalize standards of conduct and develop "one's ethical code." A fascinating paradox arises from this. Children raised this way will "comply voluntarily with rules that align with important values and questions rules

> . . . leaders should move away from the maxim that team members should only bring up problems when they have a solution to accompany it.

that don't." When a rule doesn't make sense internally, these budding originals will rebel against it and take active steps to change the rule itself.

One kind of explanation is particularly effective in "enforcing discipline." Parents who focus on the consequences of a behavior to others will develop empathy in their children. This distinction "directs attention to the distress of the person who may be harmed" by a particular behavior. Explaining to your child that washing their hands will help keep their classmates from getting sick will lead to better hand-washing habits than explaining that hand washing will keep them from getting sick, for example.

Praise for making good behavior choices also goes a long way in sending children down a more desired path. How parents provide that praise can have an impact. Research shows that praising the child, not the action, is more effective at fostering character traits we all want to see in our children. For example, let's say a child shared a toy with a playmate. Praise focused on the behavior would sound something like, "That was nice to share your toy." Praise focused on the child herself would sound more like, "You are a nice person for sharing that toy." "When our character is praised, we internalize it as part of our identities. Instead of seeing ourselves as engaging in isolated moral acts, we start to develop a more unified self-concept as a moral person."

How Managers Can Foster Nonconformity

Groupthink is "the tendency to seek consensus instead of fostering dissent." According to Grant, it is the enemy of originality but traditional theories of cohesion breeding conformity are a myth. He examines the real causes of groupthink and ways leaders can prevent it. Ordinary people and organizations have the ability to "breed originality early on and embrace it over time."

In the short run, companies stand to realize an advantage by creating what are called "commitment firms." These organizations value culture over all and hire people that conform to the established set of characteristics. Similar people are hired so that they will fit in and research shows that these firms outperform other types of hiring practices initially. But over time, this "weeds out diversity in thoughts and values." In more volatile markets, the need to change is often ignored, they fail to adapt, and they suffer financially as a result. They favor "the comfort of consensus over the discomfort of dissent" so mistakes are left uncorrected and innovations are never pursued.

Leaders can avoid these pitfalls by hiring and soliciting input from a diverse set of team members. Dissenting viewpoints are incredibly valuable, even when they end up being wrong for the company. They "stimulate divergent attention and thought," stirring up ideas in everyone and ultimately, leading to innovative and creative solutions. "Promoting the expression of original ideas" is correlated with huge organizational success.

Many leaders fall short in fostering dissent when they rely too heavily on assigning a purposeful "devil's advocate." In a robust research study it was discovered that having someone tasked with dissenting against a majority opinion had very little impact on drawing out a diversity of ideas. The others in the group seem to be sensitive to the lack of sincerity and do not take the advocate's opinions seriously. It is far more powerful, Grant states, to "unearth a devil's advocate" then to assign one. Leaders can accomplish this by offering opportunities for "open-minded debate" with the purpose of reconciling differences.

Finally, leaders should move away from the maxim that team members should only bring up problems when they have a solution to accompany it. Grant says this is a mistake that can have dire consequences. Countless problems are left unexplored because people feel they cannot bring them up. Instead, leaders should invite complaints, with or without proposed solutions, creating an "invaluable safeguard" for the organization as a result.

There is little question as to why Adam Grant is described as a management guru. His thinking is evolutionary, his writing is entirely convincing, and he points followers down an enlightened and clear path to improvement. Every principle introduced in the book is backed by extensive research and made relevant through real-world examples found in well-known corporations, teams, and individuals. It does all of this while being compulsively readable, a difficult feat when grappling with such subject matter. One of the most appealing aspects of the book is its relevance to a wide swath of readers. Managers, policy makers, teachers, parents, and literally any individual who wants to "generate, recognize, voice, and champion new ideas" will find the book useful. ***Originals*** is captivating, refreshing, and insightful in making a case for going against the grain ourselves and in fostering the same in our children, employees, and students.

THE SUMMARY IN BRIEF

Leaders know that they need to get a grip on the Intangibles to raise employee engagement. What are The Intangibles? They are the "soft stuff," such as employee engagement, empowerment, trust, respect, and company values. ***Otherwise Engaged*** is about leadership and The Intangibles.

Leaders know that getting a grip on The Intangibles will lead to better business outcomes. Businesses work hard to find the best practices for helping to increase empowerment and engagement, and work to build trust and respect among their employees. But time and again, many leaders find that their employee engagement activities fail. Why?

Author John Guaspari teaches about why businesses' employee engagement activities and other attempts at fixing "the people stuff" aren't working. He outlines a paradigm shift to help business leaders focus on what will really lead to change. Leaders will learn why creating an ethos of respect and a focus on the other will maximize employee engagement and lead to greater business success and ROI on human capital.

IN THIS SUMMARY, YOU WILL LEARN:

- What the Intangibles are.
- Why it's hard, yet necessary, to get a grip on The Intangibles.
- Why you need to infuse respect into everything.
- How to increase employee engagement leading to maximum efficiency.

Getting a Grip on The Intangibles

This is a book about leadership and engagement. It is indisputable that there is a correlation between high levels of employee engagement and improved business results. Therefore, leaders must attend to engagement along with the other "soft stuff" – the people stuff – such as empowerment, trust, respect, and company values.

Leaders know this, and try hard to take action on this, following what they believe to be the best practices. Leaders have a strong bias toward logical, rational, data-driven solutions to problems. But you can't apply utilitarian prescriptions to what is essentially a problem of the spirit. That's why so many employee engagement activities fail.

You need to recognize that The Intangibles are…intangible. They are not rational, and so cannot be handled with a rational approach. It's not that they are irrational; it is that they are "other than" rational – they exist on another plane.

When we discuss The Intangibles, it is very important that we choose our words carefully. Most of us are more comfortable with rational, left-brained thinking, so we tend to use words that bias us toward that type of thinking. Many of us feel uncomfortable dealing with "softer" topics, yet we realize that we need to do so. We need to consciously make an effort to use our right-brains when handling these topics.

Let's take a look at each Intangible up close.

Engagement

Strong engagement among employees has been shown by research to correlate with dramatically better business results. "Engagement" is generally used to connote some form of ***interaction*** or ***connection.***

But we need to be careful how we define "engagement." While it can signify things coming together, such as an engagement to be married, or two gears interlocking and being "engaged," this is not necessarily the meaning of the word that leads to better business results. Many managers think that it is and try to increase employee engagement by doing things like holding off-sites and having break-out groups during meetings.

Often, these types of activities don't work. In fact, they often lead to cynicism and disengagement. That's because the type of engagement that leads to better business results has this definition: ***The extent to which a person invests incremental energy and effort into the task at hand.***

There are various models used to illustrate engagement. They share the common characteristic of the need to account for both the rational and emotional dimensions of humans. Both sides need to be addressed.

The currency of the rational side is ***information***. So if the problem you are trying to address within your company is not getting the right information to the right people, then you need more engagement defined as interaction and connection.

But what if that is not the problem – what if the problem has more to do with your employees asking: "Why should I care?" or "What does this mean to me?" In that case, you need to be addressing the emotional side of your employees. The currency of emotional commitment is ***meaning***. People want meaning from their work. They crave meaning.

Your propelling question should not be: How can we ensure more interaction/connection? Rather, it should be: How can we ensure that we do the things necessary to bring meaning to the other person?

Engagement is not a matter of leaders engaging employees. It's about leaders creating the conditions necessary for employees to be more fully engaged in their work.

Empowerment

Employees who are empowered accomplish more for the company than employees who are always seeking approval or permission before taking any action.

People don't get a feeling of empowerment by being told they are empowered. Rather, it's a sense of assuredness that people have as they do their jobs. They feel safe to exercise their own judgment. Empowerment is a feeling that the other person has, not an assertion made by the leader. Leaders need to take a step back and consider the world from the point of view of the other person.

Trust and Respect

While engagement and empowerment are relatively new goals in the business world, everyone has heard of trust and respect throughout their lives and knows that they are important. However, many employers are unsure what to do to increase trust and respect among employees, so they make up some reasonable action steps and call it a day. Clearly, this is not helping them to meet their business objectives.

In order to accomplish anything, you need to define the

words first. Trust is a feeling, like engagement and empowerment. Trust is a feeling of confident expectation. In order to create an environment of trust, expectations must be very clear. Make them clear, and then do your due diligence to ensure that you have an acceptable degree of confidence that your expectations will be met.

Respect is defined in the dictionary as "a sense of the worth or excellence of a person." But like the other Intangibles, we need to be precise in our definition. The definition that we should use is: "Giving due consideration to the other." It's important that we say it in the singular like this, rather than saying "respect others." We need to give consideration to each person.

Values

Businesses want to project a clear and shared sense of values. The best way to promulgate your company values is to live them. Be guided by them, use them when making decisions and making hires. Set an example and guide your employees to follow your lead.

People are very good at noticing any gaps between purported values and actual behaviors. So don't talk about the values too much. The words and concepts become devalued if you talk about them too much, and people will be on the lookout for hypocritical behavior.

Also be careful to make it clear that company values aren't meant to be exactly the same as personal values. That can lead to trouble. Make it clear that you are stressing company values not so people will change their personal values to match them, but in order for them to decide if your company is the right place for them.

"The People Stuff"

- All of what happens in the running of a business flows from what's done or not done by people. Therefore, the business is the sum total of the actions taken by those people.
- The effectiveness of those actions depends on the degree to which those people are engaged – the extent to which they bring the full measure of their skills, wisdom, and experience.
- Engagement is fundamentally affected by a leader's skill at attending to "the people stuff," a.k.a. The Intangibles.
- Therefore, separating "the people stuff" from "running the business" is a false distinction.
- Accepting this is step one on getting a grip on the Intangibles because it forces you to do something effective.

There are several historical precedents that demonstrate how changing one's focus can dramatically improve business results:

- ***Total Quality Management*** (TQM) was a shift in business practices that occurred in the 1980s. It changed quality management from inspecting products for defects after production to preventing those defects in the first place by looking at the process that produced defects and fixing the process. Businesses learned that all of the careful inspection systems set up for after production had the effect of blocking their line of sight to a much better and more profitable way of doing things.
- ***Just-In-Time Inventory*** (JIT) was a revolution in business in which people learned that excess inventory doesn't insulate you from the effects of quality problems. Rather, it insulates those problems from their solutions. Its main principle is that businesses should carry no inventory other than just the amount needed, where it's needed, when it's needed.
- ***Lean*** extended these ideas of removing the excess to other parts of business besides manufacturing. Businesses learned the value of "running lean" in administration, customer service, and all areas by removing extra steps that didn't add value.

If you think about it in this context, you begin to see a pattern. Could we look at The Intangibles in the same way? Might we be implementing programs and processes to improve our results regarding The Intangibles that are actually blocking our line of sight to the real issues? Could it be that putting up posters about values and respect and having break-out sessions to discuss empowerment are actually drowning out the actual problems and solutions?

Respect Revisited

Remember, the proper definition of respect is "giving due consideration to the other." Respect is different from the other Intangibles in that it is the only one over which all of us have full control. It's entirely up to each person as to whether or not he or she will infuse respect into whatever circumstances are at hand. Respect is also the only Intangible that is an input rather than an output. Respect is the fuel that will get you to the other Intangibles.

Be guided by the need to infuse maximum respect into everything. As a leader, you should be thinking things like: "Who

are the people attending this meeting? What's important to them? What's most likely to resonate with them?" You are giving due consideration to the other. Thinking this way will lead to making things more productive.

Lack of respect (and other Intangibles) is a complex situation to be managed rather than a problem to be solved. A lot of logically-minded people are much more drawn to problem solving. If you don't look at it as a "problem" you change how people approach it.

The power of a more single-minded focus on respect has to do with fostering an atmosphere of what we have come to label as trust, which in turn will help people have a deeper feeling of what we have come to label as empowerment, which in turn will result in people who are more deeply and fully characterized by what we have come to label as engagement.

All of this will result in higher levels of efficiency and ROI to the business.

Solipsism

We have a tendency to not give sufficient consideration to the other. This tendency can be called ***solipsism***, which is a theory in philosophy that your own existence is the only thing that is real or can be known.

Solipsism, both institutional and individual, is the root cause of our inability to attend more effectively to The Intangibles.

If solipsism is the disease, then respect is the antidote. Respect begets trust begets empowerment begets engagement begets a greater return on your investment in human capital begets a better financial ROI for your shareholders.

What Should You Do Right Now?

- Stop talking about trust, empowerment, engagement, and values. If you must mention them, use them as adjectives rather than nouns. You want "empowered employees," for example, not "empowerment." Focus on the people.
- Create an ethos of respect. Make sure everyone understands that it means giving due consideration to the other.
- Introduce the concept of solipsism and make sure others understand that it's corrosive to the culture you want to create.
- Embrace the fact that The Intangibles are intangible. They're not like the rational/logical issues with which business people are comfortable dealing.
- Become otherwise engaged: Adopt an approach to engagement that is other than the one traditionally used, and focus on how everything we do affects the other.

For the past thirty years, John Guaspari has helped leaders take on the challenge of being more effective at attending to the so-called "soft stuff." He has worked with and made presentations for hundreds of corporate clients in scores of industries, and he has delivered some 1500 intangibles-related presentations, seminars, and workshops. As a result, John has gained an enviable reputation for his ability to unravel complex subject matter and communicate it in the kind of accessible and engaging way that leads to real learning.

Out Think

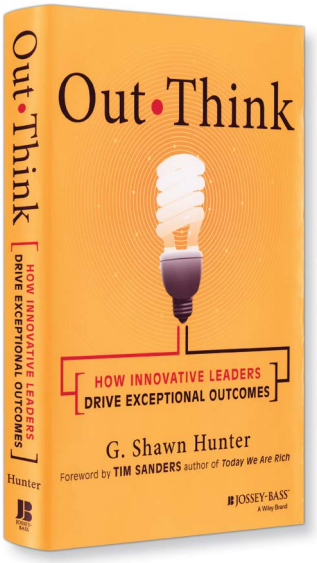
How Innovative Leaders Drive Exceptional Outcomes



by G. Shawn Hunter

THE SUMMARY IN BRIEF

Out Think provides a spectrum of thought, analysis, insight and stories on how organizations are searching for ways to leapfrog their businesses to the leading edge, imprint their brand on the public consciousness, and become more relevant in the ever-changing global marketplace — to transform their businesses into competitive, 21st-century game-changers.

We've entered a new era. Call it the age of imagination, ideation, conceptualization, creativity, innovation — take your pick. Creativity, mental flexibility and collaboration have displaced one-dimensional intelligence and isolated determination as core ingredients of competitive advantage. But these 21st century methods and mindsets needed to drive innovation are only found by tapping into the discretionary levels of passion and initiative within us. This is where *Out Think* leadership comes in.

Each chapter presents a key idea, behavior or mindset shift and illustrates these shifts through unparalleled interviews with business leaders conducted by the author. Techniques are described to show how the shift or idea can be implemented, with real-world examples. The book highlights assessments, exercises and actionable messaging throughout.

While other books also address the changing economic landscape and the challenges of the creative age, *Out Think* is unique for its author's unparalleled access to executives and thought-leaders who are, in fact, making a measurable difference. Through interviews and collaboration with these individuals, Hunter has assembled insights, stories and actionable takeaways, with an emphasis on results that can drive the innovation that leaders want and need in their organizations.

IN THIS SUMMARY, YOU WILL LEARN:

- Why and how innovation has become the primary driver of successful companies in the 21st century.
- Key components of innovation and ways to implement them in your organization.
- How to find and encourage innovative practices, including establishing trust, embracing risk, collaborating, borrowing brilliance and connecting with why.

THE COMPLETE SUMMARY: **OUT THINK**

by G. Shawn Hunter

The author: G. Shawn Hunter is vice president and executive producer for Skillsoft's leadership video-learning products. In developing these products, Hunter has collaborated with and interviewed hundreds of executives, thought-leaders, academics and authors in the United States, Canada, the United Kingdom, Europe and Australia. Hunter cofounded Targeted Learning Corp. (TLC) with his father, Hal Hunter, PhD. TLC was acquired by Skillsoft in 2007.

Introduction

This book is about the importance and power of engaging ourselves in our work, connecting with the people and world around us, and deviating from convention to reliably create innovative value in this new age. "Innovation" is now what "entrepreneurial" was to the 1990s and what "excellence" was to the 1980s. The pursuit of innovation has been urgently added to the business buzz vernacular because the velocity of change demands that companies constantly innovate to remain relevant.

Consider: Disney, CNN, MTV, Hyatt, Burger King, FedEx, Microsoft, Apple, 20th Century Fox, AT&T, IBM, Eli Lilly, Bristol-Myers — the list goes on. All of these organizations were started during economic downturns. Our greatest opportunities exist in such times, but we need to let go of some of the attitudes and attributes, methods and mindsets that have worked in the past because they're not working so well anymore.

Having interviewed, collaborated with and filmed hundreds of successful executives, business leaders and researchers, I have discovered some consistent guiding methods and mindsets for individuals, groups and organizations around the world that have been proven to be reliably valuable in today's volatile economy.

The Out Think process is not a linear blueprint for success. It's not a series of infallible steps that will lead you, the reader, inexorably toward innovation, market leadership and world domination. *Out Think* is a set of ideas and practices for generating new value in the form of innovative products and services. It requires that you participate in the journey.

Marketquake: Moving Beyond Arrested Decay

We have moved to the age of creative, symphonic thinking, where the ability to harness seemingly disparate pieces of information and ideas and mash them into wholly new iterations that can be used to create innovative solutions is, in fact, the competitive advantage for individuals and for organizations.

But how does innovation differ from creativity and invention? Paul Sloane, author of *The Innovative Leader*, lays out the distinctions: "Creativity is the capability or act of conceiving something original or unusual. Innovation is the implementation of something new. Invention is the creation of something that has never been made before and is recognized as the product of some unique insight."

We urgently need a process by which we can accelerate our new-product and value-creation pipelines. We've discovered an innovation-delivery gap that is shrinking. This gap is between an organization's ability to create new and distinctive value the market recognizes and rewards and the speed at which competitors can emerge and deliver innovative products and services to the market.

Several accelerating forces are influencing this competitive marketplace innovation gap. These include the ubiquity of technologies that enable global collaboration and the increased accessibility of new ideas and commercial opportunities in emerging markets. Added to these are the broader adoption of open-innovation practices and companies' increasing tendencies to develop capabilities with individuals and groups outside of their own organizations.

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor in Chief; **Ashleigh Imus**, Senior Editor; **Amanda Langen**, Graphic Designer; **Corbin Collins**, Contributing Editor

The volatility of the current economy — something I like to call "marketquake" — is demanding that organizations become agile in order to survive. The companies emerging from the global financial ash of five years ago are those that are embracing new management practices.

Consumers are also changing. They've never had so much information or so many options. They want to be involved in the creative process and, with the ability to post reviews, they can collectively bring a company down. Today's consumer has abundance of choice, wants to participate, yearns for experiences, not products, and is attracted to a narrative. In almost any buying circumstance in which products seem comparable, today's consumer is more likely to be drawn to those with a compelling story behind them.

Innovation is creativity in action. Everyone can be creative and contribute to innovative outcomes that create economic value and competitive advantage. Innovative leaders nurture, act upon, implement, and take creative ideas into breakthrough change and invention. It's not enough to just be ambitious and determined anymore. Leaders must hire, inspire and develop innovative people while stirring curiosity, creativity, relationship building, global awareness and integrity.

Trust: Establish the Engine of Leadership

To find new paths to innovation, the expectation is that we all have a shared understanding of some of the foundational aspects of leadership, starting with building trust, which means keeping business operations transparent. To be innovative leaders, we must build on this base by constantly reiterating and communicating core ideas, using powerful stories to propel change, modeling the behavior we wish to see, and above all, creating and sustaining energy in others in the organization. These foundational traits of the innovative leader constitute the terra firma underlying the journey to innovation.

If we want those in our organizations to remember the key priorities or to remember the reasons why we're going in a certain direction, we need to develop and share strategic stories that help remind others of the purpose of their work and what they must consider in making decisions. People remember little from looking at data and statistics, yet easily recall compelling stories. If we want people to behave in particular ways when they are away from us — which is much of the time — we should use provocative stories that have a singular message and require a few key actions to achieve the depicted goal.

Great leaders love what they do and feel great purpose in it. That rubs off on those they work with. It's hard not to get caught up in the enthusiasm of the person who is leading us. Out Think leaders don't think of themselves as sitting at the top of an organization they oversee but rather as supporting people and processes from beneath, as a servant to the organization. The Out Think leader has a persistent and unwavering commitment to constantly sustain and grow the energy of others in these ways:

- **Create and Communicate a Compelling Vision of the Future:** The key word here is *compelling*. Those energizing individuals capable of instilling a powerful and compelling vision of the future are able to convey a future they envision that is both believable and feasible as a goal.
- **Convey That Others Are Making Meaningful Contributions:** Specific praise and recognition of individual contribution is a hallmark of strong energizers. Skilled energizers also build opportunities for people to make contributions.
- **Identify and Convey a Clear Sense of Progress:** It is not monumental breakthroughs or audacious aspirations that sustain individual motivation. Rather, it is constant progress and work that holds meaning for that individual making consistent and measurable steps forward on a daily basis.
- **Fully Engage in Each Interaction:** In each interaction, energizers, however powerful or important the world believes them to be, will make every person feel as if he or she is the most interesting, important and valuable person in the room.

Inquiry: Provoke with Questions, Not Answers

In the inquiry part of the Out Think journey, we ask, probe, investigate, and remain ever open and curious about the paths on which our inquiry may take us. We need to follow the positive idea threads that matter to us. Inquiry applies to the people, the places and the processes in which we participate — who, where and how we ask questions. In the context of developing innovation, the power of inquiry can be enhanced in each of these domains. The goal here is to ask those creative questions that will drive tangible innovation that is meaningful and valuable.

Expose yourself to new external environments outside of your current domain expertise and work groups. Become more connected to people and ideas that may posi-

tively influence your thinking. Finally, *get curious*. Curiosity about the ideas of others can drive innovation in leaders. In moments of curiosity, we find ourselves extracting the most out of experiences. We ask probing questions, read deeply with intent, manipulate and examine objects, and persist in activities and tasks that we find both challenging and stimulating.

"In the beginner's mind there are many possibilities, but in the expert's there are few," said Zen master Shunryu Suzuki. We have to nurture curiosity continually to enable creativity to emerge. We do this by remaining open to all ideas and new ways of seeing the world. Experiences, emotions and understandings of information that confronts us tend to *converge* in our minds as we try to make sense of it. Yet innovative ideas and solutions often require our thinking to *diverge* out from a central idea or experience.

To accelerate and sustain our own ability to innovate, we must first change our approach to thinking — step out of cognitive ruts we may have developed or that were imposed on us, and embrace divergent thinking without fear. A few strategies to nurture such thinking include allowing all ideas to surface without bias, pursuing "accidental" innovation, choosing ideas carefully, and exercising optimistic thinking.

Exploration: Go to the Woodshed

Known in jazz circles as "going to the woodshed" or "woodshedding," the term means secluding oneself to develop virtuosity through practice and hard work.

Innovation may start with a spark of inspiration and be fed by aspiration, but every new idea needs to be probed, prodded and explored in detail. This component of the innovation journey requires work, grit, determination and unflagging perseverance to maximize innovation within ourselves, inspire others to do the same, and ultimately contribute to the innovative end result to which we aspire. It's in this part of the innovation journey that we are most likely to get distracted or lose momentum.

It is grit — perseverance and passion for long-term goals plus a willingness to remain tenacious in the face of adversity — that leads to deep expertise and mastery necessary to propel innovation.

A key component of companies that differentiate themselves well from their competitors is the ability and willingness to put a stake in the ground on key market expertise. Developing deep niche expertise is critical to making valuable contributions. It requires developing the right kind of cultural environment and expectations, including clearly defined and valued products and services in the market. To develop such deep expertise, employees need the time and space to fully explore their ideas.

Capturing internal voices of distinction is also key. Great stories are at the heart of the world's best businesses and an integral part of any successful communication strategy. To develop these stories, we can ask questions like these:

- What does the corporate mission mean to you?
- How do you embody that mission in the way you work and how you live your life?
- What positive outcomes do you feel you have achieved, and how did you achieve them?
- What advice would you give to new employees or those being promoted?

With these stories, we can tap into three key ingredients for building success for the business:

- **Use of strategic stories:** Stories that illustrate a concept tend to be memorable. Strategic stories are targeted stories intended to elicit a specific outcome.
- **Tapping strong internal credibility:** We can tap into one of the most valuable aspects for translating mindsets and skill sets by presenting a familiar and credible person to deliver the message.
- **Sustaining company identity:** To build a truly iconic, signature brand, a key guiding force comes from the existing people in the stories readily available in the company. By capturing and sharing those voices of distinction, a company can sustain and reinforce the culture.

Aspiration: Dream Well — You May Find Yourself There

Aspiration can come from many sources, but often it's from a person, fictional or real, whom we find heroic. Emulating the traits of heroes is an important part of realizing the aspirational self and leader. An aspiration is not only an articulated goal but also a feeling of hope and optimism about an intended success as well as a tangible outcome. Aspiration is one of the most powerful ideas leaders can give to others:

- **Share Truth:** To get closer to the truth and gain higher aspirations of everyone in the organization, first we have to find the hidden truths and share them. We have the obligation to say out loud when we don't know the intricacies of complex projects, and we expect and demand that those closest to the detail publicly bring to the surface any concerns.

- **Make It Personal and Heighten Aspirations:** Andrea Jung came on board Avon as a consultant and immediately diagnosed the problem with fresh eyes: the product was associated with low quality and outdated styles. She asked her salespeople, "How many of you use Avon products?" As the Avon ladies looked around the room, they saw how few among them actually used their own products. Something clicked. They understood how much trouble the company was in and took on a higher aspiration for the company because it became personal.
- **Offer Hope:** Innovative leaders recognize their capacity for inspiring greatness in those around them. When we focus our energies on developing the potential of those around us instead of pandering to those above us, we, our team, our department and our entire organization become far more successful.
- **Focus on the Team, Not the Boss:** If we go in with a grand plan to make a difference and expect people to execute on it without involving them in its development, we've lost their buy-in. When we don't engage our team members, paralysis can set in, or a catastrophe can occur that keeps us from delivering on a project.
- **Play to an Individual's Aspiration and Strengths:** The best coaches develop a deep emotional fluency such that they have a strong understanding of their players' strengths.
- **Expect the Best of Everyone:** By simply expecting the best of those around us, they can live up to that higher expectation, even if it isn't even explicitly stated. People around us respond to our body language, nonverbal cues and vocal intonation in addition to what we actually say.
- **Develop the Guru in Others:** By tapping into the intrinsic motivation to build an eternal legacy of wisdom, executives see clearly that they have a path to create a legacy and preserve their own immortal wisdom through others. To be successful, the entire organization must adopt a higher aspiration.
- **Develop Higher Aspirations As an Organization:** By sustaining not only the business but also other dimensions that drive social and environmental value, companies can prosper successfully in multiple dimensions. By simply changing the shared aspiration of the organization, we change the behavior and outcomes of those within it.

Edge: Embrace New Kinds of Risk

In the innovation process, the edge is where we experience a heightened sense of engagement, accelerated learning and creativity. "Flow" is the mental state in which a person is fully focused on what he or she is doing, where he or she is totally immersed in an activity. Being truly engaged frees those in flow to be deeply curious and explorative. They are more about solving a puzzle — finding out what lies beneath the surface of a problem — than about power, position and money.

We face risk to ourselves and our companies in every component of the innovation process. We can risk our ability to operate — to produce, deliver and support our products and services in the market. We can also take social risks — to our reputation, brand identity and social integrity. Risk can increase exponentially as we push ourselves and our companies to the edge of our creative capacity, but it can also hone our innovative abilities.

Embracing innovation means embracing risk. It starts when we first share our ideas with others. Even in the most open, welcoming environment, we risk the opinion others have of us, our credibility, even our jobs. While what seems like a wild idea at first can ultimately bring hugely positive results, it can also make others, even ourselves, question our common sense, if not our sanity.

If we carry this willingness to risk our personal reputations to the way we interact with our customers and speak to markets, we can recognize a significant upside without risking operational integrity.

Connection: Collaborate to Innovate

An innovative effort based on trust, with appreciative inquiry, great aspiration and deep exploration, can only be realized through the help and collaboration of others — through connection. It is the process component in which we, as individual contributors or leaders, reach out, engage and collaborate with those around us to discover powerful new ideas, leverage external expertise, and co-opt like-minded collaborators on the Out Think journey.

While we may start with our immediate and intimate circles of colleagues and friends on this part of the journey, we must go beyond that to connect with people who can bring new nuance, insight and skill to bear on the innovation challenge. Only by reaching beyond — and creating bridges from — our own immediate domain of expertise to cross-pollinate ideas, processes and components can we move forward in the innovation process.

Thinking, planning, making decisions, and working out action plans are all best done collectively through teamwork. Google's leaders believe their company thrives in an

organizational environment that is flat (rather than hierarchical), devoid of any pressure, and enables and encourages collaboration. They find that groups make better decisions than individuals on their own.

To truly connect with people in our organizations, we should spend more of our time and energy as leaders asking them to examine more closely how they perform their tasks and collaborate as teams and how the organization as a whole operates.

Successful teams are the result of hiring the right people, building relationships among them based on trust and concern, creating a shared vision of mission, and keeping communication open. Diversity is the mark of great creative teams, where differences are strengths, not weaknesses. Connecting personally through deep listening and conversation is also crucial. If we slow down and listen, retain our curiosity about other peoples' ideas and remain open to them, and ask the right questions to explore more deeply others' views, people become more trusting. As a result, relationships will deepen, and conversations will become richer, opening the doors to innovation.

Mash-Up: Borrow Brilliance

One of the most exciting components of the innovation process is actively combining disparate ingredients to come up with a whole that is greater than the sum of its parts. Once we have connected to people who are doing innovative work in separate domains, we can begin combining these ideas in our work environment by applying what we have learned elsewhere and inviting others to participate in the process. By constantly mashing up ideas, concepts, applications and other disparate outcomes gathered from our diverging ventures, we invent powerful new combinations.

Great ideas are built on the shoulders of giants — that is, most of what seems to be original thought is in fact built on the strength of the thoughts of those who came before us, who in turn based their thoughts on those before them. Once we accept the fact that we build on the creativity of others, our creative process becomes deliberate and intentional. Because we never know where a good idea may be lurking, we need to look everywhere — other industries, science, art, music, society … everywhere.

As we examine the ideas we borrow, we need to look at them from all angles with a fresh mind and be skeptical. We have to understand their weaknesses so that we can improve on them. The creative process is an evolutionary one, and the mechanism used to take it forward is judgment.

Only the Truth Sounds Like the Truth

Former Starbucks president Howard Behar told me a personal story of an early life lesson he learned as a young COO of a failing company. Behar had been brought in to devise a turnaround plan. He assembled the top executives and asked each to come up with a plan for reducing personnel. Someone made photocopies of the plan, and unfortunately, the original was left on the copier after everyone went home.

Howard started to get phone calls from other people in the organization who wanted to know the truth. Howard immediately summoned the private executive group back together to discuss how to handle the leak. Many executives suggested they deny the plan and publicly say that it wasn't true — that it was just an old draft.

His assistant in the room turned to him and said, "Howard, only the truth sounds like the truth." And he knew she was right. He assembled the entire company in a town-hall-style meeting and shared everything with them — the good, the bad and options for next steps. Something interesting happened. One by one people stepped up with solutions.

"Here I thought I was going to get shot, figuratively, or maybe literally, and it's not what happened at all," Howard recalled in our interview. "One by one people stood up and started applauding. People started to ask, 'How can we help?' There I was, in my early 30s; I would have never thought that would happen. It's probably one of the single most valuable lessons of my leadership life."

Unorthodox use of products is often the key to unlocking new value potential. The real purpose of a product is to do a job, and innovative thinking requires engaging the customer in the creative process to discover the jobs that need doing and the adaptations and innovations customers derive to get the job done.

Leaders need the backup of the organization and a global perspective to support the process of innovation. If we wish to encourage divergent thinking, thereby discovering new perspectives, we must tap into disparate cultural backgrounds.

Action: Get Moving or Accept the Consequences

The critical part of the Out Think journey is the doing — putting action to the words, values and ideas. All the curious inquiry, deep exploration, thoughtful conversation and mindful reflection won't amount to any kind of innovation — much less remarkable innovation — unless we act. Action distinguishes innovation from creativity.

At this point in the Out Think journey, the volume of activity and experimentation is critical, and the innovative leader celebrates failure and success equally, punishing only in action. This part of the innovative process requires rapid prototyping and active experimentation. Many innovation journeys stall at this point because of failure to actually take out a hammer, put pen to paper, write the code, build the prototype, or otherwise get our hands dirty.

One of the most important drivers of innovative outcomes is action that is novel and unique. Unfortunately, a characteristic of being human is a persistent sense of overconfidence when it comes to habitual activities.

We all often suffer from overconfidence in our abilities and knowledge of a wide range of subjects. We believe that we will be correct more often than we usually are regarding those behaviors and beliefs in which we regularly participate. If unchecked by organizational culture, managerial oversight and self-reflection, overconfidence can lead to failed endeavors and poor decisions for us and for our work. Here are a few actions and behaviors to help overcome decision overconfidence:

- **Solicit the Opinion of More People:** When we ask a larger group of people their opinion on a question, their collective judgment is almost always better than our own.
- **Solicit Your Own Second Opinion:** Try asking yourself the same scenario and decision outcome in a different way, and see if you come to the same conclusion.
- **Consider the Extremes:** We should ask ourselves what we consider the extreme positive and negative boundaries of these outcomes.
- **Separate Our "Deciding" Self from Our "Doing" Self:** When we conclude the deliberation, shift to our "doing" self, and act on that decision, it's important to remain optimistic, focused and steadfast in supporting our "doing" self.

We can test hunches by assessing our experience with the situation or problem, gaining timely and direct feedback, recognizing the degree of complexity influencing cognitive and intuitive evaluations, and discerning the personal level of desire to take one course over another.

Signature: Make It Your Own

A signature innovation comprises the core identity of those who have joined in the innovation journey, executed with the unique personalities of everyone participating and sustained by the mission of the organization. Signature innovation isn't easily copied or pirated because it comes out of a truly unique cultural identity within an organization.

Most organizations recognize and embrace the notion of modeling best practices — studying operations and teams that exemplify the kinds of traits and behaviors they wish to learn from and adopt. Such modeling can be useful in many situations to gain market share and adapt quickly to developing technologies. Being a fast follower — a second or third to market — can be quite powerful. Facebook came along after Friendster and MySpace were in the marketplace. The iPhone was eight years late to the smartphone business.

Yet creating signature solutions is unlike a wholly borrowed, or "best," practice. If a company aspires to being the best in its market, it has to lead. And only by the organization's developing its own voice — its signature — can it attain this leadership position. A company with signature solutions will get unique products to market faster and establish brand loyalty because it doesn't get bogged down in copying others or creating commodity products. Signature innovations are based on a unique blend of individual and organizational personalities, intentions and convictions.

Purpose: Connect with "Why"

Business models, manufacturing and distribution processes, brand loyalties, pricing strategies and even profits are not why companies exist. To survive, companies must provide products and services that the market recognizes as valuable, and do so on a sustainable basis. To do this, companies need the committed creativity and involved passion and initiative of human beings. The surest way of gaining this is to connect people with a greater sense of purpose. No matter how mundane or utilitarian an employee's task may seem, the greatest leaders can help connect that task and that person to a greater sense of meaning.

Ultimately, innovative products that have lasting value in the world must be connected to a larger purpose — one beyond self or financial gain — that serves the community touched. Why? Because with purpose we bring something of greater value to our community — local, national or global.

We All Borrow Ideas

Charles Darwin's *On the Origin of Species* didn't arrive fully formed from the cosmic Muse. It germinated from the influence of Darwin's grandfather, Erasmus Darwin, who wrote *Zoonomia; or, The Laws of Organic Life* in 1796. In that book, Erasmus Darwin suggested that sexual behavior and competition might affect species change.

In 1971, Ray Tomlinson was working on ARPAnet and mashed up terminal networks with an existing application that allowed users on the same terminal system to share messages. He did this by writing a script that enabled messages to distinguish between different machines and jump from one to another. Thus, Internet-based email was born.

What set Steve Jobs apart as an industry icon is a combination of his innovation, leadership, and, perhaps more importantly, his ability to recognize a good idea. In the 1980s, he saw a demonstration of the mouse with a graphical user interface and recognized the combination as perfect for a personal computer. The result: Apple's Macintosh computer. Bill Gates got the idea for Windows from Apple's graphical user interface.

In the 1990s, Jobs saw a demonstration of a new animation software program developed by filmmaker George Lucas and his company. He bought the company, combined the software with storytelling, and created Pixar and the first computer-animated film, *Toy Story*.

Over ten years ago, Jobs saw the first MP3 player. He combined it with an integrated website, iTunes, and, with cutting-edge design from Jonathan Ive, created the iPod.

Business gurus suggest that employees should be comforted and heartened by the knowledge that the product they are contributing to matters to the customers they serve. Here's the thing: no matter how hard we try to sell the company to our employees, they still won't buy it until they are sold on who *they* are. Until people find out their own "why" — their own reason for doing what they do — they aren't going to buy the why of their boss or the why of the company they work for. Until people feel wholly fulfilled, focused and energized by their own core personal mission and focus, they aren't going to care completely about their employer's version of why.

Truly creative people are intrinsically motivated, working for the sheer joy of it. As people's options and choices increase, so does intrinsic motivation.

Sustaining the Innovative Mindset

If we are to sustain innovation in our business lives, we have to selectively abandon past behavior and pick up new habits and actions in equal parts. What is happening today may not be happening tomorrow; trends come and go, but constantly looking for ways to improve a product or process, or invent a new one, will keep us competitive in an ever-changing marketplace.

Seismic changes in the world have brought about increased connectivity, interrelatedness and interdependency. In such a rapidly changing world, no matter how cataclysmic the change, being optimistic about the future and embracing continual innovation are key to growth and stability. Change and upheaval clear the ground of orthodoxy and prime the pump for an explosion of ideas.

To keep moving ahead, organizations will have to keep rethinking and redefining their systems. Few of the traditional, orthodox methods and systems will be enough to carry us through the century and beyond.

Remaining curious, growing a repertoire of ideas, creating new mash-ups, and cross pollinating ideas with others is the new path that leaders must take. The path leads to taking bold actions that create new value. Step boldly.

THE SUMMARY IN BRIEF

When people who have been successful in life become parents, their perspectives shift dramatically. Their roles and identities change. Parents wonder if they can make a living, be true to themselves, and spend the time they desire with their children. In ***Passion Purpose Profit: 9 Keys to Building an Authentic Executive Coaching Business***, author Donna Karaba shares how you can be the parent of your dreams and do the work you love.

You can surpass your corporate salary with a business you operate from home. You can be happy, make a great living, and have the time to raise your children as you wish. ***Passion Purpose Profit*** opens the doors to her business so you can step inside, see how it works, and make your dreams come true.

IN THIS SUMMARY, YOU WILL LEARN:

- How you can realize success through acting upon your passion.
- What nine steps you can take to run a successful executive coaching business.
- How to overcome obstacles that impede your path to success.

How to Realize Success

Donna Karaba left her last corporate job in 2002 and began taking training classes through the Coaches Training Institute. Shortly thereafter she announced to colleagues that she was starting her own coaching business. She landed her first paying client with that announcement. When you begin acting upon your passion, you light a fire within you and that fire feeds other aspects of your life. Others notice something different about you. People are attracted to your confidence, joy, and personal presence. You become magnetic.

Karaba began developing herself spiritually as a coach, developing her intuition through meditation, reading, and writing material that caused her to dig deep emotionally. She found a clear sense of self as she discovered her calling. She was able to bring her spiritual being into her work in the material world. She became someone that helped free people to be happy in work and in life and help them become more fully present. And so can you.

A-U-T-H-E-N-T-I-C Leadership Business Model

Karaba has trained countless people how to start a successful executive coaching business. The heart of her program is the Authentic Leadership Business Model™. The underlying force is authenticity: drawing it forth in yourself, your clients, and in all your business relationships. She has been refining this model for over a decade. Use these steps as a recipe for success, adapting to your clients' needs. By utilizing these nine steps you will create fertile soil for your executive coaching business to thrive and blossom.

A: Awareness Forms Foundation

The foundational component is awareness. By enhancing awareness one can develop emotional intelligence (EI), a crucial ability for leaders. Leaders must be conscious of their emotions, behaviors, and words to be able to choose their responses. Awareness forms the foundation of leadership. Why? One of the key behaviors needed in leaders is the ability to listen and be fully present to another human being, primarily their staff, as well as their internal and external customers.

Consider the many demands on a leader throughout the day. Meeting after meeting, decision after decision. With so much activity, it can be difficult to clear the mind and be present. Ideally the leader can put aside what is pulling from the past or future and become present to the person or situation at hand. Being able to shift gears to listen with an open heart and open mind is a skill that can be developed through mindful practice. Thus, developing a personal mindfulness practice is key for leaders.

As a coach, it is best to lead by example and develop a mindfulness awareness practice of your own. As you cultivate awareness in your own life you become more grounded, more intuitive, and more present for your clients. It is also important for your client to develop these same qualities to become a more mindful leader. Start your client meetings with an awareness exercise and see the difference it makes to the quality of the meeting and the outcome for your clients.

U: Understand Needs

Understanding the needs of your client is crucial to your ability to provide value. The key to satisfying the needs of your customers is listening. Further, it is important to listen to your heart and ensure you understand your own needs. Remember that you cannot effectively serve others if your needs have not been met first.

Understanding the needs of your client will drive the activity of the business and will set the course for your service offerings and product development. Probe with open-ended, powerful questions and then remain quiet. Give them your full attention as they tell you what they need. Through inquiry and dialogue, those areas that are most important to your client will naturally surface. From there, you can assist your client in developing an action plan to reach their goals.

Understand your client's business goals so that you can do your work with clarity. It is helpful to understand the context in which you are working and what is at stake for a successful outcome. There are four reasons to establish clarity on the deliverables: 1) to quantify the potential value your coaching will bring the client company before you quote your service offerings and retainer fee, 2) to ensure you complete a successful engagement, 3) to determine the ROI and what impact your work can have on the client company who is funding the work, and 4) to obtain a client testimonial and reference for marketing purposes in securing new business.

T: Trust by Caring

You have many natural talents that create trust and lasting relationships. Your genuine care creates trust with your clients immediately. Do not take your abilities lightly. Too often we negate our natural talents and skills because we have not had to work hard to obtain them.

CEOs are people who rarely have an impartial ear where they can speak openly. The freedom to be vulnerable is not an option for CEOs because those close to them are either a board member, peer, staff, or family member and each has a stake in the matter. Your trust and care are valuable.

You are not only a confidant, but often a strategic thinking partner who is able to offer exceptional insights. Because you care about your client's happiness, you can provide a safe space, impartial ear, and an open mind that allows your clients to think clearly without concern for other peoples' agendas. Your client can be free to express their true potential. People are focused on their own problems and if you demonstrate genuine care in helping them solve problems, then you will build trust which opens the door for their higher self to come out. It is your job to establish trust. It is essential to a successful coaching engagement.

> Remember to always start and end on a positive note.

H: Honor Mission and Vision

It is optimal to work with ideal clients whose mission and vision is in alignment with your values. Meet with key stakeholders to ensure you understand their mission and vision as well as their expectations for a successful engagement. Be prepared to compare your ideal client profile to each coaching candidate. Take on assignments that align with your integrity. Be smart about what clients you agree to take on and insist on open engagement or walk away. Any leader worth their title will be happy to work openly with an executive coach because they know they will only improve their effectiveness. Do not compromise your integrity as a coach and trusted advisor and insist on common denominators for a successful engagement.

You need to review your mission, vision, and values regularly. Your mission is the effect you wish to have on the world. Your mission may be to make people happy at work, and lead from a place of authenticity and service. Your vision is how you see the world in an ideal state of being. Your vision may be a world full of engaged workers and leaders self-actualizing themselves and their organizations. Honor your vision and mission as you build your ideal clientele. Honor your client's mission and vision by drawing it out, clarifying it, and helping your client articulate that mission and vision to maintain focus.

E: Explore Stakeholder Feedback

To further a leader's self-awareness, it is helpful to gather 360-degree feedback. This involves assessing the client as they see themselves and assessing how others surrounding the client view the client as a leader. You should gather data from approximately twelve stakeholders: at least one superior, five peers, five direct reports, and external customers where appropriate. After interviewing all stakeholders and compiling the data, prepare a feedback report. It is helpful to present the feedback sharing client strengths and one or two areas of development. Deliver feedback to your client with compassion, kindness, and respect. Remember to always start and end on a positive note.

N: Nurture Highest Self

As an executive coach, you will address the very important, ineffable, inner world of your clients. Higher self, passion, soul, spirit, essence, and true self all describe this internal seed. Just as a plant needs the proper environment to grow and blossom, so does your higher self. Your job as an executive coach is to treat that delicate seed with loving care! Your goal is to provide the optimal environment in which that seed can grow and develop to its full potential. Self-awareness is what we are truly going for, because often the areas that are perceived as needing development are areas that the client is not aware of. As soon as you shed light on those areas, the client has a choice and can do something about it.

T: Teach Gaps in Leadership

After delivering the 360-degree feedback report, it's time to explore the gaps between where your client is and where your client wants to be. As a coach, you will teach your client specific leadership skills incorporating the client stakeholders' objectives, candidate objectives, and 360-degree feedback. With new insights, the client can decide how best to practice strengths and new skills to become more effective.

Examining the gaps and coaching your clients from where they are now to where they want to be empowers them to make meaningful change. Update the primary focus

regularly to ensure you are helping your client close the gap between where they are now and where they want to be as a leader and in life.

I: Investigate ROI

An ROI analysis may help you realize the success of the work being done and save you agony over pricing and self-doubt as to the value your client receives. If you can quantify the total value of the worth of the assignment - what it would cost the company to lose this employee at this time, or what the client company will gain by developing the executive - the information will help you justify your fee to yourself.

Having priced your services at the range you are comfortable working, determine now how much value you brought to the company by solving this problem. Review the estimated ROI to the actual ROI to understand how much the company gained realizing the coaching objectives. Price your services according to the value you bring.

C: Cultivate New Business

As a business owner, you will need to create a marketing funnel, or a continual flow of leads that can become prospects and eventually clients. Cold calling CEOs and executives is an excellent initial way to generate prospects and clients. If cold calling is not for you, you can choose another route to secure business with your ideal clients. Speaking and writing is another way to attract clients. Obtain email addresses or other contact information when presenting your information to an audience. Submit articles to online or print magazines or write a book about your business and convert readers to clients. Speak at local golf clubs, Rotary meetings, or chambers of commerce. When you open your business, you will devote 100% of your effort on business development.

Realizing the ebb and flow of business, it is recommended that you do business development 50% of the time and at an absolute minimum of 25% of the time after you have an established clientele. Use your existing clients to cultivate new ones through testimonials and referrals.

Obstacles and How to Overcome Them

You will find reasons to doubt yourself as you step into your own greatness. A common fear is, "Am I good enough?" Do not allow fear to get in your way. You must create a compelling vision for your future to move through and conquer fear.

It is helpful to create a vision statement of the person you are becoming and read this statement to yourself out loud every day. Your subconscious mind will accept the statement describing the person you are becoming and get to work in assisting you to become that person. Your vision will then draw you through the obstacles.

Keeping Your Dream Alive

Your spirit, your soul, and your passion matter. You must take yourself seriously and listen to your calling in life. Be persistent, believe in yourself, and follow the Authentic Leadership Business Model™ to transform your life into the one you have always imagined.

Donna Karaba, founder of Karaba Consulting, combines Fortune 500 experience, coaching, and transpersonal psychology to actualize leaders and organizations. She created The Authentic Leadership Business Model™ to teach coaches how to build successful businesses. Donna resides with family in Santa Fe, NM.

THE SUMMARY IN BRIEF

This is the story of how a business builds a culture – and how the values behind that culture have touched so many lives. In 1987, Marc Stefanski succeeded his father Ben as Third Federal chairman and CEO. This is where the story begins.

People First: The Third Federal Way is a story that invites reflection on how we live both our personal and professional lives. Third Federal survived numerous challenging moments. Its leadership team went through the Great Depression, the savings and loan crisis of the 1980s, the housing bubble of the 2000s, the Covid-19 pandemic, and others. Through all these challenges, Third Federal remained strong, stable, and safe.

IN THIS EXECUTIVE BOOK SUMMARY:

- The secrets of running a successful family business
- Leadership paves the way forward
- The most important Third Federal values that have remained unchanged through the decades
- Learn how business and family life can complement each other

Chapter 1: Values, Family, and Business: An Introduction

The Third Federal story really starts with my father, Ben Stefanski. Not when he started the bank, but many years before that, when he worked as a real estate secretary and managing officer at Pyramid Savings in Cleveland. My father was moving through a promising career when the stock market crash of 1929 happened, and Pyramid became one of the many financial institutions that failed.

By collecting mortgage payments when possible and selling off property when he could, he eventually paid every penny back to Pyramid's depositors.

"A hundred cents on the dollar," he used to say, which meant that he intended to mark and repay every last cent, to piece back together every dollar he'd been entrusted with.

My father's attitude toward his depositors back in the Pyramid days and his drive to treat his depositors as if they were his own family are still alive in the values of Third Federal. They're the foundation upon which the now multigenerational bank has been built. After my father had paid back all his depositors, he founded Third Federal Savings and Loan.

Third Federal Savings and Loan is a $17 billion thrift founded in 1938 in a predominantly Polish neighborhood in Cleveland by my father and mother, Ben and Gerome Stefanski. The bank has prospered because it embodies the sort of respect and integrity my father showed throughout his career.

Our values have resulted in astounding growth, perpetuated healthy families among our associates, and re-energized many of the communities we serve. We believe that work should be gratifying and fun while also believing that all these values lead to a commitment to excellence.

These values create a positive feedback loop that not only makes Third Federal a stable, prosperous company for its associates but also one that helps its community and finally often makes a great impact upon the families of those who work and bank there. This book is meant to showcase these values for those not familiar with Third Federal and also to serve as a celebration of the Third Federal values for its associates and its customers.

Much of this book is about how the core values became an integral part of the leadership at Third Federal. As an introduction to these values, it's important to examine the way our leadership style led us to these values. My dad's heart attack was, unfortunately, the de facto succession plan for the bank, which really took effect when he subsequently suffered a series of debilitating strokes.

A critical moment in my journey to finding the values of Third Federal came when I was asked to step up as the CEO of Third Federal. I wasn't in charge, and then the next moment I was.

As I took over, I knew that anxiety was the prevailing feeling among the longtime associates at Third Federal; it's not easy to watch someone new take the lead, especially so unexpectedly. One counterbalance was to be open about my thoughts and what I saw as being best for the organization. It was time to expand the bank beyond my dad's dominant personality. I told the associates that I was determined to make my mark as CEO in my own style. Since my natural inclination is to build and enjoy trusting, caring relationships, I wanted to make people the bank's focus, as well.

Chapter 2: Leadership

The heart is always involved in leadership—caring for people is the soul and spirit of influence and guidance. This kind of leadership wasn't new to my mother, not really. It was a deeply held philosophy of hers, and it just took me some time and maturity to see it. When I used to go to her office at the bank to visit with her, she'd say, "Marc, use your position to firmly guide with kindness and understanding."

In addition to nurturing, I think leadership involves being one who shows the way. A leader is somebody who is looking to the future, and I think leadership (as opposed to management) is more about the heart than the head.

As a company, Third Federal uses its vision of leadership to provide a sense of continuity and to perpetuate a culture in which it is easy to thrive. Our practices support our goal of using values to build relationships.

When leaders show personal interest, have integrity, and embrace the value of love, they take action on the behalf of people. They have the opportunity to give of themselves and to make an effort for others' well-being. Caring—that's the true joy of leadership and also a way to make life's challenges easier to bear.

None of this is to say that Third Federal doesn't emphasize profitability.

An emphasis on profit is needed to balance out compassionate leadership. The emphasis Third Federal has on helping

Love, in reality, defined in terms of the values of Third Federal, means a genuine concern for others.

its various communities does require a steady and clear vision in its leadership. Leadership in this style needs to balance being soft on people with being hard on issues

Chapter 3: Love

"Love" is the kind of term that gets a cringing reaction from the cynical realists of the world. It's the kind of term that might even earn someone an HR meeting in the right context. Love, in reality, defined in terms of the values of Third Federal, means a genuine concern for others.

At Third Federal, love is one of our values—perhaps the value from which all our other values, in one way or another, originate. In the context of Third Federal, love refers to the genuine concern for others. It guides our organization, the culture among our associates, and our interactions with our customers. It's the foundation for our customer service, the products and services we offer, and for how we interact with our community. So how do we practice love on an institutional level, and how does that end up benefiting Third Federal and its customers?

For starters, we place our genuine care for our customers and our associates above all other concerns. This means we do not engage in short-term strategies that might alienate customers, be bad for our associates, or damage the long-term reputation of Third Federal.

This genuine care we have for our customers has been so effective that we retain customers for decades and generations, and we draw in many of them through referrals. We also regularly receive letters of thanks. Both our associates and our customers tell us that they feel as if they are part of our family when they're interacting with Third Federal—that they are grateful that our organization is what it is and that they feel thankful to be a part of it. It all sounds very utopian, but it's also a practical matter. This culture centered around the value of love greatly strengthens Third Federal and has enabled us to be a multigenerational bank that is the cornerstone of the communities where we have established branches.

In addition to using love as a guiding principle for our interactions with customers, we emphasize love among our associates.

As a result of this emphasis, we have minimal annual turnover among our associates. We also only have a third of the associates an organization our size typically has. Our associate turnover is under 5 percent. The turnover for financial institutions tends to be much higher, typically 23 percent in the banking industry. These numbers let us transition a significant portion of our company into an online workplace almost instantly during the COVID-19 pandemic, and it kept our workforce intact through it all. People at Third Federal are willing to go the extra mile for our values.

Chapter 4: Trust

Although trust itself is a soft value, the results speak for themselves. We have a record of strength and stability, so our customers knew to believe us when we told them that the proceeds from our IPO would be used to further increase our capital position and facilitate an expansion that would make us even more stable. Third Federal had a $5 billion market cap and $10 billion in assets at the time. It currently has $17 billion in assets as of 2024. This is a result of the trust our customers place in us. Our commitment to honoring that trust is what put us in a strategic position that allowed us to survive the 2008 mortgage crisis.

When we pursue trust with customers, we start off by establishing a strong sense of mutual communication. One of the frequent pieces of positive feedback we receive is that we use "layman's terms" as we explain our loan offerings and the loan origination process. We also engage in the fastest turnaround times possible with our loan approval process and document preparation. Customers left waiting generally trust the process less and grow more anxious about what's going on with their loan. Similarly, we let customers know exactly what their rate will be when they apply. Many banks wait until the loan is being finalized and closed before offering the true rate. They want to bait and switch the customer—obviously not a move that's going to

inspire trust. Ideally, our customers know what's going on throughout the entire process, and they trust us once they see that we're plain dealers who uphold our end of the relationship. We want them to see for themselves that we prosper when they prosper and that we survive by keeping them as a customer and even earning their trust and support so that they bring their families and friends to Third Federal.

Trust is, by its very nature, a long-term commitment. Life would be easy if things like our IPO story could have a fairy-tale ending like "happily ever after," but some of our customers who had been with the bank almost since the beginning, began to run into problems a few years after purchasing the preferred offering of our stock. We began to get calls from customers who had purchased stock and who had since become widows or widowers or who were the surviving family members of those who had purchased the stock. In many cases, these customers were unfamiliar with stock ownership and the disposition of their investment.

Chapter 5: Respect

Respect is critical. It's why it's one of the values at Third Federal. It has these apparent benefits that many people could trace, but it often leads to even more intangible benefits.

So how does an organization create an atmosphere that fosters respect? One of the things we do is to emphasize the achievements of teams and groups rather than heaping glory upon an individual leader. We want to make sure that everyone in the bank is aware that we know of their contributions and that we know how critical they are — even if those accomplishments aren't necessarily as visible as those of their colleagues. We want everyone in the company to be aware of these ideas—to that end, we frequently make an eff ort to bolster and reinforce that teamwork with special events and visiting public figures.

Sometimes fostering respect in your company might take some big leaps and some significant guidelines. For instance, for most of our history, Third Federal generally has not allowed associates to work from home, and since the pandemic, we offer hybrid schedules rather than fully remote positions. Emailing and video conferencing from home may have their advantages, but in other ways, they undermine the effort to reinforce a culture of caring.

Expanding on the idea, we also put a lot of emphasis on respect for the customers.

Demonstrating the respect we have for our customers is of paramount concern to Third Federal. The "Yes! We Can" campaign was meant to emphasize this for both our associates and our customers. Customers who know that we respect their needs are more likely to choose us as their bank. I believe it's one of the many reasons we have so many multigenerational clients.

Chapter 6: Excellence

By the end of the 2008 mortgage crisis, Third Federal was still standing, and in better shape than most of the competition. This is because we hold our associates to a higher standard in terms of commitment to the job, production, dedication, and loyalty.

Here's what outside analysts often don't understand about Third Federal—that my father's experience in the Great Depression still guides the bank to this day. My father always made sure the bank had more than enough capital. My father also only found new markets in clients who he knew would pay back their loans. He was not only flexible but also careful. Third Federal invests heavily in its community, but the risks we take are very calculated. When we give loans in less than ideal circumstances, we make sure they are endeavors that are going to improve the communities we serve.

To reinforce this and provide stability, we stay profitable by focusing our marketing strategies on attracting strong customers who will pay us back. This strategy has helped us to keep a capital ratio that is well above that of our competitors. All of this means that, as much as we would like to help them, borrowers who intend to engage in speculation or flipping are welcome to look elsewhere. That conservative approach is the right thing to do for Third Federal, and it is the basis for our commitment to excellence. Simultaneously, Third Federal has a large commitment to lending in its communities, ensuring that we provide growth that helps everyone thrive.

A commitment to excellence involves constant evaluation. Are you setting the bar high enough? Are you engaging with the needs of both associates and customers? Are you constantly questioning your own perspective? Are you adhering to your values while you do all this?

The associates at Third Federal are trained to ask themselves the following: What kind of quality and diligence are we putting into our relationships? Are we fully satisfied with the way we help our customers? If not, is there room for

Reacting to chaos, and sometimes even creating it, is a part of growth and innovation.

improvement in those interactions and tasks?

A true drive for excellence involves a number of endeavors where perfectionism is virtually impossible. People who strive for excellence have a strong need for order and organization, but they also need to understand that not all will be ordered. Reacting to chaos, and sometimes even creating it, is a part of growth and innovation. Those who strive toward excellence obviously have high expectations for themselves, but they also need to be able to accept their own mistakes and have positive ways of coping with those situations where perfection is impossible. One of the most vital traits of a person who achieves excellence is that they are able to both recognize and learn from their mistakes.

Chapter 7: Fun

As ironic as it seems, fun is a serious part of Third Federal's overall strategy for success. It's the way that we manage people, our message, and our delivery of value to our customers. We take ourselves seriously, but levity is important to our culture. We approach fun as a way of keeping our culture intact, reinforcing our values, and strengthening the bonds we have with each other.

One of the main ways that we accomplish all of this is with the events we have for our associates and their families. We make fun events part of our work routine at Third Federal all year long, and we promote many company-sponsored events across April, so many that we call April "Fun Month." In addition, I host a Christmas gathering for associates in each of our regions, and a summer concert and celebration for associates and their families in both Cleveland and Florida each year.

Chapter 8: Making a Difference: A Legacy of Love

Charity is one of the chief virtues of being a human being. We're at our best when we're helping others. It's always been my opinion that those who have the means to help others are under the obligation to do so. It's important to leave a legacy of love for our families and communities. Charity is a way of doing this that isn't just about making widgets.

Starting with my father, my family has always done our best to contribute to our community. The Slavic Village neighborhood and the other areas surrounding our bank are some of the main areas in which we engage in community investment, but they're just the start of the impact of the Third Federal Way and our values.

One of the biggest impacts on our drive toward charity, and the namesake of one of the main charities of the Stefanski family, is named for my wife, Rhonda, who passed away from pancreatic cancer in 2014.

Rhonda was on the path to carrying out her own philanthropic undertakings when she was diagnosed with pancreatic cancer during a routine examination. Her efforts were cut short, as she passed away within ninety days of her diagnosis. It was quick and devastating for me and our five children.

After having seen the awful effects of cancer and knowing that Rhonda didn't get to carry out the biggest charitable endeavor she'd ever undertaken on her own, the Stefanski family started Rhonda's Kiss. This charity is aimed at bringing comfort and providing patient support services to those families who are undergoing cancer treatment and don't have the means to meet the various financial challenges a cancer diagnosis presents.

Conclusion

In 1999, Third Federal hired an analyst to look at our business. I wanted to make sure we were in great shape—to get an outside opinion. It's easy to miss something if you limit your perspective. They poked and prodded around the bank, getting to know the people involved, our processes, and how we managed our workforce. When finished, we sat down in my office and went over the big report at the end of their examination. They projected graphics, ran down the figures, and had generally dissected the entire business.

They were deeply impressed with how we do things. The

results Third Federal gets are, after all, undeniable. But they had one nagging issue. Why not get rid of all the touchy-feely stuff? Why not eke out even more profit and productivity? Why not service customers faster?

Why not expand more?

These are the kinds of questions I've come to expect from people who don't think the Third Federal Way. They put short-term profit over the core values we have, and it shows. Growth doesn't matter if it isn't stable. Profit doesn't matter if you need to exploit your customer, or your associates, to get it. That's how you lose good people. In our experience, that profit is likely to be destabilizing. Third Federal makes a profit by thinking in the long term. Our goal is always to be among the best in the market, and we do that by acting fairly and remembering our values.

The love, trust, respect, commitment to excellence, and fun that drive the Third Federal Way make us exceptional. Adhering to all our values makes us a formidable force in the banking business.

As I write this, I've been reflecting on a new practice I've dedicated myself to—and preached heavily to my team. On holidays and special occasions, we've come to expect gifts—cards, objects, and money. Sometimes it's something a person really wanted; other times it might not be. Either way, I've realized that we rarely get what we want from these exchanges—the sentiment behind them. I'm now dedicated to giving people the gift of words. These can be kind, encouraging, loving, supportive, nurturing, or fun, but they'll definitely be words that are meaningful to the person I'm speaking to, like: "I love you;" "You're special to me;" "I couldn't run this company without you;" "You make a huge difference here."

The gift of kindness matters at home as well as at work. Imagine if we had more kind words for our significant others and friends and coworkers. The world could be changed.

An awareness of how much people matter, of how we need to trust, love, and respect each other, and to have fun in our quest towards excellence, those are priceless things. They're the Third Federal Way.

I couldn't be more grateful for the chance to live my life the Third Federal Way.

I hope you have a chance to live that way too.

Marc A. Stefanski is chairman and CEO of Third Federal Savings & Loan, headquartered in Cleveland. The company was founded by his parents, Ben and Gerome Stefanski, in 1938. Under Marc's leadership, the company has grown from $2 billion to $17 billion in 2024. Marc, the youngest of five children, grew up in Shaker Heights, Ohio. Along with his family, his first loves were music and sports, forming his own rock back in eighth grade, a version of which continues today.

Page 3

THE SUMMARY IN BRIEF

A high-performing team must be more than a collection of high-performing individuals. In the sports world, these synergistic groups are called powerhouses. You can learn to cultivate well-oiled teamwork in your organization.

Author Kristine Lilly was only sixteen when she was asked to join the US Women's National Soccer Team. In ***Powerhouse***, you will learn more about how she and her teammates successfully and continuously won World Cup championships and Olympic gold medals, and how you can apply these same "tactics" to shape your business's journey forward to success. Complementing Kristine and her teammates' expertise, you'll find research on teamwork and business examples from John and Lynette Gillis.

Four pillars frame the tactics that teams need to take. These pillars are: Transform, Empower, Achieve, and Motivate. The final tactic, "Doing What Is Right," serves as a foundation for everything the team accomplishes. It will not always be easy, but with practice and perseverance, you can be well on your way to building your own powerhouse.

IN THIS SUMMARY, YOU WILL LEARN:

- To select the right talent and align them with the team direction.
- How to empower a team, both individually and collectively.
- To lead a group to generate, evaluate, and implement team solutions.
- Ways to build a team grounded on trust.

Transform

Effectively transforming a group of individuals into a powerhouse starts with selecting the right talent to join your team. This team determines its purpose as well as its strategy. Once a strategy is set for execution, each team member acts interdependently to contribute to the completion of a clear, specified, and common goal.

Selecting Exceptional Team Members

When Kristine was a freshman at UNC, members of the soccer team had to pass a fitness test to play in each game. The test measured the player's fitness levels, but it also built respect and trust among the team. With a lap to go, as a "green" inexperienced player, Kristine was struggling. Tracey Bates Leone, a "gray" senior on the team, decided to help by running backward next to Kristine and encouraging her, even though this meant Tracey would have a slower finish time on the fitness test. They pulled each other through and finished the lap on time.

Team composition matters. If you have a collection of team members with different working styles and various levels of experience, your team will be stronger and more effective. At your corporation, your team members will come from a continuum of "green" and "gray" colleagues. These different generations bring different skills, experiences, expectations, and other factors to the workplace. As you build successful teams, the key is to identify and optimize each person's diverse offerings for the benefit of the unit.

Aligning the Team Direction

All successful teams need a reason for being—their raison d'être. Organizations that have a meaningful and understood purpose will outperform those that do not. The reason for this is simple: Those organizations have focus and ambition behind their work. Purpose answers the question, "Why do you do what you do?" Purpose drives performance.

Coach Dorrance once told the women's national soccer team, "Every time you step on the field you're selling the game, changing minds, and changing the culture of what is possible for women and everyone." When Kristine first heard this statement, her response was, "I just want to play soccer." Eventually, she came to understand everything he taught them, and each action they took on the field was selling the game. They were helping not only themselves as athletes become more successful but also their team, and by extension, they were helping to establish women's soccer as a professional sport.

Scoring a Goal

Building a powerhouse comes from being focused on scoring goals. These goals should be specific to align team activity. A team should have both stretch goals and attainable goals so they can achieve small victories in the short term, while simultaneously challenging themselves to achieve greatness in the long term. Goals should be shared with the team to hold all members accountable in a competitive environment.

When Kristine was younger, there was no women's soccer in the Olympics, but as a young girl, she thought maybe one day she could compete in the Olympics. With the dream to win gold, she set out to accomplish smaller, more specific goals first. To contribute to her team's success, her objectives were about individual preparation, working hard, and making a difference. Later, she and her teammates had a constant mission: to win. Not just the World Cup or the Olympics, but every game. Every game reflected their team's capability and gave them opportunity to work together.

Empower

In a powerhouse, there is a leader who inspires, sets expectations, and develops others. Principled leadership asserts authority in an empowering manner, aligning individual rewards with the team's goals. If the situation is global, there is an opportunity to cross-pollinate better practices from different countries.

Setting the Team Foundation

When a leader effectively sets a foundation, they must build on solid ground. To create a solid base for the team, a leader should inspire the team, set clear expectations, and develop talent. Without these actions, the foundation is more like sand, and the team's performance will be unstable.

One CEO set his company's team foundation by focusing on product quality. One day, he was walking through the assembly plant and saw that one of the finished products had a slight imperfection. To make a point about the expectations he had about product quality, he went over to the end of the assembly line and destroyed that product. This action was extreme, and the story went viral throughout the company. By doing this, he set a team foundation: quality was essential, and imperfection was not acceptable. This leader's behavior was much more impactful than a "value" posted on the wall.

Leading the Team

A captain is the leader of the team who connects and builds

trust on the team. When Kristine didn't serve as team captain, her role was to follow the teammate who had been selected to lead. This following of the leader is still a leadership role; it just doesn't come with a title. It is more pull than push, showing up the way you want others to show up. As a team member, you need to know when a team needs you to lead and when the team needs you to follow. If you are leading, then remember to empower and recognize those supportive followers who are aligned to the team's direction.

Serving on International Teams

When serving on international teams, be culturally aware, as your culture's norms and expectations are different than others. You also want to cross-pollinate, to learn about better practices from other countries that you can adopt and bring to your business.

A global technology team was dealing with different cultural expectations. The company, headquartered in Canada, had deployment phases around the world. This global team had to adapt to local preferences to be successful. In Great Britain, this meant small differences like the size of standard paper in the printer or the preference of a raincoat for team swag (useful for their weather) instead of the usual company-issued hoodie (which was culturally looked down upon). In Asia, the attempt to survey employees for input had minimal impact due to their hesitation to give feedback. In South America, meetings always started late even though timing was critical to the team. The company's financial cost grew the longer the project ran, yet in Europe, no one works in August, and the organization burned millions while the local employees took their annual vacation. The team adapted to each regional variation to overcome the differences and implement the technology on budget and on time.

Achieve

To achieve, the powerhouse must learn through preparation, practicing, and then, performance. Honest communication and listening to each other ensures each decision is made collaboratively. When a problem does emerge, the team engages to generate, evaluate, and implement a proactive or reactive solution.

Learning Teamwork

Basketball has isolation plays, baseball has individual execution, and even American football short set plays dictate exactly what a player is supposed to do. Soccer players, however, are always interdependent on one another in a fluid, creative, and ever-changing context. Players must know each other so well that they can intuitively sense what other players are going to do. What one player does on the field impacts what another does—where they move and what the strategy is.

Preparation, practice, and performance are integral parts of a powerhouse. Team members prepare themselves to help the team reach its potential. They then practice their teamwork process through a dress-rehearsal simulation. Finally, they perform when it's time to execute their winning strategy.

Communicating with the Team

Communicating effectively within the team includes active listening. It also entails establishing a social network so that team members understand whom the central person is. And lastly, it involves collaboration so that the team functions as a unit.

A business school dean has a practice of listening 80 percent of the time and only speaking 20 percent. He also says that 20 percent should be full of questions. He uses inquiry to fully understand what is going on, seeking to understand and challenge the assumptions below the conversation's surface. The dean ends the conversation by asking, "Is there anything left that you have not told me? Is anything that we have discussed unclear? Is there any other information you need that I have not yet provided?" These questions effectively communicate his desire to help the person he is speaking to. What would be the point of hiring a good team member with excellent experience and potential if you're not going to trust them?

Handling Team Conflict

Out of all key tactics in this book, the mismanagement of conflict is the most significant potential derailer. Task conflict is a "what to do disagreement." By contrast, relationship conflicts consist of disagreements based on interpersonal issues, political norms and values, and personal taste.

Kristine's team captains took care of business. They put out fires when most of the team or the public didn't even know there was a fire. When needed, the captains facilitated a conversation to hear everyone's opinion. They never avoided anything. They dealt with the issues head-on, whether that was talking with the head coach about the team being burned out or talking with unhappy players to understand each player's perspective.

Motivate

The members of a powerhouse create a team culture,

based on trust, with specific roles clarified for each person. Through the work that the members of the team are committed to, they build friendships and a sense of belonging as well as their individual self-awareness. They have a positive mentality while seeking a standard of excellence. Working synergistically brings satisfaction for all.

Creating Team Chemistry

To be effective, a powerhouse needs chemistry—created by clarifying roles and engaging every player on the team. They also achieve chemistry by building trust from being benevolent, reliable, and honest in team relationships. Finally, they demand accountability.

At the 1999 World Cup Final Game, Brandi Chastain, scored the final goal for her team to beat China, a shot that would change their lives forever. Brandi spontaneously took off her jersey in celebration and slid on her knees, flexing her arms with fists clenched. The moment was captured in one of the most famous soccer photographs ever. Yet, it wasn't about Brandi and her achievement. The team needed many crucial plays to get the win that day. The game consisted of ninety minutes of hard-fought regulation time and two fifteen-minute grueling overtimes. The game was years of work by twenty women pushing each other to be the best. It was a team putting the team first.

Cultivating the Team Ethos

A team ethos is the guiding character of an organization, its reputation. A corporate ethos exists, whether a leader engages to create it or not. The team ethos comes down to three principles: build friendships, increase self-awareness, and develop team awareness. Friendships are important to have on the team, as this creates a healthy bond and psychological safety net for team players. Increased self-awareness comes by knowing yourself. Team-awareness is also vital so that individual members of the team can understand how they are perceived by others while also focusing on the specific dynamics within team relationships.

Seizing a Winning Mentality

Rudy's Bar-B-Q has a motto that drives quality: "The Love of Excellence." Whether it is in ingredients or customer service, Rudy's delights guests with a memorable dining experience because their "why" is quality. They accomplish this quality by overcommunicating, overlearning, over-measuring, and trying to be perfect—even down to the amount of lemonade to pour into a glass so that it satisfies the customer without overflowing when a lid is put on.

Doing What is Right

Finally, when doing the right thing, powerhouses overcome adversity by confronting their failures. These teams should seek diversity for the positive business impact by finding their centered set. A powerhouse is ethical, clearly knowing right from wrong and working to transform its culture so that it can effect societal change.

Kristine Lilly is an expert on effective teamwork and provides lessons gleaned from her remarkable career as an Olympic midfielder for the United States Women's National Soccer Team.

Dr. John Gillis, Jr. facilitates executive leadership development using a dynamic business simulation for LeadershipX and has worked for IBM, Accenture, Center for Creative Leadership, and The Conference Board.

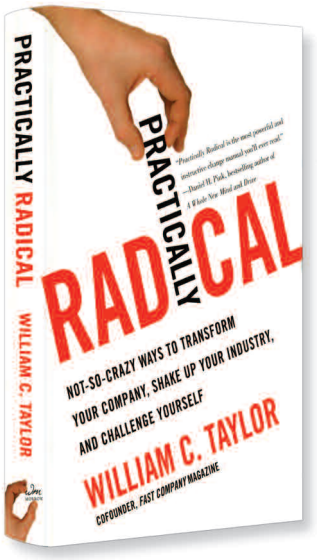
Leadership

Practically Radical

Not-So-Crazy Ways to Transform Your Company, Shake Up Your Industry and Challenge Yourself



by William C. Taylor

THE SUMMARY IN BRIEF

Practically Radical is a manifesto for change and a manual for making it happen — in an era when change is the name of the game.

Businesspeople everywhere are engaging in a dramatic "rethink" of how they lead, work and get results. In an age of fierce competition and stubborn recession, the status quo just doesn't cut it. But how do you break new ground when there is so much pressure to do things the same way as everyone else? Using his years of experience and thought leadership in the business world, William C. Taylor, the co-founder and founding editor of *Fast Company* — one of the world's most admired business magazines — offers radical ideas and practical advice to help you fix what's wrong with your organization, launch new initiatives with the best chance to succeed and rethink the logic of leadership itself.

Practically Radical goes deep inside numerous for-profit companies and non-profit organizations to find out how they've made remarkable strides in tough circumstances. It is a handbook for successful transformation and a great tutorial for implementing your change agenda.

IN THIS SUMMARY, YOU WILL LEARN:

- How to see opportunities the competition doesn't see.
- How the most successful organizations embrace one-of-a-kind ideas in a world filled with me-too thinking.
- How practices that are routine in one field can be revolutionary when they migrate to another field.
- How the middle of the road is the road to ruin.
- How to get the best contributions from the most people.

Introduction: A Game Plan for Game Changers

Most executives worry more about sinking the boat than missing the boat, which is why so many organizations, even in flush times, are so cautious and conservative. However, the opportunity for executives and entrepreneurs is to recognize the power of *rocking the boat* — searching for big ideas and small wrinkles, inside and outside the organization, that help you make waves and change course.

That's the call to action: Don't use the long shadow of economic crisis and slow recovery as an excuse to downsize your dreams or stop taking chances. The challenge for leaders in every field is to emerge from turbulent times with closer connections to their customers, more energy and creativity from their people, and greater distance between them and their rivals.

More and more executives, deep down, are beginning to appreciate that caution and conservatism — doing more of the same, but with less confidence and conviction — is a formula for disaster, not a source of stability or shelter from the economic storm. For these aspiring game changers, *radical shifts* represent a direct challenge to convention and a break with the status quo. At the same time, most leaders are realists of the first order. They may get energized by new ideas, but they recognize the limitations within their companies, among their colleagues and even inside themselves to bring these new ideas to life. In that spirit, there are ready-to-go techniques — *practical steps* they can apply right away. ●

PART ONE: TRANSFORMING YOUR COMPANY

What You See Shapes How You Change — The Virtues of Vuja Dé

Let's be clear: We are living in the age of disruption. You can't do big things anymore if you are content with doing things a little better than everyone else or a little differently from how you've done them in the past. The most effective executives don't just rally their colleagues to outrace the competition or outpace prior results. They strive to *redefine the terms* of competition by embracing one-of-a-kind ideas in a world filled with me-too thinking. That's a defining challenge in times of great dislocation: What do you see that other organizations don't see?

Or, to put it differently, the best leaders demonstrate a capacity for vuja dé. We've all experienced déjà vu — looking at an unfamiliar situation and feeling like you've seen it before. Vuja dé is the flipside of that — looking at a familiar situation (an industry you've worked in for decades, products you've worked on for years) *as if you've never seen it before* and, with that fresh line of sight, developing a distinctive point of view on the future. If you believe that what you see shapes how you change, then the question for change-minded leaders becomes: How do you look at your organization and your field as if you are seeing them for the first time?

Vuja dé may be a strange term, but it's become a strangely popular term among some of the brightest

thinkers on creativity. What matters here is how leaders apply the vuja dé mindset to the challenge of making big change in tough times. And that's where the unlikely twist comes in.

The virtue of vuja dé is that it reframes how organizations make sense of their situations and build for the future. But that's different from a wholesale disavowal of the past. Sometimes, the very act of rediscovering and reinterpreting the past creates the clarity and confidence necessary to craft a distinctive game plan for the future. ●

Where You Look Shapes What You See

"Every great advance in science," wrote the philosopher John Dewey in *The Quest for Certainty*, "has issued from a new audacity of imagination." That's true for leaders as well as scientists — and what better way to fuel your imagination than to look for inspiration beyond your field?

How Toyota Taught Virginia Mason to See

It's easier to see intractable problems with fresh eyes if lots of eyes are trained on those problems — and focused on solutions from new and unfamiliar fields. Game-changing strategies that evoke Dewey's "audacity of imagination" don't have to spring from the imaginations of a few senior leaders.

One audacious example of this phenomenon is the bottom-up transformation of Virginia Mason Medical Center, a 90-year-old hospital in Seattle, Wash., with 400 doctors and nearly 5,000 employees.

For years, despite a rich history, Virginia Mason struggled with deteriorating finances, inefficient processes and uneven quality — like so many other big, established hospital systems in the United States. Its CEO, Dr. Gary Kaplan, who took charge in February 2000, understood that merely trying to borrow ideas and techniques from the medical establishment might not have that great an impact on Virginia Mason's fortunes — best practices in the field, truth be told, weren't all that great.

As they searched for new sources of ideas, Kaplan and some colleagues got exposed to, and became fascinated with, the most advanced practitioners of Japanese-style quality management in general, and the Toyota Production System in particular — the blend of "just-in-time" assembly techniques (*kanban*), continuous improvement (*kaizen*) and frontline employees who fixed problems in real time (*jikoda*).

The legendary Eiji Toyoda had used the Toyota Production System to drive Japan's flagship company to global prominence — and Kaplan came to believe that his organization could borrow methodologies from this rich tradition to fix its problems and advance the state of its practices.

So he and the hospital's top executives began an intensive program of learning about the theory and practice of Japanese quality management, and the entire leadership team took its first trip to Japan in June 2002 to see for itself how the ideas worked on the ground. Ever since, literally hundreds of Virginia Mason staff members have made similar trips, with Kaplan leading all of them, in which doctors, nurses and hospital staffers get exposed to the intricacies of how Toyota organizes work, tracks quality and solves problems.

Kaplan explains. "We stick a bunch of doctors on an assembly line. We use the methods and tools we've learned, we come up with suggestions and the Japanese put them into place! It's a very intense experience."

Years of in-depth study of the Japanese quality movement have transformed Virginia Mason. Among its many achievements, the hospital eliminated millions of dollars of needless inventory, cut the time required to deliver lab results by 85 percent and reduced staff walking distances by 60 miles per day. One rapid-improvement team redesigned how nurses interact with patients and with each other — allowing nurses to spend 90 percent of their time at the bedside, as opposed to 35 percent before. ●

Radically Practical (I) — Five Truths of Corporate Transformation

If what you see shapes how you change, and where you look shapes what you see, then the hope is that seeing what these leaders have achieved will help you achieve your agenda for reform and renewal. Specifically, the hope is that it will allow you to reckon with the five truths of corporate transformation. Because the truth is, the work of making far-reaching change in long-established organizations is the hardest work there is.

1. **Most organizations in most fields suffer from a kind of tunnel vision, which makes it hard to envision a more positive future.**

That's why the first challenge of change is originality — for leaders to see their organization and its problems as if they've never seen them before and, with new eyes, develop a distinctive point of view on how to solve them. All too often, especially in long-established companies, long-held expertise gets in the way of groundbreaking innovation.

2. **Most leaders see things the same way everyone else sees them because they look for ideas in the same places everyone else looks for them.**

That's why the most effective leaders I know aren't big fans of "benchmarking" the competition — a commonplace exercise for inspiring change that often serves to reinforce the problem of tunnel vision. How enlightening is it, really, to learn from the "best in class" in your industry, especially if the best in class isn't all that great? So why not learn from innovators *outside* your industry as a way to shake things up and leapfrog your rivals? But looking for ideas in unfamiliar fields is not just about relocating what works from one industry to another. It is also (and more significantly) about reimagining what's possible in an industry.

3. **In troubled organizations rich with tradition and success, history can be a curse — and a blessing. The challenge is to break from the past without disavowing it.**

For even the most determined change agents, history and tradition can be unrivaled sources of strength — guides to enduring values, reservoirs of timeless expertise. Psychologist Jerome Bruner, in his collection of essays, *In Search of Mind*, has a pithy way to describe what happens when the best of the old informs the search for the new. The essence of creativity, he argues, is "figuring out how to use what you already know in order to go beyond what you already think."

4. **The job of the change agent is not just to surface high-minded ideas. It is to summon a sense of urgency inside and outside the organization, and to turn that urgency into action.**

There's a reason Harvard Business School's John Kotter titled one of his most recent books on change *A Sense of Urgency* — that's the big missing ingredient. "It occurred to me how often I was being asked, 'What is the single biggest error people make when they try to change?'" he wrote. "After reflection, I decided the answer was that they did not create a high enough sense of urgency among enough people to set the stage for making a challenging leap in some new direction."

5. **In a business environment that never stops changing, change agents can never stop learning.**

Sure, it is the job of leaders to be effective and engaging teachers — to rally their colleagues around a distinctive set of ideas and a well-designed strategy for bringing those ideas to life. But the best leaders I've met, regardless of their industry, experience or personal style, have also been insatiable *learners*.

PART TWO: SHAKING UP YOUR INDUSTRY

Are You the Most of Anything? Why Being Different Makes All the Difference

Ray Davis, president and CEO of Umpqua Holdings, based in Portland, Ore., took charge in 1994, when Umpqua was a pipsqueak of an outfit with six branches in and around the southern Oregon town of Roseburg, assets of $140 million and, in his words, a "plain vanilla" strategy. Since then Umpqua has been one of the regional-banking industry's rising stars. It has 150 branches stretching from Napa Valley to Seattle, assets of $8 billion and a unique strategy that positions Umpqua as a lifestyle brand rather than as just another local bank. Davis and his colleagues like to answer their phones with the greeting, "Welcome to the World's Greatest Bank, how can I help you?" and the training department is called "World's Greatest Bank University."

Davis explains his bank's approach to business, in boom times or dark times, this way: "In an industry like ours, which is so old, where people are used to doing things one way, with blinders on, this model is not just shifting the paradigm. It's crashing and burning and nuking the paradigm! That's how you stay relevant. And if you can't stay relevant, you're done. The banks that are failing have no value proposition — nothing — other than, 'We are a bank and we will offer you a higher rate.' We have a one-of-a-kind value proposition in our industry."

The lesson is as simple as it is subversive: It's not good enough to be "pretty good" at everything anymore. You have to be *the most of something*: the most elegant, the most colorful, the most responsive, the most focused.

For decades, organizations and their leaders were comfortable with strategies and practices that kept them in the middle of the road — that's where the customers were, that's what felt safe and secure. In the new world of business, with so much change, so much pressure, so many new ways to do just about everything, the middle of the road has become the road to nowhere.

As Jim Hightower, the colorful Texas populist, is fond of saying, "There's nothing in the middle of the road but yellow stripes and dead armadillos." To which we might add companies and their leaders struggling to

stand out from the crowd, even as they play by the same old rules in a crowded marketplace. ●

Different on Purpose — Motivation, Inspiration and the Heart of Innovation

In his inspiring and instructive book *Rules of Thumb*, *Fast Company* co-founder Alan Webber identifies two questions that demand the attention of leaders. The first is familiar: What keeps you up at night? What are the problems that nag at you? The second is less familiar, but even more important: What gets you up in the morning? What keeps you and your people more committed than ever, more engaged than ever, more excited than ever, particularly as the environment around you gets tougher and more demanding than ever? That's a question every organization needs to ask and answer if it hopes to prosper in an era of hypercompetition and nonstop dislocation.

Even the most disruptive and creative leaders recognize that long-term success is not just about thinking differently from other companies. It is also, and perhaps more important, about *caring more* than other companies — about customers, about colleagues, about how the organization conducts itself in a world with endless temptations to cut corners and compromise on values.

For leaders, the pressing question isn't just what separates you from the competition in the marketplace. It's what holds you together in the workplace.

Love Is More Powerful Than Hate

Of course, the best leaders have known this all along. There's a biography of Vince Lombardi by David Maraniss, a Pulitzer Prize-winning reporter at the *Washington Post*. After the Green Bay Packers captured their first-ever Super Bowl, Maraniss writes, Coach Lombardi, as tough an SOB as there ever was on the American sporting scene, found himself in high demand as a speaker to executive audiences who wanted him to translate his principles for victory on the gridiron to success in work and life. (His first business talk, Maraniss notes, was to a big American Management Association conference in New York City, and Lombardi "considered it a seminal moment in his emergence as a public figure known for more than winning football games.") In what became a recurring message to corporate America, Lombardi set out seven principles of competition and leadership, most of which you'd expect from the greatest football coach of all time. But his most important principle was also the most surprising: Love is more powerful than hate.

"The love I'm speaking of is loyalty, which is the greatest of loves," Lombardi told his audience. "Teamwork, the love that one man has for another and that he respects the dignity of another. … I am not speaking of detraction. You show me a man who belittles another and I will show you a man who is not a leader. … Heart power is the strength of your company. Heart power is the strength of the Green Bay Packers. Heart power is the strength of America and hate power is the weakness of the world." ●

'Disruption Days' at TBWA Worldwide

The cutting-edge marketers at TBWA Worldwide, the celebrated Madison Avenue agency, have learned to look hard at what's come before as inspiration for disruptive ideas about what comes next.

As marketing specialists, TBWA personnel have designed memorable campaigns for some of the most glamorous brands of the last few decades, from Absolut to Adidas to Apple.

As creative strategists, TBWA marketers have invented a blueprint for organizational renewal that the agency calls "Disruption Days" — wide-open, freewheeling, yet highly structured examinations of the assumptions, practices and behaviors that stand in the way of progress for a brand, a company or an industry.

Radically Practical (II) — Five New Rules for Starting Something New

How do you control the future? By inventing it yourself. That is, by doing more with less, by reacting quickly to setbacks and surprises rather than agonizing over how to avoid them and by never losing sight of why you got started in the first place — the impact you aim to have in your field and in the world. So whether you aspire to shake up your industry with an independent startup or shake up your company with an internal venture, here are five new rules for starting something new.

1. **It's not good enough to be "pretty good" at everything. Blank-sheet-of-paper innovators figure out how to become the most of something.**

Most traditional thinking about strategy and competition emphasizes the intricacies of money, power and business models. But many start-from-scratch innovators have prospered based on the audacity of their *mental* models. Robert MacDonald, the one-of-a-kind insurance entrepreneur, says that starting something new is a matter of "reminiscing about the future." Davis, the customer-obsessed CEO of Umpqua Bank, argues that the real work of leadership is to "find the revolution before it finds you" — that is, to be the driving force for transformation in your field, rather than a lagging indicator.

2. **Just because you're "the most of something" doesn't mean you can't do lots of different things. Being unique is not about being narrow.**

Tony Hsieh, the high-profile CEO of Zappos.com, understands that his fast-growing company is revered among shoe lovers for the vast array of footwear it offers, and that it owes much of its success to its mastery of this one product category. But he is adamant that as a brand and as a culture, Zappos is not primarily about selling good shoes — it is about delivering great service, a most-of-something commitment that can take the organization into all sorts of related (and unrelated) categories without diluting what makes it distinctive. Already Zappos offers clothing, bags and other fashion accessories, plus housewares and skin care, and Hsieh is reluctant to rule out expanding into all sorts of new fields.

3. **Long-term success is about more than thinking harder than the competition. It's also about caring more than the competition.**

The leaders at Magazine Luiza, the Brazilian retailer whose growth has confounded its mainstream rivals, make a direct connection between what they think and how they work. Among business professors and management consultants, Magazine Luiza's unorthodox business strategy is the stuff of admiration and curiosity. But among rank-and-file Brazilians, the company's larger-than-life workplace rituals and open-book culture generate as much attention and acclaim as its focus on low-income customers. Every Monday morning, for example, employees around the country assemble to sing songs, say a prayer, do exercises and celebrate birthdays and the arrival of new colleagues. Every Thursday, staffers watch an entertaining 45-minute broadcast (TV Luiza) in which executives discuss the latest wrinkles in tactics, high-performing employees share their best practices and everyone reviews the latest ads and promotions. Meanwhile, the company shares detailed information on revenues, costs, margins and profits across the organization.

4. **In a world of endless choice, companies must engage customers emotionally, not just satisfy them rationally. Remember, if your customers can live without you, eventually they will.**

That's the simple (and powerful) lesson behind Gallup's research on the relationship between companies and their customers. The differences in behavior between customers who were "rationally satisfied" with products and services versus those who were "emotionally engaged" were striking — and had a striking impact on business performance. Overall, Gallup found that "fully engaged" customers "deliver a 23 percent premium over the average customer in terms of share of wallet, profitability, revenue and relationship growth."

5. **Starting something new doesn't always mean starting a new company. You don't need to be a blank-sheet-of-paper entrepreneur to embrace a blank-sheet-of-paper mindset.**

Starting something new doesn't have to mean starting from scratch. Some big, established organizations can become the "most of something" in their field — if they can find ways to challenge middle-of-the-road thinking and develop strongly felt opinions that respond to fast-changing markets, fast-moving technologies and fickle customers. ●

PART THREE: CHALLENGING YOURSELF

Leadership Without All the Answers — Ambition, Humbition and the Power of Hidden Genius

What's humbition? Jane Harper is a 30-year veteran of IBM who devoted her career to transforming how this once-famously top-down organization, founded by the larger-than-life Thomas Watson, approaches innovation, collaboration and leadership. Humbition, Harper explains, is the blend of humility and ambition that drives the most successful businesspeople — an antidote to the hubris that infects (and undoes) so many executives and entrepreneurs. (She says the term was coined by researchers at Bell Labs who were looking to describe the personal attributes of the most effective scientists and engineers.) The smartest leaders, she argues, are smart enough to admit that they cannot take all the credit for their success. More likely than not, what they've

achieved is some combination of good fortune, great colleagueship, and the random collision of smart people and bright ideas.

In a manifesto of sorts that urged up-and-coming IBMers to embrace a new leadership mindset, Harper and a group of her colleagues offered a compelling description of what it takes to succeed in a complex, fast-moving, hard-to-figure-out world. Their strongly worded advice to aspiring leaders inside IBM should be read as words of wisdom for leaders at every level of all kinds of organizations.

"Humbition is one part humility and one part ambition," they wrote. "We notice that by far the lion's share of world-changing luminaries are humble people. They focus on the work, not themselves. They seek success — they are ambitious — but they are humbled when it arrives. They know that much of that success was luck, timing and a thousand factors out of their personal control. They feel lucky, not all-powerful.

"Oddly, the ones operating under a delusion that they are all-powerful are the ones who have yet to reach their potential. … [So] be ambitious. Be a leader. But do not belittle others in your pursuit of your ambitions. Raise them up instead. The bigger leader is the one washing the feet of the others." ●

Hidden Genius at Work — From Shared Minds to Helping Hands

Are there examples of group genius at work that the rest of us can put to work in our organizations?

One colorful answer to this pragmatic question involves the leadership journey of John Fluevog. For nearly 40 years, this Canadian-born designer has been creating high-profile, high fashion (and pretty high-priced) shoes that he sells in his own high-end boutiques in Boston, Toronto, Montreal, New York, Los Angeles and several other cities across North America.

With tongue in cheek, Fluevog calls himself the company's "sole proprietor" — and there's no question that when it comes to footwear, few designers have his flair or his following.

Some of the world's biggest stars wear his shoes, from musicians to supermodels to Hollywood celebrities. In *Truth or Dare*, the behind-the-scenes documentary of her "Blond Ambition" tour, Madonna flaunts her hot-pink Fluevogs (along with much else) before the cameras. Absolut Vodka devoted one of its iconic advertisements to a silver shoe designed by Fluevog, and his enthusiasts around the world describe themselves as "Fluevogers."

In other words, when it comes to creating shoes that are off the beaten path and on the cultural radar, Fluevog is something of a genius.

The Sole of Collaboration — John Fluevog's Genius By Design

In recent years, though, Fluevog hasn't just been presenting ideas about shoes and style to customers; he has also been soliciting ideas from them — encouraging enthusiasts to submit their own sketches for leather boots, high-heeled dress shoes, even sneakers with flair. He posts the submissions on his company's website, invites visitors to vote for their favorites, and then manufactures and sells the most promising designs.

"Customers want to express themselves, to be involved with the brand," Fluevog explained in Boston, at his boutique on shopper-centric Newbury Street. "For so long, people would hand me a drawing of their personal design for a shoe or ask if I had considered an idea they liked. This program is a natural outgrowth of that desire for connection. People want to be involved with companies they care about. We want companies to hear us."

Patricia Seybold, the influential technology analyst who chronicles the changing relationship between companies and their customers, has heard this message loud and clear. In a well-regarded book titled *Outside Innovation*, she offered a big-picture perspective on the sort of mindset flip that Fluevog's invitation presents.

"There's an underlying assumption that drives traditional innovation: 'Our experts are smarter than our customers,'" Seybold writes. "While it is certainly true that your company probably has deep subject matter expertise in a certain domain — automobile design, financial derivatives structures, new drug discovery — it's also true that your customers are subject matter experts in their own right. In particular, your customers know more about their context, their desired outcomes, their needs and their constraints than you can ever hope to learn." What's more, Seybold adds, what customers know and want will affect how they behave. "They will innovate — with or without your help — to create better ways to do things or to design products and services that meet their specific needs," she argues. "If you want to harness the power of customers' organic creativity, you need to support their creative processes with tools, with resources and with imagination."

That's precisely what Fluevog has done, and the results have been dramatic. Since he invited his customers to share their ideas with him, literally thousands of sketches have flowed into headquarters in Vancouver.

To date, nearly 300 have been good enough to get posted as finalists on the website, and the company has introduced 12 shoes based on customer designs. ●

Radically Practical (III) — Five Habits of Highly Humbitious Leaders

Yes, game-changing executives champion new ideas and disruptive points of view — they have a compelling vision for the future. But that doesn't mean they have to (or expect to) see the future by themselves. Instead, they understand how to solve problems and make things happen in a world where no one — not even them — can expect to have all the answers. What follows, then, is a set of attributes to encourage you to challenge your own ideas and assumptions about what it means to lead. Here are the five habits of highly humbitious executives:

1. **Real business geniuses don't pretend to know everything.**

Instead, they recognize that in an interconnected world bursting with small, well-trained, enthusiastic people, the most powerful ideas often come from the most unexpected places: the quiet genius that surrounds the organization, the hidden genius of customers, suppliers and other constituents who would be happy to share what they know if they were asked. That's the mindset of executives who figure out how to get killer results without killing themselves — and the difference between raw ambition and open-minded humbition.

2. **The most creative leaders don't just tap the power of hidden genius to attract new ideas. They leverage the virtues of collective genius to evaluate the ideas they attract.**

As creativity guru Keith Sawyer notes, "The real challenge to creativity isn't only quantity; many managers are fond of saying that 'ideas are cheap.' Just as important is that, eventually, someone has to pick the best ideas."

Which is why humbitious leaders don't just encourage lots of different people to become part of the idea-generation process — they give them a voice in the *decision-making* process as well.

3. **Not all new ideas are good ideas. So leaders who ask for lots of ideas have to get good at rejecting the bad ones without demoralizing the people who contributed them.**

If you want to maintain a healthy flow of energy and ideas, you've got to keep information flowing about how and why certain ideas rise to the top.

'Ignore the Real World'

In *Rework*, a concise book that describes their expansive worldview with respect to competition and innovation, the founders of 37signals, the self-declared "enemies of mediocrity," urge their fellow entrepreneurs to "ignore the real world" as the first step to success. "The real world sounds like an awfully depressing place to live," they argue. "It's a place where new ideas, unfamiliar approaches and foreign concepts *always* lose. The only things that win are what people already know and do, even if those things are flawed and inefficient." Their company, the founders go on, has prospered because it "fails the real-world test" in so many ways — from devising ultra-simple products in a market ruled by complexity, to attracting millions of customers without salespeople or advertising. "The real world isn't a place, it's an excuse," they conclude. "It's a justification for not trying."

4. **Leaders who are eager for outsiders to share ideas with them have to be eager to share their ideas with outsiders.**

The most humbitious leaders and organizations also tend to be the best teachers, those most eager to *share* with others.

5. **Humbition can be more than an individual style of leadership. It can be an organizational way of life.**

The highest form of humbition is when executives rethink and reimagine the role of the organization itself, when they ask searching questions not just about how to charge up their supply of ideas, but about who's in charge in the first place. If you agree with creativity guru Keith Sawyer that "innovation can't be planned, it can't be predicted: It has to be allowed to emerge," then you should also agree that the ultimate opportunity for leaders is to allow as many participants as possible to emerge as leaders. ●

Realizing the Power of Emotional Intelligence

PRIMAL LEADERSHIP

THE SUMMARY IN BRIEF

Great leaders move us. They ignite our passion and inspire the best in us. When we try to explain why they are so effective, we speak of strategy, vision, or powerful ideas. But the reality is much more primal: Great leadership works through the emotions.

Humankind's original leaders earned their place because their leadership was emotionally compelling. In the modern organization this primordial emotional task remains. Leaders must drive the collective emotions in a positive direction and clear the smog created by toxic emotions whether it is on the shop floor or in the boardroom.

When leaders drive emotions positively they bring out everyone's best. When they drive emotions negatively they spawn dissonance, undermining the emotional foundations that let people shine.

The key to making primal leadership work to everyone's advantage lies in the leadership competencies of emotional intelligence; how leaders handle themselves and their relationships. Leaders who exercise primal leadership drive the emotions of those they lead in the right direction.

What You'll Learn In This Summary

In this summary, you will learn the secrets of primal leadership by:

✓ Understanding what primal leadership is and why, when practiced correctly, it creates resonance in your organization.

✓ Understanding the neuroanatomy that underlies primal leadership and what emotional intelligence competencies you need to succeed.

✓ Understanding the six leadership styles you can use — from visionary to coaching to pacesetting — to inspire others, and when to use each one.

✓ Understanding who you are and what you need to change to become a primal leader, and then develop a plan to make those changes.

✓ Learning how to build emotionally intelligent organizations.

The Vital Emotional Component of Leadership

Gifted leadership occurs where heart and head — feeling and thought — meet. These are the two things that allow a leader to soar. All leaders need enough intellect to handle the tasks and challenges at hand. However, intellect alone won't make a leader. Leaders execute a vision by motivating, guiding, inspiring, listening, persuading and creating resonance.

As a result, the manner in which leaders act — not just what they do, but how they do it — is a fundamental key to effective leadership. The reason lies in the design of the human brain.

The Open Loop

The brain is an open loop. We rely on connections with other people for our emotional stability. Scientists describe the open-loop system as "interpersonal limbic regulation," whereby one person transmits signals that can alter hormone levels, cardiovascular function, sleep rhythms and even immune function inside the body of another. Other people can change our very physiology and our emotions.

The continual interplay of limbic open loops among members of a group creates a kind of emotional soup, with everyone adding his or her flavor to the mix. Negative emotions — especially chronic anger, anxiety or a sense of futility — powerfully disrupt work, hijacking attentions from the tasks at hand.

On the other hand, when people feel good, they work at their best. Feeling good lubricates mental efficiency, making people better at understanding information and making complex judgments. Insurance agents with a glass-is-half-full attitude, for example, make more sales, in part because they are able to withstand rejection better than their more pessimistic peers.

A study on 62 CEOs and their top management shows just how important mood is. The CEOs and their management team members were assessed on how upbeat — energetic, enthusiastic and determined — they were. They were also asked how much conflict the top team experienced. The study found that the more positive the overall moods of people in the top management team, the more cooperative they worked together and the better the company's business results. The longer a company was run by a management team that did not get along, the poorer the company's market return. ■

Laughter and the Open Loop

A study at Yale University showed that among working groups, cheerfulness and warmth spread most easily. Laughter, in particular, demonstrates the power of the open loop in operation.

Unlike other emotional signals which can be feigned, laughter is largely involuntary. In a neurological sense, laughing represents the shortest distance between two people because it instantly interlocks limbic systems. This immediate, involuntary reaction might be called a limbic lock. Laughter in the workplace signals trust, comfort, and a shared sense of the world.

Why Good Leaders Must Read Emotions

Dissonance, in its original musical sense, describes an unpleasant, harsh sound. Dissonant leadership produces groups that feel emotionally discordant, in which people have a sense of being continually off-key. Ranging from abusive tyrants to manipulative sociopaths, dissonant leaders are out of touch and create wretched workplaces

Why Good Leaders Must Read Emotions

(continued from page 2)

— although they have no idea how destructive they are, or simply don't care. Meanwhile, the collective distress they trigger becomes the group's preoccupation, deflecting attention away from their mission.

Emotionally Intelligent Resonance

Resonant leaders, on the other hand, are attuned to their people's feelings and move them in a positive emotional direction.

Resonance comes naturally to emotionally intelligent leaders. Their passion and enthusiastic energy resounds throughout the group. When there are serious concerns, emotionally intelligent (EI) leaders use empathy to attune to the emotional registry of the people they lead.

For example, if something has happened that everyone feels angry about (such as the closing of a division) or sad about (such as a co-worker's serious illness) the EI leader not only empathizes with those emotions, but also expresses them for the group. The leader leaves people feeling understood and cared for.

Under the guidance of an EI leader, people feel a mutual comfort level. They share ideas, learn from one another, make decisions collaboratively, and get things done. Perhaps most important, connecting with others at an emotional level makes work more meaningful. ■

The Four Dimensions Of Emotional Intelligence

There are four domains to emotional intelligence: self-awareness, self-management, social awareness and relationships management. Within the four domains are 18 competencies. These competencies are the vehicles of primal leadership. Even the most outstanding leader will not have all competencies. Effective leaders, though, exhibit at least one competency from each of the domains.

The four domains and their competencies are listed below:

Self-awareness

- **Emotional self-awareness:** Reading one's own emotions and recognizing their impact and using "gut sense" to guide decisions.
- **Accurate self-assessment:** Knowing one's strengths and limits.
- **Self-confidence:** A sound sense of one's self-worth and capabilities.

Self-management

- **Emotional self-control:** Keeping disruptive emotions and impulses under control.
- **Transparency:** Displaying honesty, integrity and trustworthiness.
- **Adaptability:** Flexibility in adapting to changing situations or overcoming obstacles.
- **Achievement:** The drive to improve performance to meet inner standards of excellence.
- **Initiative:** Readiness to act and seize opportunities.
- **Optimism:** Seeing the upside in events.

Social Awareness

- **Empathy:** Sensing others' emotions, understanding their perspective, and taking active interest in their concerns.
- **Organizational awareness:** Reading the currents, decision networks, and politics at the organizational level.

(continued on page 4)

Leadership and the Brain's Design

New findings in brain research show that the neural systems responsible for the intellect and for the emotions are separate, but have intimately interwoven connections. This brain circuitry provides the neural basis of primal leadership. Although our business culture places great value in an intellect devoid of emotion, our emotions are more powerful than our intellect. In emergencies, the limbic brain — our emotional center — commandeers the rest of our brain.

There is a good reason for this. Emotions are crucial for survival, being the brain's way of alerting us to something urgent and offering an immediate plan for action — fight, flee, freeze. The thinking brain evolved from the limbic brain, and continues to take orders from it when it perceives a threat. The trigger point is the amygdala, a limbic brain structure that scans what's happening to us moment by moment, always on the alert for an emergency. It commandeers other parts of the brain, including the rational centers in the cortex, for immediate action if it perceives an emergency.

Today we face complex social realities with a brain designed for surviving physical emergencies. And so we find ourselves hijacked — swept away by anxiety or anger better suited for handling bodily threats than office politics.

Fortunately, emotional impulses pass through other parts of the brain, from the amygdala through the prefrontal area. There an emotional impulse can be vetoed. The dialogue between neurons in the emotional center and the prefrontal area operate through a neurological superhighway. The emotional intelligence competencies hinge on the smooth operation of this circuitry. Biologically speaking, then, the art of primal leadership interweaves our intellect and emotions.

The Four Dimensions of Emotional Intelligence

(continued from page 3)

- **Service:** Recognizing and meeting follower, client or customer needs.

Relationship Management

- **Inspirational leadership:** Guiding and motivating with a compelling vision.
- **Influence:** Wielding a range of tactics for persuasion.
- **Developing others:** Bolstering others' abilities through feedback and guidance.
- **Change catalyst:** Initiating, managing and leading in new directions.
- **Building bonds:** Cultivating and maintaining relationship webs.
- **Teamwork and collaboration:** Cooperation and team-building. ■

The Leadership Repertoire

The best, most effective leaders act according to one or more of six distinct approaches to leadership. Four of the styles — visionary, coaching, affiliative and democratic — create the kind of resonance that boosts performance. The other two — pacesetting and commanding — should be applied with caution.

The Six Styles of Leadership

1. Visionary. The visionary leader articulates where a group is going, but not how it gets there — setting people free to innovate, experiment and take calculated risks.

Inspirational leadership is the emotional intelligence competence that most strongly undergirds the visionary style. Transparency, another EI competency, is also crucial. If a leader's vision is disingenuous, people sense it.

The EI competency that matters most to visionary leadership, however, is empathy. The ability to sense what others feel and understand their perspectives helps leader articulate a truly inspirational vision.

2. Coaching. The coaching style is really the art of the one-on-one. Coaches help people identify their unique strengths and weaknesses, tying those to their personal and career aspirations. Effective coaching exemplifies the EI competency of developing others, which lets a leader act as a counselor. It works hand in hand with two other competencies: emotional awareness and empathy.

3. Affiliative. The affiliative style of leadership represents the collaborative competency in action. An affiliative leader is most concerned with promoting harmony and fostering friendly interactions. When leaders are being affiliative, they focus on the emotional needs of workers, using empathy.

Many leaders who use the affiliative approach combine it with the visionary approach. Visionary leaders state a mission, set standards, and let people know whether their work is furthering group goals. Ally that with the caring approach of the affiliative leader and you have a potent combination.

4. Democratic. A democratic leader builds on a triad of EI abilities: teamwork and collaboration, conflict management and influence. Democratic leaders are great listeners and true collaborators. They know how to quell conflict and create harmony. Empathy also plays a role.

A democratic approach works best when as a leader, you are unsure what direction to take and need ideas from able employees. For example, IBM's Louis Gerstner, an outsider to the computer industry when he became CEO of the ailing giant, relied on seasoned colleagues for advice.

5. Pacesetting. Pacesetting as a leadership style must be applied sparingly, restricted to settings where it truly works. Common wisdom holds that pacesetting is admirable. The leader holds and exemplifies high standards for performance. He is obsessive about doing things better and faster, quickly pinpointing poor performers. Unfortunately, applied excessively, pacesetting can backfire and lead to low morale as workers think they are being pushed too hard or that the leader doesn't

(continued on page 5)

A Visionary Leader

When Shawana Leroy became director of a social agency, there were clearly problems. Her predecessor had mired the agency in rules that the talented staff the agency had attracted because of its mission found draining. Despite increased needs for the agency's services, the pace of work was slow.

Leroy met one-on-one with staff and found out that they shared her vision.

She got people talking about their hopes for the future and tapped into the compassion and dedication they felt. She voiced their shared values whenever she could. She guided them in looking at whether how they did things furthered the mission, and together they eliminated rules that made no sense.

Meanwhile, she modeled the principles of the new organization she wanted to create: one that was transparent and honest; one that focused on rigor and results. Then Leroy and her team tackled the changes. The agency's emotional climate changed to reflect her passion and commitment; she set the tone as a visionary leader.

The Leadership Repertoire

(continued from page 4)

trust them to get their job done.

The emotional intelligence foundation of a pacesetter is the drive to achieve through improved performance and the initiative to seize opportunities. But a pacesetter who lacks empathy can easily be blinded to the pain of those who achieve what the leader demands.

Pacesetting works best when combined with the passion of the visionary style and the team building of the affiliate style.

6. Commanding. The command leader demands immediate compliance with orders, but doesn't bother to explain the reasons. If subordinates fail to follow orders, these leaders resort to threats. They also seek tight control and monitoring.

Of all the leadership styles, the commanding approach is the least effective. Consider what the style does to an organization's climate. Given that emotional contagion spreads most readily from the top down, an intimidating, cold leader contaminates everyone's mood. Such a leader erodes people's spirits and the pride and satisfaction they take in their work.

The commanding style works on limited circumstances, and only when used judiciously. For example, in a genuine emergency, such as an approaching hurricane or a hostile take-over attempt, a take-control style can help everyone through the crisis.

An effective execution of the commanding style draws on three emotional intelligence competencies: influence, achievement and initiative. In addition, self-awareness, emotional self-control and empathy are crucial to keep the commanding style from going off track. ■

For a story of how one visionary leader inspired janitors, go to: http://my.summary.com

The Case of Too Much Pacesetting

The superb technical skills of Sam, an R&D biochemist at a large pharmaceutical company, made him an early star. When he was appointed to head a team to develop a new product, Sam continued to shine, and his teammates were as competent and self-motivated as their leader. Sam, however, began setting the pace by working late and offering himself as a model of how to do first-class scientific work under tremendous deadline pressure. His team completed the task in record time.

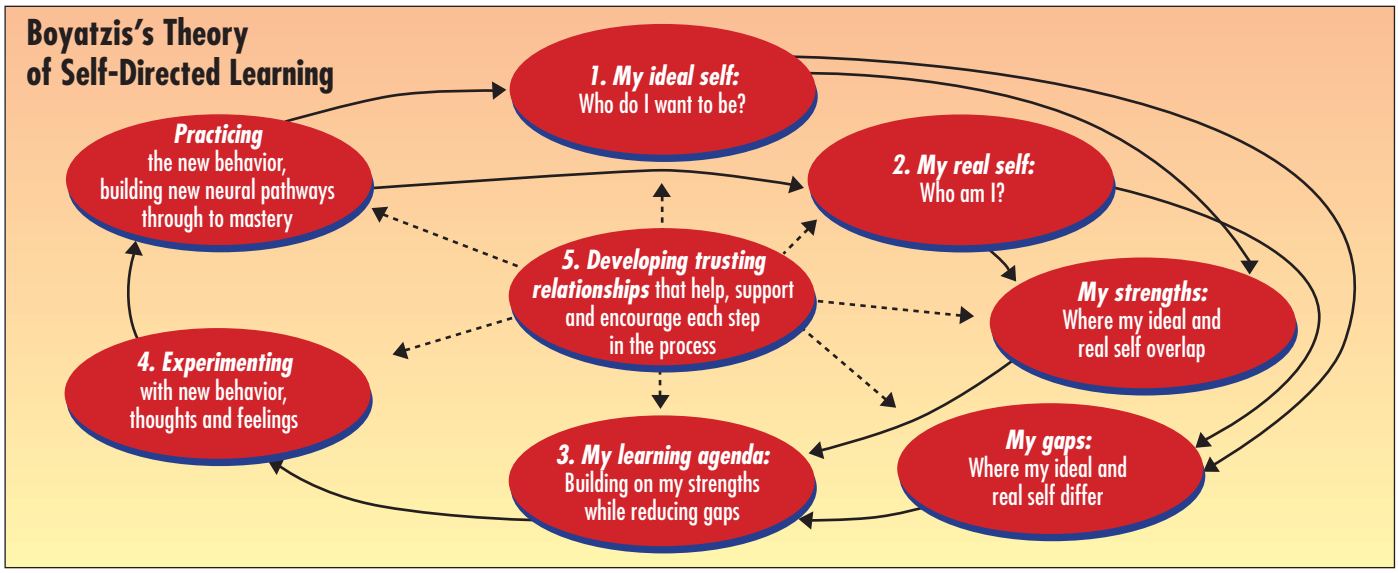
But when Sam was selected to head R&D, he began to slip. Not trusting the capabilities of his subordinates, he refused to delegate power, becoming instead a micro-manager obsessed with details. He took over for others he perceived as slacking, rather than trust that they could improve with guidance. To everyone's relief, including his own, he returned to his old job.

Developing Emotionally Intelligent Leaders

The key to learning that lasts lies in the brain. Remember that emotional intelligence involves circuitry between the prefrontal lobes and the limbic system. Skills based in the limbic system are best learned through motivation, extended practice and feedback.

The limbic system is a slow learner, especially when trying to relearn deeply ingrained habits. This matters immensely when trying to improve leadership skills. These skills often come down to habits learned early in life. Reeducating the emotional brain for leadership learning requires plenty of practice and repetition. That's because neural connections used over and over

(continued on page 6)



How One Leader Changed

When Nick, a star salesman, took over as head of an insurance agency in a new city, he knew he needed help. The agency was in the bottom quartile. He hired leadership consultants, who determined what type of leader Nick was. He fit the pacesetting mold, with elements of the commanding style. As pressure mounted, the atmosphere grew increasingly tense.

Nick was encouraged to focus on his salespeople's performance rather than his own. This required he use the coaching and visionary styles. Fortunately, some of the traits that made him a great salesman — empathy, self-management and inspiration — transferred well. He seized the opportunity to work one-on-one and stifled his impulse to jump in when he got impatient with someone's work. Eighteen months later, the agency had moved from the bottom to the top and Nick became one of the youngest managers to win a national award for growth.

Developing Emotionally Intelligent Leaders

(continued from page 5)

become stronger while those not used weaken.

Self-Directed Learning

To work, leadership development must be self-directed. You must want to develop or strengthen an aspect of who you are or who you want to be. This requires first getting a strong image of your ideal self, and an accurate picture of your *real* self.

Self-directed learning involves five discoveries, each representing a discontinuity. The goal is to use each discovery as a tool for making the changes needed to become an emotionally intelligent leader.

People who successfully change move through the following stages:

- **The first discovery:** My ideal self — Who do I want to be?
- **The second discovery:** My real self — Who am I? What are my strengths and gaps?
- **The third discovery:** My learning agenda — How can I build on my strengths while reducing my gaps?
- **The fourth discovery:** Experimenting with and practicing new thoughts, behaviors and feelings to the point of mastery.
- **The fifth discovery:** Developing supportive and trusting relationships that make change possible. ■

For an example of how limbic learning works, go to: http://my.summary.com

The Motivation to Change

The first discovery — the ideal self — is where change begins. Connecting with one's passion, energy, and excitement about life is the key to uncovering your ideal self. Doing so requires a reach deep inside.

You, Fifteen Years from Now

Think about where you would be sitting and reading this summary if it were fifteen years from now and you were living your ideal life. What kinds of people are around you? What does your environment look and feel like? What would you be doing during a typical day? Don't worry about the feasibility. Just let the image develop and place yourself in the picture.

Write down your vision, or share it with a trusted friend. After doing this exercise, you may feel a release of energy and optimism. Envisioning your ideal future can be a powerful way to connect with the real possibilities for change in our lives.

Next, determine what your guiding principles are. What are your core values in the areas of life that are important to you, such as family, relationships, work, spirituality and health. Write down everything you want to experience before you die. Doing so will open you up to new possibilities.

Look at Your Real Self

Once you see your ideal self, you need to look at your real self — the second discovery. Then, and only then, can you understand your strengths. Taking stock of your real self starts with an inventory of your talents and passions — the person you actually are. This can be painful if the slow, invisible creep of compromise and complacency has caused your ideal self to slip away.

How do you get to the truth of your real self? You must break through the information quarantine around you. Actively seek out negative feedback. You can do this using a 360-degree evaluation — collecting information from your boss, your peers and your subordinates. Multiple views render a more complete picture because each sees a different aspect of you.

Once you have a full picture of yourself, you can examine your strengths and gaps. Do this by creating a personal balance sheet, listing both. Don't focus solely on the gaps.

Metamorphosis: Sustaining Leadership Change

It's now time to develop a practical plan to learn leadership skills, which is the third discovery. Focus on improvements you are passionate about, building on your strengths while filling the gaps. Craft specific, manageable learning goals that are tied to the goals that motivate you. When goal-setting, consider that:

(continued on page 7)

Are You a Boiling Frog?

If you drop a frog into boiling water, it will instinctively jump out. But if you place the frog in a pot of cold water and gradually increase the temperature, the frog won't notice the water's getting hotter. It will sit there until the water boils. The fate of that poached frog isn't so unlike some leaders who settle into a routine or let small conveniences solidify into large habits — and allow inertia to set in.

The Motivation to Change

(continued from page 6)

- **Goals should build strengths.**
- **Goals must be your own, not someone else's.**
- **Plans must be flexible and feasible, with manageable steps.**
- **Plans must fit your learning style.**

The Experimenting Stage

The fourth discovery requires you to reconfigure your brain as you practice new behaviors to the point of mastery. You can only do this by bringing bad habits into awareness and consciously practicing a better way. Rehearse the behavior at every opportunity until it becomes automatic.

Improving an emotional intelligence competency takes months because the emotional centers of the brain are involved. The more often a behavioral sequence repeats, the stronger the underlying brain circuits become, as you rewire your brain. Like a professional musician, you must practice and practice until the behavior becomes automatic.

A powerful technique you can use is the mental rehearsal. Envision yourself repeating the behavior you want to master over and over again. This, coupled with using the behavior as often as possible, will trigger the neural connections necessary for genuine change to occur.

Supportive and Trusting Relationships

Finally, begin applying the fifth discovery — the power of supportive relationships. For anyone who has gone through leadership development that works, the importance of the people along the way is obvious. Having supportive people around when you want to change can make a big difference. Positive groups help people make positive changes, especially when the relationships are filled with candor, trust and psychological safety.

For leaders, that safety may be crucial for learning to occur. Leaders often feel unsafe in the spotlight, and avoid risk-taking change. Where can you find these relationships? One approach is to find a mentor. Another is to hire an executive coach. ■

Building Emotionally Intelligent Organizations

When it comes to leadership, changing a single leader is only the beginning. The rest of the job is to develop a critical mass of resonant leaders and thereby transform how people work together.

Parallel Transformations

The most effective leadership development works hand in hand with parallel transformations in the organizations that those leaders guide. Groups only begin to change when they understand how they work, especially if there is discordance. They must understand what the underlying group norms are, and then develop the ideal vision for the group.

The Power of Group Decision-Making

Group decision-making is superior to that of the brightest individual in the group — unless the group lacks harmony or the ability to cooperate. Even groups with brilliant individuals will make bad decisions in such an environment. In short, groups are smarter than individuals when (and only when) they exhibit the qualities of emotional intelligence.

> ***Groups are smarter than individuals when (and only when) they exhibit the qualities of emotional intelligence.***

Leaders ignore the power of the group at great cost. You can't assume that the force of your leadership alone is enough to drive people's behavior. Don't make the common mistake of ignoring resonance-building leadership styles and steam-rolling over the team using the commanding and pacesetting styles exclusively.

To lead a team effectively, you must address the group reality. Leaders who have a keen sense of the group's pivotal norms and who are adept at maximizing positive emotions can create highly emotionally intelligent teams.

Maximizing the Group's Emotional Intelligence

A group's emotional intelligence requires the same capabilities that an emotionally intelligent individual does — self-awareness, self-management, social awareness and relationship management. A group expresses its self-awareness by being mindful of shared moods as well as the emotions of its members.

Emotions are contagious, and a team leader needs to understand how to keep a bad mood from spreading. For example, imagine a meeting held in an out-of-the

(continued on page 8)

Building Emotionally Intelligent Organizations

(continued from page 7)

way location and a team member arriving late exclaiming that the meeting location is very inconvenient for him. If the member's anger is allowed to fester, it will infect the whole team. But if instead, the leader acknowledges the sacrifice the member is making and thanks him, the anger dissipates.

The leader who wants to create an emotionally intelligent team can start by helping the team raise its collective self-awareness. This is the true work of the team leader. Initiate the process by looking at what's really going on in the group. Uncover the team's less-productive norms and work with the team to change them. ■

For examples of group havoc, go to:
http://my.summary.com

Reality and the Ideal Vision

Just as was the case with teams, a leader who wants to change an organization must first understand its reality. Change begins when emotionally intelligent leaders actively question the emotional reality and cultural norms underlying the organization's daily activities and behavior. To create resonance and results, the leader has to pay attention to people's emotions. Even toxic organizations can change.

Dynamic Inquiry

A process called dynamic inquiry can help you discover an organization's emotional reality — what people care about, what is helping them, their group, and the organization to succeed, and what's getting in the way. The process uses focused conversations and open-ended questions intended to get to feelings.

A leader who wants to change an organization must first understand its reality.

Themes become apparent from these conversations, which are then taken to small groups for more discussion. The conversations that ensue about what's right and what's not create momentum. People feel inspired and empowered, willing to work together to address their collective concerns.

Once they do, you will be able to help the organization define its ideal vision — one that is in sync with individual hopes and dreams. ■

For a story of how one Ivy League school changed, go to:
http://my.summary.com

Shoney's Transformation

The Shoney's restaurant chain had a close-knit group of executives at the top — people who knew each other well, shared history and beliefs, and generally thought they knew how to run their business. In reality, they were an old-boy's network of white male senior executives with an underlying culture that left people of color behind.

All that changed when the company paid $132 million to settle a class-action lawsuit by employees and applicants who alleged discrimination. A cadre of new leaders have changed the company's culture and broadened opportunities so much that ten years later, the company was listed as one of the top 50 companies for minorities by Fortune magazine.

The change occurred because the lawsuit was a wake-up call regarding the reality of the company's dissonant culture. The new leaders identified an ideal vision that would guide hiring practices, and the organization embraced that vision.

Creating Sustainable Change

How does a leader create sustainable resonance in an organization? Every large organization has pockets of resonance and dissonance. The overall ratio determines the organization's emotional climate and performance. To shift the ratio toward resonance, cultivate a dispersed cadre of emotionally intelligent leaders.

To do that, leadership training must be the strategic priority and be managed at the highest level. Commitment must come from the top. That's because new leadership means a new mindset and new behaviors, and in order for these to stick, the organization's culture, systems and processes all need to change.

Let's say that as a leader, you get it. You've set the stage by assessing the culture, examining the reality and the ideal. You've created resonance around the idea of change, and you've identified the people who will take top leadership roles. The next step is to design a process that lets those leaders uncover their own dreams and personal ideals, examine their strengths and their gaps, and use their daily work as a learning laboratory. That process must also be self-directed and include the following elements:

- **A tie-in to the organization's culture.**
- **Seminars emphasizing individual change.**
- **Learning about emotional competencies.**
- **Creative learning experiences.**
- **Relationships that support learning, such as executive coaching.** ■

Primordial Leadership

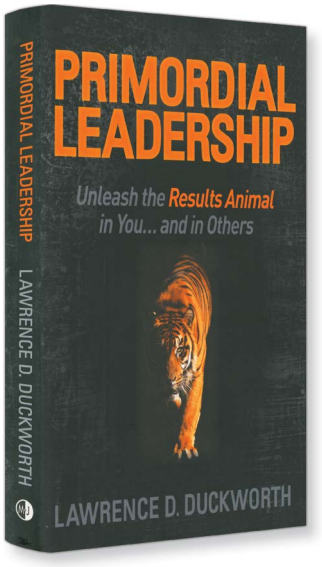
Unleash the Results Animal in You ... and in Others



by Lawrence D. Duckworth

THE SUMMARY IN BRIEF

In *Primordial Leadership*, seasoned C-executive Larry Duckworth applies cutting-edge neuroscience to the business world to reveal why people behave the way they do — at the most basic "Primordial" level — and how to leverage these powerful behavioral insights into extraordinary results.

Science has identified that our most basic Primordial Drive™ as humans is to perpetuate the species' genes. Duckworth goes further and identifies how six enabling Primal Drives™ — Safety, Self-Interest, Hope and Transcendence, Honesty and Trust, Energy and Time Optimization, and Sociability — are at work in specific leadership settings. Harnessing these deeper Primordial forces present in all human "animals" can clearly differentiate you as a more powerful, valuable leader to both your followers and from the peers with whom you're competing.

Duckworth's C-level practical, Primordially based advice has been field-tested and proven in private and public businesses, non-profits and government entities. *Primordial Leadership* will help you ignite zeal; improve innovation; effectively manage strategic, annual and operating planning; avoid change resistance; and know what to do when there is "no way out."

True leadership excellence is within you. It's time to unleash the beast!

IN THIS SUMMARY, YOU WILL LEARN:

- Effective Primordial Leadership To-Dos.
- The six leveragable Primal Drives.
- Steps that will help align Primal Drives to change.
- How to envision success and then execute the vision.

THE COMPLETE SUMMARY: **PRIMORDIAL LEADERSHIP**

by Lawrence D. Duckworth

The author: Lawrence D. Duckworth brings both professional leadership and performance improvement expertises and experiences to BusinessExcel, LLC and to EGL Holdings as a Business Excellence consultant and CEO-In-Residence. He has been a C-Executive for private and public companies, has taught business and leadership at three universities, and has led leadership seminars in various industries. He is a frequent presenter for PEX Network.

Preface

The fact is that you, all of your peers and all of your stakeholders are *animals*. Science has taught us, as animals, that the deepest Primordial Drive at the core of all of us is to perpetuate our species' genes, no matter what. More than any other drive or motivation we may experience in life, this Primordial Drive is the most powerful, pervasive drive of all.

The Primordial Drive is enabled by consistent, powerful Primal Drives™, and all can be leveraged via the Judo Principle™ for results-generating leadership. Effectively "unleashing the animal" in you and in others will yield many results, benefits and rewards by taking your leadership to the next, A-player level.

The Primordial Drive and the enabling Primal Drives represent the key, *deepest possible* "Why" behind our behavior. When an understanding and leveraging of the Primal Drives is combined with the power of envisioning and values, the improved leadership results can be remarkable.

As business leaders, we are after results and are on a constant quest to better achieve those results. Developing our envisioning capability, applying core values, and leveraging the six Primal Drives, with provided methods and tools, are a way to consistently do so, when used in self-management, leadership, marketing, sales and other relationships. The six Primal Drives are

1. Safety
2. Self-Interest
3. Hope and Transcendence
4. Honesty and Trust
5. Energy and Time Optimization
6. Sociability

The first three, in order, are the most powerful and prevalent, and the second three slightly secondary in power. Different combinations of the Primal Drives, or a "marbling" effect, will exist in different situations. The "art" of leadership lies in understanding what kind of marbling achieves results per situation.

The Judo Principle, applying the principles of Judo/Jujitsu, means proactively harnessing the power of the key, basic Primal Drives *for* you, rather than letting them overcome you. The Judo Principle can also be used for all forces you encounter, pro and con (the latter for turning problems into opportunities).

The leader who understands the true, underlying, controlling Why of behavior motivation and then Judo-leverages the insights is the one who will achieve better, deeper, more powerful results.

A Brief History of Western Leadership Thought in the Last 100 Years

To establish the context for the new art of Primordial Leadership, we must first summarily trace the evolution of leadership thinking in the last 100 years in the industrial regions of the world, especially the West. A seminal evolution/revolution in "modern" leadership thinking started in America and continues to develop today. This context shows why the focus on Primordial Drive and its enabling Primal Drives is the next step in continual leadership excellence.

During the Industrial Revolution, workers were treated as veritable servants. Prior to more modern sensitivities, workers up until the early to mid-1900s were very typ-

ically subjected to low status, harsh roles, abusive conditions, poor pay, and even physical danger and death.

Attempts to unionize to gain power for workers started to gain traction in the late 1800s, originally often by women. In the later 1800s and early 1900s in the U.S., Samuel Gompers and others eventually founded labor unions to fight for more worker power against the top-down, one-sided impositions of industrialists.

More modern leadership views began evolving in the early to mid-20th century in the West. As economic strength increased, there were more societal pressures for owners to be more compassionate and flexible.

Maslow, Herzberg and Drucker

The mid-20th century work of Dr. Abraham Maslow was a major breakthrough in beginning to better understand human behavior in the workplace. Maslow set up a hierarchic theory of needs. All of his basic needs are instinctive, equivalent of instincts in animals. Maslow's basic needs are as follows:

- Physiological needs (Air, Water, Food, Shelter)
- Safety Needs
- Needs for Love, Affection and Belongingness
- Needs for Esteem
- Needs for Self-Actualization

Maslow importantly described the *impacts,* or the *results,* of the underlying (yet unidentified) Primal Drives, including a flow of needs as each lower level was met, and thus by identifying their symptoms, he got close to the lower, causative Primal Drives.

Dr. Frederick Herzberg, a psychologist and professor, helped us understand even more about human motivations, with his Two Factors Theory. As explained by Joseph Gawel of the Catholic University of America: "In summary, *satisfiers* describe a person's relationship with what she or he *does*, many related to the tasks being performed. *Dissatisfiers* have to do with a person's *relationship to the context or environment in which she or he performs the job.* The satisfiers relate to what a person does, while the dissatisfiers relate to the situation in which the person does what he or she does."

Satisfiers include achievement, recognition, work itself, responsibility, promotion and growth.

Dissatisfiers include pay and benefits, company policy and administration, relationships with coworkers, supervision, status, job security, working conditions and personal life.

In terms of the Primal Drives, Herzberg missed the deeper Why causal factors, but he did reflect the marbling nature and impacts of them in varying, complex situations.

Dr. Peter Drucker of Harvard has been called the most influential management thinker of the 20th century. His books were and are devoured by leaders.

He stressed five key things:

- Managing time
- Choosing what to contribute to the organization
- Knowing where and how to mobilize strength for the best effect
- Setting the right priorities
- Knitting all of them together with effective decision making

Drucker's "Five Most Important Questions" were

- What is our mission?
- Who is our customer?
- What does the customer value?
- What are our (target) results?
- What is our plan?

Successful leadership yields *results*. Drucker says to focus on the key areas that will make the biggest difference, picking only the key ones as important, communicating the Whys (including why the rejected alternatives are not as strong), gaining emotional support, and executing to exceed plans.

Primal Leadership, the 2004 evolutionary book by university professors Daniel Goleman, Richard Boyatzis and Annie McKee, got the closest yet to the key Whys behind how to successfully get the most out of yourself and others. It presents many compelling scientific studies and surveys linking the brain's functions to management.

In addition to being based on direct observation, Primordial Leadership moves the ball forward from these great minds by addressing the very deepest Why behind behavior and providing powerful, practical tools and insights.

Summary of the Primordial Drive and the Enabling Primal Drives

The Primordial imperative is to survive the very competitive, unsympathetic "natural selection" process that is required for survival and to perpetuate the genes of the species, which is the most basic, "primordial," DNA-level drive of all.

Thus, we need to proactively understand, appreciate and leverage that core drive and its enabling Primal Drives in all human interactions — as an imperative. We need to realize several very important things:

• There is indeed a deep, primordial "factory" or "engine" that drives our genes' survival probability.

• Along with strong, spatial cognitive envisioning skills and values, leveraging the Primal Drives provides strong, differentiated capabilities relative to those less knowledgeable. This allows us to stand out as different and more valuable.

• While we may know the term "Primal Drive," until now we have not deeply understood and applied on a purposeful basis the unequaled powers of the Primal Drives for better and different business results.

• Although we may not have been consciously aware of them, the Primal Drives are even more pervasive and powerful to utilize than leadership training and management books to date have identified! New insights allow new skills and actions.

The Six Primal Drives

Think of the Primal Drives as being the quiet but all-powerful "operating system software" that secretly manages everything we do, but well below the conscious/awareness level.

1. Safety: Safety is the most controlling and pervasive Primal Drive we have, and it needs to be proactively harnessed *at all times*; yet its power and pervasiveness are usually not sufficiently understood or not used strongly and purposefully enough. It is the elephant in the room, and we must *always* harness it to avoid getting trampled.

When change or a new opportunity or a challenge comes up, we will, far below the conscious level, instantly first determine if the contemplated action or situation is Safe or not — or if not acting is perhaps even more unsafe. The scope and importance of the issue will determine the degree to which this factor plays.

2. Self-Interest, including greed, selfishness, self-realization and some narcissism: Adam Smith spoke of the Self-Interest drive in his *1776 Wealth of Nations*, noting "the invisible hand of self-interest" as being pervasive and vital to success. He was correct.

Even though second in power of the Primal Drives to Safety, Self-Interest is the most controversial Primal Drive, especially if no Sociability is involved (taking into account what is also good for others) as a brake. Self-Interest (greed) is a derided Primal Drive, but it is a key to business, democracy and capitalistic prosperity. It is key to wealth being generated for others, versus all being at subsistence levels.

3. Hope and Transcendence: These linked drives are a forward-looking Primal Drive that leads to Safety and Self-Interest *in the future*, recognizing that change is inevitable over time.

Leadership that evokes a vision, hopefully correctly, automatically communicates Hope. The loss of Hope is when most relationships finally end, including at work and at home as well.

Transcendence is a Primal Drive for constant change and improvement over time. It provides a change openness mentality if properly positioned and explained. A key is to credibly paint a vision of what the planned actions will *avoid* in the future or even now.

4. Honesty and Trust: Honesty and Trust Drives are protectors of Safety, Self-Interest, Transcendence and Sociability, today and tomorrow, and are kind of a "third-dimension" protective Primal Drive for managing results via people relationships over time. These are powerful drives and important to Judo-leverage, but truth must be pervasive to be successful. The Honesty and Trust drive results in all of us having a good barometer of the character and thus dependability (Safety) of other parties in a relationship relative to our own self-interests.

The fact that "the truth hurts" has led some to believe that being evasive or dishonest is the easier path. However, other people have very rich "antennae" and will subconsciously quickly pick up honesty and trustworthiness concerns.

Honesty and Trustworthiness are powerful Primal Drives to be Judo-leveraged for you and not against you. Such drives must come from the core of individuals to be received as real and not just "put on."

5. Energy and Time Optimization: The Energy and Time savings Primal Drive is responsible for very innate, DNA-level, important sub-drives such as laziness, procrastination, continually seeking easiness and convenience, taking shortcuts and saving time. There is a drive in us that says to save Energy calories for emergency use when needed and to do so purposely. Thus, laziness and procrastination are no accident; they have a core, DNA, genes-protection purpose. Saving Time has the same imperative.

When the Energy or Time cost is worse than the gain, we do not act, which may seem lazy or procrastinating, but it is deeply calculated. It is Primordial.

We constantly strive to get more results from our Time use. We see Time as a priceless resource and try to optimize its use for gain. We constantly look for more results in a time period. We also understand that "timing is everything." It is an underlying Primal Drive.

What are some everyday examples?

- Easy-open packages
- Fast-food drive-thrus

- Express lanes in the store
- Pre-packaged foods
- Bullet trains
- Microwaves
- HOV lanes

These examples did not just happen. They were *caused* to happen by the low-level energy surplus/time saving Primal Drive.

Habits are a result of this Energy Optimization Primal Drive. *Comfort zones* also form due to ease and Energy savings control — and Safety probably, since the present outcome is pre-known versus variable. These comfort zones become the enemy over time due to changes constantly occurring. We get comfortable with the status quo and do not want to expend the energy to change or accept the risks.

6. Sociability (Constraints on Self-Interest, to Enhance General Safety): Sociability has a genes-perpetuating purpose far beyond just being nice. Per Dr. Gazzaniga of the UC Santa Barbara Center for the Study of the Mind, "... Social relationships are merely byproducts of behavior originally selected to avoid our being eaten by predators" (or today, being beaten by competitors, technological change, the economy, or legal changes, the authors add).

Sociability is not a whim or accidental. It is a key survival drive, varying in intensity across individuals, is most strong in trying situations, but is the weakest Primal Drive generally. The power of "strength in numbers" causes us to protect Social circles and ties that can contribute to our Safety, Self-Interest, Energy saving and Hope/Transcendence. This drive requires us to obey mores, customs, ethics, etc., such as the Golden Rule.

Owing to nurture variances, some are obviously better than others at Sociability, and some need it less than others due to the confidence and comfort of operating alone or having insecurity about being around others.

Altruism is centered in the Sociability arena. There is Safety strength in numbers by helping others and getting the rewards indirectly by contributing to causes others will reward. Yet, altruism often fades quickly when higher-order Primal Drives are controlling, which is a special challenge to volunteer and charity organizations.

The *combination* of understanding the importance of the Primal Drives, envisioning, and values and executing this understanding via the Judo Principle is a 1 x 1 = 4 combination. Each without the other is incomplete. The combination is essential to optimal results. Together, good insights, visions and ideas that are motivational to others are powerful and provide a path to success.

The Importance of Envisioning and Values for Leadership

Stephen Covey suggested that we "begin with the end in mind." Differentiated leadership requires an innate ability to intangibly and spatially *envision an end beforehand* and the path to get from here to there (like working a maze backwards).

Great athletes envision success and then execute to the vision. Creative people, like architects, composers and others, envision the result *before* they start. A leader must do the same. A literal back-to-front "roadmap" vision in the mind is needed. Its motivating force is palpable.

Having employees tell you that they would follow you across a minefield is a metric of your envisioning capability. The other–side, end objectives are valuable to them (justifying the risks), and they know that you know how to navigate all of them through the risks and resistances that will be encountered on the journey.

Once the end is defined, the road to it is automatically more clear. For leading a project, program or entity, moving *right-to-left* is smart when planning:

1. Establish the right end: List goals and what should *not* happen.
2. Then move sequentially to the left:
   a. Key Success Factors (KSFs)
   b. Strategies for KSFs
   c. Tactics for strategies
   d. Organization
   e. Assignments for tactics
   f. KPIs (key performance indicators)
   g. Deadlines
   h. Resources
   i. Measurement
   j. Rewards
3. Note that this is a Why, What, How, Who, When flow. *Always* use it.

Therefore, in any meeting, when planning or conceptualizing, the ability to first correctly conceptualize the correct end(s) and the optimal path to get there is an important leadership intangible. Being able to "see" how things fit together and correct cause-effect associations, without even thinking about them, is an insight art and a blessing.

This native "spatial" skill of Why envisioning is the number one attribute of a leader, only after core values and the ability to understand the Primal Drives at work.

Even a narcissistic "jerk" with the right vision who protects the Safety, Self-Interest and Hope of subordinates will have zealous followers because the success potential will be worth the negatives. In the obverse, a nice person in whom no one has visionary faith will have few followers because the vision does not meet Primal needs of subordinates.

Values

Values are significantly learned by life's experience and are formed on the bedrock of the Primal Drives. The leader's values will be reflected by the organization.

Here are a few of the key value spectrums for leaders:

- Honesty or dishonesty?
- Risk taking or risk aversion?
- Brave or cowardly?
- Accepting responsibility or shirking?
- Giving others the credit or taking credit?
- Empathy or insensitivity?
- Teaching or blaming?
- Hard work or laziness?
- Working as a team member or being a loner?
- Role satisfied or dissatisfied?

In their book *Growth Thinking,* Simmons and Crawford listed five key value constructs: creating value for shareholders, creating value for employees, creating value for the ecosystem, creating value for customers, and creating value for communities.

Assessing your self-leadership potential and challenges is critical. Either leveraging or overcoming one's own values and challenges takes total self-awareness, understanding of the need to self-manage and values. Any assessment must be job specific per profiles, EEOC validated, and just one tool.

You Can't Manage Others Until You First Manage Yourself

Before we can get the most from others, we must first master ourselves. Self-management means to at least stay out of the way of others harnessing their own Primal Drives for the organization's benefit, even if we don't actively foster their Primal Drives. At a minimum we must not be part of the problem. Hopefully we can be part of the solution.

Just as respect is earned, true leadership power is earned. If others do not sense opportunity based on their Primal Drives being realized, they will be less productive than we need and perhaps even resistant. Here are the four key elements that we as leaders need to earn true leadership power:

1. We must have the insight and vision to correctly determine *what* needs to be done and Why; and communicate it.
2. We must ensure that others' Primal Drives will be met both by the correct vision and in how that vision is executed.
3. We must practice the needed Values that serve the Primal Drives in others.
4. We must not get in the way, at the very least.

Thus, we must first be worthy of success as a leader. Vision, smarts, bravery, a giving character, inner confidence, values and drive are all required — and self-management, to align and maximize the Primal Drives of ourselves and others — are the combined keys.

With the exception of a powerful, controlling vision, nothing trumps a leader's emotional commitment to harnessing his own Primal Drives to get others to commit so as to realize their Primal Drives — including other important leadership characteristics such as proactiveness, competitive spirit, street sense, risk acceptance, passion, values and charisma. All of those can and should also exist.

But unless leaders emotionally put their shoulders to the wheel to harness their own and others' Primal Drives, results will not happen as desired. As a matter of fact, if the Primal Drives are energized, then weaknesses in the other leadership areas can be overcome (except for vision quality and values).

Therefore, energizing the Primal Drives in others does require leaders to live and display the many above attributes. If not, the loss of Safety, Self-Interest, Hope and other Primal Drives will arise in others as barriers to success. We must both talk and walk these attributes at our core. They cannot be faked. It is not what we say but what we do that counts and how we do it.

Effective Primordial Leadership

The list below summarizes the actual To Dos for each Primal Drive to be Judo-leveraged in others, which means that we redirect the power of a force to our advantage. Organizing the To-Dos according to the six Primal Drives reveals the important, underlying, DNA-level Whys behind the truisms of Maslow, Herzberg and others. This helps to fortify the value of those leadership bromides by verifying that they are not whims of mere observers but actually reflect deeper, core drivers in all humans, as increasingly discovered by neuroscientists and socio-

biologists. The six Primal Drives provide a consistent, least-common-denominator construct for leadership action strategically and tactically.

Safety/Risk Aversion

- Be emotionally strong and confident, "charismatic."
- Be moral and honest, no matter the costs.
- Proactively practice good manners; insist on it for all.
- Be steady, and absorb pain.
- Use insight, vision and fairness as motivators.
- Do not allow politics to exist.
- View all as favorites.
- Communicate well.

Self-Interest

- Be a "giver"; never be a taker.
- Proactively care for the self-interests of others.
- Take calculated risks, even if failure is a possibility.
- Don't take credit; accept blame.
- Mentor and develop high-potential people.
- Practice using zeal.
- Remember to use Self-interests in action plans.

Hope and Transcendence

- Find and define the higher meanings (resonance) of plans.
- Never let others see you down.
- Never let others see management team dissension.
- Do not let political turfs control results and rewards.
- Practice urgency.
- Provide unlimited merit-based opportunity.
- Facilitate participation.
- See delegation as a means versus an end.

Honesty and Trust

- Never deceive anyone.
- Never cheat.
- Take responsibility.
- Give credit when due.
- Never allow dishonesty.
- Never allow politics.

Energy and Time Optimization

- Be seen as hardworking.
- Be energetic; set the pace.
- Lead from the front.
- Set the timetable.
- Reward hard, smart work.
- Prioritize.
- Decide what not to do or not to do yet.

Sociability

- Be personally secure; be a romantic versus a cynic.
- Trust others.
- Be sensitive.
- Use humor.
- Be approachable.
- Walk around; talk to all, and listen openly.
- Put the employees first and you second.

In just a little over 50 years, leadership success practices have dramatically evolved — and will continue to do so. The cultural, economic, technological and political contexts will also continue to change. But our core Primal Drives will not. However, they just have to be connected to the surrounding contexts by smart, savvy, results-focused leaders who strongly serve the Primal Drives of followers.

Vision, character, confidence, courage, correctly used power and drive are all needed to achieve results in an ever more challenging world. That's your job. Go for the gold intelligently, with common sense, a giving purpose and vision, attitude, judgment and ethics. Bring out the Primal Drives in your people by practicing the To-Do elements for each Primal Drive.

Planning and Effective Change Management

Planning and continual replanning are critical given the reality that not only is change an imperative, but it is even existential. Darwinism, or the survival of the most adaptable, is real, and its power must be Judo-leveraged. The alternative to doing so is very bad, recognizing that change is constant and will define and redefine destinies.

In *Future Shock,* Alvin Toffler noted that the generation at the time would see more innovation than all prior generations combined since any records were kept. Thus, change is continual in humans and is generally caused by four key forces:

- **Technology:** This is the fastest moving and most disruptive driver of change. It is also the best opportunity to change the fastest and best versus competitors.
- **Competition:** Those pesky devils! They are always doing something to change the competitive rules.
- **Laws:** Laws and regulations constantly change and enable or destroy businesses. This is especially true for federal laws. Forecasting these is a major challenge.
- **Economic conditions:** Booms and busts regularly occur. The "Kitchen" and other economic cycles are well

known. Multiple forecasting services exist to help understand what is coming.

Regardless of the right timing, knowing what changes are coming and the threats and opportunities to be prepared for to Judo-leverage is critical. How do we do that?

First, recognize that just using internal views is silently self-limiting. The hidden, inherent "as is" (change resistant) bias versus the "could be" or "should be" (change causing) is a critical challenge to be overcome from the beginning. Many methods to do so exist, including using facilitators and outside experts. Since they have no "as is" vested interests and can leave, are experienced and skilled at managing the games that will occur, and use proven processes, several types of value are provided.

Building a Change-Resilient Culture

Gaining change acceptance can have stages. These few steps regularly and consistently practiced will insulate people from the change impacts and will help align Primal Drives to change:

- Knowledge is power! Relative to change's imperative, educate, educate, educate — on the Why, What and How levels.
- Openly and often educate about our natural, Primordial, *emotional* resistance to change.
- Regularly communicate, top-to-bottom, that change is the *number-one competitive critical success factor.* Who manages it best wins and vice versa.
- Constantly communicate the changes going on around the company and the impacts.
- Note that competitors' employees are the same, so this is a change competition between us and them to best self-manage. "Let's beat those guys!"
- Educate about the *worse-evil* costs of *not* changing.
- Get ideas to adapt to the changes. Reward them, especially wins. Get buy-in.
- Solicit ideas to become the future innovator, driving changes. Reward them.
- Set up "Change Agent of the Quarter"-type reward and recognition programs at multiple levels. Make them real, visible programs. Celebrate successes.
- Do not permit change resisters, openly or quietly, to prevail. Listen to objections, looking for merit in the views. If it's just for backside protection, shut it down. Sanction if necessary.

It is a law of nature that who best plans and changes wins. Well-thought-out change is important to purposely pursue regardless of the resistance. Avoiding that resistance is usually the best path: an ounce of prevention is worth a pound of cure.

However, change is a threat for many Primal Drives if not properly and proactively handled. Not doing so is a major inhibitor of progress and may even become debilitating. Proactive methods exist to hopefully preclude change resistance from arising or to quell change resistance as much as possible. Proactive leaders position the company to see change-seeking (which is even stronger than change-resilience) as its key competitive advantage.

Conclusion

Thank goodness for leaders! They create jobs for families, enable spending in the economy and its multiplying effect, pay taxes to support governments, contribute people and monies to charities, are the backbone of our economic wealth, and supply the resources for defense from foes.

Being different and better than other leaders is key. Continually improving leadership skills is a hallmark of A-player leaders.

Recognize that your people are your key asset, and *their* Primal Drives are the "fuel" for your organization's success now and over time. Beyond not being in the way, bring out the best in them.

Study and practice the Primal Drives in ways that are creative and additive. Use the insights, methods and tools that have been provided. Per the Judo principle, proactively practice envisioning and related planning. Apply good values. Proactively get your organization to welcome change as a competitive weapon. Now, go lead!

THE SUMMARY IN BRIEF

The Oz Principle has sold more than a million copies since it debuted in 1994, establishing it as the go-to reference on workplace accountability throughout the world. By embracing its practical and invaluable advice, tens of thousands of companies have improved their organizational accountability—the key to achieving and sustaining exceptional results.

Now, the team at Partners In Leadership is applying 30 years of proven success to a whole new concept: ***Propeller***. This book presents a modern take on accountability while remaining faithful to the elegantly simple premise: When people take personal ownership of their organization's priorities and accept responsibility for their own performance, they become more engaged and perform at a higher level.

With all new examples and stories, ***Propeller*** builds on the ***The Oz Principle's*** legacy to inspire the next generation of readers to tap the incredible power of personal, team, and organizational accountability.

IN THIS SUMMARY, YOU WILL LEARN:

- To use accountability as a powerful, positive motivator for achieving great results.
- What it takes to operate Above the Line.
- Key principles to help you and your people See It, Own It, Solve It, and Do It.
- To practice effective Above the Line leadership.

The Power of Getting Accountability Right

In L. Frank Baum's classic story ***The Wonderful Wizard of Oz***, Dorothy and her companions learn that no matter how difficult your circumstances, the power to address your challenges and achieve the results you desire lies inside you, not in some external force or in the hands of some guru pulling levers behind a velvet curtain.

From this, Partners in Leadership created the Oz Principle: "Only when you assume full accountability for your thoughts, feelings, actions, and results can you direct your own destiny; otherwise someone or something else will." For the past 25 years, organizations around the world have implemented this principle as a Propeller to accelerate change by getting accountability right, C-suite to front line.

Propeller captures in one word what the Oz Principle and the Steps to Accountability create: accelerated movement in a needed direction. No matter how daunting the obstacles you face, you can deepen your resolve to take accountability for your results—past, present, and future.

Such resolve moves leaders, teams, and organizations to choose optimism when pessimism is justified, to accept responsibility when blaming others is easily explained, and to move forward and win when giving up is understandable.

Ask any CEO or senior leader, and most will readily acknowledge the mistakes they've made. The most influential leaders, however, demonstrate a unique ability to make egoless adjustments to their previous decisions. They take total ownership for current circumstances and inspire a sense of optimism within the teams they lead. These are the leaders who get accountability right. And when they do, everyone who works with them wins.

Accountability for Key Results: Applying the Oz Principle, C-Suite to Front Line

Consider what images spring to mind when you hear the word "accountability." Most likely you picture some sort of punishment for a mistake, perhaps someone in authority holding your feet to the fire or hammering you for wrongdoing.

But accountability is not an accounting for misdeeds or a reckoning for one's missteps; it's a powerful motivator for getting results.

Accountability is a personal choice to rise above one's circumstances and demonstrate the ownership necessary for achieving desired results; to See It, Own It, Solve It, and Do It.

This definition suggests that accountability begins with a decision to do something to create a better outcome. It urges the person taking accountability to avoid the temptation of falling victim to difficult circumstances and embrace the opportunity of working toward a better end result.

No one gives accountability to you; you must take it. When you take it, you put yourself in charge of the outcomes you want and need to deliver.

Accountability Principles

Three basic principles will help you harness the power of accountability:

Understand the steps to accountability that promote ownership and propel change. A line separates the unproductive, time-wasting, results-impeding blame game from the Steps to Accountability that must be taken in order to deliver results. Below the Line, people focus on what they can't control, they play the victim, ignore and deny the problem, point their finger at others, cover their tails in order to get themselves off the hook, claim that it's not their job, act confused while expecting someone else to tell them what to do, or just wait to see if the issue or problem will magically resolve itself.

Above the Line, people focus on what they can control, and they assume accountability for resolving issues or problems by taking four sure steps toward getting the right result: They See It, Own It, Solve It, and Do It. People who languish Below the Line prepare stories that explain why past efforts went awry; people who reside Above the Line empower themselves to strive for better results.

Apply the model to yourself to reduce time spent below the line. There's not one of us who is immune to giving in to the temptation to take ourselves off the hook with one excuse or another: "I didn't have enough time." "That's not my job." "The schedule is too tight." "We need more resources."

It's not wrong to go Below the Line. It's human nature. We all let the gravitational force that accompanies victim thinking pull us Below the Line into the realm of excuse-making when things go wrong or challenges confront us.

But all of us can acknowledge that it's totally ineffective

The Above the Line and Below the Line language is sticky because of its simplicity and intuitiveness.

to stay there, continually rationalizing and explaining why we're stuck and can't move forward. When we find ourselves Below the Line, the best thing we can do is acknowledge where we are and choose to move Above the Line.

Adopt the common language of accountability to accelerate movement. The Above the Line and Below the Line language is sticky because of its simplicity and intuitiveness. When companies learn to use the Steps to Accountability model, they use the model's language to talk about their work. Above the Line, the Line, and Below the Line become an integral part of their daily discussions as they seek to solve problems and move forward. Adopting common performance management language gets everybody on the same page.

Key Results: Defining and Achieving What Matters Most

Creating accountability begins with clearly defining results. Clearly defined and well-understood results are those select, few deliverables that every individual in the organization is aligned around and committed to achieve, no matter his or her role, function, department, or geographical location.

These select, few deliverables are Key Results. Ideally, Key Results should be limited to three to five meaningful, measurable, and memorable outcomes.

Key Results Principles

A culture wherein you get accountability right is created and sustained by applying four fundamental principles:

Define key results to promote accountability and facilitate needed change. As leaders clearly define a manageable number of meaningful, measurable, and memorable Key Results, individuals are actually empowered to take accountability to look at what else they can do to achieve them.

Create joint accountability to improve the probability of achieving Key Results. Since achieving Key Results almost always requires a concerted effort by more than one person, success depends on shared ownership and joint accountability. When you get a workforce asking the question "What else can I do?" to achieve the result, especially during times of uncertainty, stress, challenge, or difficulty, magic can happen. That's the power of joint accountability. Joint accountability often requires that a company dismantle its silos and create cross-functional teams.

Realize that working to achieve Key Results is the essence of working above the line. When people get stuck Below the Line, they have given up on the results and are now working on the story they can tell to justify why they can't do it. Taking accountability always poses a certain amount of personal risk. "I'm just doing my job" creates a comfort zone, but that comfort zone often threatens your ability to get results. The comfort it provides is an illusion. Overcoming that illusion requires taking accountability for owning "my impact" on achieving the Key Results, which only happens Above the Line.

Ring the bell of success as progress is made to keep people focused on their impact. Leaders should "ring a bell" that signals achievements along the road to results. It can take many forms, be it an actual bell or something else that provides meaningful recognition. Without clear reminders of progress, people can get lost in the daily activity it takes to do their jobs and lose their focus on results. Recognizing positive performance wherever and whenever it shows up creates momentum and reinforces the importance of taking personal and joint accountability for what matters most.

See It: Mustering the Courage to Acknowledge Reality

Seeing It is the first and the hardest step Above the Line. Seeing It requires a level of curiosity, courage, and humility that allows you to hear what you may be uncomfortable hearing.

In order to fully See It, you must be hungry for perspectives you don't already have, you must be able to face reality, and you must be willing to acknowledge that you don't have all the answers. Without curiosity, courage, and humility, you will be severely limited in your ability to See It.

See It Principles

These four See It principles will help you begin to change what needs changing:

Park your ego at the door to improve your vision. Egotism is a choice one makes to place themselves at the center of their world and focus almost exclusively on satisfying their own needs and welfare first. This choice keeps people from seeing the full picture.

If you want to increase workforce engagement, ensure everyone knows you hear their voices. Engaging workers requires that leaders set aside any preference for the outdated "command and control" or "the boss knows best" style of management.

Welcome difficult conversations to make them contagious. Candid and honest dialogue helps everyone to see the reality of a situation. Do "candid and honest" occasionally, and you will go broke gradually, then suddenly. Do it all the time, and you will prosper.

Kelli Valade's promotion to president of Chili's Grill & Bar in 2016 shows the benefits of having open feedback ingrained as a habit. Her new job put Kelli in charge of overseeing all aspects of domestic restaurant operations, marketing, franchising, and human resources for the brand, which operated roughly 1,600 restaurants at the time.

Immediately after assuming the top job, she knew that effectively leading the company's far-flung network would depend on increasing the number of difficult conversations she and her people had. She formed what she called "Kelli's Councils." These councils, composed mostly of front-line staff and managers, became her operational eyes and ears.

As she formed these councils within every region of the organization, she began learning about tactical problems that were occurring within the restaurants' day-to-day operations. This early warning system enabled her to streamline operations and increase revenue quickly, thereby demonstrating to the entire organization that "feedback is priceless," a mantra Kelli recited to her people every day.

Embrace the feedback you receive to accelerate your ability to change. It takes patience, persistence, and courage to ask for and listen to the hard truths. Seeing It depends as much on your ears as on your eyes. As you come to understand that reality at your core, you will seek and provide feedback as if your life depends on it.

Link what you see to Key Results to keep you on the path to achieve them. You may see a lot of problems you think your organization should solve, but unless a given problem prevents you from achieving the Key Results you're seeking, you should not make it a top priority. You must both know and understand the Key Results, why they must be achieved, and whether or not specific problems need to be solved in order to achieve them.

Own It: Assessing Agreement and Defining Involvement

Taking the Own It step goes way beyond a dictionary's definition of ownership. Someone demonstrates ownership when they are able to connect present circumstances with both the past and the future.

All of us have made decisions, taken actions, and responded to information that has led us to our current circumstances. We need to own those realities. When we do own them, we find greater power to affect our futures.

Own It Principles

The following model provides an easy-to-remember snapshot of the most common levels of ownership. The two key elements that determine each level of ownership are agreement and involvement.

Understand the consequences of (−) negative ownership. Negative Ownership = uninvolved and disagree. This (−) Negative Ownership posture, where people disagree with the direction and refuse to get involved in its implementation and achievement, undermines the delivery of Key Results at every turn. Issues and problems remain unseen and unaddressed as people purposefully withhold information needed to identify, correct, and resolve them.

Additionally, individuals at the (−) Negative Ownership level rarely remain quiet about their discontent. They often work to recruit allies to support their disgruntled positions, often becoming a cancer that infects the entire culture. When you add up their lack of agreement and their lack of involvement, you get (−) Negative Ownership that actually pulls you backward.

Resist the deception of (0) Zero Ownership. Zero Ownership = uninvolved and agree. A leader with (0) Zero Ownership has thoughts like these: "I agree something needs to be done, but it's not my job to figure this out. It's *their* problem. Let *them* figure it out."

The problem here is, people really believe it's not their job to be involved. For this reason, (0) Zero Ownership can be very deceptive. On the surface it sounds like there is some ownership. People speak to the issue at hand with passion, fully acknowledging the severity of the situation, but then exempt themselves from actually participating in the process of solving it or engaging with the team to achieve it.

If left alone, (0) Zero Ownership can establish a precedent for inaction throughout the organization. For those at (0) Zero Ownership, the buck keeps passing without ever landing on anyone's desk.

> Applying the Solve It step requires openness, authenticity, and humility on the part of the leader.

Embrace the advantage of (+) Positive Ownership. Positive Ownership = involved and disagree. This involves those who disagree with the target but are entirely involved in achieving it. Their disagreement can manifest itself in countless ways. Some may disagree because the metric and target they've been asked to deliver don't seem reasonable. Others might disagree simply because they lack data or understanding or needed context.

What's the advantage of (+) Positive Ownership? It's simple: While people with (+) Positive Ownership openly communicate their disagreement, they are committed to focusing on what else they can do to get the needed result and taking the necessary actions to make it happen. In this case, their involvement speaks louder than their disagreement.

Positive Ownership propels you forward precisely because people at this level take positive steps, despite the fact that they disagree.

Harvest the power of (++) Total Ownership. Total Ownership = involved and agree. Here, people fully agree with and quickly become involved in delivering the needed direction, target, or outcome. Their agreement and buy-in are what separate them from the (+) Positive Level of Ownership. Because of their agreement they do not, even for a moment, vacillate between opinions. Once a decision is made, they move without hesitation and immediately invest themselves in delivering the targeted result.

They bring their best creative selves to their jobs, never giving up, always rejecting Below the Line thinking, and working tirelessly to succeed.

Solve It: Obtaining the Wisdom to Solve What You Own

When it comes to the Solve It step, high achievers channel their creative thinking into answering this deceptively simple yet powerfully propelling question: "What else can I do?"

If achieving needed results begins to seem increasingly unattainable, they again ask themselves if there's something else they can do to get things back on track and moving in the right direction. Asked over and over again, this question, "What else can I do?" reflects the Solve It attitude and mindset that most often differentiates those who win from those who lose.

Solve It Principles

Four Solve It principles will help you stimulate the creative thinking needed to achieve Key Results:

Create space for others to fill. Applying the Solve It step requires openness, authenticity, and humility on the part of the leader. Inviting people to ask "What else can we do?" suggests that the leader expects them to come up with the best answers.

Arrogant, egoistical, and overconfident leaders will often think to themselves, "What else can I do to show people my awesome power?" Hey, look, it's a superhero! What a beautiful cape, what a guy, what a gal! But look again, and you will see someone who easily falls prey to the Emperor's New Clothes syndrome, gaining the verbal admiration of people while failing to win their minds and hearts.

Effective leaders resist the temptation to jump in and Solve It themselves and instead maximize the human capital entrusted to their leadership by encouraging everyone to keep asking, "What else can I do?"

Engage more brains at work. Ed Catmull, co-founder of Pixar Animation Studios and president of Pixar Animation and Disney Animation, once disclosed in an interview, "At Pixar, we believe strongly that filmmakers

should develop ideas they are passionate about. This may sound like a no-brainer, but in fact, the big movie studios in Hollywood have whole departments devoted to acquiring and developing projects that will only later be paired with a director for hire."

"Pixar, by contrast, never buys pitches from the outside. Instead, we encourage our people to build their ideas from scratch and we give them the resources and, crucially, the candid feedback that are required to transform the first wisps of a story into a truly compelling film."

The Pixar story illustrates an understanding of the basic human desire to create something. Human beings come hardwired with that desire. We involve ourselves in creating and improving the life that surrounds us.

Leaders who invite everyone in their organization to solve and improve the world around them reap the benefits of their people's innate desire to contribute value to that world.

Stay engaged, be persistent, think differently, and create new connections. Stay engaged. Solutions generally come only when you take the initiative to explore, search, and question, even after you think you have done everything you can.

Be persistent. You must constantly ask the Solve It question: "What else can I do?" It makes it possible for you to keep formulating the creative solutions that propel progress.

Think differently. The same thinking that got you into the problem won't get you out of it. Always solicit and strive to understand a wide range of different, even diametrically opposed, perspectives.

Create new connections. Many solutions require innovative approaches that tap into unfamiliar ways of thinking about a problem. You can take advantage of new perspectives by forging relationships with people you may not have previously considered as sources of good ideas.

Previously unconsidered relationships may include your competitors, your suppliers and vendors, or someone in another department in the company.

Maintain a culture intent on achieving key results. Ironically, some people interpret the Solve It question as "What more can I do?" which is not the same as "What else can I do?" There's a huge difference between the two. "More" can mean "more of the same old, same old." It's not just about doing more!

The word "else" suggests coming up with something new, different. "More" often courts failure; "else" generates creative new thinking that leads to success.

Do It: Exercising the Will to Do What You See, Own, and Solve

No matter what the task, you must always ask the key Do It question: Who will do what by when?

This question keeps priorities straight by removing confusion and false assumptions about important tasks. If you can't answer the Do It question, you don't have a plan or a path forward.

Do It Principles

No matter how brilliantly you've traversed the first three steps, See It, Own It, and Solve It, they mean nothing unless you use them to Do It. The value of "ideation" manifests itself in the "doing." These four Do It Principles will help you take that final step:

Learn from failed attempts to Do It. When it comes to following through on solutions, people tend to fall back Below the Line for two main reasons: an unwillingness to take the risks associated with action and an inability to maintain the discipline it takes to keep going when the going gets tough.

Learning from failed attempts to Do It ultimately means helping yourself and others to Do It. Just as a line separates the behavior needed to deliver on the Key Results from the blame game, an even finer line separates good companies from great ones: the line between Solve It and Do It.

Recognize that you're not taking full accountability until you Do It. The leaders of Redstone Federal Credit Union (RFCU) of Huntsville, Alabama, set their sights on making RFCU the best company in its industry. With 24 branch locations and 830 employees, RFCU had established an outstanding track record over the years, never failing to hit its numbers. RFCU's leaders wanted even better results.

An extensive internal survey led to two important discoveries: (1) many of the company's departments functioned in silos, with little or no interaction among key departments, and (2) members of the leadership team were not perfectly aligned behind the company's mission. The RFCU senior leadership team, led by CEO Joe Newberry, decided to build a corporate Culture of Accountability.

If leadership is an art, then Above the Line leadership is the ultimate art form.

A series of workshops led by key RFCU executives implemented the Steps to Accountability to create a company-wide commitment to achieving best-in-class status in the industry. To communicate that commitment in a clear and tangible way, they collected every single one of the organization's grievances and complaints and wrote them down on a large hatchet-shaped paper. Then they buried that hatchet. Literally.

Within six months, RFCU's already good-to-great culture became even greater. Cross-functional communication to make sure everyone could See It became a daily cultural trait, and every leader and manager aligned behind the mission to become best in class. The bank ultimately achieved 55 percent growth in annual noninterest income; 1,052 percent increase in loans; and 1,179 percent increase in average annual total member giveback (excluding dividends).

Make the Do It question part of every meeting. If you record a typical meeting, you will probably find that it ran over the allotted time, followed an agenda with too many items, did not cover all of those items, and ended with no one knowing what to do and by when to deliver the Key Results.

If you need to improve your meeting culture, make sure that the appropriate people are invited to the meeting; set a specific time limit; and make sure the meeting does not end without answering the Do It question: "Who will do what by when?"

Never stop until you achieve the key results. In 1978 an engineer was working in his garage on a way to enhance computer databases that could rival offerings from IBM and other large suppliers. Two years later, the engineer's hard work met with big success when his company, Teradata, sold its first system to a large East Coast company. That accomplishment prompted a huge celebration among Teradata's employees, who had worked together as a close-knit family for two long years.

It was Saturday morning in the parking lot of the Teradata facility, the renovated warehouse that had replaced the garage. A group of 52 excited employees and their families were holding balloons and waving banners with the slogan "Ship the Big One."

The American Van Lines driver who had been contracted to deliver the shipment couldn't help but catch the excitement from the festivities as he climbed into the cab of his 18-wheeler. As the driver started his engine and pulled out of the parking lot with The Big One aboard, the Teradata families cheered wildly. Moved by the moment, the driver waved back, shouting that he would not let them down.

Almost eight hours into his trip, the driver pulled into his first weigh station only to discover that his load weighed 500 pounds more than the legal limit. He knew the overweight problem would require a lot of paperwork and approvals that could cause a full day's delay and prevent Teradata from meeting its promised delivery date.

You can probably imagine how easy it might have been for the driver to fall Below the Line, blaming the company for the overweight problem. After all, it wasn't his fault. However, the driver stayed Above the Line by choosing to do something to solve the problem.

After some quick thinking, he turned the truck around and drove to the nearest truck stop, where he unpacked the truck's winter chains, removed a number of extra water containers and spare chairs, and then hid everything in a nearby ditch under some brush.

When he returned to the weigh station, the truck weighed 50 pounds below the limit. The American Van Lines driver made it to the East Coast and delivered The Big One on time. After hearing about the driver's experience, Teradata congratulated and celebrated him for taking accountability to get the right result.

Above the Line Leadership: Holding Yourself and Others Accountable for Results

If leadership is an art, then Above the Line leadership is the ultimate art form. First and foremost, who is the most important person to get Above the Line? Hopefully, you just answered, "I am!" Above the Line leaders work, act, and

live Above the Line. Because they do, they quickly recognize when others have become stuck Below the Line.

How do you coach people to take accountability in a way that motivates them to do their best to overcome the obstacles that block the path to achieving Key Results? Apply the LIFT Accountability Coaching model:

Listen for obstacles (See It). Above the Line leaders commit to hearing what others are thinking. They want to know what's getting in the way of achieving the needed results, and they want it all out on the table. They listen intently, withhold judgment, and ask for clarification as needed.

They do not solve problems for their people; they coach their people Above the Line, enabling them to reengage their hearts and minds so they feel responsible for discovering the needed solutions.

Identify the obstacles you can influence (Own It). Above the Line leaders help people move from See It to Own It. They do this by encouraging others to identify and prioritize the obstacles they can actually control. Sometimes it helps to list what's in and outside of the team's control.

Facilitate the Solve It question (Solve It). Sometimes jarring someone out of the habitual Below the Line thinking requires a little jolt to their psyche. "What if your life depended on it?" can provide that jolt. Regardless of the situation you face, circumstances will not likely improve until you have coached everyone to pack away their excuses for poor results and put on their best thinking caps, asking over and over and over again, "What else can I do to get the result we need?"

Test for movement (Do It). The LIFT Accountability Coaching Model is not a problem-solving tool. It's really a reengagement tool. Success is found with LIFT when people have moved Above the Line and are reengaged in solving the problem.

When testing for movement, if the team or individuals respond by saying something like, "I (we) just don't know what to do," Above the Line leaders have the patience to begin again. They Listen. Identify. Solve. Test. More often than not, people will move and re-engage.

Above the Line leaders get the most out of the LIFT model when they do two things really well: keep people focused on what matters most; and model Above the Line behaviors.

Success comes from applying a more proactive version of accountability—a version focused on *taking* accountability for better results, not being held accountable after the fact. Make taking accountability the way we do things around here, and see how your results change.

Propel yourself, your team, and your organization to a brighter and better future.

THE SUMMARY IN BRIEF

There's a new and effective method for seizing opportunity in the face of uncertainty. In ***Provoke***, renowned strategy consultants and best-selling authors Geoff Tuff and Steven Goldbach insightfully explore how people act tentatively in the context of uncertainty, and the authors provide the tools we need to do things differently.

Tuff and Goldbach offer the compelling argument that taking a "wait and see" approach is the exact opposite of what helps visionary leaders change the world. Drawing on principles from business and behavioral economics, the book shows readers from all walks of life how to provoke action as a mechanism to advance.

Perfect for leaders or aspiring leaders in all walks of life where uncertainty abounds—which is to say, almost everywhere—***Provoke*** will become your go-to guide to overcoming the natural human instincts that keep us frozen in place and prevent us from seizing our opportunities.

IN THIS SUMMARY, YOU WILL LEARN:

- To overcome cognitive biases that distort leadership decision-making in the face of uncertainty.
- To recognize the phase change when uncertainty moves from a question of "if" to a matter of "when."
- Five models of provocation that leaders can use to anticipate, drive, and execute phase change to create a desired future.

Introduction

Kids love rollercoasters. They just love them. Although they exhibit patience for nothing else, they are willing to wait in a long line just to get a few minutes of thrill. They smile with glee as the car grinds and clacks up the track at a snail's pace, anticipating the hair-raising freefall that comes on the other side when all that potential energy is converted to kinetic. Not knowing precisely what's coming doesn't scare them. It excites them.

In adulthood, it's safe to say one's relationship with roller-coasters changes. There are some who still love them, but experience suggests it becomes a smaller and smaller proportion of the population as we age. For those who do not enjoy rollercoasters, the thrill is gone, and the experience is quite literally the opposite of the glee of youth.

Those Who Embrace the Ride

The history of leadership is chock-full of people who look like both types of riders: those who embrace the ride and others whose fixation on each possible pitfall renders them immobile. Both groups, in past decades, have had a reliable foundation on which to "ride," with predictable outcomes linked either to carefree confidence that everything is on a safe path or obsessive over-analysis of knowable details.

But the plight of each archetype is complicated by the realities of today's environment, which are serving up increasingly unpredictable twists, crests, and dives. Leaders will have a harder and harder time anticipating and capitalizing on the peaks.

Yet, it's at these peaks when new opportunities shift from the possibility of "if" to the inevitability of "when." To make matters worse, basic human cognitive biases—fatal flaws—narrow individual and organizational peripheral vision and lead to all-too-typical dysfunction.

The best leaders rise above these constraints to gain perspective; they set aside their terror of the ride and summon their inner child, who can better deal with the twists and turns. They recognize—and even appreciate—that while they may not be able to control all the outcomes, they can plan for and control their reactions.

These days, the conviction to act—especially in the absence of perfect data—is the only way to provoke the future you desire. Action creates potential energy. Action allows you to position yourself to see the peak sooner and more clearly than others. Action gives you the power to move through the phase change of "if" to "when" so that you can make the most use of the kinetic energy when it's released.

This is about looking forward and working through the natural human instincts that keep people frozen in place, thinking and analyzing. It is about forcefully gathering the will to act in the face of deepening uncertainty and DO SOMETHING!

PART I: PREDICTABLE PATTERNS

Patterns From the Past

When an anomaly emerges, something that might be important, the vast majority of humans behave in a persistently predictable pattern. It's as if executives are riding that roller-coaster but fail to recognize that they are in fact going up a steep slope that will at some point tip over into the ride of their lives—and not in a good way.

The potential of the trend—if it might happen—shifts to when it will happen. Too many executives fail to anticipate that phase change. They miss the trend, deny the trend, analyze the trend, or respond meekly to the trend:

Miss the trend. In general, we miss trends not because we aren't looking but because our brain processes the raw data of what we see through an unconscious filter of our own experiences. Unless you consciously learn how to turn that filter off, it can be hard to see something right in front of your nose.

Deny the trend. Denial can take many forms. People question and discredit observations. With other trends (e.g., humans' impact on climate, vaccines), that denial can include just an outright refutation of the findings. But after missing something for a long time, having it pointed out to you frequently sparks a negative response, and deniers will dig in. The lesson? People don't like to be shown they have missed something important.

(Over)analyze the trend. After a period of denial, some will turn to analysis. Executives will start to ask lots of questions about how big it is, how fast it's moving, how many people it will impact. And there are meetings . . . so many meetings . . . and all with their requisite PowerPoint decks. Some analysis leads to more analysis. The more you look at something, the more you find other ways you could look at it.

Respond meekly to the trend. Sadly, in the rare cases where executives take action—after an unduly long period of study—it's often too little, too late.

Once an 'if' becomes a 'when,'
the nature of a leader's response must change.

A chasm separates if something will happen (true uncertainty) from the uncertainty of when something will happen. This difference dictates how you act in the face of the trend, and the failure to recognize this nuance in meaning is what leads most leaders to miss, deny, analyze, and respond meekly.

These biases are the subject of Part I, which also offers solutions you can start implementing now to overcome some of these issues. Part II introduces five moves you can make, depending on whether you face an "if" or a "when." These tools will help you avoid those biases that prevent meaningful action, expand your peripheral vision to better assess your playing field, and prompt you to actually DO SOMETHING!

On the Importance of 'If" Versus 'When'

There are two phases of any trend, each characterized by the nature of the uncertainty around the trend. In the initial "if" stage, it's still uncertain if the trend will come to fruition; in the "when" stage, the trend has progressed, gathered momentum, and crossed an important inflection point where it's no longer uncertain whether it will come to fruition. It's only a question of when and, sometimes, to what extent.

Once an "if" becomes a "when," the nature of a leader's response must change. The opportunity is to focus on the moves you can make that will shape the trend to create a better future, one where your organization is advantaged.

The "if-to-when" shift is similar to a rollercoaster. That big initial climb as a cable pulls the car up the hill is the "if" stage. The rollercoaster cars are building up a ton of potential energy, and if they stop, they might just slide backwards.

But when the cars get to the peak and start to tip, that potential energy becomes kinetic and the momentum takes the cars through loops, twists, and turns, seemingly with a life of their own. Once you hit that inflection point, the "when" stage kicks in. During this transition, the critical question is how long it will take for the trend to resolve into inevitability.

The Balanced Breakthrough Model

While it's impossible to be exhaustive about all the mechanisms that might be at play in moving from "if" to "when," it's helpful to lean on something from the world of design-driven innovation called the "Balanced Breakthrough Model."

The basic notion is that a "balanced" innovation that has more likelihood of succeeding in the market will simultaneously build in aspects of desirability (the market wants it), feasibility (the innovator can produce it), and viability (the innovator can eventually make money from it).

Similarly, a trend that seems headed in the direction of checking all three of these boxes has a much higher likelihood of passing through the phase change to "when" than other, less robust trends.

Consider the launch of ride-hailing services. In markets like New York, where the existing taxi infrastructure didn't allow for calling a taxi, or consumers didn't find the experience clean, having the ability to hail a clean car from your phone at a similar price is unequivocally more desirable for the vast majority of consumers. It was quite predictable that ride hailing would take off quicker in markets with less attractive existing competition (other things being equal). The question was not "if" but "when."

As a general rule of thumb, anything that has the possibility of impacting your foundational business model—or mission—should be paid particular attention to.

Personal Patterns

It happens just about every day in organizations around the world. A combination of basic human biases—fatal flaws—and organizational dysfunction mean that most businesses systematically miss the opportunity to take early action against emerging trends—whether they are still in the "if" stage or the early stages of "when." They wait until the only choice is one of adaptation.

These fatal flaws can make the difference between an orga-

nization failing or thriving. Successfully spotting subtle—or not-so-subtle—trends that meaningfully impact the prospects for businesses is a fundamentally important capability that impacts every business, big or small, old economy or new economy, virtual or physical.

When businesses are faced with fundamental changes to the environment in which they operate, leaders have a choice—*but only if they can effectively identify the meaningful trends*. Those choices involve either riding the trend downwards, adjusting the business model to fit the emerging trend, or shaping the trend to create advantage. Let's explore several of the cognitive biases:

Availability bias. This is the tendency to rely on examples that are easy to access mentally. You've probably been in a meeting where someone would say something like, "I gave a sample to my daughter and she hated it." Although it's unfortunate that his daughter disliked the product, it certainly does not imply that research is faulty.

Egocentric bias. This is the tendency to overweight data that is consistent with one's previous point of view. The world is a muddy place, and there is often lots of data that is unclear. If you are more likely to select and use data that conforms to your view of the world, then it makes it harder for you to incorporate different views into your overall perspective.

Affect heuristic bias. This bias suggests that people base their judgments on their perceived affect toward what they are judging. Affect heuristic is a "gut" response to something that is triggered when we have strong feelings associated with the subject.

Each of the preceding three biases contributes in part to the inability of individuals to see trends that are at the "if" stage, or even the early "when" stage. The challenge of not seeing trends is further exacerbated by the human tendencies that prevent action against those trends. Several well-known biases include

Status quo bias. This is a preference for the status quo over a change. One explanation for this bias is that a deviation from the status quo is perceived by people as "losing" something—and humans are quite loss averse.

Overconfidence bias. People overestimate the likelihood that they are correctly judging a situation. Several studies have demonstrated this bias by asking people to answer questions such as how to spell words, or true/false statements on general knowledge topics, and then assessing their confidence in their answers. Systematically, people overestimate their chance of being correct.

Cognitive bandwidth of leadership. Time has become the scarce resource. Most senior leaders' days are filled with meetings, travel, and meals, with not a lot of time for themselves or to think. As a result, they rarely have sufficient time to think about the future and the challenges their businesses might face in the future. Too many organizations are governed by the tyranny of the urgent.

When all of this is taken together, what do we end up with? We have people in organizations who are biased against even seeing possible impactful trends in the marketplace, just by the nature of being human—not because they are incompetent or evil.

If they do identify a trend, they are biased against seeing it as important to their business and tend to discount it entirely. And if a trend does get raised, there are considerable organizational impediments to taking any meaningful action against it.

But there are ways for companies to pursue strategies that have them adapt and thrive.

Expanding Peripheral Vision

There are tactics you can adopt that will expand your and your organization's peripheral vision so that you can see more of the playing field, and so you'll be more likely to see the "if-to-when" trends and more prepared to take on the Provoke strategies.

Embrace Diversity

One of the best antidotes to a narrowing of organizational peripheral vision is to embrace diversity. More-diverse groups are better at solving complex problems and creating new possibilities. If you diversify the group working on a problem, you'll more likely get the right answer. How does this work mathematically? Researcher Scott Page explains it using the following formula:

Group Error = Average Individual Error – Diversity

Groups benefit from cognitive diversity because each individual in the group selects different data based on their personal biases, processes that data differently based on their experiences and learned heuristics, and reaches different conclusions.

Page explained the benefit of diversity against problem solving using the simile of an episode of the television show CSI. After interviewing one witness, you have a single angle on the crime in question. You might be able to eliminate one or two suspects.

But as you keep adding eye-witnesses, each of whom had a different angle on the crime, you can incrementally eliminate suspects and are more likely to find the perpetrator. But interviewing a bunch of eyewitnesses who saw the crime from the same angle advances the investigation less.

There are things that organizations can do to take advantage of diversity they already have:

> We must dispel the notion that strong leaders don't change their positions . . . or learn.

Teach productive interactions to embrace inclusion. The goal is to make sure that each member of the group is willing to *advocate* for the things they see, sharing the data and the logic for how they reached their conclusions. But, importantly, they also *inquire* about the data and logic of others, with the intent to learn about the way others perceive the world. This is a learned skill, and it takes a lifetime to perfect.

A simple reminder before every meeting goes a long way. You can say to yourself, "I have a point of view worth hearing, but I might be missing something."

Make flexibility in thinking a positive leadership trait. We must dispel the notion that strong leaders don't change their positions . . . or learn. This is not to suggest that flip-flopping with no explanation is a desired leadership trait: That amounts to just whipsawing the organization by constantly changing your tune about an issue with no basis for the change.

However, flip-flopping when you have new information—flexing your thinking in an explicable way—is absolutely a hallmark of effective leadership in the face of accelerating change.

There's more to being a provocateur than just being able to identify trends. You have to know what to do with them when you find them. Let's next explore five strategies for what you can do when you discover a trend that impacts your organization. How you do so depends highly on where you are in the "if-to-when" phase change.

PART II: PRINCIPLES OF PROVOCATION

Birth of a Provocation

The bombing of Pearl Harbor and the terrorist attacks of 9/11 are two of the most ingrained stories of attacks by a foreign enemy on American soil in history. The attacks share a common thread: Prevailing wisdom of the time, built on an understanding of the world, had been up to that point overshadowing the voices of those raising the alarm to the potential danger.

Many may be familiar with the failure to collate related intelligence warnings prior to the 9/11 attacks but are less aware that the attack on Pearl Harbor had its own warnings that were ignored. At the core of this breakdown was an idea—fueled by historical precedent, conventional wisdom, and basic racism—that the Japanese military simply did not have the wherewithal to attempt such an aggressive and ambitious operation.

The failure of the United States to anticipate and prepare for Pearl Harbor is a prime example of what happens when orthodoxy based on past experiences and embedded belief systems congeals to create an inability to act. Many boardrooms and C-suites are beset by the same issues.

The call to action for all leaders today is to provoke a better future—and if you're a business, a better future means one in which you are advantaged.

The Provoke Quintet

There are five general models of provocation:

- **Envision:** The foundational provocation that allows you to see the future(s) that could emerge over time.
- **Position:** Situate your organization to take advantage of the emerging future(s).
- **Drive:** Directly create an impact that is advantageous to you.

- **Adapt:** Shift your business model to best fit the inevitable outcomes, moving as quickly as possible to create advantage.
- **Activate:** Trigger a network or knock-on effect—often through an ecosystem—that stands the highest chance of leading to your desired outcome.

Let's dive into these in more detail.

Envision: Seeing the Future

Any successful envisioning exercise will allow you to accomplish three things. First, it will help you understand your frame of reference through a desired outcome. Second, it will help you develop scenarios and place initial bets. Third, it will enable you to identify signposts and leading indicators of how the future is unfolding to track over time, setting yourself up to course-correct as necessary. Consider these three steps:

Create a focal question that allows for consideration of a diversity of desired outcomes. The trick is to effectively translate your desired state into as concrete a focal question for consideration in your scenario development as possible, one that specifically addresses the decision you need to make. It should allow for flexibility to explore the rosiest of plausible scenarios you desire, but also encompass alternative futures that do not work in your favor.

Develop scenarios and place initial bets. Most organizations prize the ability to see into the future with certainty through ever-more sophisticated access to data and analytical techniques. For the increasingly complex environment in which most companies operate today, that's simply not possible. Instead, the purpose of scenarios is to "imagine with confidence" rather than bulletproof certainty.

At the heart of good scenarios lies a comprehensive understanding of all the driving forces that might impact the desired outcome and focal question. Those forces must be sorted and narrowed to focus only on the forces that will have meaningful impact on the focal question, honestly and confidently declare which of them are already in the "when" phase and should not be treated as uncertain (except regarding timing), and result in a subset of the highest- impact forces that are genuinely uncertain (i.e., in the "if" stage).

Identify leading indicators to track over time, enabling course correction as necessary. The final stage of a good envision provocation establishes what we should be paying attention to as we manage through the face of uncertainty. These are leading indicators (primarily quantitative) and signposts (primarily qualitative) that we need to build sensing systems to monitor in an increasingly intuitive way over time. These indicators and signposts provide the backbone of a sensing system that will be one of the best sources of information about when uncertainties are resolving into trends.

Position: Preparing for the Change

When you are still living in the uncertain "if" phase, there are three actions you can take to simultaneously try to provoke a phase change to "when" and try to understand when you have entered that phase change. The trick is to execute them with foresight and purpose.

Situate. With a sense for how the future might unfold through different scenarios, actions that help situate you are ones in which you place bets that maximize the likelihood that your future desired state comes to pass.

Frame. Once you know what you are trying to achieve and are in a position to take action, you need to frame an experiment in a way that will give you data on whether a hypothesis is coming true and/or whether you can catalyze events in a way that will lead it to come true.

Test. Testing is, of course, execution of the designed experiment. But the active work in this provocation goes beyond just pulling the trigger. It largely consists of constantly monitoring outcomes in a way that allows you to place new bets, frame further experiments, and launch new tests until you shift from "if" to "when."

The key distinguishing feature of these three moves in the "if" phase is that you need to treat them as a system, interconnected and often executed repeatedly in a series.

Betting on the Business Model

In early 2008, four classmates at Wharton Business School, Neil Blumenthal, Andrew Hunt, David Gilboa, and Jeffrey Raider, wondered why prescription eyeglasses were not sold online. It's not that others hadn't had the same thought, but most believed such a business model was unsustainable. The eyewear market was characterized by a very small number of large global players controlling nearly all name-brand frames and distribution channels. Barriers to entry were high, to say the least.

Additionally, the idea of buying eyewear online, a deep-

The act of adapting to a foregone conclusion that doesn't favor you is the hardest provocation of all.

ly tactile purchase, seemed doomed to fail in the earlier e-commerce days, when buying books online made sense but—for example—personal fashion didn't. But there were signs that might change.

Ahead of many others who had likely explored the market, the four co-founders were able to both sense and demonstrate that high-touch retail experiences could effectively transfer online. As such, they were partially the cause of this moving from an "if" to a concrete "when." The convergence of two factors was key: the rapidly expanding e-commerce market and Americans' growing comfort with online shopping, and an eyewear industry with bloated "middleman" costs that was ripe for disruption.

Against the backdrop of this landscape, Warby Parker launched a vertically integrated company that eliminated waste in the distribution system through a direct-to-consumer model, passing savings on to consumers. This, coupled with a deep passion for customer experience and a willingness to respond to feedback and iterate, has driven much of the success of this company—valued in late 2020 at a remarkable $3 billion.

Much of the company's continued success comes from a willingness to continually design, test, and reposition in response to the market.

Drive and Adapt: Taking Control

The best provocateurs bring a combination of foresight, well-timed action, and a constant attention to "what's next" in the market to constantly work the swirl between catalyzing the world they envision and riding the waves that they make.

Drive

Drive is when a single organization can have a meaningful impact on the outcome of a broader trend, where an actor has the opportunity to "just do it." Often, if you catch a trend early enough in the phase change, you may have a slightly higher ability to influence the outcome.

But Drive is also the move that requires the most confidence and commitment to seeing it through, even in the face of plenty of evidence that the move is anything but a sure thing.

With the platform company Tencent and the app WeChat, Ma Huateng (aka Pony Ma) has changed the face of communication.

Pony Ma was in the ideal place at the ideal time, living through China's rapid rise from an agrarian society to an industrial powerhouse that became the world's factory in just less than 40 years. Ma recognized how quickly society and people within it will adapt and adopt new ways of doing things that clearly make their lives better.

The phase changes that Ma recognized in or around 2010—and positioned himself and his company to take massive advantage of—were the rise of the smartphone as the primary mechanism for accessing the internet and the subsequent shift to instant messaging as a way to stay in touch. There's no doubt that the company helped lead the way as a key catalyst in the exponential rise of smartphone use.

And since then, it has always seemed to be able to stay one step ahead of the next trend. WeChat has continuously added to its wealth of offerings to lock its large, loyal user base into the ecosystem. As of 2020, the range of WeChat services includes the offerings of multiple large-tech companies in the West, including Google, Uber, SnapChat, Amazon, Craigslist, and Facebook.

Adapt

The act of adapting to a foregone conclusion that doesn't favor you is the hardest provocation of all. Sometimes, that's due to operational or positioning challenges.

But more often the biggest challenges are emotional ones, because by definition this reality is one in which you have little ability to shape a future that is advantageous to you, and a great degree of complexity in the path forward. It therefore requires an admission that your business model is no longer fit for the purpose.

While it's great to be able to see the wrecking ball coming, it's even better when you can get out of the way and configure

yourself to take advantage of the emerging trend. This requires embedding—with foresight—a plan to adapt predictably, building it into your business model from the outset.

Activate: Harnessing Your Ecosystem

The Activate provocation involves working with and through an ecosystem to get things done. It's unique from the others, however, because while the provocateur may see a very straightforward path to their desired outcome, they have little ability to directly influence—except at the very outset—whether it is achieved. At its heart, it is a move to trigger a knock-on effect that, once set in motion, you just have to hope is seen all the way through.

Increasingly, ecosystems are one of the best ways to sense, respond to, and when appropriate, accelerate a phase change to a more certain—and desirable—future.

Increasingly, if an organization wants to remain competitive, it can't rely on the capabilities it can conceivably create within its four walls. Further, because of technology, it's becoming easier and easier to access the capabilities of outside organizations.

Ecosystems are not new, but in the face of this new optionality, it is newly important that leaders need to make clear ecosystem choices. The most foundational choice that organizations need to make as it relates to ecosystems is what to use them for.

What to Use the Ecosystem For

There are several factors that need to be considered when evaluating whether to do something solely in house or with one or multiple outside parties as you try to provoke the future you desire:

- How much better (or cheaper) could we deliver against the business objective by working with outside parties?
- How quickly can we build the capability with others versus doing it ourselves?
- If we build the capability with others, can our competition access similar (or even the same) partners to build the same capability?

Ultimately, each choice needs to be examined on its own merit, and sadly, there is no simple formula. There is one rule of thumb: If the capability is a critical part of delivering your organization's overall differentiation, then it's more important that the capability be proprietary in nature.

If your differentiation lies, instead, in your ability to convene and lightly orchestrate the activities of many, then virtually nothing other than your word-of-mouth reputation as a force for good need be proprietary.

Action, in some ways, is nearly always superior to inaction because action provides more immediate, more valuable feedback.

Whether you're the one in charge or the newest member of a team, we will all live in a better world if you just go out and DO SOMETHING!

Geoff Tuff is a principal at Deloitte, where he holds a variety of leadership roles across its sustainability, innovation, and strategy practices. His work centers around helping clients transform their businesses to grow and compete in nontraditional ways. Steven Goldbach is a principal at Deloitte and serves the U.S. partnership as the firm's chief strategy officer. He helps executives and their teams transform their organizations by making challenging and pragmatic strategy choices in the face of uncertainty.

THE SUMMARY IN BRIEF

Have you ever asked yourself, "What fulfills me?" It's an awkward question, but one that is important to understand who you are and where you want to go in life. People who know and pursue what fulfills them have better productivity, focus, and overall health.

The question, "What fulfills me?" is another way of asking yourself "What is my purpose?" If you don't know your purpose, or if you don't feel you have the right purpose, this book will help you discover it. ***Purpose – The Extraordinary Benefits of What Matters Most*** helps you understand how to find your purpose and how you will benefit from it.

Author Ben Renshaw breaks down how to find your purpose, why you need to find your purpose, and how knowing your purpose will positively affect every aspect of your life. Renshaw shares practical examples and personal stories of purpose throughout many industries. Whether you are a teacher, a salesman; young, or experienced - ***Purpose*** is for everyone. Everything you do is guided by your purpose, and this book will help you find it.

IN THIS SUMMARY, YOU WILL LEARN:

- The benefits of leading a life with purpose.
- How to identify your personal purpose.
- Skills that will help you lead and live with purpose.
- How to turn your purpose into action.

Introduction

As a child, author Ben Renshaw was trained as a classical violinist. He toured the world and showcased his extraordinary talent. But in spite of his success and recognition, he wasn't happy. Renshaw felt he didn't have a purpose and was afraid that all his time practicing and performing was for nothing.

Ben embarked on a personal journey to discover who he really was as a person. He realized his purpose was people. He loved connecting with others and interacting with all types of people, so he pursued the field of personal development to focus on relationships, happiness, and leadership. This new purpose made him a new person. A purpose helps you learn who you really are and leading with purpose will have a huge impact on your life.

Before we identify your individual purpose and how to use it to help others, we'll share the benefits of leading a life with purpose.

Lead a Life with Purpose

Making Meaning

Once you are clear on your purpose, you can apply meaning to every aspect of your world. This meaning is important at all times, but especially in hard times. One inspiring example comes from one of the darkest times in history. Victor Frankl was a Viennese psychiatrist who survived seven concentration camps during World War II. He believed man's deepest desire was to search for meaning and purpose. His purpose was to have hope amidst all the despair around him, and he believed that's what helped him survive. Your purpose helps you find your meaning, and it can guide you through whatever trials you experience in your journeys.

Being Yourself

We spend so much time trying to gain new skills and knowledge in the hopes of being better than everyone else. This constant pursuit of the future prevents us from taking a step back and trying to learn who we are in the present. Being authentic, admitting our limitations, and being transparent in our communication helps others believe in your skills as a leader.

Boosting Energy

We can't hope to lead others or believe in ourselves if we don't have the energy for it. You need to know what energizes you and, just as important, what de-energizes you. People can be either a source of energy or exhaustion. For those who energize you, you need to ensure you keep in touch with them. The energy those people give you will help you in following your purpose. For those that exhaust you, you need to cut them out of your life. Every second you spend with someone who de-energizes you is a second you are not serving your purpose. Physical health is another source of energy. What kind of foods do you eat? How much sleep do you get? Emotional health is another source – do you have a positive outlook on life, or are you constantly focusing on negative emotions? These questions help you understand what is driving your purpose and what is damaging it.

> A team that has purpose can stay focused on the goal so they don't get derailed from distractions.

Inspiring Others

The most important role in leadership is to inspire others. Organizations that have inspired employees are more productive, have greater profit, and have lower turnover than organizations with people who don't feel inspired. You won't be able to serve your purpose by yourself, so inspiring others ensures you reach and help the most people.

Winning Teams

The key foundation for high-performing teams is to have a clear sense of direction. This direction comes from purpose. A team that has purpose can stay focused on the goal so they don't get derailed from distractions. Whatever distractions or challenges occur, your team can always look at their purpose to guide their actions.

Creating Business Differentiation

Organizations driven by a clear purpose have more loyal customers, increased returns for shareholders, and create economic and social value. This purpose-driven mindset is important for all employees, not just the senior leaders.

Now, you understand what is at stake and how leading with purpose can benefit everyone. The next step is defining your personal purpose.

Identify Your Personal Purpose

Your personal purpose is your reason for being. It inspires and guides everything you do in your life. Your purpose is your "Why." It's important to note that your purpose cannot be a value, like "honesty." A value shapes how you behave, but it's not the reason why you behave that way. A purpose can also not be a goal. A goal is what you want to do, but it's not your "Why." Think of your goals as your "What," your values as your "How," and your purpose as your "Why."

Now that you know what a purpose is, you need to identify your purpose. There are 8 easy steps to guide you towards identifying your purpose.

1. Think back to the peak moments in your life when you were at your best.
2. Think about what was happening (an activity like a sport, a relationship you had, etc).
3. Identify the key themes that are shared across your peak moments.
4. Group the themes into broader categories like "helping people" or "making change happen."
5. Identify a category that stands out above the others.
6. Ask a trusted person to help you explore that stand-out theme…What does it mean to you, and why?
7. Ask them to take that information and summarize a potential purpose for you.
8. Clarify an initial purpose statement that means something to you.

In this activity, keep it simple and don't be vague. A purpose like "leave a legacy" doesn't give you any specific direction. An example of a powerful purpose is Nelson Mandela's – "Live in a way that respects and enhances the freedom of others."

In addition to you finding your purpose, your team needs to find its purpose as well. Your team's purpose needs to be created with input from everyone on the team. It cannot be dictated by one person. A purpose is not something you have to do – it is something you want to be. You, your team, and your organization need to be clear on their purpose in order to be successful and make a difference in the world.

So far, we've covered the benefits of leading with purpose and identified your purpose. In this next section, we're share six key skills that are the building blocks to help you serve your purpose.

Live and Lead with Purpose

Listening

To learn what is most important to others, you need to purposefully listen to them. You won't get anything done if you don't know the other person's goals, motives, and who they are.

Storytelling

Everyone loves a good story. Stories have the power to connect people through a common vision to achieve a common goal. Instead of just telling someone what your purpose is, tell them a story to bring your purpose to life.

Coaching

Coaching is a learning approach based on eliciting truth through questions and answers. Whether you are a parent developing a child or boss developing an employee, coaching is based on bringing out the potential people have in them. Instead of just telling them what to do, you need to bring out the answers they already have inside them through asking them questions. Unlocking this potential is the key to high performance.

Feedback

Feedback is usually associated with negativity, where something is wrong and you have to tell someone how to fix it. The true definition of feedback is the art of encouragement. This encouragement can be to reinforce someone when they are performing a task correctly, or it can be helping someone improve an area of opportunity. Both lead towards a positive outcome.

Relationships

If there is one leadership skill that rises above all others, it's the ability to build and sustain meaningful relationships. You are not going to get anything done by yourself and building relationships will help you serve your purpose, so you can help others.

Focus

We live in a world of distraction where it is hard to focus on what matters most. Purpose helps you focus by basing your attention on what will and will not serve your purpose. This

makes it easier for you, your team, and your organization to focus on what really matters.

Of course, having a purpose and having those skills means nothing if you cannot turn it into action.

Turn Your Purpose into Action

To take meaningful action, you need to have a support system, like your team. Your team needs to believe in you as a leader if they're going to take the actions to serve your purpose. The essence of leadership is authenticity – share your flaws, admit your struggles, and just be yourself. When your team sees you as a person and not someone just trying to get ahead, they are more likely to follow you. Once you have them believing in you, you need to play to your and their strengths. We spend so much time trying to find/fix weaknesses, but we should be highlighting our strengths and using those to drive us towards living our purpose.

Leading with purpose means you need to develop compassion towards others. Compassion means truly learning about the other person, verifying you are both on the same page, and offering to help and serve others.

Your purpose should never just be about how it can help you – it should be how you are going to help others. Knowing your purpose, and living it, will help you as you experience struggles and setbacks.

Struggles can either hurt you or help you. In a way, your struggles can strengthen you by boosting your resiliency – your ability to recover from setbacks. Unfortunately, we are sold the idea that life should be easy, and if it's not easy, then something is wrong. This could not be further from the truth. We need to be flexible and adapt to change as it happens. We can't succeed with a plan that's failing – we need to adapt and keep going in the face of adversity.

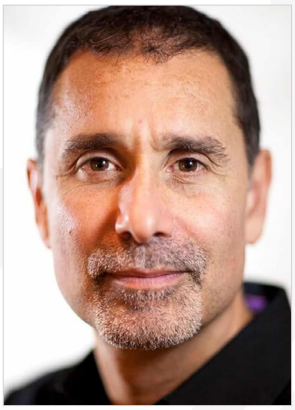
Your purpose should lead you to build and sustain connections with others. Great relationships lead to great results, and you need to develop those great connections to live and serve your purpose. Six traits of a connected leader are someone who is aware of the world around them, works constantly on maintaining their network, embraces diversity among their connections, adapts to unpredictable circumstances to benefit everyone, collaborates professionally and effectively with others, and is focused on achieving success as a team.

As a leader, you can lead change by creating an environment that encourages it. People need to understand why the change is needed, they need to feel empowered to participate, and they need to know the change will continue to benefit them instead of be abandoned/forgotten when times get tough.

Lastly, having a clear purpose can positively affect your health. Anxiety, sleep deprivation, and stress are parts of our everyday lives, and these factors cause us to ignore personal health and wellbeing. Think about your wellbeing as it is now – are you where you want to be in terms of health? If not – what actions can you take in the next six months to be better?

Conclusion

A personal purpose provides you with an anchor, a sense of meaning, and a clear focus in a disruptive environment. Following your purpose helps you make a difference in the word. Now, it is up to you to identify that purpose and lead with it.



Ben Renshaw builds purposeful partnerships with leading organizations to develop leadership capability, high performing teams and transform organizational cultures. He believes that discovering and leading with purpose is the greatest opportunity in life.

Speaker, coach, consultant and popular author of 8 books including ***Purpose, Lead***, and ***Super-Coaching***, Ben inspires people to go beyond what they think is possible. As a consultant he is renowned for getting to the heart of situations and creating the conditions for new solutions to emerge and as an author Ben blends his depth of insight with practical calls to action.

Lessons in Leadership from a CEO's Journey ...

PUT THE MOOSE ON THE TABLE

THE SUMMARY IN BRIEF

Randall Tobias, former CEO of pharmaceutical giant Eli Lilly and Company, knows what it takes to get to the top. In Put the Moose on the Table, *Tobias mixes personal anecdotes with his thoughts on effective business and leadership practices, often focusing on the intangible qualities — integrity, dedication and respect for colleagues — that separate the best from the rest.*

A vice president at AT&T when he took the job at Lilly, Tobias recalls how a major crisis on his first day tested his abilities. Despite the concerns of some Lilly managers who wondered whether the "phone guy" could handle a crisis in which lives were at stake, Tobias immediately demonstrated the management, communication and interpersonal skills that would define his successful tenure as Lilly's CEO.

As a bonus, this summary includes boxed sidebars that capture in Tobias' own words his views on values and culture, vision, change, risk-taking, communication, organizational structure and more.

What You'll Learn In This Summary

✓ How leadership means establishing boundaries based on values and proper priorities — then letting your competent people do their jobs.

✓ How success requires good fortune — and the ability to grab the opportunities that come your way.

✓ How integrity means more than not lying, cheating or breaking the rules — it means never hiding problems, even for the best reasons.

✓ How this philosophy of "putting the moose on the table" helped Tobias cope with an unimaginable tragedy.

✓ Why managers who insist on employees working long hours are hurting not only their employees, but their companies as well.

✓ Why CEOs must prepare their succession based on the company's needs, not the needs of their egos.

The Simplest Explanation

A principle known to scientists as Occam's Razor suggests that all things being equal, the simplest explanation is probably the correct explanation. In business, I have found the same holds true for the simplest questions or the simplest actions — they are often the most important and can produce the most significant results.

On the morning of Monday, June 28, 1993 at the Indianapolis headquarters of Eli Lilly and Company, I walked into the executive conference room and unknowingly put this theory to the test. Three days before, Lilly had sent a shock wave through Wall Street and its own employees by announcing that the company's president and CEO, Vaughn Bryson, was resigning and that the Vice Chairman of AT&T, Randall Tobias, would become Lilly's new Chairman, President and CEO.

The Phone Guy

In the 117 years since it was founded, Eli Lilly and Company had an extraordinary record of achievement. During the entire twenty-year tenure of former CEO Dick Wood, the company had enjoyed an outstanding financial performance that included an unbroken record of consecutive quarter-over-quarter earnings growth that was second only to that of one other company in the Fortune 500.

But over the course of the preceding 18 months, Lilly's market value had steadily declined, from $24 billion to $14 billion. Certainly the problems facing the company were largely not the creation of the current management, but the solutions would have to be. After several months of difficult debate, the board reluctantly concluded that a change in leadership was necessary.

The transition I was about to take on came with a sobering reminder that success and praise in the corporate world often has a shelf life about as long as a gallon of milk.

Wall Street analysts did not see the logic in choosing a lifelong telephone executive to lead the turnaround of a pharmaceutical company. And when asked to comment on their new leader, most Lilly employees said they cared very little about my success in former jobs; what they cared about was the status of their own.

Tobias on Leading

✓ "Leadership is about far more than producing results through one's own initiative — it's about producing results through others."

✓ "Leadership is as much about listening, about building relationships, about providing encouragement when it's needed, as it is about communicating one's own ideas."

✓ "Leaders almost always think out of the box. They listen, observe, share ideas and shamelessly borrow from the experiences of others."

Crisis in the First Hours

On my first official day of work as a full-time Lilly employee, I was immediately plunged into a crisis that concerned a clinical trial involving a potential product called FIAU (an abbreviation for the chemical compound fialuridine). One of the patients in the trial needed to be hospitalized because of profound liver failure; several other patients were showing signs of liver toxicity and were in grave danger. Meeting with a group of key Lilly employees involved in the trial was the first item on my day's agenda. The circumstances were doleful and I was intent on listening and observing. The lawyer responsible for the legal issues involved told me later what she thought to herself as she saw me walk into the meeting: "We'll see what this guy is made of, because I bet none

(continued on page 3)

The authors: Randall Tobias was Chairman and CEO of Eli Lilly and Company from 1993 to 1998, when he retired from the post. He is now Chairman Emeritus. Prior to joining Lilly, Tobias had a long career at AT&T, rising to become Vice Chairman. Todd Tobias is President and Editorial Director of Table Moose Media and founder of *Indy Men's Magazine*.

The Simplest Explanation

(continued from page 2)

of his telephones ever killed anybody!"

After listening to the scientists, lawyers and public relations people gathered, I expressed my confidence in their ability to handle this crisis. I would not get in their way. However, I did offer one opinion: Our most important priority was to focus on what we could do for the patients and their families. Their well-being should be the driver of our decisions, first and foremost, not only because we had a responsibility to do those things, but more importantly, because it was the right thing to do.

Without realizing it, I had delivered my first speech as Eli Lilly and Company's new leader. I suspect it was not only what I said that morning that engendered the trust of my new colleagues, but also what was left unsaid. Boundaries had been established based on values and proper priorities. I was not going to manage every detail from my office. It was clear that what needed to be done was being left to those with the competence to handle it, within the boundaries I established. The newly anointed chairman intended to treat them with respect and not only agreed with the company's long-standing values — people, integrity, excellence — but recognized the importance of truly walking the talk. ■

Get the Moose on the Table

"Get the moose on the table" is a phrase I used often as Lilly's CEO. It was adopted to signal, in a lighthearted way, the need to speak openly and transparently about an issue at hand.

Integrity Also Means Transparency

I spent a lot of time talking to Lilly employees about the company's core values — people, integrity and excellence — and the relationship those values had to our business success. To me, the accepted definition of the second word in our values statement — integrity — was far too limited. That definition was hampering our ability to communicate effectively and to make timely, sound business decisions. Integrity had been, and continues to be, a very important part of the culture at Eli Lilly and Company. The company does not tolerate those who lie, cheat, steal or break the rules. But to me, that was a very limited definition of integrity.

If you were a Lilly employee in 1993 sitting in a conference room talking about several ways to deal with a particular problem and you had a strong point of view that wasn't going to be popular with the group or with your boss, chances are you probably didn't offer that opinion for fear of damaging your career or worse. Also, you didn't want to hurt someone's feelings.

That attitude can be very counterproductive, so we all made a concerted effort to "get the moose on the table," which meant telling each other, in a professional, courteous way exactly what we were thinking.

Coping with Unimaginable Tragedy

My philosophy of getting the moose on the table helped me survive the unimaginable grief of my wife Marilyn's death on May 16, 1994 — the day she took her own life. For several years before her death, a wide variety of diagnoses had been suggested for Marilyn's discomfort, including Lyme disease, chronic fatigue syndrome, a liver disorder of unknown origin, and others. A few months after I joined Lilly, we finally learned what was wrong: She was suffering from clinical depression. Eli Lilly is the manufacturer of Prozac, and is home to one of the world's most significant assemblages of expertise on diseases of the brain. Had I not joined Lilly, Marilyn might have never been correctly diagnosed. Tragically, the diagnosis was made too late.

I could tell you more about those final months, and the heroic efforts of many to first diagnose and then discreetly treat Marilyn. But the hard reality is that my wife is dead. In spite of her best efforts and mine, the help that she needed to identify her illness and treat it in a timely way had simply not been there. Our lack of knowledge about the symptoms of clinical depression prevented her from getting the help she needed in time to save her life.

Dr. August M. Watanabe, Executive Vice President of Eli Lilly and head of the company's research laboratories, credits my ability to "put the moose on the table" as one of the sources of my strength during those difficult months. I could cope because I was able to confide in people. Gus also believes that my openness with the media and the company after Marilyn's death regarding her battle with depression demonstrated exactly what I meant by "getting the moose on the table." ■

Tobias on Vision

✓ "Without a shared vision that is compelling and truly embraced with passion, it's nearly impossible for any organization to be successful."

✓ "Most visions have many 'fathers.' But in the end, people must be able to see and believe that their leader is the ultimate father, and truly owns the vision."

✓ "To make a vision stick, at least two very critical components must exist. The vision must be crystal clear. But even when it is, you cannot simply order people to 'believe.' For a vision to take hold, it must also be compelling."

When Communicating, Know What's Being Heard, Not What's Being Said

Effective communication is more than simply delivering a collection of well-considered statements. It's also where and how and, above all, when these words are delivered that truly cause messages to take hold and behaviors to change.

Test Drive the Words

During my years at AT&T, I learned that not all audiences hear a particular message the same way, so I tried to be very sensitive to what would be *heard*, not just what was being *said*. Before making announcements that would impact AT&T employees, I asked a select group of people to react to my messages and give me their interpretation of whether the words communicated exactly what I wanted to say. This practice taught me that messages must be timely and must communicate as much as possible to get the desired results.

It goes without saying that organizations that run on questionable ethics and practices will find themselves in hot water. There's no way those organizations can "communicate" themselves out of trouble — it just doesn't work. But many leaders don't realize that without the proper management of communications, day-to-day mistakes or wrongdoings can grow into serious issues that gain the public's attention. Corporate communication is very much about filling information voids.

Actions Communicate

Some corporate managers feel that communications is a set of writing and speaking functions. I think it's that and much more. Communications consists of all the activities that demonstrate, through words and actions, what a leader, and what a business, is all about. If it's an airline, for example, communications is the media releases, the employee publications and the advertising, but it's also the quality of the ticketing process, the way baggage is handled at check-in and arrival, the size of your seat on the plane and the attitudes of the flight crew.

The real challenge for many leaders is not communicating *per se;* it's integrating what they speak and write into the way they behave. It's behavior that is totally focused on customers and their needs, and on the needs of every one of the corporation's stakeholders. The activities of organizational communicators are means to other ends, not ends unto themselves. When it comes down to it, corporate communications is just another form of cross-functional teamwork. It's doing away with fiefdoms, doing away with turf. Put another way, communicating effectively is leading by example. ■

Tobias on Communication

✓ "Effective communication is more than simply delivering a collection of well-considered statements. It's also where, how and above all, when these words are delivered that truly causes messages to take hold and behaviors to change."

✓ "Leaving an information void is always a terrible mistake. Whenever employees or the media or analysts or others have to fill such a void, they are most likely to fill it with the worst-case scenario they can imagine."

✓ "Communicating to audiences, friendly and hostile, large and small, formally or informally, is a skill that is one of the hallmark responsibilities of any corporate executive."

The Hierarchy of Secrets

Those who become successful leaders must have certain innate abilities and characteristics: the ability to motivate others, to communicate effectively and to withstand the rigors of long hours and travel. In my own case, the development of my leadership skills can be attributed to the sum total of a variety of unique experiences: parental influence, education, job assignments, extracurricular activities in college, mentors and early successes and failures.

Assuming that two people have equal capabilities, why does one move ahead in business and the other doesn't? Beyond sheer ability, there are many factors that come into play. To steal a line from Clint Eastwood's aging gunslinger in the movie *Unforgiven*, when success doesn't come to those who are deserving, it's mainly because "deserve's got nothing to do with it."

Seize Opportunities

Having the capabilities is absolutely necessary, but it's not enough. Success also requires opportunity. It's critical to make things happen by seizing opportunities when they come along. With every opportunity comes the possibility of growth and development, which opens the door to even more opportunity.

I don't discount the influence of either nature or nurture on my success, but I have come to believe that there are two important components that determine whether a person steadily advances in a career. The first is whether you have the capacity to consistently demon-

(continued on page 5)

Tobias on Career Development

✓ "When the glare of the spotlight suddenly shines on your stage, you have to be able to dance, to be sure. But you also have to be ready at any time to give what may be a career-determining performance."

✓ "The more a career discipline requires — and rewards — coloring strictly inside the lines, the more likely it is that people who have excelled in that environment will have difficulty dealing with the uncertainty and ambiguity of more broadly based leadership."

✓ "The ideal preparation for becoming a senior leader is having experience with both depth and breadth. Both are vitally important. But if you must choose one or the other, choose breadth. It's at the heart of leadership success."

The Hierarchy of Secrets

(continued from page 4)

strate both the ability to excel and the drive, desire, energy and enthusiasm to be motivated by all of the jobs you find yourself working in, even if some assignments don't fit into your career plans.

The second factor is fate, or luck, or whatever you believe creates opportunities. I believe that the defining events in any career, more often than not, have to do with the intersection of these two factors. A person must have both the ability to consistently deliver results and the opportunities to demonstrate that ability, especially when that rare, unexpected, career-altering opportunity presents itself.

So when I'm asked how I became a successful CEO, my response is simple. I believe I was blessed with some of the required abilities, certainly. But it was also important to do my best, to be ready when opportunity knocked. And then I always tried to answer the door.

Other Factors

Other factors can certainly influence the development of a successful leadership career.

One of the key indicators for separating those who most likely have the potential to become successful leaders from those who probably do not is their level of comfort with ambiguity.

Depth in some professional field is essential as preparation for taking on broader leadership. Somebody who knows only a little bit about a lot of things is not likely to be an effective a leader.

And sometimes success in the corporate world is like the proverbial frog in children's literature — the happy endings often lie behind the guises and forms where you least expect to find them. ■

Managers or Leaders?

Quite often, after a presentation I've made to a college class or a corporate audience, a young student or employee will approach me with a legal pad full of questions. While they usually find a creative and polite way to ask their questions, what they're often asking is, "How did you do it?"

What they really want to know is how can they do it. What types of leadership traits should they try to develop? Are they taking the right courses? Should they enroll in a master's program? What qualities are corporations really looking for on a résumé? In other words, what is the secret formula for becoming a CEO?

The Secret List

The honest and perhaps obvious answer is that there is no magic formula. But there are predictors that are important and fairly dependable indicators of leadership capacity that have been important to all of the organizations I have been associated with. It would be a mistake to believe the identification of leadership talent could be reduced to something as straightforward as a list like the one that follows. Nonetheless, here is my list, based on some of the attributes I believe are worth the effort for aspiring managers to try to develop:

- **A leader inspires confidence and trust.**
- **A leader communicates effectively, internally and externally.**
- **A leader consistently achieves superior results and produces results through other people.**

(continued on page 6)

Tobias on Risk-Taking

✓ "By encouraging more risk-taking, mistakes will be made, to be sure. But the ultimate measure should be the net impact of the successes and failures on the creation of shareholder value, not just the number of times a well-considered decision doesn't turn out as planned."

✓ "When decisions are made and things go wrong, much more than just the end result needs to be evaluated. What was known and when was it known? Was the decision made at the most opportune time? Was the risk of making the decision and being wrong outweighed by the likelihood and benefits of being right?"

✓ "At some point in the process of making most decisions, you are far better off to make a timely decision based on sufficient but partial data than to do all the things necessary to make a perfect but untimely decision based on waiting for all of the data."

Managers or Leaders?

(continued from page 5)

- **A leader pursues continuous learning and fosters a learning environment.**
- **A leader produces other leaders.**
- **A leader develops cross-functional knowledge and versatility.**
- **A leader embraces change and looks for ways to use it as an advantage.**
- **A leader is constantly on the lookout for innovative ideas, particularly in unlikely places.**
- **A leader builds alliances to further corporate goals, internally and externally.**
- **A leader balances the short term with the long term by focusing on both.**
- **A leader embraces ambiguity.**
- **A leader practices and encourages thoughtful risk-taking.**
- **A leader champions cultural diversity.**
- **A leader's contributions leave "footprints."** ■

Adding Value(s)

When there is pressure to produce, if you intend to adhere to certain standards of behavior, you have to make those intentions clear by your words and, more importantly, by your actions.

Not unexpectedly, many board members and senior executives involved in the recent rash of corporate wrongdoings have pretended to be ignorant of their companies' problems. In some cases this is true, at least in a strictly legal sense. But from a leadership perspective, I think all of the decision makers involved are at least guilty of leadership negligence.

Did these leaders do enough to ensure that their organizations instilled a value system that would keep such problems from occurring? Did they do anything with company-wide emphasis to ensure that those connected to the well-being of the organization understood which actions would be tolerated and which would not?

Granted, even the most values-driven companies can be victimized by greedy, misguided employees, or even CEOs. Having well-defined and emphasized values won't prevent problems, but it will certainly help to identify them — if those at the top are really paying attention. ■

Crisis Center

How could the need for values-driven behavior and cultural change be balanced with the need of Lilly employees to be part of an institution with meaningful cultural traditions? Could we embrace the change and uncertainty of a constantly changing work environment while also honoring the past?

I had come to strongly believe in a simple principle for managing change: *When an organization is involved in wrenching upheaval, it's important that everyone touched by the organization have something comfortable and familiar to hang on to.* Whether it's a mission statement, a quotable blurb or a familiar slogan, reenergizing a meaningful symbol from the past can act as a flotation device.

When too much change is implemented to an entire company, it can increase the sense of turmoil and further alienate workers, but communicating ideas about the organization's past successes can serve as a rallying point for employees. ■

Tobias on Change

✓ "Change is a lot like fire. Manage it, turn it to your advantage, and you will bask in the warmth of its glow; ignore it or manage it poorly, and one thing is certain — eventually you will get burned."

✓ "When one is in the midst of enormous change and all of the ground rules are being thrown out the door, it's absolutely essential to ask — and answer — *'What business are we really in?'*"

✓ "The sooner leaders recognize that change itself can represent the very core of competitive advantage, the sooner they will taste success."

Recipe (Reciprocity) For Success

Just as competitive pressures and the need for organizational effectiveness require a company to do more for its employees these days, those same pressures require that today's employees do more for their company. For example, because Lilly believes employees are the foundation of its success, the company expects a lot of them.

This mutual bond begins with the premise that in these times of continuous change, any guarantee of job security is gone. So in recent years, Lilly employees have become more responsible for their own work lives, managing their performance, upgrading their skills and planning their careers. Of course, for this to work, companies are more obliged than ever to provide mentoring, career resources and opportunities for training.

But it doesn't stop there. The bond between employers and employees still demands that at times, people must make an extra effort to accommodate the company's

(continued on page 7)

Tobias on Organizational Culture

✓ "The thin line separating the winners from the losers is often determined by how well an organization chooses and structures its people in a way that is consistent with its plans for tomorrow, not yesterday."

✓ "Organizational structures are seldom bad or good; they are just different from each other, with different benefits and different shortcomings."

✓ "It's important to remember that changing the organizational structure alone will not create success; it will only create a structure where success may be more readily achieved. Changing from one type of structure to another in the belief that it will fix a problem is a big mistake."

Recipe (Reciprocity) for Success

(continued from page 6)

needs. This means that employees might have to relocate or accept new jobs. Offering this kind of flexibility has always been a fact of life in business and remains the same during this era of revolutionary change.

Some critics see this mutual bond as a way for organizations to avoid the commitment to provide stable jobs. But I think they miss the point. The bond is mainly about organizations getting rid of the "entitlement mindset" in which employees put their own needs ahead of the needs of shareholders. ■

Flex Appeal

If work-life initiatives give a company a competitive advantage, today's leaders must remove the barriers that stand in the way of implementing them. Top management must do everything they can to hasten the transition from talking about enlightened values, commitments and policies to making them happen. It's not enough to simply offer benefits and programs — the underlying cultural issues that keep them from happening must be addressed.

The Problem with Long Hours

We all know there are people who regularly work twelve, thirteen or more hours a day and rarely take much, if any, of their vacation time. When asked why they behave that way and often expect others to do the same, they usually answer that they've been rewarded for this work style or they've seen others rewarded for it. In many cases, these employees are striving to create and reinforce an image of heroic commitment.

All too often, this work style may distract their managers and colleagues from focusing on their actual results. This kind of "dedication" not only leads to imbalances in employees' personal and professional lives but can also create problems for colleagues whose schedules are affected by their long hours.

When I observed that people were consistently working late into the night and on weekends, I often asked them directly about their personal effectiveness and the reasons why they couldn't do a better job of managing their time and working more efficiently.

I'm not saying that I don't value hard work and extra effort. What I am saying is that Lilly's culture needed to stop encouraging managers to expect this type of ongoing heroic commitment from their employees.

From time to time, there would be periods when employees would be asked to provide extra time and effort at the office — that's the reality of corporate life and it simply couldn't be helped. What could be helped is that Lilly's culture would not only refuse to reward leaders who consistently demanded that their people never see the sunshine — it would even frown on such behavior.

The Pursuit of Shared Values

Today's organizations can't succeed without the efforts of a fully committed workforce that is continuously growing, learning and retooling for the future. Lilly's work-life efforts and the company's newly defined core values helped its employees greatly.

The pursuit of shared values, like the pursuit of work-life support for employees, is a journey, not a destination. It won't happen in fifteen days, fifteen weeks or fifteen months. It takes time, a great deal of conscious effort and a lot of role-modeling that begins at the top of a company and extends throughout the organization. ■

Tobias on Values and Culture

✓ "More than the heroic hours, more than pay incentives, certainly more than strategy alone, shared beliefs — *values* — can be the key to unleashing the talents of all the people in an organization. Values can be the very foundation of success."

✓ "When you see radical downsizing, when you see sudden and massive job losses, it is at least in part a sign of the failure of leadership to adequately and creatively plan, to anticipate, to accept responsibility for the future."

✓ "People are the ultimate competitive resource, and you should embrace the responsibility for nurturing that resource to the best of your ability. Not just because it's good business, but because it's simply the right thing to do."

When It's Time to Go

In the corporate world, succession planning doesn't seem to get the attention it deserves. Sometimes there is an assumption on the part of CEOs that succession planning is the board's job. CEOs are reluctant to start the planning because they don't want to begin the process of giving up their own power.

It has long been my view that succession planning and implementation of those plans are among a CEO's most important responsibilities. If done properly, the process ensures leadership continuity and, therefore, the corporation's continuity.

Almost immediately on becoming Chairman and CEO, I set out to develop and put in place a comprehensive succession-planning process for the senior leadership to manage CEO succession.

Shared Assumptions

When it comes to succession planning, too often the board of directors and the retiring CEO don't take the time to agree on a shared set of assumptions before the plan is developed. If the former CEO is staying on indefinitely as non-executive chairman, or even planning to stay on the board of directors at all, the board should know and agree that it is best. If he plans to remain in the office he's occupied as CEO, or even in some other space in the executive suite, why is that in the best interest of the corporation?

If the answers to these questions reveal that the decisions made are primarily for the benefit of the former CEO and not the company, then the plan needs to be revisited. It's my view that when it comes to succession planning, all too often leadership transitions are handled with the main objective of determining the best way to address the ego-related concerns of the person who is leaving.

For example, the timing and manner of a leadership change have more to do with the personal objectives of the leader who is stepping down than with a combination of other factors that center around what is best for the future of the enterprise. When you're putting a new organization in place, the planning must be done by the people who are going to be on your new team, not those on the old team. That's the only way they'll have total ownership.

Maintain Momentum

When I decided to step down as CEO of Eli Lilly, I felt the business was generally being well-managed, was largely under good operational control, and was heading in a very positive direction. Our people were feeling very good about themselves and about the future of the company. We had a clear and shared vision of our future, and we had a strategy that was increasingly well-understood throughout the company and being aggressively implemented. At the same time, I believed the leadership team and, increasingly, Lilly employees more broadly understood that there was no entitlement, and without full and continuous attention, success could evaporate overnight.

Appropriate questions a CEO should ask when leaving a company are: "How can positive momentum best be sustained in the company?" and "What approach will contribute most to helping the new CEO be successful?" Without the right objectives, the implementation of a succession plan becomes an eleventh-hour fire drill.

Implementation

When I stepped down, members of the board were clearly surprised by my decision. But once we got past that, everyone in the room was well aware that the succession-planning process had been underway for several years. What we needed now was the implementation of that plan.

Assuming that the board concurred with the plan I'd laid out, I thought it would be useful to give the new CEO, Sidney Taurel, the opportunity to think about his new role and thoughtfully develop a transition plan that would address priorities, people, structure and how to fully take advantage of the energy that could come from a leadership change. In the end, it would need to be his plan and the board's, not mine. I told Sidney that I would be there to assist him in every way I could.

Gratifying as my experience as Lilly's CEO had been, I still had a number of additional things I wanted to do with my life, including having more time for myself and my family and having more time to give back to a society that had been very good to me. I was proud of what we had accomplished during the five years I'd been there and I was optimistic about what I believed could be accomplished in the years ahead.

I felt extraordinarily privileged to have had the opportunity to lead and be part of a great company. ■

Tobias on Succession Planning

✓ "All too often, in virtually all fields, leaders step down when it's convenient for them, without regard to whether that corresponds with what's in the best interests of the organization they are leading."

✓ "The success of any CEO's stewardship should be measured not only by the results achieved in power but also by the results achieved after the CEO is gone."

✓ "CEOs who stay around for a long transition after their successors are selected and announced are mostly doing so because they just don't want to let go."

Rebounders

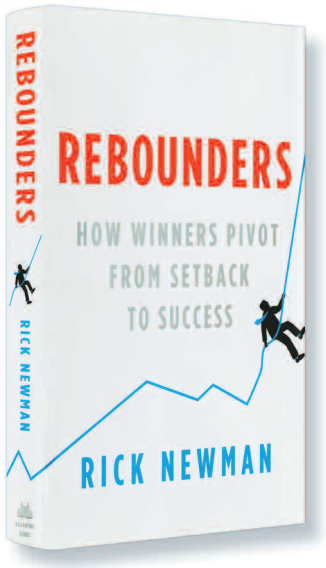
How Winners Pivot From Setback to Success



by Rick Newman

THE SUMMARY IN BRIEF

Let's face it: Setbacks happen, and failure is always a possibility. But here's the good news: Amazing success has been achieved by people who once fell flat on their faces. The secret lies in how we respond to life's bumps and potholes and unwelcome detours — from getting fired or losing a business to enduring a professional rejection or pursuing a passion that fails to pan out. Misfortune, it turns out, can be a springboard to success.

In *Rebounders*, prominent journalist Rick Newman examines the rise and fall — and rise again — of some of our most prolific and productive figures in order to demystify the anatomy of resilience. He identifies nine key traits found in people who bounce back that can transform a setback into the first step toward great accomplishment. Newman turns many well-worn axioms on their head as he shows how virtually anybody can improve their resilience and get better at turning adversity into personal and professional achievement.

Each lesson is highlighted by candid and inspiring stories from notable people, including Vanguard founder Jack Bogle, musician Lucinda Williams, inventor Thomas Edison, army veteran and double-amputee Tammy Duckworth and former New York Yankees manager Joe Torre.

In this uncertain and unstable time, *Rebounders* lays out the new rules for success and equips you with the tools you need to get ahead and thrive.

IN THIS SUMMARY, YOU WILL LEARN:

- Why setbacks can be a secret weapon.
- How defensive pessimism trumps optimism.
- The importance of knowing when to walk away at the right time.
- How to "own the suck" and rise above true hardship.

Introduction: Four Surprises About Failure

What am I doing wrong?

This is a lousy question to have to ask yourself. Most people, when faced with a major disappointment, come up with a lot of other explanations before they begin to examine their own culpability.

I avoided asking myself that uncomfortable question for years — but finally ran out of convincing alternative explanations. I had been divorced for a while. A custody battle had gone against me, forcing me to move two hundred miles to another city to be near my two kids. That meant giving up a prominent job with a lot of valuable connections — the lifeblood of success for a journalist like me — and taking a more obscure one where I started with an empty Rolodex.

I lived in a cluttered rental apartment. Many other people I knew seemed to be in an upgrade phase of life. For me it was like trudging up a long stairway, gasping for air while other people were cruising upward on an escalator. Then my industry started to struggle, as news began to appear free on the Internet, and newspapers and magazines began to lose money, then go out of business altogether.

To overcome the career setback, I applied the doctrine of hard work: Keep applying effort until you get what you want. But it wasn't paying off. So after I pondered the awful possibility that maybe I was doing something wrong and causing my own frustration, I asked myself an even worse question: Was I failing?

I applied my journalistic instincts and started to research failure. What I found was more enlightening than I expected. A lot of renowned and successful people had failed at something, occasionally at something big. The lucky ones failed early and learned quickly, whereas others failed later or took longer to get over it. But the important thing always seemed to be that they learned from failure and used that knowledge to become better and more successful.

As I continued my inquiry, one revelation followed another, and I made these four important discoveries:

1. Setbacks can be a secret weapon. When I began to study successful people and ask them to tell me their stories, it became clear that the pivotal events in their lives weren't the breakthrough moments when everything finally fell into place, but the quit points, when success was in doubt and support was scarce. Overcoming setbacks can make people stronger, smarter and more durable. Psychologists call this quality resilience.

2. Small adversities matter, just like big ones. Many non-traumatic events count as legitimate adversities: job or relationship stress, money woes, a nagging illness, even getting stuck in traffic. Small challenges are the building blocks of resilience. That's how we develop the vital skills that help us cope with bigger setbacks in the future.

3. We're addicted to alluring shortcuts and incomplete slogans. It's not really true that you can do anything you set your mind to. Just loving what you do probably isn't enough; you also have to be good at it, often really good. And if you love to do something that nobody's willing to pay for, don't expect to make a living at it. Consider it a hobby instead.

4. Optimism is overrated. For some people, optimism is the same as denial. If you believe that things will work out simply because they should, you might be ignoring problems. Successful people rarely believe

things will simply work out. They're more apt to practice "defensive pessimism," anticipating worst-case scenarios so they're prepared when things go wrong.

Some people, I began to realize, react to failure much better than others. I began to call them Rebounders because they have an enviable set of skills that enables them to bounce back from adversity. Wallowers, by contrast, often do the opposite. They get rattled when something goes wrong, even something small. They spend a lot of time figuring out who to blame for problems, usually absolving themselves.

I wanted to know what kept Rebounders going, where their confidence came from, how they found their way in the dark and what they learned along the way. ●

What Makes a Rebounder

"What doesn't kill me makes me stronger," wrote German philosopher Friedrich Nietzsche in his book *Twilight of the Idols*. Nietzsche, it turned out, was more right than he knew: enduring a few slings and arrows can make people happier than living a charmed life and experiencing none at all.

Resilience is the core strength of a Rebounder. And while Rebounders have been around forever, the science that helps us understand their special qualities is relatively new and still evolving. Researchers have proven that some resilience is innate. About one-third of people are born with a natural reservoir of resilience that allows them to cope effectively with challenges or setbacks, overcome them and end up better off.

But what about the other two-thirds? One of the most important insights about resilience is that it's as learnable as any other skill, and it doesn't take years of psychoanalysis or other rigorous effort to accomplish.

The opportunities to learn resilience and add to our natural supply begin when we're kids. Decades of research now make it clear that "controlled" exposure to adversity helps kids become confident and adaptable. Several of the Rebounders I interviewed and studied endured some kind of unusual stress as children, such as an abusive parent, divorce, financial strain or neighborhood violence. Some people feel comfortable taking measured risks as adults because they learned as kids that they can survive scary challenges. The good news is that resilience is learnable at any age, and it pays dividends no matter when it starts to work in your favor.

There can be an upside to stressful events, which can transform and improve the way we react to them. ●

The Elements of Persistence

Americans find it gratifying to think of their nation as a land of natural geniuses or trailblazers destined for greatness. But that's highly romanticized. Since its founding, America has been a nation of failers. What makes it a remarkable place is that America is also a nation of Rebounders.

Benjamin Franklin ran away from his parents in Boston at the age of 17. His first business venture left him out of money and stranded in London for 18 months, unable to pay the return fare. George Washington lost his father at the age of 11, which forced him to forgo a college education, a gap that nagged at him his entire life. He bumbled through a variety of frontier skirmishes early in his military career, suffered financial duress and lost more battles than he won during the Revolutionary War.

Thomas Edison was perhaps the ultimate Rebounder. He cultivated failure in his hundreds of laboratory experiments because he knew that rich learning came from studying mistakes and capitalizing on them. He endured three economic depressions in his career and ran short of money many times. Yet he rarely got discouraged. He famously said, "Genius is one percent inspiration and 99 percent perspiration."

Edison's boyhood seems to have been a model experiment in itself, a series of small challenges that gradually grew bigger as the boy became adept at handling them. Edison learned that he had the ability to land on his feet. He was becoming resilient.

Edison's Lessons for Innovators

But Edison's legendary persistence — the "perspiration" part of his "Genius is one percent inspiration and 99 percent perspiration" formula — wasn't simply the result of hard work. Edison succeeded over and over for three reasons that are as valid for innovators today as they were then. First, instead of making all-or-nothing gambles on one or two consuming ideas, Edison developed many ideas at once and prioritized those that seemed to be most promising. He was an inveterate multitasker. Second, he learned to let pragmatism be his guide, prioritizing practical inventions over ones he grew emotionally attached to. Finally, Edison found remarkable value in failed experiments and other setbacks, which often produced insights and nuggets of knowledge that contributed to other breakthroughs later on. Edison rarely felt discouraged when he hit a quit point because to him every setback was a signpost that might point to a more productive outcome in a different direction.

Edison's first major invention involved a rookie mistake that many first-time entrepreneurs have repeated since: he came up with a clever innovation before bothering to find out if anybody would be willing to pay for it. Edison vowed to "never waste time inventing things that people would not want to buy." Another early lesson for Edison was the value of backup plans, and if one project didn't pan out, he usually had another to turn to.

Edison's breakthroughs were laborious, and many occurred only because he had the confidence to challenge his own assumptions. ●

When Hardship Is a Privilege

Jack Bogle was born just a few months before the Wall Street crash that marked the start of the Great Depression. Bogle's parents lost a sizable inheritance from a lucrative family business. Bogle's father became a heavy drinker. There never seemed to be enough money for anything. Bogle's father eventually lost his job, then moved out.

Jack got into Princeton, where a scholarship covered part of the cost, and he took jobs to pay for the rest. Years of privation made him determined to build a successful career, and he chose as a topic for his thesis, "The Economic Role of the Investment Company." He interviewed for a job with Wellington Management Company. Walter L. Morgan hired the smart young Princetonian and tapped Bogle to be his successor.

The stock market began to plunge in 1973, the start of a bear market that would last five years. It was 10 to one in favor of firing Bogle. Then, another option materialized. Bogle had a second role at Wellington as chairman of the various mutual funds the firm administered.

The Birth of Vanguard

He named the fund company The Vanguard Group. He proposed that it start an "index" fund that wouldn't be managed by so-called experts trading stocks every day. Instead, it would be "passively managed," simply holding shares in all the firms comprising the S&P 500 stock index. The advantage would come from extremely low costs. Like many innovative new ideas, it barely survived its debut. Critics dubbed the fund Bogle's Folly, and some of his own colleagues suggested scrapping the idea. But Bogle trusted his math. No, he said, it will just take some patience.

By 1990, Vanguard was the second largest mutual fund company in America.

After getting fired as CEO, he could've been satisfied with the role he salvaged for himself and the fund company and quietly fulfilled his duties instead of launching a disruptive reform plan and trying to remake the business. He could've given up when Vanguard's first index fund flopped. All along, Bogle had heart problems that provided ample excuse to take extended leave or to retire.

"I have come to regard failure as another essential of leadership," Bogle wrote. "It is often best if things do not come too easily in this life." On a list of lessons for entrepreneurs that Bogle generated, number two was, "Turn disaster into triumph." Number four was, "Get fired." ●

The Dangers of Optimism

For a while in his 40s, Jon Luther worried that he might never reverse a sharp career downturn that left him struggling to pay his bills and pushed his boldest ambitions far out of reach.

Luther grew up in a tough, working-class neighborhood. He left the local liberal arts college after two years because of too much partying and too little studying. He flipped burgers and tended bar. His first real job was managing the cafeteria of a Wurlitzer plant in North Tonawanda, New York, where 400 hungry Polish women came for lunch every day.

After a stint at Aramark running the company's luxury restaurant division, Luther felt it was time to break free of the corporate mothership and do something on his own. He started talking to some investors. They offered him the chance to run a food service company called Benchmark. He invested most of his life savings in Benchmark.

His dream popped quickly. The economy began to slow. He thought the investors were just as committed as he was. He learned otherwise when they decided to sell the whole operation and abruptly fired him one day in late 1990. It left Luther out of a job and nearly out of money. Both of his kids were in college by then, and a nationwide recession was beginning.

A Rebounder Takes Off

Jerry Jacobs's company had contracts to provide the food at a variety of stadiums and arenas. The weakest part of the company serviced airports. Luther's name came up when Jacobs started looking for someone to turn around the airport division. Jacobs offered him the job. Luther became president of a money-losing subsidiary known as CA One, operating 38 airport restaurants that were far down the food chain from the luxury bistros he once ran. High costs and falling revenues left understaffed restaurants serving stale, unappetizing food.

He started by asking the airports to slash their rent in exchange for a pledge to remake the restaurants, bring in more customers and boost revenue by 30 percent.

The first level of reforms was to make some airport dining areas more like the food court at the mall, with familiar brands and food that was at least tasty and affordable. He brought in chains like Au Bon Pain and Burger King. Los Angeles became a turning point. Luther's first move was to approach renowned California chef Wolfgang Puck. The first Wolfgang Puck Express opened in LAX's Terminal 7 in 1995. Puck's imprimatur helped draw other upscale eateries. Luther's new concepts drew strong reviews in the press. CA One turned a steep loss into a healthy profit.

He's far from the first human being to be motivated by poverty — or the fear of it — but that alone isn't what got Luther through a crucible moment. He also summoned Rebounder skills that helped him identify his weaknesses, strengthen his own capabilities and sustain the confidence it took to keep taking risks.

Sometimes it's the stumbles that reveal what you still need to learn. "I always felt I had to work harder because I didn't have that four-year degree," Luther told me. "I've always been a continuous learner." ●

How Passion Misleads

The dangerous myth about passion is that if you love something intensely enough, you'll be successful at it. Just do something you love, the saying goes, and the rest will fall into place. Many of us know people who disprove that adage, and there's now some scientific data that backs up the anecdotal evidence. The concept is pleasingly simple: Practice makes perfect, and 10,000 hours of it seems to be a threshold at which greatness becomes possible. Yet devoting 10,000 hours to any one thing is a huge commitment that requires a lot more than passion and blocks out many other activities people find enjoyable, so it could be a goal reached only by people who are extraordinary to start with. You can still get good at something by devoting 5,000 hours to it or 2,000 hours, but don't expect to develop the kind of expertise that makes you a breakthrough success.

Musician Lucinda Williams followed her bliss down a rutted, unmarked road that seemed to lead nowhere for a long time. She spent much of her career struggling in the professional dead zone between country, folk, rock and blues. Record companies repeatedly dropped her because they couldn't figure out how to promote her music. She refused to conform to more recognizable styles that would have been far easier to commercialize.

The Long Road to Success

Twenty-five years after she started performing, Williams finally produced a bestselling record and earned one of the most coveted adjectives in her profession, becoming a Grammy award-winning musician. Her uncompromising individuality became the very thing that drew thousands of fans. But for a long time, it seemed like a liability that could derail her career. Her ambition was modest. "Pay the rent and just make a living playing music," she said. It took years to reach it. "I've seen so many people with talent but without the drive," she said.

As somebody who had made an all-or-nothing bet on a music career, she was a case study in the cost and the reward of following your bliss. Most people can't afford to stick with something they love for 20 years if they are not earning a decent living at it. But Williams also personifies the challenges that many people face at decision points that force them to choose a direction in their career and try to get better at something they love.

Lucinda Williams didn't have to bounce back from one huge or daunting failure. Instead, she had to withstand a series of minor setbacks that were exhausting in their endlessness. Like many Rebounders, she also had an accurate understanding of what she was good at and what she wasn't, a key component of resilience that helps distinguish Rebounders from unrealistic dreamers.

When to Quit

Tim Westergren had passion, drive and talent, and he probably hit the elusive 10,000-hour threshold associated with high achievement at a fairly early point in his career. But after years of effort, all he had to show for it was a raging case of burnout and an empty bank account. So he tried something else for four years and struggled at that, too. In his third attempt at a career, Westergren founded the Internet radio site Pandora, which *The New York Times* described as a startup that spent most of its first decade on the "verge of death."

Westergren's story provides an alternative view of persistence and shows that Rebounders follow no fixed template. Instead of sticking with one thing until he got it right, Tim Westergren quit one thing, then another, then tried something nobody had ever thought of after his first two efforts didn't work out. He showed the ability to shift his goals and even change his mind when new circumstances arose. And there was consistency to Westergren's pursuits because all along, he was indulging something he loved — music. If he hadn't failed to make a living at it, Pandora probably wouldn't exist.

After graduating from Stanford University in 1988, he formed a six-person band called Yellowwood Junction, which did all the things a band needs to do to have a shot at commercial success. But Yellowwood Junction never made enough money to ease the financial stress on the band members, and tensions grew. "I remember the relief I felt when I decided one day I'm no longer going to do it," Westergren said. "In some ways, that's your compass."

Mapping the Mind of Music

For his next act, Westergren got into something equally competitive: composing film scores. While analyzing different types of music, he realized that he could create a mental map of hundreds of musical attributes. Most listeners, he realized, tended to prefer certain musicological characteristics — distinct elements of melody, harmony, tempo, instrumentation, rhythm, vocal style and mood.

Then he realized that this idea — mapping all the individual characteristics of music the way scientists had started mapping all the characteristics of DNA — might be the basis for a business. He envisioned a service that might help music lovers and musicians connect more efficiently.

In the late '90s, venture capitalists were eager to fund almost any idea that might turn out to be the next technology breakthrough. But after the dot-com bubble burst, Westergren spent most of 2002 firing his staff as the money ran out. He maxed out 11 credit cards and took out all the personal loans he could. It amounted to about $250,000 in personal debt.

He made hundreds of pleas to investors, begging for money to keep his company alive. On the 348th attempt, he got what he was after. The investors ponied up $9 million, which was enough to plug the huge hole in the ship and start running his organization like a more professional company. He rehired some of the talented employees he had been unable to keep back in 2002 and then recruited a CEO, Joe Kennedy, who had run successful businesses at E-Loan and General Motors.

By 2007, Pandora had 7 million registered users and more than half a million songs in its database. But unforeseen problems are a fact of life at startups. A government panel that regulates music royalties tripled the fee that online radio services like Pandora had to pay record companies every time they played a song. More than 1 million Pandora users contacted Congress. The regulators didn't give Pandora everything it wanted, but they lowered the royalty rates enough for Pandora to stick with its business model.

By adjusting his thinking, Westergren found new ways to follow his bliss until one of them finally paid off. Westergren capitalized on his failures. The unique challenges of managing a band turned out to be good practice for running a startup. An awareness of his own limited prospects led him to seek ways to distinguish himself. The jobs he left behind were contributions to his personal database of knowledge, which finally became deep enough to persuade skeptical venture capitalists to invest millions in him. ●

Own the Suck

Severe hardships can be the toughest tests we face in life, capable of neutralizing ambition and wrecking years of careful planning. People who overcome traumatic adversities often do it by applying habits learned through lesser setbacks. In the same way that small triumphs can help build incremental layers of competence and toughness, overcoming major hardships can generate newfound capabilities that may not emerge any other way.

One day toward the end of 2004, 36-year-old Tammy Duckworth awoke in a hospital room, wondering where she was and what happened. She heard doctors and nurses talking about a helicopter crash. It came back to her in fragmented, terrifying snapshots. Iraq. Heat. Sky. Dust. A deafening flash. Screeching machinery. Blood. Fear. For days in the hospital, she felt an overwhelming sense of dread as she grasped at comprehension.

Over the following months, Duckworth would transform shock, horror, pain and a crippling new disability into an intensified sense of purpose. Modest goals grew into more ambitious ones. Her pace of accomplishment accelerated. Barriers to advancement that had once seemed imposing no longer got in the way. Duckworth developed the confidence to try bold and difficult things because the risk of failing no longer intimidated her.

Captain Tammy Duckworth, call sign Mad Dog 06, was a Black Hawk helicopter pilot assigned to the Illinois National Guard's 106th Aviation Battalion when it was sent to Iraq in 2004.

On November 12, 2004, Duckworth and her crew started flying around 7:00 a.m., ferrying troops and supplies around Baghdad in support of a big battle raging near Fallujah, about 40 miles west of the Iraqi capital. When they were just 10 minutes from landing, Duckworth heard the alarming metallic sound of small-arms fire strafing the side of her aircraft. Almost simultaneously, a blinding fireball tore through the floor of the helicopter's right front quarter where her feet were and blew straight through the top of the aircraft.

Duckworth instinctively tried to press the foot pedals that controlled the helicopter to get it on the ground. But the pedals had been blown off. So had most of her right leg and her left leg below the knee.

Duckworth had never experienced personal trauma or anything remotely close. But she still felt like she knew what she needed to do in order to recover. Like Jack Bogle and many other Rebounders, she had learned early on that hard work was a reliable formula for overcoming challenges.

She wanted to know what it would take to pilot a helicopter with artificial legs. The answer started with a lot of mundane and often painful exercises. She welcomed them, doing four repetitions if the therapist told her to do three. "Rehabilitation was my new mission," she said.

The Hard Road to Washington

As she recovered, Duckworth got drawn sporadically into the klieg lights of official Washington. Sen. Richard Durbin, from her home state of Illinois, invited her to be his guest at the 2005 State of the Union address. She met top officials from the Pentagon, who occasionally stopped by Walter Reed to visit with injured troops. Duckworth also got to know Barack Obama, the other senator from Illinois.

The idea of running for office terrified Duckworth. She was comfortable taking on tough challenges as long as it was in the incremental, familiar manner that had helped her excel at flight school. But doing something new and risky was something she had always dreaded. For all of her pluck, Duckworth was still a political novice, running as a Democrat in a district that was largely Republican. She lost the sixth district by a narrow 51 to 49 margin.

It was just the sort of rejection she had long feared, and for a while, it felt crushing. But three days after the election, Illinois's governor offered her another job as director of veterans affairs for the state. She jumped at the chance. She campaigned for Barack Obama when he ran for president in 2008, and after he won, Obama appointed her to be one of the top officials in the Department of Veterans Affairs in Washington.

"In Iraq," she said, "we had this phrase: 'owning the suck.' It sucks being over there. It sucks being deployed. Know that it sucks. Acknowledge the suck. Own it. But keep doing your job. Because you have to do your job."

After serving more than two years in the Veterans Affairs office, Duckworth left in the middle of 2011 to prepare for another run for Congress in the 2012 elections. Losing again, she knew, would suck. But she also knew that if it happened, she would own it. ●

The Soldier's Creed

Duckworth asked her husband to hang a copy of the Soldier's Creed near her bed. It says, in part, this:

I will always place the mission first.

I will never accept defeat.

I will never quit.

I will never leave a fallen comrade.

The creed, notably, doesn't say, "I will never fail." Instead, it says, "I will never accept defeat," no doubt because there are many failures in military affairs, which is often the art of accomplishing the difficult. Defeat would be yielding to those failures and giving up.

From Wallower to Rebounder

Rebounders don't always know they're Rebounders. Anybody who doubts their potential as a Rebounder should learn about the transformation of Joe Torre, the professional baseball player and manager who led the New York Yankees to six American League titles in the 12 years he spent managing the team and four World Series championships. When the Yankees hired Torre in 1995, he had the hallmarks of a has-been: He was in his mid-fifties with a career losing record as a manager. Plus he had been fired from each of the three teams he had managed before.

One big factor in Torre's long-sought success was longevity. Like Lucinda Williams, John Luther and many other Rebounders, he stuck with his craft long enough to overcome mid-career setbacks and capitalize on the experience that takes years to build. But other key factors were the peaks and valleys of his own playing career, from the highs he hit when winning the MVP award in 1971 to the lows he endured as a part-time player in decline on a losing team.

The Voice of Experience

Torre knew what it felt like to be a cocky up-and-comer hiding his own fear of failure, a star and a discouraged down-and-outer questioning his own contribution to the team. There were 25 talented professionals on a team, and a lot of them had to deal with less playing time or other managerial decisions that seemed unfair. "I know what it's like to play on a part-time

basis," Torre said. "I knew how to sit down at somebody's locker with them. They respect the fact that I've experienced it. It made me a better manager."

Torre also felt that beneath the fear and anxiety he endured when he was younger and the dismissive arrogance that later masked those feelings, he had a kind of empathy for the underdog that made him a good listener, another skill that helped him as a manager. Listening to his players and figuring out how best to use each one of them game by game gave Torre the kind of edge that made him a repeat World Series champ. "It's a matter of continuing to learn, continuing to find things out about people. We won four World Series, but we did it a different way each time."

Joe Torre could have remained arrogant and self-absorbed and still ended up with an impressive playing career. But Torre probably would not have become a model manager if he hadn't learned how to break free of his own struggles, understand his failures and listen to other people worth trusting. He was a Rebounder long in the making. ●

The Nine Attributes of Rebounders

All the Rebounders I studied exhibit basic qualities that are typically associated with success but aren't unique to Rebounders. Here are the nine additional attributes that give Rebounders an important edge:

• **They accept failure.** For Rebounders, failure is frequently an option. That's because they attempt things that are hard to do. Most Rebounders hate to fail. But if that happens, they fail productively.

• **They compartmentalize emotions.** A kind of equanimity allows them to overcome guilt, blame, anger and other bad feelings that often accompany setbacks. They don't internalize bad feelings or become dominated by emotion.

• **They have a bias toward action.** Taking purposeful action to fix a problem is one of the hallmarks of resilient people. They do it because they believe they can influence what happens next, instead of capitulating to the vagaries of fate.

• **They change their minds sometimes.** Changing your mind often means you have to be able to recognize your own mistakes. Rebounders have confidence in their ability to adjust.

• **They prepare for things to go wrong.** Few Rebounders expect everything to go their way just because they feel they deserve it or because they're lucky. They've learned through personal experience that effort produces results.

• **They're comfortable with discomfort.** Rebounders are willing to accept hardships and inconveniences as long as they feel they're getting close to an important goal.

• **They're willing to wait.** There's rarely a substitute for time when it comes to the accumulation of vital experience. What sets Rebounders apart is the determination to succeed on their own terms no matter how long it takes.

• **They have heroes.** Some Rebounders are romantics with a surprisingly strong belief in the power of narrative and their own role in something historic. Heroes help Rebounders set and meet higher standards.

• **They have more than passion.** Passion is a powerful motivator but also has a way of leading Rebounders into trouble since they're willing to take risks to pursue it. But passion doesn't always get them out of trouble. That takes a higher form of resilience.

Some people are sure that everything happens for a reason. I have my doubts, but more important, the problem with ascribing hardship to some cosmic scheme that's beyond our comprehension is that it diminishes our own responsibility to extract something valuable from something difficult. It is not inherently good when bad things happen. It's up to us to turn a bad situation to our advantage. If growth or knowledge comes from tribulation, it's only through our own effort that it happens. Rebounders don't possess a magic formula, but over time, through practice and dedication, they develop a kind of psychological muscle memory that enlarges their capacity to harness adversity. Rebounder or not? Nearly everyone has the ability to ask themselves that question and, sooner or later, answer yes. ●

RECOMMENDED READING LIST

If you liked *Rebounders*, you'll also like:

1. ***The Adversity Paradox* by J. Barry Griswell and Bob Jennings.** Two experienced consultants show you how to use the very experiences that would stall or tumble a career to build uncommon success.
2. ***Derailed* by Tim Irwin.** Tim Irwin chronicles the collapse of six high-profile CEOs and identifies the factors that drove their downfalls. Derailed teaches you how to avoid derailment by applying principles to stay on track.
3. ***Clutch* by Paul Sullivan.** Do you choke under pressure, or are you "clutch"? Sullivan offers a strategy to help you consistently deliver when it counts.

Return on Impact

Leadership Strategies for the Age of Connected Relationships

by David Nour

THE SUMMARY IN BRIEF

LinkedIn. Twitter. Facebook. You're there, but is your social networking presence driving growth, cost performance or other quantifiable outcomes? How are your members and customers better off because of your social media platforms?

Beyond doing social, organizations must transform their strategic vision, structure and governance, capabilities, talent development and operational execution to become more social enabled. That's where social market leadership can create a unique and highly sustainable differentiation. *Return on Impact* defines a valuable roadmap in that transformation.

Author David Nour provides a fundamentally different approach to evolving an organization's strategic vision, governance model and "iTunifying" its capabilities. Based on interviews with association and corporate senior executives, case studies, examples, illustrations and pragmatic advice, *Return on Impact* reveals that success from social media comes from more than picking the right tools. Placing members and customers at the center of the organization's purpose, capabilities and evolution as a transformative source for those who choose to belong isn't simply a luxury; it's a fundamental necessity.

With the IMPACT model — Immerse, Member, Participate, Accredit, Community and, finally, Transform — *Return on Impact* provides an iterative, predictable process for leveraging social as the organization's growth engine.

IN THIS SUMMARY, YOU WILL LEARN:

- How to quantify the outcomes of social media and social collaboration.
- How social impacts every employer, customer, organization and leader.
- How your involvement online impacts your financial results.
- How to navigate the social space and drive quantifiable impact.
- How to think and lead differently because of social.

Welcome to the Age of Empowered Customers!

Digital technology continues to get smaller and less expensive while becoming more powerful and prevalent. Technology and transparency are enabling decision-making processes for consumers, members, employees, partners and shareholders who expect and often demand to connect with organizations whenever they want and on the device of their choosing. They are wireless, mobile, sensor-equipped, plugged-in and far more intelligent and *empowered* than ever before. As customers, they want a consistent experience in all channels — physical, digital and mobile. They read and belive others' comments about organizations, products, services and experiences more than they believe marketing or advertising. They compare notes and instantly share personal experiences. They champion a brand or sully a reputation with one click. The intelligence and connections available to customers are forever changing the business of designing, creating, selling and delivering information, products and services. Whether as members or customers, consumers have soaring expectations.

The disruptive forces of social-media-savvy consumers are rippling through to organizations and across entire industries, affecting the fundamental need for credible content and interaction within a community of like-minded individuals working toward a common mission and vision, or against an enemy, such as legislation. At the individual member or customer level, it's not just about the connected consumers' driving the "iTunification" of business; the networked work force is collaborating in new ways both inside and outside organizations. Empowered citizens are digitally engaged and networked, making their voices and votes count on Wall Street, in ballots, with proxies and on Twitter.

'There Are No Shortcuts!'

Responding to the evolutionary digital landscape isn't a switch; it's a dial. You have to *lead differently*! Leadership strategy for the age of connected relationships isn't about putting up a Facebook fan page or the CEO tweeting three times a day! It's about the unequivocal need to *think and act differently* as a leading organization because of social: to harness its power and promise while avoiding its inevitable pitfalls, to embrace it as an enabler of your value-add, not block access to it out of fear of malice.

Social is more than a communication channel. Social is a wake-up call to engage members and customers alike, differently. It requires commitment from the entire organization and a redefined value proposition. Social customer relationship management is about truly understanding the impact you're having in the market, one engagement at a time. Social analytics will force you to examine more intently what your members or customers are saying about your industry or brand, and what matters most to them. What does your industry or brand do to improve their condition? Are they better off because of your value-add? Do you delight or annoy them? Is your value-add simply talk or does it act to become value-perceived by those most critical to your future prosperity? ●

A New Definition for 'Social'

In English, the use of *social* refers to an informal gathering, as in a "neighborhood social." I'm taking liberty of using the same reference to informal gatherings via digital interactions, within and external to an organization. My reference to social is more than social networking, such as LinkedIn, Twitter or YouTube. As such, we need a new definition for social as a fundamental shift in mindset, toolset and roadmap for an individual, team and organization to:

- Put its customers/members at the center of its structure, suite of offerings, job descriptions and value creation efforts.
- Creatively collaborate in real time, while becoming more agile, responsive, streamlined and direct.
- Be more open in its communication and transparent in its governance, encouraging, authentic and trusted.
- Be more caring, accessible, agile and innovative.
- Be proactive, engaged, connected and self-directed.

Do You Still Matter?

OK, so they're talking about you on Twitter, chatting with you on Facebook and searching for you on Google. In a world that is increasingly empowered by social media and connected screens, out of your control and enthralled by innovation, how can you be sure you are still relevant? I respectfully suggest that all that matters is the story your members or customers tell about your brand or your brand's value, in 140 characters or less. Is it a compelling story, a disappointing story or no story at all?

Associations and member-based organizations have an enormously untapped resource of amazing stories, as do companies. The stories are not about themselves, but of members and customers, employees and suppliers, all of whom dramatically altered their paths because of the impact of the organization. Our lives revolve around stories. We think narratively and record our history through narrative. Our culture is, in essence, a story; stories teach us values, and we create and share bonds through them. Stories are especially effective in communicating ideas, and very often there are people who "get it" through stories.

The Rest of the Story ...

Unfortunately, many organizations confuse stories with situations — first this happened, then that happened and here is how it turned out — almost as a matter of fact. A great story takes the middle part and creates tension and conflict, which draws all of us in to learn what happens next.

Stories are so much more memorable than statistics or simple anecdotes and are the fuel that allows social communities to grow. Strong stories become infectious and, when told well, become interwoven into the fabric of an organization. *With stories, the culture becomes the vision delivered.*

According to Jennifer Aaker and Andy Smith, the authors of *The Dragonfly Effect* (Jossey-Bass, 2010), there are four important stories that all organizations should have readily available in their portfolio:

1. "Who Are We?" — How we got started;
2. "Vision" — Where we're going in the future;
3. "Apology and Recovery" — What a transgression is for an organization and how they might respond to it; and
4. "Personal" — What personal stories are being incubated and cultivated within the organization.

What makes stories interesting are unexpected events, provocative ideas, counter-intuitive findings, suspense and mystery, and thematic complexity — the degree to which multiple interpretations lie below the surface. If an organization can make its stories relevant to the listeners' issues and give sufficient information so as to be understandable and coherent, listeners will be able to vividly identify with the characters.

Authenticity and Transparency

Authenticity is also critical in compelling storytelling. People have to believe you and that's very difficult to achieve if you don't believe the story yourself. Authenticity and transparency become important in social because of the essential underlying trust required to engage others in a low-trust environment. ●

Develop a Robust Social Strategy, an Imperative First Step

The silver lining in an economy of contrasts is that visionary leaders and entrepreneurs have the opportunity to question the status quo and explore new frontiers. That's what many member-based organization executives and corporate leaders are doing with the question of social. With the slowing of the economy, the pace and change is accelerating at so many levels in organizations that many people believe how a member or a customer-centric organization will operate in the next decade cannot be imagined today.

Unfortunately, many of my interviews reveal that social is not an integrated topic in an organization's overarching strategic plan. In one such survey conducted via the ASAE *[a Foundation devoted to management research]* we asked, "Do you currently have a social media strategy?" The most frequent response was a resounding "Yes." But upon further examination, most associations actually had a social media plan, and a tactically focused one at that. For example, many simply send out a monthly electronic newsletter and create a social media corner, perhaps by using a Facebook fan page to drive traffic and awareness of an upcoming event. Some plans were poorly developed, ignoring the power of choice and focus, trying instead to accommodate a multitude of conflicting demands and interests.

It's time to put leadership back into strategy.

The IMPACT Model

The IMPACT model is derived from a careful examination of the membership life cycle and an organization's biggest influence on each critical touch point along the way:

- **Immerse.** Educate the broader market, share value openly, engage and influence.
- **Member.** Allow them to opt-in to your value-add and pay to join.
- **Participate.** Give them the opportunity to experience the value of the community, where, when and how they need it.
- **Accredit.** Create definitive value and sustainable differentiation for the members through your affiliation, credibility, exclusivity, brand/legacy value.
- **Community.** Empower them to share the good, the bad and the ugly.
- **Transform.** Deliver measurable and influential personal and professional growth to every individual your organization touches.

A robust social strategy must cut across the entire organization to be effective, yet focus the right people and sufficient resources of the organization behind it to execute it.

Embrace World-Class Engagement

Have you ever been engaged with an organization to the extent you were enthusiastic enough to recommend it to your friends and family? *Really* engaged? How did it make you feel? Did you go back for another experience or to purchase additional products or services? Did you or would you pay a premium for the enhanced engagement? For those who stay at the Ritz-Carlton, shop at Nordstrom or spend time at Apple's in-store Genius bar, the answers are emphatic: "Oh yes, I went back multiple times, absolutely, amazing, told everyone, the premium was worth every penny!"

World-class organizations unleash their potential for growth by optimizing their most valuable relationships on- and offline. According to Gallup, organizations that optimize engagement outperform competitors by 26 percent in gross margin and 85 percent in sales growth. Customers who are fully engaged represent an average 23 percent premium in terms of share of wallet, profitability, revenue and relationship growth over the average customer. Actively disengaged customers represent a 13 percent discount for those same measures. In essence, members and customers who are engaged buy more, spend more, return more often and stay longer.

Trust: A Benefit That Is Bestowed

With the decline of discretionary time and attention, and the accelerated increase of product choices and media clutter, *trust drives transactions*. When we feel authentically engaged and have a vested interest in the improvement of our condition, we develop a comfort, dependence, reliance and trust in a brand. "I know I can trust this source for credible, reliable, timely information."

Trust is no longer a commodity that is acquired, but rather *a benefit that is bestowed*, earned through action and reinforced by transparency and engagement. Organizations have the opportunity to build an enduring foundation of trust if their leaders commit to a strategy that brings value to both investors and society by addressing the *what* and the *why*. However, given today's low-trust environment, the organization must further explain *how* it makes money, demonstrating a new level

Evolve to a Social Organization

Social organizations shift their lens to really understand what members and customers do: Participate in a set of highly related and relevant interactions that, when combined, make up their unique engagements. This perspective should stimulate much needed dialogue among senior leadership and the board in five distinct areas:

1. **Make Social the Entire Organization's Priority.**
2. **Evolve Your Capabilities.**
3. **Expand Your Definition of Resources and Staff.**
4. **Make Social Engagements About Consistent Execution.**
5. **Move with Purpose and Empirical Evidence.**

of transparency in business practices; for example, revealing ingredients in products or, after a sale, listing a "service and maintenance process." Finally, it must build relationships across the entire stakeholder universe (the *where*) by engaging audiences across a multitude of media sources — mainstream, new, social and owned — and joining the conversation by adding value and learning from the critics. ●

Build a Different Kind of Organization

"If social [media] can take down the government of Egypt, it can take down your organization," says Doug Chia, assistant general counsel and corporate secretary of Johnson & Johnson, in a recent interview with *Corporate Secretary*. So, who should own social? Social isn't a function to abdicate to a 20-something staffer to increase Twitter followers or Facebook "likes." If senior leaders of visionary organizations truly seek not only to develop a strategic direction with social, but also to dramatically affect their organizations and industries, they must examine their structure and governance models, because the immediacy and ungoverned nature of social is in direct conflict with the hierarchical and controlled business structure of many institutions. Culture and community, the cornerstones of social, thrive and perform when trusted and tracked more so than when commanded and controlled.

Organizational Structures

Some social media experts have described organizational structures as "distributed, centralized or coordinated." Frankly, labels such as these depersonalize and create categorical responses that are inevitably inaccurate. You can't lump an entire generation's unique preferences, buying patterns or specific nuances into a bucket and refer to them as specific to only that generation, such as "Gen-Xer attributes." A distributed structure where social strategy is grown organically from within a department without guidance or institutional support will be challenged to sustain growth and evolve in viability. Its lack of coordination with the rest of the organization, members, strategic partners or external knowledge assets will cause it to miss strategic insights that fuel the organization into what it could become. A centralized structure, guided by a marketing department where a single group controls the message, allows for very little flexibility across functions. It forces the controlling department to try to understand and keep up with a broad base of constituents. Furthermore, the development of new strategies for other functions screeches to a halt in the bureaucratic approval processes. A coordinated model that hands down rules to the department or functional level for a specific message to a finite audience is often glaringly absent of collaborative culture and may require years to establish.

Effective Reinventions

The most effective reinventions don't just reshuffle the boxes and lines on committee assignments. Instead, they focus on improving the organization's ability to handle its most important decisions. They enable people at all levels to make better, faster decisions while increasing the return on the impact of some or portions of effectively executed decisions. *An organization's performance is the sum of the decisions it makes and executes*. As such, a reinvention won't make much of a difference unless it prioritizes the critical decisions for the organization, specifies who is responsible for crafting the strategic roadmap and demonstrates how the new structure will help people make and execute decisions better. Reinvention will shift the focus of the board and the senior leadership from documents and project plans to the source of energy, creativity and decision making that moves the organization forward: people. ●

'iTunify' Your Capabilities

The most profitable, sustainable way to build and scale an organization is to find a group of individuals (never forgetting that relationships are between individuals) who have problems that drive them crazy and who are willing and able to pay for solutions to solve them. If the organization becomes a student of those problems — studying where they come from, how they manifest themselves, what the alternatives and risk associated with addressing them are — and is obsessed with solving them, it can create a clearly differentiated value proposition, one that many individuals are often willing to pay a premium for versus the alternative. Member-based organizations have been somewhat insulated from the competitive forces of most businesses, but social networking is dramatically and increasingly challenging the perceived value of member-based organizations to those "customers" with problems. Many leaders forget this simple proposition; businesses have fallen in love with their own products and services, and many associations are drinking way too much of their own Kool-Aid, completely losing touch with the problem-solving or quantifiable value-adding side of the formula.

An issue of *Time* magazine illustrated a particularly interesting and relevant concept around how the late Steve Jobs extended Apple's influence beyond Macs. Jobs had the vision that Apple would be more than gadgets. He understood that devices drive consumption. Consumers of entertainment, products and content have made Apple a player in music and video distribution, retail and publishing. Industry giants in various sectors have bet their digital presence on apps in the iTunes store, with its estimated 250 million plus users and their buying patterns.

Strip Away Obstacles

The price of an offering often includes features or functionality consumers have little interest in, which begs the question: When was the last time you and your team went through the portion of your business that is meaningless to your members and customers?

Doing so often has far greater positive impact on most organizations than any single strategic planning item from some off-site meeting. By stripping away obstacles that surround an organization's products and services, including the unwanted junk mail, the unnecessary and wasteful repetitions, the unwelcomed attitude of overworked and stressed staff, and the senseless bureaucracy that we tend to bucket as "policy," you can create value for your target members or customers. *By focusing on providing less of what they dislike, you create greater value and impact in what they're really looking for!* ●

Attract and Develop Unparalleled Social Talent

The transformation process of any organization in becoming more socially enabled has to start with the manner in which it identifies and attracts world-class, social talent. Attracting and retaining world-class social talent is a painstaking challenge for many small- to medium-sized organizations. This is especially true for those with limited financial resources, such as early-stage ventures, nonprofits and associations that are trying to add social as yet another "must-do" on their existing overflowing plate of action items. Many such organizations recruit less experienced talent and ask them to learn social on the job, attend conferences or get self-educated through trial and error. That may work in many other functional areas, but for an organization to evolve in its strategy, embrace engagement as a core competency and modularize its capabilities, it will need a different type of talent. It will require intelligent employees with the drive to take the initiative and combine personal characteristics with natural creativity and curiosity, an accelerated learning curve, no fear of failure and the ability to learn from every interaction to execute the organization's social strategy.

Tapping Into a Global Work Force

Associations must find creative ways to tap into a global work force, passionate about both the organization's cause and the will to create an exceptional social presence for that cause. How? By focusing greater attention on engines that can dramatically alter the talent pipeline flow into nonprofit, civic and public service sectors.

Companies can also do more to mentor nonprofit leaders and offer internships in nonprofits for current and future employees. Businesses can also provide incentives for retirees and alums to go to work for nonprofits. Bridgestar has emerged as exemplary in enhancing the flow and effectiveness of passionate and highly skilled leaders into and within the nonprofit sector. ●

Socially Enable Your Execution

Without particular attention to the following 10 strategy execution best practices, your efforts to engage, enable and empower connected relationships within the organization or external to it, will falter:

1. **Challenge status quo, certainty and critical assumptions.** When you, as an individual, a team or an organization, think that you're undeniably right, that is exactly the right time to ask: What might we be missing?
2. **It's not about perfection; it's about progress.** The relentless pursuit of diverse opinions promotes the evolution of novel ideas. Building focused communities that help improve the quality and speed of gathering business insights will accelerate your ability to generate new ideas and to constantly improve upon them.
3. **We evaluate logically but decide emotionally.** The combination of high-quality ideas and frequent real-time feedback from those eager to share their experiences give you a much stronger sense of the member's, customer's or industry's pulse than an annual satisfaction survey.
4. **When in doubt, take the high road.** Combine your great products or services with *obsessive service* — inside and outside the organization — and you build unparalleled barriers to entry for your competitive landscape.
5. **Infuse love for the organization and its purpose.** We don't often hear about love for an orga-

nization, but social communities are about deeply passionate people who genuinely love what they do, who they do it for, who they do it with and the results they create as a community of like-minded individuals.

6. **As individuals and organizations, we're richer than we think.** From our educational foundation to our professional pedigree, transformation evolves our positions, possessions and perspectives. Compared to much of the rest of the world, we're richer in all three.
7. **Humility + Learning = Exponential Growth.** Only when members or customers feel their own transformations will they come full circle to further immersion in your value-add.
8. **Purpose is created and reinforced by your discoveries.** Members or customers return, expand their involvement and refer others to an organization's breakthrough products and services, thus fueling the organization's growth.
9. **If you don't respond, you'll signal that you're incompetent or just don't care.** If the organization is engaged by others who choose to participate and it doesn't respond, particularly to requests for clarification of information, dissemination of misinformation and inaccurate or blatant mistruths, the brand and all of its constituents risk alienating those most crucial to the organization's ecosystem.
10. **Be the starfish and not the spider.** My friend Rod Beckstrom, co-author of the best-selling book *The Starfish and the Spider*, believes that at the extreme, all organizations behave either like centralized, top-down spiders, or like decentralized, collaborative starfish. Understanding the difference can be the key to success. ●

Deploy Social Analytics to Listen Louder and Tell a Compelling Story

Metrics should measure against agreed-upon objectives and values, and help to create course correction along the way — more like a *dial* you turn up or down than a *switch* you turn on or off. Here is the problem: The overemphasis on social media tools, propagated by a cottage industry of vendors and platforms, once-a-week conferences, and fly-by-night consultants and their glorified blogs, is the tail wagging the dog. Too often, organizations allow the tools to dictate rather than define what to measure. Social analytics should be about aligning objectives with the strategy, the implementation process, the effectiveness of each smart touch point, success metrics that move the member or customer to their next logical decision point, rich data sets and, finally, the tools. Social analytics should help to measure these stages and modify the original objectives or the strategy.

Organizational objectives, as defined by business outcomes, must be a driving force in implementing a social campaign for desired change in an organization. Understanding organizational objectives will facilitate the design of broad social parameters for analyzing and selecting the right tools.

The *implementation process* should be focused entirely on the business function that the social campaign will address.

If member or customer acquisition is the organizational objective, a funnel process (creating awareness, supporting consideration, developing organizational or brand preference, getting people engaged to join and sustaining loyalty) may be the most appropriate measure. Other implementation processes often encompass member or customer support, customer relationship management, organizational reputation and advocacy generation.

Success Metrics

Success metrics depend on the preceding implementation process, as each social process requires unique metrics. Member or customer acquisition objectives drive metrics such as percentage of unaided awareness, percentage of the total target market audience who would consider the organization/its products and services, incremental revenue, percentage of member renewals or repeat purchases from key customers.

Rich social data sets that are actionable are derived from ratios — a numerator and a denominator — that when independently modified will create both "what if" scenarios to explore alternative paths as well as the necessary course correction in the implementation process, engagement through the touch points or recalibration of the success metrics.

Only when the organization understands what data is needed to calculate meaningful social metrics can it assess the right class of tools to best deliver the insights it seeks. ●

Fail Intentionally and Learn From It

If an organization and its prominent change leaders candidly internalize why and how they've failed in any past endeavor, they'll soon realize that:

- Failure is not always bad, wrong, detrimental, debilitating or catastrophic.
- Learning from organizational failures are hidden gems, with insights about how to uncover, analyze and institutionalize them.

Just think about how many times, on average, employees of a global organization — or a local association, for that matter — fail daily. One of the best ideas I've ever heard was to designate a "failure wall" for staff to record scenarios where they failed, lessons they learned from failure and sign their name. Granted, it's not a Facebook wall or a Twitter hashtag — neither were in existence 10 years ago when the idea was shared with me — but because it was a prominent location and visible to all employees, partners, customers, guests, family and friends who visited, it communicated a sincere and honest need for the culture to share growing pains and recognize how the organization was better off because of them. Another client has launched Yammer internally and is asking employees every day, "What problem are you trying to solve?" This one simple idea has spun off a socially enabled knowledge management system, highlighting pockets of amazing discoveries across the organization.

Social adds an additional layer of complexity to organizational failures. It provides context-specific scenarios where multiple dependencies affect the less-than-stellar results. Beyond the obvious excuses, such as "the right process wasn't followed" or "we were ahead of our market," it's time to think differently about the organization's belief system. The first step is for the organization to get beyond what Harvard Business School Professor of Leadership and Management Amy Edmondson refers to as "the blame game." The dilemma becomes that beyond learning from failures, people withhold sharing those incredibly valuable insights for fear of lowering the performance standards or expectations across the organization. ●

Reinvent ROI

Let's take one of the most obvious applications of social media and marketing that creates awareness and gravity. According to the *MarketingSherpa 2011 Social Marketing Benchmark Report*, chief marketing officers' (CMOs) priorities have changed dramatically. Not long ago, few marketers believed that social media was a channel that could be quantified in terms of a financial return on investment (ROI). The value of social media was qualitative and defined in terms of "awareness," "engagement" and other soft metrics difficult to attribute to ROI. This is no longer the case. Senior marketing executives are adamant about quantifiable ROI or enablers of logical conversion steps that lead directly to ROI.

The financial value of improving the cost efficiency of customer support programs is often overlooked when calculating ROI. Using social channels to enable customer "self-service" after the initial transaction can significantly reduce associated post-acquisition costs as well as enhance retention and renewal metrics. Yet only about one in 10 organizations considers implementing social customer service a priority.

Monetization drives an organization's growing investment and confidence in social marketing. Beyond the "hype" surrounding the business value of social media in the last several years, with few proven practices or success stories, marketers are turning the promise of social media into the ROI of social marketing. In the same *MarketingSherpa 2011* report, 20 percent of CMOs said that social marketing is producing a measurable ROI for their organization, and that they would continue to invest in it as a viable channel, nearly tripling the 7 percent who said that a year ago.

What's Your Focus?

One of the most direct ways to capture and articulate ROI from social efforts is to conceptually agree on business objectives, measures and value in advance of crafting the social strategy or an implementation plan. Succinctly understanding the business outcomes the organization seeks makes it easier to not only focus the efforts on that desired outcome but also craft the most relevant strategies and use the most effective tools in the market.

Alan Weiss, Ph.D., has trademarked what he refers to as "the 1 percent rule": improve by 1 percent a day and in 70 days, you're twice as good. Many people won't be able to transform their organizations to a social one overnight. You don't have to. It's about making intentional progress toward a vision in the future, using a robust strategy and uncovering the resources to execute consistently along a development path. ●

THE SUMMARY IN BRIEF

Being a leader is a calling above being just a manager. A leader must devote themselves to the people around them— understanding their wants, needs, motivations, skills, what they're capable of, and how to connect with them. In this way, leadership and mentorship go hand-in-hand.

In ***Rock the Boat: Embrace Change, Encourage Innovation, and Be a Successful Leader***, Danelle Barrett shares everything she's learned about the intersection of leadership and mentorship and how leaders in all arenas can use these secrets to unlock the potential of their people. Whether you're looking to inspire more, achieve more, be a more effective mentor, or encourage better communication and collaboration in your organization, *Rock the Boat* has principles to transform you and your leadership for the better— and, in turn, transform your organization for the better.

IN THIS SUMMARY, YOU WILL LEARN:

- How to inspire the people around you, from teams and employees to mentees.
- How leadership and mentorship go hand in hand, and how to weave them together to great success.
- How to translate your leadership vision into reality with actionable steps.
- Communicate, connect, and collaborate better with the people around you— from subordinates to team members to superiors.

Introduction

Leadership, unlike management, is not science and numbers. It's about people. It is intrinsic and learned behaviors that people use to inspire others to follow and exceed expectations while achieving common objectives. Through innate ability and experience, everyone develops their own unique style as a leader. That style is heavily influenced by both the good and bad behaviors they have observed in other leaders over the years but remains unique to each individual. Those who stand out are able to translate their vision into reality by the way they communicate, connect, and collaborate with others to generate excitement about that vision and see their role in achieving it. A leader's courage, tenacity, and ability to not be deterred by cynics or obstacles motivate others to follow in their footsteps.

Leadership and mentorship are two sides of the same coin, and you have to be deliberate in your actions to do them well. They both require integrity, empathy, and the ability to inspire others. They require you to excite your team, your employees, and your mentees. You must genuinely connect with other people, clearly and frankly communicating what to expect, how you measure success, and that what you do means more than what you say. Above all, they both require you to not be a jerk. To that end, this book features both leadership and mentorship concepts, alternating between chapters with the intention of showing their interconnectedness and how the best leaders align their efforts in both areas effectively.

Lead Change

You can't think of something new if you're doing the same things as everyone else. Be open to new approaches and expect your people to think and act differently. If you mentor them on how to do that, they will. Don't get stuck on old processes or the way things are done. Think about—and have your people think about—what can be jettisoned. Start with new processes from a different angle. This is a completely different way to look at the problem and offers more opportunity for truly transformational thinking and results.

Being truly transformational with technology requires agility to pivot ot the next technology, speed to use it quickly, and focused attention to balance multiple efforts simultaneously. Only by embracing change, seeking out new ideas, and leading your team to always move forward can you create the future.

Why Mentoring Matters

A good mentor supports you and guides you on your path. They know when to listen and when to give advice. They are a good sounding board for ideas or can help you work through a tough leadership or ethical situation. They look for opportunities for you and support your advancement and professional progress with others. They don't give you the answers; they teach you to think through the problem to find the answer yourself. They talk to you about options you should consider in the calculus of the decision you will make and the possible consequences of choosing one of those options over another. In short, they lift you up and make your success as much of a priority as—or more than—their own. Having a good mentor can change your life personally and professionally.

Managing Expectations

Exceptional leaders set clear expectations and help others achieve those goals. They ensure that their teams understand their vision and objectives and what each person needs to contribute as part of the team to meet those high standards. To be a good leader, your expectations must reflect your values. Priorities will change, but your values will not. Establishing a high bar encourages people to reach beyond what they thought possible, and allowing for stumbles along the way shows them you understand that they may struggle in meeting those expectations and where you can jump in to help.

As a leader, you should be as clear as possible about your vision, desires, and expectations. You also need to be unambiguous when it comes to roles, responsibilities, and accountability. You can't have everyone in charge or no one in charge.

Frank Conversations

A mentor or a leader cannot provide the best advice if they don't know the full story, and a mentee cannot get the help they need without the same. In the context of rankness, the mentor and mentee have to acknowledge that they may have different communication styles that could impact their relationship. For the mentor-mentee relationship to thrive and survive, communication styles that tend toward circumspection or talking around the issue for fear of hurting someone's feelings won't work. Being blunt and direct may be out of a mentor or mentee's comfort zone— or both— but it will be necessary. As a mentor, you don't want the conversation to end up with your mentee leaving the discussion more upset, confused, or adrift than when it started.

No one relishes having a difficult conversation where they need to deliver bad news, provide an unpopular opinion, or recommend something that they know goes against what the person thinks should happen. Mentors and leaders owe it to those who are looking to them for advice to be honest and deliver information unemotionally, clearly, and in a timely manner. Bad news does not get better with time, so you owe it to the individual to initiate that tough conversation and make the message clear. Don't waffle.

Effective Communication

Effectively communicating their vision and desires to their organization and to those on the outside is one of the most important things a leader can do. Being able to articulate vision, challenges, successes, future plans, and current operations succinctly and in terms that people can understand sounds easy, but it takes time and effort to get it right. You need to have a deliberate strategic communications plan that identifies the theme or message you want relayed, the intended audience, the media to be used for information dissemination, the frequency of communications, and the methods of measuring efficacy of the messaging. You can codify your plan with these specifics and see it become a living, breathing document that gest revised for longer-term plans or used as a jumping-off point for similar short-term efforts.

Career Mapping

Passion is one of those terms that generally results in one of two competing reactions. On one hand, you're supposed to be passionate to show that you care about your work and that you're putting serious energy into it. But passion can also be pejorative, implying that you are blind to the reality of a topic or problem. It's often heard throughout the military for the author: "She is too passionate about this," or, "He gets too emotional about that; he is too close to the problem." But passion is an asset, as long as it goes hand in hand with being able to consider other perspectives objectively as well.

Work-Life Balance

Work-life balance will be as much of a priority as you make it. Allowing your team members time with their families or to take care of their health doesn't take away from productivity or efficiency; it increases it. A proper balance keeps your workforce from burning out, becoming despondent, and leaving. But make sure that your focus on balance is communicated through your actions. Words aren't enough. Many organizations have a mismatch between what they say and what they do. In meetings and official communication, they'll tout their strong support of family and life outside work, then they'll expect their employees to be in the office very weekend or to miss their kid's recital. You've heard that actions speak louder than words, and this is a clear example: what you do means more than what you say.

Finding Inspiration

As a mentor, you can help your mentee find the inspiration to excel at what they are passionate about. That can come in many forms— from people, nature, physical objects, music, poetry, and art to acts of courage, grace, and selflessness. Get inspired by innovative, bold thinkers who see a future that others cannot. Walt Disney. Elon Musk. Whoever it is for you, who doesn't love someone who is transforming an entire industry. Then they make those visions into reality. Those are the people that can inspire us to our greatest potential.

Pick the Hill You Want to Die On

Sometimes leaders can't see the forest through the trees to properly prioritize so everything becomes a crisis that everyone in the organization tries to respond to. It's like watching 20 five-year-olds chase a soccer ball. In other instances, people feel like they can only act and react if they are in crisis mode, so everything gest prioritized in a crisis. Either way, it is a leadership and management fail.

Remember: life is short. You don't have to work for or with jerks. That is a choice, so choose not to, because there are enough people who won't act that way and will appreciate that you don't either. Be clear on your standards, then stick to them consistently, publicly, and with transparency in your communications and, more important, in your demonstrated actions.

Leadership and Mentoring in Times of Crisis

Your organization will experience a crisis at some point. It may be temporary, or it could be existential. Either way, the crisis is real, and how you respond sets the tone for how you will come out of the crisis at the other end.

If you have established a reputation as a person of courage, integrity, intelligence, empathy, good judgement, and transparency, then your employees will be with you from the start, supporting what you ask them to do. Those requests may be above and beyond what they have normally done; testing the status quo in challenging times is expected.

Fail with Grace

True leaders have their fair share of battle scars for screwing things up. You don't know what you don't know, so sometimes you just make the wrong choice, even with the best information, intentions, and support from your team or senior management. But there are very few mistakes that you cannot recover from with the right degree of humility, a proactive demonstration that you've learned from it, and confidence in yourself and your core values to right the wrong.

Don't let others cause you to doubt that last point. Your confidence and the confidence you instill in others with your integrity, reliability, transparency, steady hand, vision, and uncompromising standards will have people continuing to line up behind you, wanting to work with you, and continuing to support you even through failure or missteps.

Overcoming Your Own Biases

Mentoring is a multidimensional activity. It's important to be aware of factors that influence the mentor-mentee relationship. We all have biases and preconceived notions about the ways of the world. These notions are based on how we are raised, our values, religion, lifestyle preferences, careers, families, external cultural influences, and so on. We need to be reflective and aware of our potential biases, keeping them in check so we do not project them onto those we mentor and cloud good advice.

Guard Your Reputation as a Leader

As you advance and grow in your career, you will establish your reputation. The choices you make in each job form an aggregate that will both precede and follow you. Be aware of how your actions are perceived by others so that you are comfortable with the reputation you establish. Others' opinions are formed by observing the way you lead and manage; how you align your words to your actions; how you treat subordinates, peers, and superiors; and how you make decisions, take risks, and innovate. Understanding how others see you enables you to better collaborate and ensure you're meeting the high standards they expect.

You Only Live Once

Don't shortchange your health— take it seriously. You only go around this rodeo once. By taking care of your health, you are sending an important message to those you lead and mentor that it matters. It also matters to those who depend on you, care about you, and want you to succeed. It sends the message that you care about yourself and your life outside the workplace as much as you do about the job. This opens the door for your employees and mentees to take care of themselves too.

As an admiral, Danelle Barrett served as Director of Current Operations at U.S. Cyber Command, and as the Navy Cyber Security Division Director and Deputy Chief Information Officer on the Chief of Naval Operations staff. An innovator, she implemented visionary digital transformation to modernize with unprecedented speed, significantly improving Navy Information Warfare capabilities. She currently executes a portfolio of work that includes being an Independent Director on several Corporate Boards, consulting, public speaking, and writing with over 36 articles published.

THE SUMMARY IN BRIEF

In many organizations, leaders struggle to secure genuine buy-in for change. Teams may nod along in agreement, but without deeper conviction, any shift in direction often fades as quickly as it begins. Sustained change requires more than mandates or motivational speeches; it requires framing ideas in a way people can't ignore, dismiss, or forget.

That challenge sits at the center of ***Say What They Can't Unhear: The 9 Principles of Lasting Change***, a concise guide for anyone responsible for influencing others. The book provides a practical framework for turning hesitant stakeholders into enthusiastic participants, giving leaders the mental tools to spark shifts in thinking that lead to enduring shifts in behavior.

Through nine "persuasion proverbs," author Tamsen Webster outlines the behavioral and psychological foundations of durable change, showing leaders how to move beyond short-term compliance and toward long-term commitment. Instead of relying on pressure or persuasion tricks, she offers a model rooted in ethical influence, one that helps audiences understand change from the inside out.

IN THIS EXECUTIVE BOOK SUMMARY

- Understand how to earn lasting buy-in without relying on authority, urgency, or manipulation
- Learn how to use ethical persuasion to spark internal motivation for change
- Find out how to connect new ideas to existing beliefs so audiences see change as logical and desirable
- Get guidance on applying nine practical "persuasion proverbs" to make your message unforgettable

Introduction

Some people experience life-changing moments like a light bulb turning on in their brain. For me, it's always a sound. *Ding!* It's that moment when the clarity of an idea or concept I've seen, heard, or read cuts through all the competing information and advice, and suddenly, I can't think of anything else.

One day I heard that ding for real, when an instructor was demonstrating "sympathetic resonance" with two tuning forks-son resonance boxes, set a short distance apart. When the instructor struck one tuning fork with a rubber mallet, that fork vibrated and emitted a loud, clear tone. A few seconds later, the instructor touched the fork with his hand. The vibration stopped, but the tone continued.

As someone who had spent more than twenty-five years in change communications, I had to know: Was it possible to build a case for change that created the same reaction in the same way—but with people?

The answer is a resounding yes. When you understand the principles behind how this kind of sympathetic response happens, you can recreate it yourself. The same is true in communication, especially communication about change. When you understand the principles that transfer the desire for change to someone else, you can craft your messages to create the same effect.

People are resistant to change because balance and harmony are a natural state of the universe. When things change, as they inevitably do, other things must change to maintain or restore that balance. There are only two exceptions to this natural resistance:

- When a proposed change doesn't register in the brain as dangerous or likely to cause harm
- When the change represents something a person actively wants or values

With that in mind, think of the stakeholders for your change as falling into one of four groups, each representing a different level of desire for it:

1. **The Actives**: These are your true believers and ideal supporters, those already attuned to the change and what it will mean.
2. **The Ambivalents**: This next group also wants the anticipated outcome of a change, but with that desire comes *dissonance*—a tension with something else that resonates just as strongly.
3. **The Indifferents**: The folks who aren't interested in the change and likely never will be.
4. **The Antagonists**: With this group, the dissonance they feel has devolved into disagreement.

Yet, even when you understand what category someone falls into, sometimes you discover that your approach to creating change works in some situations, but not in others. Nevertheless, you persist. When inspiring a change is important enough, you're willing to do just about anything to make it successful.

The question is: Which approaches to making or inspiring a change, when applied at the beginning, make it more sustainable over time? What do you need to say or do to transfer the thoughts and feelings that make change last?

The answer seemed obvious: align your approach to change with the forces that make it endure. As with the tuning forks, make a change resonate so strongly that acting on it feels inevitable. In other words, say something people can't *unhear* and eventually adopt as their own.

As my work expanded—from developing change messages for myself and my clients to helping others develop their own—I began summarizing key concepts into phrases and then tested and honed them until I could express the ideas in ways that made them impossible to unhear. The result is the nine principles this book is all about.

- The first three principles set the foundation for how long-term change happens.
- The next three principles frame the primary ways in which inspiring long-term changes are different from driving short-term action.
- The final three focus more specifically on how to put the principles into action to inspire the change you seek.

All of this requires one bonus principle that you already intuitively know: *Persuasion is personal.* Outside of a few universal truths on how change happens or doesn't, the reason someone decides to change is as individual as they are.

PRINCIPLE 1

Change Isn't Just an Action—It's a Reaction

Many of us view change as an action people take. Although that's true, it usually starts as a reaction to a change in something else, much of which is out of our control. Change may begin with external triggers, but sustained change requires an internal and renewable reward. That reward is known as "intrinsic motivation," and it's the holy grail of change.

> People align what they do with how they want to be seen: as smart, capable, and good.

You can't create intrinsic motivation in someone else. Intrinsic motivation arises entirely within the other person. That said, how you present a change directly affects whether it resonates enough to inspire the intrinsic motivation that lasting change requires. For internally motivated change to occur, someone must see a clear link between the action you're asking them to take and an outcome they personally desire.

In other words:

Your approach can just as easily impede a change as inspire one. Align your actions with the reaction you want.

Why It Matters

Trust and belief are the bedrock of change. If someone doesn't trust you, it's hard for them to believe you. Research by psychologist Susan Fiske and her colleagues shows that people assess trust based on two factors: capability and intent. When you're trying to persuade someone, they need to see you as credible and that you have the capacity and ability to deliver on the outcomes you're attaching to the change. They also need to believe you're doing it for the right reasons.

People assume that if you're resorting to what they perceive as manipulation or coercion, then your intent isn't good. In other words, pushing for a "yes" is much more likely to produce a "no."

Ultimately, your approach to a change is the only contribution to change that you fully control, which is why it needs to be the first and central focus of your attention.

What Gets in the Way

Experience has taught people to be wary of persuasion tactics. It's not uncommon for people to feel challenged or that their long-standing methods are being labeled as wrong or outdated. Although imposing your authority or bribing stakeholders with incentives can drive them to act, that kind of extrinsic motivation can also lead to resentment and unethical behavior.

That's why, even with the best of intentions, your approach can trigger one of the greatest risks to successful change—what psychologists call "reactance." Reactance is when people resist a suggested change because they feel forced to make it.

Putting It into Practice

While you can't control where someone starts on the continuum from Antagonist to Active, you *can* control the aspects of your approach that directly influence where they end up. You control:

- What information you present and how understandable it is
- Which point of view you argue from—your own, theirs, or one you share
- How you show up in the interaction and the approach you choose to take
- What you think about the other person and your true intentions

PRINCIPLE 2

Every Decision Has a Story

There's no such thing as a truly rational decision. What you may think of as a rational decision—a logical and conscious consideration of the pros and cons of why a decision is right or wrong—is, in reality, something you create after your brain has already decided. It's a story you tell yourself.

The stories we tell others show how cause and effect work together to achieve the transformation necessary for a desired outcome (happy endings) or not (not so happy).

When people decide to act, it's because they've unconsciously accepted their brain's internal argument for how and why a particular action will deliver on a desired outcome. That's why any argument for change you present to a stakeholder needs to make even more sense to them than the story they're telling themselves now.

In other words:

Any action someone takes ends an internal argument about why doing so makes sense. If that story makes sense, the decision will too.

Why It Matters

What doesn't work internally will never work externally. Even when people's internal arguments for action aren't ra-

tional, they still feel rational because they follow their own kind of logic. They have a consistent structure, with consistent elements: the "cause" (the action or change someone makes) and the "effect" (a desired outcome).

True arguments for change include not only the action to take and the outcome it should produce but also the assumptions or beliefs that create the logical connection between the two. To inspire change in others, you must clearly state your conclusion and the otherwise silent assumptions so that your stakeholders can determine, even if unconsciously, whether every aspect of your case is in tune with theirs.

What Gets in the Way

A story that would or should work for a particular person won't work if it's missing any parts of the argument behind it. Unfortunately, most persuasion and influence messaging, including almost all sales and marketing messaging, leaves out the silent assumptions that make internal arguments work. Usually, the messages include only the action and outcome, leaving out any information about why one leads to the other.

Putting It into Practice

Although you can't rely on knowing exactly what story someone is telling themselves, you can rely on that story being the driving force behind what they do, how they do it, and why. So when crafting a case for change, go beyond a simple explanation or edict of what you want to happen. Make it an actual case—an argument people would build themselves.

PRINCIPLE 3

Principles Set Patterns

Often, our subjective beliefs become so much a part of who we are and how we see the world that we begin to see them as *principles*—as universal, objective truths that not only determine what we should do and how, but what we even see as possible. Because our beliefs are true to us, whether they're objectively true or not, they guide our behavior.

This link between what someone thinks and how they act is critical to understanding why a particular case for change doesn't work and figuring out how to craft one that does.

Once you see the value of making a change, it can be hard to understand why someone else doesn't see that value too. But if someone doesn't see the world the way you do, they can't see the value the way you do. Without understanding the value, they have no reason to act.

The good news is that inspiring change is still possible, but only if you change your perspective to see the world their way. Once you do that, you can see which principles you share, build a case that connects those principles to the change you seek, and make an unfamiliar action align with someone else's familiar patterns.

In other words:

The actions that people agree with are based on beliefs they already have. To understand an action, understand the outlook that explains it.

Why It Matters

Deep beliefs are the foundations of all change because they determine the patterns for which stories, arguments, and actions someone agrees with—whether consciously or unconsciously. What someone has believed in the past almost always determines what they will believe and act on in the future, and it's their principles that set these patterns.

By bringing these core principles into the light and by saying them in a way someone can't unhear, you can open the door to alternative outcomes and deeper understanding, and connect with others on a more fundamental, human level.

What Gets in the Way

Understanding the principles that drive others' actions seems straightforward in theory, but it's often not so easy in practice. The primary obstacle? Our innate tendency to assume that others share our worldview, a cognitive bias known as the "false consensus effect."

The complexity of human belief systems adds another layer of difficulty. The diversity of backgrounds, experiences, and beliefs in most organizations amplifies these obstacles, making one-size-fits-all approaches to change rarely effective.

Putting It into Practice

The essence of inspiring change lies not merely in what you say and do, but in how both of those connect to and reflect the underlying beliefs and principles of the stakeholders involved. Instead of imposing your outlook, work to understand theirs. When you look for, acknowledge, and respect people's deepest principles, you forge paths to agreement and action that are embraced—not enforced—which leads to meaningful change. To say something they can't unhear, begin with what they already want and believe.

> The less painful a change is, the more sustainable it is.

PRINCIPLE 4

Identity Is the Greatest Influencer

Most people *want* to make good decisions. That's because most people share a fundamental human desire: to be seen as smart, capable, and good. Done well and with the right intent, any approach that acknowledges this smart-capable-good aspiration can be incredibly effective.

When your proposals and ideas about change make someone feel even smarter, and even more capable and good, you're respecting and validating them for who they already are. Not only does that increase their openness to new ideas, but it also contributes to their sense of current self-worth and agency, both of which make any action they undertake much more sustainable. It also avoids a battle with their desired self-identity—one you'll always lose in the long term.

In other words:

People align what they do with how they want to be seen: as smart, capable, and good. Defend that desire as strongly as they will.

Why It Matters

There's a reason leveraging the power of identity in persuasion is so effective: it's the only form of extrinsic motivation that even comes close to the power of intrinsic motivation. When you start from the perspective that the person you're talking to is smart, capable, and good, you're much more likely to perceive and present your case as an enhancement of their existing strengths and qualities.

What Gets in the Way

Even small nuances in how you present a change can significantly impact its resonance and how stakeholders receive or interpret it. And even when you don't directly challenge the desire of people to be seen as smart, capable, and good, not acknowledging it can still undermine your efforts.

Another important point to remember is that people's identities are not monolithic. While the desire to be seen as smart, capable, and good is a significant part of human identity, any individual person's identity is far more complex.

Putting It into Practice

In every conversation and proposal with people whose buy-in you need for change, make sure you actively seek and affirm the smart, capable, and good qualities of their current practices and beliefs. Thanks to the strength of the smart-capable-good desire, almost any message that includes that kind of affirmation becomes a message people can't unhear.

PRINCIPLE 5

The Deepest Beliefs Are the Hardest to Shift

Our tendency to believe and behave consistently is both the greatest obstacle and, counterintuitively, the greatest opportunity when it comes to persuasion and change. What's more, the longer someone believes something, the stronger that belief becomes.

But even though one deep-seated belief may stand in the way of that change, it doesn't mean that all of someone's deep-seated beliefs do. In fact, someone may have equally strong or even stronger beliefs that, if surfaced, would support your change.

In other words:

The longer someone has held a belief, the stronger it will be. Search for something even stronger than what's standing in the way.

Why It Matters

Cognitive inertia, a person's innate tendency to cling fiercely to their beliefs and the stories they tell themselves, is one of the biggest challenges to change. Instead of searching out the weak points of someone's beliefs or position, search for the stronger beliefs you share and base your case on them instead. When you do, you create a sense of collaboration and continuity, which allows people to see a change as a natural extension of what they already know or believe to be true. Even better, they may begin to see you as someone they can trust to help get them there, rather than as an obstacle to overcome.

What Gets in the Way

In many ways, your understanding of this principle helps you avoid some of the most common pitfalls of change. When your approach to change incorporates ingrained beliefs instead of antagonizing them, you're more likely to avoid activating the negative, knee-jerk responses that arise from perceived threats to someone's agency and identity.

When you're faced with strong opposition or deeply ingrained viewpoints, it can help to focus your aim on learning instead of winning. Only through curiosity and openness to someone else's viewpoint will you be able to spot the points where you and your stakeholders align.

Putting It into Practice

Don't challenge beliefs—exchange them. When you identify and empower beliefs that are as strong or stronger than those opposing a change, you lay an equally strong foundation for new behaviors or perspectives.

PRINCIPLE 6

Pain Is the Enemy of Long-Term Change

Pain—whether emotional, physical, or psychological—is something we humans naturally avoid. This instinct is crucial to remember when you want to inspire lasting change in others (or yourself).

Painful changes, no matter how beneficial or good they may seem, rarely stick. Why? Because sticking with an action that continually causes discomfort goes against your basic human nature.

Because you're wired to stop the pain, you'll eventually stop what's creating it and the change you were hoping for. Thankfully, the solution is in the problem: the less painful a change is, the more sustainable it is.

When you're working to create change with others, the more you reframe a change to reduce emotional, mental, and, where appropriate, physical pain, the more the change will align with a person's inherent desire for stability and well-being.

In other words:

Humans are wired to avoid pain—both in the moment and over time. Ask for the largest action that's easiest for stakeholders to sustain.

Why It Matters

People are more likely to adopt behaviors that are in line with their previous actions and beliefs, thanks to what's known as "behavioral consistency." When you're trying to inspire change in others, understanding behavioral consistency can make all the difference. It explains why people revert to past actions and lays the groundwork making a proposed change feel like a natural and painless extension of what someone is already doing.

What Gets in the Way

A lot of advice about persuasion and influence focuses on creating pain or discomfort for the person you're trying to persuade. Although pain may be the ally of quick action—it gets people to move, and often to move quickly—no human will continue to do something long term that feels emotionally, physically, or mentally painful.

Putting It into Practice

If you only want short-term action or results, by all means, bring the pain if that aligns with your beliefs and values. But if your goals require longer-lasting change, try reducing the pain instead. The lower the level of discomfort a potential change creates, the higher the probability of long-term success.

PRINCIPLE 7

When Two Truths Fight, Only One Wins

Every change involves a choice. Sometimes, that choice is between two things someone deeply believes or values. That kind of choice creates "cognitive dissonance," which is the discomfort someone feels when conflicting beliefs or desires challenge their current understanding of the world.

Cognitive dissonance is incredibly powerful. As soon as someone feels the discomfort a conflict of truths creates, their brain will quickly choose one of them to make the discomfort disappear. When two truths fight, only one wins.

Because cognitive dissonance is the mental spark that turns contemplation into action, creating it is a requirement for instigating long-term change. Once a person decides and resolves a dissonance, the pain dissolves. This may seem to violate the previous principle where the pain is the enemy, but this is one of the few scenarios where pain is, indeed, your ally.

> People don't regret the decisions they believe are right.

In other words:

Change requires choice. In a battle of beliefs, the strongest source of self survives.

Why It Matters

Understanding and carefully creating cognitive dissonance is crucial: change doesn't happen without it. The art of using cognitive dissonance effectively lies in framing your argument's assumptions in a way that naturally aligns the desired change with someone's deeper values and identity.

What Gets in the Way

Humans are delightful hypocrites. We say one thing, do another, and then side-eye someone else doing the exact same thing. Dr. Matt Grawitch, a professor at Saint Louis University, explains that people have two kinds of values:

- **Personal values** are the principles we hold dear. They set the patterns of our behavior and form the core of our belief system.
- **Relational values** shape the nature of our relationships and social connections and determine our needs for belonging, respect, and understanding in our interactions.

Not only do personal and relational values differ from person to person, but also the individual weight someone assigns to them differs depending on the situation—and so do the actions that result.

When your case for change surfaces the hidden assumptions that drive actions, you shed light on values people may not have realized were in play or in conflict. But your task is not to explicitly point out someone's inconsistencies. People don't like to be called hypocrites because it violates their desired smart, capable, and good identities.

Putting It into Practice

Sustainable change is a personal journey, one that hinges on the individual's battle of beliefs. Your task is to craft narratives that bring these inner conflicts to the fore, but once they do, only the other person can decide which desires or beliefs win out. Offer your arguments and align them with your shared values but respect their agency and right to deliberate and decide. When the path to change aligns closely with their core self, that's when change sticks.

PRINCIPLE 8

You Can't Want It More Than They Do

While you can—and should—make sure your stakeholders understand your case for change, your job is over once they do. It's one of the hardest lessons of inspiring change, but also one of the most important: you can't want a change more than the person you're presenting it to.

In other words:

Desire can overcome any objection, but yours is no substitute for theirs. You can only influence understanding.

Why It Matters

To say something people can't unhear, anchor it in something they won't *unwant*—that is, something they are unlikely to ignore or reject later.

Given a choice, it's also a lot harder for someone to say no to what they already want or have than to say no to something new, like a change they didn't ask for. A person's desires are part of their identity and drive many of their current and past behaviors.

This is why distinguishing the states of desire is critical. When there's a battle for change, it's won or lost with the Ambivalents. Enlist the Actives in your cause, expect the Indifferents to go along (just don't expect them to be excited about it), and convert or neutralize the Antagonists when you can.

Understanding where your stakeholders currently stand helps you focus your efforts where they're most likely to work best.

What Gets in the Way

Benefit bombing tops the list of the most common pitfalls. Benefit bombing is when—once you've established the link between your change and an actively desired outcome—you list every advantage and feature of your idea hoping

something will spark that desire you know you need. But if you list seventeen possible desires, you've started seventeen stories that will need seventeen valid and sound arguments that lead to a happy ending.

As I say to my clients, "You can only have one front door." When you give people too many options, they often don't choose any of them. Instead of trying to convince them with all possible features or benefits, determine their desire and align with that.

Putting It into Practice

When applying this principle, borrow a concept from market research: remove the neutral position. You can remove the neutral position for your change by framing your message as the response to an urgent or important question your stakeholders actively want answered.

PRINCIPLE 9

There's No Such Thing as Believer's Remorse

If you've ever impulsively clicked the "Buy" button and later wondered, "What was I thinking?"—you've experienced buyer's remorse.

But there's no such thing as "believer's remorse." If someone believes their decision was right, and if it continues to resonate with who they want to be and how they see themselves, they won't regret the decision itself.

Change communication or selling an idea isn't about persuading others to jump blindly. It's a process of leading people, step-by-step, through a narrative they already know, like, and trust, along a path to your new idea. Rather than one big "yes," you secure a series of what author and human connection expert Tim David calls "little yeses," each serving as permission to proceed.

In other words:

People don't regret the decisions they believe are right. Instead of asking for leaps of faith, build bridges of belief.

Why It Matters

If a person doesn't understand the change you're presenting, they won't act on it—at least not for long. The more that any new information you introduce aligns with what a person already knows, the more likely it is that both the case for change and the change itself will make more sense.

What exactly are these little yeses? They are the answers to questions raised by each element of an argument for change. Instead of asking people to leap blindly into change, you're guiding them to see your perspective through their lens—and likely expanding your own view and understanding in the process.

What Gets in the Way

One of the most common mistakes in any kind of persuasion is starting from a perspective that's clear to you but alien to your audience. I call this common mistake the "turn-by-turn problem," after the turn-by-turn directions that a navigation system or map application might give you.

By aligning a new idea or action with what the audience already knows and believes, you give them a map to follow as you build your case and reduce the risk that drives resistance. What's more, you transfer what resonates for you about a change to your audience, which opens up the opportunity for it to reverberate far beyond you and the moment, into the movements that drive change.

Putting It into Practice

In his book *Never Split the Difference*, former FBI hostage negotiator Chris Voss says that "the sweetest two words in any negotiation are actually 'That's right.'" Unfortunately, it's more common for us to push until we hear someone say, "*You're* right," but the two phrases aren't the same. The phrase "you're right" is more like an empty concession, a polite nod, or a desperate attempt to get you to stop talking. But when someone says, "*That's* right," the situation is different.

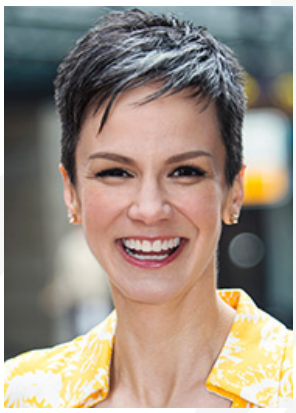
As Voss explains, "that's right" means someone has "assessed what you've said and pronounced it as correct of their own free will. They embrace it." When tuned to what people want and believe, one simple note, one simple idea, one simple case can resonate strongly enough to ring true with others—not just once, but over and over again—and inspire transformational change that lasts.

Coda

Each principle presented in this book introduces a counterpoint to conventional approaches and is a critical component of understanding how to inspire change that lasts. Taken together, these principles produce an approach that isn't about posturing for power, controlling conversations, or overwhelming persuasion. In fact, it's not really about persuasion

at all. It's about guiding someone through a journey of realizations and agreements.

When you think of inspiring change this way, you're much more likely to create a case so aligned with someone's worldview, so reflective of their own thoughts and feelings, that each point you make feels like a confirmation of what they already know and believe. You're also much more likely to say something they can't unhear, and to create, together, a change that lasts.



Tamsen Webster is a message designer, strategist, and doctoral student who helps leaders quickly clarify and communicate ideas that spark lasting change. She has worked with major organizations including Harvard Medical School, Fidelity Investments, and Databox, and serves as a judge and mentor for the Harvard Innovation Labs. Tamsen is also a professional advisor at the Martin Trust Center for MIT Entrepreneurship and spent more than a decade as the Idea Strategist for one of only nine legacy-level TEDx events worldwide. Named to the Thinkers50 Radar in 2022, she is the author of *Find Your Red Thread* and *Say What They Can't Unhear*. She lives in Boston with her husband, their two sons, and their greyhounds, Hazel and Walnut.

THE SUMMARY IN BRIEF

How do you navigate our increasingly complicated and volatile world such that you scale new and innovative solutions to complex business, organizational, and global problems? The answer is leadership!

Scaling Leadership is the just-in-time guide for those in positions of senior leadership who need to transform their organizations. You do this best when you start with yourself. Drawing on a huge international database of senior leaders providing 360-degree written feedback to fellow senior leaders, ***Scaling Leadership*** distills lessons from successful leaders into a powerful and universal leadership framework that will let you chart your specific path of development.

With this framework, leadership experts Robert J. Anderson and William A. Adams challenge you to evolve your leadership in deep relationship with others and with exceptional integrity. ***Scaling Leadership*** is an essential guide that offers senior leaders the information needed to develop conscious leadership at scale within their organization.

IN THIS SUMMARY, YOU WILL LEARN:

- The meaning of the development gap and how to address it.
- Why scaling leadership can be achieved only by developing others.
- How and why leaders "cancel themselves out."
- To transform Reactive leadership into Creative leadership.

Exposed at Scale: Spiritual Boot Camp for Leaders

Over the past decade, the term VUCA (volatility, uncertainty, complexity, and ambiguity) has become part of the business lexicon as executives, managers, and others grapple with its effects. The level of disruptive change coming at us is unprecedented, and we can only expect it to increase.

As leaders, we must learn to navigate the permanent whitewater in which our organizations operate. It is not enough to cope with the volatility and unpredictability in our markets; we must develop a new level of leadership literacy, mastery, and agility. We either rise to meet the challenge or get swamped. This is the new normal.

As businesses grow, their long-term, sustainable success depends on more than developing great products and services, securing necessary financing, or hiring and retaining talented people. It also depends on scaling leadership.

Ineffective leadership caps the ability of an organization to grow, and this liability is exposed the minute you start to scale. Leadership that works at one level of scale is likely to run into serious limitations at the next level. As an organization becomes larger and more complex, the number of people being led is larger, and the issues and opportunities requiring a leader's attention are more numerous, more frequent, and more consequential than ever.

The Development Gap

For most of us, our inner game (the complexity and structure of our internal meaning-making system, our decision-making system, our level of self-awareness and emotional intelligence, our mental models, and the inner beliefs and assumptions by which we define and deploy ourselves moment to moment) lacks the capacity and maturity to thrive amid all the complexity.

Hence, most of us are in way over our heads. We are running an internal operating system that is not complex enough for the complexity we face. This is our development gap. Since the context in which we lead will continue to challenge us, the rate of our leadership development, individually and collectively, must at least keep pace with the rate of change and escalating complexity, if not close the gap.

Scale can only be achieved by developing capacity and capability in others. Effective leaders develop other leaders. A critical prerequisite to effective organizational leadership is leadership of self. Here, self-leadership is defined as creating outcomes that matter most. Optimal self-leadership is the wherewithal to show up in our lives in ways that best serve our desired outcomes—loving families, strong relationships and friendships, work that matters, and futures worthy of our life's commitment.

The moment we start to work on our effectiveness as leaders, we begin to improve our effectiveness as human beings. Because our humanity is ultimately the foundation of our leadership, these paths are inseparable. This puts us right in the middle of a spiritual path.

Spiritual does not mean religious, except that the essence of all religions is radical transformation. This choice calls on the highest and deepest within us. We are challenged to become higher versions of ourselves—to mine our true human greatness and put it in service of others.

Leadership is the deployment of self into circumstances. As a leader, *you* are your primary asset. How you show up moment to moment is your leadership impact. When you lead, who shows up? Which self do you deploy?

Profiles in Leadership: Every Leader Has One

Jim Geiger, the CEO of LiquidWeb, offered this brilliant insight regarding leaders: "Leaders bring the weather." When a great leader walks into the room, everyone is on notice and everyone notices—the energy is palpable. The tone, mood, presence, focus, and behavior of the leader is the weather in any organization—a force of nature.

So, what is this weather—this powerful leadership presence that leaders bring with them wherever they go? In effect, the weather is the leader's profile in action. Each of us has a leadership profile. It's the way we show up to our people, how we tend to respond to certain situations or crises, what is and is not permissible to discuss, and much more.

The Leadership Circle Profile (LCP) is a tool that measures what great leadership looks like. It is designed to measure all the leadership conditions necessary and sufficient for scaling leadership. The tool incorporates progressively developing levels of leadership—Reactive, Creative, and Integral—developed by the authors in their book ***Mastering Leadership***. Creative leadership is more effective at leading in complex environments than is Reactive, and Integral is even more so. Each level of leadership is powered by a different internal landscape, or Internal Operating System, that governs how we deploy ourselves moment to moment.

Reactive Leaders can and do get results, but they create an unhealthy "or-else" ultimatum culture that brings burnout and diminishing returns over time.

The optimal LCP reflects the responses of 50,000 leaders and employees worldwide who were asked in a study to describe ideal leadership: "What kind of leadership, if it existed, would enable the organization to thrive in its current marketplace and into the future?"

Creative vs. Reactive Leadership

The Leadership Circle Profile (represented as a circle) is divided into two hemispheres, upper and lower. The upper half, Creative, represents the kind of leadership that emerges as leaders mature into Creative leadership. It displays 18 Creative Competencies that tend to arise naturally as we move into the Creative level of leadership: caring connection, fosters team play, collaborator, mentoring and developing, interpersonal intelligence, selfless leader, balance, composure, personal learner, integrity, courageous authenticity, community concern, sustainable productivity, systems thinker, strategic focus, purposeful visionary, achieves results, and decisiveness.

The correlation between the average rater score on all 18 Creative Competencies and leadership effectiveness is 0.93. It is based on more than 1 million rater surveys from around the world. This remarkably strong correlation shows that as you improve your scores in the Creative half of the circle, you will likely be experienced as a more effective leader.

The Reactive half of the circle in the LCP is comprised of 11 Reactive Tendencies: conservative, pleasing, belonging, passive, arrogance, critical, distance, perfect, driven, ambition, and autocratic.

Embedded in each Reactive tendency is a strength, but it is a strength being run reactively. In effect, these are default behaviors. They are go-to strengths on which we habitually rely when we feel under pressure or at risk.

When we run our strengths reactively, we often create unintended consequences that limit our effectiveness. When we deploy a strength reactively, we often cancel out that strength and introduce liabilities in its place. Consequently, Reactive Tendencies are inversely correlated to Leadership Effectiveness.

The correlation between Reactive Tendencies and Leadership Effectiveness is –0.68. This solid inverse relationship shows that the more we lead reactively, the less likely we will be experienced as an effective leader over time.

Yes, Reactive leaders can and do get results—sometimes extraordinary results. They may sell more, innovate more, and deliver more than anyone else in the organization. But they often leave behind them a trail of broken, disenchanted, and disengaged employees, peers, and other stakeholders who invariably feel pushed, coerced, pressured, or let down. Reactive Leaders create an unhealthy "or-else" ultimatum culture that brings burnout and diminishing returns over time.

High-Creative Leadership Strengths: What Differentiates the Most Effective Leaders

How do leaders describe the very best leaders? Here are descriptions of the 10 most strongly endorsed strengths of High-Creative leaders, in language commonly found in the written comments of the study:

1. **Strong people skills**: Has a high level of interpersonal capability. Is caring, compassionate, big-hearted, and respectful. Connects well with others and makes them feel valuable.
2. **Visionary:** Communicates a compelling vision of the future that fosters alignment. Knows and sets strategic direction and business plans that allow teams/organizations to thrive.
3. **Team builder:** Unites, engages, and supports the team's efforts. Gives support to team members and advocates for initiatives.
4. **Personable/approachable:** Is friendly, likable, and has a good sense of humor. Maintains an open-door policy. Is accessible and available.
5. **Leads by example:** Good role model. "Walks the talk."

6. **Passion and drive:** Enthusiastic, driven, and strongly committed to the success of the organization and self.
7. **Good listener:** Attentive and present when people are presenting their views.
8. **Develops people:** Shares experience and provides mentoring, coaching, career planning, and development experience to ensure growth and development.
9. **Empowers people:** Shares leadership and encourages people to take ownership, find their own solutions, make their own decisions, and learn from mistakes. Trusts people's ability and their willingness to follow directions.
10. **Positive attitude:** Optimistic and upbeat with a can-do attitude.

The biggest gaps between High-Reactive and High-Creative leaders are in the areas of people skills, listening, team building, and leading by example. The gaps are big because these two groups of leaders are experienced in very different ways. The High-Creative group had an average Leadership Effectiveness score at the 87th percentile, while the High-Reactive leaders were ranked at the 10th percentile on Effectiveness.

The Strengths of High-Reactive Leaders: Non-Differentiating Strengths

The study showed that High-Reactive leaders are most strongly endorsed/acknowledged for a much different set of strengths than are High-Creatives. Here are the top 10 strengths of High-Reactive leaders, listed in rank order:

1. **Drive and passion:** Enthusiastic, driven, and strongly committed to the success of the organization and self.
2. **Visionary:** Communicates a compelling vision of the future that fosters alignment. Knows and sets strategic direction and business plans that allow teams and organizations to thrive.
3. **Strong networker:** Builds partnerships with other business leaders. Is good at bringing diverse groups together and provides a strong customer focus.
4. **Domain/technical knowledge:** Excellent knowledge, technical skills, and experience—particularly related to the organizational culture and market.
5. **Results focused:** Knows what needs to be accomplished and how to get results. Holds people accountable, can be depended on to deliver results. Is reliable and action-oriented.
6. **Intelligent/brilliant:** Keen mind and sharp thinker.
7. **Strong people skills:** Has a high level of interpersonal capability. Is caring, compassionate, big-hearted, and respectful. Connects well with others and makes them feel valuable.
8. **Creative/innovative:** Thinks outside the box and pushes for change.
9. **Personable/approachable:** Is friendly, likable, and has a good sense of humor. Maintains an open-door policy. Is accessible and available.
10. **Positive attitude:** Optimistic and upbeat with a can-do attitude.

High-Reactive leaders are rated 12 points higher on passion and drive than are High-Creative leaders. In addition, High-Reactive leaders are endorsed more often for being intelligent, creative/innovative, thorough, hard-working, results focused, and more. This leads to a question: Is it possible to be *too* driven?

The answer is yes. High-Reactive leaders are described by other senior leaders as more driven and far less effective than High-Creative leaders. This result is consistent with decades of leadership research showing that excessive drive is a big issue with many leaders. We have all heard statements such as, "He's wound too tight," "She is constantly in overdrive," "He is excessively ambitious."

The issue here is not the strength itself but how the strength is deployed. The over-extension of a strength becomes a weakness in most every case. High-Reactive leaders are described similarly to (if not more strongly on these strengths) High-Creative leaders, but they could not be more different in how they are experienced by others as leaders. High-Creative leaders have similar to lower scores on these strengths, and yet they are experienced by others as far more effective than High-Reactive leaders.

This led to the conclusion that High-Reactive leaders are leading with Non-Differentiating Strengths—strengths that don't differentiate between the most-effective and the least-effective leaders. These Non-Differentiating Strengths comprise the bulk of the strengths for which High-Reactive leaders are endorsed.

The lesson? Not all strengths are equal as it relates to leadership, and if you overplay certain strengths, you get in your own way. You block your effectiveness as a leader. Leading from Non-Differentiating Strengths is not scalable leadership, or at least these strengths scale only to a point. You need to have them or you don't make it into leadership positions, let alone reach the top. But as you move up, they become table stakes.

Effective leadership is something entirely different. That "something different" has to do with the strengths for which High-Creative leaders are most strongly endorsed.

> When an extremely talented leader is reaching his or her limits, these limits are (more often than not) within their inner game.

The Canceling Effect: Are You Canceling Yourself Out?

How many times have we heard people say, "He can't get out of his own way." "She keeps shooting herself in the foot." "He is canceling himself out." "Could you believe that conversation? It completely undid all that we've done for the last three weeks."

These statements are indicative of the Canceling Effect. When leaders, or entire leadership organizations, experience the Canceling Effect, their strengths are canceled out by their liabilities. As a result, their leadership cannot and does not scale.

Here is feedback to Jim, a senior leader. In these comments, you can clearly see the Canceling Effect at work in his leadership:

"Jim is all over the map in his management style—from extremely professional and centered, to childish and petty. He needs to believe in the values he espouses and then align his behavior consistently with those values."

"Jim seems a bit disconnected on a personal level from those he should be mentoring. While I know he is often pressed for time, I suggest that he strive to connect with those in the organization and be willing to share some of himself to develop a bond with them so they want to follow him."

"Jim undervalues the power of relationships and the synergies those relationships can create in accomplishing his vision and those of others. He tends to go it alone, instead of working to figure out how to combine resources and efforts with his peers to be able to accomplish an expanded vision."

Jim is a capable professional, but his leadership is neither scaling nor is it scalable unless he changes his approach.

A Matter of Development

The phenomenon known as the Peter Principle happens when managers eventually get promoted to a position that's beyond their capability to perform. It says, "People are promoted to their highest level of incompetence."

There is some truth to it. However, ineffective leaders at this level have reached the limits not of their competence but of their development. This conclusion redefines how we go about developing leaders for the future.

To understand how significantly this redefines leadership development, we need to understand how each level of leadership described here is underpinned by a progressively maturing Internal Operating System. This inner game runs the outer game. Creative leadership arises on a more mature inner game than does Reactive leadership.

So, when an extremely talented leader is reaching his or her limits, these limits are (more often than not) within their inner game. Their inner game is reaching its Peter Principle and needs to evolve. They are not reaching the limits of their level of competence but of the development and maturity of their inner game.

How Leaders Scale Leadership

Some us may be born to lead; still, the leadership ability we are born with must be developed, coached, and exercised regularly. To have a developmental (if not transformative) effect on your people, your teams, your organization, and the world around you, you must scale your leadership.

How do the best of these leaders change themselves, scale their leadership, and in so doing, transform their organizations? Three key steps will get you there:

Step 1: Start with yourself. Take a deep look within yourself to understand your strengths and liabilities as a leader. Take the Leadership Circle Profile to see where you sit in the spectrum between Creative and Reactive. Specifically,

- Awareness first; acknowledge your gap.
- Harvest your feedback-rich environment.
- Focus on the One Big Thing (the one big thing you need to change).
- Reach out for help.

Step 2: Develop leadership teams. Once you have an understanding of your own strengths and liabilities as a leader, the next step is to shift the focus to your leadership teams. This begins the process of scaling leadership beyond yourself. Specifically,

- Lead the development agenda.
- Assess individual and collective effectiveness.
- Get the right people in place.
- Build alignment around what matters.

Step 3: Build leadership systems. Creating long-term organizational change that will survive those who catalyzed it requires building systems that develop Creative or higher leadership throughout the organization. Specifically,

- Create a developmental organization.
- Focus on measuring results.
- Institutionalize the development agenda.

Transforming Reactive into Creative Leadership: A Fundamental Shift of Mind and Heart in Three Movements

Your level of leadership is related to your level of adult development. Robert Kegan, a psychologist and professor at the Harvard Graduate School of Education, shows that when adults evolve, they move through three progressive stages of development:

- Socialized Mind,
- Self-Authoring Mind,
- Self-Transforming Mind.

If your self is constructed from Socialized Mind, you likely lead Reactively. If you do the hard, spiritual work of transforming Socialized Mind into Self-Authoring Mind, you more likely lead Creatively. Likewise, Self-Transforming Mind tends to boot up Integral leadership. Each level of mind and leadership is developmentally more adapted to meet complexity and thrive within it than the one before it.

Shift from Reactive to Creative in Three Movements

The shift from Reactive to Creative leadership is nothing short of a transformation—a fundamental shift of mind and heart. This evolution occurs in three movements. As we make this shift, we move from

- Authored by others to authored by self;
- Safety to purpose;
- Ambition to service.

The first movement. The first movement is from a person who is authored by others to one who is authored by self. The leader authored by others is running a Socialized Mind—the conditioning we were given in our youth and the identity we constructed over the years.

However, when we deploy ourselves from a Socialized mind, we are more likely to lead and live Reactively, because our behavior is being authored by outside circumstances and expectations. We depend on outside validation for our security and self-esteem. The structure of this game is self-limiting—it is not mature enough for the kind of complexity most of us face as leaders.

Out of all the many external messages, the Self-Authored leader has discerned what is most important and what he or she chooses to stand for. From this move is derived the definition of self-leadership: creating outcomes that matter most. What matters most defines the Self-Authored leader. Stephen R. Covey called this stage independent, not because those in it act independently (lone wolf) but because they no longer depend on outside validation for self-worth.

The second movement. The movement from safety to purpose is embedded in the first movement. The primary tension in adult life is between purpose and safety. We want to be part of something great, but at the end of the day, we still need to pay the mortgage. Both are important. If we ignore safety, we put purpose at risk. If we focus too much on safety, we also put purpose at risk.

Leaders working their way to the top are motivated to move up safely. The more we want to move up safely (knowing

As our leadership transforms from Reactive to Creative, we become less ego/self-centric and more focused on what is good for the whole.

the fall gets farther and harder with each promotion), the more we need approval of those around us, especially those above us. Most of us would do almost anything to avoid losing the confidence of key stakeholders. Here's the rub: You can't pursue purpose and safety at the same time.

In the first movement, we let go of being constantly driven by the voices from our past and the expectations of others. As we do so, we play the second movement—we re-optimize the tension between purpose and safety. We move from playing not-to-lose to playing on purpose and what matters most. There is no safe way to be great!

The third movement. The third movement, from ambition to service, is interconnected with the first two movements. As our leadership transforms from Reactive to Creative, we become less ego/self-centric and more focused on what is good for the whole. We become a servant of bringing into being what matters most.

Our drive for personal success moderates and becomes maturely balanced with the success of others and with the success of the organization's mission. As this shift happens, leadership is freed up to scale.

Leadership becomes less self-centric and more about developing the capacity and capability of the organization. It becomes more approachable and skillful in working with people, listens well, builds high-performing teams, mentors, and develops capability in others and then empowers them.

Practices That Transform Leadership: Change Is Simple, Change Is Hard

It is hard to change deeply grooved patterns in how we show up every day in our lives and our leadership. Transformation—fundamental change—is an acquired taste. It takes hard work individually, and it takes more hard work to do it collectively and at scale. If we pull it off, our leadership becomes a competitive advantage.

Effective leaders create the conditions for leadership at scale in themselves, in others, and in the organization by engaging in these four practices that work to establish and hold generative tension:

1. Tell the truth about what we want. Create vision. Focus attention on the outcomes we want to achieve together. Set our intention to create them. Choose to have this become our current reality. Hold and reaffirm this intention daily.

2. Tell the truth about how you are creating your current reality. Tell the truth about the results we are creating right now, especially those that are inconsistent with what we want. Get underneath how we are creating our current reality, individually and collectively, until we see the embedded beliefs driving the behavior that gets us what we don't want.

Surface those beliefs within yourself and within your team members. Delve into these beliefs deeply enough to see the falseness in them.

3. Rinse and repeat to continue to hold generative tension. Do this as an ongoing practice—that is, telling the truth about what we want and what we've got.

4. Practice every day. Make daily experiments. Take small steps every day to move toward what we want. Learn from your experience.

It helps a lot if you get feedback all along the way; have a practice of daily reflection; trust your intuition, and develop the openness to intuitive insight in your teams.

The leaders who quickly make the most progress scaling leadership do two additional things that help them change personally while catalyzing systemic transformation: They take a long-term, systemic approach to development, and they lead the change publicly, personally, and vulnerably.

Integral Leadership Informed by Grace: The Future of Leadership for a World at Stake

The future of leadership is Integral leadership—creating organizations innovatively designed to scale leadership at

every level, to innovate at the pace of change, and to thrive amid complexity. This puts us right back into our spiritual boot camp. The pressure of the business context relentlessly requires us to develop even further.

In the shift from Creative to Integral leadership, we move from being Self-Authored to Authored. That means we are neither authored by others nor exclusively by our own sense of personal purpose. We let go to being authored by something much larger than ourselves—something that seems to want to come through our life and leadership. We let ourselves be used by a great purpose while becoming the servant of our emergent collective future.

We see that the system's development gap is related to our own development gap. We no longer merely sponsor change in the organization; we radically, humanly, and in deep relationship lead change from the perspective that the system is mirroring the function and dysfunction in us, individually and collectively.

We experience others, much like ourselves, as a work in progress, and we engage in dialogue from a place of listening, learning, compassion, and strength. Within our leadership teams and extended leadership teams, and among our stakeholders, we generate the kind of dialogue that's more likely to create innovative, adaptive, breakthrough solutions to complex problems in which all stakeholders win. We learn together and out loud. We let go of our knowing and certainty because the solutions we seek will take a high level of collective intelligence and systemic wisdom. No one person is smart enough.

Together, we innovate new and agile organizational designs that are inclusive, engaging, developmental, and fit for purpose in a VUCA world. As such, we become the servant and system architect of an emergent future that is our collective welfare.

All of this is informed by grace. We are graced with the wisdom that rides in on intuitive waves of insight when we suddenly know what has to be done, where we need to go, or what/how we need to change, however counterintuitive. We are graced when we break through to deeper levels of self-understanding and find, in that awareness, our deep kinship with humanity. We are blessed and surprised with the synchronicity of events arising at just the right moment to propel us forward.

The future of leadership is Integral leadership informed by grace and leading from the presumption of our inherent unity. This is how we will create a thriving future for all of Earth's inhabitants.

THE SUMMARY IN BRIEF

Leadership that drives real positive change doesn't manifest via a top-down authoritarian system. Instead, it demands focusing on serving people.

The book ***Self Less: Lessons Learned from a Life Devoted to Servant Leadership, in Five Acts*** uncovers the value of lifelong learning, relationship building, staying true to one's purpose, and maintaining resilience in a leadership position. The pages within emphasize on building a selfless mindset to maximize positive impact on people through leadership, innovation, teamwork, and community partnerships.

Author Len Jessup chronicles his journey – from childhood moments to university experiences – that shaped him to become a selfless leader committed to organizational transformation. His insightful and memorable life lessons inspire us to tap into the power of humility and service to drive real organizational change.

IN THIS EXECUTIVE BOOK SUMMARY:

- Learn how "Self Less" leadership prioritizes others' needs and teamwork.
- Become a selfless leader devoted to organizational transformation.
- Prioritize service and humility in your leadership endeavors.
- Drive meaningful change through innovation and community partnerships.

Introduction

This book is about selfless leadership as a way to lead others in transformational organizational change. Yes, this sounds counterintuitive. After all, aren't great leaders supposed to take charge and tell people what to do? While I know it's natural to think this way, just the opposite is true. Selfless leading helped me and others to do some amazing things together. It was and is for me a powerful way to lead others in some amazing, transformational organizational changes.

So that's the central plot here: selfless leadership as a powerful tool for leading others through transformational organizational changes. To delve into this idea, I will share a series of personal examples to illustrate my points. From there, I'll use that foundation to describe how those moments shaped my approach to leadership. And then I'll drive home these points by sharing stories about how teams I've led accomplished some wonderful objectives.

Act 1: Origins

Confidence Shaken to the Core

When I entered college, there was so much I didn't understand. But I had a voracious appetite to learn. I recall the time I wrote an extensive paper for my art history class. I submitted my paper, and a few days later, the professor accused me of cheating and said my work was too good to be true. But I gathered myself and swore to my profession that I had written the paper. After countless questions, the professor was finally certain that it was indeed my work and said that it was very well-written. I felt so relaxed and left his office feeling affirmed: Perhaps I could succeed at college, and perhaps I deserved to be there!

Don't Let 'Em Bring You Down

After finishing two years of college, I followed my friends down to Chico State. Another one of my professors at this college didn't believe that I had written one of my papers. This time though I was ready. I was able to quickly dispel their skepticism about the authenticity of the paper, without being shocked or even surprised. There have been so many people who doubted me along the way: teachers, professors, coaches, colleagues, and even my own dad. I knew what I was capable of, and that was enough for me.

Don't Let Them Take Away Your Power Over Yourself

After two years at Chico State, I finished my undergraduate degree in fine style. And those same two faculty members who grilled me over my paper became friends and let me know I was among the top students graduating in that major. I was proud I had completed the program and done well. I decided to stay for an MBA, but my parents could do little to help me pay for my education. I worked multiple jobs every summer as well as a part-time job during school each year. Dad had finally taken the attitude that I must be doing something right.

Turning the Corner with My Dad

By the time I finished my MBA, my dad's attitude about me attending school had completely shifted. He finally saw value in what I was doing and was affirming me. Soon afterward I entered my doctoral program at the University of Arizona. When everything was packed in my car and I was ready to leave, Dad walked me out, and in private out on the front porch, looked me in the eyes with a warm smile. Holding me by my arms, he somberly nodded and said, "You're off on a great adventure…"

Off on a Great Adventure

When I arrived at the University of Arizona, I felt very lonely. I had never lived so far from home, I didn't yet know where I would spend the night and felt intimidated by this new, high-powered research university with an even smarter group of people around me. They introduced me to the other doctoral students. Everyone was smart and helpful. Even though I had a serious case of imposter syndrome by that point, I saw that my grades and references from my supportive faculty were exceptionally good. They showed that I had gotten into the doctoral program by the skin of my teeth.

The Life of the Mind

I was growing intellectually and gaining more self-confidence, but I still had lingering self-doubts. The upside was that it caused me to work even harder. My mantra became that if a day goes by where I don't embarrass myself, I'm not trying hard enough. I was surrounded by so many smart, talented people that I figured I was bound to say or do something embarrassing.

But I had to let that go. I knew that for me to continue to grow, I had to continue to learn and get better. Mistakes weren't likely going to be catastrophic. Rather, they were opportunities for learning and growth.

Shaped My Past

I think back on this time in my life often and can see now

A good leader, by definition, can influence the way people think and act.

how these events and people shaped me. Somewhere in early adulthood, this all rang clear for me, and it shaped my life's purpose: "When I get to the end of my path, I want to be able to look back and know at that moment that I did everything I possibly could, to do as much good as I possibly could, to have as much positive impact as I possibly could, for as many people as I possibly could, and that I never shied away from an opportunity to do so."

I would live a purpose-driven life in service to others. I would be a servant leader, and higher education would be my platform and vehicle.

Act 2: Beliefs

Strongly Consider Accepting Even the Little Assignments

I never shied away from an opportunity to help, to speak up, or to lead, whether in informal or formal rules. And as I kept saying yes to these opportunities, the roles and assignments got bigger, and the potential for impact became correspondingly larger. Within a literally short time, I was offered roles that forged my skills and reputation as a leader and change agent. Each of those moves made total sense to me at the moment, and each felt like it was exactly the next thing I was supposed to do to achieve my life purpose.

Take On Big Challenges, but Do So with Eyes Wide Open

A good leader, by definition, can influence the way people think and act. A leader might simply be trying to get people to perform tasks in a certain way, under certain constraints, and within a prescribed time. On the other end of the spectrum, a leader might be tasked with trying to move an entire organization from an undesirable "as is" situation to a "to be" state in the future that is better. In all cases, a leader must get things done with and through other people. So, at its core, leadership is fundamentally about leading change, leading people through change, and motivating people to collectively enact that change.

Leadership Is Organizational Change

Think back again to the basic definition of leadership: to influence the way that people think are act. With that in mind, maybe you find yourself in a position where you need to influence people to do something. You might think you know what it is they need to do and the direction you need them to move, but don't be so certain. You need to figure out what the problem is and confirm it with the people who are involved and impacted. Because I always assume I don't know anything, I always begin by listening, learning, asking a lot of questions, and talking with as many people as I possibly can.

Listen Before You Speak or Make Up Your Mind

Whether you talk with people directly or someone else helps you listen to others, you are going to need to learn from the people impacted by the change about to happen. From all that learning, you will get to the point where you have a good sense of what you think the current state of the organization is, what the real problems are, why they are happening, how they are holding the organization back, what the desired state of the organization is, how that can be enacted, where the opponents and hot spots are, where the change agents are, and so on. You won't have the complete picture, and it will likely morph over time, but through this learning phase, you will have a much better handle on things than when you started.

You've Got to Size It Up Before You Take It On

So, you've listened, you've learned, and you've gained at least an initial basic sense of what needs to happen. Your next step is to ensure that the relevant people involved see clearly and consistently that there is a need for change and what that change needs to be. You and your team, including those key influences, will need to work together to explain, persuade, cajole, negotiate, prove, incentivize, and sometimes plead with others involved. Eventually, you'll get a clearer sense of the opposition and how you need to contend with them as well. These organizational transformations are often grounded in very simple values. And these values exist as basic truths for people in the organization.

Distill the values into core tenets. From there, communicate both the good and the bad and rally people around the productive values while sidelining the negative ones, until enough people are on board to begin moving the organization forward.

In This Case, Values and Organizational Culture Will Eat Strategy for Breakfast, Lunch, and Dinner

The most difficult aspect of organizational transformations is convincing people that the vision you are presenting is possible. But when people think something isn't possible, it's hard to move to the next level with them. A limiting belief is a state of mind that you might have, or a belief about yourself or your situation, that restricts you in some way. Changing people's beliefs about what is possible for them, and their organization is perhaps the most difficult component of leadership. To illustrate this point, let me share a personal example.

No Way We Are Going to Get This Done

Jack, one of my amigos from my doctoral program, recruited me to join him at Washington State University (WSU) to help build a grow a nascent information systems program in the business school. Things were going remarkably well until the prior dean left and we found ourselves with interim leadership. So, I threw my hat in the ring for the dean's job. In my first day on the job, I was barraged by my new staff with a host of problems. Several things were broken in terms of the way the business school operated. Many of our alumni and other external stakeholders had disengaged, and our finances were problematic on several dimensions. Worst of all, we were on probation and about to lose our AACSB accreditation.

I had never faced anything quite so difficult before in my professional life. I wondered what I had gotten myself into. But about this time, I received some good advice from some mentors to be forthright with my team about these problems. And so, I did just that. I let everyone within the business school see the full report and all twenty-six key problems. I also let leadership across campus see what we were up against. I basically confided in anyone I felt needed to know or whom I felt could help us be successfully re-accredited.

That turned out to be the right thing to do. Everyone now knew exactly where we stood, and they saw the gravity of the problems we faced. Much to my surprise, nearly all of them leaned in and wanted to help, and together, we dove into the accreditation report and made recommendations on how we could fix each of the twenty-six problems within the twelve-month deadline.

Transparency, Transparency, Transparency

The good news in being so transparent with everyone about reaccreditation was that we all had the same sense of the problems we faced and the importance of working together to solve them. The bad news with being so transparent was that everyone in the business school was now acutely aware of the gravity of the situation and the difficulty in getting this all done on time.

Fortunately, I was able to persuade the accreditation agency to give us some extra time because I was new and a first-time dean. They graciously agreed to an additional six months, which provided a little more breathing room. Then, we left no stone unturned to convince people that immediate change was possible. The result? We got everything fixed within the eighteen-month time frame. We worked aggressively every day to continuously make the business school better at a time when many undergraduate business programs were stagnant.

It All Begins with the Belief That It is Possible

We humans aren't immune to doubting ourselves from time to time. This is why having a solid belief system in place is vital to stay focused on our goals. To truly build a belief system that it is indeed possible to achieve the goals you've set for yourself and your people, ask yourself: What might your limiting beliefs be about what is possible or not possible? More to the point, what might your limiting beliefs be as a leader? What might be the limiting beliefs among your team members, and how might they be holding the team and your organization back in what you all might accomplish? What can you do to help your team see what is possible? How might these beliefs shape prevailing values, and how might core values be driving or hindering what people believe is possible or desired? When you envision a positive, possible future for you and the others on your team, how does that feel?

The Naysayers Never Go Away; They Just Have Fancier Titles

Another experience I had while in leadership roles at WSU shook my beliefs to the very core. I was talked about as a possible candidate to succeed my boss as president. But a senior, key, external advisory member for the university confirmed that she had spoken against me because she felt I was too nice to be a university president.

Sometimes you must realize that you cannot get everyone's support, so you must either work around them or redirect them for other important tasks.

Despite some naysayers like that along the way, I've been fortunate to be a part of many transformations, and overcoming limiting beliefs was a difficult problem in every case. Her lack of belief in me didn't shake my belief in myself. Further, my values about what I was doing were so strong and deep by that point that I wasn't going to let her limiting beliefs about me deter me from my path.

Act 3: Adversity

Resistance Can Take Many Forms, Some Not Easy to See

There are several types of adversity you're likely to face when transforming an organization.

Many of them are environmental and things outside the organization that are likely beyond your control. Examples might include a pandemic or an economic downturn. But the type of adversity I'm talking about here is the internal kind. It's the kind of adversity primarily stemming from people who are not onboard with your proposed changes. Don't count out or ignore those in opposition. You'll encounter them often, and you'll need to deal with them one way or another.

Sometimes You Need to Ask the Resistors to Step Aside

When we faced resistance against launching an online MBA program, we found a way to essentially get this group of faculty members to politely stay out of the way of those who would pour their hearts into building and delivering a great online MBA. We got to the place we needed to, but not with everyone onboard. Sometimes you must realize that you cannot get everyone's support, so you must either work around them or redirect them for other important tasks.

You'll Need to Develop Patience, Resilience, and Nerves of Steel

When I was facing one of the toughest challenges in my life during my presidency at UNLV, I learned useful lessons in patience and resilience. I was playing the long game and worked hard not to let a few adversaries hold me or the university back. When I got knocked down by them, I rose up, dusted myself off, and got back in the game to make another play. I also had to be very careful to take care of myself mentally, physically, emotionally, and spiritually through those trying times.

Act 4: Impact

Lighten Up on Yourself Because You're Not the First

The other component of my purpose statement has to do with impact. In fact, impact is at the core of my purpose statement. I want to have a positive, visible, tangible, felt impact, and not just a little. I want to have done as much of that as I possibly can. The final note about that purpose statement is that I am focused on positively impacting other people. In business, we often talk about having an impact on people, profits, or planets, and the trade-offs for an organization between chasing after one of those versus another.

If You're Not Having a Positive Impact on Others, What's the Point?

In our modern Westernized society, work dominates our limited waking hours. As a leader in an organization, the people under your charge are spending a disproportionately large proportion of their limited waking hours with you working. Keeping this in mind, wouldn't you as the leader want to try as hard as you can to make sure this time is well spent? Wouldn't you want to make sure they are spending that time meaningfully?

Sometimes What Seems to Be the Small Stuff Is Often the Most Important and Difficult

During my time at UNLV, I noticed that the institution offered a generous personnel benefit available to faculty and professional staff that offered nearly free tuition and fees to that person's spouse. But that incredible tuition benefit was not extended to the classified staff. This included groundskeepers as well as people in areas such as maintenance, janitorial, and secretarial – the people who needed that tuition benefit the most for their spouses and depen-

dents. Despite facing a lot of resistance from some people, we managed to bring this policy change, which ended up being truly transformational in people's lives in perpetuity on that campus.

Act 5: Legacy

Raising Money on the Palouse

When I was a junior faculty member, I had several ideas for my program and for my own research, but I quickly figured out that the university couldn't possibly fund them. So, I set to figure out how to secure funding to breathe life into these visions.

Fast forward a few decades, and I have now had the privilege to help raise a lot of money for several projects that drove positive impact. I learned so much about fundraising that I could tell stories over wine for hours on end. I stepped in to lead the overall funding for WSU, that storied university in the beautiful inland Palouse area in the Pacific Northwest. Throughout my fundraising journey, we got to spend time with amazing people and fantastic homes, ranchers, startups, and so on. Even better, we got to visit troubled schools we were helping and spend time in desperate neighborhoods.

You're Never Too Old to Need a Mentor

Throughout this narrative, I've mentioned the many mentors who helped me on my journey. They've played a huge role in my life. Right from the beginning, I always openly, and actively sought out help, and I can think of very few cases where anyone turned me down. Even today, I benefit from the wise council of many university presidents, board members, business leaders, elected officials, and others. And these experiences taught me a valuable life lesson. You're never too old, successful, experienced, or smart to benefit from the mentoring of someone else.

Leadership is Often a Gift and Privilege in Being Allowed to Experience Moments with Others When They Are at Their Best

A very wise fundraising consultant, Bruce, imparted a practical lesson to me that proved useful, especially as I moved into university presidencies. He explained that when I found people who really liked what we had determined were the university's most vital needs and most impactful projects, where in a sense my own values and vision for advancing the university resonated on a deep and consistent level with the donor's values and vision, that was where the magic would happen. Thanks to his advice, I was able to then participate in some truly transformational gifts that were also incredibly meaningful to the donors.

Beautiful Things Can Happen When Values Align

Over time I learned to shape my fundraising in many healthy and productive ways. It also saved me from having a destructive mindset. For example, I never subscribed to the "own a donor" mentality that is prevalent on a lot of university campuses. We don't own our donors. With the donor-centric approach, we're there for them. Over decades of fundraising in higher education, I've had many funny or awkward moments that stand out. When one donor made one of his first large gifts to the university to help us build a Center for our business students, he initially wanted to name the facility after me. I was flattered, but I explained to him that we needed to name that facility after his family. It was their legacy, not mine.

Sometimes It Is More about Their Legacy and Less About Yours

While at UNLV, I found out that a long-time donor to the university was not in good health and would soon be passing. I quickly grabbed our vice president of development, Scott, and we scheduled a visit for him within a few days. When he arrived with his wife, we talked about programs and students who had flourished as a result. We were also careful to draw out the subsequent role that all of it played in enabling more recent projects like the new stadium in medical school. The donor couldn't communicate too well, but he frequently fought back tears throughout that ride.

There Is Perhaps Nothing Better Than Helping Secure the Legacy of Someone Else

Your legacy lives on in terms of the continued impact your efforts and investments have on successive generations long after you're gone. After I'm gone, I think the highest praise people could give me would be to say I was a nice guy who worked hard. Leadership is perhaps better thought of as trying to reach a state of true enlightenment. It's about the pursuit and not the destination. I don't think of myself as a leader per se. Rather I think of myself as being a student of leadership, always learning and growing.

Leadership Is an Ongoing and Endless Pursuit, Process, and Journey. It Is Not a Definitive Outcome, Destination, or Fixed Trait

Do you ever think about the impact you're having, and whether there might be a continuing impact from your efforts after you're gone? What might your legacy be as a result of your efforts and impact, and how might people perceive it and you long after you're gone? Are you doing all you can to shape that impact and legacy in ways that enable you to continue to do good even when you're not here to do it yourself?

Conclusion

In this book, I tried to focus on the positive, but please understand that this all didn't come without sacrifice, pain, sadness, and regrets. My meta-level lesson from all of this is that I work hard to continue to learn and, in some cases, continue to learn how to learn. I continue to learn and grow in being a better dad, friend, brother, husband, partner, and leader. I'm grateful for the opportunity each day to be enlightened, I suppose you could say that I devoted my life not only to being in service to others but also to learning. Indeed, I can't wait to see what lessons tomorrow brings.

Len Jessup is a two-time university president, two-time business school dean, long-time business school professor, and a startup investor and pioneer. Len is also a visionary leader in higher education, known as a consensus builder with a deep interest in innovation, entrepreneurship, leadership, and organizational change. He is currently president of Claremont Graduate University, a member of the prestigious Claremont College consortium in southern California.

THE SUMMARY IN BRIEF

Most of us get trapped in the illusion of silence when a problem knocks at our door. But does silence truly solve a problem that stares us right in the face? The answer is a massive "no."

An insightful take on breaking the "silence bubble," ***Silence Kills: Communication Tactics to Speak with Confidence and Build Your Influence***, points out the most pressing problems that replace result-oriented communication with the threat of silence. The book lays out detailed solutions to combat each one of these problems by mastering the art of effective communication.

Former FBI-trained hostage negotiator and public information officer, Scott Harvey breaks down how communication is the most critical element for an organization's (and an individual's) success. He infuses the book with his own experiences from his hostage negotiation days to bring home the value of rapport, active listening, kindness, and clarity and drive positive outcomes from every conversation.

IN THIS SUMMARY, YOU WILL LEARN:

- How to know what to say.
- The skills needed to deliver your message clearly.
- How to lead your team with confidence.
- How to win the trust of your customers and clients.

Introduction

No organization is immune to crises. When a problem knocks at your door, you're forced to deal with it. You can either stay silent and watch the emergency unfold, hoping there are no casualties. Or you can communicate clearly to negotiate a positive outcome.

Silence Kills: Communication Tactics to Speak with Confidence and Build Your Influence is your training to not be afraid of saying the wrong thing, always knowing what you can say, the best tactics to deliver your message, to lead your team with confidence, and get your clients and customers to trust you.

The skills you learn here are the skills you will use every day. They'll not only make you better at work, but they'll also make you a better spouse, a better parent, and a better friend. That said, welcome to Training Day!

Phase 1: The Problem

Silence

We live in a world that is knee-deep in technology and it seems to be never silent. So, naturally, "silence" of any kind often seems like a threat. Why? Because of the difference between situational and dispositional attribution.

Situational attribution is when we infer that someone's actions are a result of their situation (external factors). Meaning, if your boss didn't respond to you in a timely manner, it could be because she's busy. Dispositional attribution is when we infer that someone's actions are a result of their disposition (internal factors). Meaning, if your boss didn't get back to you promptly, it's because she doesn't like you.

Without enough rapport built up, our brains interpret silence as a dispositional attribution. When there is no explanation for why someone important to us is silent, our brain naturally alerts us to an imagined threat. But in reality, silence is more often a situational attribution. This is where the need for rapport or communication comes in.

The Brain

As discussed before, silence without rapport feels like we don't care. This is why it's important to say SOMETHING during a crisis. Sure, you won't kill the story by not talking but you WILL lose control of it by keeping silent. The best way to go about the process would be to release a statement as soon as you can, and then get about fixing the problem.

When communicating a message, however, you have to do more than simply craft the words.

Evolutionarily speaking, our brains prefer to process communication in a face-to-face mode. Research says we only get 7% of the message from the actual words someone says. Our brains extract 38% of the message from the tone and the other 55% from nonverbal cues.

If we want to tell our story, we must make sure our message is heard. We have to acknowledge the importance of tone and nonverbal cues and understand how important it is to manage stress and fear.

Stress

Stress. Anxiety. Depression. We don't like to talk about these, and that's not okay. We can only heal what we are about to talk about. Open and honest discussions are often the only way we can improve things. We need to understand the hindrance that stress creates for people whom we are hoping to communicate with.

One of the key things I learned in hostage-negotiator training is about the teeter-totter in everyone's brain. In the teeter-totter of everyone's brains, emotion sits on one end, and logic/reason sits on the other.

When one side is low, the other side is high. Meaning, when emotion is high, the logic/reason side of our brain is low, and vice versa.

Don't allow someone's unbalanced teeter-totter to unbalance your own. At the same time, don't focus only on logic. The goal here is to bring the perfect balance of emotion and logic. Start by addressing their emotion and follow the conversation through with logic.

Fear

The more we try to tap-dance around some perceived hot-button issue, the more awkward we make things. The more awkward something becomes, the more offensive it ends up being. So, in an effort to not offend anyone (or stay silent), we end up being more offensive because we draw all the attention to things we're not trying to say!

Fear keeps us silent. But there is nothing to be afraid of except inaction. Staying silent won't solve a problem, taking action will. Even if this action seems difficult. Recognize the fear. Label it. And then take appropriate action even though you're afraid.

Phase 2: The Solution

Rapport

Phase one was all about identifying the problems: silence is deadly, and fear and stress stand in the way of showing up. Phase two is all about identifying the solution. So, what breaks the silence and helps us speak up in spite of our fear? The answer lies in one little word, "communication." The only way to capture and keep someone's attention and have your message heard is with these three skills:

- Building genuine rapport
- Listening like it's your superpower
- Choosing your words wisely.

We do business at the speed of rapport. People do business with organizations they know, like, and trust. Don't just build a rapport for the sake of making a sale. Eventually, you'll come off as manipulative. Instead, understand your people – this could be your customers, team members, or clients. Know their fears and goals. Understand their motivations. Speak their language. Most importantly, demonstrate words and actions that you want them to succeed. Manipulating your way to long-term success never truly works. But when you help people get what's best for them, rapport becomes a natural byproduct.

Another way to build rapport is with consistency over time. The people you lead at work will learn to trust you or hide from you by the little ways you show up every day. For instance, when your team member walks in frazzled and late, kindly ask them what held them up instead of directly reprimanding them. Build rapport by showing up and being present and listening as much as you can.

Listening

The world today is so noisy that listening almost seems like a superpower! Perform "Active Listening" to be more actively involved in listening to someone. People will only reveal their feelings if they know you're listening.

- Maintain eye contact. Remember, you're not listening if you're not looking. Our ears face forward for a reason, after all.
- Offer minimal encouragers. This involves smiling, nodding, saying things like "I see," "Okay," and so on. The more minimal encouragers you use, the more a person is going to feel heard, connect with you, and talk.
- Paraphrase. By simply repeating back to someone what they have said, or what you heard them say, you move into an advanced level of active listening. Paraphrasing shows you are paying attention and enables you to build trust.
- Help them With Emotional Labeling. When you help someone label their emotions, you help them move from the primitive part of their brain to the rational part – from reacting for survival to thinking and responding. When people label their feelings, they balance their teeter-totter.
- Ask open-ended questions. This helps you avoid the one-word-answer trap. For instance, a question like "How was your day?" could be followed by a one-word answer, "Good." But a question like "What surprising thing happened today?" would require more thought. Asking open-ended questions is key to truly helping our clients, colleagues, and even stubborn teenagers!
- Disclosing similar experiences. The reason this is last on the list is that nobody cares about your experiences until they feel like you care about them. The goal here is to not move to the solution too early.

Remember, amidst all the listening, you will occasionally be expected to respond. So, when you do, make every effort to balance clarity and kindness.

Kindness & Clarity

I believe in the absolute POWER of our words. When you run your organization with clear communication that comes from your heart, you will prevent many disasters, and your team members will love coming to work. Words not only hurt, but they have the power to shape what we believe about ourselves. Once we believe those words, we will often become those words.

What story are we telling our team members? What story are we inviting our customers to? What do they believe to be true about us? What do they believe to be true about themselves when they interact with us? We should be using our words to invite people into an identity that will make them, and this world, better!

Clarity wins every time, in every conversation. If I was planning on killing myself, your asking directly about that greatly reduces the chance that I will actually do it! When the time comes to have a difficult conversation, being unclear is synonymous with being unkind. If you're speaking with a team member, customer, or client, make sure you're

100% clear. If you cannot meet a deadline, let them as soon as you can. Clarity is the kindest way to do business.

Phase 3: The Tactics

Face-to-Face

Phase 3 is all about unpacking some of the more popular ways that people are communicating, and some of the pros and cons of each method.

Face-to-Face is often the best way to have an important conversation with someone. Successful peoples go by the same philosophy because they know the key to clarity is not just what you say, but how you say it. Here, people feel seen and heard when they connect with people. What's more, it's the only way to build rapport through shared experiences.

Sure, virtual meetings are popular. They may even be the next best thing to being face-to-face. They're way better than not interacting with people at all. But those who have experienced the power of face-to-face conversations know that nothing can replace the power of being in the same room with people or comprehending the tone and nonverbal cues that are so valuable for conversations.

However, in scenarios where you cannot be present, at least use video to be virtual and make an effort to hear the sounds of Voice and Tone.

Phone

If you cannot get face-to-face (in person or virtually), a phone call is your best bet. When you are on the phone, others will at least pick up the cues in your tone.

One of the ways that our brain identifies emotions is through tone. When tone is added to the message, our brains begin to pick up on how someone is feeling about what they are talking about. When we catch the emotions behind the words, we begin to build rapport. Tone often communicates sincerity. Sincerity builds trust. Trust increases business.

As a hostage negotiator, I have literally been able to save lives based on phone conversations. The phone can be POWERFUL if you choose the right tactic at the right time.

Print

Putting words in print must be treated with respect – and that means we must use print thoughtfully and intentionally. We must not forget how the words we type are open to interpretation, can build up or tear down, and become a permanent record.

When we put something only in print, we risk leaving 93% up to interpretation. In other words, it's important to be cautious about communicating only in print with people you don't yet have a relationship with. Every piece of writing you send to someone is always permanently saved and can even be used against you. So, when you do decide to use it for communication, here are three specific ways to go about it:

- Use it to schedule and re-cap. Whether it's scheduling an event or re-capping a phone call, print is a great way to remember and clarify details.
- Use it to reach a wider audience. This could be for all-staff emails, website content, press releases, newsletters, and more.
- Keep a written record. Records can serve organizations internally and help build individual rapport.

Social Media

Social media is great for market research, brand building, reaching potential customers, or anything you want to communicate with your audience. However, not understanding social media today can cause more problems than achieving a goal. Let's bust some myths to strategically build your business on the social media frontier.

Myth 1: Personal = Private

Truth 1: Things said on social media, during our personal time, can spill over into our work time.

Myth 2: Social media = Free online store

Truth 2: Social media is a rapport-building machine where people come not to buy a product but to engage with a community.

Myth 3: Everyone understands social media

Truth 3: Set the expectations by crafting social media policies for what your team members can and cannot post about your company.

Other Media

Traditional media has been telling stories for hundreds of years. Newspapers, radio, and television are always looking for stories. Celebrations, new products, events, and local impact stories are a few of the stories these forms of media would be interested in.

Other ways to communicate include podcasting and writing a book. Over 144 million people listen to podcasts in the U.S. alone, making podcasts a strong medium of communication. Writing a book, on the other hand, benefits both the readers and the writer by learning and sharing valuable content.

Conclusion: The Debrief

Becoming a better communicator isn't just for work. Improved communication makes you a better spouse, a better parent, a better friend, and a better coworker. So, when a problem knocks at your or your organization's door, what would help solve the problem, silence or communication? Silence may make you feel safe but it won't keep you from drowning. Build the boat of communication to let your message reach the shore and even save the day!

Scott Harvey spent 20 years as an FBI-Trained Hostage Negotiator and Public Information Officer for a police force in Central Kentucky. Since 2010, he has spoken to hundreds of thousands of people who want to communicate more effectively. Harvey seeks to help people break the silence and communicate their way through any crisis. He currently resides outside of Lexington, KY.

Cultivate Collaboration
Page 7

Enable Performance
Page 8

THE SUMMARY IN BRIEF

Six Functions, One Vision presents a practical view of modern leadership grounded in the shift from individual achievement to enabling consistent performance through others. Dorothy Kudla addresses the central challenge leaders face as work grows more complex: how to translate responsibility and intent into results without relying on outdated assumptions about control, speed, or personality-driven leadership. The book frames leadership as a discipline shaped by awareness, judgment, and purposeful action rather than by role or temperament.

The book advances the idea that effective leadership requires slowing down to understand oneself, accurately assess situations, and choose responses with intent. Kudla emphasizes diagnosing what a moment truly requires before acting, replacing reactive behavior with disciplined focus. Leadership effectiveness emerges through creating shared direction, clarifying expectations, sustaining engagement, supporting growth, strengthening collaboration, and reinforcing progress through feedback and coaching, treated as continuous responsibilities rather than a fixed sequence.

Structured to move from leadership mindset to applied practice, the book connects everyday leadership behaviors with long-term outcomes. Its scope centers on building repeatable, sustainable performance by aligning purpose, people, and action, positioning leadership as an ongoing practice of elevation rather than control.

IN THIS EXECUTIVE BOOK SUMMARY

- Discover the Six Functions of a leader and learn how to put them into action
- Strengthen and elevate your leadership skills with proven, practical strategies
- Explore methods that help your team perform at its best and thrive in any environment over time and at scale
- Create a culture that fosters continuous growth, collaboration, and success

Introduction

Leaders aren't born fully formed. Like superheroes, they must learn to harness their abilities and develop their skills with intention and purpose. Stepping into leadership is like stepping into the ring with a brand-new opponent—the game has changed. It's no longer about your individual performance but about how well you can support and guide others to succeed.

This is where the Six Functions of a Leader come into play. Yes, effective, performance-optimizing leadership can be boileddown into six functions. That doesn't mean mastering leadership is easy or that every aspect of these functions is simple, but within these pages you'll find a blueprint that can help you find and hone your superpower and transform your approach to leading others. The key objective of a leader is to ensure that those they lead discover their full potential and accomplish goals in a repeatable, sustainable, and optimal way. The Six Functions will provide you with the tools to diagnose any situation and select the best strategies that address real issues.

Leadership, like heroism, is built on intentional actions that make a real impact. The journey from potential to proficiency requires moving beyond theory and into practice. The practical strategies and actionable insights presented here will help you uncover your unique leadership style and inspire you to lead with confidence, authenticity, and effectiveness.

CHAPTER 1

Modern Leadership

Unlocking your leader superpowers requires mastering all six functions. However, we need to consider a bigger question: What is leadership? Specifically, what does it mean to be a good leader?

It's time to pull back the leadership curtain and discuss the mindset a modern leader must adopt to succeed. Leadership is not about traits alone—it's about action and inspiring and guiding others on a path of growth so they can realize their full potential.

Just as superheroes must adapt to new threats, emerging opportunities, and evolving landscapes, so must a leader. Being an effective leader today requires learning new approaches and, perhaps even more importantly, unlearning outdated ones. It's time to let go of the beliefs, mindsets, or practices that may have worked well in the past but now can hinder progress—and embrace a new way of leading that makes the most of the time you already invest in your team.

Go Slow to Go Fast

Leadership today isn't about keeping up with the pace of change; it's about navigating complexity with clarity and purpose. To do this, leaders must be intentional and focus on what truly matters. With that in mind, I developed a simple framework built around three key pillars:

1. **Self-awareness** – the leader's ability to recognize and understand their own emotions, strengths, and weaknesses, as well as their influence on others. They need to see their own blind spots and understand how their actions land with others.
2. **Situational awareness** – the leader's ability to accurately perceive the information, events, and dynamics around them, interpret those details in context, and understand how they will impact the team, goals, and overall environment.
3. **Intentional action** – represents the culmination of self-awareness and situational awareness insights that move into tangible outcomes. It involves making informed, confident decisions and acting upon them with purpose and responsibility. The action is intentional because the leader knows precisely what problem they are solving and what outcome they are looking for. To be effective, you must resist the urge to jump into action without a pause for reflection. Always interrogate the purpose behind the action. What problem is it solving? What outcomes will I get? Slowing down like this will enable you to go fast in the long run.

Your Mission

Your mission as a leader is straightforward: to elevate and capture the full potential in people and situations. Leadership is not only about the paths you choose or the decisions you make; it's about ensuring those paths and decisions illuminate the strengths of those you guide, fostering environments where optimal outcomes can naturally emerge.

By practicing self-awareness, situational awareness, and intentional action, you can avoid common leadership pitfalls and choose a different path—one that's rooted in understanding, strategy, and effective execution.

Modern leadership demands we slow down enough to move forward with greater clarity, purpose, and velocity, and it can be learned. That's the beauty of a skill set built entirely on intentional, purposeful actions: the Six Functions.

> The key objective of a leader is to ensure that those they lead discover their full potential and accomplish goals in a repeatable, sustainable, and optimal way.

CHAPTER 2

The Six Functions of a Leader

The Six Functions simplify the complex task of leadership by translating theory and concepts into actionable steps, all in pursuit of one vision: realizing the full potential of individuals and teams. Here is a brief overview before we look at each function more closely:

- **Define the vision** – guides your team with clear direction and purpose, ensuring that everyone understands and aligns with the long-term goals and the collective mission.
- **Set expectations** – establishes clear goals and priorities that support success by aligning team efforts with organizational objectives and providing clarity on what needs to be achieved.
- **Ignite motivation** – fuels passion and deep commitment within the team, creating engagement and energy that drive performance.
- **Develop talent** – builds competencies and prepares employees for current and future challenges, fostering continuous growth and innovation to sustain performance.
- **Cultivate collaboration** – fosters strong connections within teams and taps into diverse perspectives, driving creativity and execution to achieve better results.
- **Enable performance** – optimizes results through ongoing coaching, mentoring, and feedback, continuously improving performance and maintaining high standards.

The Six Functions serve as a diagnostic tool—sharpening situational awareness. When faced with challenges, analyzing which function to focus on helps identify the root cause. With its own set of unique skills, each function equips leaders with the tools they need to address specific challenges, providing actionable strategies tailored to the situation. By mastering these skills, leaders pave the way for their teams to realize their true potential.

Pathway to Mastery

The functions serve as a compass, providing clear strategies to address various situations. They are not meant to be applied in a specific sequence nor should they be used all at once. Instead, they serve as a toolkit for leaders to operate within the three pillars, by gaining self-awareness, becoming aware of the situation—including the team's needs—and taking intentional action by selecting the most effective strategy. This is simple, uncomplicated leadership—one vision achieved through Six Functions.

CHAPTER 3

Define the Vision

While it's true that corporate vision is incredibly important and sets the overarching strategy, it's the unique visions of individual teams that make those strategies a reality. Think of the corporate vision as the destination on a map, a place everyone is aiming to reach. Each team is like a separate vessel navigating its own waters to the common point. Without a unique charted path, teams can lose their way in the vast oceans of daily operations.

Call it whatever you'd like—vision, purpose, direction—teams need a common goal to rally around, one that clarifies priorities and creates alignment, commitment, and a sense of belonging. Defining a vision for your team is not just a box to be checked but a living, inspiring force that gives meaning to work, empowers decision-making, and supports a strong team culture.

I intentionally titled the function "Define the Vision" rather than "Set the Vision." There is a subtle but important distinction. From my perspective, *setting* the vision involves deciding on the ultimate goal or end state the team aims to reach. Setting is actually part of defining and is a necessary first step. On the other hand, *defining* the vision gives the goal clarity and depth. We need to know the destination (setting), but we also need to understand the value of reaching it and the journey of getting there (defining).

Your team's vision is a lighthouse that cuts through the fog of daily operations. Without it, your team might keep moving but drift off course. With a clear vision, they're guided toward the destination with confidence, avoiding the rocks that could derail their progress. A well-defined vision also supports decision-making by acting as a filter, ensuring all actions are aligned with team objectives, and strengthens

commitment by engaging team members so they feel invested in the team's success.

Because our workplaces are so fixated on getting things done, we often rush into action without pausing to consider the bigger picture. That's why leaders must slow down, assess whether their team's vision needs to be defined, and take steps to craft one that inspires each team member to reach their full potential.

Crafting a Vision

Before you get busy ideating and jumping to vision statements, embody the "go slow to go fast" principle. Consider the best strategy for creating a clear direction.

- **Solo or Collective.** There's value in both approaches. Involving team members in the development creates a sense of ownership and commitment to achieving it. Whether you choose a solo or collective approach should depend on your team's dynamics and needs. The goal is to ensure the vision is embraced and effectively implemented.
- **Business Acumen.** A solid team vision must connect to the company's broader strategy, which requires leaders to understand how different areas of the business intersect. Building a strong cross-functional network will always serve you well. Spend time learning and discovering what other departments are working on, including their priorities and challenges.

Now that you've figured out how to approach crafting the vision, it's time to get into the process itself. There are many ways to create a vision. The process I use with clients is simple and comprehensive. I call it the "Four Cs of Visioning." This process offers a disciplined approach and involves four steps:

- **Create** – brainstorm to gather ideas, discern, prioritize, and craft the draft
- **Connect** – draw links between the draft and the organizational strategy and culture
- **Communicate** – test the vision with stakeholders to ensure clarity and get buy-in
- **Cultivate** – implement the vision and build mechanisms to use it in everyday decision-making and planning

Your Challenge

Your challenge is to assess whether your team has a vision that is clearly defined and understood by every member. If you do not have a vision, create one. If you do, examine how well it serves the team. Is it woven throughout your discussions and used to guide decisions? If not, revisit the vision—perhaps it needs refining or a complete refresh.

CHAPTER 4

Set Expectations

Since becoming a leader, have you ever felt as if you've been handed the controls to a sophisticated piece of machinery with the potential to achieve incredible results—yet no one gave you instructions? Each button and lever seems to promise success, but without clarity you are left to rely on trial and error. Your intention is to reach your goals to master the controls, but the lack of guidance leaves you confused, burning through your fuel, and exhausted. This frustration can't be chalked up to a lack of ambition or ability, but to flying blind due to the absence of clear expectations.

How important is setting expectations? It's the first of three fundamental elements in a cycle of performance enablement—a process that drives continuous growth and improvement and allows a team to move from strategy to action, and from action to results. Here's the performance enablement cycle:

- **Expectations** – define what successful performance looks like
- **Feedback** – provide continuous feedback against those expectations
- **Development** – build and refine people's skills for current and future roles

These three elements of performance enablement are a continuous cycle that loops back to expectations every time new responsibilities are added, job requirements change, new priorities surface, or direction changes. The process always starts with expectations—not feedback or development. Skipping that step and jumping straight into feedback can lead to unintended consequences.

When leaders realize an employee's performance is not where it needs to be, their instinct is often to provide feedback. While this is well-intentioned, starting with feedback can create feelings of being unfairly judged. Instead of building motivation, this approach can foster resentment, as the employee feels constantly corrected without understanding how to hit the mark. That's why it's critical to ensure expectations are clearly defined first to create a solid foundation that feedback can reinforce.

> Your mission as a leader is straightforward: to elevate and capture the full potential in people and situations.

When a team member's performance is off, ask yourself whether you have clearly communicated what you expect. If not, that's where you start. If yes, then you need to provide meaningful feedback and development. But expectation-setting involves more than just outlining what needs to be done—it also requires paying attention to how things are done.

Task expectations focus on specific goals, such as completing deliverables on time or meeting performance targets. Behavioral expectations, on the other hand, shape the team culture by guiding how employees need to act and interact in the workplace and live the company's values. Behavioral norms affect the environment in which tasks are completed.

Task and behavioral expectations are the yin and yang of performance. Tasks represent the structure—the focus on what needs to be done. Behavioral brings in the flow—the way people work together to achieve those tasks. They are interconnected and cannot exist without each other. A team can hit every deadline but crumble without the right behaviors, just as harmonious teamwork can fall short without clear goals. Together, they create the balance that drives sustainable success.

Challenges of Setting Expectations

Think back to a recent project you delegated to someone. Were you satisfied with how the project was managed? Did it meet the desired outcomes? Did it achieve its full potential? Whether your answer is yes or no, consider the following questions:

- Did you clearly communicate the desired outcomes?
- Did you discuss how best to execute the project?
- Did you collaborate on what good, excellent, and subpar outcomes look like?
- Did you have regular check-ins to provide feedback and reset expectations if needed? If yes, what do you think your direct report would say? Would they echo your assessment? If no, why not? What held you back?

If you're like most leaders, these questions will likely reveal gaps and opportunities in setting your employees up for success. Having an expectation-setting conversation can be difficult—maybe more than giving constructive feedback—but perhaps that can serve as a reminder of why these discussions matter and why they can make such a huge difference.

Your Challenge

Now that you've explored the Set Expectations Function, it's time to put this knowledge into practice.

Step 1 – Reflect on your current approach

Take a moment to evaluate how clearly you're currently setting expectations with your team. Ask yourself: How often do I articulate clear, specific expectations? Are my expectations aligned with both individual and organizational goals? How do I ensure my team members understand what success looks like?

Step 2 – Choose one team member

Identify one team member who could benefit from clearer expectations. This could be someone who is new to the role, someone who has struggled to meet expectations, or even a high performer ready for new challenges.

Step 3 – Have an expectations-setting conversation

Schedule a one-on-one meeting with this team member. Before the discussion, clarify the expectations you want to set, consider their perspective, and plan how to open the conversation so you can create space for two-way dialogue and genuine buy-in.

Step 4 – Implement a feedback loop

Set up a follow-up meeting to review progress. Discuss any challenges they've faced and adjust expectations if necessary.

Step 5 – Reflect and adjust

After your follow-up meeting, reflect on the process: Did the clarity of your expectations lead to better performance or engagement? How did the feedback loop contribute to their understanding and motivation? What would you do differently next time to improve your expectation-setting skills?

Step 6 – Expand the practice

Once you've completed this challenge with one team member, begin applying the same process with others on your team. The goal is to make setting clear expectations a natural and consistent part of your leadership approach. By master-

ing this skill, you're not only setting your team up for success but also strengthening your own ability to lead with clarity and purpose.

CHAPTER 5

Ignite Motivation

Motivation is an interesting concept. It comes and goes, makes us do things we didn't know we could, and sometimes disappears when we need it most. The beginning of a project or initiative can energize, but as the weeks go by, keeping that momentum going can be a struggle. The daily grind can also wear you down—too much change, not enough change; too much collaboration, not enough collaboration.

Have you ever felt like this? Like the weight of the climb is heavier than it used to be and you're no longer enthusiastic about charging up the hill? If so, you know that it takes real effort to regain the motivation that once kept you going.

Now, imagine you're not the one standing at the base of that hill—it's your employee. As leaders, we often focus on goals and outcomes, but it's just as important to remember that those results are achieved by people, some of whom might have lost motivation and are struggling with their own Mount Everests. What can you do to help your team find their drive again? How can you support them in making that daily climb feel less daunting?

Igniting, Not Motivating

Let's bust a myth: none of us has the power to motivate anyone. What we can do is to ignite what already exists within a person. Motivation isn't one-size-fits-all. Each person is driven by different factors—what ignites one person might not even spark interest in another. That's why it's crucial for leaders to take the time to truly understand what makes their team members tick. This requires knowing our employees and understanding what they want, need, and desire and then moving toward that.

When you align your leadership efforts with your employees' true motivators, you don't just inspire them—you empower them to achieve beyond what they thought possible. But why is motivation so important? Why is it one of the functions of a leader?

There is a powerful connection between motivation and engagement. At its core, engagement is the emotional and psychological investment an individual has toward their work and their organization. It's about feeling secure, valued, and connected with the bigger purpose—a sense of belonging, significance, and achievement within the workplace. Motivation, by contrast, is the driving force that propels us toward goals and outcomes, fueled by our intrinsic desires and extrinsic rewards.

Your Challenge

Your assignment is to become an observer for a week. Note instances where team members show high engagement and energy, as well as moments where they seem drained or less motivated. In addition, learn two key intrinsic motivators for each member of your team. You can do this during your one-on-ones, through informal conversations, or by observation. Make sure you are not making any assumptions and fishing with strawberries without realizing it.

Finally, choose one team member you believe could benefit from a motivation boost. Engage in a one-on-one conversation with them and aim to discover (not assume) their unique motivators. Look for opportunities to align their work with what motivates them.

CHAPTER 6

Develop Talent

Leadership, in its purest form, is about fostering growth and enabling individuals to meet and exceed their own expectations. It's about creating an environment where talent can flourish, challenges become opportunities for development, and growth becomes a shared experience.

The beauty of development is its simplicity and accessibility. It doesn't require grand gestures or elaborate plans. It only needs attentiveness, genuine interest in a person, and a commitment to nurturing talents. By weaving development into daily work life, you transform it from a formal, annual event into a natural, continuous journey of growth.

The essence of development lies in the everyday interactions, feedback sessions, one-on-one meetings, and even casual conversations that occur organically. The goal is to reach a place where coaching, mentoring, and creating learning and development opportunities are so natural and common that they're part of your leadership DNA.

Development Roles and Responsibilities

Growing and developing your team members is not solely your responsibility. While you, as a leader, play a crucial role in your team's growth, you are part of a broader ecosystem

> Leadership, in its purest form, is about fostering growth and enabling individuals to meet and exceed their own expectations.

involving the organization and employees themselves. If you feel the heaviness of development on your shoulders, you can shed some of the weight now. Employees are responsible for 50% of their development, the organization 25%, and you, the leader, the other 25%.

If companies want to drive engagement and leverage the benefits of talent development, they need to empower employees to manage their own development, to own it so they can be accountable for it. The days of leaders deciding behind closed doors where people move and what is the best for them are over.

Dividing the responsibilities of development between the employee, the organization, and the leader empowers employees to take ownership of their growth, gives leaders structure for how to support their team members effectively, and ensures that the organization creates the right environment for learning and development to thrive.

Career Development in Action

We've already covered the role team members play in their own development. Now, let's look at how those responsibilities align with the five key steps of career development—and how you, as a leader, can support and guide your team through each one.

1. **Self-awareness.** Employees must understand their strengths, weaknesses, values, interests, and aspirations. Leaders can support this by creating an environment that encourages reflection, inquiry, and self-evaluation, and by providing tools that help individuals assess their own growth.
2. **Identify growth opportunities.** Align individual aspirations with organizational needs. Leaders help employees see how every skill and every new learning opportunity contribute to both their career and the company's broader goals.
3. **Set meaningful goals.** Employees should create specific, meaningful development goals that clarify what success looks like. Leaders can use existing development frameworks (such as PDPs) or simple goal-setting tools to support this process and build accountability.
4. **Create a development plan.** A strong plan outlines the actions, timelines, and resources needed to achieve each goal. This ensures both the leader and the employee stay aligned and can track progress over time.
5. **Identify dependencies.** Dependencies are factors outside the employee's direct control that influence their ability to reach their goals. Leaders play a key role in helping identify these needs and removing obstacles by offering guidance, resources, or connections.

Your Challenge

Reflect on what it means for you to embrace the growth and development of people as your highest calling as a leader. How does this resonate with your personal leadership philosophy and the legacy you want to create? The ultimate goal of this challenge is to integrate talent development into your leadership style's DNA and team's culture. By actively engaging in these steps, you are not only contributing to the growth of your team members but also building a legacy of leadership that prioritizes and values development.

CHAPTER 7

Cultivate Collaboration

First, let me be clear: regular team meetings, standups, updates, and huddles are not collaboration. They are important—they provide opportunities for dialogue and connection, and they need to happen—but they should not be mistaken for true collaborative work. In its purest form, collaboration is an act of working with another person or group of people to create or produce something of value.

Collaboration isn't just about people working together; it's a dynamic process where diverse individuals combine their expertise and share their ideas, resources, and efforts to find opportunities, solve problems, and create value beyond achieving goals. It's the diversity of experiences, opinions, and knowledge that make collaboration simultaneously challenging and productive.

Culture of Collaboration

Culture is the invisible fabric that holds a team together—binding their values, behaviors, and shared purpose. It's

created through daily actions and decisions, shaping how people interact and how work gets done. Leaders establish culture, whether intentionally or not, by the norms they set, the behaviors they model, and the environments they create.

To establish a strong culture of collaboration, four elements need to be in place: people, purpose, participation, and performance. Each element plays a critical role in creating a team culture by design.

- **People.** Collaboration is an ongoing practice that requires attention and fine-tuning. Having the right people is the beginning, and building productive norms that support a strong collaboration culture will drive the desired results.
- **Purpose.** The responsibility to provide a clearly defined purpose, and connect the team members with it, belongs to the person initiating the collaboration. Everyone must know why they're there and how they contribute to the goal. With a clear purpose, process, and payoff, meetings shift from being time-draining tasks to focused, collaborative efforts that link up with something greater.
- **Participation.** Fostering participation becomes less about the burden of facilitation and more about creating an environment where team members feel naturally inclined to contribute.
- **Performance.** Achieving a specific goal might not always mean we succeeded. Reaching a project's objectives is important, but the health of the team, the process's efficiency, and the sustainable impact of the outcomes are what really define the success.

Your Challenge

Collaboration is like a perennial garden. From a distance, you view the garden as a whole and take in the serene beauty. As you move closer, you see the individual shrubs and flowers that make up the garden, each one having different nurturing needs. For the garden to serve its purpose, each plant needs to be given what it needs to thrive. In many ways, your team is no different.

CHAPTER 8

Enable Performance

At its core, enabling performance is a dynamic process. It's not a one-time effort but a continuous cycle that intertwines with every aspect of leadership. It's about guiding your team to results while helping them grow into their best selves. It's an ongoing conversation, a journey that requires you, as a leader, to wear many hats: mentor, coach, challenger, and supporter. Enabling performance means knowing when to push, when to guide, and when to step back.

The Gift of Feedback

At its core, feedback is information about a person's performance based on set expectations. And when given with the right intent, it can be one of the most powerful catalysts for personal and professional growth. An inherent trust develops between us and those who provide honest, sincere feedback. It stems from recognizing that they cared enough to step into a difficult conversation and that their insight, even when hard to hear, is aimed at helping us improve. When giving feedback aimed at genuinely helping their people, leaders build meaningful relationships and foster a culture where learning and growth are encouraged and celebrated.

The Purpose of Coaching

Coaching is not an occasional intervention but a continuous presence throughout the performance enablement cycle. It ensures that the processes of setting expectations, providing feedback, and facilitating development are dynamic and tailored to individual needs. Coaches work closely with employees to navigate their career paths, enhance their strengths, mitigate challenges, and ultimately achieve their full potential within the organization.

Coaching and feedback might seem similar, or even redundant, but they serve different purposes, and leaders must know how to utilize each at the appropriate time.

Your Challenge

Here is your last challenge:

Transform your one-on-one. Select a team member whose one-on-one meetings could be more meaningful, and shift the conversation from routine updates to future-focused dialogue. Invite them to co-own the agenda, stay present during the discussion, and use the time to deepen alignment, clarity, and connection.

Provide constructive feedback. Identify a team member who would benefit from clear, growth-oriented feedback, and prepare by reflecting on the situation and the impact. Have an open conversation that is specific, actionable, and focused on improvement, then take time afterward to reflect on what went well and what you would adjust next time.

Use coaching to develop. Determine who on your team would benefit from a coaching conversation and prepare by clarifying the goal, understanding their reality, and forming open-ended questions. During the conversation, help them reflect, explore options, and take ownership of their development, then ask for feedback to strengthen your future coaching sessions.

These steps will help you elevate your leadership approach to enable higher performance in your team. Each part of this challenge offers an opportunity to refine your leadership style and strengthen your relationship with your team members.

Conclusion

Leading others is not easy, and just as superheroes face obstacles and challenges, you will encounter difficult moments—feedback that's hard to give, performance issues that seem insurmountable, or decisions that weigh heavily. But it's in these moments your leadership truly shines. Your superpower is your resilience, your ability to adapt, and your unwavering commitment to bringing out the best in others.

Ultimately, leadership is not about being the strongest or the fastest—it's about empowering others to discover their strengths. It's about creating environments where people can thrive, achieve more than they imagined, and contribute in ways that bring your collective vision to life. As you move forward, remember this: you have the tools, the knowledge, and the power to create a lasting impact.

Dorothy Kudla is a coach, keynote speaker, and founder of Full Circle Connections, a training firm that helps organizations achieve goals through strategic planning, leadership development, and people-focused solutions. With experience spanning Fortune 500 companies and startups alike, she specializes in aligning leadership, culture, and performance to drive innovation. A former Hilton Hotels executive, Dorothy brings over two decades of experience designing practical, results-oriented programs that empower leaders to build trust, communicate effectively, and grow continuously. An avid adventurer who has run marathons and climbed Mount Kilimanjaro, she embodies her philosophy of lifelong learning and authentic leadership.

Smart Trust

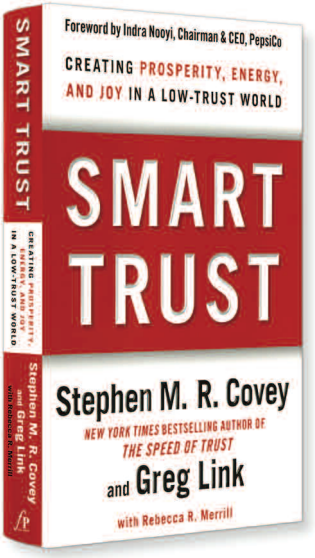
Creating Prosperity, Energy, and Joy in a Low-Trust World



by Stephen M. R. Covey
and Greg Link
with Rebecca R. Merrill

THE SUMMARY IN BRIEF

In *Smart Trust*, Stephen M. R. Covey and long-time business partner Greg Link share enlightening principles and anecdotes of people and organizations that are not only achieving unprecedented prosperity from high-trust relationships and cultures, but also attaining elevated levels of energy and joy.

With penetrating insights illuminated by their unique access to many of the world's most successful leaders and organizations, the authors lay out a breakthrough process and skill set in a practical and actionable formula that makes trust a performance multiplier for leaders, teams, organizations, and even countries. They show why trust is fast becoming the most consequential life and leadership skill of our time — a career-critical competency required to navigate and compete in this perilous 21st-century, interdependent, global economy.

Covey and Link teach how to cut through traditional either/or thinking to extend "Smart Trust," enabling you to exercise sound judgment in a low-trust world by minimizing risk and maximizing possibilities.

Smart Trust shares findings that verify how enduring success, vitality and happiness are directly related to the level of trust in our relationships — whether in our professional or personal lives.

IN THIS SUMMARY, YOU WILL LEARN:

- How to know when to extend trust.
- How to increase prosperity, energy and joy in your life and organization.
- The 5 Smart Trust actions common to high-trust people and organizations around the world.
- How Smart Trust multiplies performance.
- Why Smart Trust is a career-critical skill.
- How Smart Trust increases sound judgment.
- How to create a Smart Trust culture.
- How Smart Trust measurably increases engagement.

THE COMPLETE SUMMARY: **SMART TRUST**

by Stephen M. R. Covey and Greg Link with Rebecca R. Merrill

The authors: Stephen M. R. Covey is cofounder of CoveyLink and FranklinCovey's Global Speed of Trust Practice. He is *The New York Times* and #1 *Wall Street Journal* best-selling author of *The Speed of Trust: The One Thing That Changes Everything*. He is the former CEO of Covey Leadership Center, which, under his stewardship, became the largest leadership development company in the world.

Greg Link is cofounder of CoveyLink, FranklinCovey's Global Speed of Trust Practice, and the former Covey Leadership Center. He led the strategy that propelled Covey's father's book, *The 7 Habits of Highly Effective People*, to be one of the two most influential business books of the 20th century.

Rebecca R. Merrill coauthored *First Things First* with Dr. Stephen R. Covey and Roger Merrill and *Life Matters* with Roger Merrill. She assisted on *The Speed of Trust*.

The Paradox and the Promise

There was, and still is, a literal crisis of trust in most of the world — in our societies, our institutions, our governments, our media, our health care services, our organizations, our relationships, and even our personal lives.

The headlines and the statistics leave no doubt that the world is in a crisis of trust. What is less clear is that this crisis is simultaneously having a profound impact on economic well-being and quality of life around the globe.

Trust Changes Prosperity

A company's reputation, its ability to partner and collaborate with others, its capacity to innovate, its effectiveness in engaging its people, its ability to attract and retain great people, the speed at which it can execute — all of these dimensions of success, plus many more, are powerfully affected by trust.

In fact, trust has become the new currency of the global economy. It is the basis on which many people do business — or don't. Generally, the less corrupt (more trustworthy) a country is perceived to be, the more prosperous is that nation's economy. Conversely, the more corrupt (less trustworthy) a country is perceived to be, the less prosperous is that country's economy.

The reason there is such a direct connection between trust and prosperity is that trust always affects two key inputs to prosperity: speed and cost. When trust goes down in a relationship, on a team, in an organization, or in a country, speed goes down and cost goes up. Why? Because of the many steps that have to be taken to compensate for the lack of trust. This is a tax — a low trust tax. Everything takes more time, and miscommunication, redundancy and rework create costly delays.

On the other hand, when trust goes up in a relationship, on a team, in a company, or in a country, speed goes up and cost goes down. People are able to communicate faster, collaborate better, innovate more, and do business faster and more efficiently. This is a high-trust dividend.

High trust is a performance multiplier — a multiplier that translates directly into greater prosperity: increased revenues, profits, economic outcomes, and results.

Trust Changes Energy

The second outcome dramatically impacted by trust is *energy*. By energy, we mean not only physical and emotional energy but also engagement, creativity, and health and well-being.

Nowhere does trust change energy in organizations more than in employee engagement. Although there are numerous drivers of engagement, the two biggest drivers are: (1) the relationship of trust employees have with their supervisor, and (2) the trust employees have for the organization at large.

Trust also increases energy in the form of positive synergy (where 1 + 1 = 3 or more) and creativity, which drive innovation. When you get down to it, where does innovation come from? It comes from the collision of differences in the right environment. Bottom line, when

people trust each other, differences are strengths; when they don't trust each other, differences are divisive.

Trust Changes Joy

By joy, we simply mean happiness, fun, satisfaction, and what psychologist Dr. Martin Seligman calls "flourishing." For many people around the world, happiness is the most important goal in life.

According to Canadian economist John Helliwell, the number one factor linked to happiness — even more than income and good health — is relationships of trust.

Trust also has a profound impact on joy in teams and organizations in terms of employee satisfaction and the ability of companies to attract and retain talent.

Bottom line, in the same way that trust *quantitatively* changes prosperity, it *qualitatively* changes energy and joy. ●

Blind Trust or Distrust: Which Glasses Are You Wearing?

At different times in our lives and in different situations, most of us tend to look at our personal relationships, our teams, our organizations, and our governments through one of two sets of glasses: "blind trust" (naiveté) or "distrust" (suspicion). At times, we may even go back and forth between the two. These glasses have been created by a number of factors, including the way our parents and grandparents may have seen the world (or our response to them and their perception), the experiences we've had in our personal and professional lives, the people we interact with, the things we read, the things we watch, and the things we listen to.

The Glasses of Blind Trust

Even if we have had bad experiences with blind trust, deep inside, most of us really want to trust. Because we want to believe that our work peers really do have our best interests at heart, or that some new investment opportunity really will produce a high return with little risk, we ignore the evidence. And the cost can be great.

Blind trust is one of the reasons Bernie Madoff was able to defraud investors out of billions of dollars.

The Glasses of Distrust

Far more often than blind trust, we tend to put on glasses of distrust. We view the world through the lens of *suspicion* — with what we feel is good reason. We're bombarded daily with headlines that repeat evidence of today's trust crisis from every possible angle. In addition, our own experience validates it.

Though we've become very good at recognizing the cost of trusting too much, we're not nearly as good at recognizing the cost of not trusting enough. Whenever there is distrust in a relationship, on a team, in an organization, or in a community, a wasted tax — sometimes a significant one — is being paid. You can see at least some of the seven common low-trust taxes in many organizations: redundancy, bureaucracy, politics, disengagement, turnover, churn, and fraud.

Clearly, although there is risk in trusting too much, there is also risk in not trusting enough. It puts a tax — often a huge one — on every interaction that could be generating prosperity, energy and joy.

Bottom line, the way we see the problem *is* the problem. It's not either/or. It's not just blind trust vs. distrust. The solution is a third alternative — a whole new set of glasses, a truly different way of seeing and behaving, which we call "Smart Trust." ●

The Third Alternative: "Smart Trust"

Smart Trust is judgment. It's a competency and a process that enables us to operate with high trust in a low-trust world. It minimizes risk and maximizes possibilities. It optimizes two key factors: (1) a propensity to trust and (2) analysis. Simply put, Smart Trust is how to trust in a low-trust world.

A Propensity to Trust

The propensity to trust is the inclination, bias or desire to trust people. This propensity may be affected one way or the other by personal experience or conditioning. It is primarily a matter of the heart.

The propensity to trust almost always provides the best starting point of Smart Trust. In other words, we lead out with trust first. We don't ignore analysis, we just suspend it. We approach situations with the belief that "most people are basically good," and we do this because it opens up a whole new world of possibilities.

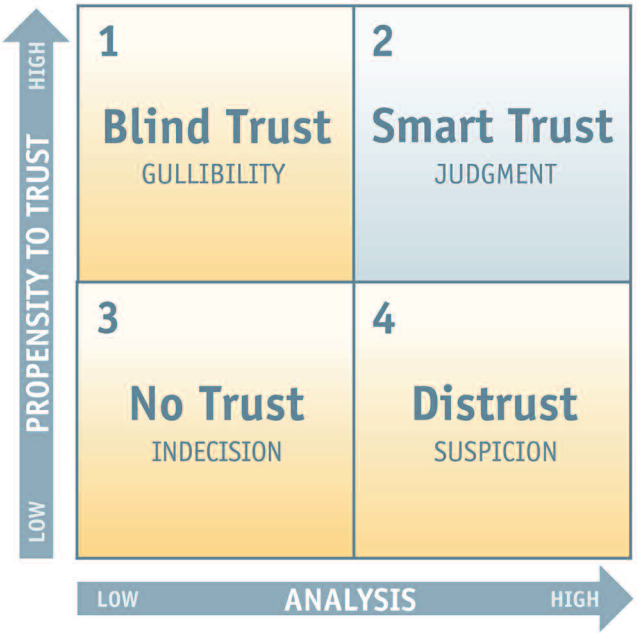
Starting with a high propensity to trust doesn't necessarily mean that we will decide to extend trust to someone; in fact, we may not — especially after we've done the analysis. What it does mean is that *we open ourselves up to the possibilities*. When we lead out with distrust, we don't even see the possibilities.

Analysis

If we were to focus solely on our propensity to trust, we'd often be trusting blindly and, in a low-trust world, we'd constantly be getting burned. To exercise Smart Trust, we need to combine a high propensity to trust with equally high analysis. Analysis refers to our ability to assess, evaluate, and consider implications and consequences, including risk.

Smart Trust analysis involves the assessment of three vital variables:

1. Opportunity (the situation — what you're trusting someone with)
2. Risk (the level of risk involved)
3. Credibility (the character and competence of the people involved).



Trust Is Contagious: The Virtuous Upward Cycle

In the end, reciprocity works both ways: When we extend trust, we generate trust; when we withhold trust, we generate distrust. Our actions lead either toward a virtuous upward cycle of prosperity, energy, and joy or toward a vicious downward cycle that eventually results in the destruction of those outcomes. Either we add to the renaissance of trust, or we contribute to the crisis of trust — in our personal lives, our families, our communities, our teams, our organizations, our nations and our world.

Smart Trust Action 1: Choose to Believe in Trust

Whatever our situation, the choice to believe in trust increases our propensity to trust. It is the foundational action that leads to all other Smart Trust actions, and those actions are what lead to the prosperity, energy, and joy we desire. It's not enough to merely give lip service to the idea of trust. It's not enough to use trust as a pragmatic technique in certain situations when it's to our advantage. It's not enough to trust only once in a while, when we think there is no risk involved. The greatest and lasting dividends of trust come only when we choose trust as our underlying approach — the operating system, if you will, that consistently governs our day-in, day-out choices and decisions.

Three Beliefs About Trust

The actions of high-trust individuals, teams and organizations worldwide grow out of three specific beliefs about trust:

1. A belief in being worthy of trust. At the root of the belief in trust is a belief in trustworthiness or credibility — in the importance of acting with character and competence so that both you and others know that you can be trusted. This belief is manifested in examples of successful people and companies, such as Jon Huntsman, Sr., who chose to conclude a deal with less favorable terms rather than create stress for a man whose wife was dying of cancer and sold a business at a $3 million loss rather than pay government kickbacks he considered to be "nothing more than extortion." Or Warren Buffett, who tells his employees, "Let's be sure that everything we do in business can be reported on the front page of a national newspaper in an article written by an unfriendly but intelligent reporter."

Leaders who have a core belief in trustworthiness do not consider that belief as merely a practical option or as a technique to get what they want in a particular situation. Rather, they are committed to being trustworthy even when it's hard, even when there's a price to pay. In fact, we might say that the real test of trustworthiness and credibility is doing the right thing, especially when there's a cost or consequence.

2. A belief that most people can be trusted. Successful high-trust people and companies create their success by choosing to believe that most people can be trusted — not all people (that wouldn't be smart), but most people.

When companies and leaders choose to believe that most people can be trusted, it plays out in organizational design, affecting systems, processes, structures, and even strategies.

3. A belief that extending trust is a better way to lead. Successful high-trust leaders believe that extending trust is a better way to lead, primarily because trust inspires people to perform, it's reciprocated, and it ultimately leads to greater prosperity, energy and joy. This belief was clearly manifested by BestBuy.com, which experienced a 35 percent jump in productivity after extending trust to employees to work whenever and wherever they liked, as long as their jobs were done

well and on time. Another example is Warren Buffett, who told his managers regarding the 257,000 people in the 77 companies of Berkshire Hathaway: "Somebody is doing something today at Berkshire that you and I would be unhappy about if we knew of it" — yet still chooses to operate based on "deserved trust" rather than distrust. ●

Smart Trust Action 2: Start with Self

"Start with self" is based on the principles of responsibility and credibility. The *opposite* is to wait for others to change or take responsibility. It's failing to take responsibility for your own credibility and success. Counterfeits include pretending (seeming rather than being), faking credibility when you haven't earned it ("Trust me!"), taking credit for success while blaming others for failure ("I did what I was supposed to do; it's their fault we failed"), starting with self-*ish* (doing what you want to do, regardless of the consequences or effect on others), and using ego and arrogance as a prosthesis for genuine self-trust.

Character and Competence

Obviously it's easier for people to trust you if they see you as honest, straightforward, dependable, and genuinely concerned about their welfare rather than dishonest, deceitful, manipulative, and self-serving. But character alone is insufficient. Credibility also requires competence, which involves your capabilities (talents, skills, and expertise) and your results (track record and performance). Again, it's easier for people to trust you if they see you as knowledgeable, skilled, successful, and deeply engaged in continuous improvement rather than as someone who doesn't perform, who is irrelevant or inexperienced, or whose skills are outdated.

So character and competence are both necessary. It's the combination of the two that makes a person, a team, an organization, or a government credible and trusted. It's the combination of character and competence that gives us the confidence to trust ourselves and enables us to inspire others to trust us.

Do I Trust Myself?

The personal congruence that leads to self-trust instills in us the confidence and credibility to inspire others. One of the more inspiring stories to illustrate this point is from the NBA basketball championship series of 1980. The Los Angeles Lakers led the Philadelphia 76ers three games to two in a best-of-seven series. The Lakers' star player, seven-foot, two-inch center Kareem Abdul-Jabbar, had severely sprained his ankle in game five and would not be traveling with the team to Philadelphia for game six in the hope that he could heal enough to play in game seven, if necessary.

An unlikely hero presented himself in the form of a 19-year-old rookie just drafted from Michigan State University, Earvin "Magic" Johnson. Johnson sensed fear and hopelessness in his more experienced and somewhat jaded teammates, who had relied on Abdul-Jabbar for the entire season and had just watched him miraculously score 14 points in the fourth quarter on a badly sprained ankle to win game five. In the words of coach Pat Riley, as recorded in *Tell to Win* by Peter Guber, when Johnson heard his teammates say they were going to lose, he said, "I know what the problem is. All you guys are afraid because Kareem isn't here. Well, I'll be Kareem." Riley continued, "We get on the plane for Philadelphia, and 1A is Kareem's seat. Even when he was sick, nobody ever sat in 1A. He'd put a sign there: DON'T SIT IN MY SEAT. I'M KAREEM. But Magic sat in his seat and said, 'Hey, I'm Kareem. I'm here.'" According to the NBA Encyclopedia: "Johnson's confidence lifted his team's spirits, and then he backed it up with one of the most remarkable games in NBA Playoff history."

Johnson's confidence was not about himself; it was about his desire to rise to the occasion and draw on his trust in his own character and competence to inspire his team.

To be clear, self-trust is not ego, arrogance, or unwarranted bravado. It's a quiet inner confidence that reflects our awareness of the most important kind of prosperity we will ever have — a high balance in our own personal trust account. And whatever our current balance (or the balance of our team or organization) may be, the good news is that we can increase it significantly by making regular deposits through behaviors that both develop and demonstrate character and competence. ●

Smart Trust Action 3: Declare Your Intent … and Assume Positive Intent in Others

There are two parts to effectively declaring intent: stating what we want to do and stating why we want to do it. Both halves are vital. Most managers are fairly good at declaring the what (e.g., "Here's our action plan to cut costs") but very poor at declaring the why ("Here's our motive and the intent behind our thinking"). Sharing the why behind the what makes a profound difference in how others interpret our communication up front, as well as how they interpret our subsequent behavior.

A Performance Multiplier

The reality is that when people trust someone else's motive or agenda (or at least understand it), they respond differently than when they don't. So how can we inspire trust in our motive or agenda? By declaring it. By being transparent about it. By letting people know that our agenda is open — not hidden.

Former U.S. president John F. Kennedy is remembered for declaring his intent on May 25, 1961, when he said, "I believe this nation should commit itself … to achieving the goal, before this decade is out, of landing a man on the moon and returning him safely to the Earth." That was the what. He later declared the why: "We choose to go to the moon in this decade … not because [it is] easy, but because [it is] hard, because that goal will serve to organize and measure the best of our energies and skills, because that challenge is one that we are willing to accept, one we are unwilling to postpone, and one which we intend to win."

To many, Kennedy's intent seemed bizarre and unachievable, but just short of a decade later Neil Armstrong and Buzz Aldrin stepped out of their spacecraft and onto the surface of the moon, almost a quarter million miles above the earth.

According to the National Aeronautics and Space Administration (NASA), "NASA's overall human space flight efforts were guided by Kennedy's speech."

When we don't declare intent, we risk not just the possibility, but more likely the probability that our motives will be misunderstood. When we do declare intent, we eliminate the need for ascribing motive by guessing or projecting. We don't leave people to wonder because they hear it straight from us.

Declaring Intent

One effective way many leaders in organizations, companies, NGOs, and government agencies have found to declare intent is through mission, vision and value statements. In formulating such statements, leaders not only give people bases for informed judgment; they also create vision, hope and possibilities that may not have existed otherwise. When such statements are backed up by congruent actions and behaviors, trust flourishes.

Other ways to declare intent include oaths, official declarations, constitutions, and vows. ●

Smart Trust Action 4: Do What You Say You're Going to Do

As important as the action of declaring your intent is to building trust, it won't work — in fact, it will surely backfire — if you don't follow through on your declaration. In other words, do what you say you're going to do, "walk your talk."

Smart Trust Actions 3 and 4 are a powerful behavioral duet. They're like a one-two punch: you declare your intent, and then you do what you say you're going to do. It's the combination that has the greatest power to knock out suspicion and distrust.

What happens if you can't deliver on a promise? What happens if circumstances change or something critical comes up and you absolutely can't do what you've said you're going to do?

By creating a relationship of trust, we can at least proceed in good faith when we discover that commitments can't be fulfilled. Without trust — or with low trust — new challenges will be viewed through the lens of distrust and suspicion, and new solutions will be much harder to envision, let alone create.

Another answer is to be wise in the kinds of commitments we make. Remember, a leader can't always guarantee specific performance or that the market won't change or that someone won't come along with a new technology that forces a company to reinvent itself. Nevertheless, declaring intent is vital to Smart Trust. So we can be wise and thoughtful in declaring our intent in terms of focus, effort, caring, and achievable outcomes.

Reputation and Brand

The reason doing what you say you're going to do makes such a huge difference in your success or your organization's success is that it is the ultimate reputation creator. It defines your personal brand. It defines your

A Few Trust-Building Behaviors

Talk Straight. Be honest. Tell the truth. Let people know where you stand. Use simple language. Call things what they are. Demonstrate integrity. Don't manipulate people or distort facts. Don't spin the truth. Don't leave false impressions.

Create Transparency. Tell the truth in a way people can verify. Get real and genuine. Be open and authentic. Err on the side of disclosure.

Clarify Expectations. Disclose and reveal expectations. Discuss them. Validate them. Don't assume that expectations are clear or shared.

Keep Commitments. Make commitments carefully and keep them at almost all costs — or communicate and renegotiate if you absolutely can't. Don't break confidences.

company's brand. And brand has never been more important than it is in today's reputation economy, where doing what we say we're going to do — or not — can make or break it. A trusted brand dramatically speeds up the Smart Trust decision-making process.

The reason doing what you say you're going to do increases trust is because behavior increases trust (or destroys it). The reality is that we judge ourselves by our intentions, but others judge us by our actions. ●

Smart Trust Action 5: Lead Out in Extending Trust

Smart Trust managers, parents and leaders in all walks of life lead out in extending trust to others. In doing so, they build the capacity and confidence of those who are trusted. They unleash human potential and multiply performance. They inspire reciprocal trust in both directions — back to those who extended it and forward to others who could benefit from it. They help create high-trust cultures that generate greater prosperity, energy and joy.

The Smart Trust Action of extending trust is based on the principles of leadership and empowerment. The opposite is to withhold trust, attempt to control others, and/or try to do everything yourself. Counterfeits include extending "false trust" (giving people responsibility but not authority or resources), extending "fake trust" (acting as though you trust people but then micromanaging and hovering over them), and "managing" or "administering" while thinking you're "leading."

Why Is Extending Smart Trust Smart?

There are three primary reasons why extending Smart Trust is smart:

1. Extending Smart Trust produces results. Best Buy's headquarters has created a "Results Oriented Work Environment" (ROWE) where performance is based on results, not face time. The result? A 50 percent decrease in turnover and employees working longer hours with no additional pay, while at the same time reporting increased health and happiness. Extending trust to people inspires them. It brings out the best in them. It motivates them.

2. Extending Smart Trust increases trust. It's somewhat ironic that one of the best ways to increase trust is to simply extend it. As Frito-Lay CEO Al Carey explained, "If you trust people, they start leaning in and you see their best self. You see their best work. They bring the best of their abilities to the party. You get 50,000 people working like this, it's going to be great."

3. Extending Smart Trust generates reciprocity. When we give trust to people, they tend to give it back. When we withhold trust, they withhold it in return. Leaders who deliberately extend trust typically find the people in their organizations far more willing to place trust in them and their leadership. Thus the reciprocal process becomes a virtuous upward cycle, all triggered by the first extension (sometimes leap) of trust.

Leaders Go First

In order to increase influence and grow trust in a team, an organization, a community, a family or a relationship, someone has to take the first step. That's what leaders do. They go first. They lead out in extending trust. In fact, the first job of a leader is to inspire trust, and the second is to extend it. This is true whether a person has a formal leadership role, such as CEO, manager, team leader or parent, or an informal role of influence, such as work associate, marriage partner or friend.

Bottom line, if we're not inspiring and extending trust, we're not leading. We might be managing or administering, but we're not leading. We manage things, we lead people. And real leadership requires trust.

How Does a Leader Extend Smart Trust?

Clearly, Smart Trust does not result in a simplistic, "one-size-fits-all" solution for every person or in every situation. What's Smart Trust for one may not be Smart Trust for another. For example, for Warren Buffet to do a deal for a $23 billion company on a handshake with no formal due diligence is not only remarkable, it's Smart Trust for him. He's highly credible. But for us to attempt to do the same kind of deal in the same way would probably not be Smart Trust.

In each situation, Smart Trust requires judgment. It's an integral combination of heart and head — a synergy between the propensity to trust and analysis that is far greater than the sum of its parts.

Creating a Smart Trust Culture

One example of a Smart Trust culture is Zappos, where management trusts employees, employees trust management, and people on every level of the organization lead out with trust. Reflective of the high-trust culture, Zappos extends trust to employees even before they begin work. All new hires go through a four-week training process and, at the end of the first week, Zappos offers to pay them $4,000 to quit — plus wages for the amount of time they've already worked. This is a standing offer through the end of the fourth week of training. CEO Tony Hsieh said, "We want to make sure that employees are here for more than just a paycheck. We

want employees that believe in our long-term vision and want to be part of our culture." Zappos trusts new hires to make the decision that's right for them. "On average," Hsieh says, "less than 1 percent of people end up taking the offer."

A Smart Trust culture is actually a culture of immense momentum, possibility and power. The increased freedom of expression, the autonomy, the enhanced trust, and the greater speed at which things can be accomplished make an enormous tangible, measurable difference in prosperity, energy and joy. This is one reason Smart Trust is smart. It's not built on the assumption that what we need is more rules, more regulations, and more referees; it's built on the evidence that extending trust and creating a high-trust culture in which top performance is expected bring significantly greater dividends for stakeholders on every level.

Creating a Legacy of Smart Trust

As we've emphasized, one person's or company's act of extending Smart Trust often inspires those on the receiving end to reach out and extend trust to others. Over time, each act of extending trust becomes part of a legacy of trust that increases prosperity, energy and joy in families, relationships, organizations, communities and even countries for generations.

You may not see results immediately. And you will certainly never see the full impact as those you trust, in turn, reach out and extend trust to others … who then extend trust to others … and so on over time. But you will have the deep satisfaction of knowing that you are investing in something magnificently bigger than self — something that can truly affect every relationship in every team, every company, every organization, every family, and every nation throughout the world for generations. And hopefully, you will be personally enriched as well by the prosperity, energy and joy that attend such effort. ●

Creating Your Own Renaissance of Trust

Some 30 years ago, in the remote village of Xiaogang, China, a group of 18 impoverished farmers secretly met and "dipped their fingers in red ink," covenanting to split up the communal land into individual plots so that individual households could be rewarded for their own efforts and success instead of sharing equally across the village what always ended up being far too little. As John and Doris Naisbitt tell the story in *China's Megatrends*, this secret agreement was both revolutionary and dangerous. It was in defiance of decades of rules and communal culture, and the participants were at risk of being "persecuted, dispossessed, or even killed as bourgeois 'landlords.'"

Not only did this bold action of a small group succeed enormously, but its success came to the attention of Communist Party leader Deng Xiaoping. His subsequent economic reforms resulted in restoring family farms and allowed for market distribution, the cumulative effect of which "changed the course of Chinese history."

The point is that the acts of one person or one small group of people can change history. Those who are involved may not fully realize it at the time. It may take years for the effects of their choices to manifest themselves in the destiny of people, families, companies, and nations. But no one can deny that there is power in "one" to effect change.

The Smart Trust Choice Takes Courage

There's no doubt that making the Smart Trust choice takes courage. For some of us, it's much easier in the short run to choose blind trust; to simply go with our propensity to trust without having to worry about developing excellence in our analytical skill. For others, it's easier to choose distrust; to simply go with our scripting or tendency to analyze things and not have to worry about changing a deep-set paradigm or gaining the strength to take a leap of trust. Nevertheless, the opportunity over the past 20 years to grapple with critical trust issues with leaders and influencers around the world has convinced us that those who choose to master Smart Trust are the ones who are experiencing increased prosperity, elevated energy and enhanced joy. We hope you will join us as co-catalysts, with countless others, in seeking to bring about a global renaissance of trust for the benefit of people everywhere. ●

THE SUMMARY IN BRIEF

In ***Solving the People Problem*** Brett M. Cooper and Evans Kerrigan capture well the complexity of work relationships today. The heart of the problem they describe is that the modern work environment is in desperate need of emotional intelligence. If you can learn to harness your emotional intelligence enough to understand how and why you behave as you do—and how and why others behave as they do—you can adjust your actions and reactions to create the space for understanding and success. Using the DISC-EQ tool as both an informative tool in understanding yourself and others, the authors show us the how and why of behavior. They provide concrete steps and examples abundant to show the way to bridge differences and build a highly functioning team.

The authors promise that by using the information and direction in this book, you will become more aware of your own personality preferences and be able to adapt your approach to communicate more effectively with others, allowing you to create the high-quality, efficient, positive work environment your team and organization want and need.

IN THIS SUMMARY, YOU WILL LEARN:

- The basics of DISC-EQ to discover your emotional intelligence and personality style.
- Strengths and weaknesses in how you work and relate to others on your team.
- How to take concrete steps toward healthy conflict in the workplace.
- How to incorporate the 5 key practices of a healthy team into your workplace.

Introduction

Leading effectively can be difficult for the experienced manager, as well as the newcomer. Often, those who have spent decades in leadership positions still struggle to communicate effectively and inspire others across their organization.

Before being promoted into a leadership position, many leaders focus on being the best individual contributor they could be. But leadership also requires understanding how others think and feel. Leaders have to be able to encourage everyone to make the most meaningful contributions.

Finding the Framework to Make it Work

There are many complexities woven into work relationships. The solutions to both the simple and the difficult issues, however, often come from a novel place: our emotions. The modern work environment is in desperate need of emotional intelligence, defined as "the ability to identify and manage one's own emotions, as well as the emotions of others."

Employees go to meetings together, flesh out strategies over the phone, and send updates over email. Their work is the work of compromise, camaraderie, and communication. And yet, the skills that would enhance their ability to communicate and work together are often glossed over by their organization and their leaders. Instead, businesses implement new systems and hardware in the pursuit of increased productivity.

If you can learn to harness your emotional intelligence enough to understand how and why you behave as you do—and how and why others behave as they do—you can adjust your actions and reactions to create the space for understanding and success.

To learn and teach emotional intelligence, you need a framework that explains how people behave and why they behave that way. It has to provide an effective solution to your people problems that works on an emotional and practical level.

Facing the Relationship Crisis in the Workplace

Solving the people problem is rooted in building emotionally authentic interactions. Emotional intelligence is a challenge in today's world partly because our genuine, trust-filled work relationships are disappearing. Increasingly, we communicate via screens, instead of through person-to-person conversation.

If you want people you work with to succeed, thrive, and produce great results, you've got to create an environment where they can contribute and bring their best to the challenges at hand. That means addressing them as individuals, each with their own personality and set of preferences and talents. It is critical to meet their emotional needs as well as their rational ones.

The Solution Starts with You

Emotionally healthy organizations start with, and are driven by, emotionally healthy leaders. So you have to take the lead. You have to become aware of your personality style, comfort zones, and limitations. Then you have to learn to read the needs and preferences of others and consider those differences when making decisions and communicating. You need to understand what's happening under the surface with people in order to help resolve unproductive, emotionally fueled conflict and inspire people to work together.

Knowing Yourself to Know Others

On your team, you want different perspectives and different styles. That's what allows you to find the best solutions and implement the best strategies. The trick is learning to see the difference and honor the difference in each person so everyone feels comfortable bringing their best to the team and making their most valuable contributions.

The gap between our biased view of ourselves and how others actually see us goes a long way toward explaining why the people problem is so entrenched in the workplace. It also explains why building healthy relationships in your organization has to start with self-awareness. When we make introspection a priority, we're stronger, more flexible, and better able to empathize and connect with others.

The Solution, Part I

DISC-EQ is a synthesis of two well-established concepts—"DISC" (the language of personality style) and "EQ," or emotional intelligence (the understanding of the emotional side of human interaction). EQ is the collection of skills and insights within us that allow us to better manage ourselves and to create strong, positive relationships with others.

In 1996, Daniel Goleman published a book called, fittingly, *Emotional Intelligence*. In it, he took the term "emotional intelligence"—which had been coined by Peter Salovey and John Mayer in 1990—fleshed it out, and popularized it.

Knowing your own style is the basic understanding of your thoughts, actions, and behaviors. Self-awareness is an awareness of your internal motivations and your external behavior. By building your awareness of other people's individual styles and by using that knowledge to adapt how you behave, you stand the best chance of navigating difficult situations and building work relationships that are productive and mutually successful.

The Solution, Part II

DISC is the psychological theory developed first by Marston in the 1920s. Throughout this chapter, the authors help you determine your DISC personality style, including primary characteristics, strengths, and stressors.

Any personality type can be an effective leader. And, in truth, we are all a blend of styles to some degree. All people care about relationships, clear thinking, and making progress toward their goals. They just approach these scenarios and goals differently. They place a different priority on them, which drives them to act in different ways. This is where EQ really makes a difference. High emotional intelligence allows us to recognize these different approaches.

Checking Your Gut

One of the most essential benefits of having a higher DISC-EQ has been gaining a better understanding of the decision-making process for different DISC profiles.

The fact that it's natural to grapple with your personality priorities doesn't mean you have to simply accept the limitations your gut puts on your decision-making. You can learn to counter these impulses when they overrun their usefulness so that you are always making your best decisions.

This starts with raising your self-awareness. With DISC, you sharpen your understanding of your personal priorities. Building off that insight, self-awareness can allow you to see whether those priorities are strengthening your decision-making or limiting it.

It's Not Just Words

We have to recognize that how we communicate is not intrinsically better or worse than how others communicate. Clear communication is necessary for productive work, but more than that, when communication becomes miscommunication, the result can lead to unhealthy conflict.

There's no way around having some conflict in a work environment, since at its core, conflict is rooted in people having different opinions and points of view. Rather than trying to remove all conflict from the workplace, our goal should be to channel those different perspectives in a positive and productive direction.

The Right Kind of Disagreement

The act of conflict—the act of disagreeing—doesn't have to be emotionally distressing or organizationally disruptive. Conflict, done right, can be a healthy part of a positive work experience. In fact, if you think about it, conflict is required to make sense of competing ideas and diverse perspectives. Conflict is the means by which we discuss options and select the best answers.

Productive conflict directly addresses the issues where people have differences of opinion or points of view. Unproductive conflict moves from the substance of the issues at hand to attacking others' personalities and behaviors. In productive conflict, those involved seek to find the right answer, not just to win the argument or gain individual glory. At the end, even if disagreement still exists, people can walk away feeling heard and respected.

On the other hand, a workplace dominated by artificial harmony—where issues are pushed aside or glossed over in an attempt to keep the peace—is almost as bad as one filled with unproductive conflict. You want people to engage in energetic, ideas-focused conflict in your workplace every day. You want to see productive and respectful debates in which everyone feels included and everyone contributes to the ultimate choices made around the office.

In order to transition unhealthy conflict into its productive counterpart, we need to address the root misunderstandings between ourselves and other parties. Because every conflict has at least two sides, we have to begin our introspective process by expanding our self-awareness and considering how we might be making the situation more challenging. Stepping back to review our own actions can give us the space to act more deliberately and choose our next response more wisely.

When you take responsibility for your actions rather than assigning blame to others, you provide yourself the emotional space to see different perspectives and to adapt your style to make sure your perspective is heard in the way you intend it to be.

Step one is to become aware of your own reactions and behaviors during conflict situations.

Then, in step two, armed with the benefit of self-re-

flection, decide how you want to respond in the future. When you are ready, you can take this one step further by sharing your goals with your colleagues and asking them to help hold you accountable.

The best approach for controlling unproductive conflict is naturally a team-based solution. To solve the people problems in today's work environment, then, we have to discover how to apply DISC-EQ to find the best, most productive ways to communicate and interact..

Making the Team Work

When a group works together to target and overcome dysfunctions, they create cohesion. There are five goals for your team:

- Build Vulnerability-Based Trust
- Engage in Productive Conflict
- Commit to Team Decisions
- Hold Each Other Accountable
- Focus on Collective Results

Additionally, work with your team to set ground rules that enable and encourage everyone to participate fully in the conversation. Clearly defined team norms will make it known to all what is fair and acceptable—as well as unacceptable—for your meetings and other team interactions, thus creating a space where everyone can feel comfortable expressing themselves. Stick to an atmosphere of openness and vulnerability through the use of nurturing language.

Working with Those Outside Your Circle

DISC-EQ is a valuable approach to use in interactions with customers or business partners. The model removes the risk of mimicry while also providing us with the tools we need to read the styles of others and respond in effective and authentic ways, even when we've never met them before.

With clients and new colleagues, we may get only a single, brief window to establish the kind of positive rapport that leads to a fruitful, enduring relationship. You can learn a lot about a person just by making a more conscious effort to pay attention to how they speak and act.

Leadership Is a Relationship Conclusion

There are Five Practices that tell you what a leader needs to do, and DISC shows you how.

- Model the Way
- Inspire a Shared Vision
- Challenge the Process
- Enable Others to Act
- Encourage the Heart

Conclusion

DISC-EQ is at the heart of successful leadership because it provides a framework through which we can understand one another and address differences through concrete action. It provides us the language to discuss our different perspectives and a path to bridging misunderstanding.

Brett M. Cooper and Evans Kerrigan help professionals like you build work relationships that really work. Over the last twenty years, they've influenced thousands of people in government, non-profits, and corporate America to work together in more productive, more effective, and more human ways. Speaking as a Leader

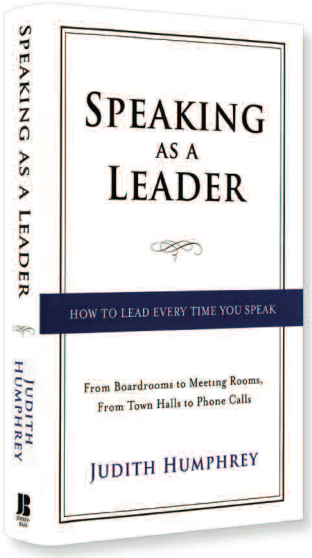
How to Lead Every Time You Speak — From Boardrooms to Meeting Rooms, From Town Halls to Phone Calls



by Judith Humphrey

THE SUMMARY IN BRIEF

Speaking as a Leader will show you how to influence and inspire others every time you speak. It provides a single, comprehensive approach that will help you lead in every communication, from formal speeches and presentations, to phone calls, meetings, Q&As and elevator conversations.

Too often, communications situations represent lost opportunities to lead. Messages are confused, audiences are bored or overwhelmed by a flood of information, and the speaker fails to elicit action. When people fail to communicate, they fail to lead.

In *Speaking as a Leader*, world renowned executive coach Judith Humphrey addresses this problem and puts communication squarely at the center of leadership. In today's flattened organizations, leadership opportunities exist in every interaction and for individuals at every level. For a leader, the mike is always on.

Speaking as a Leader will help readers meet the enormous challenge of engaging, energizing and motivating others day in and day out. It will help you unlock your leadership potential every time you communicate, and turn your listeners into followers and believers.

Humphrey offers a powerful approach to move you from information to inspiration.

IN THIS SUMMARY, YOU WILL LEARN:

- How to think like a leader.
- How to script yourself as a leader.
- How to use the language of leadership.
- How to achieve a leader's presence.
- How to move others — engage them and inspire them to action.

Introduction: Speaking as an Act of Leadership

If you internalize the idea that speaking as a leader is an ever-present responsibility you have to your stakeholders, you will infuse all your speaking with the quality of leadership. Whether you are answering a question, commenting on a project, presenting a strategic plan, selling to a customer or simply taking a group of people through a solution to a problem, your intention must be to inspire and move others to believe and act on that belief.

The Leadership Model™

But how do you speak as a leader in all situations? This book presents a systematic approach called The Leadership Model™. It is scalable: it works equally for a town hall event as for a brief elevator conversation. It will unlock your leadership potential every time you communicate. The Leadership Model™ has four steps:

1. **Think like a leader.** This first step is mental preparation.
2. **Create a leader's script.** The script structures your ideas and influences the audience's thinking.
3. **Use the language of leadership.** The best leaders are conscious of the language they use, and deliberately choose words that have the power to influence and inspire.
4. **Achieve a leader's presence.** A leader, like a good actor, brings a script to life through energy, eye contact, gestures and voice.

The four steps of The Leadership Model™ provide a powerful template. They will help turn your listeners into followers. ●

STEP 1: THINK LIKE A LEADER

Begin with Vision

It is of no use to have a clear and compelling vision if you do not communicate it to *all* your stakeholders. Michael Dell, CEO of Dell Inc., writes in his autobiography, *Direct from Dell*, that "over time, we have developed a laser-focused strategy that we take great pains to communicate consistently and thoroughly throughout the entire global organization." In fact, "at Dell, what ties us all together is belief in our direct model."

Whether you head a company, a business unit or a team, communicating your company's vision is your responsibility. It must be burned in your mind and the mind of every employee, customer and stakeholder.

So place yourself in the tradition of leaders who speak with a vision that is focused, positive, attainable and encompassing, and let that vision shape *everything* you deliver. Commit to it in your speeches, presentations, meetings and off-the-cuff comments. A vision is a living thing: if you broadcast it continually, in all your interactions, others will believe in it, act on it and, with your leadership, turn your vision into a reality. ●

Think Beyond Hierarchies

I have seen managers come undone when presenting to senior executives. Instead of providing guidance, they stumble through a dull, information-based presentation and as soon as the executives begin asking questions or making comments, the junior presenters allow the exec-

utives to take over. Why? Because these individuals defer to those above them and assume that "leaders" and "followers" are determined by rank. But too often, the senior executives are not impressed. Indeed, such performances can be career limiting.

Be Willing to Influence Others

Organizations still do have tops and bottoms. But leaders at all levels must be willing to influence others, even those they don't have authority over. The old structures, where a few at the top had access to all pertinent information and issued orders through a command-and-control structure, are gone. Regardless of your place in the hierarchy, you have a responsibility to lead. But leading takes a different shape depending on whether you are speaking to those who report to you, your peers or someone more senior than you.

- **Leading from Above.** The best bosses provide a vision that helps direct their company, division or area. They convey that vision by persuasion, not by preemptive commands. And when forming their views and guiding their employees, they listen carefully. They welcome suggestions, encourage frank conversations and are open to constructive challenges to their views.
- **Leading from the Side.** In today's flatter organizations you'll often find that you have to lead your peers, clients or suppliers. The first rule in this situation is to abandon the "us and them" mentality. Another good guideline: Try to see yourself through the other person's eyes.
- **Lead from Below.** How do you best lead from below? 1) Be political. Practice speaking to your superiors with confidence, but with respect. 2) Be direct. Executives don't want you to beat around the bush. 3) Be bold. It may mean speaking up more frequently at a meeting of senior colleagues, initiating a one-on-one discussion or seizing the chances to lead from below when the opportunity strikes.

The Power of Hierarchies

In Anton Chekhov's short story "Fat and Thin," two childhood friends greet each other warmly at a railway station after decades apart. The thin man boasts of his accomplishments as a civil servant. But as soon as he learns that the fat man is a much higher-ranking official, he becomes pale and nervous, and starts calling the fat man "Your Excellency." The fat man, saddened by his old friend's sudden fawning behavior, turns and leaves.

This is the power of hierarchies: They can turn people into pale shadows of their former selves.

Move from Information to Inspiration

Why do some people bore their audiences, while others turn their listeners into believers? One key difference is that poor speakers are stuck in an *informational* mode, while more compelling speakers command an *inspirational* style. The informational mode emphasizes content, while the inspirational mode reflects a commitment to an idea or vision.

In his book, *Lincoln at Gettysburg*, Garry Wills discusses these two modes of speaking. Wills contrasts the remarks of Edward Everett, a long-winded politician, with those of Abraham Lincoln. Everett was the first to speak at the dedication ceremony of the National Cemetery in Gettysburg, and gave an informational address. His talk lasted three hours and covered, in painstaking detail, the entire three-day battle. In contrast, Lincoln followed with his brief "Gettysburg Address," now recognized as one of the finest speeches in the English language. This talk lasted less than three minutes and, unlike Everett's remarks, it offered few details. As Wills puts it, Lincoln's "speech hovers far above the carnage ... The discussion is driven back and back, beyond the historical particulars, to great ideals that are made to grapple naked in an airy battle of the mind."

While neither pure information nor pure inspiration is ideal, most speakers err on the side of presenting too many facts, as Everett did. If you want to be a leader, you should, like Lincoln, have a message or vision that drives your talk. You should move from information to inspiration.

Listen, Listen, Listen

Listening is a prerequisite to motivational leadership, and successful listening connects you with your audience on three levels — the physical, mental and emotional.

Good listening involves keeping your audience in mind all the time. The best actors accomplish this by listening to their audience while performing. Christopher Newton, former artistic director of the Shaw Festival in Niagara-on-the-Lake, Ontario, Canada, once told an audience of after-dinner guests: "The actor divides his head — one side inside the part, the other focused on the audience." You can be a committed listener if you engage in such active listening on three levels: physical, mental and emotional. Only by working with these three approaches will you fully come to understand the views of your audience and, more broadly, individuals in your organization.

1. **Listen Physically.** This first level of listening requires that you create physical openness. To begin with, make sure the space between you and your audience is an open physical environment. Good posture is another way you show you are listening.
2. **Listen Mentally.** As Ernest Hemingway wrote: "When people talk, listen completely. Most people never listen." So listen closely to the ideas and concerns of your audience.
3. **Listen Emotionally.** This is the highest level of listening because it involves empathy, caring and a desire to give support. Helen Keller learned that "The best and most beautiful things in the world cannot be seen nor even touched, but just felt in the heart." Emotional listening involves a range of qualities: politeness, political intelligence, an awareness of verbal and nonverbal cues, and a willingness to make the exchange enjoyable.

STEP 2: SCRIPT YOURSELF AS A LEADER

What Is a Leader's Script?

The Leader's Script™ is a template The Humphrey Group has created for designing your remarks — whether you are speaking for 30 minutes or 30 seconds. This single model works when giving a formal speech or a presentation, responding to questions, speaking on the phone or having a brief conversation with a colleague. By using this template you will always be "on message," and will influence and inspire others.

The Elements of The Leader's Script™

Let's look at the three parts of this scripting template. They are the Introduction, Body and Conclusion.

1. **The Introduction.** A good introduction draws the audience in and aligns them with your thinking.

   The Introduction has four components: the grabber, the subject, the message and a structural statement.
2. **The Body.** The body of your script contains the arguments that develop your main message and should be organized in a clear structure.
3. **The Conclusion.** Your script ends with a Conclusion, which contains two elements: the restated message and the call to action.

The Leader's Script™ is a template that ensures you will lead whenever you speak.

Open with a Grabber

Your opening is important. It's the first component of The Leader's Script™, and your first opportunity to engage your audience. Get it right and you'll be well on your way to making your case.

The grabber plays a crucial role in The Leader's Script™. It draws the audience in and leads them to your message. Why bother reaching out to an audience, especially when time is short or when the people in the room (or a single person you're talking to) are familiar? The answer is that a good opening makes your listeners far more receptive to you and your message.

When you address a colleague or walk up to a podium, your audience may well have their thoughts elsewhere. They may be reflecting on problems they've been wrestling with all morning, or thinking about the next meeting they'll be attending or the vacation they're about to take. In these situations, plunging directly into your subject is like pushing your audience into a cold lake: It's an unpleasant shock to the system. Audiences need to be transformed from people just sitting to people who are eager to hear what you have to say.

Creating a Grabber

How should you create a grabber? You have two broad options. The opening can be personal or literary.

1. The Personal Grabber. The "I" grabber creates a connection by revealing something about you. For example: A young vice president finds herself in the cafeteria line just ahead of her CEO. She begins: "I've just been on the leadership retreat that you funded, and I found it exceptionally valuable." The CEO is delighted.

Avoid "you" grabbers that begin with "You're wrong," "I disagree" or "I was disappointed with your work." They create tension and undercut your leadership.

Avoid using "we" in a vague or "royal" sense.

2. The Literary Grabber. You can also use grabbers from published or "literary" sources. Literary grabbers come in many forms.

- Anecdotes, proverbs and humor can provide a rich source for your openings, and books of anecdotes and proverbs are abundant.
- Quotations can set the stage for your message in both formal and everyday remarks.
- Statistics can also provide a provocative opening.
- Research grabs your audience's attention by telling them something they've never heard before.
- Short videos can create a powerful opening.
- Poetic openings work wonders, too.

Get Your Subject Right

Every talk has a subject. Get it wrong and you're in trouble. That happened at a dinner given in honor of the sports and communications magnate Ted Turner. The people in the audience were highflyers from Toronto's media elite. When it came time for the speeches, there was a big buildup to Turner. He walked to the podium and began with pleasantries: "It's great to be here in what I'd call better times. Last time I was here the Toronto Blue Jays beat my Atlanta Braves. Tonight is a much happier occasion." Then there was a pause. Turner thought for a moment and, turning to the host, said, "What the hell did you want me to talk about anyway?" Turner's question may have been funny, but his lack of a subject must have taken the audience aback.

State Your Subject

The subject defines what you will be talking about, so it's critical to get it right. You cannot have a strong leadership script unless you are invested in your subject.

1. **Carefully choose and redefine your subject.** Narrow the topic so that it reflects your expertise.
2. **Bring excitement to your subject.** If your subject seems dull, replace it with a topic that will more fully energize your audience (and you!).
3. **Focus on one subject.** You need a single subject if you are going to have a single, powerful message.

Announce your subject after the grabber. ●

Lead with a Message

For many of our clients, the single most important "takeaway" from our training is that they should have a message every time they speak. It seems simple, but it's an extraordinarily powerful insight. Almost by itself, a strong, clear message moves you from "information" to "inspiration." It tells your audience why they are in the room. Without a message you cannot lead.

Even many leaders who are considered superb speakers have had to learn how to get control of what they say, and deliver a single clear, inspiring message. According to John Heilemann and Mark Halperin in their book, *Game Change*, Barack Obama, during the first debates in the 2007 Democratic primary, "had a lot to say and wasn't good at spitting it out quickly and concisely, tending to back into his response. Rather than sell one idea well, he tried to squeeze in as many points as possible. 'I have 60 seconds,' he said in prep, 'How much do you guys think I can get into 60 seconds?'" When his chief strategist, David Axelrod, showed him the video of the debates, Obama grimaced. "*It's worse than I thought* ran through his mind. He pledged to do better." After that, Obama learned the power of speaking with one message. His speeches, press conferences and informal remarks all improved.

Your message is the single most important element of your script. ●

Develop a Persuasive Structure

The Leader's Script™ has a beginning, middle and end.

After your script's Introduction comes the Body, or middle.

The Body of your talk should do one thing: Prove your message. If you fail to structure your talk effectively, your audience will be unconvinced or bored, or will simply wonder what you are talking about. The well-crafted message statement you began with will be left high and dry. Unfortunately, poorly structured talks are all too common.

Organizing your talk is not difficult if you put the effort into building a sound structure. Here are five guidelines to help you get the structure right.

1. **Present arguments, not topics.** The Body of The Leader's Script™ should provide arguments that prove your message. No one will be convinced by a structure that simply lists topics. Make sure that each of your main points in the Body is a complete sentence and presents a sound argument in support of your main idea.
2. **Bring your arguments together in a recognizable pattern.** When you create an effective argument, you build a case where each of the supporting points ties back to the message.
3. **Think of your structure as scalable.** It's vital to have a sense of structure that allows you to expand and contract the length of your remarks depending on the opportunity. Knowing what your key proof points are enables you to deliver the body of your talk whether you have 30 minutes or 30 seconds.
4. **Write down your structure — or in impromptu speaking, work it out mentally.** Whether you are delivering a formal speech or speaking from notes, map out your structure.
5. **Lead into the body with a structural statement.** Audiences want to listen, but they need your help! To guide them through your structure, give them a roadmap at the outset. The last sen-

tence of your Introduction should be a structural statement that lets your listeners know what route you (and they) will be taking through the Body of your script.

Close with a Call to Action

On Jan. 20, 1961, John F. Kennedy concluded his inaugural address with the following words:

In your hands, my fellow citizens, more than mine, will rest the final success or failure of our course. … The energy, the faith, the devotion which we bring to this endeavor will light our country and all who serve it — and the glow from that fire can truly light the world. And so, my fellow Americans, ask not what your country can do for you — ask what you can do for your country.

More than 50 years later we still remember that stirring call to action, expressed in simple, clear language. Not every call to action needs to be so poetic or so visionary, but whether you're giving a speech, making a presentation or sending an e-mail, you need to finish with a call to action.

What Is a Call to Action?

The call to action is the final element in The Leader's Script™. It immediately follows the restated message, and it tells your audience what is needed to turn your message into reality. Your goal as a leader is to energize your audience. The call to action focuses that energy toward clear and specific actions that people can undertake, so that your vision (as expressed in your message) can become a reality.

You'll want to direct your call to action to those who can best follow up on your message. The most frequent call to action is directed to your audience, but your guidance can also be self-directed (you act for your audience), or it can be combined (you and your audience both act).

STEP 3: USE THE LANGUAGE OF LEADERSHIP

Speak with Clarity

Even the best script won't persuade listeners without clear, forceful language: the language of leadership.

How can you make sure your audience understands you? Follow these guidelines:

1. **Think before you speak.** Clarity comes from putting in those hours preparing for a speech, or simply pausing to collect your thoughts before answering a challenging question or speaking up at a meeting.
2. **Always be "on message."** The best speakers are always on message, and they back up their contentions with strong supporting arguments. The guidelines for message and structure are important not only for the overall shape of your talk, but also for your paragraphs and sentences. Clarity involves more than simply choosing the right words. The clearest speakers stay on message and present evidence in a well-structured manner.
3. **Be precise.** Precision is crucial to achieving clarity. It means being exact about expressing your ideas.
4. **Be succinct.** Clarity also involves expressing your ideas succinctly. Some speakers think that extra words make their arguments clearer. Remember, inside every fat sentence is a thin sentence dying to get out!
5. **Make your language appropriate for your audience.** Speaking with clarity requires that you have a keen sense of audience. Speakers who know their audience and assess their listeners' level of expertise can pitch their comments accordingly.
6. **Avoid jargon.** Jargon is the bane of business, government and professional organizations. It consists of lazy language, inflated terminology and phrases that get repeated so often that they lose their meaning.

Be Conversational

Mark Twain once told of a Missouri farmer who ran five times for the state legislature without winning. It seems that he practiced his campaign speeches every day while milking his cows. He referred to himself as "your humble aspirant" and to his audiences as "my enlightened constituents." He talked about "obtaining a mandate" for his "legislative mission."

Then one day a cow balked at these speeches and kicked him, causing him to bite off the end of his tongue. After that, the farmer could speak only words of one syllable. The result was that he won his next election and kept getting re-elected. The farmer had learned, the hard way, an important lesson about speaking as a leader: You must be conversational. No one likes being preached at, or talked down to. Audiences are most receptive when they feel the speaker is addressing them in a warm, conversational manner.

Be Personal

The best leaders establish warm ties with their audience. They get personal. The better the relationship you create, whether you're speaking to 1,000 people or to one person, the more likely you are to persuade. One of

the keys to strengthening those ties is using "I," "you" and "we." Let's look at how you can do so.

- **Put yourself into your remarks using "I."** Using "I" shows your personal convictions. For example, you might say "I want to talk to you about," "I believe" or "I'm convinced." "I" can be a powerful means of letting your colleagues, customers and staff get to know you as a leader. Just make sure that you use it with that goal in mind.
- **Use "you" to engage your audience.** Speakers need to refer to their audience as directly as possible. In all forms of communication, keep a "you" focus and reach out to your audience.
- **Use "we" to create a connection with your audience.** Used effectively, "we" brings the speaker together with the audience.You can build rapport and a common bond when you use "we." For example, when you are talking to an employee, you can incorporate "we" into the discussion by saying, "We both want this to work," or "We are both committed to seeing this project through." ●

Be Eloquent

The most effective leaders make full use of the power of the English language. They lift up their audience with eloquence. Such language is more memorable. It influences listeners, commands their attention and encourages them to act. While rhetoric, which is a key to eloquence, may sound forbidding, it's not. It can be as simple as a metaphor or the use of repetition.

The Roman orator Quintilian underscored the importance of rhetoric. He observed that figures of speech "add force to our thoughts and confer grace upon them." Rhetoric can make your scripts more powerful and help you persuade your listeners.

Figures of speech help to create a strong, persuasive style. They enliven your meaning and underscore your ideas. If you want to be eloquent and persuasive, remember not only the rules of rhetoric but also that *rhetoric rules*. ●

Don't Be ... Um ... Tentative

If you want to lead and inspire others, avoid language that weakens your ideas. Watch out for the following "credibility killers" that could create tentativeness in your speeches, presentations and conversations.

1. **Avoid prefatory qualifiers.** Starting sentences with qualifying expressions can undermine your leadership. Avoid, "It's only my opinion," "Just a thought," "I'm not sure" or "I don't have all the answers, but ..." If you suggest to the audience that they know what you are about to say, they won't bother listening to you.
2. **Eliminate mincing modifiers.** Don't undercut your comments with modifiers that reduce the impact of what you're saying. Avoid "I'll *probably* want you to spend some extra time on this project," or "*Hopefully* we'll get to the root of this," or "I *just* want to say," or "*Maybe* my call to action should be" or "I'm *quite* satisfied."
3. **Watch for wiggle words.** Avoid words like "probably," "likely," "roughly," "primarily," "basically," "pretty," "sort of," "some" and "quite."
4. **Avoid filler expressions.** Make sure you don't fill your pauses with words like "um," "ah," "you know," "to be honest" and "like."
5. **Delete weak verbs.** Phrases such as "I think," "I presume," "I suppose," "I'd guess" and "I'll try" lessen other people's confidence in what you are saying.
6. **Don't over-apologize.** Too often people apologize when there is no need to. Don't start a phone call with "I'm sorry to trouble you about this matter ..." Don't apologize in meetings when you offer a comment.
7. **Don't self-correct.** Learn to speak with straightforward, declaratory sentences. Don't trip over yourself to correct your words.
8. **Don't diminish your power at the end of sentences.** Often people end thoughts with "et cetera" or "and that kind of thing," because their minds are racing on to their next thought. ●

STEP 4: ACHIEVE A LEADER'S PRESENCE

Bring Your Script to Life

When you speak as a leader, you must energize your audience and motivate them to act upon your ideas. Your vision, script and language are only important insofar as they can be *brought to life for an audience*.

Every time you speak, be aware of the tremendous source of energy gathered in front of you: your audience. It's up to you to transform that potential energy into a powerful force for change. You must make your listeners take notice of what you're saying and inspire them to follow your lead. Audiences, in fact, want to be

moved, to care, to be inspired. What audience member ever walked into a room wishing to be bored?

The goal of speaking, instead, should be to reach out and engage the hearts and minds of your audience. This focus on the audience begins as soon as you start preparing your remarks, and it continues while you are delivering your talk. Margaret Thatcher wrote in her autobiography: "I was told that most stage actors would rather hear an audience's reaction without seeing the audience. ... But I always insisted that from any public platform I must be able to see as well as hear how my words were being received." Once you tap into the energy in the room, and move your audience with the power of your own convictions, you will feel enormous satisfaction.

Find the Energy in Your Script

To energize your listeners, find the power in your script and then convey it to them. Bring your script to life for your listeners. Your job as a speaker is to interpret your text for your audience. If you treat every word in the script as equally important, you'll sound monotone and your audience will retain little of what you've said. Instead, bring to life the important elements of your script. ●

You Are the Best Visual

Great speakers rarely use visual aids. Just imagine John F. Kennedy standing before the world at his inauguration with a flipchart that read: "The Torch Has Been Passed" or Martin Luther King Jr. showing a slide with a clip art image of a black girl and a white girl holding hands. Such props clearly have no place in these stirring speeches. In fact, they would detract from the drama of the moment.

Why? The most influential leaders understand that they are the best visual. They instinctively know that their message will come through most fully if the audience watches them — with no distractions. Looking at and listening to the speaker, audiences grasp that individual's confidence, stature, conviction and leadership. Audiences that divide their attention between speaker and visual are only partially connected to the speaker, and only partially committed to the speaker as a leader.

The best way to persuade your listeners is to become the focal point of their attention.

The audience needs to focus on you — they will see your commitment in your eyes, in your gestures, in the way you walk, in the way you stand, in the way you hold your head high. Your body becomes the very best visual for portraying your leadership message. ●

Find Your Leader's Voice

Leaders know how to use their voices. When they take the stage, they project vocal energy that compels the audience to listen. They speak loudly and distinctly, because they know if an audience has to struggle to hear or understand them, their leadership will be compromised. They speak with expression and great vocal range, because they know that if they bore their audiences, their leadership will be undermined.

A good voice is a leadership imperative. To speak as a leader, you must develop your voice's full capabilities. ●

Conclusion: Always Leading, Always Influencing

Wherever you are, whatever the occasion, whomever you are talking to, you have a leadership opportunity. The call to action is that you internalize this mission:

I will work to influence and inspire every audience — large or small.

To achieve this goal you'll want to master the four broad steps to develop a leader's mindset, script yourself as a leader, use the language of leadership and achieve a leader's presence. But that is only the beginning.

- **Large and Small Stages.** You are always on stage. Every talk, presentation, email and voice mail is a chance to lead.
- **The Mike Is Always On.** There are many situations where leaders feel they are offstage, but they aren't. Look around. You have an audience whenever people are present. These "stages" can be offices, restaurants and golf courses.
- **Every Situation Is a Leadership Moment.** Recognize every situation is an opportunity to lead and inspire others with your convictions. ●

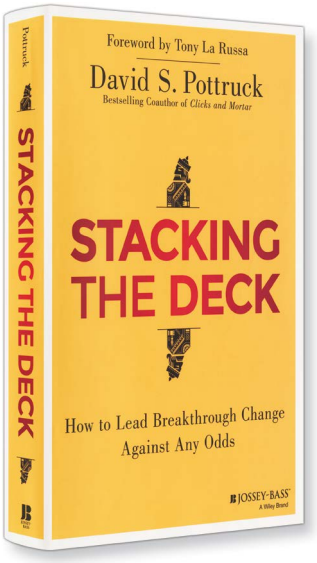
Leadership

Stacking the Deck

How to Lead Breakthrough Change Against Any Odds



by David S. Pottruck

THE SUMMARY IN BRIEF

Change is a constant, and leaders must do more than keep up — they must innovate and accelerate to succeed. Yet people are often unnerved by change. As a leader during a time of transformation, you may stand up before teams that are indifferent, or even hostile, and need to convince them that change is necessary and urgent. What does it take to be an effective change leader and increase the odds of success?

Stacking the Deck presents a nine-step course of action leaders can follow from the first realization that change is needed through all the steps of implementation, including assembling the right team of close advisors and getting the word out to the wider group. Based on Dave Pottruck's experiences leading change as CEO of Charles Schwab and later as chairman of CorpU and HighTower Advisors, these steps provide a guide to ensure that your change initiative and your team have the best possible shot at success.

Leading an organization through major change — whether it's the introduction of a new product, an expansion to a new territory or a difficult downsizing — is not for the faint of heart. While success is never guaranteed, the right leadership, process, and team make all the difference. For all leaders facing major change in their organizations, *Stacking the Deck* is an indispensable resource for putting the odds in your favor.

IN THIS SUMMARY, YOU WILL LEARN:

- The nine crucial steps for creating breakthrough change in your organization.
- How to anticipate known and unknown barriers.
- How to think about the big picture and the nuts and bolts, from passion and vision, to building a plan and partitioning projects.

Introduction

Breakthrough change refers to those disruptive initiatives that dramatically, profoundly affect the organization and the people in it. It redefines the prospects for the future and interrupts the organization's cautious momentum plan with incremental improvement. One reality of business that seasoned executives know well — often by learning it the hard way — is that introducing and implementing breakthrough change is an uphill battle.

Most organizations' processes and culture are structured for predictability, reliability, control and risk minimization. Breakthrough change is the polar opposite. It is unpredictable and favors responsiveness to new realities over control and staying the course. Breakthrough change is inherently risky and goes against every instinct the leaders of the company have developed over the course of their careers. Is it any wonder, then, that employees often resist breakthrough change — even in companies whose leaders say it's exactly what they need?

Leaders must find ways to help people see the need for change and then inspire them to move toward it with confidence and urgency. The nine-step Stacking the Deck process is designed to mitigate the risks that come with change by having you take concrete steps to increase your chances of success. This preparation does not make the change less bold — and it doesn't guarantee success. What it does do is create an advantage (or more accurately, a series of advantages).

You may know the phrase "stacking the deck" to mean preparing a deck of playing cards so that you will almost certainly win the game rather than rely on chance. The Stacking the Deck process is not designed to cheat other players. It implies instead that thinking through and preparing for all the steps and processes we will need to undertake vastly increases our chances of success. Together these nine steps represent a plan of action that will take you from the first realization that a change needs to be made through a complete shift in the way you implement this change.

Breakthrough change never, ever stops while the world progresses. Competition, the marketplace and technological advances make it necessary to keep growing and changing. Each of the nine steps will guide you along the way to breakthrough change.

Step One: Establishing the Need to Change and a Sense of Urgency

No matter how well leaders understand the need for change, the challenges they must face in leading breakthrough change will be enormous. We can't deny that change is part of life. Yet in life and in business, some people embrace change and others actively avoid it.

Link the Purpose and Mission

In leading breakthrough change, we must first convince others — those to whom we report and those on our team — that our proposed change has a positive, necessary and urgent purpose. First with the team and later with the larger organization, you've got to help people believe that the change facing them is actually progress. You will be most successful when you tie the change to the company's mission and show how the change will help achieve it.

When employees believe in a mission, they get excited and passionate about contributing to the company's goals. Thus, connecting a breakthrough change to the company mission and explaining how it contributes to the mission can help employees see and appreciate why a change may be necessary — even critical — to the company's future success.

Whatever the purpose of the change you are proposing, convincing others of its need requires effort; and it's almost always much more effort than you expect. Even if the need seems logical and inescapable to you, others won't necessarily recognize that at first. People who are afraid do not behave logically, and they don't respond to logical appeals. How can we smooth the way?

First of all, repetition is important. It's not enough just to announce a change and call it a day. You must give your employees the information again and again and use a variety of methods. Tell them in person, tell them in writing, and tell them via e-mail. Tell them one-on-one and tell them in big groups. It's very likely that not everyone will have heard you correctly the first time.

Underscore the Urgency

Before you decide to convince anyone else about the change you are proposing, you have to satisfy yourself that change is not just necessary; it's necessary sooner rather than later. You have to invest in the change and commit to it with your time, your energy and your budget. Be sure that you've considered these issues and that you've honestly pondered and answered the following questions:

- Have I evaluated the numbers for different scenarios?
- Do they look good?
- Do I truly believe in the purpose behind the change?
- Am I fully convinced of the urgency of the change itself?
- Can I demonstrate that this change is worthwhile and imperative?
- Do we really have to do it right now?
- What will occur if we postpone it?

If what you're proposing is big and bold and strategic, chances are that you will encounter people at all levels of the organization who think it may be easier to do it later. These people may voice their objections by saying, "Let's think about this some more" or "Let's be patient." You might also hear, "Shouldn't we get some more data?" Overcoming resistance and maintaining momentum require constant effort.

Step Two: Assembling and Unifying Your Team

No matter how compelling the need and how strong your passion for making the change, achieving and sustaining breakthrough change will require much more than just your passion. Leaders must rely on a well-balanced leadership team. It's your job to actively develop and unify a group that will guide the organization in making your change a reality. You are looking for pioneers, for people who are comfortable with a greater degree of risk than the average person.

When you are creating your leadership team and looking for people to help you make this change happen, consider four key elements: skill, experience, enthusiasm and team fit. The surprising truth is that enthusiasm and team fit may be the most challenging elements to locate. You need people who are willing to enter unmapped terrain. These pioneers will guide your larger team, usher your change into reality and serve as ambassadors to the rest of the organization.

Attitude is critical, but it's not sufficient. Leaders must find people with the relevant experience, and very often — particularly with breakthrough change — that means going outside to recruit the key talent that's needed.

Take Steps to Unify the Team

Even with the right people, you have to unify the team and manage your people in the right way. More than the plans you develop or the financial resources at your disposal, it's your people and the way you lead them that will make the difference. Ask your team to give you the answers to the following questions on a periodic basis:

- What do I do particularly well that I should do more of and build on?
- What do I do poorly that is hurting the team and needs my attention and commitment to change?
- How could I do better? What actions would help me improve and improve our team performance?
- What do I spend my time on that I need to do more of?
- What do I spend time and energy on that I need to do less of, delegate to someone else, or stop altogether?
- How else could I improve my performance and that of our team?

Your team needs to know that you'll treat their answers as constructive and strictly anonymous. With that understanding, they may deliver up some surprising answers. Be

sure to have a session with the team in which you review the feedback and let them know what you plan to do to respond to their suggestions.

Building Trust

Absence of trust is the source of a lot of team dysfunction, and establishing trust must start when a team is first formed. In fact, this is how you begin to build a high-functioning team. Getting people together and encouraging them to talk about themselves can in fact be a great trust builder — when done well.

It's important to shape and drive these situations to make sure that the stories actually bring people together rather than create walls between them. Since not every executive has the skills to lead such a discussion, investing in an experienced facilitator can be very worthwhile.

Step Three: Developing and Communicating a Clear and Compelling Vision of the Future

Once you have your leadership team in place, you and your team need to be ready to envision and communicate the future in such a vivid and irresistible way that everyone around you understands your vision and shares your passion for it.

In the earlier step, we were simply attempting to convince others that the status quo is unacceptable and the way we are doing things today no longer works; we need to do something different as we move into the future. In Step Three, we develop and present a very specific idea of what that "something different" is. In most cases, this means comparing the present to a future that is very different.

Whether you are starting anew or bringing change to an existing organization, you must give people a clear — and strongly compelling — vision of the future: where the organization is going and their role in the new future. Momentum is critical in the early steps of breakthrough change.

There were two recurring themes in all of the interviews I conducted:

- The critical need to communicate a compelling vision of the future;
- The critical need to communicate that message over and over.

Leaders need to spread the message to different groups and at multiple times to the same group, in different ways and in various situations. The ability to lead change rests on the leader's character and skills as a communicator. Developing yourself in these areas is an immersive process, as deep as it is rewarding. It is vital to each of the Stacking the Deck steps and transcends all of them. Developing your communication skills should be at the top of your list.

In a sense, communicating the vision behind the breakthrough change effort is never over; it's something you must repeat and constantly reinforce. To do this well requires passion, patience and understanding.

Step Four: Planning Ahead for Known and Unknown Barriers

The fourth step in the Stacking the Deck process is all about anticipating problems as you are planning, and confronting these problems before they derail your efforts.

Unfortunately, you cannot anticipate all problems. In general, however, the early or initial difficulties you will encounter when introducing breakthrough change fall into four broad categories. So many great change initiatives are given up for lost or destroyed because of these difficulties that I refer to them as the "Bermuda Quadrangle."

Mapping the Bermuda Quadrangle

Be aware and on the lookout for these issues as you plan and then execute the changes you propose:

People Resist Change: What will people resist? What will they embrace? What can you do to allay their fears about the change? The brevity of these questions is deceiving. They are difficult questions that must be addressed early and with an open mind.

Skills Are Missing: Recognize that a great attitude is required but is not sufficient. Part of your advance planning, therefore, must be a careful assessment of what skills will be needed, how they can be developed in-house, and where you can find them outside. You'll have to find ways to get people to adapt, or else actively recruit new people. Most likely you'll do both.

Processes Are Rigid: If you are proposing a change to established processes and procedures, you may be up against years of institutional habits and mindsets. You'll need to determine where the company is set in its ways and decide what it will take to change those procedures and mindsets.

Company Culture Is Unyielding: You need to think about the breakthrough changes you're proposing in the context of the entire enterprise. Does this change fit in

with the values of the existing corporate culture? If it does, how can you best make that connection clear?

Planning for the Unexpected

The way to prepare for the unexpected is to explicitly talk it out, and not just inside your head. Gather executives, responsible business partners and any other people whose involvement is critical to the change you propose, and ask them all to think seriously about how the change might be received within the organization, outside of the organization and what could go wrong.

Examine potential resistance: Take the time to explore and think about the risks and the uncertainties ahead and do so in detail so that you can eventually manage them proactively and create comprehensive ways to defuse these issues. While you may not be able to predict with certainty exactly what will happen, you can make a reasonable estimate of the odds of success versus the odds of the project going wrong.

Outside experts can sharpen the focus: Using outsiders can help you better anticipate the barriers you will face or even see the opportunities that are already in front of you. Outside consultants play a huge role in the success of breakthrough change. They are valuable repositories of new experiences, new wisdom and challenging perspectives — including the critical perspective that can debunk corporate mythologies.

Step Five: Creating a Workable Plan

Now you need to translate the inspiring vision of the future that you and your team have developed into a workable, real-world plan.

Making Assessments: From the Present to the Future

Starting anew and long-term planning have certain parallels: the need to assess where you are, where you want to be and how to get there. These assessments are vital to leading breakthrough change, whether you are starting from scratch, reshaping an aspect of the business, entering a new market or looking to expand your reach.

Initial assessment: where we are. Virtually all plans start with a thorough assessment of "where we are" (WWA). This assessment should take into account not just operations and processes but all other factors that contribute to a company or organization's position in the marketplace. You want to look at factors such as competitive position, customer satisfaction and quality of output, productivity and efficiency, human resource considerations and more.

Assessment for breakthrough change: where we want to be. Truly breakthrough change is a chance to substantially redefine the future to be something very new and different, perhaps a competitive leap forward. What will success look like in this new situation? How will we measure that success? Be sure that you and your people are imagining the most timely, highest-potential breakthrough. What you don't want is for people to picture just more of the same, only faster. You want to think imaginatively, envisioning a different future.

Assessment for action: how do we get there? Rather than painting a big, sweeping picture of the future, we must now define that future as a set of specific goals, deliverables and metrics, because now we are creating the actual plan. When you can fully answer the "how," breaking it down in terms of partitioning, metrics, people, and pilots (Steps Six through Nine), then you will have developed a meaningful plan of action.

Planning Components

Like many other business plans, the plan for a breakthrough change has the following key components: goals and deliverables, tasks, deadlines, capital and other resources, people.

Goals and deliverables: In contrast to planning an incremental change, you don't know exactly what the outcome will be at the beginning of a breakthrough change initiative. If, however, you are using the Stacking the Deck process, you will have a reasonably good idea. You should have a clear need to change and a compelling vision of the future. But that isn't the same as a specific set of executable goals you can move toward. By dividing your overall goal into smaller, step-by-step goals, you will have a series of checkpoints that you can use to determine if you are on track. When you subdivide a single, giant goal into smaller targets, you allow for more control and momentum building.

Tasks: Once you have the broad strokes of a plan, you must lay out the tasks you need to accomplish. This part of the planning process remains the same for most project and operational plans, whether the change is incremental or breakthrough.

Deadlines: You must be constantly reinforcing the importance of critical deadlines as they relate to key deliverables. There are often many moving parts in breakthrough initiatives and they are often interrelated. Pause or remove one, and everything grinds to a halt. Combat delay

the same way leaders approach other problems: anticipate, anticipate, anticipate.

Capital and other resources: There's likely to be a series of economic and institutional limits on those resources. As a result, the budgets typically awarded for these projects seem much tighter to those who are responsible for the actual outcomes. You need to negotiate from a place of strength and knowledge to secure the best possible framework for your change initiative.

People: People go hand in hand with more physical resources. Often the only way to combat a shortage of funds or labor is with an excess of passion. This goes back to finding your pioneers and getting them on board quickly. You need people who are committed, excited, and willing to put in the extra time and effort.

Step Six: Partitioning the Project and Building Momentum With Early Wins

Leading breakthrough change often means working toward an end that seems distant and out of focus. If your people can't visualize the future in real terms, they'll find it difficult to muster the urgency to undertake the journey. You therefore need ways to make the immediate steps clear and to help people — particularly those who may not have been involved in developing the vision but who will be crucial to its realization — see the path to the future in real, concrete terms.

Planning for Interim Successes

One of the best ways to preserve the enthusiasm that you have generated early on is to divide a major breakthrough change initiative into smaller phases, having shorter and intermediate-term goals with specific, clearly defined benefits. Ideally, each of these smaller goals will take less than twelve months, preferably six months or less. They provide a series of checkpoints where you can celebrate interim successes on the road to a completed change.

Planning for interim successes has multiple benefits. By delving into the details of a phased approach, you can uncover issues well before they turn into problems. Breaking a change initiative into a phased approach improves the quality of planning and, in the long term, can also make you a better, more detailed planner. It also enables you to show results and increase support for the initiative.

Build in Celebrations

"Celebrate" is another key word for the team and the overall plan. It does no one any good to let a success, including a small interim success, slide under the radar unnoticed. Without a sense of accomplishment and achievement within the team, burnout can become a problem. Acknowledging and celebrating small, staggered successes boosts morale and helps with team retention. From both a career and psychological perspective, people need to be seen to have accomplishments. Further, each celebration can reinforce the overall goal. Particularly if that goal is far on the horizon, you should create small celebrations in all phases of the initiative.

Breakthrough change is often about a new way of doing business, a new distribution channel, a new product, a new position in the market. As you develop your plan, carefully consider which interim steps you will focus on first. How will you capture what you've learned from those steps and celebrate the interim successes? How will you increase and maintain momentum ? How will you fund it all?

Step Seven: Defining Metrics, Developing Analytics and Communicating Results

To define success for your initiative you need to focus on measurable outcomes. People need to see the end result with such clarity that they can act on their own.

There's a strong desire in business to measure everything with one simple question: how much money are we making right now? But when we are making a breakthrough change, the end goal of enhanced profitability could be a long time in coming. There are always other more immediate factors we can track that will lead to profit improvement down the road. And when that road is long and uncharted, as it often is with breakthrough change, it's particularly important to measure the interim steps and goals along the way.

Measuring Progress and Success: Big Data, Metrics and Analytics

Leaders and high-level executives who are responsible for funding a given project want concrete, measurable indicators that tell them how a change is going. Historically, the usual word attached to these kinds of indicators has been "metrics."

The possibilities big data offers seem phenomenal; the opportunities to analyze enormous amounts of data in real time, very enticing. But even as capabilities evolve, it's clear that given the changes brought by big data, the traditional terms of metrics simply don't go far enough. Instead, we need to think in terms of analytics as we strive to use the newly available data most effectively. How do we best make use of the data and monitor the indicators? There are two major types of indicators — leading and lagging — each with different implications for your breakthrough change initiative.

Leading indicators: As the name implies, leading indicators are harbingers or evidence of success or failure that appear before any of the others. It's a common misconception that market share and profitability are leading indicators. In fact, it's more likely that we are hoping these will dramatically accelerate toward the end of the project; they rarely do so at the beginning.

Here are some leading indicators you might consider measuring:

- Measures of customer engagement such as customer calls or log-ins, click-throughs to deeper parts of your website, visits to physical locations, and purchases of various merchandise lines or products.
- Measures of employee engagement, attitude and turnover.
- Trend lines revealing how key indicators move over time periods.
- Customer loyalty as measured by online recommendations, endorsements, referral programs, or by the Net Promoter Score.
- Sales numbers, units, dollars, average price, product mix.
- Public relations as measured by number of positive mentions and numbers of headline stories, product reviews, or articles about your product or initiative, as well as social media mentions in tweets, retweets, and the like.
- Customer complaints, by type and number.
- Any customer attrition you may experience.

Lagging indicators: Lagging indicators are the big and important measures of success — such as reduced costs or improved market share, competitive position, pricing power, profit dollars, and profit margins — that we are working toward. Everyone wants to see positive lagging indicators and, typically, the sooner the better. But the results reflected in lagging indicators take time, sometimes years, to emerge. They are almost always foreshadowed by positive trends with leading indicators.

How do we help our people through that long period before the lagging indicators move ? We have to power through. And that is helped enormously with analytics and measurements: the more precise and granular, the better. We want monthly, weekly, and even daily measurements. We want to see every emerging trend, and every reporting period counts.

From leading and lagging indicators to big data to various types of analyses, the available information is nonstop. You need to determine what's most important among competing issues and direct your attention there.

Step Eight: Assessing, Recruiting and Empowering the Team

This builds on the work you did in Step Two. At this point, you might want to revisit and repeat some of those initial team-building actions, for at least two reasons. First, it may be time to further strengthen the leadership team for the long haul. And second, as the focus shifts to bringing together the entire team, you need to attend to the broader team that will ultimately do all the heavy lifting to bring the change initiative to fruition. This means assessing skills, namely, skills that already exist within the organization, additional skills you will need to develop and skills you will need to bring in. It also means recruiting for talent, fit and balance and empowering the larger team to succeed.

Search for Talent, Skills and Fit

You know that you're looking for people with precise skills, talent, and experience for your dream team. Now, where will you find those people?

Inside your organization: You will first want to look inside the organization to use the skills of the people you already know and trust, people who deeply understand the organization's mission and the importance of the breakthrough change. Being able to rely on people who are already part of the culture can be a tremendous boost. But if you've come to realize that even your best people are not right for the job, how do you go about finding the right people?

Becoming a magnet for talent: Ideally you want to be able to draw on an ever-expanding pool of talented people, both inside and outside your organization. Whether building a network comes easily to you or is a skill you need to work on, the sooner you start, the better. Consider

the people you meet at a conference, people who have worked with you before, even people who have recently been part of high-profile change projects elsewhere. Keep tabs on these individuals and cultivate professional relationships with them. Stay in touch and take a personal interest, perhaps even offer to act as a mentor. The odds are good that you will both benefit.

Unify and Empower the Larger Team

The benefits of a strong team are worth it. And with the right team, creativity in the face of a crisis can work wonders.

Ginger Graham has run several businesses that focus on innovation and new product development and speed. She explained that at one point the medical device company she was then with, Advanced Cardiovascular Systems, was "woefully behind in stenting technology and losing market share in the core business because of it. We invited something close to 50 employees into a room for several days with a professional facilitator to map out how we had been developing products. Then we asked them to brainstorm and work together to answer the question, 'If you could change it all, if you could fix all the things that you believe the company has been doing wrong, what would that future development process look like?'"

The group immediately set to work and redefined product development in the company. They defined a new way of developing products that would be "faster, leaner, more efficient, more focused — and that would allow us to catch up and win in the marketplace." In fact, the process worked so well that the company "went from 1 percent to more than 75 percent market share on one product launch in a major category in stenting, when stents were still relatively new in this country."

Step Nine: Testing with Pilots to Increase Success

Defining a precise set of rules about how to roll out your next breakthrough initiative is impossible: the potential projects are simply too diverse. Nevertheless, appropriate and careful use of pilot projects is a consistent thread in successful rollouts; pilots can dramatically enhance your prospects for success.

Traditional proof of concept pilots rest on a belief that it makes the most sense to test a new idea on a representative sample of your customers and your employees. The goal here is to create a slice of life and then see how your idea performs in this micro but representative version of the real world.

Unfortunately, when a traditional pilot to test the feasibility of a project shows initial success, leaders all too often rush to roll it out on a large scale.

I recommend adding an even earlier, smaller pilot, which is designed in every way to succeed. I call this a stacked proof of concept pilot because it gives the advantages of stacking the deck to a proof of concept pilot. Instead of a wide range of geographical locations, you select the best possible location, where people (potential customers and staff alike) will be most receptive to the change you're proposing. Instead of addressing average customers, you target your ideal customer base, those segments most likely to respond positively. And instead of a cross section of managers and employees, you handpick your best and your brightest to work on the stacked proof of concept pilot. You're looking for those people who are drawn to and thrive on change.

If it fails, you are forced to concede that since your idea can't succeed here, it probably can't succeed anywhere, and needs to be fundamentally reconsidered. In forming the pilot team and framing the project, you are trying to remove all possible implementation issues, individual motivation issues, employee pushback issues. All that is left is a single question: can this idea work? The stacked proof of concept pilot gives you the opportunity to test that question on its own.

In the right hands, and with the right mind-set, the Stacking the Deck steps can create a more productive and more readily navigated path to breakthrough change. The process itself is less about what to think than about how to think. It's about learning to anticipate and to analyze logically and carefully; thinking creatively and embracing possibilities; learning what to prioritize, where to concentrate energy, and how to move forward while bringing others along with you.

THE SUMMARY IN BRIEF

Any person or organization can explain what they do; some can explain how they are different or better, but very few can clearly articulate why. WHY is not about money or profit — those are results. WHY is the thing that inspires us and inspires those around us.

Although these "natural-born leaders" may have come into the world with a predisposition to inspire, the ability is not reserved for them exclusively. We can all learn this pattern. With a little discipline, any leader or organization can inspire others both inside and outside their organization to help advance their ideas and their visions. We can all learn to lead.

Start With Why shows that the leaders who inspire all think, act and communicate in the exact same way — and it's the complete opposite of what everyone else does. Drawing on a wide range of real-life stories, it provides a framework upon which organizations can be built, movements can be led, and people can be inspired — and it all starts with WHY.

IN THIS SUMMARY, YOU WILL LEARN:

- The naturally occurring pattern of how great leaders inspire people.
- How brain biology plays a role in influencing others when you answer the question, "Why?"
- How to inspire employees and customers to create brand loyalty.
- What causes a tipping point to occur.
- Why visionaries need "how" people to be successful.

PART I: A WORLD THAT DOESN'T START WITH WHY

Assume You Know

We make decisions based on what we *think* we know. It wasn't too long ago that the majority of people believed the world was flat. This perceived truth impacted behavior. During this period, there was very little exploration. People feared that if they traveled too far, they might fall off the edge of the earth. So for the most part, they stayed put. It wasn't until that minor detail was revealed — the world is round — that behaviors changed on a massive scale.

Now consider how organizations are formed and how decisions are made. Do we really know why some organizations succeed and why others don't, or do we just assume?

As we all know, however, not all decisions work out to be the right ones, regardless of the amount of data we collect. Sometimes the impact of those wrong decisions is minor, and sometimes it can be catastrophic. Whatever the result, we make decisions based on a perception of the world that may not, in fact, be completely accurate.

When faced with a result that doesn't go according to plan, a series of perfectly effective short-term tactics are used until the desired outcome is achieved. But how structurally sound are those solutions?

There is a wonderful story of a group of American car executives who went to Japan to see a Japanese assembly line. At the end of the line, the doors were put on hinges, the same as in America. But something was missing. In the United States, a line worker would take a rubber mallet and tap the edges of the door to ensure that it fit perfectly. In Japan, that job didn't seem to exist. Their Japanese guide looked at them and smiled sheepishly. "We make sure it fits when we design it."

Every instruction we give, every course of action we set, every result we desire starts with the same thing: a decision. There are those who decide to manipulate the door to fit to achieve the desired result, and there are those who start from somewhere very different. Though both courses of action may yield similar short-term results, it is what we can't see that makes long-term success more predictable for only one.

Carrots and Sticks

There's barely a product or service on the market today that customers can't buy from someone else for about the same price, about the same quality, about the same level of service and about the same features.

But if you ask most businesses why their customers are their customers, most will tell you it's because of superior quality, features, price or service. In other words, most companies have no clue why their customers are their customers. This is a fascinating realization. If companies don't know why their customers are their customers, odds are good that they don't know why their employees are their employees either.

The reality is, most businesses today are making decisions based on a set of incomplete or, worse, completely flawed assumptions about what's driving their business.

There are only two ways to influence human behavior: you can manipulate it, or you can inspire it.

From business to politics, manipulations run rampant in all forms of sales and marketing. Typical manipulations include dropping the price; running a promotion; using fear, peer pressure or aspirational messages; and promising innovation to influence behavior to drive purchases, votes or support. When companies or organizations do not have a clear sense of why their customers are their customers, they tend to rely on a disproportionate number of manipulations to get what they need. And for good reason. Manipulations work.

Reality is, in today's world, manipulations are the norm. But there is an alternative.

PART II: AN ALTERNATIVE PERSPECTIVE

The Golden Circle

There are a few leaders who choose to inspire rather than manipulate in order to motivate people. Whether individuals or organizations, every single one of these inspiring leaders thinks, acts and communicates exactly the same way. And it's the complete opposite of the rest of us. Consciously or not, how they do it is by following a naturally concurring pattern that I call the Golden Circle.

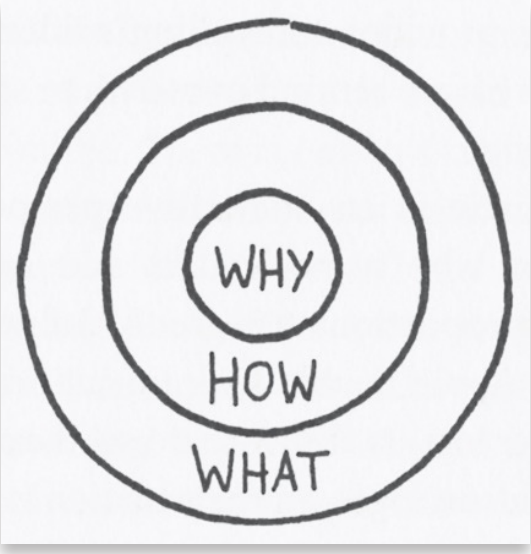
The Golden Circle is an alternative perspective to existing assumptions about why some leaders and organizations have achieved such a disproportionate degree of influence. It offers clear insight as to how Apple is able to innovate in so many diverse industries and never lose its ability to do so. It explains why people tattoo Harley-Davidson logos on their bodies. It provides a clearer understanding not just of how Southwest Airlines created the most profitable airline in history but why the things it did worked.

It all starts with Why.

Before we can explore its applications, let me first define the terms, starting from the outside of the circle and moving inward.

WHAT: Every single company and organization on the planet knows WHAT they do. This is true no matter how big or small, no matter what industry. Everyone is easily able to describe the products or services a company sells or the job function they have within that system. WHATs are easy to identify.

HOW: Some companies and people know HOW they do WHAT they do. Whether you call them a "differentiating value proposition," "proprietary process" or "unique selling proposition," HOWs are often given to explain how something is different or better. Not as obvious as WHATs, many think these are the differentiating or motivating factors in a decision. It would be false to assume that's all that is required. There is one missing detail:



WHY: Very few people or companies can clearly articulate WHY they do WHAT they do. When I say WHY, I don't mean to make money — that's a result. By WHY I mean what is your purpose, cause or belief? WHY does your company exist? WHY do you get out of bed every morning? And WHY should anyone care?

When most organizations or people think, act or communicate, they do so from the outside in, from WHAT to WHY.

But not the inspired companies.

I use Apple Inc. frequently as an example simply because they have broad recognition and their products are easy to grasp and compare to others. What's more, Apple's success over time is not typical. Their ability to remain one of the most innovative companies year after year combined with their uncanny ability to attract a cultlike following makes them a great example to demonstrate many of the principles of The Golden Circle.

I'll start with a simple marketing example.

A marketing message from Apple, if they were like everyone else, might sound like this:

> *We make great computers.*
>
> *They're beautifully designed, simple to use and user-friendly.*
>
> *Wanna buy one?*

It's not a very compelling sales pitch, but that's how most companies sell to us.

But that is not what the inspiring leaders and organizations do. Every one of them, regardless of size or industry, thinks, acts and communicates from the inside out.

Let's look at that Apple example again and rewrite the example in the order Apple actually communicates. This time, the example starts with WHY:

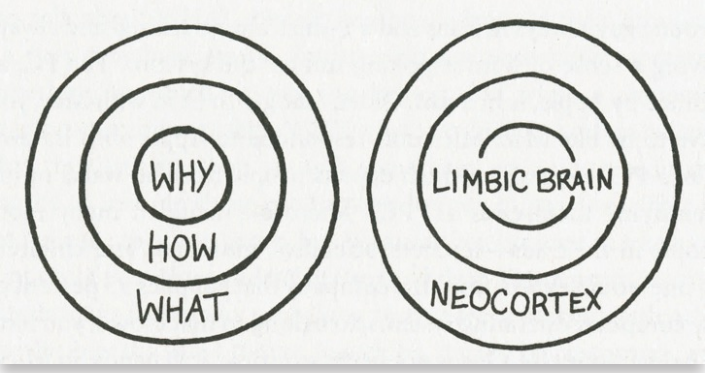
> *Everything we do, we believe in challenging the status quo. We believe in thinking differently.*
>
> *The way we challenge the status quo is by making our products beautifully designed, simple to use and user-friendly.*
>
> *And we happen to make great computers.*
>
> *Wanna buy one?*

Apple not only reverses the order of the information, their message also starts with WHY, the purpose, cause or belief that has nothing to do with WHAT they do.

Knowing your WHY is not the only way to be successful, but it is the only way to maintain a lasting success and have a greater blend of innovation and flexibility. When a WHY goes fuzzy, it becomes much more difficult to maintain the growth, loyalty and inspiration that helped drive the original success. By difficult, I mean that manipulation rather than inspiration fast becomes the strategy of choice to motivate behavior.

This Is Not Opinion, This Is Biology

When a decision feels right, we have a hard time explaining why we did what we did. The part of the brain that controls decision-making doesn't control language, which is why we rationalize "gut" decisions that "feel" right. Decision-making and the ability to explain those decisions exist in different parts of the brain. There is no part of the stomach that controls decision-making; it all happens in the limbic brain.



It's What You Can't See That Matters

In focus groups, the makers of laundry detergent asked consumers WHAT they wanted from detergent, and consumers said whiter whites and brighter brights. So brands attempted to differentiate HOW they got your whites whiter and brights brighter by trying to convince consumers that one additive was more effective than another. No one knew exactly what was driving their behavior. That little nugget wasn't revealed until many years later when a group of anthropologists hired by one of the packaged-goods companies revealed that all those additives weren't in fact driving behavior.

Products with a clear sense of WHY give people a way to tell the outside world who they are and what they believe. Remember, people don't buy WHAT you do; they buy WHY you do it. If a company does not have a clear sense of WHY, then it is impossible for the outside world to perceive anything more than WHAT the company does. And when that happens, manipulations that rely on pushing price, features, service or quality become the primary currency of differentiation.

Clarity, Discipline and Consistency

Starting with WHY is just the beginning. There is still work to be done before a person or an organization earns the right or ability to inspire. For The Golden Circle to work, each of the pieces must be in balance and in the right order.

Clarity of WHY

If the leader of the organization can't clearly articulate WHY the organization exists in terms beyond its products or services, then how does he expect the employees to know WHY to come to work and WHY customers should buy? To inspire starts with the clarity of WHY.

Discipline of HOW

Once you know WHY you do what you do, the question is HOW will you do it? HOWs are your values or principles that guide HOW to bring your cause to life. HOW we do things manifests in the systems and processes within an organization and the culture. Understanding HOW you do things and, more importantly, having the discipline to hold the organization and all its employees accountable to those guiding principles, enhances an organization's ability to work to its natural strengths. Understanding HOW gives greater ability.

Consistency of WHAT

Everything you say and everything you do has to prove what you believe. A WHY is just a belief. That's all it is. HOWs are the actions you take to realize that belief. And WHATs are the results of those actions — everything you say and do: your products, services, marketing, PR, culture and whom you hire. If people don't buy WHAT you do but WHY you do it, then all these things must be consistent.

Three Degrees of Certainty

When we can only provide a rational basis for a decision, when we can only point to tangible elements or rational measurements, the highest level of confidence we can give is, "I *think* this is the right decision." That would be biologically accurate because we're activating the neocortex, the "thinking" part of our brain.

When we make gut decisions, the highest level of confidence we can offer is, "The decision *feels* right," even if it flies in the face of all the facts and figures. Again, this is biologically accurate because gut decisions happen in the part of the brain that controls our emotions, not language. Ask the most successful entrepreneurs and leaders what their secret is, and invariably, they all say the same thing: "I trust my gut." However, the gut decision can only be made by a single person. It's a perfectly good strategy for an individual or a small organization, but what happens when success necessitates that more people be able to make decisions that feel right?

That's when the power of WHY can be fully realized. The

ability to put a WHY into words provides the emotional context for decisions.

The goal of business should not be to do business with anyone who simply wants what you have. It should be to focus on the people who believe what you believe. When we are selective about doing business only with those who believe in our WHY, trust emerges.

PART III: LEADERS NEED A FOLLOWING

The Emergence of Trust

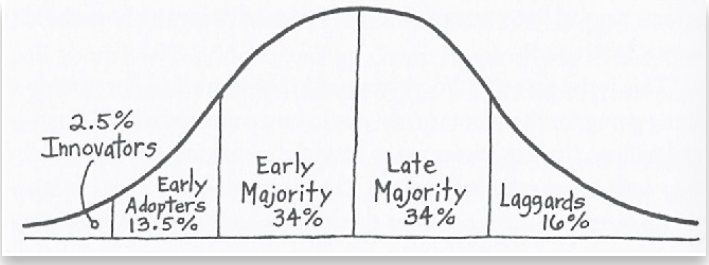
Whom do you trust more, someone you know or someone you don't know? What do you trust more, a claim made in a piece of advertising or a recommendation from a friend? Are these questions too easy? Then how about this one: why should anyone trust you?

Personal recommendations go a long way. We trust the judgment of others. It's part of the fabric of strong cultures. But we don't trust the judgment of just anyone. We are more likely to trust those who share our values and beliefs. When we believe someone has our best interest in mind because it is in their benefit to do so, the whole group benefits. The advancements of societies were based a great deal on the trust between those with a common set of values and beliefs.

So many decisions (and indeed contract negotiations) are based on an advertising industry measurement called a Q-score — a quotient of how well recognized a celebrity is, how famous they are, so to speak. The higher the score, the better the unaided awareness of the celebrity. This information alone is not enough. The clearer the spokesperson's own WHY is understood, the better ambassador they can be for a like-minded brand or company. But there is no measurement of a celebrity's WHY currently available, so the result is obvious. Unless the audience to which you are trying to appeal gets a sense of what that spokesperson believes, unless that spokesperson is "one of us," the enforcement may drive recognition, and it may even drive sales for the short term, but it will fail to build trust.

How A Tipping Point Tips

In his 1962 book Diffusion of Innovations, Everett M. Rogers was the first to formally describe how innovations spread through society. But the Law of Diffusion of Innovations explains much more than just the spread of innovation or technology. It explains the spread of ideas.



There is an irony to mass-market success, as it turns out. It's near impossible to achieve if you point your marketing and resources to the middle of the bell curve, if you attempt to woo those who represent the middle of the curve without first appealing to the early adopters.

That's because the early majority won't try something new until someone else has tried it first. This is why we have to drop our price or offer value-added services. We're attempting to reduce the risk tolerance of these practical-minded people until they feel comfortable to buy. That's what a manipulation is. They may buy, but they won't be loyal. Don't forget, loyalty is when people are willing to suffer some inconvenience or pay a premium to do business with you.

The goal of business then should not be to simply sell to anyone who wants what you have — the majority — but rather to find people who believe what you believe, the left side of the bell curve. They perceive greater value in what you do and will happily pay a premium or suffer some sort of inconvenience to be a part of your cause. They are the ones who of their own volition will tell others about you. If you reach them, the system tips, and the idea or product spreads.

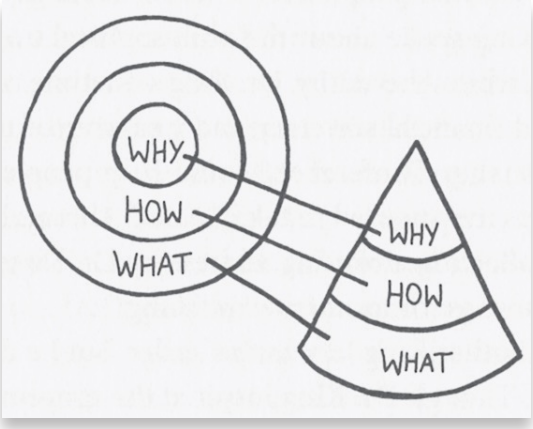
That 15 to 18 percent is not made up of people who are simply willing to buy the product. It is the percentage of people who share your beliefs and want to incorporate your ideas, your products and your services into their own lives as WHATs to their own WHYs. They look to WHAT you do as a tangible element that demonstrates their own purpose, cause or belief to the outside world. Their ability to easily see WHY they need to incorporate your products into their lives makes this group the most loyal customers. Get enough of the people on the left side of the curve on your side, and they encourage the rest to follow.

PART IV: HOW TO RALLY THOSE WHO BELIEVE

Start With WHY, But Know HOW

The Golden Circle is not just a communication tool; it also provides some insight into how great organizations are organized. If it is to provide any real value in how to build a great organization in our very three-dimensional world, the Golden Circle needs to be three-dimensional. The good news is, it is. It is, in fact, a top-down view of a cone.

The cone represents a company or an organization — an inherently hierarchical and organized system. Sitting at the top of the system, representing the WHY is a leader; in the case of a company, that's usually the CEO (or at least we hope it is). The next level down, the HOW level, typically includes the senior executives who are inspired by the leader's vision and know HOW to bring it to life. Don't forget that a WHY is just a belief; HOWs are the actions we take to realize that belief, and WHATs are the results of those actions.



Those Who Know WHY Need Those Who Know HOW

Walt Disney was a WHY-type, a dreamer whose dream came true thanks to the help of his more sensible older brother Roy, a HOW-type.

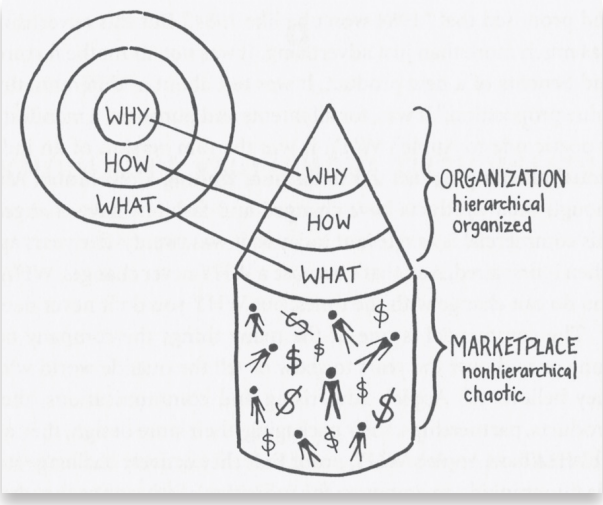
Walt Disney began his career creating cartoon drawings for advertisements but moved quickly to making animated movies. Like all WHY guys, Walt was busy thinking about what the future looked like and often forgot he was living in the present. "Walt Disney dreamed, drew and imagined, Roy stayed in the shadow, forming an empire," wrote Bob Thomas, a Disney biographer. "A brilliant financier and businessman, Roy helped turn Walt Disney's dreams into reality, building the company that bears his brother's name."

HOW-types don't need WHY–types to do well. But WHY-guys, for all their vision and imagination, often get the short end of the stick. Without someone inspired by their vision and the knowledge to make it a reality, most WHY-types end up as starving visionaries, people with all the answers but never accomplishing much themselves.

Although so many of them fancy themselves visionaries, in reality most successful entrepreneurs are HOWtypes. Ask an entrepreneur what they love about being an entrepreneur, and most will tell you they love to build things. That they talk about building is a sure clue that they know HOW to get things done. But most companies, no matter how well built, do not become billion-dollar businesses or change the course of industries. That is all you need.

Know WHY. Know HOW. Then WHAT?

The leader sitting at the top of the organization is the inspiration, the symbol of the reason we do what we do. They represent the emotional limbic brain. WHAT the company says and does represents the rational thought and language of the neocortex. Just as it is hard for people to speak their feelings, like someone trying to explain why they love their spouse, it is equally hard for an organization to explain its WHY. The part of the brain that controls feelings and the part that controls language are not the same. Translated into business terms, this means that trying to communicate your differentiating value proposition is really hard.



Put bluntly, the struggle that so many companies have to differentiate or communicate their true value to the outside world is not a business problem; it's a biology problem. And just like a person struggling to put her emotions into words, we rely on metaphors, imagery and analogies in an attempt to communicate how we feel. Absent the proper language to share our deep emotions, our purpose, cause or belief, we tell

stories. We use symbols. We create tangible things for those who believe what we believe to point to and say, "That's why I'm inspired." If done properly, that's what marketing, branding and products and services become: a way for organizations to communicate to the outside world. Communicate clearly, and you shall be understood.

Communication Is Not About Speaking, It's About Listening

There are people who walk around with Harley Davidson tattoos on their bodies. Some of them don't even own the product. The reason is simple. After years of Harley being crystal clear about what they believe, after years of being disciplined about a set of values and guiding principles, and after years of being doggedly consistent about everything they say and do, their logo has become a symbol. It no longer simply identifies a company and its products; it identifies a belief.

Most companies have logos, but few have been able to convert those logos into meaningful symbols. Because most companies are bad at communicating what they believe.

For a logo to become a symbol, people must be inspired to use that logo to say something about who they are and what they believe.

The Celery Test

We often look for the best practices of others to help guide us. But it is a flawed assumption that what works for one organization will work for another.

It is not just WHAT or HOW you do things that matters; what matters more is that WHAT and HOW you do things is consistent with your WHY. Only then will your practices indeed be best.

Imagine you go to a dinner party, and somebody comes up to you and says, "You know what you need in your organization? M&M's. If you're not using M&M's in your business, you're leaving money on the table."

Somebody else comes up to you and says, "You know what you need? Rice milk. The data shows that all the people are buying rice milk these days. You should be selling rice milk in this economy."

While you're standing over the punch bowl, yet another person offers some sage advice: "Oreo cookies," he says. "We made millions from implementing Oreo cookies in our organization. You've got to do it."

Still somebody else comes up to you and says, "Celery. You've got to get into celery."

You get all this great advice from all these highly accomplished people. Some of them are in the same industry. Some of them are more successful than you. Some of them have offered similar advice to others with great success. Now, what do you do?

You go to the supermarket, and you buy celery, rice milk, Oreos and M&M's. You spend a lot of time at the supermarket walking the aisles. You spend a lot of money because you buy everything. But you may or may not get any value from some or all of these prod-ucts; there are no guarantees.

But one thing's for sure: when you're standing in line at the supermarket with all of these items in your arms, your celery, rice milk, Oreos and M&Ms, people will walk right past you, and nobody can see what you believe.

But what if you knew your WHY before you went to the supermarket? What if your WHY is to do only things that are healthy? To always do the things that are good for your body? You'll get all the same good advice from all the same people; the only difference is, the next time you go to the supermarket, you'll buy only rice milk and celery. Those are the only products that make sense. It's not that the other advice isn't good advice; it's just not good for you.

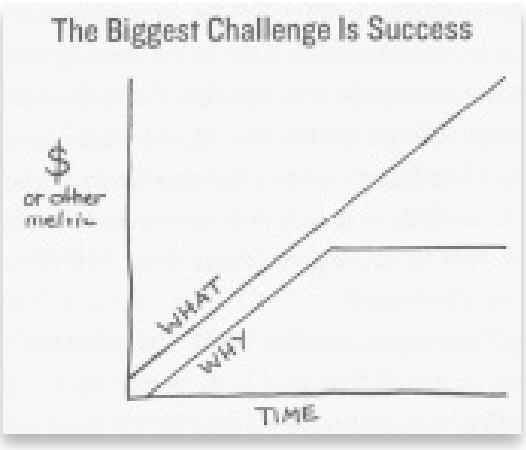
Filtering your decisions through your WHY, you spend less time at the supermarket, and you spend less money, so there's an efficiency advantage also. You're guaranteed to get value out of all the products you bought. And, most importantly, when you're standing in line with your products in your arms, everybody can see what you believe. Others who are healthy will see you as someone like them.

PART V: THE BIGGEST CHALLENGE IS SUCCESS

When WHY Goes Fuzzy

The single greatest challenge any organization will face is … success. When the company is small, the founder will rely on their gut to make all the major decisions. But as the organization grows, as it becomes more successful, it becomes physically impossible for one person to make every major decision. Not only must others be trusted and relied upon to make big decisions, but those people will also start making hiring choices. And slowly but surely, as the megaphone grows, the clarity of WHY starts to dilute.

The moment at which the clarity of WHY starts to go fuzzy is the split. At this point, organiza-tions may be loud, but they are no longer clear.



Microsoft has experienced a split but is not so far down the line that it can't be put back on track. There was a time not too long ago that people at Microsoft showed up at work every day to change the world. And they did. What Microsoft achieved, putting a PC on every desk, dramatically changed the way we live. But then their WHY went fuzzy. Few people at the company today are instructed to do everything they can to help people be more pro-ductive so that they can achieve their greatest potential. Instead, Microsoft became just a software company.

Good Successions Keep the WHY Alive

Successful succession is more than selecting someone with an appropriate skill set — it's about finding some-one who is in lockstep with the original cause around which the company was founded. Great second or third CEOs don't take the helm to implement their own vision of the future; they pick up the original banner and lead the company into the next generation. That's why we call it succession, not replacement. There is a continuity of vision.

PART VI: DISCOVER WHY

The Origins of a WHY

Just as Apple's WHY developed during the rebellious 1960s and '70s, the WHY for every other individual or organization comes from the past. It is born out of the upbringing and life experience of an individual or small group. Every single person has a WHY, and every single organization has one too. An organization, don't forget, is one of the WHATs, one of the tangible things a found or group of founders has done in their lives to prove their WHY.

Every company, organization or group with the ability to inspire starts with a person or small group of people who were inspired to do something bigger than them-selves. Gaining clarity of WHY, ironically, is not the hard part. It is the discipline to trust one's gut, to stay true to one's purpose, cause or beliefs. Remaining com-pletely in balance and authentic is the most difficult part. The few who are able to build a megaphone, not just a company, around their cause are the ones who earn the ability to inspire. In doing so, they harness a power to move people that few can even imagine. Learning the WHY of a company or an organization or understand-ing the WHY of any social movement always starts with one thing: you.

The New Competition

If you follow your WHY, then others will follow you.

All organizations start with WHY, but only the great ones keep their WHY clear year after year. Those who remember WHY they were founded show up to the race every day to outdo themselves. The pursuit, for those who remember WHY they are running the race, is not for the medal or to beat someone else but to advance their own cause.

What if the next time someone asks, "Well why should I do busines with you?" we answer, "Our goal is to find customers who believe what we believe and work together so that we can all succeed. We're looking for people to stand shoulder-to-shoulder with us in pur-suit of the same goal. We're not interested in sitting across a table from each other in pursuit of a sweeter deal. And here are the things we're doing to advance our cause," and then the details of HOW and WHAT you do follow. But this time, it started with WHY.

Imagine if every organization started with WHY. Decisions would be simpler. Loyalties would be great. Trust would be a common currency. If our leaders were diligent about starting with WHY, optimism would reign, and innovation would thrive. As this book illus-trates, there is precedence for this standard. No matter the size of the organization, no matter the industry, no matter the product or the service, if we all take some responsibility to start with WHY and inspire others to do the same, then, together, we can change the world.

And that's pretty inspiring.

Simon Sinek is leading a movement to inspire people to do what inspires them. Sinek is also an adjunct staff member of the RAND Corporation and teaches graduate-level strategic communications at Columbia University.

Still Surprised

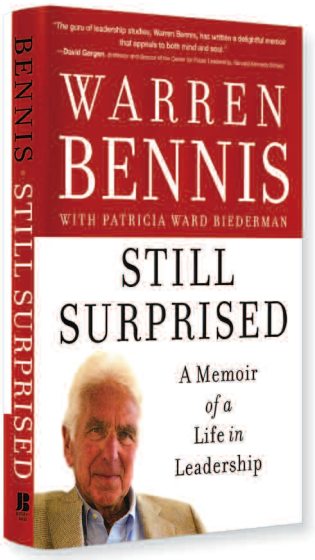
A Memoir of a Life in Leadership



by Warren Bennis with Patricia Ward Biederman

THE SUMMARY IN BRIEF

If many of our organizations have become more democratic, more resilient, more adaptable, and more transparent, it is because Warren Bennis has provided much of the intellectual and ethical fuel over the past half-century to our most influential and successful leadership experts and practitioners.

Still Surprised illuminates how the world-changing ideas of leadership guru Warren Bennis and his colleagues resulted from the personal crucibles of their own encounters, events and experiences. Bennis shares what he has learned by leading, and by mentoring and teaching future leaders. By detailing his own journey of self-discovery, Bennis shows how leaders must define and redefine themselves in the face of surprises and challenges.

Still Surprised is a memoir of our times, seen through the prism of Bennis's own development during crucial inflection points of recent decades. His own medley of insecurity, hard work, determination to invent a new life and growing capacity to engage others all came into play amidst transformations within our society.

The art of leading well is not based on quick formulas for moving people, Bennis notes; it flows from becoming an integrated person, one who is able to discover and define — and redefine — oneself in the face of surprises and challenges. The annals of modern leadership would be incomplete if our foremost authority on leadership had not detailed his own journey of self-discovery, as he finally does here — to the delight of devotees and admirers around the globe.

IN THIS SUMMARY, YOU WILL LEARN:

- The necessary qualities of leadership and how they are developed.
- How the father of leadership defined and shaped leadership theory.
- The evolution of leadership and social science.
- How self-discovery enhances leadership skills.

THE COMPLETE SUMMARY: **STILL SURPRISED**

by Warren Bennis with Patricia Ward Biederman

The authors: Warren Bennis is the founding chairman of USC's Leadership Institute and distinguished professor of business administration at the USC Marshall School of Business, and advisory board chairman of the Center for Public Leadership at Harvard's Kennedy School.

Patricia Ward Biederman, a former staff writer at *The Los Angeles Times*, is a prize-winning journalist and columnist.

Prelude

I began writing this memoir at 85, but its roots go back to my college days. I wrote a piece for the school's literary magazine and was stunned that I could write my way into the consciousness of others. My love of stories developed later in life and allowed me to escape an uneventful existence.

As Sigmund Freud noted, many children fantasize that they are adopted. They imagine themselves the offspring of different parents, switched at birth, found in a cabbage patch — anything that allows them to distance themselves from their actual families. I realize I was one of those would-be foundlings, who dreamed from an early age of a life different from the hard, ordinary existence of my parents and brothers.

World War II started me on that journey. In 1943, I went into the Army, less frightened at the prospect of going to war than eager to see where life would take me. The war offered me the opportunity, at 19, to lead others. Leadership is a performance art and most of us become leaders only when we are cast in that role.

I survived the war and went to Antioch College, where I met Doug McGregor. He made sure I got into MIT, where I studied with economist Paul Samuelson. With Doug and others, I did work on group dynamics that ushered in today's more collegial learning organizations.

I became president of the University of Cincinnati in 1971, but realized that administration was not my calling. I wanted to think, write and teach for a living. For the last 30 years, I have been at the University of Southern California.

Until I wrote this book, I didn't appreciate how World War II changed the world. Most American soldiers came home full of hope and optimism, and the new veterans' benefits created the American middle class.

The Crucible of War

In 1944, I was the rawest second lieutenant is the U.S. Army. Eighteen months earlier, I had been a confused teenager with an obsession with pop music. As my 18th birthday neared, I decided to enlist in the Army Specialized Training Program. The program began with basic training, then four years in college acquiring skills the military needed.

By December 1944, I was somewhere in southern Germany, a teenage replacement officer in the U.S. Army's 63rd Infantry Division. My first moments as a leader were low-key to the point of invisibility. I arrived at my platoon and put my sleeping bag on the floor alongside my men. I had made a quiet, unobtrusive entrance. I wonder how many American officers failed to survive simply because they couldn't stop rubbing their superior rank in the faces of their men.

The first sergeant told me, "We'd like you to follow the captain around for a couple of days, just to see what he's doing." Captain Bessinger was one of the finest leaders I have ever known. One of the most important things he did was listen to his men — a good way to get valuable information, but also evidence of respect for them.

Lessons of War

Although I didn't appreciate it at the time, I was lucky to have been trained as an officer at Fort Benning in Columbus, Ga. I learned the value of organization. I learned how to work as part of a team. I learned that one of my most important jobs was to take care of my people.

Being a leader might make you rich and famous, but it could also get you killed. Oddly enough, I was rarely afraid as a soldier. When I put on that uniform and the gold bars that went with it, I instantly became an officer in the U.S. Army. It empowered me to try on selves that nothing in my past had suggested to me.

I stayed in the Army after the war was over and ended up in Frankfurt, Germany. I participated in a project that may have planted the seeds of my later professional interests in leadership and the social sciences. I interviewed soldiers about their morale, the quality of the leaders they served under, what they wanted to do in the future and the like. I also spent a lot of time in the officers club, where I began educating myself for what I hoped lay ahead. I realized I didn't want my old life back. I wanted to invent a new one. ●

Launch

Antioch College called to me long before I went there. Antioch was progressive and its students alternated studying on campus with working at real jobs for real pay.

When I first arrived at Antioch in Yellow Springs, Ohio, I felt not fearful, but vulnerable. I was a little at sea without a uniform to announce who I was to others or help me navigate this fascinating but demanding new world. If I was going to succeed in this new role of college student, I first had to figure out how it was done. I began to closely observe the people around me who had qualities I admired.

An Electric Environment

Antioch was the least boring place I have ever been. It was electric, always abuzz. Every Antiochan had his or her opinion and passionately defended it. The sense of engagement was thrilling.

At Christmastime in 1947, my mother paid me a visit. My dad was working for his nephew, making wooden cabinets for radios and the hot new thing, televisions.

"Warren," she said, "your father really needs you. I'm worried about him. He's not getting any younger and he's working too hard. I think you should come home and give him a hand." I knew that if I left school, I would lose everything. I loved my father, but I didn't want to *be* him. "Mother," I said quietly, but with great certainty, "I can't do that. I have to finish my education."

My First Mentor

Doug McGregor arrived on campus as president in the fall of 1948. Being Doug's protégé was the next role that would shape my life. In my junior year, I asked Doug for a tutorial on group dynamics. In these weekly meetings I really got to know him. It was his character and manner that drew people to him. He was warm but authoritative, and dependably, reflexively candid. He never flinched, no matter how unflatteringly other people spoke to or about him. He seemed energized by criticism, which he would dispassionately address, then act on the valid points and forget the rest.

Doug shared a firsthand account of the revolution then going on in the social sciences. In places like MIT, groundbreaking work was being done using rigorous scientific methods to look at behavioral issues, many raised by the war.

Doug was increasingly set on my going to MIT. I was also encouraged by a teaching assistant, Henry Broude, later a distinguished economist at Yale. Henry suggested either Harvard or MIT. I didn't think I had the math and science background to get into MIT. Doug took care of that. He wrote a three-page letter of recommendation that apparently had the power to work miracles. Not everyone was as thrilled by my acceptance as Doug was. Distinguished economist Charles Kindleberger told me, at our first meeting, "We didn't exactly throw our hats in the air when we saw your application." ●

Rites of Passage

"How could you not go to Harvard?" my mother demanded. I went to MIT largely because of Doug. But once I arrived, I had my doubts. Part of the problem was where I lived. Antioch had been supportive, nurturing and bucolic. Now *[with my first wife Lucille]* I was living in a truly dreadful apartment near Kendall Square.

Of all my demanding classes, Paul Samuelson's economics courses were the toughest. Economics was undergoing a tectonic shift in those days. Samuelson had transformed the field with his emphasis on mathematical models. By ordinary standards, I was good at math, but completely out of my league at MIT.

A City Abuzz

It took a while, but I fell in love with Cambridge, Mass. The Boston-Cambridge area was the center of the

scientific and technological world. At MIT, I took my degree in both economics and social science, doing a third of my course work at Harvard.

A magnet for home-grown talent, Cambridge also sheltered some of the most brilliant minds Adolf Hitler had driven out of Europe. Thanks in large part to Doug, I had the most important gift any student can have: access.

The early 1950s would soon be stereotyped as an age of zombies in gray flannel suits, but it was actually a period of enormous social change and optimism, especially for the emerging middle class. As social scientists, we believed we had the tools to uncover the secrets of human behavior. The war was over, thank God, but hugely important questions still demanded answers.

I was grateful to have access to Harvard's resources, but there was an informality at MIT that suited me well. MIT didn't aspire to be Harvard. MIT was less concerned about departmental boundaries and an individual's place in the academic pecking order than about solving the problem at hand. A friend once observed that Harvard attracted brilliant people while MIT allowed brilliant people to accomplish significant things.

A Move to London

In 1952, I won a Hicks fellowship to do my second year of graduate work at the London School of Economics. The one person I already knew in London was A.T.M. "Tommy" Wilson, director of London's much talked about Tavistock Institute of Human Relations. I was invited to participate in a training group at the institute, which was doing groundbreaking work on group dynamics.

The Tavistock Institute was unusual in marrying psychoanalytic theory with group dynamics. That year I learned one of the great, simple truths of group dynamics from the Institute's Wilfred Bion, a lesson all leaders forget at their peril. The leader of a group must never get overly involved with its sickest member. The leader who is hijacked by extreme pathology pays a terrible price. The group will become polarized. Focusing on the sickest individual is the worst error a leader can make because it usurps the rightful authority of the healthier members to handle the situation.

For reasons I still can't sort out, I experienced terrible anxiety that year in London. I couldn't bear to be alone. I would lie awake, unable to sleep until four in the morning. Tommy Wilson set me up with Henry Dicks, an analyst from the Tavistock Clinic. We met once a week and he counseled me face-to-face. Dicks urged me to continue analysis when I returned to Cambridge.

My stay in London prepared me to dive back into the intellectual scrum of Cambridge. First, I moved into a pleasant duplex and, second, I found an analyst. Today, it is hard to imagine how exciting psychoanalysis once was. Analysis operated on the attractive premise that introspection and insight could improve the quality of anyone's life.

As a graduate student, I was short on money but I felt I desperately needed analysis. As part of the certification process of the American Psychoanalytic Association, each prospective practitioner had to analyze four "control patients" under supervision by an experienced analyst. I applied to become a control patient. Later, I learned that the ideal control patient was neurotic, but not so screwed up as to be incurable. Clearly, I was their guy.

I began meeting five times a week with Dr. Sidney Kligerman. For the first six months, Dr. Kligerman called me Walter and I duly corrected him. If you have ever been analyzed, you know how intimidating the process can be. Unless you choose to speak, the session can become a long, unnerving silence broken only by the ticking of the clock.

I remember feeling achingly empty in the early sessions. I soon began to speak, but I didn't sound authentic, even to myself. And then I had an epiphany. I began to formulate and answer questions that suddenly seemed relevant. It wasn't long before I looked forward to shaping my story and telling it in daily installments.

Understanding Groups

I had a deepening belief that you can't fully understand human behavior without understanding groups. Those of us studying groups practically vibrated with the sense that we were about to break through to some new transformative truth. We tried to outdo each other in designing the most creative, most elegant experiments.

This was a glorious time for social science. A new breed of social scientists were making discovery after discovery about human behavior. Social psychologist Leon Festinger wouldn't articulate his theory of cognitive dissonance (that the mind tries to reduce stress by reconciling beliefs and behavior) until the mid-1950s. But by 1950, he and his colleagues had already looked at how relationships form and established that proximity was the most important factor. In studies of college dorms, they found that the people who lived closest to the shared bathroom — the ones most likely to be encountered by the largest number of their fellow students — were the most popular.

As soon as I returned from England, I started on my dissertation. I decided to look at the impact time had on the quality of funded research. My hypothesis was that more time meant more inventiveness. I was thrilled by the stir the research caused when I read a paper based on it at the 1956 meeting of the American Sociological Association. The audience, which included leaders in the field, howled with laughter. My guess is that they thought I was satirizing the new breed of academic entrepreneurs. I am not sure they knew that the time-honored professional paradigm was shifting under their feet.

Completing my dissertation was another genuine rite of passage. My universe had both expanded and become more accessible. Doug McGregor had opened the door to this life of constant surprise and invited me in. He had given me the world and I remain grateful to this day.

My Teaching Career Begins

With my new doctorate in hand, I taught at MIT for the academic year 1955-56, then joined the faculty at Boston University. At BU, where I taught from 1956 to 1959, I worked closely with Ken Benne and Bob Chin in the Human Relations Center. Our conversations produced a book of readings, *The Planning of Change*, which the three of us edited and contributed to. My first book, it was published in 1961 and is most often remembered for popularizing the term *change agent*. ●

Great Groups

It must have been Doug McGregor who first told me about T-groups, groups that scrutinize themselves as they evolve. Early on, I was convinced that T-groups were a useful tool both for studying group dynamics and for bringing about change.

The T-group (for Training group) was the invention of Kurt Lewin and his protégés. They realized that a group that scrutinized its own process as it formed and changed was something new and valuable. To apply for grants, Lewin and the others needed an institute or similar entity. So they created the National Training Laboratories (NTL) for Group Dynamics. Lee Bradford found a home for the new organization at a private school in Bethel, Maine, that NTL rented each summer.

Even before I finished my dissertation, Herb Shepard and I led T-groups with master's candidates at MIT. In the best of these groups, participants were open, respectful of each other, candid, able to deal with the pressure of creating their own group, able to express their feelings, and also able to articulate what they observed about themselves, the others and the group itself.

The Stages of T-Groups

Every T-group passes through two stages, each with predictable subphases. The first stage has to do with shifts in power and control within the group. There are three subphases of the power stage. The first is dependence. I, as leader, would say something like, "We're here to learn about group dynamics, and we're going to do it by learning about ourselves and observing how our group develops over time." Then I'd be silent. The participants were used to an agenda and without it they seemed lost. The next phase is counterdependence. Group members would get angry and withdrawn. Somehow, participants almost always managed to discover how to be a group on their own. We called this final subphase of stage 1 interdependence.

There are also three subphases of stage 2, which deals with intimacy and openness. At first, in what we called the "faux personal" subphase, everybody would try to be nice to everyone else. In the counterpersonal subphase, a lot of anger was expressed and factions often formed. In the consensual validation subphase, members of the group interacted authentically with each other.

Summer Camp for Social Scientists

In 1955, Lee Bradford wrote to invite me to join Bethel's summer staff. On paper, Lee was the National Education Association's director of adult education, and NTL became a division of the association. Bethel's growing reputation was further enhanced by Doug's presence there, and occasional appearances by Abe Maslow and other social science luminaries.

Almost immediately, Bethel quickly became a summer camp for some of the best social scientists in the world. When we weren't leading groups at Bethel, we were talking about them. It was like taking part in the best seminar ever, one that wasn't being held any place else.

The T-group experience almost always *felt* transformative. People often emerged feeling sibling-close to at least some other participants. As a group leader, I learned an enormous amount about group dynamics and human behavior, but the most important thing I learned was how to truly listen. I feel that I am less a creative thinker than a creative listener. Paying undivided, respectful attention inevitably makes you more empathic, one of the most important and undervalued leadership skills.

Using white boards or drawing on the paper-covered walls, trainers recorded group behavior in a visual short-

hand of circles, arrows and key words. When a group coalesced and took off, you felt as though human nature was evolving before your eyes.

I think there were two reasons NTL succeeded for so many decades. T-groups were candid but not cruel, and the staff was made up, by and large, of serious scholars. Yet T-groups never caught the public imagination in the United States as I thought they might.

The Passing of a Mentor

Doug was urging me to come back to MIT. Harvard Business School offered me a faculty position with tenure, and Doug countered by assuring me I would get tenure when I returned to MIT.

On Oct. 13, 1964, Caroline McGregor called me. "Doug has had a massive heart attack," Caroline said. "The ambulance just took him to the hospital. Warren, they say he may not live." His death at only 58 was a terrible intellectual loss. Caroline asked me to give the eulogy at his memorial service.

When I returned to Cambridge, I succeeded Doug as head of the organizational studies area, but I was becoming restless at MIT. Maybe it was time for me to try leading an organization, not just analyzing it. ●

Fighting the Bull

My friends were baffled by my decision, in 1967, to become provost of social sciences at the State University of New York at Buffalo. But I had long wanted to see if I could successfully lead the kind of organization I regularly analyzed. I wanted to test my theories and see if I would act on them in a crisis.

Around that time, I came across a poem by Robert Graves, who wrote so compellingly about the leaders of ancient Rome. In it he writes:

Experts ranked in serried rows
Fill the enormous plaza full;
But only one is there who knows
And he's the man who fights the bull.

It was time to fight the bull.

New president Martin Meyerson had a grand plan for turning western New York's not-quite-first-tier university into "the Berkeley of the East." I admired how the plan combined a commitment to the highest academic standards with a willingness to try new ways of teaching, learning and living together. If I became provost, I would launch an innovative new doctoral program in the applied social sciences, something that I had wanted to do for years.

The reasons Martin's plan was never fully realized are many, including a tanking economy, endless campus unrest and Martin's unanticipated move to become president of the University of Pennsylvania in 1970. But those of us he recruited were also to blame. We failed to see that the zeal that united us also alienated everyone outside the inner circle. We should have courted and reassured Buffalo's many gifted veterans. Instead, we made the same mistake that doomed CEO Carly Fiorina at Hewlett-Packard. We forgot that no established organization is a blank canvas. We failed to master the culture at Buffalo before we tried to change it.

Buffalo was four years of tumult. The excitement of rebuilding the university was tempered by one crisis after another. In the fall of 1969, Martin decided to head a task force on higher education for the Ford Foundation and asked me to become acting executive vice president. For almost the entire spring semester of 1970, the campus was a battleground. Students protested and the Buffalo police responded.

The Presidency at Cincinnati

I applied for but didn't get presidencies at Northwestern, Buffalo and Boston University. A mutual friend told me Martin had said negative things about me to both the Northwestern and Boston University search committees. I was terribly hurt. After that, I asked Martin if he would send me copies of any letters he wrote about me to search committees. Cincinnati offered me the presidency anyway.

Looking back, I realize there is a sense in which I lost my innocence at Buffalo. For the first time, I felt that I had been betrayed. For decades after Buffalo, Martin and I didn't contact each other. I finally called Martin in 2002 and we arranged to meet. We sat and talked contentedly for two hours. We were not the same men we had been then and much of what happened in Buffalo was painful to recall. So we talked about other things. Nothing was resolved, but something was put behind us, something was better. ●

Going State

I was thrilled at the prospect of becoming president of the University of Cincinnati in the fall of 1971. I was still hungry to do what Doug had done at Antioch. I wanted to lead with the passion and skills of a change agent, and create a university that would reflect all that the social sciences had taught us about human dynamics since World War II. I quickly learned that before I could lead, I had to manage.

Within my first hundred days, I faced a crisis that could have permanently damaged the university. As I walked toward the door to exit my office, my secretary buzzed me. "Senator [Edward] Kennedy's office is on the phone," she said. "I think you better take it." The Kennedy staffer asked if I was aware of the problematic experiments currently being conducted by "your medical school." He said that patients with terminal cancer were being subjected to whole body radiation at the medical school's teaching hospital.

I learned that the study had major procedural flaws and that the university had no formal mechanism for insuring that all its research was conducted in an ethical manner. Provost Robert O'Neill explained how vulnerable both the university and its president would be in a congressional hearing.

The crisis lingered for almost a full academic year. We contacted the National Academy of Sciences, which sent a committee that studied the research and advised us to stop it immediately. We did. Early in 1972, Ohio Governor John Gilligan and I flew to Washington and sat with Kennedy, detailing how my staff and I had responded to the discovery that such disturbing research was being done on our campus. In the end, Kennedy was satisfied with the steps we had taken. There was no more talk of a congressional investigation.

As president of the university, I became a public person, a role I had never played before, but one that quickly seduced me. My becoming president of the city's beloved university was seen by many in the Jewish community as proof of progress.

But I was too busy with university business to pay much attention to how the public viewed me. I began recruiting. We also decided to start giving honorary degrees to worthy people throughout the year, asking them to stay on campus for a week and give master classes, performances or lectures, as well as interacting with faculty and students.

Becoming a State University

By 1975, it became clear that the only way for the university to grow, even survive, was to get additional funds on an ongoing basis. Akron and Toledo had become full state universities. I realized that we had to go state or die.

I knew I would have to become a public advocate and recruit as many allies as possible. It was a tough fight that continued for more than two years. Finally, on June 8, 1976, the people of Cincinnati voted to make the city's university a state institution.

Making the Same Movie

In 2007, the University of Cincinnati invited me to return to receive an honorary doctorate. After the awards ceremony, they held a marvelous party for me. In attendance were many of the people who worked so hard 35 years ago to save the university by taking it state. Asked to make a few remarks, I told a story that spoke to the spirit of what we, all of us working together, had done. One of the guest speakers at the leadership course that President Steve Sample and I have co-taught at the University of Southern California was filmmaker Bob Zemeckis. During the class, someone asked Zemeckis which of his films he liked the best and why. He immediately answered *Forrest Gump*. Then he explained why. He said that everyone involved in the film — the writers, the camera operators, the actors, the gaffers, the dolly grips, the sound crew, even the caterers — had worked in sync to make it a success. As Zemeckis put it, "We were all making the same movie." That was the way the University of Cincinnati finally became financially secure and sustainable. We were all making the same movie.

Not long after, I had a life-changing realization. I was giving a lecture about my experiences as a university president. When I finished, Dean Paul Ylvisker, a towering figure in higher education, asked, "Warren, do you love being president of the University of Cincinnati?" I looked at Paul and admitted, "I don't know."

I realized I did not love being president of the University of Cincinnati. By 1977 I had decided to leave. I made an appointment with Governor James Rhodes so I could tell him first. I told him that I had promised the story to one of the Cincinnati papers and asked him to please keep my decision to himself until it was announced the next day. By the time I got back to Cincinnati, the story had already been leaked and reporters were at my door. ●

A Year at Sea

"I've always wanted to live on a houseboat," I told my old friend Lenny Duhl. It was 1979, a tumultuous year in many ways. On Feb. 17, while in London, I had what the Apothecary to the Queen, who examined me, described as "a moderately rough-ish heart attack."

There is nothing like nearly dying to make you wonder if the life you are living is the one you want to live. After Buffalo and Cincinnati, I was confident university administration was not for me. I was drawn to Northern

California, lured by both its first-rate academic institutions and the liberating counterculture that had been born there in the 1960s.

I moved to Sausalito, Calif. in August 1979. My year on the houseboat was a kind of emotional sabbatical, a time to shake off the old, try on the new, relax, recharge and decide what to do next.

Enter The Founder of "est"

I moved to Sausalito without a job. Then Werner Erhard, the controversial founder of est, called and asked me if I would do some consulting for him and his organization. After his seminars were frequently parodied for bullying participants and banning bathroom breaks, Werner was convinced that the future depended on creating a more mainstream program.

Werner hired me to do an anthropological study of est culture from the inside. I took my analysis very seriously, working on it for almost a year. I feared that Werner was producing a fair number of true believers and imitators rather than followers who could develop into leaders in their own right. That was the theme of my final presentation. I began by talking about the important role transference plays in leadership development. The presentation was heavy with irony, and the staff immediately got it and began to laugh. Werner was often harsh in his seminars, but that day he showed he could take it as well as give it.

Back to Work at USC

Back when I was recuperating in London, Jim O'Toole had asked me if I would consider joining the faculty at the University of Southern California (USC). I was increasingly drawn to California. The irresistible draw was the opportunity to work with the gifted faculty and students the school was increasingly attracting. I said yes.

So by mid-August, I had packed up, reluctantly returned the keys of the houseboat and caught a flight to Los Angeles. I was about to enter one of the most satisfying periods of my life — personally and professionally. ●

Coming Home

For the last three decades I've taught at USC.

Not long before coming to USC, I received a $100,000 grant from the Ralph Corbett Foundation. I decided to research and write a book on leadership. For the book that became *Leaders: Strategies for Taking Charge*, I interviewed 90 people. Most of the leaders I spoke to had sharp, nuanced insights into the skills and attributes that allow a person to engage others.

Entrepreneurs fear boredom more than chaos. They become anxious when things are too stable and often abandon the familiar for the risky.

In my bones, I knew how important leadership was and is. We are social animals and our packs need leaders. I decided to write another book on the subject. But this time I wanted to include social innovators and cultural leaders as well as business and political ones.

On Becoming a Leader was published in 1989. Soon it began showing up on best-seller lists. I realized that writing is a way to teach leadership on a much larger scale than one student at a time. Editors and reporters called me to comment on some CEO or political leader's latest success or failure. The cringe-making word guru, never applied to me before, began to pop up. Each opportunity created more.

Mentoring, Writing and Teaching

The past 30 years have been busy ones. I have tried to give students and younger colleagues the kind of life-changing support Doug McGregor and others have given me. Book projects allowed me to immerse myself in subjects that fascinate me. Ultimately, though, the single most rewarding thing I've done on campus has been co-creating and co-teaching a course on leadership with Steve Sample called "The Art and Adventure of Leadership."

It is strange the way a career develops over the years without your realizing it. You go to college. You get your diploma, go to graduate school and finish your dissertation. You get tenure, teach and do research. You write and, if you are fortunate, there is an audience for what you write. You discover something you're passionate about and people begin leaning close to hear your thoughts. At some point, you discover that you have become a name and all you did was work hard, get lucky, and stay alive.

The actuarial tables tell me I'm nearer the end than the beginning, but nothing is certain. I can't wait to find out what happens next. Every day I look around and I'm still surprised. ●

RECOMMENDED READING LIST

If you liked *Still Surprised,* you'll also like:

1. ***The Definitive Drucker* by Elizabeth Haas Edersheim.** Peter Drucker spent the last 16 months of his life speaking with Edersheim. *The Definitive Drucker* provides his thoughts about the development of modern business.

Stop Selling Vanilla Ice Cream

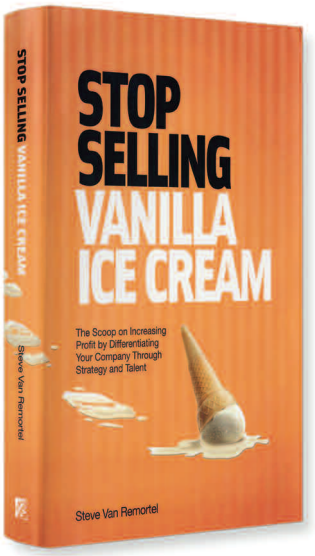
The Scoop on Increasing Profit by Differentiating Your Company Through Strategy and Talent



by Steve Van Remortel

THE SUMMARY IN BRIEF

If you are like most business owners and leaders today, you feel stuck working constantly "in" your business, for little return. Profit expert Steve Van Remortel has the solution to work "on" your business. The Stop Selling Vanilla Ice Cream process offers an easy-to-follow strategic planning and talent development methodology that leads to real differentiation delivered by a high-performance team. You will discover the answer to the most important strategic question: Why will a customer choose you over a competitor?

The unique planning methodologies in *Stop Selling Vanilla Ice Cream* address the business fundamentals of strategy and talent concurrently, because optimizing both leads to individual, team and organizational performance breakthroughs. Over 90 percent of Van Remortel's hundreds of clients experience an increase in sales and profits in the first year after completing the process. Those same results and the process to create them are now available to you.

IN THIS SUMMARY, YOU WILL LEARN HOW TO:

- Find your competence and create the differentiation so tangible that customers will choose you over your competitors.
- Adopt a talent management system that enables your organization to select, develop and retain the talent and skill sets needed to deliver your competence and strategy to achieve your goals.
- Develop and implement department plans that, when executed, accelerate the success of your organization.
- Create a culture of discipline and accountability within your organization.

Why You Must Stop Selling Vanilla Ice Cream

Are you selling vanilla ice cream? If you are, you are likely getting negotiated on price, losing customers to competitors and experiencing declining sales and profitability. As consumers we choose to go to certain stores or restaurants every day because they provide something you can't get anywhere else. Why would be it be any different for your business? You must differentiate yourself from competitors. Defining your competence, or as we call it your mint chocolate chip, is essential to the long-term success and prosperity of yourself, your family, your employees and their families, and your organization. It's time to stop the vanilla!

Over the last 20 years we have developed the tools and processes to help organizations stop selling vanilla ice cream. The combination of simultaneously taking your strategy and talent to the next level is what makes this process so unique and powerful. (We've made all the tools, templates and assessments available on our website: www.stopsellingvanillaicecream.com.)

There are five fundamentals of the Stop Selling Vanilla Ice Cream process that help define the organization's path from square one — where you are today — to greater prosperity and effectiveness:

1. Differentiation. Deliver a competence that creates a differentiation so clear that your customers consistently choose you over your competition.

2. Tangible Value. Your organization must consistently reinforce the tangible value, in dollars, that your competence delivers to current and prospective customers.

3. Talent Management. Implement a talent management system that enables your organization to identify, select, develop and retain the talent and skill sets necessary to execute and deliver your competence and plan.

4. Department/Tactical Plans. Develop and execute action plans to work "on" the business in each department of your organization rather than simply working "in" the business with regular daily duties.

5. Plan Execution. Implement a plan execution program to ensure an organizational culture of discipline and accountability. ●

The Power of Strategy + Talent

The book walks you through the four phases: planning process preparation, building the team and strategy development preparation, strategy development and strategy implementation.

• **Phase One: Planning Process Preparation.** Phase one is focused on collecting the content (specific issues and challenges of the organization) for the planning process. The planning team is selected from the leaders across the organization. The team members' function is two-fold in phase one: they complete a series of behavioral assessments that are part of the Talent Management System and complete a preplanning questionnaire. The advisor meets individually with each planning team member to review their preplanning questionnaire and debrief their behavioral assessment results. Through the questionnaires and interviews the advisor collects all the content to design the rest of the process to resolve the identified strategic challenges of

the organization. To complete phase one, members of the planning team prepare the financial analysis, sales analysis and market research in prep for the first team planning session.

• **Phase Two: Building the Team and Strategy Development Preparation.** Now that all the content and data has been collected, the planning team now comes together to prepare to develop the strategy of the organization. To develop the optimum strategy the team must be able to address the company's most sensitive issues. To accomplish this, the team completes a team development exercise we like to call "getting the team in their underwear." Each team member presents their behavioral survey results to the rest of the team, which creates the most candid and effective discussions the team has ever had. After building a more cohesive team through this exercise, the team prepares to develop the strategy of the organization by completing the internal analysis (values, strengths, weaknesses and financials), and external analysis (market research), so the team has all the information to develop the optimal strategy. The team completes phase two of the process by creating homework teams and reviewing the action plans each team will complete to prepare for phase three.

• **Phase Three: Strategy Development.** The strategy development phase of the process begins by having each homework team present their recommended competence, strategy and target markets for the organization. After each team presentation, the team starts developing the company strategy by deciding on the company's competence and target markets, the competition's area of competence, action plans to strengthen the competence and make it tangible to the target markets, and brand strategy that communicates their competence, mission statement and vision for the next 2-3 years.

• **Phase Four: Strategy Implementation.** The final phase defines the plan to take action via strategy implementation and department planning. The team designs the optimal functional organizational structure to achieve the vision, discusses the skill set voids that need to be addressed, processes and communication systems that need to be implemented, and a business planning calendar. Company goals are identified for the next year, and a method of measurement is established for each goal. Department plans are developed to ensure each department works on the business and guides the company towards its vision. Lastly, a plan execution review is established to create an ongoing culture of discipline and accountability in the organization. ●

Phase 1: Planning Process Preparation

Selecting the Planning Team

In many ways, this first step of selecting a planning team and an advisor is the most important in the process. Who makes up the planning team will define the direction of the company and the success of the process.

Is there an individual in your organization who is trusted by his or her peers, maintains objectivity in tough situations, and is effective in terms of organization and process? That person might be right for the role of advisor. If there is not a person internally who is capable of effectively leading the process, consider using an outside advisor you are comfortable with.

Optimizing Your Talent

Behavioral assessments, the foundation for the Talent Management System, ties together the strategy and talent. There are three parts of this assessment: behavioral styles, workplace motivators, and a soft skills indicator. The behavioral style component of the Talent Management System is called the DISC behavioral profile. DISC is an acronym for Dominance, Influence, Steadiness and Compliance. These are the four primary behavior modes and each is scored on a scale of 1 to 100. DISC is an assessment, not a test.

- **Dominance**: How you respond to problems and challenges.
- **Influence**: How you influence others to your point of view.
- **Steadiness**: How you respond to the pace of the environment.
- **Compliance:** How you respond to rules and systems.

The second set of results from the Talent Management System illustrates the six basic workplace motivators. An individual's top two workplace motivators drive their actions and decisions at work:

1. Theoretical: The primary driver is the discovery of knowledge and an appetite for learning.
2. Utilitarian: The driver is return on investment and time, efficiencies and money.
3. Aesthetic: The primary motivator for these individuals is form, harmony and the arts.
4. Social: The motivator is gaining satisfaction from helping people and eliminating conflict.
5. Individualistic: The primary driver is advancement and gaining power and influence.

6. Traditional: This driver measures an individual's desire for a system of living or principles.

The third component of the Talent Management System is the Soft Skills Indicator, which measures your clarity and understanding of the world and yourself. The factors in which you have the greatest clarity are the areas in which you have the greatest capacity for soft skills. Soft skills help people get things done. Soft skills are what usually separate an average performer or leader from a high performer.

Aligning an employee's soft skills, behavior styles and motivation within the company leads to increased job satisfaction, reduced turnover, enormous cost savings, higher productivity and increased profits.

Planning Team Interviews

Interviews are one of the biggest process steps for the advisor. After the interviews are complete, you'll have a very good idea as to where challenges and opportunities exist for the organization. The interviews and assessment results provide content to build the entire planning process. The interviews provide a cross-functional, honest appraisal of the state of the organization from the perspective of each team member. Interview questions are designed to bring up a number of items that are worthy of discussion with the planning team. The goal is to identify those four to six strategic challenges that are limiting the company's potential. ●

Phase 2: Building the Team and Strategy Development Preparation

A Process for Resolving Strategic Challenges

The strategic challenges that come through in the interviews are the primary point of focus for the rest of the process. The initial meeting of the planning team members will lay an important foundation for the rest of the process. It's important that the team agrees on how they will interact during the planning meetings and going forward as a team. The team covers some basic guidelines for the planning sessions, including important ground rules of team communication:

- Challenging a teammate's idea is healthy; attacking the teammate is not.
- There are no untouchables or sacred cows. All issues must be addressed.
- All teammates have equal responsibility for the development and execution of the plan.

Despite the fact that strategic planning usually makes sense to the majority of an organization's leadership team, a common set of obstacles can stand in the way of making it happen, including the following:

- There is no one, single vision.
- Operational (day-to-day) thinking dominates management's time.
- Organizations let outside forces shape their strategy.

It is helpful to allow these concerns into the conversation so they can be addressed immediately.

Building the Team to Achieve Your Dream

The team development exercise has each team member presenting their behavioral assessment results by completing the following statements:

1. I learned the following strengths of my behavioral style that positively impact the team:

2. I learned the following growth opportunities of my behavioral style that could increase the performance of the team:

3. I feel others in the organization perceive my style as:

4. To communicate most effectively with me, I ask that you do/not do:

5. I am going to take these steps in my development in the next 12 months to increase my performance and build a stronger and higher performing team:

6. a) My vision for the planning team interactions is: b) The characteristics or processes of a high-performance team that need to be implemented in our team are:

A great first step in providing a candid and interactive environment is to have the leader present his or her behavioral style first. The behavioral style presentations are a roller-coaster ride filled with highs and lows of emotion, but the results of the exercise change how the team interacts and performs together forever.

Looking in the Mirror: Internal Analysis

As part of the development of a proactive strategy, conduct a thorough internal analysis of your strengths, weaknesses and finances. Completing an internal analysis requires the team to:

- Develop or refine the company's values and beliefs statements. The values and beliefs define how the organization is going to interact internally and externally while implementing the plan. The values of an organization are at the core of its existence. The outcome of the planning process in regard to values and beliefs is to develop action plans that align behaviors with defined values.

• Conduct a strengths analysis from the interviews. Knowing your strengths — especially your top strengths — lays the foundation for the development of your competence.

• Conduct a weaknesses analysis from the interviews. Collecting weaknesses during the interviews allows for candid and honest dialogue about them that leads to action plans to eliminate or minimize as many of them as possible.

• Review the current financial analysis. Profit is not a strategy, but the result of a great strategy, so having a clear understanding of your financial picture is essential.

These four steps create a wealth of knowledge and insight, and a strong foundation for the eventual discussions about your competence and strategies for moving forward.

Looking Out the Window: External/Market Analysis

Conducting an external analysis requires you to identify trends and collect industry data to make the most informed decisions regarding your future strategy and direction. It's critical to understand what your marketplace wants and doesn't want.

Through continuous market research, successful organizations adapt their competence and strategies to the changing marketplace.

Use three primary questions to direct your market research efforts:

• What market research information do we need to collect and study to make the most informed strategic decisions?

• What trends are developing in the world, state and industry right now?

• Based on the internal and external analysis, what are the strategic options for the organization?

Establishing a market research gatekeeper is a step to consider in organizing the flood of information collected by team members. The gatekeeper's task is to collect and organize all of the market research that team members gather throughout the year.

The Process to Create a Real Differentiation

The greater the level of differentiation through your competence, the larger your margins can be.

The following step-by-step process is to assist the homework teams in developing and presenting the future competence and strategy of your company:

1. Review and discuss the internal analysis of the organization: Ask your team what strengths can be the foundational strengths of your competence. What weaknesses do you need to eliminate? Which of your products or services have the highest demand (growth) and margin?

2. Review and discuss the external analysis and market research summary. What are the emerging trends that could create an opportunity in the markets in which you compete?

3. Review the strategic opportunities list and brainstorm and list additional possible competence options for your organization.

4. Discuss how you think your top competitors are trying to differentiate themselves. Can you outperform one of your competitors on the competence it appears to have selected?

5. Complete your first draft of the future competence and use it to build the competence hierarchy using the template. Can you build on a possible current competitive advantage, or do you need to go in a different direction?

6. Provide your rationale as to why you chose this competence. Why is this competence going to separate your organization from your competition?

7. Define the target markets of the company. These are the companies or consumers that will value your future competence the most.

8. Discuss other aspects of the strategy on which you need to gain agreement.

9. Brainstorm and list all the strategies and action plans from your discussions. ●

Phase 3: Strategy Development

Defining Your Competence and Strategy

Defining your competence and how you are going to differentiate your company is the single most important strategic decision you will make as a planning team. Why is a customer going to do business with you versus one of your competitors?

Truly successful organizations hone in on specific target markets. This enables them to effectively craft their message and appeal directly to the decision makers within companies or demographic groups that will want their brand of mint chocolate chip ice cream. Does your company have a clearly defined target market or customer? How is that information communicated internally? How is it communicated externally?

Define your target market and develop messages that will appeal to customers looking for your specific type of mint chocolate chip ice cream.

Limit your target to a finite group of organizations or people. It is far more effective, especially for a small to midsize company in the business-to-business market, to create a marketing plan that targets a few hundred companies (or consumers) rather than several thousand.

Inevitably, you will be tempted to sell to as many target markets as possible. Resist this urge. Instead of trying to cast the net over the entire ocean, you'll find you can increase your sales by focusing your limited resources on the primary and secondary target markets that are most likely to value your competence the most.

Competitive Competence Analysis to Verify Differentiation

The competitive competence analysis examines your perception of how your competitors are trying to differentiate themselves. Answer these questions while completing a competitive confidence analysis:

- Who are your primary competitors in the markets where you compete?
- What is the perceived competence of each competitor?
- Based on their competence, to what level does each company differentiate itself on a scale of 1 to 10?
- Are any of these competitors delivering or trying to deliver a competence similar to that of your company?
- If yes, can you tangibly prove that you will deliver it better?

If you find out that your competence is similar to that of the competition, you need to go back to the drawing board until you define a competence that you can deliver better than anyone else in the market.

A brainstorming session aimed at strengthening your competence against what's known or perceived about the state of the competition typically generates a lengthy list of action plans. It's important to capture those action plans and assign the department plans that will include them. The focus of the exercise is to come up with a list of ways to increase the degree of differentiation and implement your strategy.

Communicating Your Competence to Increase Sales and Profit

You have to reinforce your competence at every touch point your company has with a customer. That includes branding, business reviews, email signatures and your mission statement.

You must be able to measure and illustrate the value that your product or service brings to your customers.

The brand strategy positions your competence in the minds of your target markets. Your brand is your No. 1 salesperson and it needs to effectively communicate your competence and/or the value of your competence to your target markets.

One simple question — What does your company do? Does your response effectively communicate your competence — your mint chocolate chip ice cream — in a way your listener will retain after the interaction is complete? Your mission statement developed through this process will effectively communicate why your company is unique and why your target markets should do business with you.

Creating Clarity through a Strategic Vision

One of the leadership team's primary responsibilities is creating a detailed vision that all employees can understand and shoot for. The vision contributes to strategy development by helping leadership specify what the organization needs in the future and why. It also serves as a rallying point for the rest of the employees, instilling a level of excitement and anticipation.

A compelling and clear vision has subjective and objective components. The subjective components include how you want your internal culture to be described by your employees and what you want your customers to be saying about you when you achieve your vision. The objective components include the market and scope of the products and services offered in the vision time frame, and the strategic measurements and financial objectives.

To develop a powerful vision, you will need everyone to agree on all aspects of the vision, including what new products, markets and geographic territories you're going to pursue within the vision time frame.

The next step involves developing and maintaining a tool called a measurement matrix. The matrix provides an objective view of your progress by tracking the results needed to achieve your plan. Establishing goals for each of the metrics requires that you tie the targets to your budget and performance numbers.

Performing annual plan updates is the most effective way for an organization to methodically move toward its vision.

Preparing to Turn Strategy into Action

Before you can begin executing, you need to focus on resolving transitional issues. You'll also identify goals for the next year, establish a plan execution program, and launch the department planning process.

The first assignment for the homework teams to prepare for phase 4 is to design the functional organizational

structure needed to achieve your vision and strengthen your competence. You'll need to include all necessary functions on this chart, whether they currently exist or not. This may or may not match up with current roles and responsibilities. While building the functional organizational structure, you should not discuss or assign any names to positions within the structure. All you want to do is identify responsibilities and functions.

Once a team completes its functional organizational structure, then ownership and/or leadership can place specific individuals in each role of the organizational structure based on the necessary skill set match. Consider the education, experience and behavioral assessments of each person in evaluating existing skill sets. Skill set misalignment — along with not having an organizational competence — is typically one of the main reasons a company underperforms.

The next assignment for the homework teams is identifying the systems and processes needed to achieve the vision. This is an important component for the first year's success because you need to ensure that you consistently deliver your competence throughout the organization. You accomplish this by consistently executing documented processes in every department. As you grow, the systems enable you to handle significantly more business with your current assets and team.

The last assignment is developing a list of three to five organizational goals. When creating goals, nothing is simpler or more effective than the tried-and-true SMART approach:

- **S**pecific: Be able to answer who, what, where, when, and why questions about the goal.
- **M**easurable: Identify concrete criteria for gauging progress.
- **A**greed-upon: In a team setting, gain consensus regarding the appropriateness of the goal and any incremental steps to achieve it.
- **R**ealistic: You must believe the goal is possible in order to make it happen.
- **T**imely: Ground the goal in a time frame.

Phase 4: Strategy Implementation

Developing the Structure and Skills to Execute the Strategy

After the homework teams complete their action plans to prep for the next session the team comes back to together to present their recommendations, hash them out and makes decisions on the following topics:

- Developing an optimal functional organizational structure to achieve the new vision
- Addressing the skill set voids in the organizational structure
- Identifying systems and processes to implement, including a performance-based compensation system and a communication system
- Establishing an annual business planning calendar to ensure the organization optimizes its success year after year.
- Any other significant transitional issues that could be identified by the advisor or planning team member.

After meeting with all the planning team members, the leader needs to complete the organizational structure by filling in specific names. The goal is to help employees find a position within the organization where the position matches the person's natural skill set.

Company Goals and Action Plans

Measurable goals require concrete criteria for gauging progress toward the desired outcome. The ability to measure progress makes it easier to stay on track, reach target dates, and experience the exhilaration of achievement that spurs the continued effort needed to reach your goal.

Agreed-upon goals are necessary to keep your organization's momentum moving in a positive direction. Consensus makes it easier to find ways to make goals happen. You develop the attitudes, abilities, skills and capacity to reach them.

You can attain virtually any goal you set when you plan your steps wisely and establish a time frame that makes it realistic for you to carry out those steps.

Department Planning to Make It Happen

Taking strategy from theory to tactics is where most companies fail. The best approach is a team effort driven by the leader to develop a department plan for their area of responsibility. Department plans are about working on the business. As each department completes their action plans it accelerates the success of the organization and creates a company-wide momentum that everyone can feel.

In first year department plans we make every effort to make the process as simple as possible so organizations continue this approach year after year. The outline for

the department plans can become more elaborate in subsequent years but in the first year we recommend the following department plan outline:

1. Outline the education/training needs for each or selected individuals in the department: Working with these individuals, use their behavioral assessment results as a foundation for creating a detailed individual development plan.

2. Develop action plans to achieve each company goal by doing the following:

- Read the entire business plan.
- Review your values and beliefs statements.
- Review all the action plans from the brainstorming sessions.
- Review weaknesses from the internal analysis.
- Review your competence hierarchy and the competitive competence analysis.
- Determine action plans necessary to ensure every member of the team understands your competence and their role in it.
- Determine action plans necessary for the department to execute in order to strengthen their competence.
- Review all the transitional issues and develop action plans to implement the new organizational structure, build or implement new systems and processes, and address skill set voids in your department.
- Assign each action plan an owner and completion date; ensure each individual in the department has at least one action plan to complete.
- Use the goal and action plan template to capture and monitor progress.

3. Determine how your department will measure its progress toward success: Identify those measurements you can capture that will illustrate whether or not your department plan is working.

4. Decide how you will use measurements as benchmarks for performance reviews. For budget/capital requests, define any capital or significant expense you will need to implement your plan. What additional expenses or capital are you requesting that are needed to execute your departmental plan?

A Program to Ensure Effective Plan Execution and Accountability

The Stop Selling Vanilla Ice Cream process includes a plan execution program that systematically guides an organization toward its vision. A successful plan execution program does the following:

- Guides timely execution of the strategic and departmental plans
- Keeps the organization focused on the strategy and working on the business
- Promotes a culture of discipline and company-wide accountability
- Drives completion of projects and eliminates complacency
- Consistently builds the talent of the organization through the completion of the individual development plans
- Ensures the plan is a living document used as a tool to manage your organization
- Creates breakthroughs via the combined impact of increasing your strategy and talent simultaneously
- Dramatically increases the probability of increasing sales and profits

To gain these benefits, follow the five steps of the plan execution program:

1. Completion of the strategic plan
2. Presentation of the strategic plan to the company
3. First draft of department plans are presented to the planning team
4. Budget and department plans are approved by shareholders after discussion and any requested changes
5. Monthly plan execution meetings

Each member of the planning team should present a component of the plan to show that the plan was created by the team, the team is unified around it, and each member of the team is excited to get the rest of the organization involved in the process.

The Stop Selling Vanilla Ice Cream process offers a simple step by step approach to complete a strategy and talent development plan for your organization. There is not an obstacle your company faces that can't be resolved by optimizing your strategy and talent. That is why over 90 percent of companies that implement the process into their organization experience an increase in sales and profitability. It is time for you to stop the vanilla! ●

RECOMMENDED READING LIST

If you liked *Stop Selling Vanilla Ice Cream*, you'll also like:

1. ***Be Different or Be Dead* by Roy Osing.** Osing shares strategies he has personally developed and executed for immunizing an organization against performance decline and business failure.
2. ***Differentiate or Die* by Jack Trout.** Trout and co-author Steve Rivkin address what factors allow a company or product to stand out in an increasingly competitive (and global) marketplace.
3. ***Trade-Off* by Kevin Maney.** Kevin Maney shows how conflicting forces determine the success, or failure, of new products and services in the marketplace. Almost every decision consumers make involves a trade-off between fidelity and convenience.

THE SUMMARY IN BRIEF

After twenty years of learning and experimentation, working with hundreds of organizations while training tens of thousands of people and developing messaging, pitches, and presentations for the most iconic leaders in the world, Michael Margolis has distilled what he knows into ***Story 10X: Turn the Impossible Into the Inevitable.***

Margolis expands on his approach that's been proven in the dojos of Silicon Valley, the conference rooms of Fortune 500s, and the town halls of local nonprofits. He answers questions like: How do you tell the story of disruptive innovation? Why do so many world-changing ideas get lost in translation? What makes social and cultural change so difficult?

The key factor in all of these questions is the power of story, and whether leaders are telling those stories or allowing the stories to be told for them. Only those who develop the heart of a storyteller, through the principles in this book, will be able to take command of their story and their world.

IN THIS SUMMARY, YOU WILL LEARN:

- Why storytelling is so vital in the age of disruption in which we live.
- What separates bad stories from truly great ones.
- How to take yourself from an outsider of a group to an insider.
- How to believe in your story and make your audience do the same.

Introduction

At Amazon, executives sit in silence at the beginning of meetings, reading a six-page memo on the topic at hand. The document must consist of a coherent narrative. After everyone has digested the 'six-pager,' the discussion begins, and decisions are made.

Every six months at Facebook, product team leaders do the same thing. They must create a written narrative about their work and present it to Mark Zuckerberg, Sheryl Sandberg, Chris Cox, and the rest of the executive team.

Wall Street analysts and the media pay as much attention, if not more, to Warren Buffett's carefully written annual letter than they do the financials in the Berkshire Hathaway shareholder report. Buffett's principled storytelling is legendary, encouraging investors to hang on every word from the "Sage of Omaha."

Leaders like Bezos, Zuckerberg, and Buffet are onto something. They recognize that the story is everything. Meaning doesn't come from numbers. Meaning comes from the story about what those numbers represent or tell us. The brain seeks patterns and connections. It needs context to put things into perspective.

When a group of people are all aligned in the same bigger story, you can move mountains. That's what makes storytelling a force multiplier. 2X. 5X. Even 10X.

The Heart of the Storyteller

Storytelling is much more than cute anecdotes or once-upon-a-time fairy tales. At its heart, storytelling is about meaningfully communicating what we see, feel, and believe. An inspiring vision. The world we think is possible. The experiences we care about improving. And why it matters. Presented in such a compelling and attractive manner that we can't help but say yes.

The heart of the storyteller becomes the heart of the story. Communicating ideas is not a lost cause. You just have to find and craft a story we can all agree on, that reminds us of what we share in common and transcends where we stand apart.

The key to creating an undeniable story, a story your audience cannot resist, is to learn how to think in narrative. A narrative mindset is at the heart of all successful innovation and transformation. If you know how to change the story, you can change anything.

To change the story, you have to get personal. Authentic connection and point of view are increasingly the currencies of our time. It also requires faith in the future, a belief in forward progress no matter the evolutionary constraints. Finally, it requires curiosity and humility, as storytelling is nothing less than an examination of the human experience. To become a master storyteller is to master life itself. It's an endless process, especially in disruptive times. The best stories are the ones that inspire possibility and unleash human potential.

Storytelling in the Age of Disruption

We live in extraordinary times, where is a shorter half-life between ideas and reality than ever before. Imagine if, a few hundred years ago, you were told that one day you would fly through the sky in a large metal tube, covering thousands of miles in just a matter of hours, at a time when traveling such distances took months or years.

That's why every great leader must be both a storyteller and a magician. The very best leaders are well-versed in the art and science of story. They make magical things happen with their words. In short, language is reality. How do you help people see a new view when it involves disruptive ideas that challenge assumptions and expectations?

The truth about storytelling is that you only have about five minutes to get 90% of a group of people on your side. What you say or do in those first few minutes determines everything that follows. If you can't inspire your audience, make them curious, and capture their imagination, chances are you never will.

Your success depends on how readily people embrace your ideas, yet stories of disruption are among the hardest to tell. What you need is a story that captures people from the get-go, that cuts through their resistance, that shows them why your vision matters and why they should care.

An anecdote likely won't do that. An undeniable story can. It's all based on your ability to think in narrative and to present complex situations in a simple yet compelling manner.

To tell that persuasive story, you have to know your audience. They are the reason your story exists. You must focus on who your audience is and shape your story around them.

From Outsider to Insider

If you're asking people to go on an epic journey with you, they

want and need to know who you are. What are you made of? How do you see the world? What are you willing to fight for?

If you're asking people to enter your world, you need to know who you are and how you come across. You need to understand how to turn your quirks and idiosyncrasies into unique, appealing attributes. When your audience is rooting for you, you'll be amazed at how much more forgiving they are of your imperfections. If you're asking people to see, feel, and believe the same things you do, they want and need to know your motivations.

Your personal story is the engine that propels your Undeniable Story.

In Storied workshops, a technique called StorySparks is used to get participants to reflect on their life and career experiences, then share a 90-second story with a partner. People are often moved to tears as they recognize the influences and defining moments that have made them into who they are. They also make unexpected connections that deepen their bond and sense of shared experience with the partner in the exercise. In less than two minutes, their sense of self and the world is redefined. That's the magic of storytelling. If you can open yourself to people and allow them to connect with your story, you build an incredible bridge of trust.

But before you can determine how much of your personal backstory to share, you must look more closely at how story affects the 21st-century brain, heart, and body.

The Feel-Good Principle

If you want to transform how the world thinks about your product, cause, or message, try making people feel better about themselves.

Most leaders have people bringing them problems every day— all day long. The real boss move is to come bearing a positive, feel-good story of possibility and opportunity. Give people faith in the future. More than anything, that's what people are looking for from their leaders and from the vendors or solution providers they buy from. They want to know, at the end of the day, that there's a better future ahead. You're the one to paint that picture, and with an Undeniable Story it's impossible to resist.

We tend to pay attention to the stories that make us feel good. We ignore the stories that make us feel bad, wrong, or stupid. When you open your story about change and disruption, you need to do so in a manner that makes people feel deeply connected. Help them to identify with the context you've presented in a way that makes them feel good and offers hope for the future.

We are living and working in extraordinary times, times that call for an evolutionary leap in how we construct and tell our stories for the context of innovation. Help people see how the future already exists and the new, exciting potential that comes with change.

Step 1: See It

The most critical element of storytelling is to help others see what you see in order for them to embrace your story and make it their own. You have to find the right hook for your story, one that captures your audience's attention right away. Change creates story, and your job is to narrate that change.

It's important to pick the right battles to fight in your story, using your energy efficiently. It's rarely wise to open with something contentious, controversial, or debatable. Instead, present a compelling context for change that is a generally accepted truth. Focus on what everybody wants. What will create a natural momentum of yes?

You should also focus on what's right rather than what's wrong. Why put people into a fight/flight/freeze state? You want the context for change to be aspirational, filled with an opportunity statement that is exciting.

You should also avoid making your opening statement of your story so complex that it makes your audience disoriented. Focus on a clear premise, including the most dramatic and compelling way that the world is changing.

Finally, don't get ahead of your story. Remember you live and breathe what you're working on, which means that while you might mentally already be on Chapter 9 of the story, your audience is likely still on Chapter 1 or 2.

Step 2: Feel It

To feel your story, and get your audience to feel it, you have to bring soul to the data you're presenting. This involves building a character. Sometimes the character is you, sometimes it's someone else, sometimes it's your audience, and sometimes it's the entire world.

The best approach is to make your customer your hero, then put that character into conflict in order to make them more compelling, interesting, and real. You need to craft a relatable avatar that your audience can look to and identify with. The result? When you present your solution to the character's

problem, your audience will feel emotionally invested in that solution and want to play a part in helping deliver it.

Emotion is a key ingredient in any compelling story. Combined with the context for change, you're now two-thirds of the way to crafting your undeniable story and multiplying your outcomes. What's missing is the third ingredient: the evidence of truth.

Step 3: Believe It

Storytelling in a business context is about emotion, connection, and narrative, but it's also about data. Your story is won or lost based on the supporting evidence.

In storytelling, there are many sources of evidence that can strengthen your story. They include:

- Performance metrics
- Personal story
- User research
- Scientific proof
- Pilot projects
- Historical precedent
- Product demos
- Customers
- Testimonials
- Third-party endorsements
- Case studies

That said, truth is in the eye of the beholder. It all comes down to who's telling the story. Truth can be elusive and hard to pin down in black-and-white terms. There are often many shades of gray. Here are some tips to consider as you shape the evidence that will inform the truth at the heart of your Undeniable Story.

Don't have enough data to prove your progress so far? Focus on other proof points, such as research that validates demand and unmet need.

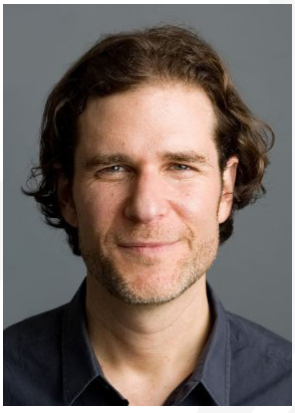
Finding a metaphor can also be a powerful way of telling your story, by comparing your new idea to something that exists in a powerful way. Just remember that this strategy can become cliched if used incorrectly or overused.

Telling a personal story about social impact is a powerful way to connect numbers to real people (or, even better, a single real person who is representative of a larger group.)

Remember that if you're not telling your story, somebody else is telling it for you.

Conclusion

Everyone has a story, and everyone gets to tell that story. We live in truly remarkable times, where we all get to story ourselves into being. No matter the stories of our past, we can reimagine, recreate, and reinvent a new future. This is your birthright, and the demands of the age we live in. The stories we tell literally make the world. If you want to change the world, you have to first change your story. The heart of the storyteller becomes the heart of the story.



Michael Margolis is the CEO and founder of Storied, a strategic messaging firm specializing in the story of innovation and disruption. As a trusted advisor, Michael helps executives to demystify the complex and deliver on the promise of transformation. Michael operates anywhere there is a story worth telling, especially in Silicon Valley, Fortune 500s, and global change. Michael is a frequent keynote speaker at top conferences around the world. He's trained tens of thousands on narrative intelligence and how to build storytelling as an organizational capability.

THE SUMMARY IN BRIEF

Complex challenges are all around us—they impact our companies, our communities, and our planet. This complexity and the emergence of networks is changing the practice of strategic management. Today's leaders need to understand how to design and guide effective collaborations to accelerate innovation and change—collaborations that cross boundaries both inside and outside organizations.

Strategic Doing offers an important guide to navigating this new world. Designed to be practical, the book introduces 10 skills that anyone can learn. The skills have been successfully adopted by executives, managers, university administrators, government officials, students, community leaders, and others from a variety of disciplines.

Solidly based in research, ***Strategic Doing*** explains each of the skills in detail and clearly illustrates how individual skills are used as part of an effective collaboration. ***Strategic Doing*** outlines a new discipline of leadership strategy specifically designed for open, loosely connected networks.

IN THIS SUMMARY, YOU WILL LEARN:

- How the 10 skills address the prevalence of networks in the world today.
- To identify, link, and leverage your group's assets.
- Why you need to start slow to go fast.
- How to make the 10 skills into habits that lead to real change.

You Are Here

Companies face complexity every day. How do they make their organizations more agile? Rapid changes in consumer demand, technologies, regulations, and competition put a premium on the ability to respond and adapt quickly.

The fact is that we are becoming overwhelmed by challenges in complex systems, but many of us are approaching the challenges with disciplines and mindsets developed decades ago.

What exactly has changed? Very few things in our complex world can be accomplished by a single individual or company working in isolation. Networks are all around us and have become the primary organizing structure behind most of the goods we buy, the services we use, and the places we work, live, and play.

A network has several important characteristics: It forms around a set of assets, or resources. These assets might take many forms: a physical location, a particular technology, even an intangible set of ideas that people hold in common. There is usually a set of people who are particularly closely related to the hub. There are other people who are more loosely connected. The network is never static. The boundary dividing who is "in" and who is "out" of the network is a porous one. There is no "top" or "bottom" to a network. And there is no one individual or entity that can give directions for the members to carry out.

There are different kinds of networks, but here the focus is on an innovating network. These networks are composed of people who have joined forces to create new value together.

An interesting example of an innovating network is the group of companies that came together to create what we think of as the product of a single company—the iPod. While Apple was certainly at the center of the network, dozens of other companies had a hand in its birth, including hardware parts manufacturers, music distributors, accessory designers, and more. Apple founder Steve Jobs may have been a genius, but part of his particular legerdemain was in assembling the right collection of partners to bring the iPod to market.

Hierarchies, Networks, and Strategy

The hierarchy and the network have very different implications for thinking about strategy. In a hierarchy, the challenge is to communicate information about what to do "down" and to get information about the results "up." In a network, on the other hand, the challenge is to get the members' resources and efforts aligned toward a chosen objective. This is a key difference and necessitates thinking about "doing" strategy very differently.

To effectively use the tools of strategy in a networked world, we need to change three things:

We need to think differently. In a complex environment characterized by networks, it's simply not possible for one individual to develop effective strategy. Strategy has to be a team effort, and the more complex the environment, the larger the network that will need to be engaged.

We need to behave differently. In genuine collaboration, trust has to be high and turf low. Trust is established when words and actions align. Rules of civility are one important component of establishing an environment where trust can flourish. We also need to balance two dimensions: guidance and participation.

We need to "do" differently. Thinking differently and behaving differently "set the table" for the third thing that needs to happen in order for companies, organizations, or communities to successfully navigate challenges—doing differently.

The following 10 skills break that "doing" down into specific components that are simple to understand and put into practice. They are not, however, a "one-and-done" formula. Change is constant. The doing differently needs to become a permanent way of working—a set of habits.

The skills are simple but not easy; they require practice and attention to master. The real power of the skills is in combining them—perhaps not all 10 at any one time but identifying the skills most called for in a particular situation. The whole is truly more than the sum of its parts.

Skill 1: Create and Maintain a Safe Space for Deep, Focused Conversation

Increasing the productivity of groups and teams begins with increasing the productivity of their conversations. One of the ways to assure deep, focused group conversations is to pay attention to the size of the group having the conversation.

In ***Decide & Deliver: 5 Steps to Breakthrough Performance in your Organization***, Marcia Blenko and her co-authors contend that the ideal group size is seven and that every person beyond seven reduced the team's effectiveness by 10 percent, so that when a group gets to about 17 members, about all they can do is make a decision about when to take a lunch break. Others have advocated for a slightly smaller size.

Good framing questions are adaptive questions. By their nature they seem big, bold, and inspiring.

In communities, it is especially important to pay attention to the local context when deciding where to have strategic conversations. The library is often a safe space for strategic conversations about civic issues. A library has some basic rules of behavior, and usually there's no such thing as a dumb question at the library.

The notion of safe behavior is equally important—a safe space in which everyone can participate. A go-to rule of civility is this: "We will behave in ways that build trust and mutual respect." It is not only the role of the agile leader to communicate and reinforce this rule, it is a shared responsibility among those having the conversation.

When bringing together a small group or team for a strategic conversation, explain that when individuals work together in groups, there is evidence that the best outcomes occur in groups that have the greatest levels of "equity of voice." This means that when they meet together, every member talks for about the same amount of time. Simply letting group members know that you'll be striving for equity of voice can be quite powerful.

Skill 2: Frame the Conversation with the Right Question

The second skill of agile leadership is to design a conversation around an appreciative framing question, a question with many answers that will move the conversation in a positive direction. A good framing question is complex enough that it will require the deeper thinking and engagement of each person in the conversation.

Adaptive questions point us to challenges for which there are no clear answers. Adaptive questions can trigger many answers that might all lead to acceptable solutions. "How do we become the employer of choice in our industry?" "What is the best way to respond to a new technology that can erode our market position quickly?" Each of these examples have many possible answers, and each solution could contribute to that answer.

Good framing questions are adaptive questions. By their nature they seem big, bold, and inspiring. They grab the listener who wants to know more about how it will be accomplished and how they can be part of the solution.

Appreciative Inquiry

Moreover, when we choose to seek out what is already good and right about an individual, team, or organization, then we have chosen an approach called Appreciative Inquiry. This approach is asset-based—positively focused rather than deficit-focused.

A company might be asked to consider this question: "What can we to do minimize customer anger and complaints?" This is an example of a nonappreciative question. It highlights what is clearly an issue for the organization asking it, but the group will work together more productively by considering a different question: "When have customers been most pleased with our service and what might we learn and apply from those moments of success?" The overall focus of the inquiry is on what the organization wants more of, not less.

By asking the right question—an appreciative one that allows for many perspectives on an adaptive challenge—agile leaders draw people into a deeper, more-focused conversation that can lead to many new opportunities.

Skill 3: Identify Your Assets, Including the Hidden ones

Many people operate in "If Only Land." Every time they are part of a conversation, they are quick to bring up what they wish they had—a better job, a nicer home, more well-behaved children. Companies and organizations aren't much different. If you could listen in on their meetings, you'd hear statements like, "If only we hadn't missed that opportunity . . . If only we had more money . . .If only other countries didn't have such low labor costs."

In network thinking, there is no top or bottom. We may still need resources, but there is no one whose job it is to give them to us. We need first to take stock of the resources we already have. We have resources all around us that can be used in new and different ways.

Assets: More Than Cash

Assets come in many different varieties and go far beyond cash. Physical and natural assets include things like real estate (land or buildings), meeting spaces, water rights, classrooms, large or specialized equipment, or high-speed fiber. Skill and knowledge assets could include skills in writing, graphic design, public speaking, budgeting, website construction, research, or cooking, among many others.

Social assets are individual people or groups of people with whom someone in your network is personally acquainted. Capital assets are financial resources or assets that otherwise would be bought, such as editorial space in a newspaper for an opinion column, or administrative support that someone could donate to the cause.

Many assets are hidden—sometimes there is no one else in the group with any idea that the person has that asset. Some of our assets are hidden even from ourselves—it takes another person to draw them out and identify the value they can have to the group. Common hidden assets are hobbies, skills, or interests someone has pursued independently over the years.

You may feel that the assets you and your colleagues can contribute to an adaptive challenge are just not sufficient. This is in some ways true—you don't have everything you need. However, the flip side of this disadvantage is a powerful truth: because you are only working with what you have, you can start work right now. You don't need permission. You are free to move ahead. As you'll see, something almost magical happens when you seize the opportunities available to you.

Skill 4: Link and Leverage Assets to Identify New Opportunities

Agile leaders not only uncover hidden assets; they also see how different assets could be linked, leveraged, and aligned, and can help others see that potential as well. A mere list of assets is not enough. The magic happens when assets get combined. Making these kinds of connections is useful in many contexts but is critical in a network (rather than a hierarchy)—it provides the platform from which collective solutions to our most complex challenges will emerge.

Here's an example from the world of technology: GPS, or global positioning systems, are a remarkable innovation that link, leverage, and align satellite technology with atomic clock technology with radio transmitter and receiver technology. Those technologies were separate assets, bodies of knowledge in different experts' heads. The assets didn't align themselves automatically. When someone (probably a group of someones) wondered, "What if we combined them?," a breakthrough in modern navigation was imminent.

Many of us have a natural tendency to think vertically—that is, to explore specific topics in depth. It is also, however, helpful to think horizontally, across different disciplines, fields, or bodies of knowledge. New insights can occur when we think horizontally.

Horizontal Thinking: Healthcare Engineering

At Purdue University, for example, there is a group called the Regenstrief Center for Healthcare Engineering (RCHE). Here horizontal thinking resulted in the idea for RCHE, in response to the appreciative question, "How might we improve the healthcare system by bringing engineers together with nurses and pharmacists?" Healthcare engineering as a field of practice and research was born.

For example, infusion pumps hang by the bedside in a hospital and deliver fluids, such as nutrients and medications, into a patient's body. While these pumps provide a high degree of accuracy in the delivery of medications, there are also significant safety problems. Malfunctions can result in the over-delivery or under-delivery of medication. RCHE has established the infusion pump informatics community of practice among more than 100 hospitals in the Midwest. Through a web-based tool, these hospitals can now share data, analysis, and best practices to improve patient safety.

Let's say a group of five to seven individuals has been tasked with designing a strategy to address a complex issue. If each person identifies five assets, the group then has 25 to 30 assets in their collective asset inventory. Mixing and matching different combinations of these assets to form potential solutions gives us a nearly endless set of possibilities.

Devote some time to simply brainstorming new possibilities from combining the assets you have at your disposal—if you're stuck, pick out a few at random and ask, "What if we combined these?" "What about these?" With even a few assets, the number of possibilities you can create will surprise you.

Skill 5: Look for the Big Easy

To develop and implement an effective strategy, we must move at least one of our ideas to action. The reason is simple: Our resources are limited. Often teams can get stuck at this point by ruminating about choices and what should

come first. The fifth skill an agile leader needs involves efficiently sorting through many options to identify one that has the best chance of success.

You've probably used many different methods to deal with this challenge; here's a rundown of some of the most common. The first is consensus, in which everyone agrees to support a particular decision. But consensus can be hard to achieve; groups that insist on it for philosophical reasons may find themselves taking a very long time trying to reach it.

Alternatively, you could vote and let the majority's choice carry the day. This has the advantage of being straightforward. Majority choice voting has a significant shortcoming: Each person is (generally) using one criterion to make their choice. Also, there's been no discussion about what the criterion is or should be. And if the challenge is really an adaptive one, thinking about things in light of only one factor is probably too simplistic.

> Metrics are a way to develop a common language, so that we know we are talking about the same thing.

The 2x2 Matrix

The 2x2 matrix is an alternative way to make these kinds of decisions. To use this tool, there is a very important decision to make: Which two criteria should be considered? You could use any two criteria you decide are best-suited to your challenge, but two in particular are suggested: impact and ease of implementation. That's why it's called the Big Easy. The "Big" inspires people and engages them emotionally. The "Easy" means that there are practical steps that can be taken now to move toward this opportunity. You are looking for the opportunity that has the largest impact and is the easiest to implement.

Using the 2×2 matrix as a way to choose among different options is as simple as drawing a four-square grid on a piece of paper. Put one criterion along the bottom and another along one side. Label the ends of each of these axes—one end is high, another low. Each person votes by indicating where on the matrix they think each idea falls (an easy way to do this is to use sticky dots; assign each idea a different color or put numbers on them). The opportunity that has the most votes in the quadrant that represents high ratings for both criteria is the winner.

When you practice the Big Easy, you will find your skills for making choices improving. Agile leaders use these skills to help guide choices about which opportunities make the most sense, even when the environment is a complex one.

Skill 6: Convert Your Ideas to Outcomes with Measurable Characteristics

Agile leaders know how to translate ideas into meaningful, measurable outcomes that, when pursued, will help organizations achieve their most cherished ideals.

To help groups adopt an agile strategy approach, ask them to consider three questions: If we are successful,

- What will we see?
- What will we feel?
- Whose lives will be different and how?

These questions are very qualitative by design. They ask you to imagine what something would be like and to describe it so that others can imagine it as well—the more specific, the better. This may feel uncomfortable, particularly if you're technically oriented and most attuned to data and charts and graphs. Try to suspend your discomfort and engage the more visual and creative parts of your brains. People sometimes close their eyes for a few minutes of silence when they get to this point. Then they are asked to verbalize what they're imagining.

When you put this skill into action, a couple of things will happen. First, the idea itself will begin to change. You'll go from the fuzzy image on a black and white TV to high definition. Also, each person will emotionally engage with the outcome. People start to physically lean in, to gesture. They are seeing the outcome "in their mind's eye." For real transformation in any area, you will need that engagement, that commitment.

Metrics to Develop a Common Language

This skill invites us to think about metrics in a different way: Metrics are a way to develop a common language, so that we know we are talking about the same thing. If you can get to agreement about how you would measure a success-

ful outcome, you can be fairly sure that you are aligned toward the same outcome.

Selecting the ways in which you might measure an outcome does not necessarily mean that you're pledging to actually carry out the measuring. You might do so . . . or you might not. You are not writing an assessment or evaluation plan or committing to Key Performance Indicators. For now, you are only using this skill as a way to engage and align a group's members toward a shared outcome.

When you ask the three questions, try for at least three statements about the outcome—not necessarily one answer to each of the questions but three or four statements in all. Once you have statements about what a successful outcome would look like, go back to each one and name a couple of ways you could measure that quality.

It is only when we are sure of what we want—in detail—that we can really pursue it. This skill allows agile leaders to guide groups in the kind of dialogue that is needed in order to come to a shared commitment to a common destination.

Skill 7: Start Slowly to Go Fast—But Start

We may all have an outcome to achieve in our mind—a better job, a more agile organization, a more prosperous community—and we want to get there as quickly as we can. The reality is that we really can't learn how to make progress toward that outcome until we *start* doing something.

Agile leaders are biased toward action for a simple reason: We only learn about these complex systems by doing. If we want to make big changes fast, we have to go slow… but above all, we have to go.

When you have an outcome in your mind, it does not have to be perfect to start. Equally important, you don't need to plot a perfect path to your outcome before you do anything. In order to learn how to get from here (where you stand) to there (the outcome you want), you need to start with something quite limited in scope and see what happens.

Without starting, you can easily become overwhelmed. Karl Weick, a psychologist at Cornell University, published an important paper in 1984 that captured this idea. Weick was exploring why large-scale social problems can close down innovation. These social problems, such as increasing poverty, rising crime rates, environmental pollution, heart disease, or traffic congestion can loom so large in our minds that we become paralyzed.

When we break big challenges into smaller, more manageable tasks, we not only reduce our risks; we also increase the chance of feeling good about getting something accomplished.

Key Qualities of Good Starting Projects

There are a number of important characteristics of a good starting project: they are short (enough)—90 to 120 days is a good length; they engage everyone on the team, they create a buzz, garnering attention for the work; they test some key assumptions (for example, a low-fidelity prototype often tests customer acceptance: will customers be willing to pay for the product, and how much?); and they don't require permission.

Examples of good starting projects include a pilot, a low-fidelity prototype, a forum series, a website, site visits or field trips, customer discovery interviews, or a business plan. Remember that you are experimenting: You may find that your first project doesn't go the way you're hoping. That doesn't mean it's not the right project.

Skill 8: Draft Short-Term Action Plans That Include Everyone

Agile leadership means ensuring that good ideas don't die on the vine, by making sure that each member of a group shares the responsibility for implementation.

When we hear the word "leader," most of us will be thinking about leadership as a quality that resides in a single person. Instead, focus on leadership as a shared characteristic of a group or a team. We need others to join us in leadership to take on complex challenges.

Perhaps the most visible, pragmatic example of shared leadership is a shared action plan. The plan needs to be documented in writing, not just left to people's powers of recollection. An action plan lays out in detail what needs to happen next to keep moving forward.

In an action plan, members of the group take responsibility for the specific "to-do's" that need to be done. An action plan should be limited to a short timeframe—say, the next 30 days. Why? Because if you're in a complex environment, things change rapidly.

While the action plan is straightforward, it's also easy for this step to go awry if careful attention isn't paid to the details. Each person should have something to do in the action plan—a promise they are making to the group.

The first way agile leaders maintain the momentum of a network is to nudge everyone to move ideas into action and complete their tasks.

When you're developing an action plan, you want to include everything that needs to happen in the next 30 days, and for each item you should specify

Who: A specific name (or at most, two names) should be assigned to each item.

What: What is it that the person will be doing? For example, making three phone calls to whom? Writing up what?

Deliverable: Often it is a written document of some sort. If someone is talking to three people about a topic, the deliverable might be a paragraph about what they learned, distributed to other team members.

By when: If this is a 30-day action plan, then all action items should be completed within 30 days.

Skill 9: Set 30/30 Meetings to Review, Learn, and Adjust

To make sure that agile strategy efforts stay on track, we use a feedback loop. Agile leaders need a specific kind of feedback loop: a learning loop.

In complex systems we do not know what will work to change the performance of the system. We'll have to experiment to identify leverage points. We also need learning loops because circumstances change. The environment is not stable, so we will want to make adjustments along the way. When your team meets frequently to examine the results of your work and discuss adjustments to the next cycle, you are making sure that you have a learning loop.

The phrase 30/30 refers to these meetings. The name comes from Edward Morrison's earliest work in Oklahoma City. As he was working with a team to develop a strategy for transforming the city's economy, his team met every 30 days to review their progress.

The agenda was simple. What did we learn the last 30 days? And what will we do the next 30 days? In a 30/30, you check in on progress, review results, discuss needed changes and make adjustments. A 30/30 is simply shorthand for the next time your team will meet and what the agenda will be, in very broad terms. A 30/30 looks backward at the last 30 days and forward to the next 30 days.

The agenda for a 30/30 meeting should be very clear and simple. You could use the following questions:

- What did we learn the last 30 days?
- Here's the outcome we've agreed to. Do we want to make any changes? Does everyone all still agree with the outcome we've chosen?
- Are we on track for what we're currently working on? How should we update our action plan?
- When and where will we next get together? Are there any communication problems we need to resolve?

As 30/30s become a habit, teams build resilience and a knack for flexibility over time as they incorporate change into their projects and respond to new members, new assets, and new networks. This strength-building will be key as the group begins to take on bigger projects.

Skill 10: Nudge, Connect, and Promote to Reinforce New Habits

"Doing differently" when it comes to collaborative networks needs to become a way of life, a set of new habits. There are three specific kinds of activities that will make these new habits of collaboration more likely to be permanent.

The first way agile leaders maintain the momentum of a network is to **nudge** everyone to move ideas into action and complete their tasks. In nudging, we are acknowledging the reality that most people will not do what needs to be done all of the time without this kind of reinforcement. We all need an extra push (at least some of the time) to get us to do our part in the new collaborative venture.

When we nudge, we are really doing two things: Most obviously, we are ensuring that a particular task is completed. Less obvious but more important is the second function of nudging: We are establishing positive norms for the group.

Another habit of agile leaders that strengthens a network is to **connect** new people and other networks to it. In connecting, you intentionally seek to grow the network. Networks have porous boundaries. Connecting is taking an active role in helping people move across that boundary to be more tightly connected to your network. Each addition to the network brings new resources and assets that might be instrumental in the group's future work.

The third habit to cultivate is that of **promoting**. Unless your group is engaged in classified espionage, you want to publicize your successes. This helps attract more people to your network that you might not have had access to otherwise. Promotion is particularly important if yours is the kind of group that doesn't have much in the way of access to financial resources. People with money make decisions about where to invest it based in part on their calculation of risk—and the best predictor of low risk is a track record of achievement. Even if your successes are small, they communicate that you're a good investment prospect.

How you promote your work can vary wildly. It could be everything from an intentional but informal conversation with a decision maker in the company cafeteria to an all-out social media blitz. However, everyone in your group should be prepared to explain what you're doing in what's sometimes called an elevator pitch—a clear description in less than two minutes.

The person who takes on nudging, connecting, and promoting is the Chief Doing Officer, or CDO. The CDO's job in one phrase would be "helping a group grow into new habits."

There isn't a specific experience or title or degree that is a prerequisite for being a CDO—people from all walks of life do it very successfully—but their one personal trait that is critical is emotional intelligence. Emotional intelligence is the ability to be aware of one's own and others' emotions and to use that information to choose the correct behaviors in a particular situation. In this context, it is important because such a large part of the CDO role is persuading others.

The need for a new approach to the complex challenges in our world has never been greater. Complex collaborations emerge when we follow a small set of simple rules.

Think of a flock of geese or starlings. Their complex, unfolding formations emerge from each bird following a small set of simple rules. The same is true for human collaborations. The 10 skills for agile leadership offer new ideas about how to have conversations that will lead to real change.

THE SUMMARY IN BRIEF

When leadership is an inch apart on strategy, product teams are miles apart on execution. Getting strategy right must occupy every leader's mindset from start to finish. But how can leaders do that? All of us are in business to meet the unmet and unarticulated needs of customers. In ***Strategy First,*** Brad Chase shares his secrets to unlocking and executing strategies that lead to real, lasting success— from leadership down to project teams.

In this summary, we'll break down the key elements that make up truly successful strategies, discover what makes strategy so important, and outline the key ways to determine whether a strategy is the right one. You'll learn how to activate the most vital elements of your strategy in order to initiate change in your organization as you discover the most vital tips for executing your company's or organization's strategy in both the short-term and the future.

IN THIS SUMMARY, YOU WILL LEARN:

- The key elements of a successful strategy.
- How to rate the elements of a strategy to determine whether it will lead to success.
- How to activate those elements in the real world.
- Tips for executing your strategy in a way that leads to exponential success.

Introduction

This book is built around an easy-to-remember model that will help you think about strategy in a way that's not academic or intellectual but practical and memorable. It covers key elements to be considered when plotting and building your business strategy.

You'll learn how the elements complement the model and which pieces are must-haves versus nice-to-haves. Things like seeking change or finding differentiated customer value; mining gaps by capitalizing on the spaces where competitors are underperforming or nonexistent; adapting to the tides and aligning your efforts with your external environment; expanding the universe and growing your business by understanding your customers and your market; and finally, climbing short walls and building tall walls or breaking into markets with low hurdles while constructing barriers to deter competition.

When you're done, you should be able to not only gain a clear and comprehensive understanding of the centrality of strategy but also feel like you have the appropriate tools to move forward with executing a successful one.

You'll learn different ways to think about and approach business endeavors, taking into account the common oversights that can either help or hinder your progress. You'll also find inspiration from the people and companies whose successes or failures have provided an invaluable road map for all of us to learn from.

Mostly, you'll have fun, be challenged and become inspired to push new boundaries, and feel compelled to make big bets of your own that are backed by solid strategies.

The Strategy Imperative

There's a lot to consider when building a winning strategy. Just as no serious competitor should head onto the field without a game plan, no businessperson should step into the boardroom without one. The moving parts of a successful plan can be exponentially easier to develop if you use the Strategy = mc2 formula; by identifying and prioritizing customer value, market potential, and execution, a winning strategy can be methodically constructed.

KonMari Media, the company founded by organization and lifestyle expert, Marie Kondo, helped turn Kondo's book into a movement and then an empire. For one, she provides customer value in spades. Her approach to 'tidying up,' known as the KonMari Method, isn't centered on throwing things away but figuring out what you want to keep based on whether or not it sparks joy.

Second, the market potential is strong. KonMari's niche is a blend of self-help and self-care, both of which are large markets on their own, but since they're not always joined together, it gives KonMari a unique offering.

Third, KonMari executes well—Kondo has spread her method and grown her business through her own advocacy and via her network of consultants. Her marketing has carefully and thoughtfully cultivated a unique image and brand, and her products, like her books, are very well done. Put it all together, and she has built a tidy operation.

Business success requires a winning strategy; there is no successful company that doesn't have one. And as we've covered, those strategies can and should be customized according to your specific business goals, which goes for all types of businesses and all types of roles—from an entrepreneur with a startup to a divisional team member in a large company, to an executive who knows a strategy reset is needed.

Scoring Your Strategy

Numbers are a simple and illustrative way to compare how you're doing with others. As we all know, we want the highest credit score, the lowest golf score, the highest score in football or basketball games, and in the social media world in which we live, the most numbers of likes on our posts.

There is also a way to figure out and assign a score to the Strategy = E x mc2 equation. It's called the Strategy First Score (SFS). You can use it to calculate a score that gives an analytical and visual representation of how your strategy compares with that of your competitors.

Using the Strategy = E x mc2 model and assigning an SFS to your current strategy and that of your competitors will provide insights and help you think about what bets to make and how best you can compete. Take note of where your strategy falls short of your competitors' and adjust accordingly—a successful strategy is one that considers all crucial components.

Seek Change

How do you find winning strategies that help you maximize success relative to the competition? The first way is to seek change. The invention of electricity, how it evolved, and

the innovations that came about because of it changed the world and created endless opportunities over time that continue today. Think about the growth of alternative energy and LED light bulbs and improved batteries. Change is, pardon the pun, electrifying and often difficult to manage, but where there's change, there's strategic opportunity.

Though there are numerous types of change you can seek, five of the primary ones are Technology, Innovation, New Business Models, Societal Trends, and New Markets.

Whether it's through one of these areas or the other (or all of them), game-changing companies take a strategic approach to change management and flourish as a result. The tactics they used in seeking change weren't revolutionary. Instead, they were intentional, informed, and timely. And when it comes to the Strategy = E x mc2 formula, employing those tactics can be the tipping point in securing customer value.

What type of change resonates the most with you and your endeavors? What deliberate action can you introduce into your business strategy? What kind of change can you seek that will distinguish you from your competitors and differentiate your customer value?

Mine the Gaps

Successful companies know how to identify gaps in the market and mine them for their own success. They're able to take advantage of unique opportunities and provide their customers what they're sorely missing, even if they didn't realize it at first. They become unique players in established markets and find success by standing out—not only by embracing how they were different, but also by relying on those differences to be the very things that give them value. What would happen if every business saw differences that way?

The same types of tactics have been employed by a wide range of companies—Google, Netflix, Redfin, Whole Foods, ActOne—the list goes on and on. They show that gaps are everywhere—pockets of opportunity, large and small, that current businesses aren't exploiting.

Those unfulfilled needs can be met in big and little, drastic and subtle ways, and it all starts with awareness. That is, seeing the market landscape both for what it is and what it could be and then getting strategic about how to get from point A to point B.

Adapt to the Tides

Regardless of the specifics of the social trends that affect a business, companies will always operate in a changing environment. Even if a business has built its reputation on qualities such as consistency and longevity, customers may value these qualities differently in social and political climates that are increasingly less predictable.

Whether a business changes rapidly in response to social trends or responds to them by cultivating consistency, it's important to know how social trends are evolving and how to respond to them with products and marketing strategies.

Ultimately, what do all the external factors have to do with your business strategy? Everything. How your business adapts to the tides of technological advancement or shortcomings, changes in regulations, demographic shifts, economic circumstances, and more can mean the difference between success and failure.

Expand the Universe

From day one, you should always be consciously mindful of opportunities to expand into new services, new areas of expertise, and new distribution channels—all of which can lead you to securing new customers. That doesn't mean you have to pursue every one of these opportunities from the get-go, but that awareness will become an essential skill as you begin to expand your universe through your strategy.

When you think about how to grow your market and expand your universe, think about how big that universe is, where it's best for your company to go, and the best routes your spaceship could take to get there. Sometimes you want a moonshot, but sometimes you just need to go down the street a little…

Climb Short Walls; Build Tall Walls

The concept of climbing short walls and building tall walls is all about barriers to entry, an imperative concept to employ when building a business or entering a new market. When walls are short, it's easier to enter or compete in a market. On the other hand, tall walls provide loyalty, defense, and security. You want to build your business in such a way that it isn't easy for someone else to compete, and you do so by creating conditions or circumstances that put your company in a superior business position.

Now in most cases, you do that the old-fashioned way with great products or customer service or attractive prices, and so forth, earning loyalty from customers along the way. But there are also common practices that can help your business

extend its walls even higher—and they're tied directly to your company's strategy.

There are many ways to build tall walls—obstacles that make it almost impossible for competitors to climb over into your turf. They can be government regulated and time sensitive, or come from having an iconic brand or large-scale distribution. They can form from your unique business-model, or secured through loyalty or membership programs.

In the end, a successful business demands that the different types of tall walls are considered and implemented as part of your strategy—while constantly remaining on the lookout for tall walls that you can successfully exploit for your own benefit in order to reach the heights you want for your business.

Execution

Once you have established your business goals, strategic bets, principles, and priorities, it's time to ACT—align resources, communicate and curate strategy and culture, and track to improve. A lot goes into execution.

But even with those ducks in a row, and even when you pair them with things like preparation, good intentions, solid leadership, and credible products, delivering is hard. While conceptualizing what we want and plotting the course to get there can seem straightforward, when it comes to actual implementation, our strategic plans can fail for any number of reasons. But a primary reason most strategic plans never actually come to fruition is because of a failure to execute well.

Conclusion

If strategy starts with a fundamental bet and is a series of choices you make on where to play and how to win in order to maximize long-term value, execution is the part of strategy that produces results within the context of those choices. Some business leaders think that they'd rather have great execution than superior strategies, but the truth is you can't have the first without the second.

Put another way, if you execute well on a bad strategic bet, you will lose. If you execute poorly on a good bet, you will also fail. Strategy comes first, but excellent execution is required.

Strong Ground

The Lessons of Daring Leadership, the Tenacity of Paradox, and the Wisdom of the Human Spirit

By Brené Brown

Brené Brown is a research professor at the University of Houston, where she holds the Huffington Foundation Endowed Chair at the Graduate College of Social Work. She is also Professor of Practice in Management at the University of Texas at Austin's McCombs School of Business. Brown is the author of six #1 *New York Times* bestselling books and the host of two award-winning podcasts. In 2024, she became executive director of the Center for Daring Leadership at BetterUp. Her research focuses on courage, vulnerability, and leadership. She lives in Houston, Texas, with her husband and two children.

A Book Review by Soundview

Learning How to Find Your Ground

Leading well is difficult. Too often, the examples seen are of leaders either misusing their power or leading weakly, resulting in little to nothing getting done, if anything at all, let alone well.

Some wish to change the status quo and change how things are done, and in a time when vulnerability and empathy are scorned, that takes an amazing amount of courage. So how did they get there, and how can we, as fellow leaders, follow their example?

In her book, ***Strong Ground: The Lessons of Daring Leadership, the Tenacity of Paradox, and the Wisdom of the Human Spirit***, Brené Brown explores how having a strong ground can change how one shows up in various places in one's life, including the workplace.

For this to happen, however, they must, let go of the hope of a quick fix. There needs to be a willingness to put in the work to help them find their strong ground, and a refusal to build on the backs of dysfunctional, outdated systems.

Brown also proposes that humans are often held back by fear, and that to combat it, they need to stop running at top speed and slow down to implement the changes needed to help them stay grounded in who they are and what they are doing, rather than reacting out of urgency or pressure. These changes may feel small or even uncomfortable at first, but they will help build up the core muscles needed to effect a more sustainable lasting change.

Throughout the book, Brown uses stories, conversation transcripts, and excerpts and quotes from colleagues and others to encourage readers to open themselves up and be willing to discover and implement a new way of thinking and showing up with greater intention and awareness in their workplace and personal life. Brown also uses language that some may consider crude, but does so to emphasize the point she is making and to relate to the reader.

What It Takes to Have Strong Ground

Brown begins by stating that Strong Ground is composed of two critical elements: first, the reader's footing—shaped by their values, curiosity, and humility; and second, a deliberate connection with others who are similarly grounded in themselves and working toward the same goal. This is emphasized by her use of the "Tush Push" football play metaphor, which shows what can happen when a team moves forward with a shared goal and vision. While there are some who may not see the value in sports metaphors, the author states that she uses them because of what sports and organizational work have in common, that being the need for strong ground and showing up fully engaged in the work that needs to be done, rather than showing up in a disjointed way and eventually succumbing to exhaustion or illness.

This is followed by an explanation of the paradox and its relation to the human spirit, helping the reader confront intolerance for uncertainty and push boundaries. Paradoxes are an invitation to live in and tolerate the tension they bring, therefore freeing individuals to show themselves more grace when they make mistakes and to explore their dreams. This is similar to the idea of negative capability, the ability to remain in areas of uncertainty without needing to know all the facts. While this is a difficult muscle to build and tone, as a leader, it is necessary to stay grounded and be courageous enough to slow down and work it rather than rush ahead and have to undo mistakes later.

The definition of leadership has not changed. A leader is someone who sees potential and is willing to work with others to bring it out in the people around them. This takes courage and dedication, as it might entail stepping out of one's comfort zone to help others grow. One change that has occurred is the recognition that courageous skills alone are not enough; a daring mindset must accompany them, and that requires digging beneath the ingrained fear. Why? Because at the heart of being a daring leader is the acknowledgment that courage and fear are not mutually exclusive, and that it is perfectly normal to feel both emotions at the same time.

That means being vulnerable and choosing courage anyway. Brown states that courage is a collection of four skill sets that can be taught and observed:

- **Living into our values**: understanding one's core values—the driving force behind why we do what we do—and developing systems to ensure that intentions and behaviors stay aligned with them.
- **Rumbling with vulnerability**: being willing to engage in difficult conversations, even when they are uncomfortable.
- **BRAVING trust**: building trust with oneself and others through the following:
  - Boundaries
  - Reliability
  - Accountability
  - Vault
  - Integrity
  - Nonjudgment
  - Generosity
- **Learning to rise**: remaining flexible in the face of setbacks or failure and using those experiences as opportunities for learning.

The foundation of these skills is the ability to rumble with vulnerability; without this core skill, it is almost impossible to put the others fully into practice.

Transformation and Clarity

Transformation is a term many tend to overuse because it has the potential to get team members to buy into what they are hoping to accomplish. The problem is that leaders use it to convey urgency or primacy about a task, when in reality the "transformation" may only require slight adaptation, or be implemented over a longer span of time. It is important to remember that real transformations are relational, not transactional. When leaders label something a "transformation" to secure buy-in, they risk losing their team's trust if it is poorly executed or mislabeled. However, when the term is used correctly and done well, it can be effective and exciting, even when it feels scary.

The book states that meaningful transformations not only require time to be implemented well but are defined by paradox. Paradoxes may seem absurd or self-contradictory but often prove to be true when the time is taken to research. This is because, while transformation is about building, it is also about deconstructing the mantles that are already in place to make room for something new and better. It means that things will be broken, potentially big things that make some uncomfortable, in order to protect the vital parts of the organization's mission that are central to its identity.

By breaking down what isn't necessary or isn't working, leaders can protect the core elements of the mission while making way for new protocols and a stronger foundation. When assessed correctly, it becomes clear what should be preserved and what should be dismantled. There will still be those who disagree, because change feels personal and

> Transformation is not just about building—it is also about deconstructing what no longer serves."

can evoke fear. A successful transformation will respect the current strategies already grounded in the mission and allow them to continue beyond the transformation.

Those leading their organization must ensure that everyone is clear on the mission and that their people do not feel overwhelmed by high-impact communication. Teams can feel off-kilter when they lack the full context of what they are working toward. Brown states that when leaders are purposeful in helping others understand where they fit into the big picture, team members tend to be braver and feel a greater sense of agency in their work. They are then able to operate within the tension of the paradox and make more meaningful contributions.

In addition to clarity, the reader learns how to strengthen communication skills through a discussion of Above/Below the Line practice. The line, in this case, is fear. When one is above the line, they can acknowledge fear without reacting to it; there is an awareness that allows them to remain in control and not crumble. Being below the line heightens the likelihood of acting out of fear, with behavior driven by it.

Awareness, naming the feeling, and communicating it are skills that must be practiced to keep them in shape. One way to do this is to ask for a pause when feeling below the line. This may seem simple, but it demonstrates vulnerability and skill and shows honesty and respect toward those in the room with you.

Grounded Confidence

Brown explains that Grounded Confidence is not built on arrogance but on the stable ground of self-awareness, courage, and practice. It is a collection of paradoxes: being both curious and knowledgeable, and recognizing that while perfection is unattainable, growth is always possible. As each category of Grounded Confidence is introduced, the reader is given a road map to understand where they are in the process.

Core

Five skill sets make up the core of Grounded Confidence: self-awareness, metacognition, emotional awareness and regulation, mindfulness, and systems thinking. Together, they form the central "muscle group" that must be stretched and strengthened so one does not default to overcompensating with weaker muscles in place of a strong core.

Strength

Strength is made up of fifteen elements: vulnerability, courage, trust, compassion and empathy, connection, humility, deep curiosity, mastery, discipline, power, accountability, adaptability, and lock-in and lock-through power. These elements foster connection not only with others but also with oneself, allowing the reader to embrace vulnerability and pursue new levels of growth.

Awareness

There are four types of awareness the reader must develop on the journey to Strong Ground: situational, temporal, and multicultural awareness, as well as visualization. The more mindful they are of the needs and cultures of those around them, the time pressures related to their work, and how to visualize and rehearse what needs to be said, the more successful they will be.

Thinking

The way one thinks has a significant impact on outcomes. Whether anticipatory, strategic, critical, paradoxical, intuitive and pattern recognition, creative and design, or symphonic, these modes of thinking must be honed so that each scenario is fully considered, conversations are thoughtful, and outcomes align with what is intended—without rushing and missing crucial details.

Communication

Communication grounded in confidence and strength must be measured by both its impact and its value. It can either elevate or diminish the efforts and contributions made.

The book outlines seven principles to guide communication:

- LEGO Complexity? DUPLO Simplicity
- Emotionally Resonant Language Matters
- Chekhov's Gun
- Become a Student of Aesthetic Force
- Own and Communicate the Changes —Yes, All of Them
- Beware of Invisible Armies and Bullshit Disclaimers
- Metaphors, Analogies, and Stories

Each of these principles helps the reader communicate more effectively with those around them.

Lessons in Locks and Transitions

With all of these new tools for a strong foundation, Brown shares how hard it can be to transition from a work mindset to home and navigate relationships with loved ones. When it is preferable to sit in one's car rather than go inside and interact with family, it signals a problem that needs to be addressed with intention.

She uses the metaphor of the Teddington Lock, where the River Thames transitions from non-tidal to tidal waters under the lockkeeper's careful management, who raises or lowers the gates as needed for each boat.

This reflects a similar balancing act individuals face when coming home from work: they must learn to transition from their professional self to their home self so they can be present and available for those who need them.

The book describes different ways to "lock in" on a task—that is, to direct all available resources and attention to the task at hand. It outlines four distinct experiences that require different cognitive, emotional, and behavioral resources:

- **Mental toughness**: how a person faces challenges and pressure, often linked to resilience.
- **Flow**: a state of deep involvement that allows full commitment and focus.
- **Deliberate practice**: working just beyond one's current ability to build mastery.
- **Deep focus**: the practice of paying attention to one's attention and resisting divided focus.

Next is the idea of locking through, which marks the transition. In the context of the River Thames, this refers to the shifting of water levels to accommodate boats; for people, it represents the transition from work to home.

Too often, the shift is rushed, and instead of moving into calm waters, individuals flounder and lash out, especially because there is a great demand for cognitive flexibility, which takes a biological toll. Many struggle because they do not take the time to lock through and allow their mental state to settle so they can show up fully in their spaces.

To create the time needed to lock through and recharge after work, the reader must trust those around them enough to communicate their needs. This requires time and practice. While it may feel selfish at first, doing so ultimately benefits both themselves and those around them by ensuring they are fully present. Although it may feel uncomfortable initially, persevering demonstrates bravery and commitment, laying the groundwork for more intentional living and leadership.

Finding the Space Between

There is much to consider as the reader reflects on what they have read and prepares to apply it in their own lives. Brown closes by inviting them to consider the space between stimulus and response, which she expresses through the formula S( )R. She developed this concept after getting sober and working to find a new rhythm in her life. While there was no space between the parentheses at first, over time she learned to keep that space open—S( )R—through practices such as prayer, Above/Below the Line, and others.

This space can be disorienting because taking time to think is not typically celebrated or practiced. It is up to the reader to recognize its importance and find practices that help keep it open. The more consistently this is done, the more clearly the reader can think and respond.

Strong Ground: The Lessons of Daring Leadership, the Tenacity of Paradox, and the Wisdom of the Human Spirit by Brené Brown is an encouraging and insightful book that invites not only leaders but all in the workforce to take a moment to pause, reflect, and assess who they are and how they show up in different areas of their lives. Through stories, quotes, and conversations with colleagues, Brown helps readers connect with her ideas and better understand her message. Throughout *Strong Ground*, she offers tools and assessments that provide a strong starting point for those looking to begin this journey.

This is not a book to be skimmed, but one that invites readers to dive in and sit with its ideas so they can apply them to their lives and lead well, confident that they are on strong ground in who they are becoming.

Nine Lessons for Turning Crisis into Triumph

STRONGER IN THE BROKEN PLACES

THE SUMMARY IN BRIEF

As the director of the Federal Emergency Management Agency from 1993 until 2001, James Lee Witt witnessed some of the worst crises Mother Nature, chance and certain humans had to offer — earthquakes, floods, airline crashes, the Oklahoma City bombing, and more. Through it all, he not only drastically improved the reputation FEMA had among lawmakers and crisis victims alike (his leadership rescued the flagging agency), he also developed a strategy for managing crises — a customer-centric model that served him and his staff well, and can serve your business in the same manner. In Stronger in the Broken Places, *Witt lays out the plan, peppering his instruction with observations gleaned from both his years at FEMA and from research into how companies handle emergencies great and small. If you're facing a crisis, Witt's ideas are a vital resource.*

What You'll Learn In This Summary

✓ Strategies for getting to know your organization's values and preparing a triage plan based on them.
✓ Ways to set up effective communication and early-warning systems.
✓ How to identify a recurring crisis and assess the repercussions of walking away.
✓ Ways to change your priorities and projects without triggering crises.
✓ How to identify synergies with suppliers, clients and stakeholders.
✓ The best ways to keep your team confident and productive when things are going wrong.
✓ Strategies to build emergency teams with customized reporting lines and goals.
✓ How to find people who can share leadership duties with you.
✓ Tips for collecting knowledge about failures and successes so you can refine your crisis plan for the future.

STRONGER IN THE BROKEN PLACES

by James Lee Witt and James Morgan

— THE *COMPLETE* SUMMARY

PREPARING FOR A CRISIS

Find Your Roots

Knowing your values — both literally and figuratively — is the crucial first step in preparing for a crisis. The first mistake people often make in crisis response is trying to fix and respond to every situation and exigency, all at once. Managing a crisis effectively requires a series of decisions that must be made quickly, under intense pressure, and with little chance to reflect or research. In such situations, some things invariably get lost. Knowing your values is the only way to ensure that you're the one who is making the decision about what exactly gets lost, and what is too important to sacrifice.

The managers of Johnson & Johnson called on their values when someone began putting cyanide in bottles of Extra Strength Tylenol in the 1980s, and their resulting actions probably saved their business. Management did not dilly-dally, backpedal, stonewall or spin. Instead, it immediately pulled all the product off the shelves and even from some assembly lines (no one knew who was tampering with the pills).

Testing the Credo

They were able to act quickly and decisively, and with such unity, because of something called the Johnson & Johnson credo — their written statement of the values that guide the way the company does business. That credo was and is strengthened by "challenge sessions" conducted a couple of times each year by Johnson & Johnson management, in which managers question the credo, in order to make sure it accurately reflects the company's actions, as well as to ensure those actions reflect the company's values. Few if any changes are made, but in the process of testing the credo, remarkable buy-in occurs. Core beliefs, like muscle, respond to exercise.

As seen by Johnson & Johnson's actions, techniques of introspection and self-examination can be incorporated into the life of an organization. When James Lee Witt took over as director of FEMA, the organization agreed on its first-ever mission statement, committing itself to an emergency management program of mitigation, preparedness, response and recovery. The mission marked a new FEMA in three crucial ways:

1. Simply by spelling it out, Witt and his people had set a concrete path for an agency known for its vagueness, thick bureaucracy, and lack of true viability.

2. Witt and his team committed their resources to handling all hazards, eliminating confusion over the agency's Cold War-era incarnation as coordinator of the U.S. response to nuclear war.

3. The mission statement emphasized reducing loss of life and property, and stressed preparation — not simply response and recovery — as an overriding theme.

Building the Plan

Finding your roots, the values that are too important to rip out from under your organization, comes first, long before a crisis hits, if you are going to be successful. Know-how comes from know-why. To build the plan your company needs to make decisions and exercise its "core value muscles," you should:

- **Identify, communicate and practice your values.** Know what you value and why and how you value it. Communicate your values in terms that don't require crunching numbers.
- **Reassess your mission statement and what it means to projects, clients, products and individuals.** It should clearly point to your values, acting as a primary indicator of the decisions your company will make.
- **Practice triage.** Incorporate "what if" scenarios into your meetings on product development, client rela-

Market the Storm

James Lee Witt finds something perversely reassuring about satellite photos of hurricanes. What is menacing, amorphous and deadly when you're in the middle of it is recognizable and predictable when viewed from miles above. This occurred to Witt when he visited Carolina Beach, N.C., many years after witnessing the aftermath of the 1996 Hurricane Fran, which did hundreds of millions of dollars' worth of damage, killed 24 people, and left 7,000 families with damaged or destroyed homes.

The View From Above

When he considered the devastation such storms had wrecked on the area, Witt thought it odd to see so many aerial hurricane photos everywhere he went. Then it hit him — FEMA had to introduce the idea of disaster preparedness and mitigation through a sustained marketing campaign, the same way one might sell Nike shoes: The agency had to market the storm. By engaging in specific, targeted communication strategies, FEMA could raise the public's level of awareness and elevate the public dialogue about disaster and the crisis management goals of preparedness and mitigation.

Marketing the storm means getting people accustomed to a state of crisis preparedness, so they're not taken off guard. When a business draws up a crisis prevention plan, those managing the plan must delve into their deepest fears, imagining every conceivable worst-case scenario. It must set limits for what it can do in a crisis, let others know those limits, and get them to set their own. Honest communication is the lifeblood of crisis management—if you can't honestly address what a problem is, you diminish your chances of solving it.

Trial by Tire

Communication, when it is working, can help you know when a crisis is coming — sometimes early enough to prevent it. General Motors watched as its competitor Ford Motor Co. and the tire maker Bridgestone/Firestone were caught up in a massive product recall of 21 million tires, and an all-around public relations disaster. GM could look on from a distance because it already had in place stringent monitoring programs for real-world tests of the tires it put on its cars, one that had a system of early-warning flags that identified defects and sub par performance. That system, quite a while before the Ford fiasco, discovered a small number of its cars suffering similar defects. GM investigated, and issued a recall for the tires — a recall that affected fewer than 5,000 car owners.

Updates Minus the Niceties

GM's case reveals a solid communication infrastructure. In such an infrastructure, updates during a crisis must be due at regular intervals, regardless of progress, and minus the niceties of business memoranda. Employees should have a series of questions to answer, including the chance to offer pointed suggestions about whether a response plan needs to be changed.

GM made use of its early warning system which prepared its people for the tire problem quickly and efficiently. Since about three-quarters of business crises start off small, early warnings can make a big difference. Keep people on continuous watch. Reward them for early reports of how their work is going off course, rather than chastising them for getting behind. ■

Sybase Makes Media Its Ally

In 1997, the database software company Sybase was riding high, showing a $15 million profit — a drastic improvement over the previous year's $70 million loss. CEO Michael Kertzman was just about to go public with the news when word came in that a handful of employees in Japan had wildly overstated earnings; once earnings were restated, the company was actually showing a $55 million loss for the year. Although company lawyers were advising him otherwise, Kertzman went public with the news, making himself available to analysts, shareholders, and the media (the *San Francisco Chronicle* even followed him around for a day as he worked on the crisis).

Kertzman wanted to show all interested parties, as well as the financial community at large, that Sybase was tackling the problem head-on, with absolute integrity, and that the overstatement of earnings was an isolated, though costly, incident that occurred half a world away. This commitment to telling the truth was reflected in media profiles of the company (particularly the *Chronicle* piece, which depicted Sybase as a company going through a rough time, but determined to do right).

PREVENTING CRISIS

A River's Gonna Go Where a River's Gonna Go

For 160 years, Pattonsburg, Miss., fought Mother Nature and her most devastating creations: the floods that visited, revisited and repeatedly devastated the town. In 1844, the flood waters came, and in 1909, again in 1947, 1951 and 1973 — each time the water rose, destroyed everything in its path, and fell back again. By the great Midwestern floods of 1993, the people of Pattonsburg had had enough. Rather than simply abandon their town, however, the 500 citizens decided to move the town several miles up Interstate 35, to higher ground. They secured permission from the governor and they received assistance from FEMA (whose director, James Lee Witt, had never before heard of the town or its tribulations). They held a lottery to select who got which lots in the new location. And they *moved the entire town*.

The people never focused on the limitations of what they were allowed to do; instead, they focused on the possibilities available to them, responding to a problem that had haunted them and their forbears for generations.

The hardest part of taking responsibility is just doing it. Inertia can cause natural disasters to be more deadly and costly than they would otherwise be, if people would prepare for them. If you live in a hurricane area, you have to decide to give up a little ocean view for more protection; if you live in a flood plain, you have to decide to take flood insurance. If you lived in Pattonsburg in 1993, you had to decide to take responsibility for your own life.

Take Responsibility for Your Crisis

Not all crises strike with the sudden drama of a tornado or hurricane. Some, like the floods in Pattonsburg, build slowly, insidiously, over time. In any case, you need to take responsibility for handling whatever problem lies before you, and for short-circuiting whatever crisis may be close at hand. Consider doing the following:

- **Launch a probe.** If the same crisis keeps hitting you again and again, find the patterns in the crisis and its causes and use them to your advantage. Create a list of attributes and study them, with the goal of using them to create a prevention plan.
- **Measure the gap and make the leap.** Even though you can see a crisis pattern doesn't mean you or others aren't going to be resistant to change. (It took the people of Pattonsburg 160 years to pull up and resettle.) That's why measuring is so important — at some point, the cumulative losses (sales lost, crises recovered from, etc.) will reach a breaking point. Quantify your problems as negatives and find positives to counterbalance them.
- **Map out the ripple effects.** Once you've decided to change direction, you need to identify the potential crises that will pop up in the repercussions of your decision. Will your people require new training? Will you have to lay off staff? How will morale be affected? Ask for input from the affected people, when possible, to minimize the negative responses to your decision.
- **Map out the new terrain.** Put your prevention plan into place, making sure everyone knows it, and knows their role in preventing a crisis. Plans are essential, but it's your employees that make your plan a reality.
- **Prevent now, prevent later.** Some portion of responding to a crisis is preventing it from spreading. Long-term prevention plans help you look at the big picture; short-term prevention plans fall back on your values and plans of action — don't confuse the two. Preventing now doesn't automatically help you prevent the same crisis from happening again. ■

Reconsider the Three Pigs

As a former builder, James Lee Witt feels we often get our priorities wrong in this country. When construction is begun on a major building project, there's a "groundbreaking" ceremony, where politicians and potentates pose with gold-plated shovels. Once the steelwork is completed, there's a "topping-out" ceremony, where those same politicians and potentates scribble their names on the uppermost beams. All the focus is on reaching for the heavens.

Witt, on the other hand, feels that the big celebration should be for the "foundation pouring." For those who live in California, the politicians and potentates would be invited to return for the "wall bolting" ceremony. Unfortunately, foundations and wall boltings simply don't have the same attraction as topping-outs. Anyone who's ever built anything lasting, however, knows the infinite value of a proper foundation and the right support.

AOL Outgrows Its Foundation

The same is true in business. America Online had humble beginnings. Started in 1985 under the name Quantum Computer Services, Inc., the company was built from a solid blueprint — management identified its market, spelled it out for all to see, delivered the system it promised, promoted its product relentlessly, and built on

(continued on page 5)

Reconsider the Three Pigs

(continued from page 4)

that base to add increasing value to its core product.

And it worked — the company built AOL's customer base from less than 500,000 users to nearly 33 million today. Not that it didn't have growing pains. In late 1996, when AOL changed its pricing system, customers responded in numbers that no one in the company expected, causing extreme stress to its infrastructure and resulting in millions of customers put "on hold." The experience sobered the company, which rushed to upgrade its infrastructure, and which has used the experience to inform virtually every new partnership it strikes up. All the while, AOL focuses on its mission, even as it has grown far beyond even the wildest dreams of its founders.

It's the Employees, Stupid!

Another aspect of proper foundations is the interaction and relationship between management and employees. Employees, through their attitudes and aptitudes, determine the level of success a foundation will support. Constant communication between management and employees is key to strengthening that foundation.

The UPS strike of 1996 shows what can happen when that strengthening factor is missing. That 185,000 employees of that well-known and well-respected corporate giant would strike against management was unthinkable, both to outsiders and to UPS managers alike. When an insulated management misjudges its employees' will to enact change, it can very easily find itself without a strategy, outmaneuvered at every turn.

Building on a Strong Foundation

You must lay a groundwork for your *strategies*, not your tasks and tactics — only then will you be able to plan for and prevent less predictable disasters that can happen to a business. When you're starting a new product or service strategy (i.e., AOL's pricing change), you may require attributes you do not currently have in order to head off a crisis (for example, an infrastructure that enables all of your customers to access accounts simultaneously). Looking for patterns helps you see the real-world commonalities in your strategies, just in case they don't match the ones you're supposed to be pursuing.

You should aim high, but never take your eye off your foundation. When you start to overreach your foundation, you risk toppling yourself. Every time you expand, acquire or merge, make sure your crisis-prevention infrastructure extends to your new employees, offices, and projects immediately, before a crisis hits. ■

The Pig With the Bricks Was Wrong

On Jan. 17, 1994, the community of Northridge, Calif., was awakened at 4:30 a.m. by a massive earthquake, registering 6.7 on the Richter scale. The quake and its aftershocks would do unthinkable amounts of damage to the area — over $40 billion worth (the country's costliest natural disaster), touching some 670,000 lives.

Much of the damage to homes and businesses was done to buildings that were not retrofitted to meet stricter building codes enacted in recent decades. The only mitigation law in California is for unreinforced masonry, or URMs — essentially solid brick structures with no steel or wood reinforcements. Such buildings have been illegal since 1935.

According to geologist Lucy Jones, the self-satisfied pig in Disney's *Three Little Pigs* cartoon had it all wrong when he built his house with bricks. "The right answer was twigs," she says. "Flexible, wood-frame construction. You have to tie them together, though."

RESPONDING TO A CRISIS

Twine Is Stronger Than String

No job in any disaster is more difficult — both physically and emotionally — than that of search and rescue. The teams involved are in the job, up close and personal. They don't deal in abstracts: They deal in concrete and steel, wood and glass, water and mud, and (all too often) flesh and blood. Their emotional reserve is absolute; one way they cope is not to think about coping, but focusing on the task at hand.

Yet, in the aftermath of the greatest of disasters — the Oklahoma City bombing, perhaps, or certainly the horrors of September 11 — James Lee Witt feels you cannot go into a crisis without some coping strategy, some connection to something bigger than you are. You have to believe in your absolute ability to get the job done, and to maintain control of everything, or at least as much as possible.

Sometimes, you don't manage your management of a crisis very well. If too much time goes by with too little good news, discouragement can easily flare into something angrier. Even the Oklahoma City rescuers, exhausted in every way possible, sometimes snapped at the very people who were there to help them.

(continued on page 6)

Twine Is Stronger Than String

(continued from page 5)

Competition between federal agencies for control of the mission didn't help, and a good deal of time was spent between colleagues, trying to smooth over hurt feelings.

Going home after the Oklahoma City cleanup was difficult for all involved. James Lee Witt tried to carry the burden of the disaster and its aftermath all by himself. He recognizes now there was no need for that after the bombing, and that there is no need for that, in any disaster situation. You owe it to yourself, your family, your neighbors, your employees, and all the other people whose lives you touch, to manage your own management of a crisis. Do not think you're in it alone — that is arrogance, and totally unproductive.

Mutual Respect, Mutual Assistance And Mutual Need

There is no place for arrogance or territorialism in the wake of a crisis. Focus must be placed on your customers, both internal and external. Probably one of the best examples of business leadership in the all-the-world's-a-customer sense is the story of Malden Mills, maker of Polartec and Polarfleece, following a devastating fire that destroyed the company's offices and plant in 1995. Nearly 3,000 workers relied on Malden Mills for their livelihood, and most thought the fire would bring about the end of the company.

Instead, CEO Aaron Feuerstein announced he was keeping all his employees on the payroll, with full benefits, while the company's plant was rebuilt on a minimal level. He even gave them Christmas bonuses. The downtime lasted three months; it cost him $25 million. When asked why he was taking this tact, Feuerstein noted that he considered employees to be an asset, not an expense.

That support came back to Feuerstein in spades when he was forced to seek Chapter 11 bankruptcy protection in 2001, after the garment industry suffered a precipitous decline. The communities around the company began a "Buy Fleece" campaign. The company's union workers took a pay freeze and cut their paid days off, in order to help the organization's bottom line. Because Feuerstein made a commitment to his workers and community in a time of crisis, those parties were willing and able to give back to him when he and his company were in the time of greatest need.

The Oklahoma City rescuers and Malden Mills are examples of the benefits of personal and professional support systems in a time of crisis. You can harness the power of such support systems by doing the following:

- **Building some twine.** Twine is stronger than string; anyone who has tied up a package can testify to the difference. In your organization, the "twine" can be an incident support team that draws on experts from different areas of your company who can coordinate responses in a time of crisis.
- **Reaching out to people.** Take an immediate and literal inventory of how a crisis is affecting your company as well as the people and businesses around you. Identify where their needs and your needs can serve one another, or where serving their needs is crucial to your handling of the crisis at hand.
- **Viewing everyone as your customer.** Evaluate the short-term costs and effectiveness of a response, in the light of long-term benefits.
- **Remembering the weeding and feeding.** Require open communication with employees, clients and partners, and maintain contact with those you might not work with on a regular basis. Draw a map of this support network, and share contacts generously. ■

Treat the Heart Without Losing Your Head

Ernest Hemingway's phrase "grace under pressure" often comes to mind when dealing with a crisis situation. Hemingway meant it as a definition of guts, but in effect it defines the essence of humanity. Crises tend to reveal much about who we really are. Even disaster professionals are caught off guard on occasion by their emotions. One fire chief at the site of the Oklahoma City bombing described one of his men who had broken down crying: "He became that building." The sliver of distance between head and heart had closed in on him.

The people who best handle crises are the ones who tend to think of others before they think of themselves. Focusing on the welfare of those around you is a key to negotiating the emotional undercurrents of a crisis situation. Good managers interact with other people, and so do good crisis managers. You cannot control a crisis: The best you can do is manage it, which, in addition to the nuts and bolts of recovery, means offering a sense of comfort and hope to those most hurt by the event.

Swissair Empathizes, Helps and Succeeds

One of the best examples of corporate crisis management was Swissair's handling of the crash of one of its jumbo jets off the coast of Nova Scotia in 1998. The company had a crisis plan in place; it recognized that the first 24 hours after a crash are crucial if an airline wants to build trust and communication with the crash families. Hours after the crash, the airline announced

(continued on page 7)

Treat the Heart Without Losing Your Head

(continued from page 6)

payments of some $20,000 to help families of victims with immediate financial needs. It also established a team of grief counselors and arranged for families to visit the crash site. Its public communications seemed open and genuine, calming the victims' families, the media, and those who invested in Swissair.

This case shows that if you tell the truth, which often means admitting you don't know or can't do something, you never have to "spin" a story. If you have a crisis plan in place, you can respond with truth and compassion, enabling you to effectively manage the situation.

Find the Balance

It is difficult to find the right balance of head and heart when managing a crisis. You need to determine what you can control, control it, and roll with the rest. This helps you manage stress, which can derail even the best-laid plans. You need to know your limits, and never promise what you cannot deliver, regardless of how much hope you might have that you can deliver something out of your reach.

Don't play the blame game or scapegoat someone or something else — respond to the crisis openly and honestly, building trust and dealing openly with the fear and uncertainty that typically accompanies these difficult situations. ■

Tear Down the Stovepipes

In today's media culture, the aura of the almighty spotlight has fried more than a few brains, particularly where the subject of teamwork is concerned. Parents who come to their kids' Little League games and embarrass themselves by getting into fights have probably just been blinded by the possibility that their kid might be a Major Leaguer one day. Self-aggrandizement, however, is not the real point of teamwork. Teamwork is about the satisfaction of helping to build something larger than yourself, to play a part in that greater entity's accomplishing a higher purpose.

Rip Out Vertical Structure

It is important to tear down the stovepipes when building a team. Vertical imaging sparks someone to play for himself and not the team. A bunch of stovepipes in a room never touch one another.

Teamwork issues are, first of all, about attitude. When James Lee Witt reorganized FEMA, one of the first things he did was switch around department managers, thereby ripping out the vertical structure that tends to grow in organizations where managers stay in the same place year after year. When Michael Bloomberg took over as mayor of New York City, he almost literally tore down the stovepipes at City Hall, replacing rows of fancy private offices with a maze of cubicles. The twist is that he occupies one of the cubicles himself. It is said of Bloomberg that he has lots of will, but no ego. That's a good way to begin to build a climate of teamwork.

You must also achieve buy-in to a unified goal. You can't just mandate it; you're just asking for resistance if you try. At FEMA, Witt had employees work together to create their new mission. He gave them general goals, parameters and directions, then left them to fashion the specifics. Because they did that themselves, they felt they owned the mission.

On the Same Page

Getting teamwork jump-started is useful when a crisis arises, because everyone on the team will tend to be familiar with one another, in addition to being focused on a single goal. If things get prickly between teams that appear to be competing, pull teams into a single unit, if only for a short time. The best way to get people on the same page is to give them only one book. ■

Marriott's Management Turnaround

In business, as in baseball, if you have a team that's firing on all cylinders, yet still not getting the job done, it's not the team's fault: It's the manager's. If something is broken, the manager must step in to fix it.

A good example is the Marriott Corp., whose legendary work ethic put a premium on "face time" — the more hours employees were on the job, the better. This was the philosophy for years, until the day Marriott International's Vice President and Marketing Manager Bill Munck spoke with one of the best entry-level managers. Munck asked the manager where he saw himself in five years; the man responded that he didn't think he'd still be with Marriott, due to the fact that he was regularly putting in 12-hour days and didn't see how he could keep up such a pace.

Rather than writing the young man off as a deadbeat, Munck and his fellow managers saw the writing on the wall and, after getting similar responses from other employees, instituted a new program shortening the hours of managers. Such a shift in attitude was done to foster teamwork, and to retain the company's best and brightest over the long haul.

RECOVERING FROM CRISIS

A Lightning Rod Works Both Ways

Crises are made for heroes; one can't help but wonder sometimes if crises weren't made to make heroes. Think of the brave travelers who boarded United Flight 93 on Sept. 11, 2001. Before they boarded that plane, they were ordinary people, occupied with the mundane hopes and activities of daily life. Then they buckled their seat belts and that big jet lifted off, carrying a handful of extraordinary passengers into the history books.

As a crisis manager, you should seek out the extraordinary people in your organization — the heroes willing to step up when the chips are down, those who bring out the best in others. How do you know who and where they are? Look for the lightning rod. Personalities capable of sparking others tend to attract their share of sparks. They're passionate people, and passion doesn't sit quietly by while everything falls to pieces around it. You want someone who instinctively will pick up the flag and inspire others to follow.

Crisis Plans and Strong Individuals

Crisis plans revolve around these strong individuals. When New York City was on the verge of bankruptcy in the 1970s, financier Felix Rohatyn masterminded the bailout strategy. When Chrysler was on the ropes, Lee Iacocca stepped in and re-created the car company. When Jerry Jones bought the flagging Dallas Cowboys franchise, he and coach Jimmy Johnson rebuilt the team into a powerhouse around quarterback Troy Aikman.

Lightning rods inspire people to carry on throughout a crisis, to gather information about what has happened so you're better prepared the next time. They stay alert for fall-out, and muster the enthusiasm for rebuilding regular life, which can be a long, slow, hard process. Knowing who and what can be a lightning rod for you will save you many headaches, and possibly a few crises, as well. ■

Martha Stewart as Lightning Rod — It's a Good Thing

When the Kmart chain filed for Chapter 11 protection in January of 2002, it brought in one of its longtime board members, James B. Adamson, to lead the company through its difficulties. Adamson's galvanizing personality and leadership experience at both the Target and Revco chains made him the perfect choice for the job.

Oddly enough, though, the big question in the press wasn't so much about who was to lead Kmart, but whether the company would be able to hold onto Martha Stewart and her premier brand of housewares. The message inherent in the punditry was unmistakable — a huge retailer was in trouble, and one of its high-profile vendors was a key factor in determining the company's future. Martha Stewart was a lightning rod around which to build a recovery. Fortunately for Kmart, she stuck by them.

Stronger in the Broken Places

The Chinese, befitting a culture marked by age and wisdom, apparently choose to take the long view of the calamities that beset mankind. Their character for crisis, *wei ji*, is comprised of the characters for two other words: danger and opportunity.

This is a wonderful fact: Change, even unasked-for change, often turns out to be good. No one would ever say they're glad terrorists attacked the World Trade Center and the Pentagon, but it did happen. Now we have to try to find the positive and the hopeful in that. Perhaps there is a kinship and unity among Americans since Sept. 11, 2001, that was not present before. Such a thing will not bring back the people who lost their lives, but it may make us a better, stronger nation.

Another Kind of Time

A crisis stops time for a while. When life is going along normally, it's like we're on a moving sidewalk in an airport corridor; the sudden loss of velocity at the end of the sidewalk can be jarring. In a crisis, another kind of time and motion take over, but you know it's temporary. Meanwhile, ordinary concerns become irrelevant. Who you are and what you want to be become more visceral, less intellectual questions. If you manage it right, a crisis becomes an opportunity for reinvention.

To manage a crisis to your advantage, remember:

- **A crisis is equal parts danger and opportunity.** A crisis gives people a chance to demonstrate leadership that can be valuable not just in a crisis.
- **Learn to view down times as a chance to stop, listen and look.** Take advantage of these times to ramp up neglected projects.
- **Don't let your mistakes and successes go into a vacuum.** Collect every bit of knowledge you can about your crisis response, how your crisis preparations held up, and what you can improve for the future.
- **Crisis is the mother of invention.** Recovery is a chance to lay new foundations and support beams.

A crisis usually isn't the end. More often than not it's the beginning. ■

Succession

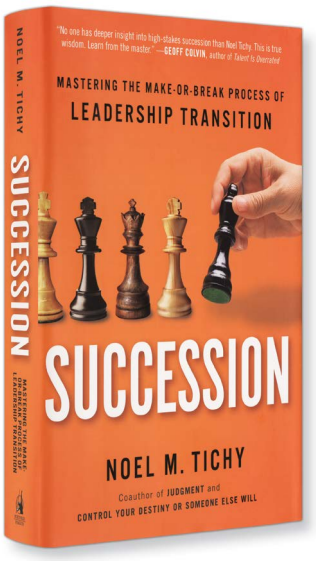
Mastering the Make-or-Break Process of Leadership Transition



by Noel M. Tichy

THE SUMMARY IN BRIEF

The decision of who leads an organization into a successful future is by far the most momentous one that directors, CEOs and senior leaders will ever make. The unfortunate reality is that as many as 80 percent of leaders get this high-stakes decision wrong. Noel Tichy, the noted leadership expert, best-selling author and longtime trusted advisor to such leading companies as GE, Intel, Ford and Merck, draws on his experience working closely with CEOs around the world to provide a blueprint for leaders who want to join the elite 20 percent who get it right.

In *Succession*, Tichy reflects on his years working with countless CEOs, Chief Human Resources Officers (CHROs) and boards to provide firsthand accounts of outstanding successes and failures at succession planning and leadership transition. He explains a practical succession framework that can be applied to any organization, whether a multibillion-dollar conglomerate, a family business or a nonprofit. He defines the roles and responsibilities of all the major players: the incumbent CEO, the board, the CHRO and the potential successors, while providing specific tools to help leaders navigate the complexities of developing, selecting and promoting the right people.

IN THIS SUMMARY, YOU WILL LEARN:

- Seven failure factors that lead to unsuccessful CEO successions.
- The proper roles of the CEO, human resources and the board in developing a succession plan.
- Why having to choose an outsider as a new CEO is an unnecessary failure and how to avoid it.

Getting It Wrong: The Broken CEO Succession Pipeline

Every time an organization's board has to reach outside its own ranks for a successor to an incumbent CEO, such a desperate move is an unmistakable sign of a broken leadership pipeline, and in my experience, broken leadership pipelines are the primary root cause of broken companies. Of the many factors to which movement of share prices and long-term performance are widely ascribed, the success or failure of senior leadership to drive internal change and confront external change is the single most important determinant of long-term success.

At virtually every company or organization on the planet, whether run for profit, not-for-profit, public or private, family or shareholder owned, there are two immutable facts about leadership:

1. Leadership matters.
2. Continuity of leadership matters.

How many times have you heard of a winning baseball, football or any high-performing sports team losing a coach or a star quarterback or pitcher without immediately naming a replacement? Yet at most of our largest and most admired companies and at many if not most of our largest and most admired academic and other nonprofit organizations, it is more the rule than the exception that if and when an incumbent leader departs the scene, for any number of predictable or unpredictable reasons, the organization all too frequently finds itself in the awkward predicament of lacking an insider candidate or candidates waiting on deck who are ready, willing, eager and, most important, well prepared to step up into the top job at a moment's notice and succeed.

Many companies do have formal succession plans in place, but that is not really the point. All too often these formal plans are no more than that — empty formalities, technicalities and charade-like check-the-box exercises. When push comes to shove, as it nearly always does, such plans and processes ostensibly designed to ensure an orderly, seamless, nondisruptive CEO succession, absent political infighting, cultural confusion, ambiguity and ambivalence, often break down in practice.

The Technical, Political and Cultural (TPC) Context of CEO Succession

"TPC Theory" applies to the topic of executive transition and CEO succession because one of the primary reasons that organizations fail at this delicate and difficult task is that too many CEOs, boards and Chief Human Resources Officers (CHROs) overly rely on the technical aspects of the process.

I have arrived at three inescapable conclusions regarding CEO succession:

1. Successful CEO succession cannot and should not be conducted in a vacuum. It must be about the journey, not the destination. Above all, it must be the culmination of the long-term development of a robust leadership pipeline, based not just on a technical but a cultural and political system designed to access and promote talent in a disciplined, impartial, objective fashion.
2. There is no perfect, fail-proof process, but a plan is better than no plan.
3. In too many cases where a plan has been formulated, it ends up turning into an empty annual ritual, like the turning of fall leaves. This is more often than not the result of excessive and even obsessive focus by the

key players on the technical aspects of the process, to the detriment of the political and cultural dimensions.

Defining Success

The essential challenge and therefore measure of success all leaders face today can be distilled down to two intertwined tasks:

1. Increasing the value of the assets they were given control over between the day of their arrival and the day of their departure.
2. Developing and selecting a successor who does the same thing.

The most commonly derived variable expressing this proposition is TRS (total return to shareholders), which, in the context of publicly listed corporations, is relatively easily determined by doing the math on any number of financial websites. Even with nonprofit organizations, it's not hard to come up with surrogates for TRS, including the size of the organization's endowment, the quality of its work, and its success in meeting precisely defined targets and goals defined by its board.

The Failure Factors

Failure Factor #1: SPOTS. This is an acronym for "Succession Plans on Top Shelves." The existence of an inoperable or poorly conceived plan can actually hinder the organic evolution of a genuine process designed to develop the next generation of leaders.

Failure Factor #2: Failing the Beer Truck Test or Not Even Taking It. Companies must invest the significant time, attention and resources required to build up a strong bench of internal talent that could be prepared to replace senior management at a moment's notice, were they to be, for any reason whatsoever, bowled over by the proverbial 18-wheeler.

Failure Factor #3: The Domineering CEO Who Won't Let Go. Microsoft CEO Steve Ballmer's failure to construct and maintain a robust leadership pipeline was largely due, as one commentator put it, to his "larger than life" leadership style, which made it "difficult for [other executives] to really rise up and have a noticeable public role."

Failure Factor #4: Superstar Outsider Bias. The outsider bias is based on a false premise: that a candidate's mere status as an outsider will make it more likely that she or he will inject more of a dose of fresh air into the company's hermetically sealed atmosphere than any insider could. Outsider selections are a sign of defeat and failed leadership, pose enormous risks to the enterprise and cost a ton to boot.

Failure Factor #5: The Halo Effect. Carly Fiorina's selection by HP's board was based to a significant degree on the reputation of the organization she came from, a shockingly popular delusion often referred to as "The Halo Effect." As *Fortune* later revealed, the high-flying stock of Fiorina's then-current company Lucent had been pumped up by phony deals booked as revenue that were being financed by Lucent at artificially low rates.

Failure Factor #6: Assessing CEO Candidates on Traits as Opposed to Experience. The basic problem with this approach is that it elevates the assessment of traits — an inherently squishy conception — above the more rigorous assessment formula based on disciplined "accomplishment analysis." These assessments are so laborious and comprehensive that they are rarely if ever compiled on anyone other than very senior leaders and, often, CEO candidates.

Failure Factor #7: In CEO Succession, Winner Takes All. The bogus reason cited by the HP board members for going outside is worthy of further dissection because it is so frequently cited by CEOs and boards resistant to running a proper CEO succession process: Setting up any sort of succession "horse race," they maintain with a straight face, will lead to fragmentation and competition among the senior team, many if not all of whom will abandon the company the moment a winner is declared, leaving it in a sorry state.

As P&G CEO A.G. Lafley once said, "It's always a horse race — get over it." What should be a nonissue is best handled the way Jack Welch of GE did, by insisting that it be well understood by all contenders that the losers would be gone the day after the winner was picked. In light of this strict ultimatum, at GE Welch took special care to keep all the contenders out of staff jobs at corporate headquarters, where they might have been tempted to spend their time trying to undermine each other, and instead gave them tough line assignments where they ran independent businesses, the performance of which could be assessed independently of one another — may the best man or woman win. It's unnatural to expect losers to stick around and report to the winner.

Cultivating Transformational Leaders on the Inside

The development and selection of an organization's next leaders is the single most important decision any organization can make. The responsibility for its conception,

development, implementation and execution must be shared (not necessarily equally) among three pivotal points of organizational power — the CEO, the CHRO and the board of directors or trustees.

Judgments are not, in fact, single-point-in-time events but the outcome of a process that can be divided into three distinct phases: 1. Preparation phase; 2. Call phase; 3. Execution phase.

Apart from being divided into three phases along the temporal dimension, all judgments can be further divided into three distinct domains with regard to their subject matter: 1. Judgments about people (who is on the team or off the team). 2. Judgments about strategy (future direction of the organization). 3. Judgments during periods of crisis (unexpected events that threaten the organization).

All board-level reviews of and deliberations about who should be the next CEO, as well as evaluations of the current CEO, should be explicitly built around the judgment framework. This framework provides a simple but actionable lens through which to examine a leader's past track record of judgments as well as providing a practical guide for incumbent leaders to predict how well a particular leader under consideration may do when under pressure to render key judgments in the future.

Sound CEO succession requires that the board, incumbent CEO and CHRO share a mutually synchronized view of how the organization will achieve success in the future. The succession decision must therefore be focused on selecting the candidate at the top of the pipeline judged to be most able to lead the organization to achieve that precisely defined vision of success. That selection needs, in turn, to be grounded in an explicit framework capable of accurately measuring the capacity of candidates under consideration to internalize knowledge in four areas: Self-Knowledge, Social Network Knowledge, Organizational Knowledge and Contextual Knowledge.

Any sound succession planning process must rigorously assess and evaluate how rising leaders make judgments, achieve success or failure and, most critical of all, their capacity to learn and adjust their strategies in response to changing circumstances. Creating such opportunities requires deliberate planning by the organization's leaders.

Getting It Right: Building a Transformational Leadership Pipeline

The most critical political aspect of CEO succession planning is the maintenance of a balance of powers — complete with real checks and balances — between the three main players in the game: the CEO, the CHRO and the board. The CEO must own and manage the process while not dominating it, undermining it or in any way compromising its integrity, objectivity or impartiality. The board, the CEO and the CHRO must be tightly aligned and must defer to the process, which involves setting aside personal agendas and biases.

Human resources systems and evaluations need to take the reality into account that compensation and promotional and development opportunities must be intrinsically linked to judgment capacity and related specific criteria, including personal integrity, motivational skill and contextual knowledge. My team and I tackle this task by designing action-learning projects that are authentic business challenges, which are ultimately developed into real-life business concepts, tactics and strategies, the success or failure of which counts against their leadership capacity assessment.

Although talent development is primarily an internal operation, the search for a transformational leader, if it is to be truly rigorous, must involve benchmarking internal candidates with viable external competitors.

The Cultural Dimension

The most powerful shaper of culture is the HR department and the systems it employs to appraise, promote and reward performance. These are the systems that must be put into place if you are hoping to override powerful personalities and politics. Building an effective leadership pipeline in today's world demands the cultivation of transformational leaders, who are able to maintain the continuity of the core culture while continuing to hard-drive internal and adapt to external change.

The CEO Role in the Succession Pipeline: The Paradox of Power

In July 2011, the board of directors of telecom giant Verizon Communications issued an announcement so widely expected it generated only a passing mention in the press. Ivan Seidenberg would be stepping down as CEO by August 1. The naming of Seidenberg's successor, Lowell McAdam, who had led Verizon Wireless since 2006, came as no great surprise to anyone who had been following the company closely, because about a year before, Verizon's board had issued a detailed public statement confirming the appointment of McAdam as COO and

president of Verizon Communications, the corporate parent, clearly positioning him as Seidenberg's heir apparent.

CEO Succession Rule #1: Great CEO Successions Don't Make Great Copy.

Everything about the Seidenberg-McAdam succession reflected Seidenberg's determination not to "create drama" around the event. An uneventful succession is the clearest indicator of an executive transition's (at least) short-term success.

CEO Succession Rule #2: The CEO Isn't the Only Game in Town.

The transfer of power from one CEO to the next shouldn't be an isolated event, but the culmination of a disciplined, rigorous process that encompasses the multi-year development and positioning of the top team.

CEO Succession Rule #3: Process Is Best Served When the CEO Collaborates with the CHRO and the Board.

The process that brought not just McAdam but the entire new team to the top had been the product of a close long-term collaboration among Seidenberg, the board and CHRO Marc Reed. Seidenberg and Reed spoke with one voice about the pride they both took in collaboratively crafting a process that, though by no means perfect, was meticulously engineered to minimize the technical, cultural and political challenges and disruptions that so often compromise and distort CEO succession sagas.

CEO Succession Rule #4: Go to the Board with a Plan on Your Own; Don't Make the Board Come to You.

This approach puts the CEO ahead of the curve in preparing the future transition. This is a subtle way for the CEO to influence yet not explicitly control the process by setting a timetable, framing the issue, letting the board know it's an important CEO priority. Yet at the same time, it gives the board members a sense that they have been called into the game early, with ample time for them to provide insight.

CEO Succession Rule #5: Acknowledge and Correct Personal Biases

Seidenberg remained firmly convinced that the board would and should ultimately "select someone who knew the industry, had deep vertical knowledge, had great operating experience and understood the premium that goes with our brand." While he wasn't shy about letting that bias be known, it made him all the more determined to give CHRO Reed a definite mandate to maintain a viable slate of external competitors for every key position.

CEO Succession Rule #6: Every Candidate Needs Exposure to the Board

This exposure should be designed to make each director feel confident in their ultimate selection decisions.

The Critical Role of Human Resources in CEO Succession

An HR system with integrity forms the foundation for the selection system, the reward and benefits systems, and a development system all linked together. The weakest link is generally appraisal. In the absence of honest, rigorous and impartial appraisal, it is not possible to achieve the required integrity in the reward system because the basis upon which who gets more or less is not seen as fair and therefore does not serve as a motivator of performance but rather as a tool for dysfunctional political manipulation.

For the HR system to support sound succession planning, HR executives must take the lead in designing a system defined by rigorous data and checks and balances. Data is a treasure that only HR possesses. If that data is degraded, the result is GIGO: Garbage In, Garbage Out.

Making HR Strategic in Three Not-So-Easy Steps

Step 1: HR helps business leaders prepare the data for review, just as finance does the same on the business side.

Step 2: HR presides over a rigorous review process reflected in open, honest dialogue. The dialogue is marked by a full and nuanced appreciation of the often subtle interplay between technical, political and cultural elements, with the most important component being the political checks and balances that maintain the system's integrity.

Step 3: Continual review and follow-up.

The Accomplishment Analysis

HR departments that are truly effective and strategic often compile thorough, qualitative portraits of present and high-potential future leaders based on an extensive series of in-depth interviews known as "accomplishment analyses." These typically start out with the leader under consideration for promotion reviewing his or her past accomplishments and aspirations with a series of interviewers initially charged with gathering the subject's own view of their strengths and weaknesses, self-perceived future potential and what they need to do to become better leaders, which will then be compared with how others who've worked with them see them. The HR auditors then interview former managers, customers and/or suppliers, superi-

ors, subordinates and peers, all of which are compiled into an exhaustive assessment often conducted by a certified outside consultant in the field or a certified HR executive from a different business inside the organization. That way, these comprehensive performance reviews and audits remain safely outside that leader's immediate chain of command, a critical check and balance comparable to one that might be implemented in the process of conducting a financial audit of a leader or business unit. Accomplishment analyses serve as a valuable function by providing an impartial narrative.

Precisely because no silver bullet or iron-clad guarantee has ever been found in the arena of leadership development and because the margin of error in assessing human potential is by definition so dramatically wide, the vital importance of creating a mutually reinforcing collage of overlapping and redundant evaluation, assessment and development systems cannot be overstated. At GE, leaders at all levels grow accustomed to rigorous, overlapping and deliberately redundant assessment processes, matrices, benchmarks, yardsticks and models.

Crafting Crucible or Stretch Assignments

HR must be the CEO's partner on this most critical of developmental challenges. There's a business side to this equation, but there's also a people piece. Designing the organizational structure is a key part of the succession planning discussion, in the later stages of the game.

In the last phases of the CEO succession horse race, HR is critical to creating a structure that gives the finalists a big chunk of the business, ideally as independent P&L if you've got one. The HR person is responsible for (1) crafting the structure to make that horse race fair and honest and (2) evaluating and measuring the performance of each leader so that it's a little more nuanced than just a totting up of their respective bottom lines.

To recap: As head of HR, you have a selection of levers to pull on. You have individual leadership assessment (critical), and you have the lever of structure. Less well known, structural change in the service of development is one of the most powerful levers.

The Role of the Board

Having a powerful board of directors is not a problem in and of itself. It is universally acknowledged given in corporate governance circles that a strong, independent board of directors presents a valuable check, balance and countervailing force against the otherwise unfettered freedom of action of strong-willed CEOs. But the lines of political demarcation between CEO and board need to be carefully drawn so as not to hamstring, compromise or neuter the positive actions of the CEO determined to drive radical and possibly uncomfortable change that may challenge vested interests and threaten long-standing ways of thinking and acting.

At the end of the day as well as the conclusion of the annual shareholder's meeting, the ultimate responsibility in CEO succession lies with the board. Of the many choices that a board makes, none is more critical than the hiring and firing of the CEO. Boards must adhere to a rigorous practice rooted in partnership with the other two key stakeholders, which inevitably requires long-term engagement in development and reviews of internal candidates.

Boardroom Dos and Don'ts

1. Don't NOT have a name in the envelope. The most awkward predicament any board can find itself into, which occurs just the same with alarming frequency, is for a sitting CEO to abruptly step down and leave the board with no name to pull out of the envelope. An emergency succession plan is the corporate equivalent to carrying a first aid kit and a spare tire in the trunk of your car. The solution to this problem is really quite simple: As the Boy Scout motto puts it, "Be Prepared!"

2. Don't have a SPOTS paper plan. The most frequent result of having a strong-willed CEO and a reticent board is not that the issue of succession planning is formally neglected but that the plan, such as it is, isn't worth the paper it's printed on.

3. Don't be afraid of alienating a successful CEO. Boards of directors frequently shy away from forcing the issue of CEO succession on a CEO when the CEO is riding high.

4. Don't split the role. In reality, organizations are better off with one leader, not two or three.

1. Do prepare for a deep, long, constructive engagement. This is a process of focused, intentional interventions over a period of years.

2. Do coach the candidates. Boards may arrange for an outside consultant from a premier firm to work closely with a candidate on their business, strategic and leadership development plans.

3. Do ensure fair and equal exposure for all candidates. The key here is to ensure that all of the candidates get fair and equal exposure to the board, because working closely and constructively with the board is probably the most important single job a CEO has.

4. Do get succession candidates on other companies' boards. It's important for directors to help succession candidates go on boards to gain additional experience and exposure outside the walls.

5. Do expose directors to candidates on their own turf.

The best practices and best processes, from a board point of view, can be distilled down to a few critical non-negotiable points: A clearly defined process, maximum transparency, a carefully tasked board committee, rigorous assessment and relentless coaching of all potential candidates by the entire board, not just relying on the committee, close and constant collaboration with the CEO and CHRO, and when the time comes, a willingness to accept expert help.

The Insider/Outsider Dilemma

On May 1, 2013, department chain store JC Penney posted a contrite video on Facebook. It included a friendly female voiceover proclaiming, "what matters with mistakes is what we learn. We learned a very simple lesson — to listen to you." The mistakes the company referred to and which could be blamed on a catastrophic failure to listen to core customers had been committed during the short but turbulent reign of recently ousted CEO Ron Johnson, former head of Apple's retail division.

Seventeen months after Johnson's appointment, retail sales had dropped by 25 percent, the stock had sunk by roughly half, and a deeply embarrassed activist investor named Bill Ackman of Pershing Square Capital Management was obliged to acknowledge that his high-profile selection of Johnson "had been something very close to a disaster."

It's a false premise that when an organization is in trouble, the best way to fix what ails it is to bring in a visionary, transformational leader from the outside to clean out the conceptual cobwebs, shake the place up and, in some cases, even blow the place up. This theory has a certain logic to recommend it, and it is sometimes (but rarely) the case that outsider CEOs imported into troubled organizations have brought with them an injection of fresh perspective and a set of skills that have resulted in dramatic turnarounds.

But that said, an overwhelming preponderance of evidence supports a contrary view, which is that these few exceptions do not prove or make a rule to be slavishly followed as a matter of dogma or doctrine. The fact that a handful of highly talented outsiders have pulled off this remarkable feat is no reason to ignore the more salient fact, which is that in the vast majority of cases, outsider selection and recruitments are riskier, costlier and far more disruptive to the fabric of the organization than insider selections.

The case for an insider cannot be overstated. The insider knows the company, the industry, the people, the networks, the subtle and shifting alliances, the existing strategy, and — for better or worse, knows where many of the existing flaws and faults lie and where all the skeletons are buried. Most important, the insider is likely to be more sensitive to the cost of throwing the baby out with the bath water.

All that said, in special situations — as when an organization is in deep distress, its core strategy and business model are no longer working, and/or its current leadership, meaning the entire top team, has been tinged with the outgoing CEO's tar brush, an outsider selection may not only be justifiable but advisable, even inevitable. Yet make no mistake about it: No matter how successful that outsider may ultimately be, his or her recruitment by definition is the result of failure.

Building a Successful Pipeline in Family Organizations

In the United States, close to 70 percent of the proprietors of family entreprises *say* they would like to keep their businesses in the family, but only 30 percent *succeed* in passing the reins on to a second generation.

The number-one lesson for all family founders: Just as all good leaders provide their rising next-generation potential successors with crucible experiences designed for them to assume the responsibility of taking on real risk in the future, all crucible experiences designed by incumbent leaders of family business to develop heirs into leaders must entail real risk and real reward.

Entrepreneurial parents hoping to develop their offspring into authentic, self-confident and legitimate leaders must be scrupulous, meticulous and fearlessly objective in designing an entry and assessment policy that is patently more rigorous than for non-family members.

This is because no matter how talented the heirs to a company or how hard they may work, their every achievement, their talents, their intellectual capacities and drive are continually called into question by those inclined to ascribe their successes or failures to the fact that they were born, as the old phrase has it, with silver spoons in their mouths. The only way to address this issue

is for family members to work harder than their nonfamily peers to succeed.

Politically, such organizations need to be structured so that family and nonfamily members complement one another and that the relationship between them is constructive and mutually productive as opposed to destructive, politicized and polarizing.

Building a Successful Pipeline in Nonprofit Organizations

With both nonprofits and for-profits, the same basic elements and prerequisites apply when planning good leadership transitions and leadership successions:

1. Complete CEO ownership and involvement.
2. Strong HR partner collaborating with the process.
3. A board that is determined to hold the CEO and HR accountable for getting it right and paying attention.
4. Developing the right tools (performance and values assessments) for the pipeline to produce accountability for succession at all levels of the organization.

Culturally, all not-for-profits are organized according to a framework that places a critical importance on the pursuit of a "higher calling" defined by a distinct set of values. All of these institutions are grounded in an acknowledged need to address a range of societal causes and challenges.

Leadership 20/20: Framing and Facing the Future

Perhaps more critical to determining organizations' rising stars' probability of achieving success or suffering failure in the top job will be their capacity to anticipate, adapt to and get out in front of what are often referred to as "megatrends."

The following four trends will simply make what is already a tough job tougher, faster and more exciting for the winners and more punishing for the losers.

1. More globalization of everything — businesses, medical treatment, education and all other services.
2. Even greater acceleration of the more-than-a-century-old technological revolution, continuing to disrupt industry after industry, creating many new companies and destroying old ones.
3. Corporate investment in global citizenship activities, environmental and human capital investments, with money and volunteerism, continues to accelerate and deepen as more organizations orient themselves toward a customer and client focus, away from an inside-out approach to an outside-in approach.
4. Activist investors will play an even more prominent role in executive transition and CEO succession by demanding even better performance and leadership, with the inevitable result being that churn at the top will increase as CEOs falter and fail, while increasingly less tolerant, more capably governed and more diverse boards increase their due diligence, responding to the ratcheting up of pressure from all sides to hold CEOs accountable for doing their primary job: raising the value of the assets they inherited while simultaneously transforming the company and developing, coaching and picking a successor capable of doing the same.

Conclusion

The case has been made that nothing is more important than having the right leader at the top of any institution. Unfortunately, we live in a world where this is done wrong 80 percent of the time.

Failed CEO succession is the single biggest destroyer of shareholder value or, in not-for-profits, the future success of the institution. The most important CEO responsibility is to grow transformational leaders from the inside so you will never need to go outside in search of one. It is up to the CEO and top team to be fully involved in this exercise and keep the board fully engaged; the process cannot be delegated to consultants and human resources staff.

The one lesson to take away from this is that leadership development from the earliest stage of someone's career and succession planning, if and when conducted properly, are one and the same and should be a top priority for the CEOs, board and head of human resources. Good succession planning and processes are the lifeblood of future organizational success.

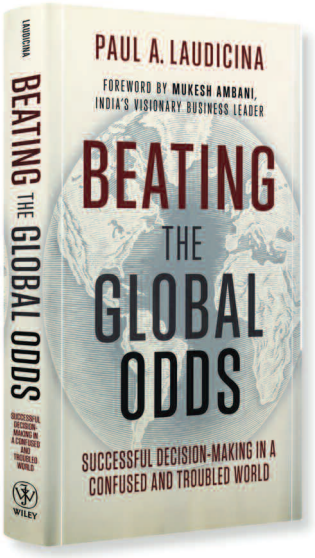
Beating the Global Odds

Successful Decision-Making in a Confused and Troubled World



by Paul A. Laudicina

THE SUMMARY IN BRIEF

More than at any other time in human history, it's possible — even necessary — to be plugged in to what's going on 24/7. But while the widespread proliferation of information can yield great benefits, the overall result has been a drastic decrease in original thinking, fresh innovation and much-needed leadership and a move toward a more fragmented society. *Beating the Global Odds: Successful Decision-Making in a Confused and Troubled World* is here to help, showing you how to cut through the clutter and regain your focus as you confront the challenges of the future.

The ultimate road map to building a better, more cohesive and more coherent tomorrow — for your business, your world and yourself — *Beating the Global Odds* is designed to help business leaders and readers overcome the confusion of the 21st century and start working together with clear purpose.

Change is essential, and A.T. Kearney CEO Paul Laudicina takes a behind-the-scenes look at the people and institutions that are thinking big to repair the international social fabric and pave the way for a better future. Guiding you where to look for new insights and ideas, Laudicina shows how the future is yours for the making.

IN THIS SUMMARY, YOU WILL LEARN:

- How to widen your lens and create a global vision.
- Why you need to master scenario planning in order to make sense of today's world.
- The critical role that values-based leadership will play in the future of politics and business.
- Four possible scenarios for the next decade and beyond.

Introduction

Today's society — a swirl of businesses, governments, organizations of all kinds and individuals — has been rendered confused and paralyzed by a multitude of shocks, crises and high-speed changes that we are all more familiar with than we'd like to be. A technology-driven and connected world has exponentially increased our inputs and choices. At the same time, there is a lack of a fundamental, shared sense of purpose on which people and organizations can build things that last — inspiring and sparking actions that will yield longer-term benefits both within and across borders.

We can't, nor would we want to, turn back the tide of connective technologies. Instead, we need to leverage them to solve the very problems they helped spawn. Information Technology 1.0 has enabled a transaction-based society in which "the deal" became more important than the value it drove or the relationships it was based on. And so this decoupling of wealth creation from value creation is at the heart of today's increasingly angry, divided, alienated and atomized societies. In this environment, individuals have retreated from integration, seeking refuge in the realities of their identity: nationality, ethnicity, religion ...

Yet we know that narrow thinking impedes innovation. And innovation drives value creation, which in turn drives wealth generation. Wealth generation enriches businesses, governments, societies and individuals. And we know that diversity of ideas and inclusion of people drive innovation, which in turn are extended by further advances in technologies that span time and space.

Only inspired leadership can help our post-Great Recession, atomized society rise above itself to realize a new, rising-tide prosperity. To inspire and compel purposeful action, leaders must be grounded in values — and be able to pragmatically employ the best of technology and new ways of thinking. Unless there is a deeper understanding of the consequences of inaction or improper action, the promise of daring to reach beyond the constraints of time and space to seize opportunity and manage risk will not be fulfilled. ●

Global Brain Freeze

Not surprisingly, people (and organizations) everywhere are feeling disoriented, bewildered and even paralyzed. From crisis and scandal to the proliferation of product choice and the relentless 24/7 information smog of always-on news, email and social media, we are not feeling especially smarter or wiser.

Disorientation and Decision Analysis

Faced with too much information and not enough understanding, people and organizations begin to grasp at fleeting pieces of certainty and take actions that make sense in such a context. The colloquialism "hindsight is always 20/20" is used to justify those decisions that fail, with the excuse being that only the perfect foresight gained from actually experiencing the future could have delivered sufficient information and insight. But the trouble is that, by perceiving the future and the world as inherently unknowable, we too often end up with one logical decision after another that when put together spell disaster.

So what are the most common reactions to information overload and confused perception? There are four:

• When faced with a complex, confusing and constantly changing world, people and organizations freeze

and take no action. The shortcomings here are obvious — freezing and delaying yield missed opportunities for purposeful action and erode competitive advantage.

• When presented with massive complexity, people and organizations begin a process of analyzing and categorizing what they see in an attempt to get a handle on the situation and make thorough, data-driven decisions. Too frequently, one can fall victim to focusing excessively on details at the expense of the bigger picture, with inaction or action made ineffective by delaying the inevitable result.

• The third reaction is a commonly applied antidote to the second — we begin to overanalyze, but in order to avoid inaction, we actually short-circuit the process and reach a single conclusion that, due to our faith in the analysis conducted, is viewed as immutable.

• Finally, and most commonly, information overload leads to frenetic, unfocused activity, devoid of clarity or purpose — like deciding to work on email for hours in order to avoid more thorny problems at hand. ●

Fast and Fickle

It's hard to believe now, but in the early 20th century, a number of artistic movements regarded speed, noise, motion, machines, crowds and even industrial pollution as thrilling and liberating.

In our own time, we find velocity more unsettling and destabilizing. For example, in the blink of an eye, Finnish mobile phone giant Nokia has gone from being the darling of the business world to a company teetering on the edge of an abyss.

The late Peter Drucker, as always, seemed to get it before everybody else (writing here in the September 1994 edition of *Harvard Business Review*):

The root cause of nearly every business crisis is not that things are being done poorly. It is not even that the wrong things are being done … But rather because the assumptions on which the organization has been built and is being run no longer fit reality.

In short, consumers, companies and governments clinging to outmoded concepts of product, business and idea cycles will be left continually flat-footed. Compare for a moment the disparate fortunes of General Motors (GM) and Volkswagen (VW). Much has been made of the difficult structural environment that GM operated in, with high labor costs and massive pension and health care obligations. But it would be difficult to say that a German company does not face at least similar challenges. Yet GM went bankrupt, saved only by the *deus ex machina* of the United States and Canadian governments. VW, by contrast, is both a larger vehicle maker than GM and a hugely profitable one to boot, with 2011 profits reaching an all-time high of 11.3 billion euros. Some of this is due to transition costs as GM moves away from a product portfolio skewed toward gas-guzzling SUVs and pickups and belatedly rationalizes a needlessly large and incoherent stable of brands. However, more had to do with GM's structural rigidity and bloated internal processes. Even now, four years after its bankruptcy, GM is producing vehicles on 30 different platforms with the goal of reducing this number to 14 by 2018. With the launch of its MQB (Modularer Querbaukasten) platform in the Audi A3, VW will produce the majority of its vehicles on just four.

Lumbering Giants

Have you noticed the way BRICs (an acronym for the economies of Brazil, Russia, India and China) has gone from ubiquity to near-obsolescence in just a few years? Yes, the locus of economic dynamism, brainpower and even military force is shifting fast from West to East and from North to South. The problem is that the exact implications are hard to gauge.

Will the 21st century be more peaceful than the last one? We sure hope so, but we just don't know. We do know that emerging markets, big and small, are no longer just low-cost manufacturing hubs. They are high-end consumer markets in their own right as well as very sophisticated investors in (not borrowers from) the United States and Europe. As one finds in Washington, D.C., the great megacities of the emerging world have enclaves of extraordinary wealth sitting near pockets of desperate poverty. You can go from the 21st century to the Stone Age just by crossing the street.

The striking thing, however, about the less privileged sections of Lagos, Sao Paulo or Mumbai, is the ubiquitous presence of advanced technology juxtaposed with living conditions that could be considered barely medieval. Seemingly everyone in the Stone Age section of these megacities will still have a mobile phone.

If you're not looking for innovative ideas or opportunities, or are unprepared to react to a discovery once made, you're not going to find yourself in a position to innovate or succeed. You can't spend all your time reacting to the fast and fickle of global change. To be sure, you need to have enough operational acumen to allow your organization to survive to reach its future potential, but you have to maintain a view of the longer term to help seize that future. This is true for individual

career or investment decisions as much as it is if you are leading a business or making government policy decisions. You might say you need a foot on the brake and a foot on the gas pedal.

Rudderless World

As we have learned the hard way, events anywhere now reverberate everywhere instantly. And, unsurprisingly, large numbers of people find the pace of change frightening and confusing. Some grasp at bizarre conspiracy theories. Others gravitate to extremist groups or politics, unfortunately a still-rising trend. A common thread binding these populist groups is the gut feeling that political institutions have been corrupted or co-opted, and that short of a significant intervention they are simply no longer responsive to the needs of ordinary citizens.

It's difficult to deny the level of popular appeal they have — and it's actually easy to comprehend the frustrations of their supporters. After all, how much real, vigorous, public debate has truly gone into some of the most momentous political decisions in recent history? The point here is not whether one agrees or disagrees with specific political actions, or even in some cases whether politicians were reasonably in a position to solicit public input prior to taking action in a crisis. It's no surprise that vast swaths of the public are feeling left out — mere bystanders to events not only beyond their control but even beyond their ability to have the smallest say.

The Three Deficits

Times like this call out for inspired (and inspiring) leadership, but we haven't been so lucky. Paul Volcker was right: Of the three deficits, the budget deficit and the trade deficit are relatively easier to handle than the arguably more acute leadership deficit. Volcker wrote in 2005, long before financial crises were on most people's radar: "Altogether the circumstances seem to me as dangerous and intractable as any I can remember, and I can remember quite a lot. What really concerns me is that there seems to be so little willingness or capacity to do much about it."

Unfortunately, the steps required for someone to get promoted or elected to a top leadership role in government, business or civil society today have little to do with the qualities actually needed to be an effective leader, including personal courage and the ability to articulate a vision of the future that inspires and unites for effective and purposeful action.

The Need to Think Bigger

It's a dilemma of our time that policymakers must be seen as either pro-business or pro-worker, as though one group could exist without the other. The challenge is that governments — and by extension their citizens — need to think bigger. The choice need not be between attracting businesses with beggar-thy-neighbor tax policies or punitive tax rates that drive away all but favored national champions who cut special deals. Taxes are important to business, but so is a range of other factors as well.

The importance of this point cannot be underestimated during a period in which most observers feel that bold political action could solve or at least mitigate many of the developed world's most pressing challenges, with the alternative — indecision and inaction — able to make them immeasurably worse.

Turkish-born Harvard professor Dani Rodrik regularly makes a point that is thought-provoking: Is it possible to have, simultaneously, democratic mass politics, national sovereignty and an open global economy? He thinks the answer is clearly no, and calls it the inescapable trilemma: You can have two of the three, but not all three. Try to have all three at once, and what you get is the messy gridlock that lurches from election campaign shouting matches to overhyped boom to economic crisis and back again. Silicon Valley billionaire Peter Thiel, the libertarian cofounder of PayPal and early investor in Facebook and LinkedIn, puts Rodrik's trilemma in slightly different (and even more ominous) terms, saying, "I no longer believe that freedom and democracy are compatible."

The Case for Values-Based Leadership

Unlike Thiel, I continue to believe that freedom and democracy are compatible, but that freedom, democracy and capitalism can only function when all the actors in the system accept a clear sense of responsibility — to themselves, to one another and to the planet. Responsibility, to be effective, cannot be handed down and enforced — it must come from a system of values.

Values is an overused word these days, but I don't shy away from it when and where it's needed. Simply put, we need to move from a world and a system in which people do good by doing well — that is, benefit others and the planet only as a byproduct of focusing on personal profit — to a system in which one does well by doing good — when providing true leadership and service is the central priority and financial returns and per-

sonal enrichment are merely their corollaries.

Maintaining a commitment to values is not always easy and the choices are not always straightforward. Google, whose informal corporate motto is "Don't Be Evil," found this out a few years back when it encountered censorship issues in China. Censorship was an activity in violation of Google's founding principles. When shareholders protested, Google was faced with a choice between violating its principles and exiting the world's largest (by population) market. One can debate the merits of Google's eventual solution — to maintain a self-censored Google.cn site while offering a link to an uncensored Google.com.hk based in Hong Kong — but the complexities that can arise when principles and the real world meet are clearly there.

Lighten the Load and Make It *Sesame Street* Simple

In the developed world, we are choking on stuff as well as information. The group Global Footprint Network has developed a way of measuring the ecological demands of global consumption and output in terms of how many planet Earths these activities consume. Right now, we're using the resources of about one-and-one-half planets to maintain current consumption levels. These researchers predict that under current trends (which of course can change), we will need more than two planets by 2050.

As an antidote to what I've described, lots of businesses and consumers have generated a groundswell of enthusiasm for simplicity — in products, in lifestyles and in operations. Former Procter & Gamble chairman A.G. Lafley memorably describes this as the move to "*Sesame Street* Simple." The successful companies (and political units) of the present and near future are those that delight and simplify choice for the harried and stressed-out consumer — as Apple has done with a truly beautiful-to-behold product line small enough to be laid out on a single table.

Behavioral scientist Barry Schwartz at Swarthmore College has closely studied what he appropriately calls the "Paradox of Choice": how an excessive abundance of choices and options in every aspect of life — from the mundane to the momentous — causes anxiety, creates perpetual stress and actually diminishes our sense of well-being. The best companies of our time already get this and help edit and curate their offerings so the consumer doesn't have to be overwhelmed or spend vast amounts of time sorting through every possibility.

Cockpit Confusion

You might be saying to yourself that information overload and messiness is annoying and sometimes overwhelming, but it's not life-or-death. Actually it can be life or death. You may recall the tragic story of Air France Flight 447, which crashed into the Atlantic Ocean in 2009 with a loss of all on board.

What we now know, following the recovery of the black boxes from the ocean floor, is that the two first officers on the flight deck were simply overwhelmed by the nonstop cascade of faults, alarms and warnings in really hairy nighttime flying conditions and the need to fly the plane manually because the autopilot had switched itself off with the loss of airspeed reading. In theory, these circumstances should have been survivable, with the pilots regaining control of the situation and continuing to fly on safely. The arguments over whether the crash was primarily due to pilot error are still going on, but it seems clear that cockpit confusion was a major factor in the disaster. First Officers David Robert and Pierre-Cedric Bonin apparently couldn't, in the mounting chaos of the moment, figure out what was essential to do next.

The key is not to avoid modernity, but to identify and eliminate the unnecessary complexity that frequently accompanies it. Seek out tools and trends in the modern context that enhance simplicity, sustainability and self-fulfillment. Avoid, eliminate or minimize those that do not. For businesses, this means first being clear about strategic intent and then being ruthless about only adopting products, processes and systems that support that strategy, rather than confusing or distracting from it. This will mean difficult decisions and not being able to satisfy all segments or all interests, but as so many companies have found in the past, trying to be everything to everyone frequently results in being nothing to anyone.

But understanding which opportunities are promising requires both foresight and peripheral vision. Most importantly, it also takes the courage to act when an inflection point is reached.

Repair Your Social Fabric

We live in a time of broken bonds. The trust between employee and employer, borrower and lender, citizen and politician, consumer and manufacturer, has been eroding, or is badly damaged — and we all see and feel the consequences.

There is no question that several trends are combining to amplify existing breaches in trust, the financial crisis

notwithstanding. For example, the trend toward solitary, transient living, often in socially hermetic suburbs, has led to increased individual atomization, making personal contact — and the relationships that it engenders — less frequent. Growing income inequality has reduced the sense we collectively feel that we're all in it together. Author Francis Fukuyama has called this a reduction in the formation of social capital. Fukuyama is clear that the creation of social capital rests not just on a perceived bond between people, but on an "actual human relationship" that turns an opportunity for potential cooperation into the real thing.

You can't repair the bonds or rebuild relationships by sitting at your desk, so American Airlines' campaign is right: "We know why you fly." British Airways has also caught on and offers a contest for small-business owners to win airfare to in-person meetings under its Face-to-Face promotion.

Relationships matter in every industry and field of human endeavor, not least in politics. I recently spoke with a former colleague on Capitol Hill, and he reminded me why the rough-and-tumble of politics seemed more substantive and less personal in years gone by. Did you know that such fierce opponents as (then) Republican Sen. Dan Quayle and Democratic House Majority Leader Dick Gephardt used to commute together into Washington, braving the heavy traffic each day? It was not time wasted, as it fostered a friendly personal relationship between those — and countless others — who might otherwise disagree on things.

Personal bonds of trust are not only essential to good politics, they also are the glue of good business. And to rebuild this sense of common purpose and community within a for-profit company, people need to spend time together just as much as they do anywhere else. Herein lies a paradox: To be effective and creative, people need time to unplug and recharge; at the same time, new sights, sounds and human interactions can help stimulate and refresh one's thinking. That team-building trip to Alaska you considered doing wasn't so wasteful after all.

There is a broader point to be made: Expanding or re-engaging your (real, tangible) personal connections not only gives you an opportunity to create more shared time and experiences on which relationships are based, it's also the chance to broaden the scope of informational inputs around which one's worldview is based. ●

Don't Wait for the Next Big Thing

If you're trying to come up with the next big thing, don't ask your customers — they can't tell you — even though conventional wisdom says you should start with market research. Thanks to the Internet and other innovations, power (including pricing power) has shifted to consumers, who are increasingly the co-creators of the products and services they buy — and a certain level of customer engagement is indeed necessary in a highly interconnected world. However, companies need to avoid being continually reactive; successful companies of the future will be those that surprise and delight their customers.

And if you are simply treading water and waiting for the next big thing or next big boom, think again. If you are longing for the good old days of easy leverage, steadily rising asset prices, cheap natural resources, and that sleight-of-hand of lower taxes and higher government expenditures ... forget it. Just wake up and get on with innovating — seizing smaller opportunities in the absence of clear macro signals.

Innovation: Slowing Down or Speeding Up?

In the view of Peter Thiel, the signs of an innovation slowdown are everywhere if we dare to look. For the first time in recorded history, travel and transport speeds are slowing — and he notes that even the ever-shrewd Warren Buffett has made a recent $44 billion investment in the American railroad industry, which "will do especially well if transport and energy consumption patterns involve a regression to the past."

According to Thiel's measures, increases in agricultural productivity are also slowing, increases in U.S. life expectancy are decelerating, pharmaceutical industry pipelines for blockbuster drugs are looking a bit empty, companies and investors are still looking to "juice" returns with leverage rather than with productivity gains driven by scientific and technological advances — and bold dreams of progress hardly exist outside the IT sector.

In the other corner, we have MIT-trained inventor and entrepreneur Ray Kurzweil, who argues that science continues to advance at an explosive, accelerating rate even if much is still invisible to the naked eye and that by 2045, those still alive will benefit from regenerative medicine that stops and in fact reverses aging entirely.

What Thiel and Kurzweil do agree on is that the IT world continues to display a vibrancy we wish we saw in all industries right now. There are even glimmers of hope that the growing information overload is responding to some therapeutic technical fixes.

Fighting Complexity With Complexity

Brian Arthur, an Irish-born economist, technologist

and former Stanford professor who helped found the Santa Fe Institute, has spent a lifetime studying the deep changes in the economy and society wrought by technological change. In Arthur's view, we are in the midst of a profound set of transformations characterized by hyperconnectivity, digitization and growing complexity. If everything is connected to everything else, both good and bad things propagate at warp speed.

By digitization, Arthur means something very specific. He's referring to the unseen economy beneath the surface of life that is teeming with processes triggering other processes: servers talking to other servers, with a vast array of technologies doing the work, from lasers and photonics to satellites.

As Arthur puts it in one of his recent journal articles, "This second [unseen] economy isn't producing anything tangible. It's not making my bed in a hotel or bringing me orange juice in the morning. But it is running an awful lot of the economy." Whole new industries are coming into being, the economy is re-forming based on new engines of growth, and — as always — human institutions are barely keeping up with what is happening, and it will take governments and societies quite a while to catch up and indeed catch their breath. Like it or not, the entire world has become an "evolving complex system" that is "self-organizing" but not yet "self-healing" — "automatic and neutrally intelligent, with no upper limit to its buildout ... This second economy that is silently forming — vast, interconnected and extraordinarily productive — is creating for us a new economic world. How we will fare in this world, how we will adapt to it, how we will profit from and share its benefits, is very much up to us." ●

Open the Aperture

If you only read highbrow publications like *The Economist*, try regularly browsing the likes of *People*, *Hello!* and *USA Today*, if only just to expose yourself to completely different interests and points of view. In today's complex world, one needs to be an information omnivore, and ideally a discerning omnivore.

Jurgen Hambrecht, the recently retired chairman of German chemicals giant BASF, made a practice of bringing in experts from a variety of different fields outside BASF's core business areas to gain their insights. His reasoning was clear: For BASF to operate with the necessary foresight and peripheral vision that a global company in a competitive environment requires, it needed access to the best minds in the world — and not just in the fields that it knew well. The benefits of Hambrecht's visionary leadership are clearly reflected in BASF's financial performance, which has returned an annual average of 14.1 percent over the past 10 years.

Tap Into Remarkable People and Places

If you want to expose yourself to remarkable people who are emerging, and if you want to tap into the world's key brainpower hubs, you also have to realize that reputations are lagging indicators. One of the reasons for this is that once a person is established he or she has too much to lose by saying something counter-intuitive — or adventurous. On the other hand, those trying to make a name have an incentive to say something crazy and hope that it sticks. The trick is to be omnivorous and discerning enough to be able to separate the has-beens and the hacks from the genuinely insightful. ●

Turning Pixels Into a Clearer Picture

At its simplest, scenario planning is a way of developing plausible stories about what the future might look like without being constrained by the limitations of today's generally accepted assumptions. At A.T. Kearney, we model multiple scenarios of the future using what we regard as the five fundamental drivers of change: globalization, demographics, consumption patterns, natural resources and the environment, and regulation and activism, with technology as an additional metadriver underpinning the others, and wildcards representing other low-probability, high-impact events.

One of the many benefits of scenario planning is that it expands an individual's and an organization's field of vision and helps them powerfully imagine the future.

The following is a set of scenario narratives that we generated recently for an internal partners meeting at A.T. Kearney. As is always the case with scenarios, our intention was not to predict the future. Rather we were attempting to put forth engaging stories about the future that could serve as a jumping-off point for robust discussion and strategic thinking. The four scenarios are titled Top Gear (an optimistic but possibly unrealistic scenario), Terminus (a pessimistic scenario), Flatline (a base case) and Control-Alt-Delete (a possibly more plausible optimistic scenario).

Scenario #1 Top Gear: In Top Gear, economic authorities all over the world manage to get it right. They coordinate to stimulate growth, reduce debt, shore up their financial institutions and strengthen their competitiveness. The geographical scope of this global turn-

around is stunning. In the United States, leaders manage to leave behind the partisanship that had paralyzed the policy process for so long. At once, they restimulate the economy and reduce the debt burden. A revived housing market, continued declines in unemployment and a resurgence of investment contribute to restored consumer and market confidence. As a result, the economy returns to a 3 percent growth track by 2015.

Scenario #2 Terminus: In Terminus, things simply unravel. In the context of protracted economic and financial instability and anemic global growth, leaders are incapable of sustaining support for the globalization that has shaped the economic and business environment for decades. No matter how compelling the economic and financial logic, the politics of procrastination and recalcitrance cannot be overcome.

One political figure after the next is pushed from power. In their place emerges a class of leaders who can and do say no to austerity and reform but have no viable alternative vision. Defaults in two periphery economies throw the euro region into tumult.

Terminus is the end of the line for globalization as we have known it. In its place arises a set of defensive, inward-looking national policies.

Scenario #3 Flatline: In Flatline, global leaders cannot extricate their countries from the 2011 to 2012 recession, resulting in an extended period of acute economic anemia. The entire world economy declines to a 10-year trend rate of 2.5 percent from 2015 to 2025. Compared with previous trend growth of 4.1 percent, foregone economic output reaches $28.2 trillion by 2025.

Flatline illustrates the simultaneous failure of leadership in key countries across the planet. It is a story about deferred actions, lack of leadership, self-inflicted wounds and a highly uncertain business environment.

Scenario #4 Control-Alt-Delete: In Control-Alt-Delete, it gets much worse before it gets much better. Dragged down by aging populations, a loss of competitiveness and widening societal fissures, the United States and Europe reach critical political and economic inflection points in 2018.

It takes a second recession, festering political recalcitrance, a more threatening geopolitical environment and mounting social unrest to get there. In the face of deteriorating economic, social and geopolitical outlook, leaders in the West manage to rise to the challenge. The year 2018 becomes the global reset point — the control-alt-delete reboot. It marks a fundamental shift in the respective pathways of the United States and Europe.

Control-Alt-Delete is a back-from-the-brink story that ends well.

Putting It All Together and Getting Ready to Beat the Global Odds

You know the many ways in which it's become a really topsy-turvy world out there — and getting ever faster, bumpier and more complex with each passing day. But it's also a world brimming over with new opportunities for those ready to chart a new course. Farsighted entrepreneurs and innovators are already bringing simplicity, delight, and a lighter use of materials and energy to whatever they do.

We all need to try to steer carefully to avoid the bipolar extremes of wait-and-see inaction and frenzied hyperactivity. In order to find that creative mean, we need to take time regularly to pause, to clarify our thinking and strategies, and to critically examine our assumptions. And we need to become omnivores too. Vary your information diet and personally go out in the world to check out remarkable emerging people, ideas, places, products and services for yourself.

Of course, relationships and core values matter more than ever in this epoch of broken bonds of trust, so never confuse a mere connection or transaction with a real relationship.

It's time to get moving. Armed with fresh clarity, ideas, passion and conviction, you and I can seize new opportunities without having to wait for that perfect data set. What really helps is learning to think in terms of scenarios, as we naturally crave exact forecasts (and the illusion of certainty). Scenario thinking opens us up to a range of new possibilities that we never before considered, and it also forces us to be skeptical of our usual sources. Taken together, these approaches create the basis for principled, decisive action that creates lasting value. That's how you can beat the global odds. ●

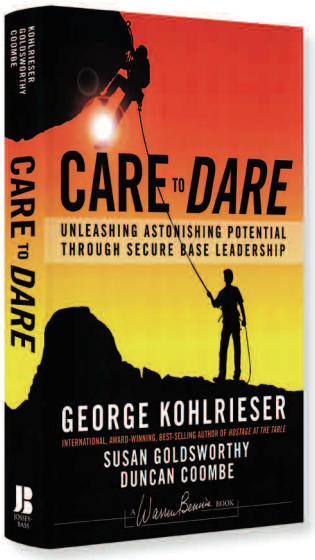
Leadership

Care to Dare

Unleashing Astonishing Potential Through Secure Base Leadership



by George Kohlrieser, Susan Goldsworthy and Duncan Coombe

THE SUMMARY IN BRIEF

Care to Dare shows you how great leaders all over the world unleash astonishing potential within themselves, their people and their organizations by building the trust, delivering the change and inspiring the focus that underpin engagement and create conditions for innovation. These are "Secure Base Leaders" who masterfully combine caring and daring.

You, too, can become a Secure Base Leader in your work and your life. No matter where you work and whom you work with, how little support you feel, how small your budget, or how busy you are, you can learn specific skills and develop a way of being and doing that delivers sustainable results through inspired relationships. Secure Base Leadership, based on trust, confidence and challenge, is the best way to liberate yourself, your team and your organization.

Secure Base Leadership works at the personal, team and organizational levels. It is not just a set of skills — the "doing." It is first and foremost a way of "being." You care enough to dare people to reach for their dreams, and in the process, you can return to your very humanity.

IN THIS SUMMARY, YOU WILL LEARN:

- To provide a sense of protection, safety and caring.
- To become a source of inspiration and energy.
- To unleash astonishing potential by building trust, delivering change and inspiring focus.

THE COMPLETE SUMMARY: **CARE TO DARE**

by George Kohlrieser, Susan Goldsworthy and Duncan Coombe

The authors: George Kohlrieser is an organizational and clinical psychologist. He is professor of Leadership and Organizational Behavior and the creator and director of the flagship High-Performance Leadership Program at one of the world's leading business schools, International Institute for Management Development (IMD), located in Switzerland. His first book, *Hostage at the Table: How Leaders Can Overcome Conflict, Influence Others, and Raise Performance*, was an international bestseller.

Susan Goldsworthy is founder and CEO of Goldswolf & Associates, a company specializing in leadership development, executive coaching and change communications. She works with a number of international clients, is on the faculty at Webster University's Geneva campus and is an executive coach and consultant lecturer at IMD.

Duncan Coombe is a teacher, researcher, author and adviser. He is on the faculty of Ashridge Business School and is a consultant to the Fowler Center for Sustainable Value. He works as an external consultant to a variety of for-profit and nonprofit organizations.

Preface

Hostage negotiators, business leaders or anybody in a position of influence succeeds when they are "secure bases" for others. For the purposes of leadership development, we define a secure base as a person, place, goal or object that provides a sense of protection, safety and caring *and* offers a source of inspiration and energy for daring, exploration, risk-taking and seeking challenge.

Care to Dare shows you how to provide that magical combination of safety and stretch and how to become a "Secure Base Leader" no matter where you are working and regardless of your title or your profession.

Secure Base Leadership works at the personal, team and organizational levels. You care enough to dare people to reach for their dreams, and in the process, you return to your very own humanity. ●

Your Leadership Opportunity

Great leaders all over the world unleash astonishing potential and achieve sustainable high performance simply by tapping into their own secure bases and becoming a secure base for other people. We define high performance as challenging yourself and others to see and achieve what is beyond normal expectations.

Attachment theory revolves around the basic premise that all humans have an innate desire to seek closeness to and comfort from a person who gives them a sense of protection. Researcher J.W. Anderson noticed how children would explore but always keep their mothers as a base — a secure base.

A secure base provides protection and encourages risk-taking. A secure base both waits and intervenes. You can be a secure base for others only when you have multiple secure bases yourself.

If you only provided safety, you would be a source of great comfort for the other person; however, without inspiring him to explore, take risks or seek challenge, you actually overprotect and limit his potential. Providing only one side of the equation reduces the ultimate performance of the people you want to lead — either because they are too comfortable or because they are too anxious.

In the words of leadership guru Warren Bennis, "The basis of leadership is the capacity of the leader to change the mindset, the framework of another person."

In many ways, being a Secure Base Leader is like "belaying" a rock climber. A rope is looped through an anchor above the immediate climbing area. The climber is attached to one end of the rope. The belayer, using a special device clipped to his harness, holds the other side of the rope so that the climber has enough slack to move, but not enough to fall any great distance. As the climber advances up the mountain or wall, the belayer

watches the climber intently and takes up slack as needed.

All bonds start as "attachments" that are basic connections. An attachment progresses to a bond when there is an exchange of emotion and a depth of contact — a "chemistry," if you will. However, bonds are not permanent, nor should they be. "Separation" from a bond at the right time is natural, just as it is natural for a child to leave a parent.

The "Mind's Eye" is the part of the brain that manages our focus. The Mind's Eye directs the focus of a "flashlight" to shine on either the positive or the negative. Secure Base Leaders influence the way others make that choice. They ensure that the Mind's Eye of the individual or team is focused on the goal, the benefit, the desired results, the learning, the opportunity and the possibility. ●

Secure Base Leadership in Action

The behaviors of Secure Base Leaders are clear, practical and learnable. In fact, you may already be exhibiting some of the nine characteristics:

1. Stays Calm. A Secure Base Leader remains composed and dependable, especially when under pressure. This characteristic is so fundamental that a leader needs to master it before he is able to portray other characteristics.

2. Accepts the Individual. Secure Base Leaders show caring for the human being before focusing on the issue or problem. They separate the person from the problem. As far as possible, they avoid judging and criticizing people.

3. Sees the Potential. Secure Base Leaders see the employee's potential talent versus his current functioning or "state." This characteristic is not about short-term potential. Instead, it is about a deeper vision or even a dream for the person's deepest potential — not in one year, but in 10 or 20 years.

4. Uses Listening and Inquiry. Our research reflected a stylistic preference of Secure Base Leaders toward listening and inquiry rather than "telling" and advocacy. They mastered the arts of asking open-ended questions and engaging in a dialogue to seek a greater truth.

5. Delivers a Powerful Message. Secure Base Leaders are masters at coming up with pithy sentences, or what we call "bull's-eye transactions." Secure Base Leaders are good at introducing these bull's-eye transactions when it really matters, not hours or weeks later when the moment has passed.

6. Focuses on the Positive. Secure Base Leaders are good at directing the Mind's Eye of other people to focus on the positive rather than the negative. They help others to see their potential and the opportunity for learning, even in a crisis or time of difficulty.

7. Encourages Risk-Taking. This characteristic goes beyond acceptance and beyond seeing the potential. It takes those concepts into direct action. Secure Base Leaders actively dare people to unleash their potential by providing tangible opportunities for risk-taking.

8. Inspires Through Intrinsic Motivation. When leaders are invited to talk about the people and events that have influenced them, they do not reference money or financial reward at all. Intrinsic motivation refers to doing something because it is inherently interesting or enjoyable.

9. Signals Accessibility. People believe that their Secure Base Leaders are always accessible and available rather than detached and unavailable or "too busy." What is important is the perception that the secure base is available if needed.

Linked to the bonding cycle and the Mind's Eye, these nine characteristics work at the individual, team and organizational levels. ●

Build Trust Through the Bonding Cycle

Central to our mission to humanize organizations, bonding is the guts and emotion of leadership. It is the "caring" part of Care to Dare that we find is often neglected in businesses. A leader can be extremely disciplined, focused and goal-oriented, but without interpersonal bonding, she will probably fail.

A form of synergy, we define bonding as forming an attachment that creates more physical, emotional, intellectual and/or spiritual energy than the person or people involved could generate independently.

Bonding is an emotional connection that invites the other person to feel a sense of protection and safety as well as energy and inspiration. Humans cannot thrive without bonding. If you do not bond, you will spend your life in search of what bonding was designed to give.

One manifestation of bonding is the ability to feel empathy and compassion for the other person.

A common misconception is that bonding equals friendship. You do not have to like someone to bond

with her. You only need a common goal. Hostage negotiators succeed in 95 percent of cases precisely because they are able to bond around a common goal.

When you are bonded, you dare to take a chance on the other person. A Secure Base Leader communicates acceptance and takes a risk toward activating the potential in a person.

Attachment, bonding, separation and grief are the four stages of the bonding cycle:

• **Attachment.** Whether to a partner, a new job or a new project, people first become attached to someone or something. When we are attached, we feel safe enough to let our natural guard down. Attachment is a drive to be in proximity to, to be next to or to be connected.

• **Bonding.** Not every attachment leads to an emotional bond. Bonding flows from what you do with the connection initiated through attachment. When the attachment leads to an exchange or source of energy, and emotion and depth of contact, a chemistry between people and the synergy around a common goal, it transforms into a bond.

• **Separation.** All bonds eventually lead to a transition or to an end — an uncoupling, a disconnection or a debonding. Change, if only through the natural passage of time, brings about separation. Separation is all about letting go of somebody or something, and it is a preparation for something beyond grief.

• **Grief.** Grief is an extension of the separation stage. Grief is the experience of saying goodbye in order to say hello. It ideally leads to a new attachment or to a renewal of an attachment. Grief involves the emotional experience resulting from the ending or transition of the bond. If you cannot grieve, you will never be able to bond effectively. ●

Deliver Change: Embracing Loss Through Grief

Many people, many executives and many organizations are uncomfortable with loss, separation and grief. There is no significant personal loss that will not permeate your leadership performance. Your work as a Secure Base Leader requires you to identify your losses and grieve them. If you do not "unload your heavy baggage" or burden of loss, you will not be able to access the energy you need to bond with and inspire others. The outcome of resolved grief is the ability to feel joy and gratitude again.

Resolving grief is essential to achieving results faster, with higher levels of motivation and engagement, and to delivering the change inherent in innovation, growth and even corporate survival.

The late Dr. Elizabeth Kübler-Ross was one of the first people to identify the stages of grief:

1. Denial
2. Protest-anger
3. Sadness-missing
4. Fear-terror-panic
5. Rationalization
6. Acceptance
7. New attachment or renewal
8. Forgiveness
9. Gratitude

Grief in organizations may appear in situations like:

• A new CEO struggles to win over an organization after the departure of the much-loved former CEO

• After not gaining a promotion, a high-potential employee disengages and then subsequently resigns

• A star performer becomes demotivated following a divorce

Many people are surprised to learn that major gains also include losses that need to be grieved:

• The loss of familiar colleagues after a promotion

• The loss of entrepreneurial spirit after a company progresses out of the startup phase

• The loss of urgency after a huge project is completed

The problem is that organizations tend to skip over the stages of grief and expect employees to bond to the new people or project or strategy or office layout immediately. Skipping stages can result in people getting stuck in their perceived loss and being unable to fully engage in a new bonding cycle — one in which they can say hello to new goals and people.

Here are some ways to use your knowledge of the bonding cycle and grief curves to deliver change as a Secure Base Leader:

• **Embrace grief.** Remember that grief during change is natural. By understanding the process of loss and grief as well as the bonding cycle, you can lead the change, instead of allowing resistance to the change to lead you.

• **Accept emotions.** Grief is not talked about much in the workplace because it is a personal emotional reaction to loss, not an intellectual one. You can encourage the change process and reduce resistance by creating safe environments for people to express emotions.

• **Recognize the pain and sell its benefit.** Recognize the pain of others by putting words to it: "I know you miss the old team leader." Then go on to "sell the benefit" of that pain: "The new team leader has contacts throughout the company that will pull in extra resources."

• **Slow down.** It takes time for people to express the feelings associated with loss, and you can't schedule a time in Outlook.

• **Use ritual.** Some ideas include a farewell speech by the departing team member, going-away gatherings to reflect on what was and working together to dismantle a project room after the deliverable is achieved.

• **Move on together.** It is important that people do not wallow in grief and become victims or complainers. Different people in different parts of the organization will go through the stages of grief at different speeds.

Bringing Forward the Power of the Mind's Eye

Your Mind's Eye guides you to make sense of the events, experiences, challenges and opportunities in your life. The choice you exercise by being the master of your fate is determined by the focus of your Mind's Eye.

If bonding is the "heart" of leadership, the Mind's Eye is the "head." Secure Base Leaders influence the Mind's Eye of others to maintain focus on the end game and thereby achieve goals, meet stretch targets and deliver results. Being a Secure Base Leader involves actively and constantly focusing the Mind's Eye of the people you want to influence and propel to high performance.

The brain is fundamentally hardwired to look for danger, pain and the negative. Our brains have one overriding goal beyond all others: survival. By connecting to somebody or something we each can achieve a feeling of safety that switches off the brain's search for danger. When we feel safe, we can open our minds to the most powerful forms of exploration. Explosions of creativity follow. Caring leads to daring as the focus turns to possibilities. With a secure base, people reap myriad benefits.

While one event can adversely affect a person's life, the cumulative effect of a series of events generally leads to the viewpoint a person holds of himself or herself, of others and of life itself. You can take control of your future in two ways: First, understand how past experiences affect the present. Second, select the secure bases who will support your dreams and aspirations.

Secure bases shape the Mind's Eye of others in three main ways:

Brain Science and Change

Our brains have a friend or foe "early warning system," a flashlight that changes focus based on very quick judgments about whether someone is a friend, and therefore treated "fairly," or whether they are a foe, and therefore treated with suspicion. When the foe system is alerted by a perceived sense of threat, people will shut down, become distant and focus on problems as they attempt to reduce the perceived danger.

Brain science also demonstrates that people are fundamentally motivated by a sense of belonging. Researchers have discovered that social exclusion lights up the same parts of the brain as physical pain. When people say "I feel hurt," they really do feel the pain.

• **Modeling.** If you are positive and optimistic, there were secure bases in your life who modeled this attitude. If the parent is relaxed and confident, the child wants to go out and explore. If the parent is anxious or nervous, the child picks up on the anxiety and may be fearful and cling to the parent's side.

• **Influencing self-theories.** People with fixed mindsets are likely to play it safe and not take risks. Their "view of self" is therefore defensive. If people have a growth mindset, they view the world from a learning, potential and possibility perspective. Their "view of self" is dynamic. Secure bases help others focus their Mind's Eye toward a growth mindset and away from a fixed viewpoint.

• **Improving self-control.** Secure bases help others direct their focus in a way that encourages self-control. Each of us has to exhibit self-control to turn the flashlight from the instinctive negative to the positive. Secure bases can direct the person's focus away from the immediate frustration, temptation or perceived loss and toward other current or future benefits.

A final fundamental aspect of the Mind's Eye is its relationship to state and results. By "state" we mean how a person is at any one moment in time — her physiology, attitude, emotions, mood, behavior and beliefs as they all come together, internally and externally. By training your Mind's Eye, you can influence your mental and physical state to determine a better result. Can you change the fact that the plane is delayed? No. So shift your Mind's Eye from the pain of the delay to the gain of what you can do with the two hours you didn't plan to have.

Achievement: Playing to Win

When you Play to Win, you combine all of the components of Secure Base Leadership — the bonding, the processing of losses through grief and the Mind's Eye — and put them in service of achievement.

Because Playing to Win is inherently sustainable, it delivers healthy high performance. Again, high performance is challenging yourself and others to see and achieve what is beyond normal expectations.

The intersection of varying levels of caring and daring creates four quadrants:

• **Playing to Win (High Caring + High Daring):** Playing to Win translates into your willingness to take the necessary risks to succeed. You are there to cover others' backs and, at the same time, to challenge your followers with tough feedback and high expectations.

• **Playing Not to Lose (High Caring + Low Daring):** If you are Playing Not to Lose, you are focused on failure, possible mistakes, worries and what could go wrong. You tend to be too cautious, are afraid of making decisions and avoid risk-taking.

• **Playing to Dominate (Low Caring + High Daring):** Playing to Dominate means focusing on results at the expense of relationships. If you continue to use this approach, you can become detached from your people.

• **Playing to Avoid (Low Caring + Low Daring):** When Playing to Avoid, you demonstrate the highest levels of defensiveness, risk avoidance, fear of making mistakes and even withdrawal. In other words, you have disengaged and "checked out."

Playing to Win is the leadership approach in which you lead at your best in a sustainable way and have your deepest impact on others and your organization. ●

Strengthen Your Own Secure Bases

Ask yourself:

• Who were my secure bases growing up?

• Who cared about me and also dared me to attempt the impossible?

• Which experiences influenced the leader I am today? What are the "roots of my leadership"?

Self-awareness is a key component of Secure Base Leadership. Through self-awareness you can strengthen your knowledge of your own secure bases, whether they are people from your present or past, goals, or objects.

Each secure base is a building block of your foundation. All these blocks fit together to create a strong base — one from which you interact with the world.

The two most important kinds of secure bases are people and goals:

• **People:** Start by identifying those people in each aspect of your life who give you both a sense of protection and inspire you to explore and grow. Your secure bases will be those people who supported and encouraged you while you spread your wings and sought to reach your highest potential. Someone from your past who has since died may still be a secure base. Avoid putting your secure bases — or anyone — on a pedestal, as doing so will only lead to disappointment.

• **Goals:** Reflect on the goals you've set throughout your life. Many of the goals that become secure bases for us can take many years to achieve and also involve moments of failure along the way as well as success. When the goal is a secure base, it gives you a source of energy and inspiration to pursue challenges in the present and future. Goals also provide what researcher Daniel Pink described as the "three factors for motivation": a sense of purpose, mastery and autonomy.

You have developed mindsets, beliefs, perspectives and knowledge based on your experiences and the people you have encountered. Neuroscience has proven that past experiences become hardwired into the brain. Certain events become associated with specific states.

We agree with research that proves that great leaders are made. Leadership is a culmination of life experiences and intentional development efforts. Secure Base Leaders develop an integrated understanding of how their past impacts the present, and then, armed with this knowledge, they develop new habits and patterns that allow them to be successful in different ways.

In our experience, those courageous enough to look back and really understand how their past experiences influenced their behavior are able to liberate themselves from those patterns. If you have had a network of secure bases throughout your life, you may be able to internalize those experiences and ultimately become your own secure base. ●

Become a Secure Base for Others

Part of the deep work of becoming a Secure Base Leader involves becoming aware of, and in some cases changing, very deeply ingrained patterns in the ways you interact with others. Some of those patterns are reflected in your "attachment style"— the way you connect to

people. Your journey should include an understanding of your attachment styles.

We have integrated Eric Berne's Transactional Analysis concepts into a model you can use to assess yourself and come to understand how and when you move across styles:

• **Secure:** Approachable, high self-esteem. "I'm OK, you're OK."

• **Anxious:** Insecure, overly dependent. "I'm not OK, you're OK."

• **Detached:** Withdrawn, depressed. "I'm not OK, you're not OK."

• **Avoidant-dismissive:** Independent loner. "I'm OK, you're not OK."

Ask yourself:

• *What was the predominant style of the people around me during my childhood?* You are likely to repeat the dominant attachment styles of your mother and father. As with any pattern you have developed over time, you can learn to change your style if it is not serving you well.

• *During times of great pressure and stress, which style do I tend to adopt?* Notice under which conditions you exhibit each of these styles and, very importantly, notice your habitual movement when under pressure.

• *Do I sometimes behave in ways consistent with styles other than my predominant style?* Keep in mind that we all exhibit elements of each style some of the time.

Connecting with others also involves picking up on the "signals" they are sending about themselves, their emotions and their needs. Signals are the verbal and nonverbal messages that confirm or deny the truth of a person's communications. Most signals are subtle. Sometimes signals are conscious, sometimes unconscious.

Four main sources of human signals are part of the verbal or nonverbal exchanges between people:

• **Body:** "Body language" includes gestures, posture, facial expressions and tone of voice. These can be conscious or unconscious, positive or negative.

• **Emotions:** Examples of basic emotions are anger, fear, joy, sadness, disgust and surprise. These emotions activate the body, which in turn sends out signals.

• **Mind:** You send signals about what is going on in your mind. What you think becomes a signal, often (but not always) through the words that you use. What you believe about the other person affects the signals you send.

• **Spirit:** Spirit indicates the intention that is behind all other signals: your purpose, your motivation while you are taking action, and your end goal. Signals from the spirit convey a sense of judgment.

The Brain, Mirror Neurons and Bonding

Mirror neurons give humans the ability to learn through imitation — you watch someone do something and you imitate it. The more you copy someone's action, the easier it becomes, and eventually you can do it almost without thinking.

Research indicates that the basic need for relatedness, empathy and bonding is actually a biological wiring that is activated through such a learning process. Bonding can be learned by watching others and experiencing how they bond.

The mirror neuron system provides scientific validation of the need for empathy and authenticity in order to engage and inspire followers.

Transform Your Organization Into a Secure Base

Remember that in addition to people, other entities can also become secure bases when they provide a sense of protection and a feeling of comfort as well as offer a source of energy and inspiration to explore, take risks and seek challenges. When the company provides that combination of safety and stretch, it becomes a secure base to any employee or external stakeholder who feels those benefits.

Your ultimate success as a Secure Base Leader comes when you influence not only a handful of individuals but also the very culture of your organization. Secure Base Leaders are like puzzle-makers who put all the pieces in the right place.

Transforming your organization into a secure base will eventually lead to a change in its culture:

• Remember that any change involves loss. People need to grieve that loss.

• Focus on the learning you can achieve along the way, not just on the end goal.

• Work with what you can change rather than worrying about those pieces you can't change.

• Strive for excellence — not for perfection.

• Break the big challenges down into small steps.

You will begin the transformation process by encouraging as many leaders as possible to integrate secure base concepts into their approaches and attitudes. The success of an organizational change program is directly related to the level and breadth of senior leadership involvement.

The more leaders you can get to be secure bases, the more people will be inspired to be secure bases and the more likely the broader organization will become a secure base.

You can integrate the core ideas of Secure Base Leadership into every human resource process. It is important to see Secure Base Leadership as a set of behaviors that can be identified, taught, learned, encouraged, assessed and rewarded. Can you find a way to incorporate elements of both caring and daring into a person's job description? We are amazed at how individual objectives often ignore the caring aspect of leadership. You will better integrate Secure Base Leadership when you write objectives that are more clearly focused on both caring and daring. If you do not review the elements of Secure Base Leadership during an annual performance review, you'll miss a critical aspect of the "reinforcement loop."

In order to transform your organization into a secure base, you need to address its goals, vision and mission. People need to bond with other people and to goals. The goals, vision and mission of an organization can infuse a deep sense of caring and daring into all employees and even other stakeholders. ●

Humanize Your Leadership and Your Organization

When we ask senior leaders to reflect on their learning experiences, they often tell us that they "feel human" again. Or they say they have "gotten back in touch with their humanity." Somehow, their very nature as people has become hidden over their years of corporate life. The experience of feeling alive again represents the essence of our mission to humanize organizations.

We recognize the tough realities of business in the 21st century. We know that organizations need to change to survive and thrive. What concerns us is the way that change is often implemented. Everywhere we look, we see more focus on efficiency and survival and less focus on people.

You begin humanizing your organization by opening yourself up to the humanity of others, and you begin that process by first attending to your own humanity:

- **Elevate your hopes and dreams.** Find a way to elevate your hopes and dreams, your passion and joy, your conviction and determination, and your spontaneous enthusiasm for your work and for your life.
- **Show vulnerability.** Remember that showing emotion is a sign of strength. In your vulnerability is your humanity, and in your humanity is your strength. We have seen time and time again that when a leader opens up others open up too.
- **Uplift people around you.** This means focusing on developing strong, enduring bonds with people while also maintaining a challenging and opportunity-focused mindset. The Mind's Eye is always focused on Playing to Win.

The way leaders organize work can either support or block people's very humanity. You can help humanize your organization by changing some of the traditional and even newer ways work is organized:

- **24/7 contact.** The brain works more effectively and efficiently when it has regular breaks. Wean yourself off any email addiction you may have and encourage your people and teams to do the same.
- **Make time to build relationships.** Does your organization schedule work in ways that enable people to get to know each other as people? See what you can do within your sphere of influence to create time for bonding.
- **Recognize the human cost of virtual teams.** Organizations are increasingly fragmented and project-based, with people more attached to their work and their direct colleagues than to the company.

If you choose to act as a Secure Base Leader and adopt a Playing to Win approach, you will respond to challenges by seeking both survival and great relationships. You will always be asking yourself, "How can we win and keep the human dimension thriving?"

Each organization is potentially a place of thriving, flourishing and growth. It can also be a place where human beings are devalued. The turning point is leadership. And within leadership, the essence is Secure Base Leadership. When you take the journey to become a Secure Base Leader, you enhance first your own human spirit, then the human spirit of others and finally the humanity of your organization. ●

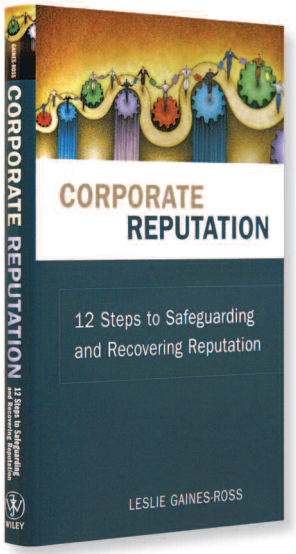
Leadership: Strategies

Corporate Reputation

12 Steps to Safeguarding and Recovering Reputation



by Leslie Gaines-Ross

THE SUMMARY IN BRIEF

Enron. IBM. Tyco. FEMA. As the number of organizations that have suffered significant crises — and were forced to start over to restore their once-good names — continues to grow, many questions naturally arise. How did they lose their reputations? What triggers reputation loss? Were there distress signals? Why are so many companies struggling with tarnished reputations? What does it take to restore a damaged reputation? Can a company build an enduring and lasting reputation?

Dr. Leslie Gaines-Ross addresses leadership teams, board members and other professionals, providing guidance and examples to help organizations answer these key questions. She explains why reputation matters to a company's valuation and well-being and isolates a new stage — reputation recovery — that deserves its rightful place in the process of reputation building. In a four-stage, 12-step process, she reveals the most important phases in recovering reputation. She also explains the roles corporate leaders must play in reputation recovery and sustainability and provides a road map for restoring reputation over the long term.

Losing money is a setback for a company, but losing reputation is a major blow. Gaines-Ross shows how you can keep your reputation strong by rallying the support of employees, consumers, investors and other key stakeholders so that your company's most competitive asset remains alive and well.

IN THIS SUMMARY, YOU WILL LEARN:

- How to minimize the negative consequences of a lost or damaged reputation.
- How to identify what went wrong, including ways of analyzing both the negatives and the positives of the issue.
- How to rebuild a damaged reputation by making necessary changes to corporate culture, shifting business models and practices as appropriate, and using media for building new relationships.
- How to sustain a positive reputation for the long term by accentuating good news and minimizing reputation risk.

Reputation Matters

Reputation means how positively, or negatively, a company or similar institution is perceived by its key stakeholders — the people or entities that the company or institution relies on for its success. Companies burdened by a tainted reputation have less opportunity to engage in business as usual, which hampers their reputation comeback efforts. Steps that would otherwise be viewed with optimism, or at least equanimity, are viewed with suspicion and doubt. Once stakeholders view a reputation as having been seriously diminished, pessimism sets in as those stakeholders cling to negativism that takes time to overcome.

Reputation recovery is a step-by-step process, taken over an extended period of time. Twelve steps fit into a four-stage reputation recovery model:

- **Stage One: Rescue.** Minimize the damage.
- **Stage Two: Rewind.** Identify what went wrong.
- **Stage Three: Restore.** Rebuild reputation.
- **Stage Four: Recover.** Sustain reputation for the long term.

As Hurricane Katrina tragically demonstrated, losing reputation is a defining moment for a company, country, institution or individual. Benjamin Franklin once advised that "glass, china and reputation are easily cracked, and never well mended." Franklin was only partially correct. Yes, reputations are inherently fragile and can tumble overnight without warning. However, the repair process has greatly improved since the 18th century. Today, companies can expect to do more than merely patch a tattered reputation back together.

Rebuilding a strong reputation is well within the realm of possibility. If the right steps are taken, reputation restoration is likely.

Stage One: Rescue

Step 1: Take the Heat — Leader First

A single corporate leader, almost always the CEO, must serve as the official spokesperson during troubled times. The reputation of the CEO and his or her company are inextricably linked. CEOs are regarded by many as the human face of the organization, although alternative representatives to the CEO do exist and might include the chairman, board members, lead director or a retired CEO.

Having one person act as the single repository of communications fosters more focused, consistent and concentrated messages. It allows the company to speak with a single voice, avoiding conflicting positions and misstatements that could confuse audiences and damage credibility at a time when trust is paramount. CEOs must communicate transparently and proactively, rather than defensively. In the early stages of a corporate crisis, leaders' messages cannot be speculative or vary even slightly.

Leaders must never underestimate the scope or depth of an issue or crisis. The natural tendency is to believe that the company's problem will blow over, go unnoticed or fade away as new headlines emerge. For a CEO to lead effectively during times of crisis is an essential component of early reputation rescue. By acting promptly with one voice, transparently and decisively, CEOs can stabilize an unstable situation and set the right tone that, in many cases, ultimately defines the crisis.

Face Head-On

Part of what it means to lead in times of crisis is to avoid equivocation. When facing a crisis, CEOs should act with a statesmanlike degree of firmness and confi-

dence in their statements and solutions.

CEOs should also recognize that admitting wrongdoing or poor judgment goes a long way to restoring a company's reputation. Perhaps the best way to accept responsibility and demonstrate empathy for those affected in a crisis is the apology. The apology is one way to help shift the focus from what has happened to what needs to happen next.

'The Seven-Second Bow Heard Around the World'

One example of an effective apology is the one from Citigroup's former CEO Charles Prince, who apologized for problems that eventually led to the collapse of the company's private banking license. Prince bowed deeply and symbolically for a long seven seconds at a Tokyo news conference. The global media widely captured his bent image, which powerfully communicated Prince's recognition that he was accountable and that silence was unacceptable. He also sent the symbolic signal that he respected Japanese customs and bowed in regret.

CEO consultant Carol Ballock refers to Prince's apology as "the seven-second bow heard around the world."

Apologies from the top are necessary, but clearly not all there is to rescuing reputation. Companies and their CEOs should follow public leadership expert Barbara Kellerman's advice about the elements of the perfect apology. She stresses acknowledging the mistake, taking responsibility quickly, expressing regret, being timely and providing assurance it will not happen again.

Step 2: Communicate Tirelessly

Communicating effectively and often during a crisis is essential. Crises create unsettling ambiguities. Companies facing crisis are usually under siege from the media, the financial community, disgruntled employees, online and offline critics, and in some cases their own boards. Rescuing reputation and taking the first steps on the path to long-term recovery require a greater level of communications than is typical in less stressful times.

These communications must combine regular and timely face-to-face contact, electronic exchanges and hard-copy messaging. Unfortunately, too many leaders rely too heavily on electronic communications to relay news about unfolding problems. Personal meetings in small or large groups can do more to rally the troops in rebuilding a company's reputation than can sanitized and consensus-driven messaging. Personal connections are hard to replicate on paper and online.

That said, companies do need to pay attention to their online Web site communications. In times of emergency, the company's site is likely to be the first place many stakeholders go for information. The site's effect on reputation during these trying times becomes exponentially greater, with a high premium placed on immediacy and accuracy. Companies under scrutiny must be responsive and communicate constantly.

Disclose Honestly and Quickly

Brutal honesty is not easy when facing up to bad news. The advantage of transparency, especially where the disclosed facts are negative, is that it gets all the bad news out at once. When bad news is released little by little, the crisis at hand is simply prolonged, the rescue process stalls and re-establishing stakeholder confidence is postponed. Even when continuing problems are anticipated, credibility can be maintained if all disclosures are accurate and future problems are candidly acknowledged.

Reassure: Keep an Eye on Your Team

For employees who are not in the decision-making or news-update loop, the early moments of crisis are frightening and overwhelming. It is only natural that employees would be concerned about job security.

In the face of uncertainty, all remaining employees, management and nonmanagement alike, need reassurance and reasons to stay at the company. They also need some amelioration for the other work-related stresses, such as sharp workload increases, as the company struggles to deal with a crisis as well as run its business. Be aware of how intense and debilitating the work environment can be, and take steps to ensure employees' concerns are addressed.

Step 3: Don't Underestimate Your Critics and Competitors

A company should not ignore or diminish what its critics and enemies have to say. They may be telling leaders something they do not *want* to hear but absolutely *need* to hear. The power of technology has increased the reach and influence of many well-organized and experienced critics.

Critics do not come and go, but have staying power that can last for years. For example, People for the Ethical Treatment of Animals (PETA), founded more than 25 years ago, was once considered a fringe movement. PETA is now the world's largest animal rights organization, with more than 1 million members and supporters. Its reach runs far and wide, and companies dismiss their complaints at their own peril.

Even a company as large and powerful as Wal-Mart has learned to not underestimate its critics. The impact of

the company's better-organized critics, such as Wal-Mart Watch and Wake Up Wal-Mart, has been appreciable and impossible to ignore. Wal-Mart CEO Lee Scott has taken critics' relentless attacks seriously and is turning the company upside down to meet expectations, win back fleeing customers and attract new customers. Scott has even taken cues from his company's critics and launched his own grassroots group, Working Families for Wal-Mart, in an effort to rescue Wal-Mart's reputation.

Step 4: Reset the Company Clock

Instilling a sense of urgency often requires getting the senior team to focus more on what has to happen next and less on what went wrong in the first place. Internal politics and finger-pointing distract leaders from attending to those critical moments when moving toward recovery is essential. Wallowing in regret and recriminations is simply not helpful and keeps the company from moving forward. Even if the company is not frozen in time by recent calamities, business as usual is unacceptable. The pace of getting things done has to be accelerated.

A good solution is shock therapy in the form of an overwhelmingly heavy dose of undeniable reality. One CEO, for example, summoned his senior team and displayed charts of its rapidly falling market share. To stun the team further into accepting the facts, he showed slides of competitors with quotes mocking the company. The shock value alone accelerated the team's drive to rescue the company from its downward spiral.

There is no room for complacency or the status quo in turnarounds. From the top floor to the shop floor, everyone must help stop the bleeding. Crisis gives leaders permission to instill that sense of urgency and to focus on change.

Break Into Easy Pieces

Turning around corporate failure is an overwhelming task. Once the company is forced to look forward rather than backward and a healthy sense of urgency is settling inside, it is time to execute the path. The first order of business in carrying out a rescue is to make changes manageable. It is not the time or moment for grand visions. Instead, it is time to set a plan in motion that has clear, quantifiable goals.

Once a plan identifies what can be accomplished in the short and intermediate terms, the rescue or transformation process can begin. Without set deliverables and action strategies, companies will not be able to set momentum in place and will lose sight of the light shining at the end of the tunnel.

Check Who and What Is Missing

In the rush of events when a crisis strikes, key stakeholders can go accidentally unnoticed. Leaders must keep an eye out on employees so that their companies' hard-won customer base is not sacrificed because of preoccupation with the crisis. A corporation has to deal with a crisis, but the core business must not languish. The key players in the business cannot be ignored. Someone has to be minding the store.

IBM Develops a Rescue Plan

After a disastrous period of declining profits and instability, IBM's reputation rescue began in 1993 when Lou Gerstner was named IBM's chairman and CEO. He focused IBM on solutions and action, proposing the following five specific priorities for the first 90 days of his leadership in order to steer the organization toward what had to be done:

1. **Stop hemorrhaging cash.**
2. **Make sure IBM would be profitable in 1994 to send a message to the world — and the IBM work force — that leadership had stabilized the company.**
3. **Develop and implement a key customer strategy for 1993 and 1994 that would convince customers that IBM was moving back to serving their interests.**
4. **Finish right-sizing the company by the beginning of the third quarter.**
5. **Develop an intermediate-term business strategy.**

Gerstner understood IBM had no choice but to make things happen. IBM had to stop blaming others and tweaking its internal structures. The company needed to break the reputation rescue phase into attainable pieces that employees could follow.

Stage Two: Rewind

Step 5: Analyze What Went Wrong and Right

As soon as leaders sense that they have stabilized or rescued their company's reputations from the grip of destruction, they should step back and start asking questions. By studying their own mistakes and those of others, companies can avoid repeating or encountering even larger problems that may lie ahead.

When Tyco International's new CEO, Ed Breen, took over from ousted CEO Dennis Kozlowski, Breen took swift action by firing 290 of Tyco's top 300 executives and handing out pink slips to the entire board. To build the "different company" he hoped to shape, Breen

looked to Tyco's past for lessons learned. He requested a root-cause analysis (RCA) to determine how the Fortune 500 company got itself into its deep financial difficulties and what could be done to prevent them from happening again. RCA is based on the assumption that problems are best solved by attempting to correct or eliminate underlying causes rather than merely addressing the symptoms and repairing any damage. By directing corrective measures at root causes, companies can minimize the problems' recurrence over the long term.

Companies should also carefully examine what they did right as well as wrong. It is easier for employees to accept change if they are presented with positive information as well as negative. Companies should carve out time to isolate the factors that brought them to where they are, so they can rebuild enduring and lasting reputations. Furthermore, an analysis of what went wrong, and hopefully what went right, is invaluable for measuring long-term progress, establishing metrics and achieving closure on an unpleasant chapter in a company's history.

Identify Distress Signals: Keep Antennae Alert

Reputations are not destroyed overnight but are gradually worn down over time, with the collective impact of each incident further chipping away at the foundation of the company's reputation. What this means for leaders is that if they can identify the telltale warning signs of impending reputation failure as they occur, they can take immediate steps to halt its progress.

Distress signals arrive in many forms and from a variety of sources. They can come from customers, employees and other stakeholders. What they have in common is that they eventually surface, whether it is months or years before the actual crisis. It pays to watch for troubling early warning signs. Once companies look back at the signals they missed, they can ensure that precautions are taken not to miss them again.

Find Your Beacons of Light

Many scandal-ridden companies soon learn that there are frequent unpleasant surprises on the long path to recovery. Waves of bad news can wash over companies and drown out any progress being made. Overcoming these gut-wrenching squalls is easier said than done. Boards and peers should encourage leaders to find their buoys in the storm. CEOs should seek out sounding boards that can easily look back at what they learned from confronting the demons of reputation failure and what they would have done differently. These beacons of light can guide companies to a safe landing when storm clouds darken the sky.

Monitoring Online Reputations

Weber Shandwick's *Safeguarding Reputation* research found that blogs, wikis, social network spaces and discussion boards are frequently home to distress signals and should be closely monitored as part of a company's reputation management strategy. Ironically, only about one-third of global executives (31 percent) report that they pay a lot of attention to reputations online. North American executives are considerably less likely to monitor their company's reputation online compared with European and Asian executives (19 versus 32 versus 38 percent, respectively).

Step 6: Measure, Measure and Measure Again

Now that the past is in full view, measurement can begin. To track progress once reputation loss has occurred, benchmarks are necessary. Now more than ever, companies and their leaders need real-time, hard evidence that the company is moving in the right direction.

Reputation measurement takes courage. Companies often do not like what they hear. The good news is that reputation measurement builds confidence — it places information out in the open, leaving no mysteries or uncertainties. Sometimes knowledge reveals that things were not as bad as the organization originally thought. Either way, leaders know what they are dealing with and have the information needed to bring about change.

In addition to quantitative and qualitative research such as surveys and focus groups, daily media alerts help a company monitor potential future problems and gauge public sentiment. These "early bird" alerts should also include intelligence on competitors, which allows the company to assess whether issues affecting competitors' reputations might spread across the industry.

For additional information on measuring reputation, go to: http://my.summary.com.

Stage Three: Restore

Step 7: Right the Culture

Most chroniclers of corporate failure will readily admit that the company's culture is what failed the organization in the first place and that the only way to ensure recovery is to alter the corporate culture.

Only when employees believe that they have as much to gain as senior management and their voices are being heard just as clearly can what former IBM CEO Lou

Gerstner called the "collective capacity of its people to create value" unleash the passion to rally behind change. When leaders engage employees and offer them something that truly resonates with their desire to help, restoration can finally begin. If an organization is committed to its work force and keeps its people motivated, employees will know how to behave when no one is watching and go the extra mile to help return the company to its former glory. To accomplish this goal, companies can consider some of the well-planned best practices that have helped other organizations recover.

Although a few individuals can usually be blamed when a company loses reputation, wrongdoing is frequently systemic. If the culture does not actually encourage misconduct, then it at least tolerates it. For example, Enron's unethical and "anything goes" behavior was shown to be pervasive. A culture of unaccountability and poor leadership was evident at the Federal Emergency Management Agency (FEMA) when Hurricane Katrina relief efforts were badly fumbled in 2005.

To right a company's culture and restore its reputation, top management must pay the utmost attention to its values system and apply steady pressure to replacing values that are either wrong or no longer relevant. Values-based leadership is increasingly important as companies learn that they are now living in glass houses. If employees can be mobilized to pay attention to company values as they do their jobs, reputation risk will be diminished.

Hire Right

Time and time again, restoring reputation comes down to identifying the right people and putting them in charge. A company where people are hired only to push an agenda at all costs will suffer the death of its reputation by a thousand cuts. By hiring the right people who set the right tone and share the right values, companies can avoid reputation failure, or at least mitigate its impact.

Perhaps the best way to ensure that the most qualified people are populating a company's work force is to train and groom them internally. For those companies trying to restore reputation, lessons can be learned from organizations whose reputations have been sustainable for the long term. General Electric Co.'s durable reputation can be attributed to its ability to build great leaders. Countless articles have been written about GE's people factory and subsequent success when GE leaders go on to lead other companies.

Reaffirm People's Beliefs in Themselves

As the recovery process gathers steam, remaining employees have to be reassured that they have what it takes to make the company successful once again. With their confidence shaken, employees have to begin believing that what looks impossible is possible.

One way to rebuild confidence back into a culture that has undergone extreme stress is to identify short-term wins that build momentum. Motorola's new CEO, Ed Zander, saw an opportunity in the ultrathin Razr cell phone and fast-tracked its development. When Razr sales skyrocketed, it was declared a hit. Zander was able to rally employees de-motivated by years of declining share price, stunted technology advancements and lackluster products. ●

Step 8: Seize the Shift

After crisis strikes and the painful process of recovery begins, business models and practices often need changing. A surprising number of crises can be traced to shifts in the business climate that leaders did not see, ignored or did not take seriously enough.

One classic example is IBM's bet on the staying power of the mainframe computer and its overlooking of the PC revolution, which resulted in the computer company's downhill slide in the early 1990s. Instead of sizing up the new market in time to develop an effective strategy against a mounting threat, the company remained dependent on its mainstay System/360 mainframe business. The PC challenge was on the horizon, but IBM had its blinders on.

It is not uncommon for companies that find themselves caught in the undertow of change to suffer from "exceptionalism" — the belief that one's own industry is unique and unlike others. IBM had trouble imagining a world without the mainframe and had to quickly scramble to regain its prominence.

Ask the Right Questions

When confronted with restoring reputation, leaders need to be alert to small and large business shifts that can impact their future. If these changes are relevant — and they often are — reputation restoration should occur within the context of these seismic shifts. Several key questions that leaders should be asking themselves as they face a new future include the following:

- What are the biggest shifts in the world today? How do they affect us?
- Where will our industry be in the next two to three years? Who and what is driving our industry?
- What will be expected of leading companies in three years?
- What will customers need from us in three years?

- Where should we be in three years? What is stopping us from getting there? What should we be doing?
- What signals are weak but already on the horizon?
- Can we change the game? What game-changer would propel us beyond all others?
- Will our answers to these questions astound our competitors?
- Will our answers to these questions inspire our people, resonate with our customers and capture the world's imagination?

Only by understanding and recognizing these business shifts will companies improve their chances of keeping the grim reaper away. When companies are in recovery mode, the answers to these questions can mean the difference between success, failure and mediocrity.

Step 9: Brave the Media

The media is no longer what it once was. At one time, companies were largely dependent on select business newspapers, magazines and major broadcast networks to convey their message to the public. With the ubiquity of the Internet and powerful social networks, traditional media has lost some of its status as the single most powerful intermediary. Referred to as the disintermediation of the media, this revolutionary change carries both benefits and disadvantages for companies in reputation trouble.

Companies now have numerous channels to get their messages heard without exclusively relying on the major media as they did in the past. On the downside, however, companies now have to worry about how a minor glitch can unexpectedly boil over into headline news once it surfaces online. The challenge for companies trying to restore their reputations is to know how and when to strategically use these new media outlets to their advantages and keep their reputations from spiraling further downward.

Don't Believe Your Own Propaganda — Bring in the Critics

Reality can be a difficult pill to swallow for companies accustomed to having their own way and often the final say. Facing up to the hard, cruel facts that created the initial reputation failure can be very painful, especially when it comes from the fiercest critics. Yet there is no better time to put a company's house in order than when it is humbled and eager to get its reputation back on track. Just showing stakeholders that the company understands what went wrong and is willing to take its licks like everyone else can help restore reputation. One way to keep a repair process moving ahead is to ignore your own propaganda.

It is also important to welcome constructive critics into the discussion, not push them away. Not every critic is going to agree with how a company changes its ways, and some may refuse to cooperate, but many will be more than willing to lend a hand with their unfettered opinion during the restoration process. Most important, critics keep companies from believing their own half-truths.

The final stage of reputation recovery is now in sight. A new culture is rising; attention is being paid to outside forces and critics, and new avenues of communications are being paved to reach critical stakeholders. The next phase of reputation recovery is to make momentum known, dig in for the long term and stay ahead of the vortex.

Stage Four: Recover

Step 10: Build a Drumbeat of Good News

Although conditions may steadily improve, the slippery slope still appears in the rearview mirror. In some cases, companies might hear enthusiastic applause for the first time, although they should not let praise distract them from restoring their good names. As IBM CEO Sam Palmisano said about the company's recovery, "Once things got better, there was another kind of danger: that we would slip back into complacency."

After months or even years of less-than-good news, many companies find themselves ready to turn the corner toward vigorously restoring their good names. Recovering reputation typically does not come from one major event or announcement, but rather from a series of small incremental steps that slowly generate positive momentum. At this stage, companies must be cautious not to appear too boastful or overconfident as good news surfaces. Companies on the recovery continuum should remain humble and always on guard.

Make It Simple

Reputation recovery should be accompanied by clear communications from the top. A rebounding company needs leadership that articulates a disciplined, straightforward and easy-to-absorb message. A centralized and unified communications strategy involves responding quickly, cohesively and consistently when any emerging negative issues or criticisms arise. Companies cannot afford the risk of ad hoc or complex communications as they recover reputation.

Communications should not be limited to words alone. Symbolic acts serve as powerful signs that corporate recovery is in progress and change is in the air.

Small actions can carry a heavy weight. As new Boeing

CEO James McNerney dug deep into restoring the aircraft manufacturer's reputation after several highly publicized ethical lapses, he replaced the company's Chicago "World Headquarters" label with "corporate offices." Although not earth-shattering, the subtle change sent a resounding message that pomposity would no longer be associated with the Boeing name. Large or small, unspoken messages can signal needed change to key stakeholders watching for genuine signs of recovery.

Make Signs of Progress Visible

If recovery is on the horizon, observable signs need to be made evident. Neither profit results nor share price are always leading indicators of a turnaround. Management must find other proof points to consistently demonstrate that upward momentum exists at the tarnished company. When it was time for Tyco International to formally declare that its recovery process from the leadership lapses of its previous CEO was officially in place, new CEO Ed Breen initiated two advertising campaigns that emphasized the company's new, streamlined leadership team and the important products Tyco made. Both campaigns reminded stakeholders that Tyco was a company worth knowing better and a company proud to be stepping back into the spotlight.

If reputation recovery progress is being made and employees are being inspired, companies will have an easier time accelerating the momentum needed to push forward. Companies should start small but relentlessly build momentum until it catches fire and spreads exponentially.

Step 11: Commit to a Marathon, Not a Sprint

Too many companies appear to recover, only to stumble soon afterward. For this reason, stakeholders do not regard recovery as certain until a successful track record is long in place. Even so, recovery is a continual process.

Hard as it may be to accept, leaders should recognize the permanency of a recovery campaign. Every day demands winning over the hearts and minds of employees, customers, investors and other key stakeholders. Just as presidents and other politicians must win the vote every day, companies and their leaders must prove that their company is worth support, attention and loyalty. The ongoing recovery and restoration of a company's reputation requires extreme patience and endurance.

Reputation recovery is an epic voyage full of courageous daily actions, small victories and deeds that never truly slay the twin dragons of doom and gloom. Employees and those vested in a company's turnaround can never be completely satisfied. Recovery has too many epic cycles that cannot be rushed to a final close.

Step 12: Minimize Reputation Risk

As the recovery process turns the final corner and the company feels healthier, reputation risk should be faithfully monitored. The once-tarnished company has to guard against any risk of further reputation damage. Minimizing reputation risk now becomes everyone's responsibility.

Minimize risk by always keeping your eyes firmly on the horizon. This includes planning for the worst-case scenario that could set the company back several steps or nearly back to the beginning when the crisis first struck.

Plan for the Worst-Case Scenario

Royal Dutch Shell has been in the business of scenario planning for more than three decades. Its highly regarded Global Scenarios are developed by the Shell Scenario team, with contributions from external experts from around the world. The impressive list of outside individuals contributing to the series demonstrates Shell's willingness to draw insights from wherever they originate.

Shell's scenarios can even be purchased on Amazon.com. Shell CEO Jeroen van der Veer explains, "These scenarios are different from forecasts in that they provide a tool that helps us to explore the many complex business environments in which we work and the factors that drive changes and developments in those environments." As Shell repairs its tarnished reputation of the past few years, its scenario planning helps the company make sense of the world and gives it a sharp competitive advantage.

Minimizing risk is critical to maximizing reputation recovery. Anticipating problems should be practiced every day to avoid unforeseen problems and keep companies on the straight and narrow path to full recovery.

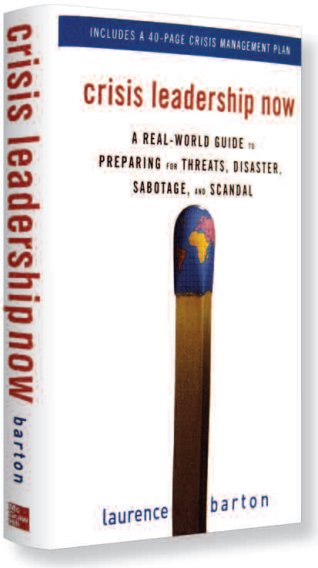
Leadership: Strategies

Crisis Leadership Now

A Real-World Guide to Preparing for Threats, Disaster, Sabotage and Scandal



by Laurence Barton

THE SUMMARY IN BRIEF

Some managers shine during a high-level crisis, while others stumble. Leading crisis management expert Laurence Barton explains why those with an action plan in place are the ones who can react quickly, manage rumors, and respond to victims and stakeholders sincerely and adequately while keeping their organization afloat. As a crisis leader, you must follow a comprehensive protocol that includes the implementation of teams, systems and tools to respond to a crisis and recover from its impact.

In his seminars with executives, Barton begins by asking, "What's the worst that could happen?" The results are surprising. On top of the expected, such as workplace violence, product recall, violent weather, pandemics, chemical spills and terrorism, executives have reported actual crises such as food poisoning impacting hundreds of guests, a counterfeit product uncovered, devaluation causing massive financial loss, and extended loss of electricity.

Barton first addresses how to avert crises through measures such as a program for securing your workplace, proper management of workplace threats and adoption of rigorous human resources practices. Next, he covers disasters including terrorism, industrial accidents, stormy weather, pandemics and sabotage. He then gives specific plans for communicating during "Code Red" situations.

IN THIS SUMMARY, YOU WILL LEARN:

- How to assess your crisis risk.
- Ten actions you should take now to decrease your vulnerability to risk.
- What to do in the first eight hours of a major crisis.
- What the OSHA requirements are for instituting an employee awareness program about the four basic types of workplace crimes.
- How to develop a stakeholder's analysis during a crisis.

THE COMPLETE SUMMARY: **CRISIS LEADERSHIP NOW**

by Laurence Barton

The author: Dr. Laurence Barton, former vice president of crisis management at Motorola, has spent 25 years studying the causes of crisis in the workplace. He has managed more than 1,200 incidents worldwide, writing crisis plans and consulting with senior management at ABC News, The Walt Disney Co., Nike, Honda, British Petroleum, ESPN, and more than 60 hotels and casinos during defining moments.

Secure Thy Workplace!

You can often judge how much a company values corporate security by looking at where it places the physical offices of its security managers. Sometimes you'll find them in the basement, right next to the soft drink machine. In these companies, the primary function of the security director is to ensure that the CEO gets to and from the airport in the company Escalade on time.

There are exceptions: Companies such as Disney, Emerson and Coca-Cola give credence to their security leaders and listen to them about crisis planning. They get it: The best crisis is the one that has been prevented. A smart security director understands that his or her company must be counterintuitive.

10 Questions to Benchmark Your Security Team

Here are 10 questions that are commonly asked when your firm is being audited, from a security point of view:

1. What's the average number of hours that your security guards are trained by you or your company?

2. What's your annual turnover in security personnel?

3. How many of the leaders in your security organization have a bachelor's degree from an accredited college? What about a master's degree?

4. Has your director of security ever worked at another company in your industry?

5. Has your company ever conducted an audit of your top talent to determine if they leave confidential memos and reports out that others can read or copy after hours?

6. What is the relationship between your director of security and your leadership in IT? Do they even know each other?

7. How many times in the last year has the security director spent a day at each major site in the company — at either your various sales offices or key facilities?

8. Has the security director ever invited the regional office of the FBI, the Postal Service or others to provide an annual briefing on potential corporate threats?

9. Does human resources routinely call upon security when a problem employee is about to be exited?

10. How many of the books on the security director's shelf have been published in the past five years?

Preventing Crisis: Background Checks

One way to prevent crises is to perform background checks regularly. Insist that a qualified employment verification firm complete the following checks on any potential employees:

- Validate that the candidate is using his or her true name.
- Check for a history of credit fraud.
- Verify that the Social Security number the candidate provided is that of a living person (a surprising number of applicants will use the number of a deceased relative with a similar or same name to hide a checkered financial past).

If one or more of the previous checks turns up questionable information, continue researching the candidate:

- Does the person have a genuine physical address or is the person using a mail receiving/forwarding service?
- Is the person living in a hotel/motel/temporary residence?
- Does the person frequently use a check-cashing service or does he or she have a legitimate checking account?
- Does the background check show any time lapses in employment? While the person could have been caring for an aging parent, it could also correlate to time spent in a correctional institution.

Keep a specific eye on applicants' criminal records for financial or "white collar" crimes. For the most part,

Workplace Violence Policy

U.S. employers are required by the Occupational and Safety and Health Administration (OSHA) to have both a policy and a training program that inform employees of the proper methods of sharing and reporting concerns about intimidating and threatening workplace behavior.

criminal background checks are retained by research firms for only seven years or less. Many of the more accomplished research firms will look for incidents such as arson, weapons violation, simple assault, domestic violence, substance abuse, etc.

Managing Threats and Workplace Violence

In the vast majority of workplace violence cases, the perpetrator is acting on a real or perceived grievance. The person may have been denied a workers' compensation claim and is now experiencing physical pain while at work, or he or she may have been reprimanded in front of peers and is now embarrassed. Maybe the employee was dismissed or reassigned, causing the person to seek revenge on a supervisor in an effort to regain control of life. No matter what the employee's motivation, the real question is: Are we *listening*?

Consider the range of potential threats:

- Stalking of an employee by a former spouse, partner or co-worker.
- Threats to bring a weapon to work, possibly preceded by a sarcastic comment; or "accidentally" leaving a hunting rifle in the back of an auto for others to see.
- Comments made by a former employee that are intentionally provocative in nature.
- E-mails or posted blog messages that threaten the life of a co-worker.
- Behavior intended to cause concern, such as mimicking the gesture of firing a weapon at a co-worker.

Assessing a Threat

Many industries, such as retail, health care and hospitality, are dependent on a high degree of interaction with clients who are total strangers. Companies in these sectors sometimes offer security supervisors and customer service managers a basic primer in managing hostile persons. Although there is no single model, we have learned much in recent years regarding specific behavioral and clinical signs of those who pose a *potential risk* to themselves and others.

Many companies have a threat assessment team whose members represent their human resources, security, IT, EAP and legal departments. The team is typically deployed when an employee makes or poses a threat. In many cases, the team will be supplemented by the supervisor of the problem employee. These teams sometimes turn to external threat assessors to gauge whether an employee outburst could escalate into violence and, most important, whether the person has the *capacity* to act on his or her threats.

It's not enough to say you will consult with a psychologist when a challenging situation arises. You need to remember that employers can be charged with tort liability for failing to prevent someone from hurting him- or herself or someone else. Managers should remember that virtually every employer has three paramount duties when threats arise:

1. Duty to Care: Saying you care isn't enough. What if someone causes harm and media later report you were *previously aware* this person made threats? What did you know and when did you know it? What did you do about it?

2. Duty to Warn: Sometimes a perpetrator acts without warning. But there are often *pre-incident indicators* before an assault at work. From the moment you are aware of such threats, assume you have a Duty to Warn others. One way to minimize exposure is to confer with legal counsel, security and HR. But think about how to warn others. Risk communication involves a collaborative discussion about the advantages or drawbacks of a small group meeting, a memo, an individual session with potentially impacted people or other options. Involving law enforcement in these is encouraged.

3. Duty to Act: You may have an obligation to act when an employee informs you that he or she is being harassed or threatened. Common steps include offering the employee a cell phone to call police coming to or from work if threatened, hiring an external security firm to patrol the parking lot until a restraining order is achieved and documenting all suggestions you make to the employee to work from an alternate location, if possible.

Now It's Your Problem

The public expects you to understand the basics of threat assessment when your company is faced with possible workplace violence. Basic facts to consider:

- A violent past is the single best predictor of future violence — period.
- An employee's interest in and access to weapons are certainly critical factors.
- Even physical appearance should be considered, e.g., people contemplating suicide often provide physical warning signs to others in the days preceding the act.

For information on how to assess an individual's "Fitness for Duty," go to http://my.summary.com

OSHA expects employers to offer awareness programs regarding the four primary types of workplace crimes:

1. Crimes committed by an individual with *no connection* to the workplace, such as a homicide during a robbery.

2. Aggression *targeting employees* perpetrated by customers, clients, patients, students, inmates or others for whom you provide a service or product.

3. *Worker-against-worker* violence, such as between a manager and a subordinate, or a former employee who returns with intent to injure a former supervisor.

4. Aggression stemming from a *personal relationship,* such as a former business partner who returns to the work site seeking revenge for a financial disagreement.

Understanding Threats

Once a manager is aware that a problem employee is exhibiting disturbing behavior, a threat assessment team should review several key issues in a timely manner. Begin by evaluating specific content of the threat. Does it explicitly suggest intent to do harm? Then review the capacity, skill set and mental state of the person posing the threat. Who is this person? Where is the person now? *How* is he or she?

Even when a person has no intention to do harm and merely verbally expresses a threat, others could still be psychologically harmed by enormous fear. When an employee tells you he or she feels that a co-worker may do him or her harm, you should take the employees' comments seriously and act on the warning. Document what the person said and the response actions you are taking. Involve law enforcement when appropriate. ●

Negligent Hiring and the Role of Human Resources

Thirty years ago, few employers admitted publicly that they had problem colleagues in their ranks, and society was more focused on corporate environmental abuse than on employee malfeasance.

Even though people haven't fundamentally changed over the decades, technological advances, such as the Internet and camera phones provide a better periscope through which to observe bad behavior, both on and off the job. We also know that numerous scandals in recent years surfaced because information that employers thought was confidential became public.

To immunize against a future problem, you should do five things:

1. Interview each new candidate for an executive position at least twice, and at least two people should interview each person in detail so you can compare notes.

2. Conduct a thorough criminal, financial and sexual predator background check on each new hire.

3. Ask a key interview question: "Tell me about a highly stressful situation involving a former co-worker and how you resolved it."

4. Once you suspect someone on your payroll is a potential problem, promptly investigate allegations.

5. If you sit on a board and signals emerge that a current leader has possibly engaged in malfeasance or behavior contrary to core principles and stated values, hire an independent investigator to discreetly examine the allegations.

Effectively Managing the Downsizing Conversation

Psychologists have written that the death of a child or spouse, the loss of a job and a separation from a spouse are among the worst possible moments of a person's life. If you have been selected to have the "downsizing conversation," you are about to share one of those three moments with one of your employees — that he or she is being laid off. With care, rehearsal and confidence, you can navigate this difficult task well.

The goal is to meet with the employee, deliver the news of the layoff, walk the employee through the severance package that he or she is receiving and communicate clearly what needs to be done immediately (collection of building keys and employee ID cards, cleaning out the office, etc.). Separation discussions should last no longer than seven minutes. ●

For additional information on how to manage the downsizing conversation, go to http://my.summary.com

Managing Health Crises

Most of us live in denial when we consider our vulnerability to possible pandemics: We are aware that flu outbreaks wiped out millions of people a century ago, but we expect modern medicine to rush to our aid in the event of another public health calamity.

A crisis team will greatly benefit your organization, both before and during any major transnational health crisis. That team ideally will be composed of those who can help you anticipate the impact of declining health on your people and operations. A number of Fortune 1000 companies already have developed pandemic plans — this doesn't mean they're fatalists. Rather, it means they understand their fiduciary responsibility to protect their employees in every jurisdiction, their duty to think about how they could deploy aid to expatriates and their families living abroad, and that they likely will be notified of an outbreak only after a significant number of people have become symptomatic.

Now It's Your Pandemic

Most companies have never asked: What if 30 percent of our workers become sick and are incapable of working? What if customers stop buying our product because they are hunkered down at home? If a pandemic were to force curtailments in global trade, even for 30 days, products wouldn't be shipped, services couldn't be sold, and income would come to a halt.

Here is a checklist of issues to consider when drafting your pandemic plan:

- Identify who will "own" the logistics of communicating breaking news about the health issue to the general population so there is a single channel of communication.
- Determine who is currently traveling, where they are today and whether/how they can get home.
- Identify one leader who will communicate your plan to your employees, and encourage that person to work from home. Then determine how IT will support telecommuting and how customer support needs will be managed. Will your company servers be able to withstand the crisis?
- If any business traveler has just returned from an impacted region, he or she may need to see a doctor. There will be legal issues about what you can and cannot order an employee to do.
- If products are shipped to or from overseas, a logistics emergency plan is needed, detailing how you will receive/send future shipments given a potential embargo.
- Assign a content manager for your company intranet and public Web site to communicate key details about preparedness, slowdown or shutdown in a timely manner.
- Consider the impact that prolonged salary and benefit continuation will have. If you work with a union, engage leaders early on so that parties are able to reach accord on major decisions.
- Arrange for regular conference calls to various company departments so employees, contractors and vendors can update one another on key developments, projects and when they anticipate returning to work.
- Identify succession planning for mission-critical people.
- Update home, cell and emergency numbers for each employee, key supplier and contractor, and ensure that multiple leaders have access to this confidential database.

Industrial and Environmental Disasters

Inevitably, management teams avoid contemplating accidents of an industrial nature. This is for two principal reasons.

First, the scope of the damage that can arise from industrial accidents is incredibly wide. Many crisis managers find it difficult to prepare their management framework for the dozens of potential scenarios that could impact their organizations.

Second, unlike cases of workplace violence or natural disasters, many managers tend to believe that their lawyers will be able to apply the same crisis standards that generally seem to work when other types of incidents arise. As a result, managers often suggest that their lawyers spend less time on these issues because of the (false) assumption that legal counsel understands the nuances of such complicated matters as technological science and construction dynamics, which are unique to industrial accidents.

Factors to Consider in Industrial and Environmental Disasters

As you begin the process of assessing your company's vulnerability to industrial accidents, you'll want to consider a variety of factors, including:

- Proximity of facilities to underground and above-ground oil, natural gas and other utility lines.
- Proximity to major highways and rail lines where toxic materials are transported.
- Chemicals kept on-site, who manages them, and a history of industrial incidents or recent regulation infractions.
- How many projects may be going on at any one time that require external contractors, and what competencies and equipment they need.
- Preparedness level of local first responders to major issues such as contamination or release of a toxic cloud nearby, and their ability to orchestrate evacuations and issue widespread alerts.
- Last time senior management focused on waste management, local pollution controls and impact on wildlife in the event of a toxic chemical spill on-site.
- Who is monitoring the driving records/licenses of those operating company vehicles, delivery trucks and special equipment.
- Adequacy of on-site medical response and safety systems to address first tiers of an industrial accident.
- Who monitors/investigates incidents or near-misses at your facilities.

Sabotage: The Undisclosed Crime

Today's saboteurs take many forms and are not always easily identifiable, but they can cause genuine security risks when they infiltrate air defense or public safety systems. Your enemies may include former or current employees and contractors, competitors or investors eager to manipulate chat rooms and blogs to profit from a significant move in your stock price.

Unlike robbery, which is typically reported to local law enforcement, sabotage is a different kind of crisis for a business. Supervisors are often hesitant to report incidents because they fear local press will report them, causing the company embarrassment and potentially further economic loss. In some cases, leaders of a company may not even know their databases or equipment have been sabotaged. On suspecting sabotage, many companies will hire investigators, who sometimes engage in social engineering to try to track down and prosecute the perpetrator. There is no science to combating such threats; sabotage is a complicated crime and its impact on business is often significant — and sometimes deadly.

The Inside Job

Sabotage is not the result of a spontaneous act of revenge; it requires planning, knowledge, access and usually some self-exposure on the part of the saboteur. A catalyst or motive is always present, even if the acts are driven merely by self-gratification. An individual with access to your systems and controls has a far greater chance of penetrating the safety of your core operations.

Chances are your business has property and casualty insurance, director and officer insurance, errors and omissions coverage — but do you have cyberinsurance? Your failure to protect sensitive data about employees, customers and others could be a violation of the Gramm-Leach-Bliley Act.

The Four Principal Categories of Sabotage

The following are four principal categories of sabotage that can have an impact on the business and government sectors:

1. Human resources-related. "Getting even" is a priority for some people and the methods they employ can be costly and often difficult, if not impossible, to track.

2. IT and mechanical. The impact from one act can cost you millions in lost production due to equipment malfunctions and time delays.

3. Economic. Unethical competitive intelligence-gathering is an arena with former Russian spies, current Korean government ministers and many others who find a way to get themselves on the payroll of a company they're seeking to destroy.

4. Reputational. Bankruptcy is not sabotage, but when a company is on the brink of failure, competitors, eager to build market share, may spread rumors, increase attempts to poach top talent or engage in other acts that can be considered sabotage.

Applying Strategic Standards

Here is a recommended five-stage approach to preventing sabotage:

1. Assess your risks and look at internal controls, including HR practices.
2. Design policies and procedures that recognize it's a new world.
3. Embed an antifraud program into your culture now.
4. Engage all stakeholders in discussions about retribution and sabotage.
5. Create a robust investigative process.

Communicating When It's Code Red

Executives are largely uncomfortable with crisis communications. In a typical day, your senior management is working in a known world where customers, products, the supply chain — all of which constitute the principal ingredients of business — are predictable. There's no way to know when a crisis will hit. Events are disruptive, and damage can last for weeks, even months, and most likely will be costly. As a result, management is often overwhelmed by the velocity and disruptiveness of corporate crises.

Diagnostics: Asking Questions Before Communicating

Here is an outline of a due diligence and crisis communications plan presented to an emergency meeting of a bank board because the bank's president was involved in some potentially embarrassing activities outside the office. The three principal questions that would define the crisis communications plan were:

1. What do we know?
2. When did we know it?
3. What are we going to do about it?

Questions pursued with the bank's legal counsel, VP of HR and several board members included:

- Did the person engage in inappropriate or *illegal* activities? Were her actions a violation of a specific standard in the company code of conduct? The difference between inappropriate and illegal is profound in terms of how the bank might communicate any decisions about her future.
- Is the bank president known beyond the bank's high-net-worth clients, such as being a high-profile member of any community/charitable groups?
- Since the bank is publicly traded, the SEC, FDIC and state banking commissioner might have questions about due diligence and whether the president broke any laws. Did the bank hire a private investigator to verify the allegations, and if so, what was found? Is the report discoverable if her behavior leads to legal action?
- Did any bank employee engage in whistle-blowing that led to the allegations? If so, what protections will the bank provide that person? Could there be additional facts that

will be disclosed in days to come that could make this situation worse, further impairing the bank's reputation?

• Are there any major events (e.g., a quarterly earnings report or new branch opening) in the next few weeks that should be reconsidered if the allegations become public?

• If the president is terminated, can she sue the bank, and if so, on what grounds? What is the bank's succession plan for leadership personnel?

In any crisis, a smart communicator will ask these and other questions to help frame his or her crisis communications plan. Twenty years ago, a news release indicating that an executive was departing "to pursue new interests" was commonly used. Although there may have been a few inquiries, the majority of management time was spent managing rumors, not preventing speculation. Today, in a world where the spirit of disclosure places a high value on ethical management and organizational culture, companies must anticipate provocative, legitimate questions.

The Eight-Hour Window

When a crisis is confirmed, the wheels of response should begin turning. This is a chaotic and unsettling time, no matter whether the organization is facing the impact of an earthquake or a violent employee. Regardless of the scope of the incident, the communication demands can be overwhelming and must be managed well.

Companies such as Procter & Gamble, British Petroleum, Kraft Foods and others recently have begun to standardize the process of harnessing key organizational resources and bringing definition to their crisis communication plans *within the first eight hours after an incident arises.* Decades ago, companies looked at crisis communications in terms of the "news cycle," believing that updates only would be shared with reporters before the three principal television newscasts of the day at noon, 6 p.m. and 11 p.m.

Our Web-centric world has effectively ended the news cycle. We have gone from three news cycles a day to dozens. The eight-hour window is a general standard, not an Olympic-timed event. Yet this time frame is a credible goal that many crisis communicators seek to achieve. If you can capture what has happened, who is impacted and how you intend to communicate your response with a clear plan of action within eight hours, you have a foundation for an excellent recovery plan.

To stay ahead of the headlines, there is a road map to effective crisis communications that should be followed. First, create a fact sheet on the scope of the incident, including names of victims and family, as well as witnesses and a time line of how events unfolded. Update it every hour as needed.

Verify all facts with law enforcement and company security and determine who should contact victims and family members, as well as whether your claims or legal department should be involved in personal visits to affected families.

Following the fact verification, begin to draft a response to the big three questions (What did we know, etc.). Continue refining based on new information.

Next, prepare a brief statement for phone operators so they know what they can and cannot say. Emphasize that they should refrain from speculating or saying anything beyond the script. All media inquiries should be directed to appropriate spokespeople. Voice mail of all senior leaders and spokespeople should be checked continually, as new facts may emerge. Rumors may spread. Regulators or elected officials may call. In most companies, communicate known facts with employees first (such as a plane crash claiming the life of an executive), but in other cases consumers may be the first ones to notify (such as a toxic chemical leak near or at a facility).

Finally, each stakeholder category may have unique crisis communications needs, for example employees may want to know if they will be paid even though they are told to stay at home during a chemical cleanup. Customers need to know when products will arrive. News media will have other questions. Your communications team should designate one person per stakeholder category to "own" the communications process with that category.

The Basic Crisis Communications Inventory

A crisis communications plan benefits every organization from nonprofits to multinational hedge funds. To achieve a high level of preparedness, your organization should have a basic communications inventory.

1. Outline the hierarchy of who will speak for the company, and include office, home and cell phone numbers of the crisis team, crisis counselors, legal counsel and insurance company.

2. Designate where you will meet, who owns the telephony aspect of your response and who will activate your crisis alert system.

3. Embed in your plan a simple outline of core crisis messages that you can customize. You'll never know all the facts immediately. So qualify all remarks with statements like "Based on what we know at this point ... " If you make a definitive statement and later have to reverse your message, your credibility is compromised.

4. Identify the 20 worst questions you could be asked during any Q-and-A session with the media or public. If possible, conduct a mock news conference first. Keep your opening statement to two minutes or less. Let the press ask questions. You will be allowed reasonable time to reflect on your answers.

5. Publicize your actions through media networks

such as PR Newswire, which has teams that know how to reach reporters and editors quickly.

6. Frame the crisis properly. Is it an incident? A crisis? Do you have all the facts? If not, say so. Admit what you know and don't know. Stakeholders will have sympathy if you acknowledge that your colleagues are feverishly working to gather all the facts. Tell them you have deployed teams to the site and promise to return with more information in a timely manner.

7. Ask media to help. Airline spokespeople after a crash inevitably begin with statements about thoughts and prayers, then explain the itinerary, type of aircraft, etc. They avoid confirming names of victims or survivors until law enforcement officials have notified next of kin. Typically, a company representative will accompany police when they visit victims' families. Airlines also share an 800-number so loved ones can call and ask for more information. ●

Crisis Prevention and Response: Picking a Consultant

Most executives have no idea what crisis preparedness tools their business needs until a crisis strikes. That is why they often contract outside consultants. Among the services that a consultant can provide are:

- Evaluation of your existing preparedness plans
- Assessment of worst-case scenarios based on your industry and market position, who should respond and how customer support would continue
- Refinement of notification and decision-making processes as well as resource allocation; this is especially useful during weekend and after-hours incidents
- Preparation of a comprehensive list of response tools, including medical and telecommunications needs, that your enterprise may not currently have access to.

Finding a Crisis Consultant

Be wary of consultants who are eager to offer you much more than an overview of their credentials and capabilities. When you interview a consultant about the crisis assessment he or she may perform for your enterprise, ask how detailed and customized the final document will be; whom he or she intends to interview in the preparation of the proposal; the types of questions that will be asked; and how many risk or crisis management plans he or she has created in the past. ●

Assessing Your Crisis Risk

Begin your evaluation of your organization's exposure to a potential crisis by completing this assessment of key categories of risk. This is often best accomplished by asking a team of your associates to work with you in a planning meeting. Rank the following items on a scale from 1 to 10, with 10 representing the greatest damage and 1 being the least.

1. Threats against individuals.
2. Major fire or flood at key facilities.
3. Power failure and sustained loss of utilities.
4. Pandemic flu sweeps across region of your enterprise (expected temporary loss of 30 percent or more of your work force for more than three months).
5. Bomb or bomb threat at your facility.
6. Terrorism specifically aimed at your company, people and facilities.
7. Terrorism (not aimed at your company) in a region that disrupts business travel, product shipment or port functions.
8. Exposure to a product recall.
9. Alleged compliance violation (e.g., European Union Act Tariffs or allegation that a salesperson violated the Foreign Corrupt Practices Act).
10. Geopolitical instability in core markets disrupts supply chain.
11. Sole source provider is destroyed or impaired.
12. Major currency issue causes significant devaluation (20 percent or more).
13. Community protests by residents or union activists.
14. Organized boycott of company.
15. Competitive intelligence threat; theft of customer/financial/data design.
16. Widespread counterfeit product and/or adulteration.

Don't run and hide from crisis preparedness. There's hope. Your organization has you, and you can also groom and hire talent that has experience in risk and crisis management. There are tons of government resources available if you know how to source them, and the public's general awareness of crisis leadership has never been higher. You're in a sweet spot. ●

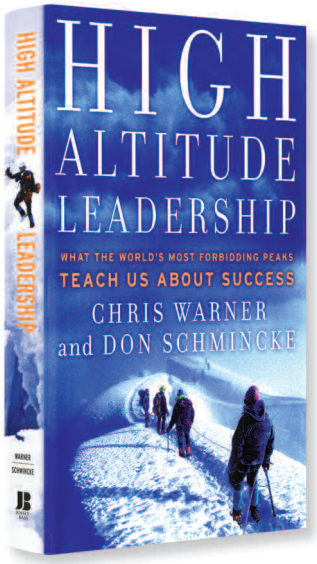
High Altitude Leadership

What the World's Most Forbidding Peaks Teach Us About Success



by Chris Warner
and Don Schmincke

THE SUMMARY IN BRIEF

Expeditions to the world's highest mountains provide the perfect laboratories to examine the dangers every leader faces. At these extreme altitudes, success or failure is easily measured and simple mistakes kill people. When you are in the death zone, you can't grab a book to look for new theories, you can't dial a consultant and motivational speakers are finally short of breath. Up here, the best teams emulate behaviors seen only in the highest-performing organizations — and the worst teams wallow in their dysfunction.

In *High Altitude Leadership*, Chris Warner and Don Schmincke reveal their mountaineering experiences as a metaphorical leadership companion. Together, they present a new approach to leadership, based on groundbreaking scientific research, field-tested under the most brutal conditions on the most difficult summits, and successfully applied in the training of executives, management teams and entrepreneurs throughout the world.

To thrive in the face of today's business challenges and tomorrow's unpredictable risks, you need to become the type of leader whose career, team and company excel in the most extreme environments. You have to be the high altitude leader who uses every bit of your talent and every ounce of your strength to guide your team to peak performance.

IN THIS SUMMARY, YOU WILL LEARN:

- What dangers are encountered when getting to higher altitudes in the mountains or in the business environment.
- Why these dangers appear.
- What you can do to survive them and how you can prevent them.
- How to lead groups to perform at the peak of their ability in the most extreme circumstances.
- How to develop leadership skills to excel in the most extreme environments.

THE COMPLETE SUMMARY: **HIGH ALTITUDE LEADERSHIP**

by Chris Warner and Don Schmincke

The authors: Chris Warner is a climber, an educator, an entrepreneur and an Emmy-nominated filmmaker. He has led more than 150 international mountaineering expeditions from K2 to Kilimanjaro. Chris has been teaching leadership and group development for more than 25 years. In 1990, he founded Earth Treks, a chain of climbing centers that serves more than 100,000 customers a year.

Don Schmincke is a dynamic keynote speaker and mad scientist turned provocative management sage. From CNN to *The Wall Street Journal*, his use of anthropology and evolutionary genetics to remedy the high failure rates of management theories established him as a consultant renegade and leading global authority. He is also the founder of The Saga Institute.

Danger #1: Fear of Death

The Korean team struggles through the deep snow, barely 100 feet above us. Sucking bottled oxygen and teamed with three experienced Sherpas, they should be farther ahead. But at this altitude, simple problems become monumental challenges.

Suddenly the Korean team's professional leader, Nima Nurbu Sherpa, a highly experienced climber who had summited Mount Everest six times, slips and falls. He rockets to the bottom of the Bottleneck, but slows as he toboggans across the only flat patch on the newly vertical South Face. To our horror, Nima slides off the edge and tumbles into the darkness. At our altitude, he will fall for several minutes before hitting the glacier 10,000 feet below us. His body will never be recovered.

— From the journals of Chris Warner

Whether on a mountain or at work, leading others can quickly become difficult and dangerous. You want so badly to influence positive change in your organization. You accept the title of leadership and purposefully trek upward, propelled by hope. In this exciting journey, you seek to be a great leader leading a great company to great altitudes.

Then you slip off the cliff into reality. Leadership becomes a burden as the world fails to cooperate with your dreams. In an instant, the threat of failure awakens you from the delusion. How you respond in the face of real dangers defines you as a leader.

The Nemesis of Great Leadership

In a moment of great fear, action stops. Whether in an office or on a mountain, choosing to stay stuck in the safe world ensures losses of great opportunities to the ultimate strategy killer: fear. It stops staff from making great decisions, stops change agents from disrupting the status quo and stops leaders from leading.

When faced with fear, most people freeze up. Among humans, fear becomes the dominant biological response, and an estimated 90 percent of us freeze up when stressed. We see the same effects of freezing up in teams. As fear races through a team, whether the fear of confronting co-workers or the fear of a failed project, team members withdraw, morale sinks, and whispered conversations and accusatory e-mails cause distrust.

As leaders, we have to combat the freeze response and prevent it from taking root in our professional lives and the teams we lead. When high altitude leaders identify the moment they overcame the great fear that could have frozen them, they tell you they focused not on whether they succeeded or failed, but on the very fact that they acted in the face of great fear. High altitude leaders tame fear in themselves, their teams and their organizational cultures by taking decisive action.

Survival Tip: Embrace Death

Accepting death is choosing life. It grants us the power and freedom to act. Although the mountaineering teams face death in the most absolute sense, metaphorical death can also occur, from the boardroom to the production floor, and it can be just as transformative an experience. Leaders tell how embracing — versus avoiding or denying — the death of a goal, a project, a sale or a career, freed and inspired them to create new possibilities and actions.

High altitude leaders find that moments of imminent failure free them to take decisive action. The call to action from accepting business deaths drives problem solving, decision making and execution with greater clarity of vision. Acting in the face of death — not freezing up at the very thought of it — stops fear and allows you to continue climbing, pushing on past those paralyzed instead of giving up and descending.

If you and your team aren't regularly pushing limits, you won't be able to overcome the life-or-death challenges that every person, every team and every organization eventually face. Remembering the inevitability of death loosens the ego's grip. Then honor, bravery and integrity emerge in its place. This is the secret to high altitude leadership.

Danger #2: Selfishness

Descending into the mountain's shadow, we come upon two determined Italians still climbing upward. We are all surprised. I radio base camp, and their team there sounds equally shocked. Hours before, one of these climbers had been told to turn back, but they just kept going. When your ego drives you, the results are never pretty. They're committing one of the worst mistakes in mountaineering: summiting after the sun sets. I'm worried about the consequences this could have for all of us.

— From the journals of Chris Warner

Selfishness kills people, profits and possibilities. You already know this persistent danger that stalks organizations at every altitude. It doesn't take long to smell it coming. Take a sniff:

- Someone thinks of his career as he abandons the team.
- Critical problems remain covered up until there's no time left to resolve them.
- Turf wars are funded at costly expense to the company.
- Someone takes credit for another's idea.
- An employee tries hard to look good to the boss, even if it means making someone else look bad.

How Selfishness Hurts Us

Whenever we find selfishness in a company, it shows up in an unproductive condition, or what we call dangerous, unproductive, dysfunctional (DUD) behavior.

The list of DUD behaviors is endless: protection of sacred-cow projects (continuing on long after they were told to turn back), blaming, avoiding accountability, back-stabbing, political maneuvering, CYA (a common vernacularism for "cover your butt"), turf wars, silo protection, hidden agendas, taking credit for another's ideas, trashing other ideas to promote your own, withholding information, looking good to the boss, playing favorites, finger-pointing, power plays, passing the buck, gossiping, entitlement attitudes and grin faking (smiling in agreement when you have absolutely no intention of supporting the project).

On the expeditions, clear risks of injury or death make detecting DUD damage easier and more important. One selfish act can kill a lot of people. In organizations, however, the damage often lies hidden. You'll never find it measured on the profit-and-loss statement, but selfishness lurks as the most dangerous blow to profitability.

Damage from DUD extends beyond day-to-day productivity losses and includes missed sales opportunities, quality erosion, higher legal exposure, lower sustainability of competitive advantage, increased waste, employee turnover and poor morale.

Scientists have concluded that selfish strategies are the most effective for species evolution. In the real world of evolution, any animal thinking this is a warm, cooperative universe where we could just talk things out and have a group hug eventually becomes food product for another species.

On mountains and in companies, this primal agenda gets in our way. It robs us of leadership power and usurps the freedom needed for producing great results. Employees naturally perceive a world of threat or fear in a company. Whether the threat is real or not, it still exists, because that's what humans are supposed to perceive. Today this human biological drive collides with the needs of modern organizations, bleeding profits and sending many companies off the cliff. How many times do selfish employees hoard or steal resources, ignore another in need of help, or fight to preserve their self-image at the expense of the organization?

Survival Tip: A Compelling Saga

It was noted that the Himalayan expeditions seemed to falter at the end of the journey, not the beginning. Without a challenge before them, everyone started putting personal desires ahead of the group's goals and reverting to their own selfish behaviors. Human selfishness can only be unhooked when a great passion overwhelms the selfish agenda.

Throughout history, great leaders constantly have focused on creating passion in their people by inventing stories of gods, kings and heroes. High altitude leaders throughout history knew that compelling sagas effectively inspire passion and give people something worth fighting for. The compelling saga leverages the leader's

power in aligning people toward a higher cause than the agenda of their ego.

Compelling sagas bring the vision, mission, values and strategy to life. Sagas capture the epic challenge in what some have called a rallying cry or battle charge, and they provide that emotional trigger to focus on a cause that makes our selfish agendas seem trivial.

Humans need a compelling saga, a passion that overwhelms the selfishness common in humans. ●

Danger #3: Tool Seduction

Cho Oyu has become such a popular mountain that the same level of infrastructure that is built on Everest is applied to climbs on this peak. Large commercial expeditions, employing dozens of Sherpas, set up a well-stocked base camp and three smaller but also well-supplied camps on the mountain. Thousands of feet of rope are strung between the camps, simplifying the commute. Each tent is equipped like a hotel room, outfitted with sleeping bags, ministoves, bags of food, and bottles of oxygen.

Two hundred feet below camp, a crack shot across the slope I was crossing. The crack became an avalanche, the snow rushing past my legs like water in a river. Curious, I watched the snow slide past me. Engrossed in the excitement of this little slide, I never imagined that my cute little avalanche could become so deadly. Suddenly, a silent wave of snow, 10 feet high, picked me up. Pure whiteness and complete silence engulfed me. I tumbled deeply inside this tidal wave, flipping and spinning like a white sock among white sheets in an arctic clothes dryer. The avalanche finally spit me to the side into the slower-moving snow at its edge, burying me to my neck and then, free of me, it plunged over a 300-foot cliff.

Other climbers waited for the storm cycle to play itself out, which it eventually did. Precious time was wasted because the Sherpas needed to move even more gear into place. Ten days later, the big groups were no farther along. And when the tiny window finally opened, a small handful of us, those not needing all sorts of tools and comforts, snuck to the summit. The largest groups watched hopelessly from base camp.

— From the journals of Chris Warner

You want to have the best tools of leadership. And there are so many of them out there. Thousands of books, trainers and experts teach how to use them — tools like the best way to structure a team, motivate others, make great decisions, influence, serve, plan, inspire, set values, gain respect, take initiative, empower, achieve goals — and get people to follow you to the summit.

But in mountaineering, an overdependence on Sherpas, tools and infrastructure can limit talented climbers. Similarly, a parade of consultants packing the latest tools and theories can bog down progress and distract companies from focusing on the vital issues.

Of course, tools are important. Before climbing up to the death zone, a lot of time was spent testing gear and perfecting skills. But in critical moments, even the best tools break or fail in some other way, resources are lost, or circumstances counted on fail to materialize — yet still you must survive. The problem isn't with the tools; it's in how you relate to them.

Tools offer hope, and they make people feel that they have the right answer. But a problem occurs when employees use tools as crutches for safe answers. Both dead climbers and bankrupt companies are found grasping great tools.

Survival Tip: Behavior and Adaptation

Remember two things: Behavior, not tools, drives results; and adapt or die.

High altitude leaders survive the danger of tool seduction by driving results from a behavioral perspective. Focusing on behavior and adaptation like appropriate decisions, actions, deeds and conduct replaces tool seduction on mountains and in companies.

Regardless of how much you spend on books, training, experts and meetings, it's all a waste if behavior doesn't change so that people start making different decisions and taking different actions. Most of the problems you're having in your organization are behavioral, not tool-based. Someone is either doing something unproductive or using tools the wrong way. You can equip a climber or manager with the finest gear and hours of training, but without the correct behavior, failure creeps closer. ●

Danger #4 Arrogance

We spent days in base camp, spying the face with binoculars, trying to understand the patterns of avalanches and rockfall, and tracing the route, like a kid pencils in a maze. We convinced ourselves that the climb would take 36 hours, bottom to top. We were horribly wrong, and our overconfidence almost killed us. The route proved much more difficult than we imagined. On the second day, we ran out of food. On the third day, we ran out of fuel (so we couldn't melt snow for water). Vertical rock walls demanded that we climb using our bare hands, with the temperatures well below zero.

— From the journals of Chris Warner

The Everest Laboratory

In the best spirit of a compelling saga, people voluntarily put themselves at risk to pursue their dream of standing on Everest's summit. In the 54 years since Sir Edmund Hillary and Tenzing Norgay first summited, more than 4,000 others have followed. But only one thing exceeds the number of Everest's iconic achievements and personal successes: the number of dramatic failures. Between 1922 and 2007, more than 13,000 people have tried to climb the mountain. Seventy-three percent of them didn't summit, and 208 of them died.

With so much at stake, Everest may be the best laboratory to observe arrogance and how arrogance threatens organizations and profits. Arrogance places organizations and teams in danger of death every day. Analysts blame organizational failures on strategic missteps, poor market positioning, bad planning or ineffective execution. But we find that these usual suspects are just the symptoms, not the real cause. The real cause, arrogance, always lurks beneath the surface. Every time a passionate company at the top of its game falls, you find managers who think they already know everything.

Arrogant leaders ignore warnings on mountains and in boardrooms. Their destructive self-absorption as they pursue egocentric dreams is exceeded only by the damage they leave behind by putting others at risk. From pure hubris or some hidden fear, arrogant leaders act as if the rules don't apply to them. Because of this, they are frequently outmaneuvered by smaller, more nimble competitors.

Survival Tip: Humility

A company driven by a compelling saga still needs a healthy dose of humility to keep it from veering off into an arrogance disaster. Humility allows leadership greatness to emerge. Instead of stepping over weak climbers or leaving them for dead, humble leaders act decisively; the instinct for rescue and recovery, not refusal and rejection, turns on.

When Johnson & Johnson removed all bottles of Tylenol from the shelves after the poisoning sabotage incident in 1982, it did so without hesitation. Its leadership knew that they had a sacred trust to uphold and that trust was more valuable than the profits they would lose. They knew that the rules of human decency applied to them.

How to Bring Humility to Arrogance

Humility fuels high performance, but is it something that everyone is ready for? No. Not everyone has a strong, confident staff and consistent leadership. Whether on mountains or in companies, we've learned that only solid teams grow stronger when humbled; weak ones become more dysfunctional. Humility causes the weak to question their competence and shatters their confidence. But it shouldn't make you less competent or confident. It should improve your judgment by tempering your ego. As the saying goes, bad experiences teach good judgment, and the better your judgment, the better your performance is. ●

Danger #5: Lone Heroism

I rolled him over and listened to his moaning. He needed two things: oxygen and a dose of the steroids that reduce this type of swelling. I knew that with help, he could swallow a dexamethasone tablet and wash it down with a sip of water. If this treatment didn't work, I would then pop a stronger, injectable dose into his butt.

He greedily ate the dexamethasone and let us help him stand up, but he wouldn't let himself use any of our oxygen. He was filming his ascent for Spanish television and desperately wanted this to be an "oxygenless" ascent. Purists look down on climbers who use oxygen when climbing. He wanted a "pure" ascent to prove he was among the sport's elite.

— From the journals of Chris Warner

Lone heroism is dangerous. We're not talking about the lone challenge we sometimes take on for our own personal development, but the ego-driven, selfish, glory-seeking heroism. We see this in aspirant leaders as they use others to get to where they want to go, stepping all over people without even removing their crampons.

Who is trying to do it all, alone, without supplemental support? Who thinks it's a sign of weakness to ask for help? Or, worse, who thinks he or she is the lone hero — the only one who can do something right? You know the mantra: "If you want something done right, you have to do it yourself."

There's another problem with lone heroes: They're never grateful for the help they're given.

Lone heroes make for great cinema, but in death zone environments, they become frozen corpses. Lone heroism can be found contributing to higher operating costs, lower innovation, increased risks, delayed execution, higher turnover and missed sales opportunities.

Survival Tip: Partnership

High altitude leaders know that partnership with peers, staff or outside stakeholders trumps lone heroism every time.

Creating partnerships in your life raises different questions. How many projects are you leading alone? Where are you resisting support from others? Whom can you bring in to help you or your team summit bigger peaks? As you seek to bring partnership forward, remember:

• You don't need an equal or superior to create great partnership. Genuine partnership is never truly among equals. Partners can come from all levels.

• Pass the mantle of leadership to whoever is equipped to take it in the moment. In the face of life-threatening circumstances, who can afford to be hesitant?

• If you're the team leader or manager, sometimes you have to get out of the way. In true partnering, one "gives up" control by empowering key talent and letting accountability drive the results.

• Partnerships don't work well with leaders who are so afraid of losing control that they end up allowing only weaker people to work under them.

• Create and maintain vibrant partnerships by maintaining accountability. Allow partnership to drive performance.

Danger #6: Cowardice

Our Italian teammate who had quit earlier heard us returning and crawled from the tent he borrowed to get the latest news. We told him all about the snow, at 25,500 feet: It was too deep and soft and likely to avalanche. We were stopped about 200 vertical feet from the col, from where the rocky ridge to the summit, especially at this early hour, would never be able to stop us.

Back at base camp, the Italian wrote authoritatively about the climb, the snow conditions, and the decision to turn around, sharing it with all the Web sites. However, he omitted the part about his quitting and crawling into someone else's tent for a nap.

— From the journals of Chris Warner

Cowardice endangers organizations just as badly as its opposite cousin, lone heroism. Did you ever have someone in your company boast about their heroic efforts, when in reality he or she wasn't even close to the action? Unfortunately, such behavior infects all kinds of teams and cultures.

Is your company infected by cowardice? Do doomed projects move ahead because the cowardly don't dare reveal the truth? Do staff members talk behind their manager's back because their cowardice prevents them from confronting the obvious? Have cowardly politics overtaken performance? If so, you can bet some employees prefer crawling into a tent for safety rather than risking their necks by exposing the truth or challenging the status quo.

Fear of failure, or fear of consequences like retaliation, being ostracized, being blamed, or looking bad to the boss, propels cowards into the tent of safety. But not high altitude leaders. These leaders push the limits of performance and don't allow the friction of cowardice to jeopardize the future. In a world where innovation, competitive superiority and market growth are fraught with risk, cowardice is a danger few companies can afford.

Cowardice damages companies by stopping people from exhibiting high altitude performance behaviors like these:

• Challenging others on their lack of accountability.

• Exposing weak members of a team.

• Confronting arrogance.

• Uncovering selfishness.

• Divulging the state of doomed projects.

Survival Tip: Bravery

High altitude leaders instill bravery by turning cowardice into bold action and profitable growth. The methods they use can be controversial and are often not taught in business schools. Only a few dare venture into this harsh environment that requires politically incorrect techniques.

• **Shame.** Shame induces bravery effectively. Cowards go into battle, even though they're scared to death, because they're too ashamed to turn and run in front of their peers. After a few battles, cowards find their own legs, and there's no discernible difference between the born brave and the learned brave.

• **Truth, not motivational speaking.** People want the truth, no matter how good, bad or ugly it is. Employees aren't stupid. They know the bad news already. They want to see if their leaders have the courage to acknowledge it.

• **Walk the talk.** Begin having leaders walk the talk and risk vulnerability. Can you bravely disclose the real problems in your organization? Can you demonstrate that it's OK to bring them up?

Danger #7: Comfort

Three months after Everest, I was back on the crowded streets of Kathmandu. My plan was to return to Shisha Pangma, a mountain I had failed to climb in 1999. Now I wanted to try to climb it without any partners. It would be a lot more dangerous, with an ever-greater chance of failure. I figured that by fully immersing myself in a challenge of this magnitude and surrounding myself with that much risk, I would be forced to perform at my highest level of ability. I wanted to be so fully engaged that my self-confidence would rush back in, filling the void.

— From the journals of Chris Warner

Great achievements sometimes require enduring extreme discomfort. And that's when real leadership is tested, validated and proven. Why do so many turn back when the going gets tough? Popular leadership trends easily seduce the unsophisticated when there's fine weather, an easy path and plenty of air to breathe. You look like a genius when you have lots of cash, an abundance of time and a simple agenda with minimal risk. Only when the path ahead becomes formidable and risky, when certainty wavers and your legs quiver, does real greatness emerge — or not.

There is nothing pleasurable, sexy or exciting about taking just one more step when your body is totally aching and exhausted, but on the climb it makes the critical difference between success and failure. You grow only when you're putting yourself in uncomfortable positions and taking on new challenges. High performers are used to being uncomfortable. Many get nervous when things get too comfortable for too long.

Survival Tip: Perseverance

As a leader, you often won't have all the tools, resources or circumstances you need, yet you still must summit. Perseverance separates the high altitude leaders from the charlatans. Business history is rich with such examples — there are many Edisons who persevered through hundreds of failures in order to create their right lightbulb. No team or professional accomplishes a goal worth the pursuit without surviving the often uncomfortable and at times painful stretch called perseverance.

If you've been at this game for any length of time, you've experienced failure. In the natural course of life, your heart will be broken, your team will lose games and your attempts to climb higher will fail. Instead of stopping, high altitude leaders become greater as a result. Conflicts result in character development. If you avoid the conflicts or dwell on the associated pain, you will not grow.

Blind Persistence Is Not Perseverance

On a snowy day in October 1999, Chris and his climbing partner arrived at a remote Tibetan base camp. Shisha Pangma is the 14th-tallest mountain in the world. They were headed for the South Face, an extremely technical, rarely climbed objective on this 26,289-foot-tall mountain. Two other teams were on the mountain when an avalanche bisected the entire face, sending hundreds of thousands of pounds of ice and rock crashing onto the glacier and burying two of the climbers beneath thousands of tons of ice and snow.

Chris and his partner chose to abandon the climb. It was clearly too dangerous. The storm system, by the time it finished crossing the Himalayas, claimed the lives of 13 climbers on three different mountains. It cost a few thousand dollars to walk away from Shisha Pangma.

How many times do you hold on to a dream too hard? Still pursue a project you've already sunk too much time and money into? Let the ego rather than the head drive the agenda? Retreat, not blind persistence, can sometimes be the only course of action. Walking away does not mean giving up. It's about maintaining a higher-level strategy that allows you to withdraw and then return again.

Perseverance does not mean continuing on in the face of impossible obstacles, but in having the capacity to retreat, rethink and return.

How to Inspire Perseverance

Many times managers fail to inspire their people to persevere in the face of being stopped. They mistakenly focus on motivational speeches and posters to get people past the hard stuff. But people really want something more. They want the truth, no matter how hard it may sound. Avoiding the truth or covering it up with speeches only engenders distrust in an organization. In leadership, as in climbing, the higher you go, the greater the challenges become.

Telling the truth does something else: It prepares people to keep going even when they hit the wall. It's precisely when your confidence eludes you, when your physical and emotional capacity dries up, that you need to take one more step, then another and another. When leading teams in this situation, high altitude leaders lead by example.

People also have higher levels of perseverance if they're not handicapped by deadweight. It's the difference between summiting with a day pack or a yak on your back. People persevere better alongside those they respect. Of course, confronting deadweight behaviors isn't comfortable, but neither is the failure that results from avoiding accountability. Once you start removing deadweight, your best employees will be happier (while the losers will start to flee in a state of panic).

Finally, the most critical challenge may not be when you've successfully persevered and summited but what happens next. Comfort always seeks a way into your life and your company's life. Its best opportunity to strike occurs when perseverance is no longer necessary. After the greatest of companies have successfully achieved lofty goals, the comfort of the status quo consumes them. ●

Danger #8: Gravity

We were 50 feet apart. Despite the glacier being flat, we knew there were crevasses in this area. We stepped carefully and took all the normal precautions. When we did find a crevasse, the climber in the lead would probe the edges with his ice ax, and once we knew where the edge was, we would hop from one side to the other. All of this is standard practice. We had probably hopped over 50 crevasses so far this morning. Bruce took another step. He disappeared. The rope whipped tight. Two hundred pounds of climber and gear were pulling me by the waist. I fought with all my strength, but it was of no use. I was being dragged toward the bottomless crevasse he fell into. I was still on the surface, being dragged along the path Bruce had just made, when suddenly the snow exploded around me. I was hurtling into another hidden crevasse.The rope stopped my fall with a jerk. The impact forces slammed me into the crevasse wall. Looking up, I could see the edge of my hole, 5 feet above me. The tightened rope went straight from my harness, through that hole, and across the flat glacier, before bending over the edge of Bruce's crevasse, to where he lay dangling some 25 feet below the surface. Both crevasses seemed bottomless. We were alive: Two men fall into two separate crevasses, saving their lives.

— From the journals of Chris Warner

High altitude leadership is an endless journey full of risk. You constantly tread in unfamiliar areas. Although plans are made and experts say the path is clear, you still may fall, and fall hard. Assumptions prove to be erroneous, data end up being flawed or commitments go unmet. All of a sudden, a cherished project, career move or critical goal appears to reach a point of failure.

Survival Tip: Luck

High altitude leaders accept luck as part of the success equation. The first type of luck is skill-based. We've already discussed many of these skills: Act in the face of real fear, subjugate your personal desires to the greater goal of the group, fight arrogance with humility, seek out and nurture partnerships, be seduced by passion and not by tools, and persevere. When you combine these elements, you appear to be one lucky leader. Being viewed as lucky, you attract even more good fortune. We know that all this luck comes from the application of hard-earned skills and a positive mental attitude.

The second kind of luck is pure luck. When the forces of gravity switch directions, let's just hope that the dial we spin puts us on a good luck, not a bad luck, square. There's no explanation for luck. Both good and bad luck occur as teams seek the summit. You can lead your team and do it all correctly with no mistakes and still be swept over a cliff by an avalanche. ●

The Journey Begins

In mountaineering, rarely does the first error kill a climber. Death occurs when the third thing goes wrong.

On big peaks, we tell clients that the first mistake they made was joining the expedition. They are now in an environment where things can go terribly wrong very quickly. If they are going to make it home alive, they have to be more disciplined, more giving and more humbled than ever before. Everyone has to scan the horizon. Everyone has to examine themselves and each other for signs of weakness. Everyone is responsible for their own safety and the safety of everyone else. They have to prevent the small mistakes from adding up to a catastrophe.

Just as in mountaineering, business leaders make small errors almost daily. But how many does it take before the errors reach a deadly magnitude of bringing down a project or a career or a company? Both organizations and expeditions fail because a series of mistakes build on themselves — and before anyone notices. How many teams failed before anyone realized that the demoralized culture, increased customer dissatisfaction and hemorrhaging profits would combine into an inescapable landslide?

In the most extreme situations, true leadership emerges in the self-sacrifice that people exhibit for others. We call it altruism.

Don't Conquer the Peak, Conquer Yourself

Lose yourself and you have nothing left. Remember that high altitude leaders don't seek to conquer the great goals; these are the results of their conquering themselves. Don't lose yourself in the process, but dig deeper into yourself so that you can climb ever higher. This remains the timeless challenge of a leader.

Each day you must engage the dangers inherent in the trek to higher altitudes. Surviving these dangers ensures your personal success and the breathless views from the summits you reach. As a leader, you owe it to yourself, your team and your company to be ever-vigilant so that all may summit — and then make it safely back to base camp. ●

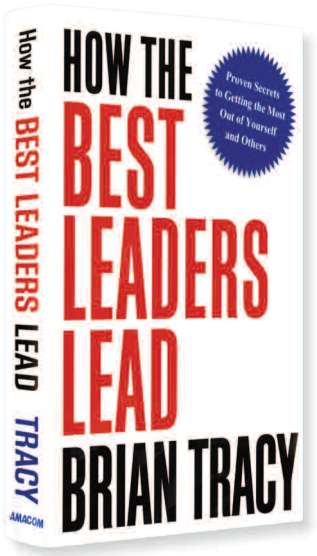
Leadership: Development



How the Best Leaders Lead

Proven Secrets to Getting the Most Out of Yourself and Others

by Brian Tracy

THE SUMMARY IN BRIEF

Leadership is the critical factor that determines the success of any business, department or organization. The ability to select, manage, motivate and guide employees to achieve results is the true measure of any leader's success.

In *How the Best Leaders Lead,* business expert and renowned author Brian Tracy reveals the strategies used by top executives and business owners everywhere to achieve astounding results in difficult markets against determined competition.

Tracy gives business leaders and managers at every level a series of practical, proven ideas and strategies that they can use immediately. He describes how you can plan for the future while managing the present, how to motivate people in turbulent times, how to communicate and get ideas across to others, and a variety of ways to build, manage and motivate winning teams. He also tackles the issues involved in hiring and keeping the best people.

Great leaders determine their ideal leadership style for any situation, identify opportunities and take concrete action. With this summary, anyone can learn how to become a better and more effective leader, and get more done faster than they ever dreamed possible.

IN THIS SUMMARY, YOU WILL LEARN:

- How you can put 12 military principles to use in your business.
- How to set clear goals and objectives for yourself and others.
- How to develop an exciting future vision for your business.
- How to set priorities and focus on key tasks.
- How to solve problems faster and make better decisions.

Introduction: The Race Is On

We are living in the most challenging times for business and economics that we have experienced in our lifetimes. Only the fit will survive. The race is on and you are in it. If you are not committed to winning, to conquering against all odds, you will be brushed aside and passed over by people and companies more determined to win than you are.

The Seven Responsibilities of Leadership

There are seven basics that never change — the key responsibilities of leadership in any organization. On a scale of 1 to 10, your ability in each of these seven areas determines your value to yourself and your contribution. Here they are:

1. **Set and achieve business goals.** The No. 1 reason for business and executive failure is the inability to achieve the sales, growth and profitability goals for which the leader is responsible.
2. **Innovate and market.** As Peter Drucker said, the purpose of a business is to "create and keep a customer." Only through continuous innovation of products, services, processes and promotional methods can companies create and keep customers.
3. **Solve problems and make decisions.** The only obstacles that stand between you and the business success you desire are problems, difficulties, hindrances and barriers. Your ability to go over, under or around these problems is central to your success.
4. **Set priorities and focus on key tasks.** Time is your scarcest resource. The way you allocate your time can be the critical determinant of everything you achieve — or fail to achieve.
5. **Be a role model to others.** Albert Schweitzer once wrote, "You must teach men at the school of example, for they will learn at no other." Leaders conduct themselves as though everyone is watching, even when no one is watching.
6. **Persuade, inspire and motivate others to follow you.** Management consultant Tom Peters said that the best leaders don't create followers, they create leaders. You must motivate others to follow your vision, to support and achieve the goals and objectives that you have set, to buy into the mission of the organization as you see it.
7. **Perform and get results.** In the final analysis, your ability to get the results that are expected of you is the critical factor that determines your success.

The Heart of a Leader

Leadership is the single most important factor in the success or failure of a company or business. Your ability to step forward and lead your enterprise to success in competitive markets is both essential and irreplaceable.

The better you become as a leader, the better you will be in every area of your enterprise.

Leadership Requires Character

Leadership is more about who you are than what you do. Your ability to develop the qualities of effective leadership, the essence of what it takes to be a leader, is more important to your success as an executive than any other factor.

One of the great principles of personal development is, "Whatever you dwell upon grows and expands in

your experiences and personality."

You become more effective, day by day, when you think and act on the basis of the key qualities of effective leaders throughout the ages. You program these qualities into your personality and behavior by dwelling on them continually. You learn these qualities by practicing them in your daily activities as a person and as a leader in your organization.

The Seven Qualities of Leadership

There have been more than 3,000 studies conducted over the years aimed at identifying the qualities of successful leaders. More than 50 qualities have been identified that are important to leadership. But there are seven qualities that seem to stand out as being more important than the others. The good news is that each of these qualities can be learned, and they must be learned by practice and repetition:

1. **Vision: The most important single quality of leadership.** Leaders have vision. They can see into the future. They have a clear, exciting idea of where they are going and what they are trying to accomplish.
2. **Courage: The second quality that leaders have in common.** Winston Churchill said, "Courage is rightly considered the foremost of the virtues, for upon it, all others depend." The quality of courage means that you are willing to take risks in the achievement of your goals with no assurance of success.
3. **Integrity: The most respected and admired quality of superior people and leaders in every area of activity.** The core of integrity is truthfulness. Integrity requires that you always tell the truth, to all people, in every situation. Truthfulness is the foundation quality of the trust that is necessary for the success of any business.
4. **Humility: Leaders have the security and self-confidence to recognize the value of others.** The best leaders are those who are strong and decisive, but also humble.
5. **Foresight: Leaders have the ability to look into the future and anticipate what might occur.** Excellent leaders are good strategic thinkers. They have the ability to look ahead, to anticipate with some accuracy where the industry and the markets are going.
6. **Focus: The ability to focus personal and corporate energies and resources in the most important areas is essential to leadership.** Leaders focus on results, on what must be achieved by themselves, by others and by the company. Leaders focus on strengths, in themselves and in others.
7. **Cooperation: The ability to work well with others is essential for effective leadership.** Your ability to get everyone working and pulling together is essential to your success. ●

Four Ways to Change Your Life

There are only four ways to change your life: First, you can do *more* of certain things. Second, you can do *less* of other things. Third, you can *start* doing something that you have not done before. Fourth, you can *stop* doing certain things altogether.

Leaders Know Themselves

The better you know and understand yourself, the better decisions you will make and the better results you will get.

What is the most important and valuable work that you do? The answer is *thinking*. The quality of your thinking determines the quality of your choices and decisions. The quality of your decisions, in turn, determines the quality of your actions. The quality of your actions determines the quality of your results, and the quality of your results determines almost everything that happens to you, especially in business.

Perhaps the most powerful stimulant of good thinking is pointed questions that force you to analyze and decide exactly what you want and what you are going to do to achieve it. Asking yourself serious questions — about your position, abilities, talents, performance, etc. — will not only help you focus on your goals and aspirations; it will help you to develop greater clarity about who you really are inside and what is truly important to you.

The successful leader is, first and foremost, a successful person. The best leaders establish priorities and goals not only for their professional lives, but for their personal lives as well. They know, in both their professional and personal lives, what they want, who they are, who and what is important, where they are going and why, and what strengths and weaknesses will help or hinder them as they move forward. The best leaders are complete, balanced, self-aware, healthy individuals who live their professional and personal lives by the same rules.

Who Are You and What Do You Want?

Leaders know themselves. They know who they are and what they want. The more clarity with which you can answer the questions that you ask yourself, the more effective you will be as a leader. You will make better decisions, set clearer priorities, allocate people and money more diligently and efficiently utilize your personal time and resources to accomplish more of those things that are more important. You will make fewer mistakes and get more things done with greater effectiveness.

By developing complete clarity about yourself and your situation, you will think and act more efficiently and accomplish greater results in everything you do.

Counterattack! The Business Lessons of Military Strategy

Great generals and military leaders have been studied throughout history to determine which qualities and abilities enabled them to prevail against fiercely determined and hostile enemy forces. Over the years, students of military history have identified 12 principles of military strategy that, when properly applied, lead to victory.

These principles of military strategy apply to business, as well. Every one of them is essential to success in competitive markets. A weakness in a single key area can lead to business reversals or even bankruptcy.

1. **The Principle of the Objective.** This refers to the importance of establishing clear objectives for every military action in advance and making them clear to each person who is expected to help to achieve those objectives. Does everyone in your company know exactly which goals you are trying to achieve in your business?
2. **The Principle of the Offensive.** This refers to switching over to the attack, to taking aggressive action against the enemy to achieve victory. Your company cannot win by playing it safe, retreating or simply cutting costs.
3. **The Principle of the Mass.** This refers to the ability of the commander to concentrate his or her forces at one point, the location of the enemy's greatest vulnerability.
4. **The Principle of Maneuver.** This refers to the ability to move the attacking forces in such a way that they can outflank the enemy and attack where the enemy is most vulnerable.
5. **The Principle of Intelligence.** This refers to the need to obtain excellent information concerning the actions and movements of the enemy. In business, the more you know and understand about your competitors and your marketplace, the more successful you will be.
6. **The Principle of Concerted Action.** This refers to the ability of the general in command to ensure that all parts of his or her forces work together in harmony and cooperation in both offensive and defensive operations.
7. **The Principle of Unity of Command.** This refers to the need for absolute clarity about who is in charge of every area of activity, from the commanding officer on down. Top companies have clear leadership at all levels.
8. **The Principle of Simplicity.** This refers to the importance of clear, simple orders, commands and battle plans that are easily understood by the people expected to carry them out.
9. **The Principle of Security.** This refers to the importance of guarding against surprise attacks and unexpected reversals. In business, this principle requires that you look down the road and anticipate what could happen to hurt your business or threaten its survival.
10. **The Principle of Surprise.** This refers to the importance of taking an action that is not anticipated by the enemy. In business, you must be looking for different ways to do business with different customers, in different markets, at different prices, using different distribution channels.
11. **The Principle of Economy.** This refers to the importance of not expending any more soldiers and material to achieve a military objective than it is worth or is necessary. In business, this means that you do everything at the lowest cost possible.
12. **The Principle of Exploitation.** This refers to the importance of the winning army taking full advantage of a victory. In business, this means that you follow up and follow through when you achieve a market success or get a new customer.

Masterful Management

Henry Mintzberg wrote in *BusinessWeek* that too many leaders don't see themselves as managers. They believe that their job is "to do the right things," while others are responsible for "doing things right." That may look good in a consultant PowerPoint presentation or an academic white paper, but the fact is that the best leaders are, first and foremost, managers. They make things hap-

pen. They get results. They organize people, allocate resources, implement strategies — whatever it takes to get things done.

In *Execution,* Larry Bossidy writes, "Only the leader can make execution happen, through his or her deep personal involvement in the substance and even the details of execution."

The Seven Roles of the Manager

In any enterprise there are seven key roles of the manager: planning, organizing, staffing, delegation, supervising, measuring and reporting. Each of them is only learned through trial and error and continuous practice. But they are all *learnable,* and they must be learned for you to realize your full potential as a leader.

One of the most important management qualities is *flexibility.* The more mental tools and skills you have to get the most and the best out of your people, the more flexible and, therefore, the more effective you can be as a manager.

Each role is as important as any of the others. An executive can be excellent in many areas, but the areas where he or she is weak will hold him or her back from achieving everything that is possible.

The Seven Determinants of Business Success

There are seven key factors that are relevant to every business and organization: productivity, customer satisfaction, profitability, quality, innovation, organizational development and people-building. A failure or shortcoming in any one of these areas can lead to the collapse of the enterprise. Your job as a leader and a manager is to ensure that your company succeeds in each of these areas.

To fulfill your potential, you must become excellent at what you do. Choose your personal area of excellence. Your decision to excel in a particular area moves you into the top 10 percent in your field because most people never make that decision in their entire careers.

The key to moving from good to great in your field is to ask yourself the brutal question: "Why aren't I already the best at what I do?" The answer is always the same. The reason you are not at the top of your field is because you have not decided to be there or you have not backed that decision up with the hard work that is necessary. ●

Hire and Keep the Best People

Your skill in hiring and keeping the best people will determine your success as a leader more than any other single factor.

In Jim Collins' best-selling book *Good to Great,* he writes that the key to building a great company is to "Get the right people on the bus, get the wrong people off the bus, and then get the right people in the right seats on the bus."

The skill of hiring and keeping good people is not genetic. It is a skill that, like any other business skill, can be learned with practice.

Select the Right People

The selection process is the key to your success and the success of your company.

The rule is that if you select in haste, you will repent at leisure. As a manager, you are responsible for spending the time and effort required to make a good hire. As a leader, you have two responsibilities. One is to enable your managers to make the best decisions. Don't set deadlines for new hires unless you absolutely have to. Taking your time is one of the keys to successful recruitment.

Your second responsibility is to be involved in the hiring of employees at all levels in your organization. You may not do initial interviews for some employees, but no employees should be hired before you have seen and talked to them.

Improve Performance Professionally

Job descriptions and job requirements are changing so rapidly that you must continually redefine them for each employee. Here are five simple steps that you can use on a regular basis to improve the performance of every person who reports to you:

First, sit down and explain clearly what the employee is expected to do. Describe the results that you want from the job.

Second, set measurable standards of performance for the job you want done. Put numbers on everything. Put financial measures on every single output responsibility, if possible. One of the great rules in management is, "What gets measured gets done."

Third, never assume that the employee completely understands what you are saying. When you have delegated an assignment, ask the employee to repeat it back to you in his or her own words.

Fourth, give regular performance feedback to tell people what they are doing well and what they can change or improve.

Fifth, inspect what you expect. When you delegate a job, you assign responsibility, but you are still accountable. ●

Building Winning Teams

All work is done by teams. Your ability to assemble and manage a high-performance team of individuals is one of the keys to your value and effectiveness as an

executive at every stage of your career.

To help people become happy, productive members of the team, you must understand their motivations. People at work are most motivated by four factors.

The first is *challenging, interesting work.* Most people want to be busy and happy at work, doing things that keep them active and force them to stretch, to move out of their comfort zones, to continually learn and grow. People won't buy into the goals and objectives of a team if they are given only the most mundane tasks.

Second, people are highly motivated by working in *a high trust environment.* This is created by keeping people in the know. Have regular weekly staff meetings where everyone gets a chance to talk about what they are doing in front of everyone else. This is one of the most powerful team building exercises of all.

Third, people are motivated by being made *personally responsible for results.* Give people important, challenging work to do and then support them while they do that work. The more responsibility a person takes on, the more he or she grows as a decision maker and leader and the more valuable he or she will be to your company.

Fourth, people are motivated by *opportunities for personal growth and promotion.* Many people will take or stay at a job that pays less than they can earn somewhere else if they feel that they are becoming better skilled and more competent as a result of the work they do.

Much to the surprise of most managers, money and working conditions are fifth and sixth on the list of what motivates people at work.

The Dynamics of Top Teams

Top teams have five characteristics in common: shared goals, shared values, shared plans, clear leadership, and continuous evaluation and appraisal.

Top teams and good leaders practice what is called *management by exception.* This means that once the task has been assigned, as long as it is on schedule and on budget, no reporting is necessary. The individual only has to report back if there is an exception to the agreed-upon plan and/or schedule. The better and more competent your people are, the more you can practice management by exception with them.

You can also practice *management by responsibility.* Make people completely responsible for the successful completion of a particular task. Then get out of their way and leave them alone. It is amazing what people will accomplish when they feel that they are personally responsible and that they have no excuses to fall back on.

Problem Solving and Decision Making

Your entire success as a person and leader is determined by your ability to solve problems effectively and well. Whatever title is written on your business card, your real job is problem solver. All day long, in every situation, you solve problems.

Leaders don't react to problems with anger or frustration; they look upon problems as the essential defining skill area of their work. As a leader, your job is to become extremely effective at solving any problem that is brought to you, large or small.

The Three Qualities of Genius

In becoming better at problem solving, you can develop within yourself these three qualities of geniuses:

1. The first quality of a geniuses is the ability to concentrate single-mindedly on a single goal, a single problem or a single question without growing tired or bored.
2. The second quality of geniuses is mental flexibility.
3. The third quality of geniuses is that they use a systematic method to solve any problem.

Systematic Problem Solving Method

There is a systematic method of problem solving that is used by the most effective executives in almost every organization. The following 10-step process is incredibly effective in helping you overcome obstacles and achieve your goals:

Step 1: Define your problem or goal clearly in writing.

Step 2: Once you have defined your problem clearly, ask, "What else is the problem?"

Step 3: Restate the problem to make it easier to solve. If you settle for a quick definition of the problem, it could lead you down the wrong path.

Step 4: Determine all the possible causes of the problem. Ask the brutal questions. Get your ego out of the way.

Step 5: Determine all the possible solutions to this problem. Then force yourself to ask, "What else is the solution?"

Step 6: Once you have done a thorough and complete analysis of the problem and laid out all the possible causes and possible solutions, make a decision!

Step 7: Once you have made a decision, assign responsibility. Who exactly is going to carry

out each part of the decision?

Step 8: Set a deadline. Set a schedule for reporting on progress.

Step 9: Implement the plan.

Step 10: Check and review later to see if the solution was successful. ●

Communicate With Power

Fully 85 percent of your success as a leader will be determined by your ability to communicate effectively with others. Everything you accomplish will be associated with other people in some way. And the people in your life will account for 85 percent of your happiness and your success.

The quality of your communication, therefore, determines the quality of your life and the quality of your relationships, of all kinds.

In your interactions with others, there are five goals that you want to accomplish:

1. You want people to like and respect you, which will reinforce and validate your self-image but also encourage others to want to hear you, not shut you out.
2. You want people to recognize that you are valuable and important, reinforcing your self-esteem but also giving others a reason to listen to you.
3. You want to be able to persuade people to accept your point of view, to sell your product, services and ideas to others.
4. You want to get people to change their minds and to cooperate with you in achieving your goals.
5. Overall, you want to be more personally powerful and influential in all your relationships, personal and business.

These are the keys to success in leadership, life and love.

Your Emotional Intelligence

In 1995, Daniel Goleman wrote the book *Emotional Intelligence*. He argued that EQ is more important than IQ.

He concluded that your ability to persuade others is the highest form of emotional intelligence and the true measure of how effective you are as a person.

People do things for their reasons, not yours. Motivation requires *motive*. To communicate and persuade effectively, you must find out what their motives really are.

The key is to get out of yourself and enter into the mind, heart and situation of the other person. Focus on the needs and desires of the other person rather than your own.

Communicators are aware of the emotional element in effective communication — the importance of understanding the emotional motivations of the people with whom you're communicating. But any efforts to address emotional issues must be based in sincerity. ●

Make Them Feel Important

The deepest need in human nature is to feel valuable and important. You trigger this feeling by doing everything possible to raise the person's self-esteem, to help him or her to like him- or herself even more.

You should imagine that every person in your company is wearing a sign around his or her neck, all day long, that says, "Make me feel important." In every interaction with every single person, you should respond to this basic human request. You should always be looking for ways to make people feel important and valuable as parts of your team.

The Leader's Questionnaire

The best leaders are those who have a complete and intimate understanding of every facet of their business and industry. Leaders know everything about their own companies, their customers, their competition and the business environment in which they operate.

A complete leader's questionnaire covers all the major strategic and management issues that leaders will need to address. Every leader should be able to answer each question with confidence, without hesitation. If you do not know the answers, or if you are unsure, it is important to find out as soon as possible. Without the answers to the questions, or with the wrong answers, you will make mistakes in marketing, sales and business strategy that can be fatal to your business.

As Larry Bossidy writes, "Only a leader can ask the tough questions that everyone needs to answer, then manage the process of debating the information and making the right trade-offs. And only the leader who's intimately engaged in the business can know enough to have the comprehensive view and ask the tough, incisive questions."

Here are a few of the tough questions that you and the team you lead will need to answer:

1. What business are you really in? What does your company actually *do* for your customer to improve

his or her life or work?

2. What is the *mission* of your company or firm? Your mission should be stated in terms of what you want to achieve, avoid or preserve for your customers.
3. How do your customers talk about, think about or describe your company to others? What *words* do they use?
4. Who is your *perfect customer?*
5. Describe your perfect customer *psychographically*. How does your perfect customer think and feel in relation to buying what you sell?
6. What does your perfect customer consider of *value?* What benefits does your customer seek or expect in dealing with you?
7. What are your company's *core competencies?* What special skills or abilities does your company possess that enable you to fulfill the needs of your customer?
8. Who are your *competitors?* Who else sells the same product or service to your prospective customers?
9. *Why* do your customers buy from your competitors? What benefits do they receive from your competitors that they don't receive from you?
10. Which of your products or services give you your *highest profits?* Which of your products, services, markets, customers or activities are the *least profitable?*
11. What is your company's area of *specialization?* What is your area of *differentiation* or excellence?
12. What *organizational changes* should you make in your business, with regard to people, activities, work flow and expenses, to improve both effectiveness and efficiency? ●

Simplify Your Life

Everyone has too much to do and too little time today. You feel overwhelmed with your duties, tasks and responsibilities. As a leader, those duties, tasks and responsibilities are multiplied. The challenge is for you to simplify your life in such a way that you spend more time doing the things that are most important to you and less time doing those things that are not at all important. A great leader is someone who is effective, positive, in control, generally content and even-keeled. If you are overwhelmed, you are probably none of these things. Simplifying your life will not only make you a happier person, it will significantly increase your success as a leader.

Here are six methods, techniques and strategies that you can use to reorganize and restructure your life, simplify your activities, get more done, and enjoy more personal time and time with your family than ever before:

- **Determine your true values.** Decide exactly what is most important to you. The most important question that you must ask, and answer, throughout your life is, "What do I really want to do with my life?" Set peace of mind as your highest goal and then organize your life around it.
- **Decide exactly what you want.** Start deciding what you want by writing out a list of at least 10 goals that you would like to accomplish in the next year. After you have written out this list, review the 10 goals and then ask: "What one goal, if I achieved it in the next 24 hours, would have the greatest positive impact on my life?"
- **Select your major definite purpose.** Your most important goal becomes your *major definite purpose*. Then make a list of everything you can think of that you can do to achieve that goal. Organize the list by priority, by what is more important and what is less important. Then immediately begin the most important thing that you identified to achieve your most important goal.
- **Get your life in balance.** The key to balance is to be sure that your exterior activities are congruent and in alignment with your interior values. A sense of happiness, peace, joy and relief comes when you return to your values and make sure that everything you do is consistent with them.
- **Put your relationships first.** Put the most important people in your life at the top of your list of priorities. Put everything else below them.
- **Take excellent care of your physical health.** You can simplify your life by eating less, eating better, exercising regularly, getting thinner, getting regular medical and dental check-ups, eating proper nutrients and taking excellent care of yourself. ●

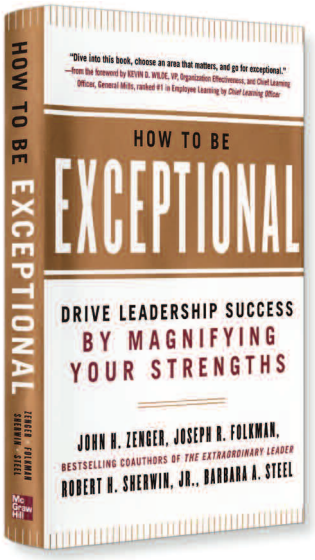
Leadership



How to Be Exceptional

Drive Leadership Success by Magnifying Your Strengths

by John H. Zenger, Joseph R. Folkman, Robert H. Sherwin, Jr., Barbara A. Steel

THE SUMMARY IN BRIEF

You run a business department, a division or an entire company. Everything is going smoothly, everyone respects your abilities and no one complains about you. You are a good, talented business leader.

But are you *exceptional*? Because in these difficult business times, true success requires nothing less.

From the leadership gurus of Zenger Folkman, *How to Be Exceptional* provides a revolutionary approach to leadership development. Instead of focusing on your weaknesses and how to overcome them, focus on your strengths — and learn how to magnify them.

When you magnify your leadership competencies to the level of exceptional, employee engagement increases, productivity rises and profitability soars. Learn how to make your business and career dreams a reality.

IN THIS SUMMARY, YOU WILL LEARN:

- How to pinpoint your best leadership traits and choose the right development target for yourself.
- How to use feedback and action learning on the job to elevate your strengths.
- How to apply Zenger Folkman's revolutionary cross-training method to escalate your leadership competencies into the top 90th percentile.
- How to ensure that your fully developed strengths are sustainable by building follow-through into your development plan.

THE COMPLETE SUMMARY: **HOW TO BE EXCEPTIONAL**

by John H. Zenger, Joseph R. Folkman, Robert H. Sherwin, Jr., Barbara A. Steel

The authors: John H. Zenger is cofounder and CEO of Zenger Folkman. He is considered a world expert in the field of leadership development and is a highly respected and sought-after speaker, consultant and executive coach.

Joseph R. Folkman is cofounder and president of Zenger Folkman. One of the nation's renowned psychometricians, his expertise focuses on survey research and change management.

Robert H. Sherwin, Jr. is the chief operating officer of Zenger Folkman. He has spent 25 years as an executive, a leader, a coach and a mentor in some of the world's largest and most successful training and development companies.

Barbara A. Steel is the senior vice president of leadership effectiveness for Zenger Folkman. For more than 25 years, Barbara's career has been dedicated to leadership, consulting, coaching and training.

PART 1: WHAT LEADERS CAN LEARN FROM THEIR STRENGTHS

Organizations Flourish With Strong Leaders

As you observe organizations with an abundance of great leadership talent, several characteristics become apparent.

1. Great leaders attract others with talent. Like magnets that are properly aligned, there is a huge attraction. Other competent leaders want to work with them.

2. Great leaders discover and pull out hidden abilities in those around them. Good qualities emerge. Strong teams develop and collaboration abounds.

3. Great leaders tend to stay and build. Not only are they initially attracted to the organization and the other leaders in it, but they thrive in place, build off each other and grow the garden they're in.

In a study of 5,285 leaders working in five different organizations, we examined the effectiveness of leaders at different levels of these organizations. This measure of leadership effectiveness was derived from our research on extraordinary leaders, utilizing 360-degree feedback instruments.

We have worked with organizations in which the senior teams had overall effectiveness scores hovering at the 65th percentile. That means that in all likelihood the next lower level will be at the 50th percentile, and each successive layer well below that. Indeed, that is what occurred. The consequences were far-reaching. Employee commitment scores in those organizations were at the 32nd percentile.

A handful of organizations had gaps of only 3 to 5 percentile points between levels. This small gap created a dramatic shift upward in the effectiveness of leaders at all levels. It became apparent that the smaller gap was the result of several differences in these organizations.

First was selecting the right people as leaders. Second, the talent management processes being used identified a clear set of desirable leadership competencies. Third, senior executives believed that a significant part of all leaders' jobs was the development of their direct reports. Fourth, the bar for effective leadership was set high. The expectation was that the leaders needed to be outstanding, not merely adequate or good, and that everyone, regardless of position or level in the organization, could improve. ●

Why Emphasize Strengths?

For the past several decades, we have worked with firms that were focused in large measure on helping managers and key professional associates identify their weaknesses and then fix them. We developed assessments that identified strengths or weaknesses with equal effectiveness. But the fact of the matter was that they

were used primarily to identify weaknesses.

Here's the bottom line: If a leader has some trait or competency that is a profound weakness, and this behavior is both important on the job and readily observed by others, this could be considered a fatal flaw. One or more fatal flaws have the potential to sink this person's career unless those flaws are fixed.

Kevin is a salesperson who is very good in one-on-one discussions and in building individual relationships. However, his company recently reorganized the sales team and selling process, requiring him to now make regular presentations to large groups. Unfortunately, he has lots of trouble communicating effectively to groups of almost any size. Because he gets very nervous when he has to be "on stage," Kevin regularly loses his train of thought as he is presenting, and he has difficulty responding to any questions. Since group presentations are now a critical part of his job and his lack of skill at making them is easily observed, this change has uncovered a profound weakness and a potential fatal flaw for Kevin. If he can't quickly develop a competency in this area, at best he'll have trouble hitting his sales targets; at worst he may lose his job.

If leaders have significant weaknesses, ones that could be considered fatal flaws, improving those weaknesses can have a substantial positive impact on their overall effectiveness. Although focusing on a weakness gets you to a position where the behavior is no longer detracting from your overall performance, it doesn't elevate you much beyond that.

As we get people to identify the best leaders they have known or with whom they've worked, we ask them whether these great leaders had any weaknesses. The answer is always the same, "Yes — they were not perfect." Our next question is, "If they had weaknesses, what made them so exceptional?" The answer is always that it was their strengths. It was what they did extremely well that made the difference and always far outweighed any weaknesses they may have had.

If people spend all their time focusing on fixing weaknesses, their potential strengths will never become profound strengths. It is that shift in focus — from trying not to be below average in anything to, instead, being outstanding at relatively few behaviors — that makes such a huge impact on others and causes these leaders to be viewed as exceptional. ●

Strengths Can Be Developed

Effective leaders are created through a mixture of "made and born," and the weight of evidence is clearly on the side of leaders being made.

The development of strengths is a complex process. The process involves six elements or stages:

1. Learn the basics. Young employees in an organization watch how the boss conducts a meeting. They watch how the boss delegates an assignment. They watch how the boss responds to questions regarding the organization's services, or how he or she replies to a question about the firm's products. Some have estimated that possibly 70 percent of what we learn is via this informal process.

2. Learn through formal development. In some skill areas, such as our use of various applications for the computer, formal classes provide extremely helpful information and jump-start a person's progress. The same holds true for learning leadership skills. Content for formal programs is extremely varied and ranges from specific skills, such as coaching, giving presentations, delegating, solving problems, or interviewing, to broader topics, such as understanding emotional intelligence or being more inspirational and motivating.

3. Build in feedback processes. One way of increasing the value of formal development is to add feedback into the learning experience. This feedback provides people with a clearer picture of their abilities.

4. Do cross-training. Cross-training is a type of nonlinear development. When athletes aspire to become more than just casual participants in a sport, they often turn to cross-training. Aspiring runners, for example, take up cycling, swimming and weight lifting.

From the research that identified the 16 differentiating competencies of the most effective leaders, we have identified between five and 12 companion behaviors for each of them. The correlations of the companion behaviors to the differentiating competencies are statistically significant.

For example, the companion behaviors to the competency of *practices self-development* are mostly those that describe the leader's involvement with others and their development. These include listening, being open to the ideas of others, respecting others, exhibiting honesty and integrity, and taking the initiative and being willing to risk and challenge the status quo.

Competency companions provide a new and more complete pathway to developing a strength. A person who gets a high score on one tends to also get a high score on the other. This suggests that raising the score of one will have a high likelihood of raising the score of the other.

5. Learn while working. Strengths may also be

developed by deliberately creating opportunities for improving our skills through practice in the normal course of daily work.

6. Create sustainability. This final step in building a strength is the one that locks the strength into place.

Sustainability and follow-through come from:

• Creating a supportive environment from managers, peers and subordinates.

• Providing clearly defined outcomes for the development.

• Establishing well-defined accountability and responsibility for participants' implementing and applying what they learn.

• Building systems that provide visibility.

• Implementing various methods of follow-up, such as additional sessions, telephone calls and accountability partners within the organization. ●

Leadership Cross-Training

Cross-training is an optimum solution for someone who is reasonably good at something and who wants to continue excelling at it and then move into the higher ranks in any given activity or sport.

Dave is the manager of an organization's research and development unit. He is by nature an introvert. He is not an active contributor in most meetings. When he participates, his comments are offered with some hesitation, almost an apology. In past meetings with customers and representatives from other departments, there had been occasional comments questioning his technical competence and the reason for his being in this position.

Specifically, on a recent 360-degree feedback instrument, he was given feedback regarding his level of technical competence that indicated that some peers had questions about his knowledge regarding the firm's technology. His knee-jerk response was that this should be fairly easy to fix. Just bump up the level of knowledge about the firm's technology so that he could answer every question and never be stumped with anything tossed at him.

Then Dave recalled that as a part of the 360-degree feedback process, the facilitator had talked about a different approach to developing important competencies. She had called that new approach "nonlinear development." He recalled talk of cross-training and how the best way to develop some important skills may well be to build around them and not run straight into the headwind.

Dave got out his manual and looked at this specific competency of technical competence. After examining the behaviors that described this competency, and after reviewing some fairly obvious, straightforward remedies, he decided to plow on to the next section.

As Dave examined the research on companion competencies for technical and professional expertise in his organization, his eye was drawn to three of the most statistically linked companion competencies:

• Solving problems

• Relationship building and networking

• Communication and influence skills

Even though Dave sees the need for improving his communication skills, there is the possibility that he may lack the desire and passion to improve. And without the passion to improve, the result might not change much. He may find he has more passion and energy for problem solving as another way to demonstrate his expertise.

One of the best ways to show others the depth of your expertise is to solve a difficult problem or come up with a new solution. Using a companion competency can provide a variety of options for every person to build his or her strengths. ●

Benefits From Developing Strengths

There is a significant motivational difference between people who work on strengths and those who work to fix weaknesses. This motivational difference, in turn, has a substantial impact on their levels of success. We know that leaders who attempt to improve their weaknesses can make significant progress. Leaders who focus on strengths invariably show more substantial gains.

Our studies have confirmed over and over the relationship between the effectiveness of leaders and the engagement, satisfaction and commitment of their direct reports. Whatever the starting point, improving leadership behavior leads to improved results.

There are a variety of benefits that come from building strengths:

1. People are more motivated when they work on their strengths. When people work on something they enjoy, they are more willing to invest time and effort into improvement.

2. Those who worked on their strengths were more successful in their change efforts, and that substantially increased their overall leadership effectiveness.

3. Change in outcomes — such as employee commitment, intention to stay, highly committed employees,

total sales and performance ratings — followed improvement in leadership effectiveness.

4. Such improvement provides incentive and motivation for further development. ●

PART 2: HOW EXCEPTIONAL STRENGTHS ARE DEVELOPED

Where to Start

We propose a model with three important filters for identifying a behavior that could be expanded into a strength. We label this the CPO model, where C stands for "competence," P for "passion" and O for "organization need." The basic premise of the CPO model is to consider each of its three key filters when selecting a competency for development into a strength:

1. Competence. The first consideration is to measure the level of competence. Is this competency a strength in embryo? What are your current inclinations and abilities? What are you already reasonably effective at doing?

2. Passion. What charges your batteries? It is one thing to be reasonably effective at some leadership competency that is compatible with what the organization needs, but it takes on a different cast if it is something for which you have little or no enthusiasm.

3. Organization need. What does your organization need from you right now in your current position? Regardless of what you are currently effective at doing, the value of developing strengths that will enhance your career and help you become a more competent leader is obviously specific to the organization in which you work and the current position you hold.

The ideal situation occurs when these three CPO elements come together. It is perfect when the individual can be working on a competency that he or she is already reasonably good at doing, when that competency is something that the organization highly values, and when the individual has an intense interest in and passion for building the competency. ●

Transitioning From Poor Performance to Good

We learned most of our skills by watching others perform them. Young employees in an organization watch how the boss conducts a meeting. They watch how the boss delegates an assignment.

Others learn, however, when leaders share their thought processes, assumptions and experience. That is one of the great virtues of having senior executives come in to teach in leadership development programs.

Added to this is the role of formal development that the organization or some outside source provides. In some skill areas, such as learning how to use various software applications for the computer, formal classes can provide extremely helpful information and jump-start a person's progress.

Another extremely important source of development comes from the formal and informal coaching received from one's boss, peers or external coach.

We have found that the most frequent outcomes of training people to be better coaches are that they resolve to talk less, not more than 20 percent of the conversation; ask more questions; listen more intently; refrain from giving advice; and plan the interview more thoroughly.

Real coaching is rare, but when the skill is mastered, it can have a substantial impact on the learning of others. ●

The Role of Feedback in Developing Leadership Strengths

People can benefit from feedback only if they believe and accept the feedback they've been given. Accepting feedback is a function of four broad sets of skills. *First and foremost fundamental is the ability to be humble and reflective.* Humility comes when people start to understand that it is the reactions of others that really matter in terms of their leadership effectiveness. Their effectiveness as a leader is determined by others.

The second factor is personal honesty and integrity. People who are more honest and straightforward with others tend to be honest and straightforward with themselves. The higher the level of perceived honesty and integrity, the higher the level of openness to receiving feedback from those around you.

The third factor is engaging in the development of others. Our research indicated that those who were better at accepting feedback also tended to be more effective at developing others. Development is contagious. One of the powerful tools to develop others is to provide them with useful feedback. That works best, however, when the leader has set the example by seeking feedback from the subordinate, welcoming any and all messages that would help the leader be even more effective.

The final factor is taking action and initiative to move forward and respond to the feedback. Passive acceptance is a

helpful start, but without action, nothing changes. Those who accept feedback and move forward start to respond with energy and enthusiasm about improving their performance. They provide others with a clear vision and goal about what they are going to change and how they will do it. Finally, after they start, they follow through on their commitment to execute the change. ●

Building Strengths at Work

An element that has possibly the highest potential to escalate a leader's strengths in the near term is the basic idea that valuable development can take place on the job and that work itself is a huge developmental opportunity if managed properly.

It has been known for decades that altering the nature and content of a job could increase the satisfaction and overall motivation of the people performing it. Job enrichment and job enlargement have been shown to improve the productivity of front-line workers. In addition, these practices enhanced overall employee satisfaction, and that in turn led to higher employee retention.

These ideas have been extended and given a modern twist at the University of Michigan, where the term *job crafting* is used. The basic idea is to focus on how workers at all levels can shape their jobs to add meaning and fulfillment. Job redesign can also be used as a leadership development tool by helping any workers, along with their managers, identify opportunities for developmental activities that can be integrated into their current positions.

That work assignments play an important role in development is beyond debate. Over the years, many organizations have had great success in developing future executives by giving them demanding assignments. A developmental assignment might be the responsibility of opening a new plant, with all the complexity it presents.

Leaders and managers have a certain degree of latitude regarding how they define and execute their jobs. The leader can add some activities, take away other activities and allocate time to those activities that would help in his or her ongoing development.

Next we suggest some activities that are specifically designed to bring learning into the job in a more formal way. The first has broadly been labeled *action learning*. This approach was originally pioneered by Reginald Revans, a professor at the University of Manchester in England. The essence of the action learning concept is that we all learn by doing and that business leaders are no different.

Revans' university had sponsored a variety of programs for executives, and he observed the impact the programs were having on participants. To his dismay, Revans became convinced that the programs were having little or no impact. It became clear to him that the conventional methods of teaching hardly made a dent in the way leaders behaved. Knowledge and information did not change behavior. Increasingly he came to believe that rather than have leaders study the usual abstractions about management (such as planning, organizing, control or strategy), it was best to have them study their own actions at work, along with how they were experiencing their work. He was convinced that the best course content was the actual work they were performing.

Another method for building learning into work is a technique pioneered by the military. At the conclusion of every mission, the group who participated would be assembled for an after-action review. The objective was to identify what went well and to ensure that those actions would be repeated in the future. The key question was to keep focusing on what you might do differently next time as a way of learning from every mission.

Building developmental opportunities into your job starts with selecting a competency to develop that is aligned with what your organization and team needs and for which you have energy and enthusiasm. Development activities that directly support performance goals tend to receive the most time and attention.

It's also often possible to modify the collection of organizational tasks that make up your current job in a way that still meets organization and team needs and at the same time provides additional opportunities for development of your chosen competency.

If you want to learn a skill, then build that skill into your job. Find opportunities to practice the skill in your job. Ask for feedback on what went well and what you could do better. ●

Sustaining Strengths

Another key to success in developing a strength is extensive follow-through. People don't win the 100-yard dash by running extremely well for 50 yards and then coasting.

Two elements are important. First, you must obviously be motivated if there is to be a sustained effort to develop a strength. Determination and stick-to-itiveness are essential. Second, linking your efforts to the genuine elements of motivation will escalate success. If the skill

you've chosen gives you greater autonomy in your work, a higher sense of mastery in what you are doing and the sense that you are working toward a higher cause or purpose, this will clearly expand your motivation.

Persistence in developing a strength hinges on knowing how you will use it and what specific steps are required to put this strength into place. Practice that leads to better performance calls for a person to do something new and challenging with an improvement goal in mind.

The environment that surrounds a leader is complex. It starts with the culture of the organization. It includes the roles of the immediate manager, the peers and the subordinates of the leader involved.

Craig is the manager of a large department. The organization sees real potential in him and tells him that he has a bright future if he will continue to develop himself. So who is responsible for Craig's efforts to develop his strengths? Is it the HR executive? Is it Craig's manager? Or is it Craig?

The participant muses, "Well, I know that this is about me, and I obviously am responsible for my development to a large degree, but my manager doesn't seem to notice if I improve the way I lead. The manager only cares about the numbers. There's never any discussion about the progress I'm making on my development. Also, I have no way of knowing if I'm getting better. I get no feedback."

Yes, we believe it is primarily Craig's responsibility. However, the others, especially the manager, have very strong roles to play in Craig's success in developing his strengths. The manager's ongoing coaching can have a major impact. HR can provide processes (repeated 360-degree feedback) and other channels (coaching) to help the leader have ample feedback. For real sustainability to occur, all the components of the environment — boss, peers, subordinates and HR— need to work together to support Craig's development. ●

PART 3: SPECIAL CONSIDERATIONS

Individual Contributors

It's often assumed that leadership is an assignment strictly for supervisors, managers and executives. The rest of the workforce, consisting of nonmanagerial workers and staff personnel, also known as individual contributors, are supposed to be followers, not leaders.

We assert that individual contributors can potentially be leaders and have the opportunity to use their influence to make a difference within an organization. Not only that, our productivity research shows that organizations today, more than ever, need these individuals to help lead those organizations so that key targets and results can be attained.

There have been many examples of great leaders who were not in formal positions of power in their organizations. These individuals didn't control huge financial budgets, manage and direct the work of large teams, or determine strategy. Yet as individual contributors their actions made a big difference. Similar to leaders with positional authority, individual contributors have the ability to see opportunities or potential problems, show initiative when needed, and lead others in the accomplishment of important objectives. Despite the numerous examples of the differences these folks make, their leadership contributions aren't always apparent. Sometimes this is due to the accomplishment of their work product being attributed to the "boss." Or the work is seen as a team effort and the magnitude of the individual contributor's work isn't completely understood. Yet it is the leadership efforts shown by these individuals that produce successful outcomes.

As with managers who are in formal leadership roles, extraordinary individual contributors are differentiated by the existence of a few profound strengths, not the absence of weaknesses. They, too, should implement their development efforts using the same approach of building strengths rather than fixing weaknesses.

Organizations that have begun providing 180 feedback and leadership development opportunities early in the careers of individual contributors have found not only that they prepare these people to become excellent managers in the future, but that their current effectiveness as individual contributors is greatly enhanced. ●

Getting Out of the Pit

An important element of a fatal flaw is that it is a behavior that is viewed as being very important in the person's current job or in the culture of the organization. In a professional services firm, technical expertise is so highly valued that all the professional staff members need to be technically competent in order to keep their jobs.

One way to measure if a weakness is fatal is to note whether it is the first trait people think about when a person's name is mentioned. It becomes the filter through which all other traits are viewed. This filter col-

ors all other characteristics. In many cases, people refuse to attribute any positive characteristics to a person because the fatal flaw has such a negative impact.

Our advice for people with fatal flaws is to immediately take steps to fix them. The really good news is that addressing a fatal flaw can have a substantial positive impact on how these people are perceived. In studying the impact of fixing fatal flaws, we found that 11 of the 15 leaders with fatal flaws made significant positive progress by focusing on fixing their fatal flaws.

Frequently, leaders get moved or promoted into new jobs where a competency that was not critical in the past becomes essential in their new positions. When a competency is mission-critical, average performance is never good enough. Most people can think of a person who performed well at some point in his or her career only to be promoted to a position where the performance was considered inadequate. This phenomenon has been labeled the *Peter principle*. The principle states that people are promoted until they finally get elevated to a position in which they are fundamentally incompetent. This explains why fatal flaws often appear later in people's careers as they are promoted to more senior positions.

Fatal flaws are not easy to change, but improvement is possible. The first and most necessary step is for people to accept the fact that they have a fatal flaw and that this flaw will eventually be fatal to their careers.

In order for people to change, they need to identify the problem behavior and then study the triggers that cause it to occur. The next step is to formulate a plan for change. People may need to ask for the forgiveness of others in order for other people to accept that the change is occurring. Enlist the assistance of others. And lastly, find a way to reward yourself for progress and the achievement of a goal. ●

Can Strengths Be Taken Too Far?

Is there such a thing as a behavior practiced to excess? Yes, we think so. Chances are we can all think of some behaviors that when done in moderation are positive, but when done to excess cease to be helpful. A commonly held belief is that strengths taken too far cease to be strengths and become liabilities or weaknesses.

We think it is terribly confusing to tell people to work on a strength but to always be monitoring themselves to determine when they become too effective or use the strength too much. We identified 16 competencies that described the most effective leaders and distinguished them from average and poor leaders. These strengths include qualities, such as character and integrity, problem-solving skills, technical competence, innovation, initiative, communication and strategic thinking.

We cannot envision many situations where doing less of any one of them would be better than doing more. Can someone be too honest? Too skilled at solving problems? Too technically competent or innovative? ●

Building Strengths With Multi-Rater Feedback

We think that the multi-rater, or 360-degree, feedback process is unparalleled in its ability to provide a comprehensive and yet granular way to help in the development process.

Inspiring leaders don't stand before the assembled troops and declare, "I want you to be just a little above average." The better message to participants is that the organization needs them to be performing like the very best. So rather than reporting data to managers that show how they compare with the mean average, why not show them how they compare with the best?

Because the 360 is administered to the subordinates or direct reports, it is possible to incorporate a mini employee survey right into the 360-degree feedback instrument. The 360-degree process affords the opportunity to ask the manager, peers, direct reports and others about their perception of what a person in a specific job or position should be focused on achieving.

Make the process a positive, not a negative one. The great joy for most participants can be the opportunity to identify and celebrate strengths.

Ensure that the survey process is not laborious. The objective is to acquire sufficient assessment information from each rater to provide validated survey results, but do it in the minimum amount of time. This requires a survey and software design that is well conceived and structured.

The 360-degree feedback process is not perfect, it just happens to be much better than any other technique that has been developed to help leaders grow. ●

Idea Agent

Leadership That Liberates Creativity and Accelerates Innovation

by Lina M. Echeverría

THE SUMMARY IN BRIEF

Is it possible to manage the creative professionals within your organization without stifling them? That's the million-dollar question for those trying to help their companies develop the kind of breakthrough innovations that result in unique products, improved processes and creative advantages that competitors can't copy. The challenge lies in striking the right balance between unleashing your creative people's energy and channeling it into tangible business results.

Drawing on Lina M. Echeverría's considerable experience assembling and nurturing cutting-edge teams at Corning Inc., one of America's leading technology companies, *Idea Agent* shows you how to become an Idea Agent — a catalyst for releasing your people's creativity, their advocate within the company, and also the person who keeps them focused and productive.

Containing practical methods for pulling strong-minded, visionary individuals together to solve incredibly complex problems, *Idea Agent* reveals seven proven principles to help you nurture — and follow through on — innovation.

IN THIS SUMMARY, YOU WILL LEARN:

- How to confront creative conflict.
- How to preserve space for discovery and invention.
- How to demand excellence and enrich lives.
- How to live values that liberate creativity.
- How to create a culture of creative engagement.

THE COMPLETE SUMMARY: **IDEA AGENT**

by Lina M. Echeverría

The author: Lina M. Echeverría is an innovation leadership consultant with 25 years of experience in science and technology. At Corning Inc., Echeverría created an environment where scientists were both creative and productive, and where teams balanced the ability to explore the edges of possibility while delivering critical new technology on time and on budget. From scientist to vice president, she helped drive new products that now underpin our technology-based economy.

Prologue

An impassioned culture of innovation thrives when guided by leaders who can resonate with team members — leaders capable of managing with passion and creating energized organizations while staying true to themselves and making their own work meaningful. Innovation thrives under a leader who internalizes and lives by the belief that to excel you must start with a group; to excel you must create a culture; and to excel you must manage one by one — one person at a time, one situation at a time, one project at a time, one group at a time — by staying in the present, undistracted.

In my experience in technology innovation, management and delivery, I have found seven essential elements that provide both the vibrancy and the rigor essential to create the culture of success in a team chartered with delivering innovation. I refer to these as Seven Passions of Innovation:

1. Looking creative conflict in the eye and flexing for resolution.
2. Bringing together teams of diverse, highly intelligent people freely in a way that engages their deepest personal motivations.
3. Living values that set creativity free.
4. Insisting on excellence and results.
5. Cultivating a culture that honors time for intuitive flow.
6. Defining an organizational structure that guides, but allows solutions to come from many permutations of talent and function.
7. Providing authentic leadership with the will to manage, the guts to decide, the wisdom to guide and the passion to make innovation happen.

These seven elements are not unarticulated components; rather they come together to make up a living system whose energy radiates from a leader at the core, its heart center. ●

Passion 1: Into the Ring of Fire

As anyone who has been surrounded by creative artists, writers or musicians knows, creativity often comes along with strong — even conflicted — personalities who will not stop in the face of obstacles along their way. The drive to materialize their vision is stronger than themselves.

Creativity can be a hot fire and you have to love it to gain from it. Fear of managing the passions of creative scientists will only lead to missed opportunities. Not being afraid of moving to free up and channel the energy and the creativity, on the other hand, can open worlds of opportunities.

It cannot be stressed enough: it is about understanding each one of the players for who they are, where they come from, what drives them and what they can bring to the solutions. And from this understanding, leadership that liberates creativity is about managing conflict — not preventing conflict from arising, but stepping into the ring of fire and managing all its actors and stages.

Leading a creative team means harnessing this conflict and managing it to benefit, not detract from, the work.

You will have divergences, clashes and tension.

Perhaps the level of control in your organization is high enough that the dissent is being discouraged. But then so are the good ideas, the ones that come at a 90-degree angle from your planned path.

An understanding of each human being and the way he or she relates to others needs to be your guide. As a leader, it starts with you knowing your people, their reactions and expectations, their roles in the team. It continues with being comfortable with conflict and with understanding that arguments and discussion are as essential to science as experimentation itself. And it moves on with playing an active role in managing conflict, literally sitting at the negotiating table, rather than shying away from it.

Find Your Courage

Managing personalities and tempers is not fun. It takes courage, serenity, flexibility and tact. Courage to understand that managing tempers does not mean compromising and that creating untouchable personalities means eroding the culture you are trying to create: the culture of respect, accountability and trust that drives the group. Serenity to stay detached during your exchanges. Flexibility to treat each personality in the unique way that is fruitful for each person involved. And tact to find the way to deliver a message in a way that does not flare tempers but yields results. ●

Passion 2: Let the Best Take Flight

The first step in building a high-performance team is to get passionate, brilliant and creative people in the room. Beyond stellar academic or work credentials, it is essential to get a sense of the candidate's fit with your organization by looking for the person — his or her upbringing and personality, ability to see wide-open spaces balanced by the need to remain highly focused, life at home and in the community, and reaction to those circumstances. Just as crucial is the need to look outside the person's work life for expressions of creativity, such as hobbies, activities and a zest for life.

Spotting Creatives

Some of the most successfully creative technical people I have led and worked with are musically talented and accomplished. I can think of talented classical piano players such as Peter Murray, a geologist turned glass scientist, who sings with a tenor voice and also enjoys cooking ethnic foods. And Joe Fishlinger, a polymer scientist with an understanding of chemistry and rheology of organic materials, who turned his knowledge into high-quality truffle-making that rivaled the most prestigious European chocolatiers.

Real creativity is productive and its expression yields a constant stream of output: a canoe for the family one month, an improved telescope system the next; a butterfly collection that keeps on growing; a new garment of wearable art every season. These are some of the signs to seek as output for social or family activities and they are a good predictor of professional output. They are the materialization of a creative flow that is ongoing. So it is important that the hiring process be rich enough to allow you to unearth, explore and walk around these passions to inform your decisions.

Players as Coaches

The opportunities to learn from your people are boundless. About their activities external to work, for sure, but also about the depths and reaches of their understanding. As a leader, whether in technology, architecture or medicine, you are expected to understand your field, to know where it is headed and to translate this knowledge into the strategic direction that keeps you ahead of the field. But you will be fooled, and your group and goals poorly served, if you as a leader do not have experts in your group whose knowledge and understanding far exceed your own.

Learning from your experts is not only an enriching experience for you as a leader, but it is one of the first elements of sharing knowledge, an important element in creating a persevering culture where creativity thrives and innovation delivers.

Make Room for Intuition

Creative people are driven to make real their dreams, hunches and drives a material reality. If given the freedom to be, the creatives themselves will guide you in how leadership can best help them — and the organization — to deliver. If you create an environment of trust and spend your time listening, you will understand the needs and the frustrations you hear.

The role of the leader is to act as shock absorber for the organization, to understand the needs of the commercial group on one hand and, with the knowledge of what it takes to preserve the space needed for invention on the other, to define goals that can benefit both sides.

In creating a culture of expansion, respect and freedom — to create, to deliver, to be — it is important to understand that the ultimate expression of freedom is the ability to follow your dreams. If an organization does not have the space for your more daring members to

spread their wings, their flight will take them away from you. Maintaining an inspired and motivated state for highly creative, talented individuals is the challenge of leadership. As leaders, we need to create cultures that grant our people the freedom to stay — cultures where leaders exhibit flexibility in responding to needs and identifying opportunities, in creating unorthodox career paths and letting people move outside their groups, in following their people's leads and opening spaces that create opportunities. ●

Passion 3: Live Values That Liberate Creativity

Our values — the principles we deeply believe in, the issues that are important for us to stand for — do not necessarily remain constant throughout life. Some may evolve; others may be added; others still may be dropped. There are those, though, that do remain unchanged. Those are the ones that will be more meaningful to you as a leader and therefore more powerful in creating culture, the ones you need to establish in guiding your organization.

Respect

Respect for ideas, for needs, for the whole self, is where it all starts. For the human being, the productive artist, the jazz singer, the heart surgeon, the architect, or the creative scientist, respect is what creates the space that allows conception and invention to flow.

Respect for this crucial side of their nature — the need to feel untethered, the need to safeguard their autonomy — takes the form not only of understanding that this is not a personal rebellion against you as a leader, or a deficiency in adjusting to a group setting on their part, but rather that it expresses a need to achieve that sense of empowerment that constitutes an important driving force for creatives.

Freedom

Freedom is the maximum reward; it empowers, it respects, it recognizes. Freedom starts with forms as basic as freedom of style. Not all your team members will have the same need for freedom, and only your deep knowledge of them as human beings and of their track record will inform you on the size of the performing ring each needs.

Flexibility

Respect and freedom open the way for flexibility: flexibility to embrace new ideas, to accommodate life-needs, to change direction, to change your true-and-tried ways. Flexibility is the way of life in research, so leading your group to adopt it as a way of life *in life* will bring vitality and a "can do" and "why not?" attitude to your group. It is an important culture-creating value as it shifts the focus from the "what" to the "how." And, just as importantly, it touches lives in all dimensions, from trivial to crucial.

Fun and Play

There is an air of lightness that the creative mind craves. Walk into a roomful of inspired artists and you will sense it. It is an energy that allows the creative spirit to free itself from limitations, that enables it to envision the changing of context and conditions that is a prerequisite to invention. Fun and play, in bringing that nimbleness, that buoyancy, help to maintain the spirit that invites novelty to emerge.

Interdependence

The principle of interdependence can be as simple as the recognition by individual members that in the workplace their survival, success and well-being depend on the mutual reliance of a collaborative group.

Honoring interdependence does not negate the ability to act with autonomy — that is, to be independent — but instead brings in the additional dimension of awareness of the impact of your actions on the well-being of the group.

Transparency

As a leader you owe it to your people to be transparent about your intentions, your plans and your concerns, in the same way you owe them your expression of your active interest in them, their results and careers, in the

Advise and Guide Without Imposing Your View

Throughout the years, I have served numerous people as mentor and coach. The situations have been all different, the personalities even more diverse. The request for advice, however, often comes in the same form: "What should I do? What would you do?" My answer would be consistent: "What I would do is not important. What matters is how you feel about it. What would you love to do now?" For therein lies the truth to our search. Find what you would love to do right now; let that intuitive feeling guide your decision; and, one step at a time, tread the path of your passion and your life.

form of direct feedback, dialogue and give-and-take. And though these give-and-take sessions can at times lead to difficult discussions, they are the first steps in creating a culture of open, honest communication.

Integrity

To live the value of integrity — the willingness to give and keep your word, to walk your talk, to fulfill your promises and agreements — is in essence to live in your commitment. And, as a leader, this is your aim for yourself and your people. Integrity is an unforgiving value, one that may exact unyielding pain if not pursued relentlessly, as the smallest of exceptions may give rise to damaging effects and consequences.

Passion

As a leader you are in an enviable position to help people unite their avocation and their vocation, and by so doing make work become play. It starts by using your intuition to become aware of the unseen potential in others and to support them to see and realize it. This is not about influencing their consciousness with what would be your personal choices, but about opening them up to their own. As leaders, our role in each case is to actively mentor and guide them into the personal path of their own discovery and, inasmuch as they are driven, their own awareness.

Trust

Trust is that fragile and vital value that must underlie every activity but that cannot be tangibly created. Trust is also essential to high performance. Expressions of trust are recognized by everyone's willingness for open, honest communication, dialogue and feedback. They are at the core of the courage of taking intelligent risk and they underlie a sentiment of mutual respect. The utmost expression of trust is the willingness to place our future in somebody else's hands, to follow his or her guidance into unknown territory, to pursue a trail that we had not charted or even envisioned ourselves.

Rigor

As the fundamental quality of good scientific work — and good work in any field — rigor is not only a necessity but an ultimate element of culture. By insisting on it, rigor permeates the thinking of a group and comes to represent an important underlying principle of every activity.

Rigor translates into being clear in communicating the difference between dreams, hypotheses, theories and results. Rigor produces fully developed scientific theories, discussion of results and publications. The net result is credibility, a culture that can be trusted and results that can be relied on.

Results

For any team chartered with delivering innovation, whether in high technology, medicine or cinematography, the raison d'etre is bringing forth results. There is a delicate balance — the "creative tension" — between unleashing creative researchers and harnessing their work to deliver actual products and revenues.

Two elements are important in cultivating a culture of results. First, there needs to be breadth in the definition of "results," and this does not mean a diluting effect but a definition based on the true understanding of your mission and the means of achieving it, and then there is a need for identification of the whole spectrum of desirable results. Tangible results, those that customers will pay for and use and the processes to make them — such as the optical fiber they rely on to bring information to their home, the new cardiac surgery technique that can save lives or the new building design — are easy to classify as results.

Standing firm on these values is the cornerstone of building a creative culture in which your teams can thrive. ●

Passion 4: Demand Excellence and Enrich Lives

As with living your values and with everything you do, in inspiring a spirit of high performance and demanding excellence, as a leader you need to guide, direct, coax, detour and show the way. And to do so, you need to lead by example.

There are two critical elements for success in bringing out the spirit of high performance in your group. First, expectations must be clearly spelled out, not just on your first day as a leader but for every single assignment, project and suggestion. The second element is, naturally, consistency — though not rigidity — in upholding your expectations. Your expectations may be nuanced by the people, the circumstances and the activities they perform, but your expectations, like your values, should not be accommodating of personalities — true for some but not for others.

At the core, the leader needs to offer unconditional support and deep interest in the careers of practitioners in such a genuine way that it underlies and permeates each action and is deeply felt by everybody.

Expectations of a Leader

At my first communications meeting with my groups, they consistently heard me articulate what I expected of each one of them:

• **To use their skills and follow their hearts.** There is an inescapable connection between honoring your being and doing good work. It is only by playing in the field where your skills are found that work can become play and you find yourself giving your best performance.

• **To be flexible and adapt.** In the social process that is innovation there is little value in being set in your ways, unable to look at things in a new way, unwilling to listen to an alternate viewpoint or to take a new path, or unwilling to take an unusual assignment.

• **To achieve mastery.** My groups have heard me exhort them many times: "Become an expert and let the world know about it." Assembling the best and the brightest in the world is the first step. Putting together all the elements for them to free up their potential is a good second step. But it will only go so far if they do not do the rest: become the best they can ever be.

• **To benefit from argument.** I do not advocate argumentation for the sake of fun or as a way of exerting control. What I expect is to have the clarity of thought, the courage of spirit and the ability to articulate a different viewpoint, to do so with an engaging dialogue and to express it with a constructive tone of voice. Yes, there are those whose ability for debate placed them on their college teams and whose voice can carry a stadium. I expect from them to tone it down into a constructive dialogue. And I expect the rest to stand up and not shy away in discomfort.

Commitments From a Leader

As leaders it is our responsibility to be accountable to each member of our groups and to let them know what they can expect of us. In my case, in addition to carrying on the responsibilities of managing the group, I shared what they should expect of me:

• **To continuously raise the bar as high for myself as for them.** I pledge to know each of them, what they can bring and what their very best effort is, and to drive them to achieve it; to guide them toward achieving mastery and self-awareness, without forcing them; and to demand the same of myself.

• **To take a deep interest in their careers.** The commitment needs to be to take a deep interest in their careers, in their development as human beings and in the whole of their life experience — and to participate by moving them along; to connect with their personal passions and resonate with them.

• **To design teams that work.** Few things are as important in assembling winning teams as understanding team dynamics and putting the right person in the right role.

• **To give them unconditional support.** Most important, it is about supporting them in the process of growing and reaching their potential. ●

Passion 5: Create a Culture

To excel in breakthrough innovation, it is not enough to manage a group of talented individuals. It starts with survival of the culture, and to survive a leader must create a culture defined by beliefs, attitudes, energy, interaction style and practices — and rituals. But to excel, the leader must ensure that the culture be one of creative engagement and liberating values. If it is clearly defined and rests on lived values, the group culture will flood the larger organization and, in so doing, create the network that is vital for innovation to take place.

Create Settings That Nurture Knowledge Sharing

The ability to collaborate and get along with others is paramount in enabling people to quickly share knowledge, either formally within a team or informally beyond the team. To foster informal knowledge transfer, teams need an environment that stimulates the senses and the emotions, one that fosters free association of ideas. An impassioned leader uses every lever, including workspaces and furnishings, to support the team culture. One effective way of promoting cross-pollination of ideas, actively coaching incoming talent and keeping team members up-to-date is to establish "creativity rooms" — nicely decorated and furnished rooms that look more like living rooms where teams can drop in and use the space informally as needed. They are true "living" rooms, for it is here that the culture is lived.

Only one rule should apply to a creativity room: It cannot be reserved for meetings, or it will become just one more conference room. It is to be used as the group sees fit: for one-on-one discussions, which might be joined by anybody else interested in the subject; to read an article, have lunch or simply decompress; for coffee breaks and celebrations; and to brainstorm around a tough problem. It belongs to the group in which — it cannot be forgotten — you as a leader also

participate. So it is important that you partake in the life that teems in the creativity room.

Encourage Forums That Advance Knowledge Sharing

For leaders, it is immeasurably valuable to learn to feel at ease with the concept that less is more, with the idea that there are times when managers are not needed. So encourage groups to meet on their own without leaders or managers present on a regular basis. Furthermore, create the culture that gives groups the space to emerge on their own. Resist the urge to continually analyze and schedule, but be prepared to respond when you identify a need. And you will be surprised as you see a sense of empowerment arising that liberates creativity and persists over time.

Significance in Recognition

To be coherent and lasting, a culture relies on open communication and recognition to build the trust that delivers high performance. There is a certain Darwinian principle that applies to the power of recognition in maintaining a culture: Appreciating, recognizing and rewarding each other's contributions are ways of pointing out desirable behaviors, those selected for emulation.

Unfortunately, in an understandable desire to protect privacy and discourage dissent and jealousy, most forms of "big" rewards — cash awards, merit increases, bonuses, stock options — need to be kept private, and so their value in promoting desirable behavior and performance is lost to the group. With their outstanding potential for motivation, they are nevertheless important forms of recognition, one that leaders should make every effort to use as frequently and generously as possible.

Promotions: Something to Take Dead Seriously

On the other end of the spectrum lies the promotion, the public nature of which represents an important force in motivation and culture creation. A significant part of the impact of promotions on culture comes from the fact that promotions are the return on accountability —the reward for the accountability trusted upon the receiver — informing the group what contributions and behaviors are of pre-eminent importance. But in order for them to be a creative rather than a destructive force, promotions need to be judged and awarded with the greatest sense of fairness. Promote for the right reasons and you have the wind behind you. Promote for misguided reasons — the pressure to retain a star, an effort to support diversity or a well-intentioned attempt at leveling the playing field — and you run into gale winds of resistance and backlash.

In a Class by Itself: Recognize Mastery

Then there is a form of recognition that is subtle and has a pervasive and lasting effect on culture: the recognition of mastery — the daily recognition of mastery. The leader who expects the members of his or her group to become the best they can be will be wise to recognize their steps in getting there and, by so doing, help the group move toward achieving mastery, the merging of professional excellence and personal fulfillment.

Recognition of mastery has many faces and presents many opportunities on a daily basis, most of them taking place in the intimacy of the group. On these two qualities, intimacy and constancy, rests the all-encompassing impact that recognition of mastery delivers, a sustained effect in shaping culture through honest, reiterated communication and celebration.

When carried out in a timely fashion and delivered with sincerity and a personal message, small actions of recognition are the daily nourishment that recognizes influence and impact and helps those being recognized feel established as practitioners. Opportunities that have impact are easy to find, such as:

- Bringing by a relevant high-level executive to an office or lab for an unexpected private pat on the back.
- Making a mention at your group meeting of a recent external honor awarded to one of them.
- Asking seasoned scientists to mentor younger ones.
- Assigning resources to parlay the outcome of one project into a broader impact.
- Inviting expressions of appreciation and reward by team members for one another's contributions.

Passion 6: Structure a Clear Organization

By defining a clear organization, the stumbling blocks — second-guessing, the fear that "it can't be done," risk-averse knee-jerk reactions, circuitous approval paths and many other pitfalls — are eliminated and replaced by a streamlined delivery process. The time invested in defining a structure, with roles, links and responsibilities clearly understood by all, is time well spent. The need to focus on clear organizational structure in no way demands a turning-away from maintaining the vibrancy of an organization, of establishing values, demanding excellence and creating a culture by taking care of your team members

one at a time. Just the opposite: Both need to coexist with equal intensity, enthusiasm and rigor.

A structure, however, needs to strike a balance between two organizational extremes. On one hand, authoritarian hierarchies impose great clarity on an organization or team, but they can also stifle creativity and passionate exploration. Free-form organizations, on the other hand, provide no boundaries or guidance for unconventional spirits, who often flounder without the structure imposed by a more traditional organization. The need, then, is for a clearly defined impassioned organization where everybody's role and everybody's responsibility is clear to all and where every exchange reinforces the role of each component.

The more comfortable every member is in understanding his or her role, the less he or she will feel driven to engage defense mechanisms to defend his or her turf. It is this absence of destructive conflict that creates space and liberates passions.

Who Has the Skills to Do What and With Whom?

From the perspective of the individual, there are two basic questions, the answers to which streamline work and facilitate delivery: "Who takes care of my personal needs?" and "Who takes care of my project needs?" The answer, of course, defines a basic and fundamental distinction in roles and responsibilities, one that is not always identified or addressed by organizations, creating unnecessary confusion and holding back progress. And the answer is as simple as defining and differentiating two roles: functional and project management.

Taking care of defining assignments, of developing careers, and maintaining motivation and challenge is the purview of functional managers. These are the people to whom practitioners turn for direction, arbitration and support.

In a complementary role, taking responsibility for enlisting the best resources for a project, defining the timelines, and driving team members to deliver on goals and schedules is the domain of project managers. Practitioners turn to them for clarity in project objectives, access to resources and timeline definition. ●

Passion 7: Provide Authentic Leadership

To guide intense, high-energy teams, a leader needs to be passionate; impassioned practitioners are naturally at odds with apathetic leadership and the ambiguous results it elicits. But a leader's passion must be authentic; it cannot be put on or imposed from outside. Leaders need to be true to themselves while carrying out their roles. Following a recipe and going through the mechanics, even if the symbols are there, will neither create a culture nor motivate teams.

Ultimately, for leaders to be able to successfully maintain the peak performance that the role demands, they need to run both hot and cold at the same time: impassioned and detached. The passionate, energizing aspect is key to the motivational and inspirational facet of the leader. But it is detachment that enables the leader to guide the raft through whitewater. Detachment arises from awareness of what is really happening, from the understanding that your participation is required, but your control is not. A detached leader can afford to put his or her energy into nurturing, not controlling.

At the core of genuine leadership is a clear sense of self-acceptance by the leader, which comes from strong and unrelenting work leading to self-awareness. These two qualities, self-acceptance and self-awareness, are the foundation of leadership as service that is expressed through courage, integrity and empathy toward others, allowing a culture of empowerment to emerge.

Self-awareness is an imperative for leadership. You need to discover who you are before you can lead others, before you can help them and before they will trust you. Conversely, the many dimensions and facets of leadership, the many different situations and challenges awakening unconscious conditioning and eliciting emotional responses in you, create an unparalleled opportunity for self-discovery, inner growth and fulfillment.

Leadership as service can only come through nonjudgmental acceptance of your whole being, regardless of your behavior and perceived lacks. Self-acceptance brings humility, which in turn frees us from arrogance and the drive to inflate ourselves. Leadership as service flourishes when there is no personal agenda of acquisition, when the leader is free to serve and to lead with the best interests of others at heart, while releasing the need to prove himself or herself to be above or below others. ●

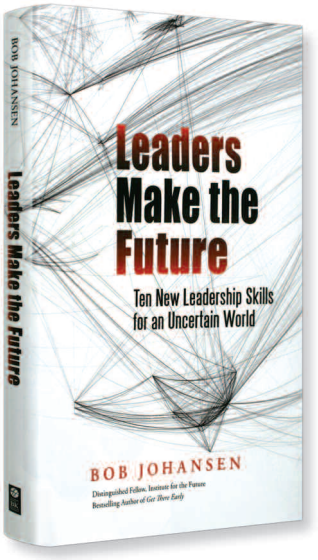
Leadership: Strategies

Leaders Make the Future

Ten New Leadership Skills for an Uncertain World



by Bob Johansen

THE SUMMARY IN BRIEF

We are in a time of disruptive leadership change. We need new leadership skills to succeed. The dilemmas we confront, the work forces we lead, the technologies we use and our organizational lives will change sharply in the next decade. We must develop new skills uniquely suited to the threshold decade ahead.

In a VUCA world — one characterized by volatility, uncertainty, complexity and ambiguity — traditional leadership skills won't be enough. Leaders who combine vision, understanding, clarity and agility can thrive in a VUCA world.

The Institute for the Future (IFTF) has been doing 10-year forecasting for 40 years for some of the world's top organizations. In *Leaders Make the Future*, noted futurist Bob Johansen draws on IFTF's latest 10-year forecast to introduce 10 critical new skills that will help leaders see new connections through the chaos and make a better future. He also provides role models, tools and advice to help you develop these future leadership skills.

Combining research-based forecasts, real-world examples and astute analysis, Johansen offers help to leaders who need to cope with and thrive in an extremely uncertain world.

IN THIS SUMMARY, YOU WILL LEARN:

- How to constructively depolarize tense situations and help people from divergent cultures to work together.
- How to immerse yourself in very different-from-you physical and online worlds and learn from them.
- How to organize smart mobs.
- How to apply the principles of nature in your leadership.
- How to prepare your organization and leaders for our rapidly changing future.

THE COMPLETE SUMMARY: **LEADERS MAKE THE FUTURE**

by Bob Johansen

The author: Bob Johansen is a Distinguished Fellow and board member with the Institute for the Future, an independent nonprofit research group in Silicon Valley. He was the Institute's president from 1996 to 2004. He is the author of eight books, including *Get There Early: Sensing the Future to Compete in the Present*.

Leaders Make the Future: Ten New Leadership Skills for an Uncertain World by Bob Johansen. Copyright © 2009 by Bob Johansen. Summarized by arrangement with Berrett-Koehler Publishers Inc. 194 pages, $26.95. ISBN 978-1-60509-002-3.

Leaders Need New Skills to Make the Future

Leaders must learn how to make the future in the midst of volatility, uncertainty, complexity and ambiguity (VUCA). The discipline of foresight can help leaders make better decisions today. We need not passively accept the future. Leaders can and must *make* a better future.

A global futures perspective can help leaders make sense out of the chaotic patterns of change in the external world. Looking to distant possibilities can provide new insight for the present.

Leaders need not be overwhelmed and pummeled by the world of VUCA. The future will also be loaded with opportunities. Leaders must have the skills to take advantage of those opportunities, as well as the agility to sidestep the dangers.

The following 10 new leadership skills unfold in a definite order, moving from instinctual to complex. Leaders can either develop each skill personally or partner with someone else to perform.

Turning the Negative VUCA Around

These 10 new leadership skills are plausible, internally consistent and provocative statements about what will be most important for leaders in the years ahead. The negative VUCA can be turned around with effective leadership that follows these principles:

- Volatility yields to vision.
- Uncertainty yields to understanding.
- Complexity yields to clarity.
- Ambiguity yields to agility.

The VUCA world of the future will be formidable and loaded with opportunities. The best way to be prepared is to look 10 years ahead.

Maker Instinct

The maker instinct is the ability to exploit your inner drive to build and grow things as well as connect with others in the making.

Everyone has some maker instinct. The challenge is to turn the natural urge to create into a leadership skill, to synchronize the maker instincts of leaders with those of others. Many people don't realize their own maker instinct and potential. It must be recognized, valued and nurtured if it is to become a leadership skill for the future. Beyond do-it-yourself, we need to nurture *do-it-ourselves* leadership. The maker instinct will be amplified by connectivity.

The leaders of the future will be less controlling, since there will be fewer things they can control. They will also be more engaged with others, since connectivity will be required to make the future. Everyone is part of a network. Leaders are nodes, and the best ones are hubs that form, nurture and grow networks that stretch far beyond the individual leader.

Improvement

Leaders with maker instinct have a constant drive to improve the organizations around them. Both managers and leaders ask how things work, but leaders have an urge to make them work *better*.

Makers like to be hands-on and see things from the inside. The *MAKE: Magazine* motto is "if you can't open it, you don't own it." Open means transparent and accessible, but it also means able to be altered, customized or personalized.

Leaders will grow, re-grow and re-imagine their own organizations again and again. The maker instinct fuels that growth. Leaders will make the future in the context of the external future forces of the next decade.

Customization and Personalization

In the future, personal empowerment will mean that customization and personalization will be desired and often demanded. Even global products will need to feel local, or at least not feel foreign. Grassroots economic systems, like eBay, will make bottom-up financial transactions possible. Smart networking will create results that will not be predicted but will be profound.

Leaders with the maker instinct are able to approach their leadership with the commitment of a job and the energy of a hobby. The leaders of the future will kindle this maker energy in themselves and in others.

Clarity

Clarity is the ability to see through messes and contradictions to a future that others cannot yet see. Leaders are very clear about what they are making, but very flexible about how it gets made.

As volatility, uncertainty, complexity and ambiguity increase, there will be many people wanting to be led out of the mess. Clarity will be a prerequisite for compelling leadership.

The future will be loaded with contradictions, but leaders with clarity will need to see through those contradictions and have the ability to discern what to do and where to go, when neither is apparent. In order to grapple with complex questions, leaders will need to resist the temptation to oversimplify and give the easy answers that many people crave.

Clarity requires inner strength and discipline. Although they will no doubt experience hopelessness, leaders with clarity will still be determined to engage with the VUCA world and pull everything together in a way that is unmistakably practical.

Self-Knowledge

Clarity requires great self-knowledge, so leaders will have to look within and sort out what is most important to them.

Clarity requires external engagement. Leaders must express themselves clearly in ways that inspire others to follow and be able to make sharp statements about plans for the future with an enthusiasm that attracts others.

Clarity requires flexibility. The best leaders will be clear about their long-term intentions, but very flexible about how to get there.

Four Keys to Clarity in Leadership

Clarity in leadership is the ability to:

- See through messes and contradictions.
- See a future that others cannot yet see.
- Find a viable direction to proceed.
- See hope on the other side of trouble.

Muhammad Yunus

Nobel Prize-winner Muhammad Yunus is a current leader with clarity about social justice. Yunus developed the principles and practices of microfinance to help impoverished people help themselves. His approach is local, personal and integrated with local communities. His model focuses on micro-credit that allows someone with little or no resources to start a business, which creates an upward cycle of receiving income, investing more into the business, making a profit and repaying the loan. He works with and grows social capital with small loans, primarily to women in local communities. Expressing his clarity about social justice, Yunus says, "One day our grandchildren will go to the museums to see what poverty was."

Clear-eyed leaders will experience hopelessness, but they won't accept it; they will see through it and be determined to make it otherwise. Leaders will immerse themselves in the VUCA world and — even if they become disoriented — find a way to clarity.

Dilemma Flipping

Dilemma flipping is the ability to turn dilemmas — which, unlike problems, cannot be solved — into advantages and opportunities.

Leaders must be able to flip dilemmas over and find the hidden opportunities. They must avoid oversimplifying or pretending that dilemmas are problems that can be solved. Dilemma flipping is the recurrent skill that leaders (many of whom were trained as problem solvers) will need in order to win in a world dominated by problems that nobody can solve.

Future leaders must be able to nurture the ability to engage with hopelessness, learn how to wade through it to the other side and flip it in a more positive direction. Dilemma flippers turn hopelessness into hope.

Three Steps to Dilemma Flipping

To improve your own dilemma flipping abilities, try these three steps:

- First, identify your dilemma. If you are not sure if you are dealing with a problem or a dilemma, it is better to assume it is a dilemma. If it turns out to be a problem you can solve, just solve it. If, on the other hand, you mistake a dilemma for a problem, you may be in deep trouble by the time you realize your mistake. If others expect you to come up with a solution and you don't, it is hard to recast the situation as one that you cannot solve after all.
- Second, immerse yourself in the dilemma. This allows you to listen to and learn about what is going on within the frame of the dilemma — without jumping to conclusions. Immersion also allows you to look for patterns and ways of making some sense out of what is going on.
- Finally, flip the dilemma in a more positive direction. Dilemmas don't go away, but a leader can learn to reframe them and then re-imagine the apparent contradictions in a way that leads to new opportunities that others don't yet see.

Leaders of the future must revel in the space between judging too soon and deciding too late, leaning toward action. ●

Immersive Learning Ability

Immersive learning ability is the ability to immerse yourself in unfamiliar environments, to learn from them in a first-person way.

Variants of simulation and gaming are a practical way for leaders to experience the future before it happens. Growing up playing video games could be very helpful for prospective leaders since serious gamers have the chance to immerse themselves in dilemmas and learn advanced social networking skills. Gaming and simulation are low-risk-high-return learning mediums, if used in a constructive fashion. They provide mind expansion and leadership skill development.

Online Social Worlds

Immersive online environments can be a safe place to practice leadership skills. Leaders don't have to adopt every model they come across, but it is important that they explore and understand what they can and cannot do. At least, leaders should encourage others to explore online social worlds so they have some organizational intelligence.

Reacting with fear or distain to new technologies and media (and the ecosystem of social and cultural practices that surround them) is precisely what a leader should not do. Engagement with gaming environments and encouraging (not just accepting) similar immersion among those being led will be an important dimension of leadership. Social networks are necessary to succeed.

Active Attention

Immersive learning requires active attention, the ability to listen and filter, and to see patterns while staying centered — even when overwhelmed with stimuli. Leaders can't absorb everything, so they must filter out extraneous information and learn how to recognize patterns as they are emerging. The difficulties of signal/noise filtering are increasing dramatically as data sources multiply. Generational differences will be apparent, and leaders who have grown up in the digital age will have better skills for continuous partial attention.

Another requirement for immersive learning ability is an open mindedness beyond what many top executives can muster. Once leaders get toward the top of organizations, even open and informal ones, they get more and more insulated from what is really going on. Leaders need to step outside their protected roles to step inside very different experiences from which they can learn. Ideally, the immersive learning environment will be more difficult than what the leader experiences in the real world. Leaders should seek out immersive learning opportunities — especially experiences that make them uncomfortable in constructive ways. ●

Bio-Empathy

Bio-empathy is the ability to see things from nature's point of view; to understand, respect and learn from nature's patterns. Respect for nature is basic to this perspective, with a long-term view of what is needed for life to go on for generations beyond the present. Bio-empathy also depends upon a knack for natural thinking and a leadership resilience that draws from nature's ways.

Eating is everyone's everyday link with nature. If we eat with consciousness about where our food comes from, we have the potential to empathize more deeply with natural processes. Eating with awareness is one form of bio-empathy, the ability to learn from nature. It applies to many different forms of leadership in many different ways.

Bio-empathy looks at leadership through a natural filter, in search of the underlying biology of each choice. What are the underlying patterns of nature that could

inform how leaders lead? Nature teaches, if only we humans can understand its lessons.

Ecological Systems

One characteristic of bio-empathy is being able to see the big picture of ecological systems, not just the components. Some people begin to understand ecosystems through immersion in the natural world by camping or going on a safari.

Bio-empathy is about seeing human activity as nested within environmental stability and vice versa. Our human systems live within natural systems. Bio-empathy is about respecting the inevitable ecological consequences of one's actions and seeing these new parameters not as barriers but as opportunities. To acquire bio-empathy, one needs to be humble and realize that getting in sync with the processes of nature can add greatly to life.

Biomimicry is one example, where principles of nature get built into products. Some buildings in Africa, for example, are designed around the airflow principles of a termite mound and therefore have less need for air conditioning. Energy efficiency can be improved when it is based on models from nature. Bio-empathy can be a platform for long-term strategic planning, capturing a growing consumer market and opening one's mind to new insights.

Reflect Nature

A leader should reflect (as water reflects) nature. There are many ways to develop bio-empathy, but the first step is to observe and appreciate the natural processes that are always going on around you. Bio-empathy contributes to person-to-person communication. Mimicking natural processes ensures moral and ethical boundaries for human action. Every organization's guiding principles should reflect bio-empathy and express it in organic — not mechanical — language. Bio-empathy takes big-picture thinking that respects all the multiple interrelated parts and nonlinear relationships, as well as cycles of change.

Constructive Depolarizing

Constructive depolarizing is the ability to calm tense situations where differences dominate and communication has broken down — and bring people from divergent cultures toward constructive engagement.

In these times, many different groups will believe that they are right; some of those will believe that everyone else is wrong. Leaders will need to engage with extreme groups who may not even agree with other similar groups. Extreme positions and polarization will be commonplace. Engaging with those who are obsessed with certainty — whatever the source — will be difficult indeed.

Leaders need to redirect the energy of a conflict and bring the stakeholders toward constructive engagement and dialogue.

Remake Polarization Into Dialogue

Constructive depolarization is the maker instinct applied to a conflict, an attempt to remake polarization into dialogue. When leaders encounter conflict, the temptation is to pick sides. Picking sides, however, is rarely a good strategy. Conflicts are often dilemmas that must be flipped in order to make good progress.

A background in cultural anthropology (ethnography), qualitative sociology (participant observation) or comparative religions will be very helpful for future leaders. International travel and living in a variety of places can be very instructive, as can language skills. The more comfortable a leader is with cultural diversity, the more likely he or she is to be able to lead in diverse organizations.

Future leaders will need cross-cultural grace in order to constructively depolarize a situation: an ability to listen and learn from people who are very different from them — and perhaps different in a disturbing way.

Reverse-Mentoring

Reverse-mentoring is a simple but powerful strategy for crossing the polarities of the future. Many innovative organizations already have reverse-mentoring programs, and they are of great benefit. For example, young Facebook users mentor their Boomer managers in social networking skills. Mentors have traditionally been experienced, often older, people who show the ropes to those who are less experienced and younger. In situations where young people are actually more skilled than older people — as is often the case with the new social media — why not reverse this process? Leaders and soon-to-be leaders should look for these opportunities wherever possible.

Constructive depolarization starts with an ability to listen deeply, engage our common humanity and empathize with others who come from very different points of view. Leaders will need to calm tensions and move through the conflict.

Extreme polarization will be a driving force for the foreseeable future, so leaders will need a personal strategy and style for constructive depolarization that goes beyond picking sides.

Quiet Transparency

Quiet transparency is the ability to be open and authentic about what matters to you — without advertising yourself.

Transparency is rooted in the maker instinct. People's curiosity and knowledge about how things are made has always been there, but will increase dramatically. Where did those ingredients come from? What standards of safety were used? How green were the factories? Who were the workers and how were they treated?

Humility

Quiet transparency in leadership begins with humility. Leaders should be self-effacing and not self-promoting — as well as open.

Whether they are more or less transparent, leaders will definitely have to give up some control. They need to decide what they themselves can and want to manage, since they cannot directly supervise everything.

Some degree of transparency will be required of all leaders, certainly more than in the past. It will still be possible to keep some things private, but they will be limited and defined by your leadership role. Quiet transparency means that leaders will decide what measures are important to them (and to the people they lead) and then be completely open about those measures — but not necessarily about everything.

Sensing, Measuring and Monitoring

Outside scrutiny of leaders is likely to grow in the world of the future as the tools for sensing, measuring and monitoring — the tools of transparency — become ubiquitous. Also, it seems that there is more to be transparent about and more people who want to know what leaders are doing. In the future, they will have the tools to do it. Measuring devices will be everywhere, connected to people all around the world.

Corporations and their leaders will be under much more scrutiny in this world. But there will also be new opportunities to work across companies, perhaps across industries, to establish new commons for trading that fit within the constraints of certification. Industry associations, for example, will have new opportunities to use pervasive computing to provide shared measures around important topics like safety.

Beyond Petroleum

There is one big lesson from quiet transparency: If leaders advertise themselves and take credit for their own performances, they will become targets. British Petroleum learned this when the company changed its name to BP, for "Beyond Petroleum." BP did a lot to live up to its new name, with many creative efforts around sustainability. Taking that bold position with regard to environmental policies, however, did little to advance relations with advocacy groups or regulators. In fact, this self-promotion seemed to make people even harder on BP, which was sometimes perceived as a soft target.

This example teaches us this: Do the right thing and be transparent, but don't be self-promotional. Be willing to tell others what you are doing and why, but only when they ask. Anyone who is interested is more likely to see what you are doing and believe what you say. As a leader, you will need to make it easy for third-party organizations to notice your transparency as well as spread the word to others.

Rapid Prototyping

Rapid prototyping is the ability to create quick early versions of innovations, with the expectation that later success will require early failures. Rapid prototyping enables us to learn from failure quickly, again and again. It is the trial-and-error method that has always been important for innovators, but on a faster cycle. The motto of rapid prototyping is fail early, fail often and fail cheaply.

Rapid prototyping is a perfect leadership style for the VUCA world — where truth emerges from engagement, trial and error — because it allows leaders to try out their own ideas quickly, as well as tap into the maker instincts of potential collaborators.

Few leaders get it right the first time, and it will get even harder in the future. Early failure is often the key to later success. The failures of "computer conferencing" in the 1970s contributed to the eventual success of MySpace and Facebook, for example. This lesson from failure took a very long time, however. In the future, leaders need to speed up the process. As Alan Kay was known for saying when he was at Xerox PARC, "The purpose of research is to fail, but to fail in an interesting way." Rapid prototyping is all about failing in interesting ways.

Innovation and Refinement

Rapid prototyping is a quick cycle of innovation and refinement. Rapid prototypes typically have lifetimes measured in hours or days, not months. They are different from pilot or demonstration projects, which often take much longer to conduct.

Rapid prototyping is the maker instinct applied to

innovation. While the concept of do-it-yourself is still important, the next generation of innovation will be driven by "do-it-ourselves" leaders who don't get stuck on idea ownership since in this process people's ideas get mixed quickly and it is often impossible to sort out who thought of what.

In rapid prototyping, the emphasis is not on abstract thought about possibilities or plans; it should begin with real people, with the end users out in the field, and as early as possible in the process. It is more about listening than it is about thinking.

The Innovation Cycle

The innovation cycle is not necessarily over when the product is sold. Leadership through rapid prototyping:

- Is characterized by a trial-and-error mentality with an interest in getting something started quickly. Leaders expect to fail early in the process so they can succeed later.
- Emphasizes experience in the field, rather than massive advance planning.
- Maximizes education by putting priority on extreme speed in learning.

Leadership in the future will be about high-speed, perpetual prototyping. The best leaders will be those who embrace the process and develop the ability to discern the patterns across the prototypes, the ideas that really do work.

Smart Mob Organizing

Smart mob organizing is the ability to create, engage with and nurture purposeful business or social change networks through intelligent use of electronic and other media.

Some social networks will have intense values linkages, so leadership must mesh with those values, some of which will be competing. Indeed, leaders' own networks and connections will be their most powerful assets. This has always been true to some extent, but the connections in the future will be amplified.

Choose the Right Medium

Smart mob organizing starts with choosing the medium that is appropriate to the situation. Most of today's leaders communicate well in person, but have a range of skills using electronic media. Leaders of the future must have a strong online identity, as well as a compelling in-person presence.

The electronic media are not, by themselves, what makes a smart mob smart. The leaders and participants in the smart mob provide the intelligence, but the media amplify that intelligence. Powerful collaboration technologies are now practical, after more than 30 years of testing. Smart mob organizing is the maker instinct applied to social connectivity and network making. Solo makers are coming together into smart mobs of makers. All that maker energy has the potential to be channeled in new and highly creative ways, if leaders are able to figure out how to tap into it.

Common Purpose

Smart mob organizing brings together large groups for a common business or social change purpose, making savvy use of available media as appropriate. They are smart because the media amplify their collective intelligence for greater impact. They are mobs because their behavior is emergent and often unpredictable. Of course, smart mobs can be more or less intelligent — depending on the resources of the members, the talent of the leaders and the effectiveness of their media.

Smart mobs and not-so-smart mobs will become much more common over the next decade. Leaders will need to learn the skills of smart mob organizing and develop their own online presence and leadership styles. In-person leadership will not be enough.

The point is not that all leaders need to be smart mob organizers personally — although it is better if they use the media themselves and do at least some of their own organizing. Rather, it is that all leaders must be respectful and understanding of their importance in the future when they will all need to have smart mob organizers working for them.

Leaders must be smart about which medium works best to deliver the message at hand.

Commons Creating

Commons creating is the ability to seed, nurture and grow shared assets that can benefit other players — and sometimes allow competition at a higher level.

The more connected you are, the freer and safer you are. Connectivity can only make you free and safe, however, if you nurture it. As a planet, we are searching for new common ground. What is it that we have in common that could make the world a better place for more people?

Grow New Places

Future leaders will be called upon to create new commons, to grow new places within which collaboration and mutual success can occur. There will be many

opportunities to create new commons between public and private, social and economic, digital and physical. These spaces and places present many leadership challenges because they will be full of dilemmas, some of which will appear hopeless on the surface.

Essentially, the search for new commons is a process of engaging with dilemmas that combine what is good for both the individual and the community. Is it possible to address personal needs and community needs simultaneously? In a world shaped by problem-solving mentalities, having a winner usually implies that there is a loser as well. However, in a world of dilemmas, the potential for win/win solutions is more apparent, if leaders can figure out ways to flip the dilemmas into opportunities.

Shared Wealth

A commons is a shared asset that benefits multiple players, as in shared wealth. If a team improves its playing field, all the teams that play will benefit.

There are many types of commons, including parks, town squares, beaches and markets. While many commons are clearly organized for the public good, market-oriented commons are focused on providing a platform of shared assets that allow competition to take place at a higher level.

Leaders will have an opportunity in the next decade to reframe and broaden the purpose of their organizations. In the world of global interactive media, companies will have new potential to create both market value and more commons. Companies will be able to become stronger protectors of the commons that are already here and advocates for new commons that need to be created.

Conclusion: Readying Yourself for the Future

Leaders can make the future. Leaders can decide what kind of future they want to create and go for it.

Given the future forces of the next decade, where do you stack up in terms of the current leadership skills? Are you ready to lead in a future that will be volatile, uncertain, complex and ambiguous? How could you improve your own readiness?

Challenges

Leaders need to understand all of these future leadership skills, but don't need to do them all at once or all by themselves. These 10 skills are challenging to master, but each of them can be learned and there are many resources.

Foresight is the ability to look over the horizon and see the big picture. All effective leaders must have the ability to think ahead, beyond the standard planning time frame. Thinking 10 years ahead will give you a much more robust perspective from which to make decisions today.

Insight is discernment, the unique "Aha!" that suggests what it is that you should do to succeed. The challenge for leaders will be to derive insight from the messiness around them and sense what's important.

Action depends upon the ability to decide on a strong path ahead. Leaders may be known by their vision, but their actions will be evaluated most vigorously.

The best future leaders will have their own styles of cycling continuously through foresight, insight and action.

From the Negative to the Positive

Moving from the negative VUCA (volatility, uncertainty, complexity and ambiguity) to the positive VUCA (vision, understanding, clarity and agility) will be the ultimate challenge for leaders in the future. As leaders of the future, you will need to have all 10 of the future leadership skills in a mix that is all your own. Connectivity will bring the leadership skills to life and amplify their impact.

Creating Commons and the Next Generation

The more connected we are, the safer and more powerful we are — if we realize our interconnections. Through the growing global electronic webs, we are able to communicate and cooperate better than ever before.

The next generation will be the focal point for new commons. Thinking about the world we want to leave to our children and grandchildren gets everyone in a good space to create a commons and make the future.

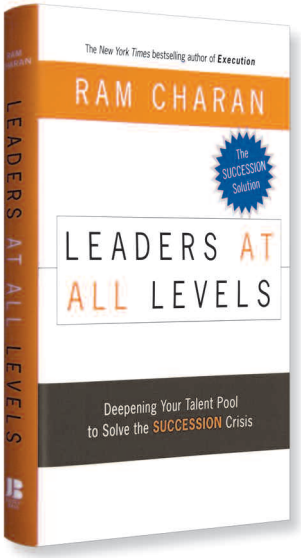
Leaders at All Levels

Deepening Your Talent Pool to Solve the Succession Crisis



by Ram Charan

THE SUMMARY IN BRIEF

Companies are too often short on the quantity and quality of leaders they need at all levels. But they could fill their leadership vacuum, says business adviser and author Ram Charan, if they knew how to spot and develop their potential leaders.

Most processes for finding and developing the potential leaders within an organization are deeply flawed. Companies need a completely new approach. This new approach, outlined in *Leaders at All Levels*, is called the *Apprenticeship Model*. It focuses on spotting leaders early and putting them in situations that drive them to grow fast. It transforms leadership development from a discrete activity run by the human resources staff to an everyday activity that is fully integrated into the fabric of the business, and in which line leaders play a central role.

The Apprenticeship Model of leadership development requires profoundly different attitudes and mind-sets as well as major organizational changes, and the results don't come quickly. But it is eminently practical, based on decades of observation of hundreds of leaders in dozens of companies. Companies that have embraced Charan's leadership development model have built powerful talent engines that give them an edge.

IN THIS SUMMARY, YOU WILL LEARN:

- How to sharpen your power of observation to spot potential leaders within an organization.
- How to accelerate leadership growth, build core capabilities and acquire new ones.
- How to apply the processes and tools that bring the Apprenticeship Model to life.
- How aspiring leaders can use the Apprenticeship Model as a road map for taking charge of their own growth.
- How to give each promising leader the opportunities that are right for him or her at the fastest pace of growth he or she can handle.

A New Way to Fund the Leadership Talent Deficit

Leadership matters. It creates and harnesses the energy of people, gives them direction and synchronizes their efforts. It is a leading indicator of a company's prospects, unlike financial results, which tell you only where the company has already been.

Boards of directors and senior executives know this. They realize that the selection of a new CEO is one of the most important decisions a board ever makes and should be planned well in advance. They also understand that the quality of leadership at every level has a huge impact on the everyday running of the organization as well as the pool from which CEOs are chosen.

Yet, it's no secret that succession planning and leadership development fall woefully short in delivering on their promise. Companies must often resort to bringing in outside talent because they have failed to produce the leaders they need. Recruiting CEOs from outside has always been risky; now it is getting harder and costly.

Nobody Wins in a Bidding War for Leaders

Shareholders have grown impatient with CEOs who don't perform, so boards are faster to dismiss chief executives. And a revolving door at the top is disruptive to the organization.

This doesn't have to happen. It is possible for companies to build a steady stream of leaders and CEO contenders. Some companies — General Electric Co, Procter & Gamble, Colgate, and PepsiCo, among them — are net producers of senior leaders. Companies can grow all the leaders they need once they think clearly about what a leader truly is and what's required to develop one and then take decisive action to shape their leadership gene pool. ●

How Apprenticeship Turns Potential Into Leaders

It's hard for most people to picture a corporate executive as an apprentice, but the concept of apprenticeship is at the heart of this new approach to leadership development. The apprenticeship concept means that those who have a talent for leadership must develop their abilities by practicing in the real world and converting that experience into improved skill and judgment. That conversion does not take place in a classroom, and not everyone can make that conversion.

Companies using the rigorous Apprenticeship Model put leaders in jobs carefully chosen to build on their existing talents and test their ability to discover or acquire new capabilities. They also provide feedback in real time so the leaders continually improve their skills and judgment. At least once a year, their companies review the learning that has taken place and identify the learning that must come next for each leader to build his or her own brand of leadership.

Identify Leadership Talent Early and Correctly

Finding leadership talent early is essential. A high-potential candidate will exhibit the drive to master new skills, the ability to rapidly absorb knowledge and then communicate it, and a natural bent to build lasting relationships and mobilize others to get things done. Most important, he or she will have business acumen, a knack for understanding how a company makes money.

Once a high-potential candidate has been identified, his or her fundamental development is done through a series of planned apprenticeships. There will be on average just five jobs between entering the work force and assuming a top leadership job. Therefore, the design or selection of

those jobs is crucial.

The Boss as Mentor

In the Apprenticeship Model, the boss becomes a mentor and takes a close personal interest in guiding and developing his or her young leaders, helping them to broaden their thinking, sharing experience and wisdom, and digging deep to pinpoint each leader's specific talents.

Some bosses will be better at the role of mentor than others. Those bosses who show a lack of interest or mentality to observe a subordinate's actions, decisions and behaviors; fail to give feedback and coaching; and/or fail to make incisive observations and judgments about the potential leader, shouldn't be bosses.

However, even the best mentor-boss can't do the job without the help of senior leaders and human resources. Those collective insights help detect the trajectory of a leader's growth and inform decisions about where the leader should go next.

Adopting and executing the Apprenticeship Model will require committed effort because it involves changing the way people think and act throughout the organization. You have to accept that truly high-potential leaders are different from other people and warrant the disproportionate share of time and attention. At the same time, you have to be clear that although leaders are different, they are not superior human beings. Companies should instead see leadership for what it is: a distinct job that requires distinct talents that not everyone has to the same degree.

Choosing the Next CEO

Filling the CEO job is the ultimate challenge of any succession and talent development system; it takes a ton of leadership ore to produce an ounce of CEO gold.

The job of a CEO is more intellectually, socially, politically and psychologically demanding than ever. It takes keen mental ability and seasoned judgment to be a leader at the highest levels, the kind our best leaders have acquired through a lifetime of experiences and learning. But such judgment doesn't have to take a lifetime to acquire. Given true leadership potential and the right experiences, a person's judgment can improve faster than you think.

With a cadre of leaders given precisely the kinds of experiences they need to expand through the Apprenticeship Model, the company can expect to have two or three viable candidates to be CEO when the succession decision is imminent. Naturally there is no guarantee any candidate will succeed in the job, no matter how impeccable the preparation. The odds increase greatly when leaders get the right opportunities and feedback, when the board is involved early and gets to know the candidates well, and when the process for choosing the next CEO is rigorous.

Why the Apprenticeship Model Works

Concentric learning is a key concept in the Apprenticeship Model. Think of a high-potential leader's career progression as concentric circles of expanding scope and complexity, with the innermost circle being the person's fundamental capabilities. If the next job involves greater scope and complexity and the leader has the talent to rise to the challenge, he or she will figure out how to apply the core capabilities to the new situation.

Deliberate practice is another key concept, one that goes hand in hand with concentric learning. Deliberate practice — in short, practice of core capabilities combined with feedback and self-correction — is how business leaders refine their abilities and judgment. Leaders benefit the most when the feedback is specific, constructive and in real time. That is why bosses should provide it as they are the ones who observe leaders practicing their core capabilities. ●

How to Recognize Leadership Potential

The Apprenticeship Model depends on spotting leadership talent early and correctly. Colgate-Palmolive, a company whose secret weapon is the depth to its leadership, all the way to the top, is a good example.

Daniel Marsili is the trustee of the company's talent machine, which at any given moment is working closely with about 500 or so people among Colgate's 36,000 worldwide employees who have been identified as "global high potentials."

Colgate's leadership identification and development process takes place at three levels: local, regional and global. The company's high-potential leaders are selected on strict criteria. No matter their country of citizenship, fluency in English is a given, as is an undergraduate degree from a respected university.

Focusing on Leadership Qualities

Colgate's real selection begins with a focus on several qualities of leadership:

- **How well the person demonstrates a set of leadership competencies that are more or less common to any company, such as people and communication skills.**
- **How well the person operates within and sets an example of Colgate's unique culture**

Other Indicators of Leadership Potential

Beyond the essentials, other criteria that are observed in leaders in any business include:

- **The capacity and inclination to see things in a broader context.**
- **Drive and aggression are common criteria and are conveniently easy to observe even in very young people.**
- **The ability to analyze and synthesize large amounts of data and make a decision based not only on the data but also on intuition.**
- **The passionate quest to continually learn and grow.**
- **Integrity to tell the truth at all times fearlessly and without weighing the consequences.**

and value system.

- **How well the person produces results and *how* those results are achieved.**

Colgate's talent identification process emphasizes early identification of high-potential leaders. Once identified, Colgate proceeds to treat them as high-potential leaders, and is consistent and clear about the earmarks of leadership potential. The challenge, according to Marsili, is to have really good mechanisms to ensure that no mind is wasted and to stay current on people's abilities, aspirations, limitations and capabilities.

Focusing on the Essentials

One way to think about the raw talent of a business leader is to think of two strands of a helix: people acumen and business acumen. The beginnings of these strands are pretty much in place in individuals by the time they reach their 20s. After that, we can test someone's people acumen and business acumen and give them opportunities to expand them. But we don't yet know how to implant them in mature people who lack them entirely.

• ***A leader with people acumen*** selects the right people and motivates them, gets them working well as a team and is able to diagnose and fix problems in coordination among groups of people. They also exhibit an enthusiasm for selecting people who are better than they are, and then using those subordinates to lift the organization and themselves to new levels of accomplishment.

• ***A leader with business acumen*** has the intuitive ability to comprehend the total picture of a business, how it makes money and how profits and losses interact with the company's balance sheet. With practice, any leader can improve his or her business acumen, but some leaders are naturally better at it.

Diversity and DNA

Companies will want to go beyond general criteria to particular qualities, skills and even attitudes relevant to their business. Doing so will give them an edge by differentiating themselves from other companies. The challenge is to define what your company considers important in its leaders and to ensure the criteria are up-to-date and anticipatory of where the company will be in the near and distant future.

Every company's leadership pool has a "DNA," or commonality in the basic makeup of its leaders. The best companies are conscious of their DNA, not only to ensure that they choose leaders who mesh with it but also to shape it and intentionally differentiate it from the competition. They design into their leadership selection criteria precisely the characteristics, skills and capabilities they want emphasized.

Where to Find High-Potential Leaders

The search for high-potential leaders begins with recruitment. Avoiding common errors — identifying as leaders people who really aren't, or missing great leaders in your midst — means continually revisiting the talent pool, removing those whose talents didn't materialize and allowing for the possibility of adding leaders whose talents have suddenly come to light.

Recruiting potential leaders from other companies is important to keep the talent pool diverse and flexible. Although an influx of outside talent can disrupt an organization's cohesiveness, the value of new ways of thinking makes it worthwhile to bring in outsiders as leaders at several levels below the CEO.

The military is another source of leadership talent. Its leadership training is second to none. People who have been through it and seem to have a natural interest in business can be a good bet. ●

Customizing Leaders' Growth Paths

The Apprenticeship Model requires companies to be creative in custom designing talent tracks that take each leader wherever he or she needs to go to unleash his or her talent quickly. You are not only handpicking your leaders, you're also handpicking their jobs so that each assignment provides the right kind of developmental challenge for that leader to grow as fast as possible. Bosses must be willing to take some calculated risks by

giving leaders jobs that stretch them.

High-potential leaders often grow in spurts, and their talent tracks must allow for that kind of expansion. They should be given jobs that are several notches up in scope and complexity and that force them to exercise the mental skills to find a clear path through it.

When is a leap too great? When it puts the leader or the business at undue risk. Companies must be sure they can withstand the consequences if the leader doesn't rise to the challenge.

Defining the Growth Path

The search for the right job for each leader turns conventional practice on its head. Most companies try to find the people for the jobs. In the Apprenticeship Model, the job is chosen, redesigned or even created specifically for each leader. The content of the jobs you give your leaders is the crucial difference in whether you're developing them or just moving them around.

Profit-and-loss (P&L) responsibility early on is crucial for leaders to develop their CEO nucleus. Any staff people who have leadership potential should get it. Some staff people rise high in their organizations through a functional silo, and only when they're near the top do they catch the eye of the CEO or board. By then it's almost too late to put the person in contention for a senior leadership position. This is why so few CEO candidates emerge from information technology, human resources, finance, legal and strategic planning.

Being able to handle the myriad challenges of the global environment is an imperative for many leaders today, so leaders must expand themselves beyond a single culture. It's not good enough to have direct reports in other countries. Running a business in China from New York is a completely different experience from living in China while running the business.

Not every leap in learning requires a new job. Some functionally organized companies provide important experiences by putting potential leaders on task forces. WELLPoint Inc., one of the largest administrators of health plans in the United States with some $50 billion in annual revenue, tests young high-potential executives in their regular jobs by assigning them to projects that are part of the company's ambitious "2010 Plan." Those projects tackle a range of real company issues, some of which involve the P&L. The leaders assigned to them have mentors, and an HR person administers the program.

Clearing the Path

No matter how well you plan for your promising leaders, you're bound to run into a variety of organizational and practical difficulties. You'll have to be creative in finding ways to keep them from blocking the leaders' progress.

One of the most challenging tasks may be to unblock a job held by a leader who has done his or her job well but is no longer growing. These situations must be handled carefully because every leader must be valued and treated with dignity. You can ease the disruption by making sure they, too, get jobs in which they can discover new talents and expand.

You may encounter resistance from bosses of high potentials, and you have to understand its root. Some bosses resist having a rising leader assigned to them because they don't want to take a risk on someone whose skills and capacities are untested, or they may be afraid of being outshined by an ambitious and aggressive person.

Resistance can't be tolerated. The deployment and development of leadership talent needs to be a corporate priority that every boss understands and acts on. It is a core value. Anyone who doesn't subscribe to it doesn't belong in a boss's job.

Freedom to Fail

Whatever the specifics of the talent tracks you design, they have to give your developing leaders the chance to make their own success — or not. The learning experience won't be complete, and the test won't be valid, if a leader isn't free to fail. The environment you put leaders in must meet three criteria:

- **The freedom to set ambitious targets for themselves that redefine their job.**
- **The latitude to lead the team they inherit in whatever way best suits them, making their own judgments about people and motivating them to achieve goals.**
- **The freedom to determine how best to balance the business' short-term and long-term needs.**

Failure is not necessarily the end of a leader's talent track. Many people who fail in one job flourish when they are reassigned to another that better fits their talents and skills. ●

The Crucial Role of Bosses

The Apprenticeship Model makes every boss a mentor and coach who invests energy and care in helping develop the high-potential leaders who report to him or her. Bosses are the eyes and ears of the company, gathering information about the leader, to answer a crucial question: What learning is in fact taking place?

Periodically the boss and others should take the time to pool their observations of the leader's *actions, decisions* and *behavior.* From that, they can crystallize where each leader is on his or her growth trajectory.

The point is to keep leaders focused on the one or two things they must deliberately practice so that their personal traits get honed and their skills get tested and hopefully expanded. This is the process of concentric learning. The more frequent the *deliberate* practice, the more the capabilities expand and the deeper the core capability becomes etched.

Deliberate Feedback

When feedback is deliberate, leaders sincerely appreciate it. In fact, they actively pursue it, and the whole relationship between the boss and the leader becomes more open and trusting. Communication gets more honest and spontaneous, and the learning and self-correction happen faster. If the leader doesn't listen and adjust, he or she can no longer be considered to have high potential.

Deliberate feedback should be a natural part of the monthly and quarterly operating and budget reviews bosses already conduct. The boss should ask questions and get into specifics to know how things are progressing, why and how the leader is handling situations as they arise — all crucial for execution.

Every up-and-coming leader benefits from deliberate feedback, but for high potentials, it is essential for maintaining their momentum. Once that is understood, it should be clear why bosses are the best people to provide it and why outside coaches so often disappoint. They are brought in for their skills in the psychological and behavioral aspects of leadership, but they're not in a position to see the leader in action in a variety of situations.

Keeping Track of a Leader's Growth

Every boss should have a routine to periodically take pause and consider the progress of each direct report. For some bosses, once a quarter is sufficient. Those who make a habit of it look forward to those moments, just as they eagerly track their quarterly numbers.

This should be in addition to performance evaluations and other kinds of numbers-driven assessments. Most people think evaluations based on numbers are the ultimate in objectivity, but numbers alone can be misleading. Evaluations that rely on them are often shallow and sometimes even dangerous when ethics and corporate culture are so important to the long-term health of a business.

Organizations should help the boss with an annual "leadership recalibration session" that combines the observations and thinking of several people who know a leader and whose sole purpose is leadership development. These sessions should be designed and conducted to allow all dimensions and nuances about the person to emerge. This is a way to correct misjudgments by the boss and prevent the wrong leaders from moving up the leadership trajectory.

Dialogue as the Principal Tool

The key to developing an accurate and nuanced calibration of a rising leader is periodic facilitated dialogue among several people who have observed the leader in action. The Apprenticeship Model elevates those conversations beyond gossip while allowing people to discuss each leader in everyday language, unconstrained by the predefined competencies some companies use.

A dialogue session should involve at least four people who have direct knowledge of the leader, including the person's boss, several of the boss's peers and preferably leaders at a high level. HR should moderate the dialogue.

The focus should be on getting the group to dig deeper to pinpoint the positives. There will be a tendency at first for the group to find flaws, but that is a waste of time. It is the positives that make the person a valuable leader. If the positives aren't there, the negatives simply don't matter. ●

Managing Apprenticeship Systematically

Every company has a formal routine for collecting financial data and sorting, shifting and analyzing them. These systems give managers at all levels and the board of directors consistent and integrated data for making decisions based on hard facts. But few companies systematically compile comparably useful information about their leadership resources.

Colgate-Palmolive's Successful Process

Can it be done? Absolutely. Colgate-Palmolive, for one, has mastered such a process and is enjoying tremendous success using it. Colgate measures and manages its leadership talent as carefully as it does its market share, finances and brand equity. It also frequently assesses its specific leadership needs to identify any gaps between the leaders it has in the pipeline and its emerging needs.

How does Colgate execute these tenets? It begins with methodologies and mechanisms that are uniform across the globe, ensuring the same process for identifying and developing leaders is used at every location and encompasses all functions — not just line and general managers.

The criteria are explicit, so everybody has the same

concept of what leadership potential looks like, but they are not set in stone. Colgate senior management constantly fine-tunes the mix in light of new requirements to meet competition, consumer tastes, shifting channels of distribution and changing modes of communication to consumers in the more than 160 countries in which the corporation operates.

The Colgate-Palmolive Model

Colgate begins at the country level. At least once a year the leadership team devotes one or two days to succession-planning discussions. These discussions result in updated training and development plans for each person. All the information goes into a database and generates a profile of a person that shows in a single page their personal information, work history and education, performance ratings, strengths and development needs. The database also includes recommendations for the leader's next two moves, recommendations for developmental actions and even the names of potential successors for his or her position.

Armed with all that information, a boss attends an off-site meeting prepared to discuss his or her people, get input from colleagues and make some commitments. A typical result is that one person may be tapped to go to Colgate's New York headquarters. When the off-site session ends and people have committed to the agreed-on developmental actions, the HR department takes the responsibility for ensuring that they happen. This provides follow-through.

The same process occurs each year at the geographical division level — North America, Europe, Latin America, Asia, Africa and the Middle East. The key difference is that global high potentials become possible successors for key regional and global positions. Because those kinds of moves involve many stakeholders, the discussions are more complex.

The final step in the process occurs at the board level where a personnel and organization committee gets presentations from the senior team about critical operational leaders who have a shot at the top jobs. The committee makes sure that Colgate has a good balance of talent around the world by function and geography.

Rewards and Recognition

Rewards and recognition are an important part of Colgate's talent development process. Colgate ensures that their high-potential leaders are compensated at rates above the marketplace average and they use special recognition tools, such as providing them with stock ownership when they otherwise wouldn't be eligible.

Colgate periodically rewards top-performing leaders at all levels by having them participate in what it calls "visibility programs." In the first five years of their career, for example, young leaders might be invited to participate in a "Leadership Challenge" that brings high potentials from all over the world to New York for a week. ●

Choosing the CEO Who Is Most Likely to Be Successful

The Apprenticeship Model goes a long way toward deepening the pool of potential CEOs. But when a decision is imminent, the board must use tools and techniques designed to delve into the specifics of the CEO job with great granularity and sharp focus. The board must take hold of the selection process and approach it with a fresh and objective eye.

Three fundamental principles should guide the CEO succession process:

1. Recognize that *the CEO's job is quantitatively and qualitatively different from all other jobs.*

2. Recognize that *no two CEO jobs are alike.* Every company has unique needs and opportunities that the CEO must recognize and act on. The concept of "fit" is paramount.

3. Recognize that *CEOs are people, complete with their share of human flaws.* The key is to understand the candidates in their entirety, to pinpoint the talents that make a particular leader stand out as the best possible person to lead the business at that time. Boards have to draw out the best thinking of all their members and make this judgment collectively.

Determining the CEO Criteria

Nothing is more important than pinning down the right criteria for a new CEO. Many boards go wrong by relying too much on the givens, which are the usual content of generic job descriptions and search criteria. Boards have to dig deeper into their company's situation, pushing and probing, bringing in outside experts if necessary, until they have a clear picture of what a new CEO must do well. They need to iron out any underlying disagreements about company direction or gaps in understanding the business and its external context. They cannot stop until the board has boiled it all down to the three or four specific skills and abilities that are critical. These are the non-negotiables.

Helping the New CEO Succeed

Becoming a CEO is a big leap for leaders. The CEO must take hold of the job within the first three to six

months, and the board members should provide whatever help they can, whether it's coaching from a seasoned director or concrete suggestions for how to complement the CEO's expertise.

Boards should be sure their new CEO is seeking and listening to their input but not completely deferring to them either. Consider, too, the impact of letting the outgoing CEO retain a board seat. Generally, this arrangement inhibits the successor.

Those Who Are Not Called

If there are other inside candidates for the CEO position, the board and the outgoing CEO may try to mandate that the new CEO take steps to retain the contenders. This is a mistake. If they wish to stay, fine. But the new CEO should be free to assemble his or her own team and not have to go through needless turmoil because his or her former competitors are being forced on him or her. It is almost certain that the other contenders for the CEO job will leave the company within a year or two no matter what the new CEO does, if only because headhunters will hotly pursue them. ●

Adopting the Apprenticeship Model

Only a few companies have in place a leadership development process that follows the tenets set forth in this summary. But an increasing number have realized the need for comprehensive leadership development processes and are in various stages of executing them. The Apprenticeship Model does not demand that companies follow it in every detail; it's the principles that ultimately count.

Any company attempting to build a better leadership development program can learn from those who have gone before. Your efforts will almost certainly differ in some fundamental ways. But you will surely face some of the same problems that others encounter. Some will be philosophical, some will be cultural and some will be merely mechanical. ●

What Can a Leader Do?

Individual leaders can and should embrace the Apprenticeship Model — even if their companies don't. Those who believe they have leadership potential that is undiscovered should take charge of their own learning and development. They should make their own luck.

The leader can create his or her own luck by figuring out when and where opportunities lie. If not in your current company, then search for a place where your talent can be used, recognized, encouraged and developed.

The search, which will continue throughout your career, is a three-part undertaking:

• **Begin by identifying what your potential is.** This requires introspection and the utmost intellectual honesty.

• **Find ways to nurture that potential.** You need to continually search for the job in which your talent and potential are likely to be best deployed.

• **Be aware of those things that can derail you as your potential develops.**

Some people may at some point have to face the realization that despite their aspirations to leadership, they really don't have the raw talent for it. It may take some testing and some brutal honesty to determine whether leadership is truly the best path for you, or whether your natural gifts should take you in a different direction. Remember that leadership is a job, not a badge of honor. ●

When Is It Right to Choose a CEO From the Outside?

Most companies would prefer to select an inside candidate for CEO. On the other hand, there are times when an outsider has a clear edge, when, for instance, the company needs:

- A turnaround (think Alan Mullaly at Ford).
- To restore credibility (Ed Breen at Tyco).
- To undertake a culture shift (Randy Tobias at Eli Lilly).
- A radical change in strategic direction (Fred Kindle at ABB).

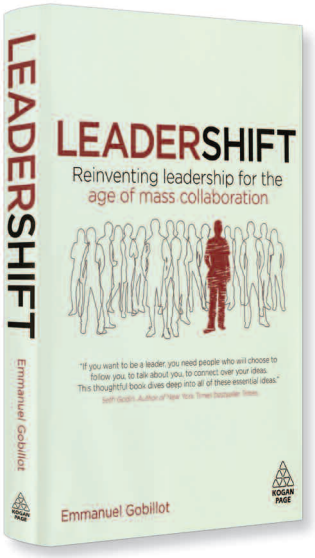
Leadership: Strategies

Leadership

Reinventing Leadership for the Age of Mass Collaboration



by Emmanuel Gobillot

THE SUMMARY IN BRIEF

The age of mass collaboration is challenging the very nature of leadership, yet it also offers unprecedented value for leaders who know how to lead in this new environment. *Leadershift* describes how to adapt traditional leadership roles, and presents the tools necessary to embrace and succeed in this new age. It offers a new business model that will allow leaders to engage successfully with communities, recognize and develop talent, and win customer loyalty.

For decades, leaders have been told that success depends on experience, expertise, efforts and power. But, today, four critical trends are making these variables irrelevant: the demographic trend, the expertise trend, the attention trend and the democratic trend. These critical trends are turning the world of work on its head. When people work collectively, there is no rulebook. The time has come for leaders to question every move.

Leadershift explores the world of mass collaboration — the collective actions of large numbers of people working independently of organizations — and what it means for leaders.

Using examples and ideas from a number of fields, author Emmanuel Gobillot rewrites the rules of leadership. His conclusion is as stark as his solutions are practical — adjust your mindset or become irrelevant.

IN THIS SUMMARY, YOU WILL LEARN:

- Who makes the decisions in a virtual world.
- How an online community effects change.
- What social networking means for the way we solve problems.
- What the online world can teach us about the offline one.
- How mass collaboration will change the way you lead.

Introduction

The social, collaborative and virtual networking phenomena have far deeper implications than just changing the way we do business. They are changing business itself. Business is no longer hierarchical (as it still remains in the main today) nor is it personal (as we were keen to suggest in the 1990s). Mass participation makes business social. Mass collaboration makes it communal. This is changing the nature of roles.

While sought and welcomed, leadership in communities is intrinsically linked to narrative, task and contribution rather than power, role and accountability. Therefore, by understanding the communal landscape we can understand the nature of the leadership requirements and start to develop new models of leadership effectiveness.

Mass Participation

Leading in mass participation requires us to don our Indiana Jones hats and become social anthropologists, focusing on the communities that are created, rather than the psychology of any one individual who contributes to one or more of them. Mass collaboration is indeed a herd phenomenon where focusing on the masses pays off.

The aim of leadership will always be to secure engagement, alignment, accountability and commitment. What is changing is the way in which we will achieve these.

The Day of Reckoning

Every challenge we face is met with a call for leadership. We have a thirst for people who can meet the only test of leadership — make us feel stronger and more capable. Our value and, ultimately, our survival as leaders, reside in our ability to meet the challenges dictated by four fundamental trends that make up mass collaboration. The real difficulty will be our ability to shift our emphasis when some of the things around us remain the same. The real challenge of mass collaboration is that it is practiced with tools that do not necessarily facilitate it.

Engaging in conversations that will help leaders paint a viscerally desired picture of the future is the way we will get over our reluctance to change. Of course, it will be a challenge to adjust our behavior when most of the structures and systems we operate under reinforce the status quo. But it is a challenge we must face, for if we don't, taken together, these trends spell the potential death of leadership — literally. We must face the four trends that create the acronym DEAD:

- **The *D*emographic trend, which will make your experience irrelevant.** Multiple generations, with multiple socio-cultural backgrounds, are now working alongside each other. Each brings with it its own hopes, fears, expectations and experiences, which the others don't understand and cannot relate to.
- **The *E*xpertise trend, which will make your knowledge irrelevant.** The expertise that drives organizational value increasingly resides in a network of relationships outside the managerial reach of the organization.
- **The *A*ttention trend, which will make your efforts irrelevant.** A collection of social and informational networks is coming to replace organizations as a source of coherence and cohesion for stakeholders.

line reports, part-time employees, casual labor and networks of associates have acquired an equal voice at the organizational table, outside a leader's span of control.

These shifts cannot be stopped. But they are not to be feared as they offer leaders new, efficient and effective sources of value generation. ●

The Demographic Trend

Two elements make up the demographic trend. The first element is the never-ending war for talent and, in particular, a new front opening in that war — the battle for leaders.

While it is unlikely that the demand for leaders will decline, it is certain that a healthy supply pipeline is necessary if you consider that 50 percent to 75 percent of senior managers will be eligible for retirement by 2010. Replacing them is critical. It will require a fundamental rethink of leadership development.

The Clash of Experience

The second of the two elements that make up the demographic trend is the clash of experience.

Think about it this way: What we learn shapes our experience, which, in turn, informs the way we lead. Leaders are the products of their pasts. Their behavior and, as a result, the type of leadership they offer is a combination of who they are as people and the situations they find themselves in. As geographical and socio-cultural differences enter the workplace at an unprecedented rate to fill the leadership gap, fewer people will be able to relate to their leaders' demands. This difference of experience, when viewed through an organizational lens, quickly becomes a clash of experience.

No longer can leaders' experience help them comprehend others; nor can others' experience help them understand the leadership leaders seek to provide. As this trend continues, a leader's experience runs the risk of becoming irrelevant, if not altogether counterproductive. This problem is compounded by the fact that along with socio-cultural differences, we are also experiencing generational trends in organizations.

Generation Me

Thirteen years after she first started to research generational differences, Jean M. Twenge published *Generation Me*, which, to date, has to be the most thorough exploration of the Generation Y phenomenon.

Twenge had enough data to look at the behaviors of students of the same age throughout the 1950s, '60s, '70s, '80s and '90s. Armed with enough data points to make a pointillist pale with envy, Twenge exposed the real differences between generations.

This new generation, brought up with an idea of entitlement and an unrealistic sense of possibilities, is less likely to accept your leadership than any generation in the past. Having discovered that their dreams are unlikely to become reality, members of this generation are also more depressed and unfulfilled than their older siblings. Imagine a workplace where you have up to three generations from numerous continents with multiple socio-cultural backgrounds working alongside each other.

This demographic trend means that leaders will no longer be able to rely on their experience to lead. ●

The Role of the Leader

The role of the leader is to foster an environment where the conditions are right to attract a thriving community. Leaders must shift their emphasis to the fostering of social engagement by valuing conversations that they otherwise might have deemed wasteful and inefficient. To be worth following, leaders will need to work primarily on the contributions they make, rather than the direction they give, to the community. This requires them to develop enough executive maturity (i.e. being comfortable in their own skin) to be able to see mass participation as an opportunity to create value rather than a threat to their existence.

The Expertise Trend

Today's technology is putting the world of co-creation on steroids. What has become known as "distributed co-creation" — the bringing together of talent from numerous sources outside the organizational boundaries — is only in its infancy but is growing at an exponential rate.

Threadless, the company behind the T-shirt that reads "This was supposed to be the future so where is my jet pack?" relies on its users' community to generate designs that other members vote on and eventually purchase.

Distributed Co-Creation

Open source software was perhaps the best-known precursor to the developing movement. As more companies reconfigure their supply chain to rely on expertise beyond their organizational walls, they will increasingly

come to rely on a happy band of amateur experts (many call them "prosumers," for professional consumers). Already, while traditional Web sites are growing by about 20 percent a year, user-generated media sites are growing at about 100 percent a year.

The drive for co-creation illustrated by user-generated content is relentless. The often quoted example of Wikipedia, which in fewer than seven years has grown to be the world's biggest encyclopedia with more than 6 million articles in more than 250 languages, is but the tip of the iceberg. The very act of creating a product or service is no longer the preserve of a closed organizational system of experts. As the world reconfigures the make-up of expertise, that of individual leaders could become irrelevant. ●

The Attention Trend

As human beings, we are bombarded by messages and information. Unable to make sense of them all, we look to communities to help us focus. We rely on a few brands. We read only a couple of newspapers. We follow the same blogs. This selectiveness is our way of cutting through the information clutter and the demands on our attention.

While organizations used to form part of that network of attention, a collection of social and informational networks is coming to replace them as a source of coherence and cohesion for people. The reason is simple: They replicate more closely the way we seek engagement than organizations have been able to achieve through their narrow focus on roles, rules and economic incentives, rather than on individuals and their sense of moral and social obligations.

Wasted Effort

As leaders, our role is not only to get people to do something, it is to get them to do more than they thought possible. We want them to allocate their discretionary effort to our cause. Our reliance on roles, rules and economic incentives to achieve these ends has been to the detriment of the moral and social obligations that make us release that discretionary effort. That in itself would not be a problem if we had nowhere else to turn. But, as technology enables the creation of much more targeted communal experience in a way organizations could never replicate, the efforts put in by leaders to win the fight for attention will be largely wasted.

Faced with this trend, some organizations are multiplying their communication efforts. They try (sometimes successfully) to use new channels to reach us. But what the attention trend demonstrates is not so much that we need to be more intelligent and credible about where we find people but, much more importantly, it will shape what we say to them once we have found a place where they might listen. ●

The Democratic Trend

Ikea requires you to adopt as many different roles as there are stages in the somewhat schizophrenic experience of Ikea shopping. You are the interior designer arranging products together. You are the consumer savoring your meatballs. You become the storeroom picker carrying your goods, prior to acting as the transport manager loading stuff into the car.

We are facing the "Ikeazation" of our world. Our economies are starting to look like giant Ikea stores where people go from one role to another depending on their skills, passions — and ultimately demand. The idea that there are such things as employees or customers no longer satisfactorily represents the complexity of the economic activity.

A Complex System of Relationships

An organization is now a complex system of relationships most of which sit outside a leader's span of control.

In the democratic world, leaders are no longer an accident of birth. We can choose whom we follow. We even get to vote whenever we want. In this world, the leader never gets to call the election.

Devoid of positional power, leaders need to find a new way of engaging people. When the social, intellectual and informational capital of an organization no longer sits inside a leader's span of control, democracy takes over.

The Death of Leadership as We Know It

These four trends foretell a world where relationships between followers and leaders will need to be different from what they are today if they are to be productive. Yet, for every worrying facet of change there are opportunities. While this work is making the way we lead today irrelevant, it is also a world crying out for leadership. Taken together, the demographic, expertise, attention and democratic trends spell the death of leadership as we know it, but they do not altogether make the practice of leadership redundant. Our challenge is to understand the communities that will form the new business landscape and the way they are best engaged for the delivery of an economic objective. ●

Pay or Play?

The demographic trend coupled with the attention shift creates a direct threat to control. You cannot control what you do not understand or what doesn't want to be controlled.

The combination of the expertise trend and the democratic trend means that the legitimacy of structures (which relies on either knowledge or willing adoption of roles, and preferably both) is no longer present. The rejection of current organizational forms forced by the demographic and attention trends mixed with the loss of leaders' positional power as a result of the democratic and expertise trends threatens the order necessary for success.

Two Insights

The four trends indicate that the coordination of activities we have so far achieved through hierarchical means is not efficient and that the means through which we achieve coordination will need to change. There are two insights we can gain from the trends themselves.

The first is that the coercion of individuals toward an organizational cause (however cleverly articulated and positively intended) is not sustainable. Commitment cannot be engineered. The "Ikeazation" of the economy demands a "build it and they will come" mindset rather than a "lie cleverly and they will buy" capability. Communities do indeed self-regulate, even without centralized control. A complex interaction between transactional involvement and social engagement emerges, which no organization can or should try to regulate.

The second is that the very tools used to create the coordination of activities and the engagement of resources have had their legitimacy rooted in the institutional character of the organization. As these institutions cannot survive, we will need to find a new set of tools.

Beyond Leadership

The trends are changing the way organizations create. The new units of analysis are not organizations (in the sense of structurally organized), but rather companies (as in groups of companions). Does that mean that leadership will be irrelevant? Are we going toward some anarchical, communal days where no one is in charge (with the associated chaos we have all been taught to fear anarchy leads to)? Well, the way we have led might be irrelevant but this is not true of leadership altogether. We are living beyond the days of leadership. ●

Leadershift

"Leadershift" is about facilitating a community's engagement need. It is that new "leadershift" modus operandi that is defined as:

> *A type of leadership, non-hierarchical in form, that facilitates the collaboration of a self-selected group, of which the leader is an integral part, in the generation of a narrative that builds and sustains a valuable and co-created outcome.*

Blurring the Boundaries

Where "leadershift" differs from leadership is in its search for a truly dynamic, social and co-created form of leadership. This is leadership that blurs the boundaries between leader and follower and places the importance of culture facilitation over that of strategy articulation as the central focus of its efforts.

"Leadershift" actions and behaviors are only legitimate in so far as they are mandated by the community itself. To make a call because no one else can make it is only directive if the community never recognized you as being able to make the call. When the community asks you to arbitrate its decisions, a directive style becomes a helpful style.

Leadership vs. 'Leadershift'

In "leadershift," reputation rather than position makes the leader. What creates a reputation is the commitment the leader has shown to the community rather than the effectiveness by which they have made it work for their benefit. That kind of power is interdependent. The leader is only as strong as the community and the community becomes stronger through the actions of its leader. The difference between current organizational positional power and this communal, social power is that both parties need to agree and have the ability to review the contract. ●

Shift 1 — From Clarity to Simplicity

Simplicity is about realigning participants' intellectual and emotional outlooks. It is a combination of two elements: simplification and coherence.

A leader must learn to distinguish between what matters and what doesn't to the engagement of a community. Our simplification reflexes have become so sharp that, in our search for efficiency, we risk eradicating some important elements of the community's strength.

We have all witnessed how changes in processes and structure (even if as a result these are becoming simpler)

tend to decrease, rather than increase, levels of understanding. We have all seen employees trying to figure out who and what matters once a new structure is announced. So, while the simplification process is a worthwhile thing to do, it is not the only thing that matters to increasing engagement. What we ignore when we put our focus solely on simplification is the interplay between simplification and our second element of simplicity — coherence.

Coherence

Coherence is the ability to highlight the interdependence of a system (e.g. a car is a complicated system of parts, but a coherent mode of transport).

The role of the leader must be to deploy strategies that can help bring different elements together to build a coherent whole. The leader becomes a primary agent in helping the community stage discussions on what it stands for. The role of leadership is to help communities articulate the problem they are looking to solve.

What is important to us, as leaders, is not only that people choose our network to invest their time, money and efforts, but that they do so in a way that is beneficial to the organization. We call it alignment. Without it we fear that, instead of getting people involved in a concerted co-creation effort focused in one direction, we may end up with a multitude of unfocused, wasted enthusiasm. ●

Shift 2 — From Plans to Narratives

If simplicity is about generating the energy that propels a community forward, then narrative is the vector that helps that community move on a coherent path. A narrative helps that community in two ways. First, it clarifies the role of mass collaboration in a business, and second it helps participants align their actions to the delivery of value.

The second building block to any organizational effort, after engagement, is alignment. Leaders must answer two critical questions:

- *How do I ensure that community members understand their involvement in the social process (i.e. how do they best contribute)?*
- *How do I make sure that people stay aligned behind the mission?*

Both of these are normally answered with a plan. But as plans will invariably become obsolete in the face of change, it is better to have a community able to make sense of the evolving environment and respond appropriately to changes. This is achieved through narrative environments that enable free exploration of options while retaining an intact notion of the overall mission.

The role of the leader is to facilitate the narrative — helping participants and the community define who they are, what they aspire to and how they hope to get there.

Tone

The role of the leader is not to design plans, but to help the organization construct a narrative by nurturing the narrative environment. It sounds a bit more woolly but it's much more effective. Nurturing a narrative environment is about helping the organization acquire a tone.

The tone of the organization is the type of story it will tell. Is the story of your department, your function, your organization one of conflict or is it a story of change and cooperation? To nurture a tone forces a leader to understand the key moments in organizational life and frame these in a way that clarifies their significance. ●

Shift 3 — From Roles to Tasks

It is not for leaders to struggle to reconcile the conflict between the organizational role and the individual's self-image. What the leader is there to do is facilitate the creation of coherence by letting community members create that logic for themselves while reinforcing the need of the community. The best way to do this is to focus on clear task definition.

At this stage in the argument we should have already secured both the engagement and the alignment of any member of the community. We have the simplicity and the narrative we need to transform the organization in a company. Tasks are the critical incidents that move the narrative along. Of course, there is no denying that the organization needs roles; after all, roles are its foundations. However, the reinforcement of the social roles of individuals born out of their self-image can only be accomplished through tasks. Therefore, it is a change of emphasis in a leader's dialogue that needs to take place.

When tasks are well defined, time bound and necessary, they form the words in the company's narrative.

Two Types of Tasks

The fact is that in order to fulfill their self-image, people will choose to complete tasks that make the community sustainable. Some of these will be what we may want to call accountability tasks (i.e. going to the immediate fulfillment of the organizational purpose) while others might be best described as maintenance tasks (i.e. tasks that are contributory to

the fulfillment of accountability tasks).

It is crucial to understand that, in mass collaboration, the leader's time is better spent helping individuals find the opportunities to reinforce their self-image while preventing the organizational roles derailing their strengths. The reality is that no one who truly loves what they do will ever reject the accountabilities necessary for their commitment to the company's success and sustainability.

Shift 4 — From Money to Love

When leaders ask for commitment, what they are asking for is devotion to the organization. They look for people who will join the organization with the aim of staying and caring enough about it to ensure that their contribution is maximized.

Commitment is about putting the organization first. In practice, it means staying as long and working as hard as is needed for a task to be accomplished. It means showing flexibility to take any extra steps, whether planned or not, to ensure expectations are exceeded. Underlying these demands are two distinct ideas that define commitment.

Showing Dedication

The first is that commitment is about making a pledge to conduct a specific undertaking. Being committed, whether in our private or in our work lives, is about showing dedication. To be real, a commitment needs to be made.

The second idea underpinning the notion of commitment is the idea of obligation. A commitment is a felt obligation to do something irrespective of how much we may want to do something else. This is a critical idea as it leads to the sustainability of the relationship and highlights the fact that commitment and engagement go hand in hand. For commitment to exist, both parties have to willingly relinquish some of their freedom to act.

Commitment Cannot Be Bought

To secure commitment, leaders must look at their organizations through two new, non-financial lenses.

The first lens is to realize that both parties involved in the relationship have to love what they do. To be successful the organization needs all involved to embrace their tasks and identify themselves with the narrative.

The second lens is that a social, rather than economic, incentive can be created by focusing on the community rather than the individual. What matters to the functioning of our communities is not what motivates individuals but rather that they direct that motivation to making the community stronger.

Love Enters the Corporate Consciousness

In the late '90s, Daniel Goleman published a book that would popularize the term "emotional intelligence." The basic premise of emotional intelligence is that to be successful, leaders need to both understand and manage their emotions so as not to derail their intent.

In 2002, Tim Sanders released his first book, boldly titled *Love Is the Killer App*. In it, he argues that business success depends on three key factors: knowledge, networking and compassion. He goes on to show how, by becoming "lovecats" (sharing knowledge, becoming a business matchmaker and building people up), anyone can achieve the impossible.

The year 2005 gave us "Lovemarks," the new marketing technique introduced to the world by charismatic Worldwide CEO of Saatchi & Saatchi, Kevin Roberts. Following Sanders' example, he introduced another three-dimensional model, suggesting that by using Mystery (i.e. great inspiring stories), Sensuality (appealing to all the senses) and Intimacy (showing empathy and passion) organizations can do something that fads and brands can never sustain — command both respect and love.

The Elvis Fallacy

In 2002, Junkie XL remixed a song first recorded by Elvis Presley in 1968 and used in one of his movies, *Live a Little, Love a Little*. The single went straight to No.1 in more than 20 countries. "A Little Less Conversation" became an anthem that was used in the soundtracks of movies from *Bruce Almighty* to *Ocean's 13*.

It also became a favorite line for journalists and commentators to use every time they were dissatisfied. Politicians of all persuasions were asked for "a little less conversation and a little more action." Executives spanning the entire economic spectrum from the health to the financial sectors were directed to have "a little less conversation and take a little more action."

But if journalists saw the resurgence of the song as an opportunity to capitalize temporarily on its popularity, business leaders should have recognized it as the best articulation of one of their most entrenched and mistaken beliefs — actions speak louder than words.

Social Engagement Is Not a Sequential Process

That executives have harbored that belief is not surprising — transactional involvement is built on actions. Create clarity, communicate a plan, hold people accountable and reward appropriate outcomes. The sequential nature of the process reinforces the belief that doing something to others is the one sure way to succeed. On the other hand, social engagement, as we have seen, is not a sequential process.

Simplicity, narratives, tasks and love reinforce each other. So, at the very least, the "doing" part of leadership needs to be more complex, more refined, more interconnected and more holistic. But the fallacy that organizations suffer from a "little too much conversation and not enough action syndrome" does not simply rest on misguided beliefs about the type of actions to take. It is born out of a failure to accept that words and actions are, in fact, intrinsically linked. There are two important aspects to this.

Words Predict Actions

The first is that words can pretty much predict the nature of the actions to be taken.

We know that our moods are contagious. We can feel how the atmosphere in our workplace changes as the mood changes. This happens because of the words we use and the attitudes we display. Clearly, our words and our actions, and, by extension, the actions of others, are not disconnected in the way conventional managerial wisdom would have it. Words speak at least as loudly as actions.

The second element we need to consider in order to put the fallacy to rest is our belief that actions and conversations exist on two separate continua. The fact is that there cannot be efficient actions without effective conversations.

Breaking the "Elvis Fallacy" requires us to start by valuing what we have and, together, imagining and designing what we are imaginative enough to envisage.

Simplicity, Narratives, Tasks and Love

There are four steps that will prove crucial in developing the strengths and resilience leaders will need to foster simplicity, narratives, tasks and love in their organizations.

The first is to learn to do nothing. The focus of "leadershift" is not on what to start or do but rather what to stop.

The second step is to contribute to the narrative. Narrative ownership is distributed through the system rather than owned by the leader, so while it is legitimate (and recommended) for the leader to contribute, that contribution is in no way superior to the contribution of others (unless made as a result of a demand on the leader by the community).

The third is to build personal reputation. To be able to navigate through the mass collaboration effort, leaders need to have a solid reputation. While reputation is underpinned by an individual's behavior and capabilities, it is ultimately accorded by community members.

Finally, the last step is learn to love what you do. If we refocus away from role to task and learn to embrace our strengths and passions rather than our measured contribution it is likely that we will find more energy. ●

Concluding Thoughts

In his book *Wind, Sand and Stars*, author Antoine de Saint-Exupéry wrote, "What saves a man is to take a step. Then another step. It is always the same step, but you have to take it."

The DEAD trends do *not*, in any way, diminish our yearning for leadership. We want to follow. We want to be inspired. We want to be led. This is not because we are weak or paralyzed by fear, nor because of some deficiency that leaders need to fix. Instead, it is because we want someone to typify the changes we wish to make. We want someone to be the figurehead of a movement we want to drive.

The ultimate leadership challenge is not the erosion of the powers and tools thrust upon us by a turbulent environment. It is our ability to take Saint-Exupéry's first step. We cannot second-guess the future. There is no point looking for a truth that will answer all our concerns. It is not out there. Our job as leaders is to take the first step, without trying to second-guess or fearing what might lie ahead. Our future lies in our ability to march proudly into the future, at some times leaders and at others followers, working together, building on each others' strengths. ●

RECOMMENDED READING LIST

If you liked *Leadershift*, you'll also like:

1. ***The Accountable Leader* by Brian Dive.** Centered around three themes — leadership, accountability and organizational structure — this book explores what it means for managers to be held accountable at every level, and argues that most problems on the job result from lack of accountability.
2. ***Put the Moose on the Table* by Randall Tobias with Todd Tobias.** The former CEO of Eli Lilly and Co. shares his approach to leadership. He talks at length on values, empowerment, success and integrity.
3. ***Leaders at All Levels* by Ram Charan.** Charan takes aim at the current crisis in leadership by offering a new model for succession and development.

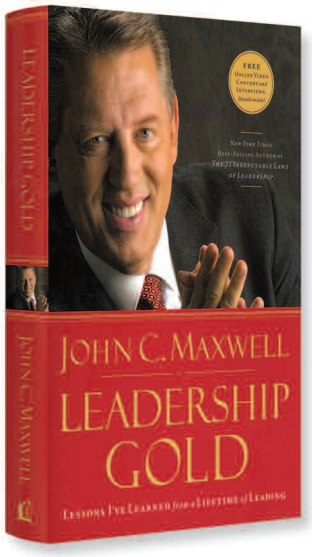
Leadership: Strategies

Leadership Gold

Lessons I've Learned from a Lifetime of Leading



by John C. Maxwell

THE SUMMARY IN BRIEF

Good leadership always makes a difference. It can turn organizations around and positively impact the lives of thousands of individuals. Leadership is not easy to learn, but what worthwhile thing is? Being a better leader pays dividends, but it takes great effort. Leadership requires a lot from a person. It is both demanding and complex. By learning more about leadership you will make a difference in yourself, and you will make a difference in the lives of others.

A leader among leaders, Dr. John C. Maxwell promised himself early in his career that he wouldn't write this book until he was 60. And now it's finally here. Maxwell delivers the most valuable lessons he has discovered during 40 years of leading. The lessons he has spent an entire lifetime mining and now shares are personal and often simple, yet these gold nuggets can have a lasting impact on your leadership style and strategy.

Leadership Gold is for anyone who currently leads or aspires to lead. It offers the best of the best and the tried-and-true insights that no one but Maxwell can deliver. With his signature style, Maxwell comes alongside the reader like a mentor, candidly taking them through what feels like a series of one-on-one leadership lessons. If you are a seasoned successful leader, Maxwell's lessons will serve as reminders and they will help you as you guide potential leaders to also be successful and willing to make a difference.

IN THIS SUMMARY, YOU WILL LEARN:

- How the toughest person to lead is always yourself.
- Why you should not send your ducks to eagle school.
- How leaders distinguish themselves during tough times.
- Why the best leaders are good listeners.
- How the secret to a good meeting is the meeting before the meeting.
- How to create a legacy worth leaving.

If It's Lonely at the Top, You're Not Doing Something Right

There are many people in the world who are willing to give advice on things they've never experienced. They are like bad travel agents: They sell you an expensive ticket and say, "I hope you enjoy the trip." Then you never see them again. In contrast, good leaders are like tour guides. They know the territory because they've made the trip before, and they do what they can to make the trip enjoyable and successful for everybody.

A leader's credibility begins with personal success. It ends with helping others achieve personal success. To gain credibility, you must consistently demonstrate three things:

1. **Initiative.** You have to *get up* to go up.
2. **Sacrifice.** You have to *give up* to go up.
3. **Maturity.** You have to *grow up* to go up.

If you show the way, people will want to follow you. The higher you go, the greater the number of people who will be willing to travel with you.

Much of the Time Leaders Are Not at the Top

Leaders rarely remain stationary. They are constantly on the move. Sometimes they are going down the mountain to find new potential leaders. At other times they are trying to make the climb with a group of people. The best ones spend much of their time serving other leaders and lifting them up.

If you find yourself too far from your people, then you need to change. True, there will be risks. But if you want to be the most effective leader you can be, there is no viable alternative. Here's how to get started:

1. **Avoid positional thinking.** If you are in a leadership position, do not rely on your title to convince people to follow you. Build relationships. Win people over.
2. **Realize the downsides of success and failure.** Extremes in thinking can create an unhealthy separation from others.
3. **Understand that you are in the people business.** The best leaders know that leading people requires loving them!
4. **Buy into the Law of Significance.** "One is too small a number to achieve greatness." No accomplishment of real value has ever been achieved by a human being working alone.

If you're a leader and you feel isolated, then you're not doing something right. Loneliness on the part of a leader is a choice. Choose to take the journey with people. ●

The Toughest Person to Lead Is Always Yourself

To be successful in any endeavor, we need to learn how to get out of our own way. That's as true for leaders as it is for anyone else. Here are four steps that can help you do that:

1. **Learn followership.** Arrogant leaders are rarely effective in the long run. They alienate their followers, their colleagues and their leaders. Learn to submit to another person's leadership and to follow well, and you will become a more humble — and effective — leader.
2. **Develop self-discipline.** To make consistently good decisions, to take the right action when needed and to refrain from taking the wrong actions requires character and self-discipline. To do otherwise is to lose control of ourselves — to do or say things we regret, to miss opportunities we are given, to spend ourselves into debt.
3. **Practice patience.** Leaders need to remember that

the point of leading is not to cross the finish line first. It's to take people across the finish line with you. For that reason, leaders must deliberately slow their pace, stay connected to their people, enlist others to help fulfill the vision and keep people going. You can't do that if you're running too far ahead of your people.

4. Seek accountability. The willingness to seek and accept advice is a great indicator of accountability. If you seek it early — before you take action — you will be less likely to get off track. Most wrong actions come about because people are not being held accountable early enough.

Leading yourself well means that you hold yourself to a higher standard of accountability than others do. Why? Because you are held responsible not only for your own actions but also for those of the people you lead. Leadership is a trust, not a right. For that reason, we must "fix" ourselves earlier than others may be required to. We must always seek to do what's right, no matter how high we rise or how powerful we become. ●

Defining Moments Define Your Leadership

What will determine whether *you* will step forward to successfully meet the challenges *you* face? The determining factor is how you handle certain critical moments in your life. These moments will define who you are as a person and as a leader. The choices we make in critical moments help to form us and to inform others about who we are. Here's why defining moments are important:

• **Defining moments show us who we really are.** They stand out because they give us an opportunity to stand up, be set apart from the rest of the crowd and seize the moment — or to remain sitting with the rest of the crowd and let it pass.

• **Defining moments declare to others who we are.** They put the spotlight on us. We have no time to put a spin on our actions. Whatever is truly inside us is revealed to everyone. Our character isn't made during these times — it is displayed!

• **Defining moments determine who we will become.** They are intersections in our lives. They give us an opportunity to turn, change direction and seek a new destination. They present options and opportunities. In these moments, we *must* choose. And the choice we make will define us. After a defining moment, we will never be the same person again.

Defining Your Moments

Leaders become better leaders when they experience a defining moment and respond to it correctly. Any time they experience a breakthrough, it allows the people who follow them to also benefit. You can choose how you will handle defining moments when they come, and you can take steps to prepare for them. Here's how:

1. Reflect on defining moments from the past. To predict how you will handle defining moments in the future, look at the ones from your past.

2. Prepare for defining moments in the future. Make major choices *before* times of crisis or decision.

3. Make the most of defining moments in the present. With opportunities come risks, but don't be afraid to take them. It is in moments of risk that the greatest leaders are often born. ●

When You Get Kicked in the Rear, You Know You're Out in Front

One of the prices of leadership is criticism. When spectators watch a race, where do they focus their attention? On the front-runners! Few people pay close attention to the racers who are out of contention. Racers who are viewed as being out of the running are often ignored or dismissed. But when you're out front and ahead of the crowd, everything you do attracts attention.

If you want to be a leader, you need to get used to criticism, because if you are successful, you *will* be criticized. Certain people will always find something to be unhappy about.

Never Work a Day in Your Life

Thomas Edison said, "I never did a day's work in my life. It was all fun!"

Following your passion is the key to finding your potential. You will not achieve the latter without pursuing the former.

Passion is an incredible asset for any person, but especially for leaders. It keeps us going when others quit. It becomes contagious and influences others to follow us. It pushes us through the toughest times and gives us energy we did not know we possessed. Passion is a real difference-maker. It separates the extraordinary from the ordinary.

The greatest job is one in which you're not sure where the line is between work and play.

How to Hold Up Under Criticism

Since all leaders have to deal with negativity and criticism, regardless of position or profession, it's important for them to learn to handle it constructively. The following four-step process has helped many leaders deal with criticism:

1. Know yourself. (This is a reality issue.) Many times, when a leader is being criticized, it's really the leadership position that prompts the negative remarks, not the individual leader. You need to be able to separate the two, and you can do that only when you know yourself. If a criticism is directed at the position, don't take it personally.

2. Change yourself. (This is a responsibility issue.) People can change for the better only when they are open to improvement. For that reason, try to maintain the right attitude by not being defensive, looking for the grain of truth, making the necessary changes and taking the high road. If you do these things, there is a very good chance that you will learn things about yourself, improve as a leader and preserve the relationships you have with others.

3. Accept yourself. (This is a maturity issue.) Accepting yourself is a sign of maturity. If you worry about what other people think of you, it's because you have more confidence in their opinion than you have in your own. Executive coach Judith Bardwick says, "Real confidence comes from knowing and accepting yourself — your strengths and limitations — in contrast to depending on affirmation from others."

4. Forget yourself. (This is a security issue.) Secure people forget about themselves so they can focus on others. As leaders, we must always be serious about our responsibilities, but it isn't healthy for us to take ourselves too seriously. ●

The Best Leaders Are Listeners

The positive benefits of being a good listener are much more valuable than we often recognize. Here are some ideas about the impact of good listening related to leadership:

1. Understanding people precedes leading them. Leadership finds its source in understanding. To be worthy of the responsibility of leadership, a person must have insight into the human heart.

2. Listening is the best way to learn. It is no accident that we have one mouth and two ears. When we fail to listen, we shut off much of our learning potential.

3. Listening can keep problems from escalating. Good leaders are attentive to small issues. They pay attention to their intuition. And they also pay close attention to what isn't being said. To be an effective leader, you need to let others tell you what you *need* to hear, not necessarily what you *want* to hear.

4. Listening enables trust. David Burns, a medical doctor and professor of psychiatry, points out: "What most people really want is to be listened to, respected and understood. The moment people see that they are being understood, they become more motivated to understand your point of view."

5. Listening can improve the organization. The bottom line is that when the leader listens, the organization gets better. No one can go to the highest level and take their organization there without being a good listener. ●

Get in the Zone and Stay There

No matter if you're just starting out or if you are at the peak of your career, the more you work in your strength zone, the more successful you will be.

Success is knowing your purpose in life, growing to your maximum potential and sowing seeds that benefit others. If you are able to do those three things, you are successful. However, none of them will be possible unless you find and stay in your strengths zone.

You don't become an effective leader by default. You must be intentional. And you must work from your strengths. You are not called to do something that you have no talent for. You will discover your purpose by finding and remaining in your strengths zone.

Similarly, you cannot grow to your maximum potential if you continually work outside of your strengths zone. Improvement is always related to ability. The greater your natural ability, the greater your potential for improvement.

Finding Your Own Strengths Zone

If you have an image in your mind of what talents people are supposed to have, yet you do not possess those talents yourself, then you will have a difficult time finding your true strengths. You need to discover and develop who *you* are. Here are a few suggestions to help you:

1. Ask, "What am I doing well?" People who reach their potential spend less time asking, "What am I doing right?" and more time asking, "What am I doing well?" The first is a moral question; the second is a talent question.

2. Get specific. The more specific you can get about your strengths, the better the chance you can find your "sweet spot."

3. Listen for what others praise. If others are continually praising you in a particular area, start developing it.

4. Check out the competition. If you don't have the talent to do something better than the competition, place your focus elsewhere.

If you desire to be an effective leader, you must learn how to develop people in their areas of strength. To do that:

- **Study and know the people on your team.**
- **Communicate to individuals how they fit on the team.**
- **Communicate to all team members how each player fits on the team.**
- **Emphasize completing one another above competing with one another.** Team members need to work together for the sake of the team, not only for themselves.

A Leader's First Responsibility Is to Define Reality

One of the pitfalls that can stop potential leaders is the desire to focus on vision to the detriment of facing reality. But good leaders are both visionary *and* realistic. Reality is the foundation for positive change. If you don't face reality, then you will not be able to make necessary changes.

If you are optimistic, and you naturally encourage people, then you may need to take extra care to look reality in the eye and keep yourself grounded. Continually cast a realistic eye on:

- **The Situation.** It is often worse than you think.
- **The Process.** It usually takes longer than you think.
- **The Price.** It always costs more than you think.

If you lack realism today, then you may lack credibility with others tomorrow.

Embrace Realistic Thinking

The ability to define reality as a leader means embracing realistic thinking so that we can see the consequences of our actions further and with greater clarity than those around us.

Here are four practices a leader can follow:

1. Admit your weaknesses. You can't *define* reality if you won't *face* reality.

2. Embrace realistic people. An effective leadership team has members who complement one another.

3. Ask for honesty from others. The only way a leader will get honest feedback is by asking for it, and by treating people well when they actually give it.

4. Invite "fresh eyes" to check you out. Many leaders pay outside consultants to come in, observe and tell them what they see.

To See How the Leader Is Doing, Look at the People

Leaders inevitably make things better or worse for the people who follow them. Wherever you have a good leader, the team gets better, the organization gets better, the department or division gets better. And wherever you have a bad leader, everyone that leader impacts has a tougher time. Leadership makes every endeavor either better or worse.

The best leaders are highly intentional about developing their people. But good or bad, leaders always impact their people. And if you want to know whether a leader is successful and effective, don't look at — or listen to — the leader. Simply look at the people.

Analyzing Leadership

If you want to know how you're doing as a leader (or if you want to analyze the leadership of someone else in your organization), do it by asking the following four questions:

Question #1. Are the people following? If someone with a leadership position has no followers, then that person has a position but isn't really a leader. There is no such thing as a leader without followers! Every time a good leader makes the right moves with the right motives, the relationship strengthens and the team gets better.

Question #2. Are the people changing? People will become their best only if they are changing. And they are unlikely to change unless an effective leader is present to help facilitate the process.

Question #3. Are the people growing? The best leaders help people with more than their jobs; they help them with their lives. They help them become better *people*, not just better workers. And that has great power because growing people create growing organizations.

Question #4. Are the people succeeding? The bottom line in leadership is always results. Leaders may impress others when they succeed, but they impact others when their followers succeed. Peter Drucker observed, "Leadership is the lifting of a man's vision to higher sights, the raising of a man's performance to a higher standard, the building of a man's personality beyond its normal limitations."

Don't Send Your Ducks to Eagle School

Here are three reasons why you should not try to turn ducks into eagles:

1. If you send ducks to eagle school, you will frustrate the ducks. Leadership is all about placing people in the right place so they can be successful. As a leader, you need to know and value your people for who they are and let them work according to their strengths. There's nothing wrong with ducks. Just don't ask them to soar or hunt from a high altitude. It's not what they do.

2. If you send ducks to eagle school, you will frustrate the eagles. Eagles don't want to live in a barnyard or swim in a pond. People who are used to moving fast and flying high are easily frustrated by people who want to hold them back.

3. If you send ducks to eagle school, you will frustrate yourself. As a leader, your job is to help your ducks to become better ducks and your eagles better eagles — to put individuals in their right places and help them reach their potential. You shouldn't ask people to grow in areas where they have no natural talent. Natural ability is not a choice. It's a gift.

It's very important for a leader to get the right people in the organization and put them in the right positions. There are few things that a leader does that are more important than this.

Keep Your Mind on the Main Thing

Here are five decisions leaders can make that can help them become more focused and productive:

1. Determine not to know everything. Successful leaders don't know everything. But they know people who do. If you're a leader and you don't have a good assistant, you're in trouble. If you have the right person in place, you can keep your mind on the main thing while your assistant thinks about everything else.

2. Determine not to know everything first. If every problem must be shared with leaders first, then solutions take forever. The people on the front lines are usually the ones who provide the best solutions.

3. Determine to let someone represent you. The decision to let others represent you requires much time and trust. This trust should not be given lightly. You must get to know the people in whom you place that trust, and they must earn it through seasons of proven performance. Once you reach that level of trust with people you work with, you will be freed up even more to remain focused on the main things that really matter.

4. Determine to stay with your strengths and not work on your weaknesses. Strive to stay with your strengths. In those areas of strength, you usually get good results because you remain focused.

5. Determine to take charge of what takes your time and attention. Take control of your calendar. You cannot fulfill your purpose if you are forever fulfilling everyone else's. If you don't take charge of your schedule, others will always be in charge of you.

Your Biggest Mistake Is Not Asking What Mistake You're Making

Everyone makes mistakes — large and small. To get maximum attention, make a big mistake. To cause maximum damage, fail to admit it! That will keep you from growing as a leader. When it comes to success, it's not the number of mistakes you make; it's the number of times you make the same mistake. If you want to learn to fail successfully and handle the mistakes you *do* make with maximum profit, then you need to do the following five things:

1. Admit your own mistakes and weaknesses. The first step toward anticipating mistakes and learning from the ones you do make is to take a realistic look at yourself and admit your weaknesses. You can't improve as a leader if you're too busy trying to pretend you're perfect.

2. Accept mistakes as the price of progress. Nothing is perfect in this life — and that includes you! If you want to move forward, you're going to make mistakes. If you want to reach your potential as a leader, expect to fail and make mistakes.

3. Insist on learning from your mistakes. People in leadership need to take their cue from scientists. In science, mistakes always precede the discovery of truth.

4. Ask yourself and others, "What are we missing?" Reading between the lines is essential for good leadership. We are most likely to do that when we ask the question, "What are we missing?" Asking tough questions causes people to think differently.

5. Give the people around you permission to push back. The best leaders invite the opinions of the people on their teams. Many good minds working together is always better than one working alone.

Keep Learning to Keep Leading

The secret to success can be found in people's daily agendas. If they do something intentional to grow every day, they move closer to reaching their potential. If they don't, their potential slowly slips away over the course of their lifetime.

If you want to be a good leader, you've got to be a good learner. If you don't have a plan for personal growth, then don't expect to grow!

As you seek to learn and grow as a leader, here are a few suggestions:

1. Invest in yourself first. As long as people are following you, they will be able to go only as far as you go. If you're not growing, they won't be growing — either that or they will leave and go somewhere else where they *can* grow. Followers get better after their leaders do.

2. Be a continual learner. If you want to lead, you have to learn. If you want to *continue* to lead, you must *continue* to learn. Successful people continue to exhibit an excitement, a curiosity or a sense of wonder.

3. Create a growth environment for the people you lead. To be a lifelong learner, get out of a stagnant environment and distance yourself from people who have no desire to grow. As a leader, you need to create a positive growth environment for the people you lead.

Being around people who are better than we are has a tendency to make us stretch to improve ourselves. ●

Leaders Distinguish Themselves During Tough Times

Every leader faces tough times — and that's when leaders distinguish themselves and show who they really are. Leading others can be very difficult and can take great courage. Every change, every challenge and every crisis requires a tough call, and the way those are handled is what separates leaders from everyone else.

How do you know when you're facing a tough call and need to be at your best as a leader? You'll know when the decision is marked by these three things:

1. The tough call demands risk. Leaders have to be willing to do things others are unwilling to do. They have to put themselves on the line. You can't play everything safe and expect to take people forward at the same time. Progress always requires risk.

2. A tough call brings with it an inward battle. Any tough call you make will be questioned. Doing the right thing isn't always easy, but it is always necessary if you want to have integrity and be effective.

3. A tough call will distinguish you as a leader. When an organization not only has lost momentum but is moving in the wrong direction, that's when leaders really earn their pay! It is during those tough times that they make the toughest decisions and really distinguish themselves as leaders.

No matter how tough it gets, a real leader will keep on leading and never give up. It doesn't matter what kind of storm comes. ●

People Quit People, Not Companies

Some sources estimate that as many as 65 percent of people leaving companies do so because of their managers. We may say that people quit their job or their company, but the reality is that they usually quit their leaders. The "company" doesn't do anything negative to them. People do.

Most leaders can make a good impression on employees when they first meet. Add to that the optimism people have when they start a new job. They want a new job to work out. But over time, leaders will be recognized for who they really are, not who they are trying to appear to be. If a boss is a jerk, it's only a matter of time before an employee knows it.

So what kinds of people do employees quit? Most often they come in four types:

1. People quit people who devalue them. When leaders devalue their people, they begin to manipulate them. They start treating them like objects, not people. Look for people's value and express your appreciation for them.

2. People quit people who are untrustworthy. It becomes very difficult to overcome the damage done in a relationship when trust has been lost. Building and maintaining trust as a leader is a matter of integrity and communication. If you don't want people to quit you, you need to be consistent, open and truthful with them.

3. People quit people who are incompetent. When leaders are incompetent, they become a distraction to the team. Productivity declines, morale suffers and positive momentum becomes impossible.

4. People quit people who are insecure. People want to work for leaders who fire them up, not who put out their fire.

Here are things you can do to make yourself the kind of leader that other people want to follow:

• Take responsibility for your relationships with others.

• When a person leaves you, do an exit interview.

• Put a high value on those who work for you.

• Put credibility at the top of your leadership list.

• Recognize that your positive emotional health creates a secure environment for people.

• Maintain a teachable spirit and nurture your passion for personal growth. ●

The Secret to a Good Meeting Is the Meeting Before the Meeting

To be a good leader, you have to learn to make your meetings effective. Meetings are for getting things done. To do that, you must often have a meeting before the meeting to prepare people for the meeting. Here's why:

• The meeting before the meeting helps you receive buy-in. If you deliver surprising news to a group of people and the most vocal and most influential react negatively, then the entire group is likely to be negative. That can take a meeting off course or bring it to a grinding halt. That's why you want to get those vocal and influential people to buy in ahead of time.

• The meeting before the meeting helps followers gain perspective. As the leader, you need to help followers see things as you do. That requires time and intentionality. Give influencers the right perspective before the meeting and they'll help you spread it to everyone else.

• The meeting before the meeting helps to increase your influence. Leadership is influence. To gain influence with people, you invest in them. If the only time you spend with individuals is in meetings, and during that time you are asking them to take care of business according to your agenda, you won't build any kind of positive relationship with people.

• The meeting before the meeting helps you develop trust. You can answer questions. You can more easily share your motives. You can cover details that you might not otherwise want to go into publicly. And you can tailor the message to the individual with whom you are communicating.

• The meeting before the meeting helps you avoid being blindsided. Even the best leaders can miss something. Sometimes during the meeting before the meeting, the person they're talking to gives them information or insight that will help them avoid making a big leadership mistake. ●

People Will Summarize Your Life in One Sentence — Pick It Now

A legacy is something we leave for the next generation. It can be possessions that we place in the hands of others. It can be principles we lived by that carry on beyond our lives. It also can be people we have influenced whose lives are better as a result of knowing us.

Someday you are going to die. And eventually your life will be summarized in a single sentence. What do you want yours to be? Clare Booth Luce cleverly called this your "life sentence." If you are intentional about creating your legacy, people at your funeral won't have to wonder what your life sentence was.

Create a Legacy Worth Leaving

We can choose to live our lives from today forward in such a way that we continue to make a positive impact on others after our death. We can create a legacy worth leaving. To accomplish this, we need to do the following:

1. Choose today the legacy you want to leave others. Be intentional about it. That way you have the possibility of making a greater impact on a future generation.

2. Live today the legacy you want to leave. The greatest guarantee that you will leave the legacy you desire is how you live. Add up each action over the course of many years, and you can see your legacy beginning to take form.

3. Appreciate today the value of a good legacy. There is a great joy in taking others to places they have never been and to heights they have never dreamed possible. As a leader, you have a great opportunity to do those things. ●

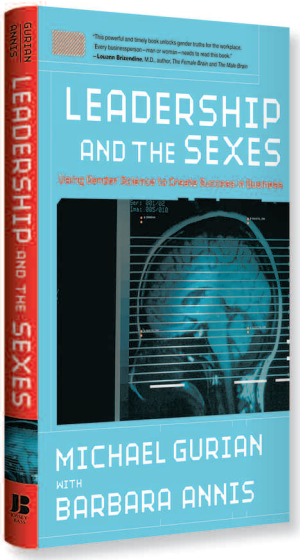
Leadership and the Sexes

Using Gender Science to Create Success in Business



by Michael Gurian
with Barbara Annis

THE SUMMARY IN BRIEF

We enter the workplace not only as a human being, but as a woman or a man. Each workday is a meeting of gender-different styles, modes of operating and leadership skills. The corporation that utilizes the differences between men and women is the corporation that discovers significant competitive advantage. The corporation that helps both genders understand each other has committed to maximum success.

Leadership and the Sexes weaves together Michael Gurian's use of brain science in gender studies and Barbara Annis' experience consulting to top companies on gender issues, and then adds real life examples of what is currently happening in business leadership. Its practical application focuses on executive and managerial leadership, then extends to all levels of the workplace operation. This summary will be helpful to women and men in the workplace who want to become more effective and fulfilled, and ultimately what they learn and incorporate in their managerial styles will help businesses to realize increased profits.

Leadership and the Sexes presents brain science tools that readers can use to look into the brains of men and women. The authors also provide five field-tested GenderTools for readers to increase both their personal comfort and competitive edge.

IN THIS SUMMARY, YOU WILL LEARN:

- How men and women lead differently.
- How to articulate differences without falling into the trap of creating male and female stereotypes.
- What the latest scientific studies reveal about male/female brain differences.
- How differences impact the ways that men and women negotiate, communicate, lead and run meetings.
- How ignoring gender balance impedes the true potential of any business.

THE THEORY: GENDER INTELLIGENCE — THE NATURAL DIFFERENCES BETWEEN MEN AND WOMEN

Understanding the Science of Gender

Beginning in the 1970s, researchers began to use medical technologies and computers to study gender in the brain. There are three techniques most used:

• A *PET scan* uses positron emission tomography to identify areas of neutral activity. Scientists can locate the regions that become active while a person speaks, works, relates, loves and performs tasks. PET scans from all over the world show that male and female brains are organized differently.

• *fMRI imaging* uses magnets to detect signals from particles with a positive electronic charge that act like compass needles in the magnetic field. Because the amount of oxygen found in blood affects its magnetic properties, fMRI detects regions with changes in levels of blood oxygenation due to activity-related changes in blood flow. fMRI can help researchers accurately determine which brain regions are active in each task.

• *SPECT imaging*, similar to PET and fMRI, uses single photon emission computed tomography to provide lower-resolution images; it is much less expensive than PET.

Equal but Different Intelligence

As brain science becomes more sophisticated, the results of studies consistently indicate that although men and women produce equivalent intellectual performance, their brains do it differently.

We are different in the following ways:

• *How and what we remember.* Women take in more information through each of their five senses than men do, on average, and store more of this material in the brain for later use.

• *How we process words (and how many and what kind we use).* Women use more words than men, on average, when reading, writing and speaking are computed together.

• *How we experience the world.* New studies indicating that even the cells in our retina may well be different, with female retinas tending to have more P ganglion cells (which see color and fine detail) and male retinas tending toward more M ganglion cells (which more easily see physical motion of objects moving in space around them).

• *How we buy and why we buy it.* Because of sensory differences, women's buying is often more linked to immediate complex sensory experience than men's; for example, women more readily enjoy walking through a store and touching and feeling objects, while men will get less pleasure from this.

• *The ways our midbrain (limbic system) and emotional processing works.* The approach to developing self-esteem and emotional intelligence can be quite different in women and men, especially because women's brains tend to link more of the emotional activity that is going on in the middle of the brain with thoughts and words in the top of the brain (the cerebral cortex). Thus a man might need many hours to process a major emotion-laden experience, whereas a woman may be able to process it quite quickly. This often creates a lot of tension between women and men.

• *The amounts of white matter and gray matter in the brain.* Women have more white matter and men have more gray matter related to cognitive functioning in the brain. White matter connects brain centers in the neural network, whereas gray matter tends to localize brain activity into a single active brain center. The white/gray brain matter is one reason the genders bring different perspectives to the same problem or design.

First Principle and Task of Balanced Leadership

Principle: Gender intelligence — and, therefore, gender-balanced leadership — begins in the understanding that we are, in large part, hardwired to be who we are. This understanding begins a work/life process of nurturing our own nature and feeling personally responsible to help others nurture their own authentic gender qualities. When we open our thinking to science-based insight about gender, we take a first step in trusting both our own and the other gender's abilities, and we begin to expand into areas of gender intelligence that can lead to authentic and balanced leadership for both women and men.

Task: Begin the process of re-visioning your leadership and management philosophy toward dealing with gender issues scientifically. Be open right now to wherever this re-visioning takes your corporation. Also be open to where it takes you personally, and your leadership team as a group, including gaining an understanding of those individuals who are exceptions to gender "rules." ●

Understanding How the Male and Female Brain Work Differently

There are three major categories of brain differences between male and female brains that ultimately impact every aspect of our workplaces:

• **Differences in neural blood flow patterns.** Blood flow represents the neural activity in a brain at any given time. In the female brain, more neural activity occurs in the parts that think in and create words *and* in the parts that connect those words to memories, emotions and sensory cues; in the male brain, more neural activity occurs in the parts that use physical and kinesthetic intelligence, as well as spatial mechanics and abstraction.

• **Differences in particular structures in the brain.** The *hippocampus*, a significant memory center in the brain, plays a key role in women, as women often test out better than men at remembering the specific and minute details of interactive situations and events. Have you ever wondered why men tend to get more "physically expressive" when they get angry? The *amygdala* is one possible reason. The male amygdala is larger than the female amygdala, and because this structure stimulates more activity downward in the male brain toward the brainstem (and thus more quickly into the physical body) and more often upward in the female brain toward talking centers, men and women tend to differ in their angry behavior.

• **Differences in brain chemistry.** Not only do male and female brains differ in structural components and blood flow, but they also secrete their chemicals differently. This chemistry difference profoundly affects leadership and, ultimately, everyday life. Differences in brain chemistry can initially be understood when we realize that males secrete more *testosterone* and *vasopressin* (aggression and territoriality chemicals) than do women. Females, on the other hand, secrete more of the brain chemicals estrogen, progesterone, serotonin and oxytocin. Serotonin and oxytocin are less well-known than estrogen and progesterone; serotonin, among other things, calms our impulses; and oxytocin, among other things, is a bonding chemical.

Second Principle and Task of Balanced Leadership

Principle: Deeper understanding of male/female differences leads to a deeper individual and team awareness, with each gender learning from and relying on the other's gifts for corporate success.

Task: Work together as an executive team to list and get to know each other's personality and gender assets. Use gender coaches and trainers as advisers as much as need-

Bridge Brains

Having established that there is hardwiring of male/female differences, it is crucial to look at exceptions to the rule.

Ten years ago, author Michael Gurian coined the term *bridge brain* to help people understand the exceptions: These include people whose brains share a number of characteristics of the other gender's brain, transgendered individuals and people who just sense that their brains may be toward the middle of the gender/brain spectrum.

What research into bridge brains is showing us scientifically is this: (1) Every one of us has both our own gender's and the other gender's hormones and brain characteristics; (2) yet if we are biologically male, we will tend toward being more male on the brain/chemistry spectrum, and if female, we'll tend toward female; and (3) some of us are closer to the other gender on the spectrum than others are. Some of us, in other words, are neurological "bridges" between genders.

ed, especially if clear gender issues show up — you are not involved in an easy task here, and there are pitfalls. ●

Understanding How Men and Women Lead Differently

Leaders can appear at any level of a company. To get to the top, you have to be very good at putting yourself confidently into the daily stress of leadership, whether you are male or female. Research shows that females, by nature, embody senior leadership status differently from the way males do. This difference is hard-wired, and it's part of gender intelligence, balanced leadership and gender evolution as a whole.

There are a few basic characteristics found in male leaders. *Male leaders* tend to:

• Bond with co-workers in *short bursts* of connection, both physical (a pat on the back) and emotional (a word of praise), or through goal achievement that is less tied to words and emotions and more to action and competition than that of female leaders.

• Focus on leading workplaces and hierarchies through *order assessment, pattern thinking* and *ritualized action*.

• *Downplay emotion*, even at the risk of hurt feelings, in order to play up performance.

• Promote *risk-taking* and *independence* of the employee as long as that risk-taking and independence fits the ultimate goals of the corporation.

Female Leaders

Research shows that female leaders tend to:

• *Bond with co-workers in extended conversations,* both physical and emotional. Women tend to interconnect data and share common experiences.

• Provide as much *hands-on connection* to the co-worker as possible.

• Emphasize *complex and multitasking* activities, actions, team development — expanding leadership into various tasks and away from dominance by one task.

• Search for a method of *direct empathy* when someone's feelings are hurt, even at the expense of other current goals.

• *Relinquish personal, daily independence* in order to be cognizant of other's needs.

The end result of learning about hardwired gender differences in leadership patterns is not just understanding, but also practical action.

Third Principle and Task of Balanced Leadership

Principle: If we are committed to principles of authentic leadership, our corporations need both male and female assets in front-line, middle and upper management and at the highest CEO levels. As we look specifically at hard-wired differences in the area of gender leadership, we can achieve a level of mutual respect that makes possible greater innovation and advancement of talent.

Task: Notice the specific leadership style of each person around you, and notice how well you fit (or do not fit) with the gender style of each leader. Start your assessment by spending most of your time on strengths and much less on weaknesses in the other gender's leadership style. ●

THE TOOL: PUTTING GENDER INTELLIGENCE TO WORK IMMEDIATELY

GenderTool 1: Improving Your Negotiation Skills With Both Genders

Something important gets missed when women and men both undervalue the women's negotiation-through-rapport and overvalue men's negotiation-through-data-and-banter. What mainly gets missed is the effectiveness of both, in the right circumstances. The future of corporate success lies in women and men both becoming gender intelligent in negotiations.

Applying Balanced Leadership to Negotiations

Gender intelligence, like emotional or intellectual intelligence, is important to every negotiation. You will have to decide how important it is in a given situation. As you incorporate gender intelligence, consider adding these balanced leadership tools to your toolbox:

• Put together a team of negotiators that includes both women and men.

• Pick the right person to lead the negotiations. Do the strongest gender assessments you can on the people you are negotiating with, and plan strategically which women and men to have involved in negotiations — and which parts of the negotiations they should handle.

• Read gender signals clearly during any negotiations you observe or participate in. Check perspectives, intuitive and factual. By reading male and female signals more clearly, you'll know where you stand; how successful you're being; and what other tools you need to bring to bear — including other gender assets — to develop appropriate rapport, data and outcome.

As you work in your team on this gender-negotiation tool, talk about the following five specific areas of focus

in any negotiation: preparation, personality, use of data, rapport building and intended outcome. Then talk about the different gender intelligences, behaviors and follow-through of women and men in each area.

Ultimate success in all spheres comes when we remain ourselves but learn from others. Both women and men should learn from each other, and both women and men should be valued in a room. Gender intelligence is and always will be about tapping into the skills inherent in the other gender until we feel comfortable in the room with those skills — and able to gain allies in those skills when we don't feel comfortable.

GenderTool 2: Running a Gender-Balanced Meeting

Balanced leadership becomes all the more possible when you build your gender intelligence up to the point where you can fluidly run a gender-balanced meeting. One interesting and amazing brain fact to take into your meetings involves the hormones testosterone and oxytocin. Males, as we know, are driven by testosterone, having up to 20 times more of this aggression chemical in their bloodstreams and brains than women have. Women are more actively driven by oxytocin. These brain chemicals are directly affected by meetings.

Meetings raise our levels of cortisol — the stress hormone. When women's cortisol levels rise, they tend to secrete more oxytocin. Their brain system says, "You need to decrease your stress level now by 'tending and befriending' — protecting relational cohesion, keeping tension levels down, making sure social connections are secure."

When men's cortisol levels rise, they tend to secrete more testosterone. Their brain system says, "Assert yourself independently, interrupt, make sure you are aggressively known, mark your territory, take risks, challenge social cohesion if that will further the ultimate goals of the system or your own place in the system."

We bring different chemistry and brain functioning to meetings! No wonder meetings can be so complex.

Ten Essential Gender-Balanced Management Skills

To improve meetings from the point of view of gender balance, focus on these 10 skills that will help meet the needs of both genders:

Skill 1: Be a complete meeting leader. Plan, facilitate and follow up.

Skill 2: Set a gender-balanced frame. The most efficient meetings tend to begin with a statement of purpose, review of the agenda and alignment on intended outcomes.

Skill 3: Make meetings adult places. Use of humor is an aid to a good meeting.

Skill 4: Return meetings to their purpose. Keep the discussion or brainstorming focused.

Skill 5: Draw out talent. Encourage participation from all attendees so that everyone's ability and talent comes to bear on the issue, design concept or marketing strategy.

Skill 6: Care about diversity. You may need to make the inclusion of diverse ideas and viewpoints a tacit action item in every meeting.

Skill 7: Channel competitiveness. Facilitate the meeting so team members' personalities work together.

Skill 8: Be organized. Assign action items and next steps as you end meetings.

Skill 9: Be open to the post-meeting process. If you see that a person (woman or man) is dissatisfied with the meeting itself, take five minutes to debrief and hear the person's point of view after the meeting (or later that day).

Skill 10: Reach out for gender help. Reach out to trusted people of the other gender for their assistance.

GenderTool 3: Improving Your Communication Skills With Women and Men

Here is a tool you can use to improve your own communication as a leader and facilitate better communication in your team and workplace between the genders.

Be aware of and discuss the following five differences in language that exist between men and women who are trying to communicate what they need and want:

Difference One. Women tend to use *more words* than men, often relying more greatly on verbal and written communication throughout the workday. Men use fewer words, in general, and will interrupt people when they've reached what men consider their "word limit."

Difference Two. In their everyday conversations, women tend to *criticize themselves* more than men criticize themselves. Women often do this to match relationally with another person ("Oh yes, I made that mistake too"). Men tend to *criticize others* in order to match relationally ("He's not going anywhere in this company, you can tell").

Difference Three. Men tend, more than women do, to direct word use toward the *success goal* they are focused on (in this area, men will sometimes use *more* words than women do). Women will tend to use more words to

manage the process by which success is gained.

Difference Four. Men tend to spend more verbal time showing their own *accomplishments and prowess* than women do. Women tend to spend less time this way, instead spending more time asking *questions* like "So, what did you do?" which specifically de-emphasize their own prowess in favor of hearing another's accomplishments.

Difference Five. Women tend to spend more verbal time on individual *emotion-memories* and individual family and relational memories than men do. Men tend to spend more words on trivia and outcomes of *large social aggression-based groupings* (such as sports, factual history) and on showing dominance (one-upmanship).

Focusing on Nonverbal Communication

Here are four nonverbal communication differences you may need to navigate every day at work:

- Women tend to smile when listening, while men tend to squint and frown more.
- Women tend to use ***less physical space*** while communicating, whereas men tend to spread their legs out more, gesture their arms more widely and move around more.
- Men tend to believe more than women do that their *nonverbal relational cues* are being picked up.
- Men tend to notice fewer nonverbal cues of emotion, whether *on faces or in physical gestures*, than women do.

GenderTool 4: Improving Your Conflict Resolution Skills With Men and Women

Work teams can be made or broken by their ability or inability to handle conflicts together. Conflict is inevitable in relationships, and if done well, it is a good thing. It increases bonding and leads to creativity and new thinking. We don't want to try to remove conflict from relationships. We want to do conflict well, because when done badly, it can be dangerous to a team and a corporate culture.

Noticing Differences Between Women and Men in Conflict

For men, a primary mistake in angry conflicts is not returning to the issues of the conflict and resolving them (even later, after the fury is gone). Men will often think the conflict has been resolved because it is finished inside them. They won't realize how hurt the woman feels; they won't value her feelings. This is dangerous to corporate culture — it can lead in the long term to women leaving this particular workplace and taking their talent elsewhere.

Four Alternative Approaches to Conflict Resolution

Good conflict is not achieved through *one* verbal style of conflict resolution. There are many good approaches, and some don't involve talking a lot. These include:

- **Relax ASAP.** Do what you have to do to cut back on your stress levels.
- **Experience, express, expel.** Let your emotions move through their natural cycle in a safe way. This means feeling the anger, expressing it (even physically, in physical exercise or a safe, physical burst of energy) and expelling it by breathing it out or getting it out of your system via a conversation with a friend.
- **If you walk away, return.** Complete the conversation.
- **Examine your thoughts.** If you get triggered easily or if you often escalate quickly, you may need coaching or mentoring or other similar assistance.

For women, a primary mistake is saying to men right in the middle of the conflict situation, "What's happening? What are you feeling? Talk to me." When the male brain becomes angry, the swelling of the amygdala in the limbic system often leads to a near closure of a lot of the man's verbal circuits. Whereas amygdalic swelling in the female brain can open up a lot of her words and thoughts so she may want to "talk it out right now to seek understanding" as the key to resolution, the man's angry brain response may require that he delay verbal reaction, walk away and return several minutes later.

Authentic Leadership

Authentic leadership is about taking responsibility for one's actions. Our only real authority as individuals on a leadership team comes from that authentic act. We can't control others, but we can control ourselves. This holds true especially when we are navigating conflicts between ourselves and the other gender.

THE APPLICATIONS: ENSURING GENDER-BALANCED LEADERSHIP IN THE LONG TERM

Helping Women

In a study of what women need in order to be retained and advance, these were the most common responses:

- Women need work/life flexibility (men need this too).
- Women need men to understand that women's and

men's needs are not separate, but interdependent.

• Women need to be respected for who they are — they are not men.

• Women need to be validated with more verbal encouragement than managers and co-workers may realize.

• Women need to be mentored in a gender-intelligent way.

A recent Catalyst Corp. study shows that while some women certainly leave the corporate world to have their families, most actually walk out of one corporation into another that better fits their *needs* as executives, managers and women.

Fourth Principle and Task of Balanced Leadership

Principle: Gender balance is crucial to retaining and advancing women of talent in a corporation. When we apply science-based insight about gender, we alter corporations to fully advance women — through understanding and through intervention when necessary.

Task: Apply gender biology to your workplace by looking at the obstacles women face in your corporation, misunderstandings men fall into when dealing with talented women and lack of work/life balance. See women as powerful, and listen with openness to what women are saying about what they need. ●

For Women: Tips for Supervising Men

Here is a scenario that includes a common error some female supervisors make when supervising men:

A male staff member comes into your office and starts venting his frustration about an incident. He shares that he is tired of the complaining by some members of his team, annoyed that they aren't meeting deadlines, and on and on.

Trying to be supportive, you respond by empathizing. "I can see how frustrated you are with this situation. Have some coffee, tell me how you're feeling …"

Don't be surprised if the man says, "I don't need a cup of coffee — I need to know what to do about this!"

Supervising a Man Who is Angry

Your emotive processing style may not be what your male staff member is looking for at this moment of frustration: He wants solutions; he wants strategies. His task-focused male brain may want to resolve this situation and move on to completing tasks. He may not see emotional processing as a way to get himself positioned effectively back into the larger system.

A more effective response could be to immediately offer action steps. "Let's take notes about strategies you've tried that don't seem to be working. Then let's make a list of alternatives that you can implement right away." As you take these action steps with him, if you want to pursue emotional content and feeling talk, the most effective approach may be asking how he feels about the system. He may talk about feelings more if they are not about his own internal feelings, but rather about how he and you and everyone else might fit into the effective continuation of a strong system.

Fifth Principle and Task of Balanced Leadership

Principle: When we apply science-based insight about gender, we alter our corporate vision to fully understand men and what they need in the workplace. Men bring immense strengths to the gender dialogue, and they also bring specific issues that are part of the gender evolution in contemporary business.

Task: Apply gender science to your workplace with men in mind. Survey your work force to figure out men's strengths and issues. Supervise men in ways that are specifically effective for them. ●

GenderTool 5: Practicing Gender-Intelligent Mentoring and Coaching in Your Corporation

When mentoring women and men, three primary areas of focus emerge. Each is often handled differently depending on whether the mentor is helping a woman or man:

• *Career support.* The individual being mentored — the mentee — needs help with specific career track issues; for example, advancement up a leadership ladder.

• *Psychosocial support.* The mentee needs a listening ear for relational issues, help dealing with a particular leader or help dealing with a crisis at work or elsewhere.

• *Gender intelligence support.* The mentee needs help understanding the other gender's signals and developing a plan for action in relation to the other gender.

Mentoring Women Toward Success

Mentoring and being mentored can be risky and humbling experiences. As women seek out and accept mentoring from both women and men, and as, concomitantly, both women and men provide the mentoring, all parties must expect some discomfort at some point. Here are specific actions that often must be taken to fully

mentor women:

• *When important clients don't trust the woman.* As one male leader revealed, in reporting his mentoring efforts: "I've experienced clients saying to me that they really want a male executive on their project. I find I have to push back and tell them that the woman is the best candidate and has outstanding skills. My job as a mentor is to push for her to get the job. If I didn't push, she wouldn't get the job."

• *When a woman is slower than a man to say "yes" to a project.* Insist that the qualified woman look closely at the new job, providing her with the information she needs and being patient with her style of choice-making.

• *When a woman doesn't blow her own horn.* You may need to coach her in what words to use and how to talk about herself and her successes.

• *When a woman is not being direct enough.* Women in this situation need both female and male mentors to help them learn how to develop frankness that leads to specific solutions.

Mentoring Men Toward Success

The most frequently reported gender challenges men list when asked what they need mentoring on include removing barriers to advancement, understanding and navigating female ways of relating, feeling left out of female conversations, feeling gossiped about. As men seek out and accept mentoring from both women and men, and as, concomitantly, both women and men provide the mentoring, specific actions can be taken by both genders to fully mentor men:

• *When a man needs career help.* Men often do not ask for the help they need, yet they often need a mentor to help them advance.

• *When a man doesn't know how to give women feedback.* Men often need mentoring on how to give feedback, both to men and to women.

• *When a man isn't sure how to give feedback to a female leader.* If you are mentoring or coaching a man who is having trouble giving feedback to a female leader, help him focus on asking open-ended questions that create dialogue and complimenting specific achievement outcomes.

• *When a man needs help with work/life balance.* Research consistently shows a need among men to get help in developing work/life balance. A mentor who helps them develop work/life balance can become a kind of lifeline for these men.

Mentoring for the New Millennium

Female mentors are as crucial for women as male mentors are crucial for men, but so, too, is cross-gender mentoring. The mentoring programs of the future will move in the direction of providing both women and men to mentor both women and men.

Many of the issues women and men have faced in any work environment in the past have not been solvable without a mentoring component in place. The same holds true in your present corporation. To mentor and to be mentored is a part of the human DNA. As you are mentored and mentor others, you are participating in a profoundly important part of being a woman or a man.

The Future of Gender

Human nature is and always has been the prime mover of our instincts, and our workplaces are instinctual places — filled with ambition, power and need. The new gender evolution combines instinct with passion and passion with reason. The ultimate destination of this work is to ensure a future of gender relations that can awaken in each of us, and thus in our children — our future leaders and work force — a deep respect for who we are and they are, why each of us is here and why each of them is here. Newly energized by this respect, corporate leaders of the present and future can take dynamic leadership into the community at large, effecting competitive edge for a corporation and important social change for our culture.

Life Purpose

The issue before us, as we use science to understand gender, is the issue of life purpose. We, and those we care for — as well as our colleagues and our consumers — each want to feel meaningful and purposeful in life. This feeling — profound and very real — is gained in part by our free and reasonable expression as women and men. It has always been this way and always will be.

You as an individual leader have a great deal of power; your leadership team has even more. Be revolutionary in your gender discussions, reframing and retooling. Success in terms of bottom lines should be forthcoming from this revolution, and so, too, success as human beings. ●

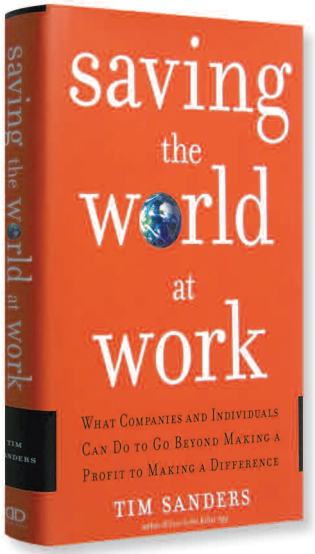
Saving the World at Work

What Companies and Individuals Can Do to Go Beyond Making a Profit to Making a Difference



by Tim Sanders

THE SUMMARY IN BRIEF

A "Responsibility Revolution" is shaking up corporate America. In *Saving the World at Work*, author Tim Sanders reveals why companies must go beyond making a profit and start making a difference.

Every one of us, regardless of title or position, can inspire our companies to change the way they do business, helping them to become a positive force for enriching people, communities and the environment. When this happens, not only do we help save the world, we help save our companies from becoming irrelevant. We become part of the Responsibility Revolution.

Companies that don't participate in this revolution risk becoming obsolete. Today, customers, employees and investors are demanding that companies focus on their social responsibilities — not just their bottom lines.

Saving the World at Work offers concrete suggestions on how all of us can help our companies join the Responsibility Revolution. Drawing on extensive interviews with hundreds of employees and CEOs who are making a difference in the workplace and in the world, the author offers practical advice every individual and company can use to make the world a better place — now and in the future.

IN THIS SUMMARY, YOU WILL LEARN:

- The five phases of business revolutions and how these revolutions lead toward massive changes in the manner in which business is conducted.
- How to properly link your personal goals with your company's business goals and add social value without a great deal of funding.
- How you can help to reduce your company's social inefficiency.
- How to develop a new type of business acumen.
- Why everyone should make a difference.
- How even the actions of a single person can help change the world.

PART ONE: THE RESPONSIBILITY REVOLUTION

The Power of One Revolutionary

The Responsibility Revolution has arrived. It demands that companies make a difference to society — not just indirectly, by producing jobs and profits, but directly, through their products, through their manufacturing methods and operational systems, through their environmental efforts and community outreach.

The consumers and customers leading this revolution will screen your company to see if it is socially responsible. Then, and only then, will they reward it with their loyalty.

The Responsibility Revolution represents a new consciousness among consumers concerning why we buy or don't buy, what we use or don't use. We want to make a positive difference with our wallets, and through our actions, to make the world a better place.

The 'Them Generation'

So who is behind the Responsibility Revolution?

I call the people who compose its growing chorus the "Them Generation." Many of them were born after 1980, but its membership includes everybody, of any age, who is focused on "them" — that is, on others.

Those growing up in the 1960s were part of the Me Generation. They were only one generation removed from the Great Depression. The Me Generation was superseded in the 1980s and 1990s by the Us Generation, a group that focused half on me, half on you. This is basically the same story, same theme. What's in it for me? What's in it for us?

By comparison, the Them Generation sees itself as affluent rather than impoverished. These people don't expect merely to survive, but to thrive. To them, there is enough to go around, and they are making a cause of giving some of it to others. They have little connection to the fear and insecurity of the Great Depression. They aren't obsessed with notions of scarcity, survival and security. They've moved up Abraham Maslow's psychological ladder to a higher emotional need: to achieve significance.

Make a Difference

No matter who you are, or where you work, or how high up or low down you are in an organization, you can make a difference. You can shape your community. You can become the catalyst to produce outreach programs that embed themselves throughout your entire company. You can change the world at work, even if you don't have a title and have never fancied yourself a leader. ●

The Nature of Business Revolutions

Revolutions are fueled by frustration with the status quo, combined with a perceived opportunity to seize the moment and alter it. Two of the most notable examples are the American and French Revolutions, but countless others — not necessarily political — follow the same pattern.

In the context of business, revolutions lead toward massive changes in the manner in which business is conducted.

Five Phases

Business revolutions occur in five phases:

The first phase is a *change in circumstances* that dramatically impacts how we think about the business landscape. Our lives are continually shaped by the social environment in which we live. When seismic events occur, they inexorably alter the business landscape. The result is a shock to the collective consciousness that causes us to view the world in new and unexpected ways.

Any major change in circumstances results in the second phase of a business revolution: *a new set of values*. In

this context, the definition of values is: beliefs that shape the criteria by which one allocates resources. If you believe in corporate stability rather than strategic risk taking, your efforts will go into preserving the status quo instead of into research and development. If you value accuracy over speed, you'll invest in quality control rather than production capacity and quotas.

The third phase of the business revolution is the *arrival of the innovators*. In response to new values, some perceptive companies rush in to meet the needs of underserved or emerging markets. They are the innovators, and they play the role of spoiler to the old guard. They buck the system in a way that resonates with the new values. For example, innovative companies may offer faster instead of better or cheaper as a value proposition. Their quality may seem substandard, and their price too high, to the incumbent industry leaders. But to the new market for convenience, the innovator hits its sweet spot.

Disruption and the New Order

As the new values reach an inflection point of mass popularity, the fourth, and most extreme, phase of a business revolution occurs: *disruption*. This happens when incumbent industry leaders are either toppled or cave in to market pressures, and can only survive by making radical transformations to their business model. Earning shortfalls, layoffs, bankruptcies and organizational overhauls litter the disruptive phase of the business revolution.

The fifth and final salvo of a business revolution is the very long period in which companies develop proficiency in serving new markets as innovators become more sophisticated and customers more demanding. This period is *the New Order*.

Eventually, surviving companies will satisfy the new market needs and the competition will then turn to who does it best. ●

Phase One: A Change in Circumstances

Changes are coming that will threaten the stability of both your company and your industry. The world at work will never be the same.

The Responsibility Revolution is under way. It is following the same blueprint as the Quality Revolution, and it is starting to disrupt the business landscape in an even more dramatic way.

A Broad-Based Movement

The Responsibility Revolution is a broad-based movement of people and companies taking a disruptive approach to making a difference — contributing to our quality of life, locally and globally, for current and future generations. Making a living and making a profit are not enough for these people. Armed with wealth, knowledge and talent, they are using their money and time as levers to pressure companies to change their ways. They believe business possesses the money, technology, people and power to fix the problems of today's world.

A great many changes have rattled our social atmosphere. At the same time as we've been bestowed information-based empowerment, we've also been robbed of our ability to guarantee a safe future for our children. Anyone born in the tornado alley that is West Texas understands what happens during an onslaught of diverse changes in the atmosphere. You get a storm. The more dramatic the collision of elements, the worse the storm — like the 1970 Lubbock tornado that leveled everything in its path.

Think of the positive changes mentioned as a warm air flow of opportunity that has swept through our psyche and lifted our spirits. Imagine the disturbing changes as a cold air of dread that has depressed our souls. The convergence of these two extremes has created an environment similar to what happens when high- and low-pressure fronts collide in the sky. The rapid changes in the atmosphere of daily life are brewing a major social storm. ●

Phase Two: The Rise of a New Value System

Millions of adult Americans possess a new set of priorities in their personal and professional lives. They want their lives to make a difference to the world.

How have the recent experiences in Phase One influenced our values?

Change One: The Information Boom. An abundance of information empowers people to become highly selective about companies with whom they choose to do business. ThemGeners routinely use the latest online tools to screen for social responsibility and find alternatives.

Change Two: A Threat to Security and Safety. Most people who have suffered through traumatic experiences emerge with a new perspective on life, as well as new priorities.

Change Three: Scandals. The number of corporate flameouts between 2000 and 2003 was unprecedented. Tens of thousands of families lost their pensions or investments when Enron collapsed, and the entire economy felt the ripple effect in the resulting 2002 stock market swoon.

The mortgage/Wall Street meltdown of 2008 reinforces this feeling, and stokes mistrust of companies. This leads to more scrutiny of them by talent and customers alike.

Change Four: The Environmental Crisis. Many have made the environment a top priority. But none has embraced it more than today's youth, raised on recycling and save-the-planet campaigns, and now poised to spring into action.

Changing Rules

When values change, so do the rules we apply to everyday situations. They form the criteria by which we allocate resources, and we apply these beliefs to all facets of our lives. The three key areas in which we decide how to allocate our personal resources are how we buy, where we work and where we invest. ●

Phase Three: The Arrival of the Innovators

The rise in social values goes beyond changing how people buy, take jobs or invest. It invades the very core of how people do business.

ThemGeners come in all ages and from all walks of life. Many of them work inside the system, where they adapt their existing companies to serve these new values, while others start new companies based on social missions rather than financial ones.

These people are reinventing how business is conducted. Sometimes they're serving markets that were previously underserved; at other times, they are setting out to create and fuel them.

Pioneers and Fast Followers

In the Responsibility Revolution, the first wave of innovators are the pioneers those people who arrived on the scene filled with ideas and energy before others even knew there was a scene.

As the market for socially valuable business grows, pioneers are followed by another set of businesspeople: the fast followers.

Fast followers are innovators who, based on intelligence brought back from the front lines of their businesses, sense a values shift that will soon disrupt their current business model. They recognize the emergence of the new value proposition and act swiftly to place their companies ahead of the curve. Armed with a new business plan, they march into the future before the future marches into their backyard.

The difference between the pioneers and the fast followers goes beyond who comes first. It is also a matter of motivation. Both are driven by values, but the fast followers are driven by dollars as well. Pioneers want to change the world; fast followers want to win the game.

Fast followers help to legitimize the pioneers who preceded them. Highly successful fast followers include Starbucks (fair-trade coffee), Toyota (hybrid cars), Citigroup Inc. (community development) and British Petroleum (renewable energy). Today, fast followers can be found within almost all major industries.

Today's Fast Followers

Today's fast followers have acted to move the Responsibility Revolution to the threshold of the disruptive phase. Together with the pioneers, they've introduced a new value proposition: Contribute to the greater good with your money or your talent.

Once the growing flock of ThemGeners gets a taste of purpose with a paycheck, there's no going back. They'll expect it everywhere, in every industry, throughout all walks of life.

When the market becomes infected with a new value proposition, the innovation phase is complete. ●

Phase Four: Disruption

Unless a company is an innovator for good, business conditions will get ugly. This is due mostly to the following three emerging market conditions that will create disruptive clashes over scarce business resources:

1. The End of the Casual Customer. Mindful customers are the enemy of the thoughtless business. They don't buy based only on price or quality. They ask too many questions about the product: how it was made, where it comes from, who helped make it. And they tell their friends where and what to buy — and those friends listen. With each passing year, Americans' purchasing values are being reshaped by the context of modern life.

2. The End of the Deep Talent Pool. The signs of talent shortages are already visible. According to the National Science Foundation, industry demand in the pharmaceuticals business for scientists now outstrips supply by a margin of three to one; the technology industry faces the same crisis because of a shortage of highly skilled engineers.

The war for talent will not be won with money. ThemGeners are willing to take a pay cut to work for a company they'd be proud to post as their employer on their Facebook or LinkedIn profile page. Increasingly, the battle for talent comes down to reputation rather than compensation.

3. The End of the Nearsighted Investor. At some point in the next 10 years, a critical mass of farsighted investors will put the squeeze on just-for-profit companies and redistribute the juice to top corporate citizens. This paradigm shift will be the result of two disruptive trends: social investing going mainstream, and mainstream investing going social. ●

How the Body Shop Lost Its Focus

In order to make its numbers and expand its product line to meet the stock market's expectations, personal-care products retailer The Body Shop made the leap from private to public; in doing so, the company licensed technology from companies that conducted animal testing — in direct violation of the company's original mission. Exposed by the media, The Body Shop saw its stock swoon and its sales drop. To this day, the brand has not recovered its stature.

Phase Five: The New Order

The establishment of the New Order takes place when the new value becomes a source of competitive advantage for all. Social responsibility will be the new king. Companies that contribute more than they deduct from people, community and planet will make more money and will be more attractive as business partners.

As the Responsibility Revolution unfolds, five rules of the New Order will become clear:

1. The longer it takes to join the Responsibility Revolution, the more expensive it will be to realign in order to catch up with the innovators. It won't be sufficient for a company simply to announce its changes; the company will have to convince everyone that its intentions are sincere, and this effort will require major efforts in marketing and public relations.

2. Integration is as important as innovation in the long term. Companies that fail to integrate fully will have gaping holes in their business model compared with those that allow the new mission to guide all their operations.

3. Progress must be measured and reported. These metrics will measure a company's diverse social values, including employee quality of life, ethics in the supply chain, and its impacts on host communities and on the larger natural environment.

4. Companies must provide rewards for adding social value. The most effective way to get everyone on board is to reward as many employees as necessary for helping the company meet the newly established metrics. Rewards can take the form of compensation bonuses, promotions or some creative form of recognition.

5. Companies must stay focused on the new value. Many innovator companies paving the way for a revolution eventually fall victim to it because they don't stick to their original commitments. ●

PART TWO: THE SAVER SOLDIER

The Six Laws of the Saver Soldier

A saver soldier is a highly motivated individual who leverages work as a platform to help save the world.

Your personal transformation from businessperson to saver soldier begins with your perspective.

An unenlightened outlook can impede your ability to make the right decisions, while an enlightened one will impart wisdom in situations where the average person wouldn't know what to do.

Here are the six laws of the saver soldier:

1. The Law of the Ledger. Your company's financial success is always paramount — excellent fiscal acumen is fundamental to good business. Companies in economic crisis can't worry about the environment, the future or their employees. Bad numbers create bad business. If your company isn't making money, it can't be expected to help anyone.

2. The Law of Interdependence. This law states that, for the most part, the strength of a business depends on the strength of the greater community. Interdependence in a business context implies that a company is part of a greater ecosystem — comprising myriad stakeholders, other companies, communities, governments and the natural environment. In such a system, a small ripple can create dramatic waves.

3. The Law of Abundance. The Law of Abundance essentially states that there is always enough to go around. There are enough customers, enough talented people, enough recognition, enough of whatever is needed. People who possess an abundance mentality can find contentment where others find envy.

4. The Law of Reciprocity. The Law of Reciprocity states that people will give back when they've been given to. For the most part, every time you do the right thing for your customers, employees, partners and/or greater community, these people will find a way to repay you, through loyalty, by giving thoughtful feedback to improve your business, by telling their friends to buy from you or to work at your company.

5. The Law of the Long View. The Law of the Long View states that while making any decision, you must consider its long-term implications. Long-view thinking considers various consequences in response to an act over time. One way to implement long-view thinking is to look into the future and consider chain reactions to business activity.

6. The Law of the Last Mile. If you don't finish what you start, you might as well not start at all. The

only way to add true social value is to finish the difficult last mile. In business, the term "last mile" describes the final few action items required to convert an idea into a reality. When launching a new product, for example, the last mile is getting it into the hands of the customer.

By focusing on the last mile, you will dramatically increase your chances of making a difference, now and into the future. The last mile may not be easy to finish, but it is the one that counts most. ●

PART THREE: THE PRACTICE OF BEING GOOD

Assess

It's time to move from thinking to doing. Saver soldiers are people of action. When presented opportunities to add social value, savers seize them.

To start on the journey of becoming an effective saver, first assess your company's current place on the responsibility continuum and place it within the context of the Responsibility Revolution.

Go online. Google your company. Don't just search for the company name — add a series of keywords and phrases, such as *lawsuit, social responsibility, safety, fair trade, awards, protest, injustice, sustainability* and *liability*.

Next, go to Hoovers.com, a popular business research Web site that provides analysis for investors, and search for reports on your company. If your company is public, you can also try Yahoo! Finance, TheStreet.com or MSN Money, where you will find news items and SEC filings, as well as a bulletin board. If you notice consistent patterns of complaints, from mistreating workers to polluting a water system, take note and do more research.

Keep an Open Mind

Read what detractors say with an open mind. Some of these groups' claims may be baseless; what you are looking for are widely held beliefs about your company that signal a problem worthy of further consideration.

Now it's time to look at some of the good news about your company: its accomplishments, awards, philanthropy, outreach programs or other signs of a positive reputation, such as being ranked by *Business Ethics* or *CRO* magazine as a top corporate citizen.

Look at your company's Web site; examine its corporate social-responsibility section. Almost all Fortune 1000 companies aggregate the company's positive contributions here.

Create a Total Social Assessment

With your research in hand, it's time to create a total social assessment of your company. Your assessment will help you better understand what you can do as a saver. For example, if your assessment suggests your company is creating long-term environmental damage, you will want to be a change agent to help green up operations.

If your assessment shows that you're working at a company that is a pioneer or innovator, perhaps your role should be that of a booster, supporting existing efforts and initiatives.

However, remember that even the best-run and best-intentioned companies can lose their way as a result of changes in ownership or leadership, market conditions and/or employee participation. The general public will be unforgiving to companies that go back on their word as good corporate citizens.

To ensure that your company stays on track, participate in corporate programs aimed at developing people, community and the planet. ●

Act: Save Your People

Every one of us can jump into the revolution right now by bettering our company's social performance. There are dozens of opportunities to help save the world at work. The following lists are only a starting point for social innovation.

People

These five suggestions apply to anyone, regardless of title or role:

1. Join a Corporate Mentorship Program. Corporate mentorship programs help employees become more successful at the company and lay the foundation for flourishing careers.

2. Mentor a Co-worker or Employee. If your company doesn't have a mentorship program, think about creating one yourself.

3. Integrate a New Person Into the Company. Savers help the newbies create necessary and valuable connections.

4. Help Co-workers in Need. One of the best ways to connect your company to its people is to make their problems your problems. Sometimes people just need to be able to talk to someone else. Simply by listening, you can ease that suffering.

5. Give Ample Recognition. When people don't receive acknowledgment for their efforts, their sense of self-worth is diminished. Professional recognition acknowledges an employee's contribution to the company's success.

Partners

Few businesses can manage successfully without business partners. Partners help a company do everything your company can't do alone. Partners must be given the same respect that a company extends to its employees. ●

Act: Save Your Communities

Community-relations development is the process of forging a bond between your company and the community in which it does business. Your company is either a nutrient, a filler or a toxin to its communities.

Community relations count for a significant portion of a company's social status. The Golin-Harris survey ranks being "active and involved in communities where it does business" as a primary driver in a company's standing as a good corporate citizen.

Be an Employer of Choice

A Work Foundation survey noted that one out of three ThemGeners said they were planning to find a new job because their employer's community contributions were sub par.

You can help your company serve the communities in which it does business. Almost all businesses have community outreach programs that encourage employee participation. For those involved in these projects, your contributions will be evaluated by the strength of your efforts and ideas rather than your role or rank.

Get Involved

Here are five ways to help your communities:

1. Join an Existing Community Program. Find a program that excites you. Does it match your personal values? Look for something that can intelligently incorporate your skills. Search out opportunities that leverage your education or experience as well as your network.

2. Create a Virtuous Circle in Your Community. If you can't find a program that suits your and your company's needs, consider creating your own.

3. Sponsor Community Organizations. Whether you work at a large or a small company, explore possible local sponsorship opportunities.

4. Respond to Community Crisis. When a crisis comes to your town, don't wait for somebody else to spring into action.

5. Offer Your Company as a Meeting Place. Your board rooms, lunchrooms and meeting spaces can provide great opportunities for community organizations to get together, while enhancing your company's reputation as a community partner.

Act: Save Your Planet

Much of your company's greenhouse-gas-emission footprint results from the personal behavior of its employees. According to Michael Totten, senior director of climate at the Center for Environmental Leadership in Business, "Three numbers will dominate most organizations' footprint: energy used in the building, employee travel, and paper consumption."

Save Paper

The following five pieces of advice can help you save paper:

1. Use Recycled Paper. A 2002 study by the Alliance for Environmental Innovation determined that using recycled paper stock will enable you to eliminate wood use and reduce net greenhouse-gas emissions by 50 percent and wastewater by 33 percent.

2. Think Before You Print. We should think first and only then print — maybe.

3. Print on Both Sides of the Page. Set printing to duplex mode, or printing on both sides of the page. In 2006, office workers for the City of Seattle reduced their paper printing by more than 21 percent using duplex-mode copying and printing.

4. Recycle. When paper has run its course, has been printed on both sides, and is no longer useful, it should be properly recycled. Otherwise, it ends up in a garbage dump where it will decompose, releasing methane, a greenhouse gas 20 times more damaging to the environment than carbon dioxide.

5. Reduce Others' Paper Footprint. Redesign documents to print on fewer pages.

Reduce Your Personal Work Footprint

The next five points speak to your nonpaper-related

Timberland's Saver Soldiers

In December 2006, footwear maker Timberland held its wholesale account reps sales rally in New Orleans, 15 months after Hurricane Katrina. Timberland typically injects local community service into its agendas so as part of this conference, 200 sales reps lent a hand in the restoration of a popular restaurant in the historic Central City district. But it was in their visit to the hardest-hit Ninth Ward at a makeshift community gathering spot where a volunteer community organizer pointed to a chalkboard that listed shoes at the top of the Please Drop Off list that the Timberlanders really connected with the Responsibility Revolution. Following the lead of one employee who immediately bent down, unlaced his boots and handed them to the volunteer, all 200 sales reps donated their shoes or boots to the Ninth Ward that day. Over the next months, other Timberland employees and others they connected with became involved in the struggle to rebuild New Orleans, a chain reaction for good. Which sales rep started the chain? "It doesn't matter who did it," the sales rep told the event planner. "It just matters that it was done."

personal work footprint and will help you and your company become more environmentally, financially and socially efficient:

6. Become an Energy Saver. Turn off all the lights when you leave for the day. Turn off computers, copiers and printers in your cubicle and, if appropriate, your office.

7. Reduce Transportation Emissions. The next time you're taking a meeting out of the office, ask yourself — do you really need to go?

8. Reduce Waste. Simple daily acts such as having a drink of water or grabbing a quick lunch can create a tremendous amount of waste.

9. Buy Offsets Whenever Possible. Some companies allow employees to buy renewable-energy credits that offset their business air travel or total work-related carbon footprint.

10. Choose Virtual Over Physical. Do you use an electronic voice-mail system or a personal answering machine? The voice mail offered by almost every phone-services provider is a much greener option. ●

Influence

When you take on the challenge of influencing others, you are stepping up as a leader during a time of change. Here are some tips on how to help lead others:

1. Evangelize. In the context of business, evangelism signifies your personal campaign to bring about change. It arises from your deep passion to make a difference, combined with a strategic understanding of the area in which you want to see that change. Whether you're pitching a facilities manager on green buildings or a marketing director on community services, you must know how to transform minds and behavior.

Teach, don't preach; follow up relentlessly; and welcome your skeptics into the fold when they eventually convert.

2. Unleash the Power of Many. Another way to influence others is to organize diverse groups of like-minded people inside your company. Such groups not only show senior management that there is a collective will for change, but also can penetrate corporate boundaries and spread ideas, regardless of how sprawling and massive the company might be.

A variety of different approaches exist to create and manage groups. The two most effective are to build a movement and to create a network.

3. Mentor Your Leaders. No matter how persuasive you can be, how committed you are, or how many peers you sign up, there are going to be times when real change will require your leaders to become as involved as you are. ●

Good Gravy: The Power of Being a Saver Soldier

In the long run, social responsibility can be achieved at no cost to people or companies. Good, smart companies succeed. If you always connect your business to your social innovations, and you follow the six laws of the saver soldier, you cannot hurt your company by helping it do good.

Early Adopters Flourished

Strategic social responsibility is excellent for business, which is why Patagonia, SAS Institute, Aveda, Whole Foods and many other early adopters flourished even before the revolution was under way.

Doing good may actually be the very best way to succeed. A 2000 study from research company Towers Perrin examined the financial returns of 25 companies that excelled in taking care of their stakeholders. In the 15 years from 1984 to 1999, these companies outperformed the S&P 500 index by more than 126 percent.

If you help your company make a positive difference in the world, you'll feel your work has meaning, and you'll take pride in knowing that you're contributing to something larger than yourself. ●

If Not You, Then Who?

If you don't show up for the Responsibility Revolution at work, who will?

Revolution is in the air. ThemGeners are organizing against just-for-profit business and they are willing to sacrifice to change it. Even if your CEO is already aware of this news, and he or she likely is, no CEO can do the heavy lifting alone. So if you don't show up, you and your company may wind up on the wrong side of the revolution.

If not now, then when? The Responsibility Revolution is already under way. The longer you wait to join it, the more likely you and your company will struggle to play catch-up or miss out on opportunities to gain an unshakable edge over your laggard competitors. ●

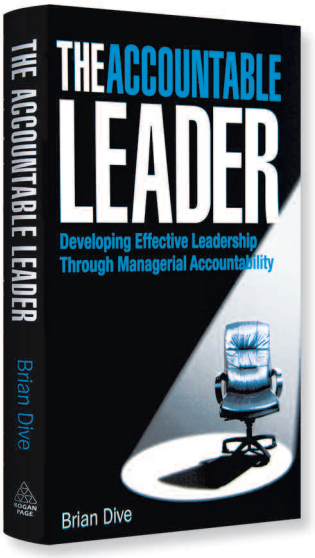
Leadership: Development



The Accountable Leader

Developing Effective Leadership Through Managerial Accountability

by Brian Dive

THE SUMMARY IN BRIEF

The Accountable Leader is centered around three themes — leadership, accountability and organizational structure. The book illustrates how the three concepts are related, and how accountability is at the heart of sound organizational architecture, which in turn is a pre-condition for truly effective leadership, leadership development and a rewarding career path.

The Accountable Leader is an explanation of how the structure of organizations has a profound impact on the ability of managerial leaders to perform their job effectively. It also describes how organization design has a huge impact on the individual well-being and happiness of those people earmarked for future promotion, so much so that talented staff may well leave an organization rather than suffer the effects of operating inside a poorly designed organization.

The Accountable Leader explores what it means for managers to be held to account at all levels in an organization. The author demonstrates that most leadership-related problems arise from the ineffectiveness of organizational structures that lack accountable jobs.

IN THIS SUMMARY, YOU WILL LEARN:

- The 10 key management accountabilities
- Why organizations are so often lacking clear accountabilities
- How to develop leadership in an organization
- How the Decision Making Accountability (DMA) Solution Set provides the principles needed to address the accountability of leaders
- The Seven Elements of Decision Making Accountability
- How leaders are held accountable at the various Work Levels within an organization

Accountable for Success

Accountability is vital to organizations for many reasons. Lack of true accountability causes excessive cost, both economic and psychological; de-motivation in those who work for the organization; dissatisfaction in those served by it, and suboptimal performance in general.

Accountability can afford greater freedom for leadership, or deny and constrain the individual's ability to perform effectively. In this sense accountability can be positive or negative; both are important.

Negative accountability occurs when there is interference with or blocking of the free exercise of positive action. Positive accountability occurs when one is answerable to another for the provision of work; husbanding of resources; and the delivery of a service, product or set of results that can be measured in terms of quantity, quality, cost and time. Positive accountability should operate at all levels in organizations. This is distributed accountability or, indeed, distributed leadership.

Authority and accountability are closely related concepts. The exercise of relevant authority is a critical element of accountability.

Popular wisdom has it that teamwork involves shared accountability. But this is a common mistake. Teamwork is a shared endeavor, not shared accountability. A team is led by an individual who is personally accountable for the team results.

Accountability assumes a proactive and conscious commitment to the purpose of an organization by an individual. It also presupposes clarity, transparency and participation, which enable contribution to that purpose.

The 10 Key Management Accountabilities

A bona fide line manager must be accountable for the following:

1. Deciding who comes into the team, negotiating and managing a budget for that team, and being held to account for its expenditure.
2. Deciding who will work where, in which jobs and when.
3. Securing employee commitment to attain the relevant goals and providing them with the means they need to deliver their goals.
4. Giving constructive feedback and deciding upon individuals' performance and appraisal ratings, agreeing on their training and development needs, and ensuring that these are acted upon.
5. Ensuring that the members of the team meet all their obligations and, if necessary, changing the goals, obligations or team members, as appropriate.
6. Providing solutions when confronted with problems. Accountability entails finding a new solution.
7. Making change happen.
8. Achieving results from peers and colleagues over whom the manager does not have direct control.
9. Achieving results with and through external agencies, such as consumers, customers, suppliers and shareholders.
10. Setting timelines and establishing goals, which then need to be achieved in terms of quality, quantity and service.

10 Indicators of Unsound Accountability — A Checklist for CEOs

There are several signs of faulty organization design:

- Unclear purpose and priorities
- A lack of timely and appropriate decisions

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor in Chief; **Judy Jensen**, Senior Editor; **Christine Wright**, Senior Graphic Designer; **Barry Silverstein**, Contributing Editor

- Duplication of work
- Too many ineffective meetings
- A culture of long and excessive hours at work
- Managers working in their team members' decision space
- Multiple, small authorization steps, leading to "organizational treacle" that slows down decisions
- Quantitative grading systems that generate unnecessary jobs (and therefore structure) to provide administrative "promotions"
- Undue loss of good people
- Top management thinks there is a capability problem.

Organizing for Accountability

The challenge in the 21st century is to build accountable organizations: those in which the accountabilities of the individuals who work in them are clearly defined, differentiated, and understood in a way that is motivating and meaningful.

In an accountable organization people know what they will be rewarded for, and how those rewards are set and calibrated. They know they will be given the means to carry out the objectives they have agreed to. They also know what the consequences will be for not completing the tasks and assignments they have agreed to complete.

The majority of large organizations have too many layers and their average spans of management are too narrow. Organizations like this can be hell to work in.

Why Are Organizations So Often Lacking Clear Accountabilities?

There can be a number of reasons, the most notable of which are:

- Unclear direction or purpose
- Faulty strategy
- Key roles not linked to strategy
- Lack of understanding about accountability
- Poor organization design
- Negative company culture and history
- Genuine capability problems
- An obsession with continuous cost reduction
- Lack of feedback from the external environment
- Lack of performance measures
- Lack of consequences for action
- The adoption of management fads and fashions.

Leaders and Leadership Development

The focus here will not be on the CEO, but on leaders all the way from the front line up through the organization. It will be on distributed leadership, the leadership required at each level. Such leadership is the heart and soul of any successful organization, whatever its size and complexity.

Job Evaluation: Status, Grades and Ranks

If accountability is so important in leadership development, why then do so many companies and public agencies fail in this regard?

The answer is the historical use of a system of grades and ranks. While these started out being used primarily for job evaluation, almost unconsciously grades have come to drive organization design. Moreover, these structures often acquire a link with matters of status, and this contributes to ineffective structures, unwieldy bureaucracies and promotions that do not reflect substantial changes in responsibility.

Status is the position of an individual in relation to others. Unfortunately, a desire for status can work against recognition given for work done well, and prove the enemy of merit.

Grading systems aim to lay the foundations for a rational, fair and equitable system of pay or reward. The focus is on the job, not the jobholder. But the fundamental problem with job evaluation is it simply measures the job as it exists. It does not ask whether it *should* exist and, if so, whether it adds anything to other jobs around it.

Is a system of ranks the answer then? Well, not necessarily. There are shortcomings to a rank system not based upon clear levels of accountability.

Holding Leaders to Account: Leadership by Design

The Decision Making Accountability (DMA) Solution Set provides the principles that can guide organizational design and the empowerment of an organization's people.

DMA is the process of taking decisions in seven key decision-making zones called Elements that align with the purpose and strategy of the organization and add value to the work of others, while at the same time enabling the individual taking the decisions to learn and grow. The *Accountability Probe* plots what decisions people make and whether those decisions add value to the work of others. It reveals how many decision-making layers of management are required.

The 7 Elements of DMA

These Seven Elements are a touchstone for determining whether a job adds value, and they are a compass for determining the location of a job in the landscape of the organization.

1. Nature of Work. This first Element focuses on the core reason for the existence of a particular job and where it differs in essence from those below and above. This Element refers to what the organization expects and determines what the individuals should do — their roles. It defines the nature of their accountability for a distinct area of work.

2. Resource Complexity. This Element defines accountability for resources: people, technology, budgets, and know-how or knowledge. In the new "knowledge age," know-how is rapidly becoming the critical resource.

3. Problem-solving. This Element is concerned with the type of thinking that is required to solve a particular problem or set of problems. This is where intellectual capability is taken into account; this is an important factor in the assessment of individuals' ability to cope with the demands of increasing levels of accountability.

4. Change. The essence of strategic leadership is sensing and then ultimately managing change that leads to building a new competitive advantage. Change management is at the heart of modern management accountability. This demanding Element is concerned with accountability for driving innovation in its various forms.

5. Internal Collaboration. This Element refers to the lateral interaction or collaboration with peers within the organization to complete common tasks. It is this network that allows an individual to get the job done successfully.

6. External Interaction. This Element covers the need for collaboration outside the organization. The consumers, customers and suppliers are covered by this Element. Many jobs in a large multinational are accountable for achieving results in the external domain.

7. Task Horizon. Timescales drive large organizations. Most activities are framed by deadlines, which are usually subservient to the planning process. The accountability being assessed here is: "How long does it take to know whether the work covered in the first six Elements of the DMA Solution Set have been successfully completed?" A task horizon extends from minutes in some front-line jobs to many years at the higher work levels.

The Three Key Principles of DMA

1. All organized work falls into a hierarchy of discrete levels or strata of increasing complexity. At each successive level the objectives to be achieved, the complexity of work to be mastered, the changes to be managed and the decisions that therefore have to be taken become broader in nature.
2. For any assigned job, the balance of major tasks falls into a single leadership level. The balance of tasks comprises more than 50 percent of the burden of accountability.
3. Each accountability level above the front line requires one and only one layer of management. This is the golden rule of DMA.

The distinction between layers and levels is critical. A level refers to the decision-making zone or area in which a person is working. A layer of managerial leadership is a job on the spine of accountability in a hierarchy of increasing complexity.

Held to Account at the Front Line

Every day we encounter people working on the front line. They are invariably at the sharp end of customer service. What does a front-line worker do? What decision-making accountability do they have? We can find out by looking at the Seven Elements.

1. Nature of work. Work at Level 1 can be, and increasingly is, automated, like airline check-in processing, for example. The output or outcome is specified in advance, and it cannot be changed without the agreement of someone at a higher level. Work at Level 1 is often mapped out in guidelines or defined processes, which ensure maximum consistency and effectiveness.

2. Resource complexity. At Level 1, resources for jobs are restricted to the resources required to achieve the prescribed output. The person doing the job does not have the authority to change or make key decisions about those outputs, and is not accountable for decisions about those outputs.

3. Problem-solving. The problems faced at Level 1 are concrete, real-world problems that are familiar and recurrent. Usually there are guidelines to help employees at Level 1 to resolve these problems.

4. Change. Although jobholders at this level are not accountable for making changes outside guidelines, they are expected to respond to changes and, if the relevant schedule is not working, to seek improvements.

5. Internal collaboration. Front-line team members normally work closely with colleagues at the same level,

in the same department and at a single location. Roles at this level require the employees to act, primarily, as channels of information. Decisions are taken at a higher level.

6. External interaction. External links and interfaces at this level are likely to be with specified customers or suppliers, within a framework for regular contact and liaison. The majority of key decisions will have been anticipated, often as a result of previous experience.

7. Task horizon. The results of unskilled and semi-skilled work are often evident within seconds or minutes. As the work becomes more complex, however, the timescale for successful completion becomes longer, stretching to hours, days and weeks. The task horizon for Level 1 is up to three months.

Challenges at the Front Line

Most people in most organizations are at Work Level 1. Many organizations, and trade unions, have hopelessly overcomplicated the division of work at Level 1.

Support is often to be found in an important role at the top of Level 1, often referred to as a supervisor. The supervisor exists to assist a manager in the first layer of the hierarchy — at Level 2 — to manage the department. Supervisor is a role that tends to be surrounded with uncertainty and a lack of clarity. Despite the challenges involved, however, supervisory leadership roles are vital components of good organizational structures.

Managing the Front Line

Here are the Seven Elements at the second level of accountability.

1. Nature of work. A job at this level always contains an element of judgement. This judgement is more than just common sense; it is derived from experience, and often from formal professional training. The jobholder is required to make assessments in new situations or individual cases using analysis, diagnosis and judgement, before deciding on what action to take. Level 2 may be the front line.

2. Resource complexity. Where they have a team of Work Level 1 staff reporting to them, jobholders at Level 2 will be accountable for setting objectives, for the recruitment and release of people, for delegating main duties and work, for training and development, and for managing performance.

3. Problem-solving. At Level 2, analysis and judgement are required. Even though in many cases problems will be discrete and non-routine, and the leader (from either experience or professional training at this level) will know that a number of solutions are possible — some fact gathering and diagnosis will still be required to enable the appropriate solution to be found. The challenge here is to discover which solution is best applied in a particular case.

4. Change. Managerial leaders at Level 2 are expected to make changes to operating guidelines and procedures as appropriate, so that Level 1 staff can improve their performance. Jobholders are expected to find ways to use their specialist knowledge and experience to solve problems, to unclog systems, and to implement process and procedural improvements for those areas for which they are accountable.

5. Internal collaboration. At Level 2, managers work with colleagues at the same level, often, but not necessarily, within the same function or process at the same site; they could also cooperate with colleagues at different locations. To be successful in their own role, Level 2 managers have to learn how to get things done through colleagues to whom they cannot issue commands.

6. External interaction. If an individual has particular external duties at Level 2, these duties will generally involve acting as a first point of contact with bodies that the organization must cooperate with or serve, such as customers, suppliers, trade unions and so on. The shape of that interaction is likely to be largely influenced at the next level of accountability — Level 3.

7. Task horizon. In some industries, the time frame for the impact of major decisions to become apparent is generally from about three to six months. In other industries, the decisions of managers at Level 2 can generally be assessed within a year. The annual budget is the common overall framework for work at this level.

Most organizations seem to assume that the front line is invariably at Level 1, but there are certain situations where this is not the case. The most frequent example of a front line at Level 2 is where a professional entry requirement calls for Level 2 know-how and experience, and a competence to deal with recognized problems and to apply solutions in a manner requiring specific kinds of expertise — expertise that is often gained through study, training and experience.

Span of Control Guidelines

It is unwise to give rigid figures for optimal spans of control, or how many people should be managed by any one individual. It depends on a number of factors, such as the nature of the work and the technology used.

It is a good rule of thumb that any organization of at least 500 people with an average span of five or less is over-managed, and any organization in a country with a

GDP of up to US$100 billion with more than five layers of management is unhealthy.

Global companies have a median average span of control of eight across their entire business. Experience indicates that average spans in head offices tend to be lower. A target head office average span of five is both realistic and achievable. At present, most head offices seem to average closer to three.

Managing the Managers

Leaders at the third level of accountability are the backbone of a successful organization. They are the operational general managers who make sure things happen.

Work at Level 3 moves beyond leading one situation at a time, or diagnosing a single case, to balancing the needs and outcomes for a number of different individuals and sets of circumstances.

Here are the Seven Elements at the third level of accountability.

1. Nature of work. The key aspect of work at this level is the delivery of planned performance, while at the same time continuing to get better performance from the assets and resources year on year. The essence of Level 3 accountability is managing a sequence or flow of work tasks and events, which have to be managed as a whole, not as a series of unconnected events.

2. Resource complexity. Managers at Level 3 are not yet accountable for changing the fundamental disposition of the resources at their disposal. Resources have to be managed in the context of an integrated system, unit or head office department. Working at Level 3 often requires authoritative specialist knowledge. The Level 3 manager is accountable for the identification of potential managers and their appointment to Level 2.

3. Problem-solving. For the Level 3 manager, problem-solving involves identifying patterns in the actual performance of existing products, technology platforms and systems. Individuals at Level 3 manage a flow of interrelated problems that need to be prioritized and solved using the resources within the team. They are not accountable for strategy and policy but should see the implications and shortcomings of current practice and the need to shape different approaches going forward.

4. Change. The essence of Level 3 change is continuous improvement. Operational scientific change culminates in Level 3 innovation. It is important to distinguish between operational innovation, which occurs up to Level 3, and strategic innovation, which occurs at Level 4 and above.

5. Internal collaboration. Managers at Level 3 normally work across group disciplines, functions within a business, and sometimes a number of countries, in order to improve the performance of their unit or department or to improve the delivery of a process, operational system, study or project. Managerial leaders are accountable for their effectiveness in collaborating with peers.

6. External interaction. External contacts at Work Level 3 tend to be at a national level, in contrast to those at Level 2, which tend to be local or regional within a country. These interactions often involve negotiation of agreements. The response to the external world outside the organization is reactive. By contrast, at Level 4 the manager needs to be proactive.

7. Task horizon. Managers at Level 3 are very much involved in the delivery of the annual plan. A Level 3 manager adds value by looking across individual plans and budgets and ensuring that their contribution is such that the whole unit or department meets its time-related targets. These managers are also expected to make a significant contribution to the plans and activities of the following year.

There comes a point when an operational unit is too large to be run with only two layers of management. One should be very careful about designing units in excess of 1,000 at Level 3, unless the work is very routine and only needs minimal supervision or interference.

Managing on a Global Stage

The international dimension adds an additional facet of complexity. The following is a definition of the Seven Elements in relation to Level 4.

1. Nature of work. Jobs at this level are accountable for work that is more strategic than operational. At Level 4, the challenge is to identify resource gaps and constraints that adversely impact on performance and have them redressed. The person at Level 4 is accountable for the technical and professional input of the gap-assessment and suggested solution(s), and for their quality and accuracy.

2. Resource complexity. Level 4 managers are increasingly accountable for identifying new opportunities and resolving gaps in know-how, technology, the application of systems, the delivery of services, and the meeting of untapped or new needs.

3. Problem-solving. Abstract and conceptual analysis is required to identify problems and assess potential solutions involving new formulas, products, technology, systems or policies. This mental modeling process entails identifying the causes of patterns and linkages, perhaps first identified at Level 3, and devising the right solutions.

4. Change. Change involves fundamental realignment of assets and resources. It is not just a modification of what exists; it is taking leadership in an industry, science or profession based on breakthrough, first-in-the-industry, best-in-class, trend-setting change.

5. Internal collaboration. In an international company the network of peers is likely to span a number of different countries. Internal networks in large international companies can be fraught with internal politics. Collaboration is never easy. International, strategic collaboration is one of the most challenging types of collaboration of all.

6. External interaction. The nature of the interaction with the environment is the key difference between work at operational and strategic levels. In the first three levels of accountability the response is reactive. At the strategic levels managers are expected to be proactive. Increasingly they are expected to influence and shape the external environment to the advantage of the organization, or at least mitigate the damage that might otherwise be done.

7. Task horizon. Generally, the time frame for operational work seems to be up to two years. For strategic levels of accountability, it seems to be up to about 15 years.

Organizational Design Accountability and Leadership in Practice

Three variables are critical for the successful development of leaders throughout an organization:

- A role with clear accountabilities.
- An organization structure with the right number of layers.
- An individual with the right degree of competence for the job.

Unfortunately, the first two factors are invariably ignored.

Talented individuals cannot contribute to their full capacity and potential in a cluttered, top-heavy organization that blurs accountability and stifles initiative. Yet, for some reason, the critical link between effective organization design and successful leadership development is often ignored. Leaders cannot be held to account in a vacuum.

The difference between operational work and strategic work and the implications for leadership development is critical. Identifying where this difference occurs in an organization is even more critical. But most leadership approaches do not focus on this vital division, largely because the clarity of the demarcating line is blurred by administrative grading systems.

The Importance of Boundary Moves

A boundary move takes individuals outside their comfort zone but not outside their learning zone. The aim is to stretch and broaden the learning of the incumbent.

Boundary moves occur when job moves entail:

1. A change in accountability level.
2. A change to another function.
3. Changes in the type of experience for roles with the same title.
4. Change from line to support.
5. Change of country.

The Seven Steps for Building an Effective Leadership Development Program

1. Identify the levels of accountability.
2. Identify and define line and support jobs.
3. Plan the move to a healthy organization, if necessary.
4. Identify and establish a set of differentiating behaviors or competencies.
5. Construct a reliable and valid method for assessing individuals against their level of accountability.
6. Fill the value-adding roles with competent individuals.
7. Identify key career and learning tracks.

Leadership Development Schemes: How Can They Succeed?

The following case study shows how leaders can be identified and developed for future jobs in which they will be held to account.

There is strong anecdotal evidence that there is an acute shortage of school principals in a number of countries at present. Unlike private sector organizations, educational bodies are not noted for identifying leaders with potential and preparing them for leadership roles, such as principal of a school.

What are the key steps to identifying and developing these leaders — secondary school principals?

- Identify the accountabilities within a school.
- Identify and design the relevant boundary moves for leadership development.
- Adapt and apply a differentiating competency model (the DMA model).
- Design the assessment process — what to assess, how and why.

This approach can be described as an assessment or a development program. It can be either or both.

The program is based on knowing the level of accountability of the job of a secondary school principal. Once that is known, then the six DMA Leadership Competencies come into play.

The four-step process was designed to look for consistent trends in the individual's leadership behavior. A summary judgment indicated whether the individual demonstrated potential to be a principal within "one, three or five years." Detailed comments are provided that could form the basis of an individual's development program, aimed at better equipping the person in question to become a principal. ●

The Accountable Leader: 20 Key Ideas

1. Everyone has a right to real work and a real job; a real job is one in which the person in that job is held to account.

2. An individual can only be held to account if the organization has clearly demarcated levels of accountability, or leadership levels.

3. The Decision Making Accountability (DMA) Solution Set maps how leaders are held to account throughout an organization.

4. The principles of DMA form the basis for effective organization design.

5. A program to assess potential leaders needs to rest on a sound foundation of clear accountabilities.

6. The DMA Solution Set provides that platform.

7. An administrative promotion occurs when an individual is moved to another grade at the same level of accountability.

8. Boundary moves occur when individuals are taken out of their comfort zone, but not beyond their learning zone.

9. A bureaucracy is an unhealthy organization that has lost contact with both its purpose and its customers.

10. An accountability level is justified when the leader in it makes decisions that members of the team cannot make, and that are different in substance and quality from those of the manager to whom that leader reports.

11. Only one layer of management is needed for each level of accountability above the front line.

12. Compression occurs when there are two or more layers of management at the same level of accountability, or two or more tiers of supervision at Level 1.

13. A good engineer might not be a good manager, because leadership behaviors are required in addition.

14. Values are badges of belonging — important for the life of an organization and contentment of the individual, but not indicators of potential leadership.

15. Outstanding performance at one level of accountability does not guarantee good performance at the next level.

16. Beware of accelerated development programs. Insufficient experience at Level 3 correlates with failure on promotion.

17. Potential leadership is best assessed by differentiating behaviors (competencies) linked to the Seven Elements of the levels of accountability.

18. A differentiating competency identifies those behaviors that help ensure that a person can perform effectively at the next level of accountability.

19. One must know where the operational-strategic divide occurs in the organization in order to devise an effective leadership development program.

20. Apply these two tests to your organization: Is the average span of control less than six? And, do any of the following apply?

- Revenues or costs up to US$5 billion with six or more layers of management.
- Revenues or costs up to US$15 billion with seven or more layers.
- Revenues or costs up to US$45 billion with eight or more layers.
- Revenues or costs up to US$150 billion with nine or more layers.
- An organization in a country with a GDP of up to US$100 billion with more than five layers of management.

If the answer is "yes," then there are too many managers and they cannot be held to account clearly as leaders. In other words, your organization is over-managed and under-led. ●

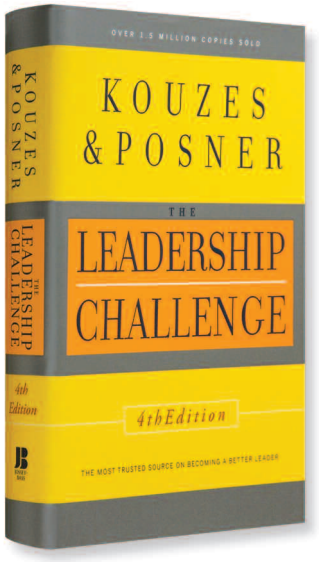
Leadership: Development

Bonus Summary



The Leadership Challenge

4th Edition

by James M. Kouzes and Barry Z. Posner, Ph.D.

THE SUMMARY IN BRIEF

The fundamentals of leadership are not a fad. While the context of leadership has changed dramatically, the content of leadership has endured the test of time.

When leaders understand that leadership is a relationship and they begin to engage in the Five Practices of Exemplary Leadership® — Model the Way, Inspire a Shared Vision, Challenge the Process, Enable Others to Act and Encourage the Heart — they are better able to embark on a lifetime of success and significance.

The Leadership Challenge is about how leaders mobilize others to want to get extraordinary things done in organizations. It is about the practices leaders use to transform values into actions, visions into realities, obstacles into innovations, separateness into solidarity and risks into rewards. It's about leadership that creates the climate in which people turn challenging opportunities into remarkable successes.

Authors James M. Kouzes and Barry Z. Posner, Ph.D., offer a set of leadership practices based on the real-world experiences of thousands of people who have answered the call for leadership. They confirm the discovery that when the leader in everyone is liberated, extraordinary things happen.

IN THIS SUMMARY, YOU WILL LEARN:

- How to utilize the five practices common to personal-best leadership experiences.
- How to improve your performance and the performance of your team with commitment and consistency.
- How to strengthen your abilities and uplift your spirits, as well as those of others.
- How the magic word "we" can help you enable people to act.
- How ordinary people exercise leadership at its best.

Getting Extraordinary Things Done in Organizations

When they are doing their best, leaders exhibit certain distinct practices, which vary little from industry to industry, profession to profession, community to community and country to country. Good leadership is an understandable and universal process. Though each leader is a unique individual, there are shared patterns to the practice of leadership. And these practices can be learned.

The Future of Leadership

The domain of leaders is the future. The leader's unique legacy is the creation of valued institutions that survive over time. The most significant contribution leaders make is not simply to today's bottom line; it is to the long-term development of people and institutions so they can adapt, change, prosper and grow.

Leadership is important, not just in your career and within your organization, but in every sector, in every community and in every country. We need more exemplary leaders, and we need them more than ever. There is so much extraordinary work that needs to be done. We need leaders who can unite us and ignite us.

In the end, leadership development is self-development. Meeting the leadership challenge is a personal — and a daily — challenge for all of us. If you have the will and the way to lead, you can. ●

What Leaders Do and What Constituents Expect

Leadership can happen anywhere, at any time. It can happen in a huge business or a small one. It can happen in the public, private or social sector. It can happen in any function. It can happen at home, at school or in the community. The call to lead can come at 4 o'clock in the morning or it can come late at night. The energy and motivation to lead can come in ways you'd least expect.

Personal-Best Leadership

From an analysis of thousands of personal-best leadership experiences, leadership researchers James M. Kouzes and Barry Z. Posner, Ph.D., discovered that ordinary people who guide others along pioneering journeys follow rather similar paths. Though each experience was unique in expression, every case followed remarkably similar patterns of action. Kouzes and Posner have forged these common practices into a model of leadership that provides guidance for leaders as they attempt to keep their own bearings and steer others toward peak achievements.

Leadership is not about personality; it's about behavior. The Five Practices of Exemplary Leadership are available to anyone who accepts the leadership challenge. And they're also not the accident of a unique moment in history. The Five Practices have stood the test of time, and the most recent research confirms they're just as relevant today as they were more than 25 years ago.

The Five Practices of Exemplary Leadership

This research has uncovered five practices common to personal-best leadership experiences. When getting extraordinary things done in organizations, leaders engage in these Five Practices of Exemplary Leadership:

1. Model the way. Exemplary leaders know that if

they want to gain commitment and achieve the highest standards, they must be models of the behavior they expect of others. To effectively model the behavior they expect of others, leaders must first be clear about guiding principles. They must clarify values.

Exemplary leaders go first. They go first by *setting the example* through daily actions that demonstrate they are deeply committed to their beliefs.

2. **Inspire a shared vision.** As Mark D'Arcangelo, system memory product manager at Hitachi Semiconductor, said about his personal-best leadership experience, "What made the difference was the vision of how things could be and clearly painting this picture for all to see and comprehend."

Leaders gaze across the horizon of time, imagining the attractive opportunities that are in store when they and their constituents arrive at a distant destination. They *envision exciting and ennobling possibilities*.

Leaders have to *enlist others in a common vision*. To enlist people in a vision, leaders must know their constituents and speak their language. Leadership is a dialogue, not a monologue.

3. **Challenge the process.** Jennifer Cun, in her role as a budget analyst with Intel, noted how critical it is for leaders "to always be looking for ways to improve their team, taking interests outside of their job or organization, finding ways to stay current on what the competition is doing, networking and taking initiative to try new things."

Leaders are pioneers. They are willing to step out into the unknown. They *search for opportunities to innovate, grow and improve*.

Leaders know well that innovation and change involve *experimenting and taking risks*.

4. **Enable others to act.** Hewlett-Packard's Angie Yim was the technical team leader on a project involving core team members from the United States, Singapore, Australia and Hong Kong. In the past, she said she "had a bad habit of using the pronoun 'I' instead of 'we,'" but she learned that people responded more eagerly and her team became more cohesive when people felt part of the "we." "This is a magic word," she realized. "I would recommend that others use it more often."

Leaders *foster collaboration and build trust*. They engage all those who must make the project work — and, in some way, all who must live with the results.

Leaders make it possible for others to do good work. Exemplary leaders strengthen everyone's capacity to deliver on the promises they make.

5. **Encourage the heart.** Genuine acts of caring uplift the spirits and draw people forward. *Recognizing contributions* can be one to one or with many people. It's part of the leader's job to show appreciation for people's contributions and to create a culture of *celebrating values and victories*.

What People Look for and Admire in Leaders

Research documents consistent patterns across countries, cultures, ethnicities, organizational functions and hierarchies, gender, education levels, and age groups. For people to follow someone willingly, the majority of constituents believe the leader must be:

- **Honest.** Honesty is the single most important factor in the leader-constituent relationship. If people anywhere are to willingly follow someone, they first want to assure themselves that the person is worthy of their trust. They want to know that the person is truthful, ethical and principled.
- **Forward-looking.** People expect leaders to have a sense of direction and a concern for the future of the organization. Leaders must know where they're going if they expect others to willingly join them on the journey. They have to have a point of view about the future envisioned for their organizations, and they need to be able to connect that point of view to the hopes and dreams of their constituents.
- **Inspiring.** People expect their leaders to be enthusiastic, energetic and positive about the future. It's not enough for a leader to have a dream. A leader must be able to communicate the vision in ways that encourage people to sign on for the duration and excite them about the cause.
- **Competent.** To enlist in a common cause, people must believe that the leader is competent to guide them where they're headed. They must see the leader as having relevant experience and sound judgment. If they doubt the person's abilities, they're unlikely to join in the crusade.

Credibility Is the Foundation

Above all else, we as constituents must be able to believe in our leaders. We must believe that their word can be trusted, that they're personally passionate and enthusiastic about the work that they're doing, and that they have the knowledge and skill to lead.

If leaders practice what they preach, people are more willing to entrust them with their livelihood and even their lives. This realization leads to a straightforward prescription for leaders on how to establish credibility: *Do what you say you will do*.

To be credible in action, leaders must be clear about their beliefs; they must know what they stand for. They must put what they say into practice; they must act on their beliefs and "do."

This consistent living out of values is a behavioral way of demonstrating honesty and trustworthiness. People trust leaders when their deeds and words match.

Model the Way

CMP Media Electronics Group's Tim Avila said, "Having faith in my principles and beliefs gave me the courage to navigate difficult situations and make tough decisions."

To stand up for your beliefs, you have to know what you stand for. To walk the talk, you have to have a talk to walk. To do what you say, you have to know what you want to say. To earn and sustain personal credibility, you must first be able to clearly articulate deeply held beliefs.

Clarify Values

Clarifying values is where it all begins. To clarify values as a leader you must engage in these two essentials:

- **Find your voice.** You must know what you care about. To act with integrity, you must first know who you are. You must know what you stand for, what you believe in and what you care most about. Clarity of values will give you the confidence to make the tough decisions, to act with determination and to take charge of your life. Once you have the words you want to say, you must also give voice to those words.
- **Affirm shared values.** Shared values are the foundations for building productive and genuine working relationships. Although credible leaders honor the diversity of their many constituencies, they also stress their common values. Important as it is that leaders forthrightly articulate the principles for which they stand, what leaders say must be consistent with the aspirations of their constituents.

High-performance values stress the commitment to excellence, *caring values* communicate how others are to be treated, and *uniqueness values* tell people inside and outside how the organization is different from all the others. These three common threads seem to be critical to weaving a values tapestry that leads to greatness.

Set the Example

Leaders take every opportunity to show others, by their own examples, that they're deeply committed to the values and aspirations they espouse. No one will believe you're serious until they see you doing what you're asking of others. Leading by example is how leaders make visions and values tangible. It's how they provide the evidence that they're personally committed.

To set the example, you need to:

- **Personify the shared values.** Leaders are their organizations' ambassadors of shared values. Their mission is to represent the values and standards to the rest of the world, and it is their solemn duty to serve the values to the best of their abilities. Spend your time and attention wisely, watch your language, ask purposeful questions and seek feedback.
- **Teach others to model the values.** *Teach others* what's expected so they can hold themselves accountable for living the values of the organization, *confront critical incidents, tell stories* about what team members do to live the values and *reinforce the behavior you want repeated.*

In practicing these essentials, leaders become role models for what the whole team stands for and they also create a culture in which everyone commits to aligning themselves with shared values.

Ten Commitments of Leadership

Embedded in the Five Practices of Exemplary Leadership are behaviors that can serve as the basis for learning to lead. Here are the Ten Commitments of Leadership:

1. Clarify values by finding your voice and affirming shared ideals.
2. Set the example by aligning actions with shared values.
3. Envision the future by imagining exciting and ennobling possibilities.
4. Enlist others in a common vision by appealing to shared aspirations.
5. Search for opportunities by seizing the initiative and by looking outward for innovative ways to improve.
6. Experiment and take risks by constantly generating small wins and learning from experience.
7. Foster collaboration by building trust and facilitating relationships.
8. Strengthen others by increasing self-determination and developing competence.
9. Recognize contributions by showing appreciation for individual excellence.
10. Celebrate the values and victories by creating a spirit of community.

Inspire a Shared Vision

Organized efforts — whether those of a company, a project or a movement — begin in the mind's eye. Call it what you will — *vision, purpose, mission, legacy, dream, aspiration, calling or personal agenda* — the point is the same. If we are going to be catalytic leaders in life, we have to be able to imagine a positive future. When we envision the future we want for ourselves and others, and when we feel passionate about the legacy we want to leave, then we are much more likely to take that first step forward. If we don't have the slightest clue about our hopes, dreams and aspirations, the chance that we'll lead is nil.

Ideal and Unique Image of the Future for the Common Good

Exemplary leaders are forward-looking. They are able to *envision the future*, to gaze across the horizon of time and imagine the greater opportunities to come. They are able to develop an *ideal and unique image of the future for the common good*.

Leaders develop the capacity to envision the future for themselves and others by mastering two essentials:

- **Imagine the possibilities.** There are ways we can improve our capacity to imagine exciting possibilities and to discover the central theme for our lives. Improvement comes when you engage in conscious introspection. You need to do more to *reflect* on your past, *attend* to the present, *prospect* the future and *feel* your passion.
- **Find a common purpose.** What people really want to hear is not simply the *leader's* vision. They want to hear about *their own* aspirations. They want to hear how their dreams will come true and their hopes will be fulfilled. They want to see themselves in the picture of the future that the leader is painting.

Listen deeply to others. Determine what's meaningful to them. Make it a cause for commitment. People commit to causes, not to plans.

Enlist Others

Keith Sonberg, director of site operations for Roche in Palo Alto, Calif., said, "What really drives performance is not metrics. It's passion plus pride equals performance. I call it the three P's. The leader's job is to create an environment where people are passionate about what they're doing and take pride in what they're doing. The end result will always be performance." For Sonberg and his team, the three P's are all about sustainability, a vision of a company that delivers a triple bottom line. "We want to be environmentally sound, economically sound, economically viable and socially just," Sonberg explained.

Beyond the vision and mission statements, Sonberg and his team developed a program with categories of projects — including energy conservation, natural resources conservation, recycling, green engineering and construction, and employee and community growth and development. They wanted to become a model for what an organization could do to create sustainability.

Mobilizing a Crowd

Whether they're trying to mobilize a crowd in a grandstand or one person in the office, to enlist others, leaders must improve their capacities to act on these two essentials:

- **Appeal to common ideals.** Ideals reveal our higher-order value preferences. Connect to what's meaningful to others, take pride in being unique and align your dream with the people's dream.
- **Animate the vision.** Leaders have to arouse others to join in a cause and to want to move decisively and boldly forward. Use symbolic language, make images of the future, practice positive communication, express your emotions and speak from the heart.

Successfully engaging in these two essentials can produce very powerful results. When leaders effectively communicate a vision, constituents report significantly higher levels of job satisfaction, motivation, commitment, loyalty, team spirit, productivity and profitability. ●

Challenge the Process

When it comes to innovation, the leader's major contributions are in the creation of a climate for experimentation; the recognition of good ideas; the support of those ideas; and the willingness to challenge the system to get new products, processes, services and systems adopted.

Search for Opportunities

The work of leaders is change. All change requires that leaders actively seek ways to make things better, to grow, innovate and improve. To search for opportunities to get extraordinary things done, leaders make use of two essentials:

- **Seize the initiative.**
- **Exercise outsight.**

Sometimes leaders have to shake things up. Other times they just have to grab hold of the adversity that surrounds them. Whether change comes from outside challenges or inside challenges, leaders make things happen. And to make *new* things happen, they rely on *out-*

sight to actively seek innovative ideas from outside the boundaries of familiar experience.

Seize the Initiative

When people think about their personal bests, they automatically think about some kind of challenge. Why? The fact is that when times are stable and secure, people are not severely tested. They may perform well, get promoted, even achieve fame and fortune. But certainty and routine breed complacency. In contrast, personal and business hardships have a way of making people come face to face with who they really are and what they're capable of becoming.

Leaders must be innovators to navigate their organizations into and through the global economy.

Exercise Outsight

If leaders are going to detect demands for change, they must stay sensitive to external realities, especially in this networked, global world. They must go out and talk to their constituents, be they citizens, customers, employees, stockholders, students, suppliers, vendors, business partners, managers or just interested parties. They must listen — in person, on the phone, via e-mail, via Web sites — and stay in touch.

As CEO of Bay Area Credit Services, Michael Priest learned firsthand that leaders must look forward to fresh ideas. "Sometimes you just can't predict where the change will come from," he says, "but you have to have your eyes wide open if you have any hope of even catching a glimpse of it."

Leaders can expect demand for change to come from both inside and outside the organization. Unless external communication is actively encouraged, people interact with outsiders less and less frequently and new ideas are cut off.

Experiment and Take Risks

To create a climate in which the norm is to experiment and take risks, it's essential for leaders to:

- **Generate small wins.** Leaders should dream big but start small. Dream big about crossing that enormous cosmos to find some new world, but start small with a few short journeys to test your theories and your abilities.
- **Learn from experience.** Studies of the innovation process make the point: "Success does not breed success. It breeds failure. It is failure which breeds success."

These essentials can help leaders transform challenge into an exploration, uncertainty into a sense of adventure, fear into resolve and risk into reward. They are the keys to making progress that becomes unstoppable. ●

Three Ways to Clarify Values

Here are three actions that you can use to clarify values for yourself and others:

- **Write a tribute to yourself.** Begin the process of clarifying your values by reflecting on your ideal image of yourself — how you would most like to be seen by others.
- **Write your credo.** Get a single sheet of paper and write a "credo memo."
- **Engage in a credo dialogue.** Gather together the people you lead for a dialogue about shared values. Tell them what you've learned about personal and shared values. Tell them that you've written a credo memo that you'd like to share with them, but before doing that you'd like them to do the same thing. Ask each person to share with a few colleagues in small groups what he or she wrote. Model the process by reading your memo to them and telling them why you prize the values you chose.

Enable Others to Act

The first order of business for Jill Cleveland when she became finance manager at Apple Inc. was "to learn how to trust my employees. After being responsible only for myself for so long, it was very difficult to have to relinquish control. But I understood that in order for my employees, and thus myself, to be successful, I needed to learn to develop a cohesive and collaborative team, beginning with trust as the framework." This is a key realization for all leaders.

Foster Collaboration

World-class performance isn't possible unless there's a strong sense of shared creation and shared responsibility. To foster collaboration, leaders have to be skilled in two essentials. They must:

- **Create a climate of trust.** To build and sustain social connections, you have to be able to trust others and others have to trust you. Psychologists have found that people who are trusting are more likely to be happy and psychologically adjusted than are those who view the world with suspicion and disrespect. Be the first to trust. Be open to influence. Share information and resources.
- **Facilitate relationships.** To create conditions in which people know they can count on each other a leader needs to develop cooperative goals and roles, support norms of reciprocity, structure projects to pro-

mote joint efforts, and support face-to-face interactions.

Collaboration can be sustained only when you create a climate of trust and facilitate effective long-term relationships among your constituents. To get extraordinary things done, you have to promote a sense of mutual dependence — feeling part of a group in which everyone knows they need the others to be successful.

Here are three action steps that you can take to fulfill the leader's commitment to foster collaboration:

- **Show trust to build trust.** Building trust is a process that begins when one party is willing to risk being the first to ante up, being the first to show vulnerability and being the first to let go of control. Since you're the leader, the first to trust has to be you.
- **Say *we*, ask questions, listen and take advice.** When talking about what is planned or what has been accomplished, it's essential that you talk in terms of *our* vision, *our* values, *our* goals, *our* actions and *our* achievements.
- **Get people interacting.** Create opportunities for people to interact with one another and, in the process, form more trusting, more collaborative relationships.

People can't all be in this together unless you get them interacting on both a personal and a professional basis. People need these opportunities to socialize, exchange information and solve problems informally.

Strengthen Others

Exemplary leaders enable others to take ownership of and responsibility for their group's success by enhancing their competence and their confidence in their abilities, by listening to their ideas and acting upon them, by involving them in important decisions, and by acknowledging and giving credit for their contributions.

Creating a climate in which people are fully engaged and feel in control of their own lives is at the heart of strengthening others. People must have the latitude to make decisions based on what they believe should be done.

Here are two leadership essentials that strengthen others:

- **Enhance self-determination.** Leaders accept and act on the paradox of power: *You become more powerful when you give your own power away*. Self-determination can be enhanced in a number of ways. The most significant actions a leader can take to ensure that people can decide for themselves are to provide more choices, to design jobs that offer latitude and to foster personal accountability.
- **Develop competence and confidence.** Developing competence and building confidence are essential to delivering on the organization's promises and maintaining the credibility of leaders and team members alike. To get extraordinary things done, leaders must invest in strengthening the capacity and the resolve of everyone in the organization.

Turning Constituents Into Leaders

Strengthening others is essentially the process of turning constituents into leaders — making people capable of acting on their own initiative. A virtuous cycle is created as power and responsibility are extended to others and as people respond successfully.

Here are three action steps you can start taking to strengthen others:

- **Increase individual accountability.** Enhancing self-determination means giving people control over their own lives. Therefore you, the leader, have to give them something of substance to control and for which they are accountable.
- **Offer visible support.** Make others more visible. By fostering outside contacts, and by developing and promoting people with promise, you help build a greater sense of personal power, increase confidence and open doors for people so they can exercise more of their own influence.
- **Conduct monthly coaching conversations.** Schedule a once-a-month one-on-one dialogue with each of your direct reports. ●

Encourage the Heart

In high-performing organizations — and when people report being at their personal best — people work quite intensely and often put in very long hours, but this doesn't mean they don't or can't enjoy themselves. To persist for months at a demanding pace, people need encouragement. They need emotional fuel to replenish their spirits. They need the will to continue and the courage to do something they have never done before. One important way that leaders accomplish this is by recognizing individual contributions.

Recognize Contributions

Recognition is about acknowledging good results and reinforcing positive performance. It's about shaping an environment in which everyone's contributions are noticed and appreciated.

Exemplary leaders understand this need to recognize contributions and are constantly engaged in these essentials:

- **Expect the best.** Successful leaders have high

expectations of themselves and of their constituents.

- **Personalize recognition.** To make recognition personally meaningful, you first have to get to know your constituents.

By putting these essentials into practice to recognize constituents' contributions, leaders stimulate and motivate the internal drive within each individual — and fulfill their commitment to encouraging the heart.

Celebrate the Values and Victories

Performance improves when leaders bring people together to rejoice in their achievements and to reinforce their shared principles. If leaders are to effectively celebrate the values and victories, they must master these essentials:

- **Create a spirit of community.** Celebrations are among the most significant ways we have to proclaim our respect and gratitude, to renew our sense of community, and to remind ourselves of the values and history that bind us together. Celebrations serve as important a purpose in the long-term health of our organizations as does the daily performance of tasks.
- **Be personally involved.** One of the most significant ways in which leaders show others that they care and that they appreciate the efforts of their constituents is to be out there with them. This visibility makes them more real, more genuine, more approachable and more human.

Perpetuate the Stories

Leaders are on the lookout for "catching people doing things right," and this can't be easily done sitting behind a desk. They want to see and know firsthand what's being done right, not only so that they can let that person know to "keep up the good work" but so that they can tell others about this and other examples of what it means to put into practice and live out shared values and aspirations. ●

Leadership for Everyone

Leadership is not about position or title. Leadership is about relationships, credibility and what you do.

You Are the Most Important Leader

If you're a manager in an organization, to your direct reports you are the most important leader in your organization. You are more likely than any other to influence their desire to stay or leave, the trajectory of their careers, their ethical behavior, their ability to perform at their best, their drive to wow customers, their satisfaction with their jobs, and their motivation to share the organization's vision and values.

The leaders who have the most influence on people are those who are the closest to them. You have to challenge the myth that leadership is about position and power.

U.S. Army Maj. Gen. John H. Stanford

U.S. Army Maj. Gen. John H. Stanford grew up poor, failed sixth-grade but went on to graduate from Penn State University on an ROTC scholarship. He survived multiple military tours in both Korea and Vietnam and was highly decorated. The loyalty of his troops was extraordinary. Stanford headed up the Military Traffic Management Command for the U.S. Army during the Persian Gulf War. When he retired from the Army he became county manager of Fulton County, Ga., when Atlanta was gearing up to host the 1996 Summer Olympics, and then he became superintendent of the Seattle Public Schools, where he sparked a revolution in public education.

When asked how he'd go about developing leaders, whether in colleges and universities, in the military, in government, in the nonprofit sector or in private business, he replied:

"When anyone asks me that question, I tell them I have the secret to success in life. The secret to success is to stay in love. Staying in love gives you the fire to ignite other people, to see inside other people, to have greater desire to get things done than other people. A person who is not in love doesn't really feel the kind of excitement that helps them to get ahead and to lead others and to achieve. I don't know any other fire, any other thing in life that is more exhilarating and is more positive a feeling than love is."

Leadership is not an affair of the head. Leadership is an affair of the heart. ●

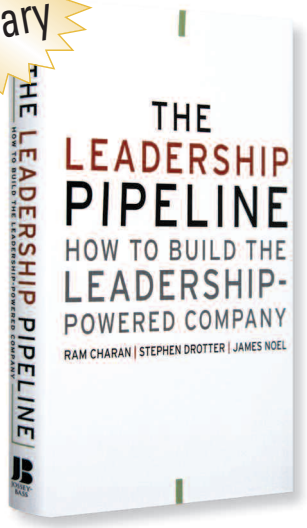
Bonus Summary

The Leadership Pipeline

How to Build the Leadership-Powered Company



by Ram Charan, Stephen Drotter and James Noel

THE SUMMARY IN BRIEF

Today's businesses compete as much on the strength of their intellectual capital as on that of their financial capital. This intellectual capital resides in employees at all levels of the firm, but it takes strong leadership to fully develop and enable it.

In *The Leadership Pipeline*, three experts show companies how to build their own leaders by understanding the critical passages a leader must navigate, by providing the appropriate development for navigating those passages and by building the right system for ensuring a full pipeline of leaders now and in the future. They provide readers with a proven method for building a leadership pipeline by defining six critical leadership passages, assessing competence and performance at each passage, and planning leadership development in a way that addresses the unique challenges of each passage.

The authors' practical advice gives managers and human resource professionals the framework, tools and language they need to help leaders at every level reach their full potential. It also gives individuals a framework for managing their own development and planning their own careers.

IN THIS SUMMARY, YOU WILL LEARN:

- How to use a proven model for identifying future leaders, assessing their competence, planning their development and measuring the results.
- How to integrate your company's leadership development process with a succession planning process to constantly renew leaders at all levels.
- How to use diagnostics to identify problems and possibilities in your leadership pipeline.
- Ways to improve performance by clarifying roles and creating performance standards.
- How to challenge traditional notions of leadership to use the Leadership Pipeline approach effectively.

THE COMPLETE SUMMARY: **THE LEADERSHIP PIPELINE**

by Ram Charan, Stephen Drotter and James Noel

The authors: Ram Charan is an independent consultant and leadership coach whom *BusinessWeek* named one of the top 10 resources for in-house corporate programs in the United States. He has taught on the faculties of Harvard Business School and Northwestern University's Kellogg School of Business, and is co-author of *Boards at Work* and *Every Business Is a Growth Business.*

Stephen Drotter is one of the early designers and practitioners of General Electric Co.'s succession planning process. He later ran human resources for INA (now called CIGNA) and for Chase Manhattan Corp.

James Noel is an executive coach residing in New York City. His corporate experience includes work as the manager of executive education and leadership effectiveness at GE's Management Development Center in Crotonville, N.Y.

Introduction

This is an era in which the demand for leadership greatly exceeds the supply. Signs of this imbalance are everywhere. Executive search firms are flourishing because of the demand for leadership talent. Just about every major organization is attempting to hire "stars," offering enormous compensation to entice the best and the brightest.

These overly aggressive, sometimes desperate attempts to recruit outsiders suggest that the leadership pipeline is inadequate. Internal training, mentoring and other developmental programs aren't keeping the pipeline full, making it necessary to look outside. Everyone is fighting over a relatively small group of stars who, even when successfully recruited, tend to willingly move from company to company.

What's needed is an approach that will allow organizations to keep their own leadership pipelines full and flowing. This is easier said than done because the requirements of leadership have changed so dramatically, and most development models are ill-suited for these changing requirements.

However, the following approach that takes into account the different requirements at distinct leadership levels is viable.

Six Leadership Passages

The six turns in the leadership pipeline discussed here are major events in the life of a leader. They represent significant passages that can't be mastered in a day or by taking a course. The goal is to help you become familiar with the skills, time applications and work values demanded by each passage. Once you grasp what these passages entail and the challenges involved in making each leadership transition, you'll be in a better position to use this information to unclog your organization's leadership pipeline and facilitate your own growth as a leader.

Passages Through the Pipeline

By establishing appropriate requirements for the six leadership levels, companies could greatly facilitate the succession planning, development and selection processes in their organizations. Individual managers could clearly see the gap between their current level of performance and the desired level; they could also see gaps in their training and experience and where they may have skipped a passage (or parts of a passage) and how that's hurting their performance.

Having a leadership pipeline in place can reduce emotional stress for individual employees. The Pipeline model makes skipping passages unlikely. This model also helps people move through leadership passages at the right speed. The Pipeline model provides a measurement system to identify when someone is ready to move to the next leadership level. In addition, the Pipeline model reduces the typical time frame needed to prepare an individual for the top leadership position in a large corporation.

From a pure talent perspective, however, the most significant benefit of the Pipeline methodology is that you don't need to bring in stars to prime the leadership pump and unclog the pipeline.

From Managing Self to Managing Others (Passage One)

To be successful as a first-time manager requires a major transition for which many people are not adequately prepared. Perhaps the most difficult aspect of this transition is that first-time managers are responsible for getting work done through others rather than on their own. While new managers may recognize this transition intellectually, they reject it psychologically, as evidenced by their behaviors. Typically, they overpower their direct reports with their expertise. Giving up the tasks and responsibilities that earned them a manager title in the first place is a tremendously difficult aspect of this leadership passage.

First-line managers must become cognizant of the first-level leadership characteristics that will help them meet the needs and maximize the performance of their people.

Managers must cease thinking only about themselves and start thinking about others.

Pipeline-Unclogging Tactics

Measures need to be put in place so that first-time managers make a smooth transition from their individual contributor roles. These measures need to prepare people for this transition, monitor whether they're making it successfully and intervene when there are problems. Although there is some overlap between all three of these measures, let's look at them separately so you can understand how to implement them effectively:

- **Preparation.** Clearly communicate the skills, time applications and work values required at this passage and provide training that helps people make necessary changes. Individual contributors need to understand what's required of them as they move through this first leadership level, and they need to understand it in specific rather than general terms.

- **Monitoring.** Determine whether and where someone is having difficulty with this first-level transition. There are numerous ways you can keep tabs on whether a given manager is making a successful transition, including *observation, sampling* and *gap analysis.*

- **Intervention.** Provide regular feedback and coaching to help people make this transition; take action if they're experiencing significant difficulty in doing so. Intervention can take many forms: *coaching-feedback; peer learning and partnering; meetings, readings and travel;* and *a new work assignment*.

The direct responsibility for preparing first-time managers rests with managers of managers. This latter group needs to learn how to coach their direct reports to make this transition.

From Managing Others to Managing Managers (Passage Two)

Though most organizations have training programs for first-line managers, relatively few have any programs in place for managers of managers. Whereas being appointed as a first-line manager is a cause for celebration, the move to a manager of managers is usually greeted with more muted enthusiasm.

Yet this leadership level differs significantly from the previous one in terms of skills, time applications and work values. If this transition isn't addressed, many managers skip this passage, much to the detriment of their organizations.

Managers of managers are responsible for the greatest number of people in the company who do the most hands-on work; they're in charge of getting the work done that is directly related to the company's products and services. As you can imagine, quality and productivity suffer when managers of managers aren't performing their roles effectively. In fact, errors here harm the company's ability to execute and may even create a competitive disadvantage.

What Managers of Managers Should Do

The following four skills are absolutely essential at this leadership passage: selecting and training first-line managers, holding first-line managers accountable for managerial work, deploying and redeploying resources among units, and managing the boundaries that separate units which report directly and with other parts of the business.

Goals and measurements must be put in place that create accountability for new managerial behaviors. Appropriate measures include amount of improvement in efficiency; degree of improvement in quality, frequency and impact of coaching sessions; number of first-line managers promoted to bigger jobs or moved laterally for broadening experiences; success rate of new first-line managers; and teamwork within the assigned area and other areas.

Of all these measures, perhaps the most important revolves around preparing first-line managers for their roles.

It is especially important during these times of rapid change and uncertainty to involve managers of managers at a strategic level. They can play a major role in interpreting and communicating the company's evolving objectives to the work force, either directly or through first-line managers.

From Managing Managers to Functional Manager (Passage Three)

Maturity is a result of learning from success and from mistakes — in other words, learning from experience. Given that many relatively young, high-performing people are being promoted to functional manager positions, the odds are that this maturity isn't always developed. To help these managers grow, place them on task forces, teams and committees of managers from different functions or subfunctions with different backgrounds, skills and experience. Having to work effectively with people who are different is a growth experience.

Developing strategic competencies can be a more formal process. After three to six months on the job, training in these skills can be done through university classes, consultants or in-house resources. The best method of training, however, involves hands-on learning activities in which the manager uses the function's own data, challenges and resources in a strategy-related assignment. After completing the assignment, the manager should be evaluated and receive feedback.

Development Progress

Development progress can be measured with a calendar check. Functional managers have to make significant shifts in how they spend their time if they're going to transition to this new leadership level successfully. Time has to be blocked out for strategy sessions, communication meetings with a variety of sub-functional representatives and so on.

Perhaps the best way to measure development progress, however, is to watch for signs of maturity. Maturity can be measured in development of traits such as humility.

A clear sign of maturity is letting go of old silo behaviors. When silos were the rule, functions and sub-functions worked apart rather than together. Although management has attempted to tear down these silos, the old attitudes persist. Mature leaders will turn away from a narrow dedication to their function and embrace a more integrated, total business philosophy.

From Functional Manager to Business Manager (Passage Four)

Helping business managers learn to value all functions and assemble and rely on strong teams of direct reports requires a number of actions. Ideally, all the functional heads will have the experience and expertise necessary to facilitate appropriate treatment and total trust on the part of the business manager. In reality, this isn't often the case. Therefore, the business manager's boss should consider doing the following:

• Encourage the business manager to spend time with each of the functional heads and to ask questions, listen to answers and reflect on what he or she has heard.

• Set specific goals for the business manager for each of the functions, linking these goals to the support functions so they serve as an early warning system for problems.

• Suggest that the business manager make it a habit to take an appropriate functional head along on trips; this will help the manager become more attuned to the value of each function in "real-life" situations.

Though changing the way a business manager thinks isn't easy for any boss, it can be made easier if this issue is addressed on the first day of the job.

Five Signs of a Misplaced Manager of Managers

People who are struggling with this leadership passage usually are having problems with core leadership skills, as the following signs suggest:

• **Difficulty Delegating.** Some managers delegate improperly; they lack a control system that ensures accountability for what is delegated.

• **Poor Performance Management.** Look for someone who provides poor or little feedback to his managers, isn't a good coach, doesn't offer clear direction and whose people are unsure about their goals.

• **Failure to Build a Strong Team.** This is someone who works with her direct reports as individuals but doesn't organize them into a productive team.

• **A Single-Minded Focus on Getting the Work Done.** This individual frequently doesn't exhibit any interest in strategic or cultural issues.

• **Choosing Clones Over Contributors.** This not only causes diversity problems, but also pollutes the leadership pipeline with people who lack necessary leadership qualifications.

From Business Manager to Group Manager (Passage Five)

At this level, the best companies consider development a corporate responsibility and take this task seriously. At General Electric Co. and Citibank, succession planning focused on group executive candidates and provided them with a series of assignments designed to develop their ability to run multiple businesses.

Perhaps the most important developmental experience for group managers, therefore, is managing more than one business. Ideally, they will have the opportunity to manage very diverse businesses. This will help them make the shift from knowing one business model to experiencing different business models and will enable them to move beyond the belief that the known model is the only model.

Experience and Coaching

Through experience and coaching, group executives can also learn the art of critiquing strategy. Essentially, the skill they really need to master is helping their business managers produce a better strategy by asking the right questions and by examining the underlying data. This means knowing what questions to ask these managers, evaluating the strategic options they have presented, assessing the risks and telling these managers to go forward or go back to the drawing board.

Selecting functional managers for business manager positions is another group executive skill that can be developed.

From Group Manager to Enterprise Manager (Passage Six)

Enterprise leadership demands a system of beliefs substantially different from what is required at other leadership levels.

For managers who have built their careers achieving results faster and more effectively than their peers, valuing slow, evolutionary results can be a struggle. Giving up on long-cycle programs (such as quality-based ones) before they're fully implemented and able to produce measurable results is a common CEO failing.

Similarly, many CEOs experience difficulty valuing only three or four key objectives. Business managers and even group executives frequently have long lists of goals. They derive satisfaction by checking off one item after the next. The enterprise manager, however, should derive satisfaction from a short list of long-cycle initiatives.

CEO Development: No Skipping Levels Allowed

Though there are many paths to the chief executive spot, all of them should allow managers to make leadership transitions at each level. People who become enterprise managers and have skipped levels are burdened by a gap in their leadership experience.

To help develop group managers into enterprise managers, one of the keys is to have them run a group that is different in market position, product or customers from what they're used to. They need to learn how to deal with a new business model. This is good preparation for a CEO position, where running the company is much more challenging than grasping a new business model.

Another development step is to have them take on a staff position with companywide responsibilities. Research, deep analysis, long-term planning and measurement are necessary for CEO success, and staff positions can provide opportunities to develop these skills. It will also give them an appreciation of staff work and help them value and use staff more effectively when they're managing the enterprise.

Perhaps the best development method for CEOs is having a coach or some other "peer" who can give them feedback. In an ideal situation, boards will fulfill this role.

Dealing With the Spotlight

Dealing with the high visibility that this leadership level necessitates is an ongoing process. In some cases, managers will have developed a degree of maturity at the previous level that will help them handle the spotlight. Some managers' natural reaction to being closely and widely scrutinized is defensiveness and rigidity. To encourage openness and flexibility instead, business managers should try the following tactics:

- Pretest ideas, decisions and proposals with a trusted associate.
- Resolve to say "I don't know" when uncertain about answers or decisions, and then make a commitment to find the answers by a certain date.
- Collect many opinions — both for and against — before making decisions; look for external inputs as well.
- Use *The Wall Street Journal* test: Ask how you would feel about an idea or transaction if it were on the front page of the paper tomorrow.

Diagnostics: Identifying Pipeline Problems and Possibilities

Just about every organization has people working at the wrong leadership levels. The problem can occur at any of the six levels, but it's most common among first-line managers who are spending most of their time doing individual contributor work, business managers who are doing functional work and group executives who are focusing on business manager work.

Diagnostic Steps

The following steps will help you assess an individual quickly and accurately:

1. Identify the individual's behaviors and work production through observing and talking to him. Look at his calendar to determine how he's spending his time. Find out what work he's producing and the major focus of his efforts.

2. Discover his impact on others — direct reports, both past and present, as well as people in other units. Has he developed direct reports effectively for their current leadership levels?

3. Overlay this information on the Pipeline model. Analyze how an individual's actions and attitudes align or misalign with a given level's skills, time applications and values.

4. Determine the level at which someone is actually working versus the level at which he should be working. When you do so, be specific in identifying the gaps between his operating level and his assigned level.

5. Create a development plan that is value-focused. Keep in mind that if people learn the right values, the right time applications and skills usually follow.

Group Perspective

Many times, the Pipeline diagnostic is used for different groups within an organization. Business teams can use it to figure out whether they're working at the proper level, given their assignment and goals. The following steps will help groups use the Pipeline diagnostic effectively:

1. Conduct individual assessments of leaders who are part of the group being assessed.

2. Look at the individual assessments cumulatively and determine whether the skills, time applications and work values match what is appropriate for the level across the group.

3. If they're not appropriate, what are the specific gaps? Spell out what the misalignment consists of.

4. If you're looking at the entire pipeline, analyze each level's strengths and weaknesses. Where is the pipeline clogged? Can you pinpoint a particular level or levels where appropriate leadership is lacking? ●

Performance Improvement: Clarifying Roles and Creating Performance Standards

The Leadership Pipeline provides a fast and effective way to establish role clarity. By comparing what a leader *does* versus what is *required* at a given leadership level, as well as what his boss and subordinates do versus the model, you can sharpen role clarity. Because most development occurs on the job, it's important to establish the right role requirements so a leader understands them and develops in the right direction.

Role clarity can be achieved by using the Pipeline model to identify the leadership level at which a given job is located; communicating to managers what this level is and the skills, time applications and work values demanded by this level; and making everyone up and down the pipeline aware of the potential gaps and overlaps between "adjacent" levels and taking action to correct the gaps and overlaps.

Strategies for Getting to Full Performance

Certain leadership development strategies have proven to be very effective for companies attempting to improve the flow in their leadership pipeline. Here are four:

Strategy 1: Start with the boss and not the subordinate. Bosses must ask themselves what they're doing (or not doing) that's impeding leadership development and performance of their subordinates.

Strategy 2. Search for evidence of an appropriate values shift. The evidence of a values shift includes people willing to see their roles differently. They must be willing to reallocate their time, change the way they attack problems or change which aspect of the problem they tackle personally, and accept new skill-building requirements.

Strategy 3. Use Action Learning as a primary vehicle for development. Action Learning involves setting up teams of leaders who are all on the same leadership level and assigning them a highly challenging task related to a significant business objective. These are stretch assignments that demand that participants develop new skills, time applications and values in order to complete the assignments successfully.

Strategy 4. Address inappropriate performance immediately. Leadership pipelines clog when performance gaps are allowed to exist for lengthy periods. ●

Succession Planning

The following five-step plan will greatly facilitate your succession planning with Leadership Pipeline goals in mind:

1. Tailor the Leadership Pipeline model to fit your organization's succession needs. Add leadership levels if that better reflects how your company is set up.

2. Translate standards for performance and potential into your own language. Clear, detailed, unambiguous standards will greatly enhance both your succession and development planning.

3. Document and communicate these standards throughout the organization. When everyone is aware of the standards for judging potential and performance, they know what they have to do to move up a level and be qualified for a given leadership position.

4. Evaluate succession candidates through a combined potential-performance matrix. This is a useful tool for gaining snapshots of a leadership layer.

5. Review the plans and progress of the entire pipeline frequently and seriously. Ideally, your organization will have at least one annual succession meeting that will focus on this performance-potential evaluation, and you'll also schedule quarterly reviews and monthly action reporting. In addition, the CEO and his or her direct reports should be privy to the performance ratings for the entire leadership pipeline. Each leadership level should be looking at the ratings for at least two levels beneath them.

Creating this two-level-down accountability and using the definitions and standards will greatly increase the odds of selecting the right people for key leadership positions and developing them properly. What is more important, it will help organizations achieve their ultimate goal of getting the right people in the right jobs with the right preparation while producing targeted results now and in the future.

Identifying Potential Pipeline Failures

In company after company, people who were counted on to assume key leadership positions don't live up to expectations. Some fail in first-time manager positions and some as CEOs.

Although there are many reasons for failure and some can't be completely avoided (such as abrupt changes in consumer preference), a significant percentage of them can be prevented or dealt with effectively.

Failure is something that needs to be addressed as part of this process. Here are the four most common causes of individual failure: selecting the wrong person, leaving poor performers in the job too long, not listening to or seeking feedback and defining jobs poorly.

How to Prevent Institutional Failure

Three key ingredients can prevent institutional failure:

- **A framework for leadership.** The Leadership Pipeline model provides companies with a leadership framework. At the very least, it defines requirements by levels and makes clear distinctions between what is required from one level to the next.
- **Language for discussing problems.** Without appropriate language, organizations lack precision for diagnostics and solutions. With the language of the Pipeline, people can talk about their leadership requirements by using the same categories (skills, time applications and work values) but define them according to their particular leadership positions.
- **Standards for judging performance.** Performance standards help leaders set goals and create true measures on which their performance is judged.

The Functional Career Passage

The Leadership Pipeline branches out in a second direction at the passage from functional manager to business manager. Instead of moving from functional manager to business manager to group manager to enterprise manager, some managers move upward on a functional path. For the majority of people who work in large companies, this is the relevant upward path since very few are selected to be business managers. This functional offshoot is the one most people will follow.

This functional branch of the Pipeline becomes clogged as easily as the business leadership portion, and it's important to use this model to understand requirements and prevent the clogs. In fact, most organizations have a significant number of critical functional positions above Passage 4, and it's crucial that a process be in place to help them go through their leadership passages successfully.

Developing Enterprise Functional Managers

At this level, self-help is the norm. The CEO usually provides direction but it rarely suffices. The following suggestions are geared toward self-help because it's the most realistic course of development action:

- **Obtain an early, expert assessment of the function.** Valuing expert opinion other than your own is a basic requirement.
- **Validate your game plan and goals with the CEO and with a cross-section of key leaders at every level.** Since everyone in the company relies on the services your function provides, obtain input and confirmation from all levels. Being aware of perceived versus actual value of your function is crucial.
- **Make time on your calendar for touching the enterprise at every level personally.** You require firsthand information from your internal customers and they need to hear your message directly. Schedule visits at least once per month on an ongoing basis.
- **Separate the important from the urgent.** Quick response to urgent problems is mandatory for functional

leaders. Successful managers at this high functional level aren't seduced by short-term, highly satisfying victories. They learn to value real progress toward sustainable long-term goals.

Coaching

The Pipeline is motivational from both a carrot and a stick perspective. In terms of the latter, it shocks managers into realizing they're not operating at the right leadership level (given their position). In terms of the former, it's very specific in delineating the behaviors and attitudes they need to demonstrate to achieve specific career goals.

The Leadership Continuum

The Pipeline also helps managers locate themselves on the leadership continuum.

In many ways, these leadership passages correspond to psychological developmental stages — the developmental stages of children, for instance. They represent the progressive growth stages of a leader, and when they're presented in that manner, people become much more coachable.

Finally, the Pipeline is a great coaching tool because of its clarity and simplicity. People "get it" right away. They realize that if they want to be successful at the manager of managers level, they need to let go of certain values and skills that made them successful at the first-time manager level.

Benefits Up and Down the Line

There's a war for talent going on now, and it's only going to become more intense in the future. The Leadership Pipeline model provides a way to win that war.

No matter what your position within an organization might be, you can use it to think, talk about and decide on actions to build your group's talent. In doing so, you may need to convince yourself and others that it's worth adopting this Pipeline model. Some people will prefer buying stars; others will be reluctant to move from a traditional leadership development model.

A Flexible Pipeline for Changing Organizations

The six leadership passages and the attendant skills, time applications and values aren't set in stone. Some requirements might need to be tweaked to conform to specific environmental realities.

How Coaches Avoid a 'Fix-It' Mentality

Coaching with the Pipeline model rather than the problem in the spotlight is not always an easy task. Managers often are tempted to "fix it" and deal with the problem rather than with the individual's leadership capability.

To avoid a pure fix-it mentality, concentrate on attempting to achieve the following through coaching:

- Help people achieve their full potential. Discuss what managers need to do in order to fulfill that potential on their current leadership level.
- Provide an honest assessment. This means communicating to managers where they are on the Pipeline in terms of their skills, time applications and values, even if where they are personally is nowhere near where they are assigned.
- Communicate the benefit for both the individual and the organization.

Ultimately, the Leadership Pipeline's greatest value may be that it provides a framework upon which new organizations can be built and old ones can reconfigure themselves.

In the future, the six passages may change. As e-commerce affects almost every company and as other major trends force companies to rethink what they are and what they must do, leadership passages will evolve. Nonetheless, the Pipeline model will remain viable because its essential message is timeless: Leadership entails a series of passages that come with very specific values, skills and time requirements; leaders must not skip passages as they take on more responsibility and influence in an organization or they will end up working at the wrong level and will clog the pipeline.

With these principles in mind, any organization can develop its own talent to maximum leadership capacity now and in the future.

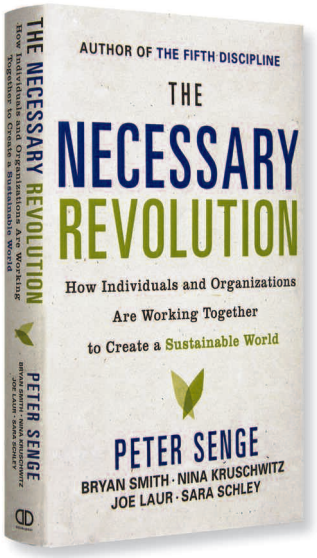
Leadership: Strategies

The Necessary Revolution

How Individuals and Organizations Are Working Together to Create a Sustainable World



by Peter Senge, Bryan Smith, Nina Kruschwitz, Joe Laur and Sara Schley

THE SUMMARY IN BRIEF

A revolution is under way in today's organizations. Companies around the world are boldly leading the change from dead-end "business as usual" tactics to transformative strategies that are essential for creating a flourishing, sustainable world.

There is a long way to go, but the era of denial has ended. Today's most innovative leaders are recognizing that for the sake of our companies and our world, we must implement revolutionary — not just incremental — changes in the way we live and work.

In this summary, the authors of *The Necessary Revolution* reveal how ordinary people at every level are transforming their businesses and communities. By working collaboratively across boundaries, they are exploring and putting into place unprecedented solutions that move beyond just being "less bad" to creating pathways that will enable us to succeed in an increasingly interdependent world.

This summary contains a wealth of strategies that individuals and organizations can use to build the confidence and competence to respond effectively to the greatest challenge of our time — creating a sustainable world, both for ourselves and for the generations to follow.

IN THIS SUMMARY, YOU WILL LEARN:

- Why life beyond the Industrial Age Bubble will be based on very different beliefs, assumptions and guiding principles from today.
- How Sweden became the world's model for reduced dependence on fossil fuel.
- The many benefits for individuals and organizations of embracing collaborative leadership in the regenerative economy.
- Why rethinking our actions and expanding our boundaries help us to see underlying limits and new forces at play.

Endings, New Beginnings

Something important has happened in the last stage of the industrial era that sets it apart from the past: Globalization has brought a level of interdependence between nations and regions that has never existed before, along with truly global problems that also have no precedent. The Industrial Age isn't ending because of the decline in opportunities for further industrial expansion. It is ending because individuals, companies and governments are coming to the realization that its side effects are unsustainable.

Endings are also beginnings. The Industrial Age has brought extraordinary improvements in public education, human rights and material well-being, but it has also destroyed ecosystems, swallowed up traditional cultures that had thrived for centuries and created a way of life that cannot continue for much longer.

A Future Awaiting Our Choices

Amid all the uncertainties, three guiding ideas stand out as essential for creating a more sustainable future:

1. **There is no viable path forward that does not take into account the need of future generations.**
2. **Institutions matter.**
3. **All real change is grounded in new ways of thinking and perceiving.**

The challenges we face appear in three interconnected areas — energy and transportation, food and water, materials waste and toxicity (what we make and discard) — and the consequent imbalances that result when too many resources are concentrated in too few hands.

A sustainable world will only be possible by thinking differently. With nature and not machines as their inspiration, today's innovators are showing how to create a different future by learning how to see the larger systems of which they are a part and to foster collaboration across every imaginable boundary. Three core capabilities — seeing systems, collaborating across boundaries and creating versus problem solving — form the underpinnings, and ultimately the tools and methods, for this shift in thinking.

How We Got Into This Predicament

If you had to explain our predicament to a 10-year-old, this would be a good way to start:

1. The industrial system — what we make, buy and use — sits within the larger systems of nature.
2. This larger natural world includes living, regenerative resources, such as forests, and other resources that, from a human time perspective, do not regenerate, such as oil.
3. The regenerative resources can sustain human activities indefinitely, so long as we do not "harvest" them more rapidly than they replenish themselves.
4. The nonregenerative resources can only be depleted or "extracted." Since they cannot be replenished, sooner or later — as is happening right now — many start to run out.
5. In the process of extracting and harvesting resources in order to produce and use goods, the industrial systems also generate waste — waste from extracting and harvesting resources and from how we produce, use and eventually discard goods. This waste damages the ability of nature to replenish resources.
6. The industrial system also sits within a larger social

system of communities, families, schools and culture. Just as overproduction and waste damage natural systems, they also cause anxiety, inequity and stresses in our societies.

We have gotten into our predicament today because of a way of thinking that focuses on parts and neglects the whole.

The Case for Urgency: The 80-20 Challenge

Although the problems of the Industrial Age have been evident for decades, there is now one important difference: global climate change. Greenhouse gasses accumulating in the atmosphere are like a bathtub that is filling rapidly; it is not enough to stop the inflow (of emissions) from growing: If the inflow exceeds the outflow, the tub level will continue to rise forever. Given how much CO_2 is removed from the atmosphere by natural sequestration (which is being *reduced* by global deforestration), CO_2 emission worldwide must fall 60 to 80 percent in the next one to two decades! Today, emissions are still *rising* around the world. Accomplishing this will require a sea change in the kinds of energy we use, cars we drive, buildings we live and work in, cities we design, and ways both people and goods move around the world, as well as other changes no one can even imagine.

While focusing on CO_2 levels helps us to understand the urgency we face, it is equally important to remind ourselves that climate change is not an isolated problem. Climate change is but one thread in a larger cloth; we cannot simply remove the thread, but must reweave the cloth.

The change will not happen without a radical shift in the thinking that has made the industrial era so successful — and so disastrous.

Life Beyond the Bubble

The Industrial Age constitutes an extended bubble. The question is not if the Industrial Age Bubble will end. The question is when and how.

Life beyond the Bubble will be based on choices such as:

- **Surf the flux.** Live within our energy income, not by burning our energy capital (fossil fuels).
- **Zero to landfill.** Everything is 100 percent recyclable, remanufacturable or compostable.
- **We are borrowing the future from our children; we have to pay it back.**
- **We are only one of nature's wonders.**
- **Value the earth's services; they come free of charge to those who treasure them.**
- **Embrace variety; build community.**
- **In the global village, there is only one boat, and a hole sinks us all.** ●

The Future Is Now

Of all modern industrial countries, Sweden is probably the furthest along in weaning itself from fossil fuels. Today, the country depends on oil for only 30 percent of its energy, down from 77 percent in 1970, and the whole of northern Sweden is working together to be the world's first "bioregion," an advanced economy operating entirely on sustainably produced biofuels with zero fossil fuels. (The United States, by contrast, depends on fossil fuels for 85 percent of its energy.)

You might have assumed that changes of this magnitude required a massive government effort involving tens of thousands of people, enormous financial subsidies and years of extensively funded research. But, in fact, for many years, there was none of this kind of support, government sponsored or otherwise. Instead, countless local networks developed quietly, thanks to the efforts of small groups of committed and courageous individuals who set out to find others with similar aspirations.

Sweden's Per Carstedt

In Sweden in the early 1990s, Per Carstedt was one such person. He is the owner of a large Ford dealership in northern Sweden. Carstedt kept asking himself big questions, but he also asked himself, "What can one person do?"

An answer came when Carstedt was contacted by a foundation that wanted help in getting ethanol cars into the Swedish market. Carstedt eventually managed to find a person at Ford in Detroit who was in charge of producing "flexi-fuel" vehicles, cars that could run on ethanol, gasoline or any blend of the two. "He saw me as a potential ally," says Carstedt, "and helped us buy three cars in 1995." When it became clear that three cars were not enough to wake up the market, Carstedt negotiated with Ford to buy another 300 flexi-fuel vehicles.

He and a colleague from the BioAlcohol Fuel Foundation spent the next four years traveling from city to city until they formed a buyer's consortium of 50 municipalities, companies and individuals committed to buying 3,000 cars. In essence, Carstedt arranged a field test. Along the way he was also getting others engaged — primarily local government officials — to help build momentum for his idea.

Campaign of Persuasion

By the time Carstedt and his colleagues imported the first 50 Fords, he had managed to persuade two filling stations to install pumps with ethanol. To expand to the number of stations needed to serve the hundreds and soon thousands of cars they were planning on importing, he and his colleagues from the BioAlcohol Fuel

Foundation began a campaign of persuasion, approaching one retailer at a time, often coming up with the financing to install pumps themselves. "The first 100 stations took 10 years to develop," Carstedt says. "Nowadays we add 100 stations every three months!"

The foundation set a course by 2000 to move beyond the "low-hanging fruit" of grain-based ethanol toward alternative sources — such as cellulosic ethanol made from forestry industry waste — that would not compete with food crops and would have significantly lower greenhouse gas emissions.

The Green Zone

In 1997, Carstedt met an architect named Anders Nyquist; the two soon decided to work together to "build the most environmentally friendly car dealership in the world," says Carstedt. This evolved into what he and Nyquist dubbed the Green Zone: a block of businesses, incorporating Carstedt's car dealership, a McDonald's restaurant and a gas station (gasoline and biofuel, naturally), that would be as energy-efficient as possible. They designed systems interconnecting the businesses. Overall energy use was cut more than 80 percent from comparable developments.

There were several showplaces of integrated complexes in Europe, but these were large manufacturing complexes. Carstedt and Nyquist's Green Zone was a cross section of smaller "everyday" businesses that could serve as a model to inspire others.

To Carstedt's surprise, his small pilot project inspired many more than he had imagined. Soon it started to draw media attention from around the world.

The Green Zone sparked people's imaginations because it was small and relatively simple, and involved businesses that people could understand and relate to. After seeing how the Green Zone worked, others "could start to take the next steps by themselves," explains Carstedt.

BioFuel Region

Eventually, many did just that and began imagining an entire region that worked much like the demonstration site, scaling up the Green Zone into a BioFuel Region. Gradually the vision of an entire industrial region free of fossil fuels started to take shape.

Today, the BioFuel Region vision in northern Sweden includes more than 200 people working actively in student projects, local businesses, building and urban design, feedstock development and the continual advancement of ethanol production.

Not surprisingly, the BioFuel Region has captivated people not only in Sweden but around the world. Carstedt now helps coordinate a global project sponsored by the EU, involving 10 regions seeking to follow in northern Sweden's footsteps. ●

Getting Started

Sustainability, like shareholder value creation, is a multidimensional challenge. The Sustainable Value Framework originated by Stuart Hart and Mark Milstein addresses this in a simple and elegant way.

It is built around two dimensions — time and space — but it includes the social and environmental challenges businesses now face. It's been used by companies of all sizes in many industries and by broader coalitions of business and nonbusiness leaders.

The framework demonstrates the connection between sustainability and the core functions of any business. As Hart and Milstein point out, many executives look at this model and realize that *this connection simply has not been made before.*

The framework helps people place their organizations' activities in perspective, and shows how they can work together to create and maintain value and simplify strategic decision making.

Sustainable Value Creation

There are many distinct forces compelling businesses toward the regenerative economy, but the Sustainable Value Framework helps us categorize them into four broad groupings — and allows us to better understand how sustainable practices are directly related to a company's core strategies.

The first, and perhaps most obvious, relates to the increasing industrialization of the last two centuries and its side effects, material consumption, pollution and waste generation among them. Firms can create immediate value by reducing the level of material consumption and pollution associated with their activities.

A second set of forces concerns the proliferation of "civil society stakeholders." As the power of national governments has eroded in the wake of global trade regimes, nongovernmental organizations (NGOs) and other civil society groups have stepped into the breach, assuming the role of monitor (and, in some cases, enforcer) of social and environmental standards. Internet-connected coalitions of NGOs are making it increasingly difficult for governments, corporations or any other large institutions to operate in secrecy. Moreover, companies that operate at greater levels of transparency and responsiveness to the public's desire for sustainable practices will see the direct impact of improved brand image on the bottom line.

Emerging 'Disruptive' Technologies

A third set of trends includes emerging "disruptive"

technologies that challenge the status quo and could render many of today's energy- and material-intensive industries obsolete. Genomics, biomimicry, nanotechnology, information technology and renewable energy all hold the potential to drastically change both the way we do business and our effect on the planet. There are few more effective ways for companies to invest in the future than by developing new, game-changing technologies.

Finally, a fourth set of drivers relates to global problems like resource depletion, deteriorating ecosystems and climate change; poverty and inequity in the developing world; and an equally broad set of sustainability drivers in the developed world, including global security issues and their close links to climate, resource consumption and energy supply and security. Social development and wealth creation on a massive scale, especially among the world's poorest 4 billion, are essential to sustainable development.

Companies that hope to thrive in the years to come must address each of the four broad sets of drivers.

Seeing Systems

The innovators creating tomorrow's regenerative economy have all, in their own ways, learned how to *see the larger systems* in which they live and work. They have learned to see systems by cultivating an intelligence that we all possess. Organizations committed to building the capacity to see the larger systems in which they operate not only create powerful learning environments within but begin to be a positive force for systems intelligence to flourish on a larger scale.

Once people start to practice seeing systems, they begin to understand the basic flaws in prevailing mental models and alternative futures that are possible.

Businesspeople with traditional competitive win-lose mind-sets are closing their eyes to the fact that there are really only two long-term options when it comes to dealing with sustainability issues: win-win or lose-lose. To avoid the lose-lose path, we all must be able to (1) break free of established mental models and the arbitrary boundaries on thinking such assumptions impose; (2) step back, expand our boundaries and see the larger limits on natural resources and what they mean for our businesses; and (3) when needed, work to build a stewardship ethic in our industries, helping other key players realize that we all share a "commons" that will support us only so long as we learn what it takes to support it.

Rethink Boundaries

Attempts to convince people that they are wrong and that they need to rethink boundaries will almost always be met with resistance; few people appreciate being told that their thinking is too limited. Instead, a more effective approach is simply to help people reflect on the assumptions that they are making.

When you begin to expand boundaries, you will start to see underlying limits and new forces at play. Many of the limits were there all along but have been obscured by previously assumed mental models. Seeing the forces that arise from underlying limits also enables seeing into the future.

The discipline of seeing systems is an ongoing process of stepping back to see a bigger picture, appreciating the deeper forces underlying a problem or situation, seeing new opportunities these forces might also create, and then focusing on these opportunities. But the intellectual insight this generates will only take you so far. Ultimately, we need to reflect on the mental models or assumptions driving the systems we belong to and make the choice to move in new directions.

Seeing Our Choices

Once companies see clearly that they have a simple choice to make — either take the lead on sustainability issues or shift the burden to someone else — they can start to make serious investments.

The shifting-the-burden dynamic can help companies see the very different outcomes of these two choices. One set of choices involves addressing a problem with short-term, symptomatic solutions. The other looks at fundamental, long-term solutions. The key insight here is that opting for quick fixes and avoiding fundamental solutions tends to set up a reinforcing set of pressures for more quick fixes over time.

Seven Benefits of Leading in a Regenerative Economy

Here are seven concrete benefits of embracing leadership in the regenerative economy:

1. **There is significant money to be saved.**
2. **There is significant money to be made.**
3. **You can provide your customers with a competitive edge.**
4. **Sustainability is a point of differentiation.**
5. **You can shape the future of your industry.**
6. **You can become a preferred supplier.**
7. **You can change your image and brand.** Companies in every industry can successfully remake their reputations and brands through serious investments in environmental initiatives.

When we interrupt the shifting-the-burden pattern, we begin stewarding the restoration of shared commons. Organizations will inevitably discover that many of the limits they face are in fact "commons," shared by others in their industry or by society itself. Building on their own efforts, they can then reach out with credibility to collaborate with others.

Virtuous Cycle of Improvement

By reinvesting the benefits from successful initiatives to better manage commons, a virtuous cycle of improvement can ensue: Cost savings become investment capital for further building the commons, reducing system costs still further.

We must find ways to manage essential commons such as water and topsoil, healthy ecosystems, rain forests and stable climate. But we still have a long way to go until we find a number of ways to do this practically. Managing or stewarding these commons starts with a critical mass of stewards — individuals, teams and organizations that see the risks and are willing to act. They then must create new systems — formal and informal rules and management practices based on new mental models — that are adequate to the task.

Work in Concert With Others

The leverage and opportunity, and the real excitement, come when individual interests work in concert with others. As more people realize that the core challenges of the Big Three global systems — energy and transportation, food and water, and material waste and toxicity — cannot be solved in isolation, collaborations will spread and become more sophisticated as people and groups combine systems thinking and skills in collaborating across boundaries. We are just starting to appreciate the level of collaborative systems-thinking skills that will be needed, but there is no doubt this is where real leverage for the future lies. ●

Collaborating Across Boundaries

Collaborating successfully requires more than good intentions. It also requires improving your "convening" skills so that you can get the right people together and have more open and productive meetings. It requires seeing reality through others' eyes so that you can better understand what might be holding them and you back from building more open and truly productive partnerships. And it requires forging genuinely shared aspirations to which everyone is committed.

More organizations are collaborating across boundaries because as the complexity of issues grows, people are beginning to understand that any one organization can only do so much.

Collaborating is ultimately about relationships, and relationships do not thrive based on a rational calculus of costs and benefits but rather because of genuine caring and mutual vulnerability. Building the capacity to collaborate is hard work and demands the best of people, particularly when it involves people from different organizations with different goals and with little history of working together — maybe even with histories of distrust and antagonism. In particular, building this capacity rests on three capabilities: convening, listening and nurturing shared commitment.

Convening: 'Get the System in the Room'

Like all journeys, "getting the system in the room" is a step-by-step process. In addition to requiring great patience and perseverance, it takes insight into who needs to be engaged and when. In practice, convening usually becomes a step-by-step iterative process — considering the system you seek to influence, thinking about the variety of key actors in that system, and remembering to include those who traditionally lack a voice in formal decisions or official policies but who possess important circles of influence nonetheless.

Seeing Reality Through Others' Eyes

The five elements of all learning journeys can help open your eyes to a larger reality beyond the one you usually see:

1. Bring together a diverse group of people who, to the highest degree possible, represents the larger system you belong to.
2. Identify the different facets of the system that you will explore.
3. "Go there together"; travel with the entire team.
4. Set aside ample time to reflect and talk together about what you experience.
5. Pay careful attention to the intentions and commitments that arise from your reflection, and take time for these as well.

The last element is an essential aspect of all learning journeys. Learning journeys, at their essence, are about "sensing" (or opening awareness to the present moment), but the goal is not simply awareness for its own sake, or to only deepen relationships between key players, but doing this in the context of compelling issues about which people care deeply. The team members must ultimately be prepared to re-examine their own beliefs and tried-and-true approaches in the service of genuine change.

Building Shared Commitment

Shared commitment arises through focusing first on

engagement — connecting to what matters to you and the larger organizations involved — and then on creating the opportunity for both focus and commitment to deepen naturally over time.

Your ability to foster commitment will never be greater than your own commitment. The key in fostering shared commitment lies in connecting to what you care about and what the organization cares about and gradually knitting the two together.

Move Beyond Views and Agendas

Opening minds and hearts starts with the process of moving beyond our own views and agendas so that we can start to connect with one another and truly work together to create new systems. But there is a third opening seen time and again among people who have embraced systems thinking and collaborating across boundaries — an opening of the will. This is what happens when people, individually and collectively, truly become open to their sense of purpose or destiny. These are unusual words to use in conjunction with developing practical approaches to very real problems. Yet they are often exactly what is missing. ●

From Problem Solving to Creating

Problem solving differs from creating, and though both matter, the vast changes required for creating a regenerative society will not be achieved just by reacting to crises after they arise. They will require inspiration, aspiration, imagination, patience, perseverance and no small amount of humility. They will require networks of committed people and organizations that not only learn how to see the systems shaping how things work now, but also create alternatives.

Look to Nature for Inspiration

Businesses innovate or they fail to survive. What will differ for life beyond the Industrial Age Bubble will be what *inspires* that innovation. Ultimately, the shift from a reactive problem-solving mind-set to a creative one is all about inspiration. More specifically, it's about taking nature as our primary source of inspiration.

The business model that drives virtually all Industrial Age companies can basically be reduced to "selling stuff." After customers have gotten the value they seek, they discard a product at the end of its service lifetime and replace it with more stuff. In effect, people buy a thing for its temporary value; when there is no more value, no one wants it any longer. Disposal falls on the shoulders of the customer — and ultimately upon society as a whole. But in a circular economy, designing products for "life after life" means also designing business models with the same aim. This can be accomplished through innovative business models inspired by nature.

You Don't Have to Have All the Answers

Prototypes such as Per Carstedt's Green Zone allow people to learn through doing, as happened when Carstedt discovered how "industrial ecology" concepts, developed for large industrial complexes, had to be adjusted to a cluster of small businesses.

Practical know-how, in turn, fosters a sense of possibility about "what we can *do*." Tangible prototypes also can bring together diverse interests and areas of expertise to form a community of learners.

Concrete embodiments of big ideas spark imagination in ways that abstract arguments cannot. This was Carstedt's biggest lesson from his work on the Green Zone. Initially he didn't really think the project was that exciting. But people started to come from all around the world to see it. All of a sudden, people could imagine what a "circular economy" would really look like.

Tangible Prototypes

In many ways, sustainability will be as much about seeing latent needs in the market as it is about implementing new technologies, and for this tangible prototypes are crucial.

Often people in important leadership positions think they have to have all the answers, and those "below" them hold the same view. Ironically, this fails to tap the collective intelligence that can arise when those in visible positions openly ask for help. Asking for help has two benefits, one obvious and one more subtle. First, it generates a remarkable diversity and depth of ideas and energy for change. Second, it engages people in changes that really matter to them.

From Low-Hanging Fruit to New Strategic Possibilities

Many companies start the sustainability journey with waste reduction or energy-efficiency improvements because there is an immediate "business case." But many never move beyond this low-hanging fruit because they fail to summon the imagination and courage to face the fact that they are selling the wrong products to the wrong customers based on the wrong business model.

To keep your organization from getting trapped in only undertaking sustainability initiatives with short-term benefits, you will need to gradually build a business case for investing in the future and to nurture a broader

network of leaders who see these same possibilities.

The spirit of prototypes is that you do not need to have all the answers; you are merely trying to show "proof of concept" now, and you can expand the variety of key players actively involved down the line.

Redesigning for the Future

As organizations get serious about moving beyond the low-hanging fruit of waste reduction and efficiency improvements, they invariably discover that traditional fragmented organizational structures must be rethought.

Start with redesigning the mainstream, backbone functions that represent the core of your organization. Focus on innovation next. Long-term R and D and innovation work is crucial and must be designed into the system. Then focus on staff specialists. Staff specialists can provide timely, high-quality advice and scan externally for challenging global best practices to pass on to business unit heads and other managers.

Inspired Performance

Proceed with confidence, knowing that the hard work of redesigning is well worth the effort and, even though all designs need to evolve over time, significant improvements are possible and will give every person in your company the robust organization they need for inspired performance toward life beyond the Bubble. ●

The Future

The emerging changes now taking shape around the world are very small compared to what is coming. We are entering an epic institutional transformation, where we must:

- **Reduce aggregate consumption.**
- **Invest in the regeneration of living, social and natural capital, the foundation of all real wealth.**
- **Accelerate social innovations, adaptation and learning by nurturing cultural diversity.**
- **Reverse the "short-termism" that dominates capital markets and many business decisions.**
- **Increase long-term economic performance through governance systems that promote collaborative stewardship of social and intellectual capital.**

Just as the Industrial Age has been an era characterized by the growth and spread of the large hierarchically controlled organizations, life beyond the Bubble may be characterized by a variety of business and nonbusiness organizations based on cultures of relationship rather than cultures of control.

Building enterprises based on cultures of relationship — organizations that not only work like nature but are more harmonious with nature, be it a forest or you and me — may prove a defining feature of a regenerative society.

The Future of Leadership

For much of the leadership required to create a regenerative society, look to the periphery, to people and places where commitment to the status quo is low and where hearts and minds are most open to the new, like women, young people and those from societies less socialized into the assumptions and norms of the Industrial Age Bubble.

Ultimately, leadership is about how we shape futures that we truly desire, as opposed to try as best we can to cope with circumstances we believe are beyond our control. It is now fitting that places such as Africa and China, left behind in the advance of the Industrial Age, have the opportunity to play key roles in shaping life beyond the Bubble.

A society without a way to value its past naturally discounts its future. It seems unlikely that life beyond the Bubble will be possible without leadership from those who can connect past and future and embrace far longer time horizons in both than characterized life within the Bubble.

The Future of Us

Life beyond the Bubble is not only about our relationships with the earth, with one another and with other species. It is also about our relationship with ourselves, what it means to be human.

We are a young species who, uncertain of our niche, has very recently — in a virtual second of life's day on earth — expanded to fill the world. In a sense we are like teenagers, full of enthusiasm and energy, and more than a bit confused. And, like every teenager must, we are about to discover that we are not the center of the universe — not even the center of life on this planet. We are but one of millions, and our merit depends not on our ego, but on our contribution.

Whether we are prepared or not, the teenager is growing into an adult and we must trust that the problems we face, no matter how daunting they appear, are exactly those needed to guide us through the transition. ●

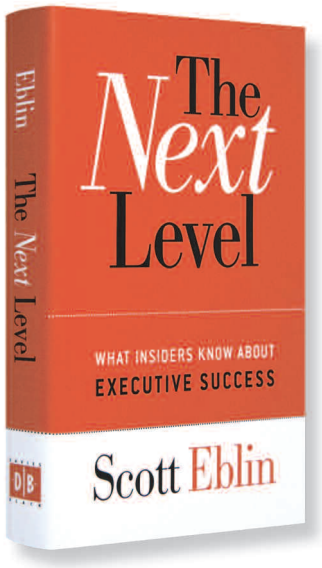
Leadership: Development

Bonus Summary

The Next Level

What Insiders Know About Executive Success



by Scott Eblin

THE SUMMARY IN BRIEF

In *The Next Level*, former Fortune 500 HR executive Scott Eblin explains the difference between being a functional leader in an organization and being an executive. At the executive level, you must let go of many of the attributes that made you a successful functional leader and begin to think in terms of the organization as a whole.

To be an effective executive, you need to know that what drove your progress at lower levels will not necessarily sustain your future success. You must adopt new ways of thinking and acting, and, more important, let go of old ways. Succeeding as an executive requires undergoing a transformational experience unlike any other in one's career. *The Next Level* provides the framework for achieving this transformation.

Eblin walks you through the pitfalls every new executive faces and provides the tools you will need to assure success in your new role. By learning the difference between accountability and responsibility, for example, you can put your energies in the right place.

Drawing on more than 20 years of experience working with new and seasoned executives, Eblin identifies nine key sets of behaviors and beliefs that rising executives must pick up and let go of to successfully transition to the executive level. If your goal is to make the most of the bigger footprint that is available to you as an executive, then *The Next Level* can help.

IN THIS SUMMARY, YOU WILL LEARN:

- Why insecure people make lousy leaders.
- How to make a Life GPS® (Goals Planning System).
- How to interact with your boss.
- How to learn what is important to senior executives.
- How to build teamwork.

THE COMPLETE SUMMARY: **THE NEXT LEVEL**

by Scott Eblin

The author: Scott Eblin, a former Fortune 500 human resources executive, is an executive coach, speaker and author. He is president of The Eblin Group, whose clients include AOL, Capital One, Northrop Grumman, and The World Bank. Eblin is a graduate of Davidson College, Harvard University and Georgetown University's leadership coaching certificate program, where he is on the faculty.

Pick Up Confidence in Your Presence

Let's start with a basic truth: Insecure people make lousy leaders. So, as you move into the executive level, the first challenge is to keep insecurity from getting the better of you. Unless you are superhuman, your first days as an executive will naturally produce some uncertainty and discomfort. It is critical for your success that you not dwell on thoughts and self-assessments that cause you to doubt your capacity to contribute as an executive. You must build a sense of *grounded confidence* in your presence and in the idea that you have important contributions to make as one of the leaders of your organization.

From the Tactical to the Transformational

Regularly demonstrating your confidence in a grounded and appropriate way will build the confidence of your boss, your peers and your team in you. Building your confidence in your executive role can begin with some tactics that, when you make them part of your routine, can lead to transformational changes that dramatically raise your level of leadership effectiveness. The opportunity you have is to identify the key tactical behaviors that, if regularly repeated, will lead to a transformation in the level of confidence you project.

To achieve and sustain results over the long run at the executive level, strong relationships with peers, top leadership and functional team members across the organization are critical. Your success in managing relationships will stem from the confidence you have in yourself and your ability to work well with others to make things happen.

Get Comfortable with Letting Go of What Brought You to the Dance

Being a successful executive does not require you to change who you are, but it may require you to change what you regularly do so that you are more likely to be operating from the state of how you are at your best. To meet the expectations that your peers and top management have of you, you will have to let go of deep engagement in the day-to-day aspects of your function. To develop the confidence needed to succeed as an executive, you will have to explore fields beyond the comfort of the functional skills that brought you to the dance.

Pick Up Confidence

To play the broader leadership role as an executive, you will have to develop and project a sense of confidence in your judgment that extends beyond functional or technical knowledge. Taking constructive action that moves the organization forward will be a key aspect of how you are assessed as an executive. If you project discomfort or insecurity, your peers will sense it and become uncomfortable with you and your judgment. If you project a confident and comfortable presence, your peers will sense that and will return the favor.

Silence Your Inner Critic

It's important to recognize when your inner critic is speaking. Interference is whatever keeps you from performing in the position of how you are when you're at your best.

Before meetings, practice by asking questions like these:

- What is the meeting going to be about?
- What is my point of view on that subject?

- What outcome do I want from the meeting?
- What ideas will I need to share to reach that outcome?
- What are the top two or three points I want to make?
- How do I want to make them?

Pick Up Regular Renewal of Your Energy and Perspective

When faced with a challenge, a natural response for many leaders is to bear down and speed up. Having chalked up success after success, they see each new challenge as simply another hurdle to jump over. They believe that all it should take is more of what brought them to that point: smarts and a willingness to work harder and do more than the competition. The problem with this approach at the executive level is that it is one new challenge after another.

If your immediate response in the face of every new challenge is to bear down and speed up, you will eventually run out of gas and crash. Managing the demands of executive life requires picking up regular renewal of your energy and perspective, and letting go of running flat out until you crash.

The transformative challenge for new executives is to learn to take the regular breaks needed to renew the energy and perspective that enable them to perform at their best. Even brief periods of recovery or downtime can make a huge difference in executive performance. For executives who already feel the pressure to get through yet more work, stepping off the treadmill of working seven days a week seems like a leap of faith. But breaking the cycle of continuous exertion allows some time for recovery and reconnection to how they are at their best.

Perspective and Peak Performance

Think about how you perform and feel when you are at your most confident and relaxed. It is when your level of engagement is in that sweet spot between apathy and brain-lock inducing stress. Operating at this level of engagement creates the opportunity to perform at the peak of your capabilities and potential. To do that requires developing routines that enable you to recharge your energy stores and regain perspective.

Harvard professor Ron Heifetz makes the point that leaders periodically need to get off the dance floor and up on the balcony. As a leader, it is too easy to be down on the dance floor where all you can see is your partner and maybe a few of the dancers around you. When you take the time to leave the dance floor and get up on the balcony, you get a perspective on everything that is going on. After you gain that perspective, you can return to the floor and apply your attention where it is needed most.

Choosing to Perform at Your Best

As an executive, you will face a lot of pressure to react to dozens of demands on multiple fronts. Because change almost always involves loss as well as gain, you will run into resistance, lack of understanding, anger and other responses that can make life difficult and uncomfortable.

You can choose to react to these demands by taking on more and more meetings, answering e-mail at home every evening, skipping lunch, ignoring your health and key relationships, and basically running flat out until you crash. Alternatively, you can choose to respond to the demands by intentionally establishing routines designed to help you perform at your best.

Navigating with Your Life GPS®

Creating your Life GPS® (Goals Planning System) begins with identifying the core characteristics that describe how you are when you are at your best. To identify the characteristics that are central to you, think of situations you've been in when you are the most relaxed, productive, effective or energized. What are the four or five words or short phrases that describe you in your best state? Write them down in the center of a piece of paper.

The next step in creating your Life GPS® is to identify a short list of routine actions in four key domains of experience that — if you do them regularly — would reinforce how you are at your best. Those domains are the mental, physical, spiritual and relational.

If you were going to adjust your routines to allow more time for thinking, what would you spend that time thinking about? Many executives have found the value of establishing daily and weekly routines for short-term and long-term planning. Others make time for regular reading inside or outside their business discipline.

If one of your core characteristics is consistency, a regular set of routines in the physical domain would likely work for you. Develop a set of physical routines that reinforce how you are at your best. The energy that enables each of us to operate at a level of peak performance begins in our body. Make time to regularly renew it.

As you review your list of core characteristics of how you are at your best, identify some routines that draw on those qualities in a way that prepares you to

leave the place you're in better than you found it. As you consider what routines to pursue in the spiritual domain, reflect on the combination of core characteristics that represent how you are at your best. What could you do to really draw them out and make the most of them for the sake of something greater and longer-lasting than yourself?

The results-oriented focus of the executive lifestyle can be so all-consuming that it is easy to overlook the relationships inside and outside work that make life richer and more complete. When you look at the characteristics that describe how you are at your best, take time to consider how those qualities can inform the routines that will strengthen your most important relationships.

When you are ready to give more consideration to singling out the routines that, if regularly practiced, would reinforce how you are at your best, write headings for the *Mental, Physical, Spiritual* and *Relational* domains at the 10:00, 2:00, 4:00, and 8:00 positions around the core characteristics you wrote down earlier. Under each heading, write down three or four routines that apply to that domain and align with your core characteristics.

Results and Perspective

The last step in completing your Life GPS® is to consider the goals and intentions you have in the three key life arenas of home, work and community. Write the heading *Home* at the top center of your page and the headings *Work* and *Community* toward the bottom left and right corners respectively. Write down three or four outcomes you would expect to see in each of the three arenas of life.

Take a few minutes each week to bring yourself back to how you are at your best by reviewing and reflecting on your Life GPS®. Taking this kind of time for review and reflection is a powerful way to pick up the habit of regular renewal of your energy and perspective.

Pick Up Custom-Fit Communications

Executives don't spend much of their time producing anything tangible. They produce and deal in ideas. For those ideas to be of any value, they have to be well communicated to the right audiences at the right time.

Be very clear about your desired outcome, the audience for your message and what it will take to move that audience toward your desired outcome. Effective executives think strategically about their communications and custom-fit their approach to take into account where their audience is and where they want their audience to be in terms of thought, feeling and action.

Communicating with the Whole Organization

As an executive, you are always on stage in your organization. As a result, you need to be much more aware of the impact of your communications than you may have been in the past.

As an executive, you have the opportunity to help shape the communications in the broader organization. If you want to sustain or build an open culture, seek to put people at all levels at ease. Even if this does not come naturally to you, it is possible to develop this approach by being clear about what you're trying to do and intentionally adopting some behaviors that reinforce your goal.

Communicating with Your Boss

If you find that managing your time is challenging for you as a new executive, imagine what it is like for your boss. You need to be intentional and focused in communicating with your boss. Don't wait for your boss to tell you what information you're supposed to provide and how often you're supposed to provide it. Ask. Adopt a simple and consistent framework for presenting it. A University of Michigan professor offers a communications framework that is built on three simple questions:

- *What?* What issue needs to be addressed or considered?
- *So What?* What are the implications of this issue that make it worthy of consideration?
- *Now What?* What needs to be done next about this issue? What action or support do you need from your boss? What milestones should your boss look for in terms of progress?

It is important to craft and implement an ongoing strategy of keeping the results of your team's good work in front of your boss and your boss's senior executive peers. One of your jobs is to position your functional team for success. When they are successful, your next job is to speak for their success. This is the point at which your personal work will speak for itself.

Communicating with Senior Executives

Cultivate the habit of asking open-ended questions to learn what is most important to your organization's most senior executives. Align your actions with their definition of success. Your opportunities to make positive impressions on senior executives will come in formal presentations, regular update meetings and more informal conversations. Be prepared with a point of view on the key issues facing not just your function, but the

company as a whole. Regularly review your short list of key initiatives and priorities, and have a brief speech ready to deliver when a senior executive asks you what you're working on.

A common mistake that new executives make is to focus too much on how they came to their conclusions. To do this is to risk getting labeled as someone who, when asked for the time, explains how to build a watch. Focus much more on your recommendations and their implications than on the mechanics of how you arrived at them.

Communicating with Peers and Your Team

The foundation of your success as an executive is the strength of your functional team. The custom-fit communications advice with regard to your functional team is to be intentional about creating time to be approachable and available to them. Schedule time for regular and frequent conversations with your direct reports. Take time to walk the floor or go to remote locations to be visible to the folks on the front line.

To communicate what you intend to communicate, manage your presence at least as much as the content of your message. You can't just say you're excited; they need to see it and hear it.

Pick Up Team Reliance

To move successfully to the executive level, you have to develop a heightened level of awareness around your strengths and weaknesses. One of the biggest derailers is trying to do all the functional work yourself once you become an executive. You have to let go now.

Get the Right People in the Right Roles

You need people on your team who can keep up and contribute to creating successful outcomes. Having the right people in the right roles on your functional team creates the opportunity for you to redefine how you add value to the work of the team and the goals of the organization as a whole. Your role is not to check the work for accuracy, but to frame its broader implications for the organization. The question to regularly ask yourself is this: What is it, that — given the perspective and resources I have as an executive — only I can do?

Build and Lead

Here are some ideas for how to build effective teamwork:

- Get the team involved in shaping goals.
- Encourage team problem solving.
- Cultivate a diversity of views.
- Promote honest feedback.
- Show respect and earn trust.

A Focus on "What"

Steve Rippe, a retired major general in the U.S. Army, is currently COO of the Protestant Episcopal Cathedral Foundation. In that role, Rippe oversees the operations of the National Cathedral in Washington, D.C. A few months after he arrived at the Cathedral Foundation, he concluded that the organization needed a viable plan for conducting a state funeral. He hired a retired lieutenant colonel whose first priority was to update the Cathedral's plan for conducting a state funeral. A few weeks after the new director of operations delivered to Rippe a complete plan for conducting such an event, Rippe's cell phone rang one Saturday afternoon. The Episcopal bishop of Washington was calling to say that he had just received word that former President Reagan had died. The bishop asked him if they should meet immediately to plan the funeral. Knowing that the plan was already complete, Rippe suggested that they meet early the next morning instead.

Pick Up Defining What to Do

Instead of telling your team how to do the work, you now need to define the work your team needs to do. By focusing on what rather than how, you will be playing in the realm of the strategic rather than the tactical. Having the right people in the right roles is the key factor that will enable you to get comfortable in picking up defining what to do and letting go of telling how to do it.

Once you have developed clarity for yourself, your next responsibility is to share your understanding of what to do with your team and then ensure that excellent execution occurs.

Perspective Transference and Setting Expectations

One of the most valuable resources you can bring to your team is the perspective and insight you get from participating in meetings with other executives. Call this dynamic perspective transference. The power of executive level perspective and insight is in how it is used to shape direction and drive action through team members.

Setting expectations with your team should focus on both the what and the how. At the outset of a major project, these are some of the questions that should be asked and answered:

- When we're successful, what will be different from today's status quo?
- What difference will success make?
- What are the metrics that will help us to measure success?
- On the way to achieving the desired result, what actions are out of bounds?
- What is our deadline?

It is essential to establish clarity with your team on when they should bring you into the stream of work and ask for your perspective and assistance.

Guidelines, Systems, Levers

Set guidelines for defining what the team should accomplish and provide an appropriate degree of availability to follow up on how progress is being made.

As an executive leader, you need to maintain a stronger measure of control and influence around what needs to be done. The levers of control you use to keep a project on track should place the emphasis on what to do, not how to do it.

By picking up defining what to do and letting go of telling how to do it, you are taking an important step in developing future leaders of your organization, which is one of your primary new responsibilities.

Pick Up Accountability for Many Results

The distinction between responsibility and accountability turns on who is actually doing the work and how work is defined. In the responsibility model, you are the person who either does the work or closely monitors others who are doing the work. If you are responsible, you are likely to step in and do chunks of the work from time to time. You may even be doing chunks of the work all of the time. Either way, you're almost certainly going to personally make sure that the work comes together well and that it leads to the desired result. Because of the personal attention that the responsibility model requires, a leader can successfully manage only one or just a few results.

Successful executives learn to shift from being responsible to being accountable. The executive leader who successfully picks up accountability for many results is focused on outcomes. Outcomes begin with a clear definition of what to do. Executives who work from the accountability model are defining what to do across a range of issues, applying a perspective that is at a higher level and has a longer-term focus than those of their reporting managers. Their job is to set the agenda and bring the different streams of work together in a way that supports not just their own agenda, but also the larger organization's agenda. They are accountable for the results that support the agenda.

Reframing Your Definition of Work

When you operate at the executive level, you face a more intangible and ambiguous definition of what you accomplish on any given day. Your work is to oversee the process. You are learning how to operate in the accountability model and move away from the comfort and familiarity of the responsibility model.

As an executive, you have to let go of personal responsibility for every outcome. Your passion needs to shift from a narrow focus to a broad focus. The manager's questions focus on the day-to-day responsibilities of management reporting, customer satisfaction and new business development. In contrast, the leader's questions focus on the strategies of the competitive positioning of the company, options for expansion and acquiring the talent needed to expand.

Accountability and Monitoring

The accountability model of executive leadership has three implications:

- "What have you done for me lately?" becomes a more frequent question.
- You own the results for good or bad.
- You and your peers are accountable for solving bigger problems.

Because of the "What have you done for me lately?" atmosphere that can exist at the executive level, you should consider what you can do to manage the stream of your team's results. Ensuring that results are delivered consistently and on time will enhance the reputation of your team and its ability to get things done in your organization. It is also important to communicate to key stakeholders and influencers in the organization the results your team achieves. The work doesn't speak for itself; you have to speak for the work.

Your responsibility is to get the right people in the right roles, provide direction and monitor progress. You are, therefore, accountable for their results.

As an executive, you will regularly be expected to develop solutions to problems that are outside your functional realm of expertise. The problems will be bigger and more complex. You will have accountability for addressing them in collaboration with your executive peers.

Developing and shaping your staff so that they consistently meet the desired level of performance cre-

ates the opportunity for everyone to play at the next level up. For you, as an executive, having a staff that you can empower to deliver results enables you to take the broader perspective that is expected of you.

Pick Up Looking Left and Right as You Lead

Beginning here, we shift the focus from how successful executives lead their functional teams to how they demonstrate presence in the broader organization. That process begins with learning to focus your attention on your peers to the left and right, while also paying attention to those above and below you in the organization.

You are now part of two teams. You are still a member of the functional team that you lead, but you are also part of the leadership team of your organization.

As an executive, you will no longer be able to accomplish the things that matter most on your own. At the next level, interdependence replaces independence. To get things done, you have to know who to work with and who to talk to. You have to communicate your agenda clearly and act in a way that causes your peers to want to support it. There are five important elements of getting things done by persuading and influencing those on your left and right:

- Get to know your peers.
- Build trust.
- Establish credibility.
- Collaborate with your peers.
- Show up as an equal.

Looking Up into the Organization

By emphasizing the need to look left and right, this is not to suggest that you ignore looking up to the most senior executives or down to your team and the teams of your peers. One of the most important things to focus on with senior management is developing clarity about what success looks like to them. What are the metrics that need to be met or exceeded? What's the deadline for completion? Who has to be happy with the result?

Looking Down into the Organization

There are a couple of points to make about managing your relationships with the people in your organization who are below the executive level. The first is stay connected. Do this by:

- Staying visible and available.
- Listening without interrupting or appearing distracted.
- Asking open-ended, nonthreatening questions.
- Showing a sincere interest in people.

When your team does not perform at its best, it's important to show openness to feedback about their performance and act on it appropriately. Most of the time, this will mean helping them learn from their mistakes.

The flip side of this issue is striking the right balance on praising your team. At the same time, though, pay attention to when enough is enough.

Help your team stay grounded by helping them understand where they and their work fit into the bigger picture.

Pick Up an Outside-In View of the Entire Organization

As you reach the executive level, the focus shifts from "me and my team" to "us as the leadership team" of the entire organization. That shift from me to us needs to be quickly followed by an additional shift in perspective from us to them. The "them" in this case refers to all the stakeholders and competitors in the external environment.

Overcoming the "Me Mind-Set"

What got you to the executive level is not what is going to keep you there. As you move to the executive level, the expectation is that you will shift your allegiance from what is best for you and your function to what is best for the leadership team and the organization.

If your modus operandi has been to accumulate or even hoard resources to ensure the success of your function, you will need to quit doing that to be a successful executive. If you are in silo mode, it's difficult to see what really matters to the big-picture success of the organization. It is important to strike the balance between what is best for your agenda and what is best for the organization's agenda.

Moving into the "Us Mind-Set"

To make the contributions that are expected of you as an executive, you have to view yourself as a leader of the business and not just your function. It's not just about you and your to-do list anymore. It's bigger than that, and your peers and bosses expect you to demonstrate that you understand.

As you begin to put the business first and your function second, you will need to help your functional team understand your operating context. As an executive you will be privy to information that cannot go any further

than the communication between the executive principals. It is helpful to state up front for your team that you will share as much information as you can with them, but there will be times when it is in everyone's best interest for certain information not to be shared.

Thinking About "Them"

Sometimes executive teams can become so focused on "us" that they don't think enough about "them." Failure to regularly look at the organization from the outside in is a fairly common mistake that executive teams make. As a new member of the executive team, you may well have the opportunity, as a fresh voice, to encourage your colleagues to challenge their assumptions and take a broader look around. As you move from "me" to "us" to "them," you will find that your comfort level rises as you see the results that come from broadening your field of vision.

Pick Up a Big-Footprint View of Your Role

Expectations change when an executive title appears after your name. Everyone will have different expectations about what you should be doing and how you should be acting as an executive.

You have to pick up a big-footprint view of your role and let go of a small-footprint view of your role. You are going to be much more visible to all the stakeholders in your organization than you use to be. Because of your increased visibility, you will be expected to make a bigger impact in the organization.

Living with a Higher Profile

When you become an executive, your words will have a greater impact because of your higher role. The way that you use your words can dramatically affect the morale of the organization.

A sure way to damage morale and sink productivity is to casually speak about emotion-laden issues, such as downsizing, reorganization, compensation and benefits, and performance goals. Jokes about job security just aren't funny.

Another dynamic to watch out for is sucking all the air out of a conversation by pushing your point of view too hard. While you may think you are just having a spirited conversation, your subordinates will likely read it as you imposing your will as an executive.

As a member of the executive team, you have both the opportunity and the obligation to seek out feedback from employees about their concerns and what is on their minds. Getting out and mixing with employees on a regular basis is probably the most effective way to shape the business culture you and the rest of the executive team are trying to create.

Living with Other High-Profile Types

As someone operating at the executive level, you have a choice to make. One path is approaching the battle for control with clear winners and losers. The other begins with picking up the habit of looking left and right as you lead. Getting to know your peers, building trust, establishing credibility and seeking to collaborate with your teammates are the building blocks of learning to live successfully with other high-profile types.

If you insist on your answer always being the one best right answer, you can easily end up being seen as aggressive and overly critical. Don't waste time proving how smart you are to your peers. Spend your energy on bringing the group together to come up with smart outcomes.

Mind Your Message

You are the message for yourself and for your company. Assume that there are always people out there forming impressions based on the message you send.

A good rule of thumb for how to dress as an executive is to look at the successful people one level up and follow their lead.

When you're in a meeting, put away the BlackBerry, cell phone, pager, laptop, Palm Pilot and anything else that allows you to multitask. With the big footprint of an executive, you are the message. Act accordingly.

Play a Bigger Game

As an executive, you are expected to take action and work with your peers to make an impact for the organization. You are expected to deliver a series of positive results over time.

Things will continue to happen whether you're on board or not. If your goal is to make the most of the bigger footprint that is available to you as an executive, then you need to be on board.

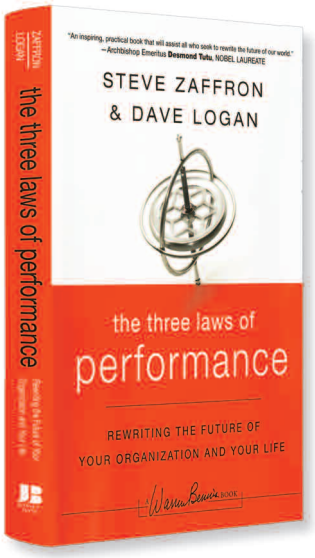
Leadership: Development

The Three Laws of Performance

Rewriting the Future of Your Organization and Your Life



by Steve Zaffron and Dave Logan

THE SUMMARY IN BRIEF

Each of us has a future that has already been written by hopes, fears, dreams, expectations and decisions made about life. In the same way, organizations have futures written by history, circumstances, culture, aspirations, successes and failures. These already-written futures determine and shape the level of performance that's possible for individuals and organizations.

The Three Laws of Performance cracks the code on rewriting the future for people and organizations. The result is the transformation of a situation, leading to a dramatic elevation in performance. Rewrite the future, and people's actions naturally shift: from disengaged to proactive, from resigned to inspired, from frustrated to innovative. This kind of transformation creates a wave of momentum: investors want in, companies seek partnerships, and potential employees seek employment.

When the Three Laws described by Steve Zaffron and Dave Logan are applied, performance transforms to a level far beyond what most people think is possible. Rewrite the future and old problems disappear.

IN THIS SUMMARY, YOU WILL LEARN:

- How to transform impossible situations.
- How to untie the knots of language and free communication.
- What it means to rewrite a future that's already written.
- The role leaders play in elevating performance.
- How to create a Self-led organization.
- How to master the game of performance.

THE COMPLETE SUMMARY: THE THREE LAWS OF PERFORMANCE

by Steve Zaffron and Dave Logan

The authors: Steve Zaffron is the CEO of Vanto Group, a global consulting firm that designs and implements large-scale initiatives to elevate organizational performance. Zaffron has directed major corporate initiatives with more than 300 organizations in 20 countries. Dave Logan is senior partner of CultureSync, a management firm and is on the faculty at the Marshall School of Business at the University of Southern California.

Part 1: The Three Laws In Action

The First Law of Performance: How people perform correlates to how situations occur to them.

The First Law answers the question, "Why do people do what they do?" Consider that when *we* do something, it always makes complete sense to *us*. On the other hand, when others do something, we often question, "Why are they doing that? It doesn't make any sense!"

Although there certainly are facts about how and why things are the way they are, the facts of the matter are much less important to us than the way those facts occur to us. The First Law rejects the common-sense view of actions — that people do what they do in a situation because of a common understanding of the facts.

What gives the First Law the potential to alter performance is its relationship to the other two laws. "The way a situation occurs" to people, and their correlated performance, can be altered through a certain use of language.

When people relate to each other as if each is dealing with the same set of facts, they have fallen into the *reality illusion*. To see the reality illusion at work, think of a person you aren't happy with at the moment. Think of words that describe that person. You might say, "self-centered" and "irrational." Notice that you've described how the person *occurs* to you. What we see is just the way it is. None of us sees things as they are. We see how things occur to us.

The First Law says that there are two elements: performance and how a situation occurs.

As counterintuitive as it may seem, most change efforts end up *reinforcing* how a situation occurs. Most companies are resisting a problem by trying to fix it, but the more they push, the more the problem pushes back.

The principle at work here is: *whatever you resist, persists*. If you can see any way that you are resisting your performance challenge, you'll see that you may be strengthening its hold on you and others — the more you have fought it, the stronger it became.

The Future Rewritten

There are specific actions you can take to tap into the power of the First Law of Performance. Notice the connection between performance and how situations occur for people. See that this relationship *always* holds.

See the reality illusion at work, in you and people around you. Almost without exception, people don't notice that all they are aware of is how situations occur to them. They talk and act as if they see things as they really are.

What if you could do something about how situations occur — to you and everyone around you? What impact would this make in everyone's performance?

Where Is the Key to Performance?

The Second Law of Performance: How a situation occurs arises in language.

People in a company get tied up in knots of language — knots composed of words, symbols, sentences and communication that somehow block and impede performance. The result is repetitive and unproductive behavior, mostly done with the best of intentions.

How situations occur is inseparable from language. Language is the means through which your future is

already written. It is also the means through which it can be rewritten.

Consider a performance challenge of your own. Your boss, your finances, your children, your industry, your country — are all resistant to change. But as the First Law of Performance says, your actions correlate with how these occur to you, not to the facts themselves. The key to performance is hiding in a particular facet of language.

The Knots of Language

Language includes not only spoken and written communication, but also body language, facial expressions, tone of voice, pictures and drawings, music, how people dress, and any other actions that have symbolic intent.

Untying the knots of language begins with seeing that whenever you say something, other communication is carried along with it. We call this phenomenon *the unsaid but communicated*. The unsaid is the most important part of language when it comes to elevating performance. It includes assumptions, expectations, disappointments, resentments, regrets, interpretations, significance, and issues that occur as dangerous. You can feel and experience the unsaid but communicated.

An aspect of communication that writes our future without our even realizing it is the part of language that exists outside the light of our attention, *the unsaid and communicated without awareness*. It determines and shapes which messages are possible, not possible, important, unimportant, and so on. The unawareness aspect puts this part of language outside our control. Until we find leverage on this part of language, the future is written and can't be altered.

The Key to Performance

For most people, exploring the unsaid is like walking into a cave — the journey goes from bright to dim to pitch black. It starts with someone saying what he or she has been thinking. After a time, the person will say something and feel surprised by what he or she has just said, as if another person uttered the words.

The unsaid, and especially the unsaid that people are unaware of, can leave people with no space to create anything new. The unsaid and communicated without awareness can become linguistic clutter.

The key to performance isn't pushing new conversations about strategy or reorganization into an already crammed space; rather, it's cleaning out the clutter.

Almost universally, it's the unsaid that's cluttered for individuals, groups and organizations. Before anything new can happen, people need to make space by doing the linguistic equivalent of clearing out closets. This means moving issues into the light of discussion — saying them and examining them in public.

The point is to notice that there are issues constraining people because of what they aren't saying. When people can address and articulate the unsaid, space begins to open up. People can discuss — openly and in public — what's holding them back and what to do about it.

Our 'Internal Voice'

As we move through the unsaid, there are forms and objects to look for. The first is the inner voice, which is the voice in your head that is constantly talking about everything and anything. Our internal voice runs so constantly that we mostly don't notice it.

Most of the time, the inner voice repeats old thoughts. Only rarely does it say anything new. And yet, it takes up a lot of our awareness. Notice that your inner voice probably won't produce any novel solutions to your performance challenge.

Rackets

Becoming aware of rackets, and taking responsibility for them, is one of the most important aspects of elevating performance.

A racket has four elements. First, there is a complaint that has persisted for some time. (*A common one in marriages is "He's late again!"*) Second, there is a pattern of behavior that goes along with the complaint. (*The wife may act irritated, aloof and withdrawn.*) The third element is a payoff for having this complaint continue. (*The wife gets to be right, makes her husband wrong, avoids the domination of her husband — or what occurs to her as her husband's domination by being late — and lets her regain control of the situation.*) The fourth element is the cost of this behavior. (*The wife loses closeness with her husband. The wife and husband running their "late again!" rackets are paying a price, about which they are both unaware.*)

Think about your racket. Can you see how the complaint might be a disguise for something deeper, such as a way of controlling a situation, or avoiding the domination of another person?

You'll have more power over a situation when you can label something a racket or can identify that what holds you back has something to do with how a situation occurs to you.

Using the Second Law

When we see the power of the unsaid, two compelling insights become clear. The first is that the situation is absurd. How the situation occurs to us is given by lan-

guage, yet it occurs to people to be as real as a wall.

The second insight leads to action: clear out the unsaid. Do this by saying what is unsaid and dealing with it. Getting the payoff and costs out into the open helps people discard some of the old conversations and make room for new conversations.

People often look for performance gains in the wrong place: in trying to force conversations before making space for them. The way to make space is to leverage the fact that how situations occur arises in language — and, in fact, the key to performance lies in language.

Rewriting a Future That's Already Written

The Third Law of Performance: Future-based language transforms how situations occur to people.

The Third Law rests on a fundamental distinction: there are two different ways to use language. The first is descriptive — using language to depict or represent things as they are or have been.

Future-based language, also called *generative language*, has the power to create new futures, to craft vision and to eliminate the blinders that are preventing people from seeing possibilities. It doesn't describe how a situation occurs; it *transforms* how it occurs. It does this by rewriting the future.

The Power of Future-Based Language

Future-based language projects a new future that replaces what people see coming. It doesn't modify the default future; it replaces it.

Future-based language is responsible for historical moments becoming turning points. When Martin Luther King Jr. said, "I have a dream," he created that dream in others — and displaced the default future of racial segregation.

Let's turn to your performance challenge. Think back on how the situation occurs to you. Notice that, even without trying, you think of past events. Your inner voice describes them and, based on what happened, predicts whether they will happen again or not.

Does your default future have any space in it to create something new, or is it all filled up?

What if, right now, you could substitute that future with another? Not one based on what's happened before, but something new? What if the future you see coming was to alter in its substance, going from default to invented?

Declaration: The Kind of Language That Creates a Future

All generative language relies on speech acts — an action taken through language. The most fundamental of speech acts is a declaration, which brings a possible future into existence. A declared future is not a dream or hope, but a future to which you commit yourself. Just as a default future isn't certain, a created future isn't a done deal, either. What we invent is a possibility to which we commit our entire being.

The Condition Required for Future-Based Language

How do you empty out the future that you are currently living into?

There are three dimensions to this process of "blanking the canvas," and people often move back and forth among them until they feel they have the room to invent something new.

The first dimension is *seeing that what binds and constrains us isn't the facts, it's language — and, in particular, descriptive language*. Issues that lurk in the unsaid occur as facts. When we become aware of these issues and are able to address and articulate them, what had occurred to us as facts shifts to being interpretations.

The second dimension is articulating the default future and asking, "Do we really want this as our future?" Until you can articulate the future and see that it isn't inevitable and necessary but is a construction of language, it's impossible to make a choice. Instead, we feel constrained and attempt to fight our way out.

The third dimension to creating a blank space is the most powerful: *completing issues from the past*. To complete means moving an incident from the default future to the past. This process goes far beyond "getting closure" or "starting the healing process." If you complete an incident, it no longer lives in your future.

Think about your performance challenge. Is there anyone involved in the situation with which you feel distance? Perhaps any sense that something is off? What you're seeing are incompletions — something that lives in your future, some baggage from the past. An incompletion lives in the occurring, not in the facts.

Creating a new future requires a constant commitment to being complete with everyone involved. Doing so creates and sustains a blank space into which the new future can be created.

Principles for Generating New Futures

Principle 1: Futures Inspire Action

Creating a new future with a large group of people takes a radically different path; more important, it starts with a different intention: to displace nonproductive conversations with conversations that establish a future so vibrant that people are eager to bring it about. That future creates a sense of urgency, and people's actions correlate to it.

Principle 2: Futures Speak to Everyone in the Process

In 2001, Northrop Grumman's strategists recognized that, in order to keep growing, the company needed to expand into markets other than defense. Space exploration became the obvious opportunity. After four days of work with 70 people, using the Three Laws of Performance, "we defined our role within the company and the new marketplace," says Doug Young, a Northrop Grumman vice president.

What made this effort successful is that people felt that the new future satisfied their concerns.

Principle 3: Futures Exist in the Moment of Speaking

Future-based language doesn't describe anything in the current reality. Rather, it creates a possible future to which the speaker is giving his or her word in the moment of speaking.

Take a moment and speculate about a future for yourself and others that would:

- Inspire action for everyone involved
- Fulfill the concerns of everyone involved
- Be vibrant and compelling in the moment you say it.

Part II: Rewriting the Future of Leadership

Each of the Three Laws of Performance has a leadership corollary — a corollary that guides what leaders do and, more important, shapes who they are for others.

Leadership Corollary 1: Leaders have a say, and give others a say, in how situations occur.

Leaders who empower others to rewrite and realize futures can transform any situation, no matter how impossible it may seem.

Leadership Corollary 2: Leaders master the conversational environment.

Leaders manage, and master, the conversational environment by working with people to resolve any incompletions they have. Leaders also work with other people to bring group rackets into the open so they can be discussed and resolved.

Leadership Corollary 3: Leaders listen for the future of their organization.

Leaders create conversations from the Third Law, composed of future-based language, to invent futures for the organization that didn't previously exist. However, leaders don't rewrite the future by themselves — they create the space and provide the "listening" for that future. When the future coalesces, leaders have a way of knowing it.

A leader who taps into the Three Laws listens for a future that will transform everything in the present. A leader listens for a future that is not predictable, probable, linear, and was not going to happen anyway, and which compels inspired action.

The Self-Led Organization

Although the last few decades have seen corporate responsibility increase, the fundamental nature of organizations hasn't transformed.

What would an evolution of corporations look like? What could the corporations of the late 21st century look like? How can we build them today, and use them to release us from crises we seem to be facing?

Our purpose is to make an organization Self-led, with the Self arising from all those people participating in the organization's network of conversations. The result is an organization that has it all: skyrocketing profits, dedicated and engaged employees, satisfied local communities, and sustainability.

Although a process as complex as finding an organization's Self can't be reduced to steps, there is a critical flow.

Encourage Leaders to Step Forward. The first part of stepping up begins with standing for the possibility that your organization can go beyond its current views of success to a place that integrates the profit motive with the desire to be global citizens.

Manage the Environment of the Network of Conversations. For the organizational Self to emerge, people have to take responsibility for the whole of the organization and for the concerns of stakeholders.

Create Ongoing Conversations with Stakeholders. Organizations that initiate and engage in ongoing conversations with their external stakeholders will be among the first to build authentic relationships with the groups and communities that they affect.

Listen for a Future That Encompasses the Self. An organizational Self emerges when the right seeds

have been planted. The conversational environment has to be tended to and implanted with integrity and ownership. The concerns of stakeholders must be an active set of conversations. People have to confront the truth about the default future of the organization and be willing to set it down and let it go. As the Self emerges, people begin to notice that they all have the same vision in mind.

Don't Lose Your Self. Once the Self of an organization is clear, leaders step forward and use future-based language to make declarations. Managers come forward to build systems, processes, policies and procedures to turn these declarations into reality.

Establish Self-Led Management. Finding an organization's Self is a business imperative. A company that listens and responds to all of its stakeholders can construct a business model to form long-term partnerships throughout the global workplace.

The New Organization: Built from the Self Up

Most organizations comprise networks of conversations that are inconsistent, dissonant and cluttered. However, if an organization's network of conversations could be infused with integrity, and harmonized, it could find its Self and become Self-led.

For an organization to deal with the pressure cooker it is in, it needs to rewrite its future by altering its network of conversations. It needs to create a compelling future for its stakeholders and align its network of conversations to fulfill that future. In the process, the organization's Self emerges, which is the collective essence of all of the people involved in its operations, including a future that inspires them and fulfills their concerns. This is what is meant by a Self-led organization.

Part III: Mastering the Game of Performance

Who or What Is Leading Your Life?

In all of our lives there are moments when we make critical decisions about ourselves that give us an overriding sense of who we are, not just in the present moment, but from then on. Based on the special self-defining nature of these decisions, we see ourselves in a way that limits who we are and what we can do.

The decisions we make that deal with what's wrong about us form the basis of our persona — who we consider ourselves to be.

These kinds of decisions are life altering. It's as if you are at a trial, and the trial is about how well you are dealing with life. You are playing three roles at the same time: the accused, the jury and the judge. That you are going to find yourself guilty is almost preordained. The sentence is the decision you make about how to deal with the future in a way that makes up for what is lacking in who you are. This is a lifelong sentence with no reprieve. These life sentences limit and narrow how you occur to yourself, and even how life occurs to you.

Overturning the Life Sentence

The good news about the life sentence is that you aren't just the accused, the judge and the jury. You can also be the court of appeals. You can reverse the conviction and release yourself from the prison of limitations. The bad news is that there is serious work to be done.

First, you have to tell the truth about your life sentence and what it is designed to hide. This step requires re-examining the evidence you used against yourself at trial. Only when the complete case is presented to the court of appeals can it be thrown out.

Once the life sentence is revealed for what it is — a decision about how to be in the future — you have a choice. Given that any decision is itself an action requiring language, you can renew or revoke it. But until you see the situation for what it is, you don't have a choice to say anything else about who you are.

Only when you see that it was you who made these decisions and judgments about and on yourself can you then overturn the life sentence. If you believe another person did it to you, or the circumstances did it to you, then you have no power. But if you are the imposer of the judgment, then you can revoke it.

Creating a Crisis of Authenticity

The idea of intentionally creating a crisis is counterintuitive. But if you want to transform who you are — how you occur to yourself — then you need to create a crisis of identity, one in which the only way out is transformation.

How do we create this kind of crisis that moves us into transforming ourselves? We do it by focusing on the areas of our lives in which we are inauthentic, those times when we are pretending.

The way out of the trap is to create a crisis over *being in the trap*. Tolerating any loss of freedom, power, contentment or self-expression becomes unacceptable.

To experience the kind of transformation that over-

turns your already-written future and writes it anew, you will have to give something up. Examples are giving up safety and risk avoidance, letting go of always having a way out, giving up the fear of having nothing to say or giving up the fear of saying something stupid.

When we alter how we occur to ourselves, everything around us shifts. Our business associates, our families, even life, show up in a new way. With that new foundation, anything is possible — even a new future.

The Path to Mastery

Milestone 1: Seeing Your "Terministic Screen" in Action

A person's way of seeing a situation is filtered through what scholar Kenneth Burke calls a "terministic screen." This screen itself is made up of language — words, terms, phrases and their relation to each other. This screen directs our attention to aspects of reality. We don't see the world, and we don't see the terministic screen; instead, we see what the screen allows us to see.

The path to mastering the Three Laws is to build a new terministic screen around new core distinctions. The process of learning something new can be seen to involve fitting what is new with what we knew before as a way of understanding. When you realize that you want to get the full impact of new ideas, it's time to build a new terministic screen.

This realization is the first milestone. Its point is that we allow a new screen to be built by rejecting the need to fit new terms into our already existing screen. We catch ourselves reshaping a new idea to fit what we already know, or rejecting a new idea as being inconsistent with our screen. There's nothing wrong with doing so — it's what happens until we get to the second milestone.

Milestone 2: Building a New Terministic Screen

To see the need to build a new terministic screen, consider how the earth appeared to people for millennia: at the center of the universe, with the sun, moon and stars moving around it. The terministic screen on this subject was consistent and compelling. Galileo argued for a radical new idea that didn't fit into the terministic screen of the day — that it was the earth that did the moving. People responded violently to this theory, which to them clearly was wrong.

So why is it so easy for us today to "see" ourselves moving around the sun, seeing the universe that Galileo saw? Because we learned a terministic screen with these ideas at the center. Because of our screen, we have no problem imagining asteroids, other worlds, space flight and life on Mars. All these thoughts would be impossible for someone with the old terministic screen.

Milestone 3: You'll See New Opportunities for Elevated Performance Everywhere

Shortly after you pass the second milestone, you'll notice that you are seeing old situations with a new perspective.

You'll become aware that most people talk about the future in terms of the past. You'll notice their default future, often unarticulated, and how their actions correlate with it.

A great side benefit of taking the path to mastering the Three Laws is developing leadership, and even charisma. You'll find yourself standing for a future rather than trying to figure one out.

As you declare the future — incorporating the concerns of others — people become engaged, excited and inspired. Workplaces transform. Performance elevates. The default future is rewritten.

You will notice that where there used to be a lot of confusion and anxiety about what to do, there now is a clarity and focus for what needs to be created. It's as if the frenzy concerning what could go wrong is replaced with an excitement of what can be created.

This third milestone of seeing opportunities for elevated performance everywhere is correlated to realizing that you are no longer remembering the Three Laws. They are now a part of your terministic screen.

Milestone 4: Teaching Others

The fourth milestone, making the application of the Three Laws a community effort, is itself a means of access to ever-expanding mastery. Through engaging, teaching and coaching others in thinking from the Three Laws, performance will expand while you discover new and creative applications of the Three Laws. When you take this step, elevating performance has moved from being your personal interest to being the group's interest. At this point, you are onto the opportunity to rewrite the future of an organization — perhaps even to discover an organization's Self and make that the driver of a new era in your company.

Breaking the Performance Barrier

The only thing that matters is performance, and performance comes down to the actions of people. Here are seven specific commitments that, when made with integrity, reliably break the performance barrier. Let them guide you in the conversations that you have.

Commitment 1: Get Out of the Stands

In the stands at a football game, people are talking *about* the game. There is little at stake, little at risk and their conversations have virtually no impact on the action of the game.

And then there are the conversations the players are having on the field. These conversations not only affect the game, they *are* the game. Throughout the game, people are communicating in such a way that the team is focused on winning.

You leave the stands when you stop assessing and judging and, instead, put something at risk. Make yourself accountable for winning the game.

Commitment 2: Create a New Game

You make a new game when you declare that something is important. This is what you're putting at stake, and it is what you're holding yourself accountable to. When others commit to the game with you, they join you on the field.

So use future-based language and declare what's important.

Commitment 3: Make the Obstacles Conditions of the Game

If something occurs to you and others as an obstacle, you'll push back by playing on the obstacle's terms. Instead, make the obstacles conditions of the game.

Commitment 4: Share Your Insights

Breakthrough performance becomes possible when you engage others in the insights from the Three Laws by sharing them.

When you share, other people take on performance challenges with you and form a network. In this community, everyone is learning and working together to achieve what once looked impossible.

Commitment 5: Find the Right Coaching

The coach isn't in the stands, and he or she doesn't play the game, either. Still, the coach risks as much as anyone who takes to the field.

Great coaching alters how the situation of the game occurs for the players, especially at critical moments. As you create a network that takes on breakthrough performance challenges, you will find yourself coaching.

Commitment 6: File Your Past in Your Past

We need to get the future and the past straightened out, once and for all.

Imagine two filing cabinets, labeled "The Past" and "The Future." From time to time stressful, difficult or dangerous things happen. When they do, and we survive, we note what worked and keep it on file in case that situation happens again. You put it in The Future cabinet.

After you've lived through enough of those incidents, the filing cabinet of The Future is full. You may find that you're repeating the past, and you are. You do the same things over and over because you've put those files in your future.

If we emptied everything out from The Future filing cabinet — all the decisions we placed there to deal with what may happen — what would be left in that filing cabinet? Nothing. That's the nature of the real future: there's nothing there. You can only create into nothing. You can create a future into nothingness.

You have to look into nothingness and declare what can be and what you actually commit to. If you stay in this conversation, you'll never confuse the future and the past again.

Commitment 7: Play the Game as If Your Life Depended on It

Begin the coaching by starting with yourself. Overturn your life sentence. Create a powerful future to live into.

There are no circumstances in business or in life that you can't handle from the Three Laws. No matter what hurdles you have to jump, challenges you have to face or unfamiliar territory you have to cross, you're ready for it.

Play the game passionately, intensely and fearlessly. But don't make it significant. It's just a game. ●

RECOMMENDED READING LIST

If you liked *The Three Laws of Performance*, you'll also like:

1. ***The Accountable Leader* by Brian Dive.** Centered around three themes — leadership, accountability and organizational structure — this book explores what it means for managers to be held accountable at all levels.
2. ***Primal Leadership* by Daniel Goleman, Annie McKee and Richard E. Boyatzis.** Discover how good leaders use their Emotional Intelligence (EI) to get results. Learn how the four quadrants of EI impact your style of leading.
3. ***Leaders at All Levels* by Ram Charan.** Ram Charan takes aim at the current crisis in leadership: the shortage of leaders prepared to face today's complex business challenges. Charan offers a solution that outlines a new model for succession and leadership development.

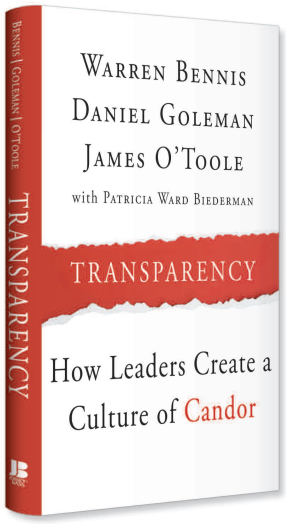
Leadership: Strategies

Transparency

How Leaders Create a Culture of Candor



by Warren Bennis, Daniel Goleman, James O'Toole with Patricia Ward Biederman

THE SUMMARY IN BRIEF

Recently, certain issues have started to enter almost all our conversations about organizations, business, public life and our personal realities. Transparency is one of those urgent, increasingly prominent issues.

The word *transparency* encompasses candor, integrity, honesty, ethics, clarity, full disclosure, legal compliance and a host of other things that allow us to deal fairly with each other. In a networked universe, where competition is global and reputations can be shattered by the click of a mouse, transparency is often a matter of survival.

In *Transparency,* experts explore what it means to be a transparent leader, create a transparent organization and live in an ever-more-transparent world culture. The three interconnected essays offer insights that will help leaders think more clearly and act more thoughtfully in matters relating to transparency, an issue that becomes ever more important as this fascinating, difficult era unfolds.

The authors look at transparency from three different vantage points — within and between organizations, in terms of personal responsibility, and finally in the context of the new digital reality — all with an emphasis on how these relate to leaders and leadership. They show how digital technology is driving the new transparency, one that is paradoxically both more and less dependent on the will of the individual.

IN THIS SUMMARY, YOU WILL LEARN:

- How leaders can show courage, integrity, candor and responsibility.
- How to create a transparent organization.
- How to embrace transparency, a good thing but rarely an easy one.
- How to take the long view of transparency.
- How to become a better follower and a better leader.

THE COMPLETE SUMMARY: **TRANSPARENCY**

by Warren Bennis, Daniel Goleman, James O'Toole with Patricia Ward Biederman

The author: Warren Bennis is the author of *On Becoming a Leader and Organizing Genius* (with Patricia Ward Biederman) and many other best-selling books on management and leadership. Psychologist Daniel Goleman is the author of the groundbreaking and best-selling books *Emotional Intelligence* and *Social Intelligence*: *The New Science of Human Relationships*, among others. James O'Toole is the Daniels Distinguished Professor of Business Ethics at the University of Denver's Daniels College of Business. He is author of 17 books, including *Leading Change* and *Creating the Good Life*.

Creating a Culture of Candor

In the spring of 2007 something unprecedented happened in the southern Chinese city of Xiamen. In a nation notorious for keeping citizens in the dark, word got out that a petrochemical plant was to be built near the center of the lovely port city. The factory would have produced toxic paraxylene, and residents who learned of the plans were understandably alarmed.

A decade ago, concerned Chinese citizens could have done little to stop the plant's construction. But this is a new age, not just in China but throughout the world. Via e-mail, blogs and text messages, word of the plan spread and a protest was organized against it. As the *Wall Street Journal* reported, hundreds, perhaps thousands of protesters gathered at Xiamen's city hall to oppose the plant.

Chinese officials refused to acknowledge the protest and shut down Web sites that opposed the plant. But using today's ubiquitous communication technology, protestors were able to circumvent the official silence. Participants took photos of the protest with their cell phones and posted them on the Web. Much to the chagrin of Chinese officials, some photos were transmitted straight to sympathetic media. The result was a victory of electronics-driven light over official darkness. City officials have postponed construction of the plant until a new study of its environmental impact is completed.

'Not Lying'

Today the word *transparency* pops up in stories about everything from corporate governance to the activities of the U.S. Justice Department. In the mouths of those in power, its meaning tends to be fuzzy, although, as *New York Times* essayist John Schwartz writes, when officials say they are being transparent, "what they really mean is 'not lying' and 'not hiding what we're really doing.' But that doesn't sound as nice or vague, does it?"

The vagueness is understandable, however. As we all know, claiming to be transparent is not the same as actually *being* transparent. Even as many heads of corporations and even of states boast about their commitment to transparency, the containment of truth continues to be a dearly held value of many organizations. Sadly, you can say you believe in transparency without practicing it or even aspiring to it.

While opacity is far less of a problem in the United States than in some other nations, it continues to characterize many, if not most, American organizations. And lack of transparency is usually no accident. It is often systematically built into the very structure of an organization.

Rise of the Blogosphere

The effort to withhold information from the public has become an all-but-impossible task because of profound changes in the global culture. Most important of these is the emergence of electronic technology that facilitates sunlight, and the rise, over the last decade, of the blogosphere — a development that has made transparency all but inevitable.

In today's culture, no corporate wrongdoing can be safely entombed forever in a company's locked file cabinets. A decade ago, secrets often remained buried until a professional journalist could be persuaded to reveal them. Today anyone with a cell phone and access to a computer has the power to bring down a billion-dollar corporation or even a government.

What Is a Culture of Candor?

When we speak of transparency and creating a culture of candor, we are really talking about the free flow of information within an organization and between the organization and its many stakeholders, including the public.

For any institution, the flow of information is akin to a central nervous system: the organization's effectiveness depends on it. An organization's capacity to compete, solve problems, innovate, meet challenges and achieve goals — its intelligence, if you will — varies to the degree that information flow remains healthy. That is particularly true when the information in question consists of crucial but hard-to-take facts, the information that leaders may bristle at hearing — and that subordinates too often, and understandably, play down, disguise or ignore.

For information to flow freely within an institution, followers must feel free to speak openly, and leaders must welcome such openness. No matter the official line, true transparency is rare. Many organizations pay lip service to values of openness and candor, even writing their commitment into mission statements. Too often these are hollow, if not Orwellian, documents that fail to describe the organization's real mission and inspire frustration, even cynicism, in followers all too aware of a very different organizational reality.

Information Flow

Information flow simply means that critical information gets to the right person at the right time and for the right reason. Although the successful flow of information is not automatic and often requires the leader's commitment, if not intervention, it happens every day in organizational life, often in the most mundane ways.

For instance, a few years ago, General Electric became alarmed about a precipitous drop in appliance sales. At meetings on the matter, the conversation soon narrowed to how the problem could be solved by improving marketing: Should GE focus on pricing? On advertising? On some other change in marketing strategies?

Then someone from the company's financial services arm, GE Capital, spoke up. He put up a PowerPoint presentation showing that consumer debt had reached near-saturation levels. The problem wasn't that GE was failing to market its appliances successfully. The likelier problem was that customers were too strapped to buy the big-ticket items that GE sold. That single crucial bit of information swiftly shifted the conversation from marketing to financing, as the company began seeking ways to help customers pay for appliances. The right information had found its way to the right people at the right time.

Damming the Flow of Information

Just as the free flow of information can maximize the likelihood of success, damming its flow can have tragic consequences. An instructive example is the decision of Guidant executives to continue selling their Contak Renewal defibrillators even after they learned that the implanted heart regulators were prone to electrical failures implicated in the deaths of at least seven patients.

Because company officials remain silent on the matter, we can only speculate on why the firm decided not to recall the devices until 2005, three years after insiders learned of the flaw. Whatever Guidant's reasoning, the result was not only needless deaths but a catastrophic trust problem with its primary customers — not heart patients but the physicians who prescribe the lucrative lifesaving devices.

According to the *New York Times*, Guidant's share of the defibrillator market dropped from 35 percent to about 24 percent after the recall, apparently because of the disgust many physicians felt at the company's decision to conceal an embarrassing truth on which patients' lives literally depended. As one angry physician wrote to the firm: "I am not critical of Guidant's device problems — these devices are so complex, issues are expected. I will not, however, work with a company that put profit and image in front of good patient care and honesty in device manufacturing."

Choosing Transparency

It almost goes without saying that complete transparency is not possible — nor is it even desirable, in many instances. Just as national security concerns may justify limiting access to certain information to a small number of carefully vetted individuals, an organization may have a legitimate interest in holding close and guarding from competitors information about innovations, original processes, secret recipes or corporate strategies. Such secrets are reasonable.

However, secretiveness is often simply reflexive. And secretive organizations are vulnerable to exposure by both the mainstream media and their growing legions of amateur competitors. But even when lack of candor is likely to be harmful, many organizations continue to choose it over openness, as Guidant appears to have done.

Because the term *transparency,* like *courage* and *patriotism*, has the exalted ring of eternal truth, it is easy to forget that transparency is a choice.

'No Secrets'

The leaders who will thrive and whose organizations will flourish in this era of ubiquitous electronic tattle-tales

are the ones who strive to make their organizations as transparent as possible. Despite legitimate moral and legal limits on disclosure, leaders should at least aspire to a policy of "no secrets." The first beneficiaries of such a policy are the members of the organization itself, who are in a position to act on maximum rather than restricted information. According to *Fast Company* magazine, Whole Foods CEO John Mackey has a "no secrets" policy that includes posting every employee's pay.

Even if unattainable, a "no secrets" policy is worth striving for. Given that secrecy and even privacy are less and less likely in a world where every teenager has a cell phone equipped with a camera and Internet access, we all need to remember that each of us is, more or less, always under scrutiny and on display. To forget that is to risk embarrassment or worse. Best to do or say nothing that you might have to apologize for if it makes headlines or is reported in a blog.

Set a Good Example

The best way for leaders to start information flowing freely in their organizations is to set a good example. They must accept, even welcome, unsettling information. If leaders regularly demonstrate that they want to hear more than incessant happy talk, and praise those with the courage to articulate unpleasant truths, then the norm will begin to shift toward transparency.

Openness and what it says about the nature of the organization becomes a competitive advantage — in creating consumer loyalty as well as in recruiting and keeping the best people. Evidence that values matter to today's consumer include the enormous interest in green products.

Values Matter

That values matter to those in the most creative part of the work force is evidenced by the vast number of people who seek employment at Google, whose motto is famously "Don't be evil." When we talk about creating a culture of candor, we imply that the organization ultimately has control over the process. Certainly, transparency is enhanced when an organization's leaders are committed to it. But even when leaders resist it, transparency is inescapable in the digital age. The new transparency is not optional.

To the evident discomfort of some, recent candidates for the presidency of the United States faced questions during televised debates, not just from participants in time-honored Town Hall forums, but from visitors to the social networking site YouTube. Used to carefully vetted, controlled encounters, the candidates had to field questions lobbed from cyberspace by cartoon characters and people dressed in goofy costumes.

Just as YouTube has changed America's political discourse, Google has made it impossible for any candidate to deny past actions or statements. Within seconds, anyone with a laptop can check on the candidate's past positions and, within a few seconds more, report any distortions or self-serving memory lapses to the entire wired world. Whether the candidates like it or not, a culture of candor has been thrust upon them. ●

Classification Vs. Declassification

Writer Graeme Wood gives a vivid illustration of how transparency is a choice in his analysis in the Atlantic of how differently recent U.S. administrations have treated sensitive information.

Arguing that the administration of President George W. Bush is unprecedented in its insistence on secrecy, Wood says the current trend began in 1982 with Ronald Reagan, whose philosophy was, in effect, "When in doubt, classify." By 1985, 15 million documents had been classified, far more than had been shrouded under President Carter. President Bill Clinton, who favored declassification, ushered in a new era, saying, in effect, "When in doubt, let it out." Classification surged again under George W. Bush. In 2006, 20.6 million documents were classified, more than six times the 3.6 million classified under Clinton.

"Leaving aside the blinkering effect it has on congressional oversight, too much secrecy impedes the routine functioning of the executive branch, by making useful information difficult for many government employees to see," Wood argues. Ironically, he points out, secrecy also has the unintended consequence of making leaks more likely.

Speaking Truth to Power

In 2002, Enron's Sherron Watkins, WorldCom's Cynthia Cooper and the FBI's Coleen Rowley were recognized as *Time* magazine's "Persons of the Year" for courageously bringing news to the men at the top of their respective organizations that those leaders preferred not to hear. As *Time* reported, the three women weren't looking to curry favor, weren't looking for publicity, didn't want to be whistleblowers, and all three — primary

breadwinners in their families — courted great risk in terms of their jobs and careers. Sadly, not only did their warnings about serious ethical violations go unheeded by their bosses, the women then were marginalized, isolated, scorned and reviled by their organizations for their efforts to save them.

So why did they dare to speak truth to power? Their motivations differed, but the actions of all three were rooted in what they saw as a moral imperative to act. In the words of Martin Luther King Jr., "Our lives begin to end the day we become silent about things that matter."

In almost all social organizations — families, sports teams, schools, businesses, government and nonprofit agencies — those lower down the pecking order experience, from time to time, the terror involved in having to tell unpalatable truths to those ranked above them. While few of us have had direct experience calling attention to Enron-scale fraud and deception, almost all of us have stories to tell of retaliatory fury from the enraged "alpha dogs" we mustered the courage to confront.

Personal Danger

Speaking truth to power is, perhaps, the oldest of all ethical challenges. Certainly, it is one of the most terrifying in that it entails personal danger: from the days of the first humans until only relatively recently, tribal leaders, clan elders, kings, tyrants, caudillos, gang leaders, ward bosses and neighborhood bullies all ruled by force. To question their decisions was to risk death.

Ethical transparency is predicated on the existence of two parties — a candid speaker of facts and a receptive listener.

Managers in companies with healthy cultures are constantly willing to rethink even their most basic assumptions through a process of constructive dissent. Companies get into moral and competitive hot water when their leaders are unwilling to test their operating premises about such often-taboo subjects as the nature of the working conditions they offer employees, the purposes of their corporation and their responsibilities to various stakeholders. The failure to openly examine such behavior-driving assumptions leads to what commonly is called *groupthink*, a state of collective denial or self-deception that often has disastrous business and ethical consequences.

The Risks of Speaking Truth

The risks of speaking truth to power are particularly acute for those in professional services firms — the lawyers, accountants and consultants who are the very gatekeepers charged with providing business leaders with unvarnished assessments and warnings, and with objective advice and counsel. These professionals are too well aware that the fastest way to lose clients is to give them news they don't want to hear. This is especially true when the news that needs conveying is that the client-CEO's behavior is at the root of a company's problems.

Another example: It takes extraordinary moral courage for a compensation consultant to tell a CEO that he or she is overpaid. In too many instances, conveyers of such news would soon find themselves out of a job. Even if one is not fired, the penalty for losing a major client in a professional services firm is a fate worse than death: derailment from the partnership track. As the demise of the Arthur Andersen accountancy demonstrated, the incentives in most professional firms too often encourage people to lie to, and for, clients. And that won't change unless the ways in which professionals are evaluated and rewarded change.

The Legacy of Enron

In the wake of Arthur Andersen, Enron and similar instances of corporate lies and fraud uncovered over the last decade, increasing calls have been made in this country for transparency — that is, for business organizations free of dirty little secrets, the unveiling of which would destroy trust, ruin reputations and wreak havoc with profits. In fact, there really is no need for *any* business secrets in organizations beyond protecting plans for new products and processes and other sources of competitive advantage (protecting the personal privacy of employees is a different matter). As author Edward Lawler has shown, it even redounds to the benefit of organizations to post everyone's salary.

Transparency, trust and speaking truth to power are complexly interrelated ethical and organizational concepts. To create cultures that manifest those characteristics, leaders must do several practical things: provide equal access to information to all, refrain from punishing those who constructively demonstrate imperial nakedness, refrain from rewarding spurious loyalty and empower and reward principled contrarians. But that is easier said than done.

Integrity

In Stephen Carter's book on the subject of integrity, the distinguished Yale law professor lays out three requisite steps for the exercise of integrity:

1. Discerning what is right and what is wrong.

2. Acting on what you have discerned, even at personal cost.

3. Saying openly that you are acting on your understanding of right and wrong.

The first step captures the idea of integrity as requiring a degree of moral reflectiveness. The second brings in the ideal of an integral person as steadfast, which includes the sense of keeping commitments. The third reminds us that a person of integrity is unashamed of doing the right thing.

Integrity, by and of itself, is an insufficient virtue: after all, radical ideologues can have oodles of it. Yet, at the same time, all other virtues are insufficient without integrity.

Giving Negative Feedback

Great unintentional harm can be done when speaking truthfully. That's why managers find it so difficult to give candid performance appraisals to subordinates whose work is not up to par. Because giving negative feedback is nearly as unpleasant as firing people, most managers shy away from giving such appraisals even though they realize that an honest assessment of underperformance is in the interest of their organization and also of the subordinate receiving the bad news. And since offering negative feedback upward — to one's boss — is even more unpleasant, that occurs in organizations more rarely still.

A Highly Visible Lesson

As much as an unimpeded flow of information is the sine qua non of a business organization's ability to meet competitive challenges, the free flow of information is also a necessity for a democracy to flourish. A dozen or so books written by Washington insiders published over the last few years document the costs in terms of careers, reputations and even lives when America's political leaders have been unwilling to listen to uncomfortable truths.

Just before the start of the Iraq War in 2003, General Eric Shinseki told Congress that many more troops than had been planned for would be needed to stabilize that country after the U.S. invasion. Soon after his testimony, Shinseki's role was marginalized by the administration: Secretary of Defense Donald Rumsfeld rebuked him, and the deputy secretary, Paul Wolfowitz, claimed that the general's troop estimate was "wildly off the mark."

Shinseki soon retired, but the lesson to other generals was clear, as Kori Schake, former director of defense strategy on the National Security Council, explained, "It served to silence critics just at the point in time when, internal to the process, you most wanted critical judgment."

While there is no way to make giving feedback fun for the bearers of negative assessments and for the recipients above or below them, Frank Daly (the recently retired "dean" of corporate ethics officers) teaches that it is advisable for people in organizations to "practice having unpleasant conversations."

How to Speak Truth Virtuously

Since there are both constructive and harmful ways to do so, it behooves speakers of truth to learn how to engage in the former — and to avoid the latter. In sum, before speaking truth to power can be considered virtuous, the act must meet several criteria:

- **It must be truthful.**
- **It must do no harm to innocents.**
- **It must not be self-interested** (the benefits must go to others, or to the organization).
- **It must be the product of moral reflection.**
- **It must come from a messenger who is willing to pay the price.**
- **It must have at least a chance of bringing about positive change** (there is no virtue in tilting at windmills).
- **It must not be done out of spite or anger.**

This list is neither complete nor all-inclusive, and meeting each criterion requires considerable ethical analysis. ●

The New Transparency

The digital revolution has made transparency inevitable, not just in this country but worldwide. The Internet, camera-equipped cell phones and the emergence over the last decade of the blogosphere have democratized power, shifting it inexorably away from the high-profile few to the technology-equipped many. Historians of the phenomenon say this new digital transparency was born barely a decade ago (in 1998) when online columnist Matt Drudge revealed that the *Washington Post* had quashed a story about then President Bill Clinton's dalliance with a White House intern.

Blogs began to multiply with the launch in 1999 of San Francisco–based blogger.com, a free site that helped users create their own online forums. Since then millions of blogs have sprung up around the world, and their collective clout has transformed politics, the mainstream media and the public and private lives of people everywhere.

In the past, we often had to wait until a courageous whistleblower came along before we learned an institution's

secrets. Now a company's most incendiary internal memos may be disclosed by an anonymous blogger, without ties to any newspaper or television station but with inside knowledge, who can reach thousands, even millions of readers. Now anyone with Internet access can take on the most powerful institutions on earth, without making any significant financial investment and often with little or no fear of reprisals.

The Role of Blogs

Because of the blogosphere's ability to expose secrets to outsiders, George Washington University professor Michael Cornfield has described it as "half forensic lab and half tavern."

Web logs, as blogs are properly called, are also strange hybrids that combine multiple functions. Currently the most popular facilitator of Web logs, Google, gave the trademarked name Blogger to the free application that allows users to set up their own sites. Google explains at Blogger.com: "A blog is a personal diary. A daily pulpit. A collaborative space. A political soapbox. A breaking-news outlet. A collection of links. Your own private thoughts. Memos to the world."

Corporate Bloggers

A blog is, in short, a tool. One notable denizen of the blogosphere is the corporate blogger. A handful of top executives have made names for themselves as bloggers, including General Motors' vice president and car guru Robert Lutz, who describes himself as "at the wheel of FastLane blog." But the most effective corporate bloggers are often non-managers who allow outsiders to peek inside their companies and project a David-unafraid-of-the-corporate-Goliath persona despite collecting a paycheck.

Fortune magazine featured a popular employee blogger from Microsoft, Robert Scoble, in a story on the pervasiveness of blogs. Scoble's most notable achievement appears to be lessening the hostility routinely directed at his employer, so often treated as the Great Satan by the digital elite.

Chairman Bill Gates told *Fortune* that Scoble's and other blogs by Microsoft staff have enhanced the company's image. "It's all about openness," Gates said. "People see them as a reflection of an open, communicative culture that isn't afraid to be self-critical."

By their nature, blogs challenge hierarchies, introducing an outsider's or non-elitist voice into the conversation at hand. When those voices are wise or even simply contrarian, they benefit the organization by challenging its dominant assumptions, preventing tunnel vision and reminding the powers that be that they don't have a lock on all useful truths.

Transparency's Woes

But there is a downside to the instantaneous access to all kinds of information that is making organizations more transparent. The same forces are fast making privacy a thing of the past.

For example, the digital technology that allows supermarkets to manage inventory as never before, also allows Big Brother to peer into the shopping cart of every patron who signs up for an electronic discount card. The grocery chain stores the specifics of every trip to the supermarket Mrs. X makes in its computer files.

As more and more of our personal records go online, our ability to keep our information confidential will continue to diminish, no matter how conscientiously privacy advocates strive to protect it. At the same time, the ubiquity of cell phone cameras makes each of us the potential target of amateur paparazzi. The lack of privacy that results from transparency can be annoying, embarrassing and infuriating.

Electronic Advisers

Transparency would not be a problem in a world in which everyone is decent and fair-minded. In the real world, thugs and predators have computers, too.

If the new transparency changes our expectations of privacy in ways that can be problematical, the digital technology that drives it also has an invaluable upside. One of its remarkable strengths is its ability to tap into the wisdom of crowds, in writer James Surowiecki's resonant phrase. We can access collective intelligence as never before, making primitive forms of tapping opinion, such as focus groups, obsolete. We can also benefit from the wisdom of the group in such modest but valuable forms as the aggregate restaurant ratings in the popular Zagat guides and the collective recommendations that send many consumers to angieslist.com to find roofers and other service providers.

Typically, we ease into relationships with electronic advisers. We take a chance on one of their referrals, and if we like the meal or the paint job, we feel confident using the resource again.

The problem here, of course, is that what looks like transparency may not be. The blogger who slams a restaurant may not be a run-of-the-mill diner. He or she may be the unscrupulous owner of a rival restaurant who decides to whack the competition electronically, a despicable sock puppet.

'Nobody Knows You're a Dog'

Any number of commentators on the difficulty of establishing identity online cite a *New Yorker* cartoon that has been taped on thousands of computers: "On the Internet nobody knows you're a dog."

Genuine transparency is impossible as long as we cannot be sure that those online are who they say they are. Although digital technology may not be the sole cause of the problem, the United States is in the throes of an expertise crisis. Because the Internet is open to everyone, it tends to be a great leveler. But when all voices have the same force, it is harder and harder to identify those who have the training, experience and wisdom that make them truly worth listening to. Television today is full of self-appointed experts who make assured pronouncements on current events and other matters and yet have no credentials beyond a good haircut and an even better agent.

Devaluing Authentic Expertise

The mainstream media have accelerated this devaluing of authentic expertise by treating ordinary viewers and readers as the equals of those with genuine insight and experience. Thus, CNN devotes some time that could be spent hearing expert analysis to asking viewers what they think about American immigration policy and other issues of the day. Such public involvement may massage viewers' egos and increase loyalty to the station, but, arguably, it does little to advance the audience's understanding of important, often-complex issues.

This devaluing of expertise is of great concern to everyone who fears that the blogosphere may be the fatal blow to the world's great and beleaguered newspapers. Information in reputable papers is vetted by experienced journalists striving for the truth and committed to fairness. Bloggers may be committed to nothing more than making themselves heard.

Many feel that blogs will be an adequate substitute for great newspapers only when they go beyond repackaging content to generate comprehensive content of their own and when they commit to high standards of accuracy, fairness and conduct.

There Forever

The new electronic transparency has other characteristics that both organizations and individuals are just now coming to terms with. Negative information can be spread much more rapidly than in the past, and, once it is committed to the Internet, it is there forever. You can hire someone to spin what comes up when you Google your name or that of your organization, but you can't really make it go away.

There is another major problem with the new transparency besides its tendency to catch and preserve experience like some vast digital La Brea tar pit. That is the troubling fact that what is exposed usually seems true.

Authenticating Online Information

In a world in which organizational and personal secrets are revealed around the clock at blog speed, we have a greater responsibility than ever to vet and verify what we see. Lies, urban legends and distortions are as much a part of the mix as authentic revelations. Moreover, it is often impossible to determine the actual source of a nugget of information on the Web. For example, companies often add to their Wikipedia entries or delete information from them without leaving tell-tale fingerprints.

The Internet is a dispassionate delivery system; it doesn't care whether it trades in enlightenment or lies. As a result, governments, other institutions and individuals must find ways to authenticate online information, much as they earlier had to devise methods to determine the authenticity of signatures and $100 bills.

Unanticipated Changes

The new transparency is no doubt changing us in unanticipated ways we don't yet recognize. With its millions of intrusive cameras, its constant potential for trumpeting past indiscretions through cyberspace, and its other discontents, the new reality will force us to adapt or go mad. Eventually, a new etiquette will evolve that will allow us to live more comfortably with the round-the-clock possibility of surveillance by anyone who happens to pass by.

Some new method will emerge that quiets the cacophony of ever-present cell phones and lessens the pain of being "flamed" online by any malcontent who decides to go after us. Until then, we will have to be more wary, and we'll have to develop thicker skins. And since the cameras aren't going away anytime soon, we'll have to find a way to lower the blinds in our glass houses, if only in our minds. ●

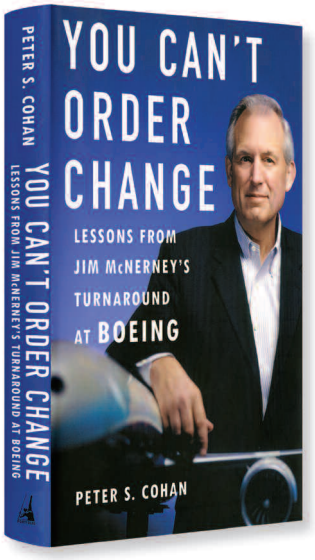
You Can't Order Change

Lessons From Jim McNerney's Turnaround at Boeing



by Peter S. Cohan

THE SUMMARY IN BRIEF

Boeing, the legendary aerospace giant, was on the fast track to doom, facing investigations into suspicious business practices. Meanwhile, sex scandals had led to embarrassing headlines, revenue was down, the stock was tanking, the workplace had grown toxic and key staffers were jumping ship.

Jim McNerney, head of 3M, and formerly one of Jack Welch's top protégés at General Electric, was asked to pull off a seemingly impossible turnaround. The fate of more than 150,000 employees rested on his leadership skills and business acumen.

You Can't Order Change is the story of how McNerney became Boeing's CEO and met the challenge with his consensus-driven leadership style. McNerney is smart about motivating people; crafting business strategies that spark profitable growth; and making operations more productive, efficient and effective. But most important, he is a genius at creating harmony within communities. *You Can't Order Change* reveals McNerney's approach to accountability, growth, cost cutting, leadership development, customer focus, new technology and other universal challenges.

IN THIS SUMMARY, YOU WILL LEARN:

- How to unlock individual achievement in each employee, and identify and develop leaders.
- How to set goals and implement strategies that help groups work together for the greater corporate good.
- Why you should link pay to profit and process rather than stock price.
- How to engage engineers so they are motivated to meet the needs of customers.
- Why organic growth is better than growth by acquisition.
- How to create a culture of ethics and compliance.

Introduction

Jim McNerney, current CEO of Boeing Co., spent much of his career as a rising star and major player at General Electric, where he was one of the three finalists to replace Jack Welch. When Welch gave that job to Jeff Immelt in 2000, McNerney was recruited by 3M's board, and he quickly set about revitalizing the tired old industrial giant. At Boeing, he has cleaned up a mass of legal problems, tackled the cultural issues that allowed them to arise, rebuilt the brand, and invested in new programs that promise a long, profitable future for the company.

At each of the companies that he's led, McNerney has managed its people as the key source of new product ideas that boost the top line *and* the essential ingredient for making operations more efficient. He does that not by frightening them into performing but by tapping into their innate desire to improve and by removing barriers that inhibit their growth.

Who Is Jim McNerney?

Jim McNerney is a leader who gets results by motivating others.

What makes McNerney the right leader at the right time for Boeing is his understanding that its future rests on making the right investments. These investments are bets on new products that he anticipates will meet the needs of its customers more effectively than do competitors'. And decisions about people are a critical leading indicator of whether those investments will pay off for shareholders. How so? Because Boeing's bets can succeed only if the right people with the right skills manage those bets.

So what is the source of McNerney's ability? McNerney embodies a core Midwestern value writ large: Don't break your arm patting yourself on the back. It's not that McNerney is not competitive and doesn't like to win. It's just that he prefers to let the organization's results speak for themselves rather than drawing all the attention to himself. ●

Help Your People Get 15 Percent Better

McNerney has set a goal to make Boeing's people 15 percent better every year. By this he means improving both the effectiveness of individuals and how all the people in the whole organization work together. The number may sound arbitrary, but McNerney uses it to let people know that he's measuring what they do.

Jim McNerney focuses on people's growth because he believes that if the company's people grow, then the company will grow. To encourage people to grow, McNerney sets goals that stretch people beyond their comfort zones, and he urges managers from the top down to be role models.

McNerney thinks about how he can help others improve. He tries to figure out how to unlock the creativity that he feels is often trapped inside people in a stifling, bureaucratic environment. McNerney's emphasis on enhancing people's productivity is relevant for both individual contributors and those who manage them.

McNerney does five things that help the people in his organizations perform more effectively:

1. He defines clear leadership attributes. McNerney defines clear leadership attributes because he knows that what gets measured gets done. While the leadership attributes aren't surprising, they're valuable because they motivate and direct the behavior of people with leadership

ambitions. McNerney promotes those whose behavior stands out as being most consistent with the leadership attributes. And he sidelines those who cling to the old ways.

2. He interacts with people so they jointly own the leadership attributes. McNerney's investment in ensuring that he and his people co-own the leadership attributes suggests three leadership lessons:

- Leadership attributes are the foundation of changing a company's culture.
- A CEO seeking to make fundamental changes must listen and broadcast over a long period of time to create a shared sense of ownership of the change.
- To change behavior, leaders must link the attributes to performance evaluation, pay and promotion.

3. He encourages communication from the bottom up. McNerney's efforts to encourage the flow of information from the bottom up frame four leadership lessons:

- Bureaucracies can create informal norms that stifle enthusiasm, creativity and the flow of information up and down the line.
- A CEO needs to take action to strip away the vestiges of bureaucracy and unleash people's growth potential.
- One reason for the CEO to encourage the flow of information from the bottom up is to identify individuals with the potential to grow.
- CEOs must identify the right balance between empowering and trusting their leaders. One way to do this is by creating channels to tap into information from lower levels of the organization.

4. He gets rid of players who block others. McNerney recognizes that his skill at managing Boeing's talent pool is critical to what actually happens inside Boeing as well as to the analysts' perceptions. McNerney does not pretend to be a visionary who can accurately predict the future of the aircraft industry and position Boeing accordingly. So he relies on having a smart, effective team in place. And this means that there is no room for people who sabotage subordinates in order to burnish their own reputations. By subtly punishing people who push out their more team-oriented peers and rewarding people whose talents will encourage and motivate others, McNerney is building up Boeing's talent pool.

5. He invests in developing leaders. McNerney invests heavily in leadership development by spending a large amount of his own time developing leaders. He considers leadership development so important that he is willing to put relatively untested potential leaders in charge of major projects that could affect Boeing's future. The chance that those projects might fail can be thought of as a tuition payment by Boeing shareholders for developing Boeing's future leaders on the job.

McNerney's investment in leadership development suggests four lessons:

- Spending time on leadership development gives the CEO the attention of key leaders and helps the CEO shape the way key leaders think about their jobs.
- Leadership development enables the CEO to create a shared sense of ownership about which behaviors result in rewards and which lead to being sidelined.
- Picking and empowering leaders prepares the company to prosper far into the future.
- The CEO must balance the desire to give leaders the freedom to succeed or fail against the need to protect shareholders from the cost of a failed project.

McNerney makes Boeing better by engaging its people in a purpose that captures their passion. He spends time working with people at the top and middle levels of the organization to identify what needs to be changed, and getting people to buy into a set of shared leadership attributes. He then uses those attributes as a context in which to set goals and promote or sideline people based on their performance. ●

Lead Groups to Higher Ground

In large organizations, there are many groups that share common bonds but also compete for resources and rewards. In order to boost Boeing's performance, McNerney needs to do more than simply motivate the individuals in these groups. He must also motivate these groups to cooperate with each other in pursuit of Boeing's corporate aims. The interests of these individual groups may sometimes be at odds with some of Boeing's overall corporate goals. McNerney must overcome the groups' natural desire to put their own interests above Boeing's.

McNerney does this, first of all, by pursuing corporate goals that make most groups better off. How does he accomplish this?

- He identifies the key players and understands their different needs.
- He focuses on getting agreement on critical issues and doesn't waste time on the trivial.
- He generates solutions that make key players better off.

• He overcomes obstacles to realize solutions.

McNerney's ability to lead groups to higher ground marks him as an exceptional leader. He praises the company and helps people see that their future may be brighter thanks to his leadership. By creating this openness, McNerney learns what most urgently needs to be done and unites different groups around those critical goals. From this unity, he crafts workable strategies to achieve the goals.

Link Pay to Profit and Process, Not Stock Price

Because managers can't control the price of their companies' stock, McNerney believes it is inappropriate to pay them based on stock price performance alone.

So rather than compensate executives for things they can't control, McNerney ties compensation to what managers can control. He pays them to focus their efforts on the financial performance that's under their control and in the company's long-term interests. To accomplish this, McNerney does the following things:

• **He bases pay on factors that leaders can control.** McNerney uses a measure called economic profit as the gauge of executive performance. Specifically, McNerney believes that leaders should be able to control two variables in their businesses: how much profit they earn and how much capital they use to achieve those profits. His notion is that the best business leaders make efficient use of the company's capital. McNerney also concentrates on these two factors because he believes that over the long run, investors will pay a premium for a company's shares if its business units consistently achieve high return on capital.

• **He weighs both profit and process.** While achieving economic profit and other business unit goals is clearly important to McNerney, he believes how people achieve those goals is equally important.

• **He makes shareholder value a by-product.** McNerney encourages people not to focus too much attention on a company's stock price. If executives meet their economic profit targets while adhering to corporate values, they receive bonuses regardless of stock price performance.

McNerney's approach to paying leaders seeks to get them to do the right things in the right way. Focusing managers on what they can control means they spend less time squabbling about matters that do not benefit shareholders and customers. Compensating leaders for achieving corporate and individual goals will pay off for shareholders.

The Skills of a Politician

McNerney has a politician's ability to identify which constituents he needs to satisfy in order to help an organization move forward. In each situation, these constituents might be different, so it is important to figure out quickly who the important players are and how to relate to them in order to gain their support.

By maintaining a modest demeanor and not harshly condemning the status quo, McNerney puts himself in a good position to establish an initial rapport with these constituents. McNerney also listens carefully to their views, understands their goals and appreciates the challenges they face in achieving those goals. With the input of these key groups, he forms a vision for action that enables him to pick goals that, if achieved, leave them all better off.

McNerney's shrewdness about leading people was evident as he stepped into Boeing as its CEO. McNerney had the experience from GE and 3M to realize that when a CEO joins an organization, he needs to gain the trust of the people in the organization. He inherits the history of conflicts among different groups and the frustration of those who thought they deserved his job. To keep these emotions from overwhelming his effectiveness, McNerney avoided charging into Boeing with lots of new ideas about how to fix everything that was wrong. Instead, he stepped into the new job quietly, praising Boeing's strengths and trying to get off on the right foot with its key constituents.

McNerney's actions reveal important lessons about how a leader should identify the key players in an organization and build relationships with them. Helpful tactics in this endeavor include the following:

- Start off by praising the company, its people and its accomplishments.
- Avoid making major proclamations about how everything needs to change.
- Don't immediately replace the people who report to you.
- Listen to key players before drawing conclusions about what needs to change.

Build Strategy on Customer Focus

During his career at GE, 3M and Boeing, McNerney, who is not an engineer, has learned that while technology is valuable, alone it is not enough to sustain the growth of a successful technology company. The company must use the technology to do things that customers want.

When it comes to managing technology, McNerney pleases the customers instead of pleasing the engineers. He encourages cross-functional teams to spend time with customers so they can understand what products they need to offer to close future sales.

McNerney's winning approach is to build strategy on customer focus, which he does in the following ways:

1. **He forms teams from different functions and across corporate boundaries.**
2. **He satisfies the needs of customers, not engineers.**
3. **He harnesses technologies that will make customers better off.**
4. **He shifts resources to projects with the highest profit potential.**

McNerney cites five ***myths of innovation*** that need to be overcome by individuals "as they seek to contribute creatively in the modern corporate environment." These five harmful myths include:

- Innovation is a crusade.
- Innovation is technology alone.
- All innovation is radical.
- Innovation is lucky.
- Innovation must be undisciplined.

McNerney contrasts these five myths with five ***innovation realities***:

- Innovation requires teaming.
- Innovation is shared.
- Innovation is broad.
- Innovation can be incremental.
- Innovation must combine creativity and discipline.

McNerney has introduced winning products that have contributed significantly to corporate revenues. He helped to push through the GE90, which generated $25 billion in revenue potential for GE. He contributed to the introduction of the 787 at Boeing, which has generated more than 900 customer orders. At the core of these successes is McNerney's ability to listen to the needs of customers. But McNerney also recognizes that despite the uncertain nature of innovation, he can make product development more disciplined by shifting capital and people from weak or irrelevant projects to ones with strong potential. ●

Invest in Your Strengths

To win customers, the company's product or service must satisfy customer requirements better than competitors'. To attract and retain the best employees and managers, a human resources strategy must create a more compelling work environment than competitors'. And to attract equity capital, the firm must exceed investors' expectations by a greater proportion and more reliably than competitors'. The CEO must formulate strategy and then manage the organization so that strategy gets translated into specific actions that lead to superior performance.

During his tenures at GE, 3M and Boeing, McNerney has demonstrated the ability to create and execute such strategies. How does McNerney achieve this?

- He focuses on big, growing markets.
- He invests in existing strengths and tackles weaknesses.
- He analyzes and exploits competitor weaknesses.

Before he became Boeing's CEO, McNerney was a Boeing director, and in that role he helped develop the strategy that allowed Boeing to make the right bet on which group of customers would be most profitable. Boeing focused on the midsize planes needed by the point-to-point airline segment, while Airbus targeted the larger planes used by the long-range, hub segment. As it turned out, Boeing made the smarter bet.

How did McNerney know that Boeing should bet on the midsize market? He took a clear-eyed look at the potential customers and what they wanted. Unlike Airbus, which may have fallen victim to confirmation bias — the tendency to see only data that reinforces a pre-existing expectation — McNerney relied strongly on Boeing's Strategic Analysis Department (SAD). As an independent unit, SAD gathers data, analyzes it and comes to a conclusion about the size of a market without pressure to slant the results to satisfy the demands of Boeing executives.

Boeing proposed to Airbus that the two companies conduct a joint study to assess the market potential for a replacement version of the 747. At the end of the joint study, Boeing concluded that the superjumbo market would be far smaller than Airbus did. Like Airbus, Boeing believed that size matters, but it wasn't the size of the plane that Boeing wanted to maximize. It was the size of the market and Boeing's potential share of it that mattered. At McNerney's urging, Boeing remained focused on the market for intermediate-sized jets, which proved to be the better bet.

McNerney has built on Boeing's strengths to help it win a substantial amount of business. Despite problems delivering the 787, Boeing has cleverly exploited Airbus' weaknesses. It targeted the midrange market while Airbus was distracted by its focus on the smaller jumbo segment. This strategy turned an $8 billion investment in a midrange, fuel-efficient aircraft into 896 orders. By building on its strengths, Boeing has prevailed over Airbus. ●

Grow Through People, Not Deals

Basically, a CEO can get growth from two sources: new products that the company develops itself or acquisition of companies. At both 3M and Boeing, McNerney has made it clear that he prefers the internal growth model.

One reason McNerney resists growth through acquisitions is that it's hard to merge the cultures and operations of acquired companies. Another reason McNerney says he is reluctant to make acquisitions is that they relieve a company of the obligation to chart its own destiny.

McNerney's choice of strategy for organic growth depends on the company and the industry it is in. For example, at 3M the challenge was to focus thousands of research projects and increase the odds that they would lead to new products that consumers would buy. By contrast, at Boeing, each individual new product could cost billions of dollars — an investment that is hardly guaranteed to earn back its cost. So while at 3M McNerney needed to develop multiple smaller products, at Boeing the challenge remains to succeed with fewer bet-the-company investments per decade.

To generate organic growth, McNerney does the following:

- He holds people accountable for growth.
- He applies current strengths to new markets.
- He makes acquisitions that complement organic growth.

While Jim McNerney used acquisitions in both 3M and Boeing, they complemented existing lines of business and more than paid for themselves through the higher profits they generated.

Tackle Challenging Situations Quickly and Effectively

McNerney's training prepared him well for parachuting into challenging situations, getting the lay of the land, figuring out the most important things to get done first and working with people to get the needed results.

McNerney has used these skills well at 3M and Boeing. At 3M, he focused research spending on health care products and plastic films for display screens. This was in stark contrast to 3M's prior CEOs, who had let its research and development employees work on whatever innovations they wanted without focusing on the revenues they might generate for 3M. McNerney shifted the culture to say, "Give me your three best ideas." And he almost immediately started getting results.

McNerney's focus on a critical few fixes at Boeing helped boost Boeing's revenues and profits significantly. As he did at 3M, McNerney has channeled Boeing's spending into areas where it's likely to get the biggest returns.

McNerney's accomplishments at both 3M and Boeing testify to his ability to tackle challenging situations via three methods:

- He diagnoses problems quickly and effectively. McNerney has built on his consulting experience and his subsequent management roles to hone his ability to tackle things quickly. He doesn't shy away from challenges. He doesn't put things off. He doesn't waste time.
- He pushes multipronged solutions and avoids simple answers. McNerney resists the one-size-fits-all approach to management problems. He understands the complex causes of problems and finds solutions to address them.
- He uses a hardheaded, soft-hearted approach to people. To accomplish change, McNerney does two things: He first sets very specific goals — the hard-headed part — and then he helps people achieve the goals — applying his soft-hearted side. He also recognizes that not all employees will succeed, and he is honest when letting go employees who aren't working out.

Tighten Operations With Process-Improvement Tools

As assiduously as McNerney pursues growth, he also seeks productivity. Increasing efficiency is a theme that runs through all his management and operational programs. He sees it as all connected: If you want profitable growth, you need to work on both the cost part and the growth part.

There are many ways to boost operational efficiency, and McNerney is not married to any one of them. He examines the company's challenges, determines where there are opportunities to boost its efficiency and judges which techniques will be most appropriate for achieving the goal. The primary technique he has used at Boeing is one called Lean. At 3M, he instituted Six Sigma, which he had seen work well at GE.

Once he decides which technique fits the company best, he starts to educate people so they share a common language for process improvement. He helps select the process-improvement projects, gives teams the resources they need to succeed, eliminates obstacles and rewards those who get results.

Lean is a quality-management process that Toyota developed and refined. Lean evolved from the Toyota Production System (TPS), which strives to mass-produce

goods more efficiently. Lean reduces waste, human effort, manufacturing space, investment in tools and engineering time to develop a new product.

Partner With Global Suppliers to Reduce Risk and Accelerate Time to Market

The bold notion of transforming global suppliers into global partners required a radical loosening of Boeing's control over the suppliers. Instead of specifying in great detail exactly what each supplier would manufacture, Boeing would describe only what the component should do and let the supplier decide how to design and build it. Boeing has outsourced 70 percent of the design and manufacturing work, much of it to firms abroad. This has meant that for Boeing to meet its production targets, all those highly complex parts need to come together correctly and on time. This has presented significant management challenges, one of which was getting dozens of partners around the world working productively on the same design software, linked to the same database with one set of drawings.

Boeing's first attempts at the hands-off approach turned out to be a bit too hands-off. When suppliers had problems, Boeing was too slow to see them and get them resolved. But when the anticipated delivery date had to be postponed several times because of supplier problems, McNerney replaced the person in charge, Mike Bair, and became more involved himself.

Despite the problems, he remains convinced that global partnering is a key to substantial profits, and to capture those profits McNerney has taken the following steps:

- He works closely with suppliers and their subcontractors during design and manufacturing.
- He builds trust up and down the line and with partners.
- He monitors performance relative to schedule and adjusts accordingly.

McNerney's efforts to globalize product development at Boeing are likely to pay off in the long run. McNerney's objects were ambitious, and in seeking to achieve them he ran into problems. He has learned that he can prevent these problems from recurring by restoring trust up and down the line and with Boeing's suppliers. And he has shifted from a delegate-and-trust approach to a trust-but-verify one.

Leadership Lessons From Tackling Challenging Situations

Jim McNerney does a great job of diagnosing business problems. His success suggests these lessons for leaders:

- Develop networking skills to help assess people quickly.
- Diagnose critical business problems early.
- Question and learn from your direct reports and find out what business indicators matter most in each function.
- Track changes in those business indicators over time.
- Analyze why they are changing.

McNerney's use of a multipronged approach to solving problems suggests these lessons for leaders when taking over a new leadership challenge:

- View the organization from the perspective of all its constituents.
- Avoid imposing solutions just because they worked in the past. Tailor an approach to fit the unique problems of the organization.
- Recognize that boosting financial results is crucial to gaining the confidence of constituents.
- Engage constituents in the short-term and longer-term efforts to boost performance.
- Use intellectual humility to tackle challenges, because it builds credibility with constituents and yields better solutions.

McNerney's record of tackling challenging situations quickly and effectively suggests three leadership lessons:

- **Take a fresh look at the challenges facing a company.** Such an opportunity yields practical insights about what can be done to improve the company's results quickly.
- **Devise effective solutions to the company's problems.** McNerney believes that a top-down approach is less effective because it fails to exploit the creative talent of the entire organization.
- **Boost results quickly — thus building enthusiasm for ongoing change.** If the CEO sets high expectations, then the odds are good that results will improve. The pressure for improvement ratchets up as the organization begins to believe it can meet those higher expectations.

Make Ethics and Compliance a Clear Competitive Advantage

McNerney's predecessors had shredded Boeing's reputation, and the company had a culture that appeared to put more value on winning contracts and making money than on ethical behavior. McNerney's first assignment at Boeing was to resolve the legal problems resulting from the procurement and document scandals and to make sure that in the future no such problems would recur.

In order to repair the damage from these scandals, McNerney acted on three fronts:

1. **Settlement.** McNerney settled a series of lawsuits against Boeing. According to *The New York Times,* "The $615 million settlement ended a three-year investigation and allowed Boeing to avoid criminal charges …"
2. **No tax deduction.** McNerney forced Boeing shareholders to pay a short-term price for restoring public trust in Boeing when, in July 2006, the company announced that it would not seek a tax deduction for the $615 million it had paid to the government — a decision that McNerney said would cost $200 million.
3. **Congressional testimony.** And the next month, McNerney found himself in front of Congress trying to draw a line in the sand between his tenure and that of his predecessors. During August 2006 testimony, McNerney said, "I hope to discuss why, going forward, the Congress and the taxpayers of this country can place their trust in Boeing. Companies doing business with the U.S. government are expected to adhere to the highest legal and ethical standards. I acknowledge that Boeing did not live up to those expectations."

McNerney brought an ethical compass to Boeing to transform its culture into one with a focus on ethics. Here are six steps McNerney is taking to accomplish the transformation:

- He directly addresses the sources of ethical problems in company culture.
- He adds ethical conduct to explicit values.
- He requires leaders to model ethical behavior.
- He opens channels to discuss ethical and business problems.
- He links promotion and pay to ethical conduct.
- He looks for ethics problems rather than waiting for them to surface. ●

Cut Your Company's Environmental Footprint

In the case of Boeing, there are fundamental reasons why reducing its environmental footprint makes business sense. Unlike leaders in the United States, European leaders take global warming and noise pollution seriously. This matters to Boeing for at least two reasons. First, Boeing sells to airlines based in Europe, and those airlines are increasingly interested in buying aircraft that produce lower carbon emissions. Second, if Boeing wants to continue to sell in Europe, it must take an especially cautious approach because all things being equal, European customers would prefer to buy from Airbus than from an American company.

McNerney does many things to cut Boeing's environmental footprint:

- He pushes Boeing to reduce carbon and noise levels.
- He builds products with smaller environmental footprints.
- He wins customers who value such products.
- He works with governments to encourage more stringent environmental regulation.
- He boosts the role of Boeing's environmental strategy department.

Boeing's ability to knock competitor Airbus out of the running for an aircraft order from Virgin Airlines indicates that this principle has a tangible payoff. Moreover, the emphasis McNerney has placed on this principle — by elevating Boeing's Environmental Strategy unit, investing in R&D to reduce the environmental footprint of its products and working with Boeing's constituents to reduce its footprint — attests to the business wisdom of cutting a firm's environmental footprint. ●

THE SUMMARY IN BRIEF

Many business leaders and organizations struggle to unlock their true potential. They may achieve brief flashes of high performance, but without a system to sustain success, those moments fade into inconsistency, burnout, and missed opportunities.

George Pesansky's book ***Superperformance: 8 Strategies to Reach Full Potential for Yourself, Your Team, and Your Organization*** offers a roadmap out of this cycle. Pesansky argues that "superperformance" is not luck but a skill that can be cultivated. Drawing on more than three decades of leadership and coaching experience, he introduces practical strategies designed to eliminate ambiguity, extend moments of peak performance, and create long-term clarity and momentum.

Through real-world examples, Pesansky illustrates how leaders can move beyond rigid expectations, build stronger collaboration, recognize and remove friction, and shift from problem-solving to replicating success. His approach emphasizes utility, the ability to get things done, as the core of creating value and achieving superperformance. By integrating vision, strategy, and action, readers can transform isolated high-performance moments into a repeatable, sustainable system for themselves, their teams, and their organizations.

IN THIS EXECUTIVE BOOK SUMMARY:

- Identify and eliminate bottlenecks, waste, and friction that stall progress.
- Harness the collective strength of teams through true collaboration.
- Shift from solving problems to replicating the root causes of success.
- Turn performance into a sustainable system by practicing improvement like a skill.

INTRODUCTION: On the Path to Enlightenment

I train people to solve problems, to learn, and to grow so that they can offer increasing value to their organization. I focus on techniques and habits that lead to actual skill improvements, so that any performer good at their job can become a *superperformer*, a stellar example for their peers and leaders and a source of knowledge for their team.

Being a superperformer—and finding or creating other superperformers to support you and your team—is crucial for career success, no matter what position you're in.

Creating value is about the utility you can provide or influence. Utility is simply the ability to do things that need to be done, and it's through utility that you create value. Superperformance—your ability to provide the greatest utility—happens at the intersection of vision, strategy, and action.

PART 1: VISION

CHAPTER 1: The Golden Hour

Many people think that there's no way they can ever work at 100 percent effectiveness (often called *zero loss*). They think this state of perfection is either impossible to achieve, unsustainable, or both.

The thing is, all of us have experienced perfection in our lives—the golden hour—when we're in a flow state and performing at our peak. And while that flow state may only last for an hour, a day, or a week, it is possible—each and every one of us has the ability to experience it. It's not a question of if; it's a question of *when* and for *how long*.

Your Outline for Action

Here are some things to keep in mind as you look to find your golden hour:

- A common obstacle to achieving the golden hour is negativity bias, the tendency of our brains to give greater weight to negative events in our life—and dwell on them longer—than positive events.
- The golden hour is all about focusing on expanding our strengths.
- The potential for perfection exists in every organization, but the question is who believes in it.
- Real leaders inspire their teams to hit their full potential, to show them what they're capable of; good leaders give them the opportunity to get to that outcome, unlocking what's possible and what they can do to achieve that greatness.

CHAPTER 2: Unlocking Potential

Superperformance is more about a way of approaching everything that you do. Most of it is about how you define your problem. Defining a problem—and then solving it—makes these people, these superperformers, differentiators.

Superperformers are potential force multipliers. They don't just go out and do projects; they recognize that the way improvements get done is by creating clarity and focus, by giving them a picture of exactly what it is we are trying to accomplish and then being able to connect the dots on how and why we're doing that.

Your Outline for Action

Unlocking potential is the heart of superperformance. Here are some things to keep in mind as you work to unlock your own potential or that of your team:

- No matter where, when, or who is involved, if you can create clarity, you can make decisions and take action. When you eliminate ambiguity, you erase doubt. When the direction becomes obvious, you act instinctually. You have utility.
- Remember the words of Charles Kettering: "A problem well defined is a problem half solved."
- How smart somebody is doesn't necessarily correlate with how much success they're going to have. I have found there is a correlation between success and how open-minded someone is; their willingness to listen, learn, and understand enhances their utility and enables them to reach their full potential.
- Author Stephen Covey developed a framework where knowledge (what to do), skill (how to do it), and desire (why you want to do it) intersect to form habits that lead to action and results. Everything we would like to get done, everything we want to communicate, can be viewed through this simple lens of *what*, *how*, and *why*.
- Use the magic wand question: "If I gave you a magic wand, what would you change?" Then ask follow-up

When you're working with people, success isn't just being right. It's about how much acceptance you can create. You've got to build agreement and support and alignment with the direction you propose to go.

questions about how they think they would have to go about doing it and why they picked out that specific thing to change.

- The effort you expend is almost always associated with whichever metric is the reddest.
- Instead of defaulting to "Let's figure out a problem and then correct it," look at the successes in your organization and figure out how to do more of that.

PART 2: STRATEGY

CHAPTER 3: Escape from the Prison of Expectations

The *prison of expectations* exists almost any time in an organization when you have three elements at play: the metric is highly visible, the expectations are high, and the consequences for not meeting the goal are also high. Many employees—leaders and frontline workers alike—are trapped in a *prison of expectations*. They (falsely) believe they can't achieve zero loss, so they're happy doing something less than zero loss, often *far* less. They may be meeting their numbers, but the potential is there to do so much more.

Your Outline for Action

The prison of expectations is when we end up in the Goldilocks zone where we don't work too hard, and we don't work too little. We go along to get along, and we miss out on turning golden hours into golden shifts. Here are some things to keep in mind as you try to escape the prison of expectations—or help others escape from it:

- Leaders sometimes think their people are sandbagging or that they're calling it in or not really applying themselves—even not very good employees at all. Experience shows that the way we're being measured forces us into this prison of expectations.
- Most of us are happy to exist in a small zone where we might move up or down 5 percent—no big moves, no big splashes, no big failures.
- Start off with the attitude that employees want to be successful, they want to have pride, they want to get respect.
- Instead of pointing out who is doing poorly, what are the things that you can emulate? Where are the places you're succeeding?

CHAPTER 4: Learn the Potential of We versus Me

While individuals often don't matter as much as they think they do, what really *does* matter is the team you work with. Together, that group has the ability to make really good things happen in any organization. When you start to think that your value to the organization is not *me* but *we*, then you are on the right track.

Your Outline for Action

Too many leaders firmly plant themselves in their offices, losing touch with the people in their organizations who get the work done. These leaders seem to believe that the world revolves around them and that they are more important than anyone else. And of course, that's just wrong. Here are some ways leaders can focus on their teams:

- Regularly put yourself in the shoes of the people doing the work.
- Be a servant leader, prioritizing the needs of others (your people, your customers, your vendors, your community, and so on) over your own.
- When you put the emphasis on *me*, you are naturally limited in what you can do. But when you put the emphasis on *we*, then there really are no limits. You can create your own dream team.
- Engaging in after-action reviews helps employees learn from both their mistakes and achievements.
- A true leader communicates the *what* and the *why*, and then listens and learns *how* to enable their team to achieve an outcome.
- Maximizing your potential is directly proportional to

activating the overall potential of your team. Every interaction you have has the potential to activate collaboration.

- S = Q × A. Success is equal to the quality of the solution times the level of acceptance. The quality of your solution and its level of acceptance is dependent on the team's ability to achieve high levels of assertiveness and cooperativeness, leading to true collaboration.
- Be a Sherpa, that person who has the activation energy to get the best out of everybody.

CHAPTER 5: Find the Friction and Lower the Temperature

When you're working with people, success isn't just being right. It's about how much acceptance you can create. You've got to build agreement and support and alignment with the direction you propose to go. Otherwise, you'll never get there. You can't do it alone.

Your Outline for Action

You always need to be self-aware, and you've got to be able to read the room—to feel the temperature. What can you do to find the friction and lower the temperature?

- An experienced Sherpa reads the expedition's potential and pushes the group to their limit but not beyond it. Pushing beyond the limit means you have goals the team can't realistically achieve, and the expedition will likely fail.
- Everything in life is a distribution, and on average, not everything is average. Some of your people are going to perform a little bit better, and some are going to perform a little bit worse.
- To lower the temperature, you've got to find the actual source of the friction, that piece of sand in the gears that is the problem, versus taking a general perspective that the engine is overheating and you've got to fix it somehow.
- The 80/20 rule—the Pareto principle—is always a good place to start. For example, it's likely that 20 percent of the people you're looking for in the marketplace are generating 80 percent of the issues you're having of being shorthanded.
- Start at the end of the process and work your way back to the beginning. The Kano model —being able to see things for the value they create— can help you do this.

CHAPTER 6: Make Focus Your Friend

Whether it's in a factory setting or even in the work that you do, there's always a strong allure to pick up the easy or obvious thing to do, to take care of the low-hanging fruit. If you have an infinite amount of time and resources, working on the easy things first could be perfectly fine. Eventually, everything will get done. But in a lot of business and professional situations, you absolutely don't have an infinite supply of time or resources. And in many cases, you're just not going to be able to get everything you want to accomplish done.

Your Outline for Action

You have to focus on the things that provide the most value for your customers. Here are some ways to do that:

- Work breakdown structures are a great way to take large tasks and activities and distill them down to manageable bodies of work.
- Use SIPOC—suppliers, inputs, process, outputs, and customers—to focus on the things that deliver the highest return and the greatest value.
- Use a PICK chart (possible, implement, challenge, and kill) to help you prioritize projects based on how difficult they are and the value they deliver.
- When you think about what you have to overcome and what you have to achieve, your first task is to try to meet this target condition. A target condition is your state after breaching the barrier between you and the things you need to do; it's an intermediate state of success.
- If you know exactly where you're going, and if you're always clear about the target condition you're moving to, then you have a really clear purpose and you're well on the way to superperformance.
- Use PDCA—Plan, Do, Check, and Adjust—and Toyota's A3 strategy to gain clarity on what you are doing, how you are doing it, and why it matters.

CHAPTER 7: Build an Improvement Factory

Superperformance is facilitating a team to their full potential and understanding the bottlenecks and waste in our improvement factory. It's achieving our full throughput

If you look closely at any successful entrepreneur or business, chances are that their success came about because they doubled down on what was working, what customers valued.

potential. To succeed, you've got to be really focused on your constraints and on the high-value, low-effort things you can do to overcome those constraints. You've also got to be willing to bypass activities that might get you all tied up in knots.

Your Outline for Action

You are an improvement factory manager. Just like a real factory, your goal is throughput—to make the products and services you deliver as fast as you can at the highest level of quality, to weave straw into gold. As you build your improvement factory, be sure to ask these questions:

- What outcomes do we desire?
  - » The golden lens: What does the customer want?
  - » What is preventing these outcomes?
  - » What is enabling these outcomes?
- What resources—people, material, machines, or technology—do we depend on?
- What stages or phases do we work through, and what does the work in progress look like?
- What does the success rate look like—overall and by phase or stage?
- What percentage of our improvements survive a year? Three years?
- What are our bottlenecks to speed or effort?
- What is the quality of results, and does it need to be reworked?
- What are the delays? (This is lost time.)
- What are our strengths to build on?
  - » What could we do more of?
  - » What could we share or replicate?

CHAPTER 8: Find the Root Cause of Success

You are likely sitting on a goldmine, and the ironic thing is you might not realize it. As humans, we tend to focus on our problems; it's no accident that root cause failure analysis is so deeply embedded in manufacturing and other industries. But if you look closely at any successful entrepreneur or business, chances are that their success came about because they doubled down on what was working, what customers valued.

Instead of the root causes of failure, let's emphasize the root causes of success.

Your Outline for Action

As humans, it's natural for us to focus on our failures. We need to change that focus from failures to successes. Knowing your best demonstrated practice—what works, what you do well, and why—is the most overlooked opportunity in business. Here are some things to consider as you shift your focus to finding your best demonstrated practice and root cause of success:

- Teach the elephant to dance by turning your lumbering organization into one that is nimble and responsive.
- When you find a best demonstrated practice, and a specific group or individual producing this result, you have captured the what. Next, find the how—how they execute and produce this result—which will enable you to learn why they represent the best demonstrated practice and get you to the root cause of their success.
- Use 5W&1H (what, who, where, when, why, and how), the 5 whys, and fishbone diagrams (also known as Ishikawa diagrams) to ask the right questions and read the collaboration vibe in your organization.

CHAPTER 9: Learn a Trade and Deliberately Improve

I suggest that you avoid getting hung up on the labels and, instead, think of the practical application of continuous improvement tools and the ability to drive change as a vocation. The vocation of applying many of the tools and methods described in this book to drive change for the better is something I call *deliberate improvement*.

Your Outline for Action

Avoid getting hung up on the labels applied to the tools of continuous improvement; instead, think of the practical application of these tools—and their ability to drive change—as a vocation. Here are some things to keep in mind as you approach this experience like learning a trade:

- Understand that knowledge is necessary, but that knowledge alone is useless without the skill and ability to use it effectively. If you approach driving change and improvement as a trade, you are already positioned for success.
- The vocation of applying many of the tools and methods to drive change for the better is *deliberate improvement*.
- *Troubleshooting* is the practice of checking all the conditions that should be working to try and find anomalies—things that aren't working or that are out of place—and all improvement should start with troubleshooting.
- Before you look for the root cause, there's one more very critical question you need to answer: Is this a *waste* problem or a *variation* problem?
- If you use root cause failure analysis (RCFA), pick out a specific instance and establish the chain of events that initiate from some specific cause, causes, or combination of events.
- At its heart, Kaizen (Japanese for "change for the better") is about empowering the people who do the work to improve their circumstances. It is best when you have direct experience with the problem and the people who will solve the root cause are the ones who experience it.
- DMAIC (define, measure, analyze, improve, control) is a process that focuses a team on a specific problem or opportunity. The team identifies factors that affect the process, gathers evidence, conducts analysis, tests solutions, and produces quantifiable, sustainable improvements that impact the business.

CHAPTER 10: Be Able to Clearly Explain WHY We Will Sustain

Every business wants improved worker safety and morale. Just because something is difficult to measure doesn't mean that you shouldn't try to do the right thing. The drive toward focusing on a metric, a KPI, or some other measurement of our success costs businesses literally billions of dollars every year. That idea is more than a little counterintuitive—that if you can't improve what you can't measure, but then you somehow measure it, it costs you billions of dollars. But it comes down to the problem of *sustainability*.

Your Outline for Action

Companies have entire organizations, training, consultants, teams, money, and time wrapped up in their improvement efforts, and 75 to 95 percent of the outcomes can't survive the warranty period on the results. That's unsustainable. Here's how to avoid being one of those companies that is pouring money down the drain:

- Understand that sustaining results from improvement projects is a must-win battle.
- The water you will carry is not only the size of the bucket, but also how fast the bucket leaks. Choosing the right projects that you execute effectively to produce sustained results is an order of magnitude better than a shotgun blast of projects where only a very small number land.
- You can't sustain what you can't explain; you need to know why and how your solution works if you want to sustain the results.

PART 3 ACTION

CHAPTER 11: Walk the Talk—A Call to Action

When we lack clarity on our target condition—what the barrier or issue is we are overcoming to reach our longer-term goals—we are asleep. People who have purpose know exactly what they're working on and exactly what they're trying to improve. And if you want to be a superperformer, you absolutely have to move with purpose.

Your Outline for Action

Being deliberate is different from the ongoing slow burn of what's constantly happening in the background. If you want your improvement efforts to succeed, you have to be deliberate about them. Here are some tips on how to do just that:

- To determine if you're moving with purpose, take note of this moment that you're in right now. *What*

are you doing? *Why* are you doing it? Next, imagine this same moment exactly seven days from now, after an entire cycle of the common patterns in your life has passed. In this moment, based on the intention that exists right now in your mind, what will be *different* seven days from now?

- Your ability to provide the greatest utility is what separates you from the rest of the pack. It's what makes you a superperformer.
- It's not enough to walk the walk or talk the talk. You must be able to walk the talk, engaging teams and organizations while having the skills (the vocation) to do what you say you're going to do and deliver results.
- Carefully craft your elevator speech. It will be your go-to method for doing your best to be a superperformer and to walk the talk. Be able to communicate three things in just a few minutes: the what, the how, and the why.

Acknowledgments

No success—no superperformance—is achieved alone. Just as this book emphasizes the power of clarity, utility, and collective success, its creation was made possible through the support, insight, and encouragement of many people who helped shape both the ideas within these pages and the journey that led me here.

To the readers—those who are committed to pushing past limitations, leading with clarity, and sustaining peak performance—may this serve as a guide to unlocking your own golden hours, eliminating ambiguity, and building a future defined by deliberate improvement and lasting success.

Thank you all for being part of this journey. Your contributions are a testament to the very principles in these pages—because real success is never achieved alone.

George Pesansky is a leadership and performance optimization expert with over 30 years of experience in operational excellence, executive coaching, and organizational transformation. Known for his practical, results-driven approach, he has led initiatives across industries to enhance efficiency, foster continuous improvement, and turn high-performance moments into repeatable systems. George has trained and coached more than 10,000 professionals in Six Sigma, Lean, and World Class Manufacturing worldwide, while also authoring influential work on peak performance and best practices. As founder of Capacity2Care, he encourages top performers to contribute their talents to strengthen charitable organizations.

Living Your Best Swagger Life
Page 4

THE SUMMARY IN BRIEF

We want to have what we think traditional swagger is—an air of powerful, cocksure confidence, no matter the situation. We want to be heard, respected, recognized, and rewarded for being our true selves at work, but we're too shit-scared of the possible repercussions. So, we squash our realness down, telling ourselves that we'll get what we want in the end if we're hardworking drones who don't stand out too much.

The more you are able to be yourself in your work, the more successful you will be at work. That's what swagger really is. Swagger is the ability to manifest the real you and hold on to it in the face of all the psychological crap that's going to come for it—regardless of the situation or environment. Leslie Ehm, speaker, consultant, and author of ***Swagger,*** assures us that swagger is not about perfection. It's about being a flawed badass. It's self-acceptance, not self-assuredness. And once you find your swagger, you'll never, ever want to go back to who you were, because having swagger is the secret to that game-changing, next-level success.

IN THIS SUMMARY, YOU WILL LEARN:

- Swagger is more than confidence.
- What will block your swagger.
- How truth, intention, and self-belief drive your swagger.
- To speak, walk, and feel your swagger.

Introduction

Confidence is not about having all of the answers—it's about honestly believing in yourself, which is very different from simply pretending to. Confidence is not a "thing" to achieve; it's a by-product of self-belief that stems from real competence. If you believe that you are truly worthy of owning your awesomeness at the stage you're currently at, then you do. Nothing or no one can tell you differently. In that light, it makes sense to flip the adage from "fake it 'til you make it" to "feel it 'til you find it."

Swagger Blockers

Everyone is capable of swagger. Being an introvert or inexperienced is no excuse. Conversely, just because you're a crowd-pleaser doesn't mean you already have it. Tapping into and releasing true swagger has to be a conscious act. You won't always notice when, where, why, or how it's getting stuck unless you understand the psychological blockers holding it back. Imagine that the real, authentic you—the one seen every day by those who already love and accept you—sits at your very core. This is the you who feels free to speak and act without self-consciousness, fear of judgment, and nagging self-doubt. It's the you that the world deserves to see.

Persona

The first swagger blocker separating the real you from the world is Persona. So many of us develop a conscious demarcation between who we really are and what we reveal to the world, particularly in the context of our professional lives. We do this because we've been conditioned to believe that there's a way we're supposed to show up if we want to succeed. But the truth is, having a work persona hides our uniqueness and shrouds our value. When we align our persona as closely as possible with our true self, we can step into our power big-time.

Ambition

In the business world, the concept of ambition is extremely loaded, which is exactly why it qualifies as a swagger blocker. The Oxford English Dictionary's definition of ambition is "a strong desire to do or to achieve something, typically requiring determination and hard work." It's not about a title or power. It's wanting to be a badass to the best of your ability and for the right reasons. For ambition to be legit, it should never come at the cost of your authenticity.

Insecurity

Insecurity is the dreaded "what if"—the anxious state where all unknowns percolate. It's self-doubt in action. Remember that those voices in your head do not suddenly manifest—they've been simmering and solidifying for years, seeded by your parents, siblings, teachers, boyfriends and girlfriends, colleagues, and bosses your entire life. When someone tells us we're not good enough, it sticks. Those tapes get recorded and then play themselves when we're at our most vulnerable. Insecurity is rarely about the challenge we're about to take on—it's the history of self-doubt that is the killer. Retrain your brain to accept what is true instead of what is imagined.

Fear

Fear is real. It doesn't matter what the danger is. Telling someone, or yourself, to "just get over it" doesn't work. So let's get practical. The trick is going to be in building up some positive conditioning to counter the brain's certainty that all is about to go to hell in a hand basket. Having a clear and decisive plan to face your fears is like slowly chipping away at the boulder that sits on your chest. You'll feel lighter and more positive in no time.

Pain

We are all formed by pain. Ling was the only daughter in a family of four brothers. In Chinese culture (at the time), women were perceived as second-class, almost disposable entities. As such, she was completely overlooked. Her wants, opinions, and aspirations were ignored. She was told to "stay quiet" for her entire childhood. So she did, becoming progressively invisible—even to herself. Even when she broke free from her family and made her way to Canada, that silence stayed with her. It was rooted in profoundly painful memory and conditioning. Now, when she was free to speak up for herself, it was too late. She had literally lost her voice.

Slowly but surely, she was able to turn her volume up, and with it came the funny, quirky personality she'd been hiding for so long. Ling didn't just find her voice. She found her importance. Without learning what was triggering her pain, she may have stayed hidden forever. But now, understanding that hearing "speak up" wasn't a criticism of her worth, she was able to lean in and be heard in her own unique, quiet way.

Swagger Drivers

Truth is what you want and need to express, intention is why you want to express it, and self-belief is knowing that

you are the best person to express it now, and that you have the right to, in this situation. The biggest challenge you'll face is learning how to keep your truth, intention, and self-belief intact as they navigate through the swagger blockers.

Truth

Truth is the number one driver of our swagger because it has the power to carry our authenticity out into the fresh air. Speaking your truth isn't license to run around spewing your opinions or judgments on others, either. It's more an antidote to feeling unheard, misunderstood, or suppressed in some way. If swagger is the authentic manifestation of who you really are, then speaking your truth must be in your toolkit if you want to be successful.

Speaking truth to power has always been a human challenge. The ancient Greeks referred to it as "parrhesia," meaning "to speak candidly or to ask forgiveness for so speaking." Parrhesiastes means "one who speaks truth to power." In the 1950s, the Quakers used the phrase as part of their manifesto to find alternatives to violent actions. Since then, it's become a political rallying cry for everyone from Martin Luther King Jr. to Anita Hill and the #MeToo movement. Why? Because speaking truth when you feel like you're in a position of lesser power and believe there could be serious consequences can be utterly terrifying, regardless of whether the stakes are personal or global. So, if you're someone who struggles with truth, it doesn't make you "weak"; it makes you perfectly human.

Do a quick analysis of the situation that you believe requires or deserves your truth. Now swap chairs and imagine it from the perspective of the person or people you're hoping will hear it. How might they feel? How would you feel in their position? A little empathy can help you check yourself. While something may be your truth, it may not actually need to be shared for any other reason than to make yourself feel better. If that's the case, go for drinks with a friend and vent that shit.

Intention

Intention is everything. It is the "why" of your swagger and can mean the key difference between cocky and confident. Sharing your intention can do wonders to prepare your listener for what's coming, especially if the conversation is going to be touchy or delicate. For example, "I know you're having a really hard time these days and it's affecting you badly. My intention here is to help in any way I can because I know you're getting some harsh judgment about it." That's a juicy, well-intentioned conversation starter. It's the compass for your swagger, and you should always know exactly in which direction it's pointed.

Self-Belief

The ability to believe in one's self is tough, and it's the driver most likely to falter when facing down swagger blockers. What also makes self-belief challenging is that it must come from the self rather than being a reflection of other people's belief in you. Self-belief is the unerring faith that you are the right person to express this thing in this moment, for these people and this situation.

Remember how Wile E. Coyote would chase after the Road Runner with absolute commitment and gusto? He'd charge up the winding mountain path, trying to catch a bird that could take corners at breakneck speed. Inevitably, the poor sap would careen over the edge and find himself suspended in midair. He'd hang there for a moment. And he would fall only when he looked down. That's the secret to self-belief: Never. Look. Down. Instead, believe if you speak your truth and act with intention, that path through midair will magically reveal itself beneath your feet.

Walking, Talking, and Feeling Your Swagger

We are all born with physical quirks, nuances, and differentiators. That's what makes the breadth of humanity so freakin' gorgeous. Yet most of us develop a serious hate-on for the very things that make us memorable and unique. (Thanks, adolescence. You fully suck.)

Living in Your Swagger Skin

I worked with a female senior executive at Google who is incredibly tall. She is literally head and shoulders above all the dudes in the room. She has a gorgeously deep voice and a strong Eastern European accent. She is strong and smart and kind. Guess what she wanted my help with? How to appear smaller when she was in front of audiences. This glorious specimen wanted to take up less space because she believed her height made her intimidating. I spent the bulk of our time together persuading her to reframe how she believed others perceived her. Watching her step back into her body and discover its potency was a very powerful experience for both of us. Through this, she was so much more confident in expressing her truth, intention, and self-belief.

Speaking of Swagger

How we express ourselves reveals who we are and how we think and feel about the world around us. There's no such thing as "sounding smart." To qualify as smart, you are either in a place of knowledge or in a place of seeking it. The latter is about curiosity and openness. Sounding smart is about either or both insecurity and arrogance. These are the opposites of swagger.

When we put tons of unnecessary mental energy into planning and second-guessing every word we say, it's unlikely that we're going to find our flow. But when we just let it rip, focus more on our truth and intention, what comes out of our mouths will find acceptance.

Feeling Your Swagger

Everyone from interns to CEOs are cautious about having the "feels." All the wishing and hoping ain't gonna make emotions conveniently disappear. Every time we get criticized, rejected, or even celebrated, our brain's natural response will be emotional. The more you accept your emotional realities and complexities, the more secure in your swagger you'll become. You'll be less hyperreactive to external triggers—your sense of self will strengthen and you'll be far less subject to what would have been injury before.

Living Your Best Swagger Life

Small, medium, or mega, each swagger moment we have matters and counts. If we've consciously established our truth, intention, and self-belief in advance of any situation and are able to act on it—even in the tiniest way—that's an amazing win! Those moments will add up and before you know it, you'll have more consistent, conditioned reactions to whatever life throws at you. Because swagger is not just about what you do, it's also about how you feel about what you do. Your swagger is for you. The by-product is awesome for the world. But you're doing it for the betterment and happiness of only you first. So shed those pounds of insecurity, put down the bottle filled with fear, and dance that change like nobody is watching.

Former TV host and advertising Creative Director turned training guru, **Leslie Ehm** has spent decades travelling the globe with her award-winning company Combustion, working with executives and teams from top organizations like Google, Disney, Pepsico, TD Bank, Uber, and more. She's turned technologists into creative forces, bankers into storytellers, and has brought a serious dose of badassery to boardrooms everywhere. Leslie is now a Wall Street Journal, USA Today and Amazon #1 bestselling author, speaker, and Swagger Coach.

THE SUMMARY IN BRIEF

Forget everything you know about motivating others and building a harmonious workplace. If you want to get the best out of people, you must be willing to fight. But that doesn't mean you become a dominator, nor does coddling others work.

The best leader you've ever had in your life was a liberator—someone willing to fight for your highest good, even at a personal cost. In ***The 100X Leader,*** global leadership experts Jeremie Kubicek and Steve Cockram explain what makes such leaders so unique, how to become that person yourself, and how to share the same gift with others.

Kubicek and Cockram revive the lost art of leadership—the intentional calibration of support and challenge for everyone you lead, your team, and your family. They help leaders become multiplication masters by learning to bring the best out of people for their highest good and that of the whole team.

The 100X Leader will help you become—and build—leaders worth following.

IN THIS SUMMARY, YOU WILL LEARN:

- Why the Sherpa guides are a great metaphor for leadership.
- To use tools like the Support-Challenge Matrix to understand and improve your leadership.
- The art of multiplication, which allows you to transfer knowledge, skills, and expertise to your people and your entire organization.

Introduction

There is a group of people on this planet known for their superhuman abilities. They can climb at levels unimaginable, while carrying gear and supplies that would make the normal person wince. They are known as the Sherpa, and they are a perfect metaphor to describe a type of superhuman leader that exists on this planet as well.

The Sherpa people are a Tibetan ethnic group who live predominantly in the highest altitudes in the world—the Himalayas. Their genetic predisposition of altitude acclimation has given them the reputation of being some of the best mountain climbers in the world.

You may know the Sherpa for their expertise on Mount Everest and throughout the Himalaya mountains. Even more than their physical DNA, the Sherpa tend to have a belief system that is different than the extreme climbers who pay thousands to climb a mountain, seeking mostly the thrill of personal achievement. In contrast, the Sherpa climb out of respect for the mountain and for the chance to take care of their families.

The metaphor of the Sherpa represents the best example of what it means to truly lead people, modeling perfectly the ability to calibrate support and challenge. The goal in using this metaphor is to help you become a person who people *want* to follow, not one people *have* to follow. There is a big difference.

We Need Better Leaders

The 21st century is a steep mountain climb for today's leaders; the landscape is treacherous and constantly shifting as the complexities of work, culture, and life are changing rapidly in the digital age. It's unrecognizable from 30 years ago! In essence, the terrain has changed drastically, and people are either adapting or not.

Because of these changes, the world doesn't need more leaders—it needs more of the right kind of leaders, especially amid the chaos that is constant within global affairs. We need more leaders who people want to believe in, not leaders who people are forced to follow.

The changes in geopolitical realities, global leadership, and technological advancements have also caused a complete shift in the way adults learn. People have changed the way they read and view information and even the way they read books. Social media affects newsfeeds and attitudes, not to mention the endless options of entertainment. The proliferation of information has forced different behaviors as people try to filter what they want to take in and how much content to digest, whether it's audio, visual, or text. This dramatic shift in how we learn affects people's abilities to become healthy and to train others effectively.

For this reason, we need leaders who lead for the benefit of others, not just for themselves. But you must first change yourself before you can attempt to change others. This is the secret of the Sherpa, or 100X leader.

Welcome to base camp. Let's get ready to become someone worth following.

PART I: DEVELOPING YOU

Choosing to Climb

There's a symbol that can be used by you inside your world to help shape the intent of people becoming healthy leaders. That symbol is 100X.

The phrase 100X is simple and deep all at the same time. The number 100 simply means reaching 100 percent of the desired health or personal transformation of a person, encompassing their emotional intelligence, mental ability, and holistic leadership strength and effectiveness.

The hallmarks of a leader at 100 percent could look like the following:

- They are secure in who they are and confident with their abilities while remaining humble to those they serve.
- They are consistent in the way they lead so that people can count on them.
- They are self-aware and responsive when they have erred.
- They are intently for their people, not against them or solely for themselves.
- They have something to give others because they are full of the positive even in the midst of difficult circumstances.

And the X in 100X? The X stands for multiplication—the intentional transfer of knowledge, wisdom, and skills to those you lead. Once you journey up the mountain yourself and prove that you have what it takes, you will become the Sherpa for those you lead.

Put together, 100X is a formula for leadership success—

100X invites you to climb Everest every day for the rest of your lives and learn how to be a Sherpa to others at the same time.

transformation of the leader and multiplication to those you lead.

Some of you might be at 70 percent, as you are generally healthy in your leadership but may not be multiplying or helping others climb in the way they need. 100X invites you to climb Everest every day for the rest of your lives and learn how to be a Sherpa to others at the same time.

To do that well, you will need to become well rounded in three fundamental areas of your life. You will need to become a leader worth following, not one people must follow because of a job or just because you are their boss; build leaders worth following because every organization needs much stronger leaders to be able to sustain and grow; and lead organizations (or cultures) that people want to join. People have a choice, and 100X will help you create teams and organizations that people want to attach their names to.

Your 100 Percent Health Check

Let's prepare for the journey by taking a quick, unscientific, reality health check for your life now. Rank yourself 1–10 (10 being the highest level of health) on each of these statements:

- I am secure, not insecure, in my ability to lead people, teams, programs, or organizations to accomplish our goals.
- My personal life is healthy and allows me to be fully present and productive in accomplishing my objectives and goals.
- I am emotionally intelligent and have acclimated to leadership by learning how to lead people in complex situations.
- I am consistent in my leadership and not prone to rash emotions or using fear and manipulation to lead others.
- I know where I am going and what I am responsible for and feel the freedom and courage to lead at higher levels.
- I am fit to lead, physically, mentally, and emotionally.

Now, average your scores and divide by six. A score of 7 and above would highlight that you believe you are in a healthy season. A score of 5 and under would mean that there are real issues happening in your life and that you need some help to get healthy enough to continue climbing. Lastly, if you are between 5 and 7 then there are some flags that need to be addressed, as you could easily move up or down based on some circumstances in your life.

One-hundred percent is the goal. Most of us are not at that number, as stress and pressure, missed expectations, hard relational dynamics, kids, and life in general have shaved this number down into something well below.

The Making of a Sherpa

In the leadership context, a Sherpa is someone who has climbed his own mountain, learned how to lead himself and can thrive in higher altitudes, all the while helping other people climb up the same mountain. Figuratively speaking, the making of a Sherpa is the making of the 100X leader who must learn all of the technical aspects of leading, from communications to performance management, to alignment and execution, to dealing with people on every level.

The objective is to develop fully acclimated leaders who, like the Sherpa, can move up and down the mountain while helping others move up themselves. Key attributes of the 100X leader are as follows:

- They must decide that they want to become someone worth following and want to learn the secrets to becoming one of the best leaders in the world.
- They must become self-aware, knowing who they are and why they do what they do and be willing to change those patterns and actions for the benefit of all.
- They must learn how to calibrate support and challenge as they fight for the highest possible good of those they lead.
- As they learn to be consistent leaders, they must learn to handle hard realities and adjust as they go.

- They must desire accountability and be teachable—humble enough to let others help them up to the next level.
- They are committed to a lifelong process of intentional self-improvement.
- They must overcome the arrogance that comes from pride and learn to create a culture of empowerment and growth in the midst of turmoil and drama.

Dealing with Self-Preservation

Every person who climbs has to deal with fear. The Sherpas on the mountain must deal with the fear of loss and become comfortable using their experience with handling people and themselves at high levels. In the same way, the 100X leader must lean on their experiences and make difficult decisions that affect people's lives. They must become confident in their skills and overcome each of these self-preservation issues.

What am I afraid of losing? Your position and the salary and benefits that come with it? Some leaders are so afraid of losing that they tend to lose themselves. The fear of losing can drive people to do irrational things.

What are you trying to hide? The self-aware leader can answer any challenge without fear, while the insecure leader will do anything to keep people from seeing their weakness.

What are you trying to prove? In order to acclimate to the highest levels of leadership, this question must be dealt with honestly. What are you trying to prove and to whom? Is it your board or business partners or administration or simply your boss? Proving yourself is a natural rite of passage in any job. You want to do a good job so that people have confidence in you. However, if insecurity is rooted deeply in you, then the overproving can actually cause an undermining that can affect your influence and your respect.

Put another way, self-preservation is the overprotection of what you are afraid of losing. When you overprotect, you tend to lose what you were afraid of losing in the first place.

To climb to the higher levels on the 100X journey, we need to break through our own insecurities to become secure, confident, and humble people.

Your Ultimate Test

The Sherpa help people do what they don't believe they can do. Their secret to helping climbers lies in their ability to provide challenge commensurate to their support.

To become a person worth following is a balancing act, part science, part art. It is the calibration of managing support and challenge consistently with those you lead as well as with yourself. Most leaders default to their natural tendency of oversupport or too much challenge because they tend to live accidentally or out of habit.

The Sherpa understands the objective and helps guide people using both support and challenge based on the needs of the moment to get their people to the next level.

Support means to provide the appropriate help others need to do their jobs well: to equip people, serve them, and provide the resources needed for those you lead.

Challenge, on the other hand, means to motivate people by holding them accountable to what they could do if they had the resources. Challenge is the push needed to get people to move to be the best they can be, either as a team or as an individual.

The Support-Challenge Matrix

The Support-Challenge Matrix is a simple but powerful tool. There are four levels in the matrix. Each represents a standard of leadership behavior and the culture that leadership behavior creates: protect, liberate, abdicate, and dominate. Let's look at each one:

Dominating. Dominating others means that our tendency is to bring challenge but little support. This often occurs out of habit from stress rather than a deliberate decision. Those who dominate tend to coerce and browbeat people with fear and manipulation when they feel like they aren't winning or if control is slipping out of their grasp. They usually assume that others like them, but may be out of touch with the hard reality of what it is like on the other side of themselves as leaders.

Protecting. Those who protect give more support and rarely take time to share challenges or even reasonable expectations. Although this can feel comfortable and easy, ultimately overprotection creates a culture of entitlement and mistrust, as those who protect can flip from Dr. Jekyll to Mr. Hyde in their inconsistent leadership style.

At their core, a person who protects sees even healthy challenge as conflict and does anything to avoid it, wanting everything to just run smoothly. These people create caution in their cultures due to the inconsistencies that tend to occur in their leadership style.

Abdicating. Abdication usually occurs when people don't fully perform their duties or the responsibilities needed of their role. When a leader abdicates, it can be for many reasons. The leader may be worn out by the overwhelming tasks of the job or have switched off due to office politics or through sheer boredom with lack of challenge. Sometimes, abdication can occur from self-preservation or the fear of being rejected. Whatever the reasons, abdication is a sad place to live or lead. It creates lifeless cultures with low expectations for all.

Liberating. To liberate is to empower those you lead. 100X leaders are the best leaders in the world because they have learned how to liberate those they lead in every circle of influence (self, family, team, organization, and community). The problem is that there are just too few of them in the world. To liberate means to fight for the highest possible good of those you lead. Liberating leaders build healthy teams and cultures, and they produce a level of relational trust that takes performance to higher levels.

Know Yourself to Lead Yourself

The most important part of any leadership journey is the ongoing, never-ending process of self-awareness. For all the many books, articles, and experts who talk about it, self-awareness can be boiled down to two simple commitments:

- A commitment to understand how you're wired, the tendencies that result from such wiring, and the impact those tendencies have on others;
- A commitment to change your negative tendencies in order to become the best person and leader you can be.

One of the most potent tools to train 100X leaders is called Know Yourself to Lead Yourself. The tool involves discovering the process of how our actions and tendencies shape us.

Tendencies. We all have tendencies that create patterns of actions and behavior that generate consequences that ultimately shape our current reality. Therefore, if we want to change our reality, we must find the tendencies that form the patterns of action generating the undesired consequences.

Our tendencies will never change—they are hardwired into our DNA and our personality. It is therefore vital to catalogue our tendencies so we can know ourselves and lead ourselves. For example, what do you tend to do when you are angry? What is your tendency when you have not received the honor you think you deserve? How do you handle incompetence in others? How do you feel when you are under stress? What do you tend to do when you don't get your way?

Patterns. A pattern is something you do over and over again thinking it produces results, but it rarely does. People know your patterns, and if you ask them they will tell you. Patterns can be manifested as an external behavior or as an internal thought, and both must be managed in order to become a leader worth following.

Actions. Your actions come from your tendencies and patterns, and they lead to consequences that shape your reality. If you want to change your reality, then you must change your patterns and actions. The job of a Sherpa is to hold up a mirror and help leaders get to the next level. That is what the 100X journey is all about.

Self-aware people know their tendencies and default patterns of behavior and at times choose an action contrary to the default. The intentional journey from tendency to action is what defines the leaders who climb the highest. They are able to choose actions that are not their default patterns when they know to do so would be unhelpful.

Consequences. There is a price tag to our unconsidered patterns and actions: the consequences of our words, deeds, retorts, and responses. They shape who we are, how we think, how we interact, and the way other people learn to view and interact with us as a result.

If you don't like the consequences that you are experiencing, then it is important to look at the actions and work backward to the patterns and tendencies. All consequences ultimately shape current reality. So, in light of the consequences, it is vital to be intentional about the patterns we develop so that we produce positive rather than negative consequences.

Reality. Reality is the result of our natural tendencies growing into patterns, with actions that produced consequences that we now get to live with. Most people complain about their realities without ever acknowledging that their own actions and tendencies are at least partly (or entirely) responsible.

Another way to use the Know Yourself to Lead Yourself tool is to work backward. Pick a reality that you don't like and review it honestly—ask yourself what were the actions that created the mess that you are in. Once you've identified the actions, look at your behavior patterns and observe

what your natural tendencies are. Be honest with yourself, or ask a friend to work through it with you.

PART II: GETTING OTHERS TO A HIGHER LEVEL

The Higher Levels

The goal of a 100X leader is to establish liberation, which is to fight for the highest possible good of those we lead—by using the intentional calibration of support and challenge. It is our job to calibrate that support and challenge so that they can move to the next level with the proper equipping and motivation.

Once this is established, then your job is to look for what could take them out—the tendencies or patterns that undermine their influence. If you truly care for those you are leading, then it is vital for you to bring honesty with respect, to speak the truth in love, in order for them to become the best they can be. Ask three questions:

- What specific support and/or challenge do they need from me?
- What is the tendency or pattern most undermining their influence?
- How can I help them get to the next level?

How to Get People to Change

People change when they see what it is like to be on the other side of themselves. They begin to understand the damage they are causing and actually want to change themselves once they see there is a clear path to that change.

As Sherpas, our job is to help our people see the other side of themselves. It means having difficult conversations when necessary, while providing the right resources and support for your team, family, spouse, to become the best, healthiest, most productive version of themselves as they can.

One of the 100X tools is the Liberators Intent. It is simple but powerful, with the axiom of "calling people up, not out." The leader of Legacy School, Suzanne Phillips, shared with a group of executives about how kids change: "Children don't change by shaming them; they change through aspiration. You must call them up to who they are becoming instead of calling out their current behavior."

The same is true with the adults you lead. Call them higher and remind them who they are, and watch them self-adjust. The other alternative is to call them out on what they are not becoming, which rarely produces what you hope. Positive change rarely comes from negative judgment.

Sherpas need a great deal of patience, a "for-others" attitude, and a commitment to learning how to bring both high support and high challenge with precision. If you work to apply the "for-others" mindset, you'll be surprised at how quickly your capacity expands in order to cultivate change in those you lead.

People change when they see what it is like to be on the other side of themselves.

Becoming a Multiplication Master

Multiplication is the intentional transfer of knowledge, skills, and expertise into the lives of the people you lead. If you become an expert in the art of multiplication, the capacity of the individual, team, and organization increases dramatically. The key is being intentional.

If leaders are accidental and abdicate their leadership, they may subtract, or worse, divide those they lead. Most of us have experienced this in certain leaders we have worked with, whether it be in the constant feeling of disappointment amid no expectations being shared or the dysfunctional leader who pits people against others as a sick game to try to produce competition that might increase performance.

The 100X leader only multiplies the positive and does not subtract from people or divide teams. The Sherpa are always training their clients as they climb, because they want the climber to be successful and not cause any issues for the team. Thus, they are constantly teaching rope mastery, climbing technique, coaching on the terrain, or whatever is helpful for the next challenge. In the same spirit, the 100X leader is looking to intentionally multiply what they know to those they are leading to get to higher levels.

Here are the four main methods of multiplying yourself into others:

Although the Sherpa guides can't set the climate on Mount Everest, they can shape the atmosphere of their teams and the way things are done on the mountain.

Informing. Communication is critical for any leader, and informing is the most traditional style of intentionally transferring knowledge, wisdom, or skills. This comes when a leader shares information in a one-way manner. For the Sherpa, this occurs when they share rules or objectives or plans. For some leaders, this occurs through a written newsletter or email where they control what is communicated to others. For others, informing looks like the company speech or keynote where the leader is engaging through multiple channels with little or no interactive process.

Training. It is one thing to inform people and another to train. Multiplying via training occurs by creating facilitated learning events with clearly defined objectives using a controlled interactive process. Designing a training experience is a skill. It's a careful balance of new learning, interaction, and keeping energy in the room. With concentration spans being more limited than ever, people need interaction every seven minutes in order to effectively interact with the content and see its practical application for their immediate world.

Coaching. Coaching is the consistent investment in a small number of leaders over time, with mutually agreed upon objectives, in an interactive learning process. This could look like one-to-one consulting, best-practice core groups with a small group, or live troubleshooting. Coaching is an ongoing, proactive process that must be intentional to see real results in those you lead.

Apprenticeship. Apprenticeship is the intentional transfer of knowledge, skills, and expertise into a person. To apprentice is to invest long term in another person who has the capacity and desire to replicate skills and competencies. Apprenticeship is a lost art in most places. It was once the norm in training leaders but has lost its importance with the proliferation of information available in today's world.

PART III: CREATING 100X CULTURES

Creating the Atmosphere for Growth

Although the Sherpa guides can't set the climate on Mount Everest, with its freezing temperatures and rapidly changing weather patterns, they can shape the atmosphere of their teams and the way things are done on the mountain from a leadership perspective. It takes work to establish and keep the healthy culture of any group of people, which is why there are so few leaders worth following in the world and why we need so many more.

Culture can be defined as atmosphere. It is the air that people breathe while they are doing their work inside a team or organization. The leader defines the atmosphere by their style and standards. They shape it by their actions and reactions. They shape it by who they are and the work they've done on themselves to become leaders worth following.

To shape culture, a leader must first create a common language. Language is created through the establishment of a common vocabulary—words that come to mean the same thing, at the same time, with the same group of leaders. This language can be used to positively shape culture because people use the objective language to communicate effectively, while getting things done.

The language components of a healthy culture include **vocabulary**, which is expressed in **visual tools**. These visual tools create **objective language**, which then transforms **leadership culture**.

The following list of questions will help you begin thinking about how to purposefully shape your organization and cultivate the culture you truly want rather than the one you happen to stumble into:

- How would you describe the current atmosphere of your team? Is it healthy or toxic?
- Do you utilize a common language to help shape the culture?
- How well do you think you balance the often-competing needs of vision and values?
- Do you have a thorough process for raising new leaders?
- How intentional are you in helping new employees integrate into your culture?

- How do you celebrate together?

So, take a moment to think about these realities; then gather the troops and start asking these questions. And don't be afraid to dive deep, you'll need clear language and common understanding if you hope to communicate effectively and generate the buy-in that will take you to the next level as an organization.

Subculture, the Secret to Organizational Change

A subculture is any team of people or division inside an organization that has influence. A subculture leader can be someone with influence but without a powerful title—maybe someone with years of experience who could be influencing a small group of employees because of their seniority. Or it could be a small division with well-established employees who like to do things their way. There might be a subculture of new employees or support staff, a group in the accounting department, a group that gathers for coffee, and so forth.

Each leader creates an atmosphere that other employees live in. Now, look at your subculture leaders. What is their tendency? Do they tend to liberate, dominate, protect, or abdicate? Since leaders define the culture, then their influence will tend to shade the group that they lead, and that is how subcultures are built.

If you want to change the culture, you must change each subculture. If you are leading your organization, it starts with you and your senior team; you can't outsource culture. The subculture will be the primary experience of your employees.

Only by creating a multiplying language that everyone can learn and having a clear focus on the subculture leaders do you have the chance of creating a liberating culture, where 100X leaders are multiplied.

If you are the leader of the organization, then it is your responsibility to support and challenge each subculture as you move forward for the greater good of the whole. If someone is out of line, then it is your role to get them either moving in the right direction or moving out the door.

Liberating leaders challenge people to the agreed standards/values and the vision of the organization. If your culture is out of control, then it is up to you to lean in and deal with the situation with clarity, challenge, and proper perspective.

Every person who summits Mount Everest starts from base camp with an intentional goal. If you're not already walking, step onto the trail today and begin walking the path of becoming someone worth following.

THE SUMMARY IN BRIEF

What do you dream of? In your wildest imagination, what do you see yourself doing? Now, what is standing between you and that dream? The answer is leadership. "Everything rises and falls on leadership," says Dr. John C. Maxwell, "but knowing how to lead is only half the battle. Understanding leadership and actually leading are two different activities."

What makes people want to follow a leader? The key to transforming yourself from someone who understands leadership to someone who successfully leads in the real world is character. Your character qualities activate and empower leadership — or they stand in the way of your success.

Maxwell outlines a list of 21 qualities that he has found to be common among all great leaders and he explains these characteristics in detail in ***The 21 Indispensable Qualities of a Leader.***

Leadership truly develops from the inside out. If you can become the leader you ought to be on the inside, you will be able to become the leader you want to be on the *outside*. People will want to follow you. "If you are able to do that," says Maxwell, "you'll find there's nothing in this world you cannot do."

IN THIS SUMMARY, YOU WILL LEARN:

- Why leaders are effective because of who they are on the inside.
- How to go to the highest level of leadership by developing character qualities from the inside out.
- How true commitment inspires and attracts people.
- How to start and sustain the process of continuous personal growth.

Do You Have What It Takes to Become a Great Leader?

Do you know whether you have what it takes to become a great leader, the kind who attracts people and makes things happen? If you took the time to really look at yourself deep down, would you find the qualities needed to live out your boldest dreams, the ones so big that you've never shared them with anybody? That's a question each of us must have the courage to honestly ask — and answer — if we want to achieve our real potential.

CHARACTER

How a leader deals with the circumstances of life tells you many things about his or her character. Crisis doesn't necessarily make character, but it certainly does reveal it. Adversity is a crossroads that makes a person choose one of two paths: character or compromise. Every time a leader chooses character, he or she becomes stronger, even if that choice brings negative consequences.

The development of character is at the heart of our development not just as leaders, but as human beings.

Ask yourself whether your words and actions match — all the time. When you say you'll finish an assignment, do you always follow through? If you tell your children that you'll make it to their recital or ball game, are you there for it? Can people trust your handshake as they would a legal contract?

To improve your character, do the following:

Search for the cracks. Spend some time looking at the major areas of your lie and identify anywhere you might have cut corners, compromised or let people down.

Look for patterns. Is there a particular area where you have a weakness, or do you have a type of problem that keeps surfacing?

Face the music. The beginning of character repair comes when you face your flaws, apologize and deal with the consequences of your actions.

Rebuild. Now that you've identified any areas of weakness, create a plan that will prevent you from making the same mistakes again.

CHARISMA

Most people think of charisma as something mystical, almost undefinable. They think it's a quality that comes at birth or not at all. But that's not true. Charisma, plainly stated, is the ability to draw people to you. And like other character traits, it can be developed. One way to make yourself the kind of person who attracts others, is to "Put a '10' on every person's head." One of the best things you can do for people — which also attracts them to you — is to expect the best of them. It helps others think more highly of themselves and, at the same time, it helps you.

If you appreciate others, encourage them and help them reach their potential, they will love you for it.

How would you rate yourself when it comes to charisma? Are other people naturally attracted to you?Are you well liked? If not, you may possess one of these roadblocks to charisma: pride, insecurity, moodiness, perfectionism and cynicism.

To improve your charisma, do the following:

Change your focus. As you talk to others, determine how much of your conversation is concentrated on yourself. Determine to tip the balance in favor of focusing on others.

Play the first impression game. The next time you meet someone for the first time, try your best to make a good impression. Learn the person's name. Focus on his or her interests. Be positive. And, most important, treat him or he as a "10."

Share yourself. Make it your longterm goal to share your resources with others. Think about how you can add value to five people this year. Provide resources to help them grow personally and professionally.

COMMITMENT

If you want to be an effective leader, you have to be committed. True commitment inspires and attracts people. It shows them that you have conviction. They will believe in you only if you believe in your cause. As the Law of BuyIn states, people buy into the leader, then the vision.

Commitment starts in the heart. If you want to make a difference in other people's lives as a leader, look into your heart to see if you're really committed. The only real measure of commitment is action. And there will be times when commitment is the only thing that carries you forward.

When it comes to commitment, there are really only four types of people: cop-outs, holdouts, dropouts and all-outs. What kind of person are you? Have you been reaching your goals? Are you achieving all that you believe you can? Do people believe in you and follow you readily? If your

answer to any of these questions is no, the problem may be your level of commitment.

To improve your commitment, do the following:

Measure it. Sometimes we think we are committed to something, yet our actions indicate otherwise. Spend a few hours tallying up how you spend your time and where you spend your money. All these things are true measures of your commitment.

Know what's worth dying for. If it came down to it, what in life would you not be able to stop doing, no matter what the consequences were? Meditate on that thought, then see if your actions match your ideals.

Use the Edison method. If taking the first step toward commitment is a problem, try doing what Thomas Edison did. When he had a good idea for an invention, he would call a press conference to announce it. Then he'd go into his lab and invent it. Make your plans public and you might be more committed to following through with them.

COMMUNICATION

The success of your marriage, job and personal relationships depends greatly on your ability to communicate. People will not follow you if they don't know what you want or where you are going. You can be a more effective communicator if you simplify your message and focus on the people with whom you're communicating. As you communicate, never forget that the goal of all communication is action. If you dump a bunch of information on people, you're not communicating. Every time you speak to people, give them something to feel, something to remember and something to do.

If you know in your heart that your vision is great, yet people still do not buy into it, your problem may be an inability to communicate effectively.

To improve your communication, do the following:

Be clear as a bell. Examine a letter, memo or other item you've recently written. Are your sentences short and direct, or do they meander? Will your readers be able to grasp the words you've chosen, or will they have to scramble for a dictionary? Have you used the fewest words possible? To a communicator, your best friends are simplicity and clarity.

Refocus your attention. Pay attention to your focus when you communicate. Is it on you, your material or your audience? If it's not on people, you need to change it. Think about their needs, questions and desires. Meet people where they are, and you will be a better communicator.

Live your message. Are there any discrepancies between what you communicate and what you do? Talk to a few trustworthy people and ask them whether you are living your message. Receive their comments without defensiveness. Then strive to make changes in your life to be more consistent.

COMPETENCE

We all admire people who display high competence, whether they are precision craftsmen, world-class athletes or successful business leaders. But the truth is that you don't have to be Michael Jordan or Bill Gates to excel in the area of competence. If you want to cultivate competence, you need to show up every day, keep improving, follow through with excellence, accomplish more than expected and inspire others.

Do you attack everything you do with fervor and perform at the highest level possible? Or is good enough sometimes good enough for you? When you think about people who are competent, you're really considering only three types of people: those who can see what needs to happen, those who can make it happen and those who can make things happen when it really counts.

To improve your competence, do the following:

Get your head in the game. If you've been mentally or emotionally detached from your work, it's time to reengage. Identify the source of the problem and create a plan to resolve it.

Redefine the standard. If you're not performing at a consistently high level, reexamine your standards. Are you shooting too low? Do you cut corners? If so, outline more demanding expectations for yourself.

Find three ways to improve. Nobody keeps improving without being intentional about it. Find three things you can do to improve your professional skills and follow through on them.

COURAGE

Eleanor Roosevelt acknowledged, "You gain strength, courage, and confidence by every experience in which you really stop to look fear in the face. You are able to say to yourself, 'I lived through this horror. I can take the next thing that comes along.' You must do the thing you think you cannot do."

Courage deals with principle, not perception. If you don't

A leader who knows his or her priorities but lacks concentration knows what to do but never gets it done.

have the ability to see when to stand up and the conviction to do it, you'll never be an effective leader. Your dedication to potential must remain stronger than your desire to appease others.

What's ironic is that those who don't have the courage to take risks and those who do, experience the same amount of fear in life.

To improve your courage, do the following:

Face the music. Go out and do something stretching simply for the sake of growing in courage. Skydive. Perform in a play.

Talk to that person. Most people are avoiding confrontation with someone in their lives — an employee, a relative or a co-worker. If that's true for you, talk to that person this week.

Take a giant step. Maybe you've been afraid to make a career move. Take the time to really look at it. If it's the right thing to do, then do it.

DISCERNMENT

Discernment can be described as the ability to find the root of the matter, and it relies on intuition as well as rational thought. Discernment is an indispensable quality for any leader who desires to maximize effectiveness.

People who lack discernment are seldom in the right place at the right time. Although great leaders often appear to be lucky to some observers, it's more likely that leaders create their own "luck" as the result of discernment, that willingness to use their experience and follow their instincts.

Are you able to see root causes of difficult problems without having to get every bit of information? Do you trust your intuition and rely on it as much as you do your intellect and experience?

To improve your discernment, do the following:

Analyze past successes. Look at some problems you solved successfully in the past. What was the root issue in each problem:? What enabled you to succeed? If you can capture the heart of the matter in a few words, you can probably learn to do it with future issues.

Learn how others think. Which great leaders do you admire? By learning how other discerning leaders think, you can become more discerning.

Listen to your gut. Try to recall times when your intuition "spoke" to you and was correct. What do those experiences have in common? Look for a pattern that may give you insight into your intuitive ability.

One discernment-driven decision can change the entire course of your destiny.

FOCUS

What does it take to have the focus required to be a truly effective leader? The keys are priorities and concentration. A leader who knows his or her priorities but lacks concentration knows what to do but never gets it done. If he or she has concentration but no priorities, he or she has excellence without progress. But when he or she harnesses both, he or she has the potential to achieve great things.

So the important question is: How should you focus your time and energy? Use these guidelines to help you:

- Focus 70 percent on strengths — Effective leaders who reach their potential spend more time focusing on what they do well than on what they do wrong.
- Focus 25 percent on new things — Growth equals change. If you want to get better, you have to keep changing and improving.
- Focus 5 percent on areas of weakness — Nobody can entirely avoid working in areas of weakness.

How would your rate yourself in the area of focus?Have you been majoring in minor things?

To improve your focus, do the following:

Shift to strengths. Make a list of three or four things you do well in your job. Devise a plan to make changes, allowing you to dedicate 70 percent of your time to your strengths.

Staff your weaknesses. Identify three or four activities

necessary for your job that you don't do well. Determine how you can delegate the jobs to others.

Create an edge. What would it take for you to go to the next level in your main area of strength? Rethink how you do things.

GENEROSITY

Nothing speaks to others more loudly or serves them better than generosity from a leader. True generosity isn't an occasional event. It comes from the heart and permeates every aspect of a leader's life, touching his or her time, money, talents and possessions. Cultivate the quality of generosity in your life by being grateful for whatever you have, don't allow the desire for possessions to control you and develop the habit of giving.

Do you continually look for ways to add value to others? And to whom are you giving your time? Writer John Bunyan affirmed, "You have not lived today until you have done something for someone who can never repay you." If you aren't giving in the small areas of your life, you're probably not as generous a leader as you could be.

To improve your generosity, do the following:

Give something away. Take something you truly value, think of someone you care about who could benefit from it, and give it to him or her.

Put your money to work. Put your money to work for something that will outlive you.

Find someone to mentor. Once you reach a certain level in your leadership, the most valuable thing you have to give is yourself.

INITIATIVE

Leaders must show initiative by always looking for opportunities and being ready to take action. What qualities do leaders possess that enable them to make things happen? Here are four:

- They know what they want.
- They push themselves to act.
- They take more risks.
- They make more mistakes.

Are you constantly on the lookout for opportunity, or do you wait for it to come to you? Are you willing to take steps based on your best instincts? Or do you endlessly analyze everything? When was the last time you initiated something significant in your life? If you haven't pushed yourself lately and gotten out of your comfort zone, you may need to jump-start your initiative.

To improve your initiative, do the following:

Change your mind-set. If you lack initiative, recognize that the problem comes from inside, not from others. Find the source of your hesitation and address it.

Don't wait for opportunity to knock. Take stock of your assets, talents and resources. Doing that will give you an idea of your potential. Now, spend every day for a week looking for opportunities. Where do you see needs? Who is looking for expertise you have?

Take the next step. Pick the best opportunity you see, and take it as far as you can. Don't stop until you've done everything you can to make it happen.

LISTENING

Peter Drucker, the father of American management, estimated that 60 percent of all management problems are the result of faulty communications. And the overwhelming majority of communication problems come from poor listening.

A lot of voices are clamoring out there for your attention. As you think about how to spend your listening time, keep in mind that you have two purposes for listening: to connect with people and to learn.

Are you a good listener? When was the last time you really paid close attention to people and what they have to say? Start listening not only for words, but also for feelings, meanings and undercurrents.

To improve your listening, do the following:

Change your schedule. Do you spend time listening to your followers, customers, competitors and mentors?If you don't have all four groups on your calendar regularly, you're probably not giving them enough attention.

Meet people on their turf. A key to being a good listener is to find common ground with people. Get to know who they are and seek common ground to build your connection with them.

Listen between the lines. As you interact with people, you certainly want to pay attention to the factual content of the conversation, but don't ignore the emotional content.

PASSION

What makes it possible for people who might seem ordinary to achieve great things? The answer is passion. Nothing can take the place of passion in a leader's life.

Passion is the first step to achievement. Your desire determines your destiny. Think of great leaders and you will be struck by their passion: Gandhi for human rights, Winston Churchill for freedom, Martin Luther King Jr. for equality, Bill Gates for technology. Anyone who lives beyond an ordinary life has great desire.

Passion increases your willpower. It is the fuel for the will. If you want anything badly enough, you can find the willpower to achieve it. If you follow your passion — instead of others' perceptions — you can't help becoming a more dedicated, productive person.

To increase your passion, do the following:

Take your temperature. How passionate are you about your life and work? Does it show? You won't become passionate until you believe passion can be the difference maker in your life.

Return to your first love. Think back to when you were just starting out in your career — or even farther back to when you were a child. What could you spend hours and hours doing. Try to recapture your old enthusiasm. Then evaluate your life and career in light of those old loves.

Associate with people of passion. Passion is contagious. Schedule some time with people who can infect you with it.

POSITIVE ATTITUDE

If you desire to be an effective leader, having a positive attitude is essential. It not only determines your level of contentment as a person, but it also has an impact on how others interact with you.

Your attitude is a choice. No matter what happened to you yesterday, your attitude is your choice today. Your attitude determines your actions. You can choose your attitude, you can change it.

When you meet people, do you tell yourself they'll let you down? When you face new experiences, does a voice in your head say you're going to fail?

To improve your attitude, do the following:

Feed yourself the right "food." If you've been starved of anything positive, then you need to start feeding yourself a regular diet of motivational material.

Achieve a goal every day. Set achievable daily goals for yourself. A pattern of positive achievement will help you develop a pattern of positive thinking.

Write it on your wall. As incentive, people put up awards they've won, inspirational posters or letters they've received. Find something that will work for you.

PROBLEM SOLVING

No matter what field a leader is in, he or she will face problems. They are inevitable for three reasons. First, we live in a world of growing complexity and diversity. Second, we interact with people. And third, we cannot control all the situations we face. Leaders with good problem-solving ability anticipate problems, accept the truth and handle one thing at a time. They see the big picture and they don't give up a major goal when they're down.

To improve your problem solving, do the following:

Look for trouble. If you've been avoiding problems, go out looking for them. You'll only get better if you gain experience dealing with them.

Develop a method. Some people have a hard time solving problems because they don't know how to tackle them. Try using the TEACH process:

Time — Spend time to discover the real issue.

Exposure — Find out what others have done.

Assistance — Have your team study all angles.

Creativity — Brainstorm multiple solutions.

Hit it — Implement the best solution.

Surround yourself with problem solvers. If you aren't a good problem solver, bring others onto your team who are. They will immediately complement your weaknesses and you will also learn from them.

RELATIONSHIPS

The ability to work with people and develop relationships is absolutely indispensable to effective leadership. People truly do want to go along with people they get along with. And while someone can have people skills and not be a good leader, he or she cannot be a good leader without people

If you can determine what's really a priority and release yourself from everything else, it's a lot easier to follow through on what's important.

skills. Never underestimate the power of relationships on people's lives. If your relational skills are weak, your leadership will always suffer.

To improve your relationships, do the following:

Improve your mind. If your ability to understand people needs improvement, jump-start it by reading books on the subject, then spend more time observing people and talking to them to apply what you've learned.

Strengthen your heart. Make a list of little things you could do to add value to friends and colleagues. Then try to do one of them every day. Don't wait until you feel like it to help others.

Repair a hurting relationship. Think of a valued long-term relationship that has faded. Do what you can to rebuild it.

RESPONSIBILITY

Good leaders never embrace a victim mentality. They recognize that who and where they are remain their responsibility — not that of their parents, their spouses, their children, the government, their bosses or their co-workers. They face whatever life throws at them and give it their best, knowing that they will get an opportunity to lead the team only if they've proved that they can carry the ball.

People who embrace responsibility get the job done. They're willing to do whatever it takes to complete the work needed by the organization. If you want to lead, you've got to produce.

To improve your responsibility, do the following:

Keep hanging in there. Sometimes an inability to deliver despite difficult circumstances can be due to a persistence problem. The next time you find yourself in a situation where you're going to miss a deadline, lose a deal or fail to get a program off the ground, stop and figure out how to succeed. Think outside the lines. Creativity can bring responsibility to life.

Admit what's not good enough. If you have trouble achieving excellence, maybe you've lowered your standards. Look for places where you've let things slip. Then make changes to set higher standards.

Find better tools. If you find that your standards are high, your attitude is good and you consistently work hard but you still don't achieve the way you'd like —get better equipped. Improve your skills by taking classes, reading books and listening to tapes. Find a mentor. Do whatever it takes to become better at what you do.

SECURITY

Insecure leaders are dangerous — to themselves, their followers and the organizations they lead — because a leadership position amplifies personal flaws. Insecure leaders have several common traits: They don't provide security for others, they take more from people than they give, they continually limit their best people and they continually limit the organization.

In contrast, secure leaders are able to believe in others because they believe in themselves. They aren't arrogant; they know their own strengths and weaknesses; and they respect themselves. When their people perform well, they don't feel threatened. They go out of their way to bring the best people together and then build them up so that they will perform at the highest level. And when a secure leader's team succeeds, it brings him or her great joy. Don't let insecurity prevent you from reaching your potential.

To improve your security, do the following:

Know yourself. If you are the kind of person who is not naturally self-aware, take time to learn about yourself. Ask people who know you well to name your three greatest talents and your three greatest weaknesses and then reflect on it.

Give away the credit. If you assist others and acknowledge their contributions, you will help their careers, lift their morale and improve the organization.

Get some help. If you cannot overcome feelings of insecurity on your own, seek professional help. Get to the root of your problems not only for your own benefit but also that of your people.

SELF-DISCIPLINE

No one achieves and sustains success without self-discipline. It positions a leader to go to the highest level and is key to leadership that lasts. If you can determine what's really a priority and release yourself from everything else, it's a lot easier to follow through on what's important. And that's the essence of self-discipline.

Self-discipline can't be a one-time event. It has to become a lifestyle. To develop a lifestyle of discipline, one of your tasks must be to challenge and eliminate any tendency to make excuses. The next time you're facing a must-do task and you're thinking of doing what's convenient instead of paying the price, change your focus. Count the benefits of doing what's right and then dive in.

If you know you have talent and you've seen a lot of motion — but little concrete results — you may lack self-discipline.

To improve your self-discipline, do the following:

Sort out your priorities. Think about which two or three areas of life are most important to you and the disciplines that you must develop to keep growing and improving in those areas.

List the reasons. Write out the benefits of practicing the disciplines you've just listed. Post the benefits where you will see them daily. On the days when you don't want to follow through, reread your list.

Get rid of excuses. Write down every reason why you might not be able to follow through with your disciplines. Even if a reason seems legitimate, find a solution to overcome it. Don't leave yourself any reasons to quit.

SERVANTHOOD

Servanthood is not about position or skill. It's about attitude. You have undoubtedly met people in service positions who have poor attitudes toward servanthood: the rude worker at the government agency, the waiter who can't be bothered with taking your order, the store clerk who talks on the phone with a friend instead of helping you.

Just as you can sense when a worker doesn't want to help people, you can just as easily detect whether a leader has a servant's heart. And the truth is that the best leaders desire to serve others, not themselves. The first mark of servanthood is the ability to put others ahead of yourself and your personal desires.

Where is your heart when it comes to serving others?Are you motivated by a desire to help others?

To improve your servanthood, do the following:

Perform small acts. Find ways to do small things that show others that you care.

Learn to walk slowly through the crowd. The next time you attend a function make it your goal to connect with others by circulating among them and talking to people; getting to know their needs, wants and desires.

Move into action. If an attitude of servanthood is conspicuously absent from your life, the best way to change it is to start serving. Sign up to serve others at your church, a community agency or a volunteer organization.

TEACHABILITY

Leaders face the danger of contentment with the status quo. After all, if a leader already possesses influence and has achieved a level of respect, why should he or she keep growing? The answer is — your growth determines who you are, and who you are determines who you attract, and who you attract determines the success of your organization.

If you want to grow your organization, you have to remain teachable. Some people mistakenly believe that if they can accomplish a particular goal, they no longer have to grow. It can happen with almost anything: earning a degree, reaching a desired position, receiving a particular award or achieving a financial goal. But effective leaders cannot afford to think that way. The day they stop growing is the day they forfeit their potential— and the potential of the organization.

If you're not where you hoped you would be by this time in your life, your problem may be lack of teachability.

To improve your teachability, do the following:

Observe how you react to mistakes. Do you admit your mistakes? Do you apologize when appropriate?Or are you defensive? If you react badly — or make no mistakes at all — you need to work on your teachability.

Try something new. Go out of your way to do something different that will stretch you mentally, emotionally or physically.

Learn in your area of strength. Continue to learn in an area where you are already an expert. This prevents you from becoming jaded and unteachable.

VISION

Vision is everything for a leader. It is utterly indispensable. Why? Because vision leads the leader. It paints the target. It sparks and fuels the fire within, and draws him or her forward. It is also the fire lighter for others who follow that leader.

Show me a leader without vision and I'll show you someone who isn't going anywhere. At best, he or she is traveling in circles. When you look deep into your heart and soul for a vision, what do you see?

To improve your vision, do the following:

Measure yourself. Talk to your spouse, a close friend and key employees. Ask them to state what they think your vision is. If they can articulate it, then you are probably living it.

Write it down. If you've thought about your vision but never put it in writing, take the time to do it. Once you've written it, evaluate whether it is worthy of your life's best. Then pursue it with all you've got.

Do a gut check. If you haven't done a lot of work on vision, spend the next several weeks or months thinking about it. Consider what really impacts you at a gut level. What makes you cry? What makes you dream? What gives you energy? And think about what you'd like to see change in the world around you. What do you see that isn't — but could be?

Conclusion & Advice

Keep growing as a leader. Put yourself on a regular program where you consistently read books, listen to tapes and attend conferences that stretch you. Find other leaders who will mentor you. The only way to become the kind of leader that people want to follow is to keep growing and learning about leadership.

John C. Maxwell is an internationally recognized leadership expert, speaker and author who has sold more than 13 million books. A ***New York Times, Wall Street Journal*** and ***Business Week*** best-selling author, Maxwell was named the World's Top Leadership Guru by Leadershipgurus.net. Three of his books, ***The 21 Irrefutable Laws of Leadership, Developing the Leader Within You*** and ***The 21 Indispensable Qualities of a Leader*** have each sold more than 1 million copies.

The Value of 360-Degree Leaders
Pages 8

THE SUMMARY IN BRIEF

These are classic pictures of leadership: William Wallace leading the charge of his warriors against the army that would oppress his people. Winston Churchill defying the Nazi threat as much of Europe had collapsed. Mahatma Gandhi leading a 200-mile march to the sea to protest the Salt Act. Mary Kay Ash going off on her own to create the world-class organization Mary Kay Cosmetics. Martin Luther King Jr. standing before the Lincoln Memorial challenging the nation with his dream of reconciliation.

Each of these people was a great leader. Each made an impact that has touched millions of people. Yet these pictures can also be misleading. The reality is that 99 percent of all leadership occurs not from the top but from the middle of an organization. Usually, an organization has only one person who is the leader. So, what do you do if you are not that one person?

You can learn to develop your influence from wherever you are in the organization by becoming a 360-degree leader. You can learn to lead up, lead across and lead down. Only 360-degree leaders influence people at every level of the organization. By helping others, they help themselves.

IN THIS EXECUTIVE BOOK SUMMARY:

- Disprove the myths believed by many people in the middle of an organization.
- Deal with the most common challenges faced by people in the middle of an organization.
- Lead your boss, your colleagues and your followers.
- Overcome the setbacks and obstacles you will face on the road to becoming a 360-degree leader.
- Quantify the value of 360-degree leadership.

The Myths of Leading From the Middle

The Position Myth

The number one misconception people have about leaders is the belief that leadership comes simply from having a position or title. But nothing could be further from the truth. You don't need to possess a position at the top of your group, department, division or organization in order to lead. If you think you do, then you have bought into the position myth.

The true measure of leadership is influence — nothing more, nothing less. Leadership is dynamic, and the right to lead must be earned individually with each person you meet. Where you are on the "staircase of leadership" depends on your history with that person.

Position has little to do with genuine leadership. Influencing others is a matter of disposition, not position. Leadership is a choice you make, not a place you sit. Anyone can choose to become a leader wherever he or she is. You can make a difference no matter where you are.

The Destination Myth

Those who believe the destination myth might say, "When I get to the top, then I'll learn to lead."

But, if you want to succeed, you need to learn as much as you can about leadership before you have a leadership position. Good leadership is learned in the trenches. If you don't try out your leadership skills and decision-making process when the stakes are small and the risks are low, you're likely to get into trouble at higher levels when the cost of mistakes is high, the impact is far-reaching, and the exposure is greater. Mistakes made on a small scale can be easily overcome. Mistakes made when you're at the top cost the organization greatly and they damage a leader's credibility.

Start now to adopt the thinking, learn the skills, and develop the habits of the person you wish to be. Handle today so that it prepares you for tomorrow.

The Influence Myth

Those who believe the influence myth might say, "If I were on top, then people would follow me."

People who have no leadership experience have a tendency to overestimate the importance of a leadership title. You may be able to grant someone a position, but you cannot grant him or her real leadership. Influence must be earned.

A position gives you a chance. It gives you the opportunity to try out your leadership. It asks people to give you the benefit of the doubt for a while. But given some time, you will earn your level of influence — for better or worse. Good leaders will gain in influence behind their stated position. Remember, a position doesn't make a leader, but a leader can make a position.

The Inexperience Myth

Although the desire to improve an organization and the belief that you're capable of doing it are often the marks of a leader, without experience being the top person in an organization, you would likely overestimate the amount of control you have at the top. The higher you go and the larger the organization, the more you realize that many factors control the organization. More than ever, when you are at the top, you need every bit of influence you can muster. Your position does not give you total control — or protect you.

The Freedom Myth

Those who believe the freedom myth might say, "When I get to the top, I'll no longer be limited."

But when you move up in an organization, the weight of your responsibility increases. In many organizations, as you move up the ladder, you may even find that the amount of responsibility you take on increases faster than the amount of authority you receive. When you go higher, more is expected of you, the pressure is greater, and the impact of your decisions weighs more heavily. Leaders have more obligations and, because of that, they become more limited in terms of their freedom. It is a limitation they choose willingly, but they are limited just the same.

The Potential Myth

Someone who believes the potential myth would say, "I can't reach my potential if I'm not the top leader."

People should strive for the top of their game, not the top of the organization. Each of us should work to reach our potential, not necessarily the corner office. Sometimes you can make the greatest impact from somewhere other than first place.

The All-or-Nothing Myth

Someone who believes the all-or-nothing myth might say, "If I can't get to the top, then I won't try to lead."

Some people in the middle become frustrated by their position in an organization because they define success as

being "on top." As a result, they believe that if they are not on top, they are not successful. If that frustration lasts long enough, they can become disillusioned, bitter and cynical. If it gets to that point, instead of being a help to themselves and their organization, they become a hindrance.

Improve your leadership and you can impact your organization. You can change people's lives. You can be someone who adds value. You can learn to influence people at every level of the organization — even if you never get to the top. By helping others, you can help yourself.

The Challenges 360-Degree Leaders Face

The Tension Challenge

This challenge comes from the pressure of being caught in the middle. It's not enough to merely recognize that leading from somewhere in the middle of an organization can be stressful. You need to learn how to relieve the tension. Here are five suggestions:

- **Become comfortable with the middle.** Being in the middle can be a great place — as long as you have bought into the vision and believe in the leader.
- **Know what to own and what to let go.** Nothing frees a person from tension like clear lines of responsibility.
- **Find quick access to answers when caught in the middle.**
- **Never violate your position or the trust of the leader.**
- **Find a way to relieve stress.**

The Frustration Challenge

This challenge results from following an ineffective leader.

Your job isn't to fix the leader; it's to add value. The only time that is not true is when the leader above you is unethical or criminal. If the leader won't change, then change your attitude or your work address.

When you find yourself following a leader who is ineffective, do the following:

- **Develop a solid relationship with your leader, find common ground, and build a solid professional relationship.**
- **Identify and appreciate your leader's strengths.** Find them and think about how they might be assets to the organization.
- **Commit yourself to adding value to your leader's strengths.**

The Multi-Hat Challenge

Leaders in the middle must perform tasks and have knowledge beyond their personal experience. And they often are forced to deal with multiple shifting priorities, often with limited time and resources.

Every role or "hat" you are asked to wear has its own responsibilities and objectives. If you change hats, keep in mind that the context changes. The goal often determines the role and the approach to take. Don't use one hat to accomplish a task required for another hat. When you change hats, don't change your personality. And don't neglect any hat you are responsible to wear.

The Ego Challenge

It's normal for any person to want recognition, and leaders are the same. The fact that leaders in the middle of the pack are often hidden — and as a result they don't get the credit or recognition they desire and often deserve — can be a real ego buster. The challenge is to be a team player and remain content while contributing.

Here's how to do that:

- **Concentrate more on your duties than your dreams.**
- **Appreciate the value of your position.**
- **Find satisfaction in knowing the real reason for the success of a project.**
- **Embrace the compliments of others in the middle of the pack.**
- **Understand the difference between self-promotion and selfless promotion.**

The Fulfillment Challenge

The right attitude is absolutely essential to contentment in the middle of an organization. Truly, leadership is more disposition than position. With the right attitude and the right skills, you can influence others from wherever you are in an organization. Here are five ways to develop an attitude of contentment and fulfillment right where you are:

- **Develop strong relationships with key people.**

- **Define a win in terms of the team.**
- **Engage in crucial communication.**
- **Gain experience and maturity.**
- **Put the team above your personal success.** Leadership is about helping others win.

The Vision Challenge

Championing the vision is more difficult when you did not create it. The key to successfully navigating the vision challenge is this: The more you invest in the vision, the more it becomes your own. Even though your own vision may excite you more than someone else's, to get the opportunity to pursue your own dreams, you will almost certainly have to succeed in achieving the dreams of others.

The Influence Challenge

Leading others beyond your position is not easy. Leadership is influence. If you have neither position nor influence, people will not follow you. And the further outside your position they are, the less likely they are to let you lead them. That's why 360-degree leaders work to change their thinking from, "I want a position that will make people follow me," to, "I want to become a person who people will want to follow."

People follow leaders they know, leaders who care. If leaders care about each individual as a person, then people respond well to them. The greater the depth of their concern, the broader and longer-lasting their influence.

The Principles 360-Degree Leaders Practice to Lead Up

Leading up is the 360-degree leader's greatest challenge. Most leaders want to lead, not be led. But most leaders also want to have value added to them. If you take the approach of wanting to add value to those above you, you have the best chance of influencing them.

Your underlying strategy should be to support your leader, add value to the organization, and distinguish yourself from the rest of the pack by doing your work with excellence. If you do these things consistently, then in time the leader above you may learn to trust you, rely on you, and look to you for advice. With each step, your influence will increase and you will have more and more opportunities to lead up.

Lead Yourself Exceptionally Well

Nothing will make a better impression on your leader than your ability to manage yourself. If your leader must continually expend energy managing you, then you will be perceived as someone who drains time and energy. If you manage yourself well, however, your boss will see you as someone who maximizes opportunities and leverages personal strengths. To become someone your leader turns to when the heat is on, manage your emotions, time, priorities, energy, thinking, words, and your personal life.

Lighten Your Leader's Load

If you help lift the load, then you help your leader succeed. When the boss succeeds, the organization succeeds. Lifting shows you are a team player. It shows gratitude for being on the team and makes you part of something bigger. It also gets you noticed and increases your value and influence.

How do you lift your leader's load? Do your own job well first. When you find a problem, provide a solution. Tell leaders what they need to hear, not what they want to hear. Go the second mile and do more than is asked. Also, stand up or stand in for your leader whenever you can.

Be Willing to Do What Others Won't

Successful people do the things that unsuccessful people are unwilling to do. Few things gain the appreciation of a top leader more quickly than an employee with a whatever-it-takes attitude. That means taking the tough jobs. You learn resiliency and tenacity during tough assignments, not easy ones. When tough choices have to be made and results are difficult to achieve, leaders are forged. That means that you will have to sacrifice some personal goals for the sake of others. You will have to do something because it matters, not because it will get you noticed. Good leaders also find a way to succeed with people who are hard to work with by finding common ground and connecting with them.

Do More Than Manage — Lead!

To move beyond management to leadership, you need to broaden your mindset and begin thinking like a leader. If you are already leading well, then use this as a checklist to see where you need to keep growing:

- **Think longer term.**
- **See within the larger context of how something will impact those above and beside you.**
- **Push boundaries to find a better way.**
- **Emphasize intangibles such as morale, mo-**

tivation, momentum, emotions, attitudes, atmosphere and timing.

- **Rely on intuition.** As Dr. Joyce Brothers says, "Trust your hunches. They're usually based on facts filed away just below the conscious level."
- **Look for good people and invest in them to the point where they can be released and empowered to perform.**
- **Be an agent of change.** Leaders want more than just to see progress — they want to make it happen.

Invest in Relational Chemistry

All good leadership is based on relationships. People

won't go along with you if they can't get along with you. That's true whether you are leading up, across or down.

The key to developing chemistry with our leaders is to develop relationships with them by listening to their heartbeat to understand what makes them tick, knowing their priorities, catching their enthusiasm, supporting their vision, connecting with their interests, conforming to their personality, earning their trust, learning to work with their weaknesses, and respecting their family.

Be Prepared Every Time You Take Your Leader's Time

For all leaders, time is precious. For that reason, you must always be prepared when you take any of your leader's time.

Whether you have unlimited access to your boss or you only get a few minutes on rare occasions, you need to think and plan ahead. Don't make your boss think for you, and bring something to the table.

Know When to Push and When to Back Off

Successful leaders make the right move at the right moment with the right motive. Timing is critically important to leadership. When it comes to gaining influence with your boss, timing is equally important.

It's wise to wait for the right moment to speak up. A great idea at the wrong time will be received just the same as a bad idea. Of course, there are times when you must speak up, even if the timing doesn't seem ideal. The trick is knowing which is which.

Become a Go-To Player

Few things elevate a person above his or her peers the way becoming a go-to player does. Everyone admires go-to players and looks to them when the heat is on — not only their leaders, but also their followers and peers. Go-to players produce when the pressure is on. They are the people who find a way to make things happen no matter what.

If you adopt the positive tenacity of a go-to player and take every opportunity to make things happen, your leader will come to rely on you. If you have the willingness and the capacity to lift the load of your leaders when they need it, you will have influence with them.

Be Better Tomorrow Than You Are Today

Often, when people get to their desired destination, they stop striving to grow or improve.

There's certainly nothing wrong with the desire to progress in your career, but never try to "arrive." Instead, intend your journey to be open-ended. Most people have no idea how far they can go in life. They aim way too low. The key to personal development is being more growth oriented than goal oriented. There is no downside to making growth your goal. If you keep learning, you will be better tomorrow than you are today, and that can do many things for you.

The Principles 360-Degree Leaders Practice to Lead Across

To succeed as a 360-degree leader who leads peer-to-peer, you have to work at giving your colleagues reasons to respect and follow you. You can do that by helping your peers win. If you can help them win, you will not only help the organization, but also yourself.

Understand, Practice and Complete the Leadership Loop

If you want to gain influence and credibility with people working alongside you, don't try to take shortcuts or cheat the process. Instead, you have to show people that you care about them by taking an interest in them. Make an effort to get to know them as individuals. You should also strive to see others' unique experiences and skills as resources and try to learn from them.

When you go out of your way to add value to your peers, they understand that you really want them to win with no hidden agenda of your own. Affirm them by praising their strengths and acknowledging their accomplishments.

Put Completing Fellow Leaders Ahead of Competing With Them

In healthy working environments, there is both competition and teamwork. The issue is to know when each is appropriate. When it comes to your teammates, you want to compete in such a way that instead of competing with them, you are completing them.

Winning at all costs will cost you when it comes to your peers. If your goal is to beat your peers, then you will never be able to lead across with them. How do you balance competing and completing? First, acknowledge your natural desire to compete and channel it in a positive way. Embrace healthy competition. The whole goal of healthy competition is to leverage it for the corporate win.

Be a Friend

We often consider ourselves to be many things to the people who work alongside us — co-workers, teammates, contributors, competitors — but we often forget to be the one thing that every person wants: a friend. Poet Ralph Waldo Emerson wrote, "The glory of friendship is not in the outstretched hand, nor the kindly smile, nor the joy of companionship; it is in the spiritual inspiration that comes to one when he discovers that someone else believes in him and is willing to trust him."

A great approach to friendship at work is to make it your goal to be a friend, not to find a friend. As you reach out to your co-workers, listen, find common ground not related to work, be available beyond business hours, have a sense of humor, and tell the truth when others don't.

Avoid Office Politics

Playing politics is changing who you are or what you normally do to gain an advantage with whomever currently has power. In work environments, this may mean sucking up to the boss, constantly changing positions to get on the winning side, or using people for personal gain without regard for how it affects them. Political people are fickle and opportunistic, doing what's expedient in the moment to win, regardless of what's best for their peers, their employees or the organization.

In the long run, integrity, consistency and productivity always pay off — in better teamwork and a clear conscience. To avoid office politics, avoid gossip; stay away from petty arguments; stand up for what's right, not for what's popular; look at all sides of the issue; don't protect your turf; and say what you mean and mean what you say.

Expand Your Circle of Acquaintances

If you want to expand your influence, you have to expand your circle of acquaintances.

Expanding your circle of acquaintances helps you improve, exposes you to new ideas, and prompts you to see things from a different point of view, which will help you generate new ideas of your own. It will help you to learn new working methods and pick up additional skills. And it will help you to become more innovative. Expanding your circle also expands your network, putting you into contact with more people and giving you potential access to their networks.

Let the Best Idea Win

Leaders in the middle of the organization who help to surface good ideas are creating what an organization needs most. They do that by producing synergy among their peers. And they will develop influence with their peers because when they are present, they make the whole team better.

To generate good ideas, 360-degree leaders listen to all ideas and never settle for just one idea. They also look in unusual places for ideas. Don't let the personality of someone with whom you work cause you to lose sight of the greater purpose, which is to add value to the team and advance the organization. If that means listening to the ideas of people with whom you have no chemistry, or worse, a difficult history, so be it. A 360-degree leader protects creative people and their ideas.

Don't Pretend You're Perfect

Since nobody is perfect, we need to quit pretending. People who are real, who are genuine concerning their weaknesses as well as their strengths, draw others to them. They engender trust. They are approachable. And they are a breath of fresh air in an environment where others are scrambling to reach the top by trying to look good. To "get real," admit your faults, ask for advice, worry less about what others think, be open to learning from others, and put away pride and pretense.

The Principles 360-Degree Leaders Practice to Lead Down

What makes 360-degree leaders unique — and so effective — is that they take the time and effort to earn influence with their followers just as they do with those over whom they have no authority.

As a 360-degree leader, when you lead down, you are

doing more than just getting people to do what you want. You are finding out who they are, helping them to discover and reach their potential, showing the way by becoming a model they can follow, helping them become a part of something bigger than they could create on their own, and rewarding them for being contributors on the team.

Walk Slowly Through the Halls

One of the best ways to stay connected to your people and keep track of how they are doing is to approach the task informally as you move among them. To connect with people, you travel at their speed. Express that you care and create a healthy balance of personal and professional interest. Professional interest shows that you have the desire to help them. That is something all good leaders share. Personal interest goes deeper — it shows your heart. When you take interest in your people as human beings, you need to be sure not to cross the line. There is a point at which interest becomes inappropriate.

See Everyone as a '10'

Three-hundred-and-sixty-degree leaders get more out of their people because they think more of their people. They respect and value them and, as a result, their people want to follow them. The positive, uplifting attitude that they bring to leadership creates a positive working environment where everyone on the team has a place and purpose, and where everyone shares in the win.

To shine in this area, see people as they can become. Let them borrow your belief in them. Catch them doing something right. Give them the benefit of the doubt. And understand that people usually rise to the leader's expectations.

Begin today to see and lead people as they can be, not as they are, and you will be amazed by how they respond to you. Not only will your relationship with them improve and their productivity increase, but you also will help them rise to their potential.

Develop Each Team Member as a Person

There is much more to good leadership than just getting the job done. Getting the job done makes you a success. Getting the job done through others makes you a leader. But developing people while helping them get the job done at the highest level makes you an exceptional leader.

In order to develop your staff, you need to keep growing yourself. Understand that development is a longterm process. Development is based on the needs of your people: You give them what they need in order to become better people. To do that well, you need to know people's dreams and desires.

Take responsibility for conforming your leadership style to what your people need, not expecting them to adapt to you. As a leader, your first responsibility is to help others define the reality of who they are. Sometimes that means having difficult conversations. The thing you need to remember is that people will work through difficult things if they believe you want to work with them.

Place People in Their Strength Zones

When employees are continually asked to perform in an area of weakness, they become demoralized, they are less productive, and they eventually burn out.

Successful people find their own strength zones. Successful leaders find the strength zones of the people they lead. When you place individuals in their strength zones, you change people's lives for the better, their jobs become rewarding and fulfilling, and you help both the organization and yourself. The ability to help people find the best place means discovering their true strengths, giving them the right job, identifying the skills that they'll need, and providing world-class training.

Model the Behavior You Desire

Leaders set the tone and the pace for all the people working for them. Therefore, leaders need to be what they want to see. Your behavior determines the culture. Your attitude determines the atmosphere. Your values determine the decisions. If your decisions are not consistent with your values, they are always short-lived. Your investment determines the return. Your character determines the trust. Your work ethic determines the productivity. Your growth determines the potential.

Followers become like their leaders. They are influenced by their leaders' values. They adopt their working methods. They even emulate many of their quirks and habits. That's why we must always be aware of our own conduct before criticizing the people who work for us. If you don't like what your people are doing, first take a look at yourself.

Transfer the Vision

As a leader in the middle of the organization, you will be transferring what is primarily the vision of others. Leaders in the middle may not always be the inventors of the vision; they are almost always its interpreters.

To interpret the vision in a way that fires up people and sets them off in the right direction, include the following elements: clarity; connection of past, present and future; purpose; goals; a challenge; stories that make the vision relational and warm; and passion. If there is no passion in the picture, then your vision isn't transferable.

Reward for Results

Whatever actions leaders reward will be repeated. That is why it is very important to reward results and to do it the right way. To reward results most effectively, give praise publicly and privately, back up praise with money, don't reward everyone the same, give perks beyond pay, promote when possible, and remember that you get what you pay for.

The Value of 360-Degree Leaders

Becoming a 360-degree leader isn't easy. It takes much work and it doesn't happen overnight. But it is worth every bit of the effort.

As you seek to grow as a leader, you will not always succeed. You will not always be rewarded the way you should be. Your leaders may not listen to you at times.

Your peers may ignore you. Your followers won't follow. And the battle may feel like it's uphill all the way.

Don't let that discourage you. By becoming a better leader, you add tremendous value to your organization. Everything rises and falls on leadership.

The following are five values that 360-degree leaders add to their organizations:

1. A leadership team is more effective than just one leader.

Organizations need to develop leadership teams at every level. A group of leaders working together is always more effective than one leader working alone. And for teams to develop at every level, they need leaders at every level.

As a leader in the middle, if you develop a team, you will be making your organization better and helping it to fulfill its vision. You will be adding value no matter where you serve in the organization. As you do that, keep in mind that visionary leaders are willing to hire people better than themselves, wise leaders shape their people into a team, secure leaders focus on others and want them to do well, experienced leaders listen to their teams, and productive leaders understand that one is too small a number to achieve greatness.

2. Leaders are needed at every level of the organization.

If a team starts out with a vision but without a leader, it is in trouble. Why? Because vision leaks. And without a leader, the vision will dissipate and the team will drift until it has no sense of direction. On the other hand, if a team starts out with a leader but without a vision, it will do fine because it will eventually have a vision. Leaders are always headed somewhere. They have vision, and that vision gives not only them direction but it gives their people direction.

Without a leader, decisions are delayed, agendas are multiplied, conflicts are extended and morale is low. Without a leader, production is low and success is difficult.

3. Leading successfully at one level is a qualifier for leading at the next level.

Growing organizations are always looking for good people to step up to the next level and lead. To find out if a person is qualified to make the jump, they look at that person's track record in his or her current position. Leadership is a journey that starts where you are, not where you want to be. Great responsibilities come only after handling small ones well.

4. Good leaders in the middle make better leaders at the top.

Good leaders maximize the performance of those on their team. They set direction. They inspire their people and help them work together. They get results.

Good leaders bring out the best, not only in their followers but also in other leaders. Good leaders raise the bar when it comes to performance and teamwork, and this often challenges other leaders in the organization to improve.

Leaders in the middle of an organization are closer to the people in the trenches than the leaders on top. As a result, they know more about what's going on. They understand the people who are doing the work and the issues they face. They also have greater influence at those lower levels than the top leaders.

Today's workers are tomorrow's leaders in the middle of the organization. And today's leaders in the middle will be tomorrow's leaders at the top. While you function as a 360-degree leader in the middle of the organization, if you keep growing you will probably get your opportunity to become a top leader. But at the same time, you need to be

looking at the people working for you and thinking about how you can prepare them to eventually take your place in the middle.

5. Three-hundred-and-sixty-degree leaders possess qualities every organization needs.

The 360-degree leader possesses qualities that every organization wants to see in all of its employees, especially in its leaders. These include the following:

- **Adaptability:** Quickly adjusting to change.
- **Discernment:** Understanding the real issues.
- **Perspective:** Seeing beyond your own vantage point.
- **Communication:** Linking to all levels of the organization.
