- **Security:** Finding identity in self, not the position.
- **Servanthood:** Doing whatever it takes.
- **Resourcefulness:** Finding creative ways to make things happen.
- **Maturity:** Putting the team before oneself.
- **Endurance:** Remaining consistent in character and competence over the long haul.
- **Countability:** Being able to be counted on when it counts.

John C. Maxwell, known as America's expert on leadership, has communicated his leadership principles to Fortune 500 companies, the U.S. Military Academy at West Point, and sports organizations such as the NCAA, the NBA and the NFL. He is the founder of several organizations, including Maximum Impact. He is the author of more than 30 books, including Developing the Leader Within You, Your Road Map for Success, The 21 Irrefutable Laws of Leadership, and Winning with People.

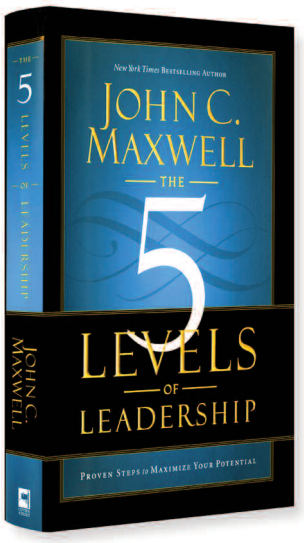
Leadership

The 5 Levels of Leadership

Proven Steps to Maximize Your Potential



by John C. Maxwell

THE SUMMARY IN BRIEF

True leadership isn't a matter of having a certain job or title. In fact, being chosen for a position is only the first of the five levels every effective leader achieves. To become more than "the boss" people follow only because they are required to, you have to master the ability to invest in and inspire people. To grow further in your role, you must achieve results and build a team that produces. You need to help people develop their skills to become leaders in their own right. And if you have the skill and dedication, you can reach the pinnacle of leadership.

The 5 Levels of Leadership are:

1. **Position.** People follow because they have to.
2. **Permission.** People follow because they want to.
3. **Production.** People follow because of what you have done for the organization.
4. **People Development.** People follow because of what you have done for them personally.
5. **Pinnacle.** People follow because of who you are and what you represent.

Through humor, in-depth insight and examples, internationally recognized leadership expert John C. Maxwell describes each of these stages of leadership. In *The 5 Levels of Leadership*, he shows how to master each level and rise up to the next to become a more influential, respected and successful leader.

IN THIS SUMMARY, YOU WILL LEARN:

- How to fulfill the role of the leader.
- How to raise your effectiveness and improve your performance.
- How to extend your influence beyond your immediate reach and time.
- A roadmap for taking the journey to the highest level of leadership.

You Can Have a Leadership Game Plan for Your Life

In all the years that I've taught about leadership, there has been one lecture that I have been asked to give more often than any other — from West Point to Microsoft and in countries all around the world. That lecture explains how leadership works, and it provides a game plan for learning how to become a leader. It's "The 5 Levels of Leadership."

You Can Learn Practical Leadership Tools

The 5 Levels has been used to train leaders in companies of every size and configuration, from small businesses to Fortune 100 companies. It has been used to help nonprofit organizations understand how to lead volunteers. And it's been taught in more than 120 countries around the world. Every time I talk about it, people ask questions and make observations. Those things have helped the 5 Levels of Leadership become stronger and develop greater depth. The concept is tested and proven. In addition, it offers several other benefits:

• **The 5 Levels of Leadership Provides a Clear Picture of Leadership.** How do people get a handle on leadership? For those who are not naturally gifted for it, leadership can be a mystery. For them, leading people is like walking down a dark corridor. They have a sense of where they want to go, but they can't see ahead, and they don't know where the problems and pitfalls are going to lie. For many people in the academic world, leadership is a theoretical exercise, an equation whose variables are worthy of research, study and rigorous debate. In contrast, the 5 Levels of Leadership is visually straightforward, so anyone can learn it.

• **The 5 Levels of Leadership Defines Leading as a Verb, Not a Noun.** Leadership is a process, not a position. Leadership deals with people and their dynamics, which are continually changing. They are never static. The challenge of leadership is to create change and facilitate growth. Those require movement, which, as you will soon see, is inherent in moving up from one level of leadership to the next.

• **The 5 Levels of Leadership Breaks Down Leading into Understandable Steps.** The subject of leadership can be overwhelming and confusing. Where does leadership start? What should we do first? What processes should we use? How can we gain influence with others? How can we develop a productive team? How do we help followers become leaders in their own right? The 5 Levels of Leadership gives answers to these questions using understandable steps.

• **The 5 Levels of Leadership Provides a Clear Game Plan for Leadership Development.** Good leadership isn't about advancing yourself. It's about advancing your team. The 5 Levels of Leadership provides clear steps for leadership growth. Lead people well and help members of your team become effective leaders, and a successful career path is almost guaranteed.

• **The 5 Levels of Leadership Aligns Leadership Practices, Principles and Values.** When I developed the 5 Levels, I conceived of each level as a practice that could be used to lead more effectively. As time went by and I used and taught the levels, I realized they were actually principles. Here's the difference: A practice is an action that may work in one situation but not necessarily in another. A principle is an external truth that is as reliable as a physical law. For example, when Solomon said,

"A gentle answer turns away every wrath, but a harsh word stirs up anger," he stated a principle that is universal and timeless.

Principles are important because they function like a map, allowing us to make wise decisions. If we embrace a principle and internalize it, it becomes a part of our values. The 5 Levels influences my leadership life every day.

Level 1: Position

Leadership traditionally begins with Position. Someone joins the Army, and he or she becomes a recruit, working to earn the rank of private. A person gets a job, and along with it comes a title or job description: laborer, salesperson, waiter, clerk, accountant, manager. Position is the starting place for every level of leadership. It is the bottom floor and the foundation upon which leadership must be built. Real influence must be developed upon that foundation.

There was a time when people relied heavily on position to lead, which is no surprise when you consider that at one time, hereditary leadership positions were handed down from father to son (and sometimes daughter) within families. Princes became kings and their decisions were law — for good or bad. In most industrialized nations, those days are gone. True, there are still nations with kings and queens, but even in most of those nations, such as England, monarchs rule with the permission of the people, and the real leaders are usually elected. Position gives you a chance, but it usually carries with it very little real power, except in systems where the penalties for not following are dire.

There's nothing wrong with having a *position* of leadership. When a person receives a leadership position, it's usually because someone in authority saw talent and potential in that person. And with that title and position come some rights and a degree of authority to lead others.

Position is a good starting place. And like every level of leadership, it has its upsides and downsides.

The Upside of Position

Just as there are positive and negative aspects in every season of life, there are both positive and negative aspects to every level of leadership. If you are new to leadership and you receive a position, then there are things to celebrate. Here are four of them:

1. A Leadership Position Is Usually Given to People Because They Have Leadership Potential. Most of the time when people enter a leadership position, they do so because it was granted or appointed by some other person in authority. That probably seems obvious. But think about the implications: It usually means that the person in authority believes that the new leader has some degree of potential for leading. That's good news. So if you're new to leadership and you have been invited to lead something, then celebrate the fact that someone in authority believes in you.

If you have a new leadership position, then welcome to the first step in your leadership journey. You have a seat at the table and have been invited to be part of the "leadership game." You will have opportunities to express your opinion and make decisions.

Your initial goal should be to show your leader and your team that you deserve the position you have received.

2. A Leadership Position Means Authority Is Recognized. When an individual receives a position and title, some level of authority or power usually comes with them. Often, in the beginning, that power is very limited, but that's OK because most leaders need to prove themselves with little before being given much. As the *Infantryman's Journal* (1954) says, "No man is a leader until his appointment is ratified in the minds and the hearts of his men."

As a new leader, you must use the authority you are given wisely, to advance the team and help the people you lead. Do that and your people will begin to give you even greater authority. When that happens, you gain leadership, not just a position.

3. A Leadership Position Is an Invitation to Grow as a Leader. There should always be a relationship between receiving a leadership position and fulfilling the requirements demanded by it. One of the main requirements is personal growth. I learned this early in my life from my father, who loved to quote, "To whoever much is given, much shall be required." He believed that each of us had received a lot in life, and we had a responsibility to learn and grow so that we could make the most of it.

The journey through the 5 Levels of Leadership will only be successful if you dedicate yourself to continual development. If you believe that the position makes the leader, you will have a hard time becoming a good leader.

4. A Leadership Position Allows Potential Leaders to Shape and Define Their Leadership. The greatest upside potential for people invited to take a leadership position is that it affords them the opportunity to decide what kind of leader they want to be. The position they receive may be defined, but they are not.

When you first become a leader, your leadership page is blank and you get to fill it in any way you want! What kind of leader do you want to be? Don't just

become reactive and develop a style by default. Really think about it. Do you want to be a tyrant or a team builder? Do you want to come down on people or lift them up? Do you want to give orders or ask questions? You can develop whatever style you want as long as it is consistent with who you are.

As you think about the way you will define your leadership, take into consideration what kinds of habits and systems you will consistently practice. What will you do every day when you arrive at work? How will you treat people? What will be your work ethic? What kind of example will you set? Everything is up for grabs. It's up to you to define it. And the earlier you are on the leadership journey, the greater the potential for gain if you start developing good habits now.

The bottom line is that an invitation to lead people is an invitation to make a difference. Good leadership changes individual lives. It forms teams. It builds organizations. It impacts communities. It has the potential to impact the world. But never forget that position is only the starting point. ●

Five Downsides of Position

Since Position is the lowest level of leadership, it has a great number of negatives. Here are five:

1. Having a Leadership Position Is Often Misleading. Once you have a position or title, people will identify you with it. However, positions and titles are very misleading. A position always promises more than it can deliver.

2. Leaders Who Rely on Position to Lead Often Devalue People. As a result, departments, teams or organizations that have positional leaders suffer terrible morale.

3. Positional Leaders Feed on Politics. When leaders value position over the ability to influence others, the environment of the organization usually becomes very political. Positional leaders focus on control instead of contribution.

4. Positional Leaders Place Rights Over Responsibilities. Inevitably, positional leaders expect their people to serve them, rather than looking for ways to serve their people. This does nothing to promote teamwork or create a positive working environment.

5. Positional Leadership Is Often Lonely. If you're atop the hill alone, you may get lonely. If you have others alongside you, it's hard to be that way.

Level 2: Permission

Making the shift from Position to Permission brings a person's first real step into leadership. Why do I say that? Because leadership is influence, nothing more, nothing less. Leaders who rely on their positions to move people rarely develop influence with them. If their subordinates do what they are asked, it's usually because they think they have to — to receive their pay, keep their jobs, prevent being reprimanded and so on.

In contrast, when a leader learns to function on the Permission level, everything changes. People do more than merely comply with orders. They actually start to follow. And they do so because they really want to. Why? Because the leader begins to influence people with relationship, not just position. Building relationships develops a foundation for effectively leading others. It also starts to break down organizational silos as people connect across the lines between their job descriptions or departments. The more barriers come down and relationships deepen, the broader the foundation for leading others becomes.

When people feel liked, cared for, included, valued and trusted, they begin to work together with their leader and each other. And that can change the entire working environment. The old saying is really true: People go along with leaders they get along with.

Moving up to Level 2 is an important development in leadership because that is where followers give their supervisors permission to lead them. People change from being subordinates to followers for the first time, and that means there is movement! Remember, leadership always means that people are going somewhere. They aren't static. No journey, no leadership.

Best Behaviors on Level 2

If you find yourself in a place where you need to start working to win people's permission on Level 2, what should you do? How can you make the most of the opportunity to develop as a relational leader? Do the following:

1. Connect with Yourself Before Trying to Connect with Others. One of the secrets of connecting with people and building relationships is knowing and liking yourself. In my book *Winning With People*, I call it the Mirror Principle, which says, "The first person we must examine is ourselves." The work in relationship building always has to start with yourself.

2. Develop a People-Oriented Leadership Style. Permissional leaders don't rely on rules to lead people. They don't depend on systems. And they never try to rule with a stick. (Anyone who does needs to know that

every stick eventually breaks.) Instead, they use a personal touch whenever they deal with people. They listen, learn and then lead. They develop relationships. They have more than an open-door policy — they know the door swings both ways. They go through it and get out among their people to connect.

3. Practice the Golden Rule. I always teach the golden rule: "Treat others as you want others to treat you." It is a core teaching that can be found in every culture and religion. It is the simplest, most profound and most positive guide to living there is. Practicing the golden rule enables everyone to feel respected.

4. Become the Chief Encourager of Your Team. For many years I have enjoyed the friendship of the Cathy family, the leaders of Chick-fil-A. One day when I was having dinner with Truett Cathy, the company's founder, he said, "Do you know how I identify someone who needs encouragement? If the person is breathing they need a pat on the back!"

5. Strike a Balance Between Care and Candor. I believe that people can change their attitudes and can improve their abilities. And because I do, I talk to them about where they're coming up short. If you're a leader and you want to help people, you need to be willing to have those tough conversations. Care without candor creates dysfunctional relationships. Candor without care creates distant relationships. But care balanced with candor creates developing relationships. ●

Level 3: Production

The Production level is where leadership really takes off and shifts into another gear. Production qualifies and separates true leaders from people who merely occupy leadership positions. Good leaders always make things happen. They get results. They can make a significant impact on an organization. Not only are they productive individually, but they also are able to help the team produce. This ability gives Level 3 leaders confidence, credibility and increased influence.

Another benefit of leadership on Level 3 is that it attracts other highly productive people. Producers are attractive to other producers. They respect one another. They enjoy collaborating. They get things done together. That ultimately creates growth for the organization.

Leaders can get to Level 1 for an almost endless number of reasons: They show promise; they have connections; they play politics; they have seniority; the organization is desperate. You name it and someone has probably received a leadership position because of it. Leaders who are naturally good with people or who take pains to learn people skills can move up to Level 2. But some people never move up from Level 2 Permission to Level 3 Production. Why? They can't seem to produce results. When that's the case, it's usually because they lack the self-discipline, work ethic, organization or skills to be productive. However, if you desire to go to higher levels of leadership, you simply have to produce. There is no other way around it.

The Laws of Leadership at the Production Level

If you want to use the Laws of Leadership to help you grow on Level 3, then consider the following:

• **The Law of Respect: *People Naturally Follow Leaders Stronger Than Themselves.*** When you're working to gain relational credibility on Level 2, the positive results are often intangibles, such as morale and trust. In contrast, the results of good leadership are highly tangible at Level 3. People see better organization, increased productivity and higher profitability. The result is that they see your strengths and understand what you can do. Your credibility is established. People respect that and they follow not only because you treat people well, but because of what you do for the team and organization.

• **The Law of Magnetism: *Who You Are Is Who You Attract.*** When you reach Level 3 and create a highly productive team, you begin to attract other producers. The great thing about this is that it helps you make the productive team you've developed even more productive. Introducing additional highly productive people to the team raises the bar and makes everyone more productive. And if there are people on the team who won't or can't produce, others will be lined up at your door willing to take their place.

• **The Law of the Picture: *People Do What People See.*** Leaders are usually highly visible to the people they lead, especially if they lead by going first. As a result, their actions are always noticed. If you're a producer,

No One Can Fake Level 3

No one can fake Level 3. Either you're producing for the organization and adding to its bottom line (whatever that may be), or you're not. Thomas Watson, the founder of IBM, noted, "The outstanding leaders of every age are those who set up their own quotas and constantly exceed them." That is a good description of Level 3 leaders. They are self-motivated and productive. As a result, they create momentum and develop an environment of success, which makes the team better and stronger.

that's a good thing. Nothing motivates people in a positive way more than seeing a positive leadership model. When people see results from their leaders, they know results are expected from them. And whenever results are an expectation, greater productivity happens.

• **The Law of Victory:** ***Leaders Find a Way for the Team to Win.*** The best leaders on Level 3 find ways to win. They always do. They produce! If you are one of those people who consistently produces, then everyone will want to be on your team. That makes leading that much better.

• **The Law of the Big Mo:** ***Momentum Is a Leader's Best Friend.*** Level 3 is where momentum kicks in. Good results create momentum. Having momentum gives you greater results. Greater results create even more momentum. With momentum, an organization can overcome problems, negativism, past issues, pettiness and upcoming obstacles.

• **The Law of Priorities:** ***Leaders Understand That Activity Is Not Necessarily Accomplishment.*** Level 3 leaders do the right things the right way at the right time for the right reasons. They know that an organization where anything goes eventually becomes a company where nothing goes. They plan and act accordingly.

• **The Law of Sacrifice:** ***A Leader Must Give Up to Go Up.*** Radio broadcaster Paul Harvey remarked, "You can tell you're on the road to success; it's uphill all the way." You'll have to give up some privileges and resources to move up. Leaders learn to let go of everything but the essentials as they climb.

• **The Law of Buy-In:** ***People Buy into the Leader, Then the Vision.*** The buy-in comes from the relationships you have with them and the results you demonstrate in front of them. They want to know you care about them and they want to know you can produce. ●

Level 4: People Development

Effective leaders understand that what got them to their current level of leadership won't be enough to get them to the next one. They understand that if they want to keep getting better as leaders, they have to be willing to keep growing and changing, and that each move up the 5 Levels of Leadership requires a paradigm shift and a change in the way a person leads.

On Level 3, the emphasis is on personal and corporate productivity. The ability to create a high-productivity team, department or organization indicates a higher level of leadership ability than most others display. But to reach the upper levels of leadership that create elite organizations, leaders must transition from producers to developers. Why? Because people are any organization's most appreciable asset.

Good leaders on Level 4 invest their time, energy, money and thinking into growing others as leaders. They look at every person and try to gauge their potential to grow and lead — regardless of the individual's title, position, age or experience. Every person is a potential candidate for development. This practice of identifying and developing people compounds the positives of their organization because bringing out the best in a person is often a catalyst for bringing out the best in the team. Developing one person for leadership and success lays the foundation for developing others for success.

Bringing Out the Best in the Team

In *On the Profession of Management* Peter Drucker observed:

> Making the right people decisions is the ultimate means of controlling an organization well. Such decisions reveal how competent management is, what its values are and whether it takes its job seriously. No matter how hard managers try to keep their decisions a secret — and some still try hard — people decisions cannot be hidden. They are eminently visible. Executives who do not make the effort to get their people decisions right do more than risk poor performance. They risk losing their organization's respect.

How does this emphasis on people and people decisions translate into action? Leaders on the People Development level of leadership shift their focus from the production achieved by others to the development of their potential. And they put only 20 percent of their focus on their personal productivity while putting 80 percent of it on developing and leading others.

This can be a difficult shift for highly productive people who are used to getting their hands dirty, but it's a change that can revolutionize an organization and give it a much brighter future.

Beliefs That Help a Leader Move Up to Level 5

If you have managed to move up to Level 4, you are leading at a very high level, higher than 90 percent of all other leaders. But there is still one level higher that may be within your reach. Fewer than 1 percent of all leaders achieve it. To prepare yourself to attempt that final climb and give yourself the best chance of making it to the top, you must first embrace the following beliefs:

1. The Highest Goal of Leadership Is to Develop Leaders, Not Gain Followers or Do Work. When you help other people become leaders, you change their lives. You change the way they see the

world. You change their capacity. You increase their potential. You change the way they interact with others. If they become good leaders, you help them improve not only their lives, but also the lives of everyone they touch. I believe that is how you change the world for the better.

2. To Develop Leaders, You Must Create a Leadership Culture. You will not be able to move up to Level 5 unless you create a leadership culture. Jim Blanchard did this at Synovus. In an interview with George Barna, Blanchard said, "I think the most important and difficult thing is to create a culture in the organization where leadership is really important. It's important for people in the company to realize that this is a growth-oriented company, and the biggest thing we have to grow here is you, because it's you who will make this company better by your growth. ... So I would think making a culture aware of the significance of developing leaders is valuable."

3. Developing Leaders Is a Life Commitment, Not a Job Commitment. Level 4 leaders develop people. Level 5 leaders consistently develop leaders over a lifetime, and the leaders they raise up also develop leaders. It becomes a lifestyle they practice everywhere and at all times, not a program they implement or a task they occasionally practice. Mentoring is a mantle that they wear willingly and they strive to add value to others.

Level 5: The Pinnacle

Rare is the leader who reaches Level 5 — the Pinnacle. Not only is leadership at this level a culmination of leading well on the other four levels, but it also requires both a high degree of skill and some amount of natural leadership ability.

It takes a lot to be able to develop other leaders so that they reach Level 4; that's what Level 5 leaders do. The individuals who reach Level 5 lead so well for so long that they create a legacy of leadership in the organization they serve.

Pinnacle leaders stand out from everyone else. They are a cut above, and they seem to bring success with them wherever they go. Leadership at this high level lifts the entire organization and creates an environment that benefits everyone in it, contributing to their success. Level 5 leaders often possess an influence that transcends the organization and the industry they work in.

Most leaders who reach the Pinnacle do so later in their careers. But the Pinnacle level is not a resting place for leaders to stop and view their success. It is a reproducing place from which they make the greatest impact of their lives. That's why leaders who reach the Pinnacle should make the most of it while they can.

With gratitude and humility, they should lift up as many leaders as they can, tackle as many great challenges as possible and extend their influence to make a positive difference beyond their own organization and industry.

Guide to Being Your Best at Level 5

Use the following guidelines to help you grow as a leader and develop others to become Level 4 leaders.

1. Remain Humble and Teachable: The greatest potential internal danger of working your way up to Level 5 is thinking you've arrived and you have all the answers.

2. Maintain Your Core Focus: If you've made it to the Pinnacle level of leadership, you possess a primary skill set — a sweet spot or strength zone — that got you there. Identify that core strength and write out a plan for making the most of it in the coming years.

3. Create the Right Inner Circle to Keep You Grounded: All successful leaders need an inner circle of people who will work alongside them to achieve the vision, help them to enjoy the journey and keep them grounded.

4. Do What Only You Can Do: There are always a handful of things that only the top leaders can do for their organization, department or team. What are yours? Make sure you make them a high priority.

5. Create a Supercharged Leadership Development Environment: One of the most important factors in creating a Level 5 organization is developing and maintaining an environment where leaders are constantly being developed.

6. Create Room at the Top: If you don't create room at the top for developing leaders, you will waste much of your potential horsepower and you will eventually start to lose your up-and-coming talent.

7. Develop Your Top Leaders: Anyone who has the potential to lead as well as you do (or even better) should be on your radar for one-on-one mentoring.

8. Plan Your Succession: If you have developed a lot of Level 4 leaders, then begin focusing on the few who have the best potential to succeed you. If you haven't been developing high-caliber leaders, then start there.

9. Plan Your Legacy: It's been said that Alfred Nobel read his own obituary, which had been mistakenly published in the newspaper, and that prompted him to change his focus from manufacturing explosives to rewarding scientists and statesmen who advanced the cause of peace and development.

10. Use Your Leadership Success as a Platform for Something Greater: What opportunities do you have to contribute to causes greater than your own? Give that some thought and then leverage your ability for the benefit of others outside your direct sphere of influence. ●

Portrait of a Level 5 Leader: Coach John Wooden

My admiration and respect for John Wooden began when I was just a kid. You see, basketball was my first love. I'll never forget the day in fourth grade when I attended a high school varsity basketball game. It enthralled me. For the next dozen years, I played basketball just about every day. And because I was a great fan of the game, I knew about Wooden. How could I not! During his tenure with the UCLA Bruins, Wooden won 620 games in 27 seasons. His teams won 10 NCAA titles during his last 12 seasons, including seven in a row from 1967 to 1973. At one point, his teams had a record winning streak of 88 consecutive games. They had four perfect 30-0 seasons. They also won 38 straight games in NCAA tournaments and a record 98 straight home-game wins at Pauley Pavilion. Wooden was named NCAA College Basketball's Coach of the Year in 1964, 1967, 1969, 1970, 1971, 1972 and 1973. In 1967, he was named the Henry Iba Award USBWA College Basketball Coach of the Year.

I was fortunate to get the chance to meet John Wooden. I was even more fortunate that for the next seven years I had the privilege of meeting with him several more times and continuing to learn from him — for while he had made a great impression on me from afar, he made an even stronger one up close.

In fact, when I teach the 5 Levels of Leadership and I am asked to give an example of a Level 5 leader, Wooden is the person I most often talk about, because I think that by studying his life anyone can learn great leadership lessons. Here's how his life exemplified the 5 Levels of Leadership.

• **Level 1: Position — People Follow You Because They Have To.** Wooden coached basketball for 30 years. Like all leaders, he started by receiving a leadership position and got the opportunity to make the most of it. Coach Wooden used his position when needed, though he did it with a soft touch. For example, his practices were not long, but he demanded the full attention of every player each time they practiced. If a player lost focus and slacked off, Wooden would kick him out of practice.

• **Level 2: Permission — People Follow You Because They Want To.** Throughout his long career, Coach Wooden's relationships with all of his players were special. And after his career as a coach was completed, Wooden maintained his close ties to the men he had once led on the court. More than once he told me, "If, as a leader, you listen to them, then they'll listen to you." He understood that leaders listen, learn and then they lead.

• **Level 3: Production — People Follow You Because of What You Have Done for the Organization.** Coach Wooden turned around UCLA's basketball program in one season. Prior to his arrival, they had experienced a losing season. His first year as UCLA's coach, the team won the Pacific Coast Conference (PCC) Southern Division Championship with a 22-7 record. It was the most wins in a season for UCLA since their basketball program had begun in 1919.

• **Level 4: People Development — People Follow You Because of What You Have Done for Them.** Coach Wooden said, "Success is peace of mind which is a direct result of self-satisfaction in knowing you did your best to become the best that you are capable of becoming." That's what Level 4 leaders want for themselves and those they lead: to reach their potential.

• **Level 5: Pinnacle — People Follow You Because of Who You Are and What You Represent.** Many times people don't find out how wonderful a leader was until he or she dies. They go to the funeral or memorial service and they are surprised to discover how many other lives were impacted by the person. In the case of Coach Wooden, we didn't have to wait to find out. Players from four decades of teams had received the benefit of his leadership, and so did the people they have led after their days on the court. And millions more had watched from afar as he led teams to victory. He was wise, honest, principled, disciplined, humble, humorous, courageous and faithful. He was a Level 5 leader. The world needs more like him. ●

THE SUMMARY IN BRIEF

This special book is built on real experiences, hard-earned insights, and the powerful lessons that come from working with teams. Many of the moments within its pages are inspired by true stories. While the story is fictional, it's rooted in events that truly happened—experiences that have touched lives and shaped perspectives. This book brings together the best of what has been learned, taught, experienced, and felt, with the hope that it will inspire you, too.

In ***The Seven Commitments of a Great Team***, Jon Gordon uses his own experiences with being coached and applies it to all aspects of life. In this book, readers are able to understand what makes a strong team, and how to rebuild them when they are failing. The seven commitments serve as a guide for anybody in a leadership position who is not only trying to make their company stronger, but how to show their employees or teams how valuable they are.

IN THIS EXECUTIVE BOOK SUMMARY:

- Discover strategies to use to craft any high-performing team.
- Learn how to construct team-building exercises.
- Understand the balance between accountability and encouragement.
- Form relationships that are stronger even after encountering adversity.

Teammates Are Forever

Tim sat beside Coach Richie's bed and held his hand. It was the same hand that he shook when he was offered a scholarship to play ball for him 30 years earlier. Coach Richie's grip was different then—strong, powerful, affirming. He scanned his thin, pale face and wondered what you say to the man who gave you so much and changed the course of your life.

Coach Richie's eyes lit up for a moment. "Remember, kid, teammates are forever. Teammates are forever," he said before closing his eyes again.

"So are coaches who change your life," said Tim as Coach fell back to sleep.

Disconnected, Discouraged, Disappointing Results

As Tim drove to the airport, Coach's words "Teammates are forever" kept running through his mind. He couldn't stop thinking about them. Are teammates really forever?

Tim couldn't help but think of his own team at work. Was he helping them get better? No, he wasn't. They were going through the motions. Disengaged. Apathetic. Complacent. They were on a team but they weren't a real team. They were disconnected, discouraged, and delivering disappointing results. He was at a loss of what to do.

How do you get a team that is simply going through the motions to create momentum? How do you get people who are focused on their own careers to care about other team members?

Commitments Are Greater Than Goals

Tim recalled a powerful experience that had a huge impact on him and the team. It was the beginning of his sophomore season. The previous season hadn't turned out the way they had hoped. They had a losing record and were frustrated because they had so much talent. On the first day of training camp, Coach Richie stood in the meeting room in front of the team.

"I want you all to write down your goals for the season," he declared. "You got five minutes to do this."

After a bunch of the guys shared their commitments, Coach Richie said, "So now you see why I had you guys do this exercise. You were excited when you shared your goals but that excitement easily wears off when you are confronted with adversity, inconveniences, and distractions. When you shared your commitments, you were more intentional, serious, and focused. Your commitments create a standard and if you keep your commitments and live up to the standard, you will much more likely achieve your goals. This season I'm also going to share with you our 6 Commitments as a team and program."

A Visit to Vino

Tim woke up the next morning thinking about his old teammate Vino. They hadn't seen each other in years but they shared the bond of a powerful moment as teammates their senior year. Coach Richie called them both into his office and let them know they weren't chosen as captains by the team because they weren't as popular as the other guys. But he saw them as leaders and wanted them to help lead the team, even though they didn't have a title.

It was a defining moment in their lives, and Vino would go on to lead one of the top sports marketing agencies in the world. Tim thought about how Vino was thriving, while he himself was currently struggling. He figured Vino would have some great ideas on how he could turn around his team and company.

"Do you remember the 6 Commitments Coach taught us?" Vino laughed. "Remember them? They've been a huge key to my success."

Commitment #1: Commit to the Vision and Mission of the Team

After Coach Richie had each teammate share their commitments, he said it was time for practice, and they ran out of the team meeting room and onto the practice field.

"Last year we allowed too many things to divide us. Last year we weren't one team. This year we are going to become one united team. This year my job and all of our jobs is to create a team with oneness in mission and vision. A team that is divided is weak. A team that becomes one is powerful and strong. We are all going to become one team, face the same direction, and commit to a shared vision and mission."

Vision: Become One Gritty Team That Competes Like Champions.

A season is like a roller coaster, with ups and downs, and when you're up you can't get too high on yourself.

Mission: Define and elevate this program. Set the standard and inspire teams after us to reach an even higher level.

Attack a New Opportunity

A week later the team had their first scrimmage of the preseason, and it didn't go well.

"From this moment on, we are not defending anything but our goal. We're going to attack a new opportunity every moment, every game. We will not focus on the expectations others have for us. We will focus on our commitments and let those commitments drive our results. Do you hear what I'm saying?" Coach hollered to the team.

Commitment #2: Commit to Staying Positive Together

Coach Richie could feel the tension rising. Training camp was taking its toll. The guys' bodies were tired and sore. Their minds were reeling. Some were asking themselves if they were good enough to make the team.

"We have to stay positive together," Coach yelled, emphasizing the final word. "Together is the key. The collective positivity and belief of our team is the result of each one of you choosing to stay positive and believe in our vision, our mission, our ability to win, and each other. Your positivity, optimism, and belief matters and every day you must feed yourself in order to feed your teammates."

Commitment #3: Commit to Giving Your Best

After their day off and a few days of practice, Coach Richie noticed that the guys were making too many mistakes. Too many were not being consistent. Too many were not giving their best effort. As a coach, he knew there were times his team needed to be pulled up and times they needed a push. With a few days left before their first game, he believed that now was a time they needed a little push. Before practice he had the team gather in the meeting room.

"To work harder, you have to care more. If you care more, you will push through the soreness. If you care more, you will give your all even when you feel like you don't have your all. If you care more, you won't just go through the motions. If you care more, you will always give your best. And that's the next commitment I want you all to make this season."

The Roller Coaster

Coach Richie's words and commitments must have struck a chord, because during the first game his team outworked, outhustled, and outplayed their opponent and cruised to victory for their first win of the season. A season is like a roller coaster, with ups and downs, and when you're up you can't get too high on yourself. And when you're going down the roller coaster and feel like you're crashing, you can't jump off and escape. You just have to stay on the roller coaster and focus on your principles and commitments.

Commitment #4: Commit to Getting Better

After practice the guys took their seats in the meeting room and Coach Riche held up a newspaper. "Hey, big boys! Don't believe the press clippings. They will tell you that you're better than you are and worse than you are. Today means nothing".

Coach walked to the whiteboard and wrote down the Questions:

1. What went well?
2. What could we do better?

What did we learn that will make us better?

"This is going to help us hold each other accountable to our commitments and make sure each person is giving their best and working to get better. If you see it, reinforce it and recognize each other. If you don't see it, call it out and address it."

Tough Love

The team lost two games in a row. The guys sat in the locker room exhausted, devastated, and defeated. They were now 5–4 and their season was on the brink. Coach Richie knew they were at a pivotal crossroad. They would either turn it around or the season would be another disaster. He knew the guys played their hearts out and after the game in the locker room he told them he was very proud of them. Their commitment to being their best and getting better was unmatched. He never had a team work so hard and give so much. But while he didn't say it in that moment, he knew the problem was that they challenged each other more than they loved each other. Every great team needs a combination of love and accountability. Tough love is essential, but love must come first.

Commitment #5: Commit to Connect

The guys walked into the team meeting room sad and somber, with their heads down and their hearts and bodies aching. Coach Richie pointed to their vision statement on the wall. "See that? It says, One Gritty Team That Competes Like Champions. You are definitely competing like champions individually. You are each being gritty in your play. But we are not being a gritty team together. You have individual grit but we don't have team grit because we are not one team. Team grit is all about connection."

The Safe Seat

Coach Amy placed a chair in the front of the room facing the rest of the team and called it the Safe Seat.

1. Who's your Hero?
2. What's a Hardship you faced that was a defining moment in your life?
3. What's a Highlight you are proud of?
4. What do you Hope for?
5. What's Hilarious? What makes you laugh? Could be a story or anything funny.

She had each guy sit in the Safe Seat one at a time and share their 5 Hs.

Team Beats Talent

Coach Amy had never seen the 5 Hs go wrong. Every team she had ever shared it with became more connected, and this time and this team was no different. They walked into the room as disconnected individuals and walked out a connected team. In sharing themselves and their stories, a special spirit filled the room. The walls of pride, envy, and ego came crumbling down, and what was left was always there. It was love. In the weeks that followed, Coach Richie watched as this team became the most connected team he had ever coached.

Commitment #6: Commit to Each Other

As the players took their seats in the meeting room, Coach Amy smiled and said, "Okay, it's time for some difficult conversations." She handed out plain white paper with each person's name at the top on one side and sticky tape on the other side. She instructed the players to stick the paper on each other's backs so everyone had a sheet of paper on their back. She had them all come to the open space in the front of the room and asked seven teammates to stand side by side while she handed out markers to the rest of them. "Now, on the white paper on your teammates' backs, write a few words that represent what you believe is holding that teammate back from being their best and being a great teammate. After we've done the first seven, the next seven will line up and you'll write on their backs. When we're all done, we're going to have some difficult conversations." She then had one guy at a time come to the front of the room and take the paper off their back, sit in the Safe Seat, and read out loud what was written on the paper.

It was a defining moment in Tim's life, and he and his team would be forever transformed by this exercise and their own willingness to change, improve, sacrifice, and become better teammates.

Loss

With more ups and downs than ever this year, he and his staff were not surprised that they won their next game and lost the game after that. The win was special because they played so well together. They finally jelled on the field and played connected, committed, and as one. The loss was devastating because they were once again playing so well together until H went down with a severe knee injury that required a cart to take him off the field.

This team wasn't worried about losing. They were focused on their commitments and competing and preparing to win.

Coach said "We lost our focus and we lost the game. I'm not mad at all. LOSS stands for Learning Opportunity, Stay Strong, so I want us to take the lesson from this loss, and stay strong as we approach our last game of the regular season."

I Am...

The next day at practice, a day before their final game, Coach Amy stood in the middle of the circle and looked at the team, including H, who was on crutches and awaiting surgery. His knee was too swollen to have surgery yet, and he loved his team too much not to be with them before the big game. "You are not the thoughts you think. You are the thoughts you believe," said Coach Amy. "So think about what would happen if you said, 'I am strong. I am powerful. I am a champion.' I want each of you to come into the circle one at a time and say, 'I am' and then add another word. Speak life into who you are. Say it and become it!"

Stronger Together

This team wasn't worried about losing. They were focused on their commitments and competing and preparing to win. They didn't want their season to end and because they played with confidence, determination, unity, and selflessness, it didn't. They played their best game of the season and left no doubt who was the better team. They did it. They had made it to the postseason, and when they got to the locker room they danced like they had never danced before.

"I'm proud of you guys," said Coach Richie. "Not because you won. I'm proud of you because of the team you have become."

An Unexpected Fan

They received a ton of press and accolades from the media and their fans. While the guys were doing their best to ignore what the media was saying, their families and friends were reading and watching everything. Including estranged family members like Tim's father. Tim hadn't seen or talked to him in years but he reached out to Tim and said he was coming to see him play in the quarterfinals game. Tim was a wreck leading up to the game. His teammates didn't know what was going on but they knew something was wrong.

During a team building session two days before the quarterfinals, Coach Amy asked the guys to share anything they were struggling with. Tim told the team about his father calling him and coming to the game. After the game Tim walked over to the stands to see his father, who had made his way onto the field. Tim wasn't in the mood to hug him or get into details of their past. But when his father said it was great to watch him play and that he was proud of him, Tim began to cry, gave him a hug, thanked him for coming, and said he had to go celebrate with the team.

Forever Teammates

Two days later the team walked into the stadium to play in the national championship expecting to win, and they played their best game of the season and competed like champions, but on this day they didn't win a championship. They gave their all and played beautifully together but their opponent was the better, more talented team who were also connected and committed.

"Trophies don't last," Coach said. "They break. They get lost. They get thrown out. They lose their significance. In a few hundred years no one will care about whether you won a championship trophy. But the way you cared about each other and loved each other and played for each other, that's what lasts forever. It's the love that lasts forever, and that's why you all are forever teammates!"

The 6 Commitments

Tim thought about what he was like back then and how those times with his team and Coach Richie's fatherly influence transformed him as a man and leader. And he smiled thinking about how Coach Richie and his teammates like Vino were still impacting him now, years later. Coach Amy popped into Tim's head.

He remembered seeing her 10 years earlier at an alumni event, where she told him about workshops she did helping teams implement the 6 Commitments. He opened the contacts on his phone, found her cell number, and called her. They agreed to have her fly in to do a workshop with his leadership team the next week. Tim loved the plan. He had already experienced the impact the 6 Commitments had on his college team. If they had even half the impact on his company, he would be very happy.

Commitment Recognizes Commitment

Going through the 6 Commitments with his team and Coach Amy was like being in a time machine. With each commitment he reflected on the past and saw how it applied to his present team and situation.

"Commitment recognizes commitment," said Coach Amy. "The more you commit, the more it will come back to you." Tim marveled at how Coach Amy had mastered the commitments and was prepared for every issue and nuance that came up during her teaching, as she helped guide the decisions of how each person and the team would implement the commitments. The fact that Tim took ownership of his lack of commitment helped greatly, and his vulnerability helped the team become vulnerable.

The Funeral

Tim thought he had cried his last tear after telling his family that Coach Richie had passed away. But as soon as he saw his teammates, the tears started flowing once again. He hadn't seen many of them in a long time. Some he hadn't seen since they graduated. Life flies by when you begin your career, meet your spouse, have kids, start and grow a business, and raise a family.

The Power Inside You

Tim wanted his employees to become forever teammates, and he wanted to provide practical tips to create something tangible when dealing with such an ethereal idea as "forever."

He made a video and shared it with everyone in the company, talking about the power of caring and creating your life and success from the inside out. He told them that being a forever teammate is possible in every moment by reminding yourself, "This matters. This meeting matters. What I'm doing matters. This person matters. This mission matters. This team matters. This effort matters. This client matters. If it matters to you and you care about it, you will put this care into the person, the project, the meeting, the team, and the client. And the care you put into it will determine the quality of it."

The 7th Commitment

Coach Amy had been teaching the 6 Commitments so long it felt strange to hear there was a 7th Commitment but she was open to getting better.

Tim went to the board and wrote:

The 7th Commitment: Commit to Valuing Each Other

Tim explained, "If you don't value each other and find value in your team members, then none of the other commitments work or make sense. You first have to value each other and value the team. If you do, you'll commit to giving your all to the team and commit to getting better together and commit to connecting with each other and commit to sacrificing for each other. If you value your team, you'll do all of it. But if you don't value each other, you won't do any of it."

Forever Impact

Tim made a commitment to himself and Coach Richie that he wasn't just going to talk about being a forever teammate and leader. He was committed to doing it and was going to do all he could to create a forever impact and help others do the same. He looked at the championship ring and had an idea. He wanted to create a reminder for his teammates and team members at work that symbolized the 7 Commitments.

By following the seven commitments in this book, leaders are able to understand the balance between accountability and encouragement. Jon Gordon is able to take his own experiences in being coached and allow readers in on the secrets that worked for him. Whether it is in a professional or personal setting, commitment is essential in building a solid foundation for people. Even after adversity, people can be coached to be a major part of high-performing teams.

Jon Gordon is a 16x bestselling author and thought leader, renowned keynote speaker, and consultant who has worked with many of the top leaders and organizations around the world. Jon is a highly sought after global influencer who inspires millions of people each year with his books, talks, podcasts, and messages on positivity, teamwork, and leadership.

THE SUMMARY IN BRIEF

The 8 Laws of Customer-Focused Leadership examines how organizations must reorganize leadership priorities around customer experience in an environment shaped by technological transparency and rising customer expectations. The central problem addressed is how companies sustain differentiation when products and services become commoditized and competitive advantage shifts to the quality of customer experience. Morgan argues that effective leadership must place customer needs at the center of decision-making, embedding accountability and responsiveness throughout the organization. This approach requires leaders to model behaviors that align employees with customer-focused outcomes while reducing internal complexity that hinders service delivery.

The book advances a structured framework of eight laws that define customer-focused leadership as an ongoing organizational discipline rather than a discrete initiative. It emphasizes balancing short- and long-term priorities, maintaining strategic consistency, engaging employees as central drivers of experience, and adapting to future trends such as artificial intelligence. Morgan also highlights the importance of measurement systems that reflect actual customer expectations and reinforce accountability across teams. The work positions customer experience as a unifying principle that shapes culture, operations, and strategy, requiring continuous reinforcement to remain effective in dynamic market conditions.

IN THIS EXECUTIVE BOOK SUMMARY

- Establish a customer experience mindset using accountability and feedback
- Balance short-term results with long-term customer value creation
- Execute a consistent strategy with clear goals and daily improvements
- Anticipate future trends while maintaining human-centered service

Introduction

The treasure chest that great leaders seek today is a customer focus that leads to unimaginable treasure: strong relationships, loyal customers, innovation, engagement, and, yes, better revenue. Finding that treasure requires taking an enthusiastic journey toward customer-centric leadership with a total focus on customer experience.

The path to a customer-centric company is paved with leadership. A leader is nothing without a group of followers, but a leader is granted that title because other people choose to follow them. If the employees do not trust or respect the leader, the leader is simply a manager. And without trusting employees, you cannot build a customer-centric company.

By knowing the rules of customer-focused leadership, working on them in yourself, and setting an example to impart them to others, you will transform yourself into the kind of leader organizations need the most right now.

CHAPTER 1

The Rise of the Customer-Focused Leader

Over the past ten years, we've seen an explosion of businesses caring about customers. Corporate employee titles with the word customer exploded worldwide. What changed? Simply put, technology drove this new era of accountability and focus on the customer.

As customers, we all have a great amount of power because we have access to an incredible amount of information. There's no hiding. Today, we know what is happening everywhere, and we know quickly. We're all watching one another all the time. Employers are watching employees, employees are watching employers, employees are watching customers, and customers are watching employees and employers.

With all that watching, we've entered a new period of extreme accountability. Whether you like it or not, we are all accountable to the customer. The customer has the power. Your product or service is a commodity; if it hasn't become one yet, it's only a matter of time. Even if you have a new product idea, someone will come along and make it better or different and sell more than you.

The Customer Experience Advantage

Today, the only way to differentiate your brand is through customer experience (CX). To become a beloved brand, you must live and breathe it and interpret what that means for your company because no two are alike. It requires a mastery of the basics—but it's more than that. Great customer experience is created when it is part of your brand. In fact, it *is* the brand.

If the brand is the experience, the product itself isn't the only matter of importance. The complete experience around the product, the psychology of the customer, and the customer's perception of your brand matter a great deal. So how do you create this customer-centric culture?

As a leader, it starts with you. You can inspire greatness in employees only by modeling the behavior and setting the groundwork to drive the behaviors that lead to customer-focused outcomes. You can work to reduce back-end complexity so employees are free to focus on their roles and not the messiness of a poorly run company.

When leaders relentlessly pursue an amazing customer experience based on the eight laws that follow, even as the world and customers evolve, they spread that excitement and focus to the rest of their employees. And that's when the magic happens.

CHAPTER 2

The Current State of Customer Experience

If customer experience could boil down to one word, it would be *accountability*. This accountability comes from the mindset of the individual. When your company has the customer experience mindset, you have teams of people who all have the mindset of accountability, and when you have achieved that, you are unstoppable.

Every individual mindset is affected by the culture of the company, and that culture is created by the leaders. If you want to learn about everything that's going well and not well inside a company, you can get a sense of that by looking at the customer experience.

If the customer experience is incredible, it's likely the leaders of that company have adopted a customer experience mindset throughout the company.

What Is a Customer-Centric Leader?

A customer-centric leader places the needs, aspirations, and experiences of customers at the core of every decision, ensuring that organizational strategies not only drive business growth but also cultivate authentic relationships and lasting value for the people they serve.

> A customer-centric leader places customer needs at the core of every decision.

As the world and markets evolve, every business has become a commodity. Today, brands compete on experience more than price or product. And building a great experience and the customer experience mindset starts by understanding the modern customer.

Who Is the Modern Customer?

Customer demands and preferences are constantly changing, but perhaps never more than during and after the pandemic. Customers do not want to go back to the way things were, but companies are not rising to the occasion. The modern customer is

- experience-driven
- informed
- has diverse needs and craves personalization
- seeking convenience
- concerned about sustainability
- not married to any particular brand
- connected
- security- and privacy-conscious

CHAPTER 3

Law 1: Create a Customer Experience Mindset

Customer experience is the great leveling field of our time. Any small group can build an experience that people hate, reconstruct it with a better experience for the customer, and be the new big fish. No company, no matter how big or old it is, is safe from being disrupted.

Being a customer-centric leader means you feel extreme ownership over your work. You make the decision every day to be better than average; you choose to balance short-term goals with long-term strategies. 72% of business executives say they understand what it feels like to be one of their customers, but only 35% of consumers say that companies understand them well. The customer-centric leader works arduously to understand their customers and create experiences based on actual feedback about what customers would like to see and experience.

The Energy for Influencing Change

If you have the energy for influencing change, you will never be without a leadership opportunity. Sometimes long-standing rules and practices, especially in the contact center, must be thrown out. To be bold, you must have the energy for influencing change. If you don't have the energy, you better start working on developing your energy levels and your appetite for change.

The following eight steps stand out as critical ways to create the customer experience mindset for yourself. These eight steps can give you a big boost with your own leadership, to truly become a customer-centric leader and embody the customer-focused mindset.

1. **Flip burgers next to employees**. The customer experience mindset means you are an in-the-trenches kind of leader. You are not above the work you ask others to do.
2. **Give no excuses**. The customer experience mindset is when a leader decides to be accountable. While the problem might not be your fault, and you cannot control the behavior of others, you are accountable for always doing your best in that moment.
3. **Commit to excellence**. While perfection is not possible in modern life, aspiring for zero defects or unforced errors is. A commitment to excellence is simply the act of always doing your best.
4. **See feedback as a chance for growth**. Feedback should not be seen as a pain because the company must change, but as a chance to improve.
5. **Don't take yourself too seriously**. The customer experience mindset doesn't take itself too seriously. That means that when a leader messes up, they can admit it. Ego does not get in the way.
6. **Believe employees are the path**. A customer-focused mindset is laser focused on what is happening with employees. The employee is the path to the customer.
7. **Know that everything you do matters**. Creating a mindset for excellence starts with you. You show up every day for everyone in your life with honor, respect, grace, and gratitude.
8. **Have a life outside of work**. When you're a leader,

no one is going to take care of you. That is why *you* must take care of *you*, so you have the energy to give to others.

CHAPTER 4

Law 2: Exceed Long-Term Profit Expectations

Short-termism is a real problem for leaders, and it prevents them from making the customer-centric choice every time. Leaders are in a constant state of balancing two pursuits at one time. This is the essence of the customer-focused leader: this leader is always thinking about what is happening with customers today while also considering all the opportunities for tomorrow.

Companies with a long-term orientation are rewarded with a lower cost of capital, which allows them to afford more innovation—a virtuous cycle. Profit today is increasingly a reward for long-term focus on disruption and innovation.

Customer Experience in Action

When David Cote took charge as CEO of Honeywell International, no one expected him to succeed in turning the company around.

Over the next several years, with David's short- and long-term vision, Honeywell did the seemingly impossible—stabilizing the company and progressing on a number of fronts simultaneously.

His approach to customer experience was straightforward:

1. Truly understand what the customer values
2. Develop metrics that correspond to something the customer values
3. Figure out which processes drive the metric and map them
4. Constantly go back and survey again and again

Leaders have to think about many moving parts in running a company, but the part that is not always as defined or clear is the one with the word "customer" in it. It's easy to forget about the customer's experience when there are so many problems to solve. So who owns it? Essentially, everyone.

And yet, customer experience most often lives in the contact center where leaders often do not have the resources to paint the story of why and how much it matters to the bottom line of the business.

Creating a Short- and Long-Term Vision Statement

The leaders I interview who succeed with customer experience know that profits can be a little further in the distance when they do the right thing up front and invest in customer experience. Facing the stress head-on, rather than allowing dysfunction to perpetuate and get worse, makes for a stronger leader and a stronger company. The leader must focus on the vision and come up with a strategy to protect customer programs from the chopping block.

Both good times and bad are important times to invest in customer experience. It makes sense that when you're making money, and things are up, no one wants to put a wrench in the wheel and slow the company down.

But when profits are up, it's a good time to experiment with a new program on a small group of customers. When profits are down, something is off in how you are providing goods and services to customers. The ability to balance short-term strategies with long-term goals is a key leadership skill today.

CHAPTER 5

Law 3: Lay Out Your Customer Experience Strategy and Stick to It

If CX is so simple, everyone would do it. It's much easier to talk about building a customer-centric business than it is to actually build one. Simply put, investing and prioritizing customer experience matters. And while experience centers on relationships and people, it also has a significant impact on the bottom line.

The hard part is not creating a plan; the hard part is sticking to it and being consistent. You must constantly go back and fix your recipe to ensure it's always relevant in an ever-changing world. But if you put customer work into your weekly schedule, it will be much easier than if you try to do it randomly. If your customer experience strategy is a wash, rinse, and spin cycle, it would look like the following:

- **Define your mission and vision**: Clarify why you are doing what you are doing, how you will measure success, and what that success looks like. Identify what customers value and what you can deliver, and use those insights to shape your vision.
- **Build a customer-centric culture**: Recognize that culture may not be visible, but it is felt by employees and experienced by customers.

> The value of a company now lies in its ingenuity, relationships, and psychological power in the customer's mind. ”

- **Align business goals with customer experience outcomes**: Understand your business objectives and how they intersect with the outcomes you want your customer experience to drive.
- **Align the organization around the vision**: Ensure the entire company is working toward the same mission and value set, grounded in the desired customer experience outcomes.
- **Operationalize the strategy**: Create a roadmap, cascade it to leaders and managers, and measure what matters to drive the outcomes you seek.

Every company has a different version of this, but generally, you start with goal setting, then get into how you're going to achieve your goal and figure out how to keep these priorities in check.

Customer Experience in Four Steps

1. **Walk a mile in their shoes**. This means understanding the reality of the customer experience; the leader personally goes through the customer journey to know it inside and out.
2. **Ask for the truth**. Leadership must have a consistent commitment to the truth and always be willing to ask for feedback from employees and customers.
3. **Yes to accountability**. Saying yes to accountability is a mindset. It's the mindset of employees who jump out of bed in the morning to start their day because they love their work. This is often innate, but you can inspire it in yourself by shifting your mindset and modeling and inspiring it in your employees.
4. **Small improvements every day**. Overnight success is a myth. Good things take time, and the most valuable experiences take years to build. Small daily changes have cumulative impacts.

Customer experience requires constant attention. Creating a culture of "fail fast and break things" is critical. It's all about experience design and empowering your people to deliver experiences they can be proud of. Giving employees the tools they need to own and deliver great experiences pays off. A study shows that 82% of customers are more loyal to brands that empower contact center agents to solve issues without having to follow a script.

CHAPTER 6

Law 4: Embark on Your Ninety-Day Get-Started Plan

It's important, when you start a new role, that you start strong. The customer leadership role is tough because you are walking into an uncertain situation where you will need to be an investigator.

At times you will feel like you're at a start-up because the path is not entirely clear. You will need to build the airplane as you fly it.

Some of the goals you will need for yourself in your new role include achieving early wins for credibility, finding advocates and building relationships, making informed strategy decisions, and finding focused learning time (you have a learning curve) while not drinking from the fire hose and getting overwhelmed.

The role of the customer-focused leader is to make life better every day for employees and customers. Your job is to effect change, starting where you can and spurring innovation. Ultimately you want to create a customer-focused culture across the company.

Your First Ninety Days in Ten Steps

1. Go on a CX listening tour
2. Gain tools for rapid learning
3. Match your CX strategy to the situation
4. Secure early CX wins
5. Negotiate CX success
6. Achieve CX alignment
7. Build your CX team
8. Create CX coalitions
9. Ensure you are not overly stressed and aim for balance
10. Be the tide that raises all boats

It's normal that in your first ninety days there will be some huge waves that throw you off your game or make the journey feel very uncertain. The key is to stay the course, hold on to what you can, and don't lose faith in yourself and the important work you are doing.

CHAPTER 7

Law 5: Anticipate the Future

Businesses are increasingly operating in a world where the products being sold are not physical at all. One of these intangibles is the relationship the customer has with the brand. The value of a company is not what it used to be: it now lies in its ingenuity, relationships, and psychological power in the customer's mind.

What Is a Futurist?

A *futurist* is a person who systematically explores predictions and possibilities about the future and how those possibilities can emerge from the present. A *customer experience futurist* considers the business implications of the broader trends and changes in society and how that could affect your customers.

You're seeing more innovation than society has ever encountered, coupled with more uncertainty than ever before on a variety of fronts. The world needs leaders who understand futurism and think about it all the time.

How Customer Experience Will Be Affected by AI

The exponential growth of AI has created many ethical gray areas and watchdogs calling to slow down the speed of AI development. One of the biggest opportunities for AI, and one of its fastest adoption areas, is customer service.

Although Goldman Sachs says AI could replace the equivalent of three hundred million full-time jobs, most experts agree that customer service jobs will be augmented and automated but not replaced.

By automating mundane tasks, AI could provide a better experience for customers with more self-service options and help fix some of the industry's biggest problems, especially employee burnout and inefficiency.

These experiences have led to a massive talent shortage and make it costly for companies, which have to continually recruit and train new employees, all of which affects the customer and employee experience. AI won't replace human customer service jobs in the short term simply because there are so many open jobs.

The Cone of Possibilities

Some leaders are bold futurists, moving too fast for the world, even alienating or offending some. Others are way too insular, not bringing in outside counsel to tell them when they have their head in the sand. The ideal customer-centric leader who is also a futurist is able to ride in the middle.

The fact is customer experience cannot save your company from being disrupted. If your leadership is stale and your model is outdated, problems will arise. For customer experience leaders, the cone of possibilities framework provides a structured way to think about the future, anticipate various scenarios, and plan accordingly. The cone is made up of a series of zones that move from the most likely to the least certain outcomes over time:

- **Probable future**: The central part of the cone represents the most likely outcomes based on current trends and data. Examples could be increased use of AI in the contact center, the demise of retail stores and transformation into experience centers, the continued consumerization of health care, and so on.
- **Plausible future**: These scenarios are possible but less certain. They're based on potential shifts in current trends. Examples in customer experience would be more attention paid to the contact center by senior leadership and the CMO, the rise of new channels such as video chat, and increased personalization from brands as customer expectations increase, particularly among Gen Z.
- **Possible future**: These scenarios might seem unlikely right now but could occur if certain conditions change. One example is the idea that your entire customer experience will be automated, and customers won't want to interact with a person.
- **Preposterous future**: The outer edges of the cone represent wild, speculative scenarios. While they seem far-fetched, they challenge our assumptions and spark creativity. The preposterous future examples might include a contact center without a person in it, fully emotionally intelligent robots handling all customer issues, and the complete disappearance of jobs for humans.

CHAPTER 8

Law 6: Don't Forget That Employees Are Customers Too

Every team must have a great coach, and that great coach can be you. If you want to be a customer-focused company, you must start with the type of leader you want to be. A customer-focused culture is a coached culture of employees that genuinely feel part of a team. The culture must reward team-

> Performance metrics are the number one hindrance to creating a customer-focused culture and organization.

work over praising individual superstar behavior and pitting individuals against one another.

A customer-focused company is not built by a leader and customers alone. The team is the secret sauce that leads to a business that customers can't get enough of. You practice how you play, and the enthusiasm for the drudgery of practice, and paying attention to all the minutiae and details, is what makes the team perform well when it counts.

Engagement Ideas for Contact Center Agents

The contact center has some of the worst churn of any industry, ever. But it is the most important place in your entire business: these are the lucky individuals who get to talk to your customers every single day. Brian Dunphy, the former VP of customer experience at Warby Parker, has seven tactics he uses to engage his employees in the contact center:

1. **Director for the Day**. Brian would swap positions with his agents so his agents would become the director and Brian would take the contact center calls.
2. **Recognition on TV boards throughout the office**. This recognition would be for anniversaries, birthdays, or an amazing call an agent had with a customer.
3. **Handwritten cards from leadership**. Brian would set a reminder to write cards to staff every week, including words of praise and gratitude.
4. **Special badge lanyards**. Brian would provide special lanyards to staff to differentiate veteran staff from new hires, with varying colors or beautiful designs.
5. **Team lunches**. Brian's team would host lunches for top performers. Lunch-and-learns would be moderated with senior staff, or they'd just enjoy some casual chitchat together.
6. **Having food delivered to remote agents**. Remote agents would receive a complimentary lunch while they were being onboarded and gifts for the very "serious" remote agent dress code like a bathrobe, fun-branded pajamas, or sandals.
7. **Agents coach other agents**. Brian felt that a message delivered by peers resonated more than a message delivered by management. One powerful tool would simply be to have agents coach one another.

CHAPTER 9

Law 7: Evaluate Success and Measure What Can Be Measured

The discussion of metrics is one of the more polarizing topics for leaders who run contact centers. The predominant metric for customer experience today is Net Promoter Score (NPS), which is how likely a customer is to recommend a company to a friend on a scale of 0 to 10.

But NPS is problematic. And with the proliferation of data today and the ability to analyze millions of pieces of structured and unstructured data, NPS is losing the appeal it once had for many leaders.

The contact center exposes how much or how little the company cares about its customer relationships. The way a company manages its contact center or any customer-facing role says everything about what they prioritize. Managing the contact center can be very complicated, but when you get very clear about your goal, the path is clear.

If there were one glaring problem with customer experience, it's this: performance metrics are the number one hindrance to creating a customer-focused culture and organization.

How you measure success says everything about what your company values and everything about how hard you are willing to work to make improvements based on the reality of customer feedback, not a euphemistic view from someone who simply wants to keep their job and make their bonus.

Experience Level Agreements

Experience Level Agreements (XLAs) are a way to run your contact center that starts with the customer experience and backs into the metric. Most contact centers don't do this.

If you want to create a new metrics program based on XLAs, you can do the following:

- understand your brand promise and how you can best bring it to life
- connect with your customers on a deep, emotional level
- identify what your customers want

From here you create a quadrant and tell the story of your customer's core expectations. Map these expectations to current questions on your survey and analytics engine or create new survey questions (and retire former ones that don't directly connect to actionable insights) that roll up directly to the XLA metric. Include the emotion and brand promise throughout in a clear and understandable way to "tell the story."

When you evangelize XLAs in your organization, it brings alignment around what all employees own in meeting customers' core expectations. Eventually, as you integrate them into the culture, it becomes a refreshing mantra for what the customer needs that will ensure that you are a true and steadfast advocate for your customers.

Earned Growth Rate

There is also a very basic way to look at customer happiness. You can obviously look at sales. If your sales are high, that means you are doing something right, but you don't know if what you are selling is good enough that the customer will come back. A better metric than just "sales" is how many of those customers are so happy they tell their friends.

Many businesses have taken customer experience and applied stats that are no longer relevant. Customer experience leaders are missing the point and have lost their way in focusing on a scoreboard that isn't guiding a customer-centric strategy. Why don't we think of the contact center as a place where employees contribute to the bottom line?

Everyone at your company touches the customer experience in some way whether you acknowledge it or not. Customers are more likely to come back after a contact center agent helps them than after seeing an advertisement interrupting their favorite TV show.

The Importance of Metrics for CX

The importance of metrics in shaping a successful customer experience strategy cannot be overstated. Monitoring the right customer experience metrics allows teams to gauge the effectiveness of their strategies, identify areas for improvement, and continually enhance the customer experience.

But traditional metrics like NPS and Customer Satisfaction Score that many brands relied on in the past may not fully capture the expectations of today's sophisticated customers. More modern companies are using data and analytics to get the full picture, filling the gaps where older metrics lack substance. Companies need to elevate their metric monitoring and track new behaviors and attitudes.

If you knew that your customer-facing agents were the most important people at your company, because they have the special and impactful opportunity to talk to customers, what resources would you put toward their employee experience? How would you measure or manage them differently?

CHAPTER 10

Law 8: Reaffirm the Priority

Most companies are bad at customer experience because it is really hard to do. Not only is it hard to get started, but it's hard to keep it up. Changing economic conditions, changing priorities, and changes in leadership and personnel: how is any corporation supposed to stay the course over years and years, decades and decades?

What business leaders might feel is very far away could be right at their fingertips. Just like a person, a business can change; its leaders just have to want to. When you talk about customer experience, it is a series of high-level business decisions. But it is also how you manage your employees. And it is definitely how you set up and manage your contact center.

Customer experience is like exercising. You have to do it all the time or you lose your muscle. Being customer-focused is a way of life.

Conclusion

Customer experience is a mindset. It is about putting in the work. It's about believing in yourself and doing things that are hard. Seeing what you are capable of is what makes life meaningful. You have to fight for the things you care about.

There is so much work to be done in the world. We need all the helpers we can get. Being a customer-focused person is really about healing the world. The faster we embrace being uncomfortable, the sooner we can fix some of the systemic issues that plague the world. The customer experience mindset is a way of life; it's a life of meaning through service to others.

And it's not just good for your customer. It's not just good for the business. It's good for you. Being of service to others means you have purpose in your life every day, and that meaning makes for a happier and more fulfilling life.

Blake Morgan is a customer experience futurist, author, and keynote speaker known for her insights on the future of customer-centric business. Named "The Queen of CX" by Meta, she has written three books on customer experience and was recognized among the top female keynote speakers by *Real Leaders* magazine. Morgan hosts *The Modern Customer Podcast* and is a contributor to *Forbes*. She teaches as a guest lecturer at Columbia University and the University of California, San Diego, and serves as adjunct faculty at Rutgers University. She has worked with organizations including Coca-Cola, AT&T, and the Federal Reserve Bank.

From Effectiveness to Greatness

THE 8TH HABIT

THE SUMMARY IN BRIEF

For individuals and organizations, effectiveness is no longer merely an option — survival requires it. But to thrive, excel and lead in the Knowledge Worker Age, we must move beyond effectiveness to greatness, which includes fulfillment, passionate execution and significant contribution. Accessing a higher level of human genius and motivation requires a sea change in thinking: a new mind-set and skill set — in short, an additional habit to those featured in The 7 Habits of Highly Effective People. *The crucial challenge is to find our own voice and inspire others to find theirs. This is the 8th Habit.*

The 8th Habit *shows you how to tap the limitless value-creation promise of the Knowledge Worker Age. It shows you how to solve the major contradictions inherent in organizational life — most of which are a carry-over from the Industrial Age. This summary will transform the way you think about yourself, your purpose in life, your organization and other people. It explains how to move from effectiveness to greatness.*

What You'll Learn In This Summary

✓ **The power of win-win thinking.** When you're willing to suspend your own interests long enough to understand what the other person wants most, you can collaborate on a new, creative solution.

✓ **How to increase your influence.** Find out how to work on these three dimensions of yourself: ***ethos*** (your ethical nature, personal credibility, and the trust that others have in your integrity and competence); ***pathos*** (your empathy — knowing how others feel and how they see things); and ***logos*** (the power and persuasion of your own presentation and thinking).

✓ **There is a connection between leadership style and success.** The very top people in truly great organizations are "Servant Leaders." They are the most humble, the most reverent, the most open, the most teachable, the most respectful and the most caring. They model moral authority through service, humility and contribution.

✓ **The importance of the Balanced Scorecard.** It is concerned not only with the traditional bottom line, but also with the quality of the organization's relationships with all its key stakeholders. These are predictors of future results.

✓ **How to create 8th Habit leadership.** The 8th Habit leader has the mind-set and the skill set to constantly look for the potential in people. This kind of leadership communicates to people their own worth so clearly that they come to see it in themselves.

The Pain, the Problem And the Solution

More than 25 years ago, Muhammad Yunus was teaching economics at a university in Bangladesh when he met a woman making bamboo stools for two U.S. pennies a day. She explained that because she didn't have the money to buy the bamboo to make the stools, she had to borrow from a trader who imposed the condition that she had to sell the product to him alone, at a price that he decided.

Yunus made a list of 42 similar workers around the village who could use very small loans to improve their lives. The total needed by all those people was $27. After loaning them the money, he was paid back every penny.

Grameen Bank

After making many more loans and proving that poor people would pay back every cent, Yunus struggled unsuccessfully to find a local bank that would lend small amounts of money to the poor people in nearby villages. He then spent two years setting up a formal, independent bank to do just that. On Oct. 2, 1983, Grameen Bank was created.

Grameen Bank now works in more than 46,000 villages in Bangladesh, has 1,267 branches and more than 12,000 staff members, and has lent more than $4.5 billion, in loans of $12 to $15. A housing loan is $300. At the heart of this empowerment are individuals who chose to become self-reliant, independent entrepreneurs producing goods out of their own homes or neighborhoods to become economically viable and successful. They *found* their voices.

The Pain

Most people in organizations today are neither fulfilled nor excited. They're frustrated and uninvolved in their organization's goals. That's why our high-pressure, 24/7 era requires more than effectiveness (the "7 Habits"). To achieve greatness, we need an "8th Habit": ***Find your voice and inspire others to find theirs***.

The Problem

Our basic management practices come from the **Industrial Age**. These include:

- The belief that you must control people;
- Our view of accounting (People are an expense; machines are assets.);
- The carrot-and-stick motivational philosophy; and
- Centralized budgeting, which creates hierarchies and bureaucracies to drive "getting the numbers" — a reactive process that produces "kiss-up" cultures bent on "spending so we won't lose it next year."

As people consent to be controlled like things, their passivity only fuels leaders' urge to direct and manage.

There's a simple connection between the controlling, Industrial Age, "thing" paradigm that dominates today's workplace and the inability of managers and organizations to inspire people's best contributions in the Knowledge Worker Age: *People choose how much of themselves to give to their work, depending on how they're treated.* Their choices may range from rebelling or quitting (if they're treated as things), to creative excitement (if they're treated as whole people).

The Solution

Most great organizations start with one person who first changed him- or herself, then inspired others. Such people realize that they can't wait for their boss or organization to change. They become an island of excellence in a sea of mediocrity. They learn their true nature and gifts, then use them to envision what they want to accomplish. *They find and use their voice.*

Greatness involves transcending the negative cultural "software" of ego, scarcity, comparison and competitiveness, and choosing to become the creative force in your life.

All of us can choose greatness — we can cultivate a magnificent spirit in facing a serious disease, make a difference in the life of a child, be a catalyst inside an organization, or initiate or contribute to a cause. ■

PART ONE: FIND YOUR VOICE

Discover Your Voice

We can discover our voice because of three gifts we're born with. These gifts are:

Gift #1: The Freedom to Choose. Our past, our genes, the way others have treated us — these influence us but don't determine us. Between stimulus and response there is a space where we choose our response. In our choices lie growth and our happiness.

Gift #2: Natural Laws or Principles. To use wisely that space between stimulus and response, we must live by ***natural laws*** that dictate the consequences of behavior. Positive consequences come from fairness, kindness, respect, honesty, integrity, service and contribution.

Gift #3: The Four Intelligences. These are:

- ***Mental Intelligence (IQ).*** IQ is our ability to analyze, reason, think abstractly and comprehend.
- ***Physical intelligence (PQ).*** PQ is what our body does without conscious effort, coordinating 7 trillion cells with incredibly complex precision.
- ***Emotional Intelligence (EQ).*** EQ is one's self-knowledge, self-awareness, social sensitivity, empathy and ability to communicate successfully. It is a sense of timing and appropriateness, and having the courage to acknowledge weaknesses and express and respect differences.
- ***Spiritual Intelligence (SQ).*** SQ is our drive for meaning and connection with the infinite. We use this to develop our longing and capacity for meaning, vision and value. It allows us to dream and to strive. It's our conscience.

SQ helped the late president of Egypt, Anwar Sadat (who, with former Israeli prime minister Menachem Begin, brought about the Camp David Peace Accord between Israel and Egypt) write these words while he was a young man in solitary confinement in a Cairo prison, "He who cannot change the very fabric of his thought will never be able to change reality, and will never, therefore, make any progress." ■

Express Your Voice

Great achievers develop their mental energy into vision. Vision is applied imagination. Everything is created first as a mental creation, then as a physical reality. Vision also means affirming others, believing in them and helping them realize their potential.

Great achievers develop their physical energy into discipline. They don't deny reality. They accept the sacrifice entailed in doing whatever it takes to realize their vision. Only the disciplined are truly free. Only a person who has disciplined him- or herself for decades to play the piano is free to create magnificent art.

Great achievers develop their emotional energy into passion — desire, conviction and drive. Passion appears as optimism, excitement, emotional connection and determination, and is deeply rooted in the power of choice. Passionate people believe in creating their own future.

Great achievers develop their spiritual energy into conscience — their inward moral sense of what's right and wrong, and their drive toward meaning and contribution.

Moral authority makes formal authority work toward positive ends. Hitler had vision, discipline and passion, but was driven by a mad ego. Lack of conscience was his downfall.

Conscience — the small voice within us — is quiet and peaceful. It deeply reveres people and sees their potential for self-control. It empowers, understands the value of all people, and affirms their power and freedom to choose. It values feedback and tries to see the truth in it.

But our ego is a tyrant. It micromanages, disempowers and excels in control. It is threatened by negative feedback. It punishes the messenger, interprets all data in terms of self-preservation, censors information and denies reality.

We must control our ego and let our conscience guide our moment-to-moment behavior. As we develop the four intelligences — physical, mental, emotional and spiritual — in their highest manifestations, we find our voice. ■

PART TWO: INSPIRE OTHERS TO FIND THEIR VOICE

The Leadership Challenge

The leadership challenge is to enable people to sense their individual innate worth and potential for greatness, and contribute their talents and passion — their ***voice*** — to accomplish the organization's highest priorities in a principled way. Leaders must model the four intelligences, so that the organization won't neglect them.

If an organization neglects its *spirit and conscience*, the result is low trust; backbiting; in-fighting; victimism; defensiveness; information hoarding; and defensive, protective communication.

If it neglects its *mind*, it has no shared vision or common value system. If there's an ambiguous, chaotic culture, people act with hidden agendas, play political games and use different criteria in decision-making.

When there's widespread neglect of *discipline*, there's no execution or systemic support for the priorities of the organization. Processes, culture and rules replace human judgment. Bureaucracy, hierarchies and regulations replace trust and produce the codependent "wait until told" mentality.

When *the heart* is neglected, there's profound disempowerment. Thus, a great deal of moonlighting, day-

(continued on page 4)

The Leadership Challenge

(continued from page 3)

dreaming, boredom, escapism, anger, fear, apathy and malicious obedience results.

Where there's no trust, "servant leaders" model trustworthiness. Where there's no common vision or values, they try to create them. Where there's misalignment, they align goals, structures, systems and processes. Where there's disempowerment, they empower individuals and teams at the project or job level. This kind of leadership affirms people's worth and unites them as a team.

To model conscience, set a good example. To engage in pathfinding, jointly determine the course. To achieve alignment and discipline, set up and manage systems to stay on course. And to empower and evoke passion, focus on results, not methods — and then get out of people's way and give help as requested.

These modeling roles are sequential. We must first strive to find our voice personally before attempting to build high-trust relationships and practice creative problem solving. ■

The Voice of Influence

Before you respond to a situation, decide whether or how to use the voice of influence. The boss may be a jerk, but you can choose your response. The key question: What's the best thing you can do *under these circumstances?*

You choose which level of initiative to use on the basis of how far the task lies within or outside your "circle of influence." This choice takes sensitivity and judgment, but gradually your circle will expand.

There are seven levels of initiative. They are:

1. Wait until told. Unless you have the influence of someone who can do something about a problem, don't waste energy on something you can do nothing about. Otherwise, you risk the "emotional cancers" of criticizing, complaining, comparing, competing and contending.

2. Ask. Ask about something within your job description but outside your circle. If the question is intelligent and preceded by thorough analysis and careful thinking, it could be very impressive and may widen your circle.

3. Make a recommendation on an issue outside your job and at the outside edge of your circle. This process works great in many situations, and can enlarge your circle.

4. "I intend to." Here you've done more analytical work. You've owned not only the problem but the solution, and you're ready to implement it.

5. Do it and report immediately. This is on the outside edge of your circle but within your job. Report to the people who need to know.

6. Do it and report periodically. You are clearly within your job description and your circle.

7. Do it. When something is at the center of your circle, it's at the core of your job description, and you just do it.

You empower yourself by taking initiative in some way. Be sensitive, wise and careful about timing, but do something — and avoid complaining, criticizing or negativity.

In our culture of blame, taking responsibility means going against the current. It will also require some vision, a standard to be met, some improvement to be made — and discipline. It requires enlisting your passion, in a principled way, toward a worthy end. ■

The Voice of Trustworthiness

Trust is the key to all relationships — and the glue of organizations. It's not true that all we need for success is talent, energy and personality. Over the long haul, who we are is more important than who we appear to be.

Trustworthiness comes from personal character:

- **Integrity.** Your actions are based on principles and natural laws that govern the consequences of behavior.
- **Maturity** develops when we win the private victory over self, so that we can be simultaneously courageous and kind, and deal with tough issues compassionately.
- **Abundance Mentality.** Rather than seeing life as a competition with only one winner, you see it as a cornucopia of opportunity and resources. You don't compare yourself to others: You're genuinely happy for their success.

Trustworthiness also involves competence:

- **Technical competence** is the skill and knowledge necessary to accomplish a particular task.
- **Conceptual knowledge** is the ability to think strategically and systematically, not just tactically.
- **Awareness of interdependency** and the connectedness of all life is important for organizations concerned with the loyalty of customers, associates and suppliers.

We must model trust in order to deserve it. So, to improve any relationship, we start with ourselves. ■

The Voice and Speed of Trust

Communicating in an environment of no trust is impossible. Even if communication is clear and precise, people will always look for hidden meanings and agendas. But when there's high trust, communication is easy and instantaneous. Mistakes hardly matter, because people trust you: "Don't worry about it. I understand." No technology ever devised can do that. There is nothing as fast as the speed of trust. When trust is present, mistakes are forgiven and forgotten.

Enduring trust in a relationship cannot be faked and is rarely produced by a dramatic, one-time effort. It's the fruit of regular actions inspired by conscience. The "deposits" and "withdrawals" we make have a profound impact on the level of trust in any relationship.

(continued on page 5)

The Voice and Speed of Trust

(continued from page 4)

Deposits to the "Emotional Bank Account" include:

- **Seek First to Understand.** We don't even know what a deposit is to another person unless we understand that person from his or her frame of reference. What may be a high-level, high-value deposit to you may be a low-value deposit to another — or even a withdrawal.
- **Make and Keep Promises.** Nothing destroys trust faster than breaking a promise.
- **Honesty and Integrity.** If we can put our integrity and our relationship with another person above our pride and natural desires to hide our mistakes and avoid embarrassment, we can form powerful bonds of trust.
- **Kindnesses and Courtesies.** Everyone has feelings. Small courtesies and kindnesses can yield huge dividends. But people see through superficial techniques; they know when they're being manipulated. True kindness comes from a deep character reservoir of SQ.
- **Thinking Win-Win or No Deal.** The key to breaking out of the "win/lose" mind-set is to settle on *championing the other party's win as much as your own.* This requires courage, abundant thinking and great creativity. You must be prepared to walk away — unless both parties actually feel the conclusion is a win for them.
- **Clarifying Expectations.** Most communication breakdowns originate with ambiguous or unfulfilled expectations about who is to do what and how goals are prioritized.

Loyalty, Apologies, Feedback and Forgiveness

- **Being Loyal to Those Not Present.** This is one of the highest tests of both character and the depth of bonding in a relationship. When everyone seems to be bad-mouthing someone who isn't there, you can, in an unself-righteous way, just speak up and say, "I see it differently." When we give in, go along and join in the bad-mouthing, we tell everyone that we would do the same to them.
- **Apologizing.** To learn to say "I was wrong" or "I was on an ego trip. I overreacted," and then to live accordingly, is one of the most powerful deposits you can make.
- **Giving and Receiving Feedback.** Giving negative feedback is one of the most difficult communication tasks — and one of the most needed. Many people have serious blind spots they never confront, because no one knows how to give them feedback. Often, people are too fearful of rupturing relationships or having their future compromised by taking on their boss.

To give feedback, describe your feelings, your concerns or your perceptions of what happened. Don't accuse, judge or label the other. He or she may then become open to information about a blind spot without feeling threatened.

When receiving feedback, express gratitude for it, however much it may hurt. Our blind spots are not as tender as we imagine. Our sense of worth is intrinsic and doesn't come from a particular weakness or behavioral pattern.

- **Forgiving.** True forgiveness involves letting go and moving on. We all make mistakes. We need to forgive ourselves and others. It's better to focus on our own mistakes and ask forgiveness than to dwell on other people's offenses, wait for them to ask forgiveness first, or give it begrudgingly if they do. When you forgive, when you refuse to bear a grudge, you actually take away another person's power over your life. ■

Blending Voices: Searching for The Third Alternative

The "third alternative" is a higher middle position, better than either of the other two ways. It's a product of creative effort. It emerges from our willingness to really listen. We don't know where it's going to end up. All we know is that it'll be better than it is now.

It's not true that both participants have to think win-win. Only one has to think it — then prepare the other for it by practicing empathic listening, seeking the other's interest and staying with it until the other person feels trust. Most people won't do the tough work of thinking win-win and seeking first to understand in order to get to the third alternative. It takes considerable character development to get to the point where your security lies in you, rather than in people's opinion of you or in your being right.

The key is your ability to be vulnerable, because your integrity to your value system makes you secure. You can afford to be open to other influences, to be flexible, and to search without knowing where you're going to end up.

Typically, senior managers who are deeply invested in their beliefs and have the power of position will decide strategy — then announce it to everyone else. The silent audience resents the heavy-handed treatment and resists the announcement. The codependency conspiracy of "wait until told" becomes stronger. Leaders are getting their strength from their high positions but lack moral authority.

There are two steps to searching for a third alternative (see Fig. 2). Repeatedly applying these steps provides

(continued on page 6)

TWO STEPS TO ACHIEVING SYNERGY

(THIRD ALTERNATIVES)

*Would you be willing to search for a solution that is **better than** what either one of you (us) have proposed?*

Would you agree to a simple ground rule: No one can make his or her point until they have restated the other person's point to his or her satisfaction.

Fig. 2

Blending Voices: Searching for The Third Alternative

(continued from page 5)

feedback and helps create the trust that encourages the search to continue.

The two steps are not always sequential. Sometimes you start with the first one; other times, with the second.

Every situation is different. And every relationship is unique. It requires good judgment, awareness, self-control and presence to initiate either of these two steps.

Executive Modelers

The most important modelers are those on the executive team. They have formal authority, so they need to manifest moral authority. Moreover, because executives are so visible, they can be immensely motivational to others.

But third-alternative communication can begin at any level. The results produced by those at lower levels can convert the cynics at higher levels — because true leadership is a choice, not a position.

As people practice third-alternative communication, mutual respect develops. Increasingly, they seek to acknowledge the strengths of others and to compensate for their weaknesses by leveraging others' strengths. ■

One Voice: Pathfinding Shared Vision, Values and Strategy

"Pathfinding" is uniting diverse people into one voice, one great purpose. One way to do this would be to announce the vision, values and strategy to people, without any real involvement on their part. You can also seek excessive involvement and get bogged down in paralysis by analysis, with endless off-sites and discussions, as if you didn't need to actually execute. The third alternative is to reasonably involve people in the process of developing the vision, mission and strategy, in a culture of trust.

Pathfinding creates order without demanding it. As soon as everyone agrees on what matters most, everyone shares the criteria that drive all subsequent decisions. Now, they're focused, yet agile. Your challenge is to help create that shared view. Everyone who is involved in determining the vision and mission then has ownership in the values and the strategic plan.

To determine your priorities, first come to grips with the realities you face. Since pathfinding means dealing with diverse personalities, perceptions of reality, trust levels and egos, modeling is extremely important. If people can't trust the person or team that is initiating the pathfinding process, there will be no identification, and involvement will be very dysfunctional. Much depends on the leader's modeling the behavior that he or she professes to value throughout the organization.

The key pathfinding tools are: *the mission statement* (this expresses your sense of purpose), *your vision and your values*, and *your strategic plan*. The plan explains how you'll provide value to your customers and stakeholders, and achieve certain goals — by specific deadlines — in getting and keeping customers.

The words of the mission statement may vary, but organizations have the same fundamental needs as people:

- **Survival:** Financial health (body).
- **Growth and development:** Economic growth, customer growth, innovation and increasing institutional competency (mind).
- **Relationships:** Strong synergy, external networks, partnering, teamwork, trust and valuing differences (heart).
- **Meaning, integrity, contribution:** Serving and lifting all stakeholders; making a difference in the world (spirit).

No Margin, No Mission

Unless your enterprise produces consistent profits over time, you'll lose your opportunity to deliver on your mission. If you have a clear mission statement and strategic plan, anyone at any level in the organization should be able to describe how his or her job helps fulfill the plan and is consistent with the company's values.

Once the mission statement and plan are shared, half the battle is won. Mental, emotional and spiritual creation has taken place. The physical creation (execution) then follows: setting up structure, getting the right people in the right jobs with the right support, and then getting out of the way and giving help as requested.

If your pathfinding is successful, your values and strategic plan will drive every decision. You won't get sidetracked by matters that aren't central to your core purpose.

To get focus and teamwork, employees must know what the highest priorities are, buy into them, translate them into specific actions, have the discipline to stay the course, trust one another and collaborate effectively.

If priorities are clearly identified, but people feel no ownership of strategy, are given competing priorities or are unable to see the link between their tasks and corporate vision, their ability to execute is jeopardized. Teamwork is threatened by low trust, backbiting, faulty systems or processes, or too many barriers to action.

Organizations that create a shared sense of mission — such that departments, teams and individuals are consistently focused on their goals, and people are accountable to the organization's highest priorities — can find their voice and build a powerful, principle-centered culture. That's what pathfinding is all about. ■

The Voice and Discipline of Execution

To execute your values and strategy consistently without relying on the leader's continuing presence to keep everyone going in the right direction, you practice ***alignment***. This involves the following three actions:

- *Use personal, moral and formal authority* to create systems that institutionalize the strategy, vision and values.
- *Create, throughout the organization, cascading goals aligned with its vision, values and strategic priorities.*
- *Adjust and re-align according to regular feedback from the marketplace and the organization.* Aligning requires constant effort and adjustment, simply because you're dealing with so many changing realities.

Be sure that your reward systems actually reward what you say you value. Many organizations preach cooperative effort but reward only individual effort — thus, little more than lip service is paid to cooperation.

To get input to the alignment process, benchmark yourself against superior performers of similar functions within your company and throughout the world. Identify best practices and learn from them.

Institutionalized Moral Authority

Aligned organizations that are truly principle-centered have ***institutionalized moral authority: the ability to consistently produce quality, trusting relationships with various stakeholders, as well as continued focus on efficiency, speed, flexibility and market friendliness.***

The key to alignment is to begin with results. What kinds of results are you getting in the marketplace? Are your shareholders happy with their return? Are your employees and suppliers happy with their return on their mental, physical, spiritual and emotional investment?

Now, look at the gap between the results and your strategy. ***"Effectiveness" is the balance between production of desired results and production capability. It's achieving the result you want in a way that enables you to get even more of those results in the future.***

To ensure alignment, create a scoreboard. To the extent possible, everyone should be involved in developing the scoreboard — and should then be accountable to it.

One of Edwards Deming's great insights was that over 90 percent of all organizational problems are systemic. Aligning structures and systems with values and strategy is one of the toughest of all leadership challenges. Structures and systems represent the past: tradition, expectations and assumptions. Many people derive their security from the predictability and certainty of such structures and systems, which truly become sacred cows and cannot be ignored or kicked aside unless there's deep buy-in to the pathfinding criteria. ■

The Empowering Voice

The empowering role of leadership means creating win-win agreements about goals that align with the company's vision, and then holding people accountable for results. ***Most organizations are overmanaged and underled.***

Empowerment is the natural result of both personal and organizational trustworthiness, which enable people to identify and unleash their potential. True empowerment enthrones *self*-control, *self*-management and *self*-organizing. It taps into passion, energy and drive — in short, *voice*.

In organizations where people do every day what they do best, there's lower turnover, higher productivity and higher customer satisfaction. And since only 30 percent of product cost today is materials — the rest is knowledge — we must empower knowledge workers as never before.

Managers must overcome their inability to give up control. ***With empowerment, control is not lost. It's translated into self-control.*** This comes when there is a commonly understood end, with agreed-upon guidelines and supportive structures and systems, and when each person acts as a whole person in a whole job. In this "directed autonomy," managers shift from controllers to enablers: They remove barriers and become a source of support.

Successful empowerment depends on management's commitment to work with team members by win-win agreement. The result is an overlapping of the four needs of the organization (financial health, growth and development, synergistic relationships with stakeholders, and meaning/contribution) with the four needs of the individual (physical — survival, health and security; mental — growth and development; social/emotional — relationships; and spiritual — meaning and contribution).

It's essential that executives build a culture where people are allowed — even expected — to push back against a decision that would result in serious consequences to the overall mission and values of the organization.

Empowerment implies a different kind of performance appraisal. Instead of a lecture by the boss, your progress should be evaluated by the best qualified person: *you*.

Self-evaluation is tougher than anyone else's evaluation (bosses actually know the least, being the furthest removed from the actual job performance), but with a high-trust cul-

(continued on page 8)

The Win-Win Agreement

A key empowering tool is the Win-Win Agreement Process. The agreement that results is neither a job description nor a legal contract. It is an open-ended, psychological/social contract that defies expectations. It is written first into the hearts and minds of people, and then put on paper in a way that is easy to change, because it must be renegotiated as circumstances change.

The Empowering Voice

(continued from page 7)

ture, helpful systems, as well as 360-degree feedback data, self-evaluation becomes not only possible but easy.

The performance evaluation can then revolve around managerial questions such as: How is it going? What are you learning? What are your goals? How can I help you?

The role of the supervisor is to set up the conditions of empowerment and then to clear the path and become a source of help as requested. This is "servant leadership."

Our jobs are not about gratifying our egos. They're about getting the organization's best work done. It's *empowerment* that creates heartfelt commitment and excitement. ■

The 8th Habit and the Sweet Spot

Peter Drucker wrote, "So much of what we call management consists of making it difficult for people to work." The problem is a failure in these six drivers of execution:

- **Clarity.** People don't know what the goals or priorities of the team or organization are.
- **Commitment.** People don't buy into the goals.
- **Translation.** People don't know what they need to do to help the team or organization achieve its goals.
- **Enabling.** People don't have the proper structure, systems or freedom to do their jobs well.
- **Synergy.** People don't get along or work together well.
- **Accountability.** People don't regularly hold each other accountable.

An organization with great leaders (who live the four roles of leadership — modeling, pathfinding, aligning and empowering) and great people (who have discovered their birth gifts) can govern and discipline itself. It has hit the "sweet spot" where the greatest expression of power and potential happens.

Four disciplines, practiced consistently, can vastly improve your ability to focus on and execute your top priorities. These disciplines are:

1. Focus on the Wildly Important. People are naturally wired to focus on only one thing at a time and still do an excellent job. The more goals, the lower the chance of achieving them all. Focus intensely on a few crucial goals.

2. Create a Compelling Scoreboard. People play differently when they're keeping score. Without crystal-clear measures of success, they are never sure what the goal truly is. The same goal may be understood by different people in different ways. Your scoreboard should identify your key measures and represent them visually. For each priority, provide three elements: the current result, the target result, and the deadline for hitting the target.

3. Translate Goals Into Specific Actions. All the top people may know what the goals are, but that doesn't mean that the front line knows what to do. Goals will never be achieved until everyone knows exactly what he or she is supposed to do about them. Ultimately, the front line produces the bottom line. Translate your organization's goals into weekly and daily tasks.

4. Hold Each Other Accountable, All the Time. A self-empowering team focuses and refocuses in frequent accountability sessions that move key goals forward. There's "triage reporting" that quickly covers the vital few issues, leaving the less important ones for later, followed by finding third alternatives for moving goals forward. Managers agree to do things that only they can do, and to enable workers to achieve. ■

Using Our Voices Wisely to Serve Others

The 8th Habit enables us to expand and develop our freedom to choose. We grow personally when we give ourselves to others, and our relationships deepen.

We begin our search for wisdom by admitting how little we know, and how much we need others. Wisdom also requires the courage to live by unchanging principles when they're contrary to social norms. Wisdom plus an "abundance mentality" produce the kind of empowering, noncontrolling leadership that operates in terms of third alternatives.

Moral authority exponentially increases the effectiveness of formal authority. People are extremely sensitive to a leader's use of patience, kindness, empathy and gentle persuasion. Such characteristics activate the consciences of others and create emotional identification with the leader and the cause or principles for which he or she stands.

Finding your voice is a synergistic concept: It's greater than the sum of the parts. When you respect, develop and integrate the four parts of your nature, you realize your full potential and achieve lasting fulfillment.

As you continually apply the 8th Habit and find your own voice — and inspire others to find theirs — you'll increase your own power and your freedom of choice to solve your greatest challenges and serve human needs. ■

THE SUMMARY IN BRIEF

Technology is changing work as we know it. Cultural norms are undergoing tectonic shifts. A global pandemic proves that we are inextricably connected whether we choose to be or not. So much change, so quickly, is undermining our sense of identity and challenging our ability to adapt.

The Adaptation Advantage explains the profound changes happening in the world of work and posits the solution: new ways to think about careers that detach our sense of pride and personal identity from our job title and connect it to our sense of purpose. Activating purpose, the authors suggest, will inherently motivate learning, engagement, empowerment, and lead to new forms of pride and identity throughout the workforce.

Of course, making this transition is hard. It requires leaders who can attract and motivate cognitively diverse teams fueled by a strong sense of purpose in an environment of psychological safety—despite fierce competition and external pressures. Adapting to the future of work has always called for strong leadership. ***The Adaptation Advantage*** is an essential guide to help leaders meet that challenge.

IN THIS SUMMARY, YOU WILL LEARN:

- The meaning of adaptation in the Fourth Industrial Revolution.
- Why purpose and learning are more important than ever in the tech-driven economy.
- To seize the adaptation advantage for individuals and organizations.

PART I: ADAPTING AT THE SPEED OF CHANGE

The World Is Fast

Technology Is Changing Everything and Planting Opportunity Everywhere

We are entering the Fourth Industrial Revolution, marked by the merging of biological and cyber systems into a fully digitized economy. In this push to a digital world, any physical or mental task with a predictable, repeatable outcome will be handled by an algorithm. Objects will contain sensors connected to networks where data drives decisions in real time. Many aspects of the biological world will be augmented by robotic and cognitive technologies.

In this world, our relationship to work is no longer a monolithic career based on a single dose of early learning and compiled experiences. Instead, our careers will be defined by a state of constant learning and adaptation as new technologies, applications, and data alter the current state.

Three Interlocking "Climate Changes"

Celebrated *New York Times* columnist Thomas Friedman argues that we are being buffeted by three simultaneous and interlocking "climate changes": technology, the environment, and the global economy. These changes, he suggests, are rapidly reshaping our world.

Technological climate change. Where technology-driven productivity shifts were once absorbed across a lifetime, allowing workers to adjust at pace, they are now on an exponential growth curve where change drives workers from job to job, employer to employer, and career to career.

Your work life will be one of constant adaptation. Every time you hand off a skill to technology, you must reach up to add capacity to your arsenal. Understanding the need for continuous adaptation is the first step in achieving the adaptation advantage.

Environmental climate change. Scientists aligned to academies, governments, and non-governmental organizations (NGOs) around the world are clear on one point: Our natural environment is changing at a rate faster than at any time in the past 7,000 years. Eighteen of the 19 warmest years on record have occurred since 2001. Every company will soon be forced to adapt to avoid catastrophe or adapt to catastrophe itself. There is no denying that this will reshape how and where work is done.

Climate change of the market. In the analog economy, global commerce moved only as fast as a ship could transport a container across the sea, and that container could easily be regulated, inspected, and taxed as it moved from port to port. Not so in the emerging digital economy. Bits flow across international boundaries at the speed of light. There are no ports of entry, customs inspections, or tariffs on digital goods. The adage "information wants to be free" may not always hold, but on the internet, it certainly flows freely.

We now live in a world in which any company can tap into the human talent cloud to identify the highest-quality, lowest-cost actor (human or technological) for any given task. In this reality, you must focus on how you uniquely add value, leveraging but not competing with rising technology and your own access to the talent cloud.

We must find a new path, one that loops through the traditional notions of work, learning, and retirement in a continuous and adaptive cycle. Where we once learned to work and then used that learning to build a career over decades, now we must work in order to continuously learn to recognize and embrace the challenges and opportunities that these climate changes present. Working to learn is the cornerstone of the adaptation advantage.

The Only Things Moving Faster Than Technology Are Cultural and Social Norms

The only thing moving faster than technology is culture. Rapid shifts in social norms are tearing at our individual and social identities, leaving many of us struggling to answer the three basic and oft-asked questions that establish our identity and orient us in the world: Who are you? What do you do for work? Where are you from?

Recent census data project that by 2045, white/Caucasian may no longer be the majority race in the United States. In the United States between 2009 and 2019, according to Pew Research, the share of adults who identify as Christian declined from 77 to 65 percent, while the share who claimed no religion at all rose from 17 to 26 percent.

According to the United States Department of Labor, 4.4 percent of those over 85 years old were engaged in the workforce in 2018, up from 2.6 percent in 2006.

The once "nuclear" family is giving way to extended families, as grandparents, aunts, and uncles engage in primary caregiving for children and aging adults.

> Imagine what it might be like to tackle each workday as if it were the first day of school, but without the starchy new clothes.

Gender is now fluid. In various business, academic, government, and other forms, you may be asked to declare your personal pronoun preference.

Over the past decade, according to a survey conducted by Gallup, 69 percent of Americans say they have lost trust in the media. The proliferation of news sources and the inclination to cherry-pick facts and reject uncomfortable "truths" has eroded a once-common American experience: the day's news delivered by a trusted news anchor.

Human populations have always aggregated in physical communities, city-states, and countries. Now, though, these geolocated populations are being eclipsed by a new form of association—online platforms.

Occupational Identity and Expertise

If so many facets of identity are being reshaped, the question "Who are you?" may be more rightly changed to "How do you define yourself?" Psychological security will be dependent on our abilities to define, own, and embrace the fundamental aspects and values of our complex selves, especially in a world where we are not likely surrounded by people who look, eat, pray, or speak like we do.

Likewise, that ice-breaker question "What do you do?" loses its relevance when our job is no longer our primary identity. "Where do you find purpose?" may be the better question in a world where your career identity is fluid at best and more likely becoming a portfolio of self-expression. Your adaptation advantage starts with a resilient and adaptive identity, even as the forces of globalization, diversity, and changing social and societal norms reshape your touchstones.

Getting Comfortable with Adaptation

The Slowest Rate of Change Is Happening Now

This exact moment in time, right now, is the slowest rate of change you will experience ever again. This speed of change makes it even more important to occasionally pause to reflect and focus on being human. Advances in technology allow machines to do many things, but they cannot dream, contemplate, or yet imagine our unseen future.

Imagine what it might be like to tackle each workday as if it were the first day of school, but without the starchy new clothes. That idea—that every day is a new learning day—is at the heart of the adaptation advantage.

From Scalable Efficiency to Scalable Learning

Throughout history, industrial companies grew and thrived by embracing scalable efficiency. Essentially, once a company figured out how to make something of value, it leveraged technology and process innovation to deliver the product more quickly and less expensively in order to make more profit.

That model breaks in the digital era, however. Digital production at scale is virtually infinite, and incremental costs are virtually zero. That's the upside. The downside is that products—digital and digitally enabled—have shorter life cycles than they once did.

Consider the Sony Walkman, introduced to the market in 1979. For the next 30 years, Sony continuously innovated the product line, altering styles and media from cassettes to compact discs to keep pace with fashion and technology innovation, ultimately selling 385 million units before discontinuing the Walkman brand in 2010.

By contrast, Apple introduced the iPod in 2001 and sold virtually the same volume—390 million units—before ending most production in 2014. What killed the iPod? The iPhone. Apple killed its iPod cash cow in 2007 at the peak of iPod sales. The lesson here: If we disrupt ourselves at our peak, we'll be well prepared to surf the next wave of innovation, and we'll own the timing of our transformation. That is the adaptation advantage in action.

Scalable learning is what allows a company like Amazon to transform from online bookseller to global marketplace to web services provider to Academy Award–winning entertainment producer. Amazon seizes the opportunities that come like so much flotsam and jetsam of rapid market disruption.

From Stocks to Flows of Knowledge

But scalable learning is so much more than evaluating market turns and grasping at emerging fads. Principal to scalable learning is recognizing that information, which is

the atomic stuff of learning, is changing. In a slow-moving world, we had time to codify information into curriculum, establish a pedagogy, conduct training sessions, memorize, test, and apply "stocks" of knowledge, quite like inventory stored in a supply closet for future use.

In a fast-moving world, the information comes at us not in packaged and digestible chunks but in continuous flows. To become scalable learners, we need to become adept at drinking in new information as it flows by.

Now, rather than learning how to work, we ought to work in order to learn. That is, we take learning from our work as the primary benefit of work. People have always learned on the job, but what they learned was how to perform the explicit aspects of the job; they acquired the skills to do the work.

Now, we have to ask what the work has taught us. What did we learn from all the information that flows through the process of working? How were specific problems solved? Which approaches failed and why? How might those same approaches be effective in different circumstances?

In this increasingly fast-moving, change-dominated world, the speed you need comes from matching the "how," rather than the "what," of what you do. Make that shift in perspective and identity, and you are well on your way to adapting to the emerging market.

PART II: LETTING GO AND LEARNING FAST TO THRIVE

Finding the Courage to Let Go of Occupational Identity

In his seminal book ***The Practice of Management***, Peter Drucker describes the parable of the three stonecutters: "An old story tells of three stonecutters who were asked what they were doing. The first replied, 'I am making a living.' The second kept on hammering while he said, 'I am doing the best job of stonecutting in the entire country.'

The third one looked up with a visionary gleam in his eyes and said, 'I am building a cathedral.'"

In one version of the story, the third stonecutter declares, "I am building a cathedral to bring people together." In that version, the stonecutter reveals not just a vision—to build a cathedral—but also a purpose—to bring people together.

A purpose-driven identity—a sense of self that transcends job title and skill sets—is the best defense against work-related obsolescence. Yet, building that identity is not easy, because to have a sense of purpose, you must first discover your purpose.

You Are a Prototype; Start With Why

How do we avoid falling prey to occupational identity traps? We start with Why. In the age of accelerated change, every company needs to define themselves not just by their What or How but also by their Why. The Why is the principle that guides organizations through rapidly transforming market requirements, product and services opportunities, and business model adaptation. The Why is every company's unique advantage.

As technological and social change unmoor us from our professional identities, we must connect to our Why as well. If research is correct, young people in the developed world graduating today will likely hold 17 jobs across five different industries in the course of their careers. To navigate that trajectory, you cannot define yourself by what you do. Instead, you must take your definition from how and why you do it.

By thinking of your career as a continual "beta," you will develop your relationship to purpose, better understand and develop your superpowers, and come to recognize that your job is merely the application of your skills and a connection to your purpose at a moment in time. This is how you move from "a fair day's work for a fair day's pay" (stonecutter 1) or a fixation on your current tasks (stonecutter 2) to a greater purpose-driven vision (stonecutter 3), "building a cathedral to bring people together."

What kind of stonecutter are you? How do you define your Why and How? How does your What manifest your Why and How? What is your purpose?

Pay attention to what interests you; that is the fuel source for your lifelong learning and the basis for your adaptation advantage. In fact, the answers to these questions will give you the courage to let go and thrive.

Learning Fast

Why An Agile Learning Mindset Is Essential

We are in the greatest velocity of change in human history, and somehow we've got to keep up. The thing is, we will never keep pace by doing the same things faster. In fact, that will only get us farther behind. Why? Because it is the modality of the past. To keep up with this quickening pace, we need to focus not on speed and efficiency but on agility

and adaptability.

The ability to learn and adapt continuously requires both an agile learning mindset and a resilient and adaptive identity. It is nearly impossible to learn and adapt if your core identity is under threat. Learning, and more specifically unlearning, requires a comfort with vulnerability, an ease with ambiguity, an acceptance of not knowing, and, most importantly, an openness to failure.

The Agile Learning Mindset

In order to operate in an accelerating world that demands continual adaptation, we need a mindset outfitted to navigate change. We need an agile learning mindset. The agile learning mindset is separate and distinct from the agile methodologies of software and product development, although it shares similarities with those practices.

The agile learning mindset contains four components: agency, agility, adaptability, and awareness.

Agency. Agency, in social science parlance, is the capacity to act independently and to make choices for oneself. Some describe agency as the opposite of powerlessness. Navigating a rapidly shifting future of work will require the agency to learn and adapt quickly, understanding explicitly that learning is your responsibility. Connect that agency with purpose, curiosity, or motivational drive to fuel your learning and exploration.

Agility. Agility, and specifically learning agility, is the ability to both learn and unlearn. It is founded in your own learning style to optimize how you take in new information, form new knowledge, and let go of information that is no longer useful. It is flexibility, nimbleness, and responsiveness. Agility includes your ability to pivot not only to take in new information but also to deliver value when old processes and business models begin to fail and new ones are required.

Adaptability. Charles Darwin is thought to have said, "It is not the strongest of the species that survives but the most adaptable." In work as in life, then, evolutionary success belongs to those who can most readily adapt. Adaptability enables us to navigate ambiguous situations and work through challenges even when not all the information is clear or even known.

Awareness. Awareness starts with an understanding of self. Self-awareness and your sense of personal identity are essential to engage meaningfully in work. One must also have a keen market awareness. Change is coming so quickly now that organizations are in a constant dance, pivoting from one business model to the next. In fact, one might argue that the pivot *is* the business model. As a result, all workers—and most certainly every leader—need to understand how the organization creates value and how they contribute individually and collaboratively to that value creating.

Some of what separates us from other animals is also similar to what separates us from today's artificial intelligence technologies.

Rise of the Humans

Developing Your Creativity, Empathy, and Other Uniquely Human Capabilities

It seems that it may be our ability and inclination to continuously learn and disrupt ourselves that makes us uniquely human. No other animal species disrupts themselves by creating new innovations and new, more complex tools, and certainly not ones that threaten their very survival as a species.

Interestingly, some of what separates us from other animals is also similar to what separates us from today's artificial intelligence (AI) technologies. Silicon cognition has not been able to replicate or demonstrate innateness, that inherent sense of awareness, sentience, or wisdom found in humans. It struggles to apply learned skills and knowledge to new contexts. It simply lacks common sense.

The Predictive Markets Declare Future Skills That Favor Humans

Check any list of future skills, from the World Economic Forum to the Institute for the Future, and you will find one particularly intriguing similarity: None of them are specifically technical skills. The skills most needed in the future of work all center on uniquely human skills and our ability to think about our own thought processes and how we operate, and, more specifically, to collaborate with rising technology capabilities.

So why are so many people grasping at technology and sounding the alarm that schools need to teach more and better STEM skills, insisting that every kid must learn to code? Without a doubt, digital skills are important. But Dr. Randy Swearer, vice president of learning futures at Autodesk, says, "Humans need to understand what's computable. They don't need to understand a code, or to code, but they need to understand what's computable."

The real advantage to digital fluency is that it enables uniquely human skills to be seamlessly augmented with technological capabilities. That empowers individuals to see what can, and perhaps should, be automated. It empowers you to see that your real value comes from your uniquely human skills—your ability to leverage the technology tool and provide the wisdom, judgment, and common sense to maximize the value you create.

The Institute for the Future (ITF)'s Future Skills 2020 list is divided into two camps: individual performance skills and the aptitudes that enable better human-to-human and human-to-machine collaborations.

Individual skills:

- **Design mindset.** ITF defines design mindset as the "ability to represent and develop tasks and work processes for desired outcomes."
- **Novel and adaptive thinking**. ITF defines this as "proficiency at thinking and coming up with solutions and responses beyond that which is rote or rule-based."
- **Cognitive load management**. Defined as the "ability to discriminate and filter information for importance, and to understand how to maximize cognitive functioning using a variety of tools and techniques."
- **Sensemaking**. ITF defines sensemaking as the "ability to determine the deeper meaning or significance of what is being expressed."

Collaborative skills:

- **Social intelligence**. The "ability to connect to others in a deep and direct way, to sense and stimulate reactions and desired interactions." "Emotional" intelligence" can be added to this definition.
- **Transdisciplinarity**. This is "literacy in and ability to understand concepts across multiple disciplines."
- **Cross-cultural competency**. ITF defines cross-cultural competency as the "ability to operate in different cultural settings."
- **Computational thinking**. The "ability to translate vast amounts of data into abstract concepts and to understand data-based reasoning."
- **New media literacy**. The "ability to critically assess and develop content that uses new media forms, and to leverage these media for persuasive communication."
- **Virtual collaboration**. The "ability to work productively, drive engagement, and demonstrate presence as a member of a virtual team." As we increasingly work on global and often virtual teams, we must hone our ability to forge new relationships with, and perhaps even lead, people we may never meet in person.

PART III: LEADING PEOPLE AND ORGANIZATIONS IN THE EVOLUTION OF WORK

Leading in Continuous Change

Modeling Vulnerability, Learning From Failure, and Providing the Psychological Safety That Builds Trusting Teams

As we wade into the Fourth Industrial Revolution, we have to be more thoughtful about who we are leading and where we are taking them.

Leadership guru Jim Kouzes, co-author with Barry Posner of the seminal book ***The Leadership Challenge***, says, "The most self-evident and stable truth is that, at its heart, leadership is a relationship between those who aspire to lead and those who choose to follow. It is the quality of the relationship that makes the difference, not the rapidly advancing technology, or the fact that there are more human beings on the planet, or that organizations are more diverse, or that the economy is more global."

"The more frequently leaders exhibit exemplary behaviors, the more likely it is people will feel engaged, be more productive, deliver higher-quality work, and all the other measurable outcomes you would expect from exemplary leadership."

What, then, are those "exemplary behaviors" that deliver exemplary leadership in the context of accelerated change? How can we drive, eyes forward, to lead the future of work? Two ideas from Kouze's and Posner's work are to model

While you may assume your team knows who you are, you may be surprised to find they actually do not know what you value.

the way and enable others to act in order to lead adaptive teams. By embracing these two ideas, you will set the conditions for rapid learning, unlearning, and build the transformational teams at the heart of your adaptation advantage.

Model the Way

Introduce yourself and share your values. While you may assume your team knows who you are, you may be surprised to find they actually do not know what you value.

Be vulnerable. Too often, we think of vulnerability as a weakness, but University of Houston research professor and best-selling author Dr. Brené Brown has convinced millions over nearly 10 years that vulnerability can also be the basis of strength and connection. As machines do more and more routine and predictable work, humans need to be, well—more human.

Trust is essential at speed. In order to learn and adapt to new technologies, new roles, and new business models, we have to think like a trapeze artist and let go of one bar so we can grab the next. If you are asking your team members to leap, you have to assure them there is a net to catch them should they fall.

The best leaders are curious learners. To build a team that continuously learns and adapts, that learning has to start with you.

Enable Others to Act

You do not need to know everything. In the past, leadership often meant the person at the top of the organizational chart was the unquestionable expert. No longer. In a complicated world, you can predict outcomes. In a complex one, you need to constantly adapt in order to direct outcomes.

Establish psychological safety. Having the courage to show your weakness, embracing not knowing, and admitting mistakes is how you model vulnerability so that your people will be open with their own gaps and raise their hands when they need help.

Encourage respectful discourse and dissent. You may avoid tough conversations to spare people's feelings. Maybe you are avoiding your own discomfort. Avoiding tough conversations, though, robs your team of the feedback that may help them grow or adapt.

Prioritize wellness. As our world has become increasingly complex, tenure in jobs has become shorter, and continuous learning has become a nonoptional requirement for staying relevant, it's no surprise that stress levels have skyrocketed. It is high time that corporations make mental health and stress reduction not just a human resource benefit but a core business strategy.

The Adaptive Organization

Creating the Capacity to Change at the Speed of Technology, Market, and Social Evolution

As we cross the bridge to a digital economy, we need to shift from measuring output to optimizing throughput. In other words, the conditions in which we create and produce will matter more than the product itself.

That may sound like a radical idea, but consider this: The things we produce—because they may be transient—are a product of our organization's capacity to identify and rapidly respond to new opportunity and capture new value.

Products and services will be short-lived. Rather than optimizing for specific production, our best work will be in establishing the conditions that enable continuous and continually shifting methods of value creation. These conditions result in an agile, learning, and adaptable company able to thrive in the new realities on the other side of the digital economy bridge. Those conditions are culture and capacity.

It's a radical but remarkably straightforward concept: Companies are nothing more than culture and capacity. Period.

Of course, neither culture nor capacity is a simple construct. Still, if you can break apart these two elements to understand them, you can rejoin the ideas to create a framework for highly effective organizational leadership.

Culture at the Core

Culture is either intentional or accidental. An intentional culture is a deliberate construction of organizational leaders, created in collaboration with all those who are led. An accidental culture is an environment that emerges without intention from a collection of experiences. Accidental cultures are almost always toxic.

Intentional culture begins with organization's leadership. Frankly, it *is* organizational leadership. So, where do you start to build a great culture?

Author and leadership guru Simon Sinek reminds us that transformational leaders of all kinds set clear targets. From Martin Luther King Jr.'s leading the civil rights movement to the Wright Brothers' chasing the dream of flight, great leaders craft a big vision and give their people a reason to follow them. We join our efforts with great leaders because we share a sense of purpose and live by common values.

Or, as Sinek would say, start with Why. The center of every great culture is a clear sense of purpose.

Capacity: Culture's Partner

Culture alone is not enough for effective adaptation. To get there, you must also nurture culture's partner, capacity. This is where you need to connect the two concepts for effective leadership.

If culture is the heart of a company, capacity is its brain. Simply put, capacity is an organization's ability to respond to opportunity. But it is much more than the available space, time, and talent needed to address a new opportunity. Capacity is how we think about new information and ideas in order to assess and respond to opportunity. In other words, it's not enough to ask whether you have the people—or even the right people. You also need to ask whether your people have the mindset to think about this opportunity in the right way.

"Human beings are works in progress that mistakenly think they're finished," says psychologist Dan Gilbert. The world is changing, and fast. It is hard to imagine.

We will change, too. The work we do and the way we do it will differ almost from day to day. It will always be easier to look back and remember than it will be to look forward and imagine.

That practice of looking back and forward, and it is a practice, is incredibly intimidating when you are tightly bolted to a professional identity that measures how you walk in the world.

On the other hand, it's incredibly exciting to imagine a future of work that lets us explore *why* we walk in the world.

The Advantage

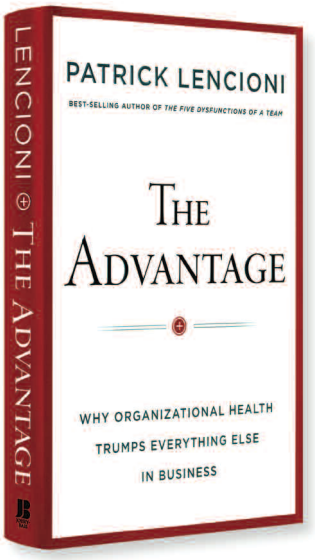
Why Organizational Health Trumps Everything Else in Business



by Patrick Lencioni

THE SUMMARY IN BRIEF

"Organizational health will one day surpass all other disciplines in business as the greatest opportunity for improvement and competitive advantage."

This is the promise of *The Advantage*, Patrick Lencioni's bold manifesto about the most unexploited opportunity in modern business. In his immensely readable and accessible style, Lencioni makes the case that there is no better way to achieve profound improvement in an organization than by attacking the root causes of dysfunction, politics, and confusion.

While too many leaders are still limiting their search for advantage to conventional and largely exhausted areas like marketing, strategy, and technology, Lencioni demonstrates that there is an untapped gold mine sitting right beneath them. Instead of trying to become smarter, he asserts that leaders and organizations need to shift their focus to becoming healthier, allowing them to tap into the more-than-sufficient intelligence and expertise they already have.

The author of numerous best-selling business fables including *The Five Dysfunctions of a Team* and *Death by Meeting*, Lencioni takes a different route in *The Advantage*. He forgoes fables and instead draws upon his 20 years of writing, field research, and executive consulting to some of the world's leading organizations. The result is, without a doubt, Lencioni's most comprehensive, significant, and essential work to date.

IN THIS SUMMARY, YOU WILL LEARN:

- The three biases that prevent leaders from embracing organizational health.
- The difference between a smart organization and a healthy organization.
- Why the Four Disciplines model builds and maintains organizational health.
- The secrets to cascading communication throughout your entire company.
- How you can hold meetings and still have plenty of time for your job.

The Case for Organizational Health

The single greatest advantage any company can achieve is organizational health. Yet it is ignored by most leaders even though it is simple, free, and available to anyone who wants it.

That is the premise of *The Advantage* — not to mention my career — and I am utterly convinced that it is true. If it sounds absurd, it should. After all, why in the world would intelligent human beings ignore something that is powerful and readily accessible? That question was finally answered for me on July 28, 2010.

I was attending a client's leadership conference, sitting next to the CEO. This wasn't just any company. It was, and still is, one of the healthiest organizations I have ever known and one of the most successful American enterprises of the past 50 years.

As I sat there at the conference listening to one presentation after another highlighting the remarkable and unorthodox activities that have made this organization so healthy, I leaned over and quietly asked the CEO a semi-rhetorical question: "Why in the world don't your competitors do any of this?"

After a few seconds, he whispered, almost sadly, "You know, I honestly believe they think it's beneath them."

And there it was.

The Three Biases

In spite of its undeniable power, so many leaders struggle to embrace organizational health because they quietly believe they are too sophisticated, too busy or too analytical to bother with it. In other words, they think it's beneath them.

This is a shame because organizational health is different. It's not at all touchy-feely, and it's far bigger and more important than mere culture. More than a side dish or a flavor enhancer for the real meat and potatoes of business, it is the very plate on which the meat and potatoes sit.

But before leaders can tap into the power of organizational health, they must humble themselves enough to overcome the three biases that prevent them from embracing it. The three biases are:

The Sophistication Bias: Organizational health is so simple and accessible that many leaders have a hard time seeing it as a real opportunity for meaningful advantage.

The Adrenaline Bias: Becoming a healthy organization takes a little time. Unfortunately, many of the leaders I've worked with suffer from a chronic case of adrenaline addiction, seemingly hooked on the daily rush of activity and firefighting within their organizations. As simple as this may seem, it remains a serious obstacle for many dysfunctional organizations led by executives who don't understand that old race-car drivers' axiom: *you have to slow down in order to go fast.*

The Quantification Bias: The benefits of becoming a healthy organization, as powerful as they are, are difficult to accurately quantify. Organizational health permeates so many aspects of a company that isolating any one variable and measuring its financial impact is almost impossible to do in a precise way.

Smart Versus Healthy

Smart organizations are good at those classic fundamentals of business — subjects like strategy, marketing, finance and technology — which I consider to be decision sciences.

But being smart is only half the equation. Yet somehow it occupies almost all the time, energy and attention

of most executives. The other half of the equation, the one that is largely neglected, is about being healthy.

What I find particularly amazing is that none of the leaders I present to, even the most cynical ones, deny that their companies would be transformed if they could achieve the characteristics of a healthy organization. They never dismiss it as touchy-feely, and they immediately recognize the practical connection between a lack of health and overall performance. It would be natural to assume that those executives would then march back to their companies and focus a large portion of their time, energy and attention on making their organizations healthier.

I've come to learn that even well-intentioned leaders usually return to work and gravitate right back to the "smart" side of the equation, spending their time tweaking the dials in marketing, strategy, finance and so forth.

The Four Disciplines Model

An organization doesn't become healthy in a linear, tidy fashion. Like building a strong marriage or family, it's a messy process that involves doing a few things at once, and it must be maintained on an ongoing basis in order to be preserved. Still, that messy process can be broken down into four simple disciplines:

Discipline 1: Build a Cohesive Leadership Team. An organization simply cannot be healthy if the people who are chartered with running it are not behaviorally cohesive in five fundamental ways.

Discipline 2: Create Clarity. The leadership team of a healthy organization must be intellectually aligned and committed to the same answers to six simple but critical questions.

Discipline 3: Overcommunicate Clarity. Once a leadership team has established behavioral cohesion and created clarity around the answers to those questions, it must then communicate those answers to employees clearly, repeatedly and enthusiastically.

Discipline 4: Reinforce Clarity. In order for an organization to remain healthy over time, its leaders must establish a few critical, nonbureaucratic systems to reinforce clarity in every process that involves people.

Discipline 1: Build a Cohesive Leadership Team

There's just no way around it. If an organization is led by a team that is not behaviorally unified, there is no chance that it will become healthy. But first, we need to get clear on what a leadership team really is.

So many teams I've encountered struggle simply because they're too large. A leadership team should be made up of somewhere between three and 12 people, though anything over eight or nine is usually problematic. There is nothing dogmatic about this size limit. It is just a practical reality.

Now that I've put forward a general definition of what I mean by a leadership team, let's focus on the steps for building a cohesive one. At the heart of the process lie five behavioral principles that every team must embrace:

Behavior 1: Building Trust

Members of a truly cohesive team must trust one another.

Many people think of trust in a predictive sense; if you can come to know how a person will behave in a given situation, you can trust him or her. As laudable as that might be, it's not the kind of trust that lies at the foundation of building a great team.

The kind of trust that is necessary to build a great team is what I call vulnerability-based trust. This is what happens when members get to a point where they are completely comfortable being transparent, honest and naked with one another, where they say and genuinely mean things like, "I screwed up," "I need help," "Your idea is better than mine," and even, "I'm sorry."

At the heart of vulnerability lies the willingness of people to abandon their pride and their fear, to sacrifice their egos for the collective good of the team. While this can be a little threatening and uncomfortable at first, ultimately it becomes liberating for people who are tired of spending time and energy overthinking their actions and managing interpersonal politics at work.

As important as it is for all members of a leadership team to commit to being vulnerable, that is not going to happen if the leader of the team, whether that person is the CEO, department head, pastor or school principal, does not go first. If the team leader is reluctant to acknowledge his or her mistakes or fails to admit to a weakness that is evident to everyone else, there is little hope that other members of the team are going to take that step themselves.

Behavior 2: Mastering Conflict

Contrary to popular wisdom and behavior, conflict is not a bad thing for a team. In fact, the fear of conflict is almost always a sign of problems.

Even when teams understand the importance of conflict, it is frequently difficult to get them to engage in it. That's how powerful our cultural aversion is to discom-

fort. In order to break through that aversion, there are a few things that a team leader can do.

One of the best ways for leaders to raise the level of healthy conflict on a team is by mining for conflict during meetings. This happens when they suspect that unearthed disagreement is lurking in the room and gently demand that people come clean.

Another tool for increasing conflict is something I refer to as real-time permission. The idea here is that people need to get immediate feedback, the positive kind, when they start to try out this approach to conflict. And no matter how minor the nature of that initial conflict might seem, it is going to be uncomfortable.

Behavior 3: Achieving Commitment

The reason conflict is so important is that a team cannot achieve commitment without it. People will not actively commit to a decision if they have not had the opportunity to provide input, ask questions, and understand the rationale behind it. Another way to say this is, "If people don't weigh in, they can't buy in."

Most leaders have learned the art of passive agreement: going to a meeting, smiling and nodding their heads when a decision is made that they don't agree with. They then go back to their offices and do as little as possible to support that idea. The impact of this is often embarrassing and costly for the organization.

The only way to prevent passive sabotage is for leaders to demand conflict from their team members and to let them know that they are going to be held accountable for doing whatever the team ultimately decides.

Behavior 4: Embracing Accountability

Even well-intentioned team members need to be held accountable if a team is going to stick to its decisions and accomplish its goals.

Peer-to-peer accountability is the primary and most effective source of accountability on a leadership team.

When team members know that their colleagues are truly committed to something, they can confront one another about issues without fearing defensiveness or backlash. After all, they're merely helping someone get back on track or seeking clarity about something that doesn't seem right. And the person being questioned about her behavior or performance will be willing to admit that she has inadvertently lost her way — after all, she's vulnerable — and adjust her behavior accordingly.

Behavior 5: Focusing on Results

The ultimate point of building greater trust, conflict, commitment and accountability is one thing: the achievement of results. What would members of an executive team be focused on if not the results of their organization? Well, for one, the results of their department. Too many leaders seem to have a greater affinity for and loyalty to the department they lead rather than the team they're a member of and the organization they are supposed to be collectively serving.

The only way for a leader to establish this collective mentality on a team is by ensuring that all members place a higher priority on the team they're a member of, than the team they lead in their departments. A good way to go about this is simply to ask them which team is their first priority. Many well-intentioned executives will admit that in spite of their commitment to the team that they're a member of, the team they lead is their first priority. This is absolutely natural, common, and understandable. And dangerous.

When members of a leadership team feel a stronger sense of commitment and loyalty to the team they lead than the one they're a member of, then the team they're a member of becomes like the U.S. Congress or the United Nations: it's just a place where people come together to lobby for their constituents. Teams that lead healthy organizations reject this model and come to terms with the difficult, but critical, requirement that executives must put the needs of the higher team ahead of the needs of their departments. That is the only way that good decisions can be made about how best to serve the entire organization and maximize its performance. ●

Discipline 2: Create Clarity

The second requirement for building a healthy organization — creating clarity — is all about achieving alignment. This is a word that is used incessantly by leaders, consultants and organizational theorists, and yet, for all the attention it gets, real alignment remains frustratingly rare.

A big part of the reason for the failure to gain alignment has to do with the fact that, like so many other popular terms, people use it without being specific about what they mean.

The point is that alignment and clarity cannot be achieved in one fell swoop with a series of generic buzzwords and aspirational phrases crammed together. Leaders simply cannot inspire, inform, motivate, market, and position their companies in the context of a T-shirt or lucite tschotske. Clarity requires a much more rigorous and unpretentious approach.

Let's take on each of the six critical questions that leaders must answer in order to create clarity and build a healthy organization.

Question 1: Why Do We Exist?

An organization's core purpose — why it exists — has to be completely idealistic. I can't reiterate this point enough. Employees in every organization, and at every level, need to know that at the heart of what they do lies something grand and aspirational. They're well aware that ultimately it will boil down to tangible, tactical activities.

Two companies that are in the same industry will often have different reasons for existing. That makes sense. However, it's also interesting to understand that two companies in completely different industries can share the same purpose. For instance, both a hospital and a masseuse could very well exist to alleviate pain and suffering in the world.

Question 2: How Do We Behave?

The word intolerance isn't often used in a positive way in society. And yet when it comes to creating organizational clarity and alignment, intolerance is essential. After all, if an organization is tolerant of everything, it will stand for nothing.

An important key to identifying the right, small set of behavioral values is understanding that there are different kinds of values. Among these, core values are by far the most important and must not be confused with the others.

Core values are the few — just two or three — behavioral traits that are inherent in an organization. Core values lie at the heart of the organization's identity, do not change over time, and must already exist. In other words, they cannot be contrived.

Question 3: What Do We Do?

This question is the simplest of the six and takes the least amount of time and energy to address. The answer lies at the opposite end of the idealism scale from why an organization exists and is nothing more than a description of what an organization actually does. No flowery adjectives or adverbs here. Just an unsexy, one-sentence definition — something your grandmother can understand. The answer to this question is something we call an organization's business definition (but never a mission statement!).

If an organization's reason for existence answers the question, Why?, then its business definition answers the question, What? It's critical that it be clear and straightforward. It should not be crafted so that it can also be used in marketing material.

Six Critical Questions to Gain Clarity

What leaders must do to give employees the clarity they need is to agree on the answers to six simple but critical questions:

- Why do we exist?
- How do we behave?
- What do we do?
- How will we succeed?
- What is most important, right now?
- Who must do what?

Question 4: How Will We Succeed?

When team leaders answer this question, essentially they are determining their strategy. Unfortunately, more than any word in the business lexicon, strategy is one of the most widely employed and poorly defined.

Essentially, an organization's strategy is simply its plan for success. It's nothing more than the collection of intentional decisions a company makes to give itself the best chance to thrive and differentiate from competitors. That means every single decision, if it is made intentionally and consistently, will be part of the overall strategy.

But that definition is not particularly actionable or useful for guiding the decisions of leaders and employees. The best way for an organization to make strategy practical is to boil it down to three strategic anchors that will be used to inform every decision the organization makes and provide the filter or lens through which decisions must be evaluated to ensure consistency. Strategic anchors provide the context for all decision making and help companies avoid the temptation to make purely pragmatic and opportunistic decisions that so often end up diminishing a company's plan for success.

Identifying Anchors

The best way for leaders to go about finding their strategic anchors is to take a reverse-engineering approach and extract them from everything that they know to be true about their organization. They need to start by creating an exhaustive list of all the decisions and realities that form the context of their current situation. This will include anything beyond the organization's reason for existence, core values and business definition.

Unlike a company's reason for existing and core values, which never change, and the business definition, which changes fairly infrequently, an organization's strategic anchors should change whenever its competi-

tive landscape shifts and market conditions call for a different approach. How often this happens will vary depending on the nature of a given organization's market or industry.

In some cases, one of an organization's strategic anchors may not yet be on the list because it isn't part of what the organization is currently doing, so it needs to be added. That's why it's important for an organization to realize that the process of identifying strategic anchors should not be completely reactive or historical. Sometimes it is the very process of identifying strategic anchors that alerts an organization to the fact that what it is currently doing isn't right or isn't enough to ensure success and differentiation, and so a change is needed.

Question 5: What is Most Important, Right Now?

More than any of the other questions, answering this one will have the most immediate and tangible impact on an organization, probably because it addresses two of the most maddening day-to-day challenges companies face: organizational attention deficit disorder and silos.

Of course, to say that there are too many top priorities is something of an oxymoron. After all, for something to be the top priority, it has to be more important than everything else. The point here is that every organization, if it wants to create a sense of alignment and focus, must have a single top priority within a given period of time.

I had been hearing so many of my clients complain about the silos within their organizations that I decided I should try to solve that problem.

Then I realized that there was a certain category of organization that seemed to rise above the silo problem — emergency responders. These include firefighters, emergency room doctors and nurses, soldiers, even police officers in the midst of a dangerous situation.

What these groups have in common is a crisis — a clear and present situation of great and immediate consequence. What a crisis provides for an organization is a rallying cry, a single area of focus around which there is no confusion or disagreement.

The Thematic Goal (a.k.a. The Rallying Cry)

I decided that there is no reason that every organization couldn't have a rallying cry, even when it is not in crisis. I called this rallying cry "a thematic goal" because it needs to be understood within the context of the organization's other goals, at the top of the list. And so, the thematic goal is the answer to our question, *What is most important, right now?* A thematic goal is:

Singular. One thing has to be *most* important, even if there are other goals under consideration.

Qualitative. The thematic goal should almost never be established with specific numbers attached to it.

Temporary. A thematic goal must be achievable within a clear time boundary, almost always between three and 12 months.

Shared across the leadership team. When executives agree on their top priority, they must take collective responsibility for achieving it, even if it seems that the nature of the goal falls within one or two of the executives' regular areas of ownership.

Defining Objectives

Realizing the benefits of having a clear and collective focus requires more than merely identifying the thematic goal. That goal must then be further clarified by defining the objectives that will make accomplishing it possible. I call these defining objectives.

Defining objectives are the general categories of activity required to achieve the thematic goal. Like the thematic goal, defining objectives must be qualitative, temporary and shared by the leadership team. They provide a level of specificity so that the thematic goal isn't merely a slogan but rather a specific and understandable call to action. In most cases, there are between four and six defining objectives, depending on the nature of the goal itself.

Once teams identify their defining objectives, they have to take on the next, and last, step in the thematic goal process: identifying their standard operating objectives. These are the ongoing and relatively straightforward metrics and areas of responsibility that any leadership team must maintain in order to keep the organization afloat.

Coming up with standard operating objectives is not terribly difficult because they are usually somewhat obvious. In for-profit companies, they usually include categories like revenue, expenses, customer retention or satisfaction, product quality, cash flow, morale or any other issues specific to a given industry.

Different kinds of organizations have different thematic goals, defining objectives, and standard operating objectives for a variety of reasons. However, what they all have in common is that their goals fit on a single sheet of paper.

Walking away with a single sheet of paper that lists a team's thematic goal, the defining objectives, and the standard objectives would give leaders the clear focus they need to align their actions and avoid distraction.

Question 6: Who Must Do What?

There is not a great deal to be said about this particular question, aside from warning leadership teams not to take it for granted. Although there is often clarity among executives in most organizations about who does what on the team, making assumptions about that clarity can lead to surprising and unnecessary problems.

Regardless of how clear or confusing a company's "org" chart may be, it is always worthwhile to take a little time to clarify so that everyone on the leadership team knows and agrees on what everyone else does and that all critical areas are covered. ●

Discipline 3: Overcommunicate Clarity

Once a leadership team has become cohesive and worked to establish clarity and alignment around the answers to the six critical questions, then, and only then, can they effectively move on to the next step: communicating those answers. Or better yet, overcommunicating those answers.

The need for repetition is not a testament to undue cynicism on the part of employees; it is the result of the generic, almost spoof-like communication that takes place within so many organizations.

The problem is that leaders confuse the mere transfer of information to an audience with the audience's ability to understand, internalize and embrace the message that is being communicated. The only way for people to embrace a message is to hear it over a period of time, in a variety of different situations, and preferably from different people. That's why great leaders see themselves as Chief Reminding Officers as much as anything else. Their top two priorities are to set the direction of the organization and then to ensure that people are reminded of it on a regular basis.

Cascading Communication

Someone once told me that the best way to ensure that a message gets communicated throughout an organization is to spread rumors about it. Therefore, they concluded, leaders simply out to go out and tell "true rumors." As silly as that may sound, it is the basis for the most important means of communication within a healthy organization.

The most reliable and effective way to get an organization moving in the same direction is for members of a leadership team to come out of their meetings with a clear message about what was decided, promptly communicate that message to their direct reports, and have those direct reports do the same for their own direct reports. We call this "cascading communication" because it begins the structured but interpersonal process of rolling key messages down through the organization directly from the leadership team.

There are three keys to cascading communication: message consistency from one leader to another, timeliness of delivery, and live, real-time communication. This starts toward the end of leadership team meetings, a time when executives are usually trying their best to get out the door. That's when someone needs to ask the sixty-four-thousand-dollar question: "Hey, what are we going to go back and tell our people?"

For the next few minutes, sometimes longer, leaders need to review their discussions from the meeting and decide which of their decisions are ready to be communicated and which are not. We refer to this as "commitment clarification," for obvious reasons. Often it's during this process that they discover that they were not on the same page about what they had decided. This will certainly take more time, but the cost of not doing it is often great. ●

Discipline 4: Reinforce Clarity

As important as overcommunication is, leaders of a healthy organization cannot always be around to remind employees about the company's reason for existing, its values, and so on. In order to ensure that the answers to the six critical questions become embedded in the fabric of the organization, leaders must do everything they can to reinforce them structurally as well. The way to do that is to make sure that every human system — every process that involves people, from hiring and people management to training and compensation — is designed to reinforce the answers to those questions.

The fact is that the best human systems are often the simplest and least sophisticated ones. Their primary purpose is not to avoid lawsuits or emulate what other companies are doing, but rather to keep managers and employees focused on what the organization believes is important. That's why a one-page, customized performance review form that managers embrace and take seriously is always better than a seven-page, sophisticated one designed by an organizational psychologist.

This point cannot be overstated. Human systems are tools for reinforcement of clarity. They give an organization a structure for tying its operations, culture and management together, even when leaders aren't around to remind people. And because each company is differ-

ent, there are no generic systems that can be downloaded from the Internet. ●

The Centrality of Great Meetings

An organization that has embraced each of the four disciplines will certainly become healthy, making success highly likely. But one activity, more than any other, will be central to maintaining those disciplines and sustaining health.

No action, activity or process is more central to a healthy organization than the meeting. As dreaded as the "m" word is, as maligned as it has become, there is no better way to have a fundamental impact on an organization than by changing the way it does meetings.

So what kinds of meetings does the leadership team of a healthy organization have? There are four basic types: daily check-ins, tactical staff meetings, ad hoc topical meetings and quarterly off-site reviews.

Whenever executives challenge me about the practicality of having four different meetings on a regular basis, I ask them to add up all the time that they would spend in those meetings in a given month.

If we apply the model in the most time-intensive way possible (a full 10 minutes each day in check-in meetings, 2 hours each week in tactical staff meetings, 6 hours each month in topical meetings, and 2 days each quarter in developmental review meetings), the grand total of time amounts to about 1,560 minutes, or 12 hours per month.

Assuming a 50-hour workweek, that amounts to just 13 percent of our time. If you work just 45 hours per week, then it's 14 percent. That means even when we're spending the maximum amount of time at each meeting, more than 85 percent of our time is still available for whatever else we do.

Finally, it's worth asking, *What else should leaders be doing besides going to meetings?* E-mail? Analysis? Customer visits? OK, there are certainly times and places for these. But a leader's first priority is to create an environment where others can do these things and that cannot happen if they are not having effective meetings.The truth is, if executives are having the right kind of meetings, if they're driving issues to closure and holding one another accountable, then there is much less to do outside meetings, including managing their direct reports. ●

Seizing the Advantage

As more and more leaders come to the realization that the last frontier of competitive advantage will be the transformation of unhealthy organizations into healthy ones, there will be a shift in the mind-set of executives away from more technical pursuits that can be delegated to others and toward the disciplines we've outlined here.

There is just no escaping the fact that the single biggest factor determining whether an organization is going to get healthier — or not — is the genuine commitment and active involvement of the person in charge. For a company, that's the CEO; for a small business, it's the owner; for a department within a company, it's the department head.

As tempting as it may be, leaders must not abdicate or delegate responsibility for communication and reinforcement of clarity. Instead, they have to play the tireless role of ensuring that employees throughout the organization are continually and repeatedly reminded about what is important. And they must be on guard against contradictory and inconsistent processes that can confuse employees and against bureaucracy that can creep into an organization when people get complacent.

If all this sounds daunting, it's because it is. People who lead healthy organizations sign up for a monumental task — and a very selfless one. That is why they need to relinquish their more technical responsibilities, or even their favorite roles, that others can handle. Because when an organization is healthy (when the leader at the top is doing his or her most important job), people find a way to get things done. When an organization is unhealthy, no amount of heroism or technical expertise is going to make up for the confusion and politics that take root.

At the end of the day, at the end of our careers, when we look back at the many initiatives that we poured ourselves into, few other activities will seem worthy of our effort and more impactful on the lives of others, than making our organizations healthy. ●

Defining the Leadership Journey

THE ARC OF AMBITION

THE SUMMARY IN BRIEF

What drives some people to accomplish spectacular things, to fulfill aspirations beyond anyone's expectations and to make a lasting impression upon everyone around them? For authors James Champy, the former head of CSC Index and co-author of *Reengineering the Corporation,* and Nitin Nohria, a professor of business administration at the Harvard Business School, the answer is ambition. They believe that ambition is the key ingredient that transforms a simple idea into a global business, topples an empire, or turns a family of immigrants into a financial dynasty.

Most of us dream of greatness from an early age. We envision growing up to be like our role models, whether they are our parents, teachers or athletes. We are further inspired as we read our schoolbooks and learn about national heroes such as Abraham Lincoln, Rosa Parks and Sally Ride. All of these experiences nurture the seedling of ambition that was planted at birth.

Yet, people have always had ambivalent feelings about ambition. Although we recognize that it is essential, we regard it as slightly dangerous. We don't approve of those who abuse it, but we don't respect those who lack it. However, history confirms that ambition is more often good than bad. In fact, good ambition is the lifeblood of human achievement.

In this summary you will learn what ambition is and how to use it to accomplish great things for yourself, your family and your company. Specifically, you will learn about the fundamental abilities that can take you up the arc of ambition, including:

- Seeing what others don't.
- Recognizing when to seize the moment.
- Never violating your values.
- Keeping control by giving it up.
- Leaving gracefully.

The habits and practices of ambitious people aren't innate; they can be learned. If you are ready to embark on a journey that can take you to the top of the arc of ambition, turn the page.

THE ARC OF AMBITION

by James Champy and Nitin Nohria

— THE *COMPLETE* SUMMARY

Ambition Is the Root of All Achievement

People have always been ambivalent about ambition. We see it as dangerous yet essential. We disapprove of those who abuse it, but we dismiss those who lack it. We see too little of it as a failing, too much of it as a sin. Simply put, ambition is what makes us go.

Almost everyone dreams of doing something special, whether it's building a new Internet company, writing a novel or going into politics. Whatever the size of your goal, it is driven by ambition. And that ambition, as shown by the study of the careers of great achievers, follows a predictable arc.

The curve of the arc of ambition, as the authors call it, isn't necessarily the same for everyone. For some, the rise is slow. It was for Sam Walton, who didn't open his first Wal-Mart store until he was 44 years old. For others, the curve rises quickly, often at a surprisingly early age. Michael Dell started producing custom-built personal computers in his college dorm room.

The first segment of the arc is the *rise* of ambition — the initial dream and the perseverance and courage that must be exercised in the pursuit of that dream. The second section of the arc covers the *apex* of ambition, as an individual tries to build something bigger than himself. It could be a business, a university or a country. The third section confronts the *decline* of ambition, the time when every achiever must cope with his or her toughest challenges. By studying achievers and understanding what makes them accomplish so much, you can learn how to best achieve your personal ambitions, whatever they may be.

Creators, Capitalizers and Consolidators

Ambition is the catalyst that ignites daring achievers and converts the ordinary into the extraordinary. Ambitious individuals tend to emerge when a new technology or way of thinking sweeps the world. During these times, three archetypal figures emerge. These ambitious men and women are creators, capitalizers and consolidators.

Creators are true innovators who pioneer a new technology to the point of making an old field technically obsolete. In the arts, dancers like Isadora Duncan and Martha Graham are creators. So was Ernest Hemingway, whose terse style broke the Victorian hold on novel writing. In the sciences, Albert Einstein and Jonas Salk were creators.

Capitalizers come next. They market the new technology so energetically that a whole new infrastructure is required to accommodate its distribution. For example, the nation's electronic subsystem has been rebuilt three times in the last 70 years by capitalizers who found new uses for innovations, going from telegraph to telephone to cable to satellite to the Internet.

Finally come the **consolidators,** the professional managers in business and the museum curators and theater producers in the arts who make new technologies work consistently and profitably. Ultimately, however, consolidators tend to look inward rather than outward to customer needs, and they lose their creative impulses. The stage is then set for a new wave of creators as the cycle repeats itself.

(continued on page 3)

Do Achievers Make History or Vice Versa?

Some philosophers have argued that heroes shape events, while others argue that events shape heroes. The truth is probably somewhere in between. After all, if Madame Curie had not discovered radium, wouldn't someone else have? On the other hand, had not Abraham Lincoln become President, would the United States still exist?

Achievers arise from a rich ragout of unpredictable ifs. **If** people have the talent and the training, **if** they are in the right place at the right time, and **if** they have the inner drive we call ambition, they may succeed and hold onto their success.

The authors: A pioneer of the reengineering movement, James Champy co-authored *Reengineering the Corporation*. Nitin Nohria is Richard P. Chapman professor of business administration at Harvard Business School and author of the award-winning *The Differentiated Network.*

Ambition Is the Root of All Achievement

(continued from page 2)

The Arc of Ambition

The rise and fall of an individual's arc of ambition can be reduced to a series of stages. These stages are:

✓ **Seeing what others don't.** The arc begins when someone sees something others don't. A fresh insight of discovery springs forth. In an ambitious person, the idea is transformed into something that is possible. From this, there emerges a belief that hard work must and will make it happen.

✓ **Following a steadfast path.** Success often comes after a series of setbacks. To achieve success, you must learn to be stubborn. The road to success requires perseverance, optimism and an unquenchable hope that the moment of opportunity will come.

✓ **Seizing the moment.** Dreamers become achievers when suddenly the moment they have been waiting for looms ahead and they seize the opportunity.

✓ **Tempering ambition.** At some point along the arc, as you near the apex, you run the danger of losing your balance. The key to successfully retaining your balance is setting ambitious goals you execute well.

✓ **Inspiring with a greater purpose.** To keep soaring along the rise of the arc, you need to transform your personal ambition into a broader purpose so that you inspire others to join in and contribute to the effort.

✓ **Never violating values.** When the point comes that you are tempted to cut corners to get further ahead, pause and consider the consequences. There is no more certain way to hasten a fall down the arc.

✓ **Keeping control by giving it up.** The only way to keep control is by giving some of it away. Fear chills minds and kills companies.

✓ **Changing or perishing.** Change is inevitable. Do not become complacent, or the competition will whittle away at your success.

✓ **Leaving gracefully.** We all get old and die. When you have created a lasting legacy, don't hesitate to step down with grace. ■

Something New From Something Old

A café that serves coffee is hardly new. Building 2,000 cafes that consistently offer superb coffee in attractive settings is distinctly new. Howard Schultz turned that idea into Starbucks, creating a new social institution in the process.

Retail discounting isn't new either. But Sam Walton saw the possibility of lowering prices further and further, while making service better and better. And he saw that rural America might provide the best markets from which to realize his dream.

Similarly, Ted Turner did not create the idea of news, but repackaged it as television news 24 hours a day. Schultz, Walton and Turner all saw something others didn't see and made it into an entirely new business.

See What Others Don't

For centuries, human flight has been a tantalizing fantasy. In Greek mythology Daedalus and Icarus dreamed of flying away from King Midas' prison. Daedalus created wings made of feathers and wax to aid their escape, and away they soared until Icarus, the disobedient son, flew too close to the sun and fell to his death as the wax melted. The legend implies that a creative mind can achieve the impossible provided it sees what others cannot see and avoids the danger of hubris. The story of Daedalus and Icarus is a metaphor for ambition.

Achievement is about seeing beyond the conventions of the day. Achievers ignore the boundaries of the old and have the courage to explore the new. They see something others don't. Sometimes that something is an intellectual meteor, like Albert Einstein's theory of relativity. Sometimes it's as simple as taking a familiar form and turning it into something new and wholly original.

What unites all achievers is their ability to see the world clearly, unhindered by the fear of obstacles. When others see roadblocks, achievers find ways of getting around them. They follow through on ambitious dreams with action. They find a way to act, either by directly confronting the obstacle or by taking incremental first steps around it.

Achieving the Impossible

Achievers dare to fly in the face of disbelief. Consider the case of the Wright brothers. The two brothers achieved what others had only dreamed of: human flight. Together, they revolutionized transportation and warfare for all time.

The Wright brothers grew up in Ohio and never graduated from high school. But they did have a knack for mechanics. In 1894 they read about the first successful human glider and decided that they wanted to try something similar. Over the next few years they experimented with different configurations until they finally found a way to get a glider off the ground.

But they didn't stop there. Instead, they refocused on powered flight. On December 17, 1903, they took the world's first powered flights. By 1908 they had a contract with the War Department to produce airplanes that

(continued on page 4)

See What Others Don't

(continued from page 3)

were to fly 40 miles an hour.

Begin With the Possible

If you want to rise along the arc of ambition, you need to take your impossible vision and begin the ascent with what is possible. This is the resolve that drove Judy George, founder of Domain, Inc., a chain of upscale furniture stores on the East Coast. Her dream, begun in childhood, was to create a tranquil and beautiful home unlike the one she grew up in. Today almost everyone who walks into her stores responds to the atmosphere of comfort and serenity she has created.

Judy spent ten years building someone else's furniture company, a $100 million a year success story. Then she was fired. Her reaction was to create a business plan, impress venture capitalists, and launch her own chain. Her goal: to enrich family life, not just sell sofas. ■

Abraham Lincoln Finds a General

When commanders like George McClellan disappointed Abraham Lincoln, he sought out a more ambitious general. He found Ulysses S. Grant, an unpretentious genius of few words but a clear sense of courage. Where other generals feared confronting a seemingly superior enemy, objectivity gave Grant an advantage. He knew that both sides feared the other, and he used that fear as the great equalizer.

Follow a Steadfast Path

It takes a strong character and a lot of willpower to hold onto a dream under adverse circumstances. Success simply doesn't come easily; perseverance is essential. Without the ability to persist, you won't make it up the arc of ambition. That idea may seem old-fashioned, but it still holds true.

Dreams and determination combine to produce greatness. You need only consider the journey of Nelson Mandela to understand the road to achievement. Mandela's dream of transforming the racist society of South Africa into a multiracial democracy lasted more than 50 years. His determination to advance that dream, to keep fighting despite intense torments to both his people and himself, carried him to a day in May 1994 when he became president of South Africa.

Optimism Can Be Learned

Constantly moving toward a goal, even if the steps are small, will eventually bring success. If you want success to come, you must remain optimistic. Optimism keeps the mind wide open to opportunities. It helps to view setbacks as temporary, to reject stereotypes of what success looks like, and to not internalize defeat. Those are exactly the characteristics that kept Mandela's dream of a united South Africa alive. When he was imprisoned for his political activities, he viewed his sentence as a temporary defeat, even though it ultimately lasted 27 years. He refused to accept the stereotypes that all whites were racists, thus allowing him to build support in the white South African community. Finally, he refused to internalize defeat, despite confinement in a maximum-security prison on an escape-proof island. He continued to see himself as his people's leader, despite his prison isolation.

Optimism can be learned. It just requires you to make a concerted effort to change how you see things. A huge proportion of success, perhaps as much as 60 percent, is a matter of attitude, positive thinking, and seeing in your mind's eye that things are sure to come to a good end. The rest of success is perseverance begetting good luck.

Achievers share an appetite for learning from the success of others and from their own mistakes. Those who never stop learning are the ones who move forward. ■

Sam Walton and the Rise of Wal-Mart

Perhaps no modern day businessman exemplifies lifelong learning better than Sam Walton. Originally a small-town merchant, he became one of the richest men in business history. He rose from rural poverty to business triumph as he created the world's largest discount chain. Today there are over 3,000 Wal-Marts worldwide.

After returning from a stint in the military during World War II, Walton bought a Ben Franklin five-and-dime store in Arkansas. Within three years, the store was bringing in double what it had when he bought it. Almost immediately, Walton realized the value of volume sales. Within six years, Walton's Ben Franklin was the most profitable in a six-state region. Next, he bought another Ben Franklin, and another, until he had six. Then, in 1962, he opened his own discount store, the first Wal-Mart. By 1979, there were 230 stores.

Walton didn't stop with Wal-Mart. He took note of a new wholesale format, pioneered by a California retailer, Sol Price's Price Club, and added Sam's Club to his retail empire. By the time he died, Walton was the richest man in the United States.

Seize the Moment

At some point on the way up the arc of ambition, a moment will come when opportunity stares you in the face. The action you take at that moment determines whether you will succeed or be left with just your dreams. To seize the moment, you must be prepared. Hard work in preparation for that moment is what can fix the odds in your favor.

Consider the case of Thomas Jefferson. In 1803 he was the president of a fledgling republic with no power, little cash and few prospects. Nonetheless, he had a vision of a great country. When opportunity presented itself in the form of an offer from Napoleon to purchase the Louisiana territory, he seized the moment and bought the land. With that purchase, Jefferson set the stage for the growth of a great nation.

You won't recognize opportunity unless you obtain the proper knowledge. Knowledge can even turn what would otherwise be foolish risks into acceptable opportunities. With knowledge, what may seem like foolhardy risks to others may actually be calculated and measured risks to someone prepared.

Timing is crucial when it comes to seizing opportunities. You can't seize the right opportunity at the wrong moment, nor will the opportunity hang around while you dither for the right moment. When daring is augmented by a shrewd sense of timing and a vision unseen by others, ambition flourishes. Business is risky, but if you are to make your vision a reality, you must take action when an opportunity dangles before your eyes.

Ambitious Achievers Make Their Own Breaks

Sometimes opportunity doesn't appear out of nowhere. You must seek it out, creating your own break. Consider Ray Kroc, the moving force behind fast food giant McDonald's. He didn't create the first McDonald's, but he did recognize its promise when he saw it. When he heard about a new kind of restaurant that had just opened in Pasadena, California, he immediately went to check it out. What he found was a clean restaurant with fast-moving lines and very satisfied customers. Visions of McDonald's restaurants dotting the country paraded through his head. Within a week, he was the owners' national franchise agent. Like many other ambitious achievers, he thought big when others thought small. He spotted a trend.

Trend spotting is another skill you can develop. It is a talent best honed by constant focus on new developments, sustained by a zest for catching the next wave early. In other words, you must develop a knack for being active, engaged and a master of what's happening. Achievers learn to use sharp senses to spot opportunity-laden trends.

To develop your sense for what will be the next new thing, you must be out in the world, ear to the ground, nose to the wind, eyes and mind open to signs of what millions will care and talk about before they know they will. Train yourself to listen and watch and then act on what you see and hear. ■

Trend-master Ted Turner

Ted Turner is probably the greatest trend spotter of our age. After taking over his father's failing outdoor sign business, he started buying radio stations. Then he moved on to television. After buying first one, then a second station, he began negotiating a satellite hook-up with RCA. At that time, cable television was still in its infancy. When the Atlanta Braves came up for sale at a bargain price, he bought them, figuring he could use his stations to broadcast games.

In the late 1970s three television networks still controlled about 90 percent of the market. Ted Turner sensed that the nature of the family was changing. Soon, he reasoned, mom, dad and the kids would not be gathered around the television for the evening news. Their active lifestyle would require that news be delivered when they could see it, not on a network's schedule. On June 1, 1980, he launched the Cable News Network. By 1981, CNN was reaching 10 million homes. Today, CNN dominates broadcast news and is seen in 210 countries.

Next, Turner launched Turner Network Television (TNT). He planned to show movies anytime and all the time. By 1996, Turner was able to sell TNT to Time Warner, making him one of the 50 richest people in the United States.

Temper Ambition

Is there such a thing as too much ambition? Many would say that the answer certainly is yes, that unbridled, unmitigated ambition can lead to folly of historic magnitude. The ability to walk a high wire — to risk all without failing — is rare in business. You must master your own limitations, learning to be neither cowed nor seduced by heady opportunities. Don't begin believing you are invincible or you may pay a huge price for self-delusion.

A startup business must be propelled by its founder's ambition, imagination and force of ego. But it can't survive unless you pay attention to the nuts and bolts of everyday operations. Business is grounded in reality. Ambitious business leaders get in trouble when they tell their employees to get results and then don't monitor

(continued on page 6)

Temper Ambition

(continued from page 5)

how those results are obtained.

Perhaps you dream of spectacular growth for your enterprise. This is the time your rise up and over the arc of ambition may be most tenuous. You need realism and discipline during times of giddy growth. We all want it: more money, more power, more pleasure. But growth has real limits. In business, growth also brings bureaucracy. In the end, a nimble upstart one-tenth your size may prove your undoing.

Dream-Killing Realities

Achievers are at risk of drowning in egotism. They tend to be gifted, dynamic people who have in some measure earned their large egos. But an overactive ego can kill dreams. You must devise a checklist of dream-killing realities if you intend to stay at or near the top of the arc of ambition. Your checklist should include the following:

✓ **Time.** There are only so many hours in the day, and decisions made after 48 sleepless hours are rarely solid ones. Recognize that time will limit you, and work within reasonable time limitations.

✓ **Talent.** You must become adept at identifying other people with talent. If you refuse to delegate work to others, you will find yourself stretched too thin, and things will slip through the cracks.

✓ **Momentum.** Be aware that when you reach the top you may lose momentum. Maintain an enthusiastic outlook.

✓ **Risk.** Don't expect to dominate your field forever. You are always at risk that someone with a better idea or better follow through will catch and surpass you. ■

Ambition Undone by Greed

Two years after he led Republicans to a sweeping victory in the House of Representatives, Newt Gingrich was forced to resign from his position as Speaker of the House. Why? In large part, because he let ambition and power get the best of him. Shortly after he was made to exit Air Force One by the back door rather than the front, he shut down the government during a budget impasse. The childish stunt led to his fall from grace. Gingrich, of course, is not the only recent politician undone by hubris while at the pinnacle of the arc of ambition. President Clinton may not fare well in history after his affair with a young woman half his age.

Making a Business of Respect

There is probably no more public example of someone who has focused on the environment than Tom Chappell. His "Tom's of Maine" line of products, including everything from soap to toothpaste, contain no ingredients that can damage the environment. Chappell founded his company on the belief that people and nature deserve respect. In framing his greater purpose and imbuing the company with a sense of his mission, he has strengthened both the organization and its ties to him as the founder.

Inspire with a Greater Purpose

People who reach exceptional heights usually share a sense of a clear goal, a compelling purpose that serves as true north. The most satisfying purpose goes beyond making money and toward a quest for a higher good. A "right" purpose can lead you to an enriched life, as it galvanizes many people working together for a vital cause that gives all of them a sense of meaning.

The need for meaning drives every human to create, to build, to pursue achievement. A worthy cause holds enormous appeal. Many great achievers have viewed their goals as a calling and pursued them with a sense of mission. However, your purpose need not be extravagant or all encompassing to be meaningful. Your gift to the world might well be an honest car dealership or a reliable hardware store.

> ***The need for meaning drives every human to create, to build, to pursue achievement.***

A purposeful ambition will survive even great hardship, whereas a less purposeful one will quickly die. There are eight practical ways that you can elevate your ambitions to a higher purpose. They are:

- ✓ **Achieve excellence in whatever you do.**
- ✓ **Create great value.**
- ✓ **Empower the individual.**
- ✓ **Improve the human condition.**
- ✓ **Create fun and pleasure.**
- ✓ **Invent the future.**
- ✓ **Use profits for the public good.**
- ✓ **Improve the environment.**

If you emulate successful businesspeople, politicians and other ambitious achievers who stay true to their chosen path, you will be imbued with a sense of purpose. This sense of purpose can take the form of financial support for the environment, culture or education. ■

Never Violate Values

Compromise is bad for ambition. You will inevitably face right versus wrong choices. The right decision may even be costly, the wrong one easy. But your integrity is too precious to squander on short-term gains. When you violate moral or ethical values you say you believe in, you are headed for a slippery slope, sliding from bad to worse.

The strength of long-held moral values prompts right actions even when one might least expect it. Consider the case of Floyd Mann and Congressman John R. Lewis. During the height of the civil rights movement, Lewis arrived in Montgomery, Alabama, as a "freedom rider." Mann, who was the state's public safety commissioner, and a staunch segregationist, accompanied the riders.

When the freedom riders got off their bus, an angry white crowd greeted them. Lewis and a fellow rider were knocked unconscious. Mann, the dedicated segregationist who had sworn to keep order, did just that. He marched into the angry mob and demanded they stop, probably saving the men's lives. He did so because of his strong conviction for the rule of law.

Strong values can help establish business purposes by ensuring customers are treated fairly. Your reward, of course, is that you earn their loyalty. One excellent way to establish strong business values is to develop a company code of conduct or other statement of values.

Not an Abstract Exercise

Dealing with ethical values is not an abstract exercise. What do you do, for instance, if a valued employee is caught taking favors from a vendor looking for more business? Doing the right thing at a high cost is a task worthy of Solomon, but you must do it. What you preserve is far more valuable than the employee you fire for violating company rules. What you preserve is the company's image and reputation.

Unparalleled integrity is not at odds with success. Rather, you will find that as your reputation for strength of character becomes common knowledge, others will flock to your side, sometimes from unexpected places. But remember that even highly principled people sometimes make a wrong turn. If you do, be assured that correcting it can still yield a positive outcome. An example of a wrong turn later corrected is Intel's initial decision to ignore a minor "bug" in a new computer chip. Although the flaw would affect very few computer users, when the word got out there was pandemonium. Intel did an about-face and offered to replace the chip for anyone who wanted a new one. It was expensive, but in the end it was the right decision. ■

Keep Control by Giving It Up

Clinging to power is a temptation that is hard to resist. Yet, sharing power is the only way to open an enterprise to its full growth potential. Replacing autocracy with partnership releases human potential. Remember that your power derives mainly from being able to inspire others. Don't assume that no one else can match your own ambition, competence or vision.

Make sure your advisors are honest, independent and perhaps even smarter than you. Condition them to tell you what you need to learn, not what you want to hear. But never let them forget that you are the person who is ultimately responsible for the toughest decisions.

Micromanaging Is Not Possible

From a practical point of view, it is simply not possible for you to run a complex company by micromanaging it from behind your executive desk. It may sometimes seem that autocracy pays off, but that is true only in the short term. If you are cold-blooded enough, you can terrify people into doing anything you demand of them, but tyrants, political or corporate, will eventually become so isolated that they are incapable of seeing reality. When that happens, their arcs of ambition inevitably curve south.

What you need is to be surrounded by people doing their best to achieve their goals — and yours. By challenging people with ever more responsibility and rewarding them with ever more praise, the ambitious leader can instill the kind of loyalty that empowers a work force. In fact, at a certain level, sharing control can transform the way people perceive their jobs. They sense that their fate is linked with the company's fate, which itself is entwined with the arc of ambition of their leader.

In fact, no leader of a company can ever have enough creativity, knowledge and time to make the right decisions alone. Your survival depends on sowing and reaping the brilliant work of others. By sacrificing the appearance of power, you achieve the substance — the real reward — of power. ■

Dreams and Ambitions

To attract the best, you must create conditions that allow them to pursue their own dreams and ambitions. Treat them as people free to pursue their most compelling ideas. You must recognize that a healthy balance of freedom and control sets the stage for peak accomplishment. The truth is that sharing power unleashes a new level of performance for everyone. When you enter into partnership with your key people, you will quickly discover that the whole is greater than the sum of its parts.

Change or Die

Knowing how and when to react to events is the secret to changing things for the better. The idea that you can do business at your own pace is a fantasy. Consider what would happen if you set up shop in an isolated village in Vermont serving only the local population. Suddenly a developer creates a lavish ski resort for thirty-something investment bankers. How do you save yourself? Perhaps the answer is to leave town. Or maybe you reinvent yourself as an epicurean or antiques emporium. But one thing is certain; you will have to change. Business is constantly changing whether you want it to or not. When you face tough competition, the answer is not to declare defeat, but to reorganize.

However, before you can meet the competition, you have to know what is out there. That means you must always be alert to the world outside your organization's walls. It isn't easy to know both when and how to face a challenge to your dominance in the market. You must become adept at "sensing," meaning adept at spotting trends and seizing opportunities ahead of your competitors. Thus, you become neither a victim of change nor a victim of tradition.

A more frequent challenge for an ambitious person is coping with defeat. When that happens and you fall from grace, you shouldn't assume that you have to get back in the saddle immediately. You may need time to weigh what happened and learn from your mistakes. A measured approach is the best way to increase the chances that your next attempt will succeed.

Change When Things Are Going Well

Sometimes the time for change is when things are going well. Consider the case of Sealed Air Corporation, the original patent holder for Bubble Wrap® wrapping and shipping paper. Given that the patent protected Sealed Air from competition, the company was in danger of becoming complacent. When they were still five years from the expiration of their patent, Sealed Air concluded a radical change was needed to inspire and transform the work force. Competition was inevitable in the future.

The CEO borrowed a large sum of money and paid it out as a one-time dividend to shareholders. He also dramatically increased employee stock ownership. It worked like a charm. By creating a controlled crisis (a huge debt load that required cost-cutting and productivity improvement to pay down), the company remained profitable and business boomed.

Sometimes you simply have to accept change and move ahead without regrets. If you can learn to fashion something constructive out of adversity, you will keep moving along your arc of ambition. ■

Leave Gracefully

Although few of us like to talk about it, we are not immortal. The same goes for our time as leaders. A graceful exit while at the peak of the arc of ambition is preferable to a quick slide down from the top.

A 1944 *Life Magazine* photograph captured for all time the way not to exit from the pinnacle of success. The photo depicts two military policemen hoisting a large executive chair and its occupant up in the air. Sewell Avery, then the deposed leader of Montgomery Ward, was sitting grimly in his chair as he was carried away. The military police were there because Avery had refused to obey a military wartime directive to sign a union contract. President Roosevelt ordered the U.S. Army to take over the company — minus Avery!

On the other hand, some business leaders have the sense to exit gracefully but never really leave. Sam Walton, for example, spent his retirement years cheerleading those he left in charge of his empire.

Unfortunately, some leaders not only don't leave gracefully, but they manage to sabotage the next generation. They do this by either not leaving at all or by making sure that what the next leaders need to know isn't passed on.

Those who leave while still in control are far more likely to leave a lasting legacy than those who have to be carried out. Decide how you want to exit, and when the time comes, go gracefully.

One of the most spectacular examples of a graceful exit is that of Andrew Carnegie. On the arc of ambition, he conceived and carried out his extraordinary achievements—to first get rich, then do good. He seized the moment to leave gracefully when opportunity presented itself in the form of a multimillion-dollar buyout offer from J.P. Morgan. He knew precisely when to fold his cards and pocket his winnings. But rather than spend his millions on a summer mansion, a luxurious yacht or a profligate social life, Carnegie lavished his wealth on plans and projects for the common good. Among the many millions he donated to every aspect of human betterment was $30 million to various universities, $56 million to building more than 2,500 libraries in the U.S. and Great Britain, and $125 million to launch the pioneering Carnegie Foundation.

To be sure, few will reach the extraordinary heights of an Andrew Carnegie. But by following the principles outlined here, everyone can increase his or her chances of ascending to the peak of the arc of ambition. ■

THE SUMMARY IN BRIEF

In the 21st Century it is more critical than ever that CEOs provide clear strategic leadership. In the ever-changing business landscape leaders must master both the art of strategy creation and formulation and the discipline of strategy implementation and review. Mike Freedman presents the Kepner-Tregoe five-phase model for strategy formulation and implementation to show how your company can develop a strategic vision and action plan, communicate the vision, implement it, and monitor it to ensure ongoing success.

What You'll Learn In This Summary

✓ **How to use** The Enterprise Model to examine your company's external and internal environments before embarking on a strategic journey.

✓ **How to gather and analyze** the appropriate strategic intelligence to direct your company to a sound strategy.

✓ **How to formulate a strategic profile** using analysis, time frame, basic beliefs and your company's Driving Force.

✓**How to determine whether your company is ready for implementation.**

✓**How to develop a strategic Master Project Plan** for implementation of the strategic vision.

✓ **How to monitor and update your formulation and implementation process** so that your strategy remains evergreen.

THE ART AND DISCIPLINE OF STRATEGIC LEADERSHIP

by Mike Freedman with Benjamin B. Tregoe

— THE *COMPLETE* SUMMARY

Beyond Vision

Everyone throws around the word strategy, but what does it really mean? Freedman defines it as the **framework of choices that determine the nature and direction of an organization.**

A **Framework** establishes the boundaries and scope of the business activity.

The **Choices** are about the products and services provided, the markets served, and the key capabilities needed.

The **Nature** of the organization is what exemplifies it and describes its character. Like Intel's "chips" and McDonald's "fast food chains," nature gives strategic coherence to decision-making and communications.

Direction is the organization's future course determined by choices about future products and services, future customers and future markets.

Also understand what strategy is not. A decision is not strategic simply because it is long-term, or involves a multi-million dollar expenditure. These decisions can be made within the strategic framework, but only decisions that change the framework are strategic.

Critical Aspects

There are three critical aspects to a strategy:

- A strategic vision must be **based on facts, informed assumptions and the best-possible what-if thinking**.
- The vision must be **communicated throughout the organization** to clarify and align the role of every strategically critical player and process.
- The vision must be **monitored** to ensure continued strength, agility and relevance.

Recent strategic thinking has been weakened by dot.com-fueled fear of failure or the desire to appease Wall Street analysts. When weak strategies fail, some assume strategy is irrelevant or unnecessary. In fact, a company without a coherent strategy is particularly vulnerable in these times, as is any company that has a clear direction but poor implementation.

Strategy requires the art of creativity to fashion a vision and the discipline to direct thought processes and execution. Discipline turns vision into reality. Executives must proactively create a strategy instead of succumbing to a default strategy that was inherited, stumbled into, or borrowed from a competitor. Lack of a clear strategy subjects your organization to competitor, shareholder and employee threats. ■

Preparing for Strategic Leadership

How Does Strategy Begin?

All strategic leadership starts with the chief executive, and in order to succeed, he or she must understand the playing field. The Enterprise Model developed by Alan Brache in *How Organizations Work: Taking a Holistic Approach to Enterprise Health* presents a full picture of the organization and the impacts on its strategy. [Editor's note: see Soundview Summary #24-17, *How Organizations Work*.]

The model demonstrates the organization's place in the value chain, external and internal influences, and its leadership capabilities before developing a strategy. Once the strategy is set, success relies on the issue resolution systems that will implement the strategy. A chief executive must fully understand each area and how it will affect and be affected by strategy.

The Strategy Process

Today's volatile world and marketplace require a

Preparing for Strategic Leadership

(continued from page 2)

robust process to guide strategy formulation and implementation. To formulate strategy, a CEO should concentrate on the following issues:

● Strategy is built around the **answers to a few vital and specific questions**, not from the masses of data typically drawn up by consultants. Executives should know the answers to these questions; they just have to be honest and thoughtful about them.

● **Process-based questions yield better strategy than narrow, content-driven questions.** Consider the utility of these content questions. When should we enter the sub-Saharan marketplace? Which of those countries should we enter first?

Now consider process questions. Should we pursue growth through entering new geographic markets in Africa? What criteria should we use for selecting new markets? Does the sub-Saharan market meet our criteria better than other alternatives? The second group of questions uses a rational process to resolve the issue through a logical sequence of gathering, organizing and analyzing information.

● The **skill and commitment of the top team** is key to the success of strategy formulation and implementation. The rational process and tough questions allow everyone to use the same language and disengage from personal agendas and politics.

The Five Phases

In addition to the considerations above, there are five phases of strategy formulation and implementation processes that will be explored in the rest of the summary. These five phases are:

1. Strategic Intelligence Gathering and Analysis.
2. Strategy Formulation.
3. Strategic Master Project Planning.
4. Strategy Implementation.
5. Strategy Monitoring, Reviewing and Updating. ■

For Additional Information on the Nine Questions for Constructing the Strategy Framework, go to: http://my.summary.com

Phase 1: Strategic Intelligence Gathering and Analysis

Executives often gather reams of data to help formulate a strategy, but the data are only representative of the past and present. They say nothing about the future. With so much raw data available today, it is difficult to discern what is relevant and not get sidetracked by minutiae and research for the sake of research. But even the right data is not useful if you do not use it to make judgments about the future. You only need enough data to **find implications of trends and assumptions for your own business**.

The team must ask universal questions that explain the past and present and look to the future. Examine broad areas of your external environment that are out of the organization's control: **trends in the economy, society, government, politics and technology that could affect your business.** Then identify key players in your current value chain: your **major customers, purchasers and end users**. What trends are likely in your **supplier base**? What is the **overall competitive scenario** in the structure of the industry's value chain? What are the **essential requirements for success** for any organization in the industry, and how do you measure up?

Find other clues to the future by looking at your company's internal environment: When have you been **successful or unsuccessful** with products and services, customers or end users, or in various geographic markets? What was the cause? Questions about past internal strategy processes will also help: What basic **beliefs or values** affect organizational culture and strategic behavior? What is your **strategic history**? What are the **expectations of your various stakeholders**? What are expectations for **growth and return**? How well have you **implemented previous strategies**, and do your **business plans and annual budgets** reflect your strategy? Do you have a **review process** for your strategy?

These questions determine which data are strategically relevant. Your team will now move from information to judgment to strategic insight. You will develop a set of commonly held assumptions about the external and internal environments that the company will operate in over its strategic time frame and the implications for your company. Assumptions, or general knowledge, should be distinguished from implications, which are the insight into the effect on your organization. This process is inherently iterative and will take a lot of work; however, if done well it will provide a solid foundation for the remaining four steps of strategy formulation and implementation. ■

Phase 2: Strategy Formulation

Strategy formulation begins with the company's **strategic time frame and basic beliefs**. Time frame and basic beliefs will help determine how to guide the organization, define and strengthen your competitive advantage, recognize which key capabilities you need, allocate scarce resources, determine direction and scope for growth and new business, and plan expectations for return and profit.

(continued on page 4)

Overview of Gathering and Analyzing Strategic Intelligence

1. Gather accurate data, focusing on vital questions not masses of information.
2. Distill data into a manageable quantity and identify common themes.
3. Analyze and agree on the meaning of the information presented.
4. Make judgments based on environmental assumptions and implications.
5. Analyze potential problems and opportunities.
6. Evaluate the validity of assumptions and implications.

Strategy Formulation

(continued from page 3)

All goals must have an endpoint to create a sense of urgency for accomplishment. Your **time frame should be determined by your individual organization and the forces that affect it** — from macroeconomic trends to emerging regulatory concerns to your value chain's timetable. The strategic time frame is not the same as the time period for long-range planning activities, which are often arbitrary and determined by accounting and shareholder expectation.

Basic beliefs are deeply held tenets, creeds, convictions or persuasions that provide the social cohesion of organizations. They set boundaries for day-to-day decision-making, reinforce strategic unity, and set a standard for performance and accountability. Basic beliefs must be defined during the strategic intelligence phase and returned to throughout the process. Identify beliefs by considering where they came from, how they are articulated and demonstrated, how new beliefs become implemented and accepted, and the desired nature of your company's relationship with its stakeholders. Beliefs are meaningless unless they support your strategy. They are not just nice to have, they explain how an organization conducts its everyday business, and they align communications, culture and practices with strategic vision.

Driving Force

Freedman coined the phrase **Driving Force** with his colleagues at Kepner-Tregoe. It is **"the primary determinant of the products and services an organization will and will not offer and the markets (customers, consumers and geographies) it will and will not serve."** It expresses the essence of what your business is about. You will need the Driving Force to provide the focus for your competitive advantage, the scope of your products and markets, key capabilities and communications systems. It is also a filter for new growth opportunities and a guide for phasing out non-strategic business areas. After establishing a time frame and basic beliefs, you will brainstorm alternative strategic visions for consideration based on one of the eight Driving Forces at the core of all strategies.

Three of the Driving Forces are quite common. Companies with a **Products/Services Offered** Driving Force provide a limited range of products to an unlimited market, such as Rolex and Toys R Us. **Markets Served** companies provide an expanding group of products to a specific market, such as Dunhil and Nike. **Return/Profit** companies, such as General Electric, focus primarily on increasing financial returns.

The other driving forces are **Low-Cost Production** (eg. commodity companies), **Technology** (eg. Cisco and GoreTex), **Natural Resources** (eg. oil companies), **Method of Sale/Distribution** (eg. express mail delivery companies), and **Operations Capability** (eg. printing and metal fabricating companies).

Choosing the optimum Driving Force for your company will be one of your most important decisions. It is an intense and demanding job that will determine your organization's competitive advantage and the key capa-

(continued on page 5)

Finding the Driving Force Of Hallmark International

Sales for Hallmark International, the half-billion dollar global subsidiary of Hallmark Cards, Inc. were slumping. One reason was that the global company kept trying to emulate the driving force of its U.S. parent, which had the characteristics of a Market Served organization — it offered its mostly female, middle aged, middle of the road clientele greeting cards, television miniseries, inspirational posters, a chain of portrait studios in the malls and even the Crayola crayons.

Hallmark International tried to base its strategy on the Markets Served Driving Force, but its diverse, multi-national client base didn't respond. The Method of Distribution Driving Force, based on the success of the U.S. parent's distribution network, was also considered — but company executives thought Hallmark Card's success would be difficult to emulate.

Finally, Hallmark International settled on the Products Offered Driving Force, which focused on greeting cards and very closely related products. The decision played to Hallmark International's strength: meeting customer needs for greetings, expressing care and building relationships.

Strategy Formulation

(continued from page 4)

bilities required to capitalize on it. Your team must determine a ranked set of objectives for the company and use a well-defined process to develop and articulate future strategic visions for several Driving Forces. Discuss how well each Driving Force fits the prioritized goals, and choose the right one to propel your company toward unity and purpose.

Completing the Roadmap: Thrust and Priorities

Now use the Driving Force to determine an actionable plan to drive the company's product and market momentum. Your team must envision its future business in terms of the thrust and priorities for growth and new business, and then outline specific products to be offered and markets to be served.

Companies can rarely venture into entirely new products and new markets at the same time and still maintain their Driving Forces (see box at right). The exception is the Return/Profit driven company where the only constraints are financial. A Products Offered company, such as a carmaker, will generally remain with current or modified products instead of completely new products, but may enter new markets. A Markets Served company, such as *Playboy,* will offer modified and new products, but stay in its current market. If there is a relatively risk-free and potentially profitable way to head in both directions, the strategy team should make it clear that this venture is outside the core business. Fully exploiting the current product in the current market is often overlooked in pursuit of more exciting options, but it can be an excellent source of growth.

After clarifying the company's products and markets, the team establishes the financial goals it expects from the strategy. Only a purely Return/Profit company has financial goals as its prime motive behind strategy. For other companies, financial success should be an *output* of strategy, not a motivator. Financial goals should be expressed through specific parameters like ROI, profit targets, cash flow requirements, as well as through general parameters like increased revenue and improved year over year performance. These are not financial plans or projections, but goals describing an ideal future.

The Product/Market Matrix

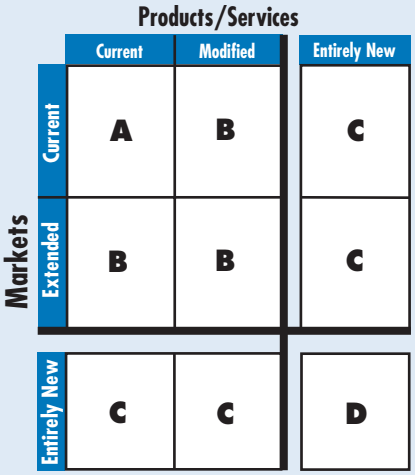
Now it is time to create the Product/Market Matrix as a roadmap to achieve the strategic vision. This matrix (see example on following page) is a robust tool that allows you to manage strategy by determining relative emphasis of each product/market combination and showing you how to allocate scarce resources to exploit competitive advantage. There are four steps to create the matrix.

- **Segment Products and Markets** — Use the Driving Force to segment products and markets into strategic categories that share a natural synergy. Place all current and potential products and markets that are consistent with the strategy along the two axes.
- **Determine Criteria for Emphasis** — Using previous strategic intelligence gathering, Driving Force, competitive advantage and key capabilities, basic beliefs, and initial financial targets, establish criteria for assessing the relative role for each product/market combination, or cell in the Matrix.
- **Assess Each Cell** — Use the established criteria to conduct a small-scale decision analysis on the future activity for each cell that reflects the contribution to the strategic intent. Determine the future degree of emphasis (Low, Medium, High) and the type of emphasis (Develop, Sustain, Opportunistic, Monitor, Explore, Phase Down) needed to achieve the ideal future.
- **Review Matrix and Strategy** — This is an iterative process, and most companies find they have too many "High" and "Develop" types of emphasis cells. The team must review and rework to obtain a real action plan rather than an unobtainable wish list.

At this point the team will have gathered so much information, it is time to stop and articulate a strategic profile using all of the information, judgments and implications developed so far. It will allow the team to effectively get to the nitty-gritty of implementation. The CEO must also take time to consider the team and how it is working. Do roles have to be changed? Does the team need more support? ■

Thrust for Growth and New Business: Priorities

Each strategic Rubicon separates current and modified products from entirely new products, and current and extended markets from entirely new markets. Determining the organization's exact thrust for growth and new business lies in the priority assigned to each of the four to six boxes the company will pursue.



A Every organization has current markets and products. Companies should seek to maximize opportunities in this area before venturing further.

B Most organizations will pursue current and modified products, and/or current and extended markets, early in the strategic period.

C Many organizations will eventually aspire to address either products/services entirely new to them, or entirely new markets.

D Few organizations will be able to take new products to new markets.

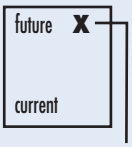
For Additional Information on how to build the Product/Market Matrix, go to: http://my.summary.com

Example of a Product/Market Matrix

Current Markets			Current Products: Alcohol – Beer	Alcohol – Wine	Alcohol – Spirits	Sodas – Coke Clones	Sodas – Others	Juices – Organic	Juices – Standard	Modified Products: Coffee, Tea, Milk	Entirely New Products: Non-beverage, Nuts, Chips, Pretzels, Cookies	Total Overall Customer Emphasis
Retailers	Supermarkets		H D M	H D M	L PD M	M S M	L S L	H D L	L M	O E O	L D O	H M
	Specialty		H S H	M D L	M S M	L S L	L S L	M D O	L L	O E O	L D O	M M
	Corner Shops		N/A	N/A	N/A	L PD M	L S L	L D O	L L	O E O	L D O	L L
Pubs	Chains		H H	H D M	M PD H	M S M	L S L	L D O	L PD M	M D O	L D O	H M
	Independents		H H	H D M	M PD H	M S M	L S L	L D O	L PD M	M D O	L D O	M M
Government	Educational Establishments		N/A	N/A	N/A	L PD M	L PD M	L H	L PD M	L E O	O E O	L M
	Hospitals		L S L	M D L	O PD L	L S L	L S L	H D L	L PD M	H D M	O E O	M L
	Retirement Homes		L S L	M D L	L S L	L S L	L S L	H D L	L PD M	M D H	M O	M L
Total Overall Product Emphasis			H H	H M	M H	L M	L L	H L	L M	M O	L O	

KEY

Degree of Emphasis
- **H** = High
- **M** = Medium
- **L** = Low
- **N/A** = Not applicable, e.g., lipstick to men
- **O** = Choose not to pursue at this time



Type of Emphasis
- **D** = Develop
- **S** = Sustain current effort
- **OPP** = Opportunistic
- **M** = Monitor
- **E** = Explore
- **PD** = Phase Down

Phase 3: Strategic Master Project Planning

Reluctance or incompetence in crafting a process for implementing strategic change is the most reliable predictor of failure. Every corner of the organization must change, so strategy implementation should be built into the work of the entire organization. The scheduling, resourcing and sequencing of project management are familiar to us all, but the Strategic Master Project Plan has the following distinguishing characteristics:

- All projects in the Plan flow **directly from the strategy**.
- Plan includes a considerable number of **diverse projects**.
- Plan requires the **disciplined prioritization** of initiatives.
- There is enterprise-wide adoption of **common project management language and methodology**.
- Plan includes **disciplined approach** to project management methodology.
- Success depends on discipline, commitment and active support of entire top team.

The purpose of the Strategic Master Project Plan is to assess the necessary strategic initiatives, integrate the existing operation projects, identify which projects must be accomplished first, and create an overall system that keeps implementation in line with the strategic vision.

The projects that address the **critical issues** discussed above are of highest priority. The team then looks at the **strategic profile** and determines the difference between the organization's current state and the ideal. The strategic profile developed in Phase 2 consists of the Product/Market Matrix; competitive advantage; key capabilities; basic beliefs; strategic intelligence gaps; functional, divisional or business unit strategies; and potential mergers, acquisitions or joint ventures. **Existing key projects** such as moving headquarters or upgrading a telephone system must be considered in the way they affect the organization's ability to implement strategy. Finally, the top team should use the **Enterprise Model** as a diagnostic tool for determining affect of strategy on the organization as a whole. For each component of the Model ask, "How do we compare with our strategy ideal for this component?"

By drawing on these four sources, the top team gathers a potential pool of projects for the Strategic Master Project Plan, and then prioritizes them based on impact and urgency of their results. By using the strategic criteria they develop an optimal portfolio of projects that can be accomplished within the constraints of available resources. As organizational capacity and resources become available, more projects can be added to the portfolio.

Once the portfolio is determined, the top team must

(continued on page 7)

Common Implementation Pitfalls

- ✓ **Strategic inertia** or not getting started.
- ✓ **Lack of stakeholder commitment** to the vision.
- ✓ **Strategic drift**, or not focusing on the destination.
- ✓ **Strategic dilution** where things are moving, but it's not clear who's driving.
- ✓ **Strategic isolation** where things are happening, but no one communicates.
- ✓ **Failure to understand progress** or know where you are on the journey.
- ✓ **Initiative fatigue** when things are happening, but nothing gets done.
- ✓ **Impatience** for immediate change.
- ✓ **Not celebrating success** and rewarding progress.

Strategic Master Project Planning

(continued from page 6)

set the foundation for the best possible execution. They must choose a **single systematic process that defines project management discipline**. It needs robust tools for resource planning, scheduling and monitoring, and should also **make time for the people side of project management**, including communication, motivation, and time management and balance. The **strategy formulation team must have its own management structure** with the systems to support it, including stewardship and support from the top team and a well-funded support office dedicated to the implementation. The **top team also devotes ongoing effort to monitor and manage** the success of the overall Plan, including reviewing the portfolio and managing employee behavior. ■

For Additional Information on typical roadblocks of Strategic Master Project Planning, go to: http://my.summary.com

Phase 4: Strategy Implementation

Aligning the Infrastructure

The fourth strategic phase is implementation. Though all Strategic Master Project Plans are different, they do have some common traits that are so important that they must be regularly reviewed and realigned with the strategic intent when necessary.

Organization Structure: When approaching implementation, first examine the current structure. If it promotes implementation, leave it alone. If it doesn't, use the Driving Force to suggest a different structure. A Products Offered company will most likely consider a structure reflecting its major product categories. Most importantly, the selection criteria for structure must be rooted in the strategic vision.

Strategic Information Management: Companies expect their capacity to gather and synthesize information to play a crucial role in success, but the analysis and dissemination of critical strategic information must be built into the implementation plan. The Driving Force will determine the most important strategic information needs, such as a Markets Served Driving Force company that will need data on demographics and related trends.

Complexity: Because CEOs don't like to say no and companies try to be all things to all people, there is a lot of unnecessary complexity in companies. Strategy teams must ferret out any organizational complexity that will cripple implementation.

Aligning Strategy, Culture and Performance

Ignoring the "soft" or human side of implementation jeopardizes your strategic goals from the outset. There is a direct line of sight from strategy to culture to performance, and then on to business results. Freedman and Tregoe define culture as **"the combined effect of behaviors, values, heritage, thinking and relationships and the way these are embedded in an organization and its performance."**

Culture: To align strategy and culture, leadership must address both the explicitly expressed values and behaviors and the latent elements hidden in the organization's subconscious, with a focus on those culture elements that have remained unchallenged for years. Basic beliefs are key to setting strategy, but without leadership they don't define or create a strategic culture.

Performance: Consider the extent to which the strategy and its supporting culture are embedded in the way your organization directs, manages and rewards its people? How does your organization produce behavior from employees that are directed toward achievement of a specific goal? How are people rewarded and encouraged to behave? It is also important to align the performance system with the strategy, so people are encouraged to pursue the strategic dimension of their jobs and receive negative consequences when they ignore them.

Communicating Strategy

Failure to communicate the strategy throughout the ranks is a death sentence for implementation. There are many stakeholders involved when a new strategy is implemented — employees, unions, analysts, shareholders — and all of them have their own biases and preconceptions about a new strategy. They will ultimately

(continued on page 8)

Strategy Implementation

(continued from page 7)

respect a strategy that shows clear direction and purpose, because they will have important roles in its future.

Communicating strategy promotes ownership and gives people a reason to support the implementation. Stakeholders can also be an important feedback source when they understand the strategy. Communication translates the big-picture vision into specific expectations from individuals and groups, and helps to motivate and get people committed to change. When communication is implemented properly every internal and external stakeholder will know **"what does this mean to me?"** Finally, proper communication changes behavior, because strategy informs the processes of setting goals, developing job descriptions, managing projects.

When the top team sets out to communicate the plan they must explain the strategic profile and Strategic Master Project Plan to the internal or external professionals who will execute the plan. They must know the nature of each audience and the appropriate message. For instance, communication about the company's thrust for growth and business will be communicated differently to middle managers, plant workers and investment bankers.

Communications should begin early to quiet rumors and reassure employees, and the top team should shoulder the responsibility. When communicating with a specific audience, they should stick together and remember to communicate face-to-face as much as possible, involve the supervisor closest to the target audience, listen as well as talk, skip the dazzle and focus on the message, engage the audience, and connect every message with an action or plan to be implemented. People will watch closely for congruence between actions and words, but if communication is built into the Strategic Master Project and used effectively, it is invaluable for driving the changes in culture and individual performance that make implementation possible. ■

For Additional Information about constructing a Communications Matrix, go to http://my.summary.com

Components of the Communications Plan

- ✓ Strategic message
- ✓ Means of testing the listener's understanding of the strategic message
- ✓ Understanding of the costs
- ✓ Schedule for releasing information and obtaining feedback
- ✓ Evidence of top management's direct involvement
- ✓ Built-in feedback mechanism

Phase 5: Strategy Monitoring, Reviewing and Updating

The final phase of the strategy process asks the top team to keep the strategy "evergreen" by asking what could go differently than anticipated, how will you know if it occurs, and what will you do when it occurs.

Monitoring: The top team monitors both the continuing viability of the strategy and its implementation. They review how well the company is implementing the projects in the Strategic Master Project Plan. Is strategy driving the decisions made in your company, or are managerial "lone rangers" operating independently of strategic imperatives? Leadership determines if the environmental assumptions made during strategy formulation are still valid, if the company is performing well against financial expectations and other key indicators of strategic success. If not, the strategy may not be viable. The top team must continually revisit the components of the strategic profile to make sure they are still applicable.

Renewing: Leadership must consider the implications of any identified deviations from the strategy discovered during monitoring. The strategy generally needs to be reevaluated when small deviations occur on a regular basis, or when there is a major deviation. Determine if the deviation is the direct result of the strategy rather than operations, but avoid blame and finger-pointing. In the absence of identifiable deviations, there should be at minimum, an annual review of the strategy.

Sticking to it: It is important to recognize that monitoring is just as important as strategy formulation and implementation. Executives may not want to keep up with monitoring because it is never-ending, and in the current fast-paced business environment it is hard to keep an evergreen approach, even though it is more critical than ever to have one. Companies should not monitor for the sake of monitoring, but so that they can manage change. Survivor companies adapt quickly to changes in the business environment if it is necessary to maintain strategic focus. Successful companies anticipate change and alter their strategies in advance. World-class companies dictate the nature and pace of change, redefining their industries and even drive the value chain. The difference between these kinds of companies is the rigor of their strategy monitoring, reviewing and updating. ■

THE SUMMARY IN BRIEF

Those who read this book will instantly feel more powerful, become more aware of self- imposed limitations, and realize the many ways that they can learn to lead themselves that inspire others to want to be around them more. ***The Art of Self-Leadership: Discover the Power Within You and Learn to Lead Yourself*** is part self-help, part career development, and part leadership development.

Imagine a life over which you have more control and influence? This new way of being allows you to progress in your career and life without constantly feeling like you are in a holding pattern to someone else's whims. The more we grow in self-leadership, the more magnetic we become, the more confident we feel about ourselves, and thus the more confidence others place in us. This opens the door for a personal and professional life that is more by design than by accident. This way of being gives us a life full of purpose that draws us closer to who we are meant to be. This is a compelling reason to pursue The Art of Self-Leadership!

IN THIS EXECUTIVE BOOK SUMMARY:

- Focus on self-awareness, self- worth, and overcoming self-imposed limitations to build confidence and resilience.
- Learn the importance of progress over perfection, using the ARC Method for goal-setting.
- Emphasize the value of trust, effective communication, collaboration, and mentorship in fostering strong personal and professional connections.
- Encourage empowerment through using your voice, personal branding, and the GROW framework to drive self-leadership.

Part I: Foundation of Self Understanding

Understanding Your Intrinsic Worth

A conversation about self-leadership and intrinsic worth is not possible without first discussing the importance of self-awareness. In the context of a self-leadership discussion, our ability to be our own solution versus the thing that stands in the way of our success is the only way through and to the life we want for ourselves. Intrinsic worth is the value that we have by our very existence. Over reliance on external validation can undermine self leadership because, by definition, self-leadership includes growing inwardly to shine outwardly.

There is a difference between having a strong self-worth and having strong self-confidence in that self-worth is more about you valuing yourself and feeling that you are a good person who deserves to be treated with respect.

Strategies for Building Self-Confidence

- Pursue a degree or certification.
- Commit to lifelong learning.
- Prepare for success.
- Don't compare yourself.
- Accept the good news.
- Adopt an abundance mindset.
- Do a skills assessment.

Understanding Your Limitations

Self-imposed limits are those barriers we put up in our own way that stop us from achieving things we set out to do. When we understand our limits to both personal and professional growth, it releases the pressure to be and do things that we are not and will never be.

Understanding Fear

A rational fear might mean that you are afraid when you run into a real-life lion. An irrational fear might be that you are paralyzed every time you see a spider. It's important to know how to categorize the fears we have and also where they originated. Some fears are learned based upon our environment and others are based upon our personal experiences.

Part II: Personal Growth and Sustainability

Personal growth is not a destination, but a journey, and to sustain a growth mindset requires effort, grace, and resilience. In this part of the book we will focus on what is required to keep evolving and bring the GROW framework for self-leadership to the forefront.

Deciding Between Progress and Perfection

Self-leadership is much more about continuous improvement than any unattainable ideal of perfection. There is a difference between a healthy striving for excellence and perfectionism. Embracing progress is the best way to feel good about who we are, where we're at, and where we're going. It's impossible to grow in self-leadership without this viewpoint.

Let's adopt a new way of setting goals using the "ARC Method." A stands for Aspirational Vision. You must first start by envisioning your desired future state or outcome. R stands for Realistic Pathways. Once you come up with the aspirational vision, you will need to break it down into realistic pathways or strategies for achievement. C stands for Continuous Adaptation. In this last step of the ARC Method, you want to embrace a mindset of continuous adaptation and flexibility as you work toward your goal.

Prioritizing Self Care

We must understand that at the forefront of leading ourselves is a way of being that prioritizes us in daily ways. If we are to be strong self-leaders, we need to learn to let go of the way everyone else thinks of self-care, and learn to lean in hard to a more expansive view. It's important to know and own that self-care is a necessity for sustained personal and professional performance, not a luxury that we treat like an occasional add-on in our lives.

The Three Stages of Empowerment

The majority of definitions for empower are "receiving" power from an outside source. You should think of empowerment more as something that you do for you, first. You give yourself the power to decide what you will do in and for your personal and professional life. By extension, you decide, and thus own, your own professional and personal growth and development.

Stage 1: The Awakening

The first step to fully awaken is to recognize your current state, your limitations, and even areas where you lack

That power that is deep inside us literally breaks through to the surface, and now we can really see the Art of Self-Leadership in full force.

control. In the Awakening stage, we need to focus on new knowledge acquisition.

Stage 2: The Struggle

There are internal and external factors that can challenge us to step outside of our comfort zone and to become truly empowered to be our best. Examples of these challenges are: fear of the unknown, resistance from others, lack of resources, lack of skills or knowledge, and institutional barriers.

Stage 3: The Breakthrough

This stage is where true self-empowerment is obvious to us and to those around us. That power that is deep inside of us literally breaks through to the surface, and now we can really see the Art of Self-Leadership in full force.

Plan for Empowerment

Create a detailed plan for moving through the three stages of empowerment. Include specific actions you will take, resources you will use, and potential obstacles you may face. Select one area where you feel disempowered and commit to learning more about it. Document your learnings and how they contribute to your empowerment.

Keying in on Your Strengths

The thing to remember about strengths is that we don't all have the same ones, and that's a good thing. When you commit to valuing the diverse strengths of others, that's when things can really be fruitful at work. You want to dig deep and do the homework to discover your strengths. If you manage a team or an organization, you want to also uncover the strengths of your people.

Discovering Your Strengths

There are different tools to assist with this, including:

DiSC®

A communication and behavioral preference assessment that can help people understand their communication style and preferences.

CliftonStrengths

Pinpoints your strengths and uncovers language to describe your natural, instinctive approach to problem-solving and relationship-building.

Myers Brigg

Is designed to help people identify and gain some understanding around how to take in information and make decisions, the patterns of perception and judgment, as seen in normal, healthy behavior.

Developing Your Strengths

There are three areas to focus on to develop what's already inside of you: Focused improvement; learn to contribute your strengths within your team to benefit the team; seek out mentors or engage a coach.

Applying Your Strengths

Ways that applying your strengths can improve your workplace experience and advance you in your career:

- Improved decision-making.
- Creating opportunities.
- Create a positive work environment.

Part III: Social Interaction and Influence

Relationship Building in Action

It is next to impossible not to be in a relationship with others. How we lead ourselves directly impacts those relationships. It is quite critical for you to focus on self-leadership first and then leadership for others.

The Foundation of Trust

Trust is a dynamic force, evolving through consistent actions and open communication. Trust in the workplace can be defined as the firm belief in the reliability, truth, ability, or strength of someone or something within the

professional environment. When team members trust each other, they are more willing to share ideas, take risks, and collaborate effectively.

How can you learn to build trust with those in your personal and professional life?

- Consistency and reliability.
- Transparency and openness.
- Empathy and compassion.
- Accountability and integrity.
- Recognition and appreciation.

If you want to build and maintain trust, focus on finding the small things that your coworkers and even your family do and show sincere appreciation to them for those things. Admitting mistakes is a huge trust builder. It is also a big trust "rebuilder" too. You will immediately endear people to you when you don't place blame elsewhere.

Effective Communication

Communication is a two-way street that determines a significant amount of our success. The problem is that many of us focus on hearing our own voices and interacting in ways that we most understand. We must learn the skills to communicate in ways that are clearer and meet others where they are.

There are three communication skills needed: being clear in your messaging, learning to actively listen, and understanding and responding to different communication styles. We need to do all of this inside the backdrop of a digital-first world.

Tips to help you become a clearer communicator:

- Simplify your message.
- Be direct.
- Use visual aids.

Active Listening

Everyone can benefit from learning a more effective way to listen to those who expect us to hear them. Active listening is the doorway to remove the clay that covers many of our relationships to reveal the good from within.

Here is an overview of the "The Cycle of Active

Listening™ process:

1. Recognize the unsaid.
2. Seek to understand.
3. Decode the message.
4. Take action.
5. Close the loop.

Understanding Communication Styles

Use DiSC® to help others understand how their style and communication preferences affect their relationships with others. Four styles make up the DiSC acronym.

The D communication style represents a person who is dominant in their decision making, moves fast in many areas of their life, and focuses more on task achievement with an eye to achieving some level of success.

The I communication style is someone who is influential, because they focus on people and what is happening to and with them.

The S communication style is known to be steady and more deliberate in everything they do.

The C communication style is very conscientious.

The easiest way to determine your own default communication style is to ask yourself these two questions: (1) What is my speed? (2) What is my focus or priority?

Collaborative Teamwork

An African proverb says, "If you want to go fast, go alone. If you want to go far, go together." It speaks to the importance of cooperation for long-term success. Working with others can be challenging for those who prefer to work quickly, but collaboration is essential for making real progress. We must also always bring new and different people around our decision making table. One toxic behavior that will never serve you or your team members well is gossip.

Networking and Mentorship

In today's interconnected world, building a strong network beyond your immediate team is crucial for personal and professional growth. Expanding your network beyond your immediate teammates is essential for career advancement and resource sharing.

Begin by building connections within your current organization:

- Attend cross-departmental meetings.
- Join employee resource groups.

Clear expectations are the foundation of effective self-leadership.

- Leverage internal social platforms.

Building a network is not just about making connections; it's about nurturing them. Some tips:

- Follow up.
- Offer value.
- Stay consistent.

Mentorship is a powerful tool for career development and provides:

- Guidance and support.
- Skill development.
- Networking opportunities.

If you choose to be a mentor yourself, the benefits to you include:

- Leadership development.
- Fresh perspectives.
- Personal fulfillment.

By embracing mentorship, you can unlock new levels of professional success and contribute to a culture of continuous growth and support within your organization and industry.

Nurturing and Sustaining Relationships

Here are several ways for you to sustain long-term relationships that can serve you and others into the future:

- Keep in touch with those with whom you already have a strong relationship.
- Mark your calendar with their important dates and reach out to them.
- Even in a remote setting, prioritize touching base with colleagues and team members.

Leaning Into Flexible Thinking

Flexible thinking is when we are willing to change our thinking and our behaviors when different ideas arise or any kind of change is necessary.

The Foundations of Flexible Thinking

One of the most important concepts to know about flexibility is cognitive flexibility. According to BetterUp Fellow Coach Lauren Miller, cognitive flexibility is "all about your brain's ability to adapt to new, changing, or unplanned events . . . and is also the ability to switch from one way of thinking to another."

By integrating mindfulness practices, embracing diverse perspectives, practicing understanding without needing agreement, fostering curiosity, having a growth mindset, and owning your power to reframe, you can overcome cognitive rigidity and enhance your self-leadership.

Implementing Flexible Thinking in the Workplace

Flexible thinking is a must if we are to have flourishing cultures with constructive dialogue and to innovate together.

Expect Clear Expectations

Clear expectations are the foundation of effective self-leadership. By setting clear expectations for ourselves and others, we create an environment where goals are understood, efforts are coordinated, and success is achievable. The consequences of poorly set expectations are confusion, frustration, and decreased productivity.

Setting Expectations for Yourself

Job analysis and performance feedback are two ways to identify and clarify your job role.

Communicating Your Expectations to Others

Once you come up with your own expectations for yourself, it's time to communicate your own expectations to those at work and at home.

Expecting Clear Expectations from Others

Understanding what is expected of you can significantly enhance your performance and satisfaction in your role. When expectations are not clear, it's crucial to proactively seek clarification.

Dealing with Ambiguity

It is frustrating when we are ready to move forward but those who need to provide direction are unwilling or unavailable to provide us clarity to ensure success. Strategies to gain more clarity:

- Set interim goals.
- Stay flexible.
- Document everything.

Self Advocacy

If you don't understand your strengths and limitations, it will be hard to discover your power to show up in moments that require advocacy. Ideas to help you include:

- Be assertive, not aggressive.
- Request regular check-ins.
- Use constructive language.
- Seek resources and support.

Maintaining and Adjusting Expectations

Work and what we do there is not static; it's ever-changing. So we need to be maintaining expectations, and be open to adjusting them for ourselves and others. Managing up involves effectively communicating and working with your direct manager to achieve mutual goals and create a productive working relationship. Tips to help you include:

- Understand their goals and priorities.
- Be proactive and solutions-oriented.
- Build a trust-centered relationship.
- Adapt to their preferences.

Feedback is a Gift

Feedback is the cornerstone of personal growth and workplace empowerment. Effective self-leaders understand that constructive feedback fosters continuous development. Effective feedback has specific characteristics that make it useful and actionable:

- Specific.
- Actionable.
- Timely.

Lean into giving people positive feedback often, which makes them more receptive to constructive feedback.

Delivering feedback effectively requires a thoughtful approach that encourages engagement and minimizes defensiveness. Some techniques:

- Use "I" statements.
- Focus on behavior, not the person.
- Understand their perspective.
- Show genuine concern.
- Be supportive.

To integrate these principles, techniques, and the empathetic approach into your feedback practice, consider these three things: prepare beforehand, continue to practice active listening, and follow up after the feedback. When you receive feedback, If you start off a feedback session with the mindset "This is a gift," you are already in the right mindset to listen well.

Use Your Voice and Be Seen

Stand up and be seen for the brilliant person you are. Don't wait for someone else to give you a voice. When you use your voice, you will experience greater empowerment, engagement, recognition, and overall life satisfaction.

If you manage even just one person, know that you have more power than you think to make them feel safe and foster an environment where everyone speaks up. Authenticity is crucial for using your voice effectively. If you try to mimic someone else's style or opinion, people can sense it and you lose trust. Actively participating in your professional environment is crucial. Active participation in meetings, projects, and public forums is essential for being seen and heard within your organization.

Some ways to make sure you are thought of as a key person of influence are to volunteer for or take on key projects, prepare to speak up in meetings, and present your work.

Building a strong professional network is vital for career growth. Consider attending industry events, joining professional organizations, leveraging social media, and seeking mentorship.

Personal Branding

To intentionally build a brand you can be proud of:

- Identify your strengths.
- Define your brand message.
- Create an online presence and share your insights.

- Seek opportunities for visibility by looking for chances to speak at conferences, write for industry publications, or participate in webinars.
- Do a brand audit on your brand perception and how you can improve.

These strategies will help you assert your presence, share your unique contributions, and connect with others who can support your professional journey.

Using Your Voice and Being Seen

Cultural and organizational barriers can create environments where certain voices are marginalized or ignored. Homogeneous work environments may overlook or undervalue diverse perspectives. Unconscious biases can affect who is listened to and whose ideas are given importance.

Useful strategies to navigate systemic barriers include forming alliances with colleagues who share your values and goals, utilizing formal channels for feedback and suggestions, and advocating for organizational changes that promote inclusivity and diverse voices. Some benefits to leaning into your unique voice and expressing it often include boosting confidence, building trust, and achieving personal goals.

Using your voice and being seen are powerful tools for personal and professional growth. By embracing self- leadership and encouraging diverse voices, you can drive positive change both within yourself and in your organization.

Here's a short acronym that helps ground us in self-leadership in a memorable way – GROW.

- Growth: Developing oneself from within
- Resilience: Bouncing back and moving forward
- Outwardly: Extending one's influence and impact into the world
- Wisdom: Leveraging insights and experiences for continuous improvement

No matter where you are on this journey, you can make different choices despite your circumstances. No more waiting, no more blaming, just a life full of self-love, inner peace, outward shine, deeply fulfilling relationships, and the ability to bounce back like you have never seen. If more people commit to this type of change, we will become a world that embraces our own responsibility to show up differently, with strength, empathy, self-compassion, and an undeniable inner glow.

Heather R. Younger is a bestselling author, renowned keynote speaker, and one of the world's leading experts on workplace culture. As the visionary Founder and CEO of Employee Fanatix, a preeminent employee engagement and workplace culture consulting firm, Heather has reviewed over 30,000 surveys and facilitated over 100 employee focus groups.

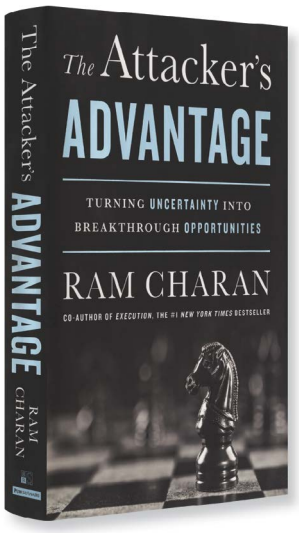
Executive Book Summaries®

The Attacker's Advantage

Turning Uncertainty into Breakthrough Opportunities



by Ram Charan

THE SUMMARY IN BRIEF

The forces driving today's world of structural change create sharp bends in the road that can lead to major explosions in your existing market space. But exponential change also offers exponential opportunities. How do you leverage change to go on the offense? *The Attacker's Advantage* is the game plan for winning in an era of ambiguity, volatility and complexity, when every leader and every business is being challenged in new and unexpected ways.

Ram Charan, harnessing an unequalled depth and breadth of experience working with leaders and companies around the globe, provides tested, practical tools to help you

- Build the perceptual acuity to see around corners and detect, ahead of others, those forces — especially people, who are the catalysts of change — that could radically reshape a company or industry.
- Commit to a new path forward despite the unknowns, positioning your business to make the next move ahead of competitors.
- Make your organization agile and steerable by aligning people, priorities, decision-making power, budgeting and capital allocation and key performance indicators to the new realities of the marketplace.

The Attacker's Advantage provides a stark and simple challenge: Stay in a legacy world of incremental gains or defensiveness, or be an attacker by creating a new world, scaling it up quickly, ahead of the traditional players.

IN THIS SUMMARY, YOU WILL LEARN:

- How to perceive catalysts for change ahead of others.
- How to define a path and create the mindset for going on the offense.
- How to make your organization more agile with Joint Practice Sessions and improved decision making.

THE COMPLETE SUMMARY: **THE ATTACKER'S ADVANTAGE**

by Ram Charan

The author: Ram Charan is a world-renowned advisor to CEOs, business-unit managers and boards of directors who value his practical solutions to complex business problems. Dr. Charan earned MBA and doctorate degrees from Harvard Business School, where he graduated with high distinction, and is the author (with Larry Bossidy) of the international best-seller *Execution: The Discipline of Getting Things Done* and many other books.

The Attacker's Advantage: Turning Uncertainty into Breakthrough Opportunities by Ram Charan. Copyright © 2015 by Ram Charan. Summarized by permission of the publisher, PublicAffairs. 228 pages, $24.99, ISBN 978-1-61039-474-1.

Introduction: What Is the Attacker's Advantage?

The attacker's advantage is the perceptual acuity to detect ahead of others forces that could radically reshape a market space so that you can position your business to make the next move first. It is the mindset to overcome fear of uncertainty and find the opportunities in it and the courage to move forward despite the unknowns. It is the ability to gain the advantage with speed, with focus and without breaking morale.

By pinpointing the sources of uncertainty, defining a path forward and making the necessary frequent adjustments to steer your organization along it, you will see that uncertainty is not something to fear. On the contrary, by immersing yourself in it, you can discover possibilities for creating something new and immensely valuable. The more you embrace uncertainty and practice the skills to deal with it, the more self-confidence you will develop, and the better prepared you will be to lead.

PART I: THE FUNDAMENTAL LEADERSHIP CHALLENGE OF OUR TIME

Bends in the Road

Taking control of uncertainty is the fundamental leadership challenge of our time. We all know that life is full of uncertainties, of course. Most of those that businesses face are familiar. What's new is structural uncertainty. It is structural because the forces now at work can explode the existing structure of your market space or your industry, putting it at risk of being drastically diminished or completely eliminated.

The Essentials for Leading in Uncertainty

Steering your business through structural uncertainty calls for a distinctly different type of leadership than the one you were trained for, requiring a radically different mindset and new skills for anticipating events and going on the attack.

The advantage now goes to those who create change, not just learn to live with it. Instead of waiting and reacting, such leaders immerse themselves in the ambiguities of the external environment, sort through them before things are settled and known, set a path and steer their organization decisively onto it.

Those who are best prepared to lead now have the following skills and abilities:

- **Perceptual acuity:** Have the mental preparedness to "see around corners" and spot potentially significant anomalies, contradictions and oddities in the external landscape ahead of others.
- **A mindset to see opportunity in uncertainty:** Recognize that uncertainty is an invitation to go on the attack, and be ready to take your organization to a new place and the changing landscape.
- **The ability to see a new path forward and commit to it:** Be willing to build whatever new capabilities you will need, which will include a high level of proficiency in the use of digitization and algorithms.
- **Adeptness in managing the transition to the new path:** Going on the attack may require a major shift as well as constant adjustment in setting priorities and ensuring financial health.
- **Skill in making the organization steerable and agile:** Linking the external realities in real time to

people assignments, priorities, decision-making power, budgeting and capital allocation and key performance indicators.

Taking advantage of the landscape that is emerging will almost certainly call for significant changes in how you define your business. In many cases it will mean starting a new and different business that could sooner or later eclipse your biggest revenue maker.

Why Structural Uncertainty Is Different

You can manage an operational uncertainty with existing tools. But a structural uncertainty arises from your external environment. It is outside your control, and it can obliterate your business if you don't detect it in time and create your own space in the new environment.

More often than not there are early warning signs that go unnoticed. Nokia had a fantastic brand, was highly profitable and built dominant market share. Its near demise took less than three years. The bend in the road was caused by Apple, which offered a new, compelling consumer experience. It was so enormously different that the consumer not only paid a high price but waited in line to gain access to it.

Nokia was taken by surprise — but it shouldn't have been. The leadership team found it hard to believe that a computer company would go into the cell-phone business and thought that Apple would not be a threat even if it did, because it wasn't big enough to pose a serious challenge. What confounded Nokia was the uniqueness of the iPhone and the ferocity with which Apple scaled up.

The leaders who succeed *because* of uncertainty realize that a world in flux creates new possibilities and lowers the entry barriers. They are the attackers. They see clearly, move decisively and act.

The Mathematical Corporation

The single greatest instrument of change is the advancement of the mathematical tools called algorithms and their related sophisticated software. Never before has so much mental power been computerized and made available to so many — power to deconstruct and predict patterns and changes in everything from consumer behavior and human health to the maintenance requirements and operating lifetimes of industrial machinery. Algorithms are dramatically changing both the structure of the global economy and the lifestyles of individual people.

The use of algorithms is already fracturing time-tested business models and creating trailblazing new ones. Algorithms are most prominent so far for their role in radically transforming retailing and by literally making it possible for giant corporations to deal with customers as individuals. Companies that have the new mathematical capabilities possess a huge advantage over those that don't. Google, Facebook and Amazon were created as mathematical corporations. Legacy companies that can't make the shift will be vulnerable to digital competitors.

GE is now essentially turning itself into a math house and has become the leader in the Industrial Internet. It not only uses the Industrial Internet to improve the profitability of its own products and services but also creates new demand by sharing its sophisticated software packages and algorithms with competitors. GE's newly built expertise in software and algorithms has recast the entire company for the 21st century.

Searching for Early Warning Signals

There's a long list of prominent leaders who ignored or failed to see warning signals of structural change. Often the signals emanate not from within your immediate ecosystem but from some outlier or oddity. When Napster appeared with its sophisticated software and algorithms that allowed people to share music files online, the music industry assumed it would only be a matter of time until the courts put an end to what was essentially piracy. Then Steve Jobs struck a deal to buy songs and distribute them through iTunes to Apple's breakthrough product, the iPod. Industry titans didn't pick up the early warning signal Napster sent, nor did they reset their path fast enough. Power shifted as high-margin CD sales fell drastically, dragging total industry revenues down with them.

The attacker's advantage is the ability to detect ahead of others those forces that are radically reshaping your marketplace, then position your business to make the next move first. Uncertainty is not something to fear but rather something to immerse yourself in, because in it lie the possibilities you can combine to create something new and immensely valuable. The more you embrace uncertainty and practice the skills to deal with it, the more self-confidence you will develop, and the better prepared you will be to lead.

PART II: BUILDING PERCEPTUAL ACUITY

Identifying the Catalysts of Structural Change

Perceptual acuity is your human radar for seeing through the fog of uncertainty so you can act before others do. Only a small percentage of upcoming leaders look at their businesses from the outside in and peer over the horizon to pick up signals that could be harbingers of change. One of the earliest warnings is the emergence of a catalyst. This is a person with exceptional perceptual acuity who seizes upon a force or combination of forces — for example, linking a demographic trend with an existing technology. Catalysts are doers who take risks based partly on fact and partly on their imagination about what could happen when forces combine in what others might later call a convergence. The catalyst, in fact, is the one who often creates the convergence.

Practice your perceptual acuity by watching for catalysts in or outside your industry, regardless of your job or organizational level. As your acuity sharpens, you'll spot catalysts sooner and begin to see the world as they see it: full of new possibilities and opportunities.

Seeing What Catalysts See

As you develop your perceptual acuity, you will become more attuned to interesting new ideas, events, technology developments and trends. You'll expand your capacity to see the landscape from multiple angles, discern what's important and speculate about how you could shape it by engaging other people in this task. You'll not only benefit from the diverse points of view but also build your team's ability to detect change sooner and create the next bend in the road.

Train yourself to stand back from your business and its environment. In particular, look for the larger significance of anomalies, contradictions and oddities: things that depart from or challenge familiar patterns and differ from what you have known or believed.

The following are some anomalies to look for:

- An accelerating trend: A trend by itself may be passive, but a change in its momentum can be, well, momentous.
- An extraordinary event: Such an event need not be business related but could be social or political.
- Potential scalability: You should be able to sketch the scenario and their outcomes, opportunities and breakthroughs quickly.

Whenever you notice an anomaly, contradiction or oddity, you need to imagine what the new landscape might be if what you're seeing is a signal of powerful change — and how you might take advantage of the shift.

Tools to Build Perceptual Acuity

Practicing perceptual acuity will raise your value as a leader. What follows are a range of tools you can choose from to develop perceptual acuity for yourself and your organization:

The 10-minute exercise: In every staff meeting of an hour or more, devote the first 10 minutes to learning about and discussing anomalies in the external landscape.

Seek contrary viewpoints: Surrounding yourself with people from different industries and backgrounds, with different cognitive bandwidths and attitudes about risk-taking, helps you see the same world through different lenses.

Occasionally dissect the past: Spend time with colleagues and look at a big external change that hit your industry or some other one sometime in the past 50 years. Dissect that change. What were its seeds, and who were the catalysts?

Dive into the sources of risk: Management must have rhythmic, disciplined mechanisms to detect signals of risk and take appropriate action ahead of others.

Continually build your mental map of changes in multiple industries: Warren Buffett reads some 500 transcripts of investor calls each year, in which all the presenters state their views about their company and industry and what they anticipate in the future. Buffet watches for changes across industries that might prompt him to change the resource allocation in the portfolio.

Ask "What's new?": In my coaching work with executives, I get ongoing feedback on how effective this simple phrase is in stimulating new thinking, expanding the imagination and connecting various insights.

Use outsiders to multiply your capacity to scan: Use third parties to search media across the globe and gather information on what critical topics are emerging and what anomalies are disrupting patterns.

Watch the social scene: Pay close attention to how society is changing and what new consumer behaviors are emerging. Social issues are sometimes followed by increased scrutiny or regulation as they work their way into the political sphere.

Be a voracious reader: Look for what surprises you. Reflect on what it might mean and for whom. Doing this with whatever you read will increase your ability to identify signals and catalysts that might create bends in the road.

Whatever tools you use to build your perceptual acuity, bear in mind that seeing the world through a wide lens is not merely an academic exercise. You need to use your observations to plot a course for your organization and steer it through the changes you detect.

PART III: GOING ON THE OFFENSE

Defining the Path

Seizing the attacker's advantage starts with this central question: What new developments can I take advantage of to create a new need or give the customer or consumer a more compelling experience? Two things will greatly improve your ability to find a path through uncertainty: a sharp focus on the end-to-end experience of the customer or consumer and a working knowledge of digitization and analytics.

Transitioning to a new path poses special challenges, but you can't let them stop you from defining where you need to go. Going on the offense is no longer optional, for one simple reason: Defense alone means a shrinking business. Delivering the company's short-term bottom line in generating cash can backfire unless you find a new path.

Defining the path means figuring out what's missing from the consumer experience — or what could be a terrific new experience — and figuring out how you could fill the gap. The "aha" moments come from observing both the external environment and the consumer and imagining the ultimate in convenience or cost from the consumer's perspective, using technology in a new way.

You cannot develop an intuitive understanding of customers or consumers without direct observation. Even as CEO of Walmart, Sam Walton walked the stores, and Steve Jobs' and Jeff Bezos' feel for the consumer, gained through keen observation, is legendary.

A Mindset for Offense

Even the best strategic thinkers can be weak on offense if they lack the courage to move in the face of uncertainty. Going on the offense almost always requires taking action before you have a crystal-clear picture of all the factors your success will depend on. You must be willing to commit to a new path forward even when some things are fuzzy, knowing that you will adjust your path along the way. This is the mindset of offense for moving ahead and creating uncertainty for others.

Removing the Blockages

Even if you educate yourself about digitization and the consumer, your own psychology may get in the way of finding a path to take advantage of uncertainty. Paying keen attention to the deeply rooted subconscious blockages — your own as well as your team's — will help transform your mindset from defense to offense.

Some of the blockages that can interfere with people's observational acuity and decision making include

- Attachment to your existing core competencies
- Inability to build a new core competency
- Obsolescence of key people
- Fear
- Avoidance of opposition

Do you have the guts to make a big move? Intellectualizing is one thing; having the courage to pull the trigger is another. Doing nothing can be risky in itself, and there will always be some unknown unknowns — risks you don't even know exist despite careful thinking. But pinpointing the particular signals that your assumptions were right or wrong can build your confidence to step onto the path.

Kaiser Permanente's Path Through the Turmoil in Health Care

You didn't have to be a genius in the early 2000s to sense that health care was going to change. A focus on the total end-to-end experience of the consumer, in this case the patient, was conspicuously missing. The industry was data poor: Medical records were kept on paper in separate physical locations, so while patients passed from one care entity to another, information about them did not. People inside and outside of the industry, including members of Congress, began talking about health care rationing as perhaps the only viable endgame for care delivery.

In 2002, George Halverson became CEO of Kaiser Permanente, the California-based health-insurance company that also ran clinics and community hospitals. He saw things differently. Why not use information technology to integrate information and use it to find ways to improve the cost and quality of outcomes for care delivery? Halvorson went on the offense.

The CEO convened a task force of 70 people, almost all doctors. He asked them to identify everything they wanted a system to do and look at every system in the world. The price tag for the project was $4 billion, the biggest investment in an information system ever made. "I told them we were betting the farm on this… The tool could have infinite capabilities… Once we had the system, it would be like having the Internet — we would keep finding uses we didn't know were possible." The board approved the investment, and KP forged ahead on its new path to become a completely computerized and paperless care system — with all data on all patients instantly accessible to all caregivers.

Data opened new lines of discovery, with impressive results in the treatment of HIV, congestive heart failure, asthma and stroke. The good results from data access and process improvements boosted KP's reputation.

PART IV: MAKING THE ORGANIZATION AGILE

The Joint Practice Session: Transparency and Coordination

What makes an organization "steerable," or agile enough to be redirected quickly, is streamlining its linkage with the speed and character of the external environment. That means breaking the core rigidities that commonly constrain organizations: long, drawn-out processes for making decisions through multiple layers; the slow, filtered, often sequential processing of information on its way to the decision makers; unresolved disagreements stemming from narrow perspectives and self-interest of siloed leaders; budgets and KPIs and the incentives that are tied to them, all of which are essentially fixed for a year or more at a time; and people assignments that don't get changed.

A tool that can break these rigidities and allow the organization to adapt is the Joint Practice Session (JPS). Developed by Sam Walton in the early years of Walmart, rigorously implemented by Steve Jobs and used by Alan Mulally in the masterful turnaround at Ford, the JPS is a powerful mechanism for integrating and steering the organization.

Not Just Another Meeting

A JPS is based on the premise that when information is transparent to everyone in the group at the same time, people can form a common view of the total picture. They are more willing and better equipped to make trade-offs and adjustments spontaneously. Decisions are made, bottlenecks get broken, people are energized and the organization gets results.

The JPS includes all the critical people whose work is highly interdependent, meaning that their goals, priorities, information and outputs affect and are affected by each other's. Additional people are invited to attend when their viewpoints or expertise are needed. The core group meets frequently; once a week is common.

Transparency rules. All members put forward their progress on their most critical tasks — the good, the bad and the ugly. Dashboards show which tasks are on target (coded green), which are encountering difficulty (yellow) and which are stalled (red).

The group members focus on getting to the root cause of every task that is off track and helping the person work through it — the exact opposite of traditional meetings that put people on the defensive.

Transparency allows people to see how decisions affect each part of the business and the common goals. Conflicts become visible and are resolved.

Observations about what is happening in the external context and how it is affecting the business are built into the discussions. Members present their own perspectives but converge on a common view, which stimulates their sense of urgency to behave differently.

Team members can better steer their parts of the organization because they can visualize the progress of the total group and know what the hurdles are on a weekly basis.

Sam Walton's JPS

Sam Walton made the JPS his central steering mechanism. Key people gathered together — store managers, logistical people, advertising people and buyers — and worked as a team to ensure that Walmart delivered on its mission of providing the lowest prices: What are customers asking for that we don't have? Is there too much in the store that is not selling? How does our price for a given product compare with our competitors? These sessions made Walmart agile, able to respond promptly to customers' changing needs.

Steve Jobs, when he returned as CEO of Apple in 1997, instituted a four-hour Monday morning session at Apple at which people whose interdependence was crucial discussed one or more products. Jobs wanted everyone in the room listening to each piece of information simultaneously, believing that the resulting dialogue and debate would foster better integration.

In his first week at Ford, Alan Mulally introduced a weekly JPS. All senior leaders were required to attend. Re-

ports on progress toward the company's turnaround goals were to be succinct and honest, and facts — not politics or personality — ruled the day. Mulally used the meetings to sharpen his team's perceptual acuity. They were crucial in relentlessly driving accountability and execution of the steps Ford was taking to put itself on the new path. Week after week, progress since the previous meeting — or lack thereof — was on the charts for all to see.

The JPS has become a necessary tool to make an organization agile in times of structural uncertainty.

How Keurig Green Mountain Adopted the Joint Practice Session

In January 2014, Keurig Green Mountain CEO Brian Kelley launched what he later came to call JPSs to integrate all the functions across the business, including some 25 top people. At the inaugural meeting, members were asked to write down the top three priorities for the upcoming quarter. The intention was to help them focus on executing the short-term steps that were part of their journey. Then they were asked to list these priorities across the bottom of a blank piece of paper, and above each, to draw bars, smokestack style, for the five critical tasks associated with that priority. Going around the room, each person explained his or hers.

It was the first time they had heard each other's priorities and tasks in detail. They were asked to grab markers to color-code these critical tasks red, yellow or green for how they were progressing as of that day. People were noticeably uncomfortable that there was lots of red and very little green. But they were assured that this is normal for any company and encouraged to keep looking. As they did, the team members started to notice that a number of the reds had something in common: The people with critical technical expertise that they depended on were stretched too thin.

Other issues also surfaced. Two leaders were driving similar critical tasks. A decision was made on the spot to combine them into one. Another critical task was red because a supplier had been lagging behind, and again people put their heads together to figure out how to overcome the problem in the short run.

The group reconvened six times over the next three months. They could see the total picture of the business; they had identified the blockages and in many cases had fixed them. They knew what they had to focus on when they went back to work, and that it was aligned with what was happening across the company. The JPS had become a routine, and a welcome one that gave the company newfound agility.

The What, Who and How of Decision Making: Zeroing in on the Organization's Critical Decision Nodes

Your ability to dissect your organization's decision making is an important part of how you steer it through the big bends in the road and also make small adjustments as you navigate. Unless you drive the necessary changes in decision making, your organization could seize up and your great plans shrivel. You must identify the crucial decision nodes: the specific points in the organization at which the most critical decisions are made.

Start with the *what*. What are the most critical decisions, the ones that are pivotal to the business and that drive many other decisions? These will point you to the nodes. Then consider the *who*. Who should be responsible for getting these decisions made and held accountable for them, and who else should be involved in making them? Pay attention to who is exercising power; it might not be the official decision maker. And pay attention to *how* those decisions are being made. Decisions increasingly require inputs from multiple vantage points and areas of expertise. Is collaboration truly happening?

Attending to the what, who and how of decision making at the ground level will get you to the crux of what drives or stalls the process of moving in the new direction in dealing with new uncertainties. It will keep you on the attack.

Identifying Decision Nodes

To find the decision nodes that matter most, work backward from the crucial actions that must be taken. A node can be an individual, but more often it is a group of people, with one person ultimately responsible.

Leaders facing new challenges often make changes in organizational structure or key people. Such moves might be necessary but by themselves miss what is perhaps the most important factor: looking with fresh eyes at decision nodes to get the moving parts of the organization working together in ways that are different from the past.

Use common sense to answer three simple questions about the individuals you put in charge of decision nodes:

Does this person have the attitude, the necessary social skills and the right expertise?

Once you have defined your most critical decision nodes and who should be in them, consider how and how well they are working. Are decisions made both formally and informally? What information is being used — is it external, and is it used in real time?

Decision nodes are likely to go awry or become obsolete at some point, so be prepared to confront those issues promptly. As people act and react, you will discover new things, and the organization will have to adjust. Stay alert for when you need to step in and dissolve the blockages or redesign the decision nodes.

Steering on Two Tracks

You may have a creative and well-thought-out plan to go on the offense, but you will still have to sustain your existing business for some period of time. You can't allow it to fall apart just because you are trying to put a new one in place. Yet you have to shift decision making, bring in new expertise and change people's priorities to the new initiative. This dual track creates enormous stresses, particularly among those at higher levels of the organization who are being adversely affected. People who sense that they're losing power will procrastinate, hide resources, distort the changes you need to make — usually hoping the new thing will go away. Their reactions may stir up your own self-doubt and test your leadership. You will have to become a master in managing the transition at the appropriate speed.

Setting Short-Term Milestones

Once you know where the organization must go and have explained that to others, define the specific steps that must be taken in the near term to move on to the new path. These items become the short-term milestones that you must hit one, two or three quarters out. They are the front end of your long-term goals.

You need to track the short-term milestones just as intensely as you do costs, gross margins and the like — and be just as swift to take remedial action when something deviates. The milestones will show whether your new path is working and what course corrections are needed.

Within the company, use rigorous reviews to sniff out friction in the social system caused by changes in decision-making power in the assignment of people. Your discipline in following through on both the existing trajectory and the short-term milestones is key to steering. Create an environment in which people are keenly attuned to the external environment and are willing to suggest changes when budgets and KPIs are causing rigidity.

As you move onto your new path, you will have to redirect cash, take on more borrowing, sell some assets or find a partner to fund the investment. Steerability increases when you build the capacity to withstand a shock if something unexpected strikes the business or to quickly muster the resources to attack when the opportunity is right.

Keep Others with You

As you transition, keep feelers out to know how various constituencies are reacting. Since by definition you're veering from the existing path to something untested, good people can have different judgments and confidence levels. People who are not in your camp might see the transition as an opportunity to dislodge you.

CEOs have to be especially concerned about investors and their boards. As the leadership teams at Google, Apple and Amazon have clearly shown, you can keep investors with you if you explain the path you're on and deliver on the interim steps. Meeting the milestones will increase your credibility.

The essence of keeping people with you is communication: of the facts, of your point of view about the things that are not yet clear and of the likely second- and third-order consequences.

If you have done all this and convinced no one, you may want to rethink your plan. That doesn't mean you have to back off, though. Ultimately, leadership is not a vote. You lead by your convictions. As Verizon CEO Ivan Seidenberg says, "There comes a day when you have to say 'This is what I believe.' If the investment in fiber optic cable didn't work, the board probably would have changed management. I was fine with that."

THE SUMMARY IN BRIEF

Thought leadership is critical when it comes to establishing a following and strengthening trust within your brand – both on a personal and business level.

The book, ***The Authority Advantage: Building Thought Leadership Focused on Impact, Not Ego*** lays out a comprehensive roadmap to help you leverage yourself as a true Authority. It also helps you create (and execute) your own Master Authority Plan (MAP) and establish valuable connections through personal branding.

Authors Adam Witty and Rusty Shelton distill the insights that they had been discussing with their clients for years about how business leaders can build their thought leadership to effective ends. They also help you create compelling content and leverage books, speaking engagements, and publicity tools for impact, recognition, and profitability.

IN THIS SUMMARY, YOU WILL LEARN:

- About Authority Advantage and The Authority Matrix.
- How to build your Master Authority Plan (MAP).
- What falls under the new media landscape and how you can tap into it.
- How to create the ultimate Authority Advantage.

Introduction

Do you have any idea what kind of impression you are making right now? In our experience, most leaders don't.

That's why we wrote this book. We want you to understand that the cornerstone for building trust and creating a connection isn't your business brand- it's you, particularly once you create your authority advantage.

As you continue through these pages, we are going to share a step-by-step roadmap for creating an Authority Advantage for your business, your legacy, and your life. First, however, we're going to start by understanding the big shifts that are driving this new climate and why an authority advantage is more an urgent essential than a nice-to-have for today's leaders.

Part 1: Why Make This Journey?

Chapter 1: What Is the Authority Advantage?

Many leaders have the mistaken impression that building their brand in a more public-facing way runs counter to the servant leadership model they have been successful with and take pride in. Sadly, this is a flawed belief.

Good leaders who are winning today understand that their best and highest service isn't limited to those who are already a part of the business. It includes building trust and rapport with potential customers, partners, and team members at scale. If a leader isn't providing value in a public-facing way, they limit the impact they have on the business they lead. As a result, they do their existing team a disservice.

Building Mission Driven Authority is an important foundation of modern servant leadership because you extend your impact at scale. When you have the Authority Advantage you position yourself to build your business by creating influence and leverage at a scale you can't imagine.

Chapter 2: The Big Shifts

There is a remarkable difference between businesses that have a well-known, authentic, public-facing leader and those who don't. The former creates a seismic advantage in today's landscape where the leader focuses their energy on connecting with stakeholders in an authentic, valuable, and visible way. So, the question now remains: are you giving your business a similar advantage?

The three seismic shifts driving much of the urgency in this book include:

Shift 1: From Corporate Branding to Authority Branding. Building your own personal credibility with the public can be much more important than leading with your company brand. We are dramatically quicker to trust individuals than we are corporations, and the quicker you can put that reality at the forefront of your strategy, the quicker you will win in this new environment.

Shift 2: From Corporate Media to Micromedia. The opportunity that smart content creation provides to leaders today is best understood by looking at two most important contributing factors to its effectiveness: trust, and personalized value. Your audience increasingly wants to push major media that is giving them fractional value out and instead turn their attention to learning directly from you. This is what micro media helps achieve.

Shift 3: From Selling to Buying. People don't want to be sold something. They want to buy something. The best way to get someone to seek out the opportunity to buy from you is to position yourself as the unquestionable authority in your space.

Chapter 3: The Authority Matrix

There are four archetypes included in the authority matrix.

Archetype One: The Top-Down Leader. This is the leader who is the "boss" who's always right in his mind and expects others to agree with that assessment. This kind of leader risks alienating not only their own people but also potential clients and customers because their egos often make them blind to their lack of communication skills.

Archetype 2: The Behind-the-Scenes Servant Leader. These types of leaders become successful in their careers by serving those around them. Yet despite all the great things they do, they constantly hear their company is "the best kept secret" in their industry.

Archetype 3: The Ego Driven Leader. This type of leader has plenty of visibility but approaches it in the wrong way by proclaiming constantly how great they are. They build a brand that reflects poorly on them and their business.

Archetype 4: The Mission Driven Thought Leader (The Authority). The Mission Driven Thought Leader archetype is, we believe, the ideal one for a modern business leader. This leader has all the traits of a behind-the-scenes servant leader but also makes it a point to expand the reach of the impact they make beyond those who meet them directly. They command outsized influence in their space based

on the value they provide, the size of their reach, and the third-party credibility they get from writing books, creating media, speaking, and authoring content. People trust them and follow their lead.

If you aren't already a Mission Driven thought leader, we're about to help you become one and if you are one already, we're going to help you get even bigger.

Part 2: Building Your Master Authority Plan (MAP)

Chapter 4: The Urgency of Building Your Authority Brand

Your reputation is your lifeblood as a leader. In today's media environment, the first place most people will interact with you and your brand won't be in person or even over the phone. It will be online.

If your potential hires, customers, and partners are getting their first impression of you from their online searches far before they connect directly with you, don't you want to control that first impression and be intentional about that image so you can build trust instead of squandering that opportunity?

This is where the importance of branding lies. Branding is about creating an image in the mind of your audience. Building your authority brand helps you create an image that can cause your customers to trust you. It helps you build a connection with your audience and ultimately serve them with a Mission Driven mindset.

Chapter 5: Defining Your Brand

Building an international authentic brand as a leader involves 2 phases: Phase One = Preengagement. This image is created before an individual has direct interaction with you, your company, or your message. Phase Two = Post Engagement. This image is created when the individual has had direct interaction with you as a customer, team member, prospect, partner, or even neighbor.

Post-engagement begins when someone engages with you in some meaningful way. Evidence of solid a post-engagement brand includes customer referrals, positive customer reviews, team member retention, and more. Brands that rely primarily on post-engagement have no direct control over the lead flow.

To build solid visibility and create your Authority Advantage it's equally important to tap into the power of the preengagement phase. Preengagement offers a high level of discoverability which, as a result, increases trust.

Chapter 6: Building Your Brand

Once you've established your discoverability, the next step is to build authority by association, which accelerates the speed of trust.

Until your name is a brand that means something to a large audience – Gordon Ramsay, for example – it's important to differentiate yourself by associating yourself with brands that do mean something to your audience. This is the single most important step to take when it comes to building trust with your target audience before you have a chance to interact directly with them.

It's also important to establish a visual authority by association. As you grow your visibility as an authority, more and more people are going to land on your website, seeking to learn from you instead of immediately being ready to buy. The visuals within your website must give them a reason to pay attention to your message. The message you advance must clearly communicate why you are the absolute best fit for your target audience.

Chapter 7: Showcasing Your Brand

The art of referral marketing can be an important component of your Authority Advantage. Typically, the referral you are most proud to make is one where there is an air of scarcity or authority involved.

Take, for instance, this referral, "The new five-star restaurant downtown is booked a month out, but I know the owner. I'll work on getting you a table."

The person who makes this kind of referral enjoys what we call the "Authority Halo." In the end, good authority-driven referral marketing creates a win-win-win for you, your customer, and your new lead in several ways. You generate leads more consistently, your customer refers you because of the authority Halo, and your new lead gets the benefit of having the chance to consume your product or service.

Chapter 8: The Three Categories of Content to Create an Authority Advantage

When you set out to establish your brand, it's important to remember that content is king. The three categories of content you must focus on include:

You-Driven Content. This is your stuff. It connects back to your experiences, your personal journey, your perspective, your intellectual property, and your own resources. This kind of content is in great demand once you have a large audience in place.

News-Driven Content. This type of content is timely content that connects to a topic your target audience is paying attention to. The two subcategories here include calendar-driven content and newsjacking.

Relationship-Driven Content. The content type helps create an authority advantage not only as an opportunity to build your brand but also as a bridge to build and strengthen relationships with others. By doing so, you give yourself a clear road map to creating and growing relationships at a scale and speed you may not realize is possible.

Aside from understanding how to distribute your content across the three categories, it's also important to do an audit of your current content streams across each of your channels.

Part 3: The New Media Landscape

Chapter 9: The Key to Understanding Media Today

The key to understanding the new media landscape is to develop a keen understanding of virtual real estate and, more specifically, a clear grasp of who "owns" the connection to the audience you're communicating with. In your past, the biggest landowner in terms of audience size was traditional media. Today, the power has shifted towards the largest rented media brands in the world such as Google, Facebook, TikTok, LinkedIn, Twitter, Instagram, and other large social media platforms. The new media landscape of today includes three media types: rented earned and owned.

Chapter 10: Rented Media

Rented media includes all media where you fully control the content, but you don't own the real estate. This media includes advertising, social media channels, bio pages on corporate sites, and 3rd party listings on sites like Crunchbase, health grade, etc. Build your rented media strategy by understanding the nuances and etiquette of each media channel.

Chapter 11: Earned Media

Earned media includes all content that goes out on real estate others own where the impression of the audience is that you earned that message. It includes publicity, speaking engagements, online business or book reviews, referrals, word of mouth, and awards. Publicity, speaking, and publishing a book are three of the most important categories of "earned media."

The most effective way to get PR today is to have a push/pull approach, where you pitch ideas directly to the media while also pulling them to you via smart content marketing. Tap into the power of public speaking by focusing on branding, delivering on stage, and capitalizing on each engagement. Finally, write and publish a book to establish instant respect and credibility with whomever you meet, and position yourself as an expert on whatever topic your book is about.

Chapter 12: Owned Media

With media you own, you get to make all the rules. You control what it looks like, what message is communicated, what style you embody, and, most importantly, the way a relationship with your audience is started, nurtured, and converted into action. Owned media outlets such as websites or podcasts are focused on attention and, more specifically, on doing everything they can to earn and then own the attention of their audience on an ongoing basis.

The starting point for an owned media strategy is having a clear understanding of the three audiences that every business always has in place. These include:

Audience 1: Paid Ticket Holders. This group includes your existing clients, strategic partners, and team members.

Audience 2: Tailgaters. These include an audience group who has not yet decided to spend money with you, take that job offer, book you for a speech, or move forward with whatever conversion you may be trying to drive.

Audience 3: Future Fans. This is the group that could benefit tremendously from working with you or hearing your message, but they currently have no idea who you are.

Create a content strategy that caters to the needs of these three audience types.

Conclusion

Success looks different to everyone, which is why the authority advantage works so well. It's customizable, adaptable, and authentic to who you are and what you do. Whatever means success for you, we hope the road map we have provided here can help support you on the way.

THE SUMMARY IN BRIEF

In 1984, Doug Conant was fired without warning and with barely an explanation. He felt hopeless and stuck, but surprisingly, this defeating turn of events turned out to be the best thing that ever happened to him. Embarking on a journey of self-reflection and discovery, he forged a path to revolutionize his leadership and transform his career trajectory. Ultimately, Conant was able to condense his remarkable leadership story into six practical steps.

Part leadership manifesto, part practical manual, ***The Blueprint*** teaches leaders how to work through the same six steps that Conant used to transform his journey. The steps are manageable and incremental, designed to fit practically within the pace of busy modern life.

The prospect of change can be daunting, so ***The Blueprint*** arms readers with exercises and practices to realistically bring their foundation to life in every situation. Today's leaders who feel stuck and overwhelmed finally have a blueprint for lifting their leadership to make meaningful change in their organizations and in the world.

IN THIS SUMMARY, YOU WILL LEARN:

- The six steps for building your foundation of leadership.
- To plan your unique leadership model.
- To adopt a growth mindset that allows you to constantly improve.
- The 10 key building blocks to leadership that works.

Introduction: The Raw Materials of Change Are Already Within You

You already have the raw materials to change your leadership life. But today's leaders don't have the time to figure it out on their own. The pace of life has accelerated rapidly; technology has ushered in a tacit expectation that we be "on" and reachable 100 percent of the time. The number of texts and emails we receive has tripled in recent years. Expectations are higher. Companies want more, better, faster.

Leaders both seasoned and aspiring don't have to muddle through figuring it out on their own anymore. By following six steps, you can fulfill your potential and deliver ever-improving results in a demanding, confusing, and time-starved world—and actually enjoy yourself along the way.

These steps teach you about yourself and help you build a customized framework for reaching your goals, in a way that works uniquely for you, with your own leadership voice and style. All you have to do is follow the practical steps in earnest. Each step is small and manageable; nothing ever has to be "perfect" or "complete." Because that's not the way life works.

There is one small catch: You must enter into this journey understanding that it is ongoing. While you'll be making measurable progress right out of the gate, noticing changes, and achieving goals, you won't ever truly be "finished." Once you embark on this journey, it never ends.

Part I guides you through the practical six-step process of self-reflection and study, to build the foundation for your leadership success. You'll learn how to use small steps to meet big goals.

In Part II: Manifesto, you'll get anchored in foundational leadership lessons. Your greatest support in the realization of your special leadership dreams will be a deep understanding of what leadership is and the timeless principles that make leadership work, no matter the practitioner.

PART I: BLUEPRINT: GET UNSTUCK

In the world at large, a blueprint is a tool for bringing to life the dreams of an architect. Here, the Blueprint is a tool for bringing to life the dreams of leaders. Rather than building a structure, you are building your future; while the output is not as tangible as concrete, steel, or glass, it can be just as magnificent as the most dazzling skyscraper.

If you ask any good structural engineer, they'll tell you that the trick to building a soaring skyscraper is laying a deep foundation. The taller the structure you want to build, the stronger and deeper the foundation you'll need.

The same thing is true in leadership. The leaders who succeed have a sturdy and secure foundation. That foundation tethers them to their beliefs and values, keeps them connected to their unique personality, characteristics, and temperament, and allows them to put their skill set to work in the most productive way.

That's what your journey through the six-step Blueprint will be focused on: designing the foundation that allows you to build a personal leadership approach that can withstand almost anything.

Step 1: ENVISION: The Power of Intention and Purpose

The first step in the Blueprint is to Envision your leadership future, to reach high and set an anchoring intention for your journey. To lead effectively, you must focus on being just a little more intentional every day.

The first step to *being* intentional in your leadership is *having* an anchoring intention. In the following exercises, you'll do the necessary reflection to uncover a working draft of your purpose.

To begin to arrive at your crisp statement of purpose, you will answer three questions—the first and most important questions of leadership. This is your opportunity to envision what your boldest dreams of success and fulfillment might look like.

Question 1: Why do I choose leadership? How can we begin to Envision what we want our leadership to look like if we don't understand why we are doing it to begin with? Why have you made the choice to lead people? What will be the greater meaning behind that choice that will help you to continue to choose it, enthusiastically, throughout the course of your life?

How do you want to spend your leadership life? What is the work you feel called to do? What is your dream? How do you want to leverage your special gifts and interests to make the world a better place? What does "improving the world" look like to you?

Question 2: What is my promise? This question adds texture to your reason for leading because it helps you con-

What have you learned from big wins or successes in your career? What successes were you able to replicate time and again?

nect with your promise: what you can deliver. What makes you different? How do you stand apart from your contemporaries and colleagues? What qualities are you not willing to compromise on? What parts of your personality do you leverage most in your leadership?

Question 3: What are my values? To gain a better understanding of your purpose—and to begin to work toward fulfilling that purpose with integrity, you'll need to identify a set of values. Your values are related to the principles you hold most dear; they are the qualities, ideals, or precepts you expect from others and strive to embody with your own behavior. In short, they are your standards. It is important to get rooted in your values early in the Blueprint process because they will be reflected throughout every other component of your entire Foundation.

To diagnose your values, you have to think back on your life and career thus far. Can you think of times where you took a principled stance even though it might have been risky, inconvenient, or even damaging to your career?

Can you think of times you feel certain you behaved with integrity even when it was very challenging to do so: examples in which you went against the grain, had an uncomfortably candid conversation, or defended an unpopular decision?

Now take a stab at a rough draft of a purpose statement that hits all three of those cylinders in some fashion. You won't get it right on the first try. But you'll be in a good position to make it better. Use the words "My Purpose Is" to guide your thinking.

Step 2: REFLECT: Dig Deep

Using the thinking you did in Step 1 as a springboard, you will be challenged to travel deeper within yourself to learn what life experiences have influenced your beliefs about leadership. You will begin to understand how you can inspire and motivate people to do better.

Question 1: What motivates people to give their best? To understand how to motivate others, first think about what has motivated you on your own journey. When were you most driven in your life and/or career? Was it when you were chasing a bonus or raise, when you were seeking the respect of a mentor or superior, or perhaps when you were perplexed by an intricate problem that needed solving?

You will find that what motivates you may not always be what motivates other people. So, now, expand your reflection to the people around you. What motivates the people closest to you in your life—your friends, family, closest colleagues?

Keep a list of things that stand out. Notice how and when there are points of synergy between what you find motivating and the values you brainstormed in Step 1.

Question 2: How do you influence people to deliver consistently high performance in an inconsistent world? This question asks you to think about successful practices and tactics for influencing others. It drills down on specifics and gets more into the nitty-gritty.

What have you learned from big wins or successes in your career? What successes were you able to replicate time and again? Which ones felt more like one-offs? Were you ever part of a team that felt so in sync and so productive that good results came repeatedly and organically? If so, what created the magic?

Thinking of the above prompts, identify four to six specific practices or actions that brought about desired results or superior performance throughout your career.

An important part of graduating from the Reflect step is to compile your leadership vocabulary. Building on the work you did in Step 1 to think about your values, beliefs, and leadership purpose, here you will add shape and structure to the words that are meaningful to you.

What are the words you will use to find strength and to describe what is most important to you? What words hold the key to the person and leader you would like to become?

Now, take a stab at a preliminary list of your leadership beliefs. Use your values and your leadership vocabulary as a reference point. For example, if one of the words in your

leadership vocabulary is "integrity," a leadership core belief that brings that word to life might be "Always be true to your word," or it could be as literal and on-the-nose as "I believe a true leader leads with integrity."

Step 3: STUDY: Lay Your Groundwork

In the Study step, you will be challenged to look beyond your own lived experience to gain deeper insights from the world around you through reading, observing, practicing, and studying.

The first concept in the Study step is the idea of building a network. People tend to think of networking as a way to advance their career and build professional relationships. And it is, but it's much more than that.

The other concept in the Study step is more in keeping with a traditional definition of studying: the idea of doing your homework. This requires reading about leadership, studying leaders past and present whom you admire, consulting with executive coaches, seeking out mentors, and more.

The Entourage of Excellence™ gives you a framework for evaluating what you admire in other leaders. And it equips you with an on-demand advisory board that can assist you in your thorniest moments. First, choose, two people from your professional life (past or present); two people from your personal life (past or present); two leaders from history who have inspired you. For each person you choose, write down their name, the qualities you admire about them (e.g., teamwork, mental toughness, EQ); and a brief story or anecdote (two or three sentences) about why you are adding them to your entourage.

Anytime you need guidance, you will simply do a quick mental accounting of your entourage, choose the right person for the job, and ask, "What would _____ do?" "What would they recommend?" "How would they challenge you?" When you develop this as a habit, you too can more confidently choose the best path forward, with excellence—at a moment's notice.

Leadership dos and don'ts. Keeping in mind the qualities that make the members of your entourage so exceptional, and the tactics you came up with when you answered "What makes people give the very best of themselves?" you will list the "greatest hits" from all your reflections thus far: five to 10 of the very best things that good leaders do. These should be tangible and specific practices that bring key qualities to life, as they will become crucial components in the leadership plan you create in the next step in the Blueprint.

For example, if your reflections have revealed that "Recognition" or "Earning Trust" is a cornerstone of your idea of good leadership, a practice that brings that to life might be "writes handwritten thank-you notes."

As important as it is to be explicit about what you should do, it's equally important to be definitive about what you should not do. So start one more list for don'ts. Brainstorm the five to 10 things that good leaders definitely do not do. These should be specific things to avoid like "doesn't give feedback," "breaks commitments," "lies," "boasts," or "always casts blame on others."

Step 4: PLAN: Design Your Leadership Model

Most leaders have a plan for the key business initiatives they want to accomplish: a plan for talent acquisition, a plan for business development, a plan for increasing sales, and so on. Planning is woven into the fabric of the corporate world for a reason. To get things done, you need a path to follow.

This step is about equipping you with a plan for bringing your leadership to life in the real world. First, you'll create a prototype, and then you'll refine your work in the next step.

A leadership model is a representation of a system, composed of concepts and practices, which you use to help people—including you—know and understand your approach to leadership. Ultimately, with the creation of your leadership model, you will create a succinct encapsulation of how you intend to lead. Once you have developed your model, as part of your overall Foundation, you have a resource that helps you to be consistent in your behavior.

Everybody's model is and should be different. That said, there are some broad guidelines about what your model should capture.

Guiding question. How will you advance your leadership purpose and honor your leadership beliefs? Advancing your purpose is about how effective you will be. Honoring your beliefs is about how authentic you will be.

Two basics. Two basic things you should strive to capture in your model are performance and people. You can find your way through just about any workplace culture or

To excel at leading, just like any art form, you must treat it as a craft: honed with intention, practiced mindfully, and improved constantly.

challenge, even in the most volatile environments, if you both perform and take care of people. The same is true of your leadership model.

Clusters. No matter what shape or framework you land on, your model will also have key practice areas. Now is the time to extract a few words, ideas, or thoughts to use for your clusters. Do this by looking back now on the exercises you have already completed. Reflect on the process briefly and extract at least a few key insights, words, or ideas. What revelations have been especially resonant? Is there an issue or idea that has occurred to you repeatedly?

Grouping. Spread out all of your notes in front of you. Which words or ideas seem to go together? Which components seem to speak to your leadership purpose? Which components seem to speak to your leadership beliefs? Start to organize your notes into clusters. Don't worry about it being "right" or "wrong." You will notice that distinct themes will emerge.

Taking shape. Now comes the fun part. Take a stab at organizing your clusters into a shape or framework that speaks to you. The possibilities for your unique design are endless.

Step 5: PRACTICE: Build Your Leadership Profile

To excel at leading, just like any art form, you must treat it as a craft: honed with intention, practiced mindfully, and improved constantly.

Deliberate practice requires dedication and smart application. To do it, you have to consistently adapt your approach; it requires calculation and careful thought but can also be broken down into small manageable steps. It means working through occasional discomfort and persevering when you're tempted to quit.

In keeping with the small step ethos, you will now do two incremental things: refine the key practice areas of your leadership model and identify just one practice for each area in your model that brings the concept to life.

To start, refer to the work you've already done in the previous steps. First, look at the Entourage of Excellence and "Dos and Don'ts" exercises you completed in the Study step. The dos and don'ts you already identified *are* practices you can use as inspiration now. Looking at those practices, you already have a stable of actions you might consider for your practice treasury.

Key practice areas are the finalized guiding themes of your leadership model; they are what your clusters should evolve into. They define what is most important to your plan for success in your leadership, outline what matters most to you as a leader, and embody your standards for conduct.

Compare your dos and don'ts to the rough draft of your leadership model. What practices fit with which clusters? How can you narrow your clusters down or expand them based on the practices you will use to bring them to life? Based on your looking at it with fresh eyes, what are the key elements you want to include?

Now pick one practice for each key practice area in your model. For each practice you choose, make sure it is specific, repeatable, requires focus, and iterative (subject to feedback).

For example, Nancy Killefer, a retired senior consultant at McKinsey, has had an illustrious career in consulting and government. She's an extrovert who found in the past that she had a tendency to steamroll or take up too much space in conversations. Wanting to practice the skill of better listening, she developed a practice that helps: She sits on her hands. Knowing that she talks with her hands, she practices restricting their movement so that she becomes aware of whenever she has the urge to interject (because the urge naturally begins in her hands). Then, she pauses and instead allows the other party to fill the silence and guide the conversation as needed.

If one of your areas is "Relationships" or "Relationship Building," a practice in service to that might be holding informal meetings outside the office. If one of your areas is "Communication," your practice might be explicitly stating your expectations in a manageable way.

Step 6: IMPROVE: Reinforce Your Foundation

The rapidly changing business environment is competitive and unforgiving. What is tried and true today may be obsolete tomorrow. What is innovative this week may be passé the next. That's why the best leaders, and organizations, understand that they must either grow or die. It's a Darwinian world. The competition is fierce and unrelenting. The pressures are unceasing. How can you keep up? If you are not constantly evolving, you are withering toward obsolescence.

Since the demands of the marketplace require agility, we must engineer ongoing growth into our leadership DNA. That's what this step is designed to help you do. Embracing a continuous improvement mindset helps you adapt, grow, and ensure you are best suited to juggle the changes you will encounter in today's world.

The Growth Mindset

First, you must internalize the growth mindset. This is a phrase coined by researcher and psychologist Carol Dweck. In simple terms, people with a growth mindset believe that intelligence can be developed and improved. It's a fundamental belief in the ability to get better.

To make the lessons in this step real and to internalize the growth mindset, you have to keep this one urgent question at the top of your mind: How can I do better? This is the same question everyone who has ever excelled in their field has used as their North Star, from Beethoven to Botticelli to Beyoncé.

As a first step toward improvement, go back through your first five steps of the Blueprint and see if they hold up to scrutiny at a high level. Are there better ways to answer the first five questions? Have you unearthed all the insights you can? Does your emerging approach make sense? What can you change or rework? What needs tinkering?

Now you will identify specific areas for growth and make a plan for improving in those areas. Pick three areas that play to your strengths, that you will be able to pursue with the joy that comes from doing the things you are good at, rather than the things that leave you feeling frustrated or depleted.

Think—what inspires you? Thinking back on your first step in the Blueprint, what did your boldest dreams of leadership success look like? Holding that vision in your mind, contemplate: What do you have to improve to get there? Maybe it's that you want to apply your skill set in a new way by pursuing board governance, or maybe it's that you want to enhance your cultural fluency with an international assignment. Perhaps you want to deepen your already rich relationship-building abilities and you want to create an action plan for that.

Write down three areas in which you want to improve and one action you will take over the next 30 days in service to that improvement initiative.

For example, if you want to strengthen team morale, the action might be this: Over the next 30 days, commit to holding at least one to three meetings in a more informal setting, whether an off-site or a walk-and-talk outdoors.

PART II: MANIFESTO: MAXIMIZE YOUR IMPACT

Thus far, ***The Blueprint*** has helped you discover a way of leading that is uniquely yours, to anchor you in a strong Foundation so you can freely adapt to the challenges you will encounter in a way that is authentic to you. But alone that is insufficient. Your greatest support in the realization of your leadership dreams will be a deep understanding of what leadership is—and the timeless principles that enhance leadership effectiveness—no matter the practitioner.

What Is Leadership?

Leadership is the art and science of influencing others in a specific direction. To influence people effectively and create an evolved leadership approach, you must first learn how to leverage enduring leadership principles: the basic building blocks. Once you're better steeped in the fundamentals, you can more ably deploy innovative, high-impact leadership practices that capture the spirit of your Foundation. The more you ground yourself in these principles now, the more enduring your leadership legacy will be tomorrow.

There are 10 key building blocks to "leadership that works": high performance, abundance, inspire trust, purpose, courage, integrity, growth or die mindset, humility, how can I help, and have fun. Attending to them in a manageable way offers your best chance at delivering enduring results in the marketplace, creating a legacy of contribution, delivering consistent value for all stakeholders, and, most importantly, charting a course to professional joy and fulfillment.

There is a "higher truth" about leadership that knits together the 10 tenets in this manifesto: Leadership is all about the people. Leaders need followers. Followers are earned; they're not guaranteed on the merit of your title alone.

To earn the confidence of your constituents and spread your influence, all of your actions must be tethered to a

Trust is not a soft, social virtue—it's a hard, economic driver for every organization.

commitment to honoring people. This is the single most important thing for leaders to understand. Let's now discuss three of these tenets.

Inspire Trust

Trust is not a soft, social virtue—it's a hard, economic driver for every organization. Trust comprises two-thirds of the criteria for *Fortune's* esteemed "100 Best Companies to Work For" list because their research shows that "trust between managers and employees is the primary defining characteristic of the very best workplaces." These companies beat "the average annualized returns of the S&P 500 by a factor of three."

Trust starts small and gets big. It's not a nice-to-have; it's a must-have. Without it, every part of your organization can fall, literally, into disrepair. This could mean something more abstract like losing profits or market share in a corporate context, or something as vital and grave as losing more lives in combat zones.

Conversely, with trust, all things are possible—from the most ambitious strategic goals in a corporate context to the most valorous victories won on the world stage in a military milieu. It's clear that as you work to develop your leadership craft, you must inspire trust at every step along the way. You really have no choice. Your entire suite of leadership behaviors depends on it.

Luckily, trust, like most leadership behaviors, is a skill that can be learned and built. To inspire trust, you must

- Honor all stakeholders.
- Declare yourself and do what you say you are going to do.
- Develop and display character and competence—consistently.
- Uphold high ethical standards.
- Model the behavior you expect from others.
- Acknowledge mistakes.
- Consistently meet performance expectations.

A theme that runs throughout the suite of behaviors listed in the bullets above is the importance of demonstrating respect. A recent *Harvard Business Review* article found that employees value the feeling of being respected by their leaders more than anything else, even more than explicit recognition, visionary leadership, or learning and development. These findings link closely with the overarching theme of all effective leadership: honoring people.

Integrity

We all know leaders who have a bias for action, who have little patience for words and only value results. These leaders say indignantly, "It doesn't matter what you say, it's what you do that counts!" It's a popular idea.

The truth is that both what you say and what you do matter; they matter a great deal and in equal measure. To demonstrate integrity you have to say how you will act, then do what you say. You have to say what matters and then do what matters. You must tell people where you're going to take the organization, then actually lead them there.

Yes, your actions are crucial. But without words to measure your actions against, they are less powerful; absent any criteria from you about what you believe and how you will act, it is harder to gauge whether you are behaving with integrity or not.

Declaring Yourself

Declaring yourself gives people a criterion for measuring your trustworthiness, to lay the groundwork for building productive working relationships, and to model the behavior you want to see reflected throughout the organization.

Declaring Yourself works in two important ways. First, it spreads trust from the inside out. As you model the practice of being forthright and transparent, people can approach their work demands with that same transparency. And they can proceed with all the necessary information to work smoothly alongside you. It is a relationship accelerant that dissolves mystery and enhances understanding between co-workers.

Second, it creates accountability for you to adhere to the commitments you make when you declare yourself.

What types of things should you include when you declare yourself? Anything you deem pertinent.

A "Declaring Yourself" document can include what is important to you, what kind of leader you're trying to be, what you value in an organization, what you seek in direct reports, how you believe your industry operates, your planning philosophy, operating style, and so forth.

Humility

Often when we think of humility, we consider its most surface level meaning: that it refers to how modest a person acts. Sometimes, leaders even misunderstand it to mean holding themselves in low esteem, or assume it requires publicly denigrating oneself so as not to appear cocky or brash.

Humility in a leadership context has two crucial overarching components. The first part of humility involves putting your ego aside to let people know a more personal, less-rehearsed version of who you really are. Instead of only showing people the best version of ourselves all the time, it means coming down to earth to show a few cracks, too.

It requires shedding your armor a bit, and doing the necessary work to delve deeper in your understanding of yourself so you can share your leadership story and gifts more freely with others.

The second part of humility requires that we look beyond our own abilities and perceptions to learn from others; it means fully recognizing we are not the smartest person in the room and learning to listen—to really listen—to the people around us.

Learning to be alert to the abundant wisdom that exists in the world around us and within the other people in our organization is a skill that will serve us well on our leadership journey. We can do this by mastering the art of listening, reading more, becoming more open-minded, and learning to give credit to others more generously.

These two components boil down to two essential elements: connecting and listening.

Your life story is your leadership story. Only you can write it. Only you can chart your course. The six steps have helped you connect more deeply with your unique talents, insights, experiences, goals, and dreams. There isn't another soul alive who can replicate your exact Blueprint, who possesses your one-of-a-kind Foundation. Cherish that knowledge. Your contribution is special.

People are waiting for you to make a difference. The time is now. Go forth and lead!

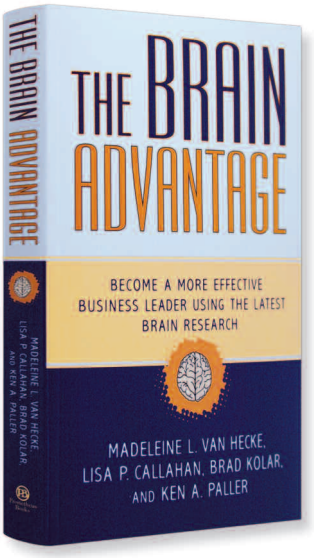
Leadership: Development



The Brain Advantage

Become a More Effective Leader Using the Latest Brain Research

by Madeleine L. Van Hecke, Lisa P. Callahan, Brad Kolar, and Ken A. Paller

THE SUMMARY IN BRIEF

The Brain Advantage ties the latest brain research to its implications for leadership styles and practices. The human brain is a three-pound miracle. But of all of its miraculous features, there is one that is too precious to neglect. We have the power to "step outside of ourselves" and be aware of what our brain is doing.

Consider a rat that has mastered a tricky maze to find food. Move the food closer to the starting point, and the rat will run right past it. The rat is trapped in its routine.

As humans, we too get trapped in mindless behaviors. But unlike the rat, we can take a step back and realize what we are doing.

The authors of *The Brain Advantage* consolidate research from a wide range of studies, articles and books that delves into the *neurocognitive* underpinnings of how people think and act, leading to provocative insights into the human condition. *The Brain Advantage* draws on key research findings and analysis that can help you become a more effective decision maker, communicator and change agent.

IN THIS SUMMARY, YOU WILL LEARN:

- Why leaders should see themselves as facilitators of innovative people.
- Why "smarter" brains don't have to work as hard.
- Why being an authentic leader does not mean revealing every random thought.
- How leaders hone their intuitions by reflecting on and analyzing their past experiences.
- How low levels of stress may make us more resistant to tough challenges.

THE COMPLETE SUMMARY: **THE BRAIN ADVANTAGE**

by Madeleine L. Van Hecke, Lisa P. Callahan, Brad Kolar and Ken A. Paller

The authors: Madeleine L. Van Hecke is the author of *Blind Spots: Why Smart People Do Dumb Things*. Lisa P. Callahan is the global leader for learning and knowledge management for the outsourcing practice, Accenture. Brad Kolar is the president of Kolar Associates, a management and leadership consulting company. Ken A. Paller works as a cognitive neuroscientist at Northwestern University.

Using Constraints to Free Up the Mind

What is going on in the brain of a jazz pianist? This is a tough question for neuroscientists to answer. If you are doing research on this in order to study creativity, how can you tell that what you are seeing in the brain scan reflects actual improvisation and not simply the playing of a prearranged jazz piece. These were the challenges faced by researchers Charles Limb and Allen Braun as they planned their study of jazz improvisation.

Limb and Braun found that the *medial prefrontal cortex* – an area of the brain that is a few inches behind the center of the forehead — was much *more* active during improvisation. At the same time, there were two parts of the brain that were significantly *less* active when the musicians improvised, compared to when they played a memorized piece.

One of these areas, the *orbital frontal cortex*, is involved with monitoring our behavior to keep it socially appropriate. The second area that was quiet during improvisation was the *dorsolateral prefrontal cortex*. This part of the brain is involved in what are sometimes called the brain's "executive functions."

When we are consciously pursuing a goal, planning to achieve it and monitoring our progress, this part of the brain is at work. In the flow state, thoughts and sensations can come through without being controlled, judged or censored. In contrast, the flow state is interrupted when executive functions are activated.

For example, when an artist steps back from a painting to consciously consider progress, he or she is activating the executive parts of the brain. When this happens, the self-expressive parts become idle.

In some circumstances, conscious analysis can also interfere with creative problem solving and innovation.

How Can I Use This Information as a Business Leader?

Companies need innovation to thrive; leaders are expected to encourage innovative thinking. This creates a challenge for many leaders since it requires a neural orientation that they typically avoid. A successful leader, for example, relies heavily on the area of his or her brain that controls executive functions. Goal-oriented business leaders are consciously, intentionally and deliberately thinking about what they are doing. Indeed, the kind of thinking most likely to result in innovative ideas is at odds with many typical business goals.

Leaders don't want employees to reinvent the same old wheel, but they do want new wheels that improve what already exists. They want better products and services and original ways to solve problems. At upper levels of management, companies want leaders who are imaginative enough to see the entire industry from different perspectives. But the values that are typically embraced in business, such as careful planning and efficiency, make it hard for some leaders to endorse the kind of thinking that leads to innovation.

Business leaders can impose constraints that encourage rather than stifle creativity, but these must be the right sorts of "nonsuffocating" constraints. In her article "How to Kill Creativity," Teresa Amabile advises leaders to "give people freedom within the company's goals. Tell them which mountain to climb, but let them

decide how to climb it."

Leaders who have set boundaries may find it easier to relinquish tight control. The boundaries create a sense of safety for the leader as well as for the employees.

Overall, leaders have a huge impact on innovation because their decisions shape the space within which creative employees can improvise. ●

Do Expert Brains Think Less?

Brain imaging techniques allow researchers to witness the brain's activity reflected in a rainbow of colors on a computer screen. When brain cells are highly active — working harder — the result shows up as brighter colors on the screen. Brilliant reds and yellows indicate brain areas that are most active. In contrast, the blues and greens on a scan show a quieter, less active brain area.

Neurologist Richard Restak summarized a UCLA study that compared individuals with high IQs to those with average IQs. Higher IQ people had cooler, more subdued brain scans "while their less intellectually gifted counterparts lit up like miniature Christmas trees."

When individuals undergo training and gain expertise, their brain activation may be reduced following learning. Restak concluded that "smarter brains" don't have to work as hard. Why? One strong bet is that when we are inexperienced — when we still have a lot to learn — we have to make a conscious effort to think about what we're doing. But later, after we've become more adept, much of what initially took effort becomes automatic. The brain automates well-learned responses.

The good news is that functioning on autopilot allows us to expend less of our brain's energy on routine aspects of work. Our expertise allows us to direct our energy elsewhere.

However, carrying out routines more automatically has one major drawback. It increases the risk that people will at times implement these procedures "mindlessly."

The Risk of Autopilot

In 1989, international rock climber Lynn Hill was preparing to climb a wall in Buoux, France. She threaded the rope through her harness, but then, instead of tying the knot, she stopped to put on her shoes. While tying her shoes, she talked to another woman. "The thought occurred to me that there was something I needed to do before climbing," she later recalled. But Hill "dismissed the thought" and climbed the wall. When she leaned back to rappel to the ground, she fell 72 feet. Fortunately, tree branches broke her fall and she survived.

Laurence Gonzales, who tells this story in his book *Everyday Survival*, points out "experience contributed to her accident." She could tie her rope to her harness on autopilot, but the similarity between tying her shoes and tying the rope "tricked" her brain into thinking she had done what she needed to do.

The key question for business leaders is how to ensure that people stick to autopilot when it's working well, yet make the shift to more conscious deliberation when it's needed. ●

Eureka! How to Make New Connections

As Northwestern University neuroscientist Mark Jung-Beeman observes, "In the two millennia since Archimedes shouted 'Eureka!,' it has seemed common knowledge that people sometimes solve problems — whether great scientific questions or trivial puzzles — by a seemingly distinct mechanism called insight. This mechanism involves suddenly seeing a problem in a new light, often without awareness of how that new light was switched on."

Sometimes we need to shift away from our methodical left-brain orientation and let the right brain take over. Our right brains let the insights "happen" and help us notice them when they occur. Insights involve making new connections among ideas that we already have. ●

Can I Trust You?

Trust is risky. Yet without trust, we would never rely on a friend to pick us up at the airport or depend on a colleague to steer us in the right direction as we worked on a project. So how do we decide whom to trust?

Economists look at trust as a calculation. Based on how someone has treated us in the past, we calculate the odds that we can trust that person in the current situation.

The neuroscience research suggests that fairness is not the only element that influences trust. The brain does try to imagine what the other person might be thinking in an attempt to predict how that person will behave. And the brain does appear to keep track of what has happened in the past to determine the odds that our partner will play fair or betray us. But once trust is established, we take it for granted and our brains no longer need to engage in careful calculations to decide what to do. We simply trust.

For trust to develop between leaders and employees,

both parties need to demonstrate their trustworthiness. Leaders need to earn a reputation for competency, honesty and dependability. Both leaders and followers need to make sure that they keep their promises.

Ouch! You Left Me Out

Psychologists used to think of social pain mainly in terms of what we feel when we are humiliated or insulted, but as social exclusion research clearly indicates, we also feel pain simply from being left out.

Leaders cannot dole out their time and attention in precise or equal measures — nor should they try to do so. But they can shoot for a balance to ensure that whole segments of their organization do not feel left out and that individuals do not feel routinely overlooked.

Feeling like you are contributing to the organization in a meaningful way, feeling connected to your team or coworkers, and valuing your relationship with your manager are three of the key drivers of engagement. All three of these motivators are harmed when people feel excluded. ●

Will the 'Real' You Please Stand Up?

There are costs associated with trying to hide our emotions. We may suppress the expression of those feelings, but that does not mean we are no longer actually experiencing them.

In the more primitive part of the brain, our reactions grow stronger when we try to hide them. Other cognitive research reveals that it takes a lot of cognitive effort to keep that stiff upper lip. This is so pronounced that when we try to hide our reactions, it is harder for us to later remember the whole experience.

There is another cognitive cost that comes when we hide our feelings — we monitor ourselves. For example, in today's business world, it is socially unacceptable to express prejudice. People try to stop themselves from saying or doing anything that might reflect bias. This kind of monitoring takes effort. That effort uses brain resources to such an extent that it temporarily impairs our ability to do other cognitive tasks.

The effort to restrain our emotions is so cognitively taxing that it distracts us from what is happening; this exacerbates our physical stress reaction as well. Moreover, it creates stress for others around us. In contrast, reappraising a troubling experience early on — before our emotional reaction escalates — helps. Thinking about what is happening from a more positive perspective calms our brain's reactivity and calms us.

You Can't Fake Authenticity

Most of us have had lots of practice in molding a bland facial expression when we actually feel embarrassed or upset. However, because our limbic system can trigger a grimace faster than we can suppress it, we sometimes unconsciously reveal what we initially meant to keep secret.

Leaders Should be Authentic

In their article "Managing Authenticity: The Paradox of Great Leadership," Rob Goffee and Gareth Jones point out one of the great paradoxes of authenticity — namely, that leaders have to be many things to many people while remaining true to themselves. One solution to this quandary, Goffee and Jones suggest, is to recognize that our authentic selves are complex and multifaceted.

They agree that it is possible to express only those aspects of ourselves that are appropriate in a given setting and still remain authentic. Being authentic does not require us to reveal every random thought and feeling we have.

Yet one major facet of authenticity, as humanistic psychologist Carl Rogers emphasized, is to make sure that our inner selves — what we truly think and feel — match our outer behavior. When we act in ways that are not congruent with our genuine feelings, other people detect it and react.

Leaders who step back from disasters to reflect on the positive aspects of the situation may find that their own emotions genuinely shift for the better. ●

Fire, Ready, Aim?

You are in the batter's box and the pitcher is winding up. You see the ball leave the pitcher's palm and come flying toward you. When you think the ball is just leaving the pitcher's hands, it is no longer there. It has already traveled nine feet. Neurologist Robert Burton uses this example to explain that we are often on a time delay when we perceive the world around us.

As neuroscientist Jeffrey Schwartz put it, we may not have "free will" but we appear to have "free won't." We have a window of time in which we can decide what we want to do about our decision. How much time we have depends on how fast we have to react.

The batter has very little time to react. In other situations, like reacting with an angry outburst, we can stretch out the amount of time we have to make a decision. But even when we have very little time — like two-tenths of a second — we at least have time to veto our original intended action.

In his discussion of the baseball player, Burton draws a parallel between the batter's situation and a person engaged in a conversation. Sometimes, we have a brief exchange in a hallway or swap ideas in a brainstorming session. In a fast-paced conversation, information speeds toward us and we respond just as quickly. We only have a small window of time to take in what other people are saying. We may be responding to the other person — believing that we have accurately heard what he or she has said — when we haven't accurately heard anything at all.

What if Leaders Encourage Slower-Paced Communication?

Leaders can show that they would like to see people take a bit more time before responding to one another rather than shooting from the hip. What if leaders experimented by imposing more silence? For example, what if leaders proposed that for just 15 minutes of a meeting, everyone would pause for two seconds after every comment or question?

Team members would learn how they react to silence. Does silence make them impatient or uncomfortable? Do they use the time to see if they understood what was said? Or do they use it to think about what to say next? Team members might even realize that this additional time leads them to change how they otherwise would have responded. ●

That's Not Fair

Evolutionary biologist Keith Jensen's research with capuchin monkeys shows that even subtle experiences of unfairness can trigger anger. Monkeys in adjacent cages were trained to hand over small granite rocks to researchers in exchange for a slice of cucumber. As long as the monkeys saw that their neighbors also received cucumbers, the monkeys happily traded rocks for food. But what happened when the researchers favored some of the monkeys with juicy grapes, a much-preferred treat? The slighted monkeys reacted.

"They would literally take the cucumber from me and ... throw it on the ground, or when I offered it to them they would simply turn and refuse to accept it," psychologist Sarah Brosnan commented. Ultimately, the monkeys who felt insulted were less willing to continue the exchange. This was even more evident when they saw other "slacker monkeys" getting grapes for *doing nothing*.

Human beings hate unfair treatment, too. People retaliate when they feel they have been treated unfairly. People will retaliate even when it means that they themselves get nothing.

In work settings, it is not uncommon for leaders to impose equal solutions in the name of fairness. To many leaders, equality means treating everyone the same. But people, departments, customers and shareholders have differing needs. Treating them equally is not necessarily fair, nor is it the best solution.

Fairness is about consistency, but it is also about applying a consistent process. As long as leaders give equal, unbiased consideration to each person's or department's needs, they are being fair. The final results or actions taken might be very different for each department. In fact, if leaders are leading effectively, they should be.

Leaders need to make sure that they are evenhanded in their dealing with employees. But just being fair is not enough. Leaders also have to make sure that employees *perceive* their decisions and actions to be fair. This perception is not based solely on the actual fairness of the leader's decisions. It is also influenced by two other factors — transparency and empathy. ●

Rules of Engagement

Apparently, our brains compute the odds of getting rewarded and create rules of thumb to guide us to the biggest payoffs — all without our conscious awareness.

Leaders influence the rules of thumb that employees learn. In *Gut Feelings*, psychologist Gerd Gigerenzer argues that an entire culture can shift when enough people implicitly learn what the leader values. Based on the leader's behavior, the culture can become "more or less open, more or less inclusive, more or less formal."

Leaders know that their behavior impacts others, but many leaders fail to realize that they are probably conveying rules of thumb without being aware of what they are doing. Leaders leave hundreds of subtle cues about their expectations, likes and dislikes. Because they are communicating norms without being aware of it, leaders can unknowingly establish norms that they would never intentionally promote.

Oppressive rules of thumb can continue to influence people — sometimes even years after the leader who introduced them has left the scene. ●

Mood Contagion

In his breakthrough book *Emotional Intelligence*, Daniel Goleman tells an amazing story of what happened in the middle of heavy fighting during the Vietnam War. As American troops and Viet Cong soldiers were shooting, six monks suddenly came into the line of fire. They walked with utter calm along a ridge through the middle of the battle. Not one shot was fired at them from either side. In fact, no one issued another shot after the monks had passed safely through.

The American soldier who recalled this incident said that something changed in him after watching the monks. He said it was as if "all the fight was out of me. I just didn't feel like I wanted to do this anymore, at least not that day. It must have been that way for everybody, because everybody quit. We just stopped fighting."

Goleman uses this extraordinary story to illustrate the power of a phenomenon called *emotional contagion*.

Can Everyone Be Having a Bad Day?

One classic study shows that just being in the same room with another person can shift your mood to match theirs.

Are moods contagious in work groups? Research shows that moods of group members converge within two hours. Even a single individual can influence the mood of an entire group — to the point of affecting how well the group functions.

Studies have shown that when leaders and managers maintain positive moods, the performance of employees is higher. What if leaders create a culture in which fun is the norm?

Some companies, like Scripps Networks, include "humor" as one of their core values. Southwest Airlines encourages its employees to come to work with a "warrior spirit, servant's heart and fun-loving attitude." By engaging employees and promoting a light-hearted, and perhaps humorous, workplace culture, leaders can increase the productivity and loyalty of their teams. And they have fun doing it.

As Adrian Gostick and Scott Christopher describe in their book, *The Levity Effect*, as a result of creating a lighter tone so that people have fun at work, employee loyalty and retention increase. ●

Often Wrong, But Never in Doubt?

How do we know that the feeling of being right is a creation of the brain? One strong indicator is that neurological conditions can exaggerate this sense of being certain so much that we cling to beliefs that we know cannot be true.

The feeling of knowing can be so strong that it trumps logic and leads us to accept beliefs that we ought to be questioning. We are often more confident than our expertise justifies, maybe because the "feeling of knowing" assures us that we are right.

It is one thing to question employees, but it's the rare business leader who is truly able to question him- or herself. Most successful business leaders would not have achieved their high status had they not been right much of the time. This makes it easy for successful leaders to become arrogantly sure of themselves. Leaders who have an arrogant style discourage employees from bringing up contradictory ideas or information, which only reinforces a leader's conviction that if he or she is sure of something, then it must be right.

Some leaders fear that unless they act sure of themselves, the people they lead will lose confidence in them. There is a different way to look at this issue. Leaders can be more *conditional* about what they believe and still act *decisively*. To get respect, leaders need to be decisive, but being more conditional means that leaders examine their sense of certainty, not that they are indecisive.

Once leaders have looked at opposing perspectives, questioned assumptions and exhausted other alternatives, they can act decisively based on the information they have gained. ●

The Halo Effect

Nearly 100 years ago, psychologist E.L. Thorndike first introduced the term *halo effect*. The halo effect describes how our perception of one desirable trait in a person can cause us to judge that person more positively overall. If people are likable, for instance, we often perceive them as more honest and intelligent as well.

Another form of bias is the *shadow effect*. This is the halo effect in reverse. Leaders who fall under the shadow effect may view people through the lens of the "One Big Mistake." Although the mistake may have happened years earlier, the story has been retold so many times that it overshadows any future successes.

Just as biases influence leaders as they deal with individuals, they also influence leaders' attitudes toward organizations. "In business," Phil Rosenzweig, author of *The Halo Effect* notes, "a company's overall performance — usually defined by tangible financial results — shapes our evaluation of other things that are less tangi-

ble. ... When times were good, Cisco Systems and ABB were both admired for their customer focus, efficient organizations and charismatic CEOs; but when performance slipped, they were criticized for the exact same things."

As brain research shows, decisions based on the "emotional brain" can be biased. But the solution is not to eliminate emotion — which would be an impossible goal in any case. Rather, the solution is to recognize potential sources of bias and address them. ●

Seeing Is Believing? Not Always

Sometimes the brain fills in or infers an inaccurate representation of the world. This is what happens in optical illusions. The brain *constructs* meaning from the information that it receives. Perhaps most important, the brain fills in what psychologists call "causal patterns."

For example, when we are watching a pool game, we don't see the movement of the balls as a series of disconnected events. We see causation. The cue ball hits the nine ball and propels it into the pocket — the brain decides one event has caused another.

Various factors affect our perception of causality. For example, timing matters. We won't think that the cue ball caused the nine ball to move if it touches the nine ball and then nothing happens for the next 10 seconds — even if at that point the nine ball propels itself toward the pocket.

The tendency to see causality is very strong. Yet, just as the brain can lead us astray in its perception of optical illusions, our inferences of causality can also be wrong.

We all "fill in" meaning. We all interpret what is going on in different ways. This has two major repercussions in the business world. First, different interpretations can be a source of conflict. In business settings, for example, leaders are frustrated when their employees don't "get" what seems obvious to the leader — and vice versa. Second, the fact that we don't know "reality" directly, but rely on the brain to interpret reality, is a source of error.

Once business leaders become aware of the fact that different people perceive reality differently, and that their own brains can misinterpret data to determine causality, then leaders can work to create more effective plans, whether it be to flatten the hierarchy of an organization, determine the variables behind market trends or prepare for the unforeseeable future. ●

Multitasking — Asset or Liability?

What is really happening when we multitask? As microbiologist John Medina puts it, when applied to the idea that we can simultaneously attend to more than one thing at a time, "multitasking is a myth." Sometimes when we multitask we are simply carrying out actions that are so habitual they do not require any conscious attention.

But when we are engaged in multiple activities that cannot be done on autopilot, something different is going on. At these times, multitasking involves a split-second shifting of our attention from one task to another.

Normally when we multitask we are working in a stream of interrupted time. Medina argues that research shows it takes substantially longer to complete interrupted tasks and we make more errors as we carry them out.

Multitasking can cause a significant productivity hit, even though it is a "skill" we tend to admire. ●

Fight, Flight or Freeze

The part of the brain called the *limbic system* reacts when we are in peril. It includes a cluster of cells called the *amygdala*. The amygdala generates reactions of fear and rage. In normal circumstances it is regulated to some extent by the cortex — the more deliberative part of the brain. But in intense situations, the reactions of the amygdala can overwhelm the cortex and hijack our ability to act reasonably.

Rather than acting reasonably, we react instinctively in one of three ways. We may lash out and fight. Or, we run for our lives to escape. These reactions constitute the famous "fight or flight" duo. But it turns out that the duo is really a trio, and sometimes — like a deer caught in the headlights — we freeze.

Unlike soldiers, firefighters and paramedics who may have only moments to act, business leaders usually have more time to consider their decisions. In fact, leaders can often buy more time for themselves or their people because they are the ones who decide how urgent the situation is. But despite the latitude that leaders have, they sometimes react instinctively and make poor decisions. To keep the executive brain functioning optimally, leaders need to be able to manage their emotions.

When a leader is angry with an employee who fails to complete a crucial assignment or anxious about meeting a key client, it might help to recognize the role of the brain in these reactions. Realizing that the amygdala is disrupting the executive functions of the prefrontal cor-

tex, leaders can reclaim the authority of their thinking brain. By stepping back from their feelings and labeling them, or by reappraising the situation altogether, leaders can quiet the emotional response and move into a more rationale mode. ●

What Doesn't Kill You Will Make You Stronger

Between 1980 and 1988, 28,000 workers in a Boston shipyard were exposed to low levels of radiation as they handled toxic materials. Harvard Medical School psychiatrist John Ratey, who describes the research carried out by the Department of Energy to assess the long-term effects of low-dose radiation on the workers' health in his book *Spark*, writes, "somehow the toxins that everyone feared were ruining the workers' health were doing just the opposite."

In high levels, radiation damages healthy cells and stimulates the growth of cancerous cells. But in low doses, these toxins apparently strengthened the workers. How is this possible? The answer lies in the notion that the cells in our bodies can become more robust when they are mildly stressed.

This "stress inoculation" idea underlies the theory called *hormesis*. Biologist Mark Mattson describes hormesis as a process where "organisms exposed to low levels of stress or toxins become more resistant to tougher challenges."

Could stress be either helpful or toxic depending on the "dose"? The answer is yes. Short-term stress can sometimes be adaptive. It gives us the kind of adrenaline surge that once helped our ancestors escape from a lion pounding across the savanna. But if stress hormones are released repeatedly over a long period of time, our bodies and minds become damaged.

What if leaders proactively manage stress in the same way that they allocate money or time in their departments? This would mean taking people's level of stress into account when assigning tasks. For example, leaders might go easy on people who are just coming off highly stressful assignments.

The goal is to become more sensitive to individual employee's stress points. The same assignment that puts one person over the top could be a welcome challenge to another. ●

Can Working Less Generate More?

Exercise stimulates brain activity. During exercise, more oxygen is carried to the brain. This helps the brain transform glucose into additional energy. But energy transformation has a downside. It results in potentially toxic waste by-products. The brain counters these by generating protective enzymes to destroy the by-products. These protective enzymes repair and strengthen nerve cells. Not only that, but exercise stimulates the development of new neurons in the hippocampus, a brain structure that is heavily involved in learning.

Leaders want their employees to perform at their best, including their intellectual best. Exercise could help. Brain expert John Medina writes, "Exercisers outperform couch potatoes in tests that measure long-term memory, reasoning, attention, [and] problem solving." They also perform better on tasks that assess fluid intelligence, a measure of creativity.

The research related to the importance of sleep and the debilitating effects of sleep deprivation also holds important lessons for business leaders. Given the links between sleep, learning and memory consolidation, it is not surprising that adequate rest appears to be necessary to develop high levels of expertise. Concentration takes energy. We need sleep to renew that energy.

Inadequate sleep and exercise, like poor nutrition, have a detrimental effect on the body. What the neuroscience research reminds us is that they also impact people's thinking and performance — much more than we realized. ●

Conclusion

Leaders can sustain their "Brain Advantage" by keeping up with recent neuroscientific discoveries and continuing to explore possibilities in their own practices.

The brain research of the past two decades does, indeed, lead us into a fantastic world, the hidden world inside the brain that influences us so dramatically, often without our awareness. Knowing about the latest brain research, leaders can align what they do to the natural

THE SUMMARY IN BRIEF

Today's world is suffering from a gap in leadership. Almost every major problem in the world (financial crises, crime, violence, global warming, etc.) can be fundamentally linked to a gap in leadership. ***The Brink*** provides the solution to closing this gap with step by step actions.

The process of facing great challenge will create the leader within you. The solution to the leadership challenges/gaps that the world faces today starts with your individual leadership. This book serves as a guide to becoming a leader and how to invent leadership in and around you. Everyone can benefit from accepting this leadership challenge.

The new leadership paradigm—the brink—requires an inward focus rather than external management. Taking responsibility, accepting difficult challenges, and facing fears are part of the processes to continually grow as a leader personally and professionally.

IN THIS SUMMARY, YOU WILL LEARN:

- The practice of making choices every moment.
- To welcome fear and adversity and to avoid the normalcy trap.
- How to embrace practice by using specific principles.
- The necessity of seeking imbalance and staying curious.

Focus on Your Vision as a Leader

Pick a Mountain

The first step toward leadership on the brink is to pick a "mountain" (a goal or challenge) to which you can apply yourself; one that is bigger than you can necessarily see possible, even one that causes fear. Embracing fear is necessary when accepting any leadership challenge or climbing a mountain.

Fear will be present on the brink of any challenging leadership possibility. But it may not be outwardly visible in leaders, as leadership is practiced mostly internally.

Know the Answer to "What for?"

What motivates people differs, but in order to effectively lead a team, all members must get the connection between the mountain and the thing they most want in the world. The job of leaders on the brink is to uncover and distinguish that connection with their team.

The vision of the leader must be put forth regularly, so followers will maintain the focus on the: Why, What, and How. Address these questions in this order for yourself and your team while focusing on context over content. Encourage yourself and your team to stop looking for balance and actively seek out imbalance.

At the brink, we experience reverence, a powerful respect for and relationship to something greater than ourselves. The brink requires reverence—reverence for the team, vision, and mission (mountain). The brink and reverence are inextricably linked. Reverence is a deep respect for something or someone—the experience of awe. Along with reverence, there must be parity within the team to create ownership in each member. This forms a team of leaders. A team of leaders is much more capable than a team of followers. There are three qualities of a leader that create parity: Relationship to self, connection to team, and strength of spirit.

Choose Everything

The brink challenges leaders to practice putting themselves at crossroads and making choices at every moment. Leaders also realize that not choosing is in fact making a choice. Leaders constantly challenge patterns and remain curious to new possibilities. Curiosity is one of the most important assets of leaders because it invites innovation, collaboration, investigation, and growth. Curiosity is a choice. Unconditional curiosity separates great leaders from ineffective ones. This curiosity also challenges leaders to not avoid pain and discomfort. The pain and discomfort become signposts of progress along the path up their mountain, rather than road blocks.

Normalize the Presence of Discomfort

Practice

The word Buddhists use for practice is translated from Sanskrit more accurately as "complete, together, coherent, wholesome."

The Six Principles of Practice Are:

- Persistence
- Intentionality
- Urgency
- Curiosity
- Commitment
- Play

With practice comes discomfort. Practice itself implies learning and therefore the possibility of doing something poorly. On the brink, comfort is a trap, and discomfort is a practice. Here leaders look for places to practice being uncomfortable and normalize the presence of discomfort.

Collaborate

The most powerful leaders always create powerful teams around them. Leaders don't need followers, but leadership on the brink will create a following of individuals who relate to themselves as leaders in their own roles. The three components of powerful collaboration are enrollment, empowerment, and truth. ***Power*** is an essential tool for the leader in collaboration, but it is a tool that is generated from effective leadership, to be wielded from the heart, not from the old paradigm of influence and control.

The Five Laws Of ***Power*** On The Brink Are:

- Authenticity Is King
- The Team Is Your Greatest Asset
- Have a Mirror
- Get Needs Met Elsewhere
- Continued Reinvention

Take Ownership

On the brink, ownership equals leadership. Ownership is akin to relating to yourself as ***The One***—the person where the buck stops, and ultimate responsibility lies.

Some of the distinct behaviors of ***The One*** include: leading as a result of enrollment and value rather than force and imposition, being responsible for the impact of his/her leadership on others and on the goal, and being open-hearted and able to make difficult decisions at the same time.

Trust in Possibility, Not Probability

Trust

The brink also requires trust and faith not only that the goal is possible, but that it will happen. Trust in this model is based in possibility, not in probability. Possibility is unlimited and based in commitment and vision. Probability is limited by the evidence of experience and is based on odds and measuring likely failure. Probability is trying to answer the possibility question without trust or faith. Having complete trust and faith in the vision is revealed when all escape routes and back doors to the goal are closed. This intentionally eliminates options. Focus is enhanced when there is no way to turn back.

The how trap outlines the fact that the question "How?" derails most goals before they are ever attempted, because the question is asked before the commitment and choice are made. The answer to the question "How?" will unfold once the choice to move forward is made and the first steps are taken. The truth is that much of it will have to be discovered and is impossible to figure out beforehand. Leaders intentionally create these types of risks to overcome or shift an unwanted pattern. This is called ***risk loading***.

Embrace Fear to Become Unstoppable

Welcome Fear and Adversity

On the brink, fear is normalized and accepted, rather than mitigated and avoided. The entire relationship to fear needs to be reinvented for a leader to be able to take action in its presence, rather than waiting for it to go away. Fear is unavoidable but suffering as a result of that fear is optional. Facing fear and adversity is how new answers are found. Alternate perspective can produce fear, but deviants or outliers are assets on the brink. The outlying or deviant perspective challenges leaders and the team to remain open and curious. The old model of requiring uniformity is ineffective at this level of leadership. These alternate perspectives cannot be hidden in the closet. Closets are places where opportunities and unfulfilled goals are hidden because of fear. Leaders must know that these closets exist, be aware of what's in them, and clean them out regularly, otherwise leadership will be sabotaged.

On the brink, success is a choice, drama is eliminated, and inconvenience is normalized. Success is optional and needs to be a conscious choice. Choice helps generate the success as teams embrace the choice and actively seek out new challenges.

> "Being willing without wanting to" allows leaders to act from commitments without needing to feel like it.

The evidence myth highlights the fact that, by definition, there will be no evidence of past success when we are up to creating something that has never been created before. By using ***The persistence principle***, which states that the degree to which leaders are persistent in an endeavor is inversely related to the depth and duration of fear that they will endure, leaders on the brink are relentlessly persistent in order to move past any lack of evidence.

Persistent focus and relentless action leave no room for distraction by fear. "Being willing without wanting to" allows leaders to act from commitments without needing to feel like it. Problems become challenges on the brink. Challenges are exciting to face, while problems are exhausting to have to fix.

Create Integrity

On the brink, integrity is redefined to mean that there are no power leaks, in the same way that the hull of a ship has no water leaks when it is in integrity. This removes the judgment of good or bad and allows for addressing the power leaks directly, rather than first having to deal with

the judgments about them. The leaks must be addressed for reintegration.

The four stages to generating reintegration when integrity goes out are:

- Awareness that there is an integrity leak.
- Choice to put it back into integrity.
- Willingness to get uncomfortable in doing so.
- Practice putting things back into integrity through what may be multiple iterations of the process.

Leaders on the brink know that peace comes from integrity and peace needs integrity in order to grow and last. The brink requires commitment to and relentlessness around its undertaking, which means to be constant and incessant in one's actions, past the point of reason. The brink requires a leader to avoid shortcuts, make bold declarations to generate integrity, and let go of the idea of safety in order to focus on integrity.

Be Unstoppable

On the brink, unstoppable is a way of being. Results are directly proportional to the sum of resilience and focus. Being unstoppable actually includes the possibility of being stopped. It simply also requires making sure that you don't stay there. Relentless pursuit is an art in that relentlessly pursuing a goal means relating to all experiences and adversity along the way as part of that goal, rather than opposing forces. Being unstoppable incudes the willingness to take on hard work and surrender to the fact that there will be obstacles and breakdowns along the way and then committing to overcoming them.

The insight trap is a trap that leaders can fall to by stopping at the point at which they are aware of what is so and what needs to be done but have not actually done anything about it. The insight into action pattern outlines the path that needs to be taken with an insight to bring it into action. This pattern is awareness, choice, action, and results.

The Big Picture

Leadership is most effectively created when we pursue a large endeavor that we cannot see the other side or guarantee its success. Leadership is needed in all organizations, teams, and individuals. The intention in creating this model is to lay a path for leadership. The brink defines transformation through a journey. It begins with a choice to lead and positions the individual as an agent for change and a "stand for" (commitment to) a result. Leaders are forged through that challenge and the growth it provides. In the process, they instill leadership in those around them. This is the seed for transformation from the old paradigm to this new paradigm of leadership.

The world needs leaders willing to step to the edge and climb. Your leadership, your life, and the world will be forever changed by that single first step.

THE SUMMARY IN BRIEF

The key to a healthier, more innovative, and competitive company is to create an environment where employees are highly engaged and eager to contribute to their fullest. Employee disengagement affects about 70% of all employees and costs the U.S. economy $450 to $550 billion per year (on average, a third of the payroll of a company).

The CEO's Playbook offers a solution and blueprint for establishing a new culture of work. Transforming how you manage people and cultivating a culture where employees thrive will lead to a boost in passion, productivity, and the company's bottom line.

Author Nora Ganescu helps you challenge old, outdated management thinking and presents the specific steps and concrete actions that you can take to make your company an amazing workplace, one that is more self-organized, wholesome, and where people drive innovation together. She details what keeps employees engaged, who you need to involve, and outlines several methods that will help you encourage creativity and trust. Whether you lead a small group or work with thousands of employees, ***The CEO's Playbook*** gives you the tools to make applying new work principles easy and effective.

IN THIS SUMMARY, YOU WILL LEARN:

- What engages people in the workplace
- To reset your assumptions about today's work landscape and culture
- How to construct a new type of company
- Concrete actions to take and who to involve to help you

Fixing the "People Issues"

Most of the management theories we have were developed on 150-year-old views of "the worker" as lazy, irresponsible, and unreliable. Employees have to be managed, given direction, and assigned very specific tasks. They need to be coerced and incentivized, otherwise they would not work. This command-and-control model looks at companies as efficient machines built from interchangeable human resources. However, the work environment of today has seen tremendous change and our management thinking needs to be reset.

Generations Y and Z are not interested in a traditional career ladder and will not be happy playing a very narrow role in a company that treats people like disposable spare parts in a machine. They are looking to work in a company that will not suffocate their individual drive and creativity. These new generations are increasingly the most qualified people available, and you should see them as bringing opportunity and potential.

What Do People Want?

The top three things that will keep people eager to contribute their best talents are autonomy, mastery, and purpose.

Autonomy. Which kind of task would be more exciting to you: one that you choose and then get to make most of the decisions about, or one where you have almost nothing to to decide, and just have to do it? If you're like most people, it is the first one, the one where you get to decide—and if you don't feel competent, then you get to ask advice and then decide how it gets done.

Mastery. What if your company could be the place where people would feel called and supported to pursue mastery in whatever they do? Just imagine what that would mean for your results and your performance.

Purpose. Coming together in the pursuit of something truly worthwhile is what we all want. We all want to invest our time in something meaninful, something that makes a difference. No matter how trivial the actual task, if we can link it to a worthwhile purpose, we will feel more excited and dedicated to it.

The companies who have the courage to re-examine old management assumptions and successfully create a great workplace and community perform far above average.

Changing the way your employees relate to your company is among the changes with highest return on investment, if you do it right. When companies successfully engage their employees, they experience a 240% boost in performance-related business outcomes, compared with companies that don't.

Some of these companies are start-ups, while others have transformed themselves from old-fashioned enterprises. They are in every industry around the world. These companies are more flexible with greater capacity to address and solve the challenges they encounter. They are also healthier, more innovative, and more playful. Specific management practices differ, but they share a few hallmarks: A high degree of self-organization, where employees have a great deal of freedom and decision-making power within the scope of their work; an environment of wholeness, where people feel supported and appreciated; and an openness to developing new ideas from all levels of the company to drive strategy.

If this is the kind of company you want to have, it is achievable. Your job as the CEO is to create the conditions for your people to thrive. When they do, many of the hard business decisions that you make now, through your own effort, will take care of themselves.

Start at the Heart of the Matter

The New Work of a CEO

The first step is committing to transform the ailing management model. The second step is to observe what is happening in your company right now through a new lens based on the premises that "people are good, responsible, caring adults" and "everybody wants to contribute and bring forth their biggest talent."

Look around and spot what is not working. Would that thing be done differently if we all trusted each other, spoke openly, and assumed the best about each other? Note what is working and what conditions made that success story possible. Keep a journal of your observations for a week. Learn to see the new possibilities that arise from shifting your assumptions. Be vigilant about not allowing doubts to sabotage you.

You can use an exercise to help see a more complete picture: write down all the thoughts that are tormenting you. Take each thought and explore if it is always true, how you feel and act when you believe this thought, and who you would be without it. Ask yourself if the opposite of the statement could be true. Reflect on the answers. This exercise can help you loosen the grip of the thoughts that scare and sabotage you and are not necessarily true.

It is essential to do the internal work to prepare you for leading change. Find a personal practice that will help center you. Whether this practice is mediation, prayer, sports, or gardening, clearing your mind of chatter for even 15 minutes a day will aid you in showing flexibility and understanding in the face of obstacles.

As CEO, you don't need to be the smartest, strongest, or fastest resource on the team. Your superpower is to incubate and engage the talents and intelligences of your people—and then let them pour it into the work. You are not above your employees; you are working together.

Your job is to hold a space for change and growth; initiate and support the change; and model the new culture. Like a parent with a child, you need to create a safe environment where people can experiment, learn, and sometimes fail without fear. Trust that the people you have hired have the competence and capacity to act as adults and organize themselves in the best way. When people can work in a space of trust, they can create their best work, attain the most cooperation, and achieve mastery.

An organization is a complex system, with many moving parts. Careful, continuous observation is key. You need to listen to people, initiate the right conversations, support your people, observe, and listen again. Start carefully, look at the entire system after each change, and determine the best way to proceed.

A Change Incubator

Do not try to change the company by executive decision. If your people don't get a say, you will have to deal with strong backlash. You need people to share the new vision for a management model that supports self-organization, wholeness, and evolutionary purpose.

To create a stable rate of change, there are three stages: creating a small core group of two or three other people that will help support you; expanding to a larger "Sandbox" group where new ideas are explored and tested; and then adopting new practices for the entire company.

At every stage, be mindful to set things up so people can show up with openness, curiosity, and excitement. You want them to know that that their presence, time, and effort is valued. And that they are not being forced to participate. Begin with inviting your core group through one-on-one conversations instead of an Outlook invitation. Instead of a sterile meeting room or office, make settings welcoming. You want everyone to be on an equal footing, listening to each other.

The Core Group

Meet with your core group several times. Explain your inspiration but commit to figuring out the transformation together (you don't have all the answers). View the core group as a think tank or peer coaching to share case studies. They should be very open to new approaches.

Unleash the Brilliance of Your Team

Once you feel ready to proceed, invite a larger Sandbox group to explore and test new ideas. This group is the creativity incubator and the engine that leads to great engagement. Choose collaborative people who are natural connectors from different parts of the company. Make sure the group is not dominated by senior management. If your company is less than 70 people, invite everybody who wants to come. Schedule a couple meetings, a maximum of two weeks apart and 2 ½ hours each. The first meeting is to begin to cultivate trust, the second is to start the conversation about what changing the management premises could mean in practice.

Discuss burning issues and new ideas. This is when the new management principles face the old culture. Bring in as much new thinking as possible, while preserving what works well from the old system.

To make the conversations meaningful, you need to craft and ask powerful questions. Make the questions simple but thought provoking. Instead of asking "what new goals should we set?" reframe it and try, "who do we need to be to provide the best service to our clients?" Structure the conversation to increase participation.

There are endless ways to design productive Sandbox meetings. You can use some of the methods (Appreciative Inquiry, Open Space Technology, World Café, or Proactive Café, etc.) described in chapter 6 of the book to organize your conversations and encourage creativity.

Some issues raised in the Sandbox will be easy to solve, others will require the group to contribute solutions to their own questions.

As CEO, you need to keep convening the group, keep reassuring them it is safe to ask questions and seek constructive solutions. Do not judge what people come up with, even if some things sound challenging or misinformed.

Instead of taking minutes that nobody reads, the core group should think in advance about how to use the results of the meeting. Perhaps it is a visual record or a statement of breakthroughs. Actively show support for the people and the initiatives resulting from the Sandbox. Keep an eye on the journey of proposals, as they can highlight both strengths and great dysfunctionalities.

Make it clear to managers that you are trying to devolve decision making and use the Advice Process to help validate new initiatives and proposals in a way that gives employees a great deal of trust and power. It also ensures that all action will be taken with enough information and advice.

The Advice Process works like this: someone has an improvement idea and is empowered to talk to a variety of stakeholders. Upon consideration of all the insight received, a decision will be made according to their best judgment. They implement their idea with the support of the company, improving their idea based on feedback from the stakeholders.

Systemic Improvements

There are three areas that are the hallmarks of truly evolved companies. You want to encourage significant change to start in these areas.

Wholeness refers to the capacity of your company to use the many talents that people can offer, not just a narrow set of skills. It also means providing an environment in which people feel supported and appreciated. Initiatives might include telecommuting, flexible hours, parental leave, etc.

Self-organization and a high degree of autonomy are markers of a company that is not burdened by too many management levels or too many non-productive tasks. Teams might decide to create their own schedules, do their own hiring, reduce the number of sign-offs, or have more control over their budgets. People will take ownership over the quality of their work, not because they report to someone, but because they are self-directed.

Evolutionary purpose. Traditionally, company strategy comes from the top-tier management, but this can waste invaluable guidance and intelligence from other levels of the company. If the company is prepared to listen to ideas about how the company should develop or what could be the next big thing from all parts of the company, its chances of growing and thriving are immensely greater.

How to Support the Transition

Transforming the way people are managed and work is organized is a fundamental change and people may well feel threatened. You need to help them find their value in the new system and support them through different stages of grief (denial, anger, bargaining, depression, and finally acceptance) as they adapt to the new normal, where the new thinking and management premises are in effect.

As you learn more about the real nature of your people and trust them with their areas of responsibility, a lot of the "busy-ness" that stems from the need to control others' daily assignments falls aside. You will have more time for the parts of the business that fill you with excitement.

Over time, these practices will become second nature and you now have a way to adapt, innovate, attract, and retain the best talent—with ease and joy.

Dr. Nora Ganescu is a coach, consultant and trainer. Her work is helping companies maximize their impact and become amazing workplaces, where people love to contribute at their fullest. Nora started her professional journey as a youth activist for intercultural understanding in post-communist Romania, and she has been dedicated to building bridges every since. She has worked as an external and internal consultant in over 30 countries and across three continents. Lufthansa, Habitat for Humanity, European Commission, and the National Academy for Public Administration are a few examples.

THE SUMMARY IN BRIEF

Many finance professionals find themselves confined to technical roles, valued for accuracy and compliance but excluded from strategic influence. Despite deep expertise in reporting and controls, they struggle to evolve into trusted business partners who shape direction, drive innovation, and lead through change. This gap limits both individual careers and the organization's ability to turn financial insight into competitive advantage.

The CFO Advantage: Elevate Your Role From Financial Technician to Visionary Business Leader addresses this challenge by providing a practical roadmap for moving from financial technician to strategic leader. It outlines proven frameworks for building leadership character, strengthening communication, and expanding strategic thinking. It shows how CFOs can develop high-performing teams, champion technology and data analytics, and create cultures that support long-term performance rather than short-term compliance.

Written by Chris Festog, a former CFO with more than four decades of executive experience at organizations including Zurich Insurance Group, RenaissanceRe, Texaco, and Mutual of America Financial Group, ***The CFO Advantage*** blends real-world examples with disciplined leadership principles. Festog explains how the most effective CFOs become stewards of people and strategy—not just numbers—and how they leave a lasting legacy by developing others and building organizations that thrive.

IN THIS EXECUTIVE BOOK SUMMARY

- Learn how to evolve from technical expert to strategic business partner
- Examine different ways to influence strategy through communication and insight
- Understand how to leverage technology and data analytics for impact
- Get practical tips to develop teams and cultures that sustain long-term success

Introduction

I recently celebrated the completion of over four decades as a financial professional, most of which I spent in the financial services industry. Of all the titles and jobs I've had, I've most enjoyed the role of CFO. Perhaps more than any other role in a company, apart from that of the CEO, the CFO holds the most power and ability to influence and truly transform an organization.

Spending so much time in the C-suite, I've learned critical lessons that have made me a truly high-impact CFO, lessons that I've then shared to empower and equip future financial leaders. These include successful communication, becoming a change champion, building a strategy that motivates teams, and leveraging data and business intelligence (BI) to drive growth. I've built stronger, more focused financial teams at every company I've worked for—teams that are now fully positioned to advance strategic and high-value work.

Whether you're new to the financial team or have been in your role for twenty years, I want to empower you to grow, build skills, and have a lasting and meaningful impact within your organization. I earnestly desire to help you lead a life of consequence and shape a career that brings you deep joy and satisfaction.

CHAPTER 1

Becoming a High-Impact CFO

One of the challenges for finance professionals is that many define their roles as purely technical positions. But a high-impact CFO should be a principal leader and innovator within the organization. To succeed in this role, they must cultivate and intentionally develop critical skills and abilities, categorized around three major disciplines: stewardship, leadership, and transformation.

Stewardship

In every organization in which I've worked as a CFO, my defining characteristic has been that of a steward. A steward is someone who does not own anything but is responsible for everything. In that inclusive capacity, I ensured that each company and its resources were run for the benefit of the owners or shareholders and not for the sole benefit of the employees.

The core responsibility of a CFO as a steward is to ensure the organization's financial integrity and that financial, regulatory, and tax reporting meet all necessary requirements.

But for a high-impact CFO, stewardship has a far broader reach. Because of this role's deep knowledge of the business and detailed performance across the organization, they often identify organizational inconsistencies or inequities.

CFOs must also frequently arbitrate how expense budgets are allocated across groups and ensure they are accurately defined in accordance with longer-range goals and objectives.

Finally, a CFO's stewardship must extend beyond the issues and events of today. It should reach far into the future by leading and developing a long-range perspective of the company's future performance.

Leadership

Moving beyond stewardship, a high-impact CFO must be a leader. When leading an organization, they must ensure that every action embodies the organization's mission, vision, and values.

Leadership manifests when employees are treated with respect and in a manner consistent with company values, and when conflicts are addressed patiently and wisely. To lead in such a manner, humility must be a defining attribute. An arrogant, closed-minded CFO will not be embraced by their team or other members outside of the finance organization.

They must also support and advance other leaders. Such a position carries significant weight in a business and requires wisdom, especially when addressing problems.

Transformation and Innovation

Perhaps the greatest differentiator in a high-impact CFO is their ability to innovate and transform an organization. A powerful component of transformation is the opportunity to partner with the business to drive investment and innovation.

Business owners who seek to build and transform their operations need senior leadership and other champions who will support them in their efforts to obtain the funding and resources needed to succeed.

The CFO can play a critical role in this by fully engaging with the business, understanding what it is trying to achieve, and working closely with other leaders to further develop the business effectively.

Ultimately, a truly successful CFO is measured by the ability to go beyond supporting business units and become a true and effective initiator of transformation and innovation across the entire company.

> Acting on partial information can wreak havoc on a team and company—or at the very least, slow performance.

CHAPTER 2

Character Counts

To be a successful CFO, you must build on something much more important than typical outward signs such as wealth and power. Success—true success that lasts—is built on character. It is built one day at a time over many years.

Professional skills and intelligence will only help so much on your journey. To truly scale the professional mountain, you must possess outstanding character.

You must build with hard work and passion to overcome obstacles, walk with integrity, earn the trust of others, and effectively steward the companies and people you work with.

Hard Work

There is absolutely no replacing hard work as the cornerstone of your career. There is a distinct danger at work when you do not work hard. You can very easily fall into what I call a "narrative of mediocrity." You do not work hard, so you fall behind with your work.

Deep inside, you know it is not your best work, but you are not willing to put in the few extra hours and effort that may make a difference. As a result, you begin to not like your job.

The only remedy to the narrative of mediocrity is to work yourself out of it. If you want to be a successful professional, you must put in the time. It's as simple as that. You must show yourself and others that you will make the effort to be more than good—to be great. You simply cannot succeed without hard work.

Passion and Pride

Two vital partners must be added to hard work to allow it to flourish: passion and pride in your work.

When people own their work, two key things happen. First, they truly understand what they are doing. They aren't just doing this task and then the next; they understand the whole. As a result, they make fewer errors and can ask better questions and do better work. Second, as they begin to own the entire product, they are able to take pride in their work and its outcomes.

Walk with Integrity

Talent, intellect, and working hard will only get you so far. Success is built over decades; it is not a short win. To sustain high levels of performance over many years, the people you work for, as well as the people who work for you, *must* trust you.

Trust does not come from persuasion. It can only be earned. You can certainly communicate all the reasons someone should trust you, but they will only trust once you have earned it. They will trust you when they see you make hard decisions based on your communicated values.

As a CFO, you are called upon many times to make hard decisions. Frequently, you will be criticized for them, but your integrity will sustain you in all of them, even if many never understand or perhaps are never able to understand.

Embrace Stewardship

Stewardship must be a defining characteristic for any CFO, or they will never be truly successful. You only perform this role for a short time before you are replaced by another. To be effective, you must be in a constant state of replacing yourself with better people, better processes, and better cultures so that the next generations might thrive.

Stewardship is taking responsibility for and care of something without owning it. It is putting the company, employees, and shareholders in front of your own interests. It is taking great care to grow and develop those around you and balancing the requirements of each. Stewardship is integrity and trust taking flight.

CHAPTER 3

Critical Knowledge

After establishing deep character through hard work, integrity, and the stewarding of other employees and the company, you must develop a deep, critical knowledge of your work to succeed. This knowledge begins with the technical aspects and moves quickly beyond that to understanding the business.

A high-impact CFO who leads and transforms must learn to be a student of people and of life. They lead a passionate life of continuous learning, always growing, always being trans-

formed themselves. They are never satisfied with the status quo, and always strive for continuous improvement through a succession of "career construction" initiatives.

Technical Expertise

The first building block in your career is technical expertise. If you are an accountant, you must possess technical accounting skills. If you are a data engineer, you should understand programming and modeling.

Your goal, then, is to become the go-to person in your job, which will significantly increase your ability to gain promotion and financial success.

Business Expertise

Focusing on and taking time to learn the business accomplishes significant steps in your development. It clarifies and focuses your technical knowledge.

As a steward of the business knowledge of the company you work for, you have an opportunity to create new ideas, develop new processes, and identify areas for improvement. The more you know about your job and company, the more likely you will be to accomplish this. In turn, you will be given more opportunities and achieve more success.

Knowledge of Life and People

Work is not performed in a vacuum but experienced with others. Success at work is not determined by technical and business expertise but by working and living successfully with those around you.

You must understand their strengths and weaknesses, their dreams and fears. To care for them and get the best out of the team, you must become students of each individual and how they interact with one another.

CHAPTER 4

Communicating for Success

Having all the work ethic and knowledge in the world—along with strong character—is only latent, untapped potential. Success depends on your ability to *communicate*.

For many professions, especially technical professions such as accounting and finance, too little thought is given to the development of communication skills. The communication necessary to succeed starts with the basics but must grow to a high level of sophistication the more you continue to advance in the organization.

Genesis of Communication — Listening

Listening at work should always be oriented around your business and people, and specifically in areas in which you need to grow and develop, from technical development to management skills to leadership.

Most important in learning is to not let go until you understand fully. Acting on partial information or knowledge can wreak havoc on a team and company or, at the very least, slow performance. In your journey to listen, ensure that you remain as objective and focused as possible to fully understand the matter at hand so that you can invest your knowledge and talent in the conversation.

Art and Science of Expression — Writing and Speaking

Your communication in writing is often the first and potentially the only way that many people will experience who you are as a professional. It determines their perception of your business knowledge and ability to provide insight into the business for decision-making.

Each communication should have a defined purpose, and the writing should achieve that purpose with clarity and comprehensiveness.

Though writing is often your initial interaction with others, just as frequently, your first communication is spoken. The great thing about speaking is that just about everyone can grow and improve in this area.

At a basic level, whether one-on-one or in a small group setting, you should pay careful attention to the following:

- **Speak with sufficient volume**. If others cannot hear you, they will not understand what you are saying.
- **Speak clearly and at the right pace**. Do not speak too fast or blend your words so that they are easier to understand.
- **Be respectful when you speak**. Do not use foul or offensive language.

Communication Summit — Sales

The power of sales does not reside only in the realm of the chief marketing officer and sales team. To impact the organization and drive change, investment, and innovation, the

> An excellent manager changes everything. They change how well the business is run. ”

CFO and their colleagues must think and communicate like a sales team.

The customers of the finance team include not only the ultimate customers of the business itself but also each vendor, department, or division. The issue many CFOs face is that they do not identify these stakeholders as customers, and, more importantly, they do not approach these interactions as a sales process.

Thinking like a salesperson transforms communication from facts and figures into the selling of ideas, values, and vision. Building the ability to effectively communicate and sell will transform you as a financial professional and shape the current and next generation of leaders.

CHAPTER 5

Pivotal Management

One of the first steps in progression as a professional is managing people. Ultimately, just about everyone will manage people at some point in their career. Investing and caring for people and building high-performance teams are some of the most rewarding aspects of work. But managing people is not for the faint of heart, nor is it something to be taken lightly.

An excellent manager changes everything. They change how well the business is run. They nurture happy and content employees. An excellent manager is pivotal to changing the company and people's lives.

Developing People

Despite technological advances, the number one resource in a company is its people, and your number one job as a manager is to help them grow as professionals. Managing people with excellence will be one of the hardest jobs you will ever do. Helping people grow professionally is not complex, but it takes commitment and integrity at the highest level.

To manage people effectively, focus on the following:

- Provide clear guidance and expectations for what you want from them
- Provide each person with honest, complete feedback as often as possible
- Provide challenges and a vision for them to grow

The greatest privilege we have in this life is to care for one another. At work, as a manager, you have a unique opportunity and obligation to care for your team and fellow workers in ways that last. You need to become a student of your team. While you need to understand and develop them professionally, you also need to get to know them as individuals.

Building and Nurturing Teams

Building and nurturing a team requires clarifying its vision and focus—what the team is trying to do and each person's role. The true power of a team lies in bringing together a diverse group of people who can apply their different strengths to achieve a common vision. When teams understand this, they achieve strong results.

To achieve great things, the team must have strong building blocks. Everyone must put forth the same effort and passion. Though each person may have a different role, all must be equally committed to success. Managers must root out below-average performers, as they will drag the entire team down. Equally problematic are high performers who do not fit or buy into the vision.

Effective communication is essential to success. Regular team meetings help communicate the vision and challenges and allow leaders to observe team dynamics. Finally, strong teams require recognition and reward—when people do great things, they must be acknowledged, as recognition does not require significant financial investment.

CHAPTER 6

Change and Innovation Champion

The most successful individuals are those who embrace and master change. One of the most important aspects of being a professional is how you respond to it.

Change is so formative to us as individuals and organizations, yet it is frequently discussed in terms of difficulty or even fear rather than opportunity. Why are corporate boards, CEOs, leaders, and individuals so reticent about change, about demanding change and transformation? Why is change so often thrust upon a company rather than embraced?

Though change has great power, it also brings real challenges: uncertainty, effort, coordination, and complexity. These must be confronted, understood, and overcome.

Leading Through Change

Change is coming from outside the organization and from within, but it is surely coming. The choice is yours as to how you are impacted.

Though understandable, resisting change results in meaningful consequences. Those who resist change will not enjoy the process but rather will be afraid or anxious about the transformation. No one performs well when they are scared or afraid of their environment.

If you resist change, you will lose a valuable opportunity to grow in your work and may even negatively impact your career. The most effective way to succeed through change is to embrace it. Embracing change allows you to enjoy the journey—to grow, innovate, dream, and not be afraid of the outcome but rather to have faith in and a vision of something better and more amazing on the other side.

Even if you get a team to fully embrace the change process, you will confront two primary challenges when leading through change.

1. Change does not need to be big or corporate-wide
2. Revolutionary change normally only occurs if evolutionary change has not taken place

True change requires leadership that builds a culture and team that cultivate living, breathing transformation; not a change that ticks the box but one that is birthed from a passion and zeal to make everything a little better every day. You must build a team that values and embraces change. Once you introduce change and improvement and the team fully embraces it, it can be intoxicating.

CHAPTER 7

Courageous Leader

Being a leader is not optional—certainly not in your growth into a high-impact CFO. Leadership is like being a parent. When you have a child, you no longer have a choice about being a parent. The choice before you is only what kind of parent you will be. So too in business, everyone will lead. The question is what type of leader will you be?

When people think of leaders, they usually think of people such as Abraham Lincoln, Martin Luther King Jr., and Michael Jordan. They think of people who have done great things. Great leadership may bring notoriety, but notoriety does not define leadership.

A leader is not just the person at the top of the vision but anyone who supports it in word and deed. They work toward the team's goals consistently, quietly, and passionately—leading by example, often with few words. They encourage others when things get tough, define success, and shape the team's culture from behind the scenes.

Leaders change the future. They transform individuals into teams to achieve a common vision. They encourage and motivate people to believe they can achieve the impossible. They empower people to overcome obstacles to achieve prescience, changing the present and building a new future.

Interestingly, many leaders, especially newer ones, do not know or even see their power or influence. To lead effectively, it is important to understand the impact you are having and how you are shaping those around you. You may adversely affect others or lose the opportunity to make a meaningful impact if you do not.

Cast, Communicate, and Sustain the Vision

The most fundamental aspect of a leader is that they must cast a vision. Organizations, teams, and everyday people long for vision, to be better, to achieve new things, to grow. The greatest risk for a leader is to have no vision.

A leader's job is not to focus on the next twelve months but to look ahead to the next three to five years. If you have built the right team, they should have the right skills, abilities, and vision to execute over the next twelve months. This should be a point of pride and ownership for the team.

However, even the greatest visions and leaders will fail without effective communication. It is no secret why the greatest leaders are great communicators. Communication is essential to achieving the vision.

Clarity of the goal initiates the movement, but it also effectively aligns the team. When everyone knows the vision, it is imperative that they understand how their role contributes to the broader objective.

Yet even a clear and well-communicated vision will only take you so far. Companies and teams must know that leadership is committed to doing what is necessary to accomplish it. Many visions fail due to lack of commitment, sustained effort, resources, and leadership. It is imperative that the leader commit to the change and ensure that every individual and team is fully aligned.

> A high-impact CFO builds an environment that turns data into insights that move the organization forward.

CHAPTER 8

Accelerate Through Technology

Technology has grown exponentially, and it continues to transform business and our lives at breakneck speed. To become a high-performing professional, no matter your discipline, you must learn to accelerate your skills and career through the creative and powerful wielding of advanced technological competencies.

Many people look at technology as a necessary evil in their work, or they use technology at the most basic level to accomplish their tasks. But building a deep understanding of how to not only use your technology but also deploy its full capabilities can transform your job and help you flourish in your career.

When you, as a nontechnical operational or financial professional, begin to grow your technological expertise, you will quickly see the massive gap that exists between those with business knowledge and those with technological knowledge.

The issue is that most businesspeople can only "speak business" and do not understand the potential of technological solutions. Conversely, most technology professionals primarily understand the technical side of their solutions, not the business implications. This makes it difficult to implement technological solutions and, more importantly, to maximize their potential.

The CFO and finance team play a critical role in successfully bridging this gap.

Steward the Technological Investment

Given the potential materiality of technological investments, as well as the strategic impact they have on an organization, it is essential that the CFO speak clearly to major technological designs and investments.

A few considerations when making technological solutions include the following:

- Plan for and embrace significant material investment
- Accept that technological investments bring risk
- Acquire solutions, not technology
- Recognize that technology is not only systems but also people
- Invest in change management

CHAPTER 9

Strategy That Focuses and Motivates

The CFO plays a central role in building the strategic plan across organizations. In larger companies, specialized teams may lead the effort, while in small- to medium-sized entities, responsibility typically falls to the CEO or CFO. Regardless of structure, the CFO must remain fully engaged in analyzing and guiding all aspects of the business.

This enables tight alignment with financial forecasting and modeling and creates an opportunity for the financial team to work closely with operations and ensure clarity of vision and alignment across the entire organization. This will clarify and speed up the strategic process and accelerate understanding and adoption of the plan at every level.

It does not matter how great the leadership, how effective the management, how powerful the communication, or how excellent the product; if a company does not plan for its future, it will not be aligned or find success.

Strategic Thinking

Thinking strategically is not light work; it takes great effort that cannot be squeezed between meetings. Because it often has little to do with your day-to-day work, you must do the following:

- Establish a deep understanding of the business
- Develop a living understanding of the organization's mission
- Nurture an inquiring mind
- Cultivate humility

Strategic thinking is not operational thinking. It is not problem-solving. It is creative, thoughtful, reflective, and transformational. Strategic thinking requires you to spend time considering the potential of the organization and brings life, power, and clarity to the mission.

CHAPTER 10

Secrets of Data and Business Intelligence

Data is the foundation of business operations and finance. Without data, there is no analysis, no financial reporting, or no planning. Yet for many companies, data is an afterthought. A high-impact CFO must build an environment that captures, enriches, and transforms data to provide operating insights that move the organization forward.

Once you start on the path to data and analytics, it never ends. It begins a fascinating journey of discovery, providing new insight into the business that speeds decision-making at every level of the organization. From product development to entering new markets and expanding businesses, BI creates a clear path forward.

CHAPTER 11

Building a Lasting Culture

Culture is the manifestation of the shared actions and values of an organization. These lived—and sometimes only implicitly communicated—values determine what is honored, respected, affirmed, and pursued. They likewise define, usually not formally, what is not accepted, not valued, and not affirmed. Culture is the world you live in at a company. It is the soil in which you plant, nurture, and harvest all your efforts.

Cultures are formed over many years and consist of intertwined values and actions that can be difficult to navigate. But to succeed, to become a high-impact CFO, you must not only become keenly aware of an organization's culture, but you must learn to steward, lead, and transform within its construct. To neglect culture is to fail. To transform a culture to higher levels of excellence, innovation, and integrity is a noble and powerful calling.

Practically, most of us work in organizations that are somewhere in between a positive and a negative culture. If you wisely choose an organization that communicates a positive culture, the practical challenge arises when that culture is not consistently followed.

When this happens, it creates a tension in the organization around clearly understanding the values and actions that are truly affirmed and how to act when difficult or stressful events take place. The most common causes of cultural drift include the following:

- Culture is not communicated consistently
- Actual culture is not aligned with written values
- Culture is not updated as the organization changes

Flourishing Within the Culture

No matter how carefully you may select an organization for its culture, no culture is completely what it says it is, and no culture is perfect. However, to successfully lead and steward an organization, you must learn to flourish within the culture and, if possible, help transform the culture for good. In simple terms, there are three typical scenarios:

1. Building a new culture

The great advantage of starting a business is that you get to build a brand-new culture. It is essential that you focus on the values and culture that you want to build to support the overall mission of the organization. These must be established early, as each new employee should embody and embrace the culture of your new organization.

2. Working within a culture

When taking on a new job, most of us will inherit a culture that will not be perfect. If you want to succeed in that organization, you need to accept and work within it. The first step in this journey is to ensure you understand the environment. Do not push back on all aspects of it. Bring your true self to the game, but remember that the culture of the organization includes everyone who has ever worked or is currently working there in any capacity.

3. Transforming a culture

Perhaps the greatest privilege of a leader, and the most common, is the opportunity to not only turn around an organization's strategy, effectiveness, and performance but to transform its culture. Much transformation can take place if given sufficient time. You must clearly articulate the new culture—the new standards that everyone will be expected to live up to. Once articulated, you and your leadership team must be the first to live them out. If you expect hard work, work hard yourself. If you expect honesty, speak truthfully. If you desire innovation, expect and reward risk-taking, not just success.

CHAPTER 12

Leaving a Legacy

A high-impact CFO is not stumbled upon but created, formed by every skill, every moment of a faithful journey. Their impact is more than business. If done well, they leave a legacy of transformed lives, businesses, and societies.

In *Good to Great*, Jim Collins introduces the concept of a Level 5 leader. Jim and his team were seeking to understand the key attributes of an organization that goes from being something good to something great. The Level 5 leader they identified was a unique blend of ambition, perseverance, and insight wrapped in humility and stewardship. These leaders were obsessed with the success of the company but not with their own success. In fact, many fled from recognition.

The purpose is not to turn everyone into a Level 5 CFO. The intent was to encourage each of you to understand and embrace the opportunity to leave a legacy in everything you do at every stage of your journey.

There are three primary ways to leave a legacy:

1. Innovate and transform the business
2. Build and nurture a transcendent mission and culture
3. Create lasting impact through shared experiences with others

Conclusion

The titles you hold and the money you earn will never be remembered. But the testimony of your impact on other people's lives will live forever. Every person I encouraged, every new approach I introduced, every individual I challenged to grow, and every mission I helped transform became part of a lasting legacy. For each person I influenced, the testimony of that moment became a part of them forever. My love, care, innovation, and passion for them is passed on forever.

In your quest to be a great professional and a great CFO, the question is this: Do you want a title and money, or the testimony of a life well lived—a life of creation, stewardship, grace, and influence?

I made my choice many years ago. What will yours be?

I hope your journey will be as rewarding and fulfilling as mine has been. *Enjoy* it.

Chris Festog is an entrepreneurial leader with more than forty years of experience building and transforming businesses in the global insurance industry. He has held senior roles with Zurich Insurance Group, Texaco, RenaissanceRe, and Mutual of America Financial Group, often serving as chief financial officer and driving innovation through technology integration. Festog has led international operations across the United States, Europe, and Bermuda and brings deep expertise in leadership, stewardship, and business transformation. He currently serves as chief financial officer of CrossPurpose and sits on multiple boards. He is also a speaker, consultant, executive coach, and contributor to *Forbes*.

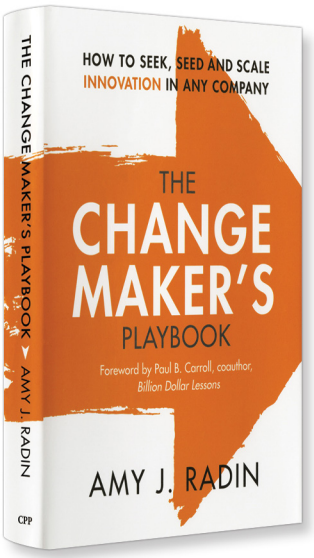
The Change Maker's Playbook

How to Seek, Seed and Scale Innovation in Any Company



by Amy J. Radin

THE SUMMARY IN BRIEF

Any leader in any company, no matter the size or sector, feels the pressure to innovate, find new ideas and business models, and create enduring customer value. There is no one formula or set process to find and execute the ideas that achieve these goals; customers set moving targets, shareholders are unforgiving and demanding, and society expects companies to care about much more than the bottom line.

In *The Change Maker's Playbook*, author Amy J. Radin walks readers through her adaptive, nine-part framework, showing leaders how to find the big ideas that will meaningfully address customer needs, take insights from idea through implementation in a way that delivers, and lead effectively through the obstacles that tend to derail or diminish innovation. Three phases — seeking, seeding and scaling — organize the framework within an intuitive, logical and useable format. Leaders will find tangible steps to find and safeguard the plans that will deliver the sustainable impacts their businesses need — new customers, new relationships, new sources of value and growth.

Success requires that leaders rethink how they lead innovation. *The Change Maker's Playbook* will help innovation leaders learn how to do just that.

IN THIS SUMMARY, YOU WILL LEARN:

- How purpose is different from a vision statement or slogan.
- The key traits of resourceful leaders.
- Essential questions to help you create your business model.
- How to anticipate and adapt in today's fast-paced innovation landscape.

PART I: SEEKING

To create innovation, you have to take action. There is no fixed formula. But a no-downside starting point is to listen — both to your inner voice and to the sources of useful feedback in your surroundings.

What most matters is to create the foundation. That is where listening, insight, purpose and commitment come into play. Why?

You are setting yourself up to go after market opportunity. Seeking behaviors come first and benefit all aspects of the framework. Set yourself up to innovate by being open — and as a result, allow for possibilities.

Discovering Real Needs

Making an effort to listen — to hear, observe and understand people — will make you a great discoverer. Discoverers want to understand where people are coming from: their backgrounds and environment, motivations and emotions. Discoverers back away from being in "I already know it" mode. They collaborate. They pursue dialogue, not interrogation. For those who are curious, discovery is fun.

People Buy Painkillers, Not Vitamins

A fellow innovator once said, "People buy painkillers, not vitamins." Living as we do with so much complexity, relief from life's hassles alone can earn attention and commitment to a brand.

Take, for example, ketchup. In 2002, Heinz's business goal was to grow sales. Discovery led to a user problem: the hassle involved in getting the last bit of ketchup out of the bottle. Users reportedly jammed knives down the bottles, or shook bottles hard, only to be squirted with a watery mess, or tried balancing the right-side-up bottle upside down.

Given the long narrow neck and wide bottom, that is a tough act. Heinz responded by introducing the inverted ketchup bottle, applying a package design first invented for shampoo. Providing a better alternative to user workarounds revolutionized a 150-year-old product. Heinz grew at three times the market rate within a year of this new-to-category innovation.

Remember that users, buyers and payers all matter. Different family members each have an influence on which bottle of ketchup will be pulled off the supermarket shelf. Heads of household pay for the item, but family members all around the table are users. Perhaps a caregiver or relative handles grocery shopping. It's important to understand the roles each member of the influence group plays, early on, to inform product priorities. Start to anticipate the complete experience.

Begin with users. Ultimately what matters is to map all members of the system and to understand how they affect each other's decisions.

Don't Just Bet on Your Own Horse

Be sensitive to the risks of do-it-yourself. Discovery requires an open mind. The common trap is to seek customer feedback as validation. Entrepreneurs fall in love with their ideas and then listen for the answers they preferred all along. That is why, budget permitting,

whether for entrepreneur or corporate innovator, there is value in having a third party with no stake in the outcome assisting in discovery. Think of discovery as co-development with users.

Purpose, Passion, Promise and Positioning

What is purpose and why does it matter? Having purpose is not a matter of writing a vision statement that ends up an empty slogan. Purpose means knowing what you stand for — why you want to exist. With purpose backed by commitment, you can challenge yourself — and others — to put in their best efforts.

Purpose comes to life through

- **Passion** — the commitment and strength of belief that fuels delivering on what you stand for;
- **Promise** — the expectations you set for the people you choose to serve;
- **Positioning** — how you portray and promote the promise.

Purpose triggers alignment across values, principles and execution. When purpose is baked into the culture, things happen the right way and everyone knows what that right way is.

How can you figure out your purpose? Look within your life for signals: read to expand awareness of your interests; talk to others about their sense of purpose; collect magazine pictures of images that attract you, looking for patterns that signal things you feel strongly about; pursue your hobbies to further boundaries; seize the opportunities arising out of personal moments of truth; work on something that fits with your purpose, either in an already-built company, at a startup or on your own.

From Purpose and Passion to Promise and Positioning

With knowledge and commitment to your purpose, get ready to shape positioning, the tool to express purpose in words, images and actions. Everything you do should manifest your positioning.

Positioning was not always thought of so broadly. Pre-digitally, positioning was a communications technique in the domain of the marketing team and the advertising agency. Now, ads are like a transparent coat of gloss, and much more is required to execute positioning that is credible and compelling.

Change makers are asking questions of customers, employees and themselves to get to the truths of a business's purpose and to confirm the links between purpose, business model, and executional and performance outcomes.

Purpose is the foundation of a pyramid leading to positioning. Positioning is a big decision, not to be shortchanged. To get it right,

- Invest in the best expertise;
- Test out possible approaches by prototyping;
- Lead an inclusive process;
- Don't cut corners;
- Implement proven rules of brand development, and go beyond;
- Give employees permission to deliver the brand promise within and beyond marketing;
- Recruit believers;
- Don't build without purpose.

The Art of Being Resourceful

Finding, shaping and implementing innovation takes resources. The obvious ones are people, money, technology, equipment and materials.

Whatever the starting point, change makers end up changing how the product is created, not just what the product is versus whatever came before. And the stronger the status quo, the more likely the need is for basic resources to overcome obstacles.

You can counter the drain on money, time and talent by being resourceful. Resourcefulness is

- A high payoff must-have for any change maker in any context;
- A force multiplier on every penny, every hour, line of code, every ounce of materials invested;
- A virtual stockpile of options to turn to when obstacles hit.

Resourcefulness separates the funded from the unfunded. Change makers are dogged enough to get the first vote of confidence that initial funding represents, then execute the plan, sticking to dates and budgets. They find the path forward no matter what. They work the ins and outs, the unexpected, the good news, bad news, great news and terrible news, knowing the news before it even happens. They live steps ahead in the future. Living in the

present means being too late and burning resources in a game of constant catch-up.

The Resourceful Leader Profile

Resourceful leadership depends on mindset. Resourceful leaders have a positive outlook and, as a result, tune into solutions. This means they are optimistic, reframers, attentive, curious and creative.

Resourceful leaders treat others with respect and value people as people and, as a result, inspire and attract others to enable their purpose. This means they are self-aware, collaborative and engaging.

Resourceful leaders can execute under diverse circumstances, especially through adversity. This means they are pragmatic, focused, impatient, hands-on, energetic, prepared and anticipatory.

Resourcefulness takes creativity, not just penny pinching. Resourcefulness has an element of watching how much money is being spent and on what. But being resourceful is not about restricting use of color printer ink, telling the team to take the cheapest flights, or engaging in nickel-and-dime directives that make any team groan. Such requests can be perceived as petty and inflict damage on morale above whatever money is saved.

Better to put effort into the bigger message: how to shape a culture where everyone on their own wants to find ways to achieve the purpose. Then, everyone is driven to make the best use of dollars, time and talent.

PART II: SEEDING

Seeding means change makers will test market conditions to see if they are right, and be willing to adapt. They will experiment, commit to trial and error, face down ambiguity and surround themselves with people who amplify their vision and purpose. Let's now talk about the skills, tools, mindset and capabilities that get concepts to take hold.

Prototype, Test, Learn, Iterate

Prototyping opens the door for users to co-develop concepts. A good prototyping process focuses on creating models, letting users engage with them, learning from the interactions and creating versions that are progressively closer to being market ready.

Prototyping is a way to learn. Engaging users in a live rendition of a product or service, however rough, narrows gaps between a great idea inside your head and a tangible, functional and sought-after real-world product.

Building prototypes and letting users play with them begins to uncover answers to questions like

- Does it function?
- Does it do what it was intended to do?
- Does it hit quality standards and expectations?
- Can it be replicated at scale and at what cost?
- Does it solve the problem it was intended to solve, and does it do so effectively?
- How does it perform relative to existing alternatives?
- What reactions does it evoke for potential users?

The When, Why, How and Who of a Prototyping Process

The When. In principle, prototyping best begins as soon as you can put something tangible down on paper, in code, using materials on hand. Capture the intention as soon as you start to see elements of your idea. No matter the business or sector, "early" and "fast" must be the rules of thumb for prototyping.

The Why. There is nothing like seeing and interacting with the real thing to identify functional requirements (what will product dimensions be? what will the user experience navigation be like? can partners deliver on promises?); use trial and error (the only way to figure out how to make new concepts work); spot and avoid easily missed mistakes; understand user emotion (emotions shape perceived value and utility — drivers of commercial potential — that otherwise would be hard to predict at this stage); foster collaboration; and move faster.

The How. Sameer Vakil and Summi Ghambir, co-founders of the startup GlobalLinker, offer their best advice about prototyping: begin with a clear and well-articulated vision; decide up front what kind of organization and culture you want; dream big and stay the course; and finally, recognize what prototyping is really about. First, the technique — the skills of building the iterative models toward product-readiness. Second, the purpose you set for your business that got you to be a change maker.

The Who. Never take users for granted or underestimate their input. Users may not be sitting at the work table or standing at the whiteboard with sticky notes in hand, so it is every team member's job to keep users' perspectives present. With regard to the team, follow this principle: "Include all of the stakeholders whose buy-in is going to be necessary for approval of my prototype," says Art Chang, founder and

CEO of Tipping Point Partners. "It is just common sense that the timeline to production will be shorter if everyone is brought into the process at day zero." Be clear about who is most important to get to a valid minimum viable product. "Valid" means proving feasibility and showing evidence that there is market demand.

Business Model Linchpins

From a vacation beach chair in 1976, Citibank CEO John Reed penned a vision to transform the retail banking business model.

Mastercard global board member Steve Freiberg joined Citi under Reed's leadership. Steve says about Reed, "Here was a guy who was young but senior. He went to his boss and said, 'I've got a great idea. I am going to take a machine and stuff $50,000 into it and leave it in the lobby of a bank branch. Over the weekend after we go home people can come and go, and take money out as they please.'"

The guys in suits, starched white shirts and pricey silk ties sitting on executive row must have thought Reed's vision was crazy. But he persisted and moved Citi to disrupt the sleepy model of Monday through Friday, 9 a.m. to 3 p.m. branch banking. In so doing, Reed defined the business model parameters for what is now a given — a 24/7 banking experience where people bank when, where and how they prefer.

Reed's vision would not have become real without a viable business model. Creating a new relationship between banks and their customers meant challenging the team to reframe the bank's purpose, from one based on pushing financial products to one based on understanding and meeting customer needs; connecting what was not obvious yet technologically possible with what mattered to users; breaking orthodoxies inside a large, complex organization; and seeing value in a totally new customer experience.

To set up the possibilities for your business model, start by answering these six questions:

- How do you plan to make a significant difference for the people you intend to serve?
- What is the size of the market? How many users and buyers are there?
- How do sources of revenue connect to your point of difference?
- How will you execute the strategy, manage the business-model levers and maintain your point of difference?
- What resources are required?
- How do plans translate into financial statements, organization design, policies, processes and infrastructure?

Being able to articulate the business model is a test of readiness and exposes the holes that must be filled to move ahead.

Getting to the Business Model: Culture and Leadership

Getting to a viable business model demands experimentation. If the team does not have the leadership backbone to create space for failures, that new model will not be found.

Sponsorship is essential, but the daily dynamics of the culture are throughout the team and help others persist against odds, show guts and act with urgency. Be the culture, and lead others instead of debating culture and leadership.

Stay centered on redefining the user experience by improving it in ways the market could not even have thought possible until you came along; imagining how to attract customers, operate and deliver value that upends the status quo; executing at scale by delivering the experience with quality and predictability, at large volumes; defining metrics that include market share and expectations for profitability; and keeping resources constrained.

Apply these principles and you will leave the competition flat-footed and bewildered.

The Green-Light Moment

The green-light moment is here. The market wants what you have created. You have the funds to move forward toward a launch.

People, strategy and execution are the three essentials of the green-light moment where attention is on moving toward launching and scaling.

People. You have hustled for dollars and technology. Now, find and engage the best people. Interviewing and assessing candidates is a learned skill. Seek all guidance on how to be an effective interviewer. Know and set the expectation that the interview experience is also the time to sell the role and the company. Competency-based interviewing is a technique that zeros in on how a person has used specific skills to solve problems in the past. The goal is to encourage the candidate to share examples illustrating how they felt and acted in real life. A quick search of the term "competency-based

interviewing" will net good, free resources if you don't have access to formal training.

Avoid the biggest hiring mistakes: bringing in people who are just like you; under- or over-hiring expertise; hiring for skill alone, without assessing culture fit and leadership; compromising; poorly framing roles; misreading people's skills and motivations.

Strategy. Strategy is where execution begins. Done right, strategy encompasses not only conceptual logic and analyses but also how execution will happen. Strategy answers four questions:

- **The starting point:** Where are you now?
- **The destination:** Where do you want to be?
- **The route:** How do you anticipate getting there?
- **The rationale:** Why does any of this matter?

The two "wheres": The answers to the "now" and "later" questions of "where" set context for smart decisions. Context motivates people and costs nothing. The starting point and destination are already in the business model metrics.

The how: Defining how means getting from the pages of the pitch into the real world where things get complicated. The best plans lead to a finish line because of the team's ability to adapt on the fly.

The why: Knowing why accelerates decisions and assures consistency without micromanagement. Being clear and open about "why" is much more effective than authoritarian leadership if you want to attract and retain people who are wired for innovation.

Execution. Execution takes time. And every change maker faces unforgiving pressure to move faster. Weeks are compressed into days, months into weeks and years into months. The constant demand is to execute, get the product out and achieve results.

Remember to assess your own competencies as you move ahead on people decisions. Know for sure that trying to prove that you can do it all will prove disastrous. Now that it is time to bring your vision to life, size up your own capacity to execute, and find ways to offset shortfalls. Putting on the operator hat means being a role model for attitude, courage, purpose, progress and culture.

Your purpose is amazing. What are you doing to ensure your team sees what's in it for them? The "WIFM principle" — what's in it for me — is not about cynicism or self-interest at others' expense. We all want to take care of ourselves and our loved ones. We evaluate personal plusses and minuses and are more motivated when the weighting is one that feels favorable, whether overtly or subconsciously.

PART III: SCALING

Scaling expands requirements. Commitments to defining and delivering on user needs, iterating quickly and aligning resources do not stop. You are juggling balls and spinning plates. To keep everything in the air, this section offers guidance, stories, concepts and tools for the last three pieces of the framework: launch, testing and experimentation, and anticipating and adapting.

Launch

Launch is when a team shifts efforts toward delivering product at the scale of results projected in the business model. It is when users expect the product to be available and functional, for platforms to work and customer service to be responsive.

Startup or grown-up business, you are ready to launch when you have crossed over from low-volume beta testing to having earned the capital for expanded sales and marketing. This is a new push requiring more diverse skills, set in place during your green-light moment, and carrying opportunities and risks not requiring attention until now.

Here are some launch questions to keep on your radar:

Are you on track to pass the 10x test? Founder Peter Thiel has advocated that to succeed commercially, an innovation must be 10 times better than whatever the user currently has available.

Ten times better means a *dramatically* better alternative. The 10x test may be met during beta testing. But now, execution must ensure that wallets open and product is snapped up at the expense of yesterday's solution.

Are you prepared to meet the launch expectations you have set? Look back. What expectations were created by beta results, market analyses and business model assumptions?

Expectations grow as production, sales and marketing efforts expand. Conflicting expectations co-exist. The business will be amazing and new … and things will be messy. There will be stops and starts, lots of stuff flying around, at the same time as media commitments are being made, while revenue projections and potential risks grow. And you created believers by passionately selling your concept and inspiring others with your purpose.

Are you getting ready for what scale means? In the case of product manufacturing — say, a chemical

compound like a new drug — active ingredients may be in short supply, even rare. Perhaps such compounds can only be procured in sufficient quantity from a far-away supplier. Perhaps, for a new product, textiles are produced in one location and are assembled elsewhere. Or prototype development happened locally, overseen by founders. Now, to hit unit costs, production moves to a vendor located elsewhere.

Which metrics are right for launch? Align launch metrics to the strategy. Metrics should codify the promises made to executives and investors and link strategy to reality. Factors to create metrics:

- Work backward from the goals.
- Measure the drivers — the user and buyer behaviors that move the business model. Of course the outcomes are where the buck stops, but drivers are where outcomes are influenced and where a team has leverage to create results.
- Pay attention to leading indicators allowing you to be proactive.
- Do your best to ensure that results will be available to allow you to take action based on what is happening, e.g., with media and other marketing elements.

Testing and Experimenting

For change makers, the stakes are too high to rely on guesswork. Seat-of-the-pants may have been necessary in the past, but today's complexity, competition and demands to achieve scale all require more. There is too much information, too many choices and decisions, and too little time. Expectations are high, while the effects of innovation investments can be difficult to discern.

Testing and experimenting keep startup and grown-up businesses on pace. Even better, they point to marketplace discontinuities leading to innovation.

Traditional testing depended upon market opportunities holding still. Today nothing holds still. But there are still principles and patterns, some of which have been proven through decades. So, even when there is no fixed template, rigor is achievable.

What are you trying to figure out? Decide which of the three types of insight apply to your priorities: hindsight, or descriptive results explaining what happened; insight, or diagnostic results, explaining why something happened; and foresight, or progressive insights, about how to make something happen.

Three critical thinking guideposts. No matter the path, consider scribbling these guideposts on sticky notes tacked up in your workspace:

1. Define the questions leading to decisions and action, linked to strategic priorities.
2. Know the business-model operating levers — user behavior, processes, policies and regulation. All drive financials.
3. Have the execution capability to apply models, including each test result. If not, what is the point of the test?

Moving to action through small, manageable steps. How can you make a habit of sensing where there is useful data, analyzing, synthesizing, assessing and then applying findings quickly? Marcia Tal advises executives on advancing innovative data science and technology-based solutions. Marcia advises focusing first on internal data sources. She says, "Internal data will always be the most valuable. Other sources won't replace proprietary data — they can complement it." Not collecting or maintaining a strong customer database? Make it a priority to figure out how to address this gap.

Next, know how the business operates to construct, execute and interpret tests. Especially important is to understand how customers make decisions that define behavior with the brand.

Focus on the gaps when designing tests. "You will get lost if you don't keep going back to the question, 'What am I trying to do?'" says Angela Curry, former managing director, Global Analytics & Insights at Citi. "Understand the goals. Where do you need insight? Build tests from there."

An easy way to gauge a well-defined goal is to fill in the blank in this sentence: "We will be successful in our venture if _____ happens."

Assemble the right mix of people for testing and experimenting success. The **planner** is able to anticipate whether, what and when testing will be influenced by the operations, processes or policies of a business. The planner identifies and integrates multiple perspectives. They connect the dots between test design and implementation.

The **implementer** has hands-on knowledge of analytics tools and methods. Perhaps they are a mathematician or technologist. Such backgrounds provide foundational implementer skill sets. Data is vast and varied, sources expand and tools change. So what they know today may be obsolete in a few quarters. That is

why the implementer who shines is skilled in how to look for information, read and write code to set up tests, and adapt to new techniques.

Anticipating and Adapting

Adapting to market conditions by making predictable, controllable, incremental moves used to be good enough. Now, the pressure is on to adapt at high speed and also to many concurrent changes. That is a tougher challenge, especially for people within big companies built with multilayered organizations, systems and processes.

Play by this ground rule to keep your vision fresh and vibrant: Anticipate whenever you can, and get on pace to adapt when the unanticipated happens.

What to Anticipate

Obvious and irrefutable trends are easy to explore, thanks to discoverable, free thought leadership content, government surveys, and virtual and live events. A good network of relationships is also a great resource. Consider just these five mega-trends, all game-changers:

Demographics: shifts in age, cultural, religious, geographic and economic cohorts affecting people's needs, habits, attitudes and preferences.

Natural resources: population growth and movement, climate change and demand for resources affecting food, water, and energy quality and supply.

Individual empowerment: reduced overall poverty (notwithstanding wealth polarization — a trend in and of itself), increasing access to education and also to manufacturing, communications and healthcare advances.

Dispersion of power: the continued shift of power to networks and alliances, changing who has influence and authority.

New technologies: both solving problems and creating consequences.

These mega-trends are seeds of massive unsolved problems and growing needs. They are sources of ideas for new ways to attack old problems. They are raw material to inspire vision and purpose.

Why are some organizations better at anticipating and adapting than others? Businesses that reinvent have four traits in common. They

- Pay attention to and act upon social and economic trends;
- Know and are passionate about their vision and purpose;
- Engage in experimentation and value diverse perspectives;
- Do not allow themselves to be taken hostage by an investor agenda misaligned with vision and purpose.

What makes some people better at transformation than others? What is it that makes some people able to imagine a different future and create that future through leadership and action? It's a matter of who we are.

Step back to 1999, when Joshua Green established Friends of the High Line, a group of Manhattan west siders who were able to imagine transforming abandoned railroad tracks into an elevated ecosystem. Demographic, workforce, transit, urbanization, real estate and other factors fed public and private sector support for reinventing the site as a recreation, retail, arts and dining destination. An urban wasteland was transformed into a dynamic residential, tourist, commercial and corporate magnet.

People who excel at transformation have a true "North Star" to serve people's needs; are able to tune out naysayers — those who see anticipators as "crazies"; possess confidence and courage to step beyond where most others can see; partner with people who complete the bundle of creative, technical, operations and influence skills required for execution; sustain an attitude, outlook and relationship network that fuel luck.

We all come into the world with a purpose, born with capabilities and potential. When we stand still, time is passing, and so there is less opportunity to make a difference and achieve purpose.

So get moving, and while you are making your dent in the universe, give back to other change makers by sharing what has worked for you and what you have learned.

Make change that matters. Find your purpose and passion. Choose happiness.

MORE SV CONTENT ON INNOVATION

Summary: *Costovation* by Stephen Wunker, Jennifer Luo Law. With costovation, you let go of assumptions, take a fresh look at the market and relentlessly focus on what customers really want. When combined, innovation and cost-cutting expose untapped opportunities to outsmart and under-spend competitors.

The Character Triangle

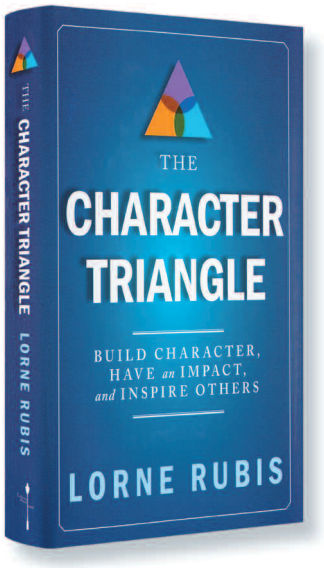
Build Character, Have an Impact, and Inspire Others



by Lorne Rubis

THE SUMMARY IN BRIEF

The challenges facing leaders, and the attributes foundational to their success are many and complex. We see and understand the true value of outstanding leadership when the situation is most critical, complicated and broadly impactful.

Before Lorne Rubis became a successful business leader and CEO, he began his career as a schoolteacher and coach who was profoundly honored by the gratitude of his students. Inspired, he purposefully set about to define a framework for the values he embraced: respect, accountability and abundance. He connected his "Character Triangle" to a system of beliefs and habits that are a veritable game changer for success, which is evidenced in his own career. *The Character Triangle* is a value and habit system, and when you apply it to your life's purpose, it becomes exponential in its value to each of us and all the people we interact with.

Rubis' book, *The Character Triangle*, examines and defines the three distinct but interdependent values that, if applied in our daily thoughts and actions, are a "playbook" for attaining rewards in any type of work and any situation in life. Rubis' relevant and timely examples of role models in diverse fields of endeavor — thinkers and doers from contemporary life from his own experience — illustrate the power of the Character Triangle.

IN THIS SUMMARY, YOU WILL LEARN:

- Why the blame game — blaming others or yourself — never works.
- The four key steps to becoming more accountable.
- How to listen with understanding in order to be respectful.
- How to understand that abundance is a state of mind.
- The connected system of accountability, respect and abundance.

Introduction to the Triangle

What is the Character Triangle? It's a personal game changer: Learning and applying it will help you build more character, have a greater impact, and inspire others. Change the game by applying it, and develop a habit system of using it.

Our character is exclusively ours. We define it by how we think, what we do, and the choices we make.

The Character Triangle describes and emphasizes three distinct but interdependent values to apply in our daily thoughts and actions:

Accountability

Accountability starts with the word "self." When we approach every situation we experience in life by FIRST asking what we personally can do about it and how, we begin to understand the concept of self-accountability. The ideas associated with "blame" and "victim" have little if any place in the self-accountable framework. This is a tricky concept to fully accept and grasp for many of us. We need to ask ourselves daily how often we feel compelled to blame ourselves or others for our condition and circumstances.

Respect

None of us work or, for that matter, live in a vacuum; our successes or failures are all built on the strength of our relationships. And relationships run on respect. To be true to the root of respect, one has to continuously look at one's self with openness and understanding. The point is to examine the way we treat OURSELVES first and then how we treat others. Most of us want to be listened to with understanding, treated with courtesy, and recognized for our contributions. Do we do that with ourselves? Then how much do we do this with others in every interaction? Again, this value can be deceptively oversimplified.

Abundance

Abundant people do not have to take anything away from anyone else to be successful. It is literally fun to work with people who are abundance-focused. They may be competitive, but rather than merely to beat someone, the essence of their drive is to advance something. In fact, abundant people relish others' success and achievements. They also focus on the resources available and finding what they need to get results. Generosity of spirit and the belief that giving leads to getting are part of their makeup.

Building the Triangle

Building character, having an impact, and inspiring others means fully embracing the values of the Character Triangle and applying them relentlessly each day. Accountability, Respect and Abundance may sound like straightforward and perhaps even simple concepts; but before you realize it, you'll think about each value more completely; and more importantly, you will understand how they connect and reinforce each other to bring success in all aspects of your life.

In this geo-economic environment of hyper-competition and tornado change, the external buffeting of the organization we reside in can rapidly add to a feeling of little or no personal control over the life cycle of the organization itself, let alone our roles within that organization. The combined effects of these business truisms can leave the best of us dazed, confused, and struggling just to keep our heads above water.

So, the question becomes, how do we go beyond just surviving in this type of undulating work climate? Is it

possible to complete each day with a personal sense of reward and contribution regardless of what is happening around us? I believe it is. While we may have less than desirable control of our environment, we do have control of our character — how we choose to think and act — regardless of the situation.

As you complete the Character Triangle, you will be able to determine how valuable and helpful these concepts can be in providing a clear guide and benchmarks. While the values of accountability, respect and abundance are generic in definition, these values will be exclusively yours in application. Like most worthwhile things in life, the rewards and benefits from embracing the Character Triangle will come from regular and incremental practice. Remember — success in any area will most effectively be defined by you and your daily interactions with others. ●

Be Accountable

What is your understanding of the concept of accountability? People often think of accountability as a concept best applied to others. "Holding other people accountable" is a common phrase. In business, it's often seen in mission and vision statements. How often have you heard or considered that someone needs to "hold others accountable"? This approach to accountability may be limiting and, perhaps, even counterproductive.

While it is vital that we all be held accountable, continually putting the emphasis on others merely takes the spotlight off ourselves and our responsibilities. From my perspective, being self-accountable is a much more constructive way to live and work. The very foundation of self-accountability revolves around the notion of taking personal responsibility for whatever situation you are in: good, bad or ugly.

If you find yourself in a situation that is less than desirable, you can respond in several ways. One way is to feel victimized and "point fingers." As an example, people may ask the following types of questions:

- Why is this happening to me?
- Why don't THEY...?
- Why do I have to change?
- When are THEY going to...?
- Don't look at me to do something first.
- That was So-and-So's responsibility...

In business in particular, it's almost our "default setting" to point the finger elsewhere when put on the hot seat. It may just be a symptom of self-protection, but in many cases, it's a symptom of deep and underlying unwillingness to assume responsibility for one's own actions.

Sometimes, asking these types of questions implies that you have little or no control over your situation. However, we do have total control over how we act and respond to amend the situations we find ourselves in.

Think for a moment and ask yourself, rather than immediately pointing a finger at someone else, wouldn't it be more effective and productive if you approached your challenges at work (and life) first by asking and answering the questions: In what way and how might you personally make a difference? So, be first. Ask what you can do about a situation, and answer how you might do something about it.

Consider:

- How do you think your boss or teammate would respond if you seriously and sincerely addressed a problem from this perspective?
- Would it make a difference in how you might work together?
- Would it pave the road to exploring better ways of mutually winning versus the corporate duel of thrust and defend?
- Would it make you a better team player?
- Possibly a better team leader?

Why the Blame Game Never Works

When something goes wrong, such as poor quarterly sales, it's easy to begin the finger-pointing, blame-game explanation of "how bad the market is," "how we're actually out-performing some competitors," "how production was late with product releases," "the underperformance of a few top sales people," etc. The blame first/assume responsibility last duel can become interesting. However, what if all parties involved approached the situation with serious self-examination around what and how they might personally do things better to improve results?

If all parties have the self-accountability approach and skill to aim and fire at data, issues and behaviors, rather than a personal test to see "who can out-blame the other," the "duel" in this case becomes instead a joint assault on changing processes and results. This is fundamentally different for both sides than feeling victimized and blaming. Of course, this approach is not necessarily easier.

Blaming? Now that's easier. With a simple finger point in somebody else's direction, it's no longer your fault or your responsibility. Instead, when we first take personal accountability seriously, we each have to skill-

fully analyze and execute appropriate actions. As we all know, this takes additional time, thought and energy. However, despite its greater degree of difficulty, the tone of the interaction changes substantially.

Typically, this focus is much more positive, with interpersonal energy better applied to everyone contributing personal and forward-moving action. The opposite results in less productive, defensive behavior, which is energy-draining, often leading to interpersonal friction.

Key Steps to Becoming More Accountable

Being Accountable does not mean blaming oneself, either. This exercise is not designed to take the blame off of everyone else and put it squarely on our own shoulders. The entire concept of blame is not very helpful, whether pointing at others or ourselves. When the concept of self-accountability is first introduced or revisited, some people rush to "fall on their swords" to demonstrate self-accountability. This is not helpful and, frankly, can come across as disingenuous. Regardless of how it appears, the effect is the same: blame decreases effectiveness, not increases it.

When we're busy blaming others or ourselves, that means we aren't busy finding solutions. We are only identifying those who may have gotten us into trouble. If sales are down, it is absolutely critical to find out why, but only in the sense that we can correct it via practical and effective solutions. Self-responsibility is a forward motion; blame takes us backward.

How to avoid the blame game in your own life? It can be a hard habit to break, but with the following four steps, you can leave the blame game in the past and look forward to a life full of personal accountability:

1. Be honest and do it now! Get the data, and recognize and accept that a situation is not acceptable. Avoidance is often a signal that something is wrong. Be aware of that, and insist on an honest evaluation. If sales are down, developing and executing a plan for getting sales back up is a forward-motion step we can take immediately. It includes discovering why sales were down; knowing why sales were down is necessary to help in determining how to get them back up.

2. Be first. Ask yourself, in advance of expecting anything from others, what you personally might do to change things. The emphasis here is on what YOU can do, FIRST and foremost, even before you consider what someone else might do to help.

3. Do what you can do. Take personal action to improve process and results. Be careful not to underestimate the plan. The solution starts with you. You'll often need others to accomplish the mission, but whether you're the CEO, VP of sales, leader, manager or team member, you can still have a direct impact on the larger organization's results if you take personal action to improve both the process and results. The execution is in the details of the plan.

4. Do not "beat yourself up." Being self-accountable does not involve blame, including self-blame. Acting with character is a lifelong process, not an overnight achievement.

When starting to approach accountability as a personal matter, it also can be disappointing when others don't reciprocate. It is downright exasperating when others listen to your self-accountable approach and choose not to act in kind. However, it is important to apply self-accountability as a personal value in your character, regardless of the behavior of others. This is about defining your own success by living with character.

The Be Accountable Playbook

1. Establish the mindset to improve yourself first. Approach issues with self-examination of in what way and how you might contribute before asking or expecting from others.

2. Always ask in what way and how you might do something. Begin each interaction with yourself in control by taking responsibility for your action.

Dig a Little Deeper and Find a Well

Do you sometimes want to change things? Wish "They" would do something to make things different? What if the "They" were you?

Ryan Hreljac of Canada was inspired at age 7 to raise $70 by doing extra chores to help build wells in Africa. By 2010, his own charity, Ryan's Wells Foundation, has helped fund more than 550 wells in 16 countries. He has helped supply clean water to more than 700,000 people.

Sometimes it is a matter of asking what and how you can take action to change things. Self-accountability is the courage and confidence to believe you can so something to develop a more desired state of being. This applies at work and outside of work. Each of us has way more power and influence than we often believe. Start now... before you know it, 700,000 people have clean drinking water. Start now … and your place of work will see the benefit of changes you have initiated.

3. Act self-accountable without expecting reciprocity. Being accountable is more about your character than others. You can be self-accountable regardless of what others do.

4. Avoid blaming, especially self-blaming. There is very little value if any in finding someone to blame. Remember that blame moves you backward, while holding yourself accountable moves yourself forward.

5. Watch out for the "victim thinking" often related to the word "they." Waiting or wanting the often undefined or mysterious "they" to make things better is often frustrating for all, to say nothing of wishful thinking.

6. Be on the lookout for the "procrastination" signal and under-planning. Avoidance often is a signal that you're waiting for someone to do something. At the same time, taking action does not imply capricious activity. It takes a plan, and be cautious not to underestimate what is needed to make a sustainable difference.

Feedback in Today's Workplace

If we wait to get and give performance feedback on an annual basis, it must not matter much. Feedback should be given and received in a much more timely way. Dan Pink, author of *Drive: The Surprising Truth About What Motivates Us*, suggests three things we can do to make a workplace a little more feedback rich.

1. Do it ourselves. Why not establish our own feedback system, such as getting feedback on a regular basis — perhaps once per month — from colleagues on how we're doing. If we have a boss who's really thinking clearly, that person will honor and support this activity.

2. Peer recognition. This is a great tool to give feedback. It can range from written acknowledgement on a comment card to allowing team members to award their peers gift certificates for a job well done.

3. Do it with software. There are some great software packages that drive extensive 360-degree feedback — the more timely, specific and constructive, the more effective results.

Great leading companies have feedback systems driving behavior. Self-accountable people find a way to get timely feedback on their performance. ●

Be Respectful

To be respectful is to be willing to see beyond our first impression. As was the case with accountability, it is imperative to start by putting "self" in front of the word "respect." To work and live this value, we need to understand what respect means. The root of the word "respect" means to "look again." Literally, then, to be respectful is to be willing to see beyond our first and often superficial impression. Respect requires us to be genuinely open to what the other person is trying to communicate. So to be true to the root of respect, one has to continuously look at one's self again and again with openness and understanding. If we treat ourselves with respect first, it's easier to be genuinely open to others and treat them respectfully, too.

So Respect Is to Be Earned, Right?

We often say respect is "earned," indicating that others must prove themselves before earning our respect. Yet, if we follow the principle of "looking again," perhaps respect for others would not come at the price of passing a subjective test to determine if they are worthy.

Think of it this way: Do we personally have to "earn" being listened to, treated courteously, and recognized for contributions? Really? We shouldn't. In this context, respect is not something to be earned but rather something to be given. To live with character is to give respect unconditionally to ourselves and others.

Everything Is a Process

When we accept the notion that everything is a process, it becomes easier to be open and understanding. If everything is a process, then everything can be viewed as a way or method of doing things. And we can confront the effectiveness of methods and ways without attacking each other personally. This is a subtle but an important principle for people in organizations to learn and apply. It helps us bridge the concepts of being performance- and improvement-driven, while still embracing the value of behaving respectfully.

No one is perfect; everything we do or our coworkers do is a process. And if a process can be understood, it can be addressed and improved. It is respectful — and necessary — to continuously improve our processes.

Listen With Understanding

Listening with understanding is hard work. One has to be present. We have to care what others are saying and meaning. There can be no respect without active listening. When you genuinely open yourself to take another look to understand an individual, the respect value is significantly enhanced.

Listening doesn't always mean agreeing. Aristotle stated, "It is the mark of an educated mind to be able to entertain a thought without accepting it." In fact, highly

respectful organizations are invigorated with constructive disagreement and conflict. A company filled with "yes" men and women often means a company with no objective viewpoint and one that is out of touch with the competition and customer.

The STP Model and Process

Here is a simple tool you can use to help with your listening dialogue. It's called STP: Situation — Target — Proposal. It's timeless and yet so simple to apply. The essence of STP is that if you work to understand the current environment (Situation) and objectives of others (Target), then action-based dialogue (Proposal) often has a successful outcome.

Situation (Define the Situation)

Generate and reach agreement on a comprehensive list of situation statements:

- What is the situation we're facing?
- What data do we have about what is going on?
- What is working well?
- What is wrong with the way things are going?
- Where is the problem occurring?
- How serious is this?
- What are people's reactions to what's going on?
- What might be the cause of the problem or situation?
- What might need help or hinder identifying a feasible solution to the problem?
- Are there situational facts and data we do not have and need to collect?

Target (Identify Targets)

Generate and reach agreement on a comprehensive list of target statements:

- How would you describe the ideal situation?
- What does success look like?
- What are our goals?
- How would things be different if the problem were solved?
- What differences would we like in the way we do things, in the way people work together, and in our methods or equipment?
- What major and minor outcomes do we want from this situation?

Proposal (Develop Proposals)

Generate and reach agreement on a comprehensive list of proposal statements:

- How can we get from where we are to where we want to be?
- What can we do to solve the problem?
- What actions should we take to immediately remedy the situation?
- What actions should we take for long-term prevention?
- If we didn't have any constraints (time, financial, etc.), what could we do to solve the problem?

Final Steps

Plan to close the Situation — Target (S — T) gap:

- Check for conflicting targets.
- Group S-statements that relate to the targets.
- Identify S — T gap.
- Identify proposals that close S — T gaps.
- Reach agreement on proposals to implement (may use ranking and voting to facilitate decision-making).
- Put proposals into action.
- Convert proposal into action.
- Plan — identify who does what and when.

Ensure the action plan assigns responsibilities to track completion and results.

Embracing Diversity

Diversity is a matter of benefitting from the unique angles of other people. Of course, when we capture the best combination of race, ethnicity, region, religion, culture, age, perspective, etc., we demonstrate the sincerest application of respect. The richness of organizational diversity is directly related to how effective we are in listening and understanding the many viewpoints of others.

Be Nice, Be Kind, Be Present

In business, it's necessary to be tough-minded, make hard decisions, and act decisively, but "tough" is not synonymous with "mean." The most admired people in organizations are usually the nicest as well. They treat people the same respectful way regardless of place, position or stature, whether they work in the corner office or on the front lines. Arrogance and respect do not go together. Being nice and kind, while perhaps sounding mushy, is fundamental to acting with respect.

Respectful people also work hard to be physically and emotionally present when they interact with others. They have a commitment to be "in the now." This is another important attribute when it comes to respect. How thoughtfully do you give your undivided attention when working with your colleagues?

The Be Respectful Playbook

1. Start with "self" first, and "look again." Take the time to reassess and reevaluate every situation from

an "inside out" perspective by putting the "self" before "respect." Take the time to look again with openness and receptivity.

2. Remember that everything is a process, and all processes can be improved. A process is distinct from the person.

3. Always examine the process, behavior and situation first; never attack a person. Remember, open dialogue and discussion — even disagreement — does not equal personal attacks and petty sniping.

4. Treat yourself the way you want others to be treated; then do it. Be nice. One can be very tough-minded and results-driven and still be courteous and accessible to all others. Arrogance provides no value.

5. Listen with understanding; be present, and look at every perspective. Diverse angles and great dialogue are fundamental to being respectful. Give others your full attention when interacting.

6. Use the STP process as a great listening tool, problem-solving process, and a way to get people aligned. ●

Be Abundant

People tend to lean either toward a philosophy of abundance or a philosophy of scarcity. What's the difference? Well, it's all about attitude connected to behavior that validates a way of thinking. Abundance-oriented people seem to approach work and life in general as if they were meant to be prosperous. The wonderful thing about these people is that they see the objective of life as development and growth. Even better, when they can't actually touch, see or feel them, abundance-oriented people believe the resources for their success are available — somewhere.

Abundant people do not have to take anything away from anyone else to be successful. They believe that it is a divine right for every person to create, advance and grow and not to impede others that growth.

Don't be confused: abundance-oriented people live within the same resource constraints that scarcity-thinking people do; they can't just "wish it" and make more resources appear. However, abundance-oriented people don't allow a lack of resources to be the reason why they can't find a way to move their situation to a more desirable state. Going back to self-accountability, if they don't have what they need, abundance-oriented people ask and answer what and how they need to do, get and be where they want to be.

It is literally fun to work beside — or with — someone who is abundance-focused. They are competitive, but rather than being out to beat someone, the essence of their competitive drive is to advance something for themselves, for teammates, coworkers, colleague — for all involved. Abundance-oriented people relish other people's success and achievements. Such people see abundance everywhere and not just in mere things. A coworker's positivity, or resourcefulness, a life lesson, a strategy, an example, a formula all are seen as tools to become more abundant.

Abundance as a State of Mind

Abundance as a state of mind contributes materially to attracting the resources you need to get things done. This doesn't mean things come easy or that life is without worry. And having strong beliefs and actions based on self-accountability and respect are brother and sister to being abundant.

Abundant-thinking people are prepared to live in the world of uncertainty. They take calculated risks because they have faith that things will work out for the better.

Climbing to the Top of the Character Triangle

Erik Weihenmayer has climbed every major summit in the world. This is an incredible feat in its own right, but Erik makes this accomplishment astounding due to the fact that he is blind. You've probably all imagined the difficulty of climbing Mt. Everest … but climbing it blind? Erik accomplished that. Now, that's character!

Erik embodies every element of the Character Triangle. When he became unexpectedly blind as a teenager, he could have blamed the world. Instead he asked himself what and how he might respond. How about deciding to climb every major challenge in the world? Now, that is self-accountability.

Erik's life teaches us about respect by the way he prepares for every climb. He respects each peak and pays homage by his preparation and attention to detail. Additionally, he ropes up with every person on his team. He listens to each peak and the teams that help him reach it.

When it comes to being abundant, Erik also sets the bar. In Tibet, blindness is a basis for discrimination. When Erik became aware of this, he responded by embracing blind Tibetan kids and teaching them to climb … the pinnacle being Everest. Now, that's being abundant.

They believe, often unfailingly, that you cannot succeed with an attitude of doubt and unwarranted anxiety (fear). Abundant people recognize that even success is in a constant state of flux, and to arrive at a plateau is the platform for a new beginning. Change brings growth, and growth brings success; and all are part of the abundance process.

Jealousy and negativity are a part of daily work life. But think about that for a moment: What good is ever derived from acting with jealousy or negativity towards anyone? Contrary to what your ego may be whispering over your shoulder, abundant people applaud the recognition others receive.

Abundance does not exist in a vacuum (or in the mind alone), and it cannot flourish without taking action. The best way to reinforce abundance is to be the most generous, giving person you can be at work (and in all aspects of life). This means sincerely giving of oneself without expecting payback.

The Be Abundant Playbook

1. Be self-abundant in thinking. Being abundant is a state of mind. Be self-abundant first. If you see yourself as prosperous, you will be focused on becoming prosperous. If you see yourself as lacking, you will focus on all that you lack. Remember that we have to be self-abundant first.

2. Act with abundance; take calculated risks. Embrace the deeply held belief that all things will work out for the best and that you have the right to material wealth, peace of mind and health.

3. Avoid negative people and people who want to take instead of give. Jealous and mean-spirited people are intent on making themselves feel better by taking from others.

4. Be as generous as possible in as many ways as possible. Believe in the virtue that those who give will receive and that helping others is both giving and receiving at the same time.

5. Avoid giving based on conditions. Be abundant; just give. ●

Character Triangle Points to Remember

Living with character and applying the Character Triangle is a belief and action habit system. Each of the following is equally important to the Character Triangle's successful contribution in living out your life's purpose.

- **Belief.** Don't let studying the Character Triangle be your "flavor of the month" idea before relegating it to your "business bookshelf" with all the other great ideas that sounded good in theory but never took root in your active, daily belief system. For the Character Triangle to have a personal impact, you must first understand it and believe in its three core elements.
- **Action.** Beliefs are the foundation, but they become alive when acted upon. So when you truly begin to believe in the Character Triangle, you must take it one step further and act on those beliefs. Apply the playbook. Practice everyday.
- **Habit System.** We can't just live with character when it's convenient. Living the Character Triangle must be a systematic and habitual part of your daily life plan. Additionally, the three values of Accountability, Respect and Abundance act in reinforcing unison as a powerful trinity. Each value stands on its own legs, but the Character Triangle is a habit system.

We Define Success

As a system, the Character Triangle helps us get the most out of our work (and life) situations. By applying Accountability, Respect and Abundance together, that is, living in the Triangle, we put ourselves in much greater control. While we cannot control what others do, we can control how we think and act. We personally become the most important determinant for thriving and winning at work and life.

But remember, living in the Triangle does not equal perfection. For example, there may be factors outside of one's control that impact the outcome. Being cognizant of these enhances your decision-making. Applying the Character Triangle in tandem with one's own raw intelligence illuminates but does not guarantee the desired result. But when we live in the Triangle, we know the journey we've taken. We can be proud of that. ●

RECOMMENDED READING LIST

If you liked *The Character Triangle,* you'll also like:

1. ***Leading with Character* by John J. Sosik.** Sosik offers a unique collection of fascinating stories about 25 famous leaders from business and history.
2. ***One Piece of Paper* by Mike Figliuolo.** Based on Figliuolo's "Leadership Maxims" training course, readers will learn to create a living document that communicates their values, passions and goals to others.
3. ***Common Purpose* by Joel Kurtzman.** Kurtzman helps readers understand the concept of common purpose. He tackles the task of uniting people to create outsized, measurable results.

THE SUMMARY IN BRIEF

Charisma starts with becoming interested in others. In ***The Charismatic Leader: 21 Skills to Connect with People***, you will learn twenty-one simple ways to develop charisma by interacting positively with people. You'll learn skills in three phases: 1) Becoming Interested in Others; 2) Becoming Invested in Others; and 3) Becoming Interesting to Others.

When you care about people and learn about them, they will find you interesting. From there, you will learn simple ways to invest in others to add value to them. Finally, you will learn four ways to make yourself more interesting. This is where most people mistakenly try to begin developing charisma, but it is, in fact, the least important of the three. To be charismatic, you don't need to be physically attractive, tall, athletic, talented, or rich. You just need to care about people and make them feel important. Anyone who does that can connect with people and become a shining light in a dreary world.

IN THIS EXECUTIVE BOOK SUMMARY:

- Charismatic leaders prioritize others over themselves, which leads to a greater sense of purpose, increased energy, and deeper contentment in life.
- Believing the best in people, valuing their contributions, and remembering personal details fosters trust, rapport, and meaningful relationships.
- Encouraging dreams, sharing credit, helping people grow, and creating special moments demonstrate leadership and strengthen bonds with those around you.
- By committing to generosity, storytelling, excellence, and helping others succeed, you become a more compelling, influential, and charismatic leader.

Part 1: Become Interested in People

Put your focus on others. Truly charismatic people care about others and focus their attention on them, not on themselves. We must get outside of ourselves, see the bigger picture, and start putting other people first if we want to live our best life and become better leaders. Everyone else in the world matters, not just us.

HOW FOCUSING ON OTHERS HELPS YOU

1. Gives You A Sense Of Purpose

Put your focus on others, and a greater purpose for your life and leadership may reveal itself.

2. Gives You Energy

Continual focus on yourself will drain you of energy. In contrast, focusing on others usually has the opposite effect.

3. Gives You A Sense Of Contentment

Serving others cultivates health and brings about happiness.

Believe the Best of Others

If you want people to be drawn to you, don't look for the flaws. Look for their best.

HOW TO EXPECT THE BEST

Believing the best about others and extending them grace and forgiveness is a very winning quality that will make you attractive to other people. To cultivate it:

LOOK FOR THE BEST ABOUT PEOPLE

If you want to believe the best in others, then the first thing you need to do is check your attitude. Search for their best traits. Catch them doing what's right and compliment them for it.

SEE THINGS FROM OTHERS' PERSPECTIVE

This takes maturity. The less mature one is, the more difficult it is to see things from another's point of view.

GIVE PEOPLE THE BENEFIT OF THE DOUBT

If you want others to give you the benefit of the doubt, you should extend the same courtesy to others.

FOCUS ON PEOPLE'S GOOD DAYS, NOT THEIR BAD ONES

We all have good days and bad days. When it comes down to it, giving others the benefit of the doubt and believing the best of them is a choice.

Add Value to People

1. VALUE PEOPLE

Your ability to add value to people starts with your attitude toward people. Human relations expert Les Giblin remarked, "You can't make the other fellow feel important in your presence if you secretly feel that he is a nobody."

2. MAKE YOURSELF MORE VALUABLE

Making yourself more valuable is not a selfish act. When you acquire knowledge, learn a new skill, or gain experience, you not only improve yourself, but you also increase your ability to add value to others.

3. KNOW WHAT PEOPLE VALUE

Once we know what people value, with some effort we can add value to them. You can lift them up, help them advance, make them a part of something bigger than themselves, and help them to become who they are made to be.

Encourage Others Every Time You Meet

EVERYONE NEEDS ENCOURAGEMENT

People everywhere need a good word or an uplifting compliment to fire their hopes and dreams. It takes very little effort to do, but it really lifts people up. Here's how:

1. ENCOURAGEMENT SHOWS YOU CARE

Think about something encouraging you can tell to the people you are going to meet that day.

2. ENCOURAGING OTHERS GIVES THEM THE TRIPLE-A TREATMENT

All people feel better and do better when you give them attention, affirmation, and appreciation.

3. ENCOURAGEMENT GIVES OTHERS ENERGY

What kind of environment do you think you could create if you continually affirmed people when you first came into contact with them? Whenever you walked into a room, the people would light up when they saw you. Just your presence alone would brighten people's day. That's charisma.

4. ENCOURAGEMENT INCREASES OTHERS' MOTIVATION

When you take the time to learn what's important to others and you make that important to you, it communicates how much you care and desire to develop a good relationship with others.

Everybody needs motivation from time to time, and when they receive it, that encouragement really helps them. Treating others negatively lowers your level of charisma and diminishes your leadership while encouraging others raises it.

Remember People's Names

In 1937 the granddaddy of all people-skills books was published, ***How to Win Friends and Influence People***, by Dale Carnegie. What made it so valuable was Carnegie's understanding of human nature. The book is a course in charisma.

A PERSONAL TOUCH IS NEEDED NOW MORE THAN EVER

What was true in 1937 is even more applicable in our fast-paced world. Remembering a person's name and calling them by it tells them you care about them as an individual.

Here are a few tips to help you remember names:

MAKE THE DECISION TO VALUE AND LEARN NAMES

When people care enough to know your name, they make you feel valued. Most people don't naturally remember everyone's names. It takes intentionality.

USE THE "SAVE" METHOD TO REMEMBER NAMES

S — Say the name three times in conversation.

A — Ask a question about the name or about the person.

V — Visualize the person's prominent physical or personality feature.

E — End the conversation with the name.

WHEN YOU CAN'T EASILY REMEMBER A NAME

Try to recall the situation in which you met the person or last saw them. If you can't recall that, ask, "How long has it been?" Perhaps that will jog your memory.

GIVE YOURSELF GRACE IF YOU FORGET

If you make the effort to remember names and are successful even only part of the time, the people whose names you remember will appreciate you, and the ones whose names you can't recall will sense that you care about them and desire to know them better. Your attitude will shine through, and you will be more attractive to others.

Learn What Matters to People

WHAT'S IMPORTANT TO YOU IS IMPORTANT TO ME

When you take the time to learn what is important to others and you make that important to you, it communicates how much you care and desire to develop a good relationship with others.

ACCEPT THE FACT THAT PEOPLE ARE DIFFERENT

As you set out to learn what's important to others, don't judge them. Instead, value them, accept them unconditionally, and appreciate their differences. Everyone is important and has value.

ASK QUESTIONS TO LEARN ABOUT PEOPLE

Asking a good question is essential to discovering what makes people tick and what matters to them most. Be curious. Ask questions. Listen and learn.

ESTABLISH COMMON GROUND

Effective leaders, communicators, and people persons always find something they have in common with the people they are speaking to. This makes them more charismatic.

REALIZE THAT WITH TIME, PEOPLE CHANGE

It is a major leap for some people to tune into others' dreams and desires and to discover what matters most to them. But time changes all things, including the human heart.

Listen with an Open Heart

OPEN YOUR EARS AND YOUR HEART

President Woodrow Wilson said, "The ear of the leader

must ring with the voices of the people." Every great leader listened with not only their ears, but also their heart. Here are four tips to help you improve:

1. FOCUS ON THE OTHER PERSON

Many people put their focus on the ideas being communicated, and they almost seem to forget about the person. You need to keep the person in focus, first and foremost.

2. OPEN YOUR MIND AND HEART

Even after you have begun to focus on the person with whom you are conversing, you may still experience many potential barriers to effective listening. Removing the things that prevent you from listening well:

- Distractions
- Defensiveness
- Closed-mindedness
- Projection
- Assumptions
- Pride

3. LISTEN PROACTIVELY

There's a difference between listening passively and listening proactively. To listen with your heart, your listening must be active.

4. LISTEN TO UNDERSTAND

The fundamental cause of nearly all communication problems is that people don't listen to understand; they listen to reply. If you want to connect with people and listen with an open heart, stop focusing on what you think and the response you could make to be right.

Learn Everyone's Story

It's a great way to learn about their journey in life, as well as their interests, hopes, and challenges. Not only that, but it also puts your focus on them, which makes them feel important, and lets them know you care about them.

TO APPRECIATE SOMEONE'S STORY, FOLLOW THREE SIMPLE STEPS

Great news about this connecting skill is that anyone can do it.

1. ASK WITH GENUINE INTEREST

When you meet someone new, after the introductions and initial pleasantries, don't hesitate to ask a person about their story. Use your own style to ask.

2. LISTEN ACTIVELY

Some of the tips to be a good listener:

- Look the speaker in the eye.
- Be attentive
- Be respectful.
- Don't interrupt.
- Repeat back

3. REMEMBER THEIR STORY

Some people have a knack for numbers, others for names. But just about everyone has the capacity to remember a story. The process of connecting with someone through their story can do a lot to build greater rapport with them.

Express How Much You Value Someone

The most fundamental and straightforward way of developing a connection with people is to express how much you value them. That has a great impact when given one-on-one and is multiplied by ten when you do it in front of others.

THE VALUE OF VALUING OTHERS

To develop rapport with people and let them know how much you care, value them verbally. Here's why:

COMPLIMENTS MAKE PEOPLE FEEL VALUED

"Everyone has an invisible sign hanging from his neck," said Mary Kay Ash, the founder of Mary Kay Cosmetics. "It says, 'Make Me Feel Important!' " She knew compliments and affirmation were critical to enjoying success with others.

COMPLIMENTS INCREASE IN VALUE WHEN WE VALUE THE PERSON WHO GIVES THEM

Who gives the compliment has a lot to do with how much we prize it.

COMPLIMENTS AFFIRM PEOPLE AND MAKE THEM STRONG

An affirmation is a statement of truth you make firm in a person's heart when you utter it. As a result, it cultivates conviction.

COMPLIMENTS IN FRONT OF OTHERS ARE THE MOST EFFECTIVE ONES YOU CAN GIVE

> No matter how successful you are, you need people, and you need to let them know that you cannot win without them.

Whenever you have the opportunity to praise another person publicly, don't let it slip by. You can do it in the moment, but you can make a huge impact on others when you're intentional.

Part 2: Become Invested in People

Be quick to help others. Whenever you are quick to help others, it makes a statement. You matter to me. To become a leader who helps, follow these guidelines:

MAKE HELPING OTHERS A PRIORITY

We are often so consumed with our own agendas that helping others never becomes important to us. The solution is to make helping others a top priority.

MAKE YOURSELF AWARE OF PEOPLE'S NEEDS

You can't meet a need if you don't know it exists. Each of us must begin by caring about the people around us and looking for what they need.

BE WILLING TO TAKE A RISK

Sometimes helping another person can be a risky proposition, yet that should not keep us from lending a hand.

FOLLOW THROUGH NO MATTER WHAT

When you help someone who doesn't know you, it can win them over. When you help people with whom you already have a connection, it endears you to them even more. And when you help others whose attitude toward you isn't positive, they reevaluate their assessment of you and let their guard down.

Invite People to Join Your Team

Make the invitation. No matter how successful you are, you need people, and you need to let them know that you cannot win without them. Here's why:

PEOPLE NEED TO BE NEEDED

Have you ever stopped to ask someone for directions? Nearly every time, people stop whatever they are doing and help if they can. Why? Because whenever a person feels that he or she knows something you don't, it makes that person feel good. Everyone likes to be an expert, even if it's for a moment.

PEOPLE NEED TO KNOW THEY NEED OTHERS

Every individual's fate is tied to that of many others. We cannot be like the shipwrecked man who sits at one end of a lifeboat doing nothing while everyone at the other end bails furiously, and says, "Thank God that hole isn't in my end of the boat!"

PEOPLE NEED TO KNOW THEY ARE NEEDED

Every human being longs for a life of significance. We all need to know we are needed and that what we offer to others is of value.

PEOPLE NEED TO KNOW THEY HELPED

"Good leaders make people feel that they're at the very heart of things, not at the periphery," said author and leadership expert Warren Bennis. Everyone feels that he or she makes a difference to the success of the organization. When that happens people feel centered and that gives their work meaning.

Encourage the Dreams of Others

If someone thinks enough of you to tell you about their dreams, take care. Even if you privately have doubts about the viability of their dream, don't doubt them or discourage them. Instead, encourage them and keep these things in mind: Dreams are fragile; Losing a dream is a great loss; Encouraging others to pursue a dream is a wonderful gift. How can you help people turn dreams into reality? Follow these six steps:

1. Ask them to share their dream with you.
2. Affirm the person as well as the dream.
3. Ask about the challenges they must overcome to reach their dream.
4. Offer your assistance.

5. Revisit their dream with them on a consistent basis.
6. Remind yourself daily to be a dream booster, not a dream buster.

PEOPLE LIVE UP TO THEIR DREAMS WHEN GIVEN A CHANCE TO FULFILL THEM

There is no telling what might happen if you were to begin encouraging the dreams of the people around you.

Share the Credit with Others

How can you give credit to others? Passing the credit on to others is one of the easiest ways to connect with people and make yourself more attractive to them as a leader. If that's what you desire, take these suggestions to heart:

- Check your ego at the door.
- Pass on the credit at your first opportunity.
- Give credit publicly.
- Put it in print.
- Say it only if you mean it.

Create Special Moments for Others

There are a few common characteristics of a memory maker. If you want to create memorable moments for others, here are some qualities to cultivate:

Initiative — Make Something Happen

Time — Set Aside Time To Make Something Happen

Planning — Plan For Something To Happen

Creativity — Find A Way To Make Something Happen

Shared Experiences — Make Something Happen Together

Mementos — Show That Something Happened

Relive The Memory — Talk About What Happened

Share Information with Others

Give others the inside track. Any time you let people in on something impactful, it makes an impression. Sharing information with someone is a matter of two things: reading the context of a situation and desiring to build up the other person. If you keep those two things in mind, you can learn this skill and connect with people. As you try it out, keep these three things in mind: 1) Share information vital to people's success; 2) Share with the goal of making people feel special; nd 3) Share information to include others in your journey.

Speak Into People's Lives

You must invest in people verbally. If you desire to lift people up by speaking into their lives, here are suggestions about how to get started:

HAVE A HIGH OPINION OF THEM

The opinions you have of people in your life affect them profoundly.

BACK UP YOUR HIGH OPINION WITH ACTION

When you back up your belief in people with action, their self-doubt begins to evaporate.

LOOK BEYOND THEIR PAST AND PRESENT AN EXPECTATION FOR THE FUTURE

Old negative labels can block a person's growth and progress.

Build Bridges for Others

You can become a bridge-building leader. No matter how much or how little you think you have, you have the ability to build bridges and do for others what they cannot do for themselves. You can approach the task by thinking in terms of four areas:

1. Introduce others to people they wouldn't know on their own.
2. Take people places they can't go on their own.
3. Offer opportunities others can't attain on their own.
4. Share ideas others won't discover on their own.

Part 3: Become Interesting to People

Do everything with excellence. You must give your best every time. Embrace these four truths to help you improve:

1. Every day deserves your best.
2. Everyone is important enough to be given your best.
3. Anything ordinary can be made extraordinary with excellence.
4. Performing with excellence makes you extraordinary.

Be a Generous Person

There is a secret to being generous. Because generosity is an attitude issue, and attitude is a choice, it means anyone can become generous if they have the desire.Generosity in

people almost always boils down to three characteristics: 1) Adopt an abundance mentality; 2) Become a maker instead of a taker; and 3) See the big picture.

Become a Good Storyteller

To tell a good story:

- Share something you've experienced.
- Tell stories with the goal of connecting.
- Put your heart into it.
- Assume that others want to hear it.

Help People Win

What does it take to help others win? Helping another person to win is one of the greatest feelings in the world. If you want to help people win, you can do so by taking the following steps:

- Believe in people.
- Give people hope.
- Focus on the process, not just the win.
- Understand that when you help others win, you also win.

Connect with Charisma

There you have them: 21 skills you can use for connecting with people. Learn them, practice them, and enjoy their benefits.

When you become interested in people, invested in people, and interesting to people, you will increase your influence, effectiveness, and impact as a leader.

Use these skills only to motivate others for their benefit and mutual advantage. If your goal is always to help people and lead them better, charisma will be the natural byproduct.

John C. Maxwell is a #1 New York Times bestselling author, coach, and speaker who has sold more than 33 million books in fifty languages. He has been identified as the #1 leader in business and the most influential leadership expert in the world. His organizations - the John Maxwell Company, The John Maxwell Team, EQUIP, and the John Maxwell Leadership Foundation - have translated his teachings into seventy languages and used them to train millions of leaders from every country of the world.

THE SUMMARY IN BRIEF

A central tenet of Taoism is naturalness. The "way" in Taoism has to do with ease, spontaneity, and connection, that there is an eternal, nameless, indescribable, but nevertheless authentic path that each of us can walk. It is a path that coachees choose to walk together with their coaches, which is an honor and responsibility that coaches do not take lightly.

This is what Eric Maisel, a master coach and popular masterclass speaker at the International Authority for Professional Coaching & Mentoring (IAPC&M), has achieved with ***The Coach's Way: The Art and Practice of Powerful Coaching in Any Field***, his latest in a long line of well-thought-out, user-friendly, practical books.

This book is for everyone committed to improving their lives through improved communication skills. *The Coach's Way* will no doubt speak to everyone in a helping relationship: parents, mental health counselors, human resources specialists, teachers, tutors, mentors, spouses. Who doesn't need to help someone sometimes?

IN THIS SUMMARY, YOU WILL LEARN:

- The essence of what it means to coach someone professionally.
- How to hold space for a coachee.
- How to improve your life through improved communication skills.
- How a coaching session can be a magical and highly useful conversation.
- How to form a good helping relationship.

Introduction

A coach is a human experience specialist, someone who knows what human beings feel, think, encounter, and experience as they navigate personal life and professional goals. A coach knows that human beings sometimes despair; that they sometimes rise to the occasion; that they sometimes don't; that they sometimes make themselves proud by their efforts; that they sometimes disappoint themselves. This is a coach's area of expertise, along with whatever other specialized knowledge they bring to a coaching session. It is a special way of two people being deeply and poignantly together; and, for the coachee, it is often a first-time experience of being so deeply seen and heard.

This book explains how that remarkable thing, a coaching session, can function at its best — and how it can do so while also being easy on the coach. It is important that a coach find the work she does more effortless than exhausting, or else she will quickly burn out. Coaching really can be easy and effortless, if you follow the field-tested practices presented in the following chapters. If you give these ideas a try, I think you'll discover that coaching may be exactly the right profession for you.

Week 1: Starting with You

You are you. Coaching begins with you. That is unavoidable.

A coaching session is first of all an agreement you make with yourself that you are willing to coach another human being. The second agreement is the pact you make with yourself that you intend to be of help. When you coach, you and your client occupy a certain space and spend a certain amount of time together. You want to relax into that space and relax into that time.

Week 2: Your Working Philosophy

So much of coaching is ultimately about whether or not a client feels that his life is purposeful and meaningful. If these are core considerations, then a coach is rather obliged to know what she herself believes about purpose. A feature of your life philosophy is your position on possibility.

Your clients will know, either consciously or just outside of conscious awareness, whether or not you have a decent understanding of human nature and whether or not you are operating from a truthful place with respect to human nature. You might want to create a new overarching or underlying principle for your work with human beings: "I am working with real people, in all their richness, darkness, and complexity."

Week 3: Before the First Session

Before you meet with a new client, three things will likely happen. First, you will gather some information from your client, so that you can hit the coaching-session ground running. Second, you will sit with that information and begin to think of what might help and where help may really be needed. Third, you will feel through what sharing that information may have meant to your client and how vulnerable that may have made her.

A life coach has a simple, essential game plan — to get things on the table, to point his client in the direction of action, and to be of some help. Unlike a mental health helper — a psychiatrist, psychologist, psychotherapist, family therapist, et cetera — you are not burdened by the need to translate the information your client has provided into "symptom picture" language or "mental disorder" language.

Week 4: The First Session

Your client arrives, let's say via computer video. You let her onto the platform, and she appears on-screen. What do you do first? Smile. This is not trivial. This is not cosmetic. Rather, this is you warming up the moment. Your smile doesn't have to be radiant, but it is like a radiator. It warms the space and lets your client sigh into the space.

The first thing you say is the equivalent of a hearty greeting. The second thing you say is the equivalent of a request, some version of "Tell me more." This greeting, followed by this request, is the way that sessions can typically — and effectively — start. It can all be kept this simple, as simple as opening a door. You step into your client's world, say hello, inquire as to how things are going, and begin.

Ending a coaching session is a bit of an art form, but it is a process made up of understandable parts, including, from my point of view, the coach summarizing and the coach ending with hope.

Week 5: Between Session 1 and Session 2

The amount of time that passes between your first session

and your second session depends on your setup. Will you meet with clients once a week, once every two weeks, once a month, or less frequently? The choice is yours.

You may formally coach between sessions via email as part of your model and your practice. You may sometimes coach between sessions because of the nature of your relationship with a given client or because of the nature of the circumstances. Or you may shy away from coaching between sessions, maybe restricting your interactions to check-ins or maybe to no interactions at all. There is no right or wrong here — all of this is for you to choose.

Week 6: The Second Session

The second session is like the first session in that a client's challenges and goals get named again. It is different from the first session in that time has passed between two sessions, during which time your client did, or intended to do, certain things. If we hold space for both, we will have a rich second session.

During this second session, you are both starting fresh and continuing; checking in to see how much got done or didn't get done in the past week, two weeks, or month; beginning to calibrate your working pace; and expanding and amplifying and/or narrowing and focusing the coaching.

With each client, you will need to appraise how well the particular interval you've chosen is working and what changes you might want to make, not to the interval but to your coaching expectations. You will already have gotten a sense in your first session as to whether you're going to be moving relatively quickly or relatively slowly with a given client. But the second session gives you another, and better, opportunity to calibrate the pace of your work together.

Week 7: Quiet Energetic Presence

As coaches, we engage in two kinds of thinking in session: what I'm calling "quiet thinking" and "accelerated thinking." These roughly correspond to being quiet in session, listening to your client, and safely holding the space so that he can say what's on his mind; and, alternately, speaking in session by asking a question, making an observation, making a suggestion, et cetera.

Coaches see their work as a collaborative dance of genuine following, where what the client has to say really matters, and careful, thoughtful leading, where the coach's knowledge, expertise, and wisdom have their part to play. The phrase "quiet, energetic presence" captures something of the character of this elegant dance. A coach fosters quality quiet as she listens, nods, and thinks; and, when it is called for, she accelerates her thinking, ups her energy, and does her active part.

Week 8: Asking Quality Questions

What is a quality question? It is not the only right question to ask, as many sensible and useful questions can be asked in any given set of circumstances. Rather, it is a top-tier question that has the quality of being spot on, that promotes engagement, and that pulls from our client the information or awareness that he or she really needs. Quality questions lead to useful experiments.

Week 9: Drop-Ins

A session doesn't come with a road map, and you can't follow standard exam procedures or baguette recipes. You must improvise. Practically speaking, this may mean that right in the middle of the chat you are having with your client, you realize it might prove really helpful to stop everything and drop something in: maybe an exercise, an anecdote, a bit of teaching, a bit of rehearsing, et cetera. And so you do that. You would do this for no other reason than that you think it makes sense to do so and you think it might help.

Week 10: Effortless Work

There is a combination of factors at play that make a certain thing easy for one person and hard for another. That combination includes a person's belief system, nervous system, skill set, experience level, and more. The complicated nature of personality formation that can make a person a fearless general yet afraid of spiders or a great race car driver but incapable of delivering a two-minute speech means that you may or may not be able to work effortlessly as a coach. The more self-aware clients become, the harder it is for them to repeat their mistakes, think thoughts and engage in behaviors that don't serve them, and get in their own way.

Week 11: In Session

A time may come in session when it makes good sense to say, "I wonder, can we stop for a moment and take a look at that?" It takes a bit of practice to arrive at a place where

you feel comfortable gently but energetically stopping your client's flow, but that's an important habit to acquire. If you don't acquire that habit, many chances to deepen the relationship or to be of some help will pass the two of you on by.

Week 12. On Progress

We want our clients to make progress, and we want to help them make progress. But we also want them to breathe and live. We want them to find a measure of happiness in daily experiences that do not look anything like progress. We can attend to the idea of progress as a valuable thing without exalting progress and without making it the best measure or the only measure of what help looks like. Progress is important, but it is not everything.

If we take that wider-angle view — that progress is one measure but not the only measure — we will by our very energy and outlook help clients feel less frustrated and less down on themselves when, during a given period, they haven't made progress. Yes, just as they do, we want our clients to make progress. But we also want them to feel deeply okay even if, between when we saw them last and seeing them now, they didn't lose those three pounds or write those two thousand words. Progress is not the only goal and not the only measure.

Week 13. The Work Over Time

Clients are not some fabulous blank slate. They come with a formed personality, a history of experiences, small and large anxieties, and all sorts of grudges, regrets, and disappointments. All of this will color what they are inclined to do, willing to do, and capable of doing. You do not need to hunt for some too simple, overarching, and essentially pejorative label for who they are, some label like "borderline personality" or "obsessive-compulsive personality." Just think "human being." That's who's coming through the door, a human being, and that's what they will bring, everything human.

You are working with a member of your species, someone exactly as complicated as you are. You may be working with a client on a goal or an array of goals, but you are more fundamentally working with a human being, someone who can be forthright one moment and secretive the next, someone who is hopeful one moment and demoralized the next, just like you. Get ready — your species is waiting.

Conclusion

Magic happens when two people actually talk. Most conversations are superficial or informational — that's all they need to be. No preambles are necessary. No sets of instructions are required. All that is needed is the unspoken agreement that real work is about to commence. Just like that, you and your client are right there, holding the beating heart of the matter in your four hands.

On a given day, you will be of some help; and occasionally, the results will be dramatic. And, yes, there will be days when your client is down, unmotivated, overwhelmed, and feeling pretty hopeless — and even then, you can help, by listening, by offering some kindness and some consolation, and by being human. That, too, is a beautiful session.

Isn't that quite something?

THE SUMMARY IN BRIEF

In ***The Coaching Effect: What Great Leaders Do to Increase Sales, Enhance Performance, and Sustain Growth,*** authors Bill Eckstrom and Sarah Wirth detail measurable and quantifiable coaching activities that have led to improved performance and sustained team growth.

With a justifiable focus on what coaches can do to drive more performance from individuals and teams, the authors also detail how an organization can adopt and implement coaching best practices.

The authors also share a four-step coaching methodology that can be utilized by businesses of all sizes to create a team of high-growth coaches, the outcome of which measures and quantifies coaching activities, behaviors, and overall coaching effectiveness.

IN THIS SUMMARY, YOU WILL LEARN:

- Why managerial effectiveness must be measured to drive growth.
- How Growth Rings illustrate environments that either promote or hinder growth.
- Four high-growth coaching activities that have the strongest correlation to effort.
- The Four-Step Coaching Process that can be executed in an organization to achieve growth above and beyond what is currently being achieved.

Measuring Managerial Effectiveness

To a high-performing business, developing talent is the essential function of their managers, rather than just one of their priorities. Managers and their team members have used the term healthy tension to describe how high-performance environments feel. They push themselves and their teams to constantly improve; and being "too busy" is never an excuse for not getting done what is most important. The success of high-performance teams depends on their coaches. In fact, every growth challenge a business faces is a management issue.

Data that measures employee effectiveness is by no means new, especially in sales, where many companies track most every selling activity imaginable. Very seldom is that the case with management and managerial effectiveness must be measured. For the heads of organizations to know nothing about the activities, behaviors, and overall effectiveness of the role that has the greatest impact on team performance, the manager, is ludicrous. Common sense dictates that nobody comes to work with a goal of failing, but the manager's role is arguably the most precarious regarding longevity. Companies are quick to release managers, and a revolving door is set in motion, especially in sales departments.

A big reason for this chaotic turnover is that nobody helps them understand how to be effective, nor is anyone measuring their performance inputs or outcomes. Time and again senior executives have no idea how their managers are spending their days or even how they should be spending them. Even managers themselves question if they're focused on the activities that produce the best team results.

The Growth Rings

Growth only occurs in a state of discomfort, and leaders at every level have the greatest impact on the discomfort level of their teams.

To sustain growth, maximize performance of your business and teams, attract the best talent, and ensure that your organization remains relevant in today's and especially tomorrow's workplace, resources must be committed to the continual development and quantification of managerial effectiveness. The goal of this commitment is to get managers to behave and drive results in a way that resembles a high-growth coach as opposed to a performance-limiting manager.

The best leaders are unique in their coaching, and either intentionally or unintentionally, they create or embrace an environment of discomfort as a growth mechanism. During the journey to understand how coaching affects the performance of individuals and teams, a model was discovered that shows ***why*** exponential and sustained growth only occurs in a state of discomfort. This model is called the Growth Rings.

Understanding the Growth Rings can change how you parent, coach, view adversity, and think about human behavior. The Growth Rings illustrate differing environments that exist in our world and how they either promote or hinder growth. Each ring encompasses one of four primary environments: Stagnation, Order, Complexity, and Chaos.

Stagnation: The first Growth Ring represents a low-performing, low, or negative growth environment called ***Stagnation***. Stagnation is a situation in which people may need to follow too many steps, get someone's permission, or deal with minutiae that stifle creativity, independent thought, or action. Stagnated environments don't just freeze growth, they regress it. By the time a business reaches Stagnation, drastic measures need to be taken to reverse the decline.

Chaos: The antithesis of Stagnation is an environment called ***Chaos***. Also, low-growth and low-performance, Chaos can be caused by internal or external events or conditions. Chaos may be a temporary state that occurs, for example in the early stages of a new business. Behaviors exhibited in chaotic environments typify those when fear is present; fear tends to trigger in our brains one of the three Fs: freeze, fight, or flight. Chaos is having zero predictability or control over inputs and outcomes. And although more common than Stagnation, is it not an environment to desire, frequent, or reside in.

Order: Next to Stagnation is ***Order***. Order is where people tend to want to exist because it is the most comfortable environment, but it is also the most dangerous. Order is achieved when the same repeated processes lead to a predictable result. However, predictability can lead to comfort and comfort is what can make Order catastrophic.

Processes and predictability have nothing to do with growth or advancement. Order keeps you stuck in a minimum growth cycle. Order doesn't promote evolution, and for quite some time science has shown us that absence of evolution leads to extinction. This applies not only to biology, but also to products, markets, skills, and businesses.

Complexity: To break the Order, and hence the minimum growth cycle, you need to change what you input. When inputs are altered, you eliminate Order and enter the ***Complexity*** environment. Complexity is the only

Learning to give great feedback is a lifelong learning experience for most coaches and is one of the most challenging coaching skills to master.

environment that creates exponential growth or consistently sustained growth. Complexity is driven by changed inputs, unknown outcomes, and discomfort.

Complexity's impact on the performance of individuals and teams is profound. The coach must control this high-growth environment, instigating and perpetuating it when appropriate. Executive leaders who are committed to evolution and who do not acquiesce in challenging periods caused by complexity show more growth.

A note on complexity: a person cannot live their entire life in this environment. All of us need Order, and it is healthy to have a balance, with ongoing doses of Complexity and Order.

Coaching Redefined

Executive leaders have forever been viewing incomplete or inaccurate data regarding team performance because they are not looking at the root cause of performance growth—the coach. No more resources should be committed to any frontline workers before the company understands the effectiveness of the coach.

Until that happens, the success or failure of any programs, products, or services cannot be accurately measured and understood without knowing if the coach enables or disables performance.

There are four high-growth coaching activities that have the strongest correlation to discretionary effort. Of all the tasks and duties that a coach can perform, the most important are one-to-one meetings, team meetings, performance feedback, and career-development plans.

One-to-One Meetings: Proactive, consistent one-to-one meetings are necessary to generate trust, communication, and accountability with team members. When coaches take the time to connect with team members individually, they get to know their team members better, and they are able to have strategic conversations about how to do their job more effectively.

Coaches can help their team members with any questions they may have, assess their progress toward goals, and help them make sure their plans are carried out successfully, holding team members accountable for executing their visions. A regular, effective one-to-one meeting is one of the most important tools a coach has in driving productivity.

Team Meetings: Team meetings are often used as a communication vehicle for leadership within a company, but they are rarely used in ways that could most benefit team members-to help them learn how to do their jobs more effectively. Surveys show that team members want more education. They want information, ideas, and training so they can do their jobs better.

Bringing in speakers or sharing best practices among peers are good ways to use team meetings as a vehicle to improve and develop team member skills. Define an agenda that encourages interaction and information sharing. This type of agenda proactively drives everyone to ask questions, share ideas, and engage throughout the entirety of the meeting.

Performance Feedback: Good feedback is a gift to the people receiving it. It helps them improve their skills, overcome challenges, achieve their performance goals, and avoid the embarrassment of making a mistake that everyone but they can see. Delivering effective, consistent, and documented feedback is one of the biggest factors in driving team performance.

Learning to give great feedback is a lifelong learning experience for most coaches and is one of the most challenging coaching skills to master. You have to be able to clearly articulate the points you want to make but also ensure that you create an effective back-and-forth with the person to whom you are giving feedback. Regularity, rather than only in response to something going wrong, is key to help team members accept it and view it in a positive light

Career Development: Having a coach who helps team members progress toward their long-term career development goals strongly increases that person's achievement of their current daily work goals. The best coaches are often

the ones pushing their team members to keep growing. Career development can't really be about setting up your team member for a promotion to management.

Instead, you, your team, and your organization must think of career development as a way to help people grow and develop their skills and experiences for whatever their current and future goals may be. In this way, effective career development is all about a person's unique goals, talents, and interests.

The Four-Step Coaching Process

The Four-Step Coaching Process can be implemented and executed in an organization to achieve growth above and beyond what is currently being achieved. The steps within the process, though independent, are inextricably linked.

Step 1: Measure

Surveying team members about the effectiveness of the coaching they receive provides clarity of what can be improved and allows for potential recommendations to better meet their needs. This measurement establishes a baseline from which to assess progress and performance over time.

Step 2: Educate and Train

Continual development—giving up old skills and learning new ones—is absolutely critical to individual and organizational growth. Unfortunately, many companies view education and training as stand-alone events. The key is to follow up and make sure what's learned in the training is actually implemented.

Step 3: Implement

Even after education and training on how to be a better coach, venturing into Complexity is too uncomfortable. By default, most coaches return to old habits and behaviors.

The best way to combat this tendency is to create a collaborative implementation environment that is driven by bringing people together who are trying to improve their coaching. Conference-call gatherings called implementation huddles focus on the continued sharing of best coaching practices and open discussions of challenges to overcome.

Step 4: Track and Analyze

Because the vast majority of coaches in the business world don't have the data and information they need, they have been underperforming for decades. Tracking and analyzing data on coaches can be used to make targeted improvements to their coaching efforts, create more accountability for coaching across the entire company, gain insights into how coaches are spending their time, and to better understand the impact of good coaching.

Becoming a great coach is a journey, and the best coaches never stop learning or growing. Maximizing growth by creating a high-growth team of coaches is hard. It's not for leadership teams who are unwilling to dive into the challenges that Complexity presents. When coaches embrace discomfort and make changes, growth is the outcome.

Bill Eckstrom is an executive, entrepreneur, mentor, student, husband, and father. His primary passion is growth; especially how coaches and leaders influence the growth and performance of individuals and teams.

Sarah Wirth has twenty years of experience in employee assessment, leadership development, sales executive coaching, and customer service. Her expertise, combined with her fact-based and commonsense approach, make her a sought-after presenter.

Break Free from Conventional Leadership Wisdom

THE CONTRARIAN'S GUIDE TO LEADERSHIP

THE SUMMARY IN BRIEF

Are you the type of leader who finds it difficult to make quick assessments of people and ideas? Do you fail to read all the things that come across your desk? Do you find yourself wondering if conventional wisdom is a bit too simplistic for the realities of our time?

Then you may be a contrarian leader. If so, this summary is for you.

In The Contrarian's Guide to Leadership, *Steven B. Sample, the president of the University of Southern California (USC) offers his no-holds-barred, unconventional wisdom on what it takes to be a great leader.*

What You'll Learn In This Summary

✓ **The ability to think gray:** Learn why snap decisions aren't always good ones and why putting off decisions until you have considered many points of view is the best decision-making method.

✓ **The ability to select expert advisers.** Contrarian leaders understand that not every expert is helpful, but know when they need assistance, when they don't, and how to choose.

✓ **The willingness to read what's important.** Contrarian leaders return again and again to classic works for inspiration and to understand human nature.

✓ **The ability to make decisions.** After thinking gray, reflecting on great works, listening carefully, and listening to advice, contrarian leaders make considered decisions or delegate them.

✓ **The ability to know which hill you're willing to die on.** Contrarian leaders know how to make tough moral decisions.

✓ **The ability to pick and manage those who work for you.** Contrarian leaders pick, manage and rely on quality lieutenants.

Thinking Gray, and Free

Contrarian leaders think differently from other people. They maintain their intellectual independence by thinking gray, and enhance their intellectual creativity by thinking free. Contrarian wisdom holds that judgments should be arrived at slowly or not at all. Most people immediately categorize things as good or bad, true or false, friend or foe. But truly effective leaders see shades of gray.

The essence of thinking gray is this: Don't form an opinion about an important matter until you've heard all the relevant facts and arguments or until the circumstances force you to form an opinion. Resist the temptation to immediately classify everything you read or hear as either true or false, good or bad, right or wrong, useless or useful. Binary thinking can lead to disaster.

Three Dangers

There are three very real dangers associated with binary thinking. The first is that the leader forms opinions before it's necessary to do so, and in the process closes his or her mind to other facts and arguments.

The second danger is flip-flopping. A leader hears something in favor of a proposition and decides on the spot that the proposition must be true. Later the same day he or she hears an argument against the proposition and decides that the proposition must be false. Many failed leaders believe the last thing they heard from the last person they talked to.

Finally, the third danger is that people tend to believe what they sense is believed by others. A leader who can't think gray and therefore can't protect his or her intellectual independence won't succeed.

Thinking Free

A close cousin of thinking gray is thinking free — free, that is, from all prior restraints. It's popular these days to talk about "thinking out of the box" or "brainstorming," but thinking free takes the process to the next level.

Imagine you are coming out of a heated swimming pool on a cool, brisk day. When you think outside the box, you stay in the cold long enough to feel slightly uncomfortable, then dive back into the warm water. But when you are truly thinking free, you stay out of the water until you shiver and your teeth chatter. It is the ability to tolerate the cold long after it becomes uncomfortable — to forcibly sustain thinking free for more than a fleeting moment — that leads to the greatest innovations.

The key to thinking free is to first allow your mind to contemplate really outrageous ideas, and only later apply constraints of practicality, practicability, legality, cost, time and ethics. As with thinking gray, thinking free is an unnatural act; not one person in a thousand can do it without enormous effort.

Congenital naysayers are among the greatest stumbling blocks to thinking free. Rather than imagining how a new idea might possibly work, they instinctively think of all the reasons it won't work. They sincerely believe that they are doing everyone a favor, by eliminating foolish or bad ideas. But what they really do is undermine the creativity that comes with thinking free.

(continued on page 3)

Juries Think Gray

The best example of thinking gray may be the American jury system. Jurors are instructed by the presiding judge to suspend judgment until they have all the facts. The attorneys representing the different parties present facts from multiple points of view. Once the evidence has been presented, the attorneys give closing arguments, doing their best to persuade the jurors what the facts are and what they mean. Then, and only then are jurors supposed to begin deliberating and working toward a consensus. They are, in effect, asked to suspend judgment until they have the complete picture. This assures that their judgment is reasoned and well considered.

Experiment Illustrates Danger of Herd Mentality

A half-century ago, psychologist Solomon Asch designed an experiment that illustrates the danger of the herd mentality. Eight subjects, supposedly chosen at random, were brought together in a room and shown a series of cards on which were printed four vertical lines. Each subject was asked in turn to identify which one of the three lines on the right side of the card was the same length as the line on the left side of the card. The experiment was rigged so that seven of the eight subjects were plants who, with conviction and sincerity, would identify the same one of the right-hand sides as being equal to the left-hand one, when in fact it was not. The one real subject of the experiment was then faced with the prospect of going along with the group and declaring as true something that he knew was false, or taking a position that was at odds with the consensus opinion of his peers. About three-quarters of the subjects went along with their peers against their better judgment.

Thinking Gray, and Free

(continued from page 2)

Leaders whose thinking are constrained within well-worn ruts, who are governed by their passions and prejudices, who can't think either free or gray, who can't even appreciate the creative imagination and fresh ideas of those around them, are as anachronistic and ineffective as the dinosaur. ■

For an example of how the author thinks free, go to: http://my.summary.com

Artful Listening

Most people are terrible listeners because they think talking is more important than listening. But contrarian leaders know it is better to listen first and talk later. And when they listen, they do so artfully. A contrarian leader is an artful listener because artful listening is an excellent means of acquiring new ideas and gathering and assessing information.

If leaders can listen attentively without rushing to judgment, they will often get a fresh perspective that will help them think independently. This kind of leader listens carefully to his or her inner circle and even the most obnoxious self-appointed advisers. Artful listening is important for maintaining the contrarian leader's intellectual independence. It enables them to see things through the eyes of their followers while at the same time seeing things from their own perspective — a process called "seeing double."

To Whom Should You Listen

Who belongs in your inner circle? These important adviser relationships must be founded on mutual understanding and trust. Include those who are committed to your organization and whose filters, prejudices and attitudes are understood. Keep the inner circle small — to no more than eight.

What about all the others who want to offer advice and be heard? Unsolicited advice gives leaders the opportunity to learn something they will never learn from their official advisers. But a true leader needs to be able to distinguish between unsolicited advice that is good and unsolicited advice that is grossly misleading. Be wary when someone tells you "our customers want this" or "our employees want that." The contrarian leader never takes such counsel at face value. Ask, "Who is saying what to whom?"

Listening Gray

Just as thinking gray is important, so is listening gray. You must absorb stories, reports, complaints, accusations, extravagant claims and prejudices without immediately offering a definitive response. The contrarian leader acknowledges the communication without rendering judgment, but promises that the matter will be looked into. Refer the matter to the most senior officer who reports directly to you, and suggest that the matter be investigated and dealt with.

Another important part of artful listening is to know when to stop listening. At some point, a leader must either make a decision or delegate it to someone else and move on. Listening carefully and intensively at the beginning can save the leader a lot of time in the end. Artful listening is a key element in stretching a leader's time and effectiveness.

Maintaining the Hierarchy

Listening gray requires open communication at all levels of the organization. It requires that leaders avoid categorizing people into an "A" list and a "B" list, and means they should not dismiss ideas strictly because of who they come from.

On the other hand, open communication can destroy the hierarchy in place and diminish the effectiveness of managers. For example, if the CEO speaks directly with a line manager, and acts on that contact, he or she makes it seem as if the higher level manager is unimportant. His or her credibility is undermined.

The way to avoid this trap is to make clear that everyone in the organization can communicate directly

(continued on page 4)

Assuming Power Requires Artful Listening

Contrarian leaders understand that when they assume a powerful position in a new organization, the best thing they can do is to begin by being artful listeners. Unless your job is to solve an immediate crisis, you're better off waiting and listening to many voices in the organization. During an interim period, you should ask questions, listen, and ask more questions without feeling compelled to provide any answers or solutions. Too many new CEOs make truly egregious mistakes during the first few months. It's not that they're stupid; rather, they are ignorant. A few months of artful listening before assuming the mantle of office almost guarantees getting off to a good start. If you can negotiate an interim period to explore and listen before officially taking office, do so.

Artful Listening

(continued from page 3)

with everyone else in the organization, but all commitments, allocations and decisions will be made strictly thorough the hierarchy. This is **structured decision-making**. ■

To understand why a supportive spouse belongs in your inner circle, go to: http://my.summary.com

Experts: Saviors And Charlatans

No one can lead a complex organization today without lawyers, scientists, architects, accountants, engineers and consultants. Unfortunately, many leaders have been brought low by experts. How can a modern leader use experts to his or her advantage without being used by them? A leader should pay close attention to experts but never take them too seriously, and never trust them completely.

Many experts are more interested in serving their own egos than serving their clients. They get around this ethical dilemma by convincing themselves that they know what's good for their clients better than the clients themselves. Sometimes they're right. But sometimes they achieve a Rasputin-like presence among their clientele, who were afraid to question the advice.

Clarify Roles

It helps to clarify the roles experts and leaders should play. Experts are deep specialists whose role is to offer leaders greater insight than they have in one small area; the leader's role should be to integrate the advice of several experts into a coherent course of action. In dealing with experts, it's very important for leaders to know precisely what their goals are and how they think a particular expert can help them achieve those goals. ■

You Are What You Read

We are what we read. Reading is a way to gain perspective and stimulate original thinking. A leader must choose carefully.

Suppose a leader was forced to choose between reading *the New York Times* or reading Machiavelli's masterwork *The Prince.* Conventional wisdom would favor the fresh and new *Times*, while the little handbook is stale and old. Contrarian wisdom argues the opposite. A leader can miss a day, week or even months of daily newspapers, but missing an opportunity to reread Machiavelli or other classic leadership works could be a major loss.

Supertexts

Some works are so important they can fairly be called supertexts. These, like *The Prince*, continue to wield enormous influence in every part of our culture. In fact, even those who haven't read them unwittingly incorporate them into new writings, movies and speeches because they have become part of the culture itself. The supertexts have been so widely read for the last few centuries that they are part of the very foundation of our culture. Contrast their longevity with the average book published today — less than one in a hundred are still in print and being purchased ten years after they first appeared. To write something that is still read by even a small audience fifty years later is a major achievement.

In these tempestuous times, it often seems that everything is changing at a rapid pace. In this environment, a leader can gain tremendous competitive advantages by being able to discern the few things that are not changing. And nothing will let him or her do that better than developing a close relationship with the supertexts.

How Contrarian Leaders Take Their News

Reading or viewing the news isn't necessarily the best way for a contrarian leader to stay informed. There is a herd mentality in the media, and a tendency to cater to what the public wants to read. Thus, contrarian leaders keep the following principles in mind when reading newspapers or news magazines, and watching the news on television:

- **Read the papers primarily for entertainment.**
- **When papers attack someone, keep in mind that**

(continued on page 5)

You Are What You Read

(continued from page 4)

there may be compelling facts and arguments the paper is ignoring or downplaying.

- **Be aware of the herd mentality that permeates the media.**
- **Understand that news is often seen as black and white, with no shades of gray.**
- **Remember that the stories that don't make the paper may be as important as those that do.**
- **Even the best newspapers can get the facts wrong.**
- **If the story is important to your institution, rely on your inner circle of advisers rather than the media.**

Finally, you don't have to read the news every day to stay informed. In fact, if you feel you are getting addicted to the daily news, take a two-week break.

How Contrarians Find Time for Other Reading

Contrarian leaders should read and reread the supertexts and limit their daily intake of newspapers. But what about all the other publications — books, magazines, journals, trade publications — that compete for attention?

Think of all published reading material as a continuum or spectrum, moving from the left to the right. On the left are newspapers and other ephemeral works, and on the right are the supertexts. Moving along the spectrum from left to right are newly published books and magazines and journals, and moving further are the novels, biographies, histories, poems and essays that are still being read fifty years after they were first published.

Next, determine how much total time you have available to devote daily to reading, and how you want to allocate that along the spectrum.

Great Stories from Supertexts

The supertexts contain stories that teach us about human nature. Some of the most valuable stories are:

- ✓ The story of Moses in the book of Exodus;
- ✓ The story of David in 1 and 2 Samuel;
- ✓ The story of Jesus in Matthew;
- ✓ The story of Paul in Acts;
- ✓ Plato's *Republic*;
- ✓ *Hamlet;*
- ✓ *Othello;*
- ✓ *Antigone;*
- ✓ Dante's *Divine Comedy*

Avoid the trade journals. Let your lieutenants read those and report on important developments in your industry.

But what about the thousands of recently published books that friends and colleagues are constantly urging you to read? There is no way to know for sure which will be durable classics and which will disappear. One way is to ask your trusted inner circle to tell you something about the books they recommend. If you have them provide a short synopsis and point out the best passages, that may be all you need. ■

For a list of supertexts, go to: http://my.summary.com

Give the Devil His Due

Consider this scenario: A contrarian leader is at a cocktail party attended by famous figures from throughout history. Plato, Mother Theresa, and Niccolo Machiavelli all discretely slip the leader copies of their resumes, each one greatly interested in serving as the leader's chief adviser. What would the contrarian leader do? He or she would think gray for as long possible, read a supertext or two for inspiration, and then pick up the phone and say "Mr. Machiavelli, I want **you** on my team."

For better or for worse, Machiavelli is the father of modern political science. Of the supertexts, *The Prince* is the only work considered to be primarily a leadership manual. And the work is probably the most misunderstood supertext. To understand *The Prince,* you must understand Machiavelli.

Machiavelli: A Noble and Loyal Patriot

Machiavelli lived in the middle of the Italian Renaissance, a period that witnessed great changes in politics, religion, technology, exploration and war. He came from a prominent Florentine family. Although not university educated, he held several important political positions until 1512, when the pope's army reinstated the Medici family as rulers of Florence. He was thrown in jail and beaten when suspicion fell on him that he might have attempted to overthrow the new regime. He maintained his innocence and was released to return to his family farm. It was there he wrote *The Prince.* He presented the work to the man whose minions had tortured him.

Not long after his death, Machiavelli's name became synonymous with deceit, cynicism, and evil machinations. In reality, he was an honorable man and a loyal patriot. The disconnect exists because Machiavelli was presenting advice to a particular kind of leader — a principe — which we have translated into "prince," but which means something entirely different.

(continued on page 6)

Give the Devil His Due

(continued from page 5)

A "principe" is a leader of a sovereign state who must compete with others like him in a world in which there are no laws or rules that govern them all. Depending on whether the principe is a monarch or an elected head of state, he may be governed by internal rules, but there are no external ones.

Thus, some of Machiavelli's more barbaric advice (such as kill the ruler whose area you took over as well as his family) won't work today when the rule of law prevails. On the other hand, his advice that, if a ruler is forced to choose between being loved or being feared, should choose to be feared (but not hated), is reasonable advice, even today.

Be Willing to Do Bad

Machiavelli advised a principe that to do the greatest good he must occasionally be willing to do bad. Modern leaders are sometimes forced to recognize what Machiavelli understood — that sometimes the ends do justify the means, and that it really is better for a leader to be feared than loved if that is the choice. But it is even better to be both feared and loved. And never humiliate an opponent unless you are able to eliminate him. Otherwise, you simply create an enemy for life.

To be an effective leader, you must be able to lay down rules and evenhandedly punish those who violate them. Evenhanded but tough justice inspires a sense of security among followers.

Douglas MacArthur followed this and other Machiavellian advice when, after the Japanese surrendered at the end of World War II, he was appointed the de facto dictator of conquered Japan. He decreed that no American soldier was allowed to rape Japanese women on threat of death. When some American soldiers defied his orders, they were court-martialed. MacArthur then invited a group of senior Japanese officials to witness the executions. Partly as a result, MacArthur received the full cooperation of the Japanese during the occupation. ■

Machiavellian Principles For Today's Leader

Machiavelli put forth the following principles for effective leadership:

✓ A talented leader realizes no policy is without peril. He examines the options and selects the best while realizing no policy is perfect.

✓ The preservation of civil unity and prevention of foreign invasion justify almost any action a leader can take.

✓ Men must either be cajoled or crushed; injure slightly and he will avenge himself.

✓ Don't submit to evil to avoid war.

✓ Luck plays the greatest role in leadership success, and luck favors the bold.

✓ In a conquered nation, it is acceptable to kill the male leaders, but leave the women and citizens' property alone.

✓ In newly conquered territory, implement harsh policies immediately, but slowly introduce benefits and mercies.

✓ The major responsibilities of a leader include: being a lover of virtue, encouraging the talents of the citizenship, letting citizens keep their property, maintaining incorruptible and ethical ministers and judges, and defending the country against foreign domination.

Decisions, Decisions

Decision-making is a major element of leadership. It can be fun, exhilarating, an ego trip, a tremendous burden, agonizing and scary. A leader's legacy is determined by the long-term effects of his or her decisions.

The contrarian's approach to decision-making can be summarized in two general rules:

- **Never make a decision yourself that can reasonably be delegated to a lieutenant.**
- **Never make a decision today that can reasonably be put off until tomorrow.**

Most decisions can be delegated to a lieutenant, provided you have surrounded yourself with good people and you choose the lieutenant best suited to the particular decision. Don't assume that because you are ultimately responsible for decisions you have to make them all. The sign of major league leaders is their willingness to let others make decisions for which they will be responsible.

Why Delegate?

Even in small organizations, there are compelling reasons for a leader to delegate much decision-making. First, the organizations may collapse if the leader who refuses to delegate becomes ill or leaves. Second, when the organization grows, the leader won't be able to keep up the decision-making pace. In addition, delegating also gives others leadership experience.

A leader who delegates is forced to select a team that is coherent and has shared values and goals. If he or she is successful, the organization can survive the loss of the leader. Succession is built in.

(continued on page 7)

Decisions, Decisions

(continued from page 6)

When Not to Delegate

No matter how talented the team, some decisions are best left to the leader. These include hiring, compensating, motivating, molding, assessing and firing chief lieutenants.

The leader should also make those decisions which have the greatest impact on the organization or movement he or she is leading. Should we sell the company? Should we risk half our net worth in the development of a single new product? Should we close down our medical school? These are decisions that belong to the leader, not his or her lieutenants. Identifying the really important decisions requires the ability to distinguish between the urgent and the merely important.

Also, too much delegation can be a bad thing. Those in the inner circle should from time to time find that decisions are taken from them. This helps clarify that authority flows from the top down and exists by the grace of the leader. Sometimes even the best lieutenants need a lesson in humility.

A leader should also be willing to make a decision to resolve disputes among his or her top lieutenants. Don't let fights fester: Listen carefully to both sides and resolve the issue promptly. But if two of your lieutenants are consistently taking up too much of your time with their quarrels, fire one or both of them.

The Power of Procrastination

The second rule of decision-making — never make a decision today that can reasonably be put off until tomorrow — is closely related to thinking gray. The rule is so counterintuitive to the average person that it appears ridiculous, but it isn't: For effective leadership over the long term, artful procrastination is an absolute necessity.

One of the greatest benefits of artful procrastination is that it can open up more options than originally appeared available to the leader. The danger, of course, is in waiting too long to make the decision. Rather than options opening, they may be closed. Not making a decision can also become a decision by default. A talented leader needs to determine when a decision will be made, and then make it.

But what about the actual decision? How do leaders arrive at them?

Many find that consulting with top advisors and lieutenants yields a deeply divided group. This is an opportunity for a leader to practice consensus-building skills. A lieutenant who too often is on the losing side of the decision-making process will lose peer respect, so it's important to work on building consensus. On the other hand, it is perfectly all right for a leader to sometimes listen to advice, but reject it all in favor of his or her own conclusion. ■

Jack Welch and Delegation

Jack Welch, the legendary CEO of General Electric, understood the need to delegate decision-making and grow his lieutenants very well. At GE, business decisions involving $25 million or less were made by operating officers. Jack would listen to a subordinate's reasoning, perhaps make suggestions, but would never make the decision himself. Doing so would undermine the lieutenant's authority and his or her ability to learn how to make good decisions.

Know Which Hill You're Willing to Die On

Most people confuse good leadership with effective leadership, but the contrarian leader knows that there is an enormous difference between the two. Hitler was an extraordinarily effective leader, but few would call him a good one. Most would think of him as monstrously evil.

Most people understand what it means to be an effective leader, but deciding whether someone is a good leader requires resorting to moral assessments, based on the moral values of the assessor. Thus the "goodness" of a leader is very much in the eye of the beholder.

Being a leader requires that you sometimes make tough moral decisions. For some people, these choices are so painful that they avoid them altogether. But a leader can't. Moral choosing requires that you "decide which hill you're willing to die on."

Sir Thomas More's Hill

Consider the case of Sir Thomas More, who was beheaded by Henry VIII when he refused to give public approval under oath to the King's marriage to Anne Boleyn. More was at odds with Henry's efforts to divorce his wife and break with the Catholic Church, but didn't take the stand that led to his execution until he found the hill he was willing to die on. He didn't immediately step down when Henry announced his intention to divorce his first wife, or when Henry established the Church of England. Nor did he openly protest the break with Rome when it came: He simply quietly resigned. But when it came time to publicly support Anne Boleyn, he refused.

Keep Your Hill to Yourself

The question raised by More is really how much

(continued on page 8)

Know Which Hill You're Willing to Die On

(continued from page 6)

ground can a leader yield and still be true to his or her moral code. A bit of advice is in order: Once you decide which hill you're willing to die on, keep it to yourself.

When you find yourself making moral decisions, remember that there is a distinction between what is legal and what is ethical. While some acts may be legal, they aren't necessarily ethical. Conversely, some acts may be illegal but may be ethical (usually because the law is wrong). Good leaders need to perform a delicate balancing act. As a contrarian leader, you must develop and hold your own moral convictions, but remain as open as possible to the strongly-held moral beliefs of others. ■

To read about an Army exercise in moral decision-making, go to: http://my.summary.com

Work for Those Who Work for You

Contrarian leaders support those who work for them. Spend 90 percent of your time supporting your employees, and 10 percent hiring, evaluating and firing them, and you will be on your way to being an effective leader. Accept them as your equals and "work for those who work for you."

Hire Those Stronger Than You

This tactic requires that you hire the best possible people. Beware of the common tactic of hiring those who are weaker than yourself. It is crucial to avoid this trap. In fact, in an ideal world, leaders would only hire those who are stronger than themselves. One of the primary challenges of any leader is to surround himself or herself with people whose skills make up for his or her own shortcomings. This isn't easy, since people feel most comfortable being surrounded by others like themselves. But doing so guarantees that your lieutenants always agree with you, even when they shouldn't.

Strive for Diversity

Achieving real diversity among your top staff is a very difficult task, but the advantages are well worth the effort. A highly homogenous organization is susceptible to disease. In the long run, the most difficult part of building a diverse team is to integrate people whose intellectual and moral perspectives cover a wide spectrum and don't just mimic the leader's.

There will come a time when you will have to fire a lieutenant. You have to do it yourself. The world is full of squeamish leaders who delegate the unpleasant task. Firing goes hand in hand with evaluation. Leaders have to be up to that task, too. And sometimes, the process can be enough to suggest that the lieutenant leave of his or her own accord.

Contrarian leaders don't fall into the trap of playing people within the organization against each other. Instead, encourage them to work out differences on their own, but to bring those differences they can't resolve to you. Then it's your responsibility to resolve the matter. ■

Follow the Leader

Before one can lead, one must acquire followers, the *sine qua non* of leadership. To gather followers, leaders must sell themselves first, and their visions and policies second. Contrarian leaders also understand that if they seek out leadership positions with a well established podium, the task of getting followers will be easier. In this case, it is the followers who give credence to the leader, even before he or she has demonstrated any ability to lead.

Once in a leadership position, leaders must begin connecting with their followers. One way to do so is to begin speeches with a good joke or anecdote. Doing so makes them appear warm and approachable even if they are not. Telling stories is one of the most powerful tools there is for establishing a bond and transmitting a vision to followers. It helps for a leader to have a credible myth or creation story about the organization. Examples include Hewlett and Packard in their garage and Washington at Valley Forge. These stories convey instantly what the organization stands for. A great leader must be comfortable as a wordsmith because communication is essential to the task of finding and keeping followers, whether they are disciples or employees.

Being President Vs. Doing President

Many people aspire to leadership for the wrong reasons. They want to be president but they don't want to do president. Make sure you don't fall into the first category. Leadership is a peculiar calling. Major leadership positions aren't necessarily appropriate for people just because they successfully climbed the corporate ladder. The best doctor won't necessarily make the best hospital administrator.

Once you reach a top leadership position, you should use the rule of 70/30. Up to 30 percent of your time should be spent on substantive matters and the remaining 70 percent on matters that are trivial or routine. This is the reality of leadership. Thirty percent may not seem like a lot, but it really is. If you're not ready for the reality of doing president rather than being president, let someone else have the job. ■

The Courage to Act

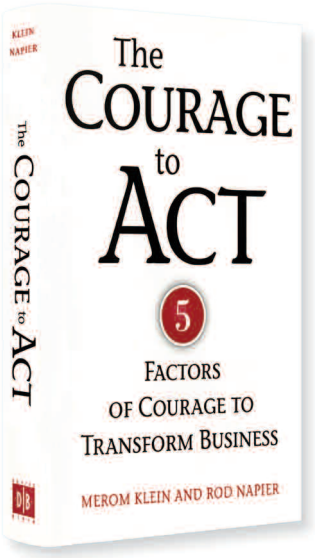
Five Factors of Courage to Transform Business



by Merom Klein and Rod Napier

THE SUMMARY IN BRIEF

Courage is not just the extraordinary acts of adventurers and visionaries. In workplaces where jobs can change with the stroke of a pen, having the courage to speak and hear the truth, inspire hope, take a stand and trust in relationships is what defines high performers. With powerful examples of courage in action, *The Courage to Act* explores the skills you need to embrace change and capitalize on opportunities, inspire courage in your teammates, and respond to your own personal moments of truth with the courage to push ahead and make the right things happen.

In a time when we all have more discretion and mobility, and our judgment has far-reaching consequences for the success of our enterprises, we all need more courage. We need to find it within ourselves and inspire it in those around us, whether they are below us or above us in the organizational hierarchy. What we say and what we intend is less important, in this environment, than what we do and how we act.

IN THIS SUMMARY, YOU WILL LEARN:

- Why courage is necessary in a time of uncertainty, challenge and conflict.
- The five factors of courage and how to assess them within your team or organization.
- How to build individual courage in your teammates and a climate of courage within your team.
- How to imbue others with the courage to act.
- A five-part formula for dealing with conflict.

PART ONE: WHY COURAGE NOW?

Virtually everyone has been part of a team at some point in his or her organizational life. But the teams of today can't be compared to the teams of 10 or 20 years ago, any more than raising a family today can be compared to the lifestyles of Ozzie and Harriet. The pressures, responsibilities, diversity, pace, mobility and outside influences are dramatically different. Semi-autonomous cells, virtual partnerships and loosely connected networks nest within organizational hierarchies. The bar is always being raised; there is always more to learn, no matter how close you feel to the top of your game.

Despite the fact that we still draw our charts with boxes, silos and pyramids, we're supposed to solve problems and seize opportunities as though the hierarchy didn't really matter. We're supposed to solicit and listen to know-how, wherever it resides. We're expected to coordinate our work with that of colleagues in other departments and other divisions so that the ultimate enterprise-wide objective takes precedence over narrow parochial orders or policies. You can't order someone to do something when he or she doesn't reside in your pyramid or silo on the formal hierarchy; so you have to explain your logic, build relationships, and rely on trust and influence rather than command and control.

Influence, not authority and power, is the way business is done in the new economy. No one has as much control or autonomy as they'd like anymore, including those at the very top of the organization.

Resource Competition

Project teams (and project team leaders) have to compete for scarce resources, for visibility, for time, and for executive support. It's easy to get tunnel vision and expect decisions to be made on a first come, first served basis or a "but you promised" standard of fairness, rather than constantly reassessing priorities according to triage criteria.

Knowledge Gaps

In a speech to business leaders after his retirement, General Norman Schwartzkopf described the daily agony he felt being responsible for thousands of lives in the Gulf War. What was the most frightening aspect of command for this war hero? It was the fact that he knew less about the technology and field conditions than many of the young men and women under his command. Nobody likes to feel inadequate or uneducated, especially when she or he is supposed to be in control. It takes courage to seek help and admit that you don't know what you don't know.

New team-based structures test the mettle of managers and workers like nothing else in the history of modern management. Bureaucracies were slow and expensive, but they also gave people a measure of security. If their needs weren't met or directions weren't clear, they simply looked higher up in the organization chart. However, teams reward people for darting in and out and changing lanes quickly on an information highway that's fast and crowded. This is the reality we now face on our organizational highways. ●

The Dilemma

Our own studies, plus previous years of research reviewed in this book, have resulted in the isolation of five factors that, together, help to imbue team members with the courage to act in situations of stress, conflict or ambiguity. We have termed these factors candor, purpose, will, rigor and risk.

Candor: The Courage to Speak and Hear the Truth. You can't mandate or require candor, yet it stands as the first quality for building courage. It is the one upon which everything else is built. If individuals on a team are inhibited from speaking the truth, or if they fail to take feedback about their current reality to heart, they might fail to act quickly enough or skillfully enough.

People desperately want to speak their minds and their hearts, but they are unwilling to be humiliated, publicly criticized, put on the defensive or to have their futures jeopardized. However, when we witness individuals putting their ideas and feelings on the table and see that they are accepted without repercussion in the moment or later reprisal, then people are emboldened and courage is imbued in other team members.

Purpose: The Courage to Pursue Lofty Goals. Most organizations live and die by the numbers. One aspect of leadership is the ability to tie the numbers to a loftier mission, sense of purpose and achievement. We work hardest, research shows, when we feel personally connected to the outcomes we are achieving — when the work is personally meaningful, gratifying and interesting and when we see a benefit to our daily work.

Will: The Courage to Inspire Optimism, Spirit and Promise. The ability to inspire, to create a sense of hope and opportunity, can infuse a team and have a multiplier effect on the group. In difficult or trying circumstances, most reasonable people do experience fear, anguish, pain and worry. According to research with decorated war heroes conducted by Reuven Gal (1986), former chief psychologist of the Israeli Defense Force, even the bravest soldiers often admit that they were scared, frustrated and hurt. Their course doesn't hinge on whether they experience these emotions; what matters is whether they let these emotions hold them back from doing what needs to be done.

Rigor: The Courage to Invent Disciplines and Make Them Stick. With rigor, a team establishes protocols, rules and agreements that bring consistency and predictability to the way that the team operates. Rigor helps the team commit to new ways of doing business and re-contract to alter old norms, expectations and interdependencies.

Teams and organizations with courage empower people and give them discretion and autonomy and, at the same time, expect them to operate within a strict code of ethics and honor, in which the spirit of the protocol is even more important than the letter of the regulation.

Risk: The Courage to Empower, Trust and Invest in Relationships. Risk is a vital factor in the process and maintenance of team life. Without taking the risk of doing what's right rather than what's expedient or in one's own narrow self-interest, the remaining four factors — candor, purpose, will and rigor — will all be undermined. Thus, a primary focus must be how to build and maintain a sense of community and relationships of trust within the team; building community is a business consideration, not just something that's nice to do when you have spare time or resources.

Courage is Not a Halfway Proposition

The five courage factors are not independent. Imagine slipping in behind the wheel of a sleek, new convertible sports coupe. You start the engine, turn on the stereo and make your way down an open country road. Suddenly, a red light appears on your dashboard, and the car starts to buck and sputter. You pull into a service station. "Not bad," the mechanic says. "You're doing fine on three out of four cylinders, the fourth is working at 75 percent of what it should and the fifth really isn't that important, is it?" The analogy applies to the five courage factors. Four out of five isn't enough. ●

Let Teammates Gather Their Thoughts

- Form duos or trios; groups of four are too large. Ask a question that requires some thought and allow 15 to 30 minutes for the small group to work on it before reporting their ideas to the entire forum.
- Send background material out ahead of time, with specific questions that you'd like to discuss or specific feedback and input you'd like to receive.
- Take a short break in a meeting and ask individual participants to jot notes in a journal or on a worksheet. When you start the meeting again, go around the room and ask for a report from each participant.

PART TWO: HOW TO BUILD COURAGE

Candor: The Courage to Speak and Hear the Truth

Supposedly, we value people who tell the truth, who deal with us straight. Yet, candor is a rare commodity. It's absence, whether on our teams or in our boardrooms, adds untold millions to our bottom lines and kills our best efforts to improve morale. A lack of candor is a cancer that has eaten away at courage. Unless candor can be restored, there is little hope that any other aspect of courage can become part of the fabric of the team.

Timing

Several months before the collapse of Enron, Sherron Watkins, one of the vice presidents, tried to get her concerns about the firm's accounting practices on the CEO's radar screen. In a memo she wrote detailing her observations, Watkins told the CEO that she had grave concerns about the company's future. By the time her warnings were taken seriously, the damage was already done.

There's no guarantee that your voice will be heard, even if you bring mission-critical information to those who need to hear it. And there are risks. But it isn't impossible to be heard if you have the facts, the right people assembled, and a process to define shared goals and common ground.

Watch the climate and tone that you create when you present data and take part in deliberations. Heavy, judgmental, grave tones can cast a pall over a group and can stifle participation. A lighter and more easygoing touch can bring out the best thinking that everyone can offer. ●

Purpose: The Courage to Pursue Lofty and Audacious Goals

Like key players in a competitive sport, people with purpose are keenly aware of what the score is, how much time is left and what has to be done to win, even when their mood is lighthearted. People with a sense of purpose are ambitious. Place a mountain in front of them and they'll find a way to climb it. Given a choice, they prefer to do things that stretch them professionally and are artistically rewarding, and they eschew tasks that are tedious or routine. They want to feel that they are making progress and they take pride in being at the top of their game.

When there is a sense of purpose, people feel connected to the organization's vision and understand how they, personally, contribute to bringing that vision to life.

Talk Up the Vision

On one level, banners, flags, T-shirts and "feel-good" public interest articles do little to change the realities on the ground. A catchy and clever slogan isn't enough to persuade an embittered cynic. But banners can get people talking and talking can be persuasive.

In corporate lunchrooms and meeting rooms, it's easy to see when people have lost sight of the vision and are going through the motions. You can say nothing or you can reaffirm your commitment, restate your purpose and rekindle the light in the tower.

Andy is a junior executive in a biotech company who's uncertain about whether he should stay the course or move on. His gruff manner and glib sense of humor have offended some of his co-workers and, as a result, he's being denied a much-coveted promotion. Unless Andy can see the prospects of a future promotion, he will be a flight risk. Management values his scientific contributions and needs him to keep performing at the top of his game. The leading cause of defections in scientific companies is uncertain future prospects. When people don't see a promising future, they start to look elsewhere for opportunities that beckon.

Taking Personal Responsibility

If anything positive has come out of the Enron collapse, it is that we are redefining professional responsibility and personal accountability; what's right isn't always what's politically expedient.

The Hippocratic oath gives physicians a clear definition of what their job is about and what choices they are expected to make. Most of us don't have a canon of professional ethics that's as sacrosanct as the Hippocratic oath, which makes it tougher for us to decide what to do when our judgment and ethics contradict the group consensus or the company's policy. In an era when very few people can count on employment for life, it's easy to accept the group consensus, follow the path of least resistance and not put our jobs in jeopardy. It's easy to rationalize costly mistakes when we are just following orders. "If you don't stand for something," a popular anti-drug slogan says, "you'll fall for anything." So, you may have to decide what you really stand for and trust that another employer will respect you for that, even if your current one doesn't.

Accept Personal Accountability

Most managers have to choose how far they'll go to hit their own numbers and maximize their bonuses, when doing so can jeopardize the long-term health of the enterprise. Just because you're told that you're empowered to make particular choices doesn't mean that you won't have to defend your judgment — or ask for special dispensation if you sacrifice your own performance statistics to help the enterprise achieve a bigger win. ●

Will: The Courage to Inspire Optimism, Spirit and Promise

Most people approach performance improvement by looking for the factors that inhibit or slow the progress of the team so that they can focus on and fix the problems. They set out to improve employee morale by finding out what makes workers unhappy or frustrated so they know where to focus their attention. Or they look for the people who are causing problems and single them out for remedial attention.

But the logic of this approach has a flaw. Watch a group articulate the things that bother or frustrate them and see what happens to their energy and optimism, their enthusiasm and their will to persevere. Invariably it wanes. In contrast, watch what happens to the energy of a team that talks about their hopes and aspirations, their accomplishments and successes, their strengths and passions. Their passion and enthusiasm rise.

See the Glass as Half Full

You may be painfully aware of what your team could do better. You may need to remind yourself why you wanted certain individuals on your team in the first place and get beyond your own frustration and panic to identify the things they do well.

Make it personal. If you don't know the individual members of the team well enough to articulate their personal strengths and contributions — as individuals, rather than en masse — find a way to get to know them better.

Make it relevant. Praising people for things that they don't value or that they take for granted in themselves doesn't have as much impact as recognizing the strengths that give them pride and a sense of professional accomplishment. What, specifically, do you see in each of your team members that makes you believe they are up to the challenge that lies ahead?

Make it explicit. Openly comment on the successes, virtues and skills that give you confidence that teammates can succeed in achieving the lofty and audacious goals that are expected of the team. Let them know why you have confidence in them.

Make it for real. Most teammates are perceptive enough to know when praise isn't sincere. If you truly can't see an individual from a glass-half-full perspective, it's time to counsel him or her off the team.

Keep score. We suggest using a five-for-one rule; we sometimes insist that executives give five pieces of praise and thank-yous for every one piece of criticism. We also suggest "no criticism" afternoons. ●

Rigor: The Courage to Invent Disciplines and Make Them Stick

We want take-charge, get-it-done team members to be empowered and to take initiative. We don't want them to let a promising opportunity slip away while they wait for permission to act. We want them to use common sense without worrying about whether they'll be reprimanded or have to justify themselves. We want them to think creatively about ways to improve efficiency.

At the same time, there are some lines that we don't want people to cross, some regulations and protocols that have to be respected, even if doing so slows things down. Rigor is a matter of judgment and discretion, consideration and self-discipline.

Get it Done, Whatever it Takes

In a large government agency, Jackie was a bit of an anomaly. She ran her operation like a businessperson, not a bureaucrat or a politician. She was a pragmatic, resourceful field manager. She didn't have a lot of time or patience for fiefdoms, mindless obedience, "not-my-job" small-mindedness or filling out in triplicate forms that no one would look at. When she was promoted to head of enforcement in the state capital, Jackie was grateful that she'd inherited a team of people who shared her spunk and ingenuity.

At first, Jackie rolled her eyes when she heard complaints about the shortcuts that her lieutenants took. But Jackie couldn't dismiss the audit results by rolling her eyes and reassuring her staff. The audit showed that Jackie's lieutenants had crossed some uncrossable lines, albeit with the best of intentions.

The choice was Jackie's. On the surface, it looked like facing off and preparing for a bitter fight against the auditors was the tack that required the most courage. But that wasn't true. It actually took more courage for Jackie to admit that the auditors might have some wis-

dom to share and that their scrutiny, while embarrassing, might help her team members improve the way they ran field investigations and avoid the appearance of impropriety or favoritism. She expected her staff to listen to the rationale, run an objective cost/benefit analysis, and assess the severity of safety risks, ethical breaches or the appearance of impropriety.

Determine Whether Rigor is the Issue

If frontline workers don't have the will to do more than follow the rules and go through the motions, they won't muster creative energy when the path of least resistance doesn't work. If frontline people don't feel free to ask candid questions, offer ideas and let someone coach them when they make clumsy attempts to try something new, they'll seek the comfort of what they know and what the rule book tells them. Ask open-ended questions and wait for someone to answer, even if that means enduring uncomfortable silence.

Whether you are training new hires or retraining experienced teammates to meet new business requirements, you can't avoid the fact that training is an expensive investment. Not everyone will "get it" quickly enough to make that investment worthwhile. Carrying teammates who simply aren't capable of learning to perform with rigor, without more attention and supervision than you can afford to provide, is an expensive indulgence. A system of training isn't a cure-all. It needs to include a system of assessment — and consequences if learners aren't making the grade.

Create a Learning Organization

Today, what teammates already know is less important than how quickly they learn. Today's systems will be obsolete tomorrow. Ingenuity, improvisation and resourcefulness don't just "happen." They are carefully cultivated, with lots of short practice drills, direct feedback, good-natured ridicule and exhortations to keep trying.

In a hierarchy, the rules of decision-making are simple and clear. The boss gets the final say, unless he or she delegates that authority to someone else and chooses not to exercise veto power after the fact. But in a molecular team, it's hard to tell where the buck stops unless you explicitly define who has the following powers.

- **Input power.** Good decisions cannot be made without adequate information. Stakeholders who can provide relevant data, therefore, should have input, which should be taken seriously by others.
- **Deliberation power.** Good decisions cannot be made without an adequate understanding of how others will be affected. If there is not impact on anyone else, one person might be able to make the decision alone. But when there are interdependencies, what's good on one continent may create difficulties somewhere else.
- **Veto power.** Good decisions are effective only if they stick. If they aren't executed, they're only a fantasy. Some sponsors, experts and executors have the power to block decisions that they don't buy into. And some make threats and blow loud and hard but, like it or not, have to bow to those who have a mandate to decide. It isn't always easy to tell the difference between these two, and it isn't always pleasant to remind others that you have veto power.

Risk: The Courage to Empower, Trust and Invest in Relationships

In a hospital emergency room (ER), it takes a special brand of courage to trust the system and empower others. The ER staff take stock of the cases that present for treatment and make ongoing triage assessments. Those that are most serious and life threatening receive care first. Other patients are expected to trust the system, empower the caregivers, and have the strength and compassion to wait and endure their discomfort.

More and more organizations are facing similar resource constraints. There aren't enough designers, programmers and office support staff to do everything. Constant triage assessments are required. The projects that are most mission-critical get care and resources first. People with less urgent requests are told to wait.

What does it take for patients in a busy, stretched-to-capacity ER to wait their turn while others are given a higher priority?

Empathy. Being attuned to someone else's needs and emotions is a special kind of intelligence. Some have more of it than others. Fortunately, research on emotional intelligence has shown that people who lack empathy can develop more compassion. In our complex organizations, we need the capacity to understand the needs of other departments, professional disciplines and markets, and we need a shorthand that evokes empathy when our group is asked to give ground and endure discomfort so others can get the care and attention they need.

Belief that others are doing their best. When others say, "I need your support," it's going to be hard to keep saying yes if you believe their needs were caused by carelessness, lack of planning or ineptitude. Benefit of the doubt has to be granted for a triage system to work.

Objective criteria. Without explanations, people may feel "the cards are stacked against us" or "no one appreciates how hard we are working and how much we really produce." Even when people are given explanations, they may challenge the criteria or try to negotiate. So be prepared to offer an explanation and be ready to justify it if it is challenged.

Someone to talk to if triage conditions change. What was not so urgent yesterday may be more critical tomorrow. If people know that they can ask for the same support and indulgence that they are willing to give as conditions change, it's going to be easier to inspire trust and dedication. ●

PART THREE: THE FIVE FACTORS IN ACTION

A Five-Part Formula: Dealing With Conflict

Step One: Candor. The answer lies in what you do with your own fear. If it were easy to talk candidly, it wouldn't take courage to speak the truth — or to acknowledge the fact that your own silence might be contributing to the problem.

Step Two: Purpose. Whose purpose should be served when conflicts are raised? If conflicts are moments of truth that you approach with a win-lose belief system, you will try to advance your agenda at the expense of others or allow them to advance their agenda at your expense.

In today's environment, however, win-win solutions often are not enough. The real test isn't just whether we've each found a way to satisfy our competing interests and achieve our individual or parochial objectives. It's also whether we've done what's right.

Step Three: Will. Whether you are trying to energize individual teammates to make personal or professional improvements or are trying to infuse an entire team or organization with the will to persevere when encountering frustrations, you'll see little forward motion without a solid sense of purpose. Lofty and audacious goals will create some motivation for achievement-oriented teammates who buy into the purpose. But a sense of purpose alone doesn't restore hope or make people optimistic when they run into setbacks, frustrations and conflicts that aren't resolved quickly and easily. Unless people have the will to stay in the game, conflicts can shut down the candor in a group and make its members wonder whether mission critical goals are achievable. A strong will keeps your stakeholders engaged and keeps them from settling for shortcuts that can damage your reputation when the straight and narrow seems too difficult.

Step Four: Rigor. What's needed is a clear plan that maps out the following:

- Who will be the sponsors to sign off on, approve, and fund the solutions that are agreed on?
- Who will be the expert advisors enlisted to share best practices, evaluate new technologies, and adapt tools and techniques to the situation at hand?
- Who will be the recipients of the solutions — those who have to execute it and achieve the expected results?
- What is the know-how that teammates already have that will enable them to execute the plan and what is the know-how they need to acquire?

Step Five: Risk. Why are you being asked to take a risk and go out on a limb to support and trust someone else in your team? Perhaps:

- Someone is claiming leadership in a domain that was supposed to be your area of authority and control.
- Someone is counting on you to do something that really isn't your job or that will require more sacrifices than you believe is fair.
- Someone expects to be empowered to handle an assignment independently and you aren't sure that he or she is up to the challenge.

These risks and others represent moments of truth that will test your courage. You may not be able to put the fear aside. But you can decide whether to let the fear stop you from doing what needs to be done. ●

The Coach: Imbuing Others With The Courage to Act

If you've ever been on a truly great team, you will never forget the experience. It doesn't matter if it was a basketball team, a scientific research group or an account team that was at the top of its game when you presented your proposal. When everything clicks on such a team, it looks and feels like magic. But as any magician will tell you, magic is an art that requires know-how and practice, as well as a few masters who can show you how the tricks are performed. Temple University basketball coach John Chaney is such a master.

Business is not sports, you might say. And you'd be right. In the world of business, there's a thin veneer of civility but the competition is fierce and the killer instinct is vicious. And in business, unlike sports, the game isn't over after 30, 40 or 60 minutes of play.

If there are lessons that your teammates have already learned and mastered — aspects of candor, purpose, will, rigor and risk that are already part of their character — there are parts of the Chaney formula that you may be able to ignore, like any coach who tailors the practice regimen to the strengths and learning needs of the players. But just because your players start in a different class doesn't mean you don't have to pay as much attention to the five courage factors as Chaney does.

After all, a hotshot engineer who powers down the court to rush for the best projects and pushes colleagues out of the way to slam-dunk her solution isn't very different from the hotshots that Chaney might bench, even when they score the winning points. And in an era when the next merger is being planned even before you've integrated the operations of the last merger, risk doesn't come naturally.

Winning is about attitude — and courage. Without the right attitude, winning is an accident of fate. It's easy to rest on your laurels and get beaten by tougher competition or unexpected adversity tomorrow. The right attitude is what makes winning happen consistently and what makes it look like magic. ●

Moments of Truth: The Challenge of Courage

Courage isn't reflected in what you know or what you can recognize when you see it in others. Courage is reflected in what you do when you are put to the test and face real moments of truth.

Action Learning Principle 1: Know What You're Preparing For. Before training starts, you should know what the moments of truth are that will test the team's courage. You should know the conflict-prone realities that the team will have to face. You should know where the pressure points are in the system, and who will have to withstand more of the strain and take up more of the slack than others.

Action Learning Principle 2: Apply It. So before you invite people to the training session and before you design the training, think about the applications that you want to see. Form task forces to engineer the rigors that have to be implemented. Convene project teams to execute change. Raise the bar on performance standards. If there isn't an application, training will be an event or a motivational speech rather than the creation of a lasting upgrade in skills.

Action Learning Principle 3: Provide Feedback. Courage is personal, so the feedback has to be personal as well. Individuals need to know what they already do well and where they need to improve. They need personal development plans with goals, time-lines and benchmarks. And they need to be acutely aware of how they affect the courage of others around them. For this reason, 360-degree feedback is an indispensable part of any training program that purports to build courage.

Action Learning Principle 4: Make it Active and Interactive. Courage isn't learned from a textbook. It's learned through action. Simulations, structured problems, and practice drills get people up and involved, and they hold the attention of impatient participants with low boredom thresholds. If the simulations or drills are properly selected and customized, they can replicate and dramatize the types of difficult situations that the team will actually have to face.

Action Learning Principle 5: Value, Honor, and Bridge Diversity. Like life, training isn't a level playing field in which everyone brings the same skills and strengths to the problem at hand. People don't play the same roles in a simulation or find the answers at the same time. The test of courage often comes when those with more insight or more strength have to work with those who don't see the solutions as quickly or who are lacking in the strengths or the knowledge that's mission-critical to solve a particular problem.

Action Learning Principle 6: Build a Code of Honor. Psychologist Martin Seligman (1998) wrote, "Optimists have a healthy defense against reality which enables them to see possibilities that don't yet exist." A code of honor shares that healthy defense against reality with others. To stay the course and work toward a vision of success that doesn't yet exist requires a shared delusion; a code of honor is part of what makes it possible to sustain that delusion despite overwhelming evidence to the contrary.

Action Learning Principle 7: Make Learning Fun. It's easier to raise tough issues and stick with the discussion when you're able to laugh at the dilemma and see the humor in the situation. It's easier to persevere when you're having fun. And it's easier to get people to drop their defenses and act naturally when they lighten up. ●

Measuring Cultural Action
Page 7

THE SUMMARY IN BRIEF

The fate of any change effort depends on whether and how leaders engage their culture. Culture is implicit rather than explicit, emotional rather than rational—that's what makes it so hard to work with, but that's also what makes it so powerful.

In ***The Critical Few***, best-selling author Jon Katzenbach and his co-authors identify the three most critical cultural elements leaders need to focus on: traits, characteristics that are at the heart of people's emotional connection to what they do; keystone behaviors, actions that would lead your company to succeed if they were replicated at a greater scale; and authentic informal leaders, people who have a high degree of "emotional intuition" or social connectedness.

By leveraging these critical few elements, you can tap into a source of catalytic change within your organization. People will make an emotional, not just a rational, commitment to new initiatives. You will elicit enthusiasm and creativity and build the kind of powerful company that people recognize for its innate value and effectiveness. Let ***The Critical Few*** show you how.

IN THIS SUMMARY, YOU WILL LEARN:

- Why changing organizational culture is so much harder than changing strategy and operating models.
- To find the traits, keystone behaviors, and authentic informal leaders in your organization that will help you mobilize lasting change.
- To effectively implement and measure culture-change interventions.

Why Aligning Culture Matters

Every industry (and indeed, every company or global institution) has its own unique cultural situation, but all organizations have one thing in common. Whenever they summon the collective will to commit to meaningful change, the success or failure of this effort depends on whether and how they choose to engage their organizational culture.

And increasingly, "committing to change" is not a one-time occasion or event but a constant challenge of 21st-century management. Eighty percent of respondents to the Katzenbach Center global survey on culture believe that their organization must evolve to succeed, grow, and retain the best people.

If you are a leader at any level and you see an opportunity to move your business in a new direction, you will be far more successful if you engage your culture in your effort. Conversely, if you ignore your culture or presume that it will resist you, you will be far less likely to achieve your goals.

Cultures are important and powerful because they determine what your company is capable of doing. An organizational culture is a collection of deeply held attitudes, entrenched habits, repeated behaviors, latent emotions, and collective perceptions of the world. Culture is the shared set of assumptions we all bring when we work together—our unspoken expectations of one another.

Why Cultural Alignment Is Tricky

It's also true—and this sounds like a bit of a paradox—that every company has both an overarching, consistent culture and competing, divergent subcultures.

Within a company, business strategy is our driving direction, the grounds on which we all have decided that we are best positioned to compete. And our operating model is how we plan to get there—the way we structure our reporting relationships and governance such that it will best support the kinds of activity that will help us achieve that strategy.

Culture is the third component: the motivation that drives and supports both other elements. It's the emotional commitment people feel (or don't feel) when the leaders describe the strategy. It's the commitment and passion that people bring to their roles, to the daily actions that will support any direction.

Just as no complex company has one singular strategy or operating model, no company has a single monolithic culture. A company's subcultures exist and bounce up against each other like branches of a family tree at a reunion. Is this a problem? Not unless serious friction or misalignment exists.

Leaders of large companies are trained to recognize and address any signs of misalignment between operating model and strategy. The cultural forces are much more difficult to recognize and far harder to address. The driving forces of any cultural situation are emotional rather than rational. This is why culture feels so unfamiliar and mysterious to most leaders.

If you are truly interested in having your company transform, then you need to become conversant with the emotions, behaviors, and deep-seated attitudes that exist in your company. You need to know what employees feel strongly about, both positively and negatively. This knowledge is "cultural insight"—the clarity that allows you to truly see what motivates your people.

Then, with this knowledge fully in your grasp, you can move to "cultural action," targeted interventions that influence how people behave from day to day.

The Three Critical Cultural Elements

Once you find basic cultural elements that motivate your workforce, you can cultivate them and align them with your goals. These elements tap the emotions that bring a culture to life. They are broad enough to resonate across the whole organization but focused and simple enough to encourage real actions in people's daily lives. They fall into three basic categories:

- **Traits:** A set of shared characteristics that represent the "family resemblance" of your entire enterprise—the qualities that transcend subcultures and are at the heart of the shared assumptions people bring to work and their emotional connection to what they do.
- **Keystone behaviors:** A few carefully identified things that some people do, day after day, that would lead your company to succeed if they were replicated at greater scale.
- **Authentic informal leaders (AILs):** A few people, or at least a reasonably small percentage of your company's people, who stand out because they have a high degree of "emotional intuition" or social connectedness.

A sharp focus on these critical few elements reduces complexity and begets a positive, informal, and lasting cultural impact on performance. Most importantly, this approach

When people you trust and admire model and enable a few key behaviors and help others do the same...those behaviors spread quickly, and they stick.

takes the emotional dimension of human behavior into account and exploits the power of simplicity. It amplifies community connections because it encourages the workforce to look to peers and colleagues for insight, support, and encouragement.

When people you trust and admire model and enable a few key behaviors and help others do the same (and feel good about it!), those behaviors spread quickly, and they stick.

A Critical Few Traits

Traits are at the heart of any organization. They are the essential characteristics that form the scaffolding for how any group of people thinks, feels, and behaves. They are the stable, prominent qualities that are shared across a company.

For any leader who seeks to understand a business's cultural challenges and how it operates, it's important to start by surfacing and articulating these critical few traits. The process of doing so—the diagnosis, the self-reflection, and the narrowing down—is a crucial first step to both evolving and aligning an organization's cultural influence on how people behave to get things done emotionally as well as rationally in any organization—gaining cultural insight.

Organizations can change (or, rather, evolve)—but only if that change is grounded in a solid sense of the steady state of that organization. In the Katzenbach Center global survey on culture, one-quarter of respondents reported that an effort had been made to change their company's culture and that they had seen no difference whatsoever as a result.

This "failure to budge" on the part of culture is due to leaders' skipping the "traits" step—that is, refusing to surface, articulate, and commit to working with their organization's core differentiating qualities. It is a result of jumping to solutions without pausing for self-reflection and diagnosis.

Leaders must begin with a solid understanding of where they are today, what "family resemblance" exists across the company. Then and only then is it possible to focus on behaviors that bring out the best, most useful aspects of these core qualities—and to encourage more of them, every day.

Arriving at Your Traits

You won't be able to arrive at an accurate, emotionally resonant group of traits by asking only a few people. You'll want to engage groups of people at different levels across the organization in structured interviews and focus groups designed to surface their feelings about your organization's culture.

Twelve common traits include consensus-driven, caring, hierarchical, individualistic, relationship focused, paternalistic, cautious, "above and beyond," process focused, opportunistic, optimistic, and egalitarian.

At a high level in the organization, the best approach to surfacing good data is to avoid direct questions, such as, "What traits are important in our culture?" That kind of direct approach is likely to yield only platitudes.

Instead, get people to tell stories about what's important to them. Ask what they love about coming to work, what they are proud of regarding the way that they work together, decide, and motivate. Stage some of these conversations as one-on-one interviews and others as small, informal peer groupings. You'll be surprised and delighted to hear what emerges from eight or 10 people who are encouraged to share their thoughts in an appropriate, safe environment.

Also ask people what frustrates them at work. Focus on qualities and patterns of behavior that are unique to the organization. Inevitably, subculture traits will appear. This is natural and logical. But do not let the presence of strong, differentiated subcultures distract you from the task of surfacing and identifying overarching traits.

Whatever method you use to gather insights about your company's traits, compare the results with your own observations. Watch people in meetings, in casual conversations, and in their daily operations.

The goal of this detective work is to generate a list of culture traits that is unique to the organization and to understand the positives and negatives associated with these traits. You can think of a company's traits as a list of

neutral descriptors, with positive manifestations (or sources of strength) on one side and negative manifestations (or challenges and barriers) on the other.

For example, you may have a company that is consensus driven, in which the entire team feels ownership of decisions. This may be a valuable trait for your company because it can ensure that once a decision has been made, many people will come on board to help execute it. On the flip side, if decisions can't be made without consensus, it's very hard for an organization to act.

After you develop a "long list" of traits, select three to five key traits that best articulate your company's current cultural situation. Choose carefully, because the traits will be a touchstone in the process of evolving your culture. To be most useful, these traits need to meet several criteria:

- Reflect your company's essential nature;
- Resonate across the enterprise;
- Trigger a positive emotional response;
- Support your company's cause.

From Traits to Emotional Commitment

Emotional energy is released as traits are defined because traits, when well-articulated, reinforce and remind people within an organization of their sense of belonging to something larger than themselves. People want to feel rewarded and recognized. They want to feel the pleasure of being part of a team. They want to learn. They want to work with others who are capable and committed. They want to be part of a culture that fosters all these qualities.

When they find such a culture, they choose to be part of the enterprise. Work is no longer just transactional. They are reminded of the passion and curiosity that led them to their chosen field. They feel they can excel at their job, and they are ready to experience feelings of pride, belonging, adventure, achievement, and other personal benefits of accomplishment.

A Critical Few Behaviors

Any leader who is struggling to understand how to harness emotional energy to drive priorities faces a basic challenge: How do you go from diagnosing to directing? How do you go from just talking about how things should happen to actually getting people in key places to take actions that yield better results?

The idea that changing behaviors, rather than mindsets, is the most practical way to intervene in an organization's culture is at the heart of the critical few approach. Charles Duhigg, author of ***The Power of Habit: Why We Do What We Do in Life and Business***, writes persuasively about the transformative power of keystone habits.

For Duhigg, a keystone habit is "a pattern that has the power to start a chain reaction, changing other habits as it moves through an organization." In other words, if you want to change the way people think, you don't start with or rely primarily on rational argument. You change what they do, even if it doesn't come naturally to them at first. Over time, as the new behavior becomes a pattern, they will likely change how they feel about doing it.

Finding a Slimmer Margin

A few years ago, James Thomas led work with a major oil company on a behaviors program designed to shift elements of its global culture to better align with its strategic objectives. One of these objectives involved an organization-wide need to operate at a slimmer margin. As a way of surfacing potential ideas to accomplish cost savings, platform managers were encouraged to conduct weekly meetings focused specifically on cost-saving ideas.

In these conversations, managers pointed out the monumental operational expense of repairing or even replacing equipment that had been mishandled. As it turned out, many of the front-line people who used these machines on a daily basis simply weren't aware of their costs. They had not connected their individual behavior (how they handled equipment) to their organization's larger goal (managing costs for competitive advantage).

Once this connection had been clarified, the people themselves came up with ideas to better economize. At one site, a front-line employee proposed labeling all the machines with price tags. A discernible drop in repair costs was the immediate result.

One employee then pointed out that the general practice of running cooling fans at all times was superfluous when the temperatures dropped. Thus began a new practice of turning off fans when they weren't necessary, leading to further cost savings. Idea by idea, more cost-conscious ways of behaving came into being, spreading organically across the organization. The behaviors moved from one-time acts to ingrained ways of getting things done. Thus, a new way of behaving became more prominent in the overall culture.

From Keystone to Organization-Wide Behaviors

What is required to apply this simple concept of keystone behaviors to the transformation of a complex global organization? Time, patience, and the willingness to be selective.

First, let's make clear what is meant by behaviors. Behaviors should be general enough to apply to all groups and levels; simple enough for the newest person to be able to understand; stringent enough to be related to the organization's strategy; and specific enough to be based on the organization's existing cultural strengths and challenges.

> Changing everything at once is impossible. Focusing on just a few behaviors allows for consistency and coherence.

Some effective organization-wide behaviors include the following:

- Use business goals and the mission to guide day-to-day project work and decisions;
- Enable others to make decisions;
- Foster explicit conversations about trade-offs between quality, speed, and budget;
- Get to know others in social settings;
- Look proactively for upstream and downstream implications before making system changes.

Note the primary characteristics they have in common: To begin, they are concise and coherent. They are also directive. Each begins with a verb, and this is deliberate. This syntax choice reflects the ultimate goal for any critical behavior: It can be acted on. It isn't an emotion, an attitude, or a perception.

Note that there are no perfect behaviors. A behavior that is effective at one company may not be effective at another. An effective behavior for your company should

- Harness existing sources of pride or emotional energy to drive intrinsic motivation toward your aspirations;
- Address barriers that get in the way of realizing your aspirations;
- Encourage the replication of actions that enable your goals.

Although not every behavior will accomplish all three of the goals listed above, each behavior should accomplish at least one.

The best way to identify the behaviors that work for your organization is to do this exercise in parallel with the process of agreeing on your culture traits. You will use many of the same sources of information: interviews and focus groups, existing assessments, existing employee engagement surveys, and your own observations. During your detective work, you can compile a comprehensive list of behaviors that you believe have the potential to help the company achieve its aspirations.

Behavior Selection: The Critical Few

Now comes the fun (and the extremely challenging) part: selecting from your long list to attain the critical few. Why the emphasis on just "a few"? You need somewhere to begin. Changing everything at once is impossible. Focusing on just a few behaviors allows for consistency and coherence.

Some of the potential prioritization criteria include leadership support (will senior leadership adopt and role-model the behavior?); impact and relevance (will the behavior impact the most critical areas/business objectives?); impact on motivation (does the behavior change create motivation and momentum for follow-up efforts?); ease of implementation; measurability; and other elements.

To select their critical few behaviors, some organizations engage in conversations about trade-offs. Others use a voting process, which can vary from the public and very low tech, like a simple show of hands, to the private and electronic, like a voting tool.

And how will you know that you've chosen the right behaviors? There are no perfect few behaviors. Likely, if you have been thorough and thoughtful in developing the long list, any of the behaviors would be useful and effective in moving your culture forward. The process of deciding which ones to prioritize is, in and of itself, a form of intervention.

A Few Authentic Informal Leaders

In Jon Katzenbach's (aka Katz) decades of work in this field, one of his formative client experiences was his opportunity to advise General Motors as it climbed out of severe financial distress following its declaration of Chapter 11 in June 2009.

For CEO Fritz Henderson, harnessing emotional energy to drive GM's change priorities was not an option—it was an imperative.

Katz's recollection of early conversations with Henderson is vivid. "Everyone is telling us to change our culture," Henderson lamented. "And people are going to expect to see it happen right away. In fact, they want it to have happened yesterday. Here's the trouble: I know that simply isn't possible. A culture takes shape over decades. This is true anywhere; it is especially true at GM. Our culture is global, complex. It is a challenge just to understand it, let alone to replace it or guide it toward change."

Henderson; GM's head of leadership and culture, Chris Oster; and Katz all agreed on a core premise: General Motors' leaders must work "with and within," rather than against, the strong prevailing culture.

Henderson believed that steering GM through turbulent waters required a deep, intuitive understanding of culture. His culture council formed a strategy council of very well-respected informal leaders from the front line and middle management to serve as a sounding board and voice of the people: "Fritz's 50." Members of this group were not the high potentials on a clear path to senior leadership; rather, they were solid citizens, many of long tenure, most at the front line or lower middle management.

Throughout GM's storied turnaround, Fritz's 50 played a crucial role. They expanded to include other configurations. These groups gave the CEO and other senior leaders a ground-level, authentic view of the day-to-day challenges that stood in the way of achieving their cultural and behavioral priorities.

They were also able to translate the leaders' core messages about GM's need to transform into plain language and emotionally appealing stories that were crystal clear to their peers. This helped generate the kind of emotional support that Henderson and subsequent senior leaders across GM needed to be successful.

Defining an Authentic Informal Leader

Let's start with what they are not: Authentic informal lead-ers are not on your executive team or in any other highly placed position on your organization chart. Formal leaders play a role in any effort to evolve a culture, but their influence and position mean that they are already empowered to do so.

AILs also aren't your high potentials, the superstar performers who are next in line for formal leadership roles. Most of them do not harbor those aspirations; their basic motivations go well beyond money and position. This is precisely the reason they can add a dimension of influence that complements formal programmatic efforts.

AILs are individuals whose social capital and emotional intuition set them apart from their peers. They are able to interpret and harness the emotional tides present in any organization. They are able to sense not just the feelings of other specific individuals but the collective feelings of the organization as a whole.

This gives AILs the power to anticipate and understand how and why a "rational" leadership decision, like eliminating a flextime arrangement that few employees had taken advantage of, might trigger a negative and unexpected emotional response. (People like to believe that their work is flexible, even if they personally find it more effective to work side by side with their colleagues in the office.)

Finding Your AILs

You can find the most effective subpopulations of authentic informal leaders using a variety of methods, ranging from informal conversations to more digitally enabled methods of surfacing patterns of relationships and affiliations such as social network analysis. All these methods have a crucial factor in common: They differ from the formal HR mechanisms used to identify the top candidates for strategic moves or promotions.

Any process or method should help you organize, synthesize, and pressure-test the collective intuition of a range of people from across your organization. Below are some pointers to help you begin:

- **Use your networks to seek recommendations—and encourage others to do the same**. Send emails to colleagues, describing the kind of person you're looking for, and ask for suggestions. Ask your team to do the same.
- **Consider your critical few behaviors as a**

Interventions, when well designed, aim for the front line, where work gets done. They rewire how people work together day to day.

starting point. Keep your desired behaviors in mind. You're looking for the informal leaders who "see it" (recognize the value of change), "get it" (understand the reasons), "want it" (are committed to change), and, in most cases, already "breathe it."

- **Seek and explore the pockets where expectations are being exceeded**. Seek your company's pockets of excellence—especially those where success defies logic. It's likely that AILs are driving this performance.
- **Start with "ideal" candidates**. To establish an effective initial group, you must carefully select, develop, and test your informal leaders. Begin with the best of the best. Even if initial efforts turn up only a dozen people who meet the criteria you've defined, that's enough to start.
- **Start subtle and then celebrate**. Keep the selection process under the radar, but announce the selection with appropriate fanfare and acknowledgment.
- **Encourage viral spread**. After several meetings, the first group can expand. They should enlist the next informal leaders.

Work with AILs should be ongoing throughout your culture evolution process, taking the form of a series of discussions. You will ask for AILs' feedback on leaders' ideas. You will also ask them how they achieve their goals. Working with the energy of AILs is the best place to dig into cultural obstacles and to determine how you can align strategy, operating model, and culture.

Measuring Cultural Action

As leaders digest and respond to the theory of the critical few, they ask two questions. The first is, "How do I actually get people to act differently?" And the second is, "How will I know if my culture is improving?"

The answers to these questions are deeply intertwined. Cultural situations evolve slowly over time. You can't point your finger and mandate behavior change. But you can intervene to create the conditions that make the right behaviors emerge. That's why the word "intervention" is used here as a broad term for any deliberate act that an organization undertakes to explain, encourage, reinforce, or reward critical behaviors.

The Key to Effective Interventions

The most effective interventions have three characteristics. First, they evolve out of the critical few-behaviors discussions, and therefore they are, innately and by design, coherent with the overall message about how the desired behaviors will support the business.

Second, they track and measure the tangible impact of putting the new behaviors into action—and, ideally, even attach these new ways of behaving to "hard" business results. Third, they appeal to the minds and hearts of those impacted.

Just as AILs are distinct from cultural ambassadors and change champions, behavior interventions are distinct from the top-down communications programs that accompany traditional transformation programs—the type that tend to result in colorful posters and wallet cards. Interventions, when well designed, aim for the front line, where work gets done. They rewire how people work together day to day.

As in the area of selecting traits, behaviors, and informal leaders, the key to interventions and measurement is to focus on a critical few. You select a few targeted areas of your organization where a shift toward the identified behaviors is most likely to have a tangible impact that can be seen and felt in a manner that helps people rally behind your cause.

Choosing the business issue or aspirational metric on which you will focus your interventions is important. It's also crucial to choose the area in your business—be it a department, facility, or function—that would be most opportune for the first pilots.

Start by looking for those executive and department leaders who support you, who are clearly energized by the topic of behavior-led transformation. Then, from this

group, filter down to those who lead a manageable, mid-range area of the business.

Measurement as an Approach, Not Just an Outcome

Ultimately, your goal should always be to find a way to attach new behaviors to improved business results, even if that link can seem tenuous or indirect. The continuous effort to find that link, to make it real and tangible for others, should be your north star.

There are always opportunities to capture valuable data on effectiveness along the way. You can—and should—trace practical, tangible, simple information, like the number of people involved, responses received to email communications that are sent out related to the overall culture effort, and traffic to intranet sites that promote critical behaviors.

This will help provide a baseline reference data set, allowing you to trace how momentum builds over time. Also look for data your organization is already capturing, such as employee engagement scores, and track whether any of these scores rise.

This is especially effective if you preselect, early on, specific questions that relate to behavior areas where you are trying to make a difference—for example, if you have a critical behavior related to empowering employees at all levels, you might narrow in on a specific engagement survey question, such as the response rate to "I feel encouraged to come up with new and better ways of doing things." You could even break out this data by level and investigate how the rate changes over time or by area of the business and assess whether any pilots improved those scores.

Finally, pay attention to stories that emerge along the way. Often, when an organization is successfully evolving its culture, stories about new ways of behaving that demonstrate "it's not just business as usual around here" pop up and go viral. An incident becomes a story that others repeat because it contains some powerful truth—an implicit lesson that resonates with other experiences and conversations.

You want to choose metrics just like you choose behaviors—not according to some abstract set of ideals but by paying close attention to the way real work gets done and what matters emotionally to people.

Culture is never all good or all bad. Focus not on an abstract idea of what the "best" culture is but on what is strongest, most reliable, and most effective within your current culture. As long as we keep culture a part of our focus, it will enable us to sustain our distinctiveness over time—whatever the future holds.

THE SUMMARY IN BRIEF

The Curiosity Curve: A Leader's Guide to Growth and Transformation Through Bold Questions examines curiosity as a practical leadership capability and an organizational asset rather than an innate personal trait. Drawing on professional experience and research, Dr. Debra Clary frames a central problem facing modern organizations: despite curiosity's role in innovation, learning, and adaptability, many workplace cultures suppress it through norms that favor compliance, efficiency, and certainty.

The core argument is that curiosity can be intentionally cultivated and calibrated to support performance, engagement, and resilience—provided leaders understand how it operates across individuals, teams, and organizations. The concept of an optimal curiosity setpoint highlights the risks of both too little and too much curiosity, underscoring the need for balance.

Building on this foundation, ***The Curiosity Curve*** offers a practical framework for diagnosing cultural barriers and guiding leadership behavior, treating curiosity as a learnable discipline embedded in daily practices, decision-making, and organizational systems that shape how people question, collaborate, and respond to change.

IN THIS EXECUTIVE BOOK SUMMARY

- Understand how curiosity functions as a leadership capability that drives performance, engagement, and organizational resilience
- Learn how to calibrate curiosity to avoid stagnation on one end and distraction on the other
- Explore a practical framework for diagnosing and strengthening curiosity across individuals, teams, and organizations
- Discover concrete practices leaders can use to embed curiosity into daily decisions, behaviors, and systems

INTRODUCTION

Are You Curious?

It was the late 1980s, and I had just been promoted to regional sales manager at Frito-Lay. I was determined to prove that real leadership isn't just about strategy—it's about understanding the business from every angle. Our global marketing team wanted to expand beyond their signature salty snacks and venture into a new category: sweet treats.

My biggest challenge was winning over the route drivers—a critical group. They were already stretched thin, and I had to convince them that adding a new line of cookies to their deliveries wouldn't just mean extra work; it could mean extra income in the form of commissions.

Determined to avoid a standoff, I decided that instead of simply telling them how things would go, I'd ask questions. I would listen to what they had to say. Immediately, the objections poured in, but I didn't argue. I wrote down all they said, and what began as a wall of resistance turned into a collaborative brainstorming session.

The result? We achieved one of the biggest route sales averages across the country.

That's the transformative power of curiosity. It's not just about solving problems; it's about empowering others to think differently, to collaborate, and to discover solutions together. It uncovers hidden potential and reframes challenges as opportunities.

Leadership has evolved beyond simply making decisions and issuing directives; it now demands fostering a culture where questioning, innovation, and collaboration are not just encouraged but embedded into the fabric of the organization. Without the capacity for employees to embrace and act on their curiosity, an organization risks losing its competitive edge. Yet, while the importance of curiosity is acknowledged, sustaining it presents significant challenges.

Many, particularly those under forty years old, refuse to commit to workplaces where curiosity is stifled. They seek environments that encourage their creative input and exploration, signaling that the future of work will favor organizations that make room for curiosity, engagement, and active participation.

While this may be the case, sustaining curiosity within a company culture presents significant challenges. Too often, employees suppress their curiosity, feeling constrained by a lack of time and support or by a culture that values compliance over innovation.

Curiosity is one of the most powerful yet underestimated forces in the world. It is the spark that has driven every major breakthrough, the instinct that compels us to seek out new experiences, and the unseen force shaping how we navigate challenges. Despite this, we often suppress this urge in people—especially in professional settings, where efficiency, predictability, and expertise are prized over exploration, questioning, and discovery.

CHAPTER 1

The Nature of Curiosity

Curiosity is more than just asking obvious questions; it means probing deeper and seeking out what isn't immediately visible. Yet surprisingly, we often lose this instinct in both our personal and professional lives. The result? We become less engaged and more prone to boredom and frustration.

Too often, we're led to believe that curiosity is an innate talent reserved for scientists, artists, or entrepreneurs. The rest of us might see ourselves as less curious and, by extension, less creative or innovative. But this perception overlooks a critical point: curiosity is deeply intertwined with creativity.

When curiosity is curtailed, so is the creative process, leading to stagnation and a lack of meaningful progress. This affects not just individuals but entire teams and organizations, where innovation and problem-solving are essential for success.

By reframing curiosity as a skill, we can recognize its potential to drive progress and foster meaningful change. When we acknowledge that curiosity compels us to take risks—switch roles, change companies, move to new places, seek out new challenges, or even embark on new personal journeys—we start to see it as an essential part of our growth.

The good news is that levels of curiosity can be measured. It's possible to discern an individual's level of curious behavior, as well as an organization's context for curiosity. There are seven tell-tale signs of curiosity that you can spot in yourself and others. To notice these clues, focus on:

- the words people use
- the questions they ask
- the empathy they feel
- the irritation they tolerate
- the disruption they cause
- the jokes they tell
- the ways they reflect on their own thoughts and assumptions

> Without the capacity for employees to embrace and act on their curiosity, an organization risks losing its competitive edge.

The bad news is that, in most parts of the world, and certainly in business, there is a growing gap between the curiosity we need and the curiosity we have. The impact is profound as people have fewer innovative ideas, more rigid thinking, and missed opportunities for meaningful change. While curiosity is a natural human impulse, social conditioning and educational systems often discourage persistent questioning, gradually eroding this instinct over time.

What is the takeaway? Curiosity is contagious. By modeling curiosity, whether as a leader, teammate, or friend, we inspire others to do the same.

It's never too late to reverse direction if you find yourself exercising less curiosity than you would hope to. Curiosity isn't like a fine wine that disappears if you didn't bottle it early—it's more like a random houseplant you forgot to water for years. A little attention, some sunlight, and it'll start sprouting again.

Start small by carving out moments in your day to ask *what if* instead of assuming *it is what it is*. Seek out experiences that challenge your comfort zone. Celebrate the discoveries you make, big or small. Every step you take to rekindle curiosity is an investment in your own potential and the future of those around you.

CHAPTER 2

The Neuroscience of Curiosity

Five years ago, I set out to explore the link between curiosity and business performance. I believed then—and still do—that curiosity is a superpower. It ignites creativity, offers a new lens for problem-solving, and serves as inner fuel for personal and professional growth.

For hundreds of years, great minds like Plato, Socrates, and Descartes have searched for the secret of achievement. What makes one person achieve success and another not? The answer may involve optimal curiosity.

Curiosity exists on a delicate continuum: too much, and we're overwhelmed; too little, and innovation grinds to a halt. Striking the right balance is what drives progress and keeps teams thriving.

In business context, decision-makers must calibrate their curiosity carefully. Too little leads to stagnation, while too much results in distraction and frustration. The right balance varies from one company to the next and may also differ by individual or across the course of a career.

CHAPTER 3

Curiosity Is Good Business

I wasn't surprised to find that curiosity is good for business. Every person in a company is a link in a chain of intrigue. At least, that's the way it's supposed to be. In real life, even the most innovative companies, like Frito-Lay, don't fully know how to cultivate the curiosity they need all the way through the hierarchy.

Something I've seen time and again in my career is that questions shape the course of conversations, decisions, and even reputations. They can reveal hidden truths, build bridges, and open doors to unexpected insights. But they also hold the power to unravel carefully constructed moments when they're not asked.

In leadership, the power of a question is invaluable. The best leaders I've known use questions as their most powerful tool—not because they lack answers, but because they value others' perspectives. They know that one good question can unlock an idea that transforms a project, sparks a connection that strengthens a team, or prevents a misstep that could cost time, resources, or credibility.

In contrast, not asking the right question or jumping to conclusions often builds walls instead of bridges. For anyone who wants to influence, inspire, or connect, questions remain one of the most effective tools available.

Innovation is the ability to put forth new ideas and turn them into successful products, services, and practices that drive growth and profitability. Organizations with curious cultures tend to attract and retain curious individuals, creating a virtuous cycle in which ideas build on one another and experimentation is encouraged. When employees feel empowered to ask questions, challenge assumptions, and propose new ideas, they are more likely to uncover novel solutions and develop new offerings. This dynamic is especially effective

when teams bring together divergent thinkers who are curious about one another's backgrounds and knowledge.

Curious cultures foster collaboration and knowledge-sharing among employees. When individuals are curious about each other's experiences and expertise, they are more likely to reach out, connect, and work together toward common goals. Over time, this mutual engagement reinforces participation and commitment, as employees feel valued for their contributions and are inspired to give their best work.

Curiosity also strengthens resilience. Individuals and teams who remain genuinely curious about changing circumstances and market conditions are more likely to find ways to manage them.

The message is clear: If companies want to unlock the full potential of their workforce, it's not enough to hire curious individuals. They must also create a culture that values and rewards exploration, learning, and innovation. Doing so requires commitment. Employees need room to ask questions, explore new ideas, and challenge conventional wisdom, and organizations must promote leaders who embody and champion those behaviors.

CHAPTER 4

The Four Factors of Curious Companies

Curiosity is a matter of strategic choice. The decisions we make as leaders, team members, and visionaries don't just shape our own behavior—they create ripples that affect the culture of curiosity throughout an organization.

In our research, we found that a company's curiosity level can be understood through four specific dimensions that reflect its cultural attitude toward curiosity. We call these *curiosity growth factors* because of the ways they influence both individual performance and collective success.

To better understand and measure an organization's level of curiosity, four core factors provide a practical framework for assessing the broader culture of curiosity within a company. Each factor influences curiosity in a distinct way, revealing how it can be nurtured to support growth and achievement. Those four factors are:

1. Exploration
2. Focused engagement
3. Inspirational creativity
4. Openness to new ideas

The first two factors, exploration and focused engagement, are often driven by individual actions and affect the ways people seek out, process, and implement new information.

Exploration refers to the drive to look beyond the familiar, to discover what lies beyond the conventional, and to investigate new areas that might unlock opportunities for growth and innovation. Individuals with high levels of exploration are energized by novelty and demonstrate a willingness to take calculated risks. They're the ones digging into new technologies, challenging assumptions, or identifying emerging trends that might benefit the organization in the long term.

Focused engagement, on the other hand, is about channeling curiosity into purposeful action. It's not enough to merely explore possibilities; this approach requires that people bring their insights back to the core mission and goals of the organization. This factor ensures that curiosity doesn't dissipate into distraction but instead becomes a catalyst for problem-solving, enhanced productivity, and strategic advancement.

The remaining two factors—inspirational creativity and openness to new ideas—operate on a broader, more collective level. These elements shape the organization's cultural backbone and influence the ways teams collaborate, share insights, and spark innovation together.

Inspirational creativity is about fostering an environment where imaginative thinking is encouraged and where creative problem-solving is not only accepted but celebrated. Organizations that embrace this factor give their people the space to experiment, ideate, and connect the dots in novel ways. Inspirational creativity is often driven by leaders who encourage unconventional approaches, which can energize teams and bring diverse perspectives to the table.

Openness to new ideas is the final, vital component of a culture of curiosity. It reflects an organization's collective willingness to receive, consider, and integrate new perspectives. When an organization prioritizes openness, it signals to employees that their voices and ideas matter, and it nurtures an environment where everyone feels empowered to contribute. This factor is especially important for fostering inclusivity, as it allows organizations to embrace a range of viewpoints and adapt swiftly to shifting markets, technologies, and customer expectations.

These four factors become visible in leadership behavior—particularly at the executive level. The following questions help illustrate how each factor shows up in practice:

1. **Exploration**: When new opportunities or challenges are raised that seem promising, does the CEO pay attention? Is there a potential budget allocated to learn-

> The best leaders I've known rely on questions—not because they lack answers, but because they value others' perspectives.

ing about the implications? Does the CEO express interest in the results of that initial exploration?

2. **Focused engagement**: Does the CEO lose interest in projects before they are completed? Are there clear priorities set for the company, with curiosity channeled down those paths? Does the CEO build strong working relationships with key people throughout the enterprise, particularly in the innovation and production domains?
3. **Inspirational creativity**: Does the CEO take pleasure in product launches and new offerings? Is it easy to raise questions and collaborate at the top levels of the company? Do people recognize the CEO's priorities and feel interested in taking part?
4. **Openness to new ideas**: Does the CEO express interest in concepts from outside the strict domains of the company? Are there diverse teams, with people who have different backgrounds and ways of thinking, at the top of the organizational hierarchy? Is there always a sense that the CEO will pull an amazing new offering or idea seemingly out of thin air?

In curious cultures, managers, team leads, and even frontline supervisors play pivotal roles in fostering an environment where curiosity can flourish. These leaders often have a direct influence on their teams' daily experiences, guiding how curiosity is applied to specific projects, customer interactions, and problem-solving initiatives. When leaders at all levels ask questions, encourage exploration, and remain open to new ideas, they actively create the conditions for innovative thinking and continuous learning.

The good news is that just as curiosity can be cultivated as a personal skill, it can also be developed as a leadership approach. Anyone in a position of influence—whether leading a small team or a major division—can grow their ability to lead with curiosity.

Cultivating curiosity, however, requires intentional practice. There are several concrete ways leaders can begin embedding curiosity into their daily interactions and decision-making:

1. Ask open-ended questions

Asking open-ended questions requires genuine curiosity and a real desire to learn. It also means recognizing that others may see things you do not and demonstrating compassion and kindness. At times, this may require setting aside your ego and showing a willingness to learn rather than prove a point.

2. Practice active listening

Active listening helps lay the groundwork for a culture of curiosity and helps employees feel valued. It enhances problem-solving, decision-making, and conflict-resolution by fostering a deeper understanding of the issues at hand. Practicing active listening requires being fully present—listening not only to words but also to nonverbal cues—and following up with clarifying questions or thoughtful paraphrasing to confirm understanding.

3. Embrace feedback

A positive relationship to feedback is a clear indicator of genuine curiosity and a hallmark of effective leadership. The ability to receive feedback without defensiveness is one of the strongest predictors of career trajectory, as it helps you understand how you're perceived, how your actions impact others, and where you may need to adjust your approach to lead more effectively.

4. Form and test hypothesis

In organizations with little regard for curiosity, problems are experienced as tension that must be resolved quickly. In curious companies, instead of jumping to a solution, groups form and test hypotheses on a small scale. If a solution works, it can be refined or expanded; if it does not, curiosity guides the group toward a new hypothesis.

5. Engage in unlearning

Self-curiosity begins with unlearning—letting go of limited beliefs, perceptions, and habits that no longer serve you. Through this process, you can reframe your perspective and absorb new skills and a new mindset. Reflective meditation can support unlearning by helping you examine the origins of your thoughts, attitudes, behaviors, feelings, and biases.

CHAPTER 5

Exploration

Exploration, the ability to actively seek out new ideas and challenges, is essential for personal growth and for organi-

zations that want to succeed. In an organizational context, exploration is active. Teams and companies deliberately seek out new experiences, ideas, and challenges. They pursue agility, adaptability, and robust leadership, understanding that these attributes strengthen with exposure to fresh perspectives and innovative ideas.

In companies that value exploration, when challenges arise, people welcome the chance to learn and solve problems creatively. Leaders cultivate environments where employees feel free to try new approaches without fear of blame. Failures are seen as learning opportunities, and rather than micromanaging, leaders trust their teams to find their own paths to success.

Exploration also extends to potential future opportunities. Employees are encouraged to network beyond their immediate teams and collaborate on joint projects, fostering connections that spark new ideas. Their voices matter, and their development is actively supported by leaders who recognize that diverse perspectives lead to stronger solutions. By creating an environment where differences are valued, the organization builds a foundation for innovation and resilience.

At the individual level, supporting exploration means creating space for employees to pursue ideas they are passionate about, even if these ideas seem outside their usual scope. This could include supporting side projects or encouraging attendance at cross-departmental meetings or external events.

When employees feel empowered to explore, they develop stronger problem-solving skills, adapt more readily to change, and bring fresh ideas back to their roles. Encouraging personal exploration also enhances engagement; employees who feel their curiosity is valued tend to be more invested and committed to their organization.

At the team level, you can encourage exploration by promoting collaboration and cross-functional projects. Consider creating opportunities for team members to shadow colleagues in different roles or to participate in idea exchanges, where employees from various teams come together to brainstorm. Team exploration not only broadens perspectives but also strengthens trust and cohesion, as individuals feel free to share insights without fear of judgment.

At the organizational level, fostering exploration involves embedding curiosity into your company's core values. This might mean formalizing initiations like innovation days, where employees dedicate time to pursuing their ideas, or implementing learning stipends that allow employees to attend conferences, courses, or training sessions. Building a culture that values exploration means providing both the time and resources for employees to engage in continuous learning.

CHAPTER 6

Focused Engagement

Focused engagement goes beyond simply being busy or productive; it involves channeling curiosity into meaningful work with sustained attention. For individuals, this means developing habits that allow you to immerse yourself in tasks, explore challenges deeply, and maintain focus over time. This kind of engagement enhances personal performance and lays the groundwork for curiosity-driven innovation.

When people work with sustained focus, they experience greater purpose and satisfaction. It's the difference between going through the motions and being fully present in what you do. In a world filled with distractions, the ability to concentrate with intention, creativity, and clarity becomes increasingly valuable.

At its core, this approach amplifies curiosity by directing it toward problem-solving, skill development, and opportunities for growth. Research shows that people who are highly engaged in their work report higher job satisfaction and are more likely to achieve their goals.

Focused engagement leads to deeper understanding, stronger problem-solving, greater resilience, and personal growth. It does not occur by chance; it requires intentional effort and habits that support sustained attention. By developing those habits, you can channel curiosity into greater productivity and innovation.

The following strategies offer practical ways to strengthen your ability to engage fully in your work.

- Start with curiosity – approach every task with a sense of curiosity.
- Eliminate distractions – identify and remove common distractions that pull your attention away.
- Use time-blocking – schedule blocks of uninterrupted time for your most important tasks. During these periods, commit to deep work, resisting the urge to multitask or shift focus.
- Set clear intentions – begin every task with a clear understanding of your goal.
- Practice mindfulness – incorporate mindfulness techniques to stay present in the moment.

> Curiosity isn't a luxury; it's a leadership necessity.

- Embrace flow state – aim to enter the flow state where you're fully immersed and energized by your work.
- Celebrate small wins – acknowledge and celebrate progress, even on small milestones.

CHAPTER 7

Inspirational Creativity

Inspirational creativity is the practice of fostering an environment where imagination, fresh perspectives, and resourcefulness are encouraged and actively supported. Unlike creativity that focuses solely on solving immediate problems, inspirational creativity invites people to think beyond the usual constraints, sparking innovative ideas, and energizing teams toward new possibilities. It involves creating a culture where employees feel empowered to ask *what if* questions, reimagine traditional approaches, and pursue ideas that may initially seem unconventional.

In a workplace with inspirational creativity, employees at all levels feel motivated to think expansively, knowing their ideas are valued and their contributions make a difference. Leaders play a key role in setting this tone by encouraging risk-taking, celebrating diverse perspectives, and creating space for exploration.

The result is a more engaged and dynamic team, capable of approaching challenges in inventive ways that fuel long-term organizational growth and adaptability. Inspirational creativity can transform ordinary tasks into powerful moments of insight and innovation, making work more meaningful and positioning an organization to thrive.

As a leader, supporting inspirational creativity in individuals means giving employees the space and encouragement to pursue their ideas. This builds confidence, resourcefulness, and capacity for innovative thinking.

At the team level, encouraging creativity requires creating anenvironment where collaboration, experimentation, and open-mindedness are valued. Team-based creativity strengthens problem-solving abilities and improves project outcomes.

At the organizational level, a culture of inspirational creativity supports long-term innovation, adaptability, and resilience. When creativity is embedded as a core value, organizations are better positioned to adapt to change and seize new opportunities.

Inspirational creativity is the driving force behind organizational resilience and adaptability. By creating an environment where employees feel encouraged to think outside the box, leaders cultivate a culture where imagination and resourcefulness flourish. From individual exploration to team brainstorming sessions and organization-wide recognition programs, fostering creativity at every level also instills a sense of purpose and excitement in the workplace.

As a leader, encouraging inspirational creativity allows you to unlock your team's potential and steer your organization toward long-term success. In a culture that values creativity, employees are more motivated, engaged, and likely to bring innovative solutions to complex challenges. Inspirational creativity builds a legacy of growth and adaptability, positioning your organization to thrive well into the future.

There are numerous techniques leaders can use to cultivate inspirational creativity at the individual, team, and organizational levels. These practices help translate creative intent into everyday behaviors, including the following:

- Encourage creative skill development such as creative writing and storytelling
- Set up a curiosity corner for exploration of resources
- Celebrate individual achievements in innovation
- Encourage diverse learning experiences
- Conduct regular innovation workshops
- Use design thinking techniques
- Organize hackathons or innovation challenges
- Facilitate storytelling sessions
- Embrace a prototyping mindset
- Reward creative problem-solving
- Design flexible, inspiring workspaces
- Promote diversity and inclusion initiatives
- Support learning from failures with after-action reviews
- Launch an ideas portal
- Develop recognition programs for innovation

CHAPTER 8

Openness to New Ideas

The factors discussed so far can only succeed if an organization is genuinely open to new ideas and willing to act on them. Curiosity cannot be performative; it must be reflected in decisions, behaviors, and outcomes. Openness to new ideas may be the most high-leverage of the four factors because it determines whether curiosity translates into meaningful change.

Curiosity naturally drives people to seek out new experiences, ideas, and challenges. This willingness to expand knowledge and adapt to changing conditions is a defining trait of curious, agile individuals—and of organizations that remain competitive over time. In cultures that prioritize openness, people actively listen to perspectives that differ from their own, and ideas are evaluated on their merit rather than their conformity to existing norms.

When openness is embedded into the culture, curiosity fuels creative problem-solving and innovation. The most innovative organizations make room for disagreement, experimentation, and discovery, recognizing that progress often emerges from questioning assumptions rather than reinforcing them.

CONCLUSION

The Future of Curiosity

Each of the four curiosity factors—exploration, focused engagement, inspirational creativity, and openness to new ideas—supports growth, resilience, and adaptability. Together, these qualities are essential in today's workplace. A culture of curiosity enables organizations to respond to rapid change with agility rather than cling to outdated practices.

Curiosity isn't a luxury; it's a leadership necessity. With deliberate conscious effort, leaders can nurture and develop curiosity, building a workplace culture where it thrives regardless of individual starting points.

The impact of fostering curiosity in the workplace, however, extends beyond individual jobs and daily tasks. It influences leadership styles, business strategies, and even the structural foundations of organizations. Leaders who embrace curiosity inspire their teams to seek knowledge, adapt to change, and approach problems with an open mind. This leads to a shift in leadership from directive to supportive, where leaders act as facilitators who nurture growth and innovation.

Curiosity-driven organizations also redefine their missions and values, embedding openness, adaptability, and continuous learning as pillars of their identity. This reshaping of organizational structure encourages collaboration across teams and departments, breaking down silos, and promoting a culture of inclusivity.

In conclusion, as you consider the role of curiosity in your life and work, think of this: each of us has the potential to be a catalyst for curiosity. In a world of 7.9 billion people, we are here because of the curiosity of those who came before us.

They dared to question, to try, to learn. They pushed boundaries, took risks, and persevered through challenges so that we might live in a world where exploration, innovation, and human connection are possible. Now it's our turn to honor that legacy by nurturing curiosity in ourselves and others.

Dr. Debra Clary is a narrative scientist and transformational leader with more than three decades of executive experience at Fortune 50 companies. She is the founder and CEO of The Clary Group, where she helps organizations cultivate curiosity-driven mindsets that accelerate growth, performance, and innovation. Clary has held senior leadership roles at globally recognized brands including Frito-Lay, Coca-Cola, Jack Daniel's, and Humana. A viral TEDx speaker, international keynote presenter, author, and award-winning film producer, she is known for compelling storytelling grounded in strategy. She earned her doctorate from The George Washington University and received the Ralph Stone Leadership Award there.

THE SUMMARY IN BRIEF

Many companies believe that if they develop the right innovation, they will disrupt their markets forever and drive growth worthy of a magazine cover story. But in ***The Disruption Mindset,*** best-selling author Charlene Li explains that's not how disruption works. Disruption doesn't create growth; growth creates disruption.

Disruptive growth requires companies to make tough decisions in the face of daunting uncertainties: Should we bet our company's future on next-generation customers or today's reliable ones? Should we abandon our current business model for an entirely new one? Making bold changes demands bold leadership and, often, massive cultural transformation.

Li shows that organizations don't have to be tech startups or have the latest innovations to transform. They need to develop a disruptive mindset that permeates every aspect of the organization. ***The Disruption Mindset*** will inspire leaders at all levels to answer the call to lead disruptive transformation in their organizations, communities, and society.

IN THIS SUMMARY, YOU WILL LEARN:

- Why strategy, leadership, and culture are the three key elements for developing the disruption mindset.
- To focus your strategy on future customers.
- The importance of building movements for successful disruption.
- To hardwire disruptive beliefs into your organization's operating system.

Introduction

Most innovation efforts fail because they focus on developing innovations without thinking through whether and how these will create growth and change.

Disruption is not only innovation. Many companies want innovation to be a carefully managed process with minimal disruption to the status quo. Innovation is the snooze button of corporate strategy, pushing tough decisions into the future. Don't settle for innovation alone.

Disruption is not about technology. Instead, it's the application of existing technologies in new ways that enables it. Uber was a simple app that matched available drivers with riders, transforming the customer experience using GPS tracking and seamless account payment. While each of these technologies had existed for years, it was bundling them together that was unique and disruptive. Disruption is not always fast and unpredictable. And it isn't only for startups.

So what *is* disruptive transformation? Transformation is the process of changing from one state to another. You can go through that change process in a gradual, incremental way that causes as little discomfort as possible. Or you can tackle it head-on and bear the stress and strain of the change to capture the opportunities created faster and sooner. Here, the focus is on the latter because there is too much at stake, and too many problems and issues to address, to settle for the slow path.

Research has uncovered three elements common to the organizations that have thrived with disruption.

Element #1: A strategy inspired by future customers to make big-gulp decisions. To create disruptive transformation, you need a strategy—a plan of what you will do and won't do to achieve your objective because you can do anything, but you can't do everything. A disruptive transformation strategy requires that you turn your back on your current customers, their attractive size and profitability, and anticipate where they are going to be in the future, where the growth and value potential will be. Customers will always move faster than the organizations chasing after them.

Element #2: Leadership that creates a movement of disruptors. Disruptive change requires a special kind of leadership. It requires that leaders actively and systematically create a movement to achieve the future desired state. There will be times when the road ahead is strewn with boulders. Being part of a movement sustains and energizes people to find a way to climb over those obstacles. When you are part of something bigger than yourself, you set aside your personal pain and discomfort to achieve that shared goal.

Element #3: A culture that thrives with disruption. To execute your disruptive growth strategy, you need a culture that thrives at the edge of disruption—one where everyone is focused and acts in concert every day to make that transformation happen. The problem for most incumbents is that culture takes years to set in, and it's incredibly difficult to change.

Let's learn how to move from talking wistfully and vaguely about "disruption" to making disruptive transformation and exponential growth a part of your agenda every day.

The Simple Secret of Successful Disruptive Strategies

A new technology rarely results in breakthrough growth. Google and Facebook didn't introduce the search engine or the social network, respectively; their products were third-generation iterations of technology that already existed. Breakthrough growth is born from an uncanny ability to see the future and direct all the resources of your organization to chase after it.

For most incumbent organizations, there's just one problem: your familiar, profitable, existing customers. The customers of today look pretty good. Why on earth would you drop them to go after another group of customers, especially if it's not clear if those new customers actually exist? No, no, executives say. It's much safer and better to stay with what you know.

But disruptive, exponential growth comes only from your customers of tomorrow. Future growth lies elsewhere—and you need to plan accordingly.

It is extremely difficult to accurately predict and define the future. But you don't need to predict the future. Instead, make an educated guess about one thing and one thing only: what you think your future customers are going to need. The more confidence you have in your understanding of those future customers, the more likely you will be to choose to chase after them, even at the expense of today's profitable customers.

Best Practices to Focus on Future Customer Needs

To orient a disruptive growth strategy around future customers, you need to systematically and intentionally build an ob-

A customer advisory board can provide you with insight and feedback on what you are doing well and what you could be doing better.

session about customers, and especially future customers, into the DNA of your organization. Here are a few best practices:

Put customers in your dashboards. Take a look at your personal dashboard, and see where and how customers are represented. Are they even there? If customers are in your dashboard already, how are they represented? Do you have mainly "vanity metrics"—things like counting revenues, products sold, and number of customers? Or do you include meaningful "relationship metrics"—things like lifetime value, customer satisfaction, and loyalty? Finally, is your future customer represented on your dashboard?

Spark curiosity about customers. Your employees, and especially those who interact with customers every day, have firsthand knowledge of what's really going on with customers. Digital collaboration platforms can quickly spread that knowledge to the top echelons of the organization. Ask your team to gather examples of what customers say, do, think, and feel for different types of customers. You can collect these examples from formal interviews, focus group sessions, or informal observations from listening in on call center calls.

Create a customer advisory board. A customer advisory board (CAB) can provide you with insight and feedback on what you are doing well and what you could be doing better. Don't stack the CAB with your biggest and best current customers. Instead, find the customers who push you to do things in a different way. Ask your sales and customer service teams who the most insightful customers are, the ones who challenge the way your company works.

Preparing for the Big-Gulp Moment

If you want to create meaningful transformative change, it is guaranteed that you will not have all the answers and that not everyone will be in 100 percent agreement when it is time to make a final decision. In that moment, you will need to make the best bet that you can given what you know at that time.

So how do you prepare yourself and your organization for that inevitable big-gulp moment? Successful organizations all followed some variation of the following three-step strategy blueprint that you, too, can follow to prepare for your big-gulp moment:

Build the Case with Rigorous Research

If you want to make a solid case for your disruption strategy, here are a few things to keep in mind:

Invest the resources and time needed. Depending on how disruptive your ambitions are, you will need to set your timeline and investment horizon in terms of months, if not years. Plan and set expectations accordingly.

Secure the right data about your future customers. You will need a reference point of customer needs for your deliberations—a centering truth that everyone can look to for inspiration as well as a reality check.

Find champions within your organization. Your case will be more robust and battle-tested the more you can get other people and departments to help you build the case.

Get Buy-In with Transparency and Dialogue

The major reason people do not buy into a coming change is that they feel uncertain and unsure of what this will mean to them. If they can't understand the change, why it's happening, and how it might affect them, you can't have a discussion with them. But if they understand it, even if they don't like it, you can at least have a discussion and try to come to an agreement.

Here are some ways you can foster transparency throughout your disruptive transformation:

Invest in relationships, culture, and values long before the change. Look at the values of your organization. How can they be of service in the journey ahead? It will be a long, tough road, and being able to link the changes you are making back to the core values of the organization will be a significant asset you can draw on.

Create structure for the uncertain future. Redundancies and layoffs are almost always an inevitable and un-

fortunate part of disruptive transformation. Rather than try to avoid talking about this reality, you are better off being open about the fact that people will have to be let go so as to minimize uncertainty.

Burn the Boats

In 334 B.C., at the tender age of 21, Alexander the Great set out to conquer the formidable Persian Empire, ruled by Darius III. Alexander sailed a fleet of 120 ships across the narrow Hellespont Strait into enemy territory. He knew that his men were outnumbered five to one, but he could sense victory.

His first order to his captains: "Burn the boats." Confused, his men asked why they should destroy the one thing that could take them safely home. Alexander answered, "We will go home in Persian ships, or we will die here." They went on to conquer Persia.

When you aim for disruptive transformation, the road ahead is so difficult that you must commit yourself and your organization completely. There can be no turning back. There must be total and utter conviction that the path forward is the only one to take. The following best practices eliminate distractions and help you become wholly committed to the success of your disruptive strategy.

Set a deadline. Set a deadline, ideally one that instills a bit of a panic in you and forces you to hit it. One person bought a first-class nonrefundable ticket to Japan for a product launch.

Experience what it feels like to be all in. Give yourself and your team a taste of what it feels like to be all in with a short sprint project. Do it right, and you will all be looking forward to more.

Remove dabblers and right timers. Dabblers are people who like to dip their toe in the water, unable to commit to one direction or the other; they like to keep their options open. Right-timers find a way to say, "It's not the perfect time to move. We need XYZ." Stay away from them or, better yet, move them out of your team or even the organization. You need people who are ready to be fully committed and all in with the strategy.

Leading a Disruptive Movement

A movement is simply a group of people working together to achieve a particular set of goals. In movements, the vision and purpose develop a life of their own, moving beyond the influence of a single leader to be taken up by those who want to be a part of the change.

To drive disruptive growth, everyone affected by the growth strategy must understand it and how they play a part in it. They must also be inspired to believe that together, they will achieve things they once thought were impossible.

Disruptive leaders recognize that movements aren't controlled; they are inspired. When people are inspired, they make the movement their personal mission, going the extra mile, moving a lot faster, and driving growth exponentially.

Research reveals three ways to build a movement: identify followers and define your relationship with them, write a manifesto that inspires action, and sustain a consistent leadership presence.

Identify Followers and Define Your Relationship with Them

Imagine that a year from now, you are holding a meeting with those most involved in your movement. Who is in the room? Who's running the meeting? How are decisions made? How much are you talking during that meeting? Consider these two best practices:

Identify your first followers. You need only one or two people to get started, but don't jump at the first person who raises a hand! Take a moment to define who your ideal first follower would be—not so much in terms of a specific person but the capabilities and resources that person or persons would bring to kick-start the movement.

Define the relationship from the follower's point of view. What's in it for them? How will followers feel about their relationship with you a year from now? Trust and relationships don't develop in a vacuum; they are built with each successful interaction between people.

Write a Manifesto That Inspires Action

A vision statement is a single sentence (usually) that serves as a shorthand way to capture where you want to be in the future. The problem is that a single sentence leaves much to interpretation.

Manifestos paint a picture of the future in bold, vivid detail. A manifesto is a public declaration of the objective and intentions of the organization. It is written with future customers in mind, telling them why you exist and documenting what your organization believes in. The manifesto also attracts people—employees and customers—who want

to be part of your movement.

To write a manifesto, start with a rant. Business writer Shannon Tanton recommends identifying what's wrong with the world. How would things be so much better if only people did something differently? Then, flip the rant into a belief. Turn each negative rant into a positive statement. Then, add what you are going to do to act on that belief. A manifesto is a playbook that lays out how those beliefs will "manifest" in the real world. Follow this simple template: "We believe [that something is true] and that's why we will [do something]."

Sustain a Consistent Leadership Presence

As leaders, we've been told to be humble, to be servant leaders, to put our organizations ahead of ourselves. The problem is that we've confused being humble and prioritizing the company with not being visible—that is, not being out there reminding people of our shared purpose and vision. That's why it's important to remind them over and over again the *why* of what you are all doing.

From the start of his tenure at T-Mobile, John Legere championed listening to customers. He visited call centers to talk with employees and sit in on their calls with customers. He had a line installed in his office so he could easily listen in on customer service calls at any time. But more important, he quickly learned to harness social media platforms to drive the movement internally and externally.

It was shortly after T-Mobile's Un-carrier strategy was launched that Legere tried out Twitter (at the suggestion of his daughter) as a way to have direct contact with customers. Legere uses his Twitter presence to constantly promote T-Mobile, bash competitors, and listen to and respond to customers. He replies constantly to people who mention him on Twitter.

Why does he do this? Because he's leading by example: showing what it means to be customer obsessed and on a mission to convert everyone into a T-Mobile subscriber because he believes the organization is better for them. Legere's ability to single-handedly drive engagement with customers and prospects is a key part of the T-Mobile Un-carrier strategy.

There are two steps to leading and sustaining a movement. The first is getting comfortable with being visible and leveraging the many digital and social technologies at your disposal. The second is to be constant and consistent in feeding your movement. Listen to customers and employees. Share your hopes and fears, and engage with your followers directly.

Also, be constant and consistent in your support of the movement. Keep it simple. Create a tagline or use an acronym that serves as a simple reminder of the "why" behind the strategy. Make repetition a habit, but mix it up by sharing new stories that show the impact of the strategy. Try out new channels (take a photo, do a Facebook Live interview) to reach new audiences.

> There's no place for managers here. Everyone needs to be a leader.

Developing Disruptive Leaders

If you want to create disruptive growth, you not only need to be a strong disruptive leader yourself, but you also need disruptors sprinkled throughout your organization to make it happen. Out of necessity, you must hone your disruptor skills while also identifying other potential disruptors and nurturing them out of their comfort zones. There's no place for managers here. Everyone needs to be a leader.

Disruptive leaders share a few characteristics. At a high level, they exhibit the characteristics of "psychological hardiness" originally proposed by psychologists Salvatore Maddi and Suzanne Kobasa. They are more likely to put stressful events into perspective. They perceive them as less of a threat and more as challenges and opportunities for personal development.

Hardiness is made up of three attitudes: Commitment refers to belief in a higher purpose or truth, which results in disruptive leaders' ability to find meaning in their work and give it their best effort. Control refers to leaders' beliefs that they can influence the events taking place around them with their efforts. Challenge is the disposition to see problems as opportunities rather than threats.

Here's how to develop disruptive leadership in yourself and others.

Commitment: Developing a Shared Vision and Purpose

Here are two ways to sharpen the mindsets and behaviors that will help you and the leaders you are developing craft a shared vision and purpose for your disruptive transformation:

Encourage dreaming. You won't try new things if you don't believe that things can be better, so dreaming is the first step to identifying possibilities.

Mirror back their deepest desires. For most of us, what we desire the most is meaning, not money. We want to know that in the time we spend on this earth, we have made a difference. The best disruptive leaders tap into this longing by explaining the purpose so people understand their role in achieving it.

Control: Creating Stability and Ownership

One of the biggest problems created by disruptive transformation is that the tremendous uncertainty makes you feel as if you are not in control of the situation. There are so many unknowns, things are changing quickly, and simply staying on top of what is happening is all you can do. To increase your and your organization's ability to step into power and control a situation, consider these best practices:

Iterate and prepare for worst-case scenarios. The beauty of worst-case scenarios is that they give a name to the unspeakable. By anticipating and preparing for what could go wrong, you're visualizing you and your team in these stressful situations. This allows you to understand and interpret the data and situations and focus on weighing which risks are worth taking.

Create support networks. Change is hard work, and disruptive transformation is exhausting and lonely. Find the key people in your organization who will help you carry the torch of change, because you will need a break to recover.

Challenge: Recasting Failure

It's only when you make mistakes and fail that you learn. Recast failure as an opportunity to learn.

Plan little experiments to foster curiosity. When you identify an area where you or your organization is being resistant to change, plan an experiment where the outcome is uncertain but the perceived risk is low. The goal here is to create a sense of curiosity about the unknown and the freedom to experiment to figure it out.

Practice optimism. People who survive ask, "What is the next step I need to take to get out of this situation?" For those of you who are not wired to see the glass as half-full, partner with a compatible optimist so you can share your different perspectives of the same situation. Exposure to a different mindset is the first step to changing your own perceptions.

Disrupting Your Culture

Culture determines how much disruptive transformation your organization can create. It is either the limiting factor or the growth engine. As your strategy shifts to address new growth opportunities, the way you work will most likely have to change as well, along with your culture.

Cultures that seem to live in a state of perpetual flux and thrive can be called flux cultures. Three beliefs that appear in flux cultures and organizations, regardless of their size or industry, are openness, agency, and action. These three beliefs are the secret sauce that enables disruptive organizations to live in a perpetual state of flux and see challenges as opportunities rather than obstacles.

The Openness Belief: Create a Foundation of Trust

When you are pursuing disruptive transformation, openness is especially important because it creates accountability, it forces difficult conversations, it removes fear of failure, and it creates opportunities for diverse perspectives to filter up. Here are some best practices.

Create a safe and inclusive environment. Regular communications like all-hands meetings, email updates, weekly conference calls, and so on are great, but unless they show a commitment to including people's ideas in a safe space, they won't be effective.

Identify crucial places where trust is low, and address them with openness. If malaise hangs over a stuck organization, go right to the core of the problem: Where would trust make the biggest impact? Work with the affected teams to deepen a belief in openness and develop better ways of sharing.

Put vital data and information where they can be best used. Make sure the data that will most sway a decision are readily available to the people who need it.

The Agency Belief: Giving Permission to Act Like Owners

Organizations that believe in giving all their employees agency—that is, the capacity to act independently and make their own choices—help them see themselves as owners and leaders of their transformation strategy. When they identify a need for change, they make it happen—and do so regardless of their actual title or role.

Amazon has 14 "Leadership Principles" that serve as the

Disruptive organizations . . . build flexibility into the structure to support chasing after new opportunities to serve future customers.

foundation for the company's strategy and culture. Two of those leadership principles get at the heart of what it means to give your people a sense of agency over decisions.

The first principle is "Ownership," which Amazon defines in this way: "Leaders are owners. They think long term and don't sacrifice long-term value for short-term results. They act on behalf of the entire company, beyond just their own team. They never say, 'that's not my job.'"

The second principle is "Have Backbone; Disagree and Commit." This is how Amazon defines that principle: "Leaders are obligated to respectfully challenge decisions when they disagree, even when doing so is uncomfortable or exhausting. Leaders have conviction and are tenacious. They do not compromise for the sake of social cohesion. Once a decision is determined, they commit wholly."

The Action Belief: Working at the Speed of Opportunities

The action belief is the sustained ability of an organization to recognize change opportunities and move quickly while executing at the highest levels. If your organization needs to increase its belief in action, consider adopting some of these best practices:

Increase and measure change capacity. Organizations with the action belief embrace the need to constantly change and evolve. Measure your organization's comfort level with change. Survey employees on how comfortable they are with change and whether the prospect of change on the horizon makes them feel energized or weary. Conducting this audit will identify places where you need to focus your transformation efforts.

Define the decision field. If you want people to feel comfortable taking risks, you have to clearly define which mistakes and failures are tolerable and which aren't. Define the boundaries of the field they are playing on, explaining that as long as they stay on their field, they are free to go anywhere the customer and market may take them.

The Flux Culture Operating System

Just adopting disruptive beliefs isn't enough to create and sustain disruptive transformation in your culture. You need to also hardwire those new beliefs into the organization's operating system so the desired disruptive behaviors become the norm rather than the exception.

Most people think that "disruptive culture" means that a lot of highly creative people do their own thing with little coordination or alignment. Disruptive organizations show just the opposite: highly creative and accomplished people working together within clear structures and processes. By not having to worry about how to get work done, they just focus on doing great work with each other.

Disruptive organizations take the time to define their flux culture by systematically developing the three cultural elements that comprise an organization's operating system: structure, processes, and lore.

Structure: The Backbone of Your Operating System

What disruptive organizations do exceedingly well is build flexibility into the structure to support chasing after new opportunities to serve future customers.

Understand and accept the truth about your organization. Conduct a close audit of your organization. Dig down to find where the disconnects are between your organizational structure and how work really gets done. Uncomfortable truths will surface quickly. Accept them and plan how the future organizational structure will take that reality into account while supporting the future desired state.

Organize around future customers, not products or functions. For example, Intermountain Healthcare, the largest healthcare provider and insurer in Utah, moved from a geographically-defined structure into a system-wide structure with two main groups, a Community Care group focused on making sure people stay healthy and a Specialty Care group to serve patients who require hospitalization or specialist procedures.

Processes: The Lifeblood of the Organization

Processes are the blood that flows throughout your organization. If they flow well, you feel strong, capable of running long and hard. If processes don't work, it's like having a knot in your muscle—you can still move but at a limping pace.

Demonstrate the benefits of the processes early on. Simply telling people that order is needed won't work; you'll have to explain why processes will support your disruptive transformation. There are two key benefits of processes: your organization will build better products and services for your customers, and it will attract high-performing people.

Create accountability for consistently high standards. By being clear about "what good looks like," you are defining the parameters of great performance. But standards alone aren't enough; you also need the grit to follow through with consequences if they are not met.

Lore: The Soul of the Organization

If organizational structure is the spine and process is the lifeblood of culture, then lore is its soul. Rituals, symbols, and stories remind and connect everyone—from executives and employees to partners and customers—about what is important and valued in the organization.

Lore builds connection and trust among employees through repeated experiences that have a shared meaning. It's the telling and retelling of the lore—its repetition and consistency—that creates culture. Aligning your company's lore with the objectives and values of its disruptive growth strategy can help create and sustain a flux culture. Here are two best practices:

Be disciplined about creating lore. If you start a new ritual, commit to doing it every time it's expected. Don't be shy about repeating the same story over and over again. Be predictable, and continually connect the lore with a specific business need.

Schedule story time. Create space, no matter how small, for people to share their stories. Story time can be built into ceremonies of recognition and departures, staff meetings, and weekly communications.

If you want your organization to sustain breakthrough growth for decades, then settle in and get comfortable with disruptive transformation. It's your fate to want to change things for the better, to heed the call to step forward, and be crazy enough to believe that change is possible. May you have success in creating the exponential change that our organizations, society, and world so desperately need.

THE SUMMARY IN BRIEF

Combining the collective wisdom gleaned from over 40 interviews with successful leaders who practice compassionate leadership, ***The Double Bottom Line: How Compassionate Leaders Captivate Hearts and Deliver Results*** shows how to add true compassionate leadership to your playbook.

You'll discover that most leaders have an innate desire to be compassionate, but many don't know how to put it into practice. This summary shares actionable methods used by proven leaders for being compassionate and tough, empathetic and action-oriented in equal measure. After all, taking care of your people is proven to lead to better results.

Written by CEO, business leader, innovator, and philanthropist Donato Tramuto, *The Double Bottom Line* is an effective guide to becoming a leader that is both more compassionate and more effective at getting the job done.

IN THIS SUMMARY, YOU WILL LEARN:

- How to become a leader that drives trust, success, and innovation.
- How to raise morale, build stronger teams, and improve overall performance at your organization.
- How to create sustainable commitment to your organization's mission and values.

Introduction

Now more than ever, leaders need to upgrade skills such as communication, transparency, adaptability, and understanding and support of employees' needs. They need to embrace diversity and inclusion, create stronger teams, and take responsibility for the impact they have on the communities in which they work and on the world. And, most importantly— as we are seeing how these shifts affect our neighbors, families, employees, and coworkers— we need to raise empathy and compassion to the top of the list.

During the pandemic, many companies struggled to stay open or simply had to shut their doors. Still others rose to the challenge, not only weathering the storm but also finding breakthrough ideas and moving from strength to strength to drive their businesses. They've seen that this test has solidified their organizations and unified their teams. There are many variables that separate those who have survived and thrived from those who have suffered, but it's clear that the most effective leaders are putting people at the top of their priority list and embracing compassion and humanity to a greater degree than ever before in their workplace. They are finding that putting people first and delivering results are not two separate goals. Rather, a strong focus on people drives strong results. That is The Double Bottom Line.

Part I: Defining a New Model of Leadership

It's Time to Flip Traditional Leadership on Its Head

Compassionate leadership means listening to others' challenges, needs, or problems; having empathy for them; and then actually doing something about it. Empathy— the ability to think about and feel for another person's problems, suffering, or experience— is a critical component. Compassion, on the other hand, usually starts with or coexists with empathy, but it adds the desire and action to relieve that person's suffering, help them overcome a challenge, or otherwise better their situation.

In an organization, where it is only people who get results, it means that you invest your time in individuals, and that is how the organization prospers. In other words, people are your true focus.

Empathy Isn't Enough

Empathy on its own has important applications in business, education, politics, and relationships. Anyone developing products, services, or solutions needs to understand the experience of the customer or constituency they serve. To deliver a solution to a problem, you have to understand what it feels like to face that problem. Cultivating empathy is essential. Many business leaders know this, and it leads to their success. In an interview, Satya Nadella of Microsoft, one of the business world's most passionate proponents of compassionate leadership, said, "Our core business is connected with the customers' needs, and we will not be able to satisfy them if we don't have a deep sense of empathy."

Action is the fuel that brings empathy to life. To bridge this gap between how CEOs see the role of empathy and how employees expect to see empathy show up in their organizations, we must first effectively listen and communicate, then combine empathy with actions that address employees' specific challenges, hardships, and needs.

Lead from the Heart

Compassionate leadership is driven by a desire and a commitment to better your people, your customers, your stakeholders, and your community. It's about understanding what touches the hearts of others in order to bring out the best in them and allow them to feel connected to their work and see it as part of something bigger than themselves.

Having a sense of mission and communicating that to employees or team members gives them a sense of meaning in their work. Communicating how each individual's role connects with and contributes to a broader purpose allows everyone to feel part of the bigger opportunity to help people or make the world better. When employees feel they are contributing in meaningful ways—whether big or small—they increase their engagement, commitment, and job satisfaction.

Compassion is Strength

Some people think that a compassionate leader is a weak leader, or that compassionate leadership is not strong, powerful, and results-oriented leadership. That could not be further from the truth. Once you understand compassionate leadership and understand how it's applied (and how it's not), you'll see it in its true light. You'll have a new vision of compassion that is strong, courageous, and kind. You'll understand that by the very definition of the term, compassionate leaders are necessarily strong and tough leaders. Compassion isn't weak; it's the power skill for the next generation.

Interestingly, though sixty-seven percent of the most senior respondents (CEO, president, owner, etc.) in a workplace

survey said that compassionate leadership is often viewed as weak, they also said that it's important. And, on the flip side, when asked if this type of leadership is weak, the majority of the group of compassionate leaders interviewed for this book said the opposite: Only twenty-three percent strongly or somewhat agreed. That is an important difference. It tells us that once practiced, its power and effectiveness is clear.

Part II: Secrets of Successful Leaders Who Win Hearts and Deliver Results

Earn Trust First

Many management theorists and leaders believe that culture comes first when building a successful organization. Many say that "culture eats strategy for lunch." But trust eats strategy for lunch every day of the week. Trust is a precondition to building a positive culture. Trust has to be established first to lay the groundwork for effective leadership. Everything else follows.

Trust is essential in all relationships. Positive, trusting relationships drive productivity, creativity, change, and growth. As a leader, you can put any program out there, you can communicate your vision, mission, and values. But unless you have your people's trust, these critical things won't be universally embraced or put into action at the highest level possible. Trust is the glue that makes it all work.

Build Compassionate Culture

Healthy and productive culture is built on trust and powered by compassion. These elements are interlinked. A compassionate and trust-based culture is the strongest foundation from which an organization can grow and thrive over time.

Strong leaders from successful organizations know this. But some leaders and corporate boards view culture as a lower priority, something that you might devote time to after focusing on hiring the best people you can afford or find, delivering your best product or service, or (especially from the old model's perspective) hitting your numbers. Others see it as a separate entity, distinct from the main activities of the organization. Many address it once in a while or sporadically during the life of the organization when perhaps external changes arise to challenge its survival. While the notion of hitting numbers first may sound appealing, it is a short-term focus. You may deliver on your numbers for a year or two, but sustaining them without a culture built on trust is like someone saying, "Let me develop the space shuttle to take you to the moon, but you need to find me the instructions to craft the engines." The person might wing it to get the engines working, but sustaining the engines will be a miracle at best.

Work Better Together

In a workplace survey, communication, commitment, and collaboration ranked as the top three keys to compassionate culture and collaborative teams. These keys of compassionate leadership combine to help the people involved form a strong sense of community, which is the essence of successful teams.

Employees or members of a community want to know that their leaders have their backs during difficult times. Teams want to know that their leaders are doing their best to provide all available resources when they are collaborating to achieve a challenging goal or make an unfamiliar shift in direction together. When leaders do demonstrate their commitment to their people, what will happen? People will go the extra mile to reach a goal. They will feel safe enough to share ideas that just might move the team, the organization, or that important project forward. They trust enough to ask for help.

Harness the Power of Differences

Great leaders know something that gives them a strategic advantage and increases employee morale, retention, productivity, and innovation: Great leaders know how to harness the power of differences in their organizations.

In part, this practice includes building, respecting, and celebrating the diversity and differences among team members. However, great leaders go a step further. They intentionally cultivate diverse teams and optimize their performance. It is not just their internal teams that are built to be diverse. It is the whole organization, including the board.

Diverse companies have proven to be stronger across many key measures, profitability included. Cultivating workplaces that are rich with different types of talented people is not only the right thing to do and the compassionate thing to do, but also a beneficial thing to do to support your people and boost your top-line revenues and bottom-line profits.

Part III: Cultivating More Compassionate People

Cultivating Compassion within Yourself

The Dalai Lama said, "If you want others to be happy, practice compassion. If you want to be happy, practice compas-

sion." These words sum up this virtuous loop of compassion and provide a compelling reason to adopt this as a practice.

As much as compassion helps your organization, as I have already discussed at some length, it helps you just as much or more! Practicing self-compassion first makes the compassion you express to others more powerful and meaningful. Those are compelling reasons to take steps to become a more compassionate leader.

Can You Teach Others to Be Compassionate?

From the standpoint of the leader, just talking about it will not be effective if it isn't also acted on throughout each workday. In the workplace or in an organization, helping people learn and grow has to be integrated into day-to-day relationships, communications, processes, and operations. It needs to be applied in the situations and settings where it's seen and felt by others. The most impactful way leaders can teach compassion is by modeling it themselves— in other words, leading by example.

Ongoing implementation and reinforcement from leaders and managers throughout the organization is the key driver that allows this to take hold. When leaders talk the talk and walk the walk, every day, it sets a visible example of compassion in practice.

Conclusion: What Every Leader Needs to Know About the Future

Change calls for sharp awareness from leaders. Two major shifts stand out to me that are fundamentally changing what the workforce needs from its leaders.

The first is the generational shift in the workforce, from one that is baby boomer-centric to one that is predominantly made up of millennials and Gen Zers. With that shift, there is a need for leaders to become attuned to a whole new set of understandings, perceptions, and skills.

Technology is the second major driver. Technological change continues to accelerate. It's changing the nature of the skills we need in our workforce-and not necessarily in all the ways you might think. We don't just need more technically savvy workers, we need people with more finely tuned human skills, and we need leaders who understand how to bring these competencies out in proper proportions across their workforce.

We all have the power to have a positive impact on others and the world. The best way to start is by taking small actions that accumulate to create bigger collective changes and a more compassionate world.

Conclusion
Page 4

THE SUMMARY IN BRIEF

Leading with empathy is more important than ever in the current executive climate. Taking an empathetic approach to leadership will help to establish and nurture relationships with clients, employees, and the public. This makes empathy a powerful leadership tool in the workplace. By focusing on interpersonal relationships, you can create and engaged, productive, employee-driven team.

In ***The E Suite: Empathetic Leadership for the Next Generation of Executives,*** Tina Kuhn and Neal Frick focus on how to use empathy to build high-performance teams. They explore how to use empathy in your management style and integrate it into daily business practice. You'll find everything you would expect in a management handbook, including employee development, attracting new talent, communication, and conflict resolution, and marketing and sales. What's different about this book is that each of these chapters is filled with practical guidance to help you embrace diversity, eliminate bias, and improve your workplace relationships.

IN THIS SUMMARY, YOU WILL LEARN:

- How to use empathy to build high-performance teams.
- Ways to develop an empathetic leadership style.
- Practical methods for using empathy in your day-to-day business practices.
- The value of using empathetic leadership to grow your business.

Introduction

Many leaders view empathy as something intangible. Because they can't assign value to empathy, they adopt a fast-paced, high-stress form of leadership. This may bring productivity in the short term, but it's not sustainable long term. Empathy directly impacts productivity by making employees emotionally invested in their work. Workers whose needs are met and who feel they are treated well will naturally engage in their job. A willingness to work to capacity is directly tied to a feeling of engagement with the organization. 74% of employees in 2020 indicated that they would work longer hours for an empathetic employer. In 2017, this number was only 64%, indicating that business has changed during this time. When employee mindset changes, management must change too.

Part I: Organizational Strength Through Empathy

Since people are the cornerstone of business, business success is dependent on individual motivation and engagement. Leaders set the tone of the business. For the organization to run successfully, the leaders within it must be engaged, positive, and empathetic. High-performance teams have empathetic leadership. Their leaders have the ability to see the strengths and weaknesses of individuals and put them in positions that allow them to succeed based on their abilities. Diversity and inclusion are the foundation on which a healthy organization must be built. This creates space for creative and unique solutions to everyday workplace problems.

Chapter 1: Building Strong Organizations

Employees are most engaged and motivated when they feel they are part of an organization's success when they can grow and learn, and they feel supported by their leaders. By focusing on the people within an organization, leaders can build it into something strong and successful. There is a trickle-down effect within the workplace. A leader's attitudes and emotions directly impact that of the employees.

Leaders can create an empathetic, people-centric organization by displaying positive and genuine leadership. It's important to ensure that each person understands the goals and vision of the organization. Leaders can show people they matter by listening without bias, showing respect, implementing the ideas of others, and keeping open communication among personnel and management.

Chapter 2: High-Performance Teams

Empathy can be used to help create and maintain a high-performance team. There are specific exercises you can employ to help increase empathy within your team. These include engaged listening, formalized debate, and emotional self-evaluation. Regularly requesting input from team members and sharing in victories not only builds high-performing teams, but it helps maintain them over time.

Chapter 3: Empathy is the Key to Diversity and Inclusion

Typically, the more diversity there is within an organization, the more empathy there is. This is because when people learn to work with others who are different from themselves, they also learn to understand different points of view. Diversity doesn't just mean avoiding discrimination and ensuring ethnic diversity, it means having a diversity of thought.

Diversity of thought ensures that the workplace doesn't stagnate and it can lead to great innovation. Creating it requires a shift from a hierarchical workplace model to a flexible leadership model and a bottom-up exchange of ideas. Unconscious biases can limit thought diversity and lower empathy levels. Leaders must challenge their own biases and eliminate them in the workplace. They should also implement training to help others embrace diversity within the organization.

Part II: Managing and Leading with Empathy

Learning to lead with empathy requires self-awareness and understanding your own emotions. This awareness allows leaders to capitalize on their own strengths and those of their team members. Empathetic communication will allow you to manage confrontation and navigate transitions within your organization.

Chapter 4: Management Styles and Empathy

A leader's attitude and approach towards their employees determine the general tone of the workplace. When leaders are positive and upbeat, others generally follow suit. Leaders who are negative and resigned with their demeanor will find the attitude is contagious. If leaders have empathy, their team is likely to do the same. Different management styles bring about different workplace conditions. Good leaders alternate between different styles of management, depending on the situation.

There are four management styles that can be used, each of which can be effective when used in the right situations.

- Autocratic style – Most effective for fast decision-making or when rapid change is needed. This style is appropriate when team members don't understand tasks or priorities.
- Democratic style – This style is effective for highly experienced teams, resolving group conflicts, or when input is required from multiple sources.
- Nurturing style – Employing this style of management is necessary to keep loyal, happy employees with low attrition rates. It provides a sense of belonging and community within an organization.
- Laissez-faire style – Team members who are independent, skilled, and willing to make decisions for the benefit of the organization as a whole will benefit from this style of management.

Chapter 5: Empathetic Leadership Starts with You

The greatest leaders are tough and demanding, but also empathetic and fair. Throughout history, leaders who have found the greatest success apply principles of empathy and love without compromising their vision. Dr. Martin Luther King, Jr. is a perfect example of an empathetic leader. He embodies determination, persistence, and empathy. He spent time listening and understanding the people he was fighting for, but he never gave in when facing confrontation. He was tough but still empathetic.

There are five things that empathetic leaders do:

- Know themselves
- Work on increasing empathy
- Align people are positions that maximize individual strengths
- Consistently motivate and inspire others

Being self-aware is the first step to increasing your empathy. You can't avoid your emotions, but you must be able to control what you do with them. Recognizing different perspectives with genuine interest comes with self-awareness. Engage with people and look for ways to help and understand them. Allow others within your team to make decisions and delegate responsibilities in order to create an environment of trust. Leaders should have a clear understanding of individual strengths and maximize those strengths to reach their full potential. Finally, motivate and inspire the team by exhibiting passion, excitement, and ethical behavior.

Chapter 6: Developing Empathetic Communication Techniques

There are many different types of communication methods and each has its own set of advantages and disadvantages. It's estimated that 93% of our communication is non-verbal. Our non-verbal cues provide context for what we are thinking and feeling, which is why empathy is best shown through communication methods that allow for body language cues to be read.

Face-to-face meetings are the most effective type of communication for building empathy as they allow the ability to use both verbal and non-verbal communication. Confrontation and conflict resolution are also best conducted face-to-face. Video meetings follow close behind as an effective communication strategy when a face-to-face conversation isn't possible. Because non-verbal information is still available to the participants, it still builds empathy and trust between the people involved. Group meetings are an effective communication technique for building rapport between team members and increasing collaboration. This can occur in-person or via video conference.

For remote teams, telephone communication is necessary, but it can be more challenging to convey empathy due to the inability to receive non-verbal cues. When used with discernment, email can be a powerful communication tool. It's a very efficient way to send quick pieces of data and information, but it is also very easy to misinterpret email messages because non-verbal communication is missing. Like email, texting is also efficient but devoid of non-verbal cues.

Chapter 7: Effective Confrontation through Empathy

Confrontation often brings up negative emotions, but it doesn't have to be difficult. There are seven simple steps for handling confrontation in a meaningful way:

- Determine a common goal
- Don't play on others' emotions
- Understand your own reactions
- Help others save face
- Tackle underlying issues and not behavior
- Don't presume to know what others are thinking
- Present constructive options for resolution

Chapter 8: Managing Empathetically during Transformation or Change

People often resist change because it takes them out of their comfort zone. It evokes feelings of fear and uncertainty and people move toward the unknown. Leadership must implement change carefully by engaging employees in the process of continuous improvement. The five steps to implement a change or transformation are:

- Create a vision and goals for the organization
- Create detailed plans with actionable steps
- Create a team of champions for the change
- Develop a plan for communication
- Have a retrospective each week to determine if adjustments are needed

Be mindful of the pitfalls of transformation. These include:

- Leadership not buying into the change
- A lack of planning and vision
- Lack of flexibility during the process
- Poor communication about changes
- Resistance to change

Part III: Growing A Business Through Empathetic Leadership

Every organization has its own set of priorities and challenges that require a customized approach to success. Understanding how to use an empathy-based approach to hiring will allow you to place the right people in the right positions. It will help you engage with potential customers by creating targeted content that meets their needs. Sales will increase when you learn to understand a customer's fears and challenges.

Chapter 9: Empathy and Hiring

Hiring employees is a challenge. By applying an empathetic approach to hiring, you can have a better understanding of the organization's needs, as well as the ability to identify the people who fill those needs. This means identifying what skills you require in your organization that cannot be taught on the job. This includes skills like critical thinking, the ability to work independently, and quick learning abilities. Look at your existing team and hire individuals who fit into it by offering more diverse thought.

The key elements of empathy in hiring are creating job descriptions that appeal to a diverse candidate pool, articulating how the role impacts your organization's goals, maintaining awareness of biases during interviews, and developing a rapport with candidates.

Chapter 10: Empathetic Marketing Campaigns

The most effective marketing campaigns employ empathy. In order for most businesses to succeed, they must engage in marketing to some degree. Successful advertising knows its brand and remains sensitive to the values of potential customers. To use empathy at the forefront of your marketing campaigns, it's essential that leaders understand their customers and strive to meet their needs. Create marketing content by showing potential customers how their lives are improved by using your product or service. Continuously review the results of your campaigns to determine the level of success and make changes accordingly.

Chapter 11: Selling with Empathy

Much like marketing, sales strategies should also employ empathy. Empathetic sales increase close rates, build better client relationships, and gain more repeat business. Refine your sales pitches based on getting to know your customers. When you know what your customers want and need, you can use targeted, individualized communication to gain potential and returning customers.

Conclusion

Empathy is a must for leaders to have a positive impact on their team members and clients. By showing empathy, you can alleviate discontent in your workforce at no cost to yourself or your organization. Empathy is about building relationships that drive productivity within a business. Applying the practical solutions in this book will start you on your way to becoming an empathetic leader. Making significant change starts with you.

THE SUMMARY IN BRIEF

Regret is the polar opposite of fulfillment. Our regrets are ours to create, they're not foisted upon us by others. To have them, we have to visualize making a different choice in our past that delivers a more appealing outcome. Regret is a devilish cocktail of *agency* and *imagination*. It is totally within our control, at least in terms of how often we invite it into our lives and how long we let it stick around. Do we choose to be tortured or bewildered by it forever, or can we move on, knowing that regret is not finished with us, that we will surely live to regret again someday?

Any decent advice book aims to help readers overcome a perennial challenge. The challenge Marshall Goldsmith and Mark Reiter are tackling in ***The Earned Life: Lose Regret, Choose Fulfillment*** is regret. Not just any regret…the supersized existential regret that reroutes destinies and persecutes our memories for decades. Readers will learn to accept that regret is inevitable but its frequency can be reduced. The primary theme presented is how to achieve a life of fulfillment–what the authors call an *earned life*–when the choices, risks, and effort we make in each moment align with an overarching purpose in our lives, regardless of the eventual outcome.

IN THIS SUMMARY, YOU WILL LEARN:

- What's stopping you from choosing your own life.
- The earning checklist.
- The five building blocks of discipline.
- When earning becomes a habit.

Part I: Choosing Your Life

Something truly earned makes three simple requirements of us:

- We make our best *choice* supported by the facts and the clarity of our goals. In other words, we know what we want and how far we need to go.
- We accept the *risk* involved.
- We put out maximum *effort*.

The deliverable from this magical brew of choice, risk, and maximal effort is the glorious notion of "an earned reward." The long menus of human striving: from a corner office to the affection of our children to a good night's sleep to our reputation and character, all must be earned. This is why we valorize the merited success; there's something heroic about applying maximum energy, wit, and will to get what we think we want.

But we cannot place too much faith in the concept of an earned reward. It's too impermanent and fragile a vessel to contain our wishes and desires to an earned life. The emotional lift we get from an earned reward is fleeting. Whatever prize we have earned–a big raise, a partnership, an ecstatic review–our victory dance is brief. Our sense of fulfillment and happiness simply doesn't last.

Setting goals and earning the desired outcomes are essential first steps for success at anything. But they lack utility in achieving an earned life when they are estranged from a greater purpose in our lives. An earned reward not connected to a higher purpose is a hollow achievement. The reward of living an earned life is being engaged in the process of constantly earning such a life.

What's Stopping You From Creating Your Own Life?

It is easier to create your own life today than it has ever been in human history. Freedom and mobility create what Barry Schwartz famously described as "the paradox of choice." We do better with fewer choices, not more. Faced with thirty-nine flavors of ice cream, we often make a disappointing choice.

It's the same with creating your own life in a complex, rapidly advancing world. Not only is it hard to sift through the myriad choices, but even when we know what we want, we don't always know how to follow our dreams. The barriers holding us back in our choices and actions, frustrating our will to live our own life, are formidable and numerous, beginning with these:

1. Our first option, unfortunately, is inertia.

Inertia is an active event in which we are *persisting* in the state we're already in rather than switching to something else. Being inertia's victim or escaping its gravitational pull is a choice that is solely ours to make. When people discover that they have a choice, they are usually empowered to change.

2. Our programming locks us in place.

All of us are programmed in some way by our parents. They shape our beliefs, our social values, how we treat people, how we behave in a relationship, even which sports teams we cheer for. More than anything else, they program our self image.

We become the smart one, the pretty one, strong one, nice one, responsible one. If we're not careful, we not only accept the programming but adapt our behavior to it. The good news is that we have the right to deprogram ourselves whenever we want. Our programming's biggest impact is how proficiently it blinds us to our need to reject it.

3. We are undone by obligation.

The beauty of obligation is that it directs us to keep our promises to others, implied or explicit. The misery of obligation is how often those promises conflict with the ones we've made to ourselves. In those moments, we tend to overcorrect, choosing between the extremes of selfless and selfish–and end up disappointing either ourselves or those who depend on us.

4. We suffer from a failure of imagination.

Curiosity is how we prepare to fire up our imagination and picture something new. If you're among the 30% of Americans who have a college degree, you already know from your teenage years what it feels like to seek an identity reboot, a new presentation of self that will improve your odds of earning your place in the world. College was your opportunity to delete your adolescence and write a new script. You did it once; you can do it again.

5. We are winded by the pace of change.

You're deluding yourself in pointless nostalgia if you think that, no matter the situation, at some point in the near future–when you finish the "rush" project or when the kids get older and your domestic life calms down–you can revert

We want to live a life that will increase fulfillment and minimize regret.

to a slower time when the pace of life and the speed at which it changed was more relaxed and gentle. It's not going to happen. Our failure to adapt to the quickening pace of change blocks us. If we cannot keep up, we get winded and fall behind.

6. We are narcotized by vicarious living.

Because of social media and a smorgasbord of technological distractions, we have an abundance of opportunities to live through other people's lives rather than live our own. The damage from this trend toward vicarious living is one of heightened distraction. Anyone or anything can pull our focus from doing what we should be doing and coax us into doing what others want us to do. That's one definition of not living your own life.

7. We have run out of runway.

"Runway" is the time we've meted out to ourselves to achieve our destiny. When we're young, we tend to overestimate our runway. Money may be scarce, but time seems infinite, dampening our sense of urgency. The other extreme–when we're old–is more invidious: We foolishly believe there's not enough time to achieve our next dream.

These are the perennial barriers that freeze us in place and leave us yearning for a new path yet unable to take the first step on that path. But these barriers are not permanent. We possess offsetting attributes that enable us to find our way. They are latent powers such as motivation, ability, understanding, and confidence that reside within all of us. They are building blocks of our potential. And we need to be reminded on occasion how to deploy them for our own benefit.

The Earning Checklist

When considering making a major career decision, there are six must-have considerations. Without good answers for each of them, there is no next step.

1. Motivation

Motivation is the reason you try to succeed at a chosen task. It's "why" you do anything. Motivation may be the high-octane fuel that drives our achievement, but it cannot be divorced from the actual doing of the specific tasks required to achieve each of our goals. It's not merely a supercharged emotional state induced by having a goal. It is that heightened emotional state coupled with a supercharged impulse to do each of the specific tasks required to achieve that goal.

There is at least one universal baseline motivation guaranteed to clarify our desire to live an earned life, and it is this: We want to live a life that will increase fulfillment and minimize regret.

2. Ability

Your ability is the level of skill you need to succeed at your chosen task. Ideally, you know what you're good at and what you're bad at, and you take on tasks beyond your abilities only because you want to stretch. Otherwise, you stay within your wheelhouse of superior skills. Staying motivated to do something you excel at should not be a problem. And yet it is. If we can't embrace that which comes easily to us, what's the alternative?

Creating a career in areas where our abilities are less than optimal, where we're in the middle of the pack and not so special is not recommended either. Our ability is not one isolated talent; it's a portfolio of skills and personality traits that have to match up with the life we want to lead.

3. Understanding

Understanding is your knowledge of what to do and how to do it. Roles matter, but so do so-called "softer" attributes, such as timing, gratitude, kindness, listening, and most valuable of all, trusting the Golden Rule. These are the values that guide us in any situation, including the pursuit of an earned life. Part of understanding is knowing the difference between good and not good enough–and accepting that in any situation, we can be one or the other.

4. Confidence

Confidence is your belief that you can succeed. You acquire confidence through an imprecise alchemy of training, repetition, steady improvement, and a strong of successful results,

each one feeding the other. The beauty of confidence is that it is the product of all your other positive virtues and choices, and then it returns the favor by making you even stronger in those areas. As a general rule, if you have motivation, ability, and understanding, lacking confidence is unfortunate, almost inexcusable. You have earned the right to be confident.

5. Support

Support is the external help you need to succeed. It comes to your rescue, like the calvary, via three sources. Support can come from an *organization* in the form of money, equipment, office space, or anything you consider a valuable resource. Support can come from an *individual* in the form of direction, or coaching, or instruction, or empowerment, or confidence building. Support can also be a defined *group*. Your support group can include anyone, even a family member or two.

6. Marketplace

It's romantic to think that we can pursue our most ardent dreams without regard to earning a living. The fact is, not only do the vast majority of us *need* to earn a living, if only to pay our bills and provide for our families, but through rearing or inclination, most of us can't help linking our sense of fulfillment and self-esteem to our material compensation.

Every day thousands of Americans start up a business, or go back to school, or quit their cushy job to strike out on their own–all hoping to improve their prospects for a fulfilling life–without asking the hard-nosed question: Is there a market? If there is no market for what you're offering, all your skill, confidence, and support will not overcome that hurdle.

These are the four internal and two external factors you have to consider and check off to gauge your chances of success at any challenging task or goal. Consider this earning checklist before taking on any new challenge that matters to you. Each of these six factors must be aligned, each one enhancing the other.

Part II: Earning Your Life

How We Earn: The Five Building Blocks of Discipline

We tend to think of discipline and willpower as the essential skills that deliver success but they are not. Rather, they are the *evidence* of our success, qualities only recognized after the fact. In a gross oversimplification, we label them as discipline and willpower but the building blocks are concepts that are much more concrete and comprehensible:

- Compliance
- Accountability
- Follow-up
- Measurement

We call on one or the other at different moments in the earning process. Together they become your template for structuring your pursuit of any goal. If you want to live an earned life, they work. Without them, you don't stand a chance.

1. *Compliance* reflects your adherence to an external policy or rule. Compliance is easy to understand but hard to do. Humans are woefully bad at compliance, whether we're flouting our doctors' recommendations, our teachers' summer reading lists, or our editors' deadlines. Here's a simple truth: You can't count on the people issuing the orders to hold your hand to ensure compliance. Nor can you count on every situation to compel compliance. You're on your own.

2. *Accountability* is our response to expectations we impose upon ourselves. The to-do list is a common example of private accountability. If we get through half the list, we carry over undone items to the next day. If some of them remain undone a week later, the frustration or shame is ours alone. No one else needs to know. When your intentions are public and out in the open, the stakes are automatically higher (people are watching) and so, hopefully, is your performance. Disclosure makes the effort to change visible; visibility elevates accountability.

3. *Follow-up* introduces the coercive force of the outside world to the mix. Suddenly, other people are checking up on us. We have been conscripted into a group for the purpose of being observed and tested and judged. And that conscription alters us. Like it or not, follow-up is a valuable process that heightens our self-awareness. It forces us to assess our progress honestly. Without follow-up we may never take the time to ask how we're doing.

4. *Measurement* is the truest indicator of our priorities–because what we measure drives out what we don't. If financial security is your top priority, you check your net worth every day. If you're serious about losing weight, you step on a scale each morning. But not every measurement that matters to us has to be a hard, objective number. Soft, subjective numbers can be just as meaningful.

If you are left with one piece of advice to increase your probability of creating an earned life, it is this: Ask for help. You need it more than you know.

As you start implementing the strategies for living a no-regrets life, these four components of the earning template will become second nature to you. Compliance and accountability will cease to be daily tests of your shaky commitment. They will evolve into autonomic responses, like your heartbeat or your breathing.

Follow-up and measurement will be the feedback loops that give meaning and purpose to your day. You will insist on data rather than cover your eyes and ears. This is how discipline and willpower gradually settle into your life. They're not bequeathed to you at birth. You earn them every day.

The Lost Art of Asking for Help

One of the biggest obstacles to living an earned life is not asking for help. The myth of the self-made individual is one of the more sacred fictions of modern life. It endures because it promises us a just and happy reward that is equal to our persistence, resourcefulness, and hard work. Like more irresistible promises, it deserves some skepticism.

It's not impossible to achieve success on your own point where it could be accurately described as self-made. The more salient question is: Why would you want to when you could surely achieve a better result by enlisting people's help along the way? An earned life is not more "earned" or glorious or gratifying–or even more likely–because you tried to achieve it all by yourself.

Too many of us try to go it alone. Our near-clinical reluctance to ask for help is not a genetic defect, like color blindness or tone deafness. It is an acquired defect, a behavioral failing we are conditioned to accept from an early age and one that continues being solidified on the job.

You would not hesitate to call a doctor if you were in extreme physical pain, or a plumber if your kitchen sink were clogged, or a lawyer if you were in legal trouble. You know how to ask for help. And yet there are moments in each day when asking for help is clearly the better choice and you decline to do so. Beware two situations in particular.

The first is when you are ashamed to seek help because doing so will expose your ignorance or incompetence. The second situation begins when you tell yourself, "I should be able to do this on my own." You fall into this trap when the task you're facing is adjacent to knowledge or a skill you think you already possess. If you are left with one piece of advice to increase your probability of creating an earned life, it is this: *Ask for help. You need it more than you know.*

When Earning Becomes Your Habit

Achieving an earned life is hard work, often all-consuming. But we're all human. Our resources–energy, motivation, concentration–deplete. Earning your life is a long game. Check that: It's *the* long game. You need a strategy anchored in both self-awareness and situational awareness to sustain our urgency and avoid burnout–until earning has become your habit.

1. Earn your beginnings

In the course of a lifetime, you will experience episodes when one phase ends and another begins. We all experience these intervals between the old and the new. But we make a grave error if we treat a transition as a lull in the action that allows us to take a time out and passively wait for our next phase. Our transitions are not voids that we aimlessly roam until we find an escape route. They are opportunities to earn your next beginning.

2. Disengage from the past

Before you can effectively earn the next phase of your life, you have to disengage from the old phase you claim to have left behind. You not only have to let go of past achievements (you are no longer the person who earned those achievements), you also have to relinquish your old identity and way of doing things. It's okay to learn from the past, but it's not recommended to go back and visit it every day.

3. Master the "earning response"

If we respond poorly every time to the same stimulus, we shouldn't be surprised that we get the same disappointing outcome each time. Eventually our poor response becomes predictable; we've acquired another poor habit. The only way to eliminate the new habit is to consciously change our response to the unchanging stimulus with better behavior.

Change the response, then change the habit.

We can turn earning into a habit as long as we add a thoughtful pause between the stimulus and the outcome before we make our official response. The pause gives us time to respond rationally, in our best interest, rather than emotionally or impulsively.

4. Play the shot in front of you

Pro golfers go through a time-consuming assessment ritual on every shot. Every set of facts we see is situational–and there's something noble in dealing as best we can with what's in front of us. When golfers play the shot in front of them, they are being supremely rational and disinterested actors, divorced from past or future concerns that may cloud their judgment. They accept that golf, like most of life, is situational, never involving the moment before or after, only now.

When we fail to play the shot in front of us, we are failing at transition. We are failing to see that something in our world, big or small, has changed irrevocably and we have to deal with the new reality.

Earning ends when we accomplish what we set out to do, or when changing circumstances in the world or in ourselves make it unnecessary to continue what we've been doing. Earning begins when we decide we need to re-create our life, making it our own even if it's someone else's idea, in order to redefine who we are.

In between the beginning and end, we must let go of many things–our role, our identity, our allegiance to the past, our expectations–then scratch and claw to find our next new thing. This is how we earn each new beginning in our life. We must close the door on one part of our life to open a new door.

Five Recurring Themes to an Earned Life

Of the various exhortations and exercises contained in ***The Earned Life,*** there are five recurring themes that hover over each page like guardian angels of the idea of an earned life. Each of these is readily within our own control.

The first is *purpose*. Anything we do is more elevated, more exciting, and more connected to who we want to become if we do it with a clearly expressed purpose. (The expressed part makes a huge difference.)

The second is *presence*. This is the impossible ask–to be present with the people in our lives rather than missing in action. Although we can never achieve the summit of being present at all times, it's still the mountain we should never stop climbing.

The third is *community*. Accomplishing something with help of a chosen community resonates more resoundingly, affects more people, and is often an improvement on the solo act because of the contribution of many.

The fourth is *impermanence*. In the grand scheme, we are here on earth for a brief moment. Nothing lasts, neither our happiness nor a day nor anything else. It is all impermanent. That inspires us to be present and find purpose in each moment.

The fifth is *results*. This is a negative theme that reveals a positive concept–because the aim here has not been to help you become better at achieving a result. It has been to help you try your best to reach a goal. If you try your best, you have not failed, regardless of the result.

In the end, an earned life doesn't include a trophy ceremony or permit an extended victory lap. The reward of living an earned life is being engaged in the process of constantly earning such a life.

Dr. Marshall Goldsmith has been recognized as one of the Top Ten Business Thinkers in the World and the top-rated executive coach at the Thinkers50 ceremony in London since 2011. Published in 2015, his book Triggers is a Wall Street Journal and New York Times #1 Bestseller! He's also the author of New York Times best seller and #1 Wall Street Journal Business Book *What Got You Here Won't Get You There*, winner of the Harold Longman Award as Best Business Book of the Year.

Page 7

THE SUMMARY IN BRIEF

The Eight Paradoxes of Great Leadership unpacks the fresh strategies and new mindset required of a next-generation leader today. Author Dr. Tim Elmore helps leaders of all kinds navigate increasingly complex, rapidly changing environments, as well as manage teams that bring a range of new demands and expectations to the workplace that haven't been seen even one generation prior.

After working alongside John C. Maxwell for 20 years, Elmore offers counterintuitive paradoxes that, when practiced, enable today's leader to differentiate themselves and better connect with their team and customers. Having trained hundreds of thousands of young professionals to develop into leaders, Elmore shares the secrets of next generation leaders who have practiced the paradoxes.

The Eight Paradoxes of Great Leadership can equip leaders to inspire team members in a way a paycheck never could. Become a next-generation leader—rich in emotional and social intelligence and orchestrating outstanding collaborative results—by mastering the eight status quo-shattering paradoxes.

IN THIS SUMMARY, YOU WILL LEARN:

- Why today's team members require different qualities than they did even in the recent past.
- The eight key paradoxes and strategies for how to practice them.
- Inspiring stories of historic and modern-day leaders who lived the eight paradoxes.

Paradoxical Leadership in a Complex Age

At 22 years old, young Isaac Newton was sent home from Cambridge University during the Great Plague of London in 1665. It was their own version of social distancing.

And that's when the magic happened. Without his teachers to guide him, Newton flourished. The period he spent away was later referred to as his *annus mirabilis*, the "year of wonders."

First, he continued working on math problems that he'd begun at Cambridge University. Believe it or not, the papers he wrote became the genesis of calculus.

Second, he acquired some prisms and began experimenting with them in his room, even boring a hole in his shutters so only a small beam of light could shine through. From his explorations emerged his theories on optics.

Third, outside his window was an apple tree. Yes, the apple tree we've all heard about. While parts of the narrative are legend, his assistant confirmed much of it is true. While Newton sat under that tree, an apple fell, which launched his thinking. From this apple, Newton developed his theory of the law of gravity and the laws of motion.

Isn't it amazing that during a great interruption, Newton transformed it into a great introduction to an entirely new world of math and science? It was when life was on hold that he made his best progress. Our world was morphed by his time alone during a pandemic. What a paradox.

Another Pandemic

Today, we live in the shadow of another pandemic. Our world was already complicated before, but the aftershocks of COVID-19 have only increased the challenges. Over the first 20 years of this century, our world became on-demand and instant access, driven by a gig economy, with a 24/7 news cycle on broadcast and social media. The most accurate description for our times is the acronym VUCA: volatile, uncertain, complex, and ambiguous.

More than 1,000 CEOs stepped down during the first three quarters of 2019. Furthermore, while Americans were distracted by the coronavirus pandemic, many CEOs stepped down in the first quarter of 2020, including the CEOs of Disney, Hulu, IBM, LinkedIn, Uber Eats, MGM, Lockheed Martin, and others.

Too often, organizations settle for leaders who do nothing, ensuring that at least they do nothing wrong. We play defense too often. And for that matter, we fail to play offense often enough. We tell ourselves that ours is a complicated day to be living in and become satisfied with avoiding losses. Or we settle for some form of leadership style or protocol that worked in the past.

Leading in the 21st century is, indeed, more complex than it was in past centuries. Leadership is seldom easy, but today it affords us the challenge of collaborating with a more educated, more entitled, more savvy population that has greater expectations of satisfaction and rewards than in past generations.

Eight Paradoxes

To guide leaders in addressing these heightened expectations, let's explore eight surprising paradoxes that effective leaders must practice as they lead. Uncommon leaders stand out because they are able to juggle seemingly contradictory traits to lead such people. Most of these paradoxes are about our emotional intelligence, not our cognitive intelligence.

Isaac Newton didn't see the plague as an interruption. When nothing and no one consumed his time—he had time to reflect, imagine, and change the world. Neuroscientists tell us that it's during times of boredom that our brains develop empathy and creativity. Today, that's our best option in this complex world.

Paradox 1: Uncommon Leaders Balance Both Confidence and Humility

Uncommon leaders possess inspiring confidence yet express it with palpable humility. Leading today requires combining these two attributes. Reality changes so quickly; leaders cannot become arrogant but must remain in a learning posture. At the same time, team members long for their leader to inspire them with confidence.

In today's complex world, people look for anyone with a clear sense of confidence. Teams seldom move forward without seeing it in their leader. At the same time, people demand that a leader's confidence doesn't blind them to their own humanity. Leaders believe in themselves, but they don't believe they can do it alone.

Confidence plus humility furnishes the *energy of certainty* and the *flexibility of teachability* to create synergy in partnerships.

As our world experiences uncertainty, the human longing for confidence grows proportionately.

Because 21st century culture is increasingly uncertain and because our global economy is increasingly complicated and unpredictable, team members long for a sense of confidence. One of the leader's tasks is to instill this in their team.

This doesn't mean leaders have all the answers up front, nor does it mean they're absolutely certain everything will pan out according to plan. It simply means that, as our world experiences uncertainty, the human longing for confidence grows proportionately. Uncommon leaders understand this need and leverage it to increase their influence.

Humility makes your confidence believable. When team members only see confidence, they begin to suspect you're not being honest; some piece of the puzzle is missing. They know all leaders eventually make mistakes, and followers begin wondering, "When can I trust you?" Confidence alone feels disingenuous.

When you demonstrate humility, you communicate credibility. Humility signals self-awareness and authenticity. Humility also signals transparency and invites reciprocation. When you are humble, you display your humanity and acknowledge your imperfections. When team members see this, they're likely to volley it right back.

How to Be a Confident Yet Humble Leader

Here are some ideas on how you can begin practicing this paradox:

- When in decision-making meetings, argue as if you believe you're right, but listen as if you believe you're wrong.
- When in conflict with team members, be willing to lose a few battles to win the war.
- Remain teachable in new contexts, even from those under your care. Don't let your confidence prevent you from improving your own ideas.
- Don't let humility become sheepishness. When we're sheepish, we are self-conscious, preoccupied with our own weaknesses. This keeps us from progress.

Paradox 2: Uncommon Leaders Leverage Both Their Vision and Their Blind Spots

While vision and blind spots seem like an oxymoron, they are generally both at work when great leaders grow or start something.

Vision gives leaders (and teams) a direction, but blind spots are often the very motivator that enables them to approach an idea in an unconventional way—and believe they can pull it off. Most new ventures require a leader to possess a clear target they want to hit. At the same time, their inability to see all the obstacles or challenges ahead of time helps them to maintain their energy as they try to hit their target. In short, leaders usually have to see something and fail to see something to reach their goal.

Blind spots prevent us from letting obstacles stop us. Almost every entrepreneurial endeavor includes a story of how a founder or an original team had no idea what they were up against or had no clue what was ahead of them as they launched. Had they known what was coming, their ideas might never have gotten off the ground.

Blind spots also spare us from the curse of knowledge. Often, blind spots can speed up the project. Because the leader doesn't know everything about the endeavor, he or she can bypass hangups that slow others down.

Capitalizing on Rookie Smarts

Vision and blind spots combine to create "rookie smarts." "Rookie smarts" is a term tossed around in business circles today describing the effective ideas that new or young people come up with and attempt that seasoned veterans would never try. Why not? Because of their experience.

Vision enables rookies to see what others may not yet see. Blind Spots prevent rookies from seeing what the experienced do see.

So, what are the actionable steps old or young rookies can take to ensure they are smart?

- Look at industries that are stuck and need a revolution.
- Listen well to people who are or could be customers.
- Interact with people outside the industry for ideas.
- Combine various industry ideas to create a new one.
- Lead the way, by risking a prototype before it's perfect.

Balancing Your Vision and Blind Spots

Both are obviously important, but imagine an entrepreneur who dreams of inventing a product. He or she likely got the idea because they faced a dilemma or discomfort and knew there had to be a better way to address it.

There are two issues leaders must recognize when engaging in this process. First, the key to leveraging vision and blind spots is an often-neglected insight: We must not fall in love with an idea but fall in love with a problem. If we fall in love with an idea, we may be blinded to the better idea that comes along later.

A second issue leaders face evolves subtly over time. Their obsession shifts from solving problems to generating revenue. While problems frequently lead to people creating solutions, once the process has begun, leaders often shift their focus too much toward money.

Obviously, cash is needed to complete the new idea. When money is the chief focus, however, it's easy for leaders to wane in their passion for solving the original problem. Their passion drifts to an obsession to finding funding. The switch is natural but sometimes deadly.

Paradox 3: Uncommon Leaders Embrace Both Visibility and Invisibility

In the beginning of any mission, most people need a visible leader, demonstrating what to do and clarifying the goal. Over time, however, those people need the leader to step aside to let them realize their potential. Ownership must be transferred. Leaders must be necessary—yet eventually work themselves out of a job. In short, they embrace the paradox of being both visible and invisible, at the right moments.

The Need for Visible Leadership From You

In the early stages of your leadership, people need you to be visible. Most human beings are "settlers" who need "pioneers" to go first. They need someone who "knows the way, goes the way and shows the way for others," to quote John C. Maxwell. This has little to do with IQ. Most followers can figure out how to apply words of instruction. It's simply that human example is so much more powerful than human explanation in transforming behavior.

Uncommon leaders empower initially by modeling the way:

- They embody the vision that their team is attempting to achieve.
- They pick up trash in the parking lot to model servant leadership.
- They tend to the details, so people see that every little action matters.
- They demonstrate what they'll soon delegate to others to ensure quality control.
- They make the tough call (hard decisions) to show they're willing to pay the price.

The Need for Invisible Leadership

Over time, uncommon leaders recognize they must trust that their example has taken hold and step out of the way for others to step up. At this point, our leadership is a tender balance of support and letting go.

Teams will eventually require leaders to take a risk and let them do what only the leaders once did. Let's talk about some fundamental signals that the time is right.

When it's time to move from empower by example to empower by experience, people have watched you do it numerous times. They know the routine and can articulate it to others. They've had the chance to try it themselves. They display that they're convinced of the legitimacy of the mission. Finally, people have built muscle memory from the task.

Leaders practicing this paradox in a holistic way include four elements in the process: the Big IDEA.

I—Instruction. Leaders must provide verbal insights and explanations through discussion. People need conversations.

D—Demonstration. Leaders must find ways to model what the insight looks like in real life. People need observation.

E—Experience. Leaders must turn teams loose to practice the insight on their own to apply the knowledge. People need application.

A—Assessment. Leaders must take time to debrief and evaluate the learning outcomes with teams. People need evaluation.

Our wins can come at too great a cost. We can win a debate with a customer over why a shipment was late and end up losing that customer for life.

Paradox 4: Uncommon Leaders Are Both Stubborn and Open-Minded

This one may be the toughest paradox of all. Leaders will never reach a goal without being strong-willed. Without a stubborn will, obstacles will stop them. At the same time, they'd be naïve to think they have all the answers at the beginning of a venture. They must be open to voices of counsel; to flex and to adapt to changing realities.

Duke basketball coach Mike Krzyzewski said it best: "The most incredibly interesting thing about being a leader is what adjustments you make and how you make them while keeping your core principles alive and well."

So, how do we embrace both a strong will and an open mind? The fact is—strong leaders earn their right to be followed by how responsive they are to the input of team members. It's not so much that they don't know what direction to take, but they believe the best idea should win, wherever it comes from. They know where they need to go, but also believe that by listening, people feel heard and take the journey together. The team owns the mission, along with the leader.

Strategies to Practice This Paradox

This balancing act is not easy. When leaders do practice it, however, they become uncommon and extremely attractive to other strong leaders. You will attract the best people when you master it. Here are five strategies:

The first strategy is to lead by principle. When leaders lead by principles, those principles guide big decisions; if there is no principle at stake or none violated, the leader can be open-minded to input on new ideas or changes. In the end, uncommon leaders decide what they'll be stubborn about, and they're flexible on almost everything else.

The second strategy is to make sure one of your principles is, always make it better. This is one of the core values at Growing Leaders. It has driven them to expand their *Habitudes*® from the printed page to e-books on Kindle, then to an online platform, and later to an app on a portable device.

The third strategy is to apply "the Bit Market" principle. We fall in love with our current product so much, we forget why people buy our product. The only reason people buy a metal piece called a drill bit is because they have a problem they need to solve: They need to make a hole in a piece of wood. If another company developed an affordable laser that made a hole in a piece of wood easier, wouldn't we stop buying drill bits? Uncommon leaders never confuse methods with mission. They separate programs and products from purpose.

The fourth strategy is to avoid winning Pyrrhic victories. Our wins can come at too great a cost. We can win a debate with a customer over why a shipment was late and end up losing that customer for life. Let's face it. One reason for our stubborn spirit is often ego. A strong will can work for us and against us. If our ego drives our will, trouble is sure to follow.

The fifth strategy is to remember the future belongs to the young. Because we're moving into a world where the young will be comfortable with new realities faster than the old are, listen to the natives and stay open-minded. Just remember, however, that if we're going to be open-minded leaders, we must possess both emotional security and a strong will. We must be emotionally secure enough to digest contrary ideas and strong willed enough to not merely swallow every novel idea just because it's new.

Paradox 5: Uncommon Leaders Are Both Deeply Personal and Inherently Collective

People need big-picture vision from their leader, someone who grasps the gravity of what's happened and the steps required to respond to it. At the same time, people need a leader who empathizes with their personal journey; someone who understands how the struggle feels to individuals, and who articulates the vision with a personal touch.

Uncommon leaders find a way to tailor roles and tasks for individuals, while at the same time keeping the larger

picture in mind and ensuring each person's talent is leveraged for the whole.

Here are some examples: This leader offers both professional training and personal development. Everyone wins. This leader stewards the mission of the organization (or team), and at the same time, stewards each individual team member's time and talent.

Paradoxical Leadership in a Pandemic

Dr Anthony Fauci, director of the National Institute of Allergy and Infectious Diseases, has practiced this paradox in front of our entire country. In 1990, when AIDS activists flooded the NIH to protest apparent government indifference, Fauci brought them to the table and met with them personally.

During the 2014 Ebola outbreak, many Americans panicked when they heard a nurse was infected by a traveler from West Africa. Dr. Fauci responded to those fears by setting a personal example. After the hospital released that nurse, not only did he say she wasn't contagious, he gave her a hug on television to prove he wasn't concerned.

During the COVID-19 pandemic in 2020 and 2021, he spoke to the American public as a whole, offering updates on the COVID infections, how to best respond to them, the research on vaccinations, and what to expect in the months ahead.

In the midst of that corporate communication, however, Dr. Fauci will often smile and speak to his listeners very personally, as if he's speaking to you as an individual. Collective then personal.

Practicing the Paradox of an Inherently Collective Yet Deeply Personal Leader

- **Do for one what you wish you could do for everyone.** Do this often enough, and you may just get around to everyone one day.
- **Practice active listening before you say anything**. Social intelligence is developed when we actively listen without interrupting.
- **Be intentional to pay close attention to what's around you**. Note the subtle social cues you receive from others and the cues people send to others.
- **Seek to add value to each person with whom you interact**. When we interact with this mindset, our curiosity enables us to find personal connections.
- **Pursue a new relationship connection every week**. Cultivating new relationships is like a workout for your emotional intelligence.
- **For each collective message you must offer, add a personal one that's relevant**. Watch what it does to people, how it fills their cognitive and emotional tanks.

Paradox 6: Uncommon Leaders Are Both Teachers and Learners

When Angela Ahrendts accepted the offer to become the chief executive officer of Burberry in 2006, the luxury coat company's sales were in decline. They had been for years. Burberry had been around for 150 years, and while the British brand retained an elite reputation, it was a company known for its plaids, and for selling coats to rich, older women.

After meeting her direct reports, she scheduled a series of meetings with her youngest team members at Burberry. Beyond that, she began recruiting sharp, young professionals, even interns, that she could meet with and listen to for insights into reaching millennials (a population Burberry was failing to reach at the time).

Probably the wisest move Angela made was to establish an in-house digital team led by a young Christopher Bailey (now Burberry's CEO), who served as chief creative officer, and John Douglas, who served as the chief technology officer. One of the team's most successful moves was to launch "a new website and innovative social media campaigns, including the Art of the Trench, a photo platform that allows visitors to upload photos of themselves in iconic Burberry trench coats."

In the end, it paid off big-time. In her seven years at Burberry, Angela raised the company's value from 2 billion pounds annually to more than 7 billion.

Angela entered as both a teacher and a learner. She was an instructor to her executive team, insisting they make moves to go digital, update their marketing approach, and hire young team members. Yet, among her wisest decisions was to become a student as well. One of her ongoing steps during her years at Burberry was to listen to young staff who intuitively knew how to reach their peers.

Practicing the Paradox of Being a Teacher and a Learner

The fact is, innovative products and services are launched every year by people who see an opportunity that others miss. The better we can leverage this "rookie advantage," the more we'll succeed in today's competitive world, just

Because this uncommon leader is focused on a better future, they make a habit of getting beyond past failures by learning from them.

like Angela Ahrendts.

- **Practice reverse mentoring across your leadership team**. Why not match your seasoned veterans with your newest team members and have them swap stories? Then, allow them to spot where they could add value to the other and mutually coach each other.
- **Make it a weekly (or monthly) goal to learn something new**. What if you identified a team of specialist mentors who can coach you in your goals?
- **Establish regular times for personal and professional growth in your team's calendar**. The key is to be intentional.
- **Each time you gain an insight, find someone with whom you can share it**. Author T. D. Jakes put it this way: "The world is a university and everyone in it is a teacher. Make sure when you wake up in the morning you go to class."

Paradox 7: Uncommon Leaders Model Both High Standards and Gracious Forgiveness

Steve Jobs said, "Be a yardstick of quality. Some people aren't used to an environment where excellence is expected." One strength of this type of leader is that they care little about winning people over. They're in a productivity contest, not a popularity contest. Only their cause can hold them hostage. They're not swayed by money, bribes, blackmail, or public opinion.

This kind of leader is passionate because the stakes are high. Their high standards separate their organization from others who can only emulate their great products or services. They have over-the-top benchmarks that put them in a league of their own—like Apple, Amazon, Zappos, and Google.

The paradox of this uncommon leader is their propensity to forgive people. It's not that they lower their standards. It's simply that they're able to absolve a team member who acknowledges they failed to meet the standard and chooses to improve. Forgiveness isn't approving what happened. It's choosing to rise above it. Forgiveness does not remove the past, but it does expand the future.

Because this uncommon leader is focused on a better future, they make a habit of getting beyond past failures by learning from them. These leaders know the most valuable team members will likely make mistakes en route to success. They know it's the cost of doing business.

When team members know their leader holds high standards yet is willing to forgive mistakes, it frees them to push themselves, take appropriate risks, and initiate when they might normally hold back and play it safe.

Steps to Take to Practice This Paradox

To create this kind of environment, try this leadership path:

Offer the gift of clarity. Make sure the people you lead understand what a "win" looks like.

Shoot for perfection and settle for excellence. Shoot for the sun, and you may hit the moon. Excellence is okay.

Communicate your high expectations but model your forgiveness. You cannot practice this paradox in word alone. Find occasions to communicate huge goals and model generous forgiveness.

Extend the safety net principle. Give people the freedom to try and make mistakes, while "owning" the project they are working on.

Practice "try it out and talk it over." Team members feel safer to make mistakes and even fail if they know they are free to try out something new, record the results, and then meet with a leader to discuss the outcomes.

Paradox 8: Uncommon Leaders Are Both Timely and Timeless

Uncommon leaders in the 21st century must embrace and advance timeless principles that make for lasting success; values that have stood the test of time and worked in all

generations and in every context.

At the same time, these leaders must leverage culturally relevant methods and futuristic resources. They use what is cultural to say what is evergreen. Their core identity is ageless, but their mode of operation is cutting edge and sets the pace for others. They're passionate to pursue future opportunity, but in their appetite for progress, they never leave behind core virtues, values, and disciplines.

Swing Sets

Think about a swing set. Did you or a neighbor have one growing up? A swing set is a helpful image of what we must do to lead well in our day. Just like a good swing, you must swing backward as far as possible, to swing forward as high as possible.

Wise leaders utilize vision that can see both *backward* and *forward*. They look back and learn from the past. They glean from past mistakes to avoid repeating them. They seek what was helpful and timeless so they can carry those elements forward. They do this so they can swing forward well. That's the engaging part of the ride, the swing forward.

To implement this kind of leadership, you must push "pause" and reflect on both the past and the future. Take time each year, if not each quarter, and use this exercise to stay on top of life and leadership. Grab a pen and respond to the following questions.

Swinging backward. Swinging back means we get in touch with our heritage—our roots, who we are and how we got here today. As we do, it is helpful to ask ourselves questions like,

- What is our foundation and heritage?
- Why did we decide to pursue our mission?
- What value did we seek to add to our community?
- What were the destructive elements we tried to discard?
- Were there principles we felt are essential to sustain us?

Swinging forward. Swinging forward means we haven't forgotten why we exist and won't lose our sense of mission as we progress. We identify our new realities and translate our mission for today's culture. Helpful questions might be

- Where do we want to go today?
- What are the greatest needs we see in front of us?
- How is the landscape different than it was in the past?
- What new methods or strategies do we need in the future?
- How do we stay relevant by renewing our pledge to our mission?

The eight leadership paradoxes that make leaders outstanding are essential today because leadership approaches have evolved over the last 70 years.

As we proceed into the third decade of the 21st century, a new kind of leader is on the horizon. This new generation of leaders doesn't enter their position assuming they have all the answers. They surround themselves with a leadership team. This inner circle is optimally diverse in their strengths and perspectives—but not in their values and vision.

The times have demanded this change, as people have recalibrated with the culture. Those who flourish today will embrace the eight paradoxes.

Dr. Tim Elmore is founder and CEO of Growing Leaders, an Atlanta-based nonprofit organization created to develop emerging leaders. His work grew out of 20 years serving alongside Dr. John C. Maxwell, where he focused on leadership for emerging generations. Elmore has appeared in the *Wall Street Journal*, the *Washington Post*, *USA Today*, and *Psychology Today*, and he's been featured on CNN's Headline News and Fox and Friends to talk about leading multiple generations in the marketplace. He has written more than 35 books.

THE SUMMARY IN BRIEF

In today's post-pandemic workplace, leaders face a paradox: employees expect understanding and flexibility, yet organizations still demand results. Many well-intentioned executives are discovering that unchecked empathy can lead to blurred boundaries, burnout, and declining productivity. So how can you lead with compassion without compromising high performance or financial success?

The Empathy Dilemma: How Successful Leaders Balance Performance, People, and Personal Boundaries answers that question with a compact, practical framework for leaders. The book explains that unchecked empathy can blur boundaries, dilute accountability, and erode productivity—and reframes empathy as a practical, actionable skill grounded in five core pillars.

Drawing on extensive research and interviews, Maria Ross shows how to translate compassionate intent into repeatable outcomes: measure and manage emotional labor, set clear expectations, protect leader resilience, and sustain organizational performance. She stresses that empathy must be reciprocal, built on mutual respect and trust, and that leaders who master the five pillars can preserve both well-being and results.

IN THIS EXECUTIVE BOOK SUMMARY:

- Balance empathy and performance by converting compassionate policies into measurable practices
- Use reflection and data to identify bias, fatigue, and leadership blind spots
- Institutionalize leader resilience to prevent burnout and model healthy behavior
- Create a trust-based relationship with employees and a safe and reliable environment where everyone can thrive

Introduction

All across the globe, organizations are becoming more human-centric. They've jettisoned old paradigms of success that center on endless overtime and constant employee sacrifice. They've tied success to purpose and workforce morale, and they've helped people balance personal and professional needs as their priorities change.

With those shifts have come changes in workplace culture, benefits offerings, even job duties. And when those social shifts collide with accelerants like the COVID-19 pandemic, employee expectations begin to morph. Compassionate policies that were once actively appreciated become taken for granted. Leniency is expected instead of requested. Workers feel entitled to special treatment at all times and under all circumstances.

And because of this, business leaders are starting to see the dark side of empathy.

In some cases, people-focused work policies have skewed employee expectations. Workers across industries now resist workplace citizenship behaviors: they refuse to stay late, show up early, or attend non-mandatory meetings. In response, leaders and fully engaged workers must do more, work more, and facilitate more just to keep their companies moving forward.

Empathy has been weaponized. Employers who commit to building compassionate workplaces feel like they must say yes to every employee request or risk watching helplessly as more people embrace "quiet quitting." How can leaders hold people accountable and set high expectations without being treated like villains? Is the answer to turn back the clock and reinstate iron-fist bossism?

In a word: *no*.

Empathy is not about caving in to unrealistic demands, letting workers do whatever they want to do, or accepting slipping performance. It's about listening, getting curious, sitting with someone's struggle or perspective, and finding a way forward.

Empathy is more about mutual understanding and support than it is about acquiescence.

Leaders who adopt healthy empathetic habits with their teams can still expect high performance, set boundaries, and avoid burnout. They can do so if they have the right foundation to embrace empathy in a healthy way.

Part I: Why Workplace Empathy Feels Hard

Chapter 1: What Is Empathy in a Work Context?

Empathy is a critically important concept in modern life, but it's also a nuanced and complex one. And one that, unfortunately, many leaders get wrong.

If you look at the definition of empathy over time, it has changed dramatically from the 1700s to today. I believe the wide variety of conflicting and convoluted ideas about the concept are contributing to the escalating tensions between leaders and their teams.

After hundreds of interviews, talks, and hours of research, the definition I want to propose to you and invite you to embrace in an organizational context is this: empathy is being willing and able to see, understand, and (where appropriate) feel another person's perspective and to use that information to act compassionately.

This definition also reflects the two types of empathy that people commonly experience:

- Cognitive empathy – uses your brain first, before your heart gets involved.
- Emotional empathy – feeling, echoing, or mirroring the emotions that someone else is feeling. It's empathy using your heart.

Examining Empathy Myths

Empathy Myth 1: Empathy means "being nice"

Not so! There are lots of nice people in our workplaces. That doesn't mean they see things from our point of view or connect with us emotionally. Creating an empathetic culture means more than just hiring a bunch of really nice people.

Empathy Myth 2: Empathy means caving in to any and all demands

Thankfully, no. Caving in to unreasonable demands is often the opposite of empathy. We need to remember that you can see someone's point of view and understand their context and still make a tough business decision that might negatively affect them, like a layoff or reorg.

Empathy Myth 3: Empathy runs in a single direction from leaders to workers

Are leaders the only ones who need to learn and express empathy for their staff? Absolutely not. Strengthening empathy is everyone's job, and it must be modeled and supported.

Empathy is being willing and able to see, understand, and—where appropriate—feel another person's perspective and to use that information to act compassionately.

Empathy Myth 4: Empathy means agreement

Especially in work situations, this isn't always the case. You can have empathy for someone and also have a productive dialogue about the points on which you disagree.

Chapter 2: Where We Go Wrong with Workplace Empathy

Power hierarchies are inherent to corporate culture, but many leaders have become increasingly uncomfortable with them. They know that team members may resent or disdain these rankings of influence, so leaders attempt to downplay their standing. This often manifests as attempts at camaraderie.

This can be dangerous territory and often leads to "empathy hijacking." In a well-intentioned effort to connect, we listen to someone else's plight and then share our own related story. It's our attempt at active listening, and our intention is to make others not feel so alone. But in doing so, we've hijacked the thread. We've made it about us, not them.

There's a time and place to share learnings from our experiences, but even when that time comes, we must do so only with explicit consent. I recommend saying something like, "Would it help if I shared something similar from my own experience?" The person you're speaking with may say yes or no, and you must respect their response.

When Empathy Gets in the Way

There are times when leaders need to dial back their emotional empathy so they can steward the health of the overall business. Obviously, we want to show compassion for our employees as often as we can and across many scenarios—but not always at the expense of the company.

Weaponized Empathy

Weaponized empathy can cause agony for truly empathetic business leaders. They understand their team members' logic and want to ensure everyone feels heard and valued, but they also know that business needs must be met. They have their own higher-ups to answer to, and if those higher-ups insist that everyone needs to get back to their cubicles, they are expected to make that happen.

Unfortunately, weaponized empathy will continue to show up if leaders lack the strength or resolve to create and communicate new boundaries.

Many leaders who aim for empathy end up missing the mark because we misunderstand when and how to express it, because we conflate empathy with people-pleasing or doing more work ourselves, or because our compassion gets turned against us by our team members.

Chapter 3: Generational Clashes and Other Complicating Factors

According to the Bureau of Labor Statistics, as of 2023, there are five generations in the workplace: Traditionalists, Baby Boomers, Generation X, Millennials, and Generation Z. These categories cover everyone from teenagers to octogenarians.

All these generations in the workplace think a certain way, and sometimes expect their teams to see the world—and the work—in the same way they do. And when that is not intentionally understood, therein lies the rub.

In addition to generational differences and clashes, there are some issues specific to certain populations that can surface and stretch empathy-related challenges.

Group-Specific Factors

There are two key concepts to keep in mind here:

1. Our differences are challenging but also enriching. The people who work with us have a wide range of life experiences, views, biases, and perspectives. Although these differences can sometimes cause friction, they should never be targeted for eradication. Diversity is a strength that brings innovation, insight, and creativity to every company.
2. Understanding leads to empathy. Acknowledging that people come from diverse backgrounds and

bring different things to the table allows us to access even more empathy. Learning about how our unique life experiences lead to different perspectives enables us to understand each other, uncover new solutions, and collaborate more effectively.

Let's examine a few examples of groups who face empathy challenges.

First-Generation Professionals (FGPs)

FGPs are among the first in their immediate families to obtain a college degree or be hired for a higher-level professional position than either parent held. They may be trailblazers in their own families, but at work they sometimes lack insider knowledge and context for office politics and social mores, which can cause interpersonal friction and misunderstandings.

Underrepresented and Marginalized Ethnic Identities

Black and Brown people, immigrants, Indigenous people, members of religious minorities, and other groups who share common cultural backgrounds or descent often face resistance, misunderstanding, microaggressions, unconscious bias, and even outright discrimination in their workplaces. It's the responsibility of leaders to cultivate understanding of these challenges and develop empathetic strategies that respect people's differences.

Underrepresented and Marginalized Gender or Sexual Identities

Empathy tensions may affect queer, gay, lesbian, transgender, gender fluid, asexual, or bisexual people in the workplace, especially with coworkers from older generations. It's also important to note that there are many subcultures and differences within this catch-all category; it is not just one homogenous group. Again, leadership must take the helm to facilitate understanding, acceptance, and empathy.

People with Differing Abilities

People who have physical differences, neurodiverse people, and people who struggle with mental health challenges may have long-standing workplace regulations in their favor, but they still come up against coworker bias and misunderstanding. This is especially true if these workers need extra accommodations, resources, and time to complete certain tasks; if they communicate or process information differently; or if they have a disability that is invisible to observers.

Part II: The Five Pillars of Effective Empathetic Leadership

Even with a solid definition in place, it can be hard to envision modeling empathetic leadership when you're operating in a high-pressure workplace on a daily basis. I believe modern leaders need high-level, broadly applicable guidelines to help them shape their policies and guide their choices.

Through years of study and hundreds of interviews, I've determined that empathetically healthy business leaders share five key behaviors and mindsets. These are the Five Pillars of Effective Empathetic Leadership:

- Pillar 1: Self-Awareness
- Pillar 2: Self-Care
- Pillar 3: Clarity
- Pillar 4: Decisiveness
- Pillar 5: Joy

Chapter 4: Self-Awareness

Self-awareness is understanding your own strengths, blind spots, emotions, leadership style, and triggers. And helping your team members understand theirs.

Why Is Self-Awareness Important? Self-awareness helps you understand complaints and constructive feedback, know when you might need help navigating a situation, and take accountability for your actions. It helps you know where you shine and where you can best contribute and complement your team.

How Does Self-Awareness Benefit Empathetic Leaders?

- Shapes how you interact with team members
- Builds trust in you as a leader
- Keeps you open to change
- Helps you champion learning and development

How to Become More Self-Aware

1. Request input from team members and colleagues

Since you won't be able to surface all of your blind spots—traits or beliefs that impact how you behave, what you believe, and how effective you can be—you'll need help. The best way to see these blind spots clearly is to ask for feedback from the people around you.

Clarity doesn't come from having the right answer; it comes from asking the right questions.

Here are some tactics to try:

- Create an anonymous suggestion box
- Ask for input at regular intervals
- Institute 360 reviews
- Assemble a personal advisory board

2. Leverage self-assessment tools

There are hundreds of tests, diagnostics, and self-assessment tools out there that can help leaders get clarity on their leadership style, strengths, challenges, and triggers. None is foolproof, but all will help you fine-tune your understanding of yourself as a leader.

Here are some tactics to try:

- Myers-Briggs® Type Indicator (MBTI)
- CliftonStrengths
- Enneagram
- HEARTI
- Self-reflect and self-evaluate

3. Learn to listen deeply

Self-aware leaders seek out new perspectives, pursue new ways of looking at the challenges, and make space for other points of view. To cultivate these skills, leaders must first learn to put their egos aside and listen deeply, a practice that involves both remaining open to outside input and tapping into self-awareness. Challenge yourself to listen to *understand* instead of just listening to *reply*.

Here are some tactics to try:

- Practice emotional regulation
- Listen to understand
- Focus on service as a leader

What You Risk If You Lack Self-Awareness

Lack of self-awareness can be dangerous, causing leaders to exist in an optimism bubble, which is not rooted in the reality of what is going on with their people.

Self-aware leaders are better able to set healthy boundaries and avoid burnout than leaders who plow through life with little self-reflection. Understanding your own emotions, leadership style, and triggers helps you see when you need to pull back, be firmer, manage your time more carefully, take time off, and create other constraints that protect your well-being.

Chapter 5: Self-Care

Self-care is enforcing strong boundaries, taking time to recharge, delegating, resting, and stewarding one's own mental health as a leader.

Why Is Self-Care Important? Depleted leaders are ineffective leaders. It can be tempting to shoulder additional burdens in the name of empathy, but in the end, you are doing yourself and your team a disservice. True empathy means treating yourself as empathetically as you should your employees. It means getting your own house in order so you have the capacity to meet other perspectives with curiosity, not defensiveness or fear.

Burnout is the result of deprioritizing self-care. It happens when you drive yourself to exhaustion while coping with an unmanageable workload or lack of boundaries, and it is exacerbated by feeling you lack control of your work or need more support from your colleagues. It's a lack of empathy for yourself—plain and simple. Reclaiming self-care enables you to manage these factors somewhat by conserving your energy and protecting your mental health.

How Does Self-Care Benefit Empathetic Leaders?

- Enables leaders to set stricter boundaries
- Helps keep burnout at bay
- Makes leaders more effective when they feel healthy and recharged
- Keeps priorities in focus
- Models healthy behavior for others to follow

How to Incorporate More Self-Care

1. Honor who you are

When leaders stay in touch with who they are and what they represent, that goes a long way toward taking care of themselves. Those who try to be someone they're not end up negatively impacting their mental health; those who show up as themselves and understand how they operate are better able to enforce their preferences and limitations.

Here are some tactics to try:

- Work with a coach
- Know your triggers

2. Seek support and advice

Along with boundaries, exercise, and other individual self-care practices, leaders can benefit tremendously from seeking peer support. Feeling understood by those in similar situations goes a long way toward alleviating work stress and cultivating self-compassion. Peer support groups, trusted advisors/mentors, and people who can serve as objective sounding boards are priceless to leaders grappling with complex challenges and issues.

Here are some tactics to try:

- Find a mentor
- Assemble a personal advisory board
- Consider connecting with a personal therapist

3. Recharge and renew

Taking time off, moving your body, making space for your personal life, and finding ways to truly rest are all practices with proven health benefits. But for years, leaders felt like they were indulgences instead of necessities.

Here are some tactics to try:

- Use your paid time off
- Set hard boundaries around time at home
- Embrace your non-work interests

What You Risk If You Don't Take Care of Yourself

If, as a leader, you ignore self-care as a regular, personal practice, you won't just get burned out; you'll get worn down. You'll become so depleted that when something minor goes wrong or some piece of criticism hits the wrong way, you'll struggle to recover. When you've got nothing left to give and no energy left to spare, everything feels like an insurmountable crisis. And that makes you turn inward in self-preservation, rather than outward in empathy.

Chapter 6: Clarity

Clarity is ensuring everyone is on the exact same page through clear communication, expectations, feedback, and understanding of job roles—all of which roll up to an actionable mission statement and meaningful company values.

Why Is Clarity Important? Resentments build where misunderstandings thrive. One of the biggest reasons leaders and workers butt heads is lack of communication on mission, roles, and responsibilities. When people know what's expected of them, including in emergencies and on an as-needed basis, they are less likely to become disgruntled or even feel entitled. Clarity helps people feel seen, heard, and valued; reduces the likelihood of conflict; and enables everyone to work together more effectively.

In short, clarity is a form of kindness.

How Does Clarity Benefit Empathetic Leaders?

- Builds trust and loyalty
- Reduces conflict
- Helps maintain healthy boundaries through clear communication
- Encourages others to communicate with the same clarity

How to Incorporate More Clarity

1. Revisit purpose and values

Clarity on minutiae won't mean bupkis if your teams don't have foundational clarity on the company's purpose and values. And neither leaders nor employees will be able to act compassionately if the shared purpose and values are confusing or vague.

Here are some tactics to try:

- Externalize, organize, and focus
- Write or revamp your vision and mission statements
- Work with a consultant

2. Clarify roles and expectations

How many people review their job descriptions after they've been hired? The number probably approaches zero, except during annual review periods. Given that, consider what you can do to ensure your team members understand and agree

Empathetic leadership is about doing what will best support people's growth, balancing their needs with business priorities, or being extremely candid instead of prolonging an unhealthy situation.

to their roles and responsibilities; doing this is incredibly empathetic since it shows you're thinking about the best uses of their time and considering how to balance their duties.

Here are some tactics to try:

- Create rules of engagement
- Destigmatize ownership discussions

3. Link clarity to accountability

You can't hold people accountable if they're not clear on their expectations and goals. Start by making sure every person you work with understands that accountability means taking ownership of mistakes and working to make things right rather than avoiding conflict or blaming others—and also encompasses taking ownership of the purpose and the mission.

Here are some tactics to try:

- Create career progression maps
- Publicly celebrate and reward milestones

4. Tell people why

Leaders are busy and overwhelmed, which means they often convey what needs to be done and when but omit the reason *why*. Without that context, people can feel disrespected or kept in the dark. This amounts to an empathy gap, and one that can be closed quickly and easily with clear explanations for any changes in duties or expectations.

Here are some tactics to try:

- Build why into your documentation
- Build a culture of why

5. Ask better questions

Little-known fact: clarity doesn't come from having the right answer; it comes from asking the right questions. How can you assess what your next step is with this person and get them to be clear? By asking, "What do you need from me in this moment? Do you want me to see it, solve it, or support you?"

Here are other tactics to try:

- Use "I like, I wish, I wonder" to guide conversations
- Frame your questions carefully
- Ask questions that invite collaboration

6. Create (and embrace) a feedback loop

Being clear isn't just about how you communicate; it's about how your communication is received. In order to know how people are reacting to your efforts at clarity, you need to both ask them and be prepared to adjust your communication strategies accordingly.

Here's a tactic to try:

- Cultivate a culture of honesty

What You Risk If You Don't Embrace Clarity

The business risks of unclear communication are well known. Research by Crucial Learning found that 43% of workers estimate they waste two weeks or more thinking about (but not acting on) an unresolved problem at work. Additionally, one-third of employees believe their inability to speak up in tough situations has cost their organizations at least $25,000.

But the costs in trust, social capital, company culture, and interpersonal relationships are potentially even greater. For instance, lack of clarity from leaders makes it difficult for team members to stay motivated. If they don't understand what they should be doing or why it matters to the company, they become disconnected from their work.

Chapter 7: Decisiveness

Decisiveness is taking thoughtful but swift action that doesn't leave people hanging, addressing issues before they fester, synthesizing input and perspectives to make timely choices, and practicing radical and kind honesty.

Why Is Decisiveness Important? Keeping people in limbo is one of the least empathetic things a leader can do. It can feel risky to commit to decisions quickly, but

dragging your feet to avoid hurting feelings will only erode trust. Addressing choices, performance issues, action plans, and pending questions as soon as possible is the most compassionate way to operate. Doing this shows your team members that you are paying attention and want them to know what to expect.

How Does Decisiveness Benefit Empathetic Leaders?

- Shows respect
- Relieves stress
- Leads to prioritization
- Fosters confidence

How to Incorporate More Decisiveness

1. Revisit your goal and purpose—often

Much of the time, leaders can get caught up in the drama surrounding important decisions and lose sight of the goal. Create a way to clearly kick yourself in the pants as you make a decision: make your goal physically visible using a sticky note or by including it at the top of every discussion agenda. Read the mission out loud when you kick off meetings to reorient everyone to true north.

Here are some tactics to try:

- Bake in goal-review processes
- Make goal-centricity a group endeavor

2. Practice transparency

There's no need to make all decisions in a secretive way and unveil them only when they are fully baked. Learn to be clear more quickly, and if possible, talk openly about the choices you're making and have made. Say what you mean and mean what you say.

Here are some tactics to try:

- Share your failures
- Talk through decisions with trusted colleagues

3. Solicit and synthesize input quickly and fairly

Become skilled at gathering facts and opinions, giving others a voice so they can point out opportunities or risks you may have missed, sorting through all the input, and coming to a conclusion. Practice soliciting input from others, but be clear that once a decision is made, naysayers will be asked to disagree and commit.

Here are some tactics to try:

- Focus on impact
- Express enthusiasm for feedback aloud
- Start small

4. Put a deadline on your thoughts

Decisiveness isn't only about making good choices; it's about making good choices *in a timely manner*. If you tend to ruminate endlessly, you need a mechanism to get yourself unstuck, such as setting aside a block of time to make a decision, which is itself a task.

Here are some tactics to try:

- Leverage tech
- Schedule a decision review block each day

5. Build trust

In an environment where trust has been cultivated and built, people are more willing to trust a leader's decisions, even if it's a tough decision for them to swallow. If your people don't trust you, they're less likely to think your decisions have been reached fairly, with everyone's input and overall best interests in mind.

Here are some tactics to try:

- Follow through on your promises
- Be honest
- Avoid micromanagement

6. Adopt a design-thinking approach

Design thinking asks us to experiment and try things out to see if they will fly in the real world. If you force yourself to consider every option until you're sure you've selected the "perfect" one, you may never make a decision for fear of being wrong. Don't succumb to analysis paralysis. Instead, gather input, decide, and move forward with a sense of curiosity and experimentation.

Here are some tactics to try:

- Trust yourself to adapt
- Create CO-STORMING™ sessions

What You Risk If You Don't Embrace Decisiveness

Leaders who lack decisiveness risk eroding trust, skewing priorities, and prioritizing their own comfort over taking

Depleted leaders are ineffective leaders.

tough but compassionate action. Empathetic leadership isn't always about making people feel warm and fuzzy inside; often, it's about doing what will best support their growth, balancing their needs with business priorities, or being extremely candid instead of prolonging an unhealthy situation.

Chapter 8: Joy

Joy is ensuring people enjoy their work, encouraging work friendships, and creating a thriving culture even when the work itself is challenging.

Why Is Joy Important? Multiple studies have shown that when people enjoy their work, it leads to lower rates of turnover, higher productivity and engagement, increased company profits, and loyalty to the employer. But beyond these pragmatic reasons, empathetic business leaders generally want their teams to be happy, successful, and fulfilled to buoy the overall culture. A joyful work culture breeds trust to collaborate, innovate, and take risks. It empowers people to have each other's backs.

How Does Joy Benefit Empathetic Leaders?

- Reduces stress
- Makes team members easier to lead
- Fosters trust and collaboration

How to Incorporate More Joy

1. Find and encourage humor

The ability to laugh at ourselves and to find humor in tough situations is a sure sign of resilience, which is just what healthy teams need. Things can and will go wrong, but when we stop taking ourselves so seriously, we can engage our prefrontal cortex to problem-solve more effectively.

Here are some tactics to try:

- Use the rule of three
- Incorporate challenges and contests
- Don't try too hard

2. Learn improv skills to nurture creativity and trust

Improv best practices could be helpful to collaborative teams in virtually any environment and has since been teaching workplace teams how to use comedy and improv as tools to unleash trust and collaboration that leads to innovation.

Here are some tactics to try:

- Practice "yes, and"
- Listen intently

3. Encourage workplace friendships

The average person spends 81,396 hours—the equivalent of more than nine years—at work. And mountains of research indicate that having friends in the workplace doesn't only boost job satisfaction and performance but also improves wellness.

Here are some tactics to try:

- Create a safe environment
- Be curious
- Try the buddy system

4. Make meaningful team-building a priority

Team-building has gotten a bad rap over the years as a cheesy, forced way to forge bonds, but when it's done thoughtfully, it can totally transform interpersonal dynamics for the better. It can lead to the formation of work friendships and bolster trust among teammates, and help everyone build important interpersonal skills, which ultimately creates a more connected team.

Here are some tactics to try:

- Tie team-building to purpose
- Give back to the community
- Consider diverse needs

5. Celebrate together

Joy at work is directly tied to feelings of purpose, accomplishment, and connection. That domino effect boosts en-

gagement and, ultimately, performance. Which means that actively celebrating wins as a team will up the joy quotient faster than just about anything else.

Here are some tactics to try:

- Encourage frequent praise from leaders and peers
- Ask about celebration preferences
- Celebrate internal work

What You Risk If You Don't Embrace Joy

Leaders who ignore this pillar will have less joy themselves, which is bad enough, but they also risk driving their teams to exhaustion and detachment.

Since recent Gallup data shows that work friendships are strongly correlated to a long string of positive business outcomes, including improvements in profitability, safety, inventory control, and employee retention, it's likely that lonely, isolated employees will lag behind in these areas.

What's Next: The Future of Empathetic Leadership

Past, Present, and Future

Setting up new leaders for success won't be easy, though, especially given the legacy of leadership that still lingers and the emerging challenges we all face.

When you leverage and fortify the Five Pillars of Effective Empathetic Leadership—self-awareness, self-care, clarity, decisiveness, and joy—you're making yourself irreplaceable. Your ability to effectively balance empathy with all the other demands will see you through these shifts, and it will even give you an advantage over others as the working world continues to evolve.

Organizational leaders of today must continue to champion empathy in balance with boundaries and compassion alongside self-care.

Empathetic Leadership Can Start Early

The way forward can be made even easier if today's leaders start modeling and teaching empathy to younger and younger generations. We need to use the Five Pillars of Effective Empathetic Leadership so we can practice healthy empathy, support our teams, and achieve performance goals while still taking care of ourselves. Because if we burn out and quit, who will take up the mantle?

Successful Leaders Embrace Both/And Thinking

Far too many people believe empathetic leadership is an either/or proposition when it's really both/and. As business leaders, we absolutely can embrace empathy and ambition, compassion and competition, kindness and high performance.

But only if we have the right foundation to embrace empathy in a healthy way.

We must always remember that empathy is more about mutual understanding and support than it is about flexibility, acquiescence, or niceness. With that understanding, we can strike that vital balance between empathetic policies and outstanding performance. We can build engaged, effective, and innovative teams who do excellent work—happily and sustainably.

And with that balance in mind, we as leaders can also thrive and flourish in the process.

Maria Ross is a speaker, facilitator, author, strategist, and empathy advocate who champions the balance of cash flow, creativity, and compassion in leadership. Through her consulting and as host of *The Empathy Edge* podcast, she helps leaders and teams worldwide use empathy to drive growth and impact. A brain aneurysm in 2008 inspired her memoir *Rebooting My Brain*, deepening her commitment to empathy in both life and work. Her insights have been featured in major outlets including MSNBC, NPR, Forbes, and *Entrepreneur*, and she has spoken for organizations such as Salesforce, TBWA\Worldwide, and the New York Times. Maria lives in the San Francisco Bay Area with her husband, son, and rescue dog.

THE SUMMARY IN BRIEF

Employee engagement affects everything from the overall experience in your workplace to your organization's bottom line. Helping employees become happier and more fulfilled at their jobs is absolutely critical, and it starts with leaders. You have a major role to play in your employees' engagement, but how can you increase that engagement in a powerful way?

That's where ***The Engagement Ring*** comes in. RING stands for Relationships, Included, Needed, and Growing— and it's the foundation for Lee Ann Pond's transformative approach to leadership and increased employee engagement.

This book helps leaders help their employees, by providing them opportunities to develop stronger relationships in the workplace, feel more included within the company and within their teams, feel needed by the organization and valued for the unique skills and accomplishments they bring to the table, and find opportunities to grow and develop within their role both personally and professionally.

IN THIS SUMMARY, YOU WILL LEARN:

- How to build strong relationships between employees and their teammates and leaders.
- How to help employees feel they belong and are always in the loop.
- How to help employees feel they can grow personally and professionally in their role.

Introduction

Having spent the last fifteen years in the corporate "C" suite, with authority over several departments including human resources, Lee Ann Pond was ultimately responsible to make sure the entire workforce had good bosses in place. Developing programs to train those leaders led her to the concept of employee engagement.

In these roles, she discovered that the end game of leadership is engaging your followers. ***The Engagement Ring*** details actionable skills and techniques needed to engage your employees.

Employee Engagement

One-third of all employees would forgo their annual raise if it meant their current boss would be fired. Half are looking for another job at any given moment. Unengaged employees cost $550 billion a year in extra sick days and lost productivity to U.S. corporations.

Employee engagement is important to an organization's success because it positively affects productivity, turnover, and profitability. It's about employees wanting to go above and beyond what is required, and most of an employee's individual engagement is due to their relationship with their direct supervisor. There are specific steps that supervisors can take, which will enhance their employees' engagement. The first is learning how to 'act' professionally.

The Engagement Ring

The elements of engaging your employees or members of your team form what's called the Engagement RING.

Relationships—with their direct leader and their teammates

Included—the feeling of belonging and being 'in the loop'

Needed—with a sense of purpose to their job and pride in the mission

Growing—opportunities to grow personally and professionally

Within this ring lies a group of values such as communication, feedback, delegation, coaching, measurement, and goals. When teams feel trusted, heard, valued, and connected, they're more engaged— and more likely to produce excellent work as a result.

R is for Developing Relationships

The most important relationship at work is between each employee and their supervisor. You should be meeting with each employee on a regular basis to get to know them and their work more closely.

You should also be encouraging friendships between members, which helps build camaraderie and higher engagement. That said, remember that employee engagement is the responsibility of the supervisor, not the employee. If your teams aren't getting along, your employees don't feel comfortable approaching superiors with ideas, or there are other signs of poor relationship building, your first question should be how you can improve as a leader.

Do I Know You?

Author Patrick Lencioni says, "In order to be the kind of leader who demonstrates genuine interest in employees and who can help people discover the relevance of their work, a person must have a level of personal confidence and emotional vulnerability. Without it, managers will often feel uncomfortable, even embarrassed, about having such simple, behavioral conversations with their employees."

When you first take the steps to have more close relationships with your employees, it may feel awkward at first. But you should have the conversations until they begin to feel comfortable—"fake it until you make it."

Have a prescheduled one-on-one meeting with your staff weekly to connect. Take notes at the meeting and follow up. Find out what each employee does in their job, what their goals are, and what their dreams are. Have a spreadsheet and track your staff's progress in the Engagement Ring.

Your BFF At Work

To be a successful leader, you need to create an environment that fosters camaraderie among your staff. You need to create opportunities to develop friendships, and sometimes that requires a certain level of creativity on your part. Icebreakers at the start of a staff meeting are a great way to encourage employees to get to know each other and interact.

That said, you need to beware of pitfalls of developing or maintaining personal friendships with employees. Always ensure that your relationship remains professional— connecting over personal social media like Facebook can sometimes distort the line between boss and employee.

I is for Being Included

Employees want to feel included in the important and ambitious work your company is doing. To do that, you can't adopt the 'gated community' approach to the company's work. While your instinct might be to withhold information from low-level employees, this can make them feel left out or disconnected from your company's mission.

Find ways to foster belonging, and seek opportunities to keep your employees in the loop whenever appropriate—as long as you're not compromising your company's security. Be as transparent as you safely can, and be sure to 'manage the grapevine.' That means being aware of what's being said from employee to employee.

Longing for Belonging

Humans have an innate need to belong to a group. They also need to be seen and appreciated for their individual strengths. When people don't feel appreciated or included, they can experience significant emotional pain. It can affect all aspects of their lives and work, and has been shown to dramatically decrease productivity and work engagement.

The ability for employees to feel like they belong begins with their leaders. A leader should set the tone to make employees feel they belong to the team. That can look different for different leaders, but it needs to be a conscious and strategic effort rather than an afterthought.

There is No 'I' in Team

Team building isn't something that will just happen on its own. A great team dynamic must be created purposefully. You can use the three Cs to create great teams— communication, collaboration, and community.

Stories about the team's successes (and failures) can become part of the history and culture of the team, and should be documented and shared as appropriate. You can also set up special activities to help create a history and stories and to motivate your team to become more engaged with each other than ever.

We Need to Talk

It's important that you carefully manage communications within your teams. If you don't, your employees will make up their own version of how things transpired.

This can be a careful balance to strike. You must be as transparent as you can while also ensuring that you keep confidentiality ranges as appropriate. It's easy to stray too far onto one side of the spectrum.

Meanwhile, you need to make sure you're "in the know." When word is travelling around your team or organization, you should know about it. If you've put in the work to establish transparent communication early, you'll be rewarded with a good view of what's being said.

The best approach is to be authentic and empathetic, and listen by being silent when appropriate.

Hey Coach

While teams need autonomy to thrive, they also need to be taught and guided. Coach your team to develop skills so that they can ultimately solve their own problems. This level of coaching requires patience, practice, and effective listening skills. Counterintuitively, the best leaders use listening and silence to coach effectively.

N is for Being Needed

How do you make your employees feel truly needed? Too many employees feel like they could disappear from the company tomorrow and hardly anyone would notice or care. So how can you make employees feel as essential as they truly are?

The key is to connect them to the mission. They need to feel powerfully tied to what your team or organization is trying to accomplish. This starts with a strong onboarding process, and also includes conducting semiannual stay interviews where you encourage employees with feedback about how important their work has been.

If a staff member does decide to leave, you should always allow them to leave on good terms.

Job GPS

You should bring the mission of your company to life in your employees' eyes with stories, acronyms, or shortened versions, so that they can easily remember and connect to that mission. Use the mission and each employee's position description in order to work out their direct connection to the mission. From there you can create goals with the employees that connect their daily tasks to their role in the mission. You can also work with the employees to create daily goals they can in turn use to measure themselves and their performance relative to the company's mission and goals.

I've Got You, Coming and Going

Integrate each new employee into the organization with an onboarding process within your department. Make stay inter-

views part of your process to obtain positive and negative feedback about the employees' experience at your company and within your department. Be open to honest feedback obtained at these stay interviews, and be prepared to actually act on it. When employees do leave, keep a connection with them and encourage a positive lasting relationship so that these former employees will remain a champion of your organization.

G is for Growing Personally and Professionally

How can you help your employees grow both personally and professionally as a member of your team? It starts by not shying away from direct conversations you know need to happen, even if they're uncomfortable. You should give consistent feedback, both positive and negative, as needed. Find stretch assignments to help delegate to staff and allow them to grow. All along the way, provide and encourage developmental activities on a regular basis.

Say What?!

Sometimes you'll need to have difficult conversations with employees. Use the SAS method— See the situation from the employee's point of view, Assume the employee had positive intent, and Script and practice the discussion.

Describe the behavior, the effect on the organization or department, and the expected behavior in the future. Remember that there is no place for anger in the workplace. Be ready with phrases to remove yourself from the situation when anger flares up.

To give bad news, use a short phrase to let them know bad news is coming, give them the news, and then allow them some space for grief or disappointment.

How Am I Doing?

Feedback is one of the most effective skills for engaging employees, but it must be handled properly and tactfully. The purpose of feedback is to mold future behavior, not simply to express frustration or let an employee know they did something wrong. Both positive and negative feedback should be given based on a somewhat scripted way to avoid going outside the scope of your feedback or saying things you don't mean. When possible, look for opportunities to give more positive than negative feedback to employees.

Delegation is an Education

You should delegate if you want to grow your employees, stretch their skills, take work off your plate, and leverage the output power of your department. When delegating, match your employees' strengths, skills, and interests to the tasks. Find something to delegate to staff at every level, and move to more complex tasks as employees' skills develop.

Delegation shouldn't be mandatory— always ask the recipient. Then, avoid micromanaging the task and let go of control. Your staff may just surprise you with their success.

Bloom Where You Are Planted

Opportunities for personal and professional growth at work benefit both the employee and the organization. You should consistently meet with employees to find out how and where they want to grow, and then formalize those plans. Find ways to track and monitor progress for each staff member.

Lee Ann Pond is the founder and CEO of Engaging Leadership, a firm dedicated to helping organizations engage their leaders, teams, and employees for peak performance. She is also the creator of the Engagement Ring, a framework for helping leaders understand the core tenets of engagement. With an MBA, executive coaching certification, and fifteen years of C-suite experience, Lee Ann is an expert at merging leadership development with employee engagement.

THE SUMMARY IN BRIEF

We spend the majority of our lives at work, and what we give is infinitely greater than just our time and energy. Heather Hanson Wickman, author of ***The Evolved Executive***, mines her experience to show us a better way to work. Her journey includes earning a Ph.D. and working as a senior level executive. It also includes a failed marriage and dropping out of the corporate world. To find success again, she evolved from fear to love and stepped up as a changed leader.

Organizations need evolved leaders who have developed beyond the needs of command and control management, who can take an honest look in the mirror and recognize that they first must be the change, and who can genuinely foster love, care, and humanness in the workplace.

The Evolved Executive is about embracing the evolution of our leadership beliefs, practices, and organizations. Evolved Executives and organizations not only thrive in the new world, often showing significant performance improvement compared to traditional organizations, but they do so while bringing purpose, meaning, and human connection to their employees and communities.

IN THIS SUMMARY, YOU WILL LEARN:

- How love trumps fear in organizational leadership.
- That service benefits employees, not just customers.
- To identify practices to bring healing to your workplace.
- To recognize personal values for whole-self development.

Introduction

Organizations are on the cusp of massive change as the world moves in more volatile and unpredictable ways. For organizations to survive, we need more adaptable leaders capable of moving us forward. We need a greater awareness and consciousness beyond simple black-and-white, quarterly report, profit-and-loss thinking.

Responsive organizations and conscious leadership hold a basic truth: people and purpose matter just as much as profit. The emphasis on profit alone, the high rate of failing companies, and the tremendous suffering that exists at work are all clear signs of the struggle that is seen in organizations.

The hard lines between leaders and workers, thinkers and doers, are becoming an active hindrance to success. We need a new way to work. Organizations don't change without leaders being willing to change, and we can't change without the courage to challenge long-held beliefs and practices. Fear is what holds us back. The only way to push fear out is to bring love in.

Evolution: A Way Forward

Leading with Love

The space between love and fear is vast but also simply a matter of intentional choice. The individual choice to operate from fear or love is one we get to make every day. When we choose fear as leaders, we create isolation and closed channels of communication, as well as a lack of transparency and alignment, which results in people who do not bring their full potential to their role or organization.

In a love-based organization, people feel safe to share information widely, provide open and honest feedback, stretch and grow themselves personally and pull together for the benefit of the entire organization.

Decurion is an organization that has built a deliberately developmental culture. In essence, they hold a core belief that investing in the development of people means investing in the future of the business. Where some organizations believe that money spent on people takes away from the bottom line, Decurion believes that the two run in concert with one another. Their successful results, they believe, are because they invest in their people.

Leading to Serve

The evolved executive, instead of focusing on power and control, focuses on the growth and potential of the team in pursuit of the shared vision. The traits that are most essential to the evolved executive and closely align to that of a servant leader include:

- Authenticity: the ability and desire to show one's true identity
- Humility: an honest understanding of one's strengths and weaknesses
- Compassion: the internal orientation to be other-centered, kind, forgiving and accepting
- Courage: being open to risk and assertively standing up for what one believes is right for the greater good

In traditional organizations, we've lost the ability to take time and simply "be" with people. Building a love-based culture means caring about people. That means watching for opportunities for clear communication, authenticity, and shared decision-making. It also means providing people with what they need to find work motivating and fulfilling.

Leadership Beliefs and Consciousness

As we become changemakers in our own lives, teams, and organizations, we must ensure that the beliefs we hold, the values that underpin our mental operating system, are aligned with the future we want to create. Belief drives behavior.

Horizontal and Vertical Learning

There are two distinct types of learning and growth for leaders in progressive organizations.

Horizontal learning focuses on the information, skills, and competencies we need to succeed as leaders. It is what you know: technical expertise, functional skills and behaviors.

Vertical learning adds the ability to interpret a complex situation in meaningful ways based on your beliefs. It focuses on developing your emotional intelligence, as well as upgrading your leadership operating system to be more wise, intelligent, intuitive, and caring.

Vertical learning first begins without understanding of consciousness. By expanding our awareness, we increase our consciousness—an essential component to vertical learning.

Consciousness is like an apartment building with many floors. People have different views of the world, depending on which floor they occupy. Every time we move up a floor, the world around us changes. We see the landscape differently. Those who climb the stairs have the drive to face the fear, embrace the unknown, and experience the new levels.

As a leader moves from the lower levels to the higher ones, he or she moves from leading from fear (self-protection and power) to leading from love (greater good and self-awareness).

Mindset

Most leaders are skilled in the analytical thinking required to be good managers and the day-to-day skills of business, but they need to gain insight into the heart and the will. The heart accesses emotional intelligence, knowledge of people, and sensing the surrounding environments. The will can heighten your ability to connect with your authentic purpose and fulfil that purpose through action. Four critical leadership beliefs help you to connect with both the heart and the will: the connection mindset, the growth mindset, the trust mindset, and the purpose mindset.

Connection is a basic human need in all of us. How can we let go of the fear and instead begin to find human connection? When we model wholeness and imperfection, we create a sense of connection with others.

With a growth mindset, you believe "that your basic qualities are things you can cultivate through your efforts, your strategies, and help from others," according to mindset expert Dr. Carol Dweck. This creates a love of learning and a resilience essential for great accomplishments. Why do we waste time proving over and over again how great we are rather than focusing on getting better?

The trust mindset means letting go of the need for certainty and the need to control. Trust gives you the ability to adapt and change even when you don't have all the answers.

The last critical belief system for evolved leaders revolves around purpose. Purpose, or a mission larger than ourselves, is a key motivator for all of us. The purpose mindset creates loyalty and commitment among employees and customers. It creates lasting organizations.

Leadership Practices

Leadership growth is about lifelong learning and action. When you experiment with new practices, pay attention to the reaction of those around you. Watch for signs to help you determine if your current environment is a good place for you to continue your growth.

Cultivating Values

Understanding values is essential for leadership success. Decision-making becomes easy when values guide the way. A values discovery tool can help you identify the values most important to your leadership context. Once you identify what's most important to you, expand out from the specific words. If one of your core values is health, you might describe health as "living with vitality and energy every day." Begin to test your values to see if they make sense for you. Ask yourself if this value truly feels consistent with how you want to lead and the leader you want to be.

People who don't have a clear idea of their values tend to be on autopilot in their career. In today's uncertain and ambiguous environment, values provide a guiding light with which to lead.

Defining Purpose

Finding your purpose is a powerful leadership exercise. Discovery is an active process. You need to experiment to understand what brings you joy and energy and what drains the life out of you. Think about who you are and what's important to you. Tell your story. Common themes and patterns emerge in these stories. Ask others what they would say is your purpose. What are you uniquely skilled and positioned to do in the world? Objective perspectives can be more powerful than your own, even though feedback can be difficult to hear.

Based on everything you've uncovered from your life stories and feedback from others, find the elements most critical to your success and fulfillment. Being able to create a simple and concise statement is powerful; it allows you to get excited about what you're doing in the world. A purpose statement guides your decisions and clarifies your priorities. If it doesn't powerfully resonate with you, try again. Keep in mind that the most powerful purpose statements are those that are in service of others.

Healing the Organization

Look around your organization. When was the last time you paid attention to the health and dynamics of the living, breathing system you call your company? Your employees do the work, but what do you really know about them?

Servant Leadership and Healing

One of the great strengths of servant leadership is the potential for healing yourself and your relationships to others, leading to a powerful force of transformation. An approach of compassion and care fosters healing, well-being, and engagement.

How leaders reward people and make decisions are great indicators of culture. Is there intense competition with one winner and one loser? Are people rewarded at the expense of others? Are there incentives that lead to perverse behavior—unintended consequences that may harm another colleague or a different part of the organization? In better situations, are teams rewarded as a unit? Team rewards and recognition versus individual rewards and recognition are often indicators of overall health.

New Roles, New Conversations

Evolving as an organization may require re-design of policies, processes, and roles. And evolving requires new and different types of conversations—some which may be awkward to manage initially. Let's take an example.

A team is faced with a specific role or a set of roles that need to get done, but no one has interest in doing them. What happens now? This creates an incredible opportunity for a conversation about priorities and needs. Why is there no interest in taking on this role? Is the role even needed? Does it provide the team and organization value? The result of this conversation may require change. The point here is that it becomes a team conversation about what needs to be done to achieve the shared purpose.

Practices initiated in service to others highlight love in action at work. They also outline the shift in the role of a leader from that as an authoritarian to a servant and coach in pursuit of a shared purpose. Organizations of the future will rely on these structures and practices to fuel their success by tapping into the depths of talent, motivation, and passion that traditional organizations squelch.

Dare to Be Different

The future of work will depend on organizations' and leaders' willingness to boldly pave a new path for others to follow. As the saying goes, with risk comes reward. Scribe Media is an organization that is practicing love in action from a very evolved and practical perspective. The Scribe mission is to unlock the world's wisdom. The organization believes human culture advances through people sharing their ideas, knowledge, and wisdom with each other. Scribe has thrown the book writing process on its head. They have created a seamless system for the book creation process that allows a writer to quickly move from idea to published work.

Beyond the obvious innovative approach to the process of book creation, they have evolved internal practices for a human-centered workplace. The company is guided by ten principles reflecting their core values. These principles drive both operations and culture.

Many organizations struggle with values that are words without actions. Evolved organizations find ways to breathe life into their values and ensure they guide the organization through purposeful business growth.

As we embark on a journey of evolution, one thing is certain: we will change. We are only beginning to realize that it will require a much different leader to get us to the next stage of business. Leading an evolved organization means living in a much more conscious way—being awake to the implications for the human, social, and economic issues we are facing at work and in the world. Creating a new future will require new beliefs, new practices, and new organizational structures that allow for humanness and wholeness to come alive at work.

Heather Hanson Wickman, Ph.D., successfully climbed the corporate ladder in healthcare before charting a new path to support senior leaders in evolving their leadership and building soulful organizations.

She specializes in organizational change and executive coaching, through which she has coached leaders on evolved business practices, deep self-awareness, and leadership development. Find out more at UntetheredConsulting.com.

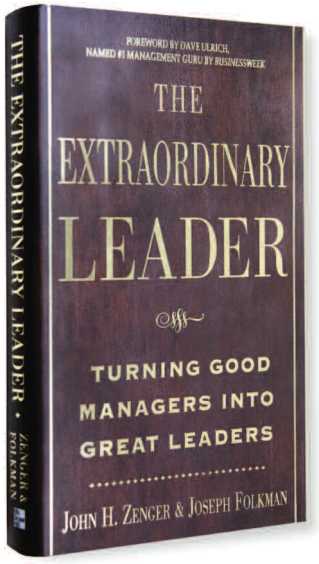
Leadership: Strategies

The Extraordinary Leader

Turning Good Managers Into Great Leaders



by John H. Zenger and Joseph Folkman

THE SUMMARY IN BRIEF

For too long, the subject of effective leadership has been shrouded in fog and ambiguity. This summary removes the shroud to reveal leadership as a skill, one that can be consciously learned and developed by anyone. It identifies the competencies necessary for effective leadership by analyzing the responses of tens of thousands of work force members as they describe, in effect, "What makes a great leader?"

Two of today's pre-eminent leadership experts analyze the answers and provide a broad and universal model for achieving exceptional results.

A major weakness in most leadership development programs has been the tendency to aim low and strive for incremental improvements in individual areas of weakness. When the results inevitably fail to impact the bottom line, organizations abandon programs as unsuccessful — and again resume their misguided focus on uncovering and eliminating leadership weaknesses instead of identifying and developing leadership strengths.

This summary instead focuses on the ability — in fact the necessity — for individuals to hone their leadership competencies in multiple areas, and organizations to develop great leaders in as many areas as possible. It provides research-based strategies for strengthening leadership both in individuals and in organizations.

IN THIS SUMMARY, YOU WILL LEARN:

- Methods that top organizations use to develop leaders from within their own ranks.
- Key competencies that leaders must have — and techniques for mastering them.
- Practical steps for developing your own leadership skills.
- A solid yet flexible leadership development program that will provide long-term value to virtually any organization.

THE COMPLETE SUMMARY: **THE EXTRAORDINARY LEADER**

by John H. Zenger and Joseph Folkman

The authors: John H. Zenger, D.B.A., is the CEO and co-founder of Zenger/Folkman, a firm that employs evidence-based, positive methods to strengthen organizations and those who lead them. He is the author or co-author of seven books on leadership and teams and is considered one of the most authoritative voices on improving organizational performance and developing leadership.

Joseph Folkman, Ph.D., is the president and co-founder of Zenger/Folkman. He is a renowned expert in the field of survey design and data analysis. He is the author of four other books: *Turning Feedback Into Change, Making Feedback Work, Employee Surveys That Make a Difference* and *The Power of Feedback.*

Demystifying Leadership

Analysis of huge amounts of data collected on leaders' competencies reveals that all vital and differentiating leadership competencies can be grouped into five clusters that can be compared to the poles in a tent:

- **Character.** Personal character is the core of all leadership effectiveness. The ethical standards, integrity and authenticity of the leader are extremely important. With a strong personal character the leader is never afraid to be open and transparent. In fact, the more people can see inside, the more highly regarded the leader will be. Without that personal character, on the other hand, leaders are forever in danger of being discovered.
- **Personal Capability.** This is the intellectual, emotional and skill makeup of the individual. It includes analytical and problem-solving capabilities, along with the technical competence the person possesses.
- **Focus on Results.** This describes the ability to have an impact on the organization. It means being capable of getting things accomplished.
- **Interpersonal Skills.** There is an enormous body of evidence that says leadership is expressed through the communication process and is the impact that one person (the leader) has on a group of other people.
- **Leading Organizational Change.** Another expression of leadership comes in the ability to produce change within an organization. The highest expression of leadership involves change. Caretaker managers can keep things going on a steady path, but leaders are demanded if the organization is to pursue a new path or rise to a significantly higher level of performance.

A key point here is that for many leadership roles, the first four elements may be all that is needed. It is not until a person gets into leading broad, strategic change that the final tent pole is required. ●

Great Leaders Make a Great Difference

An effective leader produces high productivity, low turnover, high customer satisfaction, high profitability, innovation and positive relationships with suppliers. Effective leadership is best defined and measured by the results produced.

The Organization's Objective

The more "great" leaders an organization can develop, the stronger it will be. This is true for multiple reasons, among them are the following:

- The contribution these leaders make to the units they manage.
- The example they set or role model they provide for the entire organization.
- The cumulative impact their performance has in creating an entirely new culture for the organization.
- The elevated standard of performance that is set within the organization.

Individuals must focus on their strengths. By doing that, they greatly increase the likelihood of being perceived as great leaders. That same principle applies to the organization. It is always tempting to attempt to fix the low-performing leaders, but the greatest gain appears to come by helping more leaders become truly excellent.

The only downside of any organization doing that is the target they become for headhunters. Just as GE has become the spawning ground for corporate CEOs, so will any company that produces great leaders. However, that is a relatively small price to pay for the enormous gains to be achieved by successfully developing great leaders for the firm.

Good Versus Bad Thinking

It is helpful to expand your thinking from "Leaders are either good or bad" to "Leaders are bad, good and great." This is a small change from what many currently believe, but this small philosophical difference can have a huge impact on the success of both individuals and organizations.

For individuals this philosophy should help good leaders understand that good is not great. It never was and never will be. Good is good, but the ultimate target is extraordinary leadership. Don't be satisfied with good performance. ●

Simplifying Leadership

Much of past thinking about leadership has involved the quest to find out, "Is the key to leadership having high integrity, or is it ambition? Is it developing trust in people, or is it being a good problem solver?" It is important to disabuse yourself of this thinking and cease to view leadership in "or" terms, but instead think about it in "and" terms. The elements of leadership logically go together, and development efforts in one area are like flooding the pond and lifting all boats at the same time.

Character

Everything radiates out from Character. Character ties strongly to Interpersonal Skills. A person whose character is perceived to be questionable will be less effective interpersonally. We recoil from phonies. We do not enjoy being with toadies who butter up people in authority and abuse everyone else. Most people avoid those who are arrogant or condescending. Relationships with such people are distant and strained.

Personal Capability and Interpersonal Skills

Personal Capability links to Interpersonal Skills. The respect and esteem with which anyone in the organization is viewed begins with his or her Personal Capability. It is at the stage of "contributing independently" that people develop a wide range of personal relationships. The time when people are developing their professional and technical skills is the time when they should also be developing skills that will enable them to work effectively with others. Technical and professional expertise is tightly linked to developing others and building relationships.

Personal Capability links to Focus on Results. One of the key roles any leader plays is that of role model. When the leader is personally effective and highly productive, that example is viewed by everyone involved. Leaders cannot ask others to do what they are not doing.

Four Stages of Career Growth

The four stages of career growth are:

Stage I: depending on others

Stage II: contributing independently

Stage III: contributing through others

Stage IV: leading through vision

In many cases people become locked into one stage because they do not possess the necessary skills and behavior to move forward. In other cases people stay at a particular stage because it fits their needs and aptitudes.

Focus on Results and Leading Organizational Change

Focus on Results is linked to Interpersonal Skills. Many leaders think that the linkage between Focus on Results and Interpersonal Skills is an *or* rather than an *and*. They believe they can be one or the other but not both. While each is highly desirable by itself, they are like a voice being amplified by a great sound system when they are combined. The combination of the two ignites a power that catapults a person into the highest realms of effective leadership.

Character links to Leading Organizational Change. Organizations follow a leader who is perceived as being of high character. The greater the "connection" that is felt with the leader, the more likely the organization is to support the change being proposed. That support is tied to perceptions of the genuineness, caring and integrity of the leader.

Focus on Results links to Leading Organizational Change. Leading Organizational Change is most often a long-term objective, and effective leaders are always balancing short-term and long-term objectives. A focus on results is a necessary balance to the longer-term emphasis on strategic change.

Interpersonal Skills links to Leading Organizational Change. Nowhere is there a greater requirement for consummate interpersonal skills than in

the introduction of strategic change within the organization. Whether it is an attempt to change the culture or to implement a major new initiative, trust from others and the communication skills of the leader are absolute requirements for success. ●

The Competency Quest

The most prevalent approach to leadership development in recent years has been the competency movement. The fundamental premise is simple. Identify and define the competencies of effective leaders in a specific organization. (Competencies are the combination of knowledge, skills, traits and attributes that collectively enable someone to perform a given job.) Then, when selecting leaders, choose people who possess those competencies because they will have a much higher likelihood of success. If you want to develop leaders in the organization, design activities that directly expand or strengthen those competencies for the leaders in the organization.

For the past two decades, companies have focused their people-development efforts around these defined competencies. In sum, the approach has impeccable logic to it.

Why Hasn't It Worked?

The competency movement had several major flaws:

1. It was too complex.
2. It was based on some faulty assumptions.
3. It produced several unintended consequences.
4. It suffered from poor execution.

Correcting the Assumptions

Unfortunately, it now appears that most common assumptions underlying the focus on competencies do not coincide with the current reality, nor are they reinforced by current research. For example:

Assumption 1. Competencies are unique to each organization.

Fact: Despite the efforts to create distinctive lists of competencies, there is a remarkable sameness about them from one company to another. It is probable that there are a handful of factors that will always account for overall leadership effectiveness.

Assumption 2. Competencies are unique and distinctive traits or qualities possessed by an individual.

Fact: One of the most dramatic discoveries of research is the massive linkage between competencies. The linkage does not consist of a handful of competencies that are slightly linked to each other. Instead, nearly every competency studied was highly correlated with many others.

Assumption 3. The more congruence there is between the organization's defined competencies and the individual's, the greater is the likelihood of success.

Fact: This is the only one of the assumptions that the study's data does not challenge. However, the validity of the assumption hinges on whether the organization has empirically derived its own list of competencies and whether there are good ways to measure an individual's competencies.

Assumption 4. All competencies have roughly the same importance.

Fact: There are huge differences between competencies' importance. If you want to work on improving your leadership capabilities, focus on behaviors that truly make a difference.

Assumption 5. Competencies are best developed by a direct focus on that specific competency.

Fact: Research suggests that one competency is developed in the process of developing another. They appear to be, in many cases, byproducts of one another. That means that the direct linear method is not the only way to develop or strengthen a competency. ●

Leaders Must Fit Their Organization

After analyzing the results from 22 different organizations, there are some common organizational profiles. These profiles highlight the things that organizations emphasize as strengths. Frequently, an organization might have several of the strengths listed below bundled together.

Organizational Profiles of Prized Competencies

To help you assess what your organization values, here are four of the more pronounced organizational characteristics. The opportunity here is to judge the "goodness of fit" between what your organization truly values and your own pattern of competencies.

• **Technology Emphasis.** In the technology organization, leaders need to be highly knowledgeable and viewed as having technical expertise in the core activity of the firm.

Advantages. This organization runs on cutting-edge technology.

Disadvantages. In this organization the inherent belief is that you can solve any problem with technology. Here linear thinking can be carried to an extreme.

• **Excellent Execution.** In this organization there is a substantial need to drive forward and achieve results, to get things done on time, to stay in budget and to always make your numbers.

Advantages. This organization moves fast, and change happens quickly. If people enjoy challenges and like to stretch themselves, this organization will fit them well.

Disadvantages. As with any great conquest, there are typically many dead and wounded. The reality is that if you don't keep up, you're out.

• **Avoiding Mistakes.** In this organization there is a critical need to do things right. Excellence, quality and conformance to standards are the organizational bylines. However, the reward for taking on a new project or taking some initiative is not as great as the punishment for making a mistake.

Advantages. Leaders take pride in order, deeply analyze every aspect of a project and do high-quality work.

Disadvantages. Frequently the organization is slowed down by bureaucracy and excessive details, and is often risk-averse.

• **Customer Emphasis.** Leaders are totally focused on satisfying customer needs and responding to their requests.

Advantages. This company enjoys absolute clarity about what customers currently want and need.

Disadvantages. Leaders are so focused on pleasing the customer that they lose sight of internal operational issues and long-term direction.

Implications

It is critical for leaders to understand their individual areas of competency, the things that bring them passion and the needs of their organization. The "leadership sweet spot" that is the intersection of these three elements holds great promise for both individual and organizational success. It is rare to find a perfect match between individual competence and passion and organizational needs. Individuals can develop new competencies to fit the needs of an organization. Organizations can change their culture, which requires leaders with different leadership competencies.

A key to success for leaders is to find their own personal "sweet spot." For each person there is something that he or she can do extremely well. There is a competency with which he or she can make an enormous contribution.

When an individual can provide an extraordinary competency that an organization needs, the only other component that is required is passion. This is the element that is most underrated and yet potentially the most critical part of the model. Love, desire, motivation, inspiration and passion are, in the final analysis, the greatest differences between good leaders and great leaders. ●

Great Leaders Possess Multiple Strengths

Building some strengths requires balancing some competencies against others. It is not strengths that hurt a person's effectiveness, but strengths standing alone without counterbalance.

The secret to building success as a leader is to be excellent at powerful combinations. The more differentiated the combination, the more potentially powerful the combination.

Powerful Combinations

The first powerful combination is giving others performance feedback and building trust. Having the ability to give straightforward and candid feedback is a wonderful skill. Feedback, however is not always accepted. A powerful combination is having the ability to provide feedback and also being trusted by others. If others have trust, then their assumption is typically that the feedback is given to help them. Without trust, feedback is often perceived as self-serving on the part of the giver of the feedback.

A second example is a combination of the competencies of interpersonal skills and listening. Research on behaviors that differentiated high- and low-performing leaders found that listening was not a behavior that was an effective differentiator. High performers were not much better at listening than poor performers. Listening, however, can be a very beneficial skill when combined with other interpersonal skills. Studies found a powerful combination between a person's listening behavior and the perception by others that the leader had good interpersonal skills.

The Halo Effect

A halo effect occurs when our perceptions of others are distorted either positively or negatively. After studying results from thousands of leaders, it became evident that strong positive and negative halo effects occur. When leaders perform extraordinarily well on a few behaviors, they begin to be viewed in a very positive light, and others' impressions of them on other competencies tend to be distorted in a positive direction. The opposite effect seems to occur for those with a few profound weaknesses.

The halo effect is very real, and everyone has experienced its impact. The important issue for leaders is to get this effect to work for you rather than against you. The key to getting the halo effect to work for you is to build up a few profound strengths. ●

Fatal Flaws Must Be Fixed

Five patterns of behavior consistently lead to failure in leadership. Possessing one or more of these makes it virtually impossible for a person to be perceived as an effective leader.

Here are five fatal flaws that consistently lead to failure in leadership:

1. Inability to learn from mistakes.
2. Lack of core interpersonal skills and competencies.
3. Lack of openness to new or different ideas.
4. Lack of accountability.
5. Lack of initiative.

Everyone close to these leadership behaviors feels their impact (or in this case, their lack of impact). No one is immune. They have a huge influence on the organization, because the leader has an enormous "ripple" effect in the organization.

If a leader possesses one or more of these characteristics, action should obviously be taken to remedy that deficiency, make that weakness irrelevant or move that person back into a role of being an individual contributor where that behavior is less necessary.

People can overcome these characteristics. The organization can ensure that the person knows he possesses one of these "fatal flaws" and the serious consequences this will have on his career. If the person is willing to change, he can often make significant contributions to the organization.

First, examine the nature of the individual and whether positive or negative feedback will be of most value. Second, whatever the person is like, keep feedback focused on the behavior or process the person is using, and not on him or her as a person. These two powerful ideas greatly enhance our understanding of the feedback process and how it can help leaders overcome fatal flaws.

Those whose careers continued to soar did exactly the opposite. They readily acknowledged what happened to those about them, alerted colleagues to the potential consequences, did their best to fix it and then proceeded to forget about it and move on in their careers. ●

Derailed Executives

Researchers Morgan McCall, Jr. and Michael Lombardo compared executives who were derailed to those whose careers took them to senior positions in their firms. Derailed executives made about the same number of mistakes as those whose careers continued onward and upward, but derailed executives did not use setbacks or failure in an assignment as a learning experience. They hid their mistakes from others, not alerting colleagues to the consequences of how their mistakes would affect the colleagues' activities. They did not take immediate steps to rectify what they had done. Finally, they tended to brood about their mistakes, constantly reliving them for years afterward.

New Insights Into Leadership Development

Since almost all development plans are linear, researchers looked for a technique to help people understand alternative development paths. In their approach, they took 16 differentiating behaviors and analyzed the relationship between that specific behavior and the other 15, plus a number of other behaviors. When an individual showed a high level of competence on a specific behavior, researchers looked at other behaviors that were also highly rated. Then they analyzed leaders who were rated poorly on that differentiating behavior and observed that the same companion behaviors were also rated poorly.

The researchers call these related behaviors "competency companions." They are companions because they seem to be permanently glued together. These competency companions provide excellent clues about an alternative way to develop important leadership skills — and to improve the likelihood that you will be perceived by those around you as possessing an important, differentiating competency.

For example, leaders perceived as having the best technical expertise were also perceived as having high competence in interpersonal skills and standards of excellence. Also, those perceived as having the worst technical expertise typically had poor interpersonal skills and low standards of excellence.

The Link Between Interpersonal Relationships and Technical Competence

Research by Robert Kelley at Bell Labs looked at the productivity of scientists. The researchers found that the engineers who were most successful were not those with the highest IQs or those who were the most knowledgeable. What they found was that these stars per-

formed their work differently. They developed strong networks within the organization and worked with others in a totally different manner than the "non-stars."

To be perceived as being highly technically competent demands a person who can communicate effectively about their discipline to many groups.

Mechanisms of Competency Companions

There are a variety of reasons for the impact that is evident when both the competency and the competency companion are rated positively. There are different mechanisms creating the impact. The following is a list of six mechanisms that best explain the competency companion phenomena:

1. The competency and the competency companion fit together in people's perceptional systems.
2. Competency companions facilitate the expression of another competency.
3. Achieving a high level of skill in one behavior helps develop a related behavior.
4. One competency is a building block or a core element of the other competency.
5. Competency companions change the context in which we operate.
6. Developing a competency companion changes the person.

A New Approach to Development

Competency companion research provides leaders with a new map on how to reach their ultimate destination. This map provides alternate routes, which, for the most part, are unintuitive.

Typically, leaders will find one or two of the companion behaviors in which their effectiveness is inadequate. One leader commented: "The companion behaviors I needed to work on stood out like a sore thumb. It was so obvious what was holding me back." Leaders can usually arrive at their own rationale for why performing poorly on the companion behavior impacts the competency on which they are working to develop exceptional strength. The added insight provided by the competency companions is very powerful.

Leaders who have experienced this approach have found it to be a valuable tool in their efforts to make the transition from good managers to great leaders. ●

A Case Study in Leadership Development

The U.S. Marine Corps has come to utilize some extremely powerful leadership development practices. They arrived at this through their long experience and seeing what worked, rather than coming at it primarily from any scientific research study.

Here are four lessons from the Marines' approach:

• **Development begins with understanding the unique leadership tasks required.** Leadership is a team effort rather than a solo performance. The Marines' emphasis on teams cascades through their leadership development. They pair a highly seasoned noncommissioned officer with a newly appointed lieutenant and allow the two of them to work together for several months. This eliminates many mistakes. The new officer has a sounding board with whom to think about strategies and tactics.

• **Everyone is on the team.** Daniel Freedman described the Marines' culture in these terms, as he told of a complex mission planned by a Col. Moore: "Moore will make the final decision among the three [alternatives being proposed], though he not only allows disagreement but practically demands it. This is standard Marine thinking; enlisted men and women and officers alike are expected to express concern about questionable decisions and orders, and one of the biggest mistakes an officer can make is to ignore or squelch such questioning."

• **Leaders must be able to cope with rapidly changing leadership patterns.** The Marines understand the difference between a situation that calls for a highly collaborative, team-based approach and one that calls for a strong, single leader. Effective leaders must be able to recognize the difference and to function comfortably in either situation.

• **Leadership requires the use of peer discipline and pressure.** The high level of commitment and loyalty in the Marines comes from not wanting to let your peers down, as much as or more than from the pressure of not disappointing an officer. In private-sector corporations the emphasis is more often on pleasing the boss. The Marines, in contrast, emphasize group discipline. It has long been recognized that their primary motivation is to protect their comrades. Discipline ensures a deep commitment to the organization, to the unit and to comrades. Thus, the strongest motivational forces come from within each person, and from colleagues.

While it may be premature to advise anyone to adopt their ways "lock, stock and barrel," it appears that any organization that is serious about developing people can learn a great deal from the U.S. Marines. They prove that leaders can be developed. ●

What Individuals Do to Become Great Leaders

Following are five suggestions for ways in which leaders can improve the attributes or behavior that are vital to producing extraordinary results.

1. **Decide to become a great leader.** To become a highly effective leader requires a real dedication to that task and a willingness to act with the intensity and focus that characterizes great athletes.
2. **Develop and display high personal character.** First, the leader must be willing to take the role of leader. That means calling the meeting to order, pushing the agenda along, drawing some people out and toning others down. It means saying "no" to a budget request that can't be funded. It also means having to terminate a longtime friend who is not performing effectively.
3. **Develop new skills.** Enroll in developmental experiences. Attend any development program your organization provides or those offered by local universities and private organizations.
4. **Find a coach.** Many organizations hire professional coaches to work with their key executives. They find the investment in someone who is capable of providing objective, constructive feedback to be well worth the expense.
5. **Identify your strengths.** Management guru Peter Drucker argues, "Self-development is making oneself better at what one is already good at. It also means not worrying about the things one cannot be good at."

It is clear that leaders can make huge strides by taking responsibility for their own development. They should not count on the organization to do that for them.

The Organization's Role in Developing Leaders

Research reveals that the leadership skills possessed by the most senior people in an organization become the leadership ceiling. That is, it is extremely rare to find anyone whose leadership skills exceed those of the people at the top.

Create a Culture of Feedback

Leadership development is significantly enhanced in a culture in which continual feedback is common. A variety of mechanisms exists to help make this happen. Some of those are 360-degree feedback procedures, frequent performance discussions between bosses and subordinates, team-building sessions, coaching relationships and skip-level meetings.

Success hinges on the bone-deep beliefs of the senior leaders of the organization. Do they really believe that their people can become great leaders? Are they willing to invest their time in providing leadership to this leadership development effort?

Are the senior leaders willing to set the expectations at a very high level and insist that everyone strive to be an excellent leader? For the organizations that make this commitment, the rewards are extremely high. For those who choose not to, the future is highly questionable.

Greater Success

Why does this approach promise greater success in developing leaders?

First, a focus on developing great leaders rather than merely on "leadership development" gives a new perspective to what we do. It raises our sights and creates a somewhat different mindset for measuring success.

Second, an emphasis on strengths is more palatable than looking for blemishes and weaknesses. Most of us enjoy doing things we are good at. It is much easier for a leader to find ways to magnify strengths than it is to overcome weaknesses. It comes more naturally.

Third, people are more willing to practice skills they are good at. Recent research on "expert performers" attributes extraordinary performance to diligent practice, not to some unique quality bestowed by deity. To get really good at anything requires practice. Leadership is no exception.

Fourth, by measuring the perceptions of subordinates and peers, we have a tool for the immediate and objective measurement of leadership. Frequent and precise measurements are possible and relatively economical.

Fifth, change need not take forever. Leadership is all about change, so if the leadership development process is not producing change, then it probably is not working.

THE SUMMARY IN BRIEF

Every leader has the opportunity to become fearless. It all starts with overcoming your ingrained FUD or fear, uncertainty, and doubt. FUD is the fear the world puts on our shoulders throughout our life. Being told to be careful, to not take risks, or to try something but be prepared for the fact that you may not succeed: these are all stops along the way on the FUD train. We have heard these types of statements since early life, often from our loved ones. They were actually trying to protect us, but in reality, that narrative instills fear, uncertainty, and doubt and actually hurts our chances. And it impacts your ability to become an effective leader today.

The difference between *good* teams and *great* teams, between *average* performance and *high* performance, and between *winning* and *losing* can be summed up in one single word: leadership. In ***The FUD Factor: Overcoming Fear, Uncertainty & Doubt to Achieve the Impossible*** author Brendan P. Keegan helps people see the Fearless Leader within themselves and accelerate their leadership journey by removing fear, uncertainty, and doubt.

IN THIS SUMMARY, YOU WILL LEARN:

- Why you should choose leadership
- How to become truly fearless
- Three aspects of leadership that increase impact
- Five key tools to create collaboration

Why Be?

Leadership is the willingness to accept responsibility to organize a group of people to achieve a common goal. With the definition of FUD and leadership in mind, let's talk about six reasons why leadership should matter to you.

Reason 1: The Leadership Void

In the United States alone, four million workers will retire in a given year, removing nearly fifteen million years of experience from the workforce. This mass exodus is creating the greatest leadership *void* in history.

Reason 2: The Greatest Opportunity

To run a successful business of any size, strong leaders are required. The leadership void has created the greatest *opportunity* of the past fifty years for individuals to accelerate their careers.

Reason 3: Leaders are Made

Leaders are *made*, not born. Don't believe anyone who tells you otherwise. Leadership is not a birthright; it's a daily decision. If you decide you want to be a leader, then you can become one.

Reason 4: Leadership is the Differentiator

Everyone is looking for something that makes them special and unique. Leadership is the *differentiator* you've been looking for. Once you have embraced the leader in you, many doors will open, and opportunities will come forward.

Reason 5: Leadership is a Gift

Leadership is hard work but being a leader is the greatest *gift* you could ever give yourself. Leadership is a gift that will allow you to pursue your dreams and to create dreams for others as well.

Reason 6: The Multiplier Effect

We cannot multiply time but we can *multiply* our impact every day by being a leader. When you instill and inspire leadership in others, you are creating multiple waves of success that ripple out and impact the greater world.

Welcome to your Fearless Leadership journey and overcoming the FUD factor.

Be Fearless

You were born *fearless*. We all were. But as time marched on, fear marched in, eventually followed by uncertainty and doubt. No one is immune to doubt. The world's greatest leaders, artists, and athletes talk about early and ongoing doubts, even when they have reached the height of success.

By employing thoughts of failure, we are effectively insulating ourselves from being hurt, disappointed, or rejected. This is normal and ordinary. The key is to not allow it to rule our lives.

You can conquer fear, thrive in uncertainty, and shut the door on doubt. You can truly be fearless. Let's find out how.

Fear

Once we recognize our own fear, we become better able to stop letting our fears become the fears of others. We can begin to learn how to manage them. Our fears are learned throughout our lives primarily through conditioning or negative experience.

The good news is that if we can learn what to fear, we can unlearn it too. We can confront our fears and push ourselves a little more each time we face them, building up our courage. Fear will only build momentum if you let it. Fight it inch by inch, day by day, and instance by instance, and you will strengthen your own power to shut it down.

Uncertainty

Uncertainty breeds uncomfortableness. When we know an outcome is certain, we feel comfortable and even confident. But as the percentages slip from certain to uncertain, we become anxious, restless, and irritable.

Leaders can harness an unwavering confidence and, perhaps, more importantly, transfer that confidence to every member of their team, steadily easing their fear, uncertainty, and doubt. When you remove employees' fears and feelings of uncertainty they can better focus on serving clients. When confronted with uncertainty, follow these three steps:

- First, focus on the outcome you want. Research has proved you are 50 percent more likely to achieve a focused outcome.
- Next, determine how you will achieve that outcome and begin to build the individual action that will get you that result.
- Third, commit to do what it takes to win.

Doubt

Those little thoughts of "How can this go wrong? What if it doesn't work?" that pop in our head can sow the seeds

Making the decision to be a leader is the greatest gift you could ever give yourself in life.

of doubt that keep us from moving forward. These fleeting thoughts of doubt in uncertain situations are normal, and they even happen in situations in which we have already experienced success. Doubt is a part of life; it's how we manage it that matters.

Managing doubt requires resilience and mental strength. Doubt doesn't send us a calendar notice of when it is going to pop up, so we need to be ready for it by building mental strength and resilience every day. Some ideas that work well include exercise, reading, prayer or meditation, good nutrition, spending time with family, practicing gratitude, and getting adequate sleep.

Be a Leader

Making the decision to be a leader is the *greatest gift* you could ever give yourself in life. Leadership not only provides you the opportunity to own any fear, uncertainty, and doubt you may have but it also gives you the responsibility to remove fear, uncertainty, and doubt from others.

Leadership is inspiring, exhilarating, and challenging. Managing tasks is straightforward: see the task, do the task, done. Leading people is not so easy. As a leader, you must develop skills to set a vision people can follow, develop relationships so people will want to follow, and set goals so they know how to follow.

As a Fearless Leader, you will have fulfilling days, confusing days, and downright tough days, and the scary part can be that you don't know what each day will bring. But that's what makes true leaders special; they overcome the fear and make the *daily decision* to lead.

You can make the daily decision to be the best version of yourself you can be and share that energy and best version of yourself with everyone around you. That is the magic that propels people in their career and in their personal life because people like that are the kind of people others want to be around.

No matter where you are on your leadership journey, remember that there is no final destination. There is no arrival location or mountaintop.

There are simply more places to visit, more people to understand, more lessons to learn, and more problems to solve. But despite all the challenges, you have to keep showing up, be willing to lead, to learn, to work hard, and to become the fearless and incredibly successful leader you are capable of being.

When you believe you've arrived, that you've reached your final leadership destination, and that you no longer need to maintain the energy level, the passion, and the stamina that got you to where you are, you don't just sit in the status quo but you also fall behind. The world, people, business, and technology continue to evolve around you. You may retain your title for a while, but it is guaranteed that someone else has taken the reins.

A shiny brass CEO nameplate on the office door doesn't make you a Fearless Leader. It might make you a formal leader, one who tells people what to do and checks the boxes on a management to-do list, but that's not Fearless Leadership.

For a Fearless Leader and their followers, the title is not the motivating factor. People listen to a Fearless Leader because they want to hear what the leader has to say. People follow a Fearless Leader because they believe in them. It's not the title. It's how you show up.

Be Good

Being good is all about our core values as a person. Every one of us has a set of core values that has been built from a young age into adulthood. From day one the people who have raised us have been imprinting values of respect, strength, and hard work on us. Being a Fearless Leader requires many traits like intellect, compassion, and perseverance. But if you dig down and look at what's really serving as the foundation for everything else, it's *strength* in all its aspects–physical, mental, emotional, and spiritual.

Without strength a leader cannot act with courage. *Courage* is a value that is acquired over time: the courage to lean

into your fears and confront them, the courage to believe in a positive outcome amid uncertainty, and the courage to channel your mind, body and soul to overcome doubts.

Fearless Leaders have *faith* in themselves and in others and instill faith in those around them. Fearless Leaders have the faith to succeed. They believe in positive outcomes, even when the facts and data suggest otherwise.

Fearless Leaders are willing and enthusiastic servants. They understand the sacrifice of *service* and the rewards for being the person who makes it happen in the background. The intrinsic internal and eternal flame of serving a greater good burns bright inside every Fearless Leader.

Humility is a value that shapes our legacy. As a Fearless Leader, you will have the courage to seize opportunities and overcome challenges, and your faith will lead you to exhilarating victories. Fearless Leaders serve for the purpose of their vision in life, to accomplish something bigger than themselves, and do so to benefit the greater good.

Leadership is a value that stands the test of time and is a summation of your life's work. The Fearless Leader accepts the responsibility of the goal, builds a team with skills and experience to achieve the goal, and lights the path toward the goal on a daily basis.

It all sounds so simple, but that's what makes it so impactful. Just be a good person and by doing so, you will have a great career and an even better life.

Be Impactful

Making an impact in the world, in your community, in a business, and on an individual is one of the most exhilarating feelings you will ever have. And once you've felt it, you don't want it to stop. Fearless Leaders institute three principles–*vision, goals, and productivity*–to be impactful and achieve consistent performance.

Without a vision, you won't know where you want to go, and neither will your team. The best way to articulate a vision is through simplicity, connectedness, and storytelling. First, make the vision simple enough for everyone to understand. Second, demonstrate how every role in the company is connected to the vision. If you are challenged to do this as a leader, your teammates will be challenged, too. Lastly, create a narrative and bring your vision to life with examples and analogies.

When we think of vision, we often think of visionaries who have changed the world–Elon Musk, Bill and Melinda Gates, Mother Teresa, and Steve Jobs to name a few. But every vision doesn't have to save the world. Just like leading, everyone can choose to have a clear vision whether it's for personal development, a community park, or rallying your coworkers to go beyond with every customer. We all have the power to set a vision, share it, and best of all achieve it.

Do you have a vision, and are you holding yourself accountable to it every day? Or maybe you're struggling to define your vision? Here are some tips to get started.

Define Your Values to Set Your Ground Rules

People can pressure you into compromising your values and philosophies and to act based on what *they* believe instead of what *you* believe. This is why you must solidly connect to your ideals and be willing to stand your ground with kindness. That connection will help you set boundaries and remain true to your vision.

Stop Focusing So Hard on the Trends

Business people are taught they must pay attention to trends, or they will fail. They must be *agile, adaptable, and flexible*. While there is truth to those teachings, innovation is arguably the willingness to intentionally toss trends out the window. The motivation of a Fearless Leader must have staying power. Your why must be something that can drive *you* regardless of the circumstances around you.

Pay Attention to Your Emotions

When you truly connect to a dream, the feeling of joy will be so strong that it blocks out fear and erases the word "can't." If you talk about the vision you're trying to build and you don't feel real energy, then you need a new vision. Listen to your gut and use your head to find logical ways to stay oriented toward what makes you happy.

By sharing a clear vision and setting goals to achieve it, you will empower others to follow your vision and you will make an *exponential* impact on the world.

Be Collaborative

Now that you know what you want to achieve as a leader, the question becomes how you are going to achieve your vision. A Fearless Leader doesn't go it alone. They build strong teams and leverage the collective power of those teams. How? Through collaboration.

As a Fearless Leader, you have the opportunity to leave an exponential imprint on the world.

Collaboration requires a continuous and conscious effort to reach beyond yourself and connect with others. Collaboration is reciprocal. It doesn't work if a leader only directs and pushes information, ideas, lessons, and experiences out.

A Fearless Leader must also accept direction, information, ideas, lessons, and experiences *in* from those around them. In fact, they must go a step further and actively seek out the advice, ideas, and lessons of others.

There are five key tools that a leader must employ if they are to create a collaborative environment that will make their vision a reality: *brand, relationships, communication, emotional quotient, and influence*.

Your reputation is your *brand*. Fearless Leaders build a brand that is rock solid because that is the foundation others come to depend on. Your brand is who you are. When others know who you are and when they believe in your brand, positive connections and interactions will develop, building the base for solid relationships.

Leadership is about organizing a group of people. People require time, energy, focus, and investment. Fearless Leaders develop *relationships* and take the required time to invest in those relationships. They are also willing to put themselves out there and network, meet new people, and connect more often.

In order to convey their brand and build relationships, Fearless Leaders must *communicate* with clarity, transparency, and authenticity. Developing your communication attributes is vital to instilling confidence in your audience and removing their fear, uncertainty, and doubt. Communication is all encompassing: it's how you speak, write, listen, and interact.

How well you communicate with those you lead will be directly impacted by your *emotional quotient* (EQ). High achievers and performers have the intelligence quotient (IQ) to achieve their goals and be leaders.

But Fearless Leaders develop the far more important aspect of intelligence known as EQ, the ability to identify and manage one's own emotions, as well as the emotions of others. This is perhaps the toughest attribute to develop, but it is also one that will get you the farthest in life.

Each of these attributes play a role in establishing your influence across your family, friends, colleagues, and community. If you develop all of them your influence will grow exponentially. Wield it responsibly.

Be Legendary

As a Fearless Leader, you have the opportunity to leave an exponential imprint on the world. Your imprint will be your legacy. And your legacy has the power to be *legendary*. There are four pathways to building an exponential legacy of leadership.

First, *lead* others through a clear vision and the resources to achieve that vision–together.

Second, *coach* others to be the best version of themselves. Take time every week to invest a little extra time to show someone how to improve a specific skill or attribute. Daily coaching is one of the easiest and best ways you can leave a lasting impact on the most amount of people.

Third, be a *mentor*. Slow down and take quality time to invest in those around you. Look around your circle of friends, family members, and colleagues and pick a person to take under your wind and send down the path of leadership. Chances are you owe a great deal of your success to the mentors in your life, both personally and professionally.

Fourth, *cultivate*. When you lead fearlessly by encouraging others to do good, to serve, and to be leaders, they, in turn, are motivated to encourage others to do good, to serve, and to be leaders. You exponentially remove fear, uncertainty, and doubt that hold so many of us back from reaching our potential.

Finally, find ways to *give* with no expectation of receiving. Leading means giving time, direction, support, encouragement, and wisdom so that common goals and visions can be achieved. Not only is giving so easy and incredibly rewarding, it is also beneficial to our bodies and mind through increased self esteem, decreased stress levels, and improved moods and relationships.

When you make the decision to lead, you build an exponential legacy of leadership. If you lead ten people and then they lead another ten people who then lead another ten people to achieve a common goal, you will have impacted over one thousand lives on this planet. And simply by leading ten people, you can remove instances of fear, uncertainty, and doubt half a million times over the next ten years.

Begin

We've looked at a wide range of attributes and practices that support and nurture Fearless Leaders. Now it's time to start bundling those attributes and practices together and see how they can work in harmony to transform our leadership intentions and our lives.

Doing so leads us on a discovery of how emerging leaders make plans and *launch* careers, how practicing leaders and individual contributors who feel stuck can make the *leap* into a new paradigm, how Fearless Leaders *overcome* and triumph in the face of crisis, and how each of us can build our lives and leadership approaches around a practice that consistently pushes us to *grow*.

A leader can best prepare to *launch, leap, overcome, and grow* by first hitting the pause button and taking the time to recognize the skills they have developed, the growth they have already achieved, and the leadership opportunities that are already present. Pausing to recognize also helps you identify the leadership skills and attributes that you will need to develop to get you where your vision is leading you.

Maybe you don't see yourself as a leader yet or are just not ready for the next leadership level, but if you take the time to sit back and review where you were a year ago versus where you are now, you'll have the opportunity to see your personal growth and how that has impacted your professional skills, attributes, and opportunities.

You may realize that what you are accomplishing today may not have been possible a year ago because you lacked the abilities, and now through your own personal and professional growth, you're able to achieve. Don't forget to pay attention to how you're leading, too. Recognize what skills you are using to lead better and how you can leverage those skills to lead better.

Launch

Launching your career or any significant life change doesn't succeed by crossing your fingers and hoping for the best. Recognizing what you want and where you want to go, identifying the steps to get you there, and taking action on those steps do.

Leap

No one is immune to being stuck at varying points along their leadership journey. We stick with what we know and with what's familiar and wait for external forces to change things for us. It simply doesn't work that way. Sometimes we just have to leap.

Overcome

Just as stuckness is an inevitable, recurring aspect of the leadership journey, the same is true for challenges. Sometimes as a leader you are called to help others overcome their barriers to success, and other times as a leader, you must find your own inspiration and strength to overcome the challenges you face. Choosing a mindset that aligns with your goals as a leader will help you overcome any challenge put in front of you.

Grow

Look ahead to the future and ask what it takes to create a practice of constant and continuous growth. If you don't have a growth mindset, your best days are probably behind you. Reach for positions above your current competencies and lean into the opportunity to grow. We all have a chance to grow as long as we remain open minded.

Fearless Leadership is not linear or a "one approach fits all" thing. It is an intentional development of the required attributes and an ongoing engagement of those attributes. We all have what it takes inside us. We just have to harness the power within ourselves with good intentions and learn each day how to channel our fearlessness.

The approach laid out in ***The FUD Factor*** has cultivated, empowered, and inspired thousands of people to grow as a leader and it can do it for you, too. Just be yourself. Be authentic. And stretch yourself in the directions that instill your values and fuel your passions. Fearless Leadership is a daily decision and a journey that doesn't stop here.

THE SUMMARY IN BRIEF

In ***The First 90 Days***, Harvard Business School professor Michael Watkins presents a road map for taking charge in your first 90 days in a management job. The first days in a new position are critical because small differences in your actions can have a huge impact on long-term results.

Leaders at all levels are very vulnerable in their first few months in a new job because they lack in-depth knowledge of the challenges they'll face and what it will take to succeed with their new company. Failure to create momentum in the first 90 days virtually guarantees an uphill battle for the rest of an executive's tenure.

The First 90 Days will equip you with strategies and tools to get up to speed faster and achieve more sooner. This summary will show you how to diagnose your situation and understand its challenges and opportunities. You'll also learn how to assess your own strengths and weaknesses, how to quickly establish priorities, and how to manage key relationships that will help you succeed.

IN THIS SUMMARY, YOU WILL LEARN:

- How to promote yourself.
- How to learn your new role faster.
- How to choose the right strategy.
- How to make good things happen right away.
- How to build a winning team.

Promote Yourself

"Promoting yourself" doesn't mean self-serving behavior, grandstanding or hiring a PR firm to tell the world about you. It means mentally preparing yourself to move into your new role by putting the past behind you and getting a running start by working hard to learn all you can about your new position.

This takes a lot of effort, but it's essential that you do it. Many promising managers get promoted but don't do enough to change their perspective and successfully promote themselves.

A similar mistake is to believe that you'll succeed in your new job by doing the same things you did in your previous job, only at a higher level of authority. "They put me in this new job because of my skills and accomplishments," the reasoning goes, "so that must be what they expect me to do here." Doing what you know and avoiding what you don't know can seem to work, but there's a chance you'll keep on believing this until the walls come crashing down around you.

Establish a Clear Breakpoint

The move from one position to another usually happens so quickly it's all a blur. A worker rarely gets much notice before being thrust into a new job. The lucky new leader sometimes gets a couple of weeks to make the change, but more often the move happens in only a few days.

Because you might not get a smooth transition from one set of job responsibilities to another, it's essential to discipline yourself to make a smooth transition mentally. Pick a specific time, maybe a weekend, and use it to picture yourself being promoted. Consciously create mental images of letting go of the old job and embracing the new one. Think hard about the differences between the two positions and how you'll have to think and act differently in the new job. Take time to celebrate the move, even informally with family and friends. Touch base with your advisers to ask for some quick advice. The bottom line: *Do whatever it takes to get into a transition state of mind.*

Hit the Ground Running

Your transition begins the moment you learn you're being considered for a new position, and it ends about 90 days after you begin the job. At the 90-day mark, key people in the organization — your bosses, peers and direct reports — expect you to be making an impact.

The three-month time frame isn't written in stone — the time depends on the type of situation you're in. But for planning purposes, you should use the 90-day mark as an important milestone. It will help you realize that you've got to get things done in that short time frame. If you're fortunate, you may get a month or more between the time you learn you're being considered and your first day on the new job. Use that time to educate yourself about your organization.

Assess Your Vulnerabilities

You've been offered your new position because the people who hired you think you've got what it takes to succeed. You probably do. But it can be disastrous to rely too much on the skills and knowledge that made you successful in the past.

One way to focus on your vulnerabilities is to evaluate your *problem preferences* — the types of problems that you prefer to work on. Everyone likes doing some things more than others, but doing so is like exercising your right arm and ignoring your left — the strong arm gets stronger and the weak one atrophies. Creating this type of imbalance leaves

A New Job Requires A New Approach

Douglas Ivester was promoted to CEO at CocaCola in 1997 after working as Chief Financial Officer and Chief Operating Officer at the company. In 1999, after a series of blunders that eroded the confidence of Coke's Board of Directors, Ivester resigned.

To outside observers, Ivester appeared to be the perfect candidate for the job. An accountant by training, Ivester was unable to make the leap from COO to CEO because his extraordinary attention to detail, which had been a virtue in his previous jobs in finance and operations, proved to be a hindrance in his new position. Ivester could not free himself from day-to-day operations enough to take on the strategic, visionary roles of an effective CEO.

The cause of Ivester's failure wasn't what he couldn't do, but what he couldn't let go of. An impressive career came to a deeply disappointing conclusion because he persisted in focusing on what he felt most competent doing instead of focusing on what the CEO position required.

you vulnerable in situations that call on you to be "ambidextrous."

You can do a lot to overcome your vulnerabilities, including developing *self-discipline, team building* and *getting advice and counsel*. You'll have to force yourself to devote time to important activities that you don't enjoy and that might not come naturally. In addition, you must find people in your organization who are skillful in these areas and learn from them.

As you advance in your career, there will be changes in the advice and counsel you require. With promotions comes the need to get good "political" counsel — experienced corporate advisers can help you understand the politics of the organization, which is especially important when you plan to implement change.

Accelerate Your Learning

Usually when a new leader swerves off course, failure to learn is a factor. There is so much new information to absorb that it's difficult to know where to focus and important signals can be missed. Or when a new boss focuses too heavily on the technological side of the business — products, customers, technologies and strategies — critical learning about culture and politics is shortchanged.

The fact that few managers have received training in systematically diagnosing an organization compounds the problem. Those who have had such training are usually human resource professionals or former management consultants.

Even in situations in which a leader has been brought in solely to impart new ways of doing things — such as corporate turnarounds — the leader still has to customize his or her approach by learning about the organization's culture and politics.

Defining Your Learning Agenda

The starting point is to define your learning agenda, ideally before you even formally enter the organization. A learning agenda establishes your learning priorities and consists of a focused set of questions that will guide your inquiry. As you learn more, you'll make conclusions about what is going on and why. Your learning will begin to shift toward fleshing out and testing those conclusions.

During your transition, you'll learn from various types of hard data (e.g., financial and operating reports, strategic and functional plans, employee surveys, press accounts, and industry reports). But to make effective decisions, you'll also need "soft" information about the organization's strategy, technical capabilities, culture and politics. The only way to obtain this intelligence is to talk to people who know about your situation.

Identifying promising sources will make your learning more complete and more efficient.

Adopting Structured Learning Methods

Once you have an idea of what you need to learn and where to seek it, the next step is to understand the best way to learn.

When diagnosing a new organization, start by meeting with your direct reports one-on-one and ask them these five questions:

1. **What are the biggest challenges the organization is facing (or will face) in the near future?**
2. **Why is the organization facing (or going to face) these challenges?**
3. **What are the most promising unexploited opportunities for growth?**
4. **What would need to happen for the organization to exploit the potential of these opportunities?**
5. **If you were me, what would you focus on?**

Match Strategy to Situation

Far too many new leaders don't effectively diagnose their situations and tailor their strategies accordingly. Then, because they don't understand the situation, they make unnecessary mistakes. This painful cycle happens because people usually model their transitions on a limited set of experiences.

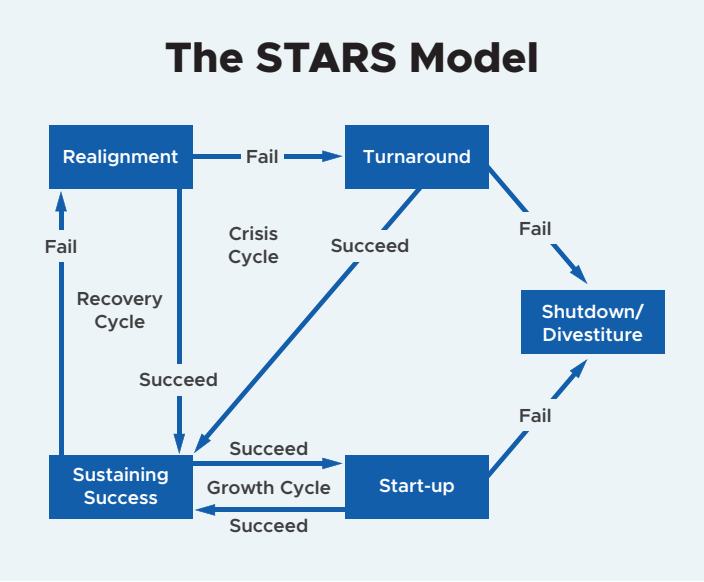
Matching your strategy to your situation requires diagnosing the business situation carefully. Only after you've diagnosed the situation can you act wisely about the challenges of your new job and the opportunities and resources available to you.

Diagnosing the Business Situation

The four broad types of business situations that new leaders must contend with are start-up, turnaround, realignment, and sustaining success (STARS). These are the defining

features of each of the STARS situations:

1. **Start-up.** In a start-up, you've got to assemble the capabilities (people, funding and technology) needed to get a new business, product or project off the ground.
2. **Turnaround.** In a turnaround, you take on a unit or group that is in trouble and work to get it back on track. Both start-ups and turnarounds involve a lot of resourceintensive construction work — there isn't much existing infrastructure and capacity for you to build on. To a significant degree, you get to start fresh, but both require that you start making tough calls early.
3. **Realignments.** Your challenge is to revitalize a unit, product, process or project that is drifting into trouble. This requires that you reinvent the business.
4. **Sustaining success.** In a sustaining-success situation, you're responsible for preserving the vitality of a successful organization and taking it to the next level. Keep people motivated by inventing a new challenge.



Understanding the History

An important point is that businesses (as well as projects, processes, products and plants) tend to move predictably from one type of situation to another. Understanding the history of your new organization will help you manage challenges and opportunities.

If start-ups grow, they eventually become sustaining success situations. Those who managed the start-up may move on to guide new start-ups while managers who are more experienced at running larger businesses take over. This is how healthy companies enter a *growth cycle.*

Realigning an organization usually means redirecting its resources by abandoning aging product lines and developing new technologies. It can also mean changing the organization's strategy, structure, skills and even its basic corporate culture.

Participants in a start-up are usually more excited and hopeful than workers in a troubled company in need of a turnaround. But the employees in a start-up are typically much less focused on key issues than those in a troubled organization simply because the start-up still lacks vision, strategy and structures.

Therefore, a large part of successful transitioning depends on your ability to transform the prevailing organizational psychology. In start-ups, where the prevailing mood is often one of excited confusion, your job is to channel that energy into productivity. In turn-arounds, you may be dealing with a group of people who are close to despair — it is your job to provide a light at the end of the tunnel.

Focusing Your Energy

Clearly understanding the type of situation you're in helps you decide what you must do in your first 90 days. Such clarity helps you make three early choices:

1. **How much emphasis will you place on learning as opposed to doing?**
2. **How much emphasis will you place on offense as opposed to defense?**
3. **What should you do to get some early wins?**

Secure Early Wins

By the end of your transition, you want your boss, your peers and your subordinates to feel that something new and good is happening. Early wins excite and energize people, build your credibility, and quickly create value for your organization.

It's crucial to get early wins, but it is also important to get them the right way. These are the most common traps that afflict new leaders:

- **Failing to focus.** It's very easy to take on too much during a transition, and the results can be disastrous.

You can't hope to achieve results in more than a few areas. It's essential to identify promising opportunities and then focus on translating them into wins.

- **Not taking the business situation into account.** What constitutes an early win will differ drastically from one business situation to another. Simply getting people to talk about the organization and its challenges can be an important accomplishment in a realignment.
- **Not adjusting to the corporate culture.** Leaders who come into an organization from the outside can fall into this trap. After absorbing a different organization's culture, they bring with them its view of what a win is and how it is achieved. Be sure you understand what your new organization does and does not view as a win.
- **Failing to get wins that matter to your boss.** It's essential to get early wins that energize your employees, but your boss's opinion about your accomplishments is very important, too. Even if you don't fully endorse his or her priorities, you must keep them in mind as you decide what early wins to pursue.
- **Letting your means undermine your ends.** Process matters. If you achieve impressive results in a way that colleagues think is manipulative, underhanded or inconsistent with the corporate culture, you're asking for trouble. An early win accomplished in a way that illustrates the behavior you hope to instill in your new organization is a double win.

Establishing Long-Term Goals

In the first 90 days, a key goal is to build personal credibility and create organizational momentum. Secure some early wins to leverage your energy and expand the potential scope of your subsequent actions.

As you look for ways to create momentum, keep in mind that the actions you take to get early wins should do double duty. Your efforts should:

1. **Be consistent with A-item business priorities.**
2. **Introduce the new patterns of behavior you want to instill in your organization.**

Armed with an understanding of your A-item priorities and objectives for behavior change, you can now create detailed plans for how you'll secure early wins during your first 90 days and beyond. You should think about what you must do in two phases: building credibility in the first 30 days and deciding where you'll focus your efforts to achieve improvements in performance in the following 60 days.

Building Credibility

You can't hope to have a measurable impact on performance in the first few weeks in your new job, but you can score small victories and show colleagues that things are changing. Your objective at this stage is to build personal credibility. Since your earliest actions will have a huge influence on how you're perceived, think about how you'll get "connected" to your new organization. What messages do you want to get across about who you are and what you represent? What are the best ways to convey those messages?

Negotiate Success

Negotiating success means engaging with your new boss to shape the game so you have a good chance of achieving your goals. Too many new leaders just play the game, reacting to the situation that exists and failing as a result. Negotiate with your boss to establish realistic expectations, reach agreement on the situation, and secure sufficient resources to get things done.

Focusing on the Fundamentals

When experienced managers are asked about building a productive relationship with a new boss, their observations usually consist of do's and don'ts. Here are six don'ts:

- **Don't trash the past.** There is nothing to be gained and much to be lost by criticizing the people who led the organization before you arrived. You must understand the past but concentrate on assessing current behavior and results.
- **Don't stay away.** If you have a boss who doesn't reach out to you, or if your relationship with your boss is uncomfortable, you'll have to reach out yourself. Otherwise, the quality of communications could be permanently damaged.
- **Don't surprise your boss.** It's no fun bringing bad news to your boss. The danger that the messenger (you) will be shot is real, but most bosses consider it a greater sin not to report emerging problems early enough.
- **Don't approach your boss only with problems.** You don't want to be perceived as bringing nothing but problems for your boss to solve. Give just a few minutes' thought to how to address the problem, your role in solving it, and the help you'll need.

- **Don't run down your checklist.** Even senior managers tend to use meetings with the boss as opportunities to run through their checklist of things they've been doing. There are times when this is appropriate, but it's rarely what your boss needs or wants to hear.
- **Don't try to change the boss.** Assume that you're not going to change your boss, and adapt to his or her style and idiosyncrasies.

Better Ways to Negotiate

There are fundamental do's on this topic as well. If you follow them, life with your new boss will be easier.

- **Take 100 percent responsibility for making the relationship work.** Don't expect your boss to reach out or offer the time and support you need. Assume that it's your responsibility to make the relationship work.
- **Clarify mutual expectations early and often.** Begin managing expectations right away. It's smart to talk openly about bad news in the beginning and to lower unrealistic expectations.
- **Negotiate time lines for diagnosis and action planning.** Don't let yourself get caught up immediately in putting out fires or trying to make decisions before you're ready. Buy yourself some time to diagnose the new organization and come up with an action plan.
- **Aim for early wins in areas that are important to the boss.** Figure out what the boss cares about most. Once you know, aim for early results in those areas. In part, your job is to shape your boss's perceptions of what can and should be achieved.
- **Try to get good grades from those whose opinions your boss respects.** Your new boss's opinion of you will be based partly on your direct interactions and partly on what he or she hears about you from trusted colleagues. Your boss may have relationships with people who are now your subordinates. Be aware of the many channels through which information about you and your performance will reach your boss.

Achieve Alignment

The higher you climb in an organization, the more you assume the role of organizational architect, creating an environment in which others can perform well. No matter how charismatic you are, you can't hope to do much if key elements in your unit are out of alignment.

Negotiating for Resources

As you look for commitments for resources, keep these principles of effective negotiation in mind:

- **Focus on underlying interests.** Probe as deeply as possible to learn the agendas of your boss and any others you're trying to get resources from and consider what's in it for them.
- **Look for mutually beneficial exchanges.** Seek resources that support your boss's agenda and advance your own. Look for ways to help peers advance their agendas in return for help with yours.
- **Link resources to results.** Emphasize the ways your team's performance will improve if more resources are dedicated to your group. Create a "menu" that lays out what you can achieve with current resources and why you

If strategy, structure, systems and skills are within your purview in your new position, you need to begin to analyze the architecture of your organization and assess alignment among these key elements. You can't hope to do much more than conduct a solid diagnosis and perhaps get started on addressing alignment issues in the first few months. But plans to assess the architecture of your group and to begin identifying areas for improvement should be included in your 90-day plan.

Designing Organizational Architecture

Begin by thinking of yourself as an architect of your unit or group. This may be a familiar role for you, but it probably isn't. Few managers get systematic training in organizational design. Because managers typically have limited control over organizational design early in their careers, they learn little about it. It is common for less senior people to complain about misalignments and to wonder aloud why "those idiots" higher up let obviously dysfunctional arrangements continue. By the time you reach the mid-senior levels of most organizations, however, you are well on your way to becoming one of those idiots. You are well advised to learn something about how to assess and design organizations.

To equip your group to achieve its goals, these five elements of organizational architecture must work together:

1. **Strategy**: The core approach the organization will use to accomplish its goals.
2. **Structure**: How people are grouped in units and how their work is coordinated.
3. **Systems**: The processes used to add value.
4. **Skills**: The capabilities of the various groups of people in the organization.
5. **Culture**: The values, norms and assumptions that shape behavior.

Identifying Misalignments

Organizations can become misaligned in many ways. One important goal during your first 90 days should be to identify possible misalignments and design a plan to correct them. Common types of misalignment include:

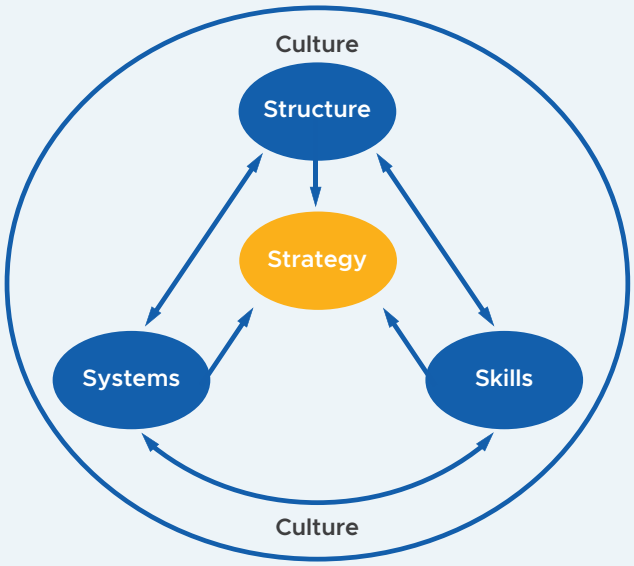
- **Skills and strategy misalignment.** Let's say you head an R&D group and your goal is to increase the number of new product ideas your team generates. If your group doesn't understand the latest techniques and support tools that would help you perform experiments faster, your group's skills don't support its strategy.
- **Systems and strategy misalignment.** Imagine you're the leader of a marketing group whose strategy is to focus on a new segment of customers. If the group hasn't established an effective way to compile and analyze information about those customers, your group's systems fail to support its strategy.
- **Structure and systems misalignment.** Suppose you manage a product-development group whose members are organized by product line. This structure lets employees with specialized expertise focus on specific products, but in this case, it has a downside — the group doesn't have systems that compensate for the overlapping expertise of different product teams.

Avoiding Some Common Traps

Too many managers rely on simple fixes to address complicated alignment problems. Be alert to these all too-common pitfalls:

- **Trying to restructure your way out of deeper problems.** Resist changing structure until you understand whether restructuring will address the root causes of the problems.
- **Creating structures that are too complex.** This is a related trap. Although it may look good on paper to create a structure, such as a matrix in which people in different units share accountability, too often the result is bureaucratic paralysis.
- **Automating problem processes.** Automating your group's core processes may yield significant gains in productivity, quality and reliability, but it's a mistake to simply speed up an existing process through technology if the process has serious underlying problems.
- **Making changes for change's sake.** Resist the temptation to tear down the fences before you know why they were put up. New leaders who feel self imposed pressure to put their stamp on the organization often make changes in strategy or structure before they really understand the business.
- **Overestimating your group's capacity to absorb strategic shifts.** It's difficult for a group to change because of large-scale changes in strategy. Focus on a few vital priorities and make changes gradually if time allows.

Elements of Organizational Architecture



Build Your Team

If you create a high-performance team, you can exert tremendous leverage to create value. If not, you'll face severe difficulties because no leader can hope to achieve ambitious goals on his or her own. Poor personnel choices will usually come back to haunt you.

Finding the right people is essential, but it's not enough. Begin by evaluating current team members to decide who will stay and who will have to go. Then create a plan for obtaining new people and moving the people you keep into the right positions without doing too much damage to short-term performance. But even this is not enough. You still must establish goals, incentives and performance measures that will propel your team in the desired directions.

Avoiding Common Traps

When it comes to building a winning team, many new leaders stumble. The result may be a delay in reaching the break-even point, or it may be outright derailment. These are some of the traps new leaders fall into:

- **Keeping the existing team too long.** Some leaders clean house too quickly, but it's more common to keep people on board too long. Whether because of pride or because they shy away from tough personnel calls, many leaders end up with less-than-outstanding teams. This means they will have to either shoulder more of the load themselves or fall short of their goals.
- **Not repairing the airplane.** Unless you're in a start-up, you don't get to build a team from scratch: You inherit a team and have to mold it into what you need to achieve your A-team priorities. Molding a team is like repairing an airplane in midflight. You will not reach your destination if you ignore the necessary repairs.
- **Not working organizational alignment and team restructuring issues in parallel.** You can't build your team before reaching clarity about changes in strategy, structure, systems and skills. Building your team prematurely could put the right people in the wrong jobs.
- **Not holding onto the good people.** Uncertainty about who will and will not be on the team can lead your best people to look for opportunities elsewhere.
- **Starting team-building before the core team is in place.** It's tempting to launch team-building activities right away. New leaders with a consensus-building style often are eager to begin collaborating with their direct reports, but some group members may be leaving.
- **Making implementation-dependent decisions too early.** When implementing your plans requires buy-in from your team, you should postpone making decisions until the core members are in place. It can be very difficult to implement decisions that commit new people to courses of action they had no part in defining.
- **Trying to do it all yourself.** Keep in mind that the process of restructuring a team is fraught with emotional, legal and company policy complications. Find out who can best advise you and help you chart a strategy. The support of a good HR person is indispensable to any effort to restructure a team.

Test Their Judgment

Some very bright people have terrible judgment, and some people of average competence have extraordinary judgment. You must have a clear idea of the combination of knowledge and judgment you need from key people.

One way to assess judgment is to work with a person for an extended period of time and observe whether he or she is able to:

1. **Make sound predictions.**
2. **Develop good strategies for avoiding problems.**

Both abilities draw on an individual's mental models, or ways of identifying the essential dynamics of situations and translating them into effective action. That's what expert judgment is all about.

Assessing Your Existing Team

You're likely to inherit some good performers, some average ones and some who simply aren't up to the job. You'll also inherit a group with its own internal dynamics and politics — some members may even have hoped for your job. During your first 30 to 60 days, you must sort out who's who, what roles each individual plays, and how the group has worked together in the past.

Inevitably, you'll form impressions of team members as you meet them. Don't suppress these early impressions, but step back from them and take the time to make a more rigorous evaluation.

Create Coalitions

If your success depends on the support of people outside

your direct line of command, it's important to create coalitions to get things done. Direct authority is never enough to win the day. "Influence networks" — informal bonds among colleagues — can help you generate support for your ideas and goals.

It's up to you to build coalitions that will help you achieve your goals. To do so, you'll need an influence strategy. Figure out whom you must influence, select those likely to support and resist your key initiatives, and persuade "swing voters" to join your side.

Mapping the Influence Landscape

One common mistake made by new leaders is to devote too much time to the vertical aspect of influence

— reaching upward to bosses and downward to direct reports — and not enough to the horizontal dimension that involves peers and external constituencies. This error is understandable — you naturally gravitate toward the people you report to and those who report to you. After all, they're the primary channels through whom you'll have an impact in your organization.

Sooner or later, you'll need the support of people over whom you have no direct authority. You may have little or no relationships with these people, so you'll need to invest time and effort in building a new base.

Identify the Key Players

How can you figure out who will be important for your success? It should become obvious as you get to know the organization better. Identify the key relationships between your group and others. Customers and suppliers, within the company and outside of it, are natural focal points for relationship building.

Get your boss to connect you. Ask for a list of 10 key people outside your group whom he or she thinks you should get to know, then set up meetings with them.

Consider doing the same when you have new direct reports coming on board: Create priority relationship lists for them and help them make contacts.

Also, try to identify the sources of power that give people influence in the organization. The usual sources of power in an organization are: expertise; access to information; status; control of resources, such as budgets and rewards; and personal loyalty.

Eventually you'll be able to pick out the people who exert heavy influence through formal authority, special expertise, or sheer force of personality. If you can convince these individuals that your goals have merit, broader acceptance of your ideas is likely to follow.

Identify your supporters and your opponents.

THE SUMMARY IN BRIEF

In an era defined by specialization, and now accelerated by artificial intelligence, the modern workplace increasingly needs people who can connect ideas across disciplines, adapt quickly, and solve problems that don't fit neatly into one domain. Yet many professionals struggle to break out of narrow roles, lacking a clear roadmap for developing the broad, integrative mindset of today's economy demands.

The Generalist Advantage: Proven Framework to Explore the Potential of 4 Types of Generalists at Work argues that generalists are not just useful but essential. It presents a structured, research-backed path for anyone seeking to broaden their capabilities and become more versatile, creative and future-ready.

Through practical tools such as The Generalist Advantage Framework—which outlines four distinct types of generalists—and The Generalist Quotient Self-Assessment, Mansoor Soomro provides a clear way for readers to identify their current generalist profile and take deliberate steps toward developing the one best suited to their goals.

IN THIS EXECUTIVE BOOK SUMMARY

- Find out how to use the TGA™ framework to identify themes across your skills, interests and experiences, and turn them into a compelling narrative
- Learn how to understand the LOSS™ model and counter the stagnation that often affects deep specialists
- Get useful tips on how to apply SDSU™ workplace strategies to navigate perceptions, communicate your value and thrive as a generalist
- Understand how to develop future-ready skills, including creative problem solving, multidisciplinary learning and complex decision-making

Introduction

Expertise is often equated with success, so the generalist concept may seem out of place. Yet, in the tapestry of human endeavor, a thread exists that weaves through the fabric of history, connecting individuals who defy the confines of narrow expertise. This thread speaks to the power and resilience of the generalist, those who embrace the breadth of interests, knowledge, skills, and experiences that transcend the boundaries of any single discipline or expertise.

When we are told to *narrow our focus* or to *stay in our lane*, we miss out on something profoundly special. Our greatest strengths often lie in that willingness to dance on the borders of multiple fields, finding unique synergies that drive real-world impact.

In the modern world, with its dizzying speed of artificial intelligence (AI), this generalist perspective is not merely quirky; it's very much necessary. More than ever, we need adaptable problem solvers, unorthodox thinkers who connect the seemingly unconnected, and lifelong learners who can thrive in a world of constantly shifting knowledge and skill sets.

CHAPTER 1

Embracing the Generalist Mindset

A *generalist* is someone who possesses a wide range of interests, knowledge, abilities, or experiences (as opposed to a specialist, who carries a deep focus on a specific interest, knowledge, ability, or experience).

Whether it's embracing diverse skills or understanding different industries, generalists play a crucial role in our ever-evolving world. Generalists tend to have a diverse set of interests and abilities, allowing them to adapt and excel in various situations or roles. They often thrive in environments that require flexibility, creativity, and the ability to connect ideas from different fields.

Moreover, they are masters of mash-ups. Instead of seeing knowledge in neat little boxes, they see it all jumbled together. They make crazy connections that other people miss, such as seeing how fixing a car has something in common with treating a patient or solving an accounting problem. And here is the best part: when faced with a new challenge, they're less likely to get stuck with the same old approach. They pull from different things they've learned, experiment way more, and often end up surprising themselves with unexpected solutions leading to multiple possibilities.

Who Is Not a Generalist?

Someone who is not a generalist is typically referred to as a specialist. Specialists focus on a narrow area of interest, knowledge, ability, or experience to develop proficiency in a specific field or subject. Specialists are also known as experts and niche leaders.

Unlike generalists, specialists may have limited exposure to or interest in areas outside their specialized field or domain. They excel in roles requiring highly specialized knowledge (like an aircraft pilot) or technical expertise (like a nuclear power plant engineer) and may find it challenging to adapt to tasks or responsibilities outside their narrow focus.

Debunking 10 Myths of Generalists

Let's debunk some of the most persistent myths about generalists:

Myth 1: Generalists are less productive than specialists.

Reality: With rapidly changing fields, technology disruptions, and global issues demanding cross-domain solutions, generalists have the potential to be more productive as they can pivot easily and join seemingly unrelated trends.

Myth 2: Generalists lack focus and direction.

Reality: Interest in many things doesn't equal scatterbrained. Good generalists make connections, transferring knowledge between fields.

Myth 3: Generalists are not good decision-makers.

Reality: While some struggle to decide which interest to explore first, a mature generalist has greater self-knowledge. Knowing diverse skills gives them the power to make more informed decisions.

Myth 4: Generalists are not effective team players.

Reality: Generalists flourish as empathetic listeners, facilitating dialogues between those with divergent views. They're excellent collaborators, recognizing diverse talents and bridging divides within teams.

Myth 5: Generalists cannot be good mentors at work.

Reality: Generalists excel as "exploration guides." They help mentees identify connections between areas of interest, develop effective learning strategies, and embrace challenges with resilience.

Myth 6: Generalists are largely extroverts.

Reality: Absolutely not true! There are introverted generalists, just like extroverted generalists, thriving in different senior and junior roles in organizations.

> Our greatest strengths often lie in a willingness to dance on the borders of multiple fields. ”

Myth 7: Generalists are mostly mediocre in performance.
Reality: This boils down to how we define success and excellence. If it's based solely on traditional markers of niche mastery, then sure. However, it ignores the inherent strengths generalists develop: innovative problem-solving, pattern recognition, and sense-making.

Myth 8: Generalists are only good at entry-level positions.
Reality: While early in their careers, generalists may take on unrelated roles for experience, their ability to adapt and learn propels them into unique senior positions. Companies are recognizing the value in leadership who understand the big picture and bridge teams with disparate expertise.

Myth 9: Generalists only fit into start-up environments.
Reality: Certainly, a start-up environment is often a generalist's playground. Yet, established companies increasingly leverage innovation for that generalist ability of their executives to disrupt routines and generate solutions that would go unnoticed within siloed departments.

Myth 10: Generalists are easily replaceable.
Reality: Highly skilled generalists with proven value-add within companies or projects are the opposite of replaceable. Their unique lens, coupled with the ability to collaborate effectively across different silos, makes them irreplaceable as connectors and knowledge integrators.

Six Superpowers of Generalists

In modern work environments emphasizing complexity and innovation, the generalist's mindset and skill set offer immense value. They foster collaboration, excel in rapidly changing conditions, and act as catalysts for fresh ideas and solutions, just to mention a few arguments advocating the power of generalists in the workplace. These six "superpowers" show how generalists translate that value into real workplace impact:

- They spur innovation.
- They are bridge builders.
- They value foresight.
- They are brilliant adapters.
- They champion resilience.
- They foster learning culture.

CHAPTER 2

Redefining Expertise in a Shifting Landscape

Generalists and specialists represent two distinct lines to acquiring knowledge and leveraging experience. Specialists see generalists' leaps as recklessness and are often baffled by how generalists arrive at conclusions seemingly out of thin air. Generalists, on the other hand, see specialists' caution as an obstacle to progress and think their obsession with details is pure madness.

Both are different in terms of their individual strengths and limitations. Here are some key differences between them in terms of the impact they have on the workplace:

- **Breadth vs depth**. Generalists possess a broad range of knowledge and skills across multiple disciplines or domains. Specialists, on the other hand, focus on acquiring deep expertise in a narrow field or subject area.
- **Versatility vs specialization**. Generalists are versatile and adaptable, able to apply their skills and knowledge in a variety of contexts and situations. Specialists are highly specialized in a specific area, often possessing in-depth knowledge and expertise that may have limited applicability outside of their domain.
- **Problem-solving approach**. Generalists tend to approach problems with a broad perspective, considering multiple factors, perspectives, and solutions. Specialists approach problems with a narrow focus, leveraging their deep expertise to analyze issues within their specialized domain.
- **Learning approach**. Generalists prioritize learning across a wide range of subjects and disciplines, often seeking out diverse experiences and opportunities for personal and professional growth. Specialists focus their learning efforts on acquiring in-depth knowledge and expertise within their specialized area.
- **Career opportunities**. Generalists may pursue diverse career paths and opportunities, as their broad skill set and adaptable mindset allow them to transition between different roles, industries, and functions. Specialists often pursue careers within their specialized field, leveraging their deep expertise to advance their careers and make significant contributions within their narrow domain.

Generalists and Near Future Readiness

The world of work is changing too much and too fast. A lot of jobs are being displaced due to AI's influence. With these shifting landscapes and changes, it is difficult to rely on experts as their expertise might not be needed the same way moving forward. Now is the time when generalists will rise.

Near Future Readiness refers to the ability of individuals and organizations to anticipate, adapt to, and thrive in an increasingly uncertain and rapidly changing but predictable time frame. Some of the aspects of near future readiness include:

- **Strategic foresight** – anticipating near future trends, opportunities, and challenges and developing strategies to address them proactively.
- **Tactical adaptability** – the ability to change plans and strategies quickly in response to shifting circumstances on the ground.
- **Ecosystem thinking** – viewing the business as part of a larger ecosystem.

Near future readiness is about planning as well as experimentation. In terms of planning, businesses scream for better research to make investments in talent upskilling and upgrading organizational infrastructure.

Generalist leaders, due to their wide interests, have better insights, which helps in planning. In terms of bold experimentation, businesses are demanding a greater tolerance for failure and a willingness to pivot if their early bets go wrong. Generalists here again, due to their exploratory mindset, can help steer course corrections quickly.

Overall, generalists excel at near future readiness for three main reasons:

1. They are pattern seekers.
2. They are above-average idea adapters.
3. They enjoy being comfortable with the unknown.

Near Future Readiness Index (NFRI)™

Recognizing the distinction between the future and the near future, as well as the importance of being prepared for the latter, it is time to introduce the Near Future Readiness Index (NFRI).

This index identifies crucial indicators essential for navigating the near future. Its purpose is to assist leaders in preparing for both negative and positive events or situations within a predictable time frame.

The NFRI is built around eight core indicators:

- critical thinking
- cognitive flexibility (thinking)
- contextual intelligence (application)
- grit personality
- agile learner
- intrepid change maker
- big-picture strategist
- team synergist

In constructing the Near Future Readiness Index, the objective is not to devise a single metric but rather to gauge a *composite score* that is built on key parameters of leadership.

For instance, adaptability as a parameter is about the capacity to learn new skills, shift directions, and embrace change swiftly with less resistance than those clinging to the status quo. Similar to that, innovation as a parameter focuses on the ability to generate, develop, and implement novel solutions. This goes beyond mere ideas, incorporating a bias for action.

Defining The Generalist Advantage (TGA)™

Returning to the debate on generalists versus specialists, a pertinent question arises: *which group is better equipped for the near future?*

In terms of near future readiness, generalists score higher than specialists overall in navigating in times of uncertainty, identifying nascent trends, leading potential disruptions, and highlighting emerging opportunities for product and market developments.

Generalists are more ready for the near future based on all eight NFRI indicators, whereas specialists are largely ready for the near future in terms of two NFRI indicators (critical thinking and grit personality).

There are a number of research studies investigating the link between generalist-led businesses and disruptive innovation. These studies show that the following four business situations can be a good start to magnify *The Generalist Advantage:*

- **Leadership roles.** Generalist leaders equipped with a multiperspective understanding can be a leadership compass in guiding strategy, innovation, and cross-functional collaboration within organizations.
- **Unstructured problems**. Facing ill-defined, ambiguous challenges with undefined best practices requires the out-of-the box thinking of a generalist.

> Generalist leaders bring better insights to planning and greater tolerance for bold experimentation.

- **New product development**. Generating fresh product or service concepts through drawing on diverse inspiration sources becomes a key generalist strength.
- **Change management**. Generalists excel in anticipating the ripples of change across teams and adapting processes to foster resilience during periods of transition.

Overall, *The Generalist Advantage* empowers individuals to thrive in today's multifaceted and interconnected world by leveraging their diverse skills, adaptable mindset, and interdisciplinary approach to problem-solving.

CHAPTER 3

The Age of AI and the Rise of Generalists

Whether you're an artist, a problem solver, or a communicator, embracing both complementary and especially contrasting skills enhances your journey through life. Put simply, a *skill* is the ability to perform a task with proficiency. In today's age of AI, success relies on empowering individuals to collaborate effectively with intelligent systems, demanding a new, collaborative skill set.

Complementary skills (also known as related skills) are those abilities that complement or enhance each other when combined. Complementary skills work best for specialists and experts as they solidify their specific domain and develop more skills by enriching their radius around their desk and team.

On the other hand, *contrasting skills* (also known as unrelated skills) are those abilities that contrast or differ from each other in nature or approach. These skills provide diversity and balance within a team or individual, offering cognitive diversity and different perspectives and approaches to problem-solving and decision-making. Contrasting skills work best for *generalist-type profiles*.

Both types of skills are valuable in their own right and can contribute to individual and team success when leveraged appropriately. In the age of AI, where technology can take care of basic tasks and humans can work on superior tasks, recognizing and understanding the complementary and contrasting skills between humans and various AI tools, technologies, and platforms can lead to more effective collaboration, decision-making, and problem-solving.

For both specialists and generalists, a balance between these two skill types is beneficial, as both complementary and contrasting skills play a pivotal role in various aspects of life, both personally and professionally.

Portable Skills as the Key to Professional Resilience

Portable skills (also known as transferable skills or universal skills) are abilities that aren't confined to a single job, role, or industry. They help you thrive in varied tasks and make you adaptable across different career paths. Think of them as the foundation you take with you from experience to experience, rather than hyper-niche skills tied to one specific task. The concern of whether AI will replace or displace jobs can be best countered by investing in portable skills.

Employers across industries are looking for transferable strengths to thrive in the unprecedented age of human–computer interaction. For example, your ability to communicate, work in teams, or think critically makes you a valuable addition regardless of your technical experience.

By developing portable skills, you can enhance your employability, adaptability, and effectiveness in a variety of roles and contexts, setting yourself up for success in your career and beyond. The eight NFRI indicators mentioned before are all portable skills, and, as shared earlier, generalists performbetter than specialists against most of those near future readiness indicators.

CHAPTER 4

Four Types of Generalists at Work

Shallow, Domain, Skill, Ultra (SDSU)™ Generalist Framework

After studying the various flavors of generalists in my eight years of research on the topic, I was drawn to the point that there could be three ways to understand the classification of different types of generalists:

1. portable skills and cross-industry adaptability
2. expertise and perspectives
3. skills and domains

Let's look into each of the four types of generalists individually:

Type 1: Shallow Generalist (S)

A shallow generalist (also known as a hyper-specialist) is someone who has one major skill predominately in one domain/industry.

Shallow generalists are specialists who are *master of one* in the jack-of-all-trades, master of none proverb. They dive deep and contribute substantially to any single field. However, this is often a case of unreliable expertise.

Shallow generalists share a set of defining characteristics:

- **Deep expertise**. Shallow generalists possess in-depth knowledge and honed skills in their specific field. Their niche area allows them to solve complex problems, recognize subtle patterns, and provide unique insights not found in generalists on that topic.
- **Attention to detail**. Shallow generalists understand that every detail matters. Their meticulous approach ensures accuracy, thoroughness, and quality output.
- **Focus**. Shallow generalists are passionate about their chosen focus and are highly dedicated, able to persevere through challenges and complex projects.

To avoid becoming a shallow generalist, it's important to focus on a few core practices:

- explore diverse topics
- develop versatility
- network and collaborate
- stay informed

Type 2: Domain Generalist (D)

A domain generalist (also known as an industry generalist) is someone who has one major skill but exposure to a few different domains/industries. Domain generalists' adaptability is impressive as it offers distinct advantages in today's fast-paced business landscapes. Typically, a domain generalist has a comprehensive understanding of various industries and their sectors, including their operations, trends, challenges, and opportunities.

Domain generalists play a crucial role in driving innovation, growth, and competitiveness within their respective industries by leveraging their deep cross-industry expertise to seize opportunities for business progression.

Domain generalists share several defining characteristics that reflect how they operate across industries:

- **Industry knowledge and exposure**. Domain generalists have a good understanding of the inner workings, trends, and dynamics of selected industries, acquired through their rotation in different industry sectors.
- **Identifying external opportunities**. Domain generalists excel at industry-specific challenges and capitalize on emerging opportunities, proving to be highly informed problem solvers and outside-in innovation catalysts.
- **Networking and relationship-building**. Domain generalists have a strong network of contacts and relationships across sectors between different industries, allowing them to collaborate, share insights, and stay informed about industry best practices.

Becoming a domain generalist requires intentionally expanding your view across industries while continuing to deepen expertise in related sectors. The following steps outline how to do both in parallel:

1. **Map your landscape**. Understand how subsectors, processes, and roles connect within and across industries. Actively learn from people at different levels to uncover blind spots and operational realities.
2. **Build a strategic learning plan**. Expand your information sources beyond your core domain to spot patterns, gaps, and emerging opportunities. Engage with adjacent disciplines to challenge assumptions, surface blind spots, and refresh perspective.
3. **Diversify your projects and activities**. Take on cross-functional work to broaden how you apply your expertise. Complement internal projects with external experiences to accelerate learning across industries.

Type 3: Skill Generalist (S)

A skill generalist is someone who has a few different skills predominately in one domain/industry. Skill generalists often excel at adapting to new roles, projects, and challenges by leveraging their broad skill set. They are catalysts for problem-solving. Their skills can be soft skills (leadership skills) as well as hard skills (technical skills).

The strengths of skill generalists are reflected in several defining characteristics:

> The ability to work outside one's domain is increasingly valuable in today's interconnected and rapidly changing business environment.

- **Diverse skill set**. Skill generalists possess a range of skills across different areas, including technical, creative, analytical, interpersonal, and leadership skills.
- **Problem-solving abilities**. Skill generalists excel at analyzing complex problems, identifying root causes, and developing innovative solutions by drawing on their diverse skill sets and multiskilled perspectives.
- **Communication and collaboration**. Skill generalists possess strong communication and collaboration skills, enabling them to work effectively with differently skilled and talented individuals.

Becoming a skill generalist means intentionally building a broad set of abilities while focusing on how those skills combine and transfer over time. This approach unfolds through a few deliberate practices:

- **Embrace the learning mindset**. Pursue curiosity beyond your job description and experiment with new skills deliberately and broadly without aiming for immediate mastery. Early focus on foundations helps you recognize how skills transfer across domains.
- **Practice strategic skill development**. Build on your natural strengths and prioritize skills that complement one another. Emphasize transferable meta-skills—such as problem-solving, communication, and iteration—that compound across roles.
- **Apply skills through practice**. Treat learning as project-based and look for low-risk opportunities to apply new skills. Documenting your process reinforces learning and makes progress visible to yourself and others.

Type IV: Ultra Generalist (U)

An ultra generalist is someone who has multiple skills in multiple domains/industries. An ultra generalist with a broad range of skills across multiple disciplines is the supreme level of a generalist, implying a level of proficiency in various fields.

Ultra generalists are by definition polymaths and Renaissance thinkers. These individuals may work independently or within organizations, pursuing intellectual exploration across fields. They often contribute as authors, speakers, consultants, and futurists, sharing insights from their cross-disciplinary perspectives.

Characteristics:

- **Cross-functional breadth**. Ultra generalists have a vast and comprehensive breadth of skills that can be applied to multiple business functions, including HR, finance, marketing, IT, and general management.
- **Multidisciplinary expertise**. Ultra generalists excel at integrating insights from different fields of study to solve complex problems, generate innovative ideas, and drive collaboration in various industries.
- **Versatility**. Ultra generalists are highly adaptable and flexible in acquiring and applying skills to a wide range of roles, projects, scenarios, and environments.

How to Become an Ultra Generalist

Becoming an ultra generalist means pursuing breadth with intention—connecting ideas across disciplines while continuously refining how you learn and explore.

1. **Embrace the pursuit of knowledge**. Cultivate insatiable curiosity and treat learning as intellectual play rather than outcome-driven work. Deliberately explore across paradigms to challenge assumptions and break linear thinking.
2. **Master meta-learning skills**. Develop systems for rapid knowledge acquisition, pattern recognition, and idea synthesis. These meta-learning abilities allow ultra generalists to absorb, connect, and apply insights from widely different domains.
3. **Follow an intentional but nonlinear path**. Balance focused exploration with a clear sense of purpose while remaining open to unexpected discoveries. Embracing serendipity helps transform curiosity into original insight rather than unfocused accumulation.

Pragmatically speaking, this discussion about the four types of generalists is more about a spectrum than it is about rigid boxes. It is important to understand that the maturity curve applies here. A shallow generalist can evolve over time toward becoming a domain generalist or a skill generalist, or perhaps both.

In the grand scheme of things, a mix of generalists at various levels, paired strategically with deep specialists (shallow generalists), is the way for innovative organizations to unlock their true potential.

CHAPTER 5

Domain and Skill Variation of Different Generalists

The Law of Specialist Saturation (LOSS) states that while the initial introduction of specialists yields significant improvements in specific areas, beyond a certain point the marginal benefits of additional specialization decrease.

To sustain and enhance overall organizational performance, generalists are essential in optimizing business results. In other words, the Law of Specialist Saturation highlights the danger of overreliance on specialists and elevates the critical role of generalists in optimizing organizational performance.

For specialists, the productivity curve initially rises steeply as they gain deep expertise in a narrow field, reaching a peak at the expert saturation point. At this stage, their productivity levels off, indicating that additional experience or knowledge gains offer diminishing returns.

In contrast, generalists show a more gradual but sustained increase in productivity. Instead of plateauing, the generalist curve continues to rise beyond the expert saturation point, illustrating how their broader skill sets and adaptability allow them to maintain and even enhance productivity over a longer career lifespan.

Why Is It a "Loss"?

My research over the years has led me to believe that professionals largely work on intentional specialization first and then they look out for planned exploration. They mostly prioritize a path of deliberate specialization as a foundation but incorporate structured periods of cross-field exploration later.

It is a loss as planned exploration is often late, and it results in specialists becoming complacent. Moreover, it does not allow generalists to flourish in good times in their careers to gain wider roots and ventures.

So working outside the domain—your industry base—means possessing the adaptability to contribute effectively in fields beyond your primary expertise. The ability to work outside one's domain is increasingly valuable in today's interconnected and rapidly changing business environment.

This capability allows individuals to leverage their expertise and adaptability to tackle challenges and contribute to projects beyond their primary area of specialization.

Ability to Acquire New Skills

Acquiring new skills can take the form of either upskilling or re-skilling.

Enhancing existing skills and acquiring new skills to improve performance in a current role is called *upskilling*. The focus here is to stay current with industry advancements and evolving job requirements related to your existing role, mostly through complementary skills.

Re-skilling, on the other hand, is about learning entirely new skills to transition into a different role, either within the company or in a new field. The focus here is on adapting to major workplace changes and opening new career pathways, mostly through contrasting skills.

Extending the discussion on upskilling and re-skilling, it is worth understanding the distinction between hard skills and soft skills, especially in the context of generalists: hard skills (also known as technical skills) represent specific know-how or training acquired through education, work experience, or specialized courses, whereas soft skills (also known as leadership skills) are traits that shape how we work with others and navigate workplace dynamics. Generalists excel in a variety of roles by balancing their hard skills with soft skills.

CHAPTER 6

The Generalist's Role in Innovation and Problem-Solving

Generalists thrive in uncertain environments by combining adaptability, critical thinking, and collaboration. Their practical insights empower them to make informed decisions and positively affect the team (and the organization) they serve.

To do better in uncertain times, leaders need better *sight*. There are four types of sights that leaders can center on:

- **Hindsight** – the ability to understand the nature of a situation clearly only after it has happened.
- **Oversight** – the act of closely supervising or managing teams, processes, or operations.
- **Insight** – a deep and accurate understanding of something, often a complex situation or concept.
- **Foresight** – the ability to anticipate or predict future events or developments and plan accordingly.

> When we are told to narrow our focus or stay on our lane, we miss out on something profoundly special. ”

Each type of generalist approaches unknown or unpredictable situation differently:

- Shallow generalists are known for their hindsight.
- Domain generalists are known for their oversight.
- Skill generalists are known for their insight.
- Ultra generalists are known for their foresight.

Generalists Tackling with Complexity

Generalists are often better equipped to deal with complexity due to their broad skill set and interdisciplinary work exposure. Dealing with complexity is about the thought process, and there are four thinking styles that we often see in today's workplaces:

- **Silo thinking** – focusing only on your own department, team, or area of expertise, without considering the bigger picture.
- **Divergent thinking** – generating as many ideas as possible, exploring all sorts of possibilities, and thinking outside the box.
- **Convergent thinking** – narrowing down ideas, evaluating options, and making logical decisions.
- **Holistic thinking** – seeing the big picture, understanding interconnectedness, and considering the long-term impacts of decisions.

Generalists use different types of thinking patterns, categorized by their approach to tackling with complexity:

- Shallow generalists are known for their silo thinking.
- Domain generalists are known for their divergent thinking.
- Skill generalists are known for their convergent thinking.
- Ultra generalists are known for their holistic thinking.

Innovation Ins and Outs of Generalists

Innovation is about creating value, as much as it is about uniqueness. Moreover, it is about introducing new ideas, methods, processes, products, or services that can enhance the productivity of an organization. It is not a surprise that generalists fuel innovation.

There are two main approaches to innovation:

- **Inside-out innovation** begins with the company's internal strengths, expertise, and existing technologies.
- **Outside-in innovation** begins by deeply understanding customers' needs, pain points, and desires.

Similar to this, there are two other aspects of innovation:

- **Explorative innovation** focuses on creating entirely new products, services, or business models.
- **Exploitative innovation** focuses on refining and improving existing products, services, or processes.

Here's how to apply the SDSU framework to innovation results in different generalists:

- Shallow generalists are best for inside-out innovation.
- Domain generalists are best for outside-in innovation.
- Skill generalists are best for inside-out innovation.
- Ultra generalists are best for outside-in innovation.

Problem-Solving Modes of Generalists

Generalists employ various problem-solving modes to tackle challenges and drive solutions across different domains, including experimental, pragmatic, ethical, and iterative problem-solving modes. They are generally better at lateral thinking, a problem-solving approach that involves looking at issues from unconventional angles.

In talking about generalists and the problem-solving conundrum, we need to discuss the approach of zooming in (focusing on the nitty-gritty of a problem) and zooming out (taking a big-picture view of the problem).

Taking the zoom perspective further, let's talk about focus. There are four types of focus:

- **Deep focus** – intense, sustained concentration on a single task for an extended period, minimizing distractions.
- **Micro focus** – focus on the smallest, most immediate actions within a task or project.
- **Macro focus** – the big-picture view of your goals, projects, and priorities.

- **Meta focus** – built on the "why" behind what you're doing.

Different generalists use different focus approaches to problem-solving:

- Shallow generalists are known for deep focus.
- Domain generalists are known for macro focus.
- Skill generalists are known for micro focus.
- Ultra generalists are known for meta focus.

CHAPTER 7

The Generalist Advantage in Action

Four case studies involving the four types of generalists reveal important lessons about The Generalist Advantage and how each type deals with unique and challenging situations. Here are the key takeaways:

- **Learn from the shallow generalist**. Avoid analysis paralysis and take decisive action, when necessary, even with limited information.
- **Emulate the domain generalist**. Leverage your domain expertise to adapt to new industries and roles.
- **Apply the skill generalist approach**. Utilize your core skills to tackle diverse challenges and opportunities.
- **Embrace the ultra generalist mindset**. Thrive in uncertainty by embracing change and continuous learning.

CHAPTER 8

The Generalist Quotient (GQ)™

The Generalist Quotient (GQ) is the measure of an individual's ability to apply a wide range of skills across various domains. It highlights their versatility, adaptability, and capacity to integrate diverse perspectives.

You can use a free online GQ self-assessment to ascertain your generalist type based on the SDSU framework and develop a road map for self-development to capitalize on The Generalist Advantage.

Conclusion

The Generalist Advantage empowers us to approach problems from multiple angles, drawing upon insights from diverse domains to arrive at creative and innovative solutions. It fosters a spirit of collaboration and empathy, recognizing the value of diverse perspectives in addressing complex issues and driving positive change.

But embracing the generalist mindset is not without its challenges. It requires us to confront our own limitations, to step outside of our areas of expertise, and to embrace the discomfort of the unknown. It demands patience, perseverance, and a willingness to embrace failure as an essential part of the learning process.

Yet, for those who dare to embrace the generalist mindset, the rewards are abundant. It empowers us to make meaningful contributions to the world around us, whether through our work, relationships, or creative endeavors.

In today's era of rapid change where AI influence and impact is fundamentally rewriting the why and how we work, a generalist is bound to thrive. They adapt when paradigms shift, for their toolbox is not rigid—it expands. When art merges with science, when education blends with gamification, when innovation challenges tradition, when creativity meets constraints, and when passion collides with practicality, the generalist steps forward, unafraid.

Dr. Mansoor Soomro is a futurist, thought leader, and author whose work appears in major international media, including the *Daily Mail*, *Yahoo*, *Raconteur*, and *HRD America*. He has been invited to speak by organizations such as the United Nations, World Bank, and Cambridge University. Championing a human-centric approach to work, he advises organizations through keynotes, executive education, leadership development, and consulting. He is the author of *The Generalist Advantage* and host of the *In Conversation podcast*. Dr. Mansoor serves on the *Harvard Business Review* Advisory Council and holds multiple international professional certifications focused on strategy, talent, and organizational transformation worldwide.

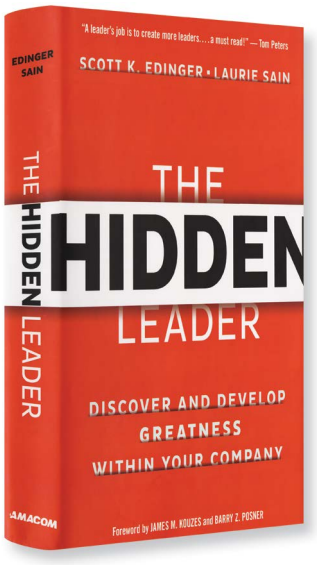
Leadership

The Hidden Leader

Discover and Develop Greatness Within Your Company



by Scott K. Edinger and Laurie Sain

THE SUMMARY IN BRIEF

Think you can spot the leaders in your company? Don't assume that you can identify them by their positions. What about those employees who consistently step up: the field agent who solves a previously intractable problem; the service rep who thinks outside the box and creates unshakeable customer loyalty.

These are more than "good employees." These are "hidden leaders," and they are critical to an organization's long-term success. Managers today need to make the most of all their resources, and *The Hidden Leader* shows them how to recognize and cultivate these talented but under-utilized employees, who demonstrate integrity, lead through authentic relationships, focus on results, work from clear customer purpose and fulfill the value promise of the company.

Supported by real-world examples of hidden leaders in action, *The Hidden Leader* helps managers discover these secret saviors and enable them to deliver even greater value to customers.

IN THIS SUMMARY, YOU WILL LEARN:

- To recognize and nurture hidden leaders in your organization.
- The four facets of hidden leadership.
- Why integrity is non-negotiable in hidden leadership.
- The difference between customer service and customer purpose.
- How to engage hidden leaders at the individual and organizational levels.

THE COMPLETE SUMMARY: **THE HIDDEN LEADER**

by Scott K. Edinger and Laurie Sain

The authors: Scott Edinger is recognized as an expert in helping organizations achieve measurable business results. Companies like AT&T, Lenovo, and *The Los Angeles Times* hire Scott Edinger to work with their senior leaders. A professional writer and instructional designer, Laurie Sain has defined content and created learning models for nearly 500,000 professionals, frontline supervisors and workers. Her clients have included Apple, the Union Pacific, Fidelity Investments and Charles Schwab. *The Hidden Leader: Discover and Develop Greatness Within Your Company* by Scott K. Edinger and Laurie Sain. Copyright © 2015 by Scott K. Edinger and Laurie Sain. Summarized by permission of the publisher, AMACOM. 240 pages, $24.95, ISBN 978-0-814-43399-7. What Is a Hidden Leader?

Hidden leaders are all around you within your organization. You have worked with them, encouraged them, and seen them rise within organizations to positions of power and influence.

You and others have called these workers smart, crucial, effective or an important part of the company. You have seen them work effectively with people at many levels within the organization, from front lines to executive suites, regardless of their formal positions. But if you thought at all about these employees' abilities, you probably categorized them as having natural talent that couldn't be replicated. You didn't see them as leaders.

What makes them "hidden" is not that their coworkers and supervisors do not value them as important players within the company. It is that management does not think of them as leaders with the potential to drive excellence throughout the organization.

These hidden leaders are a source of great strategic advantage in your company. They can be defined, identified, nurtured and encouraged to help an organization develop a competitive edge. They are the powerhouses within organizations who help galvanize people toward excellence.

The power of hidden leaders is obvious to those around them. These top individual contributors are known as the ones to approach for tough problems, the people new hires are directed to meet to understand the company's inner workings, and the anchors of productivity, creativity and innovation.

Hidden leaders affect the bottom line of an organization in several ways. They strive to fulfill the company's value promise; they enable effective shortcuts to be devised without sacrificing quality; they inspire others around them to do their best work. Managers who identify and treat them as leaders gain an important strategic and competitive advantage over the competition.

The Dynamics of Hidden Leadership

Before you can identify and develop hidden leaders, it's important to know what hidden leadership is. The dynamics of hidden leadership are more than effectiveness, friendliness and productivity. They encompass specific facets of behavior and attitude that result in these leaders fulfilling the value promise of your organization.

The Four Facets of Hidden Leadership

As a manager, you must understand each of these four facets in depth, including what drives them in hidden leaders and what undermines them in terms of systems or support. You will then be able to discover hidden leaders in your organization and develop them appropriately to strengthen your company's competitive opportunities.

Demonstrates Integrity: Integrity, by its definition, means adhering consistently to a strong, reliable code of ethics, whatever that code is.

Demonstrating integrity is the absolute bottom-line requirement of hidden leadership. Hidden leaders are known for their integrity and for acting on it in difficult situations where some might forgo commitments and lean on moral flexibility. But hidden leaders do not. Their integrity shows consistently along the way. An observer can identify it in actions, words and attitudes. To demonstrate integrity, a person must have the courage to consistently adhere to a strong ethical code, even in difficult situations.

By "a strong ethical code," we mean more than simply not lying, cheating or stealing. Those characteristics are the minimum expectations for any employee — the absence of outright dishonest behavior. A strong ethical code is built on positive, action-oriented, baseline beliefs that guide behavior. Hidden leaders may not be able to describe those beliefs, but others will see them consistently in action.

Leads Through Relationships: Demonstrating integrity is a sine qua non for hidden leaders. But they also lead through relationships, because those relationships are important to them personally. Essentially, leading through relationships requires an authentic, honest interest in others at many levels of an organization. This is evidenced and created by certain skills, attitudes and characteristics.

Hidden leaders, whether in a position of authority or not, display this ability to lead through relationships, or relational leadership. Essentially, those who lead through relationships

- Use interpersonal skills effectively.
- Exercise a sense of curiosity.
- Value others.
- Believe in their own personal value to others, whether as a co-worker or as a friend.

Focuses on Results: By focusing on results related to paying customers' needs, a hidden leader makes things happen for customers, co-workers and the company. When does a hidden leader focus on results? When the hidden leader maintains a wide perspective and acts with independent initiative. The result is individual engagement at a level that achieves more than knowledge, experience or positive thinking alone. It entails using the end to define the means.

When the end defines the means, hidden leaders don't just do a job. They aim for the end they are supposed to produce — the goal. This goal usually benefits both the customer and the company. It doesn't depend on the established process, the status quo or the personal needs of the leader.

Remains Customer Purposed: Being customer purposed is different from providing customer service or being customer driven. Being customer purposed means seeing the big picture of the company's value promise and acting in ways that enable that promise. This is more than a sense of "customer service," which implies that the one serving the customer will do anything to make the customer happy (possibly to the company's detriment).

The primary distinction of customer-purposed hidden leaders is that they focus on delivering their company's value promise during every aspect of the customer experience.

Identify Hidden Leaders

The perfect and fully developed hidden leader displays all these behaviors. You may notice people you think are leaders, who are strong in only two aspects or perhaps one. But how can a manager know if a particular person has the potential for hidden leadership in spite of skill deficits?

When two of the three characteristics are present, you will see distinctive roles and reputations in potential hidden leaders. We have identified them as the short-term visionary, the busywork-er and the lone wolf. Each of these types lacks one of the key characteristics of the true hidden leader.

The Short-Term Visionary

The short-term visionary combines results and relationships to produce action. Generally, these workers are effective in getting things done — at least things relevant to the short-term success of the company. They are continually in achievement mode, clicking off tasks, completing assignments and accomplishing goals, all while keeping relationships intact.

However, the short-term visionary is missing the customer-purposed characteristics of a true hidden leader. This frequently leads to actions that produce short-term gains at the expense of long-term results. Because they are not customer purposed, these potential hidden leaders lack the voice of the customer in their actions. As a result, they are in danger of making decisions that address localized, internal issues at the expense of customers.

When you as a manager see short-term visionaries, remember that a customer-purposed attitude can be developed. Do not discount the importance of people with strong relationships throughout the organization and an ability to focus on results.

The Busywork-er

Have you ever noticed an employee who is incredibly busy but seems to contribute very little to the company's long-term success? These well-intended professionals frequently have good relationships and exhibit a strong customer purpose. They certainly display a good work ethic, and they do get things done, especially routine assignments or marginally important projects. But without a focus on results, odds are that these workers will accomplish very little that contributes much to the value desired by customers or the long-term health of the organization.

The busywork-er lacks the characteristic of a focus on results. Without that focus, the person has no yardstick by which to measure the importance of specific tasks. Many

busywork-ers have tremendous planning and execution skills as well as excellent relationships. They do maintain the centrality of the customer, which helps them make tactical decisions.

But without the end game in mind, they may expend energy on projects and ideas that are good but not as valuable as they might be to the organization or the customer. They get results, but the results may not be in line with the company's strategic objectives.

The Lone Wolf

We call a potential hidden leader who lacks the ability to lead through relationships a lone wolf. In some situations, a lone wolf can be an asset. Especially where technical requirements are key, a lone wolf can accept an assignment, understand its importance and do it well. Many people with specialized or concentrated knowledge in a variety of fields, from software development to finance to law to medicine, fall into this category and produce great work for a company.

But lone wolves are unlikely to develop into hidden leaders. Without support from others in an organization, it is difficult for anyone to provide effective leadership. Project work generally occurs horizontally in companies. To lead effectively, a hidden leader must garner support across silos and work with multiple constituencies among different functions in the organization. Lacking that ability, the hidden leader is reduced to a lone wolf: an effective and productive person but not someone considered to be a leader.

Enable Integrity

While hidden leaders display integrity in all their activities, sometimes much of their work is done in solitude or within a small group. This can make it difficult for those uninvolved in the team to see the leader's integrity in action. The challenge for managers is observing visible evidence of integrity when the hidden leader is not in the immediate vicinity. In many cases, the manager must watch and listen for this evidence in the comments, responses and actions of others — those who depend on hidden leaders in the organization and know the leaders' integrity can be depended on in the toughest situations. When a manager hears employees suggest solutions that consistently include asking for help from a specific individual, that individual may be a hidden leader known to everyone on the front line.

How Can You Support Integrity?

Hopefully, your organization looks for and hires people who are moral and ethical in general. You begin with people whose values are consistent with the stated ones of the company.

However, courage and consistency in behaving with integrity can be encouraged or discouraged by co-workers, supervisors and managers. Company structures and organizational responses can discourage people's ability to show integrity. They can make it difficult for employees to maintain moral positions contrary to demands of the organization. Such company structures and responses are especially influential when they organically conflict with the company's stated values.

It is especially important that positional leaders show strong support when hidden leaders demonstrate integrity. We believe that this support takes three important forms:

- Responding positively to integrity
- Incorporating integrity into the culture
- Showing integrity yourself when it counts most: facing ethical dilemmas.

Does Your Culture Support Integrity?

It is one thing for an organization to employ people who demonstrate integrity. It is another thing for an organization's culture to support that integrity.

You can determine if your culture supports integrity by paying attention to everyday efforts and results. Does your company regularly deliver on its promises to customers? Are commitments met? Do people consistently act in the best interests of the enterprise, the customer, company stakeholders and employees? Do workers get honest feedback about how they might improve performance? Are conversations genuine and productive in the face of conflicts? Do people believe they have contributed significantly to the organization? A company culture that can answer "yes" to all of these questions has aligned its actions with its integrity.

Build Essential Relational Skills

Hidden leaders with strong relational leadership develop and use critical interpersonal skills whether or not they have been officially trained in them. The hidden leader's life experiences, combined with an interest in others, make these leaders more self-aware than nonleaders. This self-awareness emerges as compassion and empathy for other people. Given a baseline of interest in others, a hid-

den leader can learn these skills and integrate them into everyday performance easily.

Relational leaders do three critical things that help build emotional connections beyond basic relational skills:

- They pay attention to others.
- They make an effort to connect.
- They time conversations to coincide with their own positive moods.

Developing Essential Relational Skills

Hidden leaders consistently use a specific set of observable skills.

Face-to-Face Communication Skills: Authentic relationships entail communicating one-on-one with people. For our purposes, "face to face" means the fundamental methods two people use to communicate verbally and initiate, build and maintain strong interpersonal relationships. These skills are verbal ones. Specific features include sharing information, clarifying and confirming, and acknowledging others.

Transparent Critical Thinking: Transparent critical thinking is the ability to make verbal connections for people between the facts or assumptions that support an argument and the conclusions or solutions. Transparent critical thinkers verbalize their thought process so others can see how they came to a conclusion or the rationale behind a solution. Hidden leaders who make their critical thinking transparent trust the listeners, and the listeners are confident that there are not hidden agendas at work in the situation.

Crediting Others: Hidden leaders know that it is rare for a great accomplishment to be achieved by one person in a vacuum. Multiple contributors at many levels are involved in a success. Hidden leaders not only pay attention to the potentially unsung contributors to success, they make sure they give them public credit for their contributions. This willingness to credit others' contributions strengthens relationships deeply.

Honest and Complete Critiques: Hidden leaders believe that most people do their best, but they also know that people make mistakes. Because they truly value relationships, hidden leaders want to help others improve their performance however possible. One of the tools hidden leaders use to help others is to provide honest and complete critiques of actions, behaviors or work products. Hidden leaders' honest and complete critiques use a simple structure that is designed to help the other person, not harm. Honest and complete critiques focus on the content, maintain the person's value and build with information.

Effective Conflict Resolution: Good conflicts — those of ideas, priorities, goals and opinions — respond well to transparent critical thinking and logical, systematic approaches to solutions. Hidden leaders handle these situations well because they are confident in the power of methodical processes and rational conclusions. They also succeed at managing these conflicts because they trust that those involved have the good of the customer and the company at heart. We call these creative conflicts, because often the results or solutions that emerge are better than the two initial options combined.

In creative conflicts, hidden leaders use their communication skills to identify facts, assumptions, goals and priorities among the parties involved. Then they search for ways to combine all the stated goals into one systematic solution. This ability to synthesize solutions from conflicting ideas makes hidden leaders the relational anchor points for people involved in the conflict.

Create a Focus on Results

Few things make a difference in a company like hidden leaders who are focused on results. So what is it that allows a hidden leader to sustain a powerful focus on results? We maintain it is the presence of two characteristics: taking initiative and maintaining a wide perspective.

However, these aspects must be combined in the right amounts in the hidden leader. An imbalance of either trait leads to a very different type of person on the job. Consider these roles that emerge from combinations of initiative and perspective:

Plodder (Low Initiative, Narrow Perspective). Each of us has seen these ineffective people at work. They equate process with productivity and control with competence. Not only do these employees rank low in both initiative and innovation, they squelch those properties in the people around them. If they happen to be in formal leadership positions, their teams face demands for constant reports documenting progress. A frontline employee with low initiative and a narrow perspective can stop progress by insisting on sticking to the rules of the company or slowing team progress until not much is accomplished.

Dreamer (Wide Perspective, Low Initiative). These employees — and sometimes leaders — are at least headed in the right direction. They know the importance of keeping the end goal in sight. But they are unlikely to take decisive action without approval from above. The result is someone who can talk the talk but rarely walks the walk.

Hyper-Actor (Narrow Perspective, High Initiative). These frenetic employees take initiative for action but keep no output or broader perspective in mind. They change their stated goals regularly and may profess conflicting priorities. When they are unsure of what to do, they become more frenzied and achieve less.

Hidden Leader (Wide Perspective, High Initiative). These leaders — and they are leaders, although their titles may reflect otherwise — couple a clear line of sight toward the goal with the energy and initiative to take action, with or without approval from above. Because they let the end define the means, their actions connect to critical goals for the company and customers.

Building Individual Engagement

When they focus on results, hidden leaders maintain a broad perspective and take independent initiative to act. As hidden leaders maintain this focus over time, they become more engaged in their jobs.

Engagement happens when anyone, hidden leaders included, makes progress toward meaningful results. This progress and engagement result in people feeling happy and rewarded. The positive energy that results makes them much more likely to innovate.

By maintaining a broad perspective, hidden leaders more easily attribute meaning to everyday actions because their actions — the means — are defined by the desired results — the end. These leaders' personal initiative enables them to clearly see how their individual actions contribute to the desired goal.

Instill Customer Purpose

Customer purpose drives hidden leaders to see their work in light of the value it provides to the paying customer. It reaches beyond customer service to include the big picture facing an organization at any given point.

You can enable customer purpose in your employees by ensuring that they all understand the same definition of "customer" and can link the company's value promise to their specific tasks.

Customer Purpose Isn't Customer Service

By its nature, customer service responds to customer needs. It isn't completely passive, but a customer must be identified and a need declared before service can be offered. It is a critical aspect of a company's performance.

In contrast, being customer purposed means proactively envisioning how any task affects the value provided to the customer by the company. It means being a visionary in the context of a specific job and with the company's value promise in mind, as well as stated or potential needs of customers.

Customer purpose creates value. Inside the organization, it translates into customer-focused processes, products and services. From the outside, customer purpose builds a better customer experience. It strengthens a company's business relationships with its customers, which is a distinct competitive advantage. Your competitors may be able to replicate products, services and processes, but they cannot replicate a strong business relationship — especially if hidden leaders are the foundation of that relationship.

The Source of Customer Purpose

The source of being customer purposed is a deep understanding of the value promise of an organization. In organizations where the executive suite believes in communicating the true value promise organization-wide, hidden leaders can easily link their everyday actions to the company's purpose.

In those organizations that make no effort to help employees understand the value promise, customer-purposed hidden leaders make the effort to think through what the company is truly delivering to its customers — including future ones. It's helpful when an organization educates its employees on its value promise to customers.

But when that is not the case, hidden leaders are able to be customer purposed because they engage five distinctive characteristics:

Enthusiasm for the work: Enthusiasm born of a belief in the value to the customers drives hidden leaders to make the customers' needs their purpose. This enthusiasm influences those around them, both colleagues and customers.

Balanced skill/communications proficiency: Customer-purposed hidden leaders ask great questions, not just to uncover needs but to understand the issues from a customer's point of view. They evaluate the customer's or stakeholder's level of knowledge about the problem and product or service and talk in language that makes sense and provides value.

A Sense of Urgency: Customer purpose requires a sense of urgency on the part of the hidden leader. But urgency is not speed. It is a commitment to act, to not stop until the customer's needs are met. This sense of urgency — of believing that the customer's needs are too important to ignore in the short or long term — is a driving force behind the hidden leader's sense of being customer

purposed. A sense of urgency provides the "why" behind the "what" of being customer purposed.

An Owner's Mindset: Hidden leaders bring the commitment of a company owner to their jobs. Daily, they come to work ready to make a difference and help the organization and its customers achieve their goals. This customer purpose exists because hidden leaders see themselves as responsible owners of the organization, not just employees. They take ownership of their jobs and their companies' success. When a hidden leader acts like an owner, managers will see the leader reference company strategies in the process of making decisions in the workplace.

Behaving like an owner is not a subtle shift. It is a transformation that hidden leaders, with their self-ownership of actions, embody daily.

Being Champions of Change: Because they are customer purposed, hidden leaders look for ways to keep up with customer needs and market challenges. They are often the ones advocating improvements and responses to better meet customer needs. These champions of change will challenge the status quo, no matter their positions in the existing hierarchy. They are determined to serve the customer well, even if that means working against existing systems and assumptions. Hidden leaders use their strong communication and persuasion skills to challenge the status quo collaboratively.

Through their skills as champions of change, hidden leaders can be management's secret weapon to help others in the organization accept, commit to and implement change initiatives. Engaging hidden leaders in change implementation helps clarify the change process for others because the leaders focus on what is best for the customer.

Measure Performance

When it comes to measuring performance, how do you use the characteristics and skills we have identified as belonging to hidden leaders? People can be measured as if they might be hidden leaders. Core characteristics and skills of hidden leaders can be helpful to anyone in your organization. By exposing employees to the characteristics and skills of hidden leaders over time, achieving high performance in these skills becomes the norm.

Bestselling author Neil Rackham talks about measuring performance as a way to improve, not to prove. Rather than using measurement to verify a result, use it as evidence of growth or movement so you can make changes and adjustments.

Effective Performance-Measurement Systems

Hidden leadership characteristics offer guidance to ensure that your organization's performance-measurement system is useful.

Focus on Results: Ensure that individuals' goals link directly to the company's strategy and tactics. If necessary, alter processes and procedures so they focus on attaining results for the customer. Make sure the end — your value promise — defines the means of getting there.

Centralize the Customer: Create measurement criteria that are customer purposed to strengthen the link between goals and your company's value promise. Question a measurement or goal that cannot be directly linked to value for the paying customer. Reinforce and support those that clearly put the customer at the center.

Communicate Clearly: Visions and strategies are important. Just as critical, however, is management's communication of and commitment to the what, how and why of these high-level concepts. When it comes to communication, once is not enough. Management must continually link ongoing tactics to strategic goals and the overall vision. Regular, consistent communication at all levels must reinforce the link.

Reward Initiative, Not Just Results: Rewarding a well-planned and well-conceived initiative is the pathway to innovation, even if the result is a failure or mediocre success. True innovations rarely work the first time. The classic story to illustrate this is that of Thomas Edison's search for a suitable filament for the electric light bulb. According to various sources, Edison tested thousands of different elements before he succeeded in his quest. When he did succeed, his discovery enabled him to transform commercial lighting and electrical systems.

Customize Rewards: Remembering that different people value different reward mechanisms is important if hidden leaders are to be supported effectively. The most effective rewards are customized ones that individual people value personally. For that, managers must interact with workers and find out what is most important to them. Some prefer a quiet commendation or a word to upper management. Some like the pomp and circumstance of formal award ceremonies in front of their peers. For others, a sincere "thank you" and a special reward — for example, a flexible day off or an acknowledgment to a small team — is most important.

Engaging Hidden Leaders

The purpose of understanding hidden leaders is to engage one of the most powerful strategic energy sources in your company. When these leaders are effectively engaged, a company creates fertile ground for existing hidden leaders and produces an environment that actively cultivates the development of many other employees as hidden leaders. A business able to engage and encourage hidden leadership has a competitive advantage that is invisible to competitors. It also helps the organization develop its productivity, innovation and performance potential.

Enabling Hidden Leadership

There are ways to structure cultures and companies so hidden leaders emerge and are engaged more easily. Here are 10 dimensions of performance that, when developed, create cultures of high performance and environments where hidden leaders thrive:

Communication: One of the many advantages of hidden leaders is that they act out the value promise of your business and bring your strategy to life. But they can do so only in an environment where the value promise is clearly understood and colleagues share information effectively.

Strategy and Goals: With clear strategy and goals, hidden leaders are freed up to focus on outcomes and results, with an understanding of what the company is trying to achieve.

Teamwork and Collaboration: An environment that encourages cooperation and collaboration, through conscious management and specific reward systems, provides hidden leaders many opportunities to use their influencing skills to the benefit of the organization.

Alignment: Cultures that align strategies and goals with tactics allow people to see the relationship between what they do and the contributions of others.

Organization and Learning: Hidden leaders look for ways to improve so that they are able to contribute more value to the business and to grow as individuals. One of the best rewards for hidden leaders is an investment in their development.

Capacity for Change: To improve your culture's capacity for change, ask hidden leaders about their observations, descriptions of a problem, and expectations of how a new approach will resolve the problem or create an innovation.

Customer Focus: When a company's culture reinforces delivering value for customers in its policies, procedures and overall business attitudes, a hidden leader's capability to be customer purposed emerges readily.

Innovation: While recognizing that the people who are officially in charge according to the organization's structure guide and make final decisions, all company employees can offer critical thinking and innovative approaches to common, daily challenges.

Values: Hidden leaders are frequently great role models of an organization's values, especially when they align with the leader's personal ethical code.

Engagement and Commitment: The levels at which people in the organization participate and commit their best work sets a culture's tone. High levels of engagement nurture hidden leaders in all corners of the organization.

An organizational culture strong in these dimensions supports the achievement of a company's goals. It also enables hidden leaders to make their maximum contributions.

Hidden leaders exist. They are at work in your organization now. Based on their demonstrated integrity, they are questioning conclusions and driving issues to the fore. They are harnessing people's energy and power to get good work done, using relational skills, a focus on results and customer purpose. They make the work experience better for those in contact with them.

They may or may not meld with your company's culture perfectly, but they are there. Ignoring their influence may help maintain the status quo. It will also limit the value of your organization. By discovering and developing hidden leaders and acknowledging their contributions, you can expand both culture and value to fulfill your company's potential.

THE SUMMARY IN BRIEF

Must everything that goes up eventually come down? If global empires can collapse and advanced civilizations like the Incas can become irrelevant in a matter of a few years, how on earth can our current business leaders and managers have any confidence that today's success can be sustained into the future? One of the maxims of the business world is "the only thing that is certain is uncertainty," with past performance being no guarantee of future performance. Unfortunately, this almost always seems to be forgotten during prosperous times, leading to some reckless decision making. How can you stay on the right side of the fine dividing line between ambition and egomania, or between visionary drive and megalomania?

In ***The Illusion of Invincibility,*** authors Paul Williams and Andreas Krebs take a close look at the factors that impact business success. Using the Incan Empire as an example, they reveal how businesses today can avoid the kinds of power struggles that bring about destruction and make objective decisions when faced with challenges.

IN THIS SUMMARY, YOU WILL LEARN:

- How to create and live by an inspiring and compelling company vision.
- What key considerations should be made when hiring and promoting people.
- How to get the best out of the team and drive the organization forward.
- Three "best of" practices to help a company avoid failure in mergers and acquisitions.
- Common challenges to exercising good judgement and how to overcome

A Compelling Vision

In the real world, is a vision statement always useful for motivation? For many decades, this certainly was the case for the Incas. That is, until the point when their ambition led to a dramatic downturn in fortune. For an extended period of time, the bold core vision of the Incas to bring order to the world held a magnetic appeal. Many large organizations are launched with such a vision, which guides and inspires strategic decision-making and everyday actions. This sort of vision can inspire, cajole, and motivate. It is no surprise, then, that visions are sometimes hailed as the ideal route to business success. As the demise of the Incan Empire shows, however, this is dangerous thinking.

A proper company vision is the setting of an ambitious but nevertheless realistic goal, which serves to inspire both existing and future employees and other stakeholders. For visions to really inspire and motivate, they must provoke a positive emotional response from all involved and be plausible. They have to be "lived" everyday by all levels of the company. They have to be intuitive, be consistent, and reflect the firm's DNA; otherwise they will just provoke cynicism and ridicule.

A Stress Test for Your Vision:

A vision statement can only be effective if the leadership team is fully on board and everyone in the business buys into it. Regular reflection on the question "Where are we actually going?" generally leads to greater success and satisfaction, provided that the vision properly embodies the concept of a motivating and meaningful way forward.

Human Resources Policy

The success of a business depends on the skills of its people. An incompetent employee can harm their employer and a dishonest one can ruin them. Considering the risk, it is remarkable how carefree some businesses are when hiring new people. A successful business that wants to stay that way is well advised to take great care in the way it goes about recruitment and selection. Those who recruit carelessly and surround themselves with the mediocre, only then to complain about their lack of inspiration and good ideas, are to blame. Talent should be valued over seniority.

Company loyalty and good performance over an extended period of time in a specific position is often rewarded, rather than what a person can do best and whether this is what is actually needed in the future role. The Incas chose to elevate people who proved themselves in a relevant setting and had a positive prognosis for future success, without nepotism or favors. When it comes to choosing new employees, don't compromise! When you consider how much negative impact and collateral damage can be caused by hiring or promoting the wrong person for a key position, then such laxity in personnel decisions is extremely short-sighted.

A Stress Test for Your Human Resources Policy

The prerequisite for good people selection and development is that you give it the attention and time it deserves and invest the necessary care and financial resources. Top management, not outsiders, should be closely involved with the selection and recruitment of managers. When it comes to promotions, what matters is who is best qualified for the job, not who has been there the longest.

Leadership

Not every business can be rescued by good leaders, but poor leadership can take any company under if given the chance. How can a leader get the best out of the team and drive the organization forward? The Inca elite was highly successful in managing this over several decades with sophisticated divisions of power that were very well organized. Inca leadership drew its legitimacy from providing structure and prosperity across the empire. This is directly transferable to leadership in the modern age. How do you provide value to your colleagues and company? How does your team benefit from having you as their boss?

The level of motivation in a team is directly linked to the personality of the manager and how they view their people. Anyone who wants engaged and enthusiastic employees has to allow them to experience success, take a genuine interest in what they do, and reward them with real, personalized recognition. That's it! Easily said, but unfortunately, not quite so easily done. People crave recognition. Appreciation is something that is expressed on equal footing, is credible, and is concrete. Make it clear to your team that you trust them, give them the freedom to organize things the way it suits them best, give them responsibility, and actively support and encourage them. Most people feel motivated by such an environment.

A Stress Test for Leadership

Management ensures there are clear targets and good working conditions for people at all levels. The company encourages a culture of personal responsibility and employ-

Those who are suited to leadership rise to the top, not those who have the right contacts. Creativity, initiative, and commitment are rewarded.

ee development. Those who are suited to leadership rise to the top, not those who have the right contacts. Creativity, initiative, and commitment are rewarded.

Company Values

The Incan Empire was built on strong values. The question of whether something was right or wrong in Incan society was rarely asked, as a more significant code of values was the major factor holding the widespread empire together. Tragically, a civil war undermined these values and accelerated the decline of the empire. The business world jumped into the topic of "values" decades ago. There is an enormous amount of activity from companies regarding their corporate values and yet, at the same time, we hear of one new corporate scandal after another. What is going on here?

Where values such as personal responsibility, integrity, or mutual respect are not found and not lived by management, then moral standards run wild. Why should employees play by the rules if top management doesn't do likewise? Values help you make decisions when faced with a dilemma, and shared values help a large group of individuals find orientation and commit to a common goal. There is nothing wrong with a written statement of values, and, if it is the result of a cooperative effort by a cross-section of employees, all the better. It is vital that it is clearly communicated by senior executives, and it is also helpful if the information is handed out to every new recruit. Most important of all is that actions and not words are allowed to communicate and demonstrate what the values really mean in terms of behavior, both inside the organization and in interactions with external stakeholders.

A Stress Test for Company Values

You know what your company stands for and the values of your company are in tune with your own values. These values are lived out to the full every day, including by top management. Apparent or perceived disregard of values or value conflicts are openly addressed in the course of everyday work. Serious breaches of values bring serious consequences for those concerned, at all levels of the organization.

Mergers and Acquisitions Strategy

Company takeovers and mergers have become routine in the continuous quest for corporate growth. And yet, experts say that between half to two-thirds of them fail. If we think of the Incan Empire as a multinational business, it acquired the knowledge and skills of a large number of regions and people, integrated them successfully, and consolidated into an ever more powerful entity. Their success provides plenty of food for thought for the leaders of today.

The majority of the M&A transactions which were completed globally in 2018 involved small and midsize businesses. Some were initiated because there was no successor from within the family, some to help grow and/or internationalize the business and to avoid becoming a takeover target, others to broaden their product portfolio or to take advantage of real or assumed synergies. But size does matter. Large companies can usually weather the fallout if a merger goes badly wrong, but for smaller companies, it can be a question of life or death. A "best of" merger positions the acquiring company as a partner, not a colonist.

1. The merger offers the opportunity to select the best brains, the best concepts, the most successful products, and the most efficient processes from a bigger pool, and so increase the profitability of the new business.
2. The merger reduces emotional resistance from smaller or weaker partners and speeds up the integration process. You can buy a business, but this does not automatically mean that its employees will cooperate willingly, and you can't buy their commitment or trust. All this must be earned or won over, and this has a direct impact on productivity.
3. The merger meets the needs of the many employees who are looking for the familiar, something to cling to early on, something in the new setup that still feels a bit like home. When employees see that some of their old managers, existing working methods, and/or products have been carried over, on merit, into the new business, then it is much easier for them to identify with the new organization.

The prerequisite for a "best of" strategy is to be able to, early in the process, clearly identify people, departments, processes, and products with a positive prognosis. The key point is to demonstrate, very quickly, that the promised cooperation among equals is more than just a short-term sedative.

Your Judgment

In early Incan chronicles, they justify their subjugation of other indigenous peoples with the claim that they brought the blessings of their culture to the neighbors who, up to then, had been living "like wild animals." We human beings are extremely adept at presenting facts in a way that suits our standpoint, attitude, and intentions. How often do you think you hear the "whole truth" from your employees, direct reports, peers, bosses, or the organization itself?

There are three aspects to the challenge of ensuring you are receiving sound information upon which you can exercise balanced judgment. First, leaders rarely receive unfiltered information. Instead, they receive carefully crafted packets of flattery being fed in by the people around them.

Secondly, if the senior manager also has a domineering or authoritative leadership style, with the tendency to shoot the bearer of bad news, then any information will be cleansed still further before it reaches them.

The third danger involves a self-centeredness and overly self-confident attitude in the manager that results in them distancing themselves even further from reality. If things don't work out as they thought they should, the manager is at a complete loss to understand why.

The advantage goes to those executives who maintain some direct contact with customers and the competitive environment. Leave the management circle and go listen to the views and experiences of employees, customers, and other stakeholders. Regularly carry out reality checks on issues that normally land on your desk in the significantly more abstract form of a status report, presentation, or spreadsheet. This only works when you do this on an ongoing basis, you show that you are genuinely interested in the concerns and issues people raise, and you speak with people directly, openly, and honestly.

A Stress Test for Your Judgment

Do you really have a full 360-degree view of do you have, at best, only partial knowledge of the true facts? You can never know exactly, but there are always things you can do to sharpen up your powers of judgment.

The Incas succeeded in uniting "the best of all worlds." In looking at the story of the Incas we see that in their know-how and social and economic system they were, in many ways, smarter than we are today. Even their dramatic decline shows striking parallels with some of the crash landings of today's leaders. The lessons in this book are designed to encourage you to reflect on your own strengths and weaknesses and to reconsider positively some of the key elements of leadership that impact an organization.

THE SUMMARY IN BRIEF

What is great leadership? What separates the merely competent leaders from those rare individuals who leave a lasting impression on everyone around them? One of the world's most in-demand CEO coaches and top leadership gurus, John Mattone has identified the key qualities that, together, make up the mindset of great leadership.

In ***The Intelligent Leader***, Mattone lays out an accessible, practical, and compelling path that anyone can take to become the kind of leader that brings enrichment to the lives of others, enjoys a more fulfilling life, and leaves a lasting legacy. The book presents Mattone's seven dimensions of intelligent leadership and offers proven strategies to help leaders put them into action.

The world today needs leaders who understand the subtle dynamics of the human heart, mind, and soul, starting with their own. For those willing to do the work to unleash their inner light and let it shine in every dimension in their lives, ***The Intelligent Leader*** is an indispensable guide.

IN THIS SUMMARY, YOU WILL LEARN:

- Why you must focus on your inner core to become an intelligent leader.
- To develop your core purpose statement.
- To cultivate a mindset of duty, leverage your gifts, and address your gaps.
- Skills to help you stay present and, when necessary, to correct your course.

Introduction: Do You Have What It Takes to Inspire Others to Follow?

True leaders are those who view leadership not as a benefit to themselves but as an obligation to others. That's why a great definition of leadership is one you can read right in the dictionary: "an example for others to follow."

These leaders are aware that people around them are depending on them and modeling their lives after them. Accordingly, these leaders strive to become better people.

The best leaders aren't necessarily those who are born with some special "gift." They've made a decision to take on the enormous responsibility of becoming an example for others—and you can too. Anyone can. Assuming the mantle of leadership is a choice anyone can make. Great leadership is a skill you can develop. That's what Intelligent Leadership is all about.

Your Inner Core

If you visualize an iceberg, you can see the white or blue ice towering above the water line. But below the surface, what you can't see is a giant mass that makes up the vast majority of the iceberg and that accounts for its movements through the ocean. So, like that iceberg, your inner core is everything in you that lies below the surface, all the "invisible" qualities that anchor your personality and that result in the skills and actions that people see.

The greatest leaders are those who are not only deeply aware of their inner terrain but also skilled at accessing it, changing it, and using it to guide and shape their actions in the world. Their connection to their inner core is the "glow" of great leadership. It's the indefinable quality that makes great people tick.

Intelligent Leadership, which is made up of seven dimensions, is the key to unlocking this powerful connection between the inner and the outer, the subjective and the objective, the invisible world below the surface and the visible qualities and capacities that make us great leaders.

Getting to Know Thyself

If you want to develop as a leader, which means developing as a human being, it's crucial that you examine yourself as deeply as you can. You need to understand what drives you, what tends to get in the way of your success, and what latent gifts you might possess.

What exactly is the inner core? The inner core is fundamental to who we are, and yet it is completely invisible to us most of the time. It is the "why" of everything we do. It's a kind of blueprint, constructed by our upbringing, life choices, and experience, that shapes our lives and determines the kind of person we are.

The inner core is broken down into four primary components: your character, your values, your self-concept, and your beliefs.

How strong is your character? Consider who you are when no one else is watching. In what ways do you exhibit strong character? Are there ways in which you are lacking character? Character has six elements: courage, loyalty, diligence, modesty, honesty, and gratitude.

Values: your criteria for life. Dr. Aldo Civico, an executive leadership coach and conflict negotiator, describes values as our "criteria for life." Our values, especially our deep-seated ones, are the lens through which we see the world. They are at play in every major decision we make.

Some of our values may be principles that we've cultivated ourselves. Others were instilled in us by our parents or by society. Whether we're aware of our values or not, they are informing our every move and to a significant degree determine our destiny.

We'll be exploring how each of the seven dimensions are rooted in and influenced by your character and values. They are the foundation of who we are, and if we want to develop into a powerful expression of great leadership, getting deeply familiar with our character and values is essential.

Who do you think you are? The final components of our inner core are our self-concept and beliefs. These are how our deeper character and values are translated into our outer core behaviors and capabilities. Self-concept is, quite simply, how you think of yourself. Do you consider yourself to be a successful person or a failure? A leader or a follower? Your self-concept will, to a significant degree, shape the kind of person and leader that the world experiences.

Beliefs are closely tied to your self-concept. Here, beliefs are the principles that we know to be true through repeated experience. For instance, we might believe that human beings are inherently good, because we've repeatedly experienced acts of goodness and kindness by others in our lives. This deeply held belief, then, shapes how we act in the world.

Think of each of the following seven dimensions as being

Thinking differently and thinking big require that you work at a deeper level than your outer core behaviors and dive into your inner core.

equal parts inner and outer core—a kind of connective tissue that binds them together. These are the unique qualities that collectively make up the true essence of great leadership.

These seven dimensions are the gateway that simultaneously gives us access to better understanding our inner core and the amplifiers that help our light to shine more beautifully, vibrantly, and powerfully through our actions.

Thinking Differently, Thinking Big

If you really want to become something more, to change, to become something different, it's inevitable that you're also going to have to change the way you think. You've got to be willing to think differently than you have before, bigger than you have before. This insight is the primary step on the journey of Intelligent Leadership.

Consider the following qualities and behaviors that are often associated with thinking differently and thinking big. These are "leading indicators" of how much you embody this dimension of leadership, and are meant to help you measure yourself so you can determine what areas need improvement:

- Setting aside time just to think.
- Remaining open to all potential ideas and opportunities.
- Zeroing in on what is real and actionable.
- Bouncing your ideas off others.

Thinking differently and thinking big require that you work at a deeper level than your outer core behaviors and dive into your inner core. Understanding your core purpose is the ultimate form of big thinking. It starts with asking yourself the really big questions: Why am I here? What was I put on this earth to do? What is the unique gift that I offer to the world? Grappling with your core purpose is meant to throw your life and personal pursuits into the biggest and brightest possible light.

From here, you can see your tremendous potential—and also the many ways in which you may be unconsciously holding that potential back.

Developing Your Core Purpose Statement

The core purpose statement (CPS) is a simple description of the biggest and most fundamental vision you can articulate for yourself. Your CPS should capture the essence of the person you want to become, what qualities you want to develop, what you want to accomplish, and what contributions you want to make.

For example, here is the CPS of Denise Morrison, CEO of Campbell Soup Company: "To serve as a leader, live a balanced life, and apply ethical principles to make a significant difference." Amanda Steinberg, founder of DailyWorth.com, writes, "To use my gifts of intelligence, charisma, and serial optimism to cultivate the self-worth and net-worth of women around the world."

Ask yourself the following questions: "What would I really like to be and do in my life? What are my greatest strengths? How do I want to be remembered? Who is the one person who has made the greatest positive impact in my life?"

"If I were to do one thing in my professional life that would have the most positive impact, what would it be? If I were to do one thing in my personal life that would have the most positive impact, what would it be? How can I best contribute to the world?"

Now, visualize the end of life. You are surrounded by your loved ones, friends, and the colleagues you have touched along your life's journey. One by one they lean over to whisper their final words to you. What would each person whisper to you? What difference have you made in their life? What qualities or characteristics will you be remembered for?

Write a draft, and then let it sit for some time. Return to it in a couple of days or a week, and look at it with fresh eyes. Adjust as necessary, and keep returning to it as often as you need.

The Vulnerability Decision

The willingness to be vulnerable is the key to unlocking truly great leadership. This dimension of Intelligent Lead-

ership presents a kind of paradox that many leaders don't understand but that the greatest leaders are intimately familiar with: Vulnerability doesn't make you weak.

Vulnerability will actually make you stronger. It will open you up to new possibilities for yourself and your team that you would never have thought possible. It will build trust among your team members. And perhaps counterintuitively, it can make you *invulnerable* to so many of the slings and arrows of running a team, company, or organization.

Opening up intentionally is the vulnerability decision. It's a conscious choice that you, as a leader, make to humble yourself, invite feedback from others, and search for answers that you don't already have.

It's with the vulnerability decision that the rubber really meets the road. "Without vulnerability, change isn't possible." It's a bold statement but true, made by Curtis Smith, a former Navy man who now runs a corporate consulting firm in Ohio.

One of the key components of vulnerability is humility, or the acknowledgment that you don't have all the answers yourself. This can be a tough one for leaders, who often have pretty big egos. But if you want to change yourself or your company, you need to muster enough humility to see and acknowledge that you aren't perfect and that there are elements of your personality, behavior, management style, or company culture that need improvement. That takes vulnerability.

Practicing Vulnerability

Vulnerability takes practice. It's not something you can just "get" and then be done. Below are a series of "igniter behaviors" that you can use to cultivate vulnerability. They are behaviors that you can put into practice right away to help expand the way you think.

Taking the time to reflect. There's no set way to do this—you can use any variety of methods for self-reflection. The key is to do something regularly to put yourself in a reflective mindset. The power to change for the better is always ignited paradoxically from connecting deeply and quietly with the depths of our inner being.

Being open to feedback. You don't have to do this every day, but it's important to take time, occasionally, to make sure that you're connecting to the impact that you're having on those around you. In what ways is your inner world spilling over onto others? Are your actions—which are reflections of your inner core—having a negative or positive effect on your family, friends, and co-workers?

As you reach out, it's very important to cultivate a degree of being open to this feedback from others.

Being proactive. When you are trying to cultivate any new quality, it's crucial that you are proactive. This is especially true with vulnerability because the idea of being vulnerable can bring up tremendous fear, so actually making yourself vulnerable requires a lot of courage. You can't wait for vulnerability to come to you.

Don't wait for feedback, either internally or externally, to force you into becoming open. It's better to take the offensive. Become an expert in yourself, through reflection and feedback.

Having a Mindset of Entitlement Versus a Mindset of Duty

Being out of touch with what it takes to succeed, and expecting that the privileges that you have are, in fact, not privileges but your God-given right, creates a mindset that can inhibit your ability to work hard through unexpected challenges. And this entitlement mentality is having negative effects everywhere, from the classroom to the boardroom.

The duty mindset is a perspective in which you see yourself as a key cog in a much larger wheel. This wheel is defined by the intricate matrix of relationships that make up who you are: with your co-workers, your family, your friends, your superiors, as well as your mentors and peers.

In this larger context a lot is depending on you. You are not just an independent actor or solo operator. Your choices, your behavior, and your actions all really matter—they have consequences on all of the many relationships that make up your life.

The best leaders understand this, and they take action based on it. It doesn't mean that they don't act out of self-interest or on their own behalf. It's just that they see their own self-interest as part of something bigger. It's a kind of "enlightened self-interest" in which you are focused on your "self," but that self represents something much bigger.

In that light, the duty mindset inherently reorients all of the personal work you're doing. Your own improvement—your striving to become a better leader—becomes much more about the influence you can have on this complex matrix of relationships than it does on your own personal gain.

Cultivating a Duty Mindset

Below are a series of "igniter behaviors" for the duty mindset. These are actions that you can take to help expand your own perspective. The idea is that the more you are able to manually apply these behaviors, the more they will become second nature to you—an inherent part of the way you see yourself and the world.

> Signature strengths are the innate abilities that each of us possess that have made us who we are today.

Working backward exercise. At least once per month take stock of all your successes—all the good things that have happened to you and all those situations that led to your feeling proud, happy, and fulfilled. Now create four columns, and list your successes, one by one, on the left. In the next column, write down the positive result that you experienced from each success.

In the next column, write down what you, personally, did that led to your success. In the next column, write down the names of everyone who made some kind of contribution that led to your success. These could be individuals with whom you work, as well as others, like family, friends, or past colleagues.

In the last column, write down your reaction to seeing that your success was the result of more than just your own effort (if that was the case). Once you see that you are actually a small part of a much bigger whole, it keeps you humble, which allows you to better appreciate all the value that others bring to your own success.

Taking pride in others. As you start to see yourself in a bigger and bigger context, the more you start to identify with that bigger whole. Consequently, you'll start to take pride in it.

Take some time to consider the "greater wholes" that make you proud. Are there specific accomplishments that have been achieved by others who are part of your group or by the group itself that have made you proud? How does that feeling of pride compare to your own personal pride? Just taking the time to reflect on this greater sense of pride starts to build the muscles of your duty mindset.

Leveraging Your Gifts and Addressing Your Gaps

As we move into the fourth dimension, we begin to make the shift into applying the perspective we've been cultivating to the concrete, nuts-and-bolts mechanics of great leadership.

This starts with leveraging your gifts and addressing your gaps, which is, in many ways, the crux of human development. It's where we identify the ways we need to improve, embrace the areas in which we already shine, and then put those all together to unlock our leadership potential.

Signature strengths are the innate abilities that each of us possess that have made us who we are today. They are usually responsible for the majority of the successes we've experienced in our lives, and yet they are so "us" that we often don't even acknowledge their existence or value. The key is to identify these signature strengths and then lean into them and see how far they can take us. The best leaders, the truly great ones, are able to do this, and you can, too.

Your gaps are simply the areas where you could really use some improvement. They could be skills that are underdeveloped, like strategic thinking, communication, or attention to detail. Or they might be character flaws, like having a hot temper or being too self-obsessed.

The key to identifying your gaps is seeking out the limiting factors to growth. We're not looking to identify issues just for the sake of understanding yourself better. We want to find the areas that would have a significantly positive effect on everything else in our lives if we were to improve in them.

Below are a series of exercises and behaviors that you can use to put this dimension into practice.

A 360-degree view. This step involves assessing both your strengths and your weaknesses. It also includes seeing both gross and subtle aspects of your behavior or character—a combination of obvious characteristics, like your communication habits, and harder-to-see elements, like how you perceive yourself as a leader.

Use a combination of self-assessments and outreach to your

peer network. This provides a full-spectrum view of each person, using subjective and objective feedback.

Ask for go-forward suggestions. One way to help keep your mindset more future-oriented is to reframe the way you go about seeking feedback. Instead of asking others to simply tell you about things they think you do or don't do well, consider asking them for "go-forward suggestions" (GFS).

For example, "Mary Lou, what are some go-forward suggestions you have for me to consider in order to improve how I communicate?" The GFS approach is powerful because it will implicitly address your past mistakes and flaws but do so in a way that doesn't make you defensive or regretful.

Make a plan; keep it simple. Once you've gotten a clear sense of your gifts and gaps, it's time to make a plan for how to address them. For your gifts, you want to focus on how each one could be given greater focus in your life. For your gaps, you should look for ways to improve upon weaknesses and curtail the negative consequences of behaviors that aren't serving you.

As you develop your action plan, make sure to keep it simple. You want one or two strategies for each quality you're tackling. Keep those strategies concise. For example, "I will improve my ability to lead constructive team meetings by a) spending at least an hour preparing for each meeting and b) getting more input from stakeholders beforehand."

Make sure that you include target dates for each, and share your plan with someone you trust who can hold you accountable.

Having the Courage to Execute with Pride, Passion, and Precision

Much of the work in the first four dimensions primarily developed self-awareness. Now, the fifth dimension starts to translate this perspective into action.

Just because we plan to do something doesn't mean that we will. Executing requires courage. You need steel nerves to take a vision and actualize it, whether that vision is a project plan, a New Year's resolution, or a book.

Truly great leaders are those who are willing to lean into the often uncomfortable position of executing a plan. They are the ones who have the courage to step into the unknown on behalf of everyone involved. Cultivating this courage is something anyone can do.

Following are a series of igniter behaviors that you can take to develop, or accentuate, your own capacity for courageous action.

(Re)connect with your core purpose. The deepest possible source of courage comes from having a strong and well-considered vision for yourself—one that is big enough to keep you afloat in the rough seas of life. By tapping into the depths of your soul—perhaps for the first time—and creating the vision of the essence of the person and leader you must become, you start to see that your own journey is actually less about you and much more about others.

As you get in contact with the big vision that your CPS is based on, notice how it makes you feel. Do you feel you have more confidence to take action, regardless of what you're up against? The answer, for most people, is a resounding yes.

Assessing and taking pride. Having a healthy sense of pride in your work is a crucial part of courageous action. Think about the major actions you've taken over the past week, month, and year. Make a list of two or three actions for each timescale (week/month/year). Now go through your actions and reflect on how proud you are of the work you did for each. Did you feel that what you did reflected your best effort? Or did you cut corners just to get it done?

Rate each action on a scale of one to 10, with 10 being the highest degree of pride. Once you've gone through your list, review your scores and reflect. Are these the measurements of someone who takes great pride in their work? Or do you have room to grow?

Finding and unleashing your passion. Passion is giving maximum effort toward something, not because you have to do it but because you want to do it. Passion is the engine that drives courageous action. Reaching out to others—your peer network—is a great way to get a sense of just how passionate you are and where your passions lie. You can talk to your loved ones, peers, or trusted friends.

Ask them how "passionate" they consider you to be. Ask for specifics as well, such as, in what areas of life are you most passionate? What are some examples where they've witnessed your passion?

Once you've gotten a good set of answers, review them. Do the responses surprise you? Do your peers see passion that you are not aware of? Are there things you are passionate about that no one mentioned? Most people find that this exercise gives them a new window into themselves.

You can't change what has happened in the past. All you have is now and what you are going to do from now on to create your compelling future.

Staying Present and Being Vigilant

In today's atmosphere of increased time pressure and information overload, there is a significant premium on leaders who are able to tune out the distractions and stay focused. This capacity is staying present and being vigilant. It is the sixth and perhaps most relevant dimension of Intelligent Leadership.

Staying present allows you to be awake to the multidimensional complexity of the situations you're involved in. Being present in your interactions and relationships with others builds trust and improves communications. The more vigilant you are, the fewer mistakes you'll make, and the more effective and efficient you'll become.

In his 2011 best-selling book ***Thinking Fast and Slow***, behavioral psychologist and Nobel Prize-winning economist Daniel Kahneman identifies two different "systems" of thinking that we employ in any given situation. System 1 is intuitive—gut-thinking—based on our initial impressions.

System 2 thinking is analytical, based on careful reflection and problem solving. To be more effective thinkers, we need to prioritize our analytical System 2 thinking and deemphasize our intuitive System 1 thinking.

When we are moving fast, our natural tendency is to go with our guts (System 1 thinking). Mix into that what Kahneman says about our brains: They are wired to find patterns and create stories out of the information we are given, which helps us make sense of reality.

But this pattern-finding capacity can backfire, especially when we are moving too fast, because we often find connections and narratives that are inaccurate and based on incomplete information.

So in order to avoid making the mistake of going with our guts, or acting on incomplete information, we need to slow down and take the time to use the right kind of thinking. This is where being present comes in. When we are able to keep our attention focused and in the moment, we can start to understand the dynamics of our mind and be less susceptible to drawing premature conclusions.

Below are a few principles and practices for being more aware.

Less is more. None of us have infinite time and attention, so it's important for us to learn to get clear about what we should focus on and what we can cut out. As a leader, you have to do this not only for yourself, but you also must set and maintain priorities for the groups you lead. You must be the one to keep things focused, right the ship when it gets off track, and keep everyone focused on the few simple things that will make the most impact.

Remember, the past is over. As cliché as it sounds, you can't change what has happened in the past. All you have is now and what you are going to do from now on to create your compelling future.

Take the time to listen. Coach Avra Lyraki encourages managers to spend at least a short amount of time each week checking in with each member of your team. In these sessions, it's crucial that you don't talk much, and give the other person the floor, paying close attention to what they tell you, whether it's personal or work-related. This simple listening practice builds trust in your teammates. Most importantly, taking the time to listen establishes your credibility as a leader.

Course Correction

When things aren't working, you have to change course. And as a leader, you need to help others do the same. This gets to the heart of the final dimension of Intelligent Leadership: course correction.

The biggest obstacle to mastering the art of course correction is our own psychology. Our brains are literally wired to create habits and norms, both in ourselves and in our groups, to make life easier.

If you want to master the art of course correction, you must find a way to soften "the chains of habit" within yourself by cultivating a mindset that embraces change,

rather than resists it. This mindset is called "the psychology of adjustment," and all great leaders possess this quality, at least to a certain degree.

The psychology of adjustment has four components: a hunger for constant improvement, seeing clearly, a willingness to pivot, and living outside your comfort zone.

Below are a series of igniter behaviors that will help you cultivate your own psychology of adjustment.

Refocus on the present. One of the keys to effective course correction is being able to see yourself and any situation as clearly as possible so you can make an accurate assessment of what steps may or may not need to be taken. Apply the sixth dimension of Intelligent Leadership, staying present and being vigilant, so you can be fully aware of what's going on around you. As you begin to develop your own "psychology of adjustment," make sure you are staying as present as possible.

Do what's right, not what you think is right. Whenever you're in a challenging situation where you perceive a change might need to be made, take a moment to question your own judgment. Don't undermine yourself in an overly self-critical way. Simply ask yourself, "Are my thoughts on this situation based on what I think is right or what is actually right?" Sometimes, if appropriate, you can also do a quick poll of those you're working with, to help further clarify the situation.

Just taking a moment to reflect honestly on the course you've chosen opens you up to the possibility of change.

Surround yourself with honest, courageous people. Surrounding yourself with honest, courageous people will give you access to a strong group intelligence, which is almost always greater, richer, and more complex than the mind of even the most brilliant individual. Tapping into that collective mind will always give you a fuller picture of any given situation, reveal new and creative solutions, and position you to make the best possible choice about how to move forward.

Once you have your team on board, it's crucial that you, as a leader, create an atmosphere in which honest feedback is not only accepted, it's encouraged.

Each dimension of Intelligent Leadership is both inside of and in front of you. It is something to be unearthed and something to be strived for. Both perspectives are true and both are important. So as you move forward in your efforts to become an Intelligent Leader, understand that you can't become a better leader—or human being—without changing.

At the same time, don't overlook the fact that your own potential greatness isn't somewhere outside of yourself. It's deep inside you.

THE SUMMARY IN BRIEF

Introverts rock. People often think that a big, vibrant personality is needed to succeed in the workplace. That simply is not true. Often it is the quietest people who have the loudest minds. Unfortunately, many introverts feel excluded, overlooked, or misunderstood, and the workplace cultures are still skewed toward extroverts. The hopeful news, however, is that introverts are finding their voice, and the world is starting to awaken to the power of introverted leaders.

In ***The Introverted Leader: Building on Your Quiet Strength***, Jennifer B. Kahnweiler is able to define introvertism and explain the challenges those individuals face. Furthermore, she is able to examine these workers and emphasize what makes them valuable in the workplace. Over time, many companies have mistaken introverts as shy and quiet and having nothing to contribute to their businesses. However, by learning more about how they work, companies are able to tap into a demographic that often gets overlooked, which leads to a boom in their business.

IN THIS EXECUTIVE BOOK SUMMARY:

- Learn the definition and benefits of introverted leadership.
- Explore the six main challenges introverts face in the workplace.
- Discover the 4 Ps: Prepare, Presence, Push, and Practice
- Learn the many benefits of focusing on an introvert's strengths.

Six Key Challenges for Introverts

The Challenges

For much of the past century, organizations have privileged the outspoken and gregarious to the exclusion of the quiet and introspective. Many organizations have not rewarded leadership as much as "loudership." And they have paid a price. By overlooking and undermining introverts in the workplace, companies have wasted untold potential.

Naming the Challenges

In this book's studies, six key themes emerge as significant barriers for introverted leaders:

People exhaustion- The "people time" threshold is different for everyone, but being outgoing, conversational, and highly engaged can be stressful for introverts. Part of a leader's role is to connect with people, and without awareness and tools to manage their energy, introverts can become exhausted.

A Fast Pace- You might feel pressure from your manager, team, or organization to do fast turnarounds when you don't feel you have collected all the necessary data. Meetings are often scheduled back-to-back. As an introvert, you probably prefer to reflect on issues and ideas and to take more time to consider decisions, despite pressure to make them quickly.

Getting Interrupted- Introverts say that when they do speak up, their ideas often get passed over or hijacked by more aggressive people around them. Some also complain about their ideas not sticking. As an introvert, you also are likely to appreciate the power of the pause, which provides you with a chance to catch your breath and think.

Pressure to Self-Promote- Discomfort with networking and a tendency toward humility can make self-promotion a challenge for many introverts. In addition, they value privacy, so blasting their accomplishments on social media feels uncomfortable.

An Overemphasis on Teams- While teams can bring diverse perspectives and skills to a project, structuring team processes to bring out the best ideas from introverts could be a much better way to accomplish goals.

Negative Impressions- Introverts often tend to show less emotion in their facial expressions than extroverts. Introverts are often asked, "What's wrong?" even when nothing is the matter. They're usually just thinking. A concept called the perception gap offers one way to view how these impressions are formed.

Unlocking Success: The 4 Ps Process

For introverts who want to strengthen their role as a leader, myriad steps and strategies are available to choose from. How do you get a handle on what to do without getting overwhelmed?

Consider a framework called the 4 Ps Process: prepare, presence, push, and practice.

Prepare- Preparation gives you confidence to handle situations as they emerge. Examples include writing thoughtful questions prior to a meeting, reading the résumé of a job candidate before interviewing them, or researching a client prior to a sales meeting.

Presence- Refers to being present in a way that allows you to be with people. Examples of presence include glancing up from your laptop when a team member asks you a question, calling out a keen observation at a meeting, or switching gears during a presentation when the audience is not responsive.

Push- This likely puts you outside your comfort zone. Examples of push include attending a professional event when you'd rather stay home, initiating a conversation with a coworker, or approaching your boss for a raise.

Practice- Seize opportunities to practice new behaviors. Engaging in conversational icebreakers, facilitating meetings, and telling stories all take a great deal of practice to master.

Leading People and Projects

Can Introverts Really Be Leaders?

Many of the leaders who have presided over astonishing gains in the performance of their companies would hardly be described as "extroverts." Such leaders mostly combine the introvert's tenacity and focus on the business with humility and a willingness to share leadership.

Reframing the Traits of Strong Leaders

Introverts are no more likely to be good or bad bosses than extroverts. For example, introverts might be more likely to exhibit traits such as listening, while a trait like friendliness might be more overt in extroverts. But all traits are typically mixed and matched.

Prepare: Getting training, coaching, and mentoring will increase your chances of leading and managing others successfully. Several other steps can help prepare you for lead-

Now there's an opportunity to take advantage of these options that have tremendous potential benefits for introverts.

ership responsibilities as they morph and change. Consider these suggestions as you prepare for your leadership role:

- Know yourself.
- Build your team.
- Create an introvert-friendly hiring process.
- Allow for breaks.

Presence: Being present with people and projects is an essential part of being an introverted leader. As you practice leadership presence, here are some key strategies to build on your quiet strength:

- Walk around.
- Write it down.
- Listen like a leader.
- Have spontaneous conversations.
- Flex your approach.
- Observe to make decisions.

Push: In amplifying your leadership strengths, you can address one change at a time. Ask yourself which skill can help you achieve the most important challenges you face. Here are three leadership strategies that can push you toward both discomfort and growth:

- Be assertive.
- Delegate.
- Manage conflict.

Practice: People tend to think that it's the extroverts who engage effortlessly in conversations and give eloquent speeches. But introverts can do this just as well. Here are two ways to ensure that you practice these strengths:

- Lead from your natural strengths.
- Surround yourself with a support system.

Introverted Leaders in the New Workplace

The Pros of Remote and Hybrid Work

Experiments with working from home, even one day a week, were having a positive impact. Even before the pandemic, back in 2018, a survey of 240 introverts reported that remote work was viewed very favorably. In 2020, the first year of the pandemic, over 85 percent of the respondents in our survey of almost two hundred introverts indicated they were very satisfied or satisfied with the arrangement. Some critical reasons for this were no commute, being more productive, and having a flexible schedule. In the most recent research conducted in 2024, they asked introverts in a remote or hybrid work situation to respond. The high satisfaction rates remained, with approximately 90 percent of the fully remote respondents either very satisfied or satisfied with their arrangement. Eighty-five percent of those who work remotely five days a week still cited "no commute" as a top benefit.

Challenges

Lack of Communication and Connection- zoom fatigue, superficial relationships, virtual overload, and loneliness.

Other Risks of Being Alone Too Much- losing sight of the larger mission, creative paralysis, loss of perspective

As discussed, during the global pandemic, the world changed and offices changed along with it. Now there's an opportunity to take advantage of these options that have tremendous potential benefits for introverts.

Prepare: Some strategies to help you prepare are to:

- Prepare for connection.
- Implement Employee Resource Groups.
- Plan for days in the office.

Presence: Some ways to drive presence in the office are to:

- Manage performance.
- Consider office spaces.
- Think creatively about other spaces.

Push: Following are some ways to push yourself to address the challenges you may face in the new workplace:

- Make intentional connections.
- Announce your accomplishments.

Practice: As you move forward in this new remote and hybrid workplace, take these two steps to keep practicing:

- Listen to introverts.
- Become a voice for the quiet.

Delivering Powerful Presentations

As with any leadership skill, strong presentation skills are not correlated with extroversion. Many introverts have developed high-profile careers that require presence and presentation skills, including introverts like entrepreneur Oprah Winfrey, the late chief justice of the Supreme Court Ruth Bader Ginsberg, and Apple CEO Tim Cook, all of whom have mastered the skill of public speaking.

Prepare: Successful introverted leaders discover that they must prepare the material and themselves. If you are prepared, you can be more aware and grounded when in the actual presentation. Here are the major elements of preparing for your presentation:

- Know your audience.
- Prepare your content.
- Prepare yourself.

Presence: You're prepared and you know your material cold. Now it's time to speak. Consider how to make all that preparation time pay off so that you can stay present. Here are three ways to be fully present:

- Connect with your audience.
- Take pauses.
- Attend to your body language.

Push: The push step in delivering presentations raises your game. Here are three steps to consider:

- Use technology.
- Say it aloud.
- Get creative.

Practice: If you take the time to notice them, opportunities to speak are all around you. Here are some tips to practice:

- Deliver a recap of a recent training class at your next staff meeting.
- After you attend a conference, report back to your team what you learned about competitive trends.
- Offer to present a project status report to another team.
- Volunteer to encourage people to attend a fundraiser.

Leading and Participating in Meetings

Look at what techniques can help you, as an introverted leader, build on your quiet strengths in meetings where extroverts tend to dominate.

Prepare: Whether you are running the meeting or are a participant, know the key elements to help you prepare:

- Know the purpose.
- Prepare to contribute, and help others do the same.
- Ease into the meeting.
- Sit strategically (in person).

Presence: Ways to develop presence in meetings:

- Establish and enforce ground rules.
- Use brainwriting.
- Get your voice in the room.
- Build in breaks.

Push: You can strengthen your push muscle at meetings when you:

- Use technology wisely.
- Have assertive tools to handle extroverts.

Practice: You most likely will have many opportunities to practice your meeting management approaches. Here are some ideas on how you can practice getting the maximum results from your meetings:

- Become a meeting SME. (Subject Matter Expert)
- Use meetings as learning labs.
- Practice new approaches.

Networking, Your Way

Networking concerns are among the top issues that introverted clients bring to sessions. There is misunderstanding about what it means to network. Networking is about building relationships for mutual, beneficial exchange. We accomplish our goals, receive support, and learn from the people we know

Introverted leaders take the time they need to think about their goals for interactions, whether it is in face-to-face conversations, phone calls, or meetings.

and trust. Research has revealed that introverts, with their focused attention, willingness to prepare for social situations, and listening acumen, can be tremendously impactful connectors who build strong, lasting relationships.

Prepare: To become a strong networker, follow these five guidelines:

- Know your purpose.
- Decide what you can offer.
- Decide what you need.
- Prepare questions.
- Create a social media strategy.

Presence: Here are ways to develop your networking presence:

- Listen actively.
- Move to substance talk.
- Pique interest.

Push: Introverted leaders take several actions to move out of their networking comfort zone. Here are nine practical networking push steps you can choose from:

- Resist looking at your phone.
- Introduce people.
- Try the Fast Friends Procedure.
- Look for "open 2s and 3s."
- Lead an icebreaker.
- Learn and teach names.
- Step up to volunteer.
- Ask for an introvert-friendly meeting location.
- Honor your need to recharge.

Practice: Not only will you become better at networking, but you can practice once you've established momentum. Here are two ways to do that:

- Feed your network.
- Follow up.

Communicating and Coaching for Results

Have you ever had a productive work conversation in an informal setting? Maybe it wasn't in a pickup, but you probably found the unstructured setting made it easier to converse. Informal environments set the stage for building rapport and leading the kind of low-key, low-stress conversations that introverts relish. Work can then flow more naturally.

Prepare: Preparation contributes greatly to communication success. Introverted leaders take the time they need to think about their goals for interactions, whether it is in face-to-face conversations, phone calls, or meetings. Here are a few key steps that they take to prepare to communicate and coach for results:

- Be curious.
- Prepare a script of talking points.
- Prenumber comments.
- Allow time between appointments.
- Prepare great questions.
- Plan productive coaching sessions.

Presence: After they have prepared, introverted leaders are clear in their ongoing communication. Here are three important ways to do that:

- Communicate expectations.
- Solicit input.
- Match the medium to the message.

Push: Introverted leaders who possess strong communication skills may make it look easy; but like actors who have focused on the discipline of learning their lines, they have likely pushed themselves out of their natural comfort zone. Here are four key ways you can push yourself to excel in communication while staying true to who you are:

- Flex your style.
- Raise the bar on your presentations.

- Communicate with grounded energy.
- Show power through your voice.

Practice: Opportunities to experiment with communication and coaching approaches are everywhere. The next time you are sitting in an airport, waiting in a grocery store line, or at a school function, try striking up a conversation with a stranger. It will offer you a chance to practice your conversational skills, raise your endorphins, and make new connections. Here are some specific ways to practice:

- Use the eyebrow test.
- Record yourself.

Managing Up

Renowned management expert Peter Drucker famously said, "You don't have to like or admire your boss." But he also emphasized the importance of managing relationships with supervisors because they can be key resources for "achievement, accomplishment and personal success." Managing your boss means being savvy enough to realize that you need each other to accomplish your mutual goals.

Prepare: Here are four steps you can take when preparing to manage up:

- Meet regularly.
- Consider the big picture.
- Know what support you need.
- Observe your manager's style.

Presence: During these meetings, you will inevitably learn a great deal about your boss, your team, and your organization. This will help you accomplish your job and keep your career moving forward. Here are suggestions to make the most of these conversations:

- Be yourself.
- Demonstrate results.
- Act on feedback.
- Seek out mentors and sponsors.

Push: It is not always easy to manage up, but it is necessary if you are to accomplish your goals. You are in a partnership that is not unlike a marriage, where open communication is necessary. You and your boss can achieve better results together than either of you could alone. Look at push approaches that can help make this happen:

- Be honest.
- Give upward feedback.
- Try the SAR method.
- Know when to step back.

Practice: As an introverted leader, you can make managing up a key part of your leadership portfolio. One of the main ways to do that is to stay on top of change.

Results of Using the 4 Ps Process

The Wins for You

Prepare Example: Raj's consulting firm had imposed a sales quota. He felt pressure to call Michelle, a former client, to touch base and uncover her current business needs. As he prepared to press the numbers on his handset, Raj reviewed his prepared questions and visualized a successful call by closing his eyes for two minutes. He pictured a calm, focused exchange between them. Raj felt energized and optimistic about future business opportunities with Michelle and her company.

Presence: When you convey presence, as Raj did, you are perceived as a good listener and people will share valuable information with you.

Push: Testing your limits helps you discover your capabilities and increases your confidence. It can open opportunities you never thought possible. That is the key payoff of push.

Practice: When you practice, you can figure out which behaviors work for your authentic self.

The Wins for Your Organization

Prepare: Introverted leaders who prepare for conversations and research their stakeholders' needs build trust and commitment with employees, customers, and managers.

Presence: Leaders with presence create a climate in which people are appreciated for their contributions. Companies that are populated with managers who have presence attract and retain employees.

Push: Companies benefit when all leaders—not just extroverts—are able to contribute ideas.

Practice: Introverted leaders who practice their strengths garner respect from others. Their leadership impacts the organizational culture in a positive way.

Overuse of the 4 Ps

Prepare: You can overprepare. Preparation reaches a point of no return, and you can feel anxious and start to second-guess yourself when you overprepare.

Presence: It is also possible to go overboard on presence. When under pressure to connect, it is very common for introverts to act the role of being more sociable than they feel. This can work to a point, but you can put so much energy into pretending that it exhausts you or comes off as inauthentic.

Push: You can push yourself too hard.

Practice: You can overpractice a strength. That can lead to you ignoring important tasks you need to accomplish as a leader.

With planning and conscious attention, you can build on your natural introverted leadership strengths to get results. These accomplishments will impact your own personal development and your organization's performance. With the great problems the organizations face today, they are surely losing out by not tapping into more than half of the population and acknowledging the many gifts they contribute. Introverts bring tremendous strengths to the challenges of leading a team. When they harness these quiet strengths, they can be powerful leaders. Introverts also have unique qualities that make them particularly suited to leading people toward great results. We face tremendous challenges and great opportunities in our workplaces and in the world at large. Our organizations, teams, individuals, and ultimately our planet benefit when we highlight and harness these introvert strengths, reaping the broad range of introvert talent available to us.

Jennifer B. Kahnweiler, PhD, helps build strong leaders through her highly engaging speaking, training, and executive coaching programs. Called the "down-to-earth Ph.D." she specializes in translating leadership theory into practice. Her clients include Capital One, Turner, AT&T, the Coca-Cola Company, and GE. She is an author and speaker hailed as a pioneer of the introvert revolution of the past decade. Her practical books have focused on how introverts can lead and inspire others at work by tapping into their natural quiet strengths.

The Journey of Leadership

How CEOs Learn to Lead from the Inside Out

By Dana Maor, Hans-Wener Kaas, Kurt Strovink, and Ramesh Srinivash

Dana Maor is the global co-head for the McKinsey People & Organizational Performance Practice and is a member of its Knowledge Council.

Hans-Werner Kaas is the co-dean of the CEO leadership program The Bower Forum and a senior partner emeritus at McKinsey.

Kurt Strovink leads McKinsey's CEO special initiative globally. He works at the intersection of strategy, personal leadership, mission building, and enterprise transformation.

Ramesh Srinivasan is the co-dean of the CEO leadership program, The Bower Forum, and a senior partner at McKinsey.

A Book Review by Soundview

Reinvent Yourself and Your Organization

Being in a top leadership role is a goal for many, particularly those who work in the corporate world. They may hustle and acquire knowledge so they are adequately prepared for the role, or they may be stepping into the position because that is what those at their family-run company expect of them. However, what happens when leaders in those positions find themselves on shaky ground because things aren't running as they thought they should be? Or a change needs to happen, but they aren't sure how to implement it? Or they struggle with imposter syndrome?

When struggling with these difficulties, the question of "Can I do this?" or thoughts of "I don't think I'm capable of this" might arise. They may dig in their heels and cling to the ideals that CEOs have been holding onto for decades, but CEOs and leaders need to know there is encouragement to be had and a way to transform themselves into the leaders they want to be. In ***The Journey of Leadership: How CEOs Learn to Lead from the Inside Out***, McKinsey & Company Senior Partners Dana Maor, Hans-Wener Kaas, Kurt Strovink, and Ramesh Srinivash share stories, ideas and tactics for CEOs to step out of a place of struggle and doubt to one where they are able to lead with their whole selves and confidently model a positive change for the organizations they are apart of.

The authors wish to share that the best leaders are self-aware, self-reflective, and constantly working to reframe their mindset from what they previously taught. While previous teachings may have gotten them to where they are, leaders who desire to grow understand they are stuck and need to change. The Journey is composed of twelve points to help leaders grow internally and then share what they've learned to encourage their executive teams and organization. The book is divided into two sections, and each chapter is headed by a word or short phrase reflecting what is discussed for quick reference. Additionally, an appendix compiles one hundred micro-practices to become a great leader while understanding that while one micro-practice might not work for them, others will.

Throughout The Journey, the authors reference McKinsey & Company's Bower Forum. It is a program for CEO leadership development where they will come and discuss strategy, opera-

tions, and more. They want to share what each co-author has learned over the years and propose that the best leaders learn to become self-reflective and aware. The authors also want to offer the step-by-step processes laid out in this book to help struggling leaders get there. By connecting with themselves on an intimate level, leaders will be able to connect with themselves and those they work with.

Part One: It Starts with You

Many would readily acknowledge that change must begin internally before it can affect the exterior. The authors begin by directing the reader to begin with humility, understanding that others have different knowledge, skills, and gifts. This will allow for better listening and the potential for finding common ground. Those who had previously opposed others can work together more harmoniously. They can do this by realizing they don't have all the answers, humbling themselves, and working closely with others with different skill sets and opinions.

This will also require leaders to teach themselves how to listen to what is being said, not only listen so they can respond accordingly. While this may sound easy, they will soon find it is not. It is essential to set aside the need for control and be encouraged to create circles of advisors who help them see issues from all sides and adopt new perspectives.

It is important to listen well and learn to notice the nuances, such as body language, to truly understand what is or isn't being said and to understand the underlying motivation. It will also encourage those around the leader to feel the freedom to engage and share with them. No one ever wants to be the bearer of bad news, but when it comes, the leader will be in a place to receive it and hear it well.

Acknowledging Your Strengths

Leaders must also have confidence in themselves, realizing they belong in this position. They can do this by examining themselves closely, identifying their weaknesses, and attempting to change. Many people, particularly women, struggle with imposter syndrome, which is feeling like they don't belong despite evidence to the contrary. The authors propose that this can be combatted by discovering their authentic selves and taking agency—showing up fully and assuming they have a seat at the table. If those placed in a leadership role were not fully qualified, they would likely not have been offered the position in the first place. With that in mind, the reader is encouraged to believe in themselves and take a hard, internal look to discover their weaknesses and how they can overcome them.

By showing up as their authentic self, leaders can confidently open doors and have conversations with those around them. They know they have worked hard to be where they deserve a seat at the table and will be able to engage well with those around them.

However, it is still wise to be mindful of oneself to avoid offending, particularly when working with people from different backgrounds or cultures. By finding the courage to overcome their lack of confidence and being open to feedback, they can lead and contribute to their work culture in ways that make others feel seen and heard.

This can be the first step towards having the right sense of ego - knowing they can fulfill their role. They should be cautious, though, because It is easy to fall into the trap of wanting to have all the answers because of one's position. In other words, they are acting from an over-inflated ego rather than with the organization's good at the forefront. Being humble enough to surround oneself with people who question and agree with oneself is a sign of a good leader because they are willing to listen and decide what is best for all.

Excellent leaders remember to think with their organization's values first, rather than their own, for the good of all. They have the confidence to hear what others say and know that it doesn't put their credibility in question. Instead, they know that having input from those around them will help them make the best decision and move forward.

A method for making decisions can be helpful, particularly when the way forward is unclear, and changing course becomes necessary. This method will consider the organization's values, strengthen the bottom line, and create opportunities while giving the leader time to consider the basis of their decision.

While vulnerability might feel scary and counter-intuitive to the long-standing tradition of keeping a stiff upper lip at all times, it can make those who do this seem distant to those around them. Being vulnerable means sharing strengths, hopes, and convictions. It does not push others away; rather, it can be magnetic and cause trust where there was previous hesitation or doubts. The book states, however, that it is essential to keep one's triggers in mind to know how best to react to situations they face. This is where vulnerability is important because the reader can adjust their behavior accordingly and reach out for support or apologize when necessary.

Another strength for leaders to utilize on their journey is resilience. When things go awry or the unexpected happens, it is vital for the leader not to waste time asking why it happened to them and wallow in self-doubt and pity. Instead, they focus their energy on understanding the cause of what happened and how they can move forward. It also allows the reader to utilize their previously learned humility by apologizing when they make a mistake and surrounding themselves with people who can help them achieve their goals.

Failure isn't always the result of a mistake or because proper preparations didn't happen. Sometimes, it comes because of external changes that haven't been prepared for. When this happens, one should have a strategy to quiet the negative thoughts that may arise. By taking ownership of what happened, one can discover something new about oneself that will propel them forward to reach their goals.

Moving forward should come with versatility and flexibility so as to gain a wide variety of experience and exposure to

> *By pursuing different experiences, leaders find new opportunities and skills they can apply to their companies."*

those with different skills and knowledge sets. Today's climate is constantly growing and shifting, and leaders face numerous disruptions, all while still having to run their companies and please their constituents. There are three ways that a leader can and should be versatile. First, by pursuing diverse experiences throughout their careers. By being constantly curious and thinking deeply about their organization and the different things involved. Finally, they master interacting with the different groups of stakeholders they come in contact with.

By pursuing different experiences, leaders find new opportunities and skills they can apply to their companies. Everyone has gaps in their skillsets, and it is up to them to find ways to fill them, particularly if they want to seek a promotion or level up their careers. They must put in the work to fill their toolbox of skills and experiences as they embark on their leadership journey.

Taking the time to think deeply does not mean that leaders know every single thing about the inner workings of their organizations. Rather, it means that they have a broad understanding of what makes it tick and what the different capabilities are. At the same time, they continue to learn new things. Ultimately, they know the hows and whys intimately, remain insatiably curious, and use that drive to have the most significant impact possible.

Knowing how to interact with peers and constituents doesn't always mean talking and driving the conversation, although there is an emphasis on wise and effective communication. Sometimes, interacting well means staying quiet and listening and then responding. As a leader journeys on, they should create a list of procedures so they know how and when to or not to speak out on controversial issues. Ultimately, taking a public stance should only happen when it is authentic and relevant to the company. This will help leaders keep their statements' short- and long-term effects in mind and provide an opportunity to allocate funds towards supporting the issue if needed.

As the reader reflects on the knowledge they have gained to be a more human-centric leader, they can do this with the foundation of knowing they are not the most intelligent person in the room. As they learn how to be versatile in an ever-changing world, they will have what they need to courageously pick the most critical areas for them and their organization and purpose to champion them well.

Part Two: Moving Beyond Yourself

The next part of this leadership journey involves taking the knowledge gained from the internal perspective and sharing it externally with the rest of the organization. This will help leaders apply what they have learned to bring about effective change, beginning with embedding a strong sense of why their employees come to work.

Embedding a purpose in an organization can sometimes feel tricky or overwhelming, so it is essential to begin by defining the end goal, so everyone knows where to go and then create a plan to achieve it successfully. This should be done by considering the organization's needs, being willing to set outrageous goals, and having a purpose for achieving them. Understanding and investing in one's employees will help leaders achieve the level of empathy they are working towards so that everyone can grow in every aspect of their lives.

Being a successful leader does not only mean making decisions but also making bold, courageous moves when the circumstances require it. This will give them the tools to inspire their teams as they move forward together. They must inspire confidence in their teams as they make large and small changes, ensuring they are aligned with the companies. This will allow team members, particularly at the executive level, to be innovative and get the tools to keep moving forward.

The authors emphasize that fostering an organization-wide mindset shift is essential for cultural transformation. This approach will empower leaders to motivate their teams to execute plans effectively. Leaders must balance giving clear guidance and allowing their teams the freedom to innovate. Leaders can step back once every layer is aligned, enabling their teams to excel.

Taking these necessary steps on their leadership journey will also remind and encourage leaders to realize that they shouldn't worry about the things they cannot control. Realizing that control is an illusion will give them the freedom to formulate a new strategy, oversee a technological transformation, or clarify the organization's mandate—perhaps even the freedom to do all three. However, once they have set their priorities, they must move forward and ensure their employees have the proper resources to succeed.

This means trusting one's team to understand the organization's policies and goals, think deeply about the questions being asked, and allow the agency to grow, make, and learn from mistakes. The team should focus on listening well and encouraging their constituents to share their views and ideas on the tasks at hand.

Growing Together

In many organizations, there seems to be an unspoken rule about keeping certain things from those in charge, especially if it is negative. This is usually done from a place of hesitation or fear of being chastised or punished. However, the best leaders know that

it is imperative to hear the truth, even if it is uncomfortable. The book encourages readers to build relationships and connect with those in their circle so they can be spoken to truthfully.

It is the leader's job to recognize and remember that they are not the smartest people in the room and that disagreements can further the organization's goals and result in a positive outcome. They are reminded to reflect on whether they are reacting based on personal triggers and encourage their teams to do the same to mitigate the chance of negative behaviors and reactions.

It is essential to recognize the patterns that executive teams face when triggers abound, such as interrupting each other, pushing for control, withdrawing, and more. The best leaders recognize that these reactions primarily come from a place of fear and work to create a space that welcomes discussions and teaches each member how to recognize and respect the triggers. They should become closely tuned into their people's needs and passionate about creating an optimal company culture.

Leaders must allow room for mistakes and learn from them as they work towards creating this new culture. Rather than asking who was responsible, leaders are encouraged to ask questions that reflect on potentially vulnerable areas. Failure is bound to happen at some point, and leaders should see it as an opportunity to put their fear aside and engage in fearless learning. If the result is different than expected, leaders should see it as an opportunity for growth for their team.

They also know mistakes may be made, even with the best-laid plans, and should create contingency plans that allow team leaders to react and recover quickly when they see them go awry. They need to plan for the best and yet be prepared for the worst because the world, especially the business world, is constantly changing. Flexibility and willingness to find new ways to move forward is imperative.

Finally, the book reminds its readers to be genuinely empathetic. While many leaders say that people come first, implementing this principle can be challenging. It takes courage and skill. Learning to instill empathy in their organizations and discover what is essential to their employees is essential. This goes beyond perks such as gym memberships or on-site childcare. They must do whatever is within reason to get to know their employees, their needs, and their quirks.

The authors share a story of one CEO who gathered their top executive team to create a set of leadership principles that would allow them to create more dignity in their workplace. Their list included, "I inspire passion, optimism, and purpose" and "My personal communication cultivates fulfilling relationships." This list allowed them to share their organization guidelines and ask others to hold them accountable to them. When they find ways to invest in and engage with their organizations and show them how much they care, leaders will soon discover that there will be nothing they won't strive to achieve.

The Journey of Leadership: How CEOs Learn to Lead from the Inside Out, McKinsey & Company Senior Partners Dana Maor, Hans-Wener Kaas, Kurt Strovink, and Ramesh Srinivash is an enjoyable, engaging read. It invites their readers to think deeply about what they have read and ways to apply it to their work. The end of each chapter offers a list of questions and a summary for easy reference as the reader moves forward on their leadership journey. They have worked to expound on each idea shared by using shared stories from those they have come in contact with over the years. Finally, they close by emphasizing the element that runs through each stage of learning - reinvention and learning. They are working to challenge themselves and the organization but refuse to fall victim to the frenzy of being a CEO. Instead, they understand that the journey of being a leader never ends, and they purpose to reflect on their journey and work to be the best version of themselves.

THE SUMMARY IN BRIEF

The intricacies of leading a fast-growing organization are numerous. From negotiating to turning corporate culture into the organization's biggest asset, leadership requires good intuition, expertise, and a strategic approach.

The Journey to CEO Success: 7 Practices for High Growth Leadership is designed to help CEOs identify emerging problems and nip them in the bud. The book has been called "a masterclass in leadership and growth," as well as "a must-read for leaders wishing to enhance their journey with proven methods that have already paved the way to success for numerous C-level executives."

Authors Patrick Thean and Michael Praeger have distilled more than 20 years of experience coaching visionary leaders and transforming corporate organizations. The book brings together compelling real-world stories with tested tactics to equip entrepreneurs and CEOs with the tools needed to thrive.

IN THIS EXECUTIVE BOOK SUMMARY:

- Everything you should know about the seven practices of effective leadership
- Sustainable ways to level up your business game
- How to identify issues early on and resolve them effectively
- The secret of building a strong people ecosystem to support and develop your business

Chapter 1: Introduction

Every CEO faces challenges and career-defining moments that will result either in a major success or a complete fiasco. In those instances, a CEO needs coaching and some guidance to uncover the tools and skills essential for coming up with a resolution. I went on this journey with Richard Giordanella, my first coach.

The best coaches are capable of accomplishing the following:

- Encouraging CEOs to move forward when they feel hopeless
- Inspiring them by opening their eyes to the positive things already achieved and the possibilities of the future
- Teaching leaders how to calm down and solve critical problems instead of doing it for them
- Holding them accountable to do what they promised
- Assessing the team and showing CEOs how to lead with empathy and demand performance at the same time

When I recalled my time with Richard, it filled me with gratitude and respect. CEOs have a tough job, one of the toughest in the world. It's not always fun, and it can be lonely at times. I was in a desperate and vulnerable place. He could have taken advantage of me, but he did not. Instead, he gave me empathy, coached me, and helped me to get back up to recapture the joy and excitement of running my company. I realized that this is my true calling, my purpose: To help CEOs not fail but instead succeed, build great companies, and achieve their dreams.

My True Calling, My Purpose: To help CEOs not fail but instead succeed, build great companies, and achieve their dreams.

Chapter 2: Michael Praeger

"I need help," my friend Michael Praeger told me. "I know the smartest person in technology, but he's too busy and too far away to help me. So, I'm asking you, the second smartest person I know in technology. How about it?"

Who could predict that twenty years later, I would introduce Michael to people as "the smartest and most successful financial technology (FinTech) entrepreneur and public company CEO whom I know personally"?

Michael was the first entrepreneur and CEO whom I helped. Thanks to him, without realizing it, I had started my journey as a coach to CEOs and leaders of companies.

Early in our relationship, I could already see that Michael had the makings of a great leader. He had an insatiable appetite to learn and a humility that disguised his successful track record. He had already grown and sold three companies, yet he continues to seek personal growth and development. The best leaders do not allow their success to turn them into someone who is proud and unapproachable. Instead, they maintain their humility and their hunger to learn.

In a relationship as long and fruitful as ours, we have walked through numerous high points and low points together. AvidXchange has gone through many pivotal moments during its successful journey from startup to Unicorn (privately held company valued at more than US$1 billion) to public company on the Nasdaq stock exchange.

Chapter 3: Why You Need This Book

The journey of a CEO or any senior leader is tough. I have had the privilege of walking with and coaching CEOs for over twenty years. During this journey, I have learned that leading and making the right decisions are hard. I have witnessed many leaders make poor decisions without realizing it or considering the opportunity costs.

Your journey as a leader will be filled with challenging yet exhilarating twists and turns. I am not suggesting that mistakes are all bad. In fact, I applaud the speed and courage necessary to make decisions that might end up being mistakes. However, we all need the right practices to identify these wrong decisions and correct them quickly.

This book is meant to help you make smarter decisions, be a better leader, and make corrections faster. You are on a special path. Michael and I want to help you have a more fulfilled and successful journey.

This book is for leaders and aspiring leaders. Yes, the title of the book specifically calls out CEOs. Yet, these seven practices apply to the journeys of all leaders. More specifically:

- You are the CEO of a growth company, and you need to lead your various stakeholders (employees, customers, board members, investors) and inspire them with hope and vision. You need to drive execution and achieve breakthroughs to achieve results and be successful.
- You are a senior executive experiencing change that might feel unsettling, and you need to lead your team

We need humility to learn and improve ourselves continuously.

by making the right decisions to give them confidence in the future of the company.

- You are a manager who needs to understand how decisions are made by the senior executives in your company and equip yourself to support these decisions.
- You are an aspiring leader who wants to learn more by understanding how decisions are made to level up for future leadership opportunities.
- You are a consultant who coaches CEOs or senior executives, and you want to gain more insight and expertise to help your clients achieve success.

Chapter 4: The Seven Practices

These practices encompass elements of leadership, personal development, strategic thinking, and execution abilities. In the chapters that follow, we will delve into each practice and learn from the real-life experiences of CEOs who have used these practices to achieve success.

The first two practices help us lay a strong foundation for success by working on ourselves as leaders:

1. Be Curious: We start with the circle of curiosity. Curiosity should encompass everything we do. We will explore the difference between BEING curious and DOING curious.
2. Level Up: We need humility to learn and improve ourselves continuously. Whenever we find ourselves blaming someone else or unfortunate circumstances, we are missing an opportunity to learn and grow.

Then we need to improve how we get the work done:

3. Establish Your Early Warning System: If we can't see it, we can't avoid it. We need an early warning system to alert us before we get smacked on the side of the head.
4. Achieve Full Alignment: Work gets done and delivered in teams. If we are still operating in silos, we are in for a world of hurt! We need to get the most out of our teams in a joyful way.

Next, we need to make sure we have created the right environment for our teams to be successful:

5. Make Culture Your Competitive Advantage: This is the practical side of culture. Our working culture sets the right environment for us and our teams to succeed. When we do culture right, we significantly improve our Return on Payroll (ROP). When we do culture wrong, we are helping our competition beat us every day.
6. Build a Strong People Ecosystem: This is one of the toughest practices—to continually grow and renew our teams' skills. Handled right, our people are our greatest assets. Ignored, our people become our heaviest anchors.

Finally, we need to fine-tune our strategy to focus on our core customer:

7. Focus on Serving Your Core Customer: Not all customers are equal. Some are more important than others—our core customers. We need to figure out who our core customers are and build our businesses to serve them and care a little less about the other customers.

Chapter 5: Be Curious

All of us are born curious, but the world extinguishes our curiosity. This starts with most of our teachers and parents, who encourage us to conform to societal norms. Our parents did the best they could with what they knew. They didn't realize that by quieting a curious child, they were discouraging us from being curious.

It gets worse when we start working in the corporate world. Now our world is filled with people on a tight schedule, with little patience for reflection and downtime. Those who are more ambitious have even less time to ask questions, be curious, and play.

Knowledge and experience also play a part in dampening our curiosity. When we do not understand something, we seek to learn. We ask questions. We explore. This is being curious.

As we become knowledgeable and more experienced in our fields of study and work, we gradually become experts. We begin to naturally ask less questions and dispense more advice. As we become more knowledgeable, unless we choose to be curious with intention, we lose curiosity over time.

I stated earlier that all of us are born curious. Let's talk about how to activate your curiosity gene and be a better leader:

- Become a good listener and accelerate learning
- Go from unintentional to intentional curiosity
- Start with one question: "What is it about this topic that I don't know yet?"
- Be curious and be interested in others (and your relationships will improve)
- Be a better boss by owning your mistakes and growing from them
- Identify and solve the right problems
- Replace fear with curiosity

Chapter 6: Level Up

Michael derives true delight from improving himself. He loves to find ways to level up! Over the last twenty-four years, Michael has taken all feedback, no matter how tough, as part of the reward of being on his company-building journey.

Michael realizes that he needs to solve the problems of today and simultaneously prepare himself for the challenges of tomorrow. "Patrick, if my company is growing at 30 percent, then I must grow at the same rate or faster, or my company will outgrow me."

If you are a leader, your company or team will be limited by your leadership capabilities. If you get stuck on Mount Startup, your whole team will be stuck at the same spot.

Therefore, leveling up is not a onetime exercise. It needs to happen repeatedly, even continuously. To do that, you need the right habits. This chapter will share five habits you need to intentionally and consistently develop to level up:

- Habit 1: Delegate to Level Up
- Habit 2: Reflect Regularly to Build Self-Awareness
- Habit 3: Seek and Diffuse Blind Spots
- Habit 4: Learn to Ask for and Receive Feedback
- Habit 5: Work with a Coach

You'll also need to understand the things that keep you from leveling up:

- Not prioritizing tomorrow
- A failure to invest in your own growth and learning
- Ego and lack of self-awareness

Chapter 7: Establish Your Early Warning System

An early warning system saved my first company. Most of us do not think about having one until something goes wrong. Then we wake up and "close the barn door after the horse ran out," finally building our early warning system long after it should have been up and running. We should all build an early warning system as soon as we can in order to avoid the train wrecks and failures that are waiting for us along our journeys.

Most of us have multiple excuses for the failure to build an early warning system. The main ones are:

- We don't have time for it
- The business has seen predominantly successful results up to that point
- You start believing your own hype

To establish a successful early warning system, you need to protect your blind side. Avoid potential issues by using leading indicators that can predict and alert you to a possible train wreck. Keep the future focused and predictive.

Begin with clear success criteria. Avoid rework and wasted resources. Don't start any project until you can describe what success looks like.

Be transparent and engage all available brains. Share candidly what the real problems are while allowing teammates to engage their abilities to solve the problems.

Finally, remember to tackle problems, not people. Keep your team out of the foxhole of self-preservation with a focus on the problem, not whose fault it is. Get in the habit of always rewarding results, not effort. Avoid the common mistake of rewarding long hours and superhuman effort. Reward team members for achieving agreed-upon success criteria, and celebrate accomplishing stretch goals.

Reward team members for achieving agreed-upon success criteria, and celebrate accomplishing stretch goals.

Chapter 8: Achieve Full Alignment

A common mistake is getting aligned only on the final outcome while believing that how the team executes toward that final outcome is not important. You may also believe that the different tasks and projects leading to execution can be easily delegated without much discussion.

Aligning only on the desired results or final outcomes often leads to misunderstandings along the way.

I've seen this happen often with senior leaders. They agree on the result or destination and therefore believe that they are aligned and can move on to something else, expecting their teams from different departments to work in alignment. A month or two later, they realize that different teams were not in synchronization in their work.

Full alignment is about how we get things done, not just what we want to get done. And needless to say, we make mistakes along the way. Some of the common issues that cause misalignment include:

- Mistaking abdication for delegation
- Not agreeing on process
- Failing to communicate your vision frequently
- To become aligned and stay aligned, you'll need to:
- Make sure everyone understands the work and the purpose behind the work
- Visualize the journey together
- Commit to a rhythm of communication
- Use weekly meetings to sync up and adjust
- Run towards conflicts instead of avoiding them
- Engage in active realignment for high-challenge situations
- Plan with other departments and teams to align horizontally

Chapter 9: Make Culture Your Competitive Advantage

Your employees' behavior and how they relate and work with one another is the practical working culture of your company. Core values are part of it, but limiting the discussion to only core values does not give you the full picture of your company's culture.

Core values are the unchanging, fundamental principles that define the heart of your organization. Mindsets are the ways you think about and approach a situation or problem.

Think about how the values (core values) that you hold combined with how you approach situations (mindsets) determine how you react to situations at work (behavior). The practical side of culture comes down to how a company's employees behave and work with one another. Core values and mindsets collectively shape behavior.

Virtually every CEO now understands that culture is important, but many don't yet understand it from a competitive standpoint. Times have changed. Culture is finally truly a competitive advantage. Leaders who do not understand this will make terribly expensive mistakes.

For over twenty years, Michael and I have collaborated to make AvidXchange a great place to work. We've noticed some huge changes in that time, especially in how employees choose where to spend their careers. We have observed some emerging trends.

- Passion and interests: The younger generation of workers are courageous enough to follow their passions and interests instead of being funneled into jobs they're "expected" to do. Focusing on the joy of the work itself, rather than maximizing their compensation package, means they're less willing to work in unpleasant environments.
- Flexibility to work from home: The COVID-19 pandemic caused many people to rethink why they go to work and to gain a new appreciation for working from home.

- Prioritizing life over work: A new prioritization seems to be taking hold. People are seeing work as just one element of their lives, and they are thinking very intentionally about the work they want to do. It's less common for employees to consider sacrificing their personal preferences—family, hobbies, travel—to secure the job they want.
- Empowered decision-making: Employees are becoming more empowered, better informed, and motivated to make good moral choices, which also enhance their communities. They want to be part of something bigger than themselves. They do not want to choose between a good job and an impactful life. They are beginning to realize that they can have both.
- Making a difference: Employees have become increasingly interested in finding the company that fits them best. They want to connect to the mission and purpose of the company and contribute to the firm's success using their skill set. It's not just about a paycheck but about making a difference.
- Compensation beyond salary: While still important, salary is only one part of the compensation system. We need to view compensation more holistically. Time off, flexibility, and contributing to social causes can also be viewed as compensation.

Chapter 10: Build a Strong People Ecosystem

Great execution comes from having great focus, alignment, and accountability to achieve your commitments. The work is done by people. If your team is not well led or equipped with the right skills, then you are already failing right out of the gate! When your team is well led and well equipped, commitments get achieved with less stress and drama. Life is good!

On the flip side, when your people are not up to the task, there is much drama and emotional pain. The work just seems harder. Life sucks!

The difference is people. This chapter will explore why it is important to prioritize having the right team in place. Most companies make the mistake of prioritizing team improvements after important work. That's like choosing to chop wood with a blunt ax. It is going to take more energy and time, and you will end up chopping less wood. Instead, you should stop chopping wood and take the time to sharpen your ax. You might be slower to start, but you will have more output and end up with more chopped wood.

Solving people problems is challenging and may be emotionally draining. Your ability to reach a resolution depends heavily on the relationship that you have built with the employee. Michael, for example, likes to spend focused one-on-one time with all of his key leaders outside of the office environment over breakfasts, lunches, and dinners in order to be both fully present and to be able to connect with his team on a more personal level. Michael finds that having these deeper connections pays dividends when trying to navigate future roles and organizational changes. He is depositing into their emotional bank accounts.

It takes intentional work to recruit and develop A-Players. C-Players may actually be sucking your energy and dragging your company down. To develop a strong people ecosystem, you'll have to:

- Build an organization of A-players
- Invest in your A-players first
- Develop your future organization
- Continue investing in your great team and removing obstacles

Chapter 11: Focus on Serving Your Core Customer

To play off George Orwell: All customers are created equal, but some customers are more equal than others. Your core customer is the most important customer you have. This final chapter is about designing and fine-tuning your strategy to serve your core customer.

Your core customer will fit the following descriptions:

- They are a good fit for your products and services today.
- They also provide a road map for you to build a successful business for the future.
- Because of the good product fit, they are easy to serve without much friction.
- Because of the good product fit, your team typically enjoys providing for these customers. Your team feels fulfilled as they are also living their purpose when servicing these customers.
- They need you. Your offerings fall into the category of "must have" and not "nice to have." They would miss you if you did not exist.

Your core customer definition should be short, no more than twenty-five words. Avoid corporate jargon. Make it simple, easy to read, and understandable, and then communicate it to everyone in your company. If you have to read it off a sheet in order to remember it, then you've already messed up.

The core customer definition should describe a real person with real needs. Here's how to create that definition:

1. Make a short list of the customers you love to serve (not necessarily your largest customers) and discuss:
   - Who is the primary user of your product or service?
   - What do they value about your product or service?
   - What are their dreams and desires?
   - What do they truly need?
   - How might you uniquely offer what they truly need?
2. Make a short list of the customers that are the most challenging to serve and discuss:
   - Why is it challenging to give them what they need?
   - Learn about the characteristics of customers that you do not serve well, and consider avoiding these characteristics in your core customer definition.
3. Discuss, debate, and decide on the following:
   - Who is our primary user?
   - What do they really need?
   - What do we provide that is unique to us that solves this need?
4. Develop your core customer definition, and limit it to twenty-five words or less:
   - Avoid corporate jargon. Use simple words.
   - Remove any "fluff" (marketing words).
   - Use language that conveys feelings and experiences.

Chapter 12: Our Journey Continues

Many founders dream of taking their company from start-up to IPO as a step toward building a great business that endures as a legacy beyond themselves. These seven practices have helped Michael and many other CEOs and senior leaders achieve success in leading their companies and teams.

On October 13, 2021, AvidXchange successfully completed their IPO. They currently trade on NASDAQ under the symbol AVDX. This is an incredible accomplishment as less than one percent of all startups go on to achieve an IPO. Only a fraction of those that make it remain led by founder CEOs.

Patrick Thean is an international speaker, CEO coach, and serial entrepreneur. He is a USA Today and Wall Street Journal bestselling author. His work has been seen on NBC, CBS, and Fox. He is focused on helping CEOs and their teams experience breakthroughs to achieve their dreams and goals.

Michael Praeger is AvidXchange's Co-Founder and Chief Executive Officer. Since starting AvidXchange more than 20 years ago, he has led AvidXchange's growth to more than 1,600 employees, 8,800+ customers and over 965,000 suppliers nationwide.

THE SUMMARY IN BRIEF

Do you struggle to form meaningful connections in today's high-pressure workplace? Meetings feel flat, communication is guarded, and leaders often find it hard to inspire genuine engagement. Whether you're managing a team, selling an idea, or trying to build stronger relationships, a lack of connection can quietly limit influence, creativity, and trust—leaving people feeling unseen, unheard, and disengaged.

The Laughter Factor: The 5 Humor Tactics to Link, Lift, and Lead offers a practical way forward by showing how humor can function as a strategic communication tool. It introduces five research-backed tactics that help readers create authentic connections, energize conversations, and lead with warmth. Readers also learn to identify their personal "laugh language," overcome the fear of not being funny, and use positive humor to boost morale, deepen influence, and make everyday interactions more meaningful and memorable.

Drawing on his background working with Fortune 500 companies and organizations of all sizes, Adam Christing blends real-world humor with leadership insights. An accomplished comedian, keynote speaker, and entertainer with more than 25 years of experience, he offers a practical guide to using laughter to link people together, lift performance, and lead with confidence.

IN THIS EXECUTIVE BOOK SUMMARY

- Find out how to use humor to build trust and strengthen professional relationships
- Discover practical tactics to communicate with more confidence and authenticity in any setting
- Gain tools to increase engagement, creativity, and team morale
- Identify your personal "laugh language" to connect more naturally with others

Introduction

An involuntary reaction that starts just after birth and stays with us until we enjoy our last laugh, laughter is the universal sound of bliss. It ripples through comedy clubs, board meetings, sales gatherings, and video meetings. Funny fuels our social media and sparks viral videos.

We hunger for humor. We pay for it, seek it out, and judge others by how well they can make us laugh. "He has a great sense of humor," or "She brings so much fun to our team." You get it. Laughter is lit. But what if you don't think you're funny at all?

Truth is, the issue is this: *You* don't think you're funny. But you are. You *do* have a sense of humor. But maybe up until now your sense of your own humor style has just gone unrecognized or underdeveloped.

Laughter may seem random, but now you'll discover how to trigger it on demand—whenever, wherever, and with anyone. You'll learn five ways of being funny, and one or more of them will fit you. Get ready to increase your self-mirth.

Do you manage people? Laughter can bring them together. Are you in sales? Funny is money. If you're a leader in your company or field, you know that leaders bring people together. And many people are discovering that laughter is a powerful way of creating and forging those links.

What Is the Laughter Factor?

Laughter is magic. But don't worry, you don't have to be a professional comedian to find your way of being funny. After all, humor is human. These ideas will help you harness your sense of humor and leverage the laughter factor in your life.

So, what exactly is the laughter factor? It's the ability to:

- walk into a room and know you can lift the mood
- give a presentation and feel confident people will enjoy it
- take painful situations and make them feel playful
- make a point that sticks because you've made it memorable

In short, it's the ability to use funny as fuel to take you much further in your personal and professional relationships.

This won't turn you into a comedian, but it will give you the strategies that make people smile, laugh, and lighten up. To experience the laughter factor, you simply need to:

- commit to using your unique "laugh language"
- choose from the humor tactics outlined here
- find your favorite ways to be funny and start using them immediately

Embracing the laughter factor transforms both you and the situations you encounter. Humor boosts creativity and resilience, strengthens relationships, and becomes your go-to ally in navigating life's challenges.

While you can't control everything life throws your way, you can choose to respond with a smile, and that makes all the difference. Humor unlocks possibilities and deepens connections wherever you go.

Raise Your RIZZ with Humor

Comedy isn't just for stand-ups; it's your secret charisma booster. Here's an acronym to raise your RIZZ with the laughter factor:

- **Relatable**. Humor helps people see you as human, not just part of a to-do list. In-person meeting? Laughter breaks the ice.
- **Interactive**. Smiles are contagious, but you have to go first. Laughing with—not at—people makes you feel more connected. It's hard not to like someone who makes you laugh. And it's even harder not to love someone who laughs with you.
- **Zany**. A dash of unexpected humor boosts positive energy online and offline. Making a presentation? Toss in a surprising one-liner, like "This graph is so colorful, it doubles as my vision board."
- **Zest**. Come ready to play. You don't have to be an entertainer to crank up your enthusiasm. It's infectious.

Humor makes you more magnetic. When people link you with laughter, it catapults your charisma.

Tactic 1: Surprise

Almost as much as they love to laugh, people love to be surprised. Surprise is a fantastic tactic for bringing the laughter factor to any setting. The best comedians have surprising "hooks." Often, these hooks come from their point of view that surprises people.

Surprise in humor works just like a sudden, unexpected move in chess. It changes the game and sets you up for a big win. And the other person doesn't feel defeated; you've actually made them feel happy.

> Laughter is the universal sound of bliss.

A joke is a logical sentence taken to its illogical conclusion. Laughs come when we make a pattern and then break that pattern. The great thing about this tactic of surprise? You can use it even if you are not a natural joke-teller.

Bringing Joy by Surprise

I tell our team to make our clients SAD, which is our term for "surprise and delight." If you like to send unexpected gifts to friends, family, and colleagues, surprise may be your humor tactic, even if you are an introvert. The secret to surprise laughter is how you *make people feel about themselves* and what they receive from you.

Surprising people in a way that's all about them isn't just thoughtful; it's like pulling the rug out from under their expectations (in the best way). You'll leave them smiling, laughing, and maybe even wondering if you hacked their algorithm. That's why this tactic is the first one you should try when applying the laughter factor. Catching someone off guard with a thoughtful gift, joke, or note creates a moment they'll remember long after the wrapping paper's gone.

Dos for surprising gifts:

- Make it quirky, fun, or instantly smile-worthy.
- Do it for them. A great gift makes their day, not yours.
- Send it when they can enjoy it, not when they're juggling chaos.
- Make it special. Even Amazon gifts feel amazing when you purchase the optional gift wrap and personal note.

Don'ts for surprising gifts:

- No self-promotion.
- No confusion.
- No clichés.

In the end, it's not just about the item; it's about creating joy. So, surprise someone today and watch the smile spread across their face.

Smiling isn't just a nice gesture. It's a surprising leadership advantage. Most smiles are triggered by another smile, so the more you share them, the more likely they are to be reciprocated. They're like little boomerangs of bliss, except they never fly back and smack you on the forehead.

What Are You Doing to SAD Your People?

Whether the unexpected is something you send, do, or say, cultivating the humor tactic of surprise works best when it's intentional. We are wired to laugh when we have unexpected experiences. But springing surprises takes planning.

If you enjoy the humor tactic of surprise, you can learn to use it on purpose. Here are some ways to spring surprises at work:

- throw a tax-relief party
- change your voicemail
- plan an office potluck party
- make Mondays mysterious
- do a desk decor swap

Use good judgment, of course. One surprise you don't want to hear is, "HR would like to speak with you now." But do unleash the power of positive humor where you work and live.

Use surprise as your tactic to imprint your brand of fun on people's hearts and minds. After all, it sparks an immediate link to laughter. Look for opportunities to weave it into what you are already doing.

Tactic 2: Poke

Poking is a powerful humor technique. You'll discover how to make fun of yourself and kid people in a way that makes them laugh and like you more. The approach focuses on delivering jabs and jokes that land as playful rather than risky. It also explores how to poke fun without jeopardizing your friendships, your job, or your sanity.

Here's something you must know, right off the bat: Humor always has a clear target. Nearly every joke lands on somebody, but the best laughs nearly always come from taking aim at yourself.

Here's another secret: Humor is criticism cloaked in fun.

Dorothy Parker was one of the towering wits of the 20th century. She was known for writing critical jabs that were sharp and funny. Parker put the punch in punch lines. She shows us the key to poke power. Choose your target, then knock it down with a quick jab.

But as a leader, it's even better to criticize yourself in an endearing way.

Poke Positive

Poking isn't just about making fun; it's about creating laughs that resonate with those around you. Humor works best when it comes from a place of affection, not at someone's expense. When you truly like people, your jokes land softer, funnier, and without the sting that turns humor into hurt.

It's my golden rule of positive humor: Don't laugh *at* others. Laugh *with* them. Build people up with your humor, and you'll see that the biggest laughs come from authentic, genuine connections.

Whether you are lightly roasting those around you or making fun of yourself, here's a tool you can use: you can poke with provocative questions.

Do you realize how powerful questions are? Humor is a hook, and questions reel people right in. Master humorists and storytellers ask lots of questions. Your questions can be funny, and they can help you make a point.

Work humor thrives on the shared experience of "employment annoyment." Whether it's the boss who thinks 24/7 availability is part of the job description or the office printer that jams right when the report is due, there are plenty of things to poke fun at.

Here's what to avoid: making fun of the value people create, their work ethic, or their pay. When it comes to sensitive topics, forget about it. Unless you're an insider (see tactic 3), it's best to keep your comments in the safe zone. No one wants to be the person who turned a special event into a big bummer.

So the next time work gets on your nerves, come up with a little poke joke. Then share it with your colleagues; it just might help everybody get through the day.

Connect Before You Crack

Positive humor isn't just about making people laugh; it's also about making them feel connected. When you tap into shared experiences, people feel more than entertained; they feel drawn closer together.

It's the difference between teasing someone from a distance and gently ribbing a friend who knows it's all in good fun. The latter is where the real connection happens.

So the next time you're about to poke fun at someone, remember to bond with them first.

Humor Me

Humor thrives on defeat; that is, the acceptance of defeat. Some of the funniest things you will ever hear are in places like recovery groups. People overcoming addictions and other hard times learn to laugh at themselves and share their humorous perspective with others.

Authenticity is more than a trend on social media; it's here to stay. Make light of your struggles and how hard you are trying to get over them. It makes you more approachable, vulnerable, and relatable.

Take Yourself Down a Peg

I like the term "self-effacing humor." Some call it self-deprecating, but that sounds like a digestive problem. Whatever you choose to call it, you can take yourself down a peg on purpose. The most winsome humor happens when you poke fun at your own failures and foibles. And yes, you *can* laugh at yourself.

When you make fun of yourself, you actually enhance the way others see, hear, and experience you. It can dissolve tension and make you instantly more likable. It shows others that you don't take yourself too seriously, and that's a quality people admire; plus, it gives them permission to loosen up around you.

How to do it right:

- Know your audience.
- Keep it light.
- Aim for sweetness, not sting.

What to avoid:

- Don't hit below the belt.
- Don't gang up.
- Don't confuse the setting.

Tactic 3: In-Jokes

With this humor tactic, it's all about being *in* on the joke. Too often, life can feel like a never-ending group project with people you didn't choose. That's where humor steps in. Laughter isn't just a reaction; it's a connection hack. A shared laugh says, "We're in this together." It's the ultimate team-builder and way cheaper than a ropes course.

Humans are naturally tribal. Inside jokes signal who is a member. Being on the outside of a group's inside humor

> Humor makes you more magnetic. When people link you with laughter, it catapults your charisma.

makes you feel invisible, like you are missing the key to a secret world. But once you are inside, co-creating and cracking those in-jokes, it's like having a "fast pass" to feeling connected and vital to your family, friends, team, and clients.

The Four-Step Sequence of In-Jokes

1. Relationships

In-jokes bloom from relationships. Whether your group meets virtually or in person, it's all about knowing—and surviving—each other. Common experiences are the fertilizer for funny.

Humor based on shared language and memories unites us. Inside jokes wire and then rewire our hearts . . . together. Feel what others are feeling, and the funny follows. When you indulge in shared humor, you rediscover the connections that bind you to other people; those moments of delight that whisper in your ear: *You're part of the family*.

That's when the real magic begins. This type of humor then becomes contagious within your group. Relationships are what make in-jokes irresistible because the people we enjoy the most are the ones we laugh the hardest with.

2. Remember

Inside jokes thrive on shared memories and unique experiences. Remember those moments that brought laughter and camaraderie. These memories become fuel for in-jokes, whether it's a workplace mishap, a hilarious incident during a presentation, or a memorable group outing. The ability to recall these moments bonds you together and makes the humor authentic and relatable.

3. Relive

Funny feels good. The essence of inside jokes lies in reliving the merry moments. Share these anecdotes during group gatherings, business meetings, or casual conversations. By reliving these experiences, you get some great laughs, and you strengthen the emotional connection within your group.

4. Repeat

Repetition is key to embedding in-jokes into your friend and work groups. When you continually recall these remarkable stories and memories, something special happens. The nostalgia somehow feels brand-new. It's weird, but it works. With each retelling, those jokes become the "fun fabric" of your group's identity.

The essence of in-jokes is that we bond over things we have in common. Creating this "club" vibe makes us feel close and creates comedy moments too.

In-jokes thrive on connection, turning *me* into *we*, and sparking laughter that sticks people together. A shared laugh at work turns coworkers into co-conspirators.

Microfamous

Branding expert Matt Johnson coined a term about the power of becoming a trusted voice inside a very small group: microfamous. Johnson wrote an entire book about the opportunities within these niche networks.

Within a small, devoted circle, we feel like rock stars. The outside world might not know what we are singing or laughing about, but within our group, we are the insiders. That's what makes being in a small, connected group so special: you're part of something unique.

This sense of exclusivity and shared experience strengthens the bonds within the group, making every inside joke and shared laugh even more meaningful. It feels good to be in the know, to share those winks and nods that make you feel like you're part of something special.

Your Presence Is Requested

We hear it all the time: Be present. But you can double that: Be present, and feel their presence, too.

This is at the heart of the laughter factor. So how do you stir up this fun, even if you're not cracking jokes nonstop? The answer is one word: participation.

Use humor like a welcome mat. Mention names, give people something to do, and make them feel part of the action.

Laughter feels amazing when we're not just spectators but participants. Humor is about drawing people in, making them feel like they're part of what's happening, not just watching it.

Remember, the goal is not to be the funniest person in the room; it's to make others feel part of something special.

Tactic 4: Wordplay

If you enjoy wordplay and don't mind some people wanting to throw things at you, you'll love this humor tactic.

Use your sense of humor to make people laugh, not cry. They say talk is cheap, but it's really not if it costs you your job or a meaningful relationship.

Words pack a punch, but you can serve them up like punch and cookies. The right words can light up—or at least lighten up—a room.

Clever words can even turn a dull conversation around. And here's the best part: playing with words can make you more winsome, if you don't overdo it. The goal isn't to monopolize with wordplay.

So, what are words worth? More than you may think. Playful language sparks laughter, strengthens connections, and brings people together. Whether you're turning routines into mini-adventures, building friendships, or making work communications pop, wordplay is a tool worth using.

Be Remark-able

What makes a line memorable?

- **It's short and to the point**. A great remark is brief. The best ones are sparked by what's happening in the room.
- **It's stressed for emphasis**. A great line should be delivered with crisp conviction—even if it sounds like you're saying it off the top of your head.
- **It's startling**. The reaction you want is, "How did she come up with that?" A great line should feel spontaneous and well-timed (even if you've used it before in another setting).
- **It's repeatable**. The best remarks are the ones people can't help but repeat. They resonate so well that they spread like bad news at a church social.

Create a cheat sheet of your favorite laugh lines. Drop these lines into conversations at work and at home. Spice up your emails, texts, and social media posts. You'll start to see (and hear) what resonates. Don't guess; test.

Look for the right situations to sprinkle in these smile-makers. When the moment is right, let your funny fly. But when is the right moment? One of the key comedy rules of the laughter factor is: *Timing is everything*. Don't force humor into moments that don't call for it.

Zingers

Zingers add impact to whatever you are saying. Imagine you are hosting a group meeting and saying hello to new members: "Welcome to our team. We put the fun in dysfunctional." These short attention-grabbers make you sound witty.

Zingers are powerful because they pop. You'll want to limit using them to moments when you want to emphasize something. Think of them like exclamation marks; use them sparingly. When overused, zingers can derail a conversation or trivialize what others are saying.

Here's how to successfully land verbal zingers:

- keep them short
- find the moment
- make it pop
- match the vibe
- refine your go-tos
- abbreviate

Rhyme Time

Remember when short, catchy rhymes used to delight you and your friends? They still can. We are all kids at heart. In today's world of information overload, rhyming phrases equal smiling faces.

Insert short rhymes into your presentations or conversations. Make your messages more memorable by adding this touch of fun to the mix.

Dad Jokes Are Apparent

In today's world, dad jokes have become the fast food of funny: they are quick and easy to tell, and they're guaranteed to get a reaction. They make us feel at ease.

These little gems are loved for their simple, clever wordplay, and the nostalgic feeling they evoke. Dad jokes make family gatherings (and corporate meetings) a lot more fun. These jokes bridge generation gaps and get everyone chuckling, or at least rolling their eyes, together.

Sarcasm Can Be a Superpower

If you're anything like me, sarcasm is one of your most tempting wordplay tactics. It's that sharp, witty way of saying the opposite of what you mean. And it *can* get lots of laughs from those around you.

> Laughter isn't just a reaction; it's a connection hack.

Sarcasm can be hilarious, but it needs to come with a warning label. It can make you come across as superior-sounding rather than approachable. It often feels like a put-down. And honestly, it's just not everyone's cup of tea. You might end up alienating people when you want to bond with them.

Tactic 5: Amplify

People get a big kick out of exaggerated stories, giant jokes, and ridiculous rants. Even if the characters are small, the laughs turn big when you use this humor tactic.

Here's why this humor device devastates and delights us: Our brains think in pictures. When you paint big, crazy, outrageous images in people's minds, they crack up. They can't help it.

We love tall tales. In her book *Wired for Story*, UCLA professor and Showtime story consultant Lisa Cron explains how our brains are neurowired for narratives. She reveals that stories allow us to simulate intense experiences and relish them in a safe environment.

Humans swim in stories. Larger-than-life tales have a magical effect on us.

Wanna be great? Exaggerate. You will get big laughs when you make your jokes, stories, and personal situations way more outrageous.

Here are five ways to amp up the details of your story:

1. Be super specific.
2. Add more drama.
3. Relive your story—don't just tell it.
4. Repeat certain elements of your story.
5. Tie the end of your story back to the beginning.

Of course, you don't need to tell a long story to enjoy the amplifying effect. You can stress one dramatic detail, like this: My email inbox is so full, I got nominated for an episode of *Hoarders*.

Amplifying your humor means more than tossing out jokes or hitting the punch line. It may require *faction*: blending fact with fiction to make your stories larger than life, and way funnier. With faction, you take everyday situations and blow them up like a balloon at a kid's birthday party: you overinflate the fact and make it "pop."

You don't have to be a professional writer to wield faction like a samurai sword. It's a wonderful weapon for anyone who wants to generate bigger laughs by mixing fact with funny. Begin with something real, then pump it up until it goes off the charts.

I Feel Your Pain

Don't believe for a second that most comedians are always happy. Many of us are "wounded healers." Some of the funniest materials come from the darkest places. The sadness, frustration, and challenges we face become fuel for humor. It's about not hiding our pain but amplifying it to make the laughter (and links) even stronger.

The more you lean into your pain, and exaggerate it, the more impactful your jokes and stories become.

Making Big Impressions

Going *big* gets big laughs. It's one thing to hear a story told straight; it's another thing to hear an embellished version. Extremes work because they heighten contrast. Overstatement can amplify the humor—and, in the opposite direction, understatement can be just as effective.

To bring your humor to life, become larger than life. Expand your ability to entertain with bold expressions, movements, and more.

- **Big faces**. Making funny faces is a gift to others. Roll your eyes, raise your eyebrows, or pretend to cry. Your face is a projector screen. Exaggerated expressions often get bigger laughs than the joke itself.
- **Big moves**. Physical comedy speaks volumes. Bold movements amplify laughs. When you think your moves feel like too much, that probably means you are just getting started.
- **Big characters**. Do you have a larger-than-life relative who steals the show at family gatherings? Channel them. Big, outrageous characters stick in people's minds long after the moment passes.

- **Big accessories**. Forget clown costumes. A funny hat or oversized jacket can deliver large laughs before you even speak. Props aren't just gags; they transform the way you feel, move, and interact.

Amplifying your humor plays big to an entire group. But even as you pump up punch lines, keep this in mind: You want to connect your pain and your punch lines with what's real for you. That begins when you are honest (in a heightened and humorous way) about your own feelings. Heartfelt humor comes from genuine feelings.

Go for a Three-Peat

Good things come in threes, and so do great jokes. Why? Because three is the magic number that keeps your audience hooked and then hits them hard.

A joke builds to a funny finale when you let it unfold in a three-part sequence:

1. Set the stage.
2. Build anticipation.
3. Deliver a knockout punch.

It's a structure that maximizes rhythm and impact in your humor, making each laugh linger longer.

Leading with Laughter

As a leader, the first words out of your mouth, along with your attitude, reveal who you are. You must decide: Do I want to harness my sense of humor?

Once you commit, immediately begin to engage with your go-to humor style. Figure out which humor tactics suit you best and use them. What's *your* laugh language?

In case you missed the memo, let me remind you. Humor helps—big-time. Laughter plays a powerful role at work:

- releases endorphins, instantly lifting spirits
- builds community, making teams more cohesive
- reduces stress and de-escalates drama
- sparks creativity and fresh perspectives

And yes, it even boosts productivity—funny really *is* money.

Maybe adding the laughter factor to your group won't save you from an audit, but it *will* make you the kind of leader people actually want to follow. Bring the laughter—it's the only leadership tool that doesn't require a budget line, an MBA, or a three-hour meeting to implement. By bringing the laughter factor to your group, you empower everybody to feel better.

Discover Your Team's Laugh Languages

Here's another vital strategy to take to heart: Laugh at other people's jokes and stories. Get to know and enjoy their humor tactics. Remember, your teammates, clients, and students are absorbed in a never-ending struggle to think well of themselves. When you laugh at their humor, they feel better about who they are.

Lead your team, staff, employees, and audience into the wonderful experience of shared delight. It pays to amuse and to be amused. A culture of fun is good for everyone.

As a leader, you can maximize the uplift factor. Here are five ways you can speak into a meeting or event program:

1. Maximize the run of show (agenda).
2. Reinforce the meeting's mission.
3. Shine light on key players.
4. Add energy.
5. Spring surprises.

Speaking into an event isn't about delivering words; it's about creating lots of liftoff—moments that elevate the experience.

More Windows, Less Lumber

Great leaders don't just offer a plan; they lift hearts. Laughter lightens the load, making your message more engaging and your audience more receptive.

So, sprinkle in lighthearted jokes or personal anecdotes that connect with your audience. You want them thinking, "Hey, this is actually enjoyable!" Tell stories to illustrate your core message in compelling ways. A funny story makes your points vivid and memorable. Remember: *Facts tell. Stories sell.* As a friend of mine, the fantastic speaker Bill Butterworth, says, "Constructing a speech is like building a house. You want more windows, less lumber."

Conclusion

When you think about your organization, team, nonprofit, classroom, church, or business, what do you want it to be? What counts most in your organization? If you believe people matter, remember that laughing matters.

Foster more fun, and you build emotional bridges. To connect with people, you've got to feel what they feel. And we all want to feel good.

Using humor strategically is a catalyst: it kickstarts ideas, builds instant camaraderie, and helps your people finish strong. It sparks engagement, turning strangers into newfound friends, and works like rubber cement for leaders—gluing groups together.

You are more persuasive when you are more playful.

So lead with laughter—because your people are silently begging to have more fun.

Adam Christing is a keynote speaker, event emcee, and comedian known for using humor to connect and inspire audiences. He began performing at fourteen, sparking a lifelong passion for laughter as a leadership tool. President of Clean Comedians, Christing has spent three decades helping organizations build community through humor. He has entertained more than a million people across forty-nine states and abroad. A Biola University graduate, he is a member of its Alumni Hall of Fame. His work has appeared in *The New York Times*, *The Wall Street Journal*, and *Success*. Christing lives in North Carolina with his wife, Barb.

THE SUMMARY IN BRIEF

What is the greatest return on a leader's time? After leaders have invested in their own leadership growth, what is the best way to accomplish their vision and grow their organizations? Develop leaders! The more leaders an organization has and the better equipped they are to lead, the more successful the organization and all of its leaders.

In ***The Leader's Greatest Return***, John Maxwell shares his most important lessons about the leadership development process over the last quarter century. He instructs readers in how to recognize potential leaders, attract leaders by creating a leadership "table," position leaders to build a winning team, and more. Following Maxwell's guiding principles, leaders will experience the compounding value of developing leaders and achieve the highest levels of leadership themselves.

Anyone who wants to take the next step in their leadership, start building their organization or team today, and create their legacy for tomorrow needs to read ***The Leader's Greatest Return***.

IN THIS SUMMARY, YOU WILL LEARN:

- To find, attract, and connect with potential leaders.
- To motivate, train, and empower leaders to be and do their best.
- To teach leaders to work in teams.
- To mentor, reproduce, and compound leaders to receive the highest possible return.

Introduction: Everyone Wins When You Develop Leaders

There is nothing in this world that gives a greater ROI to a leader than attracting, developing, and multiplying leaders. It's the key to success for any country, family, organization, or institution. As you take the leadership journey, there are some things you need to prepare yourself for.

Developing leaders is going to be difficult but worthwhile. Many people who lead let themselves become comfortable attracting and leading followers instead of seeking out and developing leaders. Followers usually follow. Leaders, not so much. However, the work of investing your life in developing other leaders has a high return.

Developing leaders is a job that never comes to an end. If you desire to fulfill a bold vision or do something great, you have to let go of a microwave mindset for leadership. The process can't be done instantly. It's slow, like a Crock-Pot. Anything worthwhile takes time. You must give up looking to cross a finish line and instead find your own internal fulfillment line. That's something you can cross each and every day when you embrace the process of developing leaders.

Developing leaders is the best way to grow any organization. Grow a leader, grow the organization. A company cannot grow throughout until its leaders grow within.

Developing leaders is the only way to create a leadership culture. Culture impacts every aspect of how organizations function. If you're a leader in an organization, only you can create a positive leadership culture, and you can do it only by developing more leaders.

If you desire to improve your team and achieve your dream, you will need to learn how to take each of the following 10 steps.

1. Identifying Leaders: Find Them So You Can Develop Them

For a leader who develops leaders, there is something scarcer and much more important than ability. It is the ability to recognize ability. Take a look at these six areas of identification and answer each of the corresponding questions, and you'll know what you're looking for.

Assessment of needs: What is needed? Who are you looking for? What is your organization trying to do? Do you possess a clear target? Do you know what you're going after? That will tell you what kind of leaders you need to find to improve your organization.

Assets on hand: Who has leadership potential within the organization? Where is the best place to begin looking for potential leaders to develop? In your own organization or on your team. It just makes sense for so many reasons: They are a known quantity. They already fit the culture. They have already established influence.

Assets not on hand: Who has leadership potential outside of the organization? Sometimes you can't find who you're looking for in your own organization or on your team. But bringing in outsiders can create challenges because of the unknowns. The greatest challenge is cultural compatibility. David Walker, CEO and co-founder of Triplemint real estate brokerage in New York City, recommends asking four questions:

1. How did the culture at your last company empower or disempower you?
2. What were the characteristics of the best boss you've ever had?
3. Describe how you handled a conflict with one of your co-workers.
4. What kind of feedback do you expect to receive in this role, and how often do you expect to receive it?

Attitude of the potential leaders: Are they willing? Attitude is a choice, and at the heart of a good attitude is willingness to learn, to improve, to serve, to think of others, to add value, to do the right thing, and to make sacrifices for the team. Leadership skill may come from the head, but leadership attitude comes from the heart.

Ability of the potential leaders: Are they able? How do you know potential leaders are gifted in a particular area? They will be good at it—that displays excellence. They will have opportunities to use it—that creates expansion. They will draw other people to them—that shows attraction. They will enjoy doing it—that brings fulfillment.

Accomplishments of the potential leaders: Have they produced results? What have they achieved? When given a task, do they complete it with excellence? Do they meet and exceed goals? Do they deliver? If they can produce results for themselves, they have the potential to help other people succeed.

People don't automatically commit to you and follow you when they understand you. They commit to you and follow when they feel understood.

2. Attracting Leaders: Invite Them to the Leadership Table

Having a leadership table means creating a place in your organization or on your team where people have a place to learn, an opportunity to practice leadership with its successes and failures, and a chance to shine. Having a leadership table with open seats is perhaps the best way to attract leaders, not only within an organization but also from outside. Why? Because nothing is more attractive to a potential leader than to be asked to sit at the leadership table.

To make your leadership and your organization attractive to potential leaders, here's what you need to make sure happens at your leadership table:

People at the table can experience a leadership culture. A company's culture is the expression of the values of the people within the organization. It is the sum of the behavior of the people, not a reflection of what you want it to be. People do what people see—and they keep doing it.

People at the table participate in the dynamics of the table. Creating a leadership roundtable allows you to provide a good environment for your team members to grow, learn, and begin embracing the dynamics of leadership. It can be a fantastic tool for shaping leaders.

People at the table benefit from the power of proximity. Leadership is more caught than taught. That's why one of the best ways for potential leaders to learn how leaders think, problem-solve, and act is to spend time with them at the table. Getting the opportunity to be present in a strategy meeting is eye-opening. Listening to leaders wrestle through issues, seeing how they make choices, and watching how they interact with one another are some of the best gifts a potential leader can receive from you.

The power of proximity creates "who luck," a term coined by author Jim Collins. Simply stated, it's who you know. It's valuable to you as a leader, and it can become an incredible asset to the leaders you invite to the table. Show them the value of who luck. When you possess who luck, in any challenging situation, instead of asking yourself, "What should I do?" you ask yourself, "Who do I know who can help me?" You don't need to know everything. You just need to know enough people who between them know everything.

People at the table get to practice leadership. In the end, the only way for any person to learn leadership is to lead. Leading isn't a theoretical exercise. Lead is a verb, and to get better at leadership, people have to lead, whether they're leading as a businessperson, a volunteer, an employee, a parent, or a coach. Everybody has to start somewhere. Why not let your potential leaders start practicing at the table with you and other leaders who can help them?

3. Understanding Leaders: Connect With Them Before You Lead Them

Before you lead and develop people, you need to connect with them. You need to find common ground with potential leaders, which is less about ability and more a function of attitude. Why is it so important to touch a heart before you ask for a hand? Because people don't automatically commit to you and follow you when they understand you. They commit to you and follow when they feel understood. The best way to do that is to try to see the world from their perspective, always ask questions, and become a better listener.

Try to see the world from their perspective. Good leadership requires a perspective shift from "it's all about me" to "it's all about others." That means we need to try to see things from others' points of view. Learn perspective thinking. While people's hopes and dreams may be unique, they share many characteristics, and as a leader, you can connect with them when you know those things.

- Most people are insecure. Give them confidence.
- Most people want to feel special. Compliment them.
- Most people need to be understood. Listen to them.
- Most people want direction. Walk with them.
- Most people are selfish. Speak to their needs first.
- Most people want to be included. Ask their opinion.

- Most people want success. Help them win.
- Most people want to be appreciated. Give them credit.

Always ask questions. When you give direction to your team, you often confine them. When you ask questions, you create discovery room for them—room for articulation, communication, innovation, and problem-solving. As a leader who develops leaders, you need to be looking ahead.

Front-end questions set the direction of the conversation, draw out what they see and compare it to your perspective, help you discover their intuitive potential, learn how much they rely on assumptions, and find out if you are both on the same page.

Back-end questions prompt leaders to evaluate and reflect on their experiences. They help gauge their level of awareness and clarify what they observed, how they felt, what they learned, and how they will apply it.

Front-end questions set the agenda, while back-end questions maximize the agenda. Front-end questions encourage preparation, while back-end questions encourage reflection.

Become a better listener. How many times have you heard people complain that their bosses don't listen? People in authority usually prefer to talk. However, there is perhaps no better way to connect with people than to become a better listener.

Listening leads to understanding people, is the best way to learn, and engenders trust and connection. Listening draws people to you, which works much better than trying to push your leadership on them. Empathy builds trust.

4. Motivating Leaders: Encourage Them to Give Their Best

Every leader's organization or team possesses people who seem to lack motivation. It's difficult to get them moving, and if you do succeed, it's only a matter of time until they slow back down again. If getting them to move isn't a big enough challenge, keeping them moving is. It can be exhausting.

Author Zig Ziglar was right when he said, "People often say that motivation doesn't last. Well, neither does bathing—that's why we recommend it daily."

Good leaders inspire others only to the extent that they inspire themselves. After they've discovered their own internal motivations, they can fan that spark into a roaring fire. We also want to coach them to a place where tapping into their own internal motivations is a habit.

This process depends on knowing your team members individually. You must connect with them, understand them, and know what makes them tick. Consider the seven motivations of leaders:

- **Purpose**—leaders want to do what they were created to do.
- **Autonomy**—leaders want the freedom to control their lives.
- **Relationships**—leaders want to do things with other people.
- **Progress**—leaders want to experience personal and professional growth.
- **Mastery**—leaders want to excel at their work.
- **Recognition**—leaders want others to appreciate their accomplishments.
- **Money**—leaders want to be financially secure.

How well does each of these motivate you? Give yourself a score from 1 to 5 for each. Highly motivated people tend to score themselves highly in all seven areas. In fact, the more of them that inspire a person, the higher the odds that person will stay motivated.

As you develop leaders, you need to learn what motivates them and tap into that motivation. Focus first on what motivates them the most, but also inspire them in every area you can.

5. Equipping Leaders: Train Them to Be Great at Their Job

It's at the equipping stage that multiplication happens. When you start equipping leaders and helping them become great at their jobs, you begin experiencing the compounding of influence, time, energy, resources, ideas, money, and effectiveness.

It's one thing to ask people to join your team and take the journey with you. It's another to equip them with a road map for the trip. Good leaders provide a means for people on the team to get where they need to go.

Not only that, good leaders also help them rise up to who they can be. You can be successful in the process if you focus on six essential practices.

Be an example others want to follow. Developing yourself comes first because you cannot give what you do not have. Telling others to do what you haven't done yourself isn't equipping. It's bossing. When you learn, experience, apply, and then develop others, that's not bossing; it's leading.

Ask yourself, "What am I learning"? "What am I experiencing?" "What am I applying?" "Who am I developing?'

> Like racehorses, good leaders want to do what they were made for. They want to be empowered to lead.

Gather your potential leaders around you. No matter how busy you are or how demanding your leadership situation, you will only be able to equip potential leaders effectively if you take the time to gather them close to you and invest time in them. There is no substitute for intentional proximity.

Ask the right questions. Effective equipping begins with asking the potential leader you intend to equip the right questions. How else will you know what direction your equipping efforts need to take with people? If you don't ask questions, you may find yourself teaching the wrong people the wrong things at the wrong time for the wrong reason.

Encourage potential leaders to learn by doing. Few things cement learning like actually doing the work yourself, hands on. Theory and instruction alone produce limited results. The moment people get involved, their abilities rise quickly.

If you want to develop people, stay close to them and coach them while allowing them to gain hands-on experience doing things that will expand them and prompt them to grow.

Set equipping goals with them. At some point in the equipping process, you need to set goals for potential leaders. Make sure the goals are tailored to each person. Make sure the goals are attainable. Make sure the goals require them to stretch. Make sure the goals are measurable. Make sure the goals are clear and in writing.

Remove barriers to growth. Sometimes that means giving them tools or providing the resources they need. Other times it means introducing them to people who can help them—inside and outside the organization. And it always means creating an environment that allows people to flourish.

6. Empowering Leaders: Release Them to Reach Their Potential

If you make the effort to identify and attract leaders and then understand, motivate, and equip them but then fail to take the next step of empowering them, it would be like searching for a Thoroughbred racehorse, purchasing him, training and preparing him to race, and then never letting him out of the stable and onto the track. It would be such a waste of talent! Racehorses love to race. They want to run. That's what they are born to do. Like racehorses, good leaders want to do what they were made for. They want to be empowered to lead.

Where does the ability to empower others come from? It is based primarily on earning respect, building relationships, and providing an environment of empowerment.

Respect: Earn the power of credibility by achieving success. When you empower your leaders, you increase their power to plan, think, grow, problem-solve, and act. You give them the power to be more successful.

You must *have* power to *give* power away. That power comes from credibility. Only after you have achieved success and earned influence do you have credibility. Credibility develops as outward success and inward success. Outward success, which is what you achieve in your career, catches the attention of others. You have influence with them because of your professional credibility.

Inner success grows when you lead yourself well. It comes from the development of good character, from making the right decisions instead of the easy decisions, from putting in the work of intentional growing instead of taking life as it comes. While the outward career success gives you credibility based on what you can do, the personal growth that fuels inward success fills you up so that you have something to give from who you are.

Relationships: Be secure enough to give your power away. You cannot empower people if you allow your insecurities to control you. Why? Insecure leaders want to be the center of everything. They love the incredible emotional return of feeling indispensable. They make everything all

about themselves, and what they do is motivated by preserving their power, not giving it away. The greatest leaders aren't necessarily the ones who do the greatest things. They are the ones who empower others to do great things. To do that, leaders need to be willing to give up center stage.

Environment: Create a place where empowered leaders can rise up. Take a look at the seven characteristics of an empowering environment, make note of how many of them describe your organization or team, and think about ways you could promote them where you lead. Empowering environments

- Embrace people's potential;
- Give people freedom;
- Encourage collaboration;
- Welcome accountability;
- Give people ownership;
- Value people serving one another;
- Reward production.

7. Positioning Leaders: Team Them Up to Multiply Their Impact

When good leaders are gathered together, motivated by a leader, focused on a vision, and working together as a team, there's almost nothing they can't do. Leadership teams have the potential for great impact and a high return. To set your team of leaders on the right course, do these five things.

Make sure your leaders are in alignment with the vision. On great teams, players' individual purposes, goals, and values align with those of the organization and the other players. This kind of alignment doesn't happen by accident. It has to be facilitated by a leader on the team. You must communicate to help your leaders make the connections between the vision, the team, and their own strengths and desires.

Help your leaders bond and care for one another. Examine any successful team, and you will find people who care about each other and possess relational and emotional bondedness. The bottom line in caring for others on the team is that it's crucial to give more than you take. If you care about teammates and you have an emotional connection, a bond, with one another, you focus on being generous. You find ways to add value to the team and your teammates. You're not just in it for yourself, only after what you can get, even at the expense of other team members.

Ensure that your leaders are growing together. Here's an acronym to design growth plans for members of a leadership team:

- **G**ive them a growth environment.
- **R**ecognize each person's growth needs.
- **O**pen up opportunities for them to grow.
- **W**alk with them in challenging times.
- **T**each them to learn from every experience.
- **H**elp them add value to their teammates.

Position your leaders to complement and complete one another. Coach John Wooden was asked how he was able to get so many great players to play so well together. He said, "Each player must have a place for himself and a purpose beyond himself." What a perfect description of team players! As the team leader, you need to facilitate this process. Know what the job requires. Know whose strengths fit the job. Know when to make adjustments.

Communicate to your leaders how they are making a difference. Most people don't really see the purpose in their work. They see themselves as employees with a job description who need to fulfill a work assignment. Give them a "job lift." They need to see where the work they do lifts others and makes a difference in this world. That requires a mental shift, not a job change. You can help them position their minds to think differently about their work. You can encourage them to think more about others and less about themselves, to start their day sowing into others without focusing on reaping a harvest for themselves. Challenge them to intentionally add value to their teammates every day.

8. Mentoring Leaders: Coach Them to the Next Level

We cannot reach our potential without the help of others. Self-evaluation is valuable, but the perspective and assistance of mentors are essential. We all have blind spots where we lack self-awareness, and only another person can help us by providing another perspective. Mentoring helps us go farther, faster, and more successfully than we could ever travel on our own.

Consider this road map for mentoring leaders. The map is simple, but the journey you take won't be. As a mentor, you need to be teacher, guide, coach, and cheerleader, and you

A leadership development culture is modeled from the top, but it's grown from the bottom up.

must learn which to be at the appropriate time.

Choose who you mentor—don't let them choose you. Letting others pick who you mentor would be like selecting your investments by agreeing to buy any fund from any salesperson who called to pitch it to you. There's no telling what you would end up with or what the outcome would be. Instead, you need to selectively pick the people in whom you see the most leadership potential. When you pick the right ones, you win, they win—everybody wins.

Set expectations up front for both of you. You need to lay the groundwork on everyone's part—the we, you, and me of the relationship. "We" expectations include, "We will maintain an ROI agreement" and "We will make each other better." "You" expectations include "You must come ready," "You must keep earning my time," "You must improve, not just learn," and "You must mentor other leaders." "Me" expectations include "I will be a safe person for you to share with," "I will make myself available," "I will give you my best," and "I will look out for your best interest."

Personalize your mentoring to help leaders succeed. As you mentor leaders, pay attention to each person's personality type, learning style, language, strengths, weaknesses, internal motivation, background and history, family relationships, aspirations, inspirations, and more. Leverage every bit of knowledge you have for every leader's benefit.

Care enough to have crucial conversations. Good mentors don't hesitate to have difficult conversations with the people they mentor. They deal with the elephants in the room even when others won't. More often than not, the best time to have a crucial conversation is now. The longer you put off having a difficult conversation, the more difficult it becomes because the timing feels increasingly awkward.

9. Reproducing Leaders: Show Them How to Develop Leaders

To develop a reproducing culture, you need to have these five expectations in place and ensure that they are met by the people in your organization:

The leader of the team is the primary culture carrier. The culture of the team or organization you lead starts with you. You must model it, nurture it, monitor it, and incentivize it. In the midst of all your other responsibilities, you must make the creation of a reproducing culture your highest priority, with you setting the model for growing and developing others.

Everyone is expected to mentor someone. A leadership development culture is modeled from the top, but it's grown from the bottom up. What does that mean? It looks like this: Everyone has someone mentoring him or her. Everyone has someone to share mentoring experiences with. Everyone has someone to mentor.

Leaders focus on developing leaders, not recruiting followers. It's often easy for a talented leader to attract and recruit followers, especially if that leader has high charisma or possesses a compelling vision. But the future of an organization depends on the development of more and better leaders, not the recruitment of more and better followers. When leaders focus on developing others to their highest capability, it enlarges the leadership size and potential of the organization.

People are continually growing themselves out of their jobs. Ask the following questions about each of your leaders: Are there more followers than leaders on this person's team? Is this leader doing the exact same job year after year? Is this leader working long hours? Is this leader carrying the load by himself? If the answer is "yes" to these questions, then your leaders are not growing themselves out of their jobs. And they're not helping the organization develop leaders for the future. You need to meet with them and help them figure out why they're stuck.

Leaders become more than mentors—they become sponsors. Equipping someone to do a job is fantastic, but don't just equip people. Mentoring someone to become a better person and leader is tremendous, but don't just mentor people. Open doors for them. Advocate for them. Put yourself on the line to help them become successful leaders. Pave the way for their success, and if they surpass you, become their biggest cheerleader.

10. Compounding Leaders: Receive the Highest Return of Developing Leaders

The Pareto principle, commonly called the 80/20 rule, indicates that 20 percent of any group is responsible for 80 percent of its success in any given category. This means that doing a few important things could give a much greater return than doing many less important things. If you focus your efforts on the top 20 percent of your priorities, it would give you an 80 percent return.

A similar return comes from continually developing leaders. It compounds! And the longer you keep doing it, the greater your advantage becomes. You will increase your leadership return if you will embrace the power of the Pareto principle in your leadership. Here's why:

Small advantages in the beginning become big advantages in the end—be strategic. When coaching leaders, ask them to look at four possible areas to find and develop their individual advantage: gifting, timing, relationships, and intentionality. For example, if you see that your leaders have any kind of advantage in gifting, encourage them to be grateful, but get to work on developing those gifts. If they continually do small things to gain even a 1 percent advantage, they can keep that edge and use it to help the organization, other leaders, and themselves.

It takes time for little things to add up to big things—be consistent. You don't have to be the hare to win the race. You don't have to have a major head start in life to win. You can be the tortoise, and as long as you keep doing the little things day after day, week after week, year after year, decade after decade, it adds up.

Right Choices + Consistency + Time = Ridiculously Significant Returns.

A few leaders will give a greater return than many followers—be intentional. The Pareto principle could be applied to people. Compounding results from developing the top 20 percent. Let's say you have 10 people on your team. Not everyone has the same production potential. The top two probably produce the majority of results for the team. Who do you think has the greatest possibility of producing the greatest return for your investment in them? The top two leaders. Why? Because they can help others become more productive.

You can develop leaders and experience your own greatest return. Will it be challenging? Yes. Will it take a long time to achieve? You know it. Will you make mistakes? Undoubtedly. But will it be worth it? Absolutely! No matter what it costs you, the return you receive will eclipse the price.

Developing leaders is the most impacting and rewarding thing you can do as a leader. If you haven't already gotten started, what are you waiting for? There's no time to lose. Start today.

THE SUMMARY IN BRIEF

Unconscious bias affects everyone. It can look like the disappointment of an HR professional when a candidate for a new position asks about maternity leave. Or it can look like preferring the application of an Ivy League graduate over one from a state school.

Ideal for every leader who wants to understand and move past their own preconceived ideas, ***The Leader's Guide to Unconscious Bias*** explains that bias is the result of mental shortcuts, our likes and dislikes, and is a natural part of the human condition. And what we assume about each other and how we interact with one another has vast effects on our organizational success.

The experts at FranklinCovey show how your workplace can achieve its highest performance once you start to overcome your biases and allow your employees to be whole people. By recognizing bias, emphasizing empathy and curiosity, and making true understanding a priority in the workplace, you can unlock the potential of every person you encounter. Let ***The Leader's Guide to Unconscious Bias*** show you how.

IN THIS SUMMARY, YOU WILL LEARN:

- Types of unconscious bias and how to start overcoming them.
- To use the Bias Progress Model.
- To find the courage to cope with bias and be an ally to others.
- To apply self-awareness, openness, and growth to the Talent Lifecycle.

Introduction

To be human is to have bias. If you were to say, "I don't have bias," you'd be saying your brain isn't functioning properly!

Essentially, unconscious bias arises from our brain's capacity problem. We take in an astonishing 11 million pieces of information each second, but we can consciously process only about 40 of those bits. To handle the gap, our brains build shortcuts to make sense of this information. We pay special attention to data that proves our strategy is working and gloss over data that casts doubt (confirmation bias). We unconsciously prefer the first job candidate we meet (primacy bias). And we simply like people who are like us (affinity bias).

These shortcuts can be a boon for time-strapped professionals, letting us make quick decisions without having to deliberate on every detail. They can also distort the facts, cause inaccurate judgments, and inhibit our professional performance and possibilities.

What Leaders Need to Know About Unconscious Bias

Bias is a preference for or against a thing, person, or group, compared with another. Biases may be held by an individual, a group, or an institution. We're sometimes conscious of these biases and can state them directly.

Here, the focus is on unconscious bias, also called implicit or cognitive bias. Research shows that we have unconscious biases around gender, race, job function, personality, age/generation, socioeconomic status, sexual orientation, gender identity, family status, nationality, language ability, veteran status, culture, weight, height, physical ability, attractiveness, political affiliation, virtual/remote working, hair color—even the messiness of someone's desk or their posture.

These unconscious biases can have a positive, a benign, or a negative impact. A team leader might have a bias for collaborating or a preference for working with or without music.

But many biases have a significant negative impact. For example, workers with strong regional accents are paid 20 percent less than those with a mainstream accent, according to research by the University of Chicago and the University of Munich. As a result, these unconscious biases can limit professional opportunities for ourselves and others, across the entire Talent Lifecycle. The Talent Lifecycle is the process of your career, all of the decision points that occur, like getting hired, promoted, or selected for stretch opportunities. It also includes what kind of benefits you receive.

The good news is that our brains are wired not just for biases and preferences but also for change and growth. It takes time and, more important, a conscious effort to create new neural pathways, ways of thinking, and habits. It's not easy, but it can happen.

The Bias Progress Model, which moves beyond awareness of unconscious bias to specific action, is comprised of four parts: Identify Bias, Cultivate Connection, Choose Courage, and Apply Across the Talent Lifecycle.

Part I: Identify Bias

Each component of this four-part framework is also associated with a principle. The principle of Identify Bias is self-awareness. Self-awareness is the intellectual pursuit of introspection. Increased self-awareness can enable us to identify our biases. When we build self-awareness, we stop acting automatically and start making better decisions.

Explore Identity

The first step in identifying bias is to know ourselves and examine how personal identity influences and is influenced by bias. In FranklinCovey's Identity Model, the sources that comprise our identities include

Information. What we listen to, what we read, what we hear, what we watch—all of that information shapes our world views, perspectives, and biases.

Education. Our level of education, our field of study, and the specific educational institutions we attended contribute to our sense of self—and our preferences and biases.

Context. Identity can change as our situation changes: where we live, our religious practice, our situational contexts at work—for example, moving to a new organization or team.

Culture. This could be race, religion, ethnicity, or geography.

Innate traits. We have innate preferences that also can contribute to bias and to the way we see circumstances and situations.

Our experiences. Our experiences stay with us, leaving a lasting impression and influencing how we see future experiences and the choices we make.

In FranklinCovey's Identity Model, these elements and our identity go two ways. These elements influence our identity, and our identity influences them back, both creating biases.

Mindfulness is one of the most critical skills required to identify bias in ourselves and others.

A primary goal of exploring bias is to bring the unconscious to consciousness so that we can improve the quality of our decisions and relationships. Once we bring the unconscious forward and can name it, we can also do some analysis of it.

Dig into your identity. Complete 10 "I am" statements about who you are, representing traits such as age, race, gender, culture, physical abilities but also education, religion/spirituality, skills, family relationships, personality, and defining experiences.

Think carefully about the identifiers that may fuel an unconscious bias toward others. Place an X next to those identifiers. Put an O next to the identifiers that you feel could or have made others biased toward you. There might be identifiers where you have both an X and an O.

Consider the correlation between your identity and potential or uncovered biases. Do they limit possibilities or expand them? Are they serving you well or getting in the way of what you're trying to achieve? Do they influence you to put off decisions or lure you to rush into actions you often regret?

Recognize the Bias Traps

The bias traps are circumstances in which we are more susceptible to lean into biased thinking. Understanding them ensures we can recognize and avoid them when necessary.

Let's talk about three bias traps that represent common circumstances when our brain is most susceptible to bias in the workplace:

Information overload. When we face an overwhelming amount of data or inputs, we're at risk of information overload. For example, if we have hundreds of résumés to plow through, we might be more likely to lean into bias to help us make fast assessments. Two examples of cognitive shortcuts that occur in information overload are confirmation bias, the idea that we tend to seek information that supports our existing beliefs, and anchoring bias, the idea that we rely on the first piece of information we see to make decisions.

Feelings over facts. Many of us would say that our beliefs are factual, but of course our perceptions are not always accurate. For example, most people drastically underestimate the geographical size of Africa, because how we feel about a continent's prominence in the world overweighs the facts.

Two common biases are in-group bias and negativity bias. In-group bias is our tendency to favor people we like or those who are like us, while excluding those who are different. Negativity bias is when we are more powerfully affected by negative experiences than positive ones.

The need for speed. The need for speed occurs when we cut corners to act quickly. It can result in snap judgments, bias, and misperceptions. We need to fill a position immediately, so we hire a colleague's niece instead of completing a competitive hiring process. Our article is due this afternoon, so we make some critical assumptions instead of running down sources and completing interviews based on fact.

Two common biases under the need for speed are attribution bias, when we judge others on their actions but judge ourselves on our intent, and sunk-cost bias, our tendency to continue our current course of action because we've invested time, money, or energy into it. It's the idea that we have reached a point of no return.

Select a bias trap that you might be prone to fall into. Increase your self-awareness by listing how, where, when, and what triggers this bias trap for you. What are actions you can take to create space and hit pause between what triggers your bias trap and how you react?

Embrace Mindfulness

Mindfulness is one of the most critical skills required to identify bias in ourselves and others. Our minds are incredibly prone to wandering away from what's happening in the present moment; we spend almost half of our day thinking about something other than what we're actually doing. Without mindfulness, decisions become automatic.

Mindfulness is a state of mind achieved by concentrating our awareness on the present moment, focusing on our feelings, thoughts, and senses to better understand how we engage with others and react to stimuli. Ultimately, we're trying to create the pause between information coming in

and our emotional reactions to that information.

It can be hard to know where to start, so consider these best practices:

Build a regular meditation practice. Meditation can include relaxing, focusing, pondering, thinking, etc. Meditation can be done in just a few moments or last much longer. Apps and podcasts can walk you through a guided meditation from beginner to advanced, in many different styles. Just keep experimenting until you find one that appeals to you.

Pause and describe. When you're in a meeting or situation, take a moment to get out of your head and pay attention to the details around you. Are people engaged? What are their facial expressions? What tone of voice are they speaking in? You might even focus on concrete details like the color of the shirt they are wearing or what they're using to write, just to practice focusing.

Set intention. To deal with bias, the solution can be as simple as priming the pump. Bring the unconscious to consciousness by setting an intention around mitigating bias. Consider, before your next call, interview, or negotiation, thinking about how you're feeling, and resolve to remain in the thinking part of your brain. For example, before you review résumés, you might say, "I'm not going to make assumptions based on people's names." To a certain extent, you can clear away unconscious interferences with intention.

Part II: Cultivate Connection

By intentionally building connection with others, we are essentially filling in the gaps in our supercomputer brains, leaving less room for assumptions and more room for human complexity and nuance.

You may have heard the expression "The fish is the last to discover water." We can't see our own biases when we're surrounded by them. When we demonstrate empathy toward others, we're suspending our own beliefs, agendas, and interests in an effort to understand those of others. We make space for real breakthroughs to occur.

Focus on Belonging

Our brain is constantly trying to figure out whether we belong. Most researchers believe the need to belong is a critical psychological need. And yet in so many ways our workplace structures don't cultivate belonging or promote connection.

How often have you heard people use the word "fit" at work? We interview candidates and say they don't "fit," or someone quits and we say, "It's for the best; they didn't fit anyway." Many organizations have mastered building talent in their own likeness instead of allowing their people to utilize their unique talents and perspectives.

Researchers R.F. Baumeister and M.R. Leary define belonging as "the feeling of security and support when there is a sense of acceptance, inclusion, and identity for a member of a certain group or place, and as the basic fundamental drive to form and maintain lasting, positive, and significant relationships with others."

Being your authentic self at work is the first step to belonging. It is the open part where you are transparent and honest about your identity: who you are, what fuels you, and how you communicate. It means you let your colleagues in; they know your partner's name, your love of ski vacations, and your excitement about that new car.

And they know how you're feeling about the work that you're doing and what ideas and projects you're most excited about. The opposite of authenticity is an environment where you have to apologize for your existence. Apologizing for your body, your identifiers, your background, or your personality is inherently limiting, if not damaging.

Indicators of belonging include language. Identity is as personal to us as our names, so just as you would call everyone by the name they asked to be referred to by, you should also employ the identifiers that they ask you to use as well. If you're unsure what pronoun or identifier to use, follow the other person's lead. When in doubt, using their name will never fail you.

An organization's policies and procedures also have real and disparate impact on the people in the organization. To increase the inclusiveness of your policies and procedures, circulate drafts to team members of various identifiers and life circumstances, and ask for their feedback. A caveat, though: Getting honest feedback requires a culture of trust, one in which people feel it's safe to tell the truth. Have you created that environment?

Finally, representation matters. If an organization is not diverse, can it truly be inclusive? A sense of belonging is key to our overall sense of wellness as human beings. When people find themselves in the "only" category—when they don't see themselves reflected in the organization, in its customers, or in its leadership—this absence can impact how they define their possibilities.

Representation demonstrates that an organization is upholding at least the infrastructure of connection—and that includes seeing yourself reflected across the organization and across its clients in a meaningful way.

As you prepare for your next team meeting, find a few tangible examples of language, policies and procedures, and representation in your team and organization that include or exclude elements of belonging.

Tap into the Power of Networks

A lot of successful people say, "No one ever gave me anything" and "I got where I am through hard work." But that's simply a fallacy. At some point, someone gave each of us an opportunity, hired us, or listened to our ideas. A colleague gave us feedback. A special teacher encouraged us.

Our lives and careers are filled with moments like these, where someone said or did something that at a minimum influenced us and at a maximum set us on a path. This is the power of networks and the power of connection.

Networks give us an advantage in work and in life. They're a powerful tool in pushing against the systemic impacts of bias. Networks help us cope with being on the receiving end of bias, find a sense of belonging, and build our cultural competence so we can make decisions based on fact and not instinct or feeling.

To evaluate the power of your network, let's clarify the different network categories. Each of these network components serves a different purpose, and curiosity and empathy are deployed differently within each category.

Mentorship. Mentorship is focused on skill-building. A mentor is usually a person from whom you have something to learn, whether it be a more seasoned professional in your line of work, an expert in another line of the business, or someone with a specific skill you'd like to develop, like social media or project management.

Coaching. Coaching is about learning the playbook: strategizing about your career and learning more intangible skills like developing executive presence, expanding influence, and building your brand.

Sponsorship. Sponsorship is different from mentoring and coaching in that you are rarely present when you are sponsored. Sponsorship comes from someone with formal authority and influence above your own. Being sponsored means you are recommended. Sponsorship is when an executive ties your reputation to theirs. It's an endorsement.

> Representation matters. If an organization is not diverse, can it be truly inclusive?

Confidant. Mentorship is about skill-building, coaching is about strategy, and sponsorship is about reputation. Making progress requires a safe space. The confidant is someone you trust implicitly and with whom you can share your thoughts around being on the receiving end of bias or having biases yourself. Sometimes the confidant is a trusted colleague and sometimes, a friend. Ideally, it's not one person but a few people.

Consider the network categories outlined above. List one or two people in each. Who holds that title for you? For whom do you hold that title? Do you have any gaps or blank spaces? Could you list two or more in all of these categories?

Now think about your identifiers. Count the people who are the same as or different from you in various dimensions, such as age, ethnicity, etc. What do you notice about who you choose to connect with or who chooses to connect with you? How does who you connect with impact or affect your influence? What commitments will you make to fill in the gaps?

Part III: Choose Courage

When we bring unconscious biases to the surface, we find they're often not in alignment with our values. But we don't necessarily know what to do about that imbalance. In the FranklinCovey framework, choosing courage helps us make progress on bias at all levels, particularly in our teams and organizations.

What Is Courage?

Courage in this context is the mental or moral strength to strive and persevere in the face of uncertainty, fear, and difficulty. Courage is framed in four different ways to allow for the reality of circumstances—there is no one way to

respond to difficulty or negativity.

Courage to identify. A manager leads a successful engineering division working on complex projects for clients. One of his division's more capable engineers has been going through a gender transition to female over the last year. This engineer has been open about her transition, and the manager is respectful when the topic comes up. However, he realizes he hasn't been considering her for the more visible, client-facing projects in the past few months, even though she has successfully led similar projects in the past. It takes courage to identify when we might be making decisions based on bias.

Courage to cope. Worried about repercussions to his job, a team member doesn't display any photos of his husband in his office or even on the home screen of his phone. Some of his co-workers make homophobic jokes, and a few of the senior leaders laugh along with them. He tries to ignore it, but it's starting to get to him, and if he avoids those colleagues, it will have an impact on his work. He notices a team member who also doesn't find the jokes funny and decides to confide in her over a coffee break one day. It takes courage to cope with being on the receiving end of bias.

Courage to be an ally. A group of high-ranking women working in the Obama White House noticed they were being talked over and disregarded in important meetings. They decided to team up and amplify one another's voices. For example, when one contributed a good idea that was ignored in a meeting, another woman would bring the idea up again and point out whose idea it was. This practice came to be known as amplification and became a widespread strategy for allyship. It takes courage to be an ally.

Courage to be an advocate. In 2006, activist Tarana Burke began using the phrase "Me Too" to raise awareness of the pervasiveness of sexual abuse and assault. In October 2017, tens of thousands of people began posting their stories of surviving sexual harassment and assault on social media. It created a movement across the globe to protect victims, educate the workplace on appropriate behavior, and teach people what to do if they experience or witness problematic behavior. It takes courage to be an advocate. Let's focus on two of these categories.

Courage to Cope

It is no small thing to be on the receiving end of bias. If you feel like your possibilities are being inhibited, research shows that those experiences are detrimental to your overall well-being and have an impact on your ability to contribute, personally and professionally.

It takes courage to acknowledge how limiting and ultimately damaging it is to be on the receiving end of bias and to work through that negativity to recenter yourself. Consider these strategies to support recentering yourself.

Prioritize self-care. Make sure you're okay. Step away and effectively deal with any associated stress or emotional distress. Self-care can include removing yourself from a situation, meditation, physical activity, journaling, a conversation with a trusted friend, and self-reflection. Self-care can also mean setting appropriate boundaries with colleagues and leaders in discussing sensitive issues by pushing them to outside resources to answer their questions and refocusing conversations on work deliverables.

Organizations can support policies and workplace wellness programs that allow employees to step away and distance themselves from the situation. For example, a federal contracting firm has allocated what they call "focus rooms," small conference rooms for individuals to move into when they need time alone.

Write about your experience. We each have our own stories about our identities and biases. Noting our experiences in writing can help us understand ourselves and be its own form of self-care. The purpose of writing to cope with bias is not about perfection or even about the skill of writing itself. Give yourself permission to be informal. Writing and journaling can come in whatever format is most comfortable to you—prose, verse, bulleted list, or even doodle. What you write doesn't need to be perfectly phrased or punctuated, just captured on the page.

Courage to Be an Ally

Being an ally, lending our voices in defense of others, is a courageous act. Understanding others' experiences and offering support can make a world of difference.

An ally is not "I feel so bad about this that I'm going to help you." It's not about anger, resentment, guilt, shame, or pity. Allies understand that addressing unconscious bias is critical to morale and business imperatives, especially when they are in positions of relative power compared to those on the receiving end of bias.

Just as coping with bias is focused on recentering yourself in your narrative, there is some nuance to being an effective ally. Effective allies do not overtake the voices and experiences of those they are working to support. Instead, they

The baseline for good recruitment is being aware of the feelings stirred up as you interact with different candidates.

work to de-center themselves, ensuring the focus is not on their fear, guilt, or pain but on making progress for those they are allied with.

Be proactive, not passive. A true ally does not wait to be asked but simply takes on the challenge of inequity, standing up to make a positive change. Use your access to invite more people of diverse perspectives to the table. For example, the next time you attend a conference, panel, or event, invite one of your mentees or someone who might not have otherwise had the opportunity to benefit from that learning.

Team up with others. Making progress on bias doesn't have to be labor or work that you do by yourself. If this is something you have strong feelings about, chances are others do as well. Teaming up with others can mean building a coalition of other allies or amplifying the work of marginalized groups by lending your privilege and voice to their cause. Team up with others to learn more about your own bias and theirs, explore bias in your organization or community, and align your voices with those who are disproportionately impacted by bias.

Part IV: Apply Across the Talent Lifecycle

Let's discuss how we can genuinely and sincerely apply the principles of self-awareness, openness, and growth to the Talent Lifecycle—not because we're obligated to do so but because we recognize that diversity and inclusion are critical to sustain a high-performing organization. The decisions of the Talent Lifecycle fall under three categories: getting hired, contributing and engaging, and moving up. Let's discuss two of these.

Getting Hired

Getting hired consists of the decisions that determine whether someone has a seat at the table: recruitment, interviewing, employee benefits, and hiring. It includes questions like how a position is advertised, what information is included in the job description, how interviews are conducted and by whom, what the interviewing process consists of, and how the final hiring decision is made. Compensation is also a part of getting hired.

Recruitment. One of the most common pushbacks around hiring is when leaders argue their hands are tied because they simply don't receive applications from many qualified diverse candidates. Partnerships are a relatively easy and accessible way to broaden your applicant pool without asking invasive questions during the hiring process.

Partnering with historically Black colleges and universities is a common best practice, but it's less commonly used to recruit people from other underrepresented groups. You can reach out to academic institutions to market to their first-generation and veteran students, their LGBTQ+ organizations, or their office of disability services. Consider instituting internships and co-op programs, where people work and go to school, to further diversify your applicant pool.

Hiring and interviewing. The baseline for good recruitment is being aware of the feelings stirred up as you interact with different candidates. If you encounter negative feelings, be sure to check them against possible biases. Here are some strategies for mitigating negative bias in the hiring and selection process.

Create trained hiring panels. Move away from one-on-one interviews. Build a process whereby hiring officials are required to complete training on bias, effective interviewing skills, and determining competency and skill. Require that *multiple* hiring officials participate in and collaborate during interviews.

Allow complements to the résumé. While the résumé provides a factual baseline concerning a person's prior experience and education, there are alternatives or supplemental application components that can better highlight a person's talent, capabilities, and possibilities. For technical positions like coding, more and more organizations are asking applicants to complete sample projects instead of simply submitting a résumé. We can extend that practice to many nontechnical job functions as well.

Moving Up

Decisions in the moving up stage of the Talent Lifecycle are concerned with performance management, the full spectrum of development opportunities available at an organization, promotions, sponsorship, and succession planning.

Most leaders know that performance management is more than an annual performance review. Employees thrive on feedback, and bias or even the perception of bias thrives on silence. Meaning, if there is not ongoing performance management—feedback, coaching, and clear expectations—and then the annual performance review is bad, the employee can assume that negative review is based on bias. We can implement best practices to avoid this eventuality.

Connect early and often. If we're communicating early and often, we're intentionally building connection and moving past whatever the bias might be to focus on the work. Providing frequent feedback can take many forms from the formal to the informal. It might be as simple as texting a subordinate after a meeting that they did a nice job describing the problem or proposing solutions. For critical feedback, it might be asking the employee to coffee and brainstorming ways to be more effective or organized in the deployment of a project.

Set goals together. Given the role of bias in moving up and all of the data that points to how difficult moving up can be for people of color, women, introverts, people without advanced degrees, or those transitioning from the military to civilian life, for example, setting goals together can ensure bias doesn't creep in. There are many ways to do this. You could set some parameters for a goal and then ask the employee to weigh in on how they can influence that goal or what they think the best way to accomplish that goal is. It could also be incredibly valuable to help that employee set future goals.

Reflect on your experiences around performance management and promotions. Have you personally experienced (or seen other examples of) a situation in which an individual's advancement was made through the lens of bias? If so, what was the impact to you and others involved?

Leadership cannot be effective without inclusion. This has always been the case and will continue to be.

You have now hopefully uncovered some sparks of insight or resonance. Think more about those. Build out the story of why this subject matters to you.

And with that point of connection, take action and implement positive change.

THE SUMMARY IN BRIEF

Almost by definition, notable leaders inspire a great number of people. It is easy to think that there is a secret sauce that will motivate and inspire others by the thousands. In actuality, each inspiration sparks one person at a time.

In ***The Leaders Mind: How Great Leaders Prepare, Perform, and Prevail***, author Jim Afremow presents a contemporary collection of interviews and accounts of outstanding leaders that reflect a common thread: The leaders have a clear awareness of how their actions and words impact others, one person at a time. And they each use potent mental skills that help them navigate highs and lows, push through setbacks, and squeeze every last ounce of potential from themselves and the people they serve. In short, they have developed a Leader's Mind. And so can you.

A unique panel of leaders from many walks of life and from various professions is presented, all of whom offer their own style, at least one of which is sure to speak to your background and aspirations. There are also a bevy of mindset tips, tools, and techniques that you can apply to your own leadership skills.

IN THIS SUMMARY, YOU WILL LEARN:

- How leaders nurture their teams, one person at a time.
- How to make your mindset the most potent tool at your disposal.
- The significance of mentorship and modeling in leadership.
- Why all leaders need to develop a style that is true to themselves.

Leadership Under Fire

Nick Peters is a District Fire Management Officer for the United States Forest Service. His example has much to offer in terms of its application to leadership. Peter shares several key concepts and techniques to apply to teams, colleagues, and your own leadership.

The Observe, Orient, Decide, and Act (OODA) Loop

Peter sees stress as a human construction and recognizes there are some things you can change or control and some things you can't. Many see leadership as a decision-making role, whereas the flip side of decision making is a situation in which one has very little control.

A lot of that boils down to stress management and knowing what you have control of and what you don't. Peter uses the OODA loop to structure and facilitate his decision making.

Developed by military aviator John Boyd, the OODA loop asks that you: Make an observation of your overall surroundings, orient yourself to that, make a decision based on your situational awareness, what you've obtained, and act upon it.

The great thing about the OODA loop is that it breaks out the bias of split-second decisions. It allows you to be in the moment on a specific task, and, at the same time, to focus on the big picture. It can be used at the organizational level as a decision-making tool, too. It works very well to cut through the BS and ascertain what is really happening, what the objectives are, and how to get to the desired result.

Trigger Points

Once we have enough experience in a particular field, we arrive at a point where much of what we do comes as second nature. However, it is often important to provide "checks" on our more emotional selves. In fighting fires, as Peter does, it may be a cold front coming in or the humidity dropping or the wind changing direction.

That moment when the potential for drastic change arrives is called a trigger point. Once that trigger point is hit, you need to stop, take a time out, and reevaluate to make sure objectives are still being met and that everyone is safe.

In your daily life or maybe even in your personal life, have you identified some key triggers that can help you notice, adapt to, and engage a change in circumstances? Without such built-in triggers, you may be susceptible to shifts in the wind rather than being able to pivot and apply a more efficient strategy.

After Action Reviews (AAR)

AAR is a technique that is used in many fields. It may be known as a debrief, a postmortem, or an audit. Whatever the name, progress often involves looking at what worked, what didn't, and trying to learn a bit from history. Peters uses AAR regularly in a very simple way, using four questions:

- What was planned?
- What actually happened?
- Why did it happen?
- And what can we do next time?

The underlying objective is to increase the odds of success. It's all about self-evaluating the operation and critiquing in a constructive way to see if there is anything that could have been done differently to get better results.

The Sharpshooter

Steve Kerr is a legendary head coach who earned five NBA championship rings as a sharpshooting player and then claimed three more as a head coach. Both as a collegiate and professional athlete, Kerr began his career underestimated by the public and the press. He wouldn't have it any other way. When you aren't anywhere close to a first-round draft pick, nobody sees you coming. He was able to fly under the radar for his first few years in the league.

Playing on the Chicago Bulls team with the NBA championship on the line in game 6 against the Utah Jazz, all eyes were on teammate Michael Jordan. Everyone expected the GOAT to take and make the winning shot.

But when Jordan got double teamed, he passed to a wide-open Kerr, who did what he's done his entire career: he nonchalantly knocked down a three-pointer.

Game over. Legacy secured.

Many players would have used this moment for self-aggrandizing, but in typical fashion, Kerr turned the spotlight back on Jordan, stating that Jordan's excellence drew the attention away from him, giving him the chance to hit the game-winning shot in the NBA Finals.

He said, "What a thrill. I owe him everything."

As a leader, you need to know your audience and your team.

As a leader, will you be ready to seize the moment when a career-changing opportunity comes along? Can you apply the example of Jordan and Kerr to better use your team's talent? You can and should.

Later when Kerr was acquired by the San Antonio Spurs, he was eager to make the transition because of the coach, Gregg Popovich. Though prickly in interviews, Popovich would prove to be one of the game's greats and was far more compassionate with his players than his gruff demeanor suggested.

The organization was a family first and a team second. The coach wanted to know about the players' lives off the court. He cared about their existence beyond how they played. Once the team got on the practice court, though, it was all business.

Kerr was surprised by the way that Popovich yelled at some of his star players, though he noted that those singled out for a dressing down responded positively and played harder and smarter afterward. But Popovich didn't do that to Kerr. Kerr wasn't very confident at the time and being yelled at would have been devastating. Popovich knew how to pick and choose his teachable moments and he could adapt his style to players' different personalities.

As a leader, you need to know your audience and your team. How can you show them that you care about them? Who is an up-and-coming leader you identify with, and what can you learn from that person? What can you do better to tailor your communication style to each person you lead?

Every stage of Kerr's journey as a player, coach, and leader could be viewed as unlikely. Yet with each step, he soaked up his mentors' knowledge like a sponge, viewed adverse situations as learning opportunities, and squeezed every ounce of potential out of himself.

His story was unconventional, yet highly successful, as your leadership story can be, too.

Grace Under Pressure

Flight 1380 was a regularly scheduled passenger flight from New York's LaGuardia Airport to Dallas Love Field. Tammie Jo Shults, a former US Navy pilot, was the flight captain. She took control of the plane after an uncontained engine failure caused debris to damage the fuselage, depressurizing the cabin. Tragically, one passenger died.

How many leaders experience such a moment, when the fates of dozens are in their hands? How would most react? What does one draw upon to do what must be done?

There are three formative arcs that gave this captain nerves of steel.

- The first was upbringing. Shults had a lifetime of challenges and opportunities to learn how to respond to a situation.
- Second, mentors are vital. They build up your capacity, influence your leadership approach, and ultimately provide insight into how to lead a team.
- Third, dealing with a situation in terms of when to engage and when to take a break.

There is little in Shults's childhood that indicates a future-pilot-in-the-making. She grew up on a farm in a family that had nothing whatsoever to do with aviation. She attributes a drive to be involved in something that was both economically favorable and in line with her dream of becoming a pilot. The military was the best choice to accomplish that.

Ownership

Coupled with these initial aspirations, her parents gave her responsibility and the authority that goes with that to get a job done. She didn't feel like a servant appointed with a particular task to complete. She owned it.

This sense of ownership and getting things done is vital to successful leadership. These same patterns, habits, and attitudes were conveyed to Shults's crew and flight staff on that fateful flight.

Mentorship

Having role models is key to the trajectory of any leader. While many concentrate on the individual qualities of a leader, how often do we actually hear the leaders themselves say that it was mostly luck, or the good fortune to bump into someone, or owing it all to a few decisive moments where a trusted mentor nudged things along?

As a groundbreaking female pilot, Shults was not spared from discrimination and disrespect from peers and superiors. How she dealt with this situation reflects on what made her a great leader.

To gain this maturity, however, she had some good mentors. From them she learned to stay in the game, even when facing adversity. She gained insight into how to navigate the field as well as how to deflect and deal with criticism.

Taking Breaks

Leaders often want to do everything; they are always on the go. But sometimes it's necessary to take a break, step back, and realize that absorbing and evaluating the situation requires time.

Shults's parents taught her the importance of this when she would grow anxious about something, such as a test coming up at school. When they would notice her anxiety building up, they would redirect her energy into a different task. That was a great lesson for her that she has used her whole life.

If something doesn't seem to have an answer to it or you can't progress there, get your mind and your body on something else. It doesn't make the problem go away, but sometimes distance can give you perspective. Sometimes you have to take a break to know what your next action needs to be.

Back in the air in the flight that went horribly wrong, Shults maintained a calm composure and safely brought a crippled plane back to the ground after a catastrophic engine failure. Through her accounts of being raised on a farm, the mentorship that she received, and her approach to leading a flight crew, we gain insight into how leaders develop.

The Man in Black

Walking the Walk

For most of the last two decades, Nic Gill has served as head strength and conditioning coach for the most celebrated team in rugby–The New Zealand All Blacks.

In describing his style of leadership, he believes you have to lead by example. First and foremost, you have to be able to lead yourself to do the right thing at the right time, under pressure and fatigue.

Only then will others follow you.

He knew that his head coach and boss, Steve Hanson, had his back, that he could trust him, and that he was always going to do what was best for the whole group.

A leader has to display all those attributes they want to see in others and be willing to walk the walk. It's easy to say things, but words are meaningless if they're not lived. Whatever a leader says, they must also do.

In your own leadership, how are you empowering people to make their best possible contribution? Would people say that you're "walking the walk" of a principled leader? In what situation could you include your team to make a better decision? Reflecting on questions like this will help you lead by example with those you serve.

From Prescriptive to Inclusive

Commonly, events that unfold over the course of years shape a leader's character, personality, and modus operandi. Consequently, that leader learns how to lead more effectively and progress in communicating to and guiding others.

Gill is a big collaborator, for example, and he likes working with people so his leadership style reflects that. He used to be more prescriptive in style, with an attitude more like, "You have to do this because it will make you better." But experience taught him that unless the people you're leading are paddling in the same direction as you, you won't get any traction.

Gill now leads with a more inclusive style. He learned that collaboration is the best way to achieve success for the people he works with. He's got his own ideas, methods, and ways he wants things done, but he doesn't discount what the person and athlete feels and experiences.

He has to engage the athlete and leverage off how they're feeling and what they're thinking. This is a crucial part of taking people where you want them to go.

From Gill's leadership, you can learn that culture can't be created overnight by doing this or saying that, otherwise there would be a lot more organizations with a record of sustained excellence.

It is a living and breathing thing, and it needs to be con-

Professionals take a brief moment to prepare mentally for the intense focus they need in the task ahead.

stantly fed by the people within it. You need to be careful because it takes a long time to build up a winning culture, but it can break down very easily.

Has your own leadership style progressed over time? In what ways? Where are you on the continuum between prescriptive and inclusive leadership? How do you want to continue to evolve your leadership to take the needs of others into account? These are useful contemplations to consider as your leadership style evolves over time.

On the Cutting Edge

Katrina Firlik founded HealthPrize Technologies, where today she is the chief medical officer. From her, we learn what it means to hold life and death in your hand, and how even for the most superbly skilled professional, there is a thrill to being on a team. We also see how lifelong learning is important and leadership comes ultimately from knowing yourself.

Mentally Preparing

To rise to the challenge, whether it is sports, crisis management, or surgery, there is the moment of quiet before one steps in. Again and again, we see how elite athletes, winning coaches, and tested professionals take a brief moment to prepare mentally for the intense focus they need in the task ahead.

Firlik describes the process of scrubbing and gowning immediately before stepping into the operating room to perform surgery as a time when the mind is being quieted. The hand washing at the sink is immediate and meditative and a point of mental preparation.

Finding Your Own Best Set

In high pressure situations, the communication style becomes very important. In the operating room, Firlik encountered many different leadership styles. Some surgeons do the yelling and screaming while others exhibit the calm yet forceful listing of immediate needs from other team members. She obviously appreciated the latter more and tried to emulate it as a leader herself.

That being said, the leader of today may not be the same person as when he or she began the leadership journey. Initially many leaders emulate their mentors and teachers. Then, with experience, confidence, training, they found their own best set of leadership traits.

The Flow State

When we talk about being "in the zone," it's often in reference to athletics. However, the complex interactions between elite team members on a surgical crew can also bring about this euphoria.

The countless hours of practice and repetition with teammates bring about an almost mystical level of intuitive mental and physical collaboration.

In a flow state, it's not only doing a procedure that's so familiar with you, but also working with someone that's been there with you before. It's almost calming to be in a scenario where everybody's working together, everybody knows what they're doing, and it's a seamless flow state.

Preparing the Next Leaders

A significant part of leadership, and especially of senior leadership, is the responsibility of having a succession plan and a way to mentor and educate the next generation. Strong confident leaders are often the most willing to share and pass on their knowledge.

She has taught countless residents how to do particular techniques, just as she was taught in her own residency. Watching others learn and become proficient was really thrilling to her, because you see their confidence building, teaching them to do it calmly, and allowing them to do it rather than doing it yourself. That does require some trust in them and fortitude on your own part to give the reins over. But seeing that proficiency develop within a trainee is really exciting.

Do you carve out time to bring others up? Are there institutional processes to build and retain knowledge capital? Firlik was given the opportunity to learn and grow, which shaped her leadership style immensely.

Being True to Yourself

Along with mentoring, training, and leading, many leaders mention the importance of finding balance and respite. Firlik found it hard to find that balance.

For positive examples, she always gravitated toward surgeons who had a sense of humor and outside hobbies. She thinks that's important because you're only a surgeon for so long, and if you end up retiring in your sixties, you need a life outside of that.

You have to kind of force yourself to continue those hobbies because they are critical during your career, but even more so afterward.

There is a recurring theme for many of the leaders featured in the book and that is: be true to yourself. To be exceptional, you must develop into the leader you want to be.

Although leaders are shaped by those around them in their formative years and by mentors, coaches, and teachers, it is important to learn and choose the best parts that fit your personality, character, and outlook.

What are your strengths? Where do you shine? The answers will inform you as you develop your own unique and personal leadership style.

Key Leadership Principles from Stoic Philosophy

In modern vernacular, being "stoic" typically means not showing any emotion in the face of adversity. The philosophy and practice of "Stoicism," with a capital S, is something different entirely.

The Stoic outlook on life includes support of passion, the pursuit of virtues, living in agreement with nature, and exercising reason. The aim is to flourish as human beings.

There are some key principles from Stoic philosophy that we can apply to modern leadership.

- One should have a goal in life. Instead of just going through the motions or tackling all of life's problems one day, one problem at a time, there should be a larger goal.
- Next, to constantly move toward this goal, there are several Stoic strategies including: reframing a negative situation into a challenge; acknowledging an insult, but choosing to ignore it; noting some anxiety, or envy, but not acting on it; focusing on the process or the task at hand; and refocusing to a broader perspective.
- Putting these strategies into practice requires use and repetition, like training for a sport. When the inevitable big challenge comes along, as a Stoic, you'll be able to flex your mental muscles and rise to the occasion.

Your Strongest Attribute is a Leadership Mindset

Leaders come to us from many walks of life and make an impact on society and others in myriad ways. Yet, though someone may have the best teammates, the latest high-tech equipment, or access to the best resources, that person may not necessarily be a leader.

Some people choose to be leaders, while others are placed into leadership roles due to circumstance. Either way, there must be leadership equity to pull from.

This equity is a mental savings account that has accumulated a broad body of experiences, a set of core driving principles, and muscle memory to draw upon when needed. Further, the ability to take in, absorb, and process information means being sociable.

Good leaders are not isolated at the top, nor are they making unilateral decisions from a lofty command post. Real leaders on the ground are very much tuned into their crew, supporters, and teams.

There are also those moments when a crisis necessitates a decision. It is in those times that a leader emerges valiantly rather than just being a figurehead who crumbles. This ability involves a very imaginative, contemplative, and reflective mindset.

Leaders are adept at bringing out the best in a group of people, whether it's at work, at home, or further afield. This is the true gift of cultivating a Leader's Mind.

Doing so won't merely help you overcome hardships, tame career transitions, and meet your own goals, it will also enable you to guide, develop, and empower others to make a positive difference in their lives, communities, and the wider world.

Last, take The Leadership Pledge to ensure you are cultivating a Leader's Mind in service of others.

The Leadership Pledge

Demonstrate leadership by:

- Talking with and listening to your team, colleagues, and clients.
- Engaging in positive communication to build trust and collaboration.
- Being there day in and day out, and being professional in all aspects
- Committing to get better every day, and empowering your team to do the same.
- Modeling core values in everything you do.
- Embracing challenges as opportunities to learn and grow.
- Finding ways to serve people selflessly and humbly.
- Identifying a higher purpose and using it as fuel to chase excellence in everything.
- Forging a leadership legacy by mentoring others.
- Creating and nurturing a balanced life.

Dr. Jim Afremow is a much sought-after mental skills coach, licensed professional counselor, co-founder of the Champion's Mind, and the author of The Champion's Mind (over 140,000 copies sold), The Champion's Comeback, and The Young Champion's Mind. For over 20 years, Dr. Afremow has assisted numerous high-school, collegiate, recreational, and professional athletes. In addition, he has mentally trained several U.S. and international Olympic competitors. Jim also served as a senior staff member with Counseling Services and Sports Medicine at Arizona State University, and as a Mental Skills Coach and the Peak Performance Coordinator with the San Francisco Giants MLB organization. In addition, Jim has helped many business executives elevate their mental game.

THE SUMMARY IN BRIEF

The Leadership PIN Code is about being the most engaged leader possible through examining your approach, behavior, and conversations with those you lead. This leadership book differentiates itself by focusing on your presentations both in your personal delivery and how you connect with those who are engaging. *The Leadership PIN Code* uses PIN as an acronym for the primary tasks of a leader to persuade, influence, and negotiate with those they lead and the key stakeholders who influence your work.

Using the latest psychological and strategy research on emotional intelligence and connecting with those you lead, Author Dr. Nashater Deu Solheim presents an approach to engaged leadership that focuses on relationship building. The prime role of empathy is emphasized for connecting to employees with a desire to connect and lead on a personal level.

IN THIS SUMMARY, YOU WILL LEARN:

- How to be an engaged leader.
- How to persuade, influence, and negotiate as an engaged leader.
- How to connect with those you lead on a deeper level.
- How to avoid common pitfalls that entitled leaders make.

Introduction

A leader's skill level and style tend to fall along a continuum from the least effective—the entitled leader—to the most effective—the engaged leader.

Entitled or Engaged Leader?

Entitled leaders make changes that are about the leader and their power to act, rather than mobilizing the organization. The entitled leader seizes all ownership from the team, and as a result, people quickly disengage, becoming fearful and mistrustful of leadership.

An engaged leader harnesses as much information as possible about the organization, the culture, the teams and the individuals. He seeks input and buy-in from the team and tests changes to make sure they're relevant and necessary. He explains the motives for change and is curious to find out who holds the information he needs to know and who the real influencers are. He knows how to best handle dialogues with individual team members or key stakeholders to establish rapport, build alliances and navigate the various parts of the organization.

Both the entitled leader and the engaged leader have mandate, authority and power, but they use them differently. The engaged leader garners the best possible cooperation and collaboration for the exact same changes the entitled leader imposes by force.

Persuade, Influence, Negotiate = PIN

The PIN Code is about finding the hook—the interest and motivation—of the other person for creating a willing and winning relationship that delivers the results the business needs with you in the lead. If you've ever wondered how a psychologist encourages people to open up and commit to positive change, I'm going to show you how it's done with three keys. I offer an unforgettable way of having the impact and influence you need in your daily work. It's as simple as ABC.

A = Approach: your mindset, your research into people, context, how you prepare for individual encounters or meetings by taking the time to learn about their interests, culture, or goals

B = Behavior: the physical behavior and manner you use when meeting with people, including body language, choosing the right arena for the encounter, and how you set up a room or manage virtual meetings

C = Conversation: the questions you ask, responses you give, and how you steer the conversation and dialogue, managing resistance and conflict, building trust

Eight Common Dysfunctional Beliefs of Leaders

Leaders cannot simply expect respectful regard based on their position or title. Everything they say and do happens under the microscope of employees and stakeholders, who may be quick to point out flaws and inconsistencies.

1. 'I've studied leadership, so I'm a good leader.' Some leaders falsely believe that their education automatically makes them an effective leader.

2. 'I've got the title, so I'm a leader.' The entitled leader wields her authority, power and mandate to get what she asks for. When she demands something, she expects it to be delivered. She's not concerned about asking her employees.

3. 'My team doesn't challenge or disagree with me, so I must be getting it right.' Neither compliance nor likability are measures of effective leadership.

4. 'The longer I do it, the better I get.' Leaders often quantify their experience in terms of years, as though time itself is a great teacher. Engaged leaders understand that continuous learning is at the heart of leadership.

5. 'I was a great leader at my last job; I'll be a great leader at this one.' Context is critical. Every context requires something different. A leader must be adaptable to emerging demands and challenges.

6. 'They promoted me, so I must be able to lead.' Problems arise when the assumption is 'I'm a great expert; therefore, I'm a great leader.' There is no proven relationship between your excellence as a subject matter or technical expert and being a great leader.

7. 'I'm a spontaneous leader.' Engaged leaders know that great performance comes from being well prepared and rehearsed and leaves little to chance. They will be concerned about the audience's needs and be sure to meet them where they are.

8. 'I'm a man/woman, so I am a better leader.' Engaged leaders value and manage diversity well, and understand that it comes in many forms, including experience, culture, age, gender, expertise, qualifications, attitude and personality.

PIN and Emotional Intelligence

What separates the entitled from the engaged leader is emotional intelligence. For the engaged leader, relationships are win-win situations. The engaged leader learns the interests of the team members or stakeholders and is able to communicate the relevance of a task both in terms of the individual's motivation or gain in supporting the task or appeals to their aspiration while linking to common business priorities.

Empathy Is the Antidote to Dysfunction

Empathy is the ability to take another's perspective even if you have not had the same experience where you can offer support and guidance to resolve a challenge. Empathy is asking, 'How can I help you, and what do you need?'

Close the Gap

PIN is the power of using psychology in business in order to have the positive impact and influence you need to motivate your team and peers, and continuously negotiate with managers, stakeholders or adversaries to make real progress.

Persuasion is the process by which one person achieves their goal to change another person's viewpoint or position on a matter.

Influence is the power or capacity of causing an effect in indirect or intangible ways.

Negotiation is 'back-and-forth communication designed to reach an agreement when you and the other side have some interests that are shared and others that are opposed'.

Persuasion Occurs Every Day

Persuasion is about closing the gap between you and your position and the other person and his position. You may need to combine persuasion and negotiation to have the influence you want.

Negotiation

Negotiation is far more relevant to leadership than you might believe and not just in relation to contract, financial or commercial negotiations where there are rules to follow and margins to maintain. In today's world, negotiations between countries and political parties have huge business negotiations behind them with multiple aspects often related to defense, trade or access.

Building Influential Relationships

Drawing on Cialdini and Harvard and the great wealth of literature on what effective influencers do, I suggest that the skills of great PIN leaders essentially fall into these three categories:

Establish trust.

They do this easily and focus on what they have in common with others early on.

Demonstrate empathy.

They use empathy — the ability to put yourself as a leader in someone else's shoes to both establish their motivation and interests or see their point of view that builds trust and allows you to explore together opportunities for influence and mutual benefit.

Remain curious.

Under pressure, pushback, resistance or conflict, they stay in curious mode, searching for information to help them understand the other person's perspective. Curiosity may lead to a shared understanding and agreement that was not obvious at the start.

A Is for Approach and Advanced Preparation

You must believe in and fully understand the agenda yourself in order to motivate and inspire others whether those dependent on you for that direction or the decision-makers for supporting your cause. By knowing your audience, you're able to involve them to see what you see. Be prepared for and invite the right stakeholders to meetings or conversations, so you have the possibility there and then to get a commitment to the matter on the table, thereby avoiding having to refer to it elsewhere or cause delays. Know your biases and filters and prepare your mindset properly for your meetings.

Diligent Planning

While it may be obvious in many cases that preparation is important ahead of meetings, presentations or negotiations, there is an art to planning.

First impressions count and influence counts longer, so be prepared to give more than just a good impression. Leave a footprint, so to speak. You want to leave an impact that makes them want to seek further connection with you.

Research and establish their interests. Find out what drives this person, and what they are interested in when it comes to supporting you in your endeavour and what priorities

they have that you can link to.

Use networking opportunities to build trusting relationships and authentic rapport. If starting a new job or task, stakeholder-mapping is your best friend. Know your stakeholders: Build alliances long before you need them.

B Is for Body Language and Behavior

Social psychology research confirms that first impressions count. You only have one chance to make a great impression. But there is a difference between first impressions and influence.

If you're in a situation such as giving feedback or offering support to someone where you need to show empathy and perhaps you've been told that you can come across as a bit cold or distant, then addressing your body language can go a long way in helping you to communicate empathy or sensitivity in a more conscious way.

C Is for Conversation

A leader conducts conversations as a conductor leads an orchestra. Conversation is not about the leader doing all the talking—in particular, extroverted leaders or those with dominant personalities as in the opening story need to remember this. Much of C is a result of planning your approach and choosing appropriate behavior. Your conversations will be most successful if you hone your skills in these five styles of questioning:

Curious: to resolve conflict, disagreements, polarised ideas, resistance or opposition

Circular: to dig deeper, for example into values, motivations, drivers

Confirming: to ensure you've understood what was said, data is correct, showing empathy

Clarifying: to determine meaning and intention, exploring ideas, rationales

Challenging/Investigative: to test a situation or hypothesis, provoke opposing or new ideas, open up for pressure-testing existing ideas or concepts.

Conclusion

Your PIN Code to success is based on building willing and winning relationships wherever they may be for now or later. It boils down to being effective in all three aspects of your leadership: leading your team, collaborating laterally with peers and building alliances with senior and external stakeholders.

The Leadership PIN Code provides a framework that gets better with practice. Each time you plan your approach, behavior and conversation, receive feedback and adapt, the further towards engaged leader you'll go. It enables you to translate what you know into your daily leadership.

Dr. Nashater Deu Solheim brings a new toolkit to leadership development that is backed by decades of integrated experience in the areas of business and psychology. As a former forensic psychologist with clinical research in the neuropsychology of criminal minds, she developed a deep interest in effective learning strategies for lasting success. Now, as an expert negotiator who studied at the Program on Negotiation at Harvard Law School, Dr Solheim has combined her experience as an executive leader in international private companies and government ministries to present ***The Leadership PIN Code***, the definitive guide for helping business leaders secure influence and impactful results.

THE LEADER OF THE FUTURE 2

THE SUMMARY IN BRIEF

This summary celebrates the wisdom of some of the most recognized thought leaders of our day who share their unique vision of leadership for the future. Our post-9/11 world presents new and unexpected challenges for the leaders of the next decade. The articles in The Leader of the Future 2 *reaffirm, reconsider and expand on the basic principles and values of leadership as they apply to emerging and unforeseen challenges, opportunities and trends.*

The Leader of the Future, *published in 1996, sold 200,000 copies and broke new ground in the world of leadership literature. Ten years later,* The Leader of the Future 2 *gives voice to the most critical issues and transformative ideas for the leaders of today and tomorrow. A number of the original thought leaders from the first* Leader of the Future *have returned to offer their insights and are joined by an exciting group of newcomers with fresh wisdom and inspiration to share.*

This summary is divided into five sections: executive leadership and effectiveness; leading in a diverse world; leading in a time of crisis and complexity; leading organizations of the future; and the quality and character of the leaders of the future.

What you will learn in this summary:

- ✓ ***What Peter F. Drucker believed about executive leadership.***
- ✓ ***The musings of Peter Senge and R. Roosevelt Thomas Jr. on leadership in a diverse world.***
- ✓ ***How John Alexander, John Edwin Mroz and General Eric K. Shinseki lead in a time of crisis and complexity.***
- ✓ ***Why Dave Ulrich and Norm Smallwood see leadership as a brand, and how Marshall Goldsmith leads a new age of professionals.***
- ✓ ***How Stephen R. Covey and Usman A. Ghani define the quality and character of leaders as a developing leadership concept in the knowledge worker age.***

THE LEADER OF THE FUTURE 2

Edited by Frances Hesselbein and Marshall Goldsmith

— THE *COMPLETE* SUMMARY

Preface

Ten years ago it was a very simple, yet powerful idea. Call many of the greatest thinkers in the world, ask them to write a chapter sharing their vision for the future of leadership and put together an edited book titled *The Leader of the Future* with the proceeds supporting the Peter F. Drucker Foundation for Nonprofit Management to help develop leadership in the social sector.

The editors were — and still are — surprised at the positive reaction received from everyone. Even though the authors that were contacted are very busy people, over 90 percent enthusiastically replied to the call. Another surprise was that while edited books normally don't make the best-seller list, *The Leader of the Future* not only made the *BusinessWeek* Top 15 best-seller list but has also become probably the greatest selling edited book in the history of the field.

Hundreds of thousands of copies of *The Leader of the Future* — available in 28 languages — are still moving around the world amid the hands of global leaders.

Ten years later, post September 11, we live in a different world with a new context. Our times call for new thought and action, yet the basic principles, values and fundamentals of leadership have not changed. A lot has happened within the last 10 years, yet, once again, the editors are moved by the generosity of the thought leaders asked to make a contribution.

The authors in *The Leader of the Future 2* are an amazing collection of thinkers who have experience in all sectors — the private sector, the social sector, government, education and the military. In the turbulence of a world at war, how do these great thought leaders and writers find the language, the message that can inspire, guide and sustain leaders in an uncertain future? ■

PART ONE: A VISION OF LEADERSHIP

Peter Drucker on Executive Leadership and Effectiveness

By Joseph A. Maciariello

Peter Drucker's writings on management and executive leadership are extensive and varied. Yet, through all of his work, a definite vision of what executive leadership and management is and how leaders and managers should operate emerges.

These intertwined and overlapping subjects can be distinguished — at least in theory — by separating the principles of governance of organizations, which Drucker refers to as the practice of management, from the principles of the conduct of leaders in these organizations, which he refers to as the effective executive.

Executive Leadership and Effectiveness

Executive leadership is concerned with creating organizations that have a high spirit of performance. To attain a spirit of performance leaders must:

- Exhibit high levels of integrity in their moral and ethical conduct.
- Focus on results.
- Build on strengths — one's own and others'.
- Lead beyond borders to meet at least minimum requirements of all stakeholders.

(continued on page 3)

The editors: Frances Hesselbein (New York, N.Y.) is founding president and Chairman of the Board of Governors of the Leader to Leader Institute and editor in chief of its journal *Leader to Leader*. In 1998, Hesselbein was awarded the Presidential Medal of Freedom, the United States' highest civilian honor.

Marshall Goldsmith (Rancho Santa Fe, Calif.) is listed in *Forbes* magazine as one of five top executive coaches, and in *Human Resources* magazine as one of the world's leading HR consultants.

Peter Drucker on Executive Leadership and Effectiveness

(continued from page 2)

The Spirit of Performance: True Test of an Organization

The true test of an organization is the presence of a spirit of performance. An organization that is high in spirit builds on and develops the strength of each person. The result is common people doing extraordinary things.

To guard against weaknesses created by an emphasis on strengths, a highly spirited organization will cover weaknesses of people by overlapping the strengths of others upon these people "like shingles on a roof."

The Theory of the Business

Drucker's ideas about leading organizations all start with the organization's "theory of the business." A theory of the business is the way an organization intends to create value for its customers and is therefore applicable to all organizations, not just business organizations. It requires answers to the following questions:

- **What is our mission?**
- **What are our core competencies?**
- **Who are our customers and non-customers?**
- **What do we consider results for the enterprise?**
- **What should our theory be?**

The theory of a business is often not obvious, nor can it be formulated without controversy. This means that formulating a theory of the business must be a forward-looking exercise — creating a mission that compels it to systematically evaluate emerging trends, future changes in its environments and current or emerging social problems that may be turned into business opportunities.

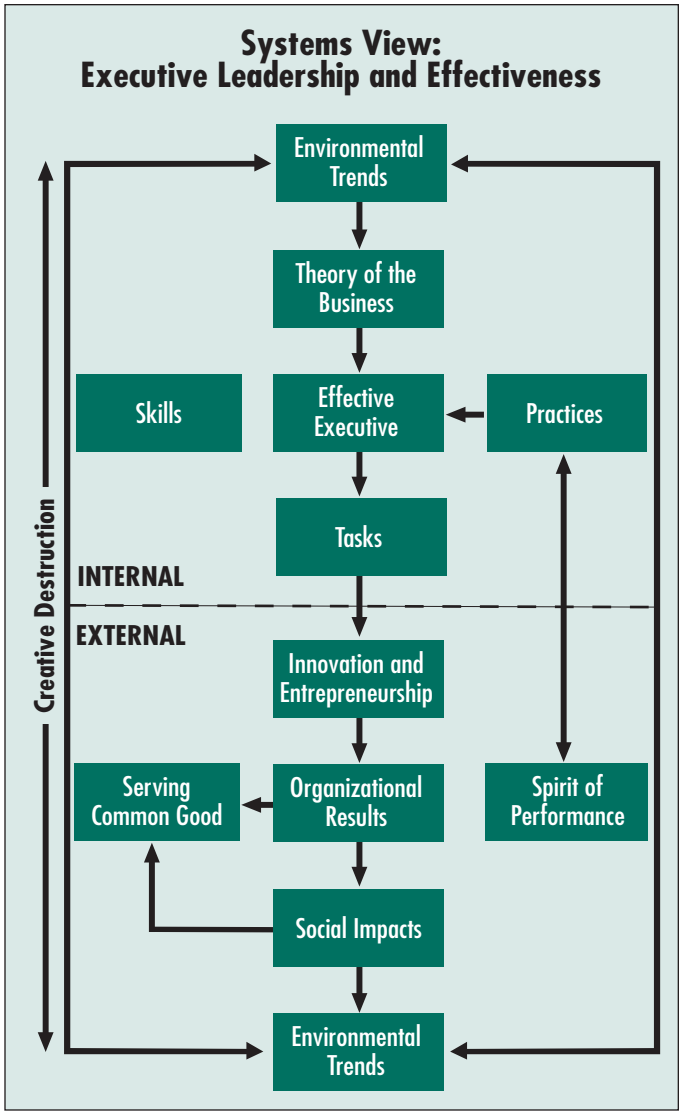
The Environment and Social Impacts

Drucker describes two different types of social impacts:

- **Negative ones an organization creates**
- **Social ills that are turned into business opportunities.**

Both impacts are important and must be managed since the first deals with what an organization does to harm society and the second with what an organization can do to help society. An organization's social impact on society is properly defined as activities, or results of activities, that are the result of an organization's pursuit of its purpose.

Detrimental impacts to society created in this process must be minimized since they are harmful to the common good and are outside the proper mission of the organization.



Executive Practices, Skills and Tasks

Executive leadership and effectiveness consists of three interconnected areas:

- Personal attributes and practices that make an executive effective
- Specific skills executives must acquire to be effective as individuals
- Specific tasks that executives must perform to make their organization effective.

Identifying the Future that Has Already Happened

Executives will have to focus much more on making knowledge work productive and the knowledge workers achieving members of their organizations, given the growing importance of both in the developed and the developing economies. This requires building on strengths and increasing the productivity of knowledge workers, and integrating these specialists into a performance whole. ■

PART TWO: LEADING IN A DIVERSE WORLD

Systems Citizenship: The Leadership Mandate for This Millennium

By Peter Senge

"The only enduring source of competitive advantage is an organization's relative ability to learn faster than its competition," wrote Arie de Geus in *Harvard Business Review* in 1988. With these words, the organizational learning movement was born. By De Geus' definition, today's organizations face unprecedented learning challenges, which we are only starting to perceive. These challenges go beyond adapting to the Internet and other new technologies or dealing with global competition. They go to the very DNA of the Industrial Age business model, a model that shapes modern societies as well.

For all of human history, societies that endured appreciated that their economies could be no healthier than the larger natural and societal systems upon which they depended. Historian Jared Diamond has shown how many one-time flourishing cultures that forgot this truism passed into oblivion, often with surprising speed. But there is one big difference today. The society in question is increasingly a global society.

As individuals and organizations, we have never had to be concerned about how our daily decisions — like the products we buy and the energy we use — affect people and larger living systems who live thousands of miles away. While De Geus' learning imperative was initially directed to individual organizations and especially businesses, the challenge of evolving to remain in harmony with our environment today applies also to larger supply networks, entire industries and whole societies. This is the message of globalization and it is indeed an alien one for all of us. We've never been here before — and the future is watching.

Societies Waking Up

Societies and their governments around the world are waking up to the fact that industrial growth as we have known it is now encountering severe and environmental limits, whose costs are getting harder and harder to ignore. For example, carbon dioxide (CO_2) in the atmosphere is 30 percent higher than at any time in the past 400,000 years, and the rate of CO_2 emissions — which itself is rapidly rising — is between two and five times the rate of which CO_2 is being removed from the atmosphere through carbon sequestration.

While environmentalists have been warning about possible CO_2 effects on global climate for a long time, the human and economic costs are starting to become hard to ignore for governments and insurance companies faced with the consequences of weather instability and spreading tropical diseases.

As these costs become recognized and their sources understood, they are starting to be allocated back to the businesses and industries where they originate.

In short, formerly "externalized" costs for businesses are starting to show up on the profit statements of insurers, health care providers and producers of diverse products and services. The era of "privatizing" profit and "socializing" many social and environmental costs is passing. These costs are growing and they can no longer be regarded as somebody else's problems at some indefinite time in the future. For more and more, the future is now. ■

Diversity Management: An Essential Craft for the Leader of the Future

By R. Roosevelt Thomas Jr.

The idea of diversity in business has undergone rapid change over the past several decades. While in the early 60s, the business use of the term was virtually nonexistent. Diversity has rapidly transitioned from necessary evil to competitive advantage for businesses that manage it effectively — an advantage that no successful leader today can ignore.

Rethinking Diversity

Putting diversity to work requires a complete rethinking of the complex concepts behind this simple word. But why now? Aren't current definitions of diversity doing the job?

Actually, they aren't. Business leaders and diversity professionals alike are increasingly concerned that the field is stuck around ideas of "representation" and "relationships"— constructs that have been with us since the mid-1960s. All are asking "Isn't there more to diversity than 'counting' and 'getting along'?"

The evidence is that there must be. But truth be told, the current reality shows that there is room for improvement. Cynicism has crept into many organizational diversity efforts and, as a result, some observers place little faith in the true motivation driving their implemen-

(continued on page 5)

Diversity Management: An Essential Craft for the Leader of the Future

(continued from page 4)

tation. They often believe that such efforts are being made only to protect their organizations from legal or public relations embarrassments, not to bring about needed change.

Ten Expectations for the Future

Specifically, there are 10 expectations for what diversity practices might look like in the future. Though the rate of evolution cannot be precisely predicted, these expectations will become a reality for tomorrow's organizations — and for their leaders.

1. Future leaders will differentiate between representation and diversity.

2. Future leaders will not think in terms of "diversity" nor will they see it as an extension of the Civil Rights Movement. Instead, they will think in terms of diversity management and view it as a craft.

3. Future leaders will define diversity management as, "making quality decisions in the midst of differences, similarities and related tensions."

4. Future leaders will not automatically assume that all racially inappropriate behavior is caused by racism.

5. In contrast to today, future leaders will be more willing to admit to having difficulty making decisions in highly diverse organizations.

6. As the trends noted above fully emerge, future leaders will be motivated to master the craft of diversity management and its key components through practice.

7. Future leaders — experienced in the diversity management craft — will become more comfortable with tension and complexity.

8. As leaders around the world begin to face their own diversity issues, future leaders will make diversity management a global craft as opposed to one confined just to the United States.

9. Future leaders will be more strategic in their approach to diversity and diversity management.

10. As future leaders master the application of the craft of diversity management in their workplaces, they will inevitably turn their attention to diversity issues within their communities and within their countries. ■

PART THREE: LEADING IN A TIME OF CRISIS AND COMPLEXITY

The Challenge of Complexity

By John Alexander

At the Center for Creative Leadership (CCL), clients are continually reminded that leadership development is never an event — it's an ongoing and arduous process. The art of leadership itself is exceedingly difficult to master.

A team headed by CCL researcher Andre Martin asked practicing managers if the definition of effective leadership has changed in the past five years. An astounding 84 percent agreed that it has. This same group, surveyed by Martin and his team for the CCL research report on "The Changing Nature of Leadership," said that the nature of outstanding leadership will shift even further over the next five years, with the "soft skills" of building relationships, collaboration and change management becoming more crucial.

Why is the very definition of leadership changing? At CCL it is believed this phenomenon is connected to the rise of complex challenges, those for which no pre-existing solutions or expertise exists. Such challenges test the limits of an organization's current strategies. They reveal the shortcomings of leadership as it is currently practiced. They create the demand for a new kind of leadership, whether one is working in the private, public or social sectors.

The Complexity of Crises

When existing strategies and tools fail — as occurred with 9/11, the 2005 hurricanes and the South Asian tsunami — something new is needed. Today's leaders are being called upon by necessity to develop responses to complex challenges brought on by unexpected or unimagined events or situations. We don't know exactly what their answers will look like, but we do know this: The best leaders of the future will embrace complexity and the skills needed to harness it.

The Rise of Complex Challenges

Beyond the extraordinary challenges posted by crises — including natural disasters and terrorist — change and uncertainty in the business, political and social environments of the United States and the rest of the world are a fact of life now. Globalization, technology and the relentless pace of change challenge the strategic and tactical skills of executives and managers each day.

The Changing Nature of Leadership

As the complex nature of challenges becomes clearer, leaders are thinking more about how to address them through collaborative and interdependent work. The CCL has found in particular that individual leaders are becoming more aware of the necessity of developing the

(continued on page 6)

The Challenge of Complexity

(continued from page 5)

soft skills needed to thrive interpersonally in the workplace. The new leadership skill set emphasizes participative management, building and mending relationships and change management. ■

Leadership Over Fear

By John Edwin Mroz

President Franklin D. Roosevelt's response to the national despair of the Great Depression was simple and direct: "The only thing we have to fear is fear itself." Today, much of the world lives in fear. Increasing numbers of people fear the destruction of their way of life due to global warming or the powerful and unwelcome influences of globalization.

Others fear that the so-called "clash of civilizations" between the Muslim and non-Muslim worlds will become an inevitability. Ever increasing terrorism around the globe, the spread of weapons of mass destruction and a renewed fear of global pandemics have added new uncertainties about our safety.

Fear breeds a search for simple truths, which in turn contributes to intolerance, alienation and extremism. This problem is a global phenomenon.

Peter Drucker reminded us a decade ago that the world had entered a prolonged period of profound change every bit as dramatic and turbulent as that ushering in the Industrial Revolution. Our world is an extremely unpredictable place where asymmetric threats make it difficult for governments to guarantee the safety of their citizens and the well being of their economies.

There are four things we must do. First, natural leaders in a world of fear and change must step up and lead themselves. Second, such men and women must imagine the possibility of change. Third, they must seek out other natural leaders who, like themselves, have had enough of watching and are willing to assert themselves. Fourth, they must set a pace that fits the context.

Leaders willing to take risks to overcome fear are all around us. Therein lies our hope for dealing with the seemingly overwhelming challenges to our planet in this 21st century. A key leadership challenge today is how to mobilize sufficient numbers of these naturally embedded leaders across the divides that breed fear and extremism and threaten our future.

It all starts with our willingness to face up to our own fears, stare them down, and find the emerging natural leader within each of us. ■

For additional information on John Edwin Mroz, go to: http://my.summary.com

Leaders of the Future: Growing One-Eyed Kings

By General Eric K. Shinseki

Leaders of the future — 2015? 2025? 2030? Do you know who will lead your business 10 years from now, or 20 or 25 years in the future? How about next week?

The U.S. Army knows who its leaders will be decades from today, they just don't know their names yet. Because the Army promotes entirely from within, it knows that it must be a premier learning organization where leadership development is a daily commitment made by leaders at every echelon throughout a high performing institution.

The Certainty of Uncertainty

The quotation, "In the Kingdom of the blind, the one-eyed man is king," and the reference to One-Eyed Kings encouraged young officers — who must grow into strategic leaders — to embrace uncertainty and to learn to be decisive.

Accept uncertainty as a given, balance risk and opportunity, find ways to generate momentum, master the transitions which always threaten to steal momentum, and retain the freedom to act whenever opportunities present themselves. These are the hallmarks of dominant decisive operations, and they are the same attributes critical to leaders of the future, whether in the military, in business or in the social sector.

The Certainty of Change

One consistent lesson that comes out of 20th century history is that the assumptions of one decade rarely carried over into the next. If you are big and the best of what you do, change — especially fundamental and comprehensive change — is nearly beyond reach.

It will not be any different in the 21st century, even with all of its promising technologies, because change is about people. Institutions don't change, people do. Change is a fact of life. You can either lead change or have it thrust upon you. That is the history of the 20th century.

Visioning is the most demanding task for any institution's senior leadership. Looking into the future is an uncertain task at best, and it requires experienced, creative and determined risk takers to deliver visions of merit.

Being more agile than one's competition is powerful in business. In the military profession, there is no alternative to being more agile, more visionary, and bolder than your competition. Simply, it is the difference between victory and defeat.

(continued on page 7)

Leaders of the Future: Growing One-Eyed Kings

(continued from page 6)

In the midst of its ongoing operations the Army continues to develop its leaders for the unseen and unknown crises that will confront the nation in the future. Sept. 11, 2001 — like Dec. 7, 1941 — is a reminder that Americans will never see risks clearly enough. That's true both in business and in the military.

Organizational competence is about growing leaders who have the skills, knowledge and attributes to make good, bold decisions in the face of uncertainty that all organizations face. The Army sought to grow One-Eyed Kings for its future, and there is a tremendously good crop in place. ■

PART FOUR: LEADING ORGANIZATIONS OF THE FUTURE

Leadership as a Brand

By Dave Ulrich and Norm Smallwood

Research shows — and experience confirms — that organizations with strong and effective leadership at all levels achieve superior business results, while organizations with inconsistent leadership achieve inconsistent business results. Effective executives can turn fledgling companies into viable competitors; ineffective executives turn once-competitive companies into takeover targets. Because leadership matters, and almost every leader wants to learn how to become more effective, the last 20 years have brought a profusion of creative metaphors and images to describe what it takes to be a successful leader.

Leadership as a Brand

The concept of brand is known to all — everywhere we go, product brands are pervasive. We buy clothes with the Nike swoosh or the Polo horse and rider. A leadership brand represents the identity and reputation of leaders throughout a company. Thinking about leadership as a brand instead of simply something leaders do offers a number of insights into leadership effectiveness and into creating sustained and consistent leadership that enhances firm value.

Branded Leadership Matters

When firms have a leadership brand they win on multiple dimensions. They win with investors. Investors will grant higher market value for similar earnings, often called intangibles. Quality of management or leadership gives investors confidence in the future, leading to a higher share price. General Electric, for example, has a reputation for great leaders. Those who leave GE to lead other firms carry that leadership brand with them and often create intangible market value. ■

For additional information on building leadership brand, go to: http://my.summary.com

Thinking About Leadership as a Brand

Thinking about leadership as a brand instead of simply something leaders do offers a number of insights into leadership effectiveness.

- ✓ **Brand** has both core and differential elements.
- ✓ **Brand** focuses on the outside/in.
- ✓ **Brand** evolves over time to meet the changing needs of the marketplace.
- ✓ **Brand** puts leadership into business terms.
- ✓ **Brand** is unique and not generic.
- ✓ **Brand** turns leadership into specific decisions.
- ✓ **Effective leadership brand** must be reflected by leaders at all levels of an organization.
- ✓ **Brand** is sustainable, not tied to any individual person.
- ✓ **Brand** must have efficacy or it will not last.

Leading New Age Professionals

By Marshall Goldsmith

Over the last 25 years, the role of leadership in large organizations, particularly in the United States, has been transforming. Several trends were beginning to be discussed when *The Leader of the Future* (1996) was published — and now they have accelerated. Several trends are causing managers to revisit their assumptions about what leadership means in a rapidly changing high-pressure, insecure professional work.

In the early 1980s, one could get the impression that corporate managers and professionals were lazy. In most corporate headquarters, you could have shot a cannonball down the hall at 5:00 p.m. and not hit anyone. Professionals and managers were working 35 to 40 hours per week. They were taking four- to five-week vacations. They enjoyed incredible security, great benefits, lifetime healthcare and guaranteed pensions.

Those days are gone! What happened?

Five factors have converged to create a new world of professional work:

- **Increased differentiation in compensation**
- **Decreased job security**

(continued on page 8)

Leading New Age Professionals

(continued from page 7)

- **Decreased healthcare and pension security**
- **Global competition**
- **New technology.**

What New Age Professionals Want from Leaders

As corporations' expectations of their professionals have increased, the professionals' expectations of their leaders have also increased. Peter Drucker often talked about the importance of leading knowledge workers — professionals who know more about what they are doing than their boss. It is important to "reverse the pyramid" and look at leadership from the perspective of the wants and needs of the professional, as opposed to the perspective of the skills of the leader.

- **Encourage their passion.**
- **Enhance their ability.**
- **Value their time.**
- **Build their network.**
- **Support their dreams.**
- **Expand their contribution.**

Leaders will need to go beyond looking at the work to be done and consider the human doing the work. ■

PART FIVE: THE QUALITY AND CHARACTER OF THE LEADERS OF THE FUTURE

Leading in the Knowledge Worker Age

By Stephen R. Covey

We live in a Knowledge Worker Age but operate our organizations in a controlling Industrial Age Model that absolutely suppresses the release of human potential. The mindset of the Industrial Age that still dominates today's workplace will simply not work in the Knowledge Worker Age and new economy.

The main assets and primary drivers of economic prosperity in the Industrial Age were machines and capital — *things*. People were necessary, but replaceable. You could control and churn through manual workers with little consequence — supply exceeded demand. You just got more able bodies that would comply with strict procedures. People were like things — you could be efficient with them. So many of our modern management practices come from the Industrial Age.

The problem is managers today are still applying the Industrial Age control model to knowledge workers. Treating people like things creates low trust, contention and rebellion. Can you imagine the personal and organizational cost of failing to fully engage the passion, talent and intelligence of the workforce in this new reality? It is far greater than all taxes, interest charges and labor costs put together!

Leadership in the Knowledge Worker Age will be characterized by those who find their own voice and who, regardless of formal positions, inspire others to find their voice.

It is leadership where people communicate to others their worth and potential so clearly they will come to see it in themselves. Therein lies a bright and limitless future. ■

The Leader Integrator: An Emerging Role

By Usman A. Ghani

The leader of the future is the Leader Integrator — an individual who breeds multiple perspectives, consciously connecting these perspectives and applying a variety of skills to establish new directions, options and solutions for the organization. Leader integrators adapt multiple roles for themselves and seek new talents and new teams to create new directions for their organizations.

As a rule, Leader Integrators move away from the traditional accolades such as, *"He is a great visionary,"* or *"She is an excellent mentor,"* or *"He is a smart implementer,"* to *"He brings myriad talents to the table and can effectively bring into play a particular role at an appropriate time."*

The Leader of the Future

By disposition, the Leader Integrator works with an inclusive attitude, incorporating individual viewpoints as well as commonalities across different personality types and thoughts.

It is the idea and the thought process that is most important to the Leader Integrator, who actually seeks out diversity to enrich every process. ■

The Lean CEO

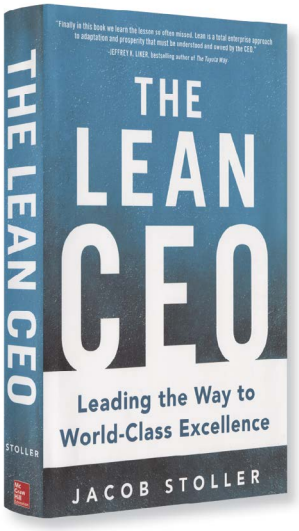
Leading the Way to World-Class Excellence



by Jacob Stoller

THE SUMMARY IN BRIEF

As organizations strive to do more with less, many are turning to Lean methodology, which is based on the same techniques that propelled the legendary turnaround of Japan's industrial sector after World War II.

The Lean CEO reveals the true power of Lean through in-depth interviews with CEOs who have gone beyond tool adoption and established Lean as a corporate-wide management system.

The CEOs tell in their own words how they applied Lean management to deliver sustainable financial results, empower and motivate employees, break down internal silos and build solid partnerships with customers and suppliers. Their testimony provides a goldmine of practical advice for managers in Lean and non-Lean organizations alike, as they share their personal insights on topics such as leading and empowering people, building transparency and trust, tuning into the customer experience and creating a learning organization.

Thoughtful, sometimes brutally frank, these leaders challenge many of the sacred cows of traditional business, such as standard cost accounting, hierarchical management, emphasis on large batches and our obsession with data and computers. Citing numerous examples from their experiences, they provide a fresh view of today's business challenges and a positive roadmap for any organization that is striving for excellence.

IN THIS SUMMARY, YOU WILL LEARN:

- How to apply Lean management to empower and motivate people.
- How to build transparency and trust.
- How to align strategic direction with day-to-day operations.
- How to instill a corporate-wide culture that promotes quality.

Introduction

One of the most promising developments in modern business history has been the emergence of the global Lean movement, which was founded on the practices that vaulted Japan to manufacturing stardom in the late 1970s. Today, the Lean approach has a track record for helping organizations do more with less, and it is rapidly gaining ground in nonindustrial sectors such as healthcare, government and financial services.

Lean's true potential to build world-class performance depends on a commitment to continuous improvement that involves every worker in the organization and requires uncommon discipline and persistence. The basic tenets of Lean, moreover, challenge many aspects of traditional management theory and call for a mindset that is foreign to most executives. Lean is therefore a rough sell in the boardroom, and CEOs who actively lead Lean transformations are the exception rather than the rule.

How Waste Became Business As Usual

Take a look at the following three scenarios:

- A recreational trailer manufacturer was forced into bankruptcy after revenues dropped 60 percent during the 2009 recession.
- A medium-sized hospital closed its doors amid rising costs, quality concerns and growing competition from larger providers.
- A manufacturer of diesel engine components, dogged by chronic delivery problems, poor labor relations and the loss of a key patent, shut down its plant and sold its assets to a large automotive manufacturer.

Scenarios like these are, sadly, not unusual. However, these three scenarios never happened. In each case, the CEO defied the odds after discovering and adopting Lean. The results were astonishing. The organizations excelled not only in terms of financial performance but also in areas such as employee engagement, customer satisfaction and influence in the business community.

To see the waste, the Lean CEOs turned much of their attention to an aspect of the organization that is neglected in modern business theory, so much so that we don't have a name for it. The Japanese, however, do have a word: *gemba*, which means "the real place." In the Lean context, this means *the place where people create a product or service that customers pay for.*

In an automotive factory, for example, gemba is the shop floor where people make cars. In a school, gemba is the classroom where teachers help students learn. Through the Lean lens, everything else — administration, finance, human resources, sales and even senior management — is there to support gemba.

Respect for the people who spend their days in gemba is one of the cornerstones of Lean. It is through their initiative that the breakthrough gains that characterize successful Lean transformations are achieved.

To empower this kind of participation, managers need to quickly rid themselves of the illusion that they know all the answers. On the contrary, Lean CEOs must be constantly inquiring and must do so openly.

Neglect of gemba and the people who work in it is behind many of the failures we hear about. To understand how managers became blind to the widespread waste in modern organizations, we have to look back in history.

The Miracle of Mass Production

The American industrial golden age began when Henry Ford opened his first factory in 1908. It took several

years to perfect the production system, but by the time it was fully operational, the Ford Motor Company was producing cars 10 times as fast as its competitors, and costs were declining rapidly.

A leading figure in industrial management at the time was Frederick Taylor, and his work defined the field for much of the 20th century.

Taylor's main preoccupation was cost reduction, and his reputation as a cost cutter became legendary. Taylor believed that for every task, there was "one best way" and promised that managers who applied his theories could determine this and "scientifically" supply all the intelligence needed to run an organization.

The key tool for cutting costs was a concept called *division of labor*. The idea is to subdivide work into simple repetitive tasks, each of which can be performed by a worker with minimal education. Thus, an organization can assign work to the lowest-paid workers.

Taylor was a strong proponent of the idea that all the thinking should be done by managers. "You are not supposed to think," he is alleged to have told workers. "There are people paid for thinking around here." Workers were treated like interchangeable cogs in a machine whose only interest was their paychecks.

In this way of thinking, the machine was the ideal worker. As machinery took over more and more of the workload, the correlation between direct labor and real product costs diminished.

By 1970, America was on a roll. Factories were buying bigger and better machines and expanding their operations. However, all this had occurred under ideal conditions during the post-World War II period.

Things started to change in the 1970s. National debt soared, the OPEC oil embargo resulted in long lines at gas stations, unemployment jumped and inflation was rising. "There is one domestic problem that all 1980 presidential contenders, including the incumbent, preach against: the disturbing decline in U.S. productivity," wrote Clare Crawford-Mason, an NBC TV producer.

Crawford-Mason contacted W. Edwards Deming to discuss the issue, and this turned into one of the most successful news documentaries in the history of television, titled "If Japan Can, Why Can't We?" At the time, Deming was an 80-year-old statistics professor who was virtually unknown in the United States.

The buzz following the show's airing kick-started a flurry of activity in the West that became known as the *quality movement*. Organizations established or grew their quality departments, consultants began to package and teach statistical quality control methods and production techniques from Japan became the latest fashion.

Deming had warned however, that the road to industrial leadership would demand a lot more than add-ons to existing management practices. His definition of total quality, in fact, called for no less than a fundamental overhaul of the way companies managed people.

Lean: A Radical New Approach to Production

By the end of World War II, Allied bombing had systematically destroyed much of Japan's industrial capability, forcing many manufacturers, including the Toyota Motor Corporation, to suspend operations. It was under these dire circumstances that Kiichiro Toyoda, Toyota's founding CEO, issued his most famous directive. "Catch up with America in three years," he said, "or the automobile industry in Japan will not survive."

Kiichiro started the Toyota Motor Company in 1933 holding a set of values, central to which was the duty to serve the people of Japan. There was also a sense of obligation to employees, which included a philosophy of lifetime employment. Toyoda admired Ford's determination to reduce waste and was greatly inspired by the continuous flow established in Ford's assembly lines, whereby all materials, labor and production equipment converged on the workplace exactly when they were needed. Toyoda coined the term "Just-in-Time" (JIT) to describe this ideal state, and this became one of the pillars of his company and the Lean movement that followed.

One employee who took Toyoda's mandate to heart was a young engineer named Taiichi Ohno. Following Kiichiro Toyoda's directive, Ohno began to reflect on what it would actually take to catch up with the United States.

Just-in-Time means that, in a flow process, the right parts needed in assembly reach the assembly line at the time they are needed and only in the amount needed. Pursuing this ideal state, Ohno realized, could serve as a powerful guiding principle for reducing waste. Each time a barrier to continuous flow was removed, waste would be automatically eliminated along with it, and efficiency would therefore be improved.

The Seven Wastes

In the Toyota Production System, Ohno put waste in the spotlight with the following formula:

Present capacity = work + waste

He went on to list seven categories of waste, which became known in the Lean world as the Seven Wastes:

1. **Overproduction:** producing more than required by the next downstream process or the customer. Ohno saw this as the cardinal sin of waste because essentially it forces all the other wastes.
2. **Time on hand (waiting)**: Workers standing idle awaiting what is required for their next work.
3. **Transportation:** Excessive movement of the workpiece or parts.
4. **Overprocessing**: more than the necessary amount of work being done on the workpiece, perhaps because of poor process design or defective tools.
5. **Inventory:** More finished goods, works in process, parts or raw materials than required by customer demand.
6. **Movement**: Unnecessary movements by workers, including bending, straining and walking to procure tools or parts.
7. **Defects:** Fabrication of a defective workpiece that will later require correction.

Ohno sensed that there was an enormous amount of waste in any manufacturing system — as much as 50 percent. He also suspected that this might be the key to catching up with American automakers.

Just-in-Time called for an uncommon level of teamwork and discipline. Supervisors became coaches who removed barriers and helped workers understand and improve their work processes. Toyota encouraged worker suggestions through a program called the Creative Idea Suggestion System, which was launched in 1951, and the broader role of workers included maintaining their own equipment.

Ohno also incorporated the concept of *jidoka*. If circumstances prevented a worker from completing standard work within the allotted time or if there was a safety issue, it was the worker's responsibility to ensure that the problem was resolved on the spot. This was initiated by pulling the *andon* (Japanese for "lantern"), a cord or lever that activated a signal light that instantly escalated the problem to a supervisor. If the problem was not resolved immediately, the supervisor pulled the andon, directing all others on the line to cease work. Jikoda was considered so important that Ohno named it as one of the two pillars of the Toyota Production system, with Just-in-Time being the other.

To manage the environment so that everything was synchronized and regulated, Ohno used a series of visual methods that gave workers instant cues about relevant activity in their environment. At the heart of this was a communication system called *kanban*. Kanban relayed the pull signal, or the trigger, to produce sequentially to all the production stages, starting with the final process and progressing back to the first. Implementing kanban throughout the Toyota facilities was a huge undertaking that took years to complete. To support visual management, Ohno enforced measures to create an orderly, clutter-free environment where visual cues could remain clear and unobstructed. Today, Lean companies use a conceptual tool called 5S to create such an environment.

If all that has been described here sounds like an impossible high-wire act, then you have understood it correctly. Perfecting a working environment that follows the Toyota Production System takes years of hard work, much of it trial and error, and calls for extraordinary discipline from every manager, engineer, supervisor and worker. This is an all-hands-on-deck journey that never ends.

West Meets East and the Unbelievable

By the 1980s, the roles had reversed: American manufacturers were struggling, and Japan had become the shining model.

In 1991, Art Byrne assumed the role of CEO of Wiremold, an electrical components manufacturer outside Hartford, Connecticut. In one of his first conversations with the company's vice president of finance, Orest Fiume, he told him that the standard cost approach of the company was terrible and it had to go.

The problem Byrne and Fiume had with standard cost accounting is that it drives decisions on the basis of past information, the proverbial managing through the rear-view mirror approach. Furthermore, because it is driven by algorithms rather than real data, it often instills the wrong kind of thinking and, even worse, the wrong kind of action.

Art Byrne: "Standard cost accounting drives companies to make things in big batches, and they absorb the overhead based on either the hours of the machines or the man-hours. And so what you find in most of those companies is near the end of the month or near the end of the quarter, people will be running machines that they don't need to run at all. They don't have any orders for the product, but that product has the most absorbtion hours in it and they want to make the financial month, and they'll do things like that all the time. And so the fact is that by running them, all you are doing is building up inventory."

This kind of formulaic thinking has very little connection with customer value.

Art Byrne: "If you walk out on a shop floor, you can't tell if you're ahead or behind. The customer is never present in a traditional manufacturing company. Instead of the customer being present, you have a forecast for the end of the month. So people spend their time trying to make the forecast even though it is not correct most of the time."

Byrne wanted to create an environment where his managers could monitor their real costs on a weekly or even a daily basis and make timely decisions that were based on how they could best help the bottom line of the company.

Art Byrne: "You're trying to improve the business moving forward. So when you want to establish targets, I think the most important thing is to try to pick those things that are going to have the most impact on changing the results going forward. Then run the business based on those targets."

Keeping Score with Real Numbers

Working with goals and targets that were straightforward and devoid of extraneous information was the cornerstone of Byrne's management strategy. Byrne ran the Wiremold business using the following five metrics:

- **Customer service percentage:** the proportion of orders that were shipped on time.
- **Productivity:** the ratio of sales to worker hours.
- **Quality:** the total reduction in defects compared with the previous period.
- **Inventory turns:** the ratio of cost of sales to average value of inventory.
- **Visual control:** defined by the rules of 5S and judged by a quality team.

The Lean metrics Byrne was using differ from what many managers are used to in that they apply to value streams, not to internal entities within the company, and specifically target waste in those value streams. Increasing inventory turns, for example, reduces the wasteful expense of holding inventory, thus improving the efficiency achieved in a value stream.

Leading on the Front Lines

Being a hands-on CEO should, according to Byrne, come with the territory. Byrne is also adamant that the Lean transformation has to be led from the top. One reason is that the change required is so fundamental that some things simply have to be decreed.

The CEO needs to be the champion of the Lean transformation, clearly articulating the direction and removing the many barriers that inevitably come up.

Art Byrne: "If you think about Lean simplistically and say this is the strategy, you say I'm trying to deliver more value to my customer, and in order to do that I have to change from batching to an organization where things flow. So all we were ever really trying to do was go from batch to flow. You could always see what you needed to do."

A New Way Out of Financial Crisis

Companies facing fiscal challenges are typically caught in a death spiral that is all about dollars: Creditors lose confidence and cut off the cash supply, the ability to deliver to customers weakens, customers defect and the cycle continues.

In traditionally managed companies, the primary weapon is triage guided by the company's financial statements. The company divests itself of the facilities, equipment or employees who are deemed to be creating the least profit. The information that drives these decisions, of course, comes from accounting.

From a Lean perspective, a key problem here is that the accounting information used to drive the decisions is only indirectly related to the activity that satisfies customer demand and makes money. Consequently, the information can be confusing, irrelevant or misleading.

One of the first accountants to take practical steps to solve this disconnect was Jean Cunningham, co-author with Orest Fiume of the book *Real Numbers* and one of the leading voices in Lean accounting.

Cunningham cites several reasons why traditional accounting isn't much help in a crisis. First of all, accounting reports are delivered after the fact and do not provide timely information that can help managers make quick decisions. Financial information can also be dangerously misleading.

When a company is seeing a significant drop in sales, for example, traditional financial statements can understate the seriousness of the situation because of the way unsold inventory is reported. Another dangerous blind spot is that standard cost accounting obscures the line between fixed costs and variable costs, leading to poor decisions about discontinuing product lines.

Rescuing a Family Business from the Brink

When Dan Ariens took over the leadership of his family's company, orders were declining, distributors were defecting and the company was sitting on a growing mountain of debt.

Dan Ariens: "I took over the business in 1998 as the CEO, and at that point we were in need of a turnaround … I would say we were a year away from closing shop."

The Ariens Company began with rotary tillers and

other farm equipment and then moved to the consumer market with a line of lawn mowers and snow blowers.

In the period leading up to the recession of the early 1990s, the company ran into financial difficulty.

Dan Ariens: "The prior CEO had designed a bonus plan that rewarded people for absorbing more overhead, but of course this was creating income that wasn't real. I took over with a ton of inventory on hand, two shifts of labor running and orders shrinking."

Ariens had studied Lean principles and knew about the dangers of high inventories. Although his scope had been limited to plant operations, he was aware that there was more to Lean than what happens on the shop floor.

Dan Ariens: "...The lightbulb for me was understanding what waste is and where it exists in organizations. It's not the waste so much in the process of making the components — it's all the other things that go around to make them ready to make the component. From the design system, to the accounting system, to the manufacturing engineering system, and the process design and the processes themselves. There are many steps before you even drill the hole."

Ariens' insight that Lean was about more than manufacturing was pivotal and revealed the scope of change that had to be made to save the company.

Dan Ariens: "It was a very stressful time, and we needed that holistic approach to change the way we did business, not just the way we manufactured. So I brought Lean to the whole company and really drove it hard from my vantage point and never let go. I was also very impatient with people who didn't get it. I used to say we're either going to change the people or change the people."

The first efforts were in manufacturing, but the Lean journey quickly began to spread from the shop floor to the offices.

Workers, supervisors and managers had built their careers by making as many pieces as possible. However, creating flow often meant that people had to slow down. The idea of scaling down production to meet demand was counterintuitive to many in the company.

Dan Ariens: "Today we have a group, and I think it's the most innovative group in this company, that's called the Ariens Right Size Machine Group. Through them, we make a lot of our own manufacturing equipment. We design it to go very slowly and make one piece at a time that fits within the demand pull."

While the work processes continued to improve the performance of the company, Ariens had to keep the auditors and the bankers happy. Previous financial reports had many of the costs absorbed in inventory. With inventories declining and fewer labor hours, overhead appeared to be increasing.

Dan Ariens: "Our biggest challenge here was to get our auditors to understand what we were doing and to get a clean and approved audit so that we could keep banking. I think it's very difficult to bridge that gap. The hardest thing internally was being able to allocate a real expense to a real owner, for instance, having a manager who owns the cost of powdered paint so that it's not part of the overhead that flows through. As the question 'Who's going to own that?' got more and more prevalent, we figured out how to quantify things like lubricants, Locktite and powder coating into our bills of materials."

Another aspect of the financial management that was holding them back was the piece rate incentive system. Being able to change a 35-year-old incentive process required a lot of trust.

Dan Ariens: "When I give talks about our Lean journey, I tell people that the biggest thing is that we have built a culture around here where we trust each other. When we have that, we know that we can take some risks on making changes in our plant. People are going to have a little patience and see it through, or they're going to be part of the team that makes it all work out. Trust is such an important component to having a Lean culture."

Capacity Without Capital Expenditure

Manufacturing capacity represents a significant investment in facilities, equipment, support infrastructure and salaried employees, all of which show up as fixed costs in a company's financials. Capacity utilization consequently becomes a bellwether for a company's financial health.

To forestall catastrophes, companies engage in various capacity planning exercises. The idea is to do the math carefully before investing in production-related resources, weighing a variety of options, such as outsourcing, partnerships, licensing and overtime. Financial analysts use a variety of formulas to quantify the risk factors and determine precisely how much capacity it is prudent to add.

The Achilles' heel in all these calculations is dependence on the dubious art of demand forecasting. When the forecast is way off, no magic formula can save the day. It is no surprise, then, that when a company is rendered insolvent

by a crisis in the economy, management is likely to blame "factors that nobody could have predicted."

There is, of course, a very different way of approaching this, and the secret sauce in it is one of the basic tenets of Lean: Instead of buying capacity, build it over time by using existing resources and investments.

Identifying and eliminating waste is the method of choice for building capacity in a Lean environment. As results confirm again and again, Lean companies, through ongoing continuous improvement, free up significant amounts of plant space, equipment and employee hours and then grow into that freed-up capacity. The resulting "asset-light" business model leaves them far less weighed down by fixed costs and consequently far more resilient in economic downturns.

A Realistic Approach to Worker Motivation

One of the most common marching orders for new leaders is to address a situation that is being presented as a workforce motivation problem. Conventional wisdom in the early 1900s was that the manager-worker relationship was inherently adversarial and that the key weapons for ensuring a productive workforce were pay and threats. Psychological research since that time has shown that human motivation is far more complex than that.

In his famous article "One More Time: How Do You Motive Employees?" the psychologist Frederick Herzberg cited numerous studies outlining a much more comprehensive view. In his two-factor theory Herzberg separated motivating factors from demotivating factors, which he called *hygiene*. True motivation, he argued, comes from conditions that cause an employee to feel challenged, trusted, recognized, valued, and able to learn and grow.

The key here is that the motivators Herzberg cited are intrinsic to the work itself. Conversely, common HR motivators such as perks, shorter work hours, human relations training and employee counseling are extrinsic and consequently do not create true motivation.

By these definitions, Lean creates the ideal environment for motivating workers. Recognition, variety, autonomy and the opportunity to learn are all intrinsic to the employee's role in a culture of continuous improvement. Furthermore, these aspects are not the results of an artificial intervention cooked up by an HR department or consultant but are based on the real needs of the customer.

There are, however, two important caveats. Lean is hard work, and for the magic of motivation to kick in, there has to be the authenticity that can be achieved only when senior management truly believes and is directly involved. Also, motivation is not a cure-all for every production problem; management must be committed to listening to workers and providing the tools they need.

Building Collaborative Management Teams

What may be the most important pillar of Lean is respect for people. In mature Lean organizations, it is a given that managers are workers like their peers on the shop floor and need clear guidelines for their activities and the right tools and processes to be successful. Furthermore, managers in Lean organizations count on their superiors to help them improve and remove barriers that stand in their way.

This calls for a paradigm shift in the way an organization is run. First of all, it requires a significant culture change, particularly with managers who built their careers by practicing top-down autocratic management.

It also requires the removal of systemic barriers that prevent employees at all levels from succeeding. Standard cost accounting and silos, for example, prevent cross-functional teamwork and often incentivize behavior that is contrary to the interest of creating customer value. Firefighting duties and wasteful activities such as paperwork can prevent managers from spending time with and supporting their people. Lack of knowledge can be the biggest barrier.

These deficiencies are far less obvious than, say, the lack of a screwdriver on an assembly line, yet they are equally debilitating. Consequently, creating an environment where managers can succeed in a predictable way is one of the most challenging tasks for a Lean CEO.

Putting People First

Bob Chapman, the chairman and CEO of the St. Louis-based industrial machinery manufacturer Barry-Wehmiller, initially saw Lean as "another quality fad" but very quickly saw the connection between Lean and people.

Jerry Solomon, VP of finance, explains: "Bob was working with a group of people on the Guiding Principles of Leadership at the time. [The one-page document lays out the company's core values, emphasizing trust, respect for individuals, teamwork and the importance of each and every employee having a meaningful role in the company.] ... Bob came to the realization that the Guid-

ing Principles of Leadership are absolutely of paramount importance, but there really is no, for lack of a better word, delivery mechanism or no distribution system with which to deliver them throughout the company. And Lean was a wonderful delivery mechanism if done right... By integrating the two, we could have a sustainable model that really brings the respect for people element that is sorely missing in a lot of Lean transformations."

Bob Chapman: "We decided that we were going to approach Lean very differently. In fact, we decided that the word *Lean* gave the wrong message. Instead, we called it *L3,* an acronym for Living Legacy of Leadership. This reflects our principles, so we built our own process around Lean based on that idea."

The vision document, subtitled "The Merger of the Guiding Principles of Leadership and Lean Enterprise," reinforces the Living Legacy of Leadership, with emphasis on pillars of Lean culture such as respect for workers, continuous improvement, cross-functional cooperation and daily communication.

As Chapman points out, the vision bets strongly on the sincere desire of people to make a positive contribution in the workplace. In other words, if a company removes the barriers that prevent employees from realizing their potential, the employees will do the rest. Furthermore, Chapman is adamant that providing fulfilling work for employees must be the number one objective that trumps all others: Treating people well cannot be a means to some other end.

Building the Learning Organization

Transforming an organization to one that truly learns and adapts is a demanding proposition for the management team. To succeed, the CEO must provide clear direction for employees and at the same time accept an atmosphere of considerable uncertainty. Piloting a ship decisively is tough when you do not know the route.

One thought leader who has studied this role carefully is Kevin Meyer. Trained as an engineer, he became a Lean consultant. He spent eight years as president of Specialty Silicone Fabricators (SSF), a midsize medical-device fabricator. Although his prior experience in engineering and with medical devices gave him a good understanding of the company's processes, Meyer knew that the knowledge the employees had accumulated was critical to any strategy.

Kevin Meyer: "The people had much more experience with the company and the product than I did. They could come up with solutions that were better than what I could just order based on other backgrounds."

Lean thinking was new to the employees, however, and Meyer needed to have them on board to move forward.

Kevin Meyer: "I don't think it's possible for an organization that hasn't been exposed to a Lean operation to really see it. They can hear, 'Yeah, we can reduce cycle time and waste,' and all those kinds of things, but Lean is one of those things you've got to experience to truly understand the power ... Most of the time, I guided people and they learned. And I think the Lean transformation may have taken longer because of that, but I think it became more rooted in the culture then."

Conclusion

Lean sets the bar high for CEO accountability. In brief, Lean CEOs

- Are active on the front lines;
- Are stewards of a companywide transformation;
- Create a culture of trust and empowerment;
- Exercise discipline and constancy of purpose.

There are many ways of explaining why lean organizations achieve extraordinary results. The two primary reasons for Lean success stand out: Lean brings out the best in people, and Lean gets leaders in touch with reality.

As organizations face the burning platforms inherent in a global economy, the community-building aspects of Lean may prove to be even more important than Lean's utility at cutting waste.

In the end, Lean is about people. As many Lean CEOs have said, once people get behind a purpose, there is no limit to what they can do.

The Life Cycle of a CEO

The Myths and Truths of How Leaders Succeed

By Claudius A. Hildebrand and Robert J. Stark

Claudius A. Hildebrand, PhD, coaches and advises CEOs and future leaders to thrive and outperform in their roles. He leads Spencer Stuart's CEO Performance Analytics and is a regular contributor to Harvard Business Review. His work on mindsets and social networks was awarded "Best Article" by the Academy of Management.

Robert J. Stark is a trusted advisor and coach to CEOs and boards. He helps CEOs outperform and CEO aspirants prepare for the role, and guides boards through value-creating CEO transitions. His insights appear frequently in business publications including Harvard Business Review.

A Book Review by Soundview

Navigate the Storms of Corporate Life

In their book, ***The Life Cycle of a CEO: The Myths and Truths of How Leaders Succeed***, Claudius A. Hildebrand and Robert J. Stark set out to describe the typical life cycle of a CEO. In doing so, they detail challenges and benefits of each of the stages they set out to describe. For Hildebrand and Stark, a CEO's success starts well before they actually attain that position. Once in the CEO position, a leader must be careful to avoid pitfalls inherent in the position as they lead their company to greater growth. Finally, as a CEO's tenure nears its end, they must then begin to look towards their legacy.

Ascent and Launch

The first step on the way to becoming a successful CEO actually starts years before a person is ever named to the position. It begins in the training they seek out and receive in the sometimes years prior to the appointment. Hildebrand and Stark state that "the best preparation for success is putting yourself through a rigorous and highly intentional process of personal evolution," and part of this requires a person to seek out varied roles to help fill in knowledge and experience gaps. No new CEO will have learned all they need to by the time they win the title, but they can make considerable strides in getting there. Hildebrand and Stark claim that "the surest path to success is not a linear ladder climb but a winding route that involves bold and often risky 'investment moves' to gain breadth as well as depth of experience." This can be seen through Terry Lundgren of Macy's. At one point he was the CEO at Neiman Marcus but resigned from that position to take a position as divisional CEO at Federated Department Stores where he stayed for three years before being named chief marketing officer. After this investment of time, he was named CEO of the company that has been renamed Macy's.

Sometimes employees switch companies to gain the experience they need and desire while other employees choose to stay with the same company. There is wisdom in this move as "76 percent of CEO appointments have been of internal candidates" within the past twenty years. Just because a person stays at one company, however, does not mean they can stagnate. People

choosing to move up the ranks within one organization must be willing to move "rapidly into many different functions and [take] on particularly challenging roles."

Some of the skills people seeking leadership positions need to hone are their influencing skills. These skills are important because companies today are staying away from the "highly directive, command-and control style of leadership" that dominated the past century. Now companies seek out leaders with soft skills who can "empower and inspire people." Potential leaders must be willing to put themselves through uncomfortable growth processes in order to acquire these skills.

Once in the position of CEO, a person can often find themselves lonely. This is because many people do not share as openly with a former coworker once that coworker has taken on the position of CEO. Additionally, there is certain information that CEOs cannot share with many people. Furthermore, very few people understand what it is like to be at the helm of an organization. Because of this, Hildebrand and Stark recommend that CEOs befriend CEOs of other companies who share the struggles and challenges they, themselves, face.

When a person takes on the role of CEO, much changes. Instead of having a single boss to report to, now the CEO has to report to a board, and this requires navigating politics and relationships with numerous different people. In addition, they may find that they now spend a large portion of their time working with stakeholders rather than actually running their business. This can prove quite challenging for the new CEO. Yet another challenge new CEOs face is outside pressure which could come from political figures, regulators, or any other of a number of sources, none of which are within the control of the CEO and not all of which can be planned for.

To be successful in this new role, a new CEO must not only learn to juggle the aforementioned external demands with internal demands, but they also must learn to focus on both the long term and the urgent needs of the organization. This requires a balance between decisive action and taking the time to learn all that is necessary about the company and the situation. This commitment to learning is crucial because a successful new CEO has much to learn about all aspects of the business. Hildebrand and Stark recommend new CEOs go on a listening tour to hear from people at all levels of an organization, and they encourage asking questions and listening to the answers during these tours. Not only does this help the CEO learn the business, but it also conveys respect for other members of the organization. The early stages of a CEO's tenure are important and stressful as all of this must be done at the same time as a new CEO learns to navigate new relationships with board members and must evaluate and form the executive team. Hildebrand and Stark maintain that "Doing all of this early spadework is so important to flourishing as you move forward."

Calibration and Reinvention

While a CEO's first year is ripe with challenges and opportunities, by the time a CEO reaches their second year of tenure, the honeymoon phase has likely worn off, and they are at risk of encountering a sophomore slump similar to those writers and musical artists often encounter. Hildebrand and Stark have several recommendations for second year CEOs that can help them navigate the pitfalls particular to this career stage. The first is not the "overreact to overreaction." Oftentimes new CEOs can solve relatively easy problems during year one, but longer term or more difficult changes take time. At this stage, transparency is important as is giving off the impression that the situation is under control.

To maintain support during a difficult sophomore year, Hildebrand and Stark recommend further deepening bonds with the board. Furthermore, they recommend acting on well-informed intuition. This intuition needs to be informed by "rigorous data analytics." Also important is combining intuition with that of other people even though it will ultimately be the CEO who is responsible for making the decisions. In addition, it is important for CEOs to continue to do fieldwork and observations. Finally, it is important to pay attention to the rate of change. While sometimes it may be necessary to push employees beyond what they can comfortably manage, in general, it is important to be in tune with key stakeholders and move at a pace that works for the organization. When looking at what moves to focus on, Hildebrand and Stark quote a study that states that "the highest performers relied most on these five [early moves]: operational improvements, launching new products, improving customer relationships, increasing employee engagement, and culture change."

By the time a CEO has reached his or her third year in the position, it is likely that they have taken ownership over the role. The influence of the former CEO has likely declined, and it is at this time that the new CEO can now use "the credibility they've gained by successfully navigating the challenges of their first two to three years – [and] leverage it to push vigorously for big advantages." Hildebrand and Stark state that often the most successful CEOs initiate a new strategy around three or four. Despite the track record a CEO may have developed by this point, they still may face considerable pushback from key stakeholders. Hildebrand and Stark tell the story of Terry Lundgren, CEO of Federated Department Stores. Numerous market forces made it evident to him that the company may need to change the name of its Marshall Field's stores to Macys. This move had the potential to greatly anger certain segments of customers, particularly those in Chicago. Despite the fact that his board was only half in his favor of this move and despite the fact that it was a big risk, he believed it was a necessary one to take because he believed "the status quo is more" dangerous. This combined with other key changes including those involving omnichannel selling led the company to success. In such situations, a CEO should expect considerable pushback even if the decision is ultimately a positive one.

Hildebrand and Stark write about how important it is for a CEO to understand if they are a marathon, mid-distance, or sprint runner. In general, marathon runners and sprinters performed better than mid-distance runners. Knowing your personal style is important in determining career trajectory, as marathoners may do better staying in a role longer while sprint-

> *...it is important for CEOs to focus on both confidence and humility.*

ers may find it is in their company's best interests and their own career's best interest if they do not overstay their welcome in the role. It is also important for board members to understand who their CEO is so they can determine how long they wish an individual to stay in a position.

Complacency

As leaders move on from their first three years into later years of tenure, Hildebrand and Stark warn of the threat of complacency. Hildebrand and Stark write how "even the most talented and experienced leaders, who've successfully navigated through many challenges, may overlook or misinterpret arising threats or fail to perceive them at all." Part of the reason problems can arise even when new leaders and experienced board members can see them is that CEOs often have even more pressing concerns that they focus on over those that are burning more slowly. It is never possible to focus on all problems at one moment. In addition, some problems are harder to see by those in the C-suite who may be viewing matters from a distance.

Another problem that can arise after the first few years is over confidence. When a CEO has a trail of successes, it is easy to fall into overconfidence. This can lead to complacency because people start to take success for granted. Decision-makers tend to make decisions that reinforce the status quo, and this can be even more likely when a company is in the throes of a successful streak. Executives can also fail to break free from the status quo because they spend much of their time with the same group of executives, limiting their insight. One way to overcome this is for CEOs to sit on the boards of other organizations. While this might not be possible in the earliest stages of a CEOs career when they have little to no extra time, this sometimes becomes more feasible after a few years in the role.

To overcome some of these pitfalls, it is important for CEOs to focus on both confidence and humility. Confidence is important because it breeds confidence in others. It must be tempered by humility, however. Part of cultivating humility is being aware of factors outside of your control that have led to your success. It is also important to remember mistakes as well as successes.

Legacy

While the general consensus is that a CEO may be best to step down from the position after ten years, Hildebrand and Stark detail multiple different CEOs who stayed in the position for considerably longer and continued to be a positive influence for their organization. Indeed, there are benefits not only for the organization, but for the leader, themself, to remain in a position for longer than a decade. They write, "The Legacy years are distinctive for their reliability. Leaders in their Legacy stage more consistently deliver strong results." One of these benefits is the ability to see earlier plans come to fruition. For example, Dave Cote said that he would stay on as CEO of Honeywell for the ten to fifteen years he believed it would take for his transformation of the company to come to fruition. He did, indeed, stay on for fifteen years and was able to see the remarkable turnaround he spearheaded.

The Legacy years can be a difficult time because of two different priorities. First, a CEO knows that they must continue to innovate if they want their organization to remain strong. Second, they must be thinking about who will be succeeding them in the position. This latter priority requires them to be forming the leaders that will come after.

Still, when thoughts turn towards leaving the CEO role, there are multiple obstacles that individuals may face. One of these is ego. When an individual has been in any role for a long period of time, it can start to take up an oversized portion of their identity. To give up the identity of a CEO and to give up perks which may include such extravagances as company jets, giving up this identity can be quite jarring and even terrifying. Despite this challenge, many CEOs are able to successfully transition into rewarding ventures after they leave their organization. For some individuals, this may mean taking on a CEO role at another company. For others, it can mean focusing attention on previously neglected areas of life. Still others take the skills and talents they put to use in their careers to use in other areas of life solving other problems in society. In such a way, leaving the role of CEO may alter one's sense of identity, but it does not need to destroy it nor does the departure need to be a departure from meaningful contributions to society.

Private Equity

Hildebrand and Stark move on to discuss the differences between the role of a CEO in a public firm versus that of a CEO in a private equity firm. As they state, "Among other things, the PE firm sets a more ambitious timeline for improving results and generally partners more closely with the CEO than a public board does in setting the company's course and executing to achieve those results." In short, the board is much more involved in both strategy and operations in a private equity firm. In addition, while the CEO of a public company reports to an entire board, the CEO of a private equity company reports directly to the firm's partner. Despite the differences between public organizations and private equity, CEOs of both types of organizations can learn from each other. It is crucially

important for a public CEO considering a transition to private equity to understand the differences between roles because not all people are suited well for the position.

One difference between S&P 500 companies and private equity is where they go to search for their talent. S&P 500 companies hire from inside for the CEO position 76 percent of the time. This stands in stark contrast to how portfolio companies hire as they hire from the outside 75% of the time. Hildebrand and Stark note how this can create difficulties for organizations when people primed to take a CEO position at their own company decide instead to move to private equity. Oftentimes the prospect is moving to a lesser known company, but they see the leap as one worth making because they will not face as much scrutiny from public markets and they are not beholden to quarterly reporting. Because of these benefits, private equity is finding it easier to hire CEOs than it did in the past. Those who "thrive under pressure and welcome close collaboration" may find that "the PE Life Cyle can be an exhilarating and highly rewarding journey."

Along with these benefits, however, come some downfalls. One of these is that private equity CEOs do not have as much autonomy as their public counterparts do. In addition, they face tremendous pressure to produce results immediately. Because private equity wants to see changes quickly, "73 percent of PE CEOs are replaced at some point during the holding period, most often within the first two years." Hildebrand and Stark describe a life cycle that the CEO will go through. The first is "Proof of Permanence," and this stage is much more intense for private equity CEOs than it is for their public counterparts. The second stage is "Pivoting to Growth" which requires a CEO to grow and evolve. They then must move on to the final stage, "Executing the Exit."

Transitions

As Hildebrand and Stark previously wrote about, it can be hard for a CEO to make the decision to leave, but this does not change the fact that if a company will continue on into the future indefinitely, the CEO role must change hands. As they end their book, they discuss the importance of boards looking for successors in order to protect the future of the company. They explain how important it is for boards to seek out their biases, so they can find candidates who may otherwise be overlooked.

This transition to a new CEO brings to a close the life cycle of a CEO that Hildebrand and Stark explain started years and maybe even decades before a person ever enters that role. The Life Cycle of a CEO: The Myths and Truths of How Leaders Succeed helps explain this life cycle to those who aspire to one day enter that role. It guides readers through the challenges that a CEO can expect to face at every step of the journey. It then goes further and helps the reader understand general steps that can be taken to overcome these challenges. The book goes beyond theory by detailing specific CEOs and companies and the successes and missteps they have taken, making the book a solid resource for those aspiring to be a CEO, those currently occupying that role, or those working closely with CEOs in their own organization. Finally, it can be helpful for those serving on boards when it details steps boards ought to take to hire new professionals for the role which requires them to become intimately familiar with the candidates.

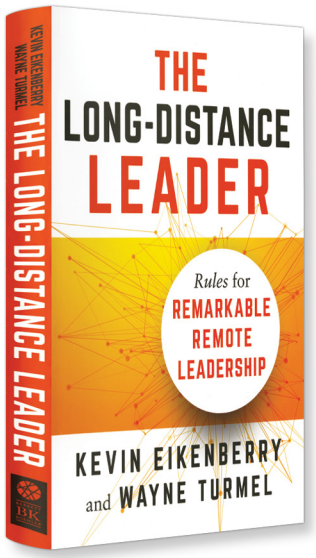
Leadership

The Long-Distance Leader

Rules for Remarkable Remote Leadership



by Kevin Eikenberry and Wayne Turmel

THE SUMMARY IN BRIEF

As more organizations adopt a remote workforce, the challenges of leading at a distance become more urgent than ever. In *The Long-Distance Leader,* the co-founders of the Remote Leadership Institute, Kevin Eikenberry and Wayne Turmel, show leaders how to guide their teams by recalling the foundational principles of leadership, whether their teams are scattered globally or just working from home a few days a week.

The authors' "Three O" Model refocuses leaders to think about outcomes, others and ourselves — elements of leadership that remain unchanged whether employees are down the hall or halfway around the world. By pairing it with the Remote Leadership Model, which emphasizes using technology as a tool and not a distraction, leaders can navigate the terrain of managing teams wherever they are.

With models and strategies that ensure projects stay on track, keep productivity and morale high, and build lasting relationships, *The Long-Distance Leader* is the go-to guide for leading effectively, no matter where people work.

IN THIS SUMMARY, YOU WILL LEARN:

- Why leading remotely requires you to lead differently.
- How the Three O Model and the Remote Leadership Model work together.
- To choose the best tool for long-distance communication.
- To practice servant leadership while also taking care of yourself.
- The three key questions for developing Long-Distance Leaders.

THE COMPLETE SUMMARY: **THE LONG-DISTANCE LEADER**

by Kevin Eikenberry and Wayne Turmel

The authors: Kevin Eikenberry is a world expert on leadership development and learning and is the Chief Potential Officer of the Kevin Eikenberry Group. He is creator of the Remarkable Leadership Learning System and a co-founder of the Remote Leadership Institute. Wayne Turmel is a co-founder of the Remote Leadership Institute. He has helped organizations develop the communication skills to lead people, projects and teams and adjust to remote working.

The Long-Distance Leader: Rules for Remarkable Remote Leadership by Kevin Eikenberry and Wayne Turmel, © 2018 by The Kevin Eikenberry Group, has been summarized by permission of the publisher, Berrett-Koehler Publishers, Inc. 224 pages, ISBN 978-1-5230-9461-5.

Getting Started

Rule 1: Think about leadership first, location second.

Leading a team at a distance is first and foremost about leadership, and the principles of leadership haven't changed — they are principles.

What has changed is that more people are working in different places and perhaps at different times. Given those changes, how we apply the timeless principles of leadership in this new world matters a great deal — for the team members working at a distance, for you as their leader and for the organization that you all serve.

The Remote Leadership Survey, conducted in 2017, examined more than 225 managers who have at least part of their team working remotely. The results show that challenges for remote leaders very closely mirror those for managers in any situation. The survey highlights challenges that arise because of the distance between people and the use of technology to bridge those gaps.

Four common questions that remote leaders often ask themselves are,

- How do we know people are really working?
- Are people getting enough social interaction?
- Are we getting good feedback when we need to consider options?
- Can we be as effective a leader as when we're co-located?

Leaders are making things happen in this new environment because they are working longer and harder. They want to succeed in the virtual world, but they're doing it through effort and guesswork. There is a better way.

Rule 2: Accept the fact that leading remotely requires you to lead differently.

Today, according to the Project Management Institute, 90 percent of project teams have at least one member (usually more) who aren't co-located with the rest of the team. Nearly 80 percent of white-collar supervisors have at least one direct report who works in a different location — at least part time.

There are two major repercussions for leaders as a result: First, the communication methods that enabled us to succeed (if we've been around for a while) have changed. You may be terrific in a face-to-face meeting . . . but how many of those will you have today?

Second, the notion of a leader's sense of isolation is no longer simply emotional. You're not only lonely because you have the sole responsibility for decisions, or the weight of authority or feel responsible if people lose their jobs — you're often actually physically alone.

But while there have been significant changes to the way we lead, the act of leadership itself hasn't really changed all that much. This is a first-order change, meaning we need to do the same things but in a different way. We need to do something faster, smarter, using different tools, but the task at hand is fundamentally the same.

Rule 3: Know that working remotely changes the interpersonal dynamics, even if you don't want it to.

Whether we're talking actual physical presence or "virtual presence," where you are available and visible to your people, "being seen" is critical to leadership and suffers in a long-distance relationship. Virtual communication changes the interpersonal dynamic, even if you don't want it to.

When you speak to someone face-to-face, you get instantaneous feedback. The broad smile of acceptance

or the furrowing of a brow tells us we need to adjust our message, repeat it, check for understanding or get more information before we proceed. We constantly and naturally adjust our messages on the fly based on those real-time responses. In a world where those immediate cues are missing, you must ensure your message is easily understood and that you find other ways to receive critical cues.

The basic needs of humans don't change, but the context of working locations may make some needs more important or obvious than they were in the past. If you have team members teleworking from their home, they may have interaction needs that were previously met in the workplace that now are missing. As a Long-Distance Leader, you must find ways to meet those needs, because as those needs are met, people are better able to focus on and complete their work successfully.

Models That Matter

Rule 4: Use technology as a tool, not as a barrier or an excuse.

The Remote Leadership Model depicts three interworking gears that work together to propel remote work. The largest gear is "Leadership and Management," which is the work you were hired to do. The second, smaller but critical gear is the "Tools & Technology" you must use in order to make the work happen at distance. Finally, the smallest gear is "Skill & Impact" — the ability to use those tools well.

The Leadership and Management gear reminds us that our job as leaders — the leadership and management behaviors we are expected to exhibit — are the same as they've ever been.

The Tools and Technology gear is perhaps the most important difference when leading remotely. Leaders are expected to exhibit all the traditional leadership behaviors and do it using tools and technology with which they might not be comfortable. That's a bigger deal than you might think. What tools do you have at your disposal to help get the job done? Are you using the right tool for the right job? Do you rely too much on the tools you're comfortable with?

The Skill and Impact gear is the simplest concept, the easiest one to maintain, yet often the one that can cause the biggest problems. Choosing the appropriate tool for the job is critical. But if you can't use the tool you've chosen effectively, all the hard work and good intentions in the world won't get the job done.

Rule 5: Leading requires a focus on outcomes, others and ourselves.

The Three O Model of Leadership outlines three areas of focus all leaders must recognize and use to reach their maximum success. This model is a more complete picture of the biggest gear in the Remote Leadership Model.

Outcomes — you lead people with the purpose of reaching a desired outcome. For a Long-Distance Leader, this focus on outcomes is even more important and can definitely be harder, for several reasons: isolation, lack of environmental cues and potentially less repetition of messages.

Others — you lead with and through other people to reach those outcomes. Long-Distance Leaders focus on others because you can't do it alone anyway; you win when they win; you build trust and relationships when you focus on others; you are more influential when you focus on others; and team members are more engaged when you focus on them.

Ourselves — you can't leave yourself out of this model. While leadership is about outcomes and other people, none of that happens without you, whether you like it or not. Who you are and how you lead is important wherever your people work, but when you are leading at a distance, some of this is less transparent, and your beliefs and assumptions are even more crucial.

Achieving Outcomes at a Distance

Rule 6: Leading successfully requires achieving goals of many types.

As a Long-Distance Leader, you need to be aware of, think about and help your teams reach all of the different outcomes in the organization.

Organizational outcomes must be crystal clear so you can help your team members (individually and collectively) move toward successfully achieving them. How clear are the targets? How often do you think about them? How often does your team discuss or review these targets to track progress?

Team outcomes. When your team is in the same location, you catch side conversations and parking-lot banter and have many ways to reinforce and clarify the goals. When you have team members working on their own, these clarifications don't happen easily. People must know how what they do fits into the work and success of the team.

Personal/individual outcomes. Remember that working remotely can be like living alone on an island. There is less interaction, and none of it happens serendipitously.

Without solid, clear targets, individuals can drift, losing sight of both the big picture and their role, too. That's why tools like electronic dashboards, intranets and online project management systems are so important — they provide visibility even when people are miles apart.

On a daily working basis, perhaps more important than goals are expectations. Expectations aren't just about the "big G" goals or the "what needs to happen." They are about how the work gets done: the rules for working together, the way you'll support and help each other, what tools you'll use and what good communication looks like.

When the expectations are clear and understood, the chances people will be successful are higher. Furthermore, there's a better chance the outcomes described above will be reached.

Rule 7: Focus on achieving goals, not just setting them.

Most everyone agrees that goals should be SMART (specific, measurable, actionable, realistic and time-driven). People find two of these criteria the hardest to master and the most difficult to make work from a distance: making goals measurable and determining what realistic looks like.

To make the work of others more measurable, ask how else you can quantify the effort and contributions of others. These questions might help: What are the quantity components of the work? How does time factor into the success of the work? How is the quality of the work determined? When working with team members who are remote, setting measures in smaller chunks can be even more important. When people work alone, in their own bubble, and the targets are too big, it is easy to let too much time pass before realizing the need to course correct.

A realistic goal is one that stretches your belief, yet you can create a workable real-world plan that might allow you to reach that goal. To make the goals of your remote team members more realistic, provide the needed information; expect engagement; get their thoughts first; modify with your thoughts, if needed; and gain agreement.

Rule 8: Coach your team effectively regardless of where they work.

Coaching is an area that Long-Distance Leaders routinely feel they could improve. Time seems scarce, conversations can be uncomfortable or seem more difficult at a distance, and leaders often don't feel confident that they're doing it well.

There are two big reasons coaching remotely feels more complicated and stressful: 1) Every interaction needs to be conscious and intentional; 2) Communicating through technology creates mental and social obstacles that don't exist face-to-face in person.

What follows is designed to address these two issues that are particularly troubling when you're at a distance.

Make sure it is truly a real conversation. Too many coaches do too much of the talking too much of the time. If you want to be a better coach, you must create a real two-way conversation with the other person about their behavior and results. The best way to do this is to ask them first, and create a conversation with them speaking first.

Have a process, and make coaching consistent and frequent. Use your webcam. We rely on visual and nonverbal cues to help us communicate. Our brains crave visual connection to the people we speak with. Webcams help mitigate the fact that you're not in the same room.

Finally, follow up. When people aren't seen, you can't rely on spontaneity; you must be focused and intentional about all your follow-up.

Engaging Others

Engaging others is one place where working remotely really becomes complicated and radically different than the ways we worked before. *Leading remotely requires influence more than command*. There are levels of accountability, trust and proactive communication that, while desirable in a traditional workplace, are absolutely critical when you're not in close physical proximity. How we engage others in a digitally connected but physically isolated world will largely determine whether you hit your goals and how stressful it will be along the way.

Rule 9: Communicate in the ways that work best for others rather than based on your personal preferences.

One of the most quoted adages of all time is known as the Golden Rule: "Do unto others as you'd like them to do unto you."

When everyone works in the same location, it's much easier to pick up the signals that tell us how to work with other people. You learn who's a morning person and who isn't. You can tell who the extroverted, chatty people are and who are the people sitting at their desk with their headphones on, just plowing through their work.

When working and leading at a distance, some of these cues are missing, so you might tend to work from your assumptions, personal preferences and your more limited history with the other person.

So let's modify the Golden Rule into the Golden Suggestion: Lead others in the way that works best for

them. Assessments like DISC, Myers-Briggs, Insights or Strengths-Finder can help you and your team identify the areas where you mesh together, as well as where there may be sources of challenge.

Consider people's preferences, and ask people how they want to work with you. Make sure that when you're seeking this information, you phrase it as a neutral question about their preference. For example: "How can I help you be successful? I want to support you and help you stay on track." "How often would you like for us to have a one-on-one?"

Rule 10: Leading successfully requires an understanding of what people are thinking, not just what they are doing.

Politics, although usually applied to ruling a government entity, is simply the dynamics of trying to reach decisions and move an organization toward a goal.

Being separated from those with whom we work or lead can present political challenges. In particular, leaders need to see and be seen. "See" means gathering the information needed to understand what's going on within the organization. "Be seen" refers to how others get their information about and from you as the leader.

First, you need to be aware of how you gather information. If all your information is coming from the same three sources or you're trying to understand how people work together strictly from email threads, you are giving yourself limited data on which to base decisions. Consider gathering information more widely and in a variety of ways; then process that data into a clear, accurate picture of what's going on around you. Ask more people, scan more sources, and be more alert on conference calls and virtual meetings to get a clearer picture of reality.

As a leader, be more aware of the impressions you make. If people know you mostly as a signature on an email and not a real person, you are constraining their ability to get a positive, accurate impression of you and what you're trying to accomplish — and why. As a leader, are you being seen often enough? How are you visible to your team? And what are they seeing (and how do you know)?

Rule 11: Building trust at a distance doesn't happen by accident.

When working remotely, it's foolish to say that trust is more important than when you are all working in the same location. What's different when working remotely is that trust is harder to build and more easily broken.

The Leadership Institute has identified three components necessary for high levels of trust to exist: common purpose (do you and the people you lead have the same purpose?), competence (do you believe that the people you lead are competent?) and motives (are people willing to go the extra mile?). The more alignment of these three components, the more trust will exist.

A Long-Distance Leader does some very practical things to help build trust as a team and between team members. Use meetings strategically. Build in time for people to really see how smart the team is. You could try showcasing one person per meeting, letting them talk about their work, or highlighting their strengths for them. Share praise in public, and delegate in public. When assigning tasks, the perception of fairness is as important as equality itself.

Use technology to build relationships. Synchronous tools like webcams allow people to put faces to names. Research at DePaul University shows that when we know the other person's face, there's a decrease in negative behaviors like lying, exclusion and being overly aggressive. Encourage the use of webcams, especially one-on-one. You can also use asynchronous tools like SharePoint to showcase task status and expertise.

Rule 12: Identify the leadership results you need; then select the communication tool to achieve them.

Long-distance leadership is mostly the same as traditional leadership, except for the pesky technology. That's an awfully small hinge swinging a terribly big door.

There's a simple tool to help people focus their thinking about which tool to use when (and how). In 2001, the Swiss/German researcher Bettina Büchel created a simple matrix that explains this concept: For communication to be effective and appropriate, you want to strike the right balance between richness and scope.

We all know humans communicate in multiple ways. Our tone of voice, the expression on our faces, our body language and the word choice we use all help us interpret a seemingly simple message. With Büchel's model, the best example of rich communication is a one-on-one meeting over coffee. You and the other person are in physical proximity, you can see and hear each other, and you're getting all the nonverbal, visual and social cues you need to interpret the other person's message.

Yet it's impractical to meet face-to-face every time we need to communicate with somebody. So every time we pick up the phone or fire off an email rather than get in the car, or hold a videoconference instead of hopping on a plane, we're sacrificing richness in favor of scope.

Email is the perfect example of a tool with great scope. Thousands of people receive the same message at the same time (theoretically, at least). You can't see the reactions of your reader, hear their wails of anguish or

shouts of joy, or answer their questions in real time. You don't know if you've been understood correctly or if people have bought in.

As a leader, be mindful of your messages and communication goals; then choose the right tool for the task. Web meetings are a good example. Let's say you have Skype for Business as your daily collaboration tool. Web meetings are in the middle ground — fairly rich with good scope. In fact, depending on how they are used, they can be quite high in richness (e.g., one-on-one video calls, coaching and training) or have terrific scope (the dreaded but often useful "all-hands meeting"). But generally you are sacrificing one factor for the other based on how you use the tool.

If you need to brainstorm effectively, you might want to have small groups using webcams and full participation with the online whiteboard. You may even want to record the meeting for later use or to include those who couldn't attend. That leads to surprisingly rich communication. On the other hand, if you're not using webcams and have a hundred people online, you might get your message out (high scope!) but will have little real chance to engage people, get input, answer questions in real time or gauge your participants' reactions.

This doesn't make that application wrong. The point is to be mindful of what you're trying to get across, to whom and how "richly" it needs to be done.

Rule 13: Maximize a tool's capabilities or you'll minimize your effectiveness.

When you realize you must build trust, communicate clearly and have productive meetings, you need to use the technology at your disposal. That requires choosing the right tool for the right job (by balancing richness and scope) and then using the chosen tool as effectively as possible.

Asynchronous communication allows you to get the information when you need it. In a distributed workplace, a central repository of on-demand information is needed. Asynchronous tools include the following:

Video and recorded messages. Video allows you to add a visual component to your communication. Rather than a broadcast voicemail, it is almost as easy to push "record" and use video.

Common file locations. Tools like SharePoint, Google Docs, Basecamp and other products allow a permanent, easily accessible and searchable central warehouse for information.

Email is best used you need greater scope, you need a permanent record and the message is complete.

Synchronous communication happens live — at the same time for everyone involved. Synchronous tools include the following:

Webcam and video chat. These are the ultimate remote, one-on-one, see-and-be-seen tool. Many people think that a webcam is used best to "broadcast" messages, and it's certainly useful for that, but it is probably more useful in one-on-one situations.

Text messaging. Texting is useful because it utilizes the device your people are most likely to have on them at any time of day or night: their mobile phones. Texting can work for business. It's how a good portion of your team functions in everyday life. Texting is best used when the message is time-sensitive.

Telephone and conference calls. Although the phone is the tool you "grew up with" in the business world, it isn't always the most effective way to communicate. Sometimes people can't hear you well, are taking the call where they can't speak openly or are multitasking.

Teleconferences are notoriously bad for getting equal input from people — or any input at all. It seems someone's always over-contributing, and it's not always the people you want to hear from. Conversely, it's easy for people to hide and not participate at all. This challenge can be overcome but only if you actively seek their engagement.

Understanding Ourselves

If you're a believer in servant leadership, you put yourself last, or at least behind other stakeholders. Taken to the extreme, focusing on others can lead to sublimating yourself and to not taking care of your mental, physical and social well-being.

You can't really focus on the desired outcomes or engage with your team without looking at the one constant — yourself. A leader who is physically exhausted, mentally drained and socially isolated is not going to be effective. We need to be honest about how we're doing and take care of ourselves.

Rule 14: Seek feedback to best serve outcomes, others and ourselves.

When you walk the plant floor or stand in the middle of the cubicle farm where people are working, you can sense the mood of the team. When you sit in your home office 500 miles from the nearest employee, you're drawing conclusions based on how you feel about the situation, what you've seen in a few email threads or

what you heard in one quick conversation with a team member. Soliciting feedback can help you communicate and lead far more effectively.

When soliciting feedback on yourself, especially as a leader, keep some things in mind:

Start with existing evidence. Before going to individuals, go back through relevant files, email threads and meeting notes. How are people feeling? What are they thinking about how you're doing and the decisions you're making?

Identify people you trust. Don't confuse this with people you like or who always say yes to your ideas. Trusted advisors can come from many sources.

Ask open-ended questions. For example, ask, "Based on what you've heard, what about this would work? What would be a problem? How do you think people will respond, and why?" Make them truly open and not presumptive.

Have these conversations as richly as possible. If you really want feedback and input, take the time and use the tools in the ways discussed above. Schedule the conversation, block sufficient time and use the tools at your disposal.

Have the conversations over time. If what you're considering is really important, people may do their best thinking before and after the conversation. If you want good insight, people should be able to prepare for the conversation.

Rule 15: Examine your beliefs and self-talk — they define how you lead.

Good leaders require a relatively healthy self-image. After all, if you don't think you are correct a good percentage of the time, or somewhat capable or the right woman for the job, you likely wouldn't find yourself in this position. Unless you are a complete sociopath, however, the voices in your head aren't always supportive or positive.

Here are some warning signs that your internal dialogue is going in an unhealthy direction as well as how to steer it onto a more positive path:

"You're an idiot. That's the worst idea ever." Really? Ever? At times like this, it's okay to revert to middle school and ask yourself, "Says who?" If you take that question seriously, it takes you back to the neutral facts. What evidence is there to support or deny your idea or premise? First of all, it's highly unlikely you're an idiot. And it's even more certain it's not the worst idea ever.

"I can't do this." When you get frustrated to the point of saying you can't do something, change the word. "I haven't yet figured out how to . . ." or "up until now I haven't been able to do it" are different ideas entirely. Changing the wording recognizes there are difficulties but still accepts the possibility of success, which changes your internal motivation.

"I'm a fraud and I will be exposed." This feeling, known as "impostor syndrome," is estimated to affect over 70 percent of leaders. Here are some simple techniques to help address this monster:

- Check your assumptions. Recognize your "I can'ts" for what they are. When in doubt, ask, "Says who?"
- Accept positive feedback as valid. When people tell you how smart or capable you are, believe them and don't dismiss or downplay it.
- Get help. Remember that even the best and brightest go to others for help, feedback and answers.

Rule 16: Accept that you can't do it all — you shouldn't try anyway.

One of the greatest challenges you face is finding the balance between being responsible to your organization and its people and taking care of yourself so that you can be both highly effective in your leadership role and fully functional as a human being, spouse, partner, neighbor or productive member of society.

Put your ego aside for a moment and ask this simple question: "If I got hit by a bus tomorrow, how would my team function?" There is a lot of power in that question, because it forces you to look at the things that encroach on your boundaries:

- Do your people know what they should be doing?
- Are you the only source for answers?
- Do you have the right people in the right roles?
- Do you guard your time?
- Are you answering email and phone calls on vacation?

Look at your organization's processes and workflow. Where are you being drawn in unnecessarily? Are there times when you are not critical to the process? If there aren't, could there be? Who else in your organization could take on some of those responsibilities? When you delegate successfully, you set your team up to succeed and give yourself the freedom to set healthy personal boundaries, too.

Rule 17: Balance your priorities to be a remarkable Long-Distance Leader.

Outcomes and others do come before ourselves. That doesn't mean we surrender our humanity, our health or

our sanity. There is a difference between self-preservation and selfishness.

Let's start with values. Your values determine how you decide what is truly important to you.

So, what is important to you? When you ask questions about what is important to you and answer honestly, you will begin to see that the barriers to managing your time are mostly of your own construction. Everyone has the same amount of time — the question is how you will use it.

As Kevin Eikenberry says in *Remarkable Leadership*, time management is really choice management. If you aren't clear on your values, you can't make clear choices on how you are using your time. Knowing your values allows you to prioritize your activities. For example, if you need spiritual balance, working on the finance reports on Sunday might be a bad call. If you need physical exercise to be happy and productive, get to the gym — that time to yourself won't undo all your good work for the week.

If you haven't yet, make a list of things that are important to you, and ask yourself, "Am I satisfied with the time I'm giving them?" If the answer is no, try to identify small blocks of time you can dedicate to them.

Developing Long-Distance Leaders

Rule 18: Ensure your leadership development prepares Long-Distance Leaders.

Whether you are an individual manager trying to grow the leadership capabilities of your team or you're in charge of learning and development for a huge corporation, here are some strategies and approaches to create a plan for growing great leaders in the dispersed workplace. When considering leadership development, there are three pairs of questions to be considered:

1. What kind of organization do you want to be? Does your current culture match this vision? Every company has a culture, which is defined as "the way we do things here." It doesn't take much insight to realize that when people work apart from each other, the way things are really done can vary greatly.

Without guidance, people working remotely and left to their own devices tend to get very task-focused and independent. If that is what you are looking for from your people, you might be fine with that — if you have a team of individual customer-service reps or salespeople focused on their quotas, for example. If you want people to collaborate and build strong relationships, it can be done virtually, but it needs to be done intentionally — whether at an individual, team or organizational level.

2. What behaviors do you expect from your Long-Distance Leaders? What skill gaps must you address? Use your existing competencies as your starting point, then use all three gears in the Remote Leadership Model to frame the discussion about additions or changes driven by leading remotely. For example, does your existing competency model accurately reflect the expectations you have of your remote leaders? Which tools do you want them to use, and when should they be used? This is the richness vs. scope discussion. Do your leaders use the tools in an impactful way?

3. What is your plan for developing and supporting your Long-Distance Leaders? How will the organization support the remote team members? The focus of "developing and supporting" should be learning and not simply training. When you change your perspective to learning, you will do three things: connect learning to the work, make learning available in different ways and make it a process.

Rule 19: When all else fails, remember Rule 1: Think about leadership first, location second.

Remember, the act of leadership itself hasn't really changed all that much. We need to do the same things but in a different way. While there are adjustments we need to make to lead in a world with more distance between team members, there is far more that won't change.

With that in mind, now let's get to work leading at a distance more effectively.

THE SUMMARY IN BRIEF

Become the leader people love to follow.

Have you noticed how broken our culture of work is? For too long, leadership has been defined by the bottom line, at the outrageous expense of the humans leading and being led. Obviously, results matter. But, now more than ever, leaders need to be so much more than a boss wielding the authority of a title to produce results.

In ***The Lovable Leader: Build Great Teams with Trust, Respect, and Kindness,*** author, speaker, and strategist Jeff Gibbard offers an invaluable set of practical skills that will inspire people to follow you, make your organization a better place to work, and might just change the broken culture of work. *The Lovable Leader* was written to show how all people are capable of extraordinary things, that obstacles can empower you instead of limit you, and that your abilities, combined with your choices, give everyone you lead the opportunity to become a superhero.

IN THIS SUMMARY, YOU WILL LEARN:

- How to inspire your team to greatness while managing different personality types.
- How to set goals and hold people accountable for realizing them.
- How to create a safe work environment where loyalty, happiness, and productivity prevail.
- How to be respected and taken seriously by your team members and supervisors.
- Many fundamental skills for excellence in your role.

Introduction

Our culture of work is broken, and we can only fix it together. This book is a call to action for you—and people really need you.

Leadership is not an achievement, nor a destination, but rather a practice that you will adopt for life. This is what lovable leadership is about: the aspects of leadership that require emotional intelligence, empathy, humility, compassion, and trust. Amid all other externalities, these are the things we can control—how we relate to one another.

The principles outlined in the following chapters are intended to guide you as a leader and provide a framework you can operate from. You should be reading this book if:

- You have just moved into a leadership role and need to understand where to devote your time and attention.
- You need to understand how to manage different personality types.
- You need to be able to set goals and hold people accountable for realizing those goals.
- You want to be respected and taken seriously by both your team members and your supervisors.

This handbook has simple, easy-to-follow frameworks for succeeding and thriving in a leadership role. This advice is ethical and scalable. This framework is designed to foster loyalty and grow cohesive and collaborative teams. For those who embrace these concepts, work will never look the same again. No obstacle will seem insurmountable, no conflict too difficult to resolve. No interaction will lack respect. Even when things don't work out, everyone will walk away better off than if you had not read this book in the first place.

You will become the kind of leader people follow from company to company, for whom they may even quit their current job. You will inspire people to dream bigger, and you will have the skills to ensure those dreams become a reality. This is for those who are ready to go from uncertain to empowered and from overlooked to revered.

Mindset

Lovable leadership begins when you adopt a particular mindset. This style of leadership is grounded, real, and profoundly simple. Once you understand this, all that remains is a choice and the practice. Mindset is the start of your journey.

To adopt the lovable leader's mindset, you must remember that leadership is a choice, not a title. Leadership is a practice, not a destination. Leadership is a responsibility, burden, and privilege. Leadership responsibilities include goal setting, strategy development, communication, team management, and navigating change. "Leader" is just another role on the team. You must stay humble, so you're not seen as a "boss."

Care

We're conditioned by society to dislike work or see it as a necessary evil rather than as an inspirational part of our lives. setup. It's about time we start really caring about things—taking things personally, not professionally. Distancing ourselves emotionally from outcomes is only seeking to protect ourselves from embarrassment and shame.

You need to care deeply about your people. Care is an essential element of love. Loving anything would be difficult if you simultaneously didn't care about it. If you want people to feel safe under your leadership – if you want them to trust you, if you want them to be loyal and hardworking for a shared cause, you have to care.

To show your team that you care, you should make your leadership about them. Acknowledge and validate them. Be mindful of small gestures like saying thank you. Stand for your team members against outsiders, each other, and themselves. Serve their growth and success. Be their biggest cheerleader.

Trust

Trust is a feeling. You sense it deep in your gut. When you trust, you allow yourself to be vulnerable. When you trust, you feel safer taking risks. When you trust, you can build the deep connections needed to harmonize and align with your people.

To build trust, you can sit on the same side of the table by setting the table (conversation context, stating and aligning goals), listening, practicing curiosity, validating (instead of judging), aligning, and getting consent. Remember the Three A's: Acknowledge, Apologize, and Act. Plus, Announce and Ask. Be honest and transparent. Be consistent. Take full ownership (but not credit or blame) for your team's success or failure.

Safe Travels

Whenever you plan a vacation, you automatically assume

you'll arrive at your destination safely. You put faith in the pilot's readiness to do their job and in their ability to fly the plane. You expect the floatation devices and oxygen masks will work in the event of an emergency. In business, you've got to create conditions in which your team members, too, feel safe in your hands as you lead them.

"Safe travels" means you will: Make sure the way toward your goals is safe. Guide the team to make commitments that ensure safety because a team is defined by what we commit to. Ensure that everyone embraces productive conflict to resolve uncertainty or inaction. Be vigilant about making repairs to the team. Always choose to lead with love over fear.

Your Most Important Tool

When it comes down to it, the only tools a leader has are words, ideas, and actions. Therefore, communication is your single most important tool as a leader. Mastering the skill of communication is a lifelong endeavor for the lovable leader to continually pursue.

Your communication determines your team's capacity for success. To master the art of communication as a leader, you must remember the three functions of communication: inform, influence, and inspire. Your capacity with these three functions exists on a spectrum that begin with misinformation, incapacitation, and demotivation respectively. When you master the art of communication to inform, influence, and inspire, you will be more effective, create environments for collaboration, and readily move everyone in the same direction. Set an example for how the team communicates. Be cognizant of the signals your communication sends.

The Destination

Author Deb Gabor likes to say, "If you aim at nothing, you'll hit it with 100 percent accuracy every time." As a leader, start with the target—in other words, know the destination of your work. Understanding where you want to go is critical because if you don't, you are not leading... you are simply wandering.

Great leaders are almost never in it (solely or primarily) for the money. Money is actually a weak motivator. Studies have shown that employees are more likely to be moved by intrinsic motivators such as job satisfaction, feelings of belonging, and autonomy in their role than they are by extrinsic rewards such as bonuses. Although there are bound to be exceptions to the rule, most leaders are committed to something bigger than themselves, and to something more meaningful than money.

To lead with purpose, you must remember that purpose is not the same thing as "the reason." Lead the team to connect with a deeper purpose. Create a tangible destination by using SMART goals. Set big goals. Hold high aspirations and set clear expectations for your team.

The Map

Having identified your destination, you now need to figure out the route to get you there—and you're not going to rely on your GPS here. Strategy traces the route from your destination back to your starting point, creating a map from where you are to where you want to be.

To develop excellent strategies, you must remember that the best-executed strategies begin with aligned goals. Start with the end and work backward. Involve your team in the creation of strategies to deepen their ownership. Document your plans to provide clarity to the team and increase accountability. Help the team understand and manage priorities. Increase accountability across the entire team by locking in commitments because commitments drive action, and genuine buy-in allows for genuine accountability.

The Journey

Once you have determined where you're going (your destination) and how you're getting there (your strategy), you embark upon the journey. This is where ideas and words manifest in action. This is the daily practice of leadership.

To excel at the daily practice of leadership, you can maintain strong team bonds by reinforcing the commitments of the team. Appreciate each individual by judging them on their strengths, not their weaknesses. Manage with the intent to motivate. Maintain an unwavering belief in your team. Step up and carry the additional weight whenever you're needed. Practice balanced oversight. Stay flexible to navigate change. Embrace the power of negative thinking to stay grounded.

The Detours

Leadership will not always go according to plan. You will make mistakes. Your patience and resilience will be tested. You will want to ignore the problems or avoid them,

but you already know that won't help. So, you've got to plan for detours.

When things go wrong with your team, you can try to fix problems rather than get rid of them. Raise intensity instead of your voice by using silence strategically, asking questions, and being clear and reasonable. Be ready for a productive conversation built on the foundation of your moral high ground. Ensure you stay on topic so the issue can be resolved. Leverage intermediaries to open the door for a productive conversation. Care for people even when you have to remove them from my team.

The Balance

Maintaining balance as you lead is critical. Avoid extremes on the journey—too controlling and you'll quash creativity and innovation, too lax and your team will feel directionless—but the moment you think you've got it figured out, you'll find an exception. Stay open, stay humble, experiment, and find what works for you.

To maintain balance in all aspects of leadership, you must avoid going to extremes. Sometimes you can make unilateral decisions instead of collaborative ones. Sometimes you need to assert control, and sometimes need to let go. Ensure your optimism is not naive. Cater your strictness and leniency to individuals. Balance your praise and criticism. Seek to understand what you need to do to bring out the best in each individual.

The Mirror

You've now learned how to be in service of others. You've assumed responsibility, you carry the burden, and you acknowledge your privilege as a leader. Now, it's time to look in the mirror and take care of yourself.

In the fast-paced world of business, the competitive world of sports, or the perilous world of the military, there can be so many other more urgent matters to attend to than your own health. At least, that's how it feels. But physically, mentally, or emotionally weakened leadership can be a liability to your team's success.

To take care of yourself as a leader, you must give yourself space to be imperfect. Take your mental and emotional health seriously. Continually invest in your own growth. Seek out mentors who will challenge you and keep you grounded. Take time off and vacations to avoid burnout.

Conclusion

Leadership is always a responsibility, a burden, and a privilege. This applies to leading not only downward but also upward to your manager. Leading upward shares many of the same principles as effective top-down leadership. The biggest difference is obviously a shift in the power dynamic. While leaders higher in the org chart can appeal to their organizational status, leading upward cannot rest on that fallback position.

The lovable leadership framework is valuable for companies, for people coming out of college looking to grow their network, for people getting into politics, or really any human being on this planet who interacts with other human beings.

You can learn these principles and let them permeate your behavior in all areas of your life. Think about everything you've read and ask yourself: What if we all behaved as lovable leaders and we did it everywhere? What would a world with more care, trust, and safety look like?

Let's build a better world together. Go forth and be lovable.

The Summary In Brief

In ***The Millennial Whisperer***, author Chris Tuff squashes the myths and stereotypes regarding the Millennial generation and shows us how, by simply empowering, trusting and motivating one of the greatest generations of all time, the future of our business communities can flourish and succeed in ways never thought possible.

Regardless of your professional or personal background, it is within all of us to be an inspiration and motivation for this generation. Many of us often wonder just how we can give back.

The Millennial Whisperer outlines, in fantastic detail, methods and ways that will empower, inspire, and motivate Millennials. The results will shape not only our business success, but the success of the communities in which we live.

In This Summary, You Will Learn:

- How to attract, keep, manage, and reward Millennials.
- How to communicate effectively with Millennial employees.
- Ways to encourage, motivate, and incentivize your employees.
- Why it's important to make others feel like heroes!

Truth in Numbers

The Millennial Generation – 1981-1996. According to the Pew Research Center, in 2016 Millennials became the largest generation in the workforce, accounting for 35% of working Americans as of 2017. By 2030, they will make up 75% of Americans in the workforce. Yet, they have been and remain stereotyped by many employers in the workplace today. Why?

Each successive generation has disrupted the workforce and our psyches. Baby Boomers, the Me Generation, Generation X, Generation Y…and now, the Millennial Generation. But it would appear that the Millennial generation has it worse than the others. There are the misconceptions that they are entitled and lazy and poor workers.

These misconceptions are just that…misconceptions; yet they have tarnished their reputation. Millennials grew up during the advent of the Internet, Smartphones and Artificial Intelligence during the years their personalities and proclivities were still being shaped. Their parents signed them up for anything and everything they could to help position them to be accepted into the best college possible. This completely backfired and left many Millennials totally unprepared for the "real world" and the demands of the workplace. These misconceptions are hurting workplaces more than they are hurting Millennials.

Debunking the Millennial Myths

Contrary to popular belief, the Millennial generation is not the generation of "beer drinking, video game playing, living-in-their-parents' basement" slackers. This generation is the future. They are smart. They are daring. They are eager to work, to be inspired, and they have so much to offer to employers. You can be the catalyst to help light that spark.

The reality is that Millennials are hardworking, optimistic workers, with many working 45 plus hours per week in addition to a side job. Many fully expect to be working until past 65 years of age, with some never envisioning retirement.

Everyone has the potential to succeed if given the right environment, supportive culture, and key opportunities. Small changes in how we relate to Millennials can reverse the negative damage done by misconceptions, over-protective parents, and misunderstandings.

If our generation does nothing to embrace Millennials, but instead gets annoyed each time one of them speaks up during a meeting, or continues to view them as spoiled, entitled brats, companies will be full of employees who hate being there. Employees will show up to work, do the least amount of work possible and collect a paycheck. When the chance comes to jump ship, they will be gone. And then begins the cycle of rehiring and retraining Millennials.

Money and resources will be wasted on training and benefits and things that do not matter nor work for the people we want to motivate. Companies will try to hang on to the ways of the past and ignore the amazing opportunities standing right before them. Those companies will go bankrupt or fold.

The key is to change our way of thinking. Getting the most out of Millennials does not require a budget. We simply have to change how we do business and recruit better, motivate better, and lead Millennials to success.

Recognizing the Changing Seasons of Life

There are younger Millennials and there are older Millennials. Some Millennials are still trying to find out their passion and niche. This is where your talents, passions and profits intersect. Many don't have the capacity to take long, expensive vacations. Many often take several mini vacations. The older generation folks might tend to view both the older and younger Millennials as lazy or unmotivated.

Do they really have toddlers keeping them up at night, or are they lazy? Do they just not want to make partner or are they stretched time-wise, planning weddings for their kids? Older Millennials did everything their parents expected. They accepted entry-level jobs and stressed themselves out trying to climb that corporate ladder.

Then the "Great Recession" hit. The newer Millennials had the rug pulled out underneath them. They were downsized and laid off. They had done everything right and everything they were told to do. This came when student loans were due. This is the thanks they got. Older Millennials were also impacted, but they had put in decades of solid employment at their company. Many saw their parents impacted firsthand by this and saw the stress, worry and financial security dwindle. Savings were depleted. The Millennials saw this as a fight to survive situation and forged their way in the workplace.

Do we view this as too easily distracted? Do they not re-

When we harness the ingenuity of the Millennials, we create a loyal workplace that will go above and beyond for our companies.

spect authority? When we step back and realize their backstory, it is absolutely understandable as to WHY they would not trust "authority." Once we acknowledge we helped create what we complain about, we can start to change our way of thinking. We helped create the technology they are accustomed to. We were the ones who terminated their parents. We modeled no loyalty in the corporate world. We scared them into buying a house. We shadowed them as parents. We made everything so easy for them.

The Message is Clear

We caused it and we can most definitely fix it. We can restore it. The first step is acknowledging that the old way of thinking about Millennials is totally incorrect. Their values are different. They will question authority. When we harness the ingenuity of the Millennials, we create a loyal workplace that will go above and beyond for our companies.

Millennials want to feel they are contributing directly to a goal and not just being able to pay their bills. They want their business to improve things in the world. They have a very far reaching vision and want to be a direct part in making good things happen.

When we empower Millennials and employ them in jobs that focus on goals and incentives far beyond just making money, you get your best work from Millennial team members.

When Millennials Work Best

Many Millennial employees do not believe that excessive work demands are worth the potential sacrifice to their personal lives. Most crave a strong, stable team-oriented environment at work. They want to do interesting work - even work around the world. These factors are important to their happiness in the workplace, even more so than their non-Millennial coworkers.

Millennials are looking for personal growth and development. It is crucial that business leaders "get the 'deal' right" when attracting top Millennial talent. They want to be a part of an organization that lets them move forward in a professional and personal capacity. Use Millennials to assist in the recruiting process of other Millennials. Allowing the current Millennial team members who may work for you to be part of the interviewing process gives an added benefit of solidifying the company culture and improving retention rates.

A long period of recruitment and a deep understanding of what Millennials want is needed to attract top-quality Millennials for the next level of success.

Create a Culture for Millennials to Thrive

Millennials need us to create a culture and provide the structure for them to succeed. Investing in your employees is a wonderful way to build their loyalty to you. They will be more willing to go the extra mile for you. You can transform their job performance if you put a little money into the tools and training that will help your Millennial team members/employees do their job. Do not try to stifle the Millennial's drive and entrepreneurial spirit. Give them room – consider letting them use a small chunk of their time during the workday to explore projects they are passionate about.

It is critical that your employees are recognized. Everyone is happier when they are recognized for doing something good. When employees are recognized, it increases their productivity and their loyalty. If you have an employee who can't be trusted, then they should not be on your team.

- Don't wait a full year to give them a review and feedback. Do so more frequently and with a purpose.
- Give feedback compassionately along with compliments.
- Discipline in the moment. Do not let issues linger.
- Negativity is extremely damaging in the workplace (and ALL aspects of life). Foster an open and transparent environment. Encourage open communication in the moment.

- Empower Millennial employees in the interview process. Peer to peer. Also have leaders involved in this process. Get involved!
- Consider personality and adaptability over pedigree and accomplishments.
- Sometimes you will have to fire a Millennial. Do so quickly and gracefully. Move on. Keep in mind, things will go wrong in business. People quit or they just need to be let go. We all make bad hires, so do not beat yourself up over this process.
- Reward your Millennials! If they want to work from home for a change of scenery, trust them to do so from time to time.
- Recognizing your Millennial employees is crucial. You don't have to break the bank for this. Foster a team environment – celebrate rewards together. Come up with ideas your company can do together to celebrate the accomplishment of a team member. Swag, stickers, good quality T-shirts, or movie tickets – the possibilities are endless and inexpensive. The less expensive, the better. Just don't forget to make it fun.

Make It Happen

There are several areas to be on the lookout for to know you are implementing your strategies effectively. You will see success in things that are measurable, such as productivity, turnover, costs and profits. You will see and hear things – energy and excitement in the workplace become palpable. You will notice people working great together, going to lunch together, hanging out at events outside of the workplace, and even participating in charity events together.

You will know when YOU have become a Millennial Whisperer. Millennial employees will wear the company shirt with pride or put company bumper stickers on their cars. You may even come across a hashtag with your company name beside it one day when you are scrolling through Instagram, looking at animal pictures and sunsets on the beach.

Start today and recognize the potential of Millennials. Start to take steps to blend generations and create an amazingly productive workplace, and world. Kindness and compassion matter…not just in the workplace, but in everyday life. When the Millennials succeed, we succeed. We must set ourselves up to succeed in leading the biggest, most resourceful, and most passionate generation in history. To do that, we must implement the strategies we know in order to move forward.

Chris Tuff is a partner at 22squared, a full-service advertising agency based out of Atlanta, GA where he oversees content marketing and partnerships. Chris has held many different roles over the 10 years he's been there and specializes in building new offerings and motivating the millennial generation.

Chris was one of the first marketers to work directly with Facebook in 2005, and is now one of the foremost thought leaders in the digital space. Always on top of emerging trends, he oversees all content marketing and helps push to get existing clients access to first-to-market ad products and offerings. He's responsible for partnership development with technology and media companies like Twitter, Google, Facebook, and beyond.

The Five Omissions of Reward-Center Leaders
Page 6

THE SUMMARY IN BRIEF

New York Times best-selling author Patrick Lencioni has written a dozen books on how leaders can build teams and lead organizations. In ***The Motive***, he helps leaders understand the importance of why they're leading in the first place.

In this fable, Shay Davis is the CEO of Golden Gate Security, who, after just a year in his role, is beginning to worry about his job and is desperate to turn things around. With nowhere else to turn, Shay receives some hard-to-swallow advice from the most unlikely and unwanted source—Liam Alcott, CEO of a more successful security company and his most hated opponent.

The Motive also summarizes the theory underlying the fable and offers practical advice to help executives examine their true motivation for leading. Lencioni provokes readers to honestly assess themselves and presents steps for changing their approach in five key areas. In this way, ***The Motive*** helps leaders avoid the pitfalls that stifle their organizations and even hurt the people they are meant to serve.

IN THIS SUMMARY, YOU WILL LEARN:

- The two primary motives driving leaders' behavior.
- Why leading and managing are the most important jobs for leaders.
- To overcome denial and resistance in order to adopt the right motive for leading.
- The five omissions of reward-centered leaders.

The Fable

Shay Davis knew that it was too soon for him to get fired. Six months was not enough time for even the most aggressive private equity firm to axe a recently promoted CEO. But it wasn't too soon for them to start thinking about it.

Golden Gate Security wasn't exactly failing under Shay's brief period of leadership. Profit margins were solid, but they looked anemic compared to those of All-American Alarm, the massive and most aggressive national company in the home and small business security market.

Shay figured that the private equity guys would give him another nine months to jump-start Golden Gate, but he wasn't going to wait that long. After climbing the ladder for more than two decades and finally making it to the top, he wasn't about to let all those years of hard work go to waste. So he decided to throw his pride out the window and make a painful phone call.

Research

Lighthouse Partners was a small consulting firm located in Half Moon Bay, California, that had a reputation for working with interesting and successful clients. One of those clients was Del Mar Alarm, a San Diego–based company that was the shining star of the regional security arena in California and a small thorn in Shay Davis' side.

Normally, Shay would never have considered hiring a competitor's consulting firm, but he was beginning to feel desperate enough to try something new. When he contacted the consultant at Lighthouse who worked with Del Mar, she explained that she'd have to check with her client to see if it would be okay for her to work with another company in the same industry. Shay decided he probably wouldn't hear back from her. He was right. But he could never have predicted what would happen next.

Nemesis

It's hard to hate someone you don't know, but Shay figured he was getting pretty good at it in regard to Liam Alcott. Though he had never really met Alcott, aside from a handshake or a perfunctory greeting at an industry event, Shay had heard him speak a few times and read more print interviews than he cared to remember. He had grown to resent the phony affability of the man who seemed to have such an easy time doing what Shay hadn't yet figured out.

So when Shay's assistant, Rita, came into his office to announce that someone named Liam was calling for him on line one, Shay figured it was one of his own executives pulling a prank on him. But it wasn't a prank.

"Hello, Shay. This is Liam Alcott. I'm calling because Amy over at Lighthouse told me that you contacted her about working with them." Shay felt a rush of shame wash over him, expecting Liam to chastise him for trying to poach his consultants, not to mention his intellectual property.

"You should let me tell you what we've learned from Lighthouse and see if that might be enough for you." Shay didn't know how to respond. *Did I hear that correctly?* Before he could think of something to say, Liam continued. "In fact, I'm coming up there next Thursday for a meeting, and then I'm staying the weekend at my sister-in-law's in Walnut Creek. Why don't we get together on Friday?"

"Don't take this wrong, Liam," Shay paused, "but don't you have some reservations about sharing your secrets with a competitor?"

Liam laughed. "Competitor? I don't think we're competitors. I mean, I certainly wouldn't have wanted Lighthouse to work with you if we were. And it's not like we're trying to steal one another's customers, unless you have plans to get into the security business in San Diego. So I don't see us having any conflict here."

Shay tried desperately to think of an excuse. Though he didn't like the idea of admitting any weakness, he also didn't want to lose out on any advice that Liam might have for him. Deciding that he could think of no good reason to refuse Liam's offer, he relented. "All right then. What time should we meet on Friday?"

Invasion

When Shay walked into his office, Liam was already sitting in the lobby of the building waiting for him. Arriving at the CEO's well-appointed office with a view of Alcatraz, they sat down at a couch, and Shay began. "So, where should we start?"

Liam was ready with an answer. "Well, why don't you tell me why you called Lighthouse? What were you hoping to get from them?"

"Well, I'm feeling like we're just not firing on all cylinders here."

Liam jotted a word or two in the notebook that he brought with him, and then responded. "Is it mostly about All-American?"

Shay did his best to hide his surprise at the discrepancy between the companies' results, which he hoped Liam hadn't noticed. Unfortunately, he did.

Without thinking, Shay admitted, "Well, that's certainly part of it. But I think there's something else. I just don't know what."

Surrender

"What do your numbers look like?" Liam asked. For the next half hour or so, Liam presented the high-level fundamentals of his financial operations, while Shay countered with mostly general answers and a few real numbers sprinkled in here and there for effect. In some aspects of their businesses, the two companies were quite similar. But in many others, Del Mar was light-years ahead.

Shay did his best to hide his surprise at the discrepancy between the companies' results, which he hoped Liam hadn't noticed. Unfortunately, he did. With a genuinely concerned look on his face, Liam offered, "What's going on up here, my friend?"

Liam went on carefully. "I mean, unless I'm hearing things wrong, you seem to have more employees generating less revenue. Your turnover, among both customers and employees, is considerably higher than ours. And you're actually spending more money on marketing than we are." He paused. "Am I missing something?"

"I'm not going to lie to you," Shay confessed. "This isn't easy for me to hear."

Reveal

Liam continued. "Why don't I start by telling you what I learned from Amy and the other consultants at Lighthouse?" Liam went to the whiteboard in Shay's office, picked up a black pen, and announced, "Everything that Amy and the other consultants at Lighthouse focused on started with me. So let's start with you. What is the most important part of what you do?"

Shay thought about it for a moment and came up with the following list:

- Reviewing ops and financials;
- Driving marketing and sales programs;
- Handling the board;
- Managing and leading;
- Interacting with key customers.

Shay asked, "Is this what your list looks like?"

Liam answered plainly. "No."

Shay decided to be as direct as possible. "Okay, what does your list look like?" Liam went to the board. He drew a line through all of the entries other than "managing and leading."

"So, you don't spend time managing your board?"

Liam shook his head. "Not really. I mean, I meet with them once a quarter, and I take their calls if they need to talk to me, which is pretty rare. And that's about it."

Shay said, "I have a hard time believing that."

"I'm sure you do. But it's true. I told my board when I took over that their input, outside of a major catastrophe, would be limited to our quarterly meetings. It was one of my conditions for taking the job. They didn't like it much at first, but now I think they're relieved."

Shay attempted to summarize his general sense of disbelief: "Okay. So, you're telling me that you spend almost all of your time leading and managing your team? Maybe we just have different ways of doing things."

"Maybe," Liam answered, unconvinced. "But you're going to have to convince me that your way is working for your company. Are you willing to let me challenge you about that?"

"Of course," Shay said without much enthusiasm.

Brass Tacks

"Okay," said Shay, what did you learn from Lighthouse?"

Liam took a drink of water. "I learned that I am supposed to have the most painful job in the company."

Shay was thoroughly confused. Liam continued. "I'm a technology guy at heart. That's what I grew up doing, and that's what I'm comfortable with. That's what I spent my

time doing before I got fired in England. And don't get me wrong; if I could, I'd still spend my time doing that. But I can't, and I don't.

"Why not?"

"Because I have a CIO and a CTO who focus on those things. I have to be the CEO."

Shay shook his head. "It's not that cut and dried. I mean, yeah, you have to be the CEO. But you can still keep your hand in technology stuff. I'm guessing you might be better than the people you hired in those areas anyway."

Liam shrugged. "Maybe. Maybe not. But that's not the point. The point is, I can delegate finance and marketing and sales and technology and operations and all those things. I can't delegate *my job*."

"Who said anything about delegating it? How much of your time does it take to do the CEO stuff?"

"All of it. And then some."

"You mean to tell me that managing your team and the company doesn't give you any time to get involved in other parts of the business?"

Liam nodded his head. "That's right."

Dirty Jobs

"You know that TV show with the guy who spends a day with people who have horrible jobs?" Liam asked.

"Yeah, it's called *Dirty Jobs.* My kids love it. I think because about half the episodes have something to do with poop."

Liam laughed. "Perhaps. I like it because it shows people who seem to like their jobs even though they're doing something that others wouldn't want to do.

Shay tried his hardest not to be sarcastic. "Yeah, but I don't think my job entails anything close to shoveling alligator crap or cleaning out a sewer."

"And yet you don't want to do it. You're not going to want to hear this, but I have to tell you anyway." He paused before finishing. "You might be working hard, but you're not doing it for the company."

"What the hell does that mean?" Shay wanted to know.

Knowing that his adversary might now punch him for what he was about to say, Liam responded. "You're doing it for yourself."

To Liam's great surprise, and relief, Shay didn't seem as angry as he did sad. In fact, all he said was, "Tell me more about that." And that was when Liam decided there was hope for a breakthrough.

Jugular

"Here it is in a nutshell. You are doing the things you like to do. You aren't doing the things your company needs you to do. And that is why your company's performance is so far behind ours." Liam paused. "You need to believe me here. I'm telling you the truth."

Liam asked, "What exactly do you think management is?"

"Well, it's about goal setting and progress reviews and that kind of stuff. That's what I did for 20 years. Now that I'm CEO, it's different."

"How?" Liam asked with the patience of a prosecuting attorney."

"I don't know. Listen, if a CEO has to look over his executives' shoulders, he's hiring the wrong people. I'm not going to micromanage a 52-year-old operations executive. And I think my people prefer my approach."

"Not if they fail."

"If they start to fail, I'll jump in and help them."

"You mean you'll do their job, especially if it's in marketing or sales or M&A."

"Call it what you want. I help them." Then Shay thought of something. "Hey, I thought you were telling me earlier that you don't have time to get involved in your executives' departments, and that all your time is taken up being the CEO. Now you're telling me I need to micromanage people."

Liam shook his head. "First, I didn't say I'm doing my people's jobs. I'm just coaching them, making sure they have a good plan and that I know about any big issue before it's too late to do something about it. That's not micromanagement."

"Potato, Potahto."

Liam shook his head. "No. It's management. The only people who call it micromanagement are employees who don't want to be held accountable. Just because someone is in his forties or fifties or sixties and has lots of experience doesn't mean he doesn't need to be managed. It's not a form of punishment or the sign of a lack of trust. It's the benefit of direction and guidance. I mean, the best football player in the world needs coaching."

"I'm sorry if I still seem skeptical. I guess I really thought that your management consultant gave you something a little more..." he paused searching for the right words, "concrete. This is all pretty soft."

Liam took a deep breath. "Can we take a 10-minute break? I need to make a call."

> Finally, Amy pulled her last and most dangerous arrow from her quiver.

Skype

When Shay returned, he saw Liam doing a video call on his laptop with a woman. Liam waved him in.

"Shay, this is Amy Stirling, who you spoke with briefly last week. She is one of the principals over at Lighthouse, and the lead consultant who worked with us over the past three years.

Shay sat down in front of the computer and greeted the consultant confidently. "Hi, Amy. It's nice to meet you. I certainly appreciate Liam sharing what you did for him."

"Do you?" Amy asked, without any sense of sarcasm or judgment.

"Well, yeah. I mean, it's always good to learn new things." Shay responded politely.

"I've only got 10 minutes here before I have to go back in with my client. So I'll be direct, if that's okay."

"Please."

"Well, Liam seems to think that you're not all that interested in learning new things. Perhaps he hasn't done a good job portraying what we did with him at Del Mar. Does that sound right?"

Shay didn't answer the question directly. "Amy, I'll be direct, too. I just don't see how all this stuff about meetings and managing people and having uncomfortable conversations can possibly make the difference between success and failure. It's not that I don't see any value in it. But not every CEO goes about his or her job that way. I'm a deal-maker. I'm good at putting together deals, explaining why the Golden Gate solution is right for our customers, and coming in when things get hairy and convincing them to go with us. That is a huge part of our success."

Finally, Amy pulled her last and most dangerous arrow from her quiver. "I have a question for you, Shay. And it's the most important one of all. I don't want you to answer right away but to really give it thought. And please be completely honest. Shay, why did you want to become a CEO?" She paused. "Or perhaps a better way to ask it is this: Why do you *still* want to be the CEO of Golden Gate Security?"

After about 45 seconds, Shay broke the silence. "I have an answer. I don't know," Shay said matter-of-factly.

"You don't know?" Liam asked incredulously.

Amy was smiling on the screen.

Breakthrough

Shay turned back to Liam. "Why did you want to be a CEO"?

"For the same reason you did. But that's not why I want to be the CEO of Del Mar Alarm now. I see my job as a responsibility and a sacrifice. You're the CEO of Golden Gate because you see your job as a reward. All those responsibilities and activities we've been talking about today are just a function of our motives for being a leader. We can talk all day about what we're supposed to do, but if we don't understand why we're leading in the first place, none of it will make sense."

Liam saw the look on Shay's face change just slightly, as though a lightbulb, albeit a dim one, went off in his head.

"Shay, when I have to dive into the middle of a petty political issue between the sales and engineering teams, or when I have to give someone their final warning about having to change their behavior, or when I have to call a meeting after hours to deal with an emergency issue, or when I have to give the same bloody orientation speech to another group of new employees, or when I have to go out to the installers and remind them that they're the front line of the company and everyone is relying on them, or when I have to," he paused, "do anything that no one else can do because they're not the CEO, I smile and thank God that I am making a difference. I have the worst and best, loneliest and most social, most appre-

ciated and most thankless job in the company. And I do that job with pride and without complaint. Because that was what I signed up for, even if I didn't realize it until Amy told me."

Finally, Shay nodded his head and spoke. "You're a good guy, Liam." Liam was confused. "Your coming up here was as generous as it was bizarre. And I mean that in the best way."

The Lesson

Just about every leader would like his or her organization to become healthier. Some leaders fail to achieve organizational health because they possess an almost unconscious unwillingness to do the difficult tasks and confront the challenging situations that are required to bring it about. This unwillingness flows from a flawed—and dangerous—motivation for becoming a leader.

There are only two motives that drive people to become a leader. First, they want to serve others, to do whatever is necessary to bring about something good for the people they lead. They understand that sacrifice and suffering are inevitable in this pursuit and that serving others is the only valid motivation for leadership.

The second basic reason why people choose to be a leader—the all-too-common but invalid one—is that they want to be rewarded. They see leadership as the prize for years of hard work and are drawn by its trappings: attention, status, power, money.

When leaders are motivated by personal reward, they will avoid the unpleasant situations and activities that leadership requires. They will calculate the personal economics of uncomfortable and tedious responsibilities—responsibilities that only a leader can do—and try to avoid them.

This inevitably leaves the people in their charge without direction, guidance, and protection, which eventually hurts those people and the organization as a whole. Employees will express their disbelief as to how their leader could have been so negligent and irresponsible, yet it makes perfect sense in light of his or her motive for becoming a leader.

It's time to expose reward-centered leadership for what it is and help leaders overcome it, for their own good and the good of the people and organizations they are supposed to be serving.

Exploring the Two Leadership Motives

How does a leader's motive play out in the organization? How does it impact the day-to-day activities of his or her work? The answers have everything to do with behavior.

Imagine two candidates for president of a country. One focuses on getting elected and sees that day as the crowning achievement of his or her life. The other sees the election as the beginning of his or her attempt to accomplish something great.

What behaviors is the reward-centered president going to avoid? Here are a few: taking the time to understand important legislative issues, meeting with constituents who offer little opportunity for publicity, adhering to traditions that are personally uninteresting to him or her. The other candidate is going to embrace those responsibilities. The same applies to leaders of organizations.

The Five Omissions of Reward-Centered Leaders

What follows are the five situations or responsibilities that reward-centered leaders delegate, abdicate, or avoid altogether, which cause the greatest problems for the people they lead. The omission of one or all of these areas may be an indication of an improper motive for leading. This is not a list of the primary responsibilities of a leader. These are simply the most common omissions that reward-centered leaders find to be tedious, uncomfortable, or just plain hard.

1. Developing the leadership team. This activity is often delegated, and sometimes even abdicated completely, by many organizational leaders. This does not work. If people on a leadership team don't believe that the leader sees team development as one of his or her most critical roles, they're not going to take it seriously, and it's not going to be effective. The leader simply must take personal responsibility for, and participate actively in, building his or her team.

Leaders often realize that effective team-building always involves emotional and uncomfortable conversations. Few leaders, even the good ones, look forward to those awkward moments and prefer to let others deal with them.

Do you feel that spending time developing your team members' interpersonal dynamics is superfluous or a waste of time? Do you organize "team-building" activities for your team that are fun but that largely ignore uncomfortable conversations about their collective behaviors?

If you answered yes to these questions, you may have the wrong motive for leading, and you have a serious decision to make. You can either rethink your attitude about team-building and embrace it as the practical, indispensable discipline

Do you believe that providing individual guidance and coaching to your people is somehow beneath you or not worth your time?

that it is, or you can accept that the organization you lead will never come close to reaching its full potential and that your team members will suffer unnecessarily.

2. Managing subordinates (and making them manage theirs). Many leaders have been trained to see management as a set of bureaucratic, overly structured activities related to writing detailed objectives, conducting performance reviews, and determining compensation. This is not really management, either at the executive level or the front line.

Managing individuals is about helping them set the general direction of their work, ensuring that it is aligned with and understood by their peers, and staying informed enough to identify potential obstacles and problems as early as possible. It is also about coaching leaders to improve themselves behaviorally to make it more likely that they will succeed. Managing is also ensuring that subordinates one level below are managing their people, too.

Do you believe that providing individual guidance and coaching to your people is somehow beneath you or not worth your time? Do you feel that you should be able to trust them to manage themselves? Do you justify not knowing what your direct reports are doing by claiming not to want to be a micromanager?

If you answered yes to these questions, then your motive for leading may be off. You can either rethink your role and get more involved in coaching them around their work, or accept that they will often fail to meet your expectations and become misaligned with the goals of the team.

3. Having difficult and uncomfortable conversations. One of the main responsibilities of a leader is to confront difficult, awkward issues quickly and with clarity, charity, and resolve. What kind of issues? Everything from a team member's annoying mannerisms to poisonous interpersonal dynamics and politics. There isn't a leader out there who hasn't balked at a moment when they should have "entered the danger" and had a difficult conversation about these things.

Yet, when leaders dodge these situations, they jeopardize the success of the team and the organization as a whole. Failing to confront people quickly about small issues is a guarantee that they will become big issues.

Here's the underlying reason that most people avoid difficult conversations: It is embarrassing and awkward. There is nothing comfortable about turning to a man or woman whom you know, someone who is of similar age to you, and who is talented in their own right, and telling them something that makes them feel momentarily bad.

Would you rather learn to live with a person's difficult behaviors than endure an awkward, potentially emotional discussion with them? Do you find yourself venting about your direct reports' behavioral issues rather than talking with them directly?

If you answered yes to these questions, this may be an indication that your leadership motive needs to be adjusted. You will need to reset your expectations about how "comfortable" your job is supposed to be and find the courage to start entering into dangerous conversations until it becomes natural. Or you should prepare for increasing levels of politics, morale problems, and unwanted turnover on your team and in your organization.

4. Running great team meetings. Meetings remain one of the most unpopular and underestimated activities in business. It is where leaders make decisions about whether to purchase a competitor or sell itself to one, to hire more employees or lay them off, to implement a new strategy or kill an old one. Can there be a more critical, central, or indispensable activity within an organization than a meeting?

In so many organizations the people responsible for making meetings better often complain about them the most! A leader seeing his or her meetings as drudgery would be like a doctor viewing surgery that way.

When leaders accept the less-than-amazing status of meetings, the results are two-fold. First, it leads to bad decision-making. If meetings are not engaging, it's completely logical to conclude that the quality of those decisions will be subpar. The second problem of accepting bad meetings at the executive level is that it sets the precedent for the rest of the organization.

Do you complain about your own meetings being boring or ineffective, and do you long for the end of them? Do you allow your people, and yourself, to check out during those meetings, or perhaps skip them from time to time for "more important" work?

If you answered yes to these questions, you may have a problem with your leadership motive. You can pour yourself into designing and facilitating more intense, focused meetings. Or you can resign yourself to suboptimal decision-making, reduced innovation, and a good deal of regret.

5. Communicating constantly and repetitively to employees. Most CEOs don't hate the idea of communicating to employees. But the majority of them greatly underestimate the amount of communication that is necessary. As a result, they think they've done an adequate job announcing a new strategy or initiative long before most people are close to understanding and embracing it.

Studies say that employees have to hear a message seven times before they believe executives are serious about it. Unfortunately, many CEOs refuse to repeat themselves again and again and again and again.

A CEO communicates to employees, at all levels, to ensure that people are aligned with and have bought into what is going on and where they fit into the success of the enterprise. It is an emotional and behavioral process more than a transactional and informational one. And it requires real, repetitive, sometimes tedious work from a leader.

Do you resent having to repeat yourself, complaining that your employees don't listen? Do you look for new messages and ideas to communicate because you get bored saying the same things again and again?

If you answered yes to these questions, your motive for leadership may not be quite right. You need to change your general attitude about communication and see it as a tool for helping others understand and internalize important ideas rather than an activity for your own entertainment.

Otherwise, you'll need to come to terms with the fact that your employees, even your executives, will often be confused and misaligned. And you'll need to get used to being surprised and frustrated by their inability to understand you and get on board with your plans.

It's long past time that we, as individuals and as a society, reestablished the standard that leadership can never be about the leader more than the led. If we can restore the collective attitude that leadership is meant to be a joyfully difficult and selfless responsibility, we will see companies become more successful, employees more engaged and fulfilled, and society more optimistic and hopeful. Perhaps people will stop using the term "servant leadership" altogether, because everyone will understand that it is the only valid kind.

THE SUMMARY IN BRIEF

Much of what they say about the CEO role is true: it's complex, confusing, and often exhausting. This is the most challenging and loneliest role in business. The scope, gravity, responsibility, accountability, and exposure of the CEO role are unparalleled, and the loneliness factor is often what takes CEOs by surprise. ***The New CEO: Lessons from CEOs on How to Start Well and Perform Quickly (Minus the Common Mistakes)*** is a combination of CEO experiences, observations, and research.

It is written to provide a wide and disparate view of the transition from the perspectives of the CEOs who have done it before you, and from the perspective of the author, who served as an advisor, having worked intimately with 50-plus CEOs across the world to ensure their success in real time. For all the attention given to CEOs, there is very little advice on how to actually land well in the early days and set yourself up for success. Successfully navigating your first weeks and months as CEO sets the tone for how you'll be perceived for years to come.

IN THIS EXECUTIVE BOOK SUMMARY:

- Learn why CEO transitions are uniquely difficult, including the loss of familiarity, increased isolation, and the weight of responsibility.
- Discover key approaches for navigating the transition, from building a strong leadership team to balancing listening, learning, and decisive action.
- Learn how to shape the organizational narrative, set expectations, and foster a culture that aligns with your leadership style and company vision.
- Understand the importance of continuous self-awareness, managing board relationships, and embracing the CEO role as a marathon, not a sprint.

Part I: So, You're A CEO

Why CEO Transitions Are So Hard

No CEO transition is without challenges. There's no singular reason for this. Typically, it boils down to a combination of the following factors.

Out of Your Comfort Zone: When you begin as CEO, you can quickly move from a position of strength, to a position where you can feel out of your depth. This loss of "capability" can rock your confidence and self-esteem.

Alone in a Crowd: You are rarely physically alone and yet at times you can feel like the only person on the planet. An often-cited study from 2012 found, 50% of CEOs reported feelings of loneliness, with 61% believing it hindered their performance.

A Heavy Crown: "You realize there is no one else," Marc Bitzer, CEO of Whirlpool. "I'm responsible not just for financials, but for 60,000 people and their families. The buck stops here. If you think too much about it, it can paralyze you."

Busier than You've Ever Been: The reality is that you'll need to work hard to meet the demands of the role, and even with this Herculean effort, you still won't get it all done.

Never Too Soon for a Crisis: When you encounter a crisis in your transition, it not only challenges your organization, it can also derail your momentum as well as threaten your tenure.

The New CEO Checklist

- Accept your vulnerability.
- Avoid becoming an island.
- Find trusted advisors.
- Know that more is not always more.
- Get comfortable saying "no."
- Remember you can't know the unknowns.

Prepare to Win

Plan: A solid transition plan will give you structure, task direction, prioritization, and clear deliverables in your early days.

Adjust: While having a transition plan is proven to be an effective input in CEO transition success, it needs to be flexible. The potential for leadership surprises is significant. From erupting geopolitical tensions to a global pandemic, we are facing situations that no one can predict.

Your Ghost: Your ghost is the former CEO who once sat at the same office you are now in. When the handover works perfectly, you'll have access to an outgoing CEO who is supportive. The reality is that there can be an outgoing CEO who consumes a considerable amount of your time, energy, and attention.

Following a Hero: Death by comparison is the risk here: they were so great; you will never stack up; if only they were still here. Key to this was avoiding any implication that what was done in the past wasn't working.

Following a Villain: While this is often easier than following a hero CEO, it's not without its challenges. The trap here is that you get positioned as the incoming hero and it goes to your head.

Dealing with a Former CEO Who Is Now a Board Chair or Director, and/or a Significant Shareholder: This is an essential time to get together and ask: "When, not if, I want to change something you put in place or kill something that was your creation, how will we deal with that discussion?"

The Business Context: Burning platforms can give you something to focus on and hopefully solve. It focuses your attention on what you should be doing among the many things you could be doing.

Turnaround: If you are at the helm of a business that requires immediate, significant, and substantial changes in order to survive, you'll be expected to make decisions much sooner than if you were at a company that was ticking along nicely. And you'll need to be comfortable making these decisions when you have limited context.

Continuation: Businesses that fit this category—with a solid foundation, efficient organizational structure, good levels of talent, and a stable record of growth—will often require their new CEO to broadly continue the existing strategy. The potential pitfall is that, in the spirit of "if it ain't broke, don't fix it," your organization may be more watchful for mistakes, and more sensitive to them, than in a turnaround situation.

Outsider or Insider: Your transition to CEO will be affected by the nature of whether you have been groomed and promoted internally, or found as part of a search process and joined from another organization or even industry.

The New CEO Checklist

- Set your plan.

The hardest part of a CEO transition is finding the right balance between listening and learning versus acting.

- Think back to front.
- Bake in flexibility.
- Don't have all the answers.
- Remove the blinkers.

Part II: Out of the Blocks: Making the Right Start

Burst the CEO Bubble

Bursting the bubble involves adjusting your thinking and behaviors—to create an environment in which people feel comfortable telling you what they're really thinking and to remove your biases, so you open yourself to the true realities in front of you, rather than trying to confirm what you think you already know.

See More, But Hear Less: You now have visibility over the entire business. The trade-off of that greater visibility is that you are as far from the frontline as you can get, and the number of layers between you and "them" has increased.

Be Curious, Not Right: You will be more successful if you focus on being curious instead of being right.

Two Ears, One Mouth: A clear aspect of curiosity is asking the right questions—and really listening.

Check Your Biases at the Door: Working on understanding and mitigating your biases is a key aspect of leadership development.

The New CEO Checklist

- Accept that your relationships will be different now that you're CEO.
- Burst the "CEO Bubble" as quickly and as often as possible.
- Find your espresso machine.
- Listen more than you talk.
- Beware of your unconscious incompetence.

Act Discerningly

The hardest part of a CEO transition is finding the right balance between listening and learning versus acting. How fast is too fast? How slow is too slow?

Rethink the First 100 Days' Mindset: Unless you're in a serious turnaround situation or in crisis management mode, the opportunistic focus on your first 90 or 100 days is overstated. If you need one rule of thumb, it would be: if it is on fire, fix it. If it is smoldering, leave it alone until you have more context. And remember, communication is your friend early on.

Festina Lente (Make Haste Slowly): Your learning curve in the first months of your role will be extremely steep. Ideally, you should resist making really big decisions or wide-sweeping changes early on unless it's something on fire.

Easy Wins: While you need to resist the pressure (internal or otherwise) to come in and fix or change everything straightaway, you will still want to make some moves during your transition, not least to signal your intentions as a new leader.

Common Pain Points: Addressing a constant moan or common pain point is another good approach. This is what Stephanie Tully, CEO of Jetstar, did. "Everyone was telling me that they hated the uniform. So, I said, 'Let's change it.'"

Early Moves: At a slightly larger scale than easy wins are a CEO's early moves—the more substantial decisions that are made during the transition period.

Clearing the Decks: There are some opportunistic benefits and advantages to being the new CEO. One of these is the lack of complete ownership of the current problems and financials. This affords you the unique freedom to make some financially unpleasant decisions.

The New CEO Checklist

- Adopt new metrics for your early success.
- Go slow to go fast.
- Don't boil the ocean.
- Look for easy wins.

- Fight the fires.
- Remember you don't always own it all upfront.

Get the Messaging Right

When Satya Nadella stepped into the Microsoft CEO shoes in 2014 he emailed every employee with a note that was as humble as it was galvanizing. He set out who he was, why he was there, and what the company would do next.

A key part of your initial communication needs to be about you, why you're happy to be here and what you're going to do over the coming weeks and months. This is a critical juncture for your organization. And if you don't set the narrative, someone else will.

What to Say

- "I Don't Know."
- "How Can I Help?"
- "What Didn't I Ask, But Should Have?"

Communication versus Action: The extent to which your transition is deemed successful early on will depend on your communication as much as, if not more than, your actions.

Intent versus Behavior: There is often a discrepancy between your intent and your actions.

Chicken Noodle Soup and Blue Walls: How you show up as a leader will shape the organization's set of accepted behaviors and norms. Everything you do is role-modeling—so be very deliberate and conscious here.

Taking a Public Position: There is a pressure and expectation—particularly from employees and society—that didn't exist 20 years ago—that CEOs should publicly comment on social and political events. Each situation is as different as each organization and CEO.There is no right or wrong answer here.

The New CEO Checklist

- Own your narrative.
- Move quickly on the who, the why, and the what.
- Prep like a politician.
- Don't be afraid to say, "I don't know."
- Remember communication can matter more than actions early on.
- Embrace the communication experts.

Navigating the Crash

For every leader, there comes a point when you crash, when you wonder if you are really up to the challenge. When the challenges arrive be attentive, but also kind to yourself, safe in the knowledge that others have struggled and succeeded with the same problems that you now face. Don't avoid seeking support.

Power of Reflection: A crash can be an indicator that it's time to pause, take stock, and recalibrate.

Here to Serve: A good way to center yourself during a crash is to remember why you are here in the first place.

Play Your Position: As soon as you can, start focusing on the things only you can (and should) do. This is often easier said than done.

Trust Your Gut: For some CEOs, the crash is not so much a psychological wobble, but an early challenge where you feel the heat from external stakeholders and must find a way forward. Take time to reflect, focus on what matters, and do the job that only you can do.

The New CEO Checklist

- Know this is normal.
- Take the opportunity to recalibrate.
- Look in and out.
- Don't neglect your health, family, or friends.
- Narrow your aperture.
- Find the solution within.

Part III: Up and Running: Early Priorities

Building Your Top Team

Your success as a CEO depends on your ability to build and lead a high-performing C-suite at the individual and team levels. Doing so will require vision, courage, and more than a few difficult choices.

Move Fast on Your Team: The area where speed is encouraged is in decisions about your team.

Decide How You Will Assess Your Team: The ideal situation is to utilize a psychometric assessment tool to ensure that you are countering your biases and to help you have a base assessment.

Your success as a CEO depends on your ability to build and lead a high-performing C-suite at the individual and team levels.

Would You Rehire?: Knowing what you know now about your leaders, if they applied for this role again, would you rehire them?

Make Your Decision, But Be Aware of the Prevailing View: As part of your assessment of senior leadership team members, take time to understand the prevailing view.

On the Right Tack: You need a star team and to set up your leaders in the right way so they all pull in the same direction toward your strategic vision.

The New CEO Checklist

- Move fast on your team.
- Watch out for decision delayers.
- Collect your evidence.
- Look for future-ready leaders.

Leading Your Top Team

How your top team operates comes largely down to your actions. The expectations that you set and the tone that you establish matter greatly. One of the first steps you can take is to invest in team-building.

Establish a "First-Team" Mentality Early: No team is more important than your senior leadership team. It is impossible for you to be successful without the right people around you.

Different Strokes for Different Folks: As CEO, you lead the most important team in the entire organization. These are the organization's top executives behind yourself. They are the best in their area that you have, and they are potentially all very different.

Showing Up Consistently: As CEO, you are no doubt aware that you cast a long shadow over the organization. Many CEOs overlook the importance of extending this same attitude to every senior leadership team interaction.

Discuss, Debate, But You Decide: When you were part of an executive team, before becoming CEO, you would have been regularly asked to contribute to the decision-making process. Sometimes you heavily influenced the decisions and it went your way. You felt that you made the right call, that you made the decisions—but you didn't. The CEO did. Likewise, when it didn't go your way, or another decision was made, it wasn't somebody else on the team making the decision. It was the CEO.

Speak Last: Executives with a seat at the senior leadership table are expected to provide a view on the issues affecting the business. It's great leadership to avoid leading the conversation or giving your view early, but it is also rare. So, you need to explain what you are doing and why. Otherwise, people might see it as a lack of interest or some sort of test.

The New CEO Checklist

- Think team first.
- Don't strive for absolute harmony.
- Harness the diversity of your senior leadership team.
- Make the right decisions.

Working with the Board

It is common for first-time CEOs to find that they have greatly underestimated the time it takes to manage the board interactions and demands.

Get to Know Them Individually: Like any stakeholder, there is benefit to investing time and effort in building effective relationships.

When in Doubt, Share: Being transparent with the board is good practice and enhances its ability to be a strategic asset.

Common Mistakes with the Board

- You do not manage the board.
- Don't ignore or avoid the board.
- Understand the scope and role of the board and what makes a board effective.
- Understanding risk management from a board's perspective is invaluable.
- The chair and directors are not your friends.
- Don't assume that a silent board means a job well done.

Board Conflicts: It's a good idea to use your early meetings with directors to discuss how you will deal with conflicts should they arise.

The Board's Concerns of You, Their New CEO: Make it clear that you understand the role to ease their concerns.

Can I Have That in Writing?: CEOs who have reflected on their first-time experiences now fully understand the opportunity you have before you start to contract your scope and authority with the board.

Dealing with the Street: Identify the most vocal analysts and investors who join calls. Understand "hot button" issues that may come up—and prepare for them.

The New CEO Checklist

- Engage the board early.
- Clarity counts.
- Forge deep relationships.
- Establish a relationship based on transparency.

Shaping the Culture

As CEO, you are ultimately responsible for the culture of your organization. In order to shape it, you first need to assess and understand it.

Change is difficult and there is considerable ground to cover between agreeing that change is necessary and actually making the change. And even more ground to cover before the change is embedded. Changing culture takes time.

The New CEO Checklist

- Get out of the corner office.
- Look beyond the culture survey.
- Be the change you want to see.
- Fold the seatbelts.
- Foster hope.

Part IV: Less of a Marathon, More a Series of Sprints

If I Could Do It All Over Again

There is a saying that is applicable to transitioning into the role of CEO. "Experience is what you get just after you needed it." This will, in part, be the case for your transition but with this book you've had the opportunity to learn from others who have gone before you. Here are a couple of pieces of invaluable advice and hindsight from some of your peers who have done it, and done it well.

Marc Bitzer, CEO, Whirlpool

"Never forget that you are here to serve. Serve the organization first, then your team, and then long afterward yourself."

Stephanie Tully, CEO, Jetstar

"Listen. Really listen. Exhaust yourself listening. Be seen as someone who is committed to hearing what people really think and feel across the organization."

Final Thoughts

The key is to go in with your eyes open. It's about admitting you don't have all the answers and opening yourself up to learning—from those who have gone before and from those rooting for your success. Being CEO is a privilege, not a right.

Be humble.

How you manage yourself during this time will make the difference.

How you come to terms with the loneliness.

How you keep your biases from negatively affecting your progress and others around you.

How you manage your internal pressure around action.

How you manage your poker face and communication.

How you balance your time and energy, manage your outside commitments and well-being, and show up authentically.

How you build relationships.

How you act as the new CEO.

The quicker you can ground and anchor yourself, the quicker you will anchor and ground your organization—and the quicker you will deliver success, both for your business, and for yourself.

Ty Wiggins is a leadership expert who is committed to ensuring new CEOs are set up for success. He is a trusted advisor to world-leading CEOs, helping them successfully transition into their roles to unlock business and personal success faster. Ty is the global lead of the CEO and Executive Transition Practice at Russell Reynolds Associates.

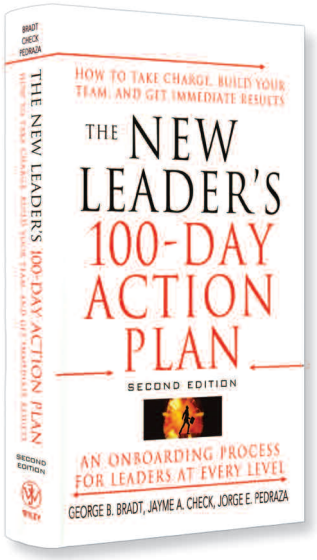
Leadership: Strategies

The New Leader's 100-Day Action Plan

Bonus Summary

How to Take Charge, Build Your Team and Get Immediate Results (Second Edition)



by George B. Bradt, Jayme A. Check and Jorge E. Pedraza

THE SUMMARY IN BRIEF

Moving into a new leadership position is one of the toughest challenges an executive can face. Nearly half of new leaders fail in their first 18 months. Often, that failure is the result of crucial mistakes made in the first 100 days.

Whether you're a veteran leader taking over a new organization or a novice moving into your first leadership role, this practical guide will help you manage your leadership transition so you can take charge, build your team and deliver results. Executive transition experts George Bradt, Jayme Check and Jorge Pedraza present proven solutions and cutting-edge techniques for getting started successfully in your new role.

The New Leader's 100-Day Action Plan presents comprehensive, easy-to-follow career guidance that will help you master your new job — and the art of leadership — with proven tools, techniques and a step-by-step action plan.

Filled with timely guidance that applies directly to leaders in today's global business environment, *The New Leader's 100-Day Action Plan* is the ultimate guide for getting ahead — and staying there.

IN THIS SUMMARY, YOU WILL LEARN:

- How to turn key stakeholders and direct reports into your allies.
- How to build your new team with early wins.
- How to fit into a new corporate culture — and shape its evolution.
- How to create, communicate and implement a new strategic direction.
- How to avoid common mistakes and pitfalls.
- How to build loyalty, trust and commitment with new colleagues.

INTRODUCTION

Forty percent of leaders going into new roles fail in their first 18 months. Why can't they deliver? In most cases, they dig their own holes by missing one of the important tasks that must be accomplished in their first 100 days. Some don't understand the impact of their early words and actions and inadvertently send their new colleagues the wrong messages. Some focus on finding a new strategy, but fail to get buy-in and build trust with their new team. Some do a lot of work and expend a lot of energy without accomplishing the one or two things that their most important stakeholders are looking for. All are unaware of some of the important steps required to achieve a successful transition. No leader wants this to happen; but it does, at an alarming rate.

Remember: *Leadership is about inspiring and enabling others to do their absolute best together, to realize a meaningful and rewarding shared purpose.*

It's not about you. It's about them — those following your lead. How you set the direction and priorities, and what you do to inspire and enable them is important. But what is most important is what they see, hear, feel, believe and accomplish together as a team. Leadership is about your ability to create an environment where your team can deliver remarkable results and love doing it.

Create Your New Leadership Role

There are two dimensions to activating your leadership potential. The first is understanding and declaring your own leadership qualities and capacities. The second is interacting effectively with others in such a way that it becomes part of an organization's or a market's perception of you. Know yourself, and then help others know you. There are concrete steps you can take to *position* yourself for leadership roles and promotions.

Begin with the first dimension — know and declare yourself a leader. The "declaring" part is important since this is what best enables you to commit to your career path. Start by declaring this to yourself. Commit yourself. Your commitments become more real, however, when you share them with others.

Next, build a career plan. Great leaders are not made in a day. Leadership is built. *The Five-Step Career Plan* can help you know yourself professionally, stake out your career path and set yourself in motion.

The Five-Step Career Plan

Here are the main steps:

1. Likes and dislikes: Go through your past activities and jobs and lay out everything you liked and didn't like. Dig underneath to pull out the values that underlie some of your likes and dislikes.

2. Ideal job criteria: With these values in mind, lay out your ideal job criteria. Make sure the criteria line up with your strengths, values and interests.

3. Long-term goals: Next, consider your long-term goals. What do you want to achieve?

4. Options: The mindset that generates a sense of possibilities and options is the mindset that creates opportunities and fosters success. Create parallel options for yourself.

5. Choice: Compare your options by weighting your

criteria and evaluating each option's results.

Once you've made your choice, write it down and go to sleep. If you wake up in the morning feeling good, then you've probably made a good decision. If you wake up with your gut indicating that you have made a mistake, you misled yourself. Most likely, you erred in weighting your ideal job criteria.

Communicating Leadership

Now, the second part: "Help others know you." Once you've gotten a good handle on your strengths and goals, you are ready to think through positioning in a proactive and methodical way.

Start by understanding your existing strengths and talents that you can turn into strengths appropriate to meet your long-term goals. Then communicate your readiness for leadership by leading something, whether it's a major project or the team outing.

Sell Before You Buy: Answer the Only Three Interview Questions

Remember three things during the interview process:

Thing 1: You cannot turn down a job offer that you have not received.

Before you accept a job, you must first get an offer. Then, and only then, you can decide if you should accept it. Do not do these steps out of order. Your initial focus should be solely on getting the job offer.

Everything you do in the interview process should be designed to get the company to offer you the job. This includes not only your answers to their questions, but also your questions to them.

At this stage in the process, your questions are not about helping *you* decide if you want the job. They are about helping *them* decide to offer it to you. Secure the offer first. After you've got the offer, figure out if it's right for you.

Thing 2: There are only three fundamental interview questions — ever.

There are only three interview questions. Every question you've ever been asked, and every question you've ever asked in an interview is a subset of one of these three fundamental questions:

1. Can you do the job?
2. Will you love the job?
3. Can I tolerate working with you?

The questions may be asked in different words, but every question, however worded, is just a variation on one of these. As each question comes, it is your job to determine which of the three is really being asked.

Thing 3: There are only three fundamental interview answers — ever.

Since there are only three fundamental interview questions, there are only three fundamental interview answers. Every answer you give in an interview should be a subset of these three answers:

1. My *strengths* are a match for this job.
2. My *motivations* are a match for this job.
3. I am a good *fit* with this organization.

Your answers to questions will be more elaborate, but your answers should always be dressed-up versions of one of the three.

Since there are only three interview questions and three interview answers, all you have to do is prepare three answers in advance and recognize what question you are being asked. Then you are ready to ace any interview.

Map and Avoid the Most Common Land Mines

You cannot reduce the risks inherent in a new role until you identify them, understand their danger and either dance around them or purposefully deactivate them. Here are the seven most dangerous land mines:

1. Organization. Organizational land mines are encountered when an executive accepts a new role in an organization that lacks a clear, concise, differentiating and winning strategy. The best way to avoid this land mine is by making a powerful and fully informed choice, early on.

2. Role. Role land mines are encountered when expectations, resources or key stakeholders are not aligned. It is critical for new leaders to know exactly what their boss expects them to deliver and what resources can be controlled and influenced in order to deliver those expectations.

3. Personal. Personal land mines are the ones that the executive brings to the new job. They are activated when significant gaps exist in an executive's strengths, motivation or fit for the job.

4. Relationship. Relationship land mines are most likely to occur when an executive fails to identify, establish or maintain key relationships up, across or down the organization. Relationship risks are particularly severe for people who are brought in as change agents.

5. Learning. Executives trigger learning land mines when they fail to grasp key information in any of the so-called 5Cs: customers, collaborators, capabilities, competitors or conditions. Executives often miss the importance of certain Cs or diminish the importance of one or more of them.

6. Delivery. Executives stumble on this land mine when they fail to build a high-performing team or deliver results fast enough. Delivery comes in all forms, but it is only valuable if it is what was ordered.

7. Adjustment. Executives can do everything correctly to this point, but if they do not see or react to the inevitable situational changes, new land mines will certainly be created.

Do Your Due Diligence on the Organization, Role and Fit

Before you accept a job, figure out organizational, role and personal risks during due diligence.

At the core, due diligence is an exercise in collecting and analyzing information to reduce the risk inherent in a decision. Here are three steps:

1. Decide what information to collect. Before accepting a job, you must gather information in the following areas to answer three fundamental questions around organization, role and personal risks:

- *Organizational Risk:* What is the organization's sustainable competitive advantage?
- *Role Risk:* Did anyone have concerns about this role; and, if so, what was done to mitigate them?
- *Personal Risk:* What, specifically, about me, led to you offering me the job?

2. Identify potential sources of information. You'll need scouts, seconds and spies to help you. Scouts are people outside the company who can give you a view of what's going on inside the company. Seconds are people who want to help you succeed. Spies are people on the inside who can give you special insight into what's going on.

3. Gather and analyze the information. Trust is the grease that lets communication work and, conversely, communication is what builds and sustains trust.

A genuine concern about the organization's ability to succeed will start opening the doors of communication. That, coupled with a sensitivity and concern for the person you are seeking information from, will further open those doors.

Categorize Risk

Now what do you do? Categorize the risk as low, manageable, mission-crippling or insurmountable and then take appropriate action.

- *Low Level of Risk.* If the organization has a sustainable competitive advantage for now, and if key people are aligned around a common, clear definition of the role you're going to take, and if you would hire yourself for that role in this organization at this time, you should be in good shape at the start.
- *Manageable Level of Risk.* If the organization knows how to create sustainable competitive advantage, but they haven't locked it in yet; if the role is clear, but not everyone is aligned; or if you don't exactly have the strength they thought you did, but you know how to compensate for that gap, go ahead and accept the job and manage these risks as you go.
- *Mission-Crippling Risk.* This is where you've uncovered something that is going to keep you from being successful unless you can change it. Before you accept this role, you should be certain that you have the authority and can implement the necessary changes to resolve or mitigate this risk. If not, you should walk away.
- *Insurmountable Barrier.* An insurmountable barrier is a mission-crippling risk that cannot (or will not) be resolved. If it feels insurmountable, it is. Listen to your intuition.

Act Differently When You Are Promoted From Within

The fundamental difference between moving to a new company and getting promoted from within is that you are already on track. Unlike when you join an organization for the first time and have to create a new positioning for yourself, when you're promoted from within, people already know you or know people who know you. Thus, to a large degree, this is an exercise in repositioning yourself within the organization.

When you have been promoted from within, keep the following rules in mind:

- **You cannot control the context.** While you may not be able to influence the circumstances surrounding an open role, you can often influence planned promotions in advance.
- **It is hard to make a clean break.** More often than not, you will still be accountable for your old job even after you start your new job. If you falter with the transition of your old job, the results can impinge on your success in your new role.

• **There is no honeymoon.** As an insider, you're expected to be fully up to speed the moment you start your new job.

Here are actions for those promoted from within:

1. *Prepare in advance.* Work to understand the context and complexity of the new situation.

2. *Take control of your own transition.* Be proactive and control the message and communication cascade — the timing of who hears what and in what order. Clarify what has changed and what has not changed.

3. *Accelerate team progress after the start.* This is where your knowledge of the organization can really help.

Take Control of Your Own Start

Many leaders fall into the trap of thinking that leadership begins on Day One of a new job. *Like it or not, a new leader's role begins as soon as that person is an acknowledged candidate for the job.* Everything new leaders do and say and don't do and don't say will send powerful signals, starting well before they even walk in the door on Day One.

If you embrace this concept and do something about it, you increase your chances of success.

This bonus time between acceptance and start can be referred to as the *fuzzy front end.* It often comes at the worst possible time, interfering with the last days of an old job or with time earmarked for taking a vacation, catching up with household errands or generally unwinding a little before the big day.

The good news is that, more often than not, key elements of the fuzzy front end can be addressed in relatively short order. Even so, strive to stretch out the time between acceptance and your start date. Adding days before your official start is one of the best ways to get more done during your first 100 days.

Choose the Right Day to Be Day One

You can create time in a few ways; but the best way to stretch the fuzzy front end is by taking these action steps:

- Identify key stakeholders.
- Craft your message.
- Manage your office setup.
- Manage your personal/family setup.
- Conduct pre-start meetings and phone calls.
- Deploy an information-gathering and learning plan.
- Plan your first 100 days.

The pre-start meetings and phone calls are a great chance to jumpstart relationships by getting into learning, expectations and implementation.

Decide How to Engage the New Culture

You have important choices to make before Day One. One choice that you must make in advance is how best to engage with the existing culture. Cultural engagement is extremely important in a successful transition, and it is essential that executives know what their cultural engagement plan will be before walking in the door for Day One.

The executive transition experts at PrimeGenesis have developed an ACES model, which lays out three cultural engagement choices: assimilate, converge and evolve, and shock. After the decision to take the job in the first place, this may be the most important decision you make in your first 100 days.

1. Assimilate. Assimilating is the safest way to engage the culture. If they wear white shirts, you wear a white shirt.

2. Converge and Evolve. This is a relatively safe middle way that will allow you to move things in the right direction over time. Here you converge with the existing culture first, and then help it evolve over time as appropriate. Most of the time this is going to be the preferred approach.

3. Shock. Shock is the opposite of Assimilate. Trying to immediately jumpstart the culture to your way is the most threatening and risky move you can make. There will be active resistance and pushback. Shock is something you only want to use when you must.

You must pick the right approach if you are to have any hope of a successful transition.

Culture can be referred to as "the way we do things here." Culture is the combination of what people do and say with their underlying core values. A good shorthand is "Be. Do. Say." It works for people and for organizations:

• **Be:** The underpinning of culture (and integrity) is what people really are, their core assumptions, beliefs and intentions.

• **Do:** These are behavioral, attitudinal and communication norms that can be seen, felt or heard such as signs and symbols like physical layouts, the way people dress, talk to each other and interact with each other.

• **Say:** What people say about their culture can be found in things like mission statements, creeds and stories.

For a culture to be sustainable, these three must be in sync. Just as your own values, actions and words need to line up, the same is true for an organization's.

Drive Action with an Ongoing Communication Campaign

Everything great leaders say and do flows directly from their own core values, beliefs and intentions. They live their message. This is why your 100-Day Action Plan should be a subset of your overall communication plan and why you need to think through what's really important to you, to the people you're communicating with, and what and how you want to communicate, before you say or do anything.

Six Steps of a Communication Campaign

The six basic steps of a communication campaign are:

1. *Plan* the campaign and key elements: message, signs and symbols, media and touch points. Great communication campaigns pivot off a central message. Think "We're going to be No. 1 or No. 2 or we're going to get out," which was used for one of Jack Welch's early drives at General Electric. Your message is the key that unlocks personal connections.

2. *Seed* the message before you start, on Day One and throughout your early days. You generally do not want to start with a big launch that catches everyone by surprise. Instead, you'll want to seed your message with an ever-growing set of stakeholders before your launch.

3. *Launch*, leveraging work on the *Burning Imperative* as appropriate. Launches can be big, subtle or somewhere in between, and the style of the launch should match what is comfortable for you and your team. It also needs to be in keeping with the culture of the organization, unless you are trying to shock the existing culture.

4. *Roll out*, leveraging *milestones* and celebrating *early wins*. Launching is a major step. Now you have to make it real by proving that you are going to deliver those achievable next steps. This is where you will likely want to deploy some sort of public scorecard where everyone can see results against key milestones.

5. *Reinforce* when doubters inevitably raise their heads by implementing your *role sort*. There will be a crisis of confidence at some point. Make it clear that you are committed to the changes. This is a good time to shine the spotlight publicly on some people who are still in the way, perhaps implementing your role sort to move some people out.

6. *Institutionalize* by embedding key routines and processes. You'll want to put in place practices that will ensure the changes you have made so far become part of the fabric of how you do business.

Planning Day One

When planning your Day One, there are some general guidelines and principles to consider:

- *It is personal.* As a leader, you impact peoples' lives. Those people will try very hard to figure out you and your potential impact as soon as they can.
- *Order counts.* Be circumspect about the order in which you meet with people and the timing of when you do what throughout Day One and your early days.
- *Messages matter.* Have a message. Know what you are going to say and not say.
- *Location counts.* Think about where you will show up for work on Day One.
- *Signs and symbols count.* Be aware of all the ways in which you communicate, well beyond just words.
- *Timing counts.* Decide which day you want to communicate as Day One to facilitate other choices about order and location.

Take Control of Day One: Make a Powerful First Impression

According to researcher Elizabeth Hilton, our brains remember information "presented first and last, and have an inclination to forget the middle items." People will vividly remember their first impressions of and their last interaction with you. While you can update their last interaction constantly, you are going to be stuck with those first impressions.

So, be careful about the messages you send with your words, with your actions, with the order of your actions, and with the signs and symbols you deploy. This is why Day One is the pivot point for onboarding. Many people who are important to your new role will form their first, indelible impression of you on this day.

There is no one right way to do this, but there are many wrong ways to do this. It is all about the first impression *received*. Different people will have different impressions of the same thing depending on their perspective and filters. The problem is that prior to your first interactions with them, you can't understand their perspective and filters. So not only is there no one right answer, it will be difficult to figure out the best answer

for your particular situation. This is another reason it is so valuable to get a jumpstart on relationships and learning during the fuzzy front end. Not only does that let you manage your initial impressions on those people outside the noise of Day One, it will help you make better choices about your early days.

Embed a Strong Burning Imperative by Day 30

On top of everything else you have to do, and all the other demands on your schedule, make the time to implement the building blocks of tactical capacity. The starting point, and indeed the foundation, is the Burning Imperative with its components of headline, mission, vision, objectives, goals, strategies and values. Experienced, successful leaders inevitably say that getting people aligned around a vision and values is the most important thing they have to do.

The Burning Imperative is a clear, sharply defined, intensely shared and purposefully urgent understanding from each of the team members of what they are "supposed to do, *now*" and how this imperative works with the larger aspirations of the team and the organization.

The Burning Imperative must have a shorthand summary or headline most likely containing a strong, action-oriented verb. This is a brief statement, or tagline, that reminds each team member of the entire range of work from mission through strategy and the statements behind each step and, specifically, of their commitments and responsibilities in relation to that work.

For the Burning Imperative to drive everything everyone actually does every day, it must be truly embraced by all. Thus you should strive to get it in place and shared early on, within your first 30 days at the latest.

Exploit Key Milestones to Drive Team Performance by Day 45

Milestones are the building blocks of tactical capacity that turn a Burning Imperative into a manageable action plan. The power of milestones is that they let you know how you're doing along the way and give you the opportunity to make adjustments. They also give you the comfort to let your team run toward the goal without your involvement, as long as the milestones are being reached as planned.

Deploying a mutually supportive team-based follow-up system helps everyone improve performance versus goals. Follow these three steps as well as the prep and post instructions:

Prep: Circulate individual milestone updates to the team to read before each meeting so you can take update sharing and reporting off the agenda, while still deploying a disciplined process to make sure information flows where it needs to go.

1. *Use the first half of each meeting for each team member to headline wins, learning and areas in which the person needs help from other team members*, but do not work through items at this point.

2. *Pause at the halfway point of the meeting to prioritize items for discussion* so the team can discuss items in the right priority order instead of first-come, first-serve. These will be the most important items for this team to work *as a team* at this time.

3. *Use the second half of the meeting to discuss the overall team's most important issues and opportunities* with regard to milestone delivery in priority order.

Post: Defer other items to the next meeting or a separate meeting.

Over-Invest in Early Wins to Build Team Confidence by Day 60

Early wins give the leader *credibility* and provide the team *confidence* and *momentum* — three very good things.

Here is a relatively simple prescription for early wins:

1. Select one or two early wins from your milestone list. Choose early wins that will make a meaningful external impact. Select early wins that your boss will want to talk about. Pick early wins that you are sure you can deliver.

2. Establish early wins in your second month and deliver by your sixth month. Early means early. Make sure you select early wins in your first 60 days that you and the team can deliver by the end of your sixth month. Select them early. Communicate them early. Deliver them early.

3. Over-invest resources toward early wins to over-deliver. Do not skimp on your early wins. Allocate resources in a manner that will ensure timely delivery. Put more resources than you think you should need against these early opportunities so your team is certain to deliver them better and faster than anyone thought was possible. Stay alert. Adjust quickly.

4. Celebrate and communicate early wins. As your first early wins are achieved, celebrate the accomplishments with the entire team. In conjunction with your communication campaign, make sure your early

wins are communicated as appropriate.

In general, "early wins" are not synonymous with "big wins." They are the sometimes small, yet meaningful wins that start the momentum of a winning team.

Secure ADEPT People in the Right Roles with the Right Support by Day 70

Of all the tools in your toolbox, putting people in the right roles is one of the most powerful.

When it comes to sorting people and roles on your team, you need to work with a short-term and a long-term framework. Initially, you must look at your team to determine what, if any, short-term moves should be made. Then, in the longer term, you must continue to monitor your team. The executive transition experts at PrimeGenesis use a process called ADEPT to develop the team over time.

Here is the context for this and ideas you can apply over time:

Acquire: This involves scoping roles, identifying prospects, recruiting and selecting the right people for the right roles, attracting those people and onboarding them so they can deliver better results faster.

Develop: Development includes assessing performance drivers, and developing skills and knowledge for current and future roles.

Encourage: Encouragement involves providing clear direction, objectives, measures, etc., and supporting your team with the resources and time required for success. It also includes reinforcing desired behaviors with recognition and rewards.

Plan: Monitor people's performance over time and assess their situation and potential.

Transition: Migrate people to different roles to fit their needs/life stage, and the company's needs.

Evolve People, Plans and Practices to Capitalize on Changing Circumstances

The 100-day mark is a good moment to start thinking about how you are going to evolve your people, plans and practices over time to capitalize on changing circumstances. It's useful to set up a predictable rhythm. This allows people to spend less time worrying about the process and more time figuring out how to react and capitalize on the inevitable changes around them. Following are elements to consider on a regular basis:

- **People.** *Succession planning* involves aligning the longer-term organizational development plans with the longer-term (three-plus years) strategic plan. Do this on an annual basis.

  Performance management and talent review (one-year horizon, run annually) include tracking progress of the longer-term succession plan and the corresponding talent needs. Do this on an annual basis.

- **Plans.** Your *strategic review* involves conducting a detailed long-term look at the business (three-year horizon), which leads to choices around how to create and allocate resources over that longer-term horizon. Do this on an annual basis.

  Your *operational review* ensures that the right operational plans (one-year horizon) are in place that will enable you to deliver the next year's goals. Do this on an annual basis.

- **Practices.** *Business reviews and plan updates* include tracking progress in the context of the operational plan (one-year horizon) and making midcourse adjustments along the way. Do this quarterly.

  Milestone updates and adjustment require you to track the monthly milestones to keep the team focused on the most important things — as a team. Do this monthly.

Thinking about these things with these horizons allows you to have a good balance between long-term thinking and short-term execution.

Major changes that are enduring require a fundamental restart. These can be material changes in things like customer needs, competitors' strategies, or the economic, political or social environment in which you operate. They can be internal changes such as reorganizations or acquisitions. Whatever the change, hit a restart button. Go back to the beginning, do a full situation analysis, identify the key stakeholders, look at your message again, restart your communication campaign, and get your people, plans and practices realigned around the new purpose. Remember, the fittest adapt best.

THE SUMMARY IN BRIEF

The journey of discovering your leadership impact and the work necessary to become a servant leader can be a struggle if you have no direction. We change our expectations of customers and employees at rapid rates, but often fail to adapt our leadership structure and organizations to these changes. Leaders have a role in the transformation process that takes place within themselves, the team, and the organization – without a clear roadmap, the transformation often never occurs.

Greg Giuliano lays out the changes that leaders need to make to embrace and provide space for discovery in his book, ***The Next Normal: Transform Your Leadership, Your Team, and Your Organization***, focusing on rethinking, resetting, and renewing leadership to facilitate the "next normal" as a step in the right direction.

IN THIS SUMMARY, YOU WILL LEARN:

- How change happens to us and sometimes because of us.
- How to go with the flow of change to maximize potential.
- How to rethink and reset your own journey as a leader.
- How to build and coach a high performing team.
- How to enable positive transformation for maximum impact in the organization.

Introduction

Sometimes change happens to us, and sometimes change happens because of us. The pandemic is a good example of change that happens to us – something we can't control. So many long for the times before COVID happened to us and focus all their energy trying to get back a world that no longer exists. This is a normal reaction to change, especially when it disrupts life. Professionals in the organizational change niche say that people don't fear change, they fear loss, which is a fair assumption – faced with change, people tend to fear their loss of control in situations. When we are comfortable in the status quo (comfort zone) any change threatens the livelihood that we create for ourselves there and we don't know what to do.

There comes a time when you have to undertake a journey of your own as a leader, rethinking and resetting how you approach your role. You have to analyze how to build and coach your high performing team while driving for change in your organization. This journey enables positive transformation within a team or organization but requires our own journey on the leadership side to create the process of personal transformation and continuous improvement – all of which result in creating a greater impact by leading intentionally.

Leading in the Next Normal

There are some basics you must define when you are creating your process – leadership, normal, next, rethink, reset, and renew. Leadership is a choice, one that takes courage; when you choose to be a leader, you step into the unknown. Leaders enable positive transformation for their organization, their team, and the individuals they lead. As a leader, you are creating the next normal for your team and organization.

"Normal" is the pattern of recurring events we view as our current state – our routine. For example, Pinky and The Brain had their routine, they were going to take over the world. It was laid out for them; they knew what they were going to do. That was their normal. When changes occur in our "normal", it disrupts our routines. The more we see change as normal, the more we, our teams, and our organizations will work to build the capability to shape and navigate continuous change.

To facilitate what comes next, leaders are required to see the current moment as the "point of no return" – which is what pre-pandemic days are to our new normal in life.

Like first responders who rush toward danger, as a leader, it is our responsibility to aim for and take on the challenges, even if they remove us from the status quo, we have become comfortable with. As a leader, the question in your mind should always be so, now what?

Driving Change

When driving change, there is right work and there is improved work – all working toward sustainable competitive advantages. To accomplish a real and sustainable competitive advantage, you have to encourage internal changes in how people and teams think, engage, and contribute. This is not an easy process and can be complicated, taking more time than leaders realize. The goal of the leader is not to enforce change but to get people to want to change.

When you begin to shape the next normal, you are making an announcement that something, or everything, will be different from that moment on. This announcement has an impact, but it can combat the situation of losing control in each situation and is necessary to help organizations change by facilitating the desire to change within its people. If you want to actively lead change, consider the best way to have a conversation about it and talk about change and transition with your team and with each person, being as clear and detailed as possible to avoid any confusion.

To drive change and empower people, remember the ABC's – align people, build bench strength, and coordinate action. Like they say, there is no "I" in team, approach everything as a "we". You are working towards driving change together, not forcing change in a way that disrupts the entire system. The organized approach provides the ability for people to adapt to change and develop a new mindset, and is an important part of the transformative leadership process.

The Gospel According to You (Your Leadership POV)

Leaders have the power to replicate and scale what they believe in order to impact the decisions and actions of hundreds or thousands of people. Your team likely knows your "gospel" and can recite it if asked. They repeat it down the chain of command, ensuring that the organizing principles you hold create a paradigm in which countless decisions are made about structure, culture, and capabilities.

To be a successful leader in the next normal, it requires some organizing principles:

- The Organization is a Living System
- Change is Normative
- Leading is a Balancing Act
- Build Bridges, Not Walls
- You're a Coach, Not a Machine Operator
- To Win is to Learn and Serve

When used together, the first three chapters provide the context for the work ahead of you as a leader seeking to change the way you approach the next normal. The next three chapters give you the framework for making a bigger impact by being more intentional about how you show up, what you focus on, and what you get done in your role.

Your Next Normal

In school, grades were given for academic work as well as "citizenship" grades. These grades were comprised of five elements – can think and act independently, follows directions, works and plays well with others, claims only their share of attention, and respects the rights and property of others. These grades came in letter form – S for satisfactory, N for needs improvement, and U for unsatisfactory. These types of grades follow us into adulthood, meaning we all have the tendency to grade one another on the "citizenship scale". Reflecting on this realization, asking questions, and discussing the answers with someone is how we continue to rethink, reset, and renew how we show up and create our next normal as leaders.

In most cases, we talk about a legacy as what we remember about people after they are gone. We talk about the legacy of our grandparents and parents, teachers and coaches, or historical figures we admired and looked up to. The truth – we are leaving a legacy all the time. The impact you make as a leader today is already leaving a legacy – but what is the impact you are making and how will it be looked back upon?

Transformative Leadership

In leadership, if you want to accelerate your career path, you must lean into developing your team leadership and human skills. There are several leaders in today's landscape who fail to grasp the lesson and approach their organization as a machine and the people as components or tools to be leveraged, rather than using them for empowerment. They direct them by telling them and see their issues as distractions versus the team that they should be building up and creating the conditions that enable working together in harmony to maximize potential.

One of the biggest mistakes seen in the realm of leadership is each person with the role working singularly – a group of leaders who report to the same person but do not work as a functioning team. They meet regularly and maneuver against one another for resources, remaining cordial with one another in the process but their sole focus is their own silo. To be a cohesive leadership team, there has to be a process of coming together and working together. There are four stages that drive team development, developed by Bruce Tuckman in the 1960s:

- Forming – the team comes together and forms in order to deliver on shared goals
- Storming – the team negotiates the principles, practices, and processes everyone will use in order to work well together
- Norming – the team arrives at an agreement on its "ways of working" – the principles, practices, and processes everyone will use to work together to deliver on shared goals
- Performing – the team operates according to its agreed principles, using agreed practices and processes to get stuff done

While most teams put almost zero thought into intention and defining high performance, the result is counterproductive processes, behaviors, and negatively impact team performance. Overcoming this lack of intention is the first step to moving forward and driving team development that enhances the organization.

Your Team's Next Normal

In your team's next normal, the goals need to be aligned so that it continues to take shape and everyone succeeds. The most successful teams always know where they are going and they are always getting better – interacting in a highly coordinated way. You want to see a team aligned around some clear guiding stars, well-provided for, and with the skill and will to cooperate and collaborate to deliver on shared goals.

As a leader, you are either making it easier for people to work together – or you are not. Set a cadence for regular

team meetings to review progress against priorities and commitments, and conduct 1:1s using their deliverables and development goals as context. Creating a team roadmap is a great way to organize and keep everyone on the same track to maximize success efforts. As a leader, it's a good idea for you to think through the sections of the roadmap on your own before addressing them with the members of the team. The roadmap lays out the mission, objectives, and key results for the business and the team as a whole. You don't want your team to buy into your roadmap, you want them to co-own the roadmap.

Be A Good Coach

As a leader, your position on the team is not as a mere teammate, but as the coach. The one who drives the plays and pushes team members to be their best selves. Project Oxygen was launched by Google in 2008 to identify what the most successful managers do to engage people and lead high-performing teams. In 2018 they revisited this, updating two behaviors and adding two more.

1. Be a good coach.
2. Empower; don't micromanage.
3. Create an inclusive team environment, showing concern for success and well-being.
4. Be productive and results-oriented.
5. Be a good communicator – listen and share information.
6. Support career development and discuss performance.
7. Have a clear vision/strategy for the team.
8. Have key technical skills to help advise the team.
9. Collaborate across the organization.
10. Be a strong decision-maker.

These ten behaviors align with the leadership practices that have been presented within these pages – align people, build bench strength, and coordinate action.

Conclusion

The leadership and team management system you're using communicates what you value and reinforces the behaviors you want to scale. By default, or by design, you are always shaping the next normal, the new "way" for your team. Using the principles, practices, and processes covered provide leaders with the way to rethink, reset, and renew your leadership, shaping the normal for your team. You can use the framework within the book to develop your plan for Ninety Days to Your Next Normal, which will help you and your team create the map necessary to drive change instead of it driving you.

Greg Giuliano is an advisor and executive coach to senior executives and teams all over the world, designing change leadership and team development strategies to lead organizational transformation. His mission is to help leaders and teams grow their capacity to enable positive disruption for markets, organizations, teams, and individuals.

Success Factors of an Extraordinary Company

THE NOKIA REVOLUTION

THE SUMMARY IN BRIEF

In its transformation from a small pulp mill in Finland to the leading worldwide force in cellular and mobile information technology, the Nokia Corp. has irrefutably redefined the term "evolution" in the context of global business.

In *The Nokia Revolution*, Dan Steinbock traces, with pinpoint detail, the steps Nokia took to gain and maintain its position at the head of such a rapidly changing technology field, as well as the occasional misstep that helped the company learn important lessons and come back stronger. Among the things that have made Nokia special are the following:

- **Strategic Intent.** As it moved into increasingly deregulated markets, Nokia faced a bevy of new challenges and competitive shifts, all of which it tackled by fearlessly addressing new opportunities outside its organization and a new process focus within its organization.
- **Global Focus.** Nokia's propensity for thriving in times of upheaval served it well in the cellular industry, where the company was forced to set global objectives or fall behind its competitors.
- **Strategic Market-Making.** By considering both unique competencies and market-based industry segments, Nokia's executive board hit upon a strategy that has served it well in a dynamic environment.
- **Focus on People.** Nokia treats human resource management issues with the same focus as it has tackled more strategic business issues. In doing so, the company has defined the key values and key challenges for its "Nokians" to address in the short- and long-term.
- **Global R&D.** At Nokia, research and development apply across the entire value chain, rather than simply in more technical sectors of the company, enabling the company to strike a necessary balance between technological factors of its business (upstream processes) and more people- or service-related factors (downstream processes).

THE NOKIA REVOLUTION

by Dan Steinbock

— THE *COMPLETE* SUMMARY

PART I: GLOBAL FOCUS STRATEGY

Strategic Intent: New Customers, New Rules

In the 1980s and 1990s, mobile communications markets were changing dramatically, and Nokia found itself having to change its structure and strategies in order to keep up. The company's leadership knew it had to transform its organization, developing new capabilities, building new strategic advantages on those capabilities, and globalizing its efforts. Nokia's customer focus — always a strong point — would need to become even stronger.

In this period, Nokia's customer base moved from the traditional, state-owned and regulated Postal, Telegraph and Telephone (PTT) customers to deregulated markets. As a result, it found lots of old rules changing.

- **Regulations.** Customers that were once driven by compliance to regulation were now free of those regulations; private sector customers replaced government-owned and -operated businesses as Nokia's chief customers and target audiences.
- **Orders.** Nokia could previously count on orders for a particular product line; as the market changed, customers demanded more integrated turnkey solutions on common platforms.
- **Work force.** In the past, the typical work force was technically driven. When the market shifted, so did the work force's specialties — away from strictly technical expertise, toward more business- and marketing-driven work.
- **Business cycles.** Prior to the change in the market, Nokia could rely on highly predictable order and delivery cycles. When the rules changed, so did those cycles, which became increasingly less predictable.
- **Competitive pressures.** Whereas Nokia's chief competition was national in nature before the mobile communications market changed, the market shift saw Nokia and its competitors forced to go global, to keep up with one another. The steady evolution of product prices and price structures eroded rapidly in this period, while delivery times grew increasingly faster. Service also became a key competitive issue; customers demanded higher levels of service than ever before, forcing Nokia and its competitors to comply or step aside.

Nokia addressed competitive shifts by fearlessly jumping into new opportunities as deregulation spread across Europe, enabling the company to establish strong footholds in the United Kingdom and Germany, among other newly open markets. By the late 1990s, Nokia was known for its ability to listen and respond to market developments in a rapid, efficient and flexible manner; the company was more agile and entrepreneurial than many of its large competitors — a trait not lost on customers looking for a flexible, responsive mobile communications vendor.

The Price of Success

Nokia's success caused its share of problems. By May 1996, the company experienced staggering drops in profit (a 70 percent decline in the first quarter) and operating profit (a 62 percent decline), which stemmed, in large part, from several years of hypergrowth and its accompanying logistics challenges:

- **Newer, larger work force.** In 1995 alone, Nokia added 7,000 employees to its work force to meet customer demand for its phones in Europe and Asia.
- **Productivity.** Problems with suppliers and delivery of components caused the company's productivity level to tail off considerably, from 15 percent to 3 percent.
- **A stagnant American market.** The market for digital handsets in the United States did not grow as expected, due to regulatory delays.
- **Cheap analog.** Analog phone manufacturers cut prices as much as 50 percent in this period, as the move to digital technology in many countries was hung up in regulations.

(continued on page 3)

Strategic Intent: New Customers, New Rules

(continued from page 2)

Despite understandable market anxiety, Nokia held firm to its focus strategy, even in the midst of its logistics problems, which the company understood, correctly, to have stemmed from its reorganization just prior to the market shift. The company's leadership knew it had to not only catch up and adapt to its external environment, it also had to upgrade and innovate its IT strategies, then align those strategies with a new strategic direction. ■

A Process-Driven Organization

The origins of Nokia's recovery and market superiority can be traced to 1992, when Mikko Kosonen, the company's vice president of corporate planning, launched an IT strategy study that helped move Nokia toward process-based management. The study identified two core business processes common to all businesses at Nokia Telecommunications: product development (R&D) and customer commitment (order fulfillment). This realization led to the institution of a new account management structure that would serve as an interface between all the company's divisions and their customers, rather than between the customer and a single product line, as had been the case in the past.

The goal of the study was to increase Nokia's customer orientation, looking at its businesses from the customer's perspective, leading to new performance measures that focused on customer value. Such a focus also benefited the company's efforts at innovation, which had always flowed through the entire value chain, rather than being strictly the responsibility of a product development or R&D arm.

Two Types of Operational Processes

By the mid-1990s, Nokia's operational processes could be divided into two broad types:

- **Business processes.** Processes associated with the physical or virtual creation of the product, its sale and transfer to the buyer, and post-sale servicing. In practice, they can be divided into upstream and downstream processes.
- **Corporate processes.** Processes that reinforce business activities by providing purchased inputs, technology development, human resources management and a variety of company-wide functions. In practice, these processes can be seen in management, performance measurement and control, HR management, and R&D activities.

Nokia put these processes into action in its process chain by firming up its commitment to partners, channels, suppliers and buyers, creating long-standing relationships through a commitment to customers. The next step was to turn the company into an industry giant. ■

Strategic Intent and Senior Management

In its attempts to move from old-style strategic planning to new management and strategic methods, Nokia's leadership recognized that simple cost-cutting measures were not enough to compensate for past excesses — the company simply had to develop future-driven strategies. Nokia needed strategic intent that would motivate every employee, not strategic memos drafted at headquarters for the investment community. Nokia's then-current capabilities and resources would not accomplish this.

In addition to restructuring efforts designed to cut costs, Nokia focused on three key themes in its strategic intent for future competition — globalization, strategy and structure, and volatile environments. These phases involved competing for intellectual leadership, shaping and shortening migration paths between current and future markets and industry structures, and competing for market power and position as new opportunities helped form new industry structures.

As part of developing a strategic intent, Nokia's leadership had to create a sense of urgency in a management environment that was, at best, skeptical. Titles were not important — teamwork was. Nokia challenged its managers to rely less on actual resources, concentrating instead on building resourcefulness, just as it had to exploit the pace at which new competitive advantages had to be built to deter rivals. Japanese companies in the 1970s and 1980s were able to create new global brand franchises in this manner; Nokia was eager to follow their example.

Global Focus: Nokia Targets Niche Markets

In global competition, short product life cycles forced companies to emphasize innovation, as well as to recognize new opportunities and exploit them with better timing. Because of high R&D costs, however, economies of scale were critical.

Nokia's leadership recognized that in this new environment, the ability to segment markets and target niche segments within those markets was a key success factor.

As Nokia saw a niche opportunity, it tailored its strategy to the narrow segment. Since the company was faster, more flexible and more responsive than its larger

(continued on page 4)

Global Focus: Nokia Targets Niche Markets

(continued from page 3)

competitors, it could use its niche to gain access to the entire market. In the course of this competitive effort, Nokia moved from low-end to high-end markets; while it kept many of its defense and government contracts, it also targeted customers around the globe as its cellular products got smaller and more popular.

How to Lead Globally

For Nokia's leadership, global growth strategies for companies in its high-technology markets encompassed several critical determinants, each of which precipitated Nokia's success in global wireless markets:

- **Set global objectives and enter lead market early.** Fast-growing challengers establish global orientation and objectives prior to the start of a high growth phase; they enter lead markets during the earliest phases of their evolution.
- **Exploit industry shifts.** Global challengers exploit first-mover advantage, optimizing industry shifts and achieving fast-paced growth.
- **Develop global products.** Global challengers must develop innovative, high-quality products and achieve rapid geographic spread for those products.
- **Build selective, functional foreign investments.** Global challengers must accumulate selective foreign assets and closely spaced investments, in order to sustain their competitive strategies.
- **Nurture global coordination and learning.** Global challengers must nurture global coordination and increase learning, distributing skills and developing global functional networks and a global mindset. ■

Strategic Market-Making

By 1999, Nokia was comprised of three core business groups — Nokia Networks, Nokia Mobile Phones and Nokia Communications Products — as well as a corporate research unit (Nokia Research Center, or NRC). While the company was well on its way to pioneering the mobile digital economy, its segment of "other operations" (most of which were contained within the Communications Products group) experienced a substantial operating loss that year. As a result, Nokia's leadership recognized that, to compete in rapidly expanding markets (such as the multimedia-enabled third-generation systems, or 3G, market), it would have to build new capabilities from scratch and prepare once again for organizational transition.

The company founded Nokia Ventures Organization (NVO), a five-part entity whose goals were to push the limits of Nokia's growth beyond the scope of its current businesses and to introduce and develop new business ideas. The NVO consisted of Internet and home communications entities, a mobile display appliances entity, and two venturing units — each reflecting the convergence of wide-area mobile communications and local-area computing, creating innovative types of high-speed mobile multimedia services.

Nokia also leveraged strategic leadership through its "collective mind" — its executive board, creating a flat yet potent organizational structure that has served the company well in the fast moving environments in which Nokia has so remarkably excelled. In the year 2000, the board consisted of chairman Jorma Ollila and eight chief executives, representing key strategic points throughout the company. Because the board members each bring something unique to the table, the entity as a collective is able to refine Nokia's corporate strategy on a continuous basis.

As Ollila and the board gained more experience in the industry and began to ponder the transition from traditional cellular businesses to the mobile Internet, Nokia's leadership aimed to create a "new management paradigm," designed to cope with developments and challenges in the dynamic markets into which the company was stretching. The paradigm combined two major schools of thought in strategic management:

The first school of thought was the resource-based view, which focused on unique competencies. Companies that bought into this view competed by maximal leverage of the competencies in current and/or future market spaces. The problems Nokia saw in focusing on this view alone were that it was too slow, too driven by past performance, and too focused on history.

The second school of thought was the market-based view, which focused on the most attractive industry seg-

(continued on page 5)

Rising Tigers, Falling Dragons

Nokia's global strategies in the mid-1990s were shaped mostly by the global business paradigm of strategist and consultant Jean-Pierre Jeannet. Jeannet noted that, in changing environmental circumstances, old-style vertical giants (or "dragons," in Jeannet's parlance) had been descending, while new-style horizontal players ("horizontal tigers") had been ascending. The horizontal tigers would dictate the future, he wrote, because companies would have to carefully pick the businesses they want to globalize — thus the shift from broad-based, unfocused businesses to niche companies focused on the global imperative.

Strategic Market-Making

(continued from page 4)

ments. Companies using this view compete by differentiation, low cost or focus.

Taken separately, neither view could meet the full range of Nokia's needs; when employed as a combination — as part of the company's market-making strategies — Nokia's leadership found a paradigm that could tackle head-on the new management challenges faced by global companies in fast-changing markets. The approach would allow the company to focus on both foresight and execution, and to compete by timing and speed — essential aspects for Nokia, which wanted to lead in rapidly evolving mobile cellular markets. ■

"Nokians" and Human Resource Management

Nokia's strategic intent would never have succeeded without its people; thus, the company has treated human resource management (HRM) issues as strategic issues, with the same focus it has used to tackle globalization and innovation. At Nokia, HRM encompasses value activities such as recruiting, hiring, training, development and compensation; it also supports business and corporate processes and the entire value chain. While the company struggled at first with inconsistencies arising from the dispersion of HRM activities throughout the company, it joined its internal forces in the effort to maintain four key values:

1. A drive to achieve customer satisfaction

2. Respect for the individual

3. Willingness to achieve and belief in continuous learning

4. Encouraging sharing (information and responsibility) and openness (to each other and to new ideas)

Nokia believes that the combined competencies of the whole organization, its operational mode, and efficient processes, serve as the foundation for future success and growth. This manifests itself in many ways: daily work is often carried out in cross-functional teams; social interaction skills are stalwart course materials in the Nokia Learning Centers; feedback is solicited from employees, and is acted upon.

Nokia also engaged its "Nokians" to identify critical challenges for companies operating in a rapid-growth environment, challenges that hold particular importance for Nokia. The challenges they identified were as follows:

- **Create organizational conditions for rapid growth.** Nokia must maintain its entrepreneurial spirit, creating an organizational structure that enables the expansion and increased number of employees that growth requires without slowing or stifling core processes.
- **Don't recruit — marinate.** Recruiting criteria should be kept clear. Employees must be aligned quickly with the processes and values of the company and must be able to deal with the kinds of unpredictability and uncertainty that accompany rapid growth. This alignment should be forged by team training at the beginning and end of orientation — a "marinating" that eliminates the boundaries between "work" and "learning."
- **Reinforce humility.** The history of the cellular industry is one of cyclical successes and failures. As companies boost their capabilities, it is easy for rigidity and, eventually, arrogance, to slip into the organization's operations, rendering it vulnerable to quicker, more innovative, less arrogant competitors. Nokians are trained to recognize external changes and respond rapidly to them; they are also trained to respect humility rather than arrogance. ■

PART II: TOWARD THE MOBILE INFORMATION SOCIETY

Nokia's Global R&D

In most companies, research and development (R&D) encompasses a range of activities, reflecting efforts to improve products and processes. At Nokia, R&D applies across the entire value chain, rather than just the traditional engineering department, influencing both the upstream (operations, logistics, new product development) and downstream (marketing, sales, service) processes in unique and strategic ways.

Nokia's R&D activities increased steadily throughout the 1990s, even as the national innovation system in the company's home country of Finland also increased (up to 3 percent of GDP by 1998); indeed, it can be said that the growth of Finnish R&D was, for all practical purposes, driven by the expansion of Nokia. Nokia's innovation strategies integrated R&D into the entire corporate structure, across business units and particularly at the NRC, where its many innovation-related activities embodied the entrepreneurial spirit of a small organization expanding to meet the needs of the global environment.

Nokia often spends less on R&D than its rivals. At the height of its focus on cellular technologies, Nokia spent between four to seven percent of its revenues on R&D, far behind the 16 percent investment made by close competitor Ericsson by the end of the 1990s. What Nokia's R&D efforts lack in comparative funding, they compensate for in efficiencies in leveraging and exploit-

(continued on page 6)

Nokia's Global R&D

(continued from page 5)

ing new knowledge. The company's R&D strategy was to develop generic platforms that could be quickly adapted to different standards. Nokia also chose to focus on software development, the primary value-added component in a handset. This allowed Nokia to concentrate its R&D on high-margin, high-quality products, while selling older models to the low-end market.

Nokia's global network of R&D outposts also distinguishes it from many of its competitors. Whereas in the past, many industry leaders have located their R&D activities in their home base, close to where strategic decisions are made, by the end of the 1990s, many established R&D networks were housed in foreign countries, to tap valuable wells of knowledge and/or address needs specific to that market. Nokia is no different although, considering the successes for which their network has been responsible, the company has not released information on the location or on its key R&D programs, due to competitive interests.

When selecting new R&D sites, contemporary global companies tend to find it helpful to carefully articulate the primary objective of each site. While Nokia's R&D expenditures have been dwarfed by competitors like Ericsson, its successes have come because each site has developed objectives based on a radical approach, one that relied on three central tenets:

- **Focus on applied science.** Throughout the 1990s, Nokia's R&D became increasingly focused, practical, and applied, and continued to be extended globally though networked research communities and intensified collaboration.
- **Diverse base of suppliers and partners.** The importance Nokia placed on platforms triggered a wide array of technology and standards coalitions, mirroring an industry-wide push toward using an increasingly diverse base of suppliers and partners to foster innovation.
- **Tightly knit teams.** Industry leaders often form tightly knit teams of experts to develop new generations of major products and processes, teams that provide a knowledge center and continuity over several generations of products. At Nokia, the significance of the executive board, as well as key product process and customer commitment teams, has been extraordinary.

The team aspect of Nokia's R&D efforts are of particular interest. The common denominator of Nokia's R&D stems from concurrent engineering efforts in which product development, sales, and production units act in cooperation, from the beginning of a project to its conclusion. For example, when product development begins, so does marketing planning; sales is also involved, explaining how features might be embedded in a product, to make it easier for customers to use.

While these different business units might approach R&D from different angles, the R&D process chain itself consists of three phases:

1. Research and technologies (the initial generic development level).

2. Technology and platforms (defining goals and looking beyond immediate product development).

3. Concurrent engineering (focusing advanced product development on creating products that fulfill customer needs. This approach is intended to cause developers, from the outset, to consider all elements of the product life cycle, from conception through disposal). ■

Upstream Innovation

With a process chain that was designed to satisfy existing and potential customer needs, Nokia has been active in both upstream and downstream innovation. Its upstream efforts have been focused not on technology innovation (which has been more prominent for competitors like Ericsson and Motorola), but in the building of new capabilities and the leveraging of strategic standards coalitions.

Building New Capabilities

Nokia's approach to creating and sustaining its vision of the mobile information society has always followed a single motto — "Look at the next challenge." For example, the company's efforts to develop a portable machine that could utilize Internet and computer technologies (first seen in the Nokia Communicator in 1996) stemmed from Nokia's ability to build new capabilities by doing three key things: managing development capabilities, moving from development to product usage, and fostering growth opportunities that emanated from those efforts.

In the turbulent cellular environment, superior management of development capabilities was Nokia's key to competitive advantage. Development projects in most companies tend to fall into one of five categories:

- **Applied research or advanced development projects.** These projects aim at inventing new science or capturing new know-how for application in specific development projects.
- **Alliance or partnered projects.** These projects find the company "buying" a newly designed product and/or process from another firm to leverage in-house development efforts. Nokia's efforts with Bluetooth, Symbian, and others are an example of a partnered approach.
- **Breakthrough development projects.** These projects create the first generation of an entirely new product and process, breaking new conceptual and/or tech-

(continued on page 7)

Upstream Innovation

(continued from page 6)

nological ground for the company, as the Communicator did for Nokia.

● **Platform or generational development projects.** These projects typically have a design life of several years and establish the basic architecture for a set of derivative projects to follow.

● **Derivative development projects.** The projects, such as Nokia's niche product lines, tend to be significantly narrower in scope and resource requirements than platform projects.

Nokia, like many other technology companies, understands that long-term success depends on the sustained ability to build on excellent products, a capabilities-to-development continuum that is fueled by great people, as well as through what it termed "transformational acquisitions." In the late 1990s, Nokia proceeded through this dual development of capabilities in five phases:

● **Assessment of acquisition needs.** These predevelopment investigations (of market, technologies, etc.) made use of information available through external channels (venture capitalists, customers, channel intermediaries, etc.).

● **Expansion of due diligence.** In this phase, Nokia identified potential targets and defined capability requirements

● **Integration and retention.** In this phase, Nokia's focus moved to the internal organization (on such issues as cooperative work efforts), in order to integrate the target company into Nokia's capabilities and to retain key employees.

● **Development projects.** Nokia's focus shifted in the fourth stage to individual projects seeking to meet goals on timing, budget, and performance.

● **New product introductions.** In this last phase, the role of the business unit diminished as focus shifted toward introducing new products into the marketplace. Conversely, other units (logistics, marketing, etc.) began to play a larger part.

It was this view of acquisition that would motivate Nokia's interest in Silicon Valley in the late 1990s, elevating their investigation of and investments in new businesses and technologies by establishing the NVO, a separate organization running parallel to the company's other three core business groups, whose purpose was to foster growth opportunities beyond the scope of the existing business groups. The NVO sought to develop areas with growth potential over a five year period, exploring new business areas facilitating future growth and boosting Nokia's product and business development in key areas, including the Internet, mobile display appliances, and multimedia terminals.

Nokia's R&D Misstep

Since the 1980s, Nokia's R&D has played a critical role in executing the company's strategic intent, especially in scenarios for the future. The company's successes, however, were not achieved without some failures.

One of those was "Nokia Future Watch," a state-of-the-art strategy and knowledge-creating project vital to the NRC. The failure of this project illustrates the fact that companies must sometimes gamble on the future in emerging markets, and that, sometimes, that gamble does not pay off.

Standards Coalitions

Nokia's other upstream strength lies in its development of and participation in standards coalitions; indeed, over time, the company has co-opted rivals into strategic alliances and identified key technologies that have led to the creation of key coalitions, including the following:

● **Symbian.** Nokia cobbled together a coalition of its closest competitors, along with palmtop software maker Psion and electronics giant Matsushita, to found Symbian, a company designed to speed up the evolution of wireless information devices. In the course of Symbian's development efforts, Nokia took a dominating role in the creation of such future-looking terminals as featurephones, smartphones and communicators.

● **Bluetooth.** Nokia also co-launched this consortium for wireless connectivity, which consists of nearly 1,200 active members, aiming to create an open standard for short-range communications between different electronic devices.

● **WAP.** The Wireless Application Protocol is the communication standard that allows mobile phones to have access to the Internet. This standard came about as a result of cooperation between Nokia, Ericsson, and Motorola, but it was Nokia's active leadership in developing the standard that enabled it to bridge the gap between second- and third-generation markets.

In technology sectors, complexity requires cooperation. Nokia obtained from external sources those complexities that had become too costly in terms of strategic flexibility and financial resources. They expected their coalitions to unlock benefits unobtainable through internal means, or by simple mergers. In particular, the company sought five kinds of benefits:

● **Access to expertise.** Strategic coalitions enable the participants to acquire, pool, or sell access to the knowledge or ability to perform activities. For Nokia, access

(continued on page 8)

Upstream Innovation

(continued from page 7)

to knowledge likely contributed to its involvement with Symbian, which allowed the company to catch up with handheld technology leaders.

● **Scale economies and learning.** Pooling volume serves to raise the scale of the activity or the rate of learning about how to perform over that of each company operating separately.

● **Shaping rivalry.** Companies employ coalitions to help others entering an industry to develop a technology that would affect its competitors' business, or to shape competition in their favor.

● **Risk reduction.** Because no single partner bears the full risk and cost of the coalition activity, such partnerships provide attractive mechanisms to reduce risk.

● **Upstream standardization.** This benefit was unique to Nokia, in that, by initiating upstream coalitions and promoting open standards built on externalization, Nokia has weakened its competitor's strengths (upstream innovation) while increasing its own (downstream innovation). ■

Downstream Innovation

In anticipation of new products and markets, Nokia does not proceed from upstream to downstream processes (technology over customers), but from downstream to upstream (customers over technology). Two key areas in which this approach is evident are in the company's strategies on market segmentation and branding.

Market Segmentation

From the beginning of the cellular era, Nokia excelled in product and market segmentation, because the company listened to its customers, anticipated needs and met them head-on. In this customer-focused approach, marketing strategy has played a critical role, in terms of the type and timing of segmentation, particularly in the following areas:

● **Lifestyle.** Nokia's market strategies have been focused on researching how their customers use their products in real life situations. Only by listening to and understanding its customers can the company obtain the specific information needed to differentiate its products from competitors on the basis of usage and needs.

● **Design.** Using its unerring focus on the needs of its customers, Nokia developed creative product designs that fulfilled those needs, enabling buyers to gain real benefits from those products.

● **Technology-Adoption Life Cycles.** In transitioning between upstream and downstream activities, Nokia found it had to deal with a chasm framework focused on the gaps between different life-cycle markets: moving from business-to-business to consumer markets, and maintaining its industry leadership by creating new product generations. Nokia bridged the chasm by developing a model of its target customers, then developing strategies to capture the lead segments in each target, enabling their products to "trickle down" to other segments as well.

Standardization and Downstream Innovation

Unlike some of its key cellular rivals, Nokia has opted not to run its own semiconductor production, choosing instead to purchase components from outside vendors. While the company has been able to avoid the heavy expenditures and risks inherent to semiconductors, it is nevertheless more vulnerable than its competitors to distribution and market fluctuations.

This decision is, however, typical of Nokia's emphasis on downstream innovation, at the expense of upstream innovation; while its rivals have developed new technologies, Nokia has been more intent on listening to its customers.

Branding

Early in the cellular age, Nokia's key branding objective was to make its mobile phones a global brand product, with the key messages being inspired technology, ease of use and durability. It — like such brand leaders as Nike, Daimler-Benz, and Phillip Morris before it — marketed its products as a single brand, considering the brand in every aspect of the value chain, from design to production to distribution. Such a holistic approach to branding dictated that Nokia would have to penetrate its entire organization with its unifying branding message.

By attempting to brand its entire company, Nokia focused on several distinct strategic endeavors, including the following:

● **Listening to the customer.** The point was not how a certain technology worked, but whether or not it contributed to customer satisfaction. Cellular standards would change and shift, but brand awareness would not.

● **Consistent look and feel.** Nokia's branding made sure the look and feel of its mobile phones would be the same worldwide. Although each market had its own unique requirements, there were sufficient similarities for a single, unified approach to branding.

● **Communicating humanity.** Rather than focus on the technical features of their products, Nokia sought to communicate in its branding the emotional benefits of purchasing a Nokia product. Their phones were "most human," "designed for you and I," etc. ■

The Pause Principle

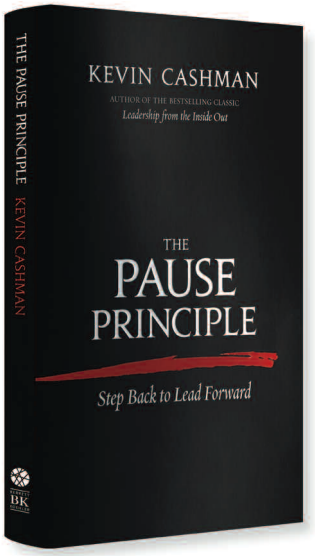
Step Back to Lead Forward



by Kevin Cashman

THE SUMMARY IN BRIEF

We live and lead in an increasingly volatile, uncertain, complex and ambiguous world. But paradoxically, Kevin Cashman contends that leaders today must not merely act more quickly, but pause more deeply. He details a catalytic process to guide you to step back in order to lead forward in three critical growth areas: strengthening personal leadership, developing others and fostering cultures of innovation. You and your organization will learn to move from management speed and transaction to leadership significance and transformation.

According to Cashman, *The Pause Principle* can be a life-changing leadership experience, but it is one that requires "an intentional, conscious stepping back to go deeply into yourself, your leadership and the world you touch in order to lead forward with deliberate purpose."

Cashman believes pause powers performance. By harnessing the Pause Principle, you give yourself and your team the ability to stop the speeding train of business before it derails. *The Pause Principle* offers support for the belief that the best way to successfully move ahead is to slow down.

With *The Pause Principle*, you can activate the latent power of pause and embody its enriching properties for your leadership, and the future of your business and its teams.

IN THIS SUMMARY, YOU WILL LEARN:

- How to use the Pause Principle to revitalize leadership and bring VUCA (Vision, Understanding, Clarity, Agility) to your team.
- The seven Pause Practices that breathe life into the workplace and grow self, others and a culture of innovation.
- How to harness the transformative force of purpose.
- The three interrelated pauses for growing others.
- How to shift focus and open up possibilities to help create a culture of innovation at your organization.

Introducing the Pause Principle

Too often, we take for granted our simplest yet most profound and transformative human capabilities. Sleep, for instance, is, on the surface, very simple. Our superficial analysis of sleep says, "Yeah, no big deal. We rest and wake up. So what?" But take a moment to consider how profound sleep really is. Every night, we go to sleep fatigued and possibly stressed from the day. When we awaken, we feel completely rejuvenated.

What sleep is to the mind and body, pause is to leadership and innovation. Pause transforms management into leadership and the status quo into new realities. Pause, the natural capability to step back in order to move forward with greater clarity, momentum and impact, holds the creative power to reframe and refresh how we see ourselves and our relationships, our challenges, our capacities, our organizations and missions within a larger context. While losing touch with our ability to pause may be less obvious than losing our ability to rest, it can be just as devastating. In our fast-paced, achieve-more-now culture, the loss of pause potential is epidemic.

The demanding pace for global leaders has never been more challenging. Digitally connected every moment, we are increasingly tied to a 24-hour global clock. We are expected to perform continually in the face of global crises and multifaceted pressures, including downsizing and mergers, and the related stresses and expectations. The list of demands, personal and professional, never ends. This is the "new normal." Could it be that going faster and driving harder are not the answers? Could there be another way to creatively sustain high performance? Could it be that the source of our real value as leaders might come from different thinking and different choices rather than from perpetuation of the incessant pace we are straining to maintain?

Flipping the VUCA Forces

For several years, I had the privilege of being a keynote speaker at one of the Army War College's leadership programs. I was humbled by how much I learned there, particularly about character-driven leadership and a potent perspective of our world called "VUCA." Borrowing this term from the Army War College, Bob Johansen, 10-year forecaster and author of *Get There Early*, has characterized the speed- and action-oriented, fast-changing, demanding world we lead in today as a "VUCA world: Volatile; Unpredictable; Complex; Ambiguous." Our addiction to action, our busy-ness, our preoccupation with incessant distractions and pursuit of the ubiquitous "more" in our 24/7, constantly connected, globally caffeinated culture conspire to diminish rather than strengthen our leadership capacities. We challenge ourselves to keep up and even hasten the grueling pace, and, frankly, we rationalize that it comes with the territory. Paradoxically, the job of leaders is to bring clarity to all of this chaos. Warren Bennis mentors, "Leaders bring clarity and hope" — No easy task in the vortex of VUCA.

Johansen contends that we have "to flip the VUCA forces to terms that create possibilities and redefine VUCA as: Vision; Understanding; Clarity; Agility." But, how do we bring about this transformation? Pause — a step back to lead forward — a transformative, pragmatic, albeit paradoxical principle for sorting through complexity and coming into conscious connection with what is important.

For most leaders, at first glance, pausing to elevate performance is incongruous with their leadership DNA,

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor in Chief; **Andrew Clancy**, Senior Editor and Contributing Editor; **Amanda Langen**, Graphic Designer

especially for the most productive, highest achievers. Why would pragmatic, hard-charging, achievement-driven leaders pause in order to accelerate performance and growth? Put simply, that is exactly what is needed to sort through complexity and then drive performance to the next level. If leaders today do not step back to gain fresh perspective and to transcend the immediacies of life, we will continue to crash economically, personally and collectively. Our downside survival and upside innovation depend on transformative pause. Certainly, we need to do more to meet the demands of high-performance, complex problems, and innovation, but in today's world, the doing needs to be new and different.

Creating a New Normal

Pause is a universal principle inherent in living, creative systems. It is part of the order, value and growth that arises from slowing down and stepping back. Like any valuable resource, yet unrecognized and therefore neglected, we have to explore and discover its pragmatic uses in order to experience its value-creating impact.

The Pause Principle is the conscious, intentional process of stepping back, within ourselves and outside of ourselves, to lead forward with greater authenticity, purpose and contribution.

What Does Pragmatic Pause Look Like?

David Rothenberger, M.D., a surgeon at the University of Minnesota, has partnered with clinicians across the Fairview Health System to share a powerful pause practice recently established for all surgical procedures. "Brief" is a few moments taken before every surgical procedure to make sure that everyone on the surgical team, everyone in the room, understands why they are there, what the procedure is and what their shared goal is. "Brief" connects everyone to the value of their individual roles, as well as to their combined impact as a team. In addition to reconnecting everyone to a deeper sense of purpose and meaning in their healing mission, it shifts their mindset from a hero mentality to a collaborative one and serves the vital objective of increasing the percentages of more positive outcomes.

Karen Kimsey-House, co-founder and CEO of the Coaches Training Institute, likes to build in a structure to reflect, create and connect with vision, purpose and direction. She takes retreats, sometimes as long as 11 days, "to stop, to be and to reflect" because she returns with expanded vision and new ideas for direction. Rohinish Hooda, vice president, U.S. sales and marketing, Ethicon Biosurgery, Johnson & Johnson, incorporates a continuous practice of pausing to question and think. He has initiated BIG — Biosurgery Idea Gurus — as a way to bring together many people working in different aspects of biosurgery to pause to share ideas and gain different perspectives in hopes that this collaboration will energize and accelerate innovation.

These leaders are conscious, pragmatic practitioners of pause, and we think they are examples of what is to come. In an article on reshaping the workplace for *The New York Times*, David Allen contends that we need more space, figuratively and literally, to counter "the dizzying number of [technological] options" that overwhelm us. He says that, paradoxically, they don't necessarily make us more productive. In fact, they are paralyzing. There is an antidote, "but it's not going to come from the usual quarters. To be successful in the new world of work, we need to create a structure for capturing, clarifying, and organizing all the forces that assail us; and to ensure time and space for thinking, reflecting and decision-making." ●

Step Back to Lead Forward: Seven Pause Practices

We have isolated Seven Pause Practices that support the meta-pause principle: Step back to lead forward. These practices are the pragmatic ways to breathe life into each growth area: grow self, grow others and grow cultures of innovation. The applications are unique to each domain. The Seven Pause Practices are:

1. Be On-Purpose. Purpose is the intersection of competency and contribution that aspires to achieve something bigger, something beyond us. Purpose gives context, drive and meaning to personal growth, talent growth and growth of innovation. It may be the most important, most far-reaching transformative pause of all.

2. Question and Listen. Questions are the probing language of pause, forcing us to step back, reframe, revision and reconsider. Listening is the receptive language of pause. Listening is the incubator for growing clarity out of complexity.

3. Risk Experimentation. Managers minimize risk and experimentation to increase predictability; leaders monitor risk and accelerate experimentation to foster breakthrough. Risking experimentation is pausing at the edgy, uncomfortable intersection of current reality and future reality.

4. Reflect and Synthesize. Great leaders take the time to incubate analysis to discover higher-order, more strategic, forward-thinking solutions. Reflective synthesis is equally important for leaders to develop self-aware-

ness, talent awareness and innovation breakthroughs. Reflection and synthesis hold the keys to unlock the doors of authenticity, transformation and innovation.

5. Consider Inside-Out and Outside-In Dynamics. Pausing to more deeply consider internal and external information creates a greater likelihood for profound personal, strategic, interpersonal and organization growth.

6. Foster Generativity. A generative leader pauses to prepare the next generation more than he or she pauses for personal success. Generative pause fosters a rich atmosphere for human potential to flourish.

7. Be Authentic. Once a leader becomes what he or she wants others to aspire to, the attractive force is irresistible and people rush in to engage and contribute.

Pause to Grow Personal Leadership

Pausing for self-awareness is like unlocking the doors to a series of rooms. While reflective pause is the key to unlocking self-awareness, self-awareness in turn opens the doorways to authenticity, character and purpose. Personal leadership growth is the ongoing process of being and becoming a more authentic leader.

Self-awareness is the most crucial developmental breakthrough for accelerating personal leadership growth and authenticity. Learning to pause to build self-awareness is a lifelong, evolving process.

Why is self-awareness so tough to practice? As Bill George, former Medtronic CEO and best-selling author of *True North,* explains,

Discovering our authentic leadership requires us to test ourselves, our values and our beliefs through real world experiences. This is not an easy process as we are constantly buffeted by the demands of the external world, the model of success that others hold for us, and our search to discover the truth. Because there is no map or direct path between where you are now and where you will go on your leadership journey, you need a compass to keep you focused on your True North and get back on track when you are pulled off by external forces or are at risk of being derailed.

Expanding the Light for a Broader View

In *The Social Animal*, David Brooks brilliantly synthesizes recent research in various scientific disciplines to explore how human beings understand themselves and see their world. He relates Alison Gopnik's insight that "adults have searchlight consciousness," while young children have "lantern consciousness" that "illuminates outward in all directions — a vivid panorama of awareness of everything."

What if we extended the circumference, the reach of light, to expand our awareness? For self-awareness to be real, authentic and grounded, it must be gained from both the inside-out and outside-in. That is why it is important to pause and reflect intently on values, beliefs, patterns, characteristics and personal history for an inside-out view, and just as important to pause to gain feedback, perspective and insight from others for an outside-in view. This continuous, infinite, self-regulating loop of self-awareness from both the "I" (inside-out) and "We" (outside-in) perspectives helps us come closer to authentic self-awareness. Since we can rarely fully govern external events, as leaders we are left principally to govern ourselves; pausing for self-awareness is authentic governance.

What Is This Thing Called Character?

Competencies get us to the doorway of leadership, but character is the key to unlocking the door of leadership. So what is this thing we call "character"? It is our most authentic, unvarnished, non-spin-doctored self. Many leaders' characters would barely recognize their reputations if they met on the street!

Too often, we idealize or vilify the character of others, which distracts us from facing our own character development. Pausing to get a picture of our own character, strengths and weaknesses is a crucial aspect of self-awareness and authenticity.

While most of us wholeheartedly endorse character as critical to leadership, and most of us require it in the leaders we work for and seek out, few leaders consciously evaluate and seek to develop their own character. Character and authenticity are very slippery subjects. We tend to expect these character qualities in others and require them in leaders, but rarely do we hold ourselves to the same standard.

A CEO of a major company told us that pausing helped her to see decision-making processes from a new perspective. She learned that pausing "strengthened her muscle of intention, instead of leaving choices and their impact to happenstance." Pausing to understand where her leadership is coming from — character or coping — has been a most valuable awareness.

Character is the essence or core of the leader. Character is deeper and broader than any action or achievement; it springs from the essential nature of the person. When we are leading from our character, we exude qualities of authenticity, purpose, openness, trust, courage, congruence and compassion.

Coping, on the other hand, protects us and helps us get through challenging circumstances. In this sense, it has value and, if used sparingly and appropriately, will serve our needs. Coping works like a muscle. We need to use it at times, but if we overuse it the muscle will collapse. Qualities of coping include concern for image, safety, security, comfort or control. The coping leader may get results but may also exhibit undue defensiveness, fear, withdrawal, or a desire to win at all costs. He or she may exclude certain people and perceive mainly win/lose scenarios.

Both approaches to leadership — leading with character and leading by coping — can get results. Coping, in itself, is not bad and may be needed in certain situations. However, character is a much better master and coping is a much better servant for leadership.

Both character and coping are present in most leadership situations. However, we need to step back and ask ourselves, "Which one is my master and which one is my servant?" When we pause to consciously make character the master of our leadership and coping the servant, we lead forward with more value creation.

Purpose: The Transformative Force of Leadership

Pausing for purpose is the essential transformational force of leadership. Purpose elevates leaders to go from self to service and compels leaders to move from success to significance.

Steve Jobs is deservedly regarded as the business and cultural icon of innovation. What drove his innovation? His interviews with his biographer Walter Isaacson and reports by others who knew him reveal how much he was driven by beauty and aesthetics. Who else but an artist could create devices that were so human-centric and human-serving? His purposeful drive to "put a dent in the universe" was fueled by the "artist's ideal" for beauty, elegance and essence.

Jobs's purpose endured throughout great personal trauma. In the intensive care unit toward the end of his life, he asked for a notepad. He drew devices to hold the iPad on a hospital bed; he redesigned fluid monitors and X-ray equipment. Jobs's purpose, his drive to make a value-creating difference, was breaking through, seeking expression to the very end.

What Is This Thing Called Core Purpose?

Leaders rarely fail due to lack of talent; success or failure is mainly the domain of character, values and purpose. Core purpose is the high-performance intersection of a leader's core strengths in service of his or her core values. Core purpose is the sweet spot of leadership, where the whole person is present, self-aware and bringing his or her talents to bear by serving what is most important. Take a moment to remember the times your energy was high, your sense of contribution was clear and your value-creating impact was great.

Howard Schultz, CEO of Starbucks, says that at the core for him is his deep love for the company and a sense of responsibility to its people. "People want to be part of something larger than themselves *if they believe in it*. There has to be an emotional connection that is based on truth and authenticity, and, obviously, trust." ●

Pause to Grow Others

During the writing of this book, I was working with an executive in China who was working on pause practices to accelerate his goal of developing leadership in others. He surprised me with this perceptive insight, "Leadership is like cooking a fish. Once one begins preparing the fish, it is best not to interfere too much. It is very important not to overcontrol it or overwork it. It is best to start cooking, step back, turn it once, and let it finish. It is the Taoist principle of Wu Wei, the principle of least action. See the work. Do the work. Don't interfere too much. Success comes by doing just enough, not too much." In growing others, particularly high-potential talent, often less is more.

The Power of Synergy

Sometimes pause feels a bit magical, like we are in the "zone," when every member of the team brings forth his or her best talents and effort, and working together we create something greater, more surprising and spectacular than we could ever do on our own.

Karen Kimsey-House, CEO of Coaches Training Institute, the world's largest trainer of coaches, described that special connection or synergy this way: "When we are all connected to each other and our purpose, the whole transcends the parts." She shared a great story of how her intuition to pause energized her team and ultimately catalyzed their synergy. She and her team were seated around the table for a strategizing and curriculum planning session. "I could feel something was off. Everyone was stressed to the max. I could tell that whatever was on their minds and in their hearts was in the way."

Wisely, Kimsey-House suggested that everyone take a deep breath and step back for a little while. She asked, "What's really going on? How are you feeling? Are there some things we need to talk about here?" Around

the table they went and, one by one, each leader talked about whatever was topmost on his or her mind. Some people were feeling overwhelmed, others were grieving recent changes, and others were feeling disconnected and anxious. Kinsey-House had the courage and insight to realize that everyone needed to reconnect to themselves, to each other and to their common purpose. The process took about 30 minutes. Having taken that time to connect, their creativity, energy and resources were available again. They were able to refocus wholeheartedly on their work because they connected to the value of what they create together and its potential impact on the world.

Growing Others Begins with Self-Growth

Most change begins with self-change and most growth begins with self-growth. No amount of growing others will compensate for a leader's lack of self-growth. As enterprise leaders, our own advancing personal growth directly influences the dynamic capacity for organizational growth. Before we can grow authenticity and purpose in others, we must dedicate ourselves to our own growth of authenticity and purpose. If we do, our development of others will be powerful and our credibility will be well earned. We must become the leaders we wish to see in our organizations, and from this credible, solid platform, we can then accelerate the development of others.

The Language of Growing Others: The Language of Pause

The two most valuable pause tools for fostering the growth of others are questions and listening. Questions are the expressive, probing language for growing others; listening is the receptive, facilitating language for growing others. These two complementary approaches form a continuous growth conversation loop. The deeper the questions, the deeper the listening; the deeper the listening, the deeper the next question. As we mutually dig together with each tool, we mutually excavate new discoveries. As a result, the learning is never one-sided; it is a co-created process that engenders empathy, trust, and collaboration.

Research confirms that a startling 67 percent of new leaders in organizations fail within 18 months. Why? Lack of listening. Why do teams usually break down? Poor listening.

We have observed three common pitfalls that inhibit people from stepping back for authentic listening:

Listening Pitfall 1: Hyper Self-Confidence. When we see ourselves as the quintessential expert, the most experienced or accurate person in the room, we position ourselves to fall into a listening black hole. The kiss of death for collaboration, connection and innovation, is moving too quickly to our own perceived "right" answer. Slow down, and challenge yourself to pause and to listen a few minutes longer to move from transaction or hyperaction to transformation.

Listening Pitfall 2: Impatience and Boredom. When conversations or meetings don't reflect our point of view or are not intellectually challenging enough, we may get impatient or bored. If we are too caught up in our judgmental self-conversation, we can never really genuinely listen and hear what is going on around us. Fight your impatience and boredom by looking deeper. Pause to question: What are they seeing and understanding that I don't see? What are the beliefs underneath what is being said?

Listening Pitfall 3: Bias for Action. Sometimes listening is challenging because we want to do something, not just hear about it. Our hyperactive impulses derive from our certainty that we know the solution and reactively want to implement it. However, as a senior leader, when facing a complexity and/or a maturing team, it isn't always optimal to rush in with the answers, unintentionally creating dependency, stunting the growth of others and sacrificing transformative breakthroughs. Pause a bit longer to let groups struggle and

Three Interrelated Pauses for Growing Others

Use Questions and Listening to Build Awareness. To help people grow, stay out of the expert, mentor role and pause to help people sort out their current situations.

Use Questions and Listening to Build Commitment. Building commitment begins with helping people to consider the consequences of their actions. However, it is not enough to help others understand intellectually that if they continue on the same course, they're going to fall short of their goals.

Use Questions and Listening to Build Practice. Without practice, there is no transformation. Pausing to help others identify what to practice breathes life, vitality and momentum into their new awareness and commitment. The people we are helping to grow can be fully aware and committed to noble goals, but if we fail to consistently give them the opportunity to practice new behaviors, it is like lighting a lamp and closing our eyes.

strain more as they explore ideas, options and deeper solutions. Listen to how they are collaborating, resolving conflict and problem solving. ●

Pause to Grow Cultures of Innovation

The world belongs to the most innovative. In today's VUCA world, efficiency is the mark of management, whereas innovation is the hallmark of leadership. In fact, in today's nonstop, globally connected business climate, sustainability rests on innovation. Without incessant innovation, the wave of someone else's innovation will overtake us. Innovation is no longer merely a distinguishing difference for organizations; it is the enduring difference. But where is this innovation going to come from? From the rare genius-like inventors? Or from a culture of curious learners who are so passionate, engaged, and purposeful that they can continually redefine and reinvent?

Purpose Drives Innovative Cultures

Ray Anderson has become a legend and an inspiration. Yet, if you had heard him speak at TED in 2009, he would have told you that he is an industrial engineer, an entrepreneur, "who went from being a plunderer, a recovering plunderer, thanks to the people at Interface, to America's Greenest CEO in five years."

In 1994, at age 60, Anderson, who was then CEO and founder of Interface, Inc., changed the course of his publicly held, industry-leading, highly profitable floor-covering company. As he described it, "I wanted Interface, a company so oil-intensive you could think of it as an extension of the petrochemical industry, to be the first enterprise in history to become truly sustainable — to shut down the smokestacks, close off its effluent pipes, to do no harm to the environment and take nothing not easily renewed by the earth."

Anderson was an innovator from the get-go. He started his company in 1973 with an idea that challenged the status quo in the carpet industry. He dared to think that carpet could be made in modular squares, not only rolls, totally transforming the flooring industry.

Pausing to read a book can ignite the spark that catalyzes radical innovation. In 1994, Anderson was reading Paul Hawken's book, *The Ecology of Commerce*, in preparation for a talk to an Interface task force on the company's environmental vision. They had none and customers were questioning the company about what it was doing about the environment. When Anderson read Hawken's assertion that industry leaders are not only responsible, but the only ones who have the power to reverse the destruction of the biosphere, he experienced what he described as a "speak in the chest" epiphany, a meaningful realization of his responsibility to step forward, and a realization that one company could play a significant role in creating a model for sustainable business that others might follow.

Anderson's vision and mission was to eliminate any negative impact Interface has on the environment by 2020. He reinvented the company and his vision changed "every aspect of the business, creating a culture of associates who are highly adaptable to the pace of change it brought and highly committed to its success." The shared vision "flattened the organization" because a hierarchical structure would stand in the way of the purpose-driven collaboration and cooperation required.

A Culture of Openness

To foster creative solutions, Interface also needed to grow a culture that encouraged openness and allowed for failure. Associates at all levels felt engaged and connected to something bigger than making carpet. Their accomplishment toward their mission has changed not only Interface, but, by example, the industry. By 2011, before his death, Anderson estimated that they were more than halfway to their goal.

Anderson lived the Pause Principle. He was willing to engage the Inside-Out/Outside-In growth dynamics as he innovated self, others and his organizational culture. He had the courage to stop momentum and see a new way forward. He faced reality and then he changed it — the two required actions of authentic, purposeful, innovative leaders.

Creating a Culture of Innovation

Mike Paxton, former CEO of Haagen-Dazs and recent CEO of the rapidly expanding jewelry company Chamilia, is a great example of a collaborative leader who creates cultures of innovation. Paxton excels at engaging his people in the process of figuring out new, better ways to do things.

In thinking about what innovation could mean for Chamilia, Paxton paused to think about how he could convey to the organization how to make continuous innovation a companywide goal. "This is a fast-growing successful company with highly energized teams with tremendous creative design success," he said. "I had to step back to think about how I could inspire them to push the envelope, set innovation as the goal not just in design, but in all areas."

Paxton challenged everyone with this possibility: "Every year, starting this year, we're going to be *the* innovator in the industry." Everyone rallied around the goal. Paxton had everyone, not just the design people, but also the people in display, manufacturing and the whole supply chain, challenging themselves to think differently about how they produced things in new ways. "The whole idea of innovation has transcended itself. It's now a part of the culture, and it is permeating all areas. People feel challenged in a positive way to keep growing; it's not just routine." Paxton paused to create a culture of innovation.

Fail Your Way to Innovation

While rallying people around a common, compelling mission of innovation is crucial, it is also extremely critical to create an atmosphere in which experimentation and failure are seen as allies not threats. Most organizations aspire for innovation, but because they also do everything possible to avoid failure, they unknowingly squeeze the innovative life force out of the culture. While most organizations want innovation, they don't realize that much of what they do kills it.

Many years ago, John Rollwagen, the former CEO of Cray Research, shared with me, "I have never seen anyone fail, recover and learn so quickly. Seymour Cray was fearless in his experimentations and lightning fast in his ability to learn from failed attempts. He visibly innovated through rapid failure."

Shifting Focus and Opening Up Possibilities

Pause is the fundamental growth process by which we can move from management effectiveness to leadership innovation. Pause liberates us from the imprisonment of the reactive "stimulus/response" pattern of non-agile management and frees us to proactively cultivate the possibilities that derive from the "stimulus/pause/multiple responses" of curious, learning-agile leadership.

Robert was an extremely bright and effective CEO of a multibillion-dollar consumer products company. Always two or three steps ahead of his team, his quick mind could solve most problems. However, during a severe financial crisis, he and his team hit the wall. Tried-and-true solutions just looked old and tired. His run of uninterrupted successes in the past compelled him to keep pushing for what had always worked, yet nothing was working.

Finally, he and his team found the courage and the wisdom to step back and look at themselves and their marketplace with fresh eyes. They studied successful companies from outside of their industry. They visited Google, Apple, Salesforce.com and Procter & Gamble. They invited consultants from different industries to share expertise with them. They assessed and coached themselves to step up as more effective, innovative leaders. They recruited people who came from different industries and had radically different experiences from them, and they welcomed diversity.

Commenting on the transformation, Robert said, "It all started with stepping back. If we had just worked harder and harder with our same approaches, we may have survived, but we would never have made the innovative breakthrough." Innovation begins with an agile leader who proactively engages others in the shift to a new reality. ●

Three After Words: Pause It Forward

What if a critical mass of leaders paused not only to influence their immediate concerns, but also stepped back for a bigger transformation ... the transformation of the toughest issues we face as citizens in a global society?

You are encouraged to pause for two very important final reflections:

1. Pause It Now. First and foremost, are you doing everything possible to grow yourself, grow others, and grow innovation? Global transformation begins with leaders like you authentically serving their immediate spheres of influence.

2. Pause It Forward. Second, what more could you do to "play a bigger game" to more positively influence the broader systems and human needs in our local communities and the world?

If we each step back to consider how to do our part, we may have a chance to lead forward to foster more enriching, sustaining futures for successive generations. As Anderson said, "Unless someone leads no one will." It is up to us, the current generation of leaders, to create the future. It is up to us to pause it forward with authenticity, purpose, and generativity. ●

THE SUMMARY IN BRIEF

The business landscape is littered with the wreckage of companies that crashed and burned when an apocalypse came—in the shape of new competitive technologies, upstart entrants, demographic shifts, and new world orders. Who can feel safe in firestorm change?

The authors of ***The Phoenix Encounter Method*** don't advise safety. In fact, their method of leadership thinking requires you to imagine burning your business to the ground—throwing yourself into a firestorm change—and turning the upheaval to your organization's advantage. It can then rise, phoenix-like, from the ashes, stronger and more powerful than ever.

Written with a sense of urgency and purposefully radical provocation, ***The Phoenix Encounter Method*** presents a methodology based on extensive research and field testing. Whatever your sector or industry, if you're responsible for your organization's ability to use change as a transformative opportunity, you'll appreciate the dramatic impact ***The Phoenix Encounter Method*** will have on you, your leadership, and your organization.

IN THIS SUMMARY, YOU WILL LEARN:

- Why the phoenix represents what leaders must become to survive.
- The three phases of the Phoenix Encounter method.
- To adopt the Phoenix Attitude and use Extra Strategic Perception.
- To lead as both a Dreamer and a Doer.

Introduction

If you're smelling smoke, there's a good reason. The business landscape is going up in flames around leaders everywhere. Forces of disturbance and change that sparked small fires in the 20th century have turned into 21st-century wildfires—further inflamed by the COVID-19 pandemic.

Unstoppable trends appear unexpectedly, and unpleasant surprises materialize out of nowhere. These are things that keep business leaders awake at night.

The Phoenix Encounter method cultivates a new leadership thinking—a new attitude and a new kind of strategic debate that seeks out fire and embraces it. The method helps leaders develop their own bespoke script for renewal and transformation. In the post-COVID-19 environment, this is an absolute imperative.

The method is challenging. It involves Radical Ideation, dramatic war-gaming, confrontation, and provocation.

At its soul, the method compels leaders to imagine fully destroying their current organization themselves with unconstrained firepower. It then takes them through the steps needed to generate a wider range of options to defend the organization, fortify the core business, and build solutions for their business model with initiatives they need for renewal.

The method cultivates a bold and farsighted talent called the Phoenix Attitude, a set of mindsets, habits, and behaviors that equip a leader to grasp firestorm disruption as a path to organizational renewal. At the heart of the method is a sense of urgency and a willingness to walk through fire. That's why it's called the Phoenix Encounter method.

Regeneration or Extinction

The phoenix is a mythical, brightly colored, and long-lived creature that can regenerate itself, withstanding the flames of fire to rise from the ashes of its former self. For millennia, the phoenix has been a symbol of rebirth and new life. Ancient Egyptians saw it as the companion of the sun god. The phoenix is the kind of bird that leaders must become to survive the firestorm of disruption that marks our current century.

In contrast, the dodo is perhaps the most famous example of symbolic extinction—it took less than a century to disappear.

Let's take the first step into your Phoenix-like future.

PART I: PHOENIX SEEKING ENCOUNTER GROUNDWORK

Phoenix or Dodo?

You need to become willing to periodically set fire to your own organization so it can rise again. Research and fieldwork suggest that only after you have launched a devastating attack on your own organization can you really understand how to defend it, fortify the core business, and generate a wider set of strategic initiatives that will propel the organization forward to a Phoenix Breakthrough.

Though the experience is very challenging, leaders with the Phoenix Attitude will discover that *you are absolutely your own best enemy*. This is a virtuous cycle of renewal and transformation—an insurance policy against complacency and hubris.

Unfortunately, leaders without the Phoenix Attitude become their own worst enemy, leading to a vicious cycle of stagnation, wholesale disruption—and where the firestorm is—devastation.

The Phoenix Encounter method is powered by a new kind of strategic dialog called the Completely Opposite Viewpoints Debate. This debate is a deliberate engagement with diverse, opposing, and sometimes unwelcome viewpoints that force leaders to see differently, think differently, and act differently than they have in the past, so they can draw up a blueprint for the future.

Just as the phoenix renews itself in a cycle of immolation and rebirth, the Phoenix Encounter method unfolds in a cycle of three phases that take participants from groundwork preparation to battlefield debate and then to a breakthrough action plan.

Phase One: Phoenix Seeking—Encounter Groundwork. Phase One lays the groundwork for a future Phoenix Breakthrough by confronting old mindsets and scanning for new threats and opportunities. The goal of the groundwork phase is to help leaders break loose from legacy thinking; cultivate a constant awareness of new possibilities; and prepare for the Battlefield exercise of Phase Two.

Phase Two: Phoenix Burning—Encounter Battlefield. At the center of the Phoenix Encounter is an intense battlefield engagement that is waged over several days. Its goal is to both test the leader's thinking blind spots and generate a wider set of strategic options for the incumbent organization, including beyond out-of-the-box solutions suggested by Radical Ideation.

The Phoenix Encounter method does not offer solutions; instead, it offers a methodology for leaders and teams to find their own solutions. . .

Phase Three: Phoenix Rising—Encounter Breakthrough. Phase Three builds on the ideas from the Battlefield exercises to chart a new course for the organization. The goal of Phase Three is to transform the organization into its best future self and make the Phoenix Attitude a permanent and central talent that the organization can use to renew itself over and over again.

Participants leave their Phoenix Encounters with a remarkable new capability: They can create a future-ready organization, and, like the phoenix, they can do it again and again. This is because the Phoenix Encounter method does not offer solutions; instead, it offers a methodology for leaders and teams to find their own solutions—solutions that are relevant to their particular situation, time, and place.

As those circumstances change (as they almost certainly will), so will the solutions, but the method remains the same: ever adaptable, ever effective.

Leadership Thinking in Firestorm Disruption

The most important sources of information about the effects of firestorm disruption in the modern business environment come from women and men in the live battlefield—the participants in Encounter sessions.

Research shows 80 percent of these executives fall into one or more of the following four types of strategic leadership thinking (they are not mutually exclusive):

The Complacent. These leaders think disruption can't happen to them because they are in some sort of "exceptional" position. Perhaps they enjoy a monopoly or a favored nation status, or they have legacy government concessions.

The Arrogant. These leaders believe they have all the answers and are dismissive of ideas different from their own. Older leaders in this category often exhibit excessive pride in an iconic brand, best-selling product, or solid previous financial performance, which leads to hubris throughout the organization.

The Cautious. These leaders mistake incremental improvements for dynamic progress. They think periodic introductions of "new and improved" products, an obsession with metrics, and tinkering with the organization chart will keep them safe.

The Overwhelmed. These leaders become paralyzed in the face of uncertainty. They schedule meetings, order reports, call in consultants, urge caution—but do not move forward. They mistake dithering for prudence.

But there is a fifth category, smaller at present but growing fast in numbers:

The Dreamers and Doers. These leaders are explorers and navigators who can both envision dramatic change and execute it. They are forward-thinking, they are on the ball, they connect the imagined big picture to the tasks at hand. They are willing to envision a future where change is a constant and they don't have all the answers. In fact, they find uncertainty stimulating and outside viewpoints exciting. These are Phoenix leaders in the making.

The Phoenix Encounter Method

Let's now explore in more detail the three phases of groundwork, battlefield, and breakthrough.

Phase One

The Encounter's Phase One involves two essential tasks:

Attitude Switch. Participants identify their current mindsets, as well as those of others operating in their business environment, and consider how these might be blocking their organization's ability to deal with firestorm change. They learn about the Phoenix Attitude and make an inventory of the tools and habits of mind that will get them through the coming attack and defense. Then they link these learnings to their personal leadership development agenda.

Battlefield Preparation. In their Encounter Journal, participants prepare a baseline report describing their organization's value proposition and evaluating its current

strengths and weaknesses. This is the first of several strategic reflections they will create throughout the Encounter. Preparing for the Battlefield exercise, they scan new technologies, demographic changes, business model innovations, and other unstoppable trends of firestorm disruption.

After pre-work is done, participants break out into their Encounter teams, called Phoenix Encounter Groups (PEGs), and the Encounter overview briefings take place.

Phase Two

At the center of Phase Two is the Battlefield engagement. Each leader takes a turn in the "hot seat" as the PEG team first attacks with as much unconstrained and disruptive firepower options as possible. Throughout, team participants undertake a series of proactive scans, searching for disruptive firepower weapons.

These weapons include both contemporary firepower (like new technologies and digital business models) and conventional firepower (like mergers and acquisitions and process or asset optimization). How the participants use these weapons—alone or in combination—is entirely up to their imaginations. The more inventive the thinking, the better, for the battle is waged in a series of Completely Opposite Viewpoints Debates designed to elicit radical ideas.

Each participant leaves the exercise with a list of insights and options to think about. In the next phase, this list will be scrutinized, tested, and fine-tuned.

The **Extreme Attack** pits a team of attackers against an incumbent organization. It is a guns-blazing, no-holds-barred firefight designed to be enormously destructive. This is the exciting, stressful, and truly revelatory core of the Encounter experience.

Once all the ideas are on the table, the PEG team goes to work debating them, arguing pros and cons, brainstorming new ideas, and then combining, editing, and finally consolidating the best options into the most destructive campaign they can collectively create.

The **Horizon Defense** unfolds in a series of opposite debates, one for each team member. This time, each participant proposes one or more ways to repel the attackers, outflank them, or leapfrog over them. Three distinct missions come into view: (1) options to counter the immediate attack, (2) options to fortify the core business, and (3) options for business model changes, innovation, transformation, and dominance in the future.

After the Horizon Defense debate, participants record their best prospective strategic options—a kind of "Hot List"—and sequence these across four time horizons for action: immediate, short term, medium term, and long term.

Phase Three

Phase Three builds directly on the ideas that emerge in the Battlefield to chart a new course for the organization—to turn ideas into action. It can take a long time, often months and sometimes years, to work through the two tasks:

Soon after the Battlefield exercise, participants collect and synthesize all the most promising ideas that bubbled up into a new high-level plan for their organization, using the Encounter Journal's template for a **Future-Facing Blueprint**.

Strengths are recalibrated to those needed for the future. Participants determine actions to be taken to realize the new strategic shifts and to fortify their core—to play out over four time horizons: immediate, short term, medium term, and long term.

In **Embedding Phoenix DNA**, participants take their Future-Facing Blueprint back to their organizations to test (including deeper rigorous analysis), revise, and implement the best initiatives identified. At the same time, they work to embed the Phoenix Attitude, tools and habits, the Battlefield exercise, and other elements of the Phoenix Encounter method into each of their organizations so it can transform itself again and again.

The Phoenix Attitude

In business, as in life, everything starts with your attitude. What is a Phoenix Attitude? In essence, it is a set of personal attributes—mindsets, habits, and behaviors—that allows a leader to embrace firestorm disruption as the essential pathway to organizational renewal. It is the mental embodiment of Phoenix DNA.

Four underlying characteristics are the enablers of all the Phoenix Attitude attributes: emotional intelligence, business acumen, talent development capabilities, and effective communication. The mental attributes of leaders with a Phoenix Attitude include curiosity, foresight, imagination, Radical Ideation, and decisiveness. Their habits include embracing the opposites debate and searching, scanning, questioning, and adopting multiple perspectives as an imagineer, with focused prioritization.

A Phoenix Flies Across Distinctive Leadership Altitudes

These leaders have mental agility to operate at three leadership altitudes simultaneously: 50,000 feet, 50 feet, and 5 feet. These altitudes correspond, respectively, to strategic, operational, and personal levels of leadership engagement.

> Being stuck at any one leadership altitude is Altitude Sickness—dangerous to leaders, their teams, and their organizations.

The **50,000-foot view** lets us see what's coming across a wide horizon. In the context of the external landscape, it can reveal the sweeping changes of unstoppable trends in the outside world, from technological advances to demographic shifts. Its big-picture vantage point promotes Proactive Scanning and Radical Ideation.

Making that vision real requires an understanding of tactical and operational matters best viewed from **50 feet**. This is, after all, where things happen most of the time. It's where day-to-day and month-to-month actions are executed and where quarterly results get reported.

The **5-foot leadership altitude** is the level of self-awareness. Only when leaders understand who they are and why they do what they do can they govern themselves and engage others.

Being stuck at any one leadership altitude is Altitude Sickness—dangerous to leaders, their teams, and their organizations. Altitude Sickness at 50,000 feet is over-dreaming; at 50 feet, it's change resistance; at 5 feet, it's micro-obsession and navel-gazing.

Phoenix Tools and Habits: Extra Strategic Perception

There are three Extra Strategic Perception tools and habits of mind that should be learned and practiced to develop a leader's Phoenix Attitude:

1. Proactive Scanning that supports the "seeing" sense for the Phoenix leader. Develop the habit of continual "scanning" for insights, trends, ideas, and dangers while learning to think and inquire in new ways to better recognize future threats and opportunities. This combines scanning with perceptual acuity and strategic inquiry.

2. Debate Rituals that support the "speaking and listening" sense for the Phoenix leader. A Completely Opposite Viewpoints Debate requires a psychologically safe and collaborative environment to discuss far-reaching, different, and opposing perspectives. Two fundamental rules enable the team to create the farsighted discussion that enables discovery of a diversity of perspectives on attack and defense, namely:

- **Radical Ideation:** Embracing unconstrained thinking to generate as wide an option set as possible.
- **The Separation Imperative:** Focusing debate and discussion separately on ideation, synthesis, analysis, and decision-making and appreciating them as distinct and discrete phases of strategic dialogue.

3. Encounter Journal that supports the "writing" sense for the Phoenix leader. It documents and tracks ideas, analysis, and actions throughout the entire Phoenix Encounter to ultimately generate the Future-Facing Blueprint for the organization and its breakthrough changes.

PART II: PHOENIX BURNING ENCOUNTER BATTLEFIELD

Scanning Firepower for Extreme Attack and Horizon Defense

In Part II, in the Encounter Battlefield phase, leaders go through a range of scans, debates, and ideation. This is essential for generating a wide range of radical ideas—the firepower of Extreme Attack and Horizon Defense.

Leaders look carefully at the external environment of firestorm disruptive trends, from technology to demographics; from digital and social platforms to emerging markets; from talent, sustainability, and activism to reimagining traditional business levers.

Sources of Firepower

Proactive Scanning allows leaders to identify "firepower" for Extreme Attack and Horizon Defense. The firepower sources are the arsenals to deploy for future organizational success or change, and they shape businesses, industries, and markets.

Two different types of firepower are contemporary firepower of the new world and conventional firepower of the old world.

Options for contemporary firepower that are often less familiar to leaders in the legacy world can include technology drivers such as digitization, algorithms and analytics; new technologies such as artificial intelligence (AI) and cloud computing; business model transformation; dynamic innovation; and macro levers allowing firms to understand and take advantage of unstoppable future trends in talent diversity, demographic shifts, sustainability imperatives, activism, and so forth.

Options for conventional firepower that are very familiar to leaders in the legacy world, and sometimes overlooked by disrupters, can include competitive positioning, operational strategy, organizational culture, and macro levers, including traditional regulation and policy management; identifying important corporate social responsibility initiatives; and understanding the implications of economic and market forces.

A leadership team with the Phoenix Attitude uses both conventional and contemporary firepower to create a Future-Facing Blueprint. The challenge is choosing carefully while building creatively because the elements can be combined in different ways for different purposes.

Let's now look at an example of contemporary firepower.

All Digital Firepower, All the Time

Digitalization has set the world on fire. It is fuel for the phoenix. By early 2020, more than 4.5 billion people had access to the internet. That represents a more than 1,000 percent increase since 2000. Even with that kind of growth, just over half of the global population is online.

One of the largest changes that internet digitalization brings is unlocking the flow of information and knowledge across the world. That flow, according to a 2017 article in *McKinsey Quarterly*, is growing in a convex fashion even while the other major global flows of trade and finance remain relatively flat.

Unlocking information flows has significant consequences. One of the most profound is the quantum shift in the power balance from sellers to buyers, a phenomenon that is not limited to first-world commerce—it underpins the arsenal of customer power.

It's also important to recognize that something beyond affordability and access is driving the growth of the new breed of digital upstarts; it's called "network externality effects." We see it clearly in the evolution of WhatsApp.

In 2009, Jan Koum and Brian Acton released WhatsApp, a smartphone application that let users send text messages via the phone's data network, as distinguished from an SMS message that goes over the telecom operator's cellular network.

The economic significance of such externality can be seen in the $19 billion that Facebook paid to acquire WhatsApp in 2014, at a time when WhatsApp had all of 55 employees on its payroll. The company's small size masked its impact on the telecom world.

The growth of WhatsApp also shows the disruption a single technology can wreak on legacy companies that are unprepared for the digital, globally networked world. The London-based research and analytics firm Ovum estimated that WhatsApp and similar over-the-top voice and messaging companies (e.g., Skype, Link) would cost global telecom operators about $386 billion in revenue between 2012 and 2018.

All this should remind readers how important it is that an organization's senior leadership have a clear sense of their tasks:

- Scan technology trends in the marketplace across industries and geographies.
- Leverage the power of the digital revolution to make their firm future-ready.
- Build the capabilities essential for digital innovation.
- Cultivate the digital transformation needed in every area of the firm.

Firepower From Combinatorial Innovation

Amid all the hype about the disruptive influence of the forces of digital, social, platforms, and technology, it's easy to think that the future could be a place where legacy firms are no longer relevant. That would be a serious mistake. Legacy incumbents have assets that can help them harness the forces of disruption in their favor, such as trust, reputation, and balance sheets.

Successful companies make it a habit to think about innovation as a multidimensional construct, one that involves

> Successful companies make it a habit to think about innovation as a multidimensional construct. . .

choreographing a bespoke set of forces across conventional and contemporary firepower. This is "combinatorial innovation" in its most potent form.

IKEA is a great illustration of the combinatorial approach. As a disruptor in the furniture world starting in 1948, it changed the way consumers bought furniture. IKEA co-opted consumers to become co-producers—driving to the stores and picking and assembling in return for affordable design—and went on to become a global giant in the furniture retail business.

However, the growth of e-commerce and changes in consumer shopping habits meant that the erstwhile disruptor was in danger of getting disrupted. IKEA's response to this threat has been to create a Phoenix-like defense built on a combinatorial portfolio of business model tilts leveraging contemporary and conventional firepower.

In 2017, IKEA acquired the Silicon Valley startup TaskRabbit, a platform website that connects consumers with freelancers who perform many household tasks, such as assembling IKEA furniture. At one level, the move reflects the understanding that IKEA's traditional model, based on co-production, would need to evolve.

It also reflects IKEA's ability to combine multiple insights: (1) a growing number of younger customers are not willing to build their own furniture, and (2) the gig economy lets customers and retailers leverage a new labor force that performs assembly cheaper, faster, or more conveniently than the customer can manage.

PART III: PHOENIX RISING ENCOUNTER BREAKTHROUGH

Blueprint for Breakthrough

The final phase of the Encounter method, the Encounter Breakthrough, focuses on taking the implications of insights from the Extreme Attack and Horizon Defense and using them to set the organization on a renewed course. It is about turning the Radical Ideation of attack and defense into a Future-Facing Blueprint for realistic actions.

First, participants distill the Horizon Defense conversation into a series of action items for investigation across short-, medium-, and long-term time horizons. They also sketch their expectations of high-level outcomes, if these action items are successfully implemented.

Participants update their Encounter Journal with a Future-Facing Blueprint that incorporates insights and their implications for strategic leadership and organizational priorities that work across all the altitudes—50,000 feet, 50 feet, and 5 feet.

The Future-Facing Blueprint will include a fully revised future value proposition for stakeholders, an updated SWOT that emphasizes the strengths needed for the future (set against growth, cost, and risk criteria) and the gaps in the present, and a description of the transformed business model and the ways value will be created and captured.

Next, participants identify the actions they must take (e.g., pilots, further analysis, and resource mapping) to make the priorities realities.

Phoenix Leaders: Dreamers and Doers

Walt Disney, remembered as one of the most creative leaders of the 20th century, was also admired for his ability to make things happen. "The way to get started," he famously said, "is to quit talking and begin doing."

Creative imagination like Disney's is film producers' stock in trade. It is not quite so common in operational executives, who are generally very good at getting things done. The ideal leader, of course, possesses both imagination and the ability to execute.

For that reason, these two attributes play critical roles in the Phoenix Encounter method, which elicits a Completely Opposite Viewpoints Debate that focuses on dreaming and doing.

Dreamer and Doer capabilities are not mutually exclusive, and they co-exist to some extent in every leader.

Phoenix leaders, unburdened by Altitude Sickness, more easily find the "sweet spot" that balances both capabilities. They apply both their leadership art and management skills. They do not engage in the kind of shallow dreaming that leads companies to change their names to "Blockchain Inc."; they do not bury their heads in the existing business. They are bigger than that.

As Jim Hackett, CEO of Ford Motor Company, said, "Corporations tend to reward actions over thinking, but the truth is, you'll find the companies that didn't do the deep thinking and acted quickly have to redo things."

Dreamers and Doers Across the Altitudes

The capabilities of a Dreamer and Doer happen to map very neatly into the leadership altitudes discussed above. The 50,000-foot thinkers are the Dreamers and explorers. The 50-foot thinkers are the Doers and exploiters.

Both Dreamers and Doers need the profound self-awareness of 5-foot thinking, and they need a personal leadership development agenda to match.

Leaders with a Phoenix Attitude build organizations that encourage Doers and Dreamers to focus on what they do best while continually exchanging ideas (the opposite debate).

This is one reason why involving both Dreamers and Doers in the Encounter Battlefield exercise produces tangible results. Each type has an opportunity to practice the other's style of thinking throughout the Encounter process.

Are you role-modeling the Phoenix leader—dreaming and doing? Where are you focusing in personal leadership development to strengthen this and hone your Phoenix Attitude?

Have you consciously worked to create an environment, structure, and systems where Doers and Dreamers can co-exist and leverage one another's talents and complements?

The Phoenix Encounter method starts with a question: How might someone destroy your business? The best person to think about the firestorm is you. It ends with a clarion call to arms: The time is now! This means leading like your business is on fire.

The key is to focus on reimagining your Phoenix rebirth and surge towards the future. There is no choice. Quite simply, there has never been a more important time to be your own best (imaginary) enemy.

For leaders with the Phoenix Attitude this implies a virtuous cycle of renewal and transformation.

THE SUMMARY IN BRIEF

Most organizations today are driven by a "soft" approach to leadership, using democratic methods such as consensus, negotiation, and compromise. The problem is, it doesn't work. In ***The Power of Mandate,*** authors Scott Stawski and Jimmy Brown, Ph.D. show that the most radically successful companies are the ones that defy groupthink and break the mold, whose leaders epitomize mandate driven leadership to create or redefine entire industries.

The book explains the basic principles and philosophy of mandate driven leadership, including creative disruption and sheer willpower, to implement a vision and strategy. Compelling examples of legendary leaders also show mandate driven leadership in action—how strong leaders turn a vision into reality. This is how leaders like you can learn from the greatest minds of our time, to forge your own unique path to the future.

The Power of Mandate will shatter your preconceptions about innovation and alter the way you think about leading. It's a must-read for all leaders in the age of disruption.

IN THIS SUMMARY, YOU WILL LEARN:

- The key theme for developing effective leaders.
- The many downsides of consensus leadership.
- The three essential characteristics of Mandate Driven Leaders.
- To create a Mandate Driven Culture.

Introducing the Mandate Driven Leader

Most consultants and business schools teach consensus building and management as the core foundation of leadership. In fact, in many companies, the concept of achieving consensus has achieved a sacrosanct status. But truth be told, consensus-driven leadership is a root cause of many a failed business.

Consensus can be defined a number of different ways. MBA texts include terms like "a decision reached by a group, not through the mandate of an individual, but through agreement of all the participants." In other words, it means the decision was reached by the overall opinion of the group.

While consensus-based decision making is very popular and does tend to make people feel good, it is not necessarily the best approach. And it is rarely the right approach for C-level executives—especially during a time when technology is driving real business disruption.

Today much of our economy, the digital economy, is now driven by technology. This technological innovation is resulting in real, long-lasting business disruption. New markets and channels are being created, entire business paradigms rethought, supply and demand channels upended. Nothing is sacrosanct.

So how do we have all these amazing technological innovations that power our world and allow us to do things that only a few years ago were the stuff of science fiction? Simply put, these disruptive companies are propelled forward by Mandate Driven Leadership. These leaders are not consensus driven, and they really don't care who agrees with them when it concerns achieving their vision.

Three Themes for Effective Leaders. . . and One Missing One

The leading literature suggests that leadership traits and characteristics can be grouped into three common themes of what it takes to be an effective leader.

The first theme is that leaders expect the best from themselves and from others. If leaders want to succeed, they need everyone doing things right.

Regardless of what a leader's motive is, leaders stay motivated and motivate others. This is the second common theme. Good leaders know how to get a team to do more than they think they can do.

Leaders are also not shy about letting the world know about their accomplishments. The great ones are even less shy about letting the world know about their team's accomplishments, which is the third theme. Mandate Driven Leaders understand that recognition drives outcomes and helps teams drive toward the vision set by the leader.

Missing from the literature is the realization that no company today can afford to be led within a status quo environment. Today we need leaders who can push organizations in directions they may not want to go, in part because they don't realize they need to. These leaders have a vision, and they command the organization to take a certain course of action to achieve that vision.

These visionary leaders have a belief, idea, strategy, or tactic that is so compelling that they do not accept "no" for an answer. Through mandate, they drive the vision from concept to implementation.

Steve Jobs, Prototype of a Mandate Driven Leader

Steve Jobs will go down in history as one of the most challenging leaders to work with of all time. Shortly after his death, ***The Atlantic's*** Tom McNichol referred to Steve Jobs as "a world-class asshole." Biographer Walter Isaacson repeatedly talks about how there was Good Steve and there was Bad Steve. While Good Steve could inspire those around him to achieve groundbreaking innovations that the world didn't realize it needed, Bad Steve could just as easily tear people down and make them hate life and run them off.

Steve Jobs is the prototype of a Mandate Driven Leader, which begs the question: Could he have accomplished the same adopting a different leadership model? While there are some management gurus who will undoubtedly disagree, the answer is an absolute no.

Jobs's adoption of a Mandate Driven Leadership model was integral to his success. As he matured, it became very deliberate as Jobs recognized that Mandate Driven Leadership was essential to being "crazy enough to think they can change the world."

Susan Kalla, an investment manager, wrote in ***Forbes***, "his high aspirations spilled over onto Apple employees who believed they too could accomplish anything." The same traits that made Steve Jobs a "world-class asshole" were the traits that enabled him to achieve great things. The same passion that made him lose his temper was the obsession that drove him to relentlessly drive forward his vision. The same lack of self-awareness that made him think the rules didn't apply to him was what allowed him to find ways to fill needs we

In order to show consensus, groups may drive all the members away from the basic or original thought toward one that is acceptable to all.

didn't know we had. Those same traits that made him a tyrant to work for also made him a Mandate Driven Leader. Steve Jobs was crazy enough that he did change the world.

The History and Pitfalls of Consensus Leadership

Consensus decision making and the principles that comprise consensus management can be traced back centuries. Five Native American societies, the Cayuga, Mohawk, Oneida, Onondaga, and Seneca, established the Haudenosaunee Confederation. This confederation, which is still active today, is based on the principles of consensus. In Europe, many governing bodies and associations, like the town councils and the guilds, have operated on consensus management principles for hundreds of years.

In more recent times, social and political activists find the principles of consensus management essential to their work. According to the organization Seeds for Change, many current social and political movements believe that the methods for achieving change must match their vision and goals of a free, nonviolent, egalitarian society.

Consensus management principles first made their way into the business world via the cooperative movement. The cooperative movement began in England and France in the nineteenth century. The industrial revolution was transforming society. The increasing mechanization of the workplace was threatening the livelihood of large portions of the worker base.

This gave rise to many labor and social movements, including the cooperative movement. The cooperative movement allowed workers to unite around a common economic goal, with leadership as well as the economic output of the cooperative being equally shared.

The idea of consensus building became popular with the trend to involve or engage all stakeholders in the decision-making process, which in turn evolved with the acknowledgment that people who gave their voluntary consent were more likely to stand by the decision and be accountable as well as take responsibility in the implementation process. Thus, by the mid to late 20th century, consensus decision making was norm de rigueur within business schools and corporate management.

The Downside of Consensus

While consensus management may contribute to the positive feelings of the whole, it is also counterproductive and detrimental to the decision-making process if misapplied, which it often is. Consensus is often misconstrued to mean or portray unanimity in the context of decision making.

The fallacious interpretation of consensus as unanimity is forced upon other members who may have valid questions or doubts but can be cowed into consent by the group's desire to reach a unanimous and strong decision. Group members may resolve not to follow any action unless consensus is manifested in unanimous agreement and unless each and every member of the group has acquiesced.

Another pitfall exists when there are dissenters but they are ignored to ensure that a unanimous agreement is projected, and thus the opinion of the minority is not even heard or discussed.

In reality, many of today's organizations reward likeability. The trait might be encased in the terms collaboration, consensus building, and team-oriented, but at the end of the day many organizations reward individuals whose thought processes and actions are not at odds with the mainstream.

Also, in order to show consensus, groups may drive all the members away from the basic or the original thought toward one that is acceptable to all. This leads to the dilution of ideas, which may have had their own merit and utility if they had been pursued but were, instead, discarded or toned down to appease the majority and build a consensus in decision making.

Hewlett Packard is a classic example of where dramatic industry changes coupled with a culture of consensus can lead to disastrous results. Bill Hewlett and Dave Packard established a set of business principles—encapsulated in the "HP Way." These principles helped establish a heritage of

consensus management within the company that has often been cited as the ideal state. In the early years, Hewlett Packard's engineering acumen allowed the company to grow and thrive.

However, the well-entrenched consensus management culture proved to be disastrous for the company during times of digital disruption. The lack of the directive leadership necessary during these times resulted in a string of failed strategies and acquisitions, including Compaq, EDS, and Autonomy. What was at one time the largest technology company in the world was ultimately dismantled.

In the end, consensus leadership is an approach to management where the process is deemed more important than the outcome—where it is deemed more important to involve and engage everyone and to create an atmosphere of participation and agreement, rather than a vision of change.

Mandate Driven Leadership Defined

How is a Mandate Driven Leader defined, and more important, how can each of us develop into this type of leader? How does the Mandate Driven Leadership model differ from the transformational, transactional, servant, authentic, or any other leadership approaches that pop up from blogs to academic peer-reviewed journal articles?

Successful Mandate Driven Leaders have a vision, drive to an outcome, and are unrelenting until it is accomplished.

A well-communicated vision of the future. Mandate Driven Leaders see a future that is better than the status quo. At the core, the Mandate Driven Leader recognizes that survival starts with a vision for a better future. The vision of the future for a leader might be a new product. It might be a better business process. It might be a completely new business paradigm for an industry.

Jeff Bezos, in a presentation in 1999 when Amazon was four years young, was asked about the vision for Amazon. He stated, "It's customers helping customers make purchasing decisions. And that's what is community . . . businesses cannot create community. All businesses can do is facilitate community." Bezos's vision was not to create the largest online bookseller or retailer. He was creating a community marketplace powered entirely by the community members themselves—their reviews, their rankings, their search results, and in many ways their product mix and their prices. Bezos still ingrains that vision into everything Amazon does.

Drive to the outcome instead of the process. Once the vision of the end state is established, a Mandate Driven Leader drives to the outcome. Death by process is actively avoided. A Mandate Driven Leader assumes that the required outcomes of the team, the organization, and sometimes society take priority over getting everyone in the team to agree on the strategy at hand.

Mandate Driven Leaders are OK with individuals questioning and debating the many details that are required to implement the vision to reality. In fact, they demand it. However, this is different from questioning or obstructing the vision.

Jack Welch, another consummate Mandate Driven Leader, was the CEO of General Electric from 1981 to 2001. He quickly developed the nickname "Neutron Jack." This nickname was earned through various strategies he implemented, including exiting any business where GE could not be the market share leader and firing the bottom 10 percent of all employees each and every review period.

In a short period of time, Welch terminated more than 100,000 employees and exited businesses with revenue in the billions. The result was that he turned what at the time was a company in crisis into a global power and increased the company's market value by more than $300 billion while achieving record revenue and profits.

Unrelenting focus and determination to achieve the end state. Mandate Driven Leaders do not take "no" for an answer. They do not accept excuses. They hold individuals accountable. And they do not stop driving relentlessly forward until the end state is achieved. It is not unusual for some people to confuse Mandate Driven Leaders and their unrelenting focus and determination with leaders who are narcissistic, poor team builders, and just plain mean-spirited.

But business leaders who are tyrants and dictators are not directive leaders for the common good; they are in it for their own selfish gain. Such leaders may claim they are champions of the people, and some even start out that way, but they quickly devolve into enriching themselves. One of the clearest examples of this comes from the Enron scandal. Ken Lay and Jeff Skilling were reportedly very difficult and demanding, but their mandate had nothing to do with helping anyone other than themselves. And they ended up being prosecuted for it.

Mandate Driven Leaders, on the other hand, add value to those around them and the world in general. This makes

people want to be around them and work with them, regardless of whether they are easy to work with or challenging.

Aside from the three main themes, Mandate Driven Leaders are different from other leaders in that they are surprised when others don't see the value in their vision, and are ruthless about getting there; they won't accept failure in themselves or others; they assume they are in charge; put customers/stakeholders first and employees second; and won't allow others to be selfish.

This focus on what needs to be done without getting bogged down in what the critics say makes Bill Gates a Mandate Driven Leader.

Effective Leadership Styles and the Mandate Driven Leader

When we think about Mandate Driven Leadership, how does it fit with a servant and transformational leadership approach used by someone like Dr. Martin Luther King? How might it be integrated into a directive leader like Jack Welch?

Bill Gates, founder of Microsoft, was clearly a Mandate Driven Leader. Microsoft at its birth was singularly focused on transforming how society can use technology, specifically the desktop PC, to transform and better the world. This was not only Bill Gates's vision but also his mandate. And during these early days, Gates was unrelenting in driving this vision forward. As time has gone on and he has been able to let Microsoft run without him, Gates has transferred this Mandate Driven Leadership approach to his charitable work.

The Bill & Melinda Gates Foundation is by far the largest philanthropic organization in the world, with an endowment exceeding $45 billion. The focus is on "improving people's health and wellbeing, helping individuals lift themselves out of hunger and extreme poverty." It is their belief that education coupled with technology enablers plays a critical part in this objective. The Foundation now spends more each year on health issues than most individual countries of the world.

However, some academics have questioned the spending priorities of the foundation. Researchers from Oxford published an article in 2008 questioning whether the foundation was prioritizing spending on infectious diseases affecting highly developed countries over the chronic health problems of the poor.

While the critics have their say, as he did at Microsoft Gates continues to propel his vision for the foundation forward without being distracted by the naysayers. This focus on what needs to be done without getting bogged down in what the critics say makes Bill Gates a Mandate Driven Leader.

However, is Gates also a servant leader? Or is Gates a directive leader or an authoritarian leader? What about a transformational leader? Or does his habit of poring through lines of code even at the CEO level during his Microsoft days make him more of a transactional leader?

This leads to the question of whether you can be a Mandate Driven Leader within many of the accepted leadership styles. Mandate Driven Leadership enables and enhances most leadership styles and helps us avoid autocracy because it keeps the leader focused on the vision.

Servant leadership. Popularized by Robert Greenleaf, servant leadership grew out of his Christian worldview, to see the leader as someone who serves rather than just someone who directs. It views leaders' role as taking care of others rather than just enhancing themselves. This focus on others has created a common misconception that servant leaders are only focused on the needs of the people who work for them. While servant leaders do consider their followers' needs and wants carefully, that consideration is in the context of the organization serving a greater good for society as a whole.

Let's say someone sees herself as a servant leader and sees an opportunity for developing some new and improved widget that will help feed underprivileged people. Taking the organization in that direction, however, would make things more challenging for the people in the organization, at least in the short term. Someone with only a surface-level understanding of servant leadership might assume that a servant leader would forgo that direction because she is taking care of the people in the organization first.

A true servant leader, however, would make the hard choice to go toward the greater good, despite the complaints from

the employees, because she knows that is the best thing to do in the long run. You don't get much more mandate driven than that.

Authentic leadership. This is a relatively nascent concept that is centered around honest relationships and leading from an ethical foundation. While particular definitions may vary, the most common conceptualizations center around four key constructs:

- Self-awareness;
- Relational transparency;
- Balanced processing;
- Internalized moral perspective.

These constructs actually work well for Mandate Driven Leaders because when a leader is focused on doing what is right rather than what is popular, there is no reason to be anything but authentic. There is no time wasted trying to drag along the contrarians because you have a job to do. If the mandate is authentic, then the leader will be, too.

Authoritarian leadership. While this style has become much less popular in the modern discourse, it is still an important consideration for several reasons. Even though many sophisticated leaders preach that this style is outdated and obsolete, quite a few of them will revert back to it when things get tough. There are some industries and cultures where having a more authoritarian style is not only accepted but necessary.

When some people hear the term Mandate Driven Leadership, they will assume it is just a repackaging of the authoritarian style for leaders who lack empathy and are totally self-absorbed. Many of the most truly authoritarian leaders lack a clear vision and default to this style out of fear or self-interest. Mandate Driven Leaders always have a clear vision of where they want the company to go, and they are open and honest (authentic) about what those goals are.

Another defining characteristic typically associated with authoritarian leaders is lack of input from subordinates and team members. What little input they do allow comes from the "yes" crowd; they don't ever actively seek opposing views but enjoy their echo chambers.

Mandate Driven Leaders look for different views and listen to them. Once they make a decision, however, they do not let the naysayers second-guess the direction, and they keep the organization laser-focused on its goals. Even when the goal is some crazy idea like streaming movies over the internet.

What makes Mandate Driven Leadership unique is that it is not just another leadership style or theory. It is a new way of understanding how successful leaders decide what agendas to pursue and then how to take the agenda to reality. It is about understanding how and why leaders push their organizations to reach new heights. In truth, Mandate Driven Leaders can use almost any style of leadership, as long as they are driving toward the necessary vision.

Creating a Mandate Driven Culture

There is a saying that "culture eats strategy for breakfast." Leaders can put forth or even mandate a phenomenal vision, but a vision alone is not going to make a turtle run faster.

Leaders must truly understand all aspects of the existing culture to determine what parts of the culture are supportive of the vision and where the culture could kill the vision. Mandate Driven Leaders must look at the culture within their organization relative to things like innovation, outcome versus process, roadblocks, and tenacity.

HP had a culture rooted in engineering and process and consensus as opposed to a culture rooted in agile decision making and financial performance. When HP entered the software and technology services business where fast innovation, agility of decision making, and financial performance are key, the result was deteriorating market share, failed acquisitions, and poor financial performance. Culture ate strategy.

The *Field of Dreams* Fallacy

So why does this matter to a Mandate Driven Leader? Mandate Driven Leaders understand that they want to avoid the ***Field of Dreams*** fallacy. This is the erroneous belief that "if you build it, they will come." Mandate Driven Leaders understand that you can't just throw an idea out there and expect people to embrace it. No leader disrupts the market alone, and you have to create a compelling vision for people to follow and create an environment that enables them to do that.

And given that Mandate Driven Leaders do not micromanage processes, they have to create a culture where everyone accepts the mission and socially motivates others to do the same. All members of the organization must realize that they only have two choices: get in the boat and row or get out and swim to a different shore. The question, of course, is how do you create such a culture? How do you drive everyone to buy into these efforts?

Mandate Driven Leaders understand and accept that at least some of the people in that organization are not going to like change and may need to leave.

Mandate Driven Leaders understand and accept that at least some of the people in that organization are not going to like change and may need to leave.

Obviously, this is very different from the consensus-driven approaches often promoted that say something like, "Ask the team what they think," "Get everyone on board," and so on. Mandate Driven Leaders know they are working against time, and while no culture changes overnight, you must change behavior if you are going to change the culture. And if you want to change behavior, start by changing management systems inclusive of processes, metrics, and accountability. It is this ability to force culture change that is critical to a transformative Mandate Driven Leader.

One of the most important things Mandate Driven Leaders do is to develop a culture that opposes and prevents groupthink. Some people confuse this with group cohesion, but in fact, it is very different. The difference is that in groupthink, maintaining group cohesion becomes more important than making good decisions. The fact that the term originally came from George Orwell's novel ***1984*** should be a pretty good indication that it is something to be avoided.

So what kind of culture should Mandate Driven Leaders create? It depends on what kind of culture they want to create. The culture at Facebook is very different from the culture at Netflix or Amazon. It is also a pretty good bet that the culture at Apple is nothing like the culture at Airbnb. All of these cultures are aligned to the strategy that the organization wants to execute and the vision the leader is mandating to fruition. It may be a culture of sheer innovation or a culture of agility or a culture of competitiveness.

And if there is one thing that all Mandate Driven Leaders know, either you manage the culture or the culture manages you.

Brian Chesky, CEO of Airbnb

The President's Room inside the Airbnb headquarters of the online home-sharing platform has a model ship that sits on a coffee table, a 19th-century sailing yacht. The model is the key to the President's Room, and may be the backbone of the Chesky operation, for the sailing vessel works as a metaphor for Chesky's leadership style.

"If you think about it, Airbnb is like a giant ship," Chesky told ***Fortune*** magazine. "And as CEO I'm the captain of the ship. But I really have two jobs: The first job is that I have to worry about everything below the water line, anything that can sink the ship. Beyond that, I have to focus on two to three areas that I'm deeply passionate about—that aren't below the water line but that I focus on because I can add unique value, I'm truly passionate about them, and they can truly transform the company if they go well."

For Chesky, those three focus areas that are above the water line are the product, brand, and culture, which are the crucial components beyond the technical aspects of an internet operation. It is in these three areas that Chesky shows his Mandate Driven Leadership style.

Chesky understands that his role as captain of that ship is to establish the destination, chart the course, and propel the ship to that destination. Captains do not sail a ship by consensus. As the captain, Chesky understands that propelling an organization to achieve a vision requires directive stewardship.

Mandate Driven Leadership and the Digital Economy

Powered by digital technology and the digital economy, disruption is everywhere. Every industry. Every geography. Affecting every business. The former VP of marketing at Dell, Heather Simmons, once said, "Knowing that an asteroid is going to hit the earth is not really useful if you are not planning to launch missiles to knock it out of the sky. You have to work massively overtime on the belief that innovation or massive change is going to happen."

This thought is critical for leaders today because business disruption is going to continue. Uber is less than 10 years old and disrupted the livery business arguably in less than five years from its founding. Airbnb is now the largest

hospitality company in the world and does not own a single hotel. Instacart hit $1 billion in valuation in 795 days. And Facebook took a mere 396 days to be valued at $1 billion and now has a valuation of $513 billion.

A startup today has access to world-class technology enablers that only a few years ago were available only to the largest of US businesses. Cloud-based computing and software as a service now allow entrepreneurs and established businesses to use technology on a consumption basis without the large up-front hardware or licensing fees. This allows a startup to compete against any established business anywhere in the world if its leaders have the right vision. Technology and infrastructure are no longer a barrier to change but an accelerator to change.

These disrupters are a threat to every legacy business. And who do you think is leading that next wave of start-ups—someone who espouses consensus management as the leadership style needed for quick market entry and disruption? Or a Mandate Driven Leader who has a vision for the startup, communicates that vision clearly, and is unrelenting until the vision is achieved?

Elon Musk, Mandate Driven Leader

Elon Musk, the co-founder and CEO of Tesla, has had his share of negative press. And he would be categorized as a Mandate Driven Leader. Musk has told many an audience that friends, family, and business associates attempted to talk him out of both Tesla and SpaceX. He has told ***USA Today*** that starting SpaceX and Tesla was probably "the dumbest things to do" as far as a startup.

However, Musk has started a revolution in the car industry, proving every naysayer incorrect. Electric car sales are growing at 50+ percent a year and will increase from 3 million units in 2017 to more than 125 million units by 2030. Every automobile manufacturer is now scrambling to catch up. In typical Mandate Driven Leadership fashion, when Elon Musk was asked why he started Tesla and SpaceX if it truly was the "dumbest thing to do," he said, he "believed in the companies' abilities to change the world for the better."

The disruption of yesterday and even today is only the beginning. We are on the cusp of an even greater round of disruption. Faster than many companies think, we will see monumental shifts in the value and supply chains in healthcare, manufacturing, insurance, finance, and consumer packaged goods.

For legacy companies not just to survive but to thrive in this era of digital disruption, they need transformational leaders who have a vision for the future of the company to allow it, through directive leadership, to become the disrupter instead of the disrupted.

THE SUMMARY IN BRIEF

This is an unprecedented time for leaders on all levels. The details and strategy being asked of leaders is intense, and graceful leadership has never been more paramount than right now in our modern world. When people hear the word grace, they often think of religion. While religion can play a role in grace for some leaders, grace, as defined here, is not about religion. Rather, grace is the practical expression of a loving, connected compassion with self and others. It is the ability to see yourself in the other.

Alexys Thompson, in ***The Power of a Graceful Leader,*** points out that every leader directly impacts at least twelve other humans through leadership. Graceful leadership is the most integrated form of leadership. It allows you to form a bridge between personal and professional, align yourself to your purpose, and adapt as required for each unique situation.

The epitome of a graceful leader is knowing where to be, when to be there, and how to be there. It's like having a playbook in football, where you know exactly where you're supposed to be on the field.

IN THIS SUMMARY, YOU WILL LEARN:

- To understand how to be graceful to yourself.
- To live your life with more alignment, integration, and flow.
- New tools for leading.
- How to create a graceful culture in your home and work environment.

What Grace Is

Grace is beauty and strength combined. It has a warrior energy to it. Grace does not equal doormat. Rather, a graceful leader has a power that is accountable. Graceful leadership offers a two-way street of connection: the graceful leader is felt and seen by the people, community, and organization they are leading, and those who experience the graceful leader are similarly left feeling seen and heard.

The Dance of a Graceful Leader

In the ballet of graceful leadership, the graceful leader pulls self back and others forward to do what is needed. When people talk about conscious leadership and servant leadership, they frequently talk about how the leader leads from behind. A leader who is always at the front, pulling their team along behind them, is not graceful. However, the humble, self-deprecating leader who is always at the back, out of the limelight, is not graceful either. A graceful leader recognizes that their role is fluid. Sometimes, yes, a leader needs to lead from behind. Other times, they need to be up front.

The graceful leader can pull to the back in one moment and then march forward to the front in the next, intuiting what the situation dictates. They swing back and forth as needed, never staying in either position for one nanosecond longer than needed. In a crisis, they move up front, taking the hits and clearing the way, and then as soon as the storm breaks, they hand command off to their lieutenants and fall back, letting their team take over.

The Tenets of Graceful Leadership

There are six tenets of graceful leadership: integrating, evolving, transparency, connecting, co-creating, and being compassionately powerful. These tenets are your guide to stepping into your grace, and working on any one of them will bring you closer to the graceful leader within you.

Grace in Action

Michael is an excellent example of what the tenets look like in practice. Michael ran the whole operations division for a Fortune 500 transportation company. It was a high-stress, high-responsibility role. He was frustrated by this inner knowing that who he said he was and how people were experiencing him weren't aligned. He felt a burning need to integrate his Christianity into his work life. He worried, though, about how he could do that without alienating his team, which was diverse, with a wide spread of religious beliefs.

Michael was on his way to being a graceful leader. How could he begin showing up as all of himself at work, while not crossing into inappropriate behavior? To reach a solution, he had to define what it meant to him to be Christian in terms of behaviors. He decided that for him it meant showing up with compassion, listening, and being more still so people could express themselves.

Then, Hurricane Harvey hit Houston hard, and Michael's new skills were put to the test in a major way. Many of the people who worked for Michael lost their homes and belongings. Since showing up with compassion was an integral part of being a Christian for Michael, he showed up with compassion in a big way. His response to the storm also epitomized the connecting and co-creating tenets of graceful leadership. He thought in terms of "we" instead of "I," and he acted according to his inner guidance system, demonstrating great empathy for his team. Together, he and his team raised money and got resources to the people who needed it. Regarding the co-creating tenet, he searched for and found innovative solutions to the hurricane's impact.

Though it put him out of his comfort zone, he reached across departments in his organization to form subcommittees to support the company's employees in the wake of the hurricane. With his example, the culture of the organization began to shift.

Fast-forward a year, and Michael's staff nominated him for a prestigious impact-in-leadership award. While he was the one receiving the award, it was just a formality so that he could bring it home and share it with the whole team. In this moment, all that he had set an intention to become as a leader was a part of him, and he felt it in every fiber of his being.

Why Gratitude is the Entry Point to Grace

Cultivating gratitude will help you shift your focus and see and appreciate all that is working in the many facets of your life. Gratitude reminds us that our challenges are usually not as big as we think they are.

A Gratitude Practice

A gratitude practice is simply about feeling and expressing gratitude for things in your life. Each person's gratitude practice tends to look a little bit different. The key is to find something that works for you.

Gratitude journals are designed to be used in the morning

and at night. In the morning, you start with a quote, pieces of gratitude, an intention for the day, and supporting behaviors for your intention. At night, you do a wrap-up, where you list a high-five to yourself, magical moments of your day, and the intention you want to take into sleep with you. Consistency matters here. Try to work on your gratitude practice at least once a day. Don't beat yourself up, though, if you miss days here and there—it happens to all of us.

Changed by Gratitude

When you start a gratitude practice, you start noticing more things to be grateful for. It's like the Baader–Meinhof effect, in which something that has recently come to your attention suddenly seems to appear with improbable frequency shortly afterward—maybe you just bought a red car, and you suddenly start seeing red cars everywhere. The things we spend our time thinking about are the things we tend to notice. It's a wonderful compounding loop: the more gratitude you express, the more you find to be grateful for.

Uniting Self And Soul

The distinction between self and soul can be tricky because both are part of you, and they are often intertwined. Another way to think about it is as the little self and the big Self—self, with a lowercase s, and Self, with a capital S. Your little self is your ego, the self you've constructed to get through life. It is created through your life experiences and your environment. Your ego is not "bad." It guides you in how to interact with yourself, others, and the world. It is your human interface. Your big Self is your soul, the Self that comes with you into this world. Your soul is your essence, the truest expression of who you are. The big Self is immutable. It is pure, innocent, and agenda-free.

Alignment

We all exhibit a spectrum of behaviors. Sometimes we're quiet; other times we're loud and boisterous. Pay attention to the full range of your behavior. Notice when you're extending yourself to others more and when you're becoming more hermitlike. Become aware of your different ways of being and doing in the world. You can have an alignment of self and soul in a wide variety of ways. Whether you're joyous or sad or angry or peaceful, you can still be in alignment. Martin Luther King Jr., for instance, understood that righteous anger was a powerful tool to be utilized in pursuing and aligning to purpose. Being in alignment does not mean you must always be calm and peaceful, though that is one way of being in alignment. Shifting into the awareness of alignment and misalignment is a gritty process. It asks of us great resolve and stillness as we do this inner mining. This process will bring into awareness limiting beliefs. Remember to be kind and graceful with yourself as you unwind some of your unconscious behaviors.

Use Grace To Distinguish Story From Fact

Rushing to judgment is a common sabotaging habit of all humans, not just leaders. Judgment is a self-protective instinct. We tend to move forward in situations as though our perception is truth. To break out of this never-ending finger-pointing game, we must learn to distinguish perception from truth, story from fact.

Curiosity

Curiosity and judgment cannot coexist. As soon as you stop and ask a question, you create space between your thought and the inquiry. In that space, you have a choice. You may end up choosing to judge. Until you make that choice, though, the judgment does not exist. You can't be judging while you're still choosing. If you slow everything down to ask, "Why would a good and decent person do that?" or "How did this come to happen?" or whatever the inquiry might be, it allows you to step outside of your story and consider other potential answers. That is curiosity doing its job.

Grace In The Face Of Conflict

Grace is a wonderful asset in navigating conflict. It prevents us from rushing to judgment and encourages us to consider situations from others' point of view. Grace leads to conversations instead of arguments.

Leaning into Conflict

Grace is power, and power holds its place. Accordingly, graceful leaders lean into conflict instead of avoiding it. With stillness, they are able to be inside the conflict. They are not positional or judgmental or poised for flight. They approach the conflict with heart, ears, and mind open. They recognize that people are not their behavior. While that makes them compassionate, it doesn't mean they tolerate bad behavior—the exact opposite. Graceful leaders have clear boundaries and believe in compassionate accountability. You can hold somebody responsible for their actions while holding compassion for them as a person.

How Grace Can Transform a Company's Culture

Graceful leadership is not just an internal adjustment. It is also concrete actions that change how you and those around you show up for work. A single graceful leader can set off a domino effect of grace within an organization.

The Power of Grace- Nadia

Like many leaders, Nadia struggled to shift from executing to influencing. She struggled to delegate. She was often out on the floor, looking in people's queues and completing tasks that were two layers below the level she wanted to be focusing on. When there were problems, she found it easier to fix it herself than to let her team figure it out.

Nadia grew brave enough to examine how she came across to others with different ages, backgrounds, and status in the organization. She realized that she sometimes exuded an intimidating intensity and often used body language that was unconsciously demeaning. Nadia started making changes. She began by extending grace to herself and then others.

She allowed a more holistic version of herself to show up at work. Her team had always liked her for her intelligence and effectiveness as a leader; now they loved her for the person she was, because she was finally allowing them the opportunity to know that person. As they witnessed her humor and vulnerability, they began to respond with the same.

Create Your Unique Path To Grateful Leadership

In *Find Your Why,* Simon Sinek says, "If we want to feel an undying passion for our work, if we want to feel we are contributing to something bigger than ourselves, we all need to know our WHY." You will know when you've found your why through your intuition. It will simply feel right. It will leverage more of your strengths than weaknesses, and it will inspire you. Additionally, when you start to share it with others, it will feel right to them as well. There will be a resonance, an echoing that comes back, reinforcing that your why is true to you.

We need graceful leaders because graceful leadership triggers a domino effect of impact. Changing yourself allows you to change your organization. Changing your organization changes your community. Changing your community changes the world.

Alexsys Thompson offers this body of work as a testament to her own leadership journey, as well as the journey of hundreds of other leaders. For Alexsys, the tipping point came when she established her gratitude practice and spent a decade refining it. Today, developing a gratitude practice is a key element of her work as a board-certified executive coach. Alexsys also serves as adjunct staff for The Center for Creative Leadership and is a member of the Forbes Coaching Council. She authored The Trybal Gratitude Journals, curated a collection of short stories called Gratitude 540, and is building a sanctuary in Vermont that will be a "safe space for souls to show up."

The Promises of Giants

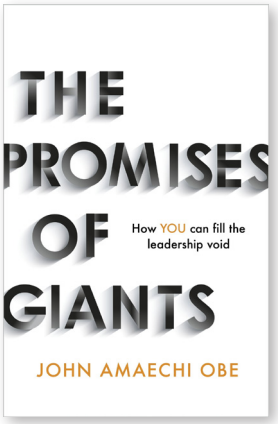
How You Can Fill the Leadership Void



by **John Amaechi OBE**

Contents

Promises to Yourself

Promises to the Organization
Page 5

THE SUMMARY IN BRIEF

Former collegiate and NBA basketball player John Amaechi has had a full and varied life. But everyday of it that he can remember has been lived as a giant. And that never goes away. The impact of being a giant factors into his every decision. It influences the way people see him and the way that he interacts with them.

The Promises of Giants: How YOU Can Fill the Leadership Void requires you to recognize that you, too, are a giant. And forgetting you're a giant–even for a moment–can have dire consequences. Giants can't do anything in the same way as everyone else. And when it comes to your interactions with others; neither can you.

The promises of giants guarantee a certain type of lived experience under the umbrella of that leader. It is a collection of promises made to the people you work with most intimately, to your workplace as a whole, and to yourself alone.

IN THIS SUMMARY, YOU WILL LEARN:

- How and why you are giant, regardless of your size.
- Promises leaders should make to themselves.
- Promises leaders should make to those they interact and work with directly.
- Promises leaders should make to their organizations on a whole.

PART ONE: Promises to Yourself

I Promise to View Myself Critically, But Not Cruelly

If you are not open to focused introspection and you do not practice it on a routine basis, you will not be a great leader–at least not by the standards of greatness that truly matter. To be authentic, emotionally literate, intellectually curious, adaptable, and connected and engaged with those around you, introspection cannot be ignored.

It is a whetstone that sharpens your inner voice, which must be trustworthy. For the rest of your professional life, that voice will be your primary source of feedback. Colleagues, direct reports, and managers will be sources as well.

But the farther you advance, the more difficult it will become to acquire useful external feedback. Your colleagues won't tell you everything. And they'll sometimes tell you things that aren't necessarily accurate, for better or worse.

So this first promise is imperative: to view yourself critically, objectively, and compassionately. This means an honest, ongoing pragmatic self-assessment of strengths and weaknesses. Without an accurate understanding of your flaws and fortes, the starting point of your journey forward will be unclear, immediately setting you off course.

I Promise to Commit Fully to Success

It may seem self-evident that you are committed to winning. After all, you are reading about achieving personal, interpersonal, and organizational success and that in itself takes time and commitment.

Success and "winning" within the context of the promises are defined just by the fulsome achievement of one's goals–hopefully goals of noble intent, but, if not that, at least goals designed not to harm others.

Winning is a big picture operation. It's about a commitment to a vivid, long-term personal and organizational goal with a clear and unequivocal understanding of what success looks like when it happens.

When it comes to winning, you need to be clear on these seven things:

- "Nice [pleasant, thoughtful, conscientious, ethical, fair, honest, etc.] guys" don't necessarily finish last.
- Success doesn't require cruelty.
- Success is relative.
- Success requires a clear, vivid, and explicit vision.
- Success requires compromise.
- Success isn't a zero-sum game–you don't have to seek to destroy others to achieve success yourself.
- Success hinges on the minutiae (people often think there are pivotal moments.)

I Promise to be Bold and Vulnerable

Many of us have had experiences that make us familiar with the surge of emotions associated with conquering fear. We've learned that, when we demonstrate the ability to be bold, paired with the willingness to be just a little vulnerable, good things usually follow.

We have all felt that relief of, "Ah, that wasn't so bad after all. Lesson learned." And yet it's a lesson that often must be relearned time and again with every new context.

Make no mistake, it is effortful to be bold. It is difficult to be vulnerable. And for these reasons, the promise to be both will be particularly challenging to keep. But you *must*.

Because being bold in the face of challenge, and allowing yourself to be vulnerable in the face of potential loss, opens up an entire spectrum of possibilities that would not otherwise be available.

But you do need both.

For many, the invitation to be bold will be more alluring than the invitation to be vulnerable. Intrinsically, boldness is conflated with courage and so has a more positive spin and is perhaps looked on with more favor than vulnerability, which is often associated with weakness or a lack of courage.

But the two are a powerful combination and each far less powerful on their own.

I Promise to Act with Vigilance Against My Biases

If we want to succeed in this world–to solve the big, new challenges and create the solutions that will be essential not only for our own success but for our collective survival–then we will need to live, work, and collaborate with people vastly different from ourselves.

As organizations and individuals we need effective ways to combat bias, and we will need to eschew those methods that continue to fail us and those individuals who refuse to develop the skills and capabilities to engage with people different from themselves.

Words and actions can be observed, measured, challenged, sanctioned, and rewarded. Words and actions are where actual damage is done.

The concept of privilege is often misunderstood and overly personalized. It is not about being rich or blessed with a life free from discomfort. It's about the distinct advantage secured only by being born into a certain identity.

They often come in the form of an absence of a particular impediment, which means we often don't realize we have these privileges when they're present because their impact only crystallizes when absent.

It is understandably a complex reality for some to embrace, fraught with potentially painful personal revelations and unnecessary guilt. But it is imperative that everyone does this work.

If you don't appreciate your privilege, you do actual damage just by your dismissal of its existence. Similarly, it is imperative that we appreciate the existence of our biases and do everything possible to prevent them from negatively influencing our actions and behaviors.

Corporate diversity and inclusion efforts would be better off focusing on behavior and rhetoric, as opposed to individual biased thought. In the workplace, we cannot control whether our colleagues harbor racist, sexist, or otherwise unsavory thoughts. We are not the thought police.

Our attention should be focused on what people say and what they do, on rhetoric and behavior. Words and actions can be observed, measured, challenged, sanctioned, and rewarded. Words and actions are where actual damage is done.

I Promise to Reject Excuses and Embrace Discomfort

Excuses are easy to find. And when they're not immediately evident, they're easy to create. Even if you love what you do, work can be tedious, rigorous, voluminous, and, in some moments, not particularly satisfying. Even though you might do almost anything to get out of it, it is work that is necessary, so it gets done without excuses.

Surely, you have your own list of situation-specific excuses, in addition to those that are more general and forever at your disposal. "I'm super busy" is the old standby but there are other excuses to accompany this one.

- "It's always been done this way."
- "I'm but a cog in the wheel."
- "It's the fault of bureaucracy."
- "I'm an extrovert, so it goes against my nature."
- "I'm an introvert, so it goes against my nature."

Any of those statements may be true. But none of them should be offered as an excuse to avoid that which is unpleasant or difficult. None of them represent immovable barriers. And none are the statements of leaders.

True leaders promise to reject excuses like these at every turn, even at the cost of their own comfort or personal gain. We are mostly all busy. So it's not a distinguishing characteristic. And thus, it's a rubbish excuse.

Time is a precious and finite resource. Consider how you can be more focused, energized, and effective with the time you have by "Paying the FEE."

FEE is an acronym for Focus, Effort, and Execution:

- **Focus**–a single-minded, unwavering concentration on the creation of, and then progress toward, a clear, discrete, and well-defined target or goal.
- **Effort**–the discipline to apply yourself to mundane, vexing, or obscure tasks and preparation with consistent eagerness and enthusiasm.
- **Execution**–undertaking everything you do with the goal of eliminating unnecessary variance so that everything you do is not just effortful but done to a tight tolerance based on your plan.

People can make themselves remarkably "busy" without ever actually being stretched beyond their comfort level–without ever even approaching their actual capacity for delivery of key outcomes.

This is the promise of giants. That we will do right by people–care for, protect, and develop them–every step of the

way, even when it's not in our own immediate interest and even when it is uncomfortable or difficult.

I Promise to Tend to My Mind and Body

This self-directed promise stands to benefit you more immediately than any promise in the book. But even the promise to tend to your mind and body is not just about you.

It's about ensuring the sustainability of your own internal resources because your attention, patience, energy, and more will be taxed in order for you to achieve your goals and be relied upon by others in your business and social circles.

In the context of leadership, there are seven factors of individual resilience that demand our attention and directly contribute to sustained high performance.

- A healthy mindset
- Active learning
- Balanced nutrition
- Physical activity
- Occasional pauses
- Consistent recuperation
- A good night's sleep

PART TWO: Promises to Individuals

I Promise to Reflect Your Potential

True giants do not require titles or labels or formal positions of authority over others. Given the proper support, they can assert power and make an impression from anywhere within the organization, simply by the way that they treat people. By the way they look at people, even.

If you're not vigilant, you can be an exaggerated funhouse mirror for everyone you come into contact with, reflecting back an unrecognizable and unwelcome reflection.

The way you interact with people is critical. It can damage their self-regard and negatively impact their performance in ways you may never have intended. Or it can instill heightened and previously unreached levels of confidence.

As a leader, a colleague and a giant, you must promise to reflect as accurately as possible the capabilities and promises of others; what others need to see in order to perform at the highest level–because that reflection has the power to tap into dormant reserves of unexplored potential.

When you don't see what you need to see reflected by those around you, it changes the way you interact with the world. As giants and leaders, we have a responsibility to make sure that this never happens on our watch.

This is not because it's important to be "nice." It is because, when we allow people to be seen as "less than" in any way, it limits their contributions. The mere feeling of being perceived as less valuable diminishes the value that a person can add to your organization.

I Promise to See You as an Individual and Not as a Job Description

Organizations bemoan the time and resources that must be spent recruiting "talent." But sometimes the talent is right under our noses, but not in the right roles. And this is because the "talent," or "human resources," is not viewed as human.

Workers have largely been commoditized, and, as such, they are separated and crammed into labeled boxes and confined lines of progression, from which escape is rare.

But organizations that will thrive in the future will flow with the recent humanization of the workforce through and post the COVID crisis and will embrace the need for talent to move and roles to evolve in a way they never have before.

The old, rigid, and sometimes unspoken boundaries on what people can contribute are antithetical to the ideals of innovation and disruptive thinking. They diminish performance, and they make people miserable. A lose-lose.

Winning in the long term and through inevitable bouts of volatility requires more than commoditized service and performance. That is why giants promise to see and treat people as unique, individual beings and as more than just their job descriptions.

I Promise to Deliver Timely and Effective Feedback

There are legitimate reasons to avoid difficult conversations, particularly around feedback. Such dialogues are challenging and energy expensive. We don't know what to say, or we fear that we'll get it wrong.

There's a chance our intentions will be misperceived and our subject will get upset and become emotional. And by talking about something, we may fear we'll make it worse and injure our relationship with the recipient. We imagine and fear a damaged future.

With a bit more focus and a few modifications, you can make clear to anyone you engage with that you've got them.

The good news is that delivering timely and effective feedback is just an ordinary skill. So, like any ordinary skill, it can be improved with practice and discipline. And as tricky conversations become more familiar, they will become less threatening. They will become easier, and you will become better at them.

Because what happens if you don't? The problems get worse, right? Your own situation gets worse. And you end up needing to have a difficult conversation anyway, only now it's more difficult because now everything is worse.

We promise to deliver timely and effective feedback because our people deserve it and need it in order to thrive. When we avoid constructive criticism out of fear that it might be cruel, we do them a tremendous disservice.

Preparing and delivering effective, timely feedback is not something you do once a year. It's something that you do constantly; it's ongoing. It's a never ending series of micro-appraisals.

It's arriving at work every day with open eyes and a commitment to notice significant, even if small, behaviors and actions, and to document and follow up on them within 24 hours. Embracing this concept of micro-appraisals will contribute to an environment where feedback is the norm.

I Promise to Be Present, and Not Only When I Need You

There is one last promise that should be made directly and personally to each of our colleagues. It is a promise to be truly and fully present while in their presence and a promise to be in their presence consistently, not just when we want or need something from them.

This is a promise to consistently, selflessly seek out and create quality time and meaningful interactions. A promise to forge true connections that contribute to a climate of collegiality because teammates that are familiar with each other and authentically collegial toward one another are proven to perform better.

Making good on this promise starts with an ongoing practice of functional mindfulness. Mindfulness is more than a quirky, spiritual trend; it is essentially about an intentional focus and attention to what you're doing while you're doing it.

Without mindfulness, it's too easy to be consumed and overwhelmed by the myriad thoughts and to-dos competing for attention in our brains. A promise of undivided attention, even for short bursts of time, is invaluable.

It sends a message that what is important to your colleague is important to you, even when you're busy. It doesn't take much, really. With a bit more focus and a few modifications, you can make clear to anyone you engage with that you've *got* them.

PART THREE: Promises to the Organization

I Promise to Bear Responsibility for the Driving Culture

There is a broad acknowledgment that organizational culture is in decline, and it must be restored to right the ship. But there is often an air of detachment between a leader's influence and the culture they are seeking to improve.

Intentional efforts in cultural reform have their place, but ultimately, culture is the accumulation of millions of choices made by each colleague. People make choices. And those choices make culture. Some people are more influential than others but everyone makes a difference.

Dismissing our immediate and actual connection to culture is an indulgence that passively encourages bad behavior. When we excuse ourselves from responsibility for the culture, its more insidious and negative elements become easier to accept or at least overlook. When we choose not to act in the face of small infractions, those infractions become more common and grow in significance.

Everyone is part of the problem, just as everyone can be part of the solution. No one gets to wash their hands of the commitment. We are all custodians of the culture, and as giants we must promise never to turn our backs on that responsibility.

It is the choices that each of us makes that shape the culture around us. When you see something, you must do something. What you choose to do will differ depending on your place in the organization. But everyone can do something. Everyone owns some responsibility for the culture.

I Promise to View the Organization Critically and Truthfully

The vast majority of organizations have a sizable gap between what they promise publicly and what they deliver in reality. There is a pathological disconnect between the stories that we tell about our workplaces and the actual experiences of people within them.

Some of the cleverer organizations avoid stating untruths by projecting aspirational mission statements: declarations of what is hoped for at some later date, rather than assessments from the present state.

Organizations may not project a perfectly objective reality of who they are but as a leader, YOU cannot buy into your organization's hype–especially if you care about improving it.

Leadership requires a clear and accurate assessment of the landscape. Just as you promised to view yourself critically and truthfully, you must also promise to view your organization critically and truthfully.

It's necessary to have a clear and specific vision for the rosy future that you see for your organization. But you will never get there without a pragmatic assessment of the "now" that is as transparent and vivid as the future you're aiming to achieve.

So this is a promise to be clear eyed about that now. It's a promise to be more precise with how we describe ourselves, to stop feigning ignorance of the way things really are.

I Promise to Promote Everyday Inclusion Based on Earned Disclosure

A culture of inclusion is so important. It is an ethical and public relations imperative. But, first and foremost, facilitating disclosure is a performance prerogative.

You must promise to promote everyday inclusion in your workplace based upon earned disclosure. This is not only the "nice" way to treat people, it's the ONLY way to treat them if you expect to extract all of what they have to offer.

Let's get clear about what is meant by "everyday inclusion" and "earned disclosure." Inclusion must be the standard because inclusion is a choice that we make, a state that is created and maintained by our actions.

Diversity, in contrast, is our collective destiny. In modern society, diversity is inevitable and on the rise. But inclusion is optional–rooted in everyday choices that are made anew daily.

Everyday inclusion is achieved when people feel confident that they are consistently being seen, heard, and valued as whole and unique individuals. And psychological safety is essential in an environment of everyday inclusion.

Psychologically safe teams provide security and liberate their members to trust in one another; to disclose and offer insights fully in pursuit of solutions, without fear of repercussion or humiliation.

This matter of disclosure is one of the most misunderstood aspects of inclusion. Voluntary, "earned disclosure" is always as much a statement about the person receiving the information as it is about the person offering it.

Earned disclosure is a profound statement about the recipient that says: "I have watched how you behave and listened to how you talk, and you have earned my trust enough that I believe that I can give you this piece of me and you will treat it with the same dignity and care as I do myself."

That trust–the ability to be vulnerable–is so powerful for organizational bonding.

I Promise to Create an Environment That People Never Want to Leave

This final promise is to create an environment that people never want to leave–because they've found a place where they are seen and heard and valued. A place where they'll receive constructive feedback but won't be abandoned should they fail, where they are never alone and never expected to be a specific, superficial "fit" in order to belong.

Put together inclusion, trust, psychological safety, and attentiveness and sprinkle in a healthy dose of joyfulness, and the result will be a potent mix that, when consumed, can be highly addictive. People will respond because they will recognize how precious and rare it is. And they will never want to leave.

Most of us want to see congruence consistently. And when we don't, we put up walls. You can tell people they're valued and they're the bedrock of your organization, but if your actions consistently fail to support that sentiment, they will notice.

If you even occasionally treat people as an afterthought, they will be disinclined to connect on your terms when you need them to. They'll be less willing to give extra. They will do just enough.

Making good on our promises requires disciplined and unconditional consistency. People need to be confident that their colleagues are all on a level playing field, held to clear and equal standards.

Giants can make a profound impact through seemingly inconsequential actions. By keeping these promises, you can positively shape the way that people view themselves. You can make people feel connected. You can unleash their talent.

The world is filled with unique, bizarre, and wonderful people with diverse gifts and reservoirs of untapped potential.

- Promise to be an ally to them and an advocate for them.
- Promise to be a true colleague and an authentic leader and to bring out the best in them.
- Promise a healthy but competitive passion for winning.

And keep those promises, unconditionally and persistently. That is the duty and honor of being a giant.

John Amaechi OBE is a respected organisational psychologist, New York Times best-selling author, sought after public speaker, executive coach and Founder of APS Intelligence Ltd. He is a non-executive director of a FTSE 250 food company and £2.4bn healthcare organisation in addition to being a board advisor for several FTSE100 organisations in the financial, legal and professional services, technology, publishing, engineering and retail sectors. John has been recognised as one of HR's most influential thinkers by HR Magazine. John is the first Britain to have a career in the NBA.

THE SUMMARY IN BRIEF

Teams that have high degrees of psychological safety also have the greatest levels of performance and innovative power. They're teams that people want to be a part of because they make people feel safe and included. Psychological safety is the "belief that one will not be punished for speaking up with ideas, questions, concerns, or mistakes." ***The Psychological Safety Playbook*** is your guide to creating psychological safety within your team and taking them to the highest levels of performance.

Karolin Helbig and Minette Norman will guide you through twenty-five specific actions that you can take to create psychological safety in your workplace. These 25 skills are organized into 5 "plays," each containing a set of skills to learn and practice. These actions can be taken by any leader, whether you're a high-level executive or a small team leader. Each action constitutes a self-contained chapter within the book, so you can start anywhere and apply them in any order.

When applied, the skills outlined in this book will help you create a high-performing work environment built on a foundation of respect. Psychological safety creates unprecedented team performance.

IN THIS SUMMARY, YOU WILL LEARN:

- Practical, real-life skills you can use in your workplace.
- How to intentionally create psychological safety within your workplace teams.
- How to be a leader in any position within your organization.
- Skills to leverage the strengths of your colleagues to reach their highest potential.

Introduction

Psychological safety is defined as "a belief that one will not be punished or humiliated for speaking up with ideas, questions, concerns, or mistakes." This idea was first developed by Amy c. Edmondson, Novartis Professor of Leadership and Management at Harvard Business School. Teams with high levels of psychological safety are the most inclusive and perform at the highest levels in the workplace. As a leader, you should think of psychological safety as the essential nutrient to build a healthy team.

Communicate Courageously

Courageous communication is a fundamental skill for developing psychological safety. It requires getting out of your comfort zone and trying new things, which means you might not feel comfortable practicing these skills immediately. This journey requires embracing discomfort. In other words, if you want to foster psychological safety, you need to get comfortable with being uncomfortable.

Communicating with courage is about being honest, allowing others to contribute to the conversation, and letting go of perfection. While many of us have been trained to think that we should have all the answers, it's time to let go of these beliefs. Showing up authentically in front of our colleagues requires vulnerability.

Welcome Other Viewpoints

By asking this simple question, you open yourself up to see things from a viewpoint other than your own. This allows your personal views to be challenged and acknowledges that you don't know everything. Welcoming other viewpoints avoids conformity bias, or feeling pressured to agree with everyone else.

Leaders should be aware that team members tend to agree with their leader's viewpoints to avoid creating dissent within the workplace. It's important to encourage open discussion, including different perspectives from your own. This fosters an environment where everyone feels their views are valid.

Solicit Diverse Perspectives

In any group, there are naturally some people who are more dominant than others. This is often due to personality differences, but people from underrepresented groups often feel they have less right to speak up and share than people in more dominant groups. Your job as a leader is to make sure that everyone's voice is equal, with no one viewpoint holding more weight than another.

Open Up

Leaders are often trained that being professional requires a lack of emotion. The irony of this is that it fails to show humanity. All humans have emotions, it's part of what makes us human. Recognizing our emotions allows us to harness and control them. When emotions are suppressed, we lose control of our reactions and our behavior. When you share your emotions with others, you create a sense of trust with your colleagues.

Take Off the Mask of Perfection

Leaders are frequently portrayed as driven, results-oriented individuals who know how to solve every problem and how to get results in every situation. But this couldn't be further from the truth. Truly successful leaders never stop learning and seek out opportunities to learn. Admitting that you don't have all the answers may put you in a vulnerable position, but it creates an environment that promotes teamwork and the pursuit of new information.

Nurture a Sense of Humor at Work

One of the most admired qualities of an effective leader is a sense of humor. The ability to laugh together with your co-workers creates bonds and brings a lightness to an environment that is often stressful and heavy-feeling. Research shows that laughter boosts team performance, well-being, and measurably impacts your bottom line. When you lead your team with a sense of humor, you create motivation and make it possible for everyone to contribute their very best.

Master The Art Of Listening

Listening well is an art form, and one of the most underdeveloped leadership skills. Most of the time, we are so focused on presenting our opinion that we don't take the time to listen. When we are "listening," we listen intending to formulate a response instead of listening with the intent to understand. Artful listening requires a change in our perspective. It requires being genuinely interested in others' opinions, even when we disagree with what they have to say.

Listen to Understand

Mastering this skill is difficult for many of us. It means allowing yourself to listen to what others have to say and focusing on understanding their perspective. It also means

not spending that time formulating a rebuttal, interrupting with comments, or waiting to jump into a conversation. Listening to understand involves an attitude shift. It means acknowledging perspectives that are different from your own and being aware of your blind spots.

Be Fully Present

Quite often we think we are listening to someone, but we aren't. We're allowing someone else to talk, making eye contact, and hearing what the person says, but our mind is somewhere else. We're mentally managing our to-do list in our heads instead of being present in the conversation. Mind-wandering is normal, but we can train ourselves to refocus our attention by practicing mindful listening. By making a conscious choice to refocus on the person talking, you become present in the conversation.

Clarify Your Understanding

Paraphrasing what someone else has said allows you to ensure you have heard them correctly and that you understand the meaning of what they said. By repeating back a summary of what you heard in the form of, "So, what I'm hearing is…" or "Just to make sure I'm understanding you correctly…" you let the other person know that you are interested in what they have to say. They will feel heard and be more willing to share with you in the future.

Listen for Emotions

Whether we like it or not, everything we do evokes an emotional response of some sort. While we've been taught that business should be emotion-free, as human beings, we inherently make decisions based on emotion. Research has shown that emotion is necessary for making decisions. Identifying and acknowledging the emotions behind what people are saying can help you address issues and resolve conflicts at the source.

Commit to Curiosity

Curiosity fuels learning and connection. If you want to bring people to their full potential, as them to tell you more and elaborate on their perspective. Avoid jumping in with your ideas and allow others time to think and speak. When you are genuinely interested in hearing more you will elicit more complete thoughts from your team members and create a deeper connection. "Tell me more" is all you need to say.

Manage Your Reactions

Reacting emotionally or defensively can take away from psychological safety in the workplace. If you respond harshly to someone, they may feel embarrassed or humiliated, making them feel that it is no longer safe to open up at work. To create a psychologically safe space you must be self-aware and learn to manage your reactions. This doesn't mean you shouldn't acknowledge your emotions, only that you must learn to choose a response that is productive and non-reactive.

Model Non-defensive Reactions

Criticism automatically causes us to become defensive. It's our natural reaction, but we can become self-aware enough to stop it before we say something we shouldn't. Pausing and reflecting before we respond will help prevent us from lashing out and hurting others.

Respond Productively

Self-awareness is a fundamental leadership skill that will allow you to control your responses. One of the best ways to do this is to label what we are feeling in real-time. Research shows that by giving our emotions a name, we can take control and decrease our emotional response. It's important to acknowledge your feelings, but don't judge yourself for them.

Watch Out for Your Blind Spots

Our brain is masterful at creating stories, whether they are true or not. This characteristic creates blind spots and biases that we may be unaware of. However, we can become more aware of these blind spots and be more suspicious about the conclusions we draw from limited information. Don't let your brain go on "auto-pilot" and make assumptions about what others are thinking or feeling. Once you recognize your blind spots, you will be more open to the perspectives and experiences of others.

Appreciate Being Challenged

Being challenged often feels like we're being attacked. Our brain can't distinguish the difference between us being chased down by a predator and a team member questioning our strategy. When our brain goes into fight-or-flight mode, we become defensive and reactive. But we don't need to be. Stepping back from our automatic reactions will allow us to provide a more productive response. Even when you fundamentally disagree with someone else's perspective, you can still take the time to appreciate their response and their courage for sharing their opinion.

Build On Others' Ideas

Using a simple change of phrasing when responding to new

ideas can shift the entire conversation. Instead of hearing a team member's idea and saying "No, but…" try saying "Yes, and…" Our brains tend to focus on the negative aspects of what someone is saying. To cultivate an attitude of sharing and openness, we need to shift to focusing on the positive. Resist the urge to instantly shut down new ideas and make room for innovation and creativity.

Embrace Risk And Failure

How you deal with risk and failure will have a giant impact on the psychological safety of your team. Do you encourage risk-taking? Do you encourage learning and trying new things? Or do you point out people's failures and shortcomings? Changing patterns of behavior is challenging, but learning and taking risks are a necessary part of success.

Normalize Failure

Accept the fact that there is no success without failure. If you want to succeed, you must embrace failure as part of the process. Thinking success is a straight line from start to finish is unrealistic. Developing a culture where you share and learn from failures will encourage learning and improvement. High-performance teams don't "fail," they learn from the things that don't work and improve upon them.

Reframe Failures as Learning Opportunities

While most companies promote continuous learning, the real learning comes from failure and making mistakes. Given this, it's a leader's responsibility to remove the fear of failure. Promote the idea of examining failures to find the lesson. This will also prevent people from hiding their mistakes and encourage them to try new things.

Get Comfortable with Discomfort

Our brains are naturally designed to stick to what we know. Unfortunately, this doesn't make us more productive. If we want to be more successful or productive, we must step outside our comfort zones. To create psychological safety in the workplace, we can't run away from things because they are hard. We must learn to deal with difficult emotions and let go of pre-existing judgments. This gives us the freedom to provide psychological safety for others.

Model Learner Behavior

It's important for leaders to be humble and shows others that we make mistakes. Modeling the behavior of owning your mistakes and learning from them will encourage others to do the same.

Celebrate Continuous Learning

Examining mistakes as a team, figuring out what went wrong, and discussing the lessons to be learned create a non-judgemental environment. It openly shifts failures to be a positive experience for everyone.

Design Inclusive Rituals

Everyone has an innate need to feel like they belong. Ensuring that everyone is accepted as an individual within your organization, is offered the same opportunities, and feels free to participate is key to creating psychological safety.

Upgrade Meetings

Most workplace meetings involve a few people speaking up regularly while others sit back and listen. Appointing an "Inclusion Booster" during your meetings facilitates discussion among all team members and allows everyone to speak. In the name of inclusion, this role should be rotated regularly.

Respect All Voices

Establish a no-interruption rule in all meetings so that people speaking feel respected and heard. This will allow you to create a safe, inclusive work culture.

Take Turns

Allowing everyone a chance to speak allows everyone to be heard. Along with a "no-interruption" rule in meetings, establish a "no one speaks twice until everyone speaks once" rule. You can also try using an online collaboration tool where everyone can put their ideas.

Gather Feedback and Express Gratitude

Check-in with your team regularly regarding their psychological safety. This will give you real-time information on how everyone is feeling and allow you to know where improvement is needed. Expressing gratitude to your team members for both successes and failures will let them know they are valued and that you see them.

Conclusion

Creating psychological safety in the workplace is a continuous process. It takes time and continuous learning. Implementing the strategies outlined in this book will help you build a safe and inclusive workplace where everyone feels valued.

THE SUMMARY IN BRIEF

The same ideas shared in modern leadership books are found in the writings of philosophers, famous religious figures, and prophets throughout history. Tied to key models in research-based psychology, the principles presented in this book are timeless, but will give you a fresh perspective on setting goals, executing them, leading and reading people, and managing your stress. Witty, conversational, and personal, ***The Psychology of Leadership*** blends research, humor, and self-improvement advice to deliver simple yet powerful guidance on mastering the mental game of leadership.

Leaders will develop what feels like mind-reading abilities for interpreting workplace personalities, hidden motivations, and group dynamics. They will learn how to inspire their organization to move mountains, improve their ability to listen, communicate, and when necessary, persuade. Along the way they will dramatically improve their own mindset and resilience.

IN THIS EXECUTIVE BOOK SUMMARY:

- Discover the connection between research on happiness and goal setting.
- Define accomplishment and success in a nontraditional way.
- Leverage control theory to execute goals, personally and at the organizational level.
- Apply the Big Five Personality Traits model to reading and leading people.

PART I: Setting Long-Term Goals

You've heard that employee engagement, culture, and meaning are important. But practical advice on how to do that has been lacking. How do you integrate these concepts into goals and practices that drive success? And what does the latest research on happiness reveal? Part 1 answers these questions.

Principle 1: Beware of the Side Effects of Measurable Goals

Clear, metrics-oriented goals can be powerful. They motivate people, create a sense of accountability, and make performance evaluations more transparent. Also, research shows that sharing goals—and the metrics used to measure progress against them—improves collaboration. It's easier to collaborate when you know what others are trying to achieve.

However, like medicine, goals can have side effects. Measurability is a powerful active ingredient. It makes a goal more effective and more susceptible to side effects.

Research in psychology has revealed three important side effects: goal-induced blindness, reduced intrinsic motivation, and failure to differentiate between luck and skill. If we are not careful, if we adhere too much to the measurability of goals, then we will encounter these problems.

Principle 2: Redefine Success

As a leader, you can use positive psychology, aka the science of happiness, to set better long-term goals for you and your organization. To do so, you must ask the right questions and change how you think about goals and, ultimately, success.

When we set goals for ourselves or an organization, we define "success." Most people think that success brings happiness. Of course, it's not that simple. Groundbreaking research in positive psychology proves that success rarely brings happiness. Counterintuitively, it's the other way around: Happiness leads to success.

People thrive when they:

- engage in tasks that are challenging yet match their capabilities,
- maintain positive relationships with people around them, and
- find meaning and accomplishment in their work.

Principle 3: Set Goals That Maximize Engagement

When people are engaged fully, they can enter the state of flow, in which time flies and everything just clicks. There are applications for leadership, too. You must set the conditions for people in your organization to spend as much time in flow as possible, whether working individually or in teams.

The principle for maximizing engagement is to maximize return on time spent (ROTS). Doing a ROTS audit is easy. Just step back and contemplate how much time you spend daily on useless emails and meetings. Low ROTS activities aren't particularly enjoyable and are less likely to lead to a flow state than high ROTS activities.

Yet low ROTS activities are irresistible for two reasons. First, they have low activation cost—they require little energy to get started. It's so easy to pull your phone from your pocket and scroll. Second, they tend to provide a short-term reward.

High ROTS activities, in contrast, often have high activation cost. But once started, they lead to higher engagement and more time spent in a state of flow. High ROTS activities are more likely to align with your long-term goals and values. And they're more likely to recruit your full and differentiated capabilities. In the long run, they contribute to your energy reservoir rather than drain it.

Principle 4: Prioritize Relationships

Relationships are so important to the psychology of leadership. We're wired to crave social connections. Also, there's a link between the importance of relationships and flow. Social interactions put your brain in the sweet spot for engagement. On the other side, the lack of positive relationships can be debilitating.

Some of the most important goals you can set for yourself and your organization should focus on relationships. These goals aren't perfectly measurable, and that's okay. Relationships are the most important and biggest challenge to mastering the psychology of leadership.

For an organization, happiness is challenging to define. Every CEO must address the tensions between maximizing profitability for shareholders, treating employees right, and keeping clients happy. These are all important relationships.

Principle 5: When You Talk About Meaning, Mean It!

Corporate leaders believe it's important to provide broader meaning to goals to motivate employees. There is merit to this idea, but let's reframe it as follows: You and your organization must pursue goals that have meaning. There's

Most people and organizations are starved for meaning, especially considering how much time we devote to work every day.

a difference between adding meaning to goals and pursuing goals that have meaning. This plays a powerful role in the psychology of leadership.

Meaning is the great motivator in life. Your sense of purpose gets you up in the morning and keeps you going when you face obstacles. Given its importance, meaning isn't discussed nearly enough when organizations set goals.

Most people and organizations are starved for meaning, especially considering how much time we devote to work every day. Research in positive psychology shows that it's a key component of well-being. When you talk about meaning, be sincere! Take meaning seriously. Roll up your sleeves, convene your leadership team, and start the discussion. Don't merely attach meaning to goals; pursue goals that have meaning.

Principle 6: Don't Focus on Winning

When we set goals, we define accomplishment. It feels good to achieve your goals, to succeed, to win. And it should be the same for your organization.

All these concepts are connected: goals, accomplishment, and happiness. But if you want to lead your organization in an inspiring, sustainable, and positive way, you can't just focus on winning for the sake of winning. You must get off the goals-accomplishment treadmill and rethink your entire goal-setting process. You must redefine success not in terms of winning for its own sake, but as a function of mastery goals.

Mastery in business leadership is all about process. It means making how you do things better. It means improving your technology, operations, culture, supply chain management, recruiting capabilities, strategic planning, ability to engage in mergers and acquisitions, and so much more. If you lead your organization with a mastery mindset, and everyone gets excited about doing things better, faster, and cheaper, then over time, you'll deliver extraordinary results.

Principle 7: Choose Your Role Models Carefully

Research on role models shows that your sense of ethics and aspirations are influenced by who you admire—perhaps more than you realize. Having good role models will make you a better person, which will make you a better leader... and, ultimately, a better role model to others. It's the circle of leadership life.

But remember that no one is perfect.

You can learn important leadership lessons from those who have accomplished extraordinary things. However, these lessons come with warning labels. Take a balanced view of the role of money as a source of motivation.

For example, Steve Jobs, Elon Musk, and Jeff Bezos seem to have mastered the psychology of leadership, don't they? The truth is this: What worked for them may be innate, idiosyncratic, and come with unattractive traits that the rest of us can't overcome. Most incredibly successful people are bad at relationships. Jobs treated some of his colleagues poorly. At Twitter, aka X, Musk took a brutal and impulsive approach to employee layoffs. Jeff Bezos has been known to harshly insult the people who work for him.

It's not necessary to be a jerk in the name of accomplishment. And money is great, but it's not everything.

Principle 8: Unleash the Power of Social Comparison

Social comparison is often a motivator for the uber-wealthy. There's always somebody to compete against. To unleash the power of social comparison, however, you need to manage the good and the bad of social comparison.

As a leader, you can use healthy internal competition to boost productivity. Popular tools for this include sales or productivity leaderboards and the classic employee of the month award.

Like its benefits, the drawbacks of social comparison are intuitive. In organizations, social comparison can hurt collaboration. Use it carefully. Internal competition must not come at the expense of trust, mutual respect, and a shared understanding of the team's mission.

Principle 9: Identify and Manage Your Core Beliefs

One of the best things you can do to improve as a leader

is to know yourself better. To do so, it helps to understand your roots and define your (and your organization's) core beliefs. These are the mental reflexes that drive a lot of your decisions. You can trace most of your personal core beliefs to your upbringing, just like corporations' core beliefs are often established by their founder.

How can you apply core beliefs to your leadership role and your responsibility to set goals and cultural norms for your team? Here's a three-step process:

1. Observe: Pay attention to the rules of thumb or common sayings being used at critical moments.
2. Discuss: Explain what core beliefs are. Reflect on the company's DNA, its founders, and critical moments in its evolution.
3. Formalize: Decide which core beliefs should be abandoned or modified, and which ones should be emphasized.

Part II: Executing Your Goals

Even if you clear your mental fog by setting long-term goals, your life and career can and will go astray. Execution is hard. Really hard. And guess what? Stuff happens. This second part covers execution. It begins with a discussion on managing stress for optimal performance. You can't go after big goals if you can't manage your stress. Then, it explains how control theory—a powerful set of mathematical models and principles typically used in engineering—addresses many of the execution challenges you will face on the journey towards your big goals.

Principle 10: Optimize Stress for Peak Performance

Stress can be both good and bad, and it's impossible to minimize it to zero. Instead, it must be optimized. This may seem counterintuitive, but you need stress to perform at your best. It's the same for your team in terms of organizational stress.

The Yerkes-Dodson (YD) curve maps performance to stress levels. It looks like an inverted U. Initially, as stress increases, performance increases because you become more motivated and alert. At some point, you maximize your performance. After that threshold, performance deteriorates. You choke under the pressure. Hence, the YD law seeks a Goldilocks level of stress.

Stress isn't a bad thing. You just need to operate in the intermediate range—the top of the U curve—that's optimal for performance.

Principle 11: Work Backwards from Your Goals

No matter your goal, you'll need to course-correct along the way. Reality won't match the plan you wrote down on paper. What's the best way to handle the inevitable deviations? In an unusual case of intellectual cross-fertilization, psychology borrowed control theory from science and engineering. It doesn't require complex scenarios or computer-based optimization models. Leaders can use the model as a way of thinking—a rule of thumb.

Control theory is a framework to handle dynamic feedback loops. The three most important rules are the following:

1. Start from the endpoint. Work backward from your big goal to develop plans, milestones, and performance indicators.
2. Optimize the path. Set targets to be difficult yet achievable. Manage expectations and build a plan that will allow you or your organization to make progress at a rate that maximizes engagement.
3. Don't anchor decisions on past information. When results deviate from your plan, adjust execution based on forward-looking analysis rather than what has happened so far.

When things get tough, people look to you as a leader to remind the organization of a brighter long-term outlook. And they want you to tell them how the organization will get there. You may have to revise the plan. That's okay. It's much better to re-baseline than to hold on to a plan that has become unrealistic.

Principle 12: Learn Strategic Patience

Another takeaway from control theory is that if you have a long window to decide, you should keep your options open. It may seem obvious, but it's constantly violated in business. It speaks to the psychology of decision-making under uncertainty. Most organizations suffer from a false sense of urgency and a bias towards action. Of course, leadership often requires quick decisions. However, sometimes the best decision is to wait and see what happens. This is "strategic patience."

If you're patient, problems have a way of working themselves out over time. Take some time, as appropriate, to assess each situation that requires you to make a high-stake decision. Ask yourself, do I need to make this decision now?

One of the most critical leadership qualities is being comfortable making people uncomfortable.

Principle 13: Focus on What Matters

In addition to planning backward and exercising strategic patience, control theory teaches us to separate signal from noise. When dealing with the noisy outcomes against your plan, you must answer several questions:

- How often should you measure progress?
- How should you calibrate your response?
- When should you take corrective action, and when should you let
- things play out?

The easiest way to separate signal from noise is to take a long-term perspective. Frequent measurements of performance against goals and adjustments are useful, but only if you're also able to put them in the context of the long-term trend before you make major decisions.

Part III: Unleashing the Power of Personality Psychology

As a leader, you can't execute your goals if you don't bring people along. You're asking people to charge up the hill with you. Will they follow?

Every leader needs to be a bit of a psychologist and understand how people are wired. The most ubiquitous model to understand how people think and behave is called the Big Five Personality Traits. Part III provides a unique view of this model by applying it to the psychology of leadership.

Principle 14: Call on the Introverts

The most well known of the Big-Five personality traits is extroversion. Extrovert leaders often undervalue introverts. There are important leadership rules to learn from this trait.

The most important rule of thumb related to extraversion that will help you as a leader is to call on introverts. Read their non-verbal cues to know when they have something to say. Extroverts tend to dominate the conversation but they start talking past each other and can't narrow down the options to find a good solution. To move forward, call on someone who's remained quiet throughout the debate. It's usually—but not always—one of the members who prefers to sit back, watch, and think. One of the introverts.

To do so, you may have to stop the extroverts from talking, including yourself. In business, listening is a superpower. In four words, here's a critical lesson in leadership: talk less, listen more.

Principle 15: Be Disagreeable, Sometimes

Do you know someone who's hard to work with? Someone who enjoys conflict? A self-centered jerk? This person would score low in agreeableness, the second trait of the Big Five. This principle goes against the conventional wisdom that agreeableness is always a positive trait.

Those who score high in agreeableness are averse to conflict. They're more likely to be empathetic, flexible, and altruistic. But someone can make a significant contribution by disagreeing with the consensus. And merely agreeing with everybody is not productive, especially in a leadership position.

One of the most critical leadership qualities is being comfortable making people uncomfortable. In doing so, you're not always agreeable. But you're pushing people to grow, especially if you're giving them feedback in a respectful way that lets them know they're valued.

Principle 16: Harness the Positive Side of Neuroticism

A little neuroticism can be a good thing. If you score high on this scale, you can succeed as much, if not more, as your thick- skinned colleagues who score low.

First, there may be a positive relationship between neuroticism and creativity. Research has shown that anxious people tend to have a highly active imagination—which is why they tend to perceive threats before others or even when there are none.

Second, neuroticism leads to vigilance and can be a source of motivation. Being a little bit of a worrier makes you attentive, focused, even driven. People who are low in neurot-

icism can be satisfied with suboptimal circumstances.

Principle 17: Balance Openness and Structure

Openness to experience is the fourth of the Big Five traits. It is a longing, desire, or pull for novelty or newness. Wanting to try different things, experiment, see something you've never seen, or do something you've never done.

On the other side of the scale, someone with low openness follows routines. There's a pattern to their day. They're comfortable mastering something they've done a thousand times.

Openness is a good quality in a leader. You must drive change within your organization and adapt to trends in your industry. However, you need balance. You must focus on a key set of priorities if you want your organization to remain competitive. A few things done very well are better than many things done half-assed. You may subscribe to the build fast and fail fast school of thought, as long as you're prepared to shut down underperforming initiatives.

Principle 18: Unleash the Power of Good Habits

The last but not least of the Big Five includes self-discipline, attention to detail, and dutifulness. Think of people who are organized, punctual, and thorough. A-students, if you will. This Principle teaches you to maximize the positive side of consciousness while avoiding the pitfalls associated with extreme levels.

Conscientiousness is a tendency towards order, systematization, logic, reason, neatness, and structure. Of the five traits, conscientiousness is the most preferred in the workplace. People who score low in this trait tend to miss deadlines, show up late and unprepared at meetings, and hand over poor-quality work.

Conscientiousness comes from a collection of good habits: showing up on time, creating routines and checklists for quality control, rewarding excellence, keeping track of business win streaks, and more. At the same time, you must watch for perfectionism and workaholism and continue to foster flexibility and creativity.

To start with the end in mind is the key to all the lessons in leadership and psychology covered in this book. There are many definitions of "the end," from completing a project to the inescapable end of your life. When you start from an endpoint, whatever the endpoint is, you get clarity on your goals and how to execute them. You become a better leader.

THE REAL WARREN BUFFETT

THE SUMMARY IN BRIEF

When one thinks of the brightest minds of investment over the last 50 years, Warren Buffett's name invariably tops the list. And well it should—as his leadership of Berkshire Hathaway has shown, his strategies, guidance, and direction have brought little but success to all involved—from account managers to the "owner-partners" (customers) who entrust their investment dollars to Berkshire. Indeed, Buffett's prevailing philosophy—that investors should act and think like owners—informs everything he does as a manager, and forms the overarching premise for telling his story in The Real Warren Buffett. *When Buffett makes a capital management decision, he makes a move only after considering what he would do if it were his own money. When he makes a people management decision, he does so in the context of how the move will affect owner-partners. Buffett truly acts like an owner in all he does as a leader—a philosophy any good manager or executive would do well to consider for themselves.*

What You'll Learn In This Summary

✓ **How to define and avoid the "Institutional Imperative."** It is important to keep a proper alignment between corporate goals and customer goals; the more typical misalignment of the two forms an "institutional imperative" that leaders must avoid at all cost.

✓ **How to forge a path to better customer relationships.** Through the Berkshire *Owner's Manual*, Buffett communicates his expectations for the managers and employees who work for him — to act like an owner.

✓ **The Buffett Model of Leadership.** Only by taking a pragmatic leadership approach can executives think like owners and react to various problems and circumstances in kind.

✓ **How to determine and act within your Circle of Competence.** Warren Buffett recognizes the limits to his knowledge and capabilities, and he declines to stray past those limits. He recognizes that some things are unknowable or unimportant, and that others are important but unknowable. Buffett makes his capital allocation decisions within the realm of the important and knowable—his circle of competence.

Berkshire Hathaway and The Institutional Imperative

In the early 1960s (after spending nearly 20 years as a successful stock picker), Warren Buffett developed a vision of his future role — as the manager of an enterprise — that was unique when he had it, and remains unique today. The vision was this: In the management of the enterprise, he would act as its owner.

To accomplish this vision, Buffett recognized that he would have to redefine the role of a manager as one who would choose, from the mass of opportunities that lay within his core competence, the application of capital that would both earn its highest return and incorporate the least risk — just as shareholders would if the money was in their hands. If he could not achieve a return in excess of what they could earn on it elsewhere, he would return it to them. He called this role the *allocator of capital*. Those who work for him must fall in with this philosophy.

At Berkshire Hathaway, Buffett is both owner and manager, which means that his interests as one are perfectly aligned with his interests as the other. He treats even the smallest of Berkshire's shareholders as an equal partner in the enterprise, so that he manages the company on their behalf as much as his. This runs counter to the typical misalignment of corporation and customer and was, initially, a problem for Buffett the manager — until he discovered a negative force he termed the "institutional imperative" (see box).

A Human Nature Problem

Buffett's discovery in the early 1960s was as momentous for his future management of Berkshire Hathaway as that of Jack Welch's seminal revelation at GE, which was to make the company the number one or number two player in every industry in which it was active. "Institutional dynamics," said Buffett, "not venality or stupidity, set businesses on these courses, which are too often misguided."

In order for Buffett (and Berkshire Hathaway) to gain and maintain a competitive advantage and continue to outperform both the Dow Jones Index and his competitors, he realized he would have to change his approach. It would be a different one from GE's, however; the institutional imperative has no respect for size or market position.

To attain sustainable advantage, Buffett had to acknowledge the institutional imperative in himself. Specifically, he had to open his eyes to the concept of *value creation on an ongoing basis,* and see that the imperative was an

(continued on page 3)

Defining the Institutional Imperative

Buffett described the workings of the institutional imperative as follows:

1. As if governed by Newton's First Law of Motion, an institution will resist any change in its current direction.
2. Just as work expands to fill available time, corporate projects or acquisitions will materialize to soak up additional funds.
3. Any business craving of the leader, however foolish, will be quickly supported by detailed rate of return and strategic studies prepared by his troops
4. The behavior of peer companies, whether they are expanding, acquiring, setting executive compensation, etc., will be mindlessly imitated.

He adds, "In business school I was given no hint of the imperative's existence, and I did not intuitively understand it when I entered the business world. I thought then that decent, intelligent and experienced managers would automatically make rational business decisions. But I learned over time that it isn't so. Instead, rationality frequently wilts when the institutional imperative comes into play."

Berkshire Hathaway And The Institutional Imperative

(continued from page 2)

obstacle to this — in all aspects of the management of, acquisition of, and investiture in companies.

Buffett recognized the imperative and specified its mechanism as a problem of human nature. He also put himself in a position where he could bridge the void between the manager of an enterprise and its owner, and act like the capital allocator that all owners want their managers to be. ■

Warren Buffett, Investor: The Early Years

While others (including Buffett's mentor, Benjamin Graham) paid deference to the role played by the future earning power of a business in its stock market valuation, Buffett originally appraised companies far more in relation to the valuation of the assets on their balance sheets than their ability to create value on an ongoing basis.

Cigar Butt Investing

Buffett's early career was premised on a technique he called "cigar butt investing" — identifying companies that were statistically cheap compared to the value in their tangible assets, whose prices would rise once other investors caught on to this discrepancy.

"A cigar butt found on the street that has only one puff left in it may not offer much of a smoke," he explained, "but the bargain purchase will make that puff all profit."

The problem with this type of investing is that whether the managers of the underlying companies that Buffett rented acted like allocators of capital was irrelevant to the highly lucrative game in which he was engaged. He bought oversold stocks cheap, then simply waited for others to recognize this fact and push prices to fair value, oblivious to any dynamics that may have been unfolding within the stocks.

By relying on Buffett's ability to analyze a "snapshot" of a valuation, rather than manage an enterprise, cigar butt investing did not prepare Warren Buffett for the job of anticipating the imperative and/or managing it. It did predispose him to escalating his commitment by choosing to own and operate companies rather than simply renting their stocks — a mistake he would eventually learn to avoid.

The Rise and Fall of the Partnership

In 1956, at just 26 years old, Buffett set up three pools of funds later amalgamated into the Buffett Partnership. Between 1956 and 1969, the value of the Partnership's assets had grown at a compound rate of 29.5 percent, compared to the Dow Jones index's 7.4 percent. However, in the late 1960s, growth stocks were discovered, sending stock prices to the moon, trailing the fortunes of investment managers behind them.

By 1967, Buffett knew he would be unable to outperform the index every year, so he reduced his target of beating the Dow from ten percentage points to five percentage points. Even after that, he became increasing uncomfortable with the market's volatility; his partners, on the other hand, voiced dismay at his reduced, more conservative projections—while other investors made out like crazy, they felt they were sidelined, making profits, but not at the extreme levels that some others did.

Resolute in his decision to pursue a more logical strategy in a period of illogical growth, Buffett decided, in a stunning move, to fold the Partnership. It was too much to contemplate — to be chided for not running with the herd, using methods that were foreign to him, lacking in any logic he could trust.

Enter Charlie Munger

Warren Buffett's predilection toward introspection could help him spot and resolve some issues (dissolving the Partnership, for instance), but not all of them. He lacked a framework for his introspection — a system of analysis that would link one to the other and make sense of the totality of his behavior.

Enter Charlie Munger, a lawyer friend from the West Coast who preached that value could be found in a company's enduring earnings potential, which included management's ability to create value. Eight years Buffett's senior and possessing a legendarily abrasive personality, Munger encouraged Buffett to recognize that companies create value by dint of things like their ingenuity, service, brand, marketing managerial competence, and so forth. Above all, Munger encouraged Buffett to look for value in each company's capacity to act like owners, then to invest in these good businesses.

By necessity, Munger's approach meant analyzing the factors shaping the future economics of a company — the orientation of management with respect to the company's shareholders, their quality and corporate culture, and the competitive characteristics of their industry.

Psychological Principles

Munger carries in his head scores of psychological principles that he feels are important for understanding how humans tick. He understands that human decision making incorporates biases, rules of thumb and emotions, which do not always produce sound results. People think and act out of survival and self-interest, which has little to do with the efficient allocation of

(continued on page 4)

Warren Buffett the Investor: The Early Years

(continued from page 3)

capital. They are afraid of being inconsistent with a prior commitment, of failing and admitting failure, of missing out on the chance of ultimate success. The result: the institutional imperative.

Munger's insights on psychology and the institutional imperative infused Warren Buffett's vision of capital allocation. Buffett had already had the facts:

- As a manager, you cannot tell people what to do and expect them to do it. They must be motivated personally.
- Commitments to businesses manifest their own dynamics, divorced from their original conception, aggregated around self-interest.
- The psychological needs of managers' managers can threaten to change the way companies are managed on their behalf.
- The companies in which Buffet would henceforth invest also faced the same problems he himself had experienced, most importantly in dealing with the expectation of shareholders whose motivation was subject to imperatives of their own.

Thanks to Munger, however, these facts now spoke to Buffett with one voice. At last, he had them in usable form. ■

The *Owner's Manual*

"Act like an owner" is Warren Buffett's credo and his directive to employees throughout Berkshire Hathaway. It's embedded in what he says and does, and is enshrined in the rules of conduct he prescribes for his managers to follow.

This directive is distilled in what he calls the company's *Owner's Manual*, a document that has been reprinted in every annual report since 1983. In it, Buffett articulates the principles that guide his stewardship of other people's money:

- **"Although our form is corporate, our attitude is partnership."** Buffett and Munger think of their shareholders as owner-partners, themselves as managing partners, and the company as a conduit through which shareholders own its assets.
- **"We do not measure the economic significance of Berkshire by its size; we measure by per-share progress."** Compensation for Berkshire executives will never be related to the company's balance sheet.
- **"A managerial 'wish list' will not be filled at shareholder expense."** Berkshire's people treat their owner-partners' money as they would their own.
- **"Noble intentions should be checked periodically against results."** Retention of earnings should deliver shareholders at least $1 of market value for every $1 retained.
- **"We will be candid in our reporting to you. We owe you no less."** Berkshire will tell owner-partners the business facts they would want to know if the positions were reversed, and the company was the customer.

The *Owner's Manual* is no mere public relations mission statement — it is the substance of the way Warren Buffett behaves, the way he has striven to behave in the past, and the way he will behave in the future. ■

Buffett's People Leadership

The current gold standard of corporate management is Jack Welch, who retired in 2001 after 17 iconoclastically successful years at the helm of General Electric, one of America's most admired companies.

In his role as chief executive, Welch was a process man at heart whose managerial excellence could be described by his remarkable ability to get the teams he assembled under him to pull together and perform. His overriding objective was to be the number one or number two player in every industry it engaged in, and, in order to do that, Welch had to remain the process/details man he was as an operational manager. It is said that he got involved in everything he could, from the quality of the company's X-ray machines to the introduction of gem-quality diamonds.

That Welch successfully executed his strategy is to be commended. Many who share his objective have failed. Reinventing an organization at every turn, in anticipation of every turn, and striving to deliver consistent and above-average returns is a risky strategy — one Warren Buffett rejects.

Rather than get his hands dirty in every detail, Buffett has been careful to design rules ensuring that the behavior of his managers self-organizes around the interests of Berkshire Hathaway's owners. Company rules require the following:

- Remuneration packages are compatible with the principle of taking inner responsibility for behavior.
- Self-interest is oriented toward return on capital and not growth.
- The optimum amount of capital is retained within the enterprise, with the excess sent to Buffett.
- If Berkshire's managers find themselves struggling, they do not throw capital at the problem.

Rather than telling people how to behave, Buffett influ-

(continued on page 5)

Buffett's People Leadership

(continued from page 4)

ences the way in which they behave by allowing their minds' own self-governing "wiring" to do his management for him. To the casual observer, it may look as though Buffett interferes very little in the day-to-day management of his companies, but in reality, he is a constant, if ethereal, presence, mediating in the interaction between agents and their environment, rather than controlling it. ■

The Circle of Competence

Warren Buffett and Charlie Munger do not believe the economy lends itself to forecasting in the sense in which forecasting has come to be practiced. Just like the stock market, the economy is a "complex adaptive system" that is poised in a critical state—one change can trigger an avalanche of side effects or generate an outsized result. No one can accurately predict the way things will go 100 percent of the time.

Buffett understands and admits his own inability to do this and has used his understanding to define the boundaries of Berkshire Hathaway's deployment of capital. The model he uses — called the Circle of Competence — does not go for completeness; it recognizes some things are unknowable or unimportant, and that others are important but unknowable. Buffett makes his capital allocation decisions within the realm of the important and knowable — the "strike zone" where he is happy to swing his bat at the pitches thrown his way. In this zone, he can make objective assessments of the opportunities presenting themselves with almost total certainty.

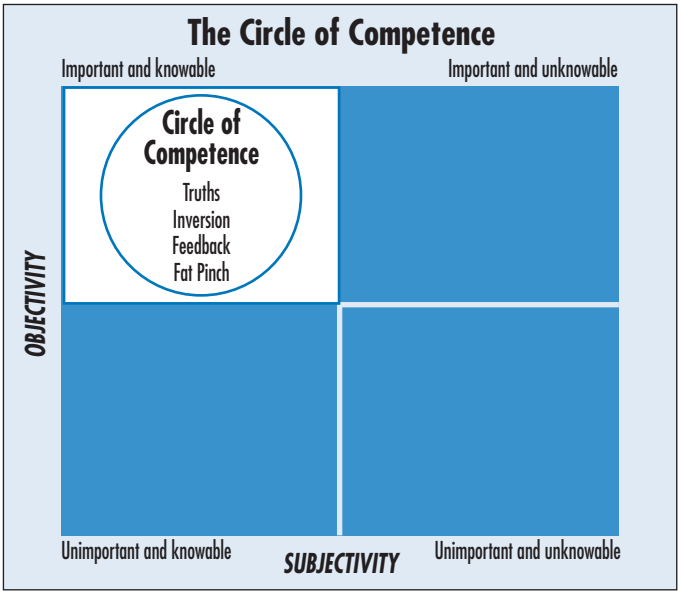
Buffett draws his Circle of Competence according to three essential instructions:

1. He establishes what he knows by identifying truths, the dynamics that sit behind them, and their relationships to each other.

While Buffett readily acknowledges that all businesses are subject to change over time, he has established that, in the realm of the business analyst, there exists incontrovertible truths that do apply and can be expected to hold in the long term, even in complex systems:

● He found these truths in the laws of business economics. Among these is the fact that there are always capital requirements needed to maintain the status quo, as well as those needed to grow business.

● He found them in the human proposition. There is a hardwiring that governs the behavior of managers and determines the effectiveness of his and their leadership, a hardwiring that also governs the interaction between the firm and its customers, as well as managements and their shareholders.



● He found them in the fundamental premise of value creation. Value creation depends on a manger's ability to generate incremental earnings on capital equal to, or above, those generally available to investors.

● He found them in the equation for value. Buffett combines business economics and the human proposition into a calculus that enables him to judge price.

● He found them in the essential characteristic of complex adaptive systems — they will deliver opportunities to him. Regardless of the unpredictability of change, these opportunities will enable Berkshire to do well within the circle they've staked out.

2. He ensures that he knows by a process of inversion whereby he seeks to disprove his prior conclusions.

There is a school of thought that humans accept all information they encounter as initially correct, and subsequently recode the information that is found to be false. Buffett ascribes to this view — he believes that transforming an area of knowledge into a Circle of Competence (and keeping it that way) can only be achieved if he constantly stress-tests what he believes to be true, and changing prior conclusions when necessary.

3. He checks that he knows by seeking out feedback from the consequences of his decisions.

Agonizing over errors is a mistake; acknowledging and analyzing them, however, can be useful. Buffett conducts post-decisional analysis, not on the decisions he gets right, but on the ones he gets wrong. Indeed, the only way he can validate the decision rules originating within the Circle of Competence is to seek out and take feedback from them.

By confining his capital management to the important and knowable, Buffett places himself in control. He has identified the immutable economic and behavioral laws

(continued on page 6)

The Circle of Competence
(continued from page 5)

that apply in this sphere. He is intimately familiar with the rules by which humans make decisions under conditions of uncertainty. He has defined his Circle of Competence with rigor and honesty. He has a fix on where its boundaries lie. He can identify the origin of his errors and therefore amend his decision after an event. His decision-making is enlightened. ■

Leadership in Action: The Buffett Model

Berkshire Hathaway is, in many ways, a product of the irregular market environment in which it operates, not an imposition of Warren Buffett's will upon it. Crucially, as Buffett picks his way through this environment, he carries his shareholders with him. He thinks like an owner. He acts like an owner. So do they.

CEOs can benefit from Buffett's model for managing capital, since his pragmatic style can help them think like owners and react to various problems and circumstances in kind. "When proper temperament joins with proper intellectual framework," Buffett notes, "then you get rational behavior."

The Proper Intellectual Framework

In order to emulate Warren Buffett, the first thing CEOs must do is adopt the right mindset. Although they might have come through the ranks as an operational manager, if they are predisposed to manage as an executive, the institutional imperative will color any "rational" debate about the conduct of the firm.

Battling the institutional imperative includes refusing to pursue pre-ordained strategies; indeed, Buffett's leadership at Berkshire Hathaway follows his maxim "In order to act like an owner, first you must think like an owner."

Buffett explicitly embeds this philosophy into the deliberation process he follows when managing capital. The intellectual framework to which he adheres in this respect centers on whether to pay the capital out to the shareholders or keep it within the company. If the decision is made to pay it out, what is the best method (via repurchases or dividend)? On the other, if you retain the capital, how do you use it to create value with the least risk?

In managing the enterprise, Buffett defers to mental models and essential elements contained in his Circle of Competence — truths, the equation for value, the patience to wait for value, and an intimate knowledge of how his cognitive apparatus functions. The lesson for any who would seek to emulate Buffett's capital management is to do the same.

Pre-Deliberation Bias in the Institutional Imperative

One aspect of the institutional imperative not previously mentioned is the common finding in studies of group decision making that — "as if governed by Newton's First Law of Motion," Buffett reminds us— the process of deliberation serves only to polarize the opinions of the group further in the direction of their pre-deliberation bias.

In one such study, individuals were first asked to reach a judgment on a number of legal cases. Subsequently, they aggregated the same individuals into juries so that they might further deliberate the cases and discovered that, after deliberation, the dollar verdict of the jury was typically higher, often far higher, than the median judgment of the same jury as individual members. Study leaders believe the manifestation of this shift stemmed from the existence of a systematic rhetorical advantage held by members of the group. In this case, it was the rhetorical advantage enjoyed by those members of society who argue for higher dollar rewards.

The Proper Temperament

Buffett's overriding objective in his communications with his shareholders is to facilitate market efficiency in the pricing of Berkshire Hathaway's stock price — that is, to ensure, as far as he is able, that it bears a close relationship to its intrinsic value. While he recognizes that management cannot determine market prices, Buffett knows that it can, by its disclosures and policies, encourage rational behavior by market participants. Therefore, Buffett reports fully and fairly on Berkshire Hathaway's operating results and outlook. By doing so, he provides the company's shareholders with the information required for them to make a judgment on whether he has achieved high earnings rate on equity capital employed ("the primary test of managerial economic performance," in his words), and, more importantly, whether he is likely to do so again in the future. Buffett does not seek to dress up Berkshire's results for public consumption, nor does he tolerate any managers' decisions to be affected by accounting considerations.

The end result of Buffett's commitment to open, transparent communication and his honesty in delivering it (though he rarely delivers it personally) is an unusual consistency in the relationship between Berkshire and its customers.

"Over the long term," Buffett says, "there has been a more consistent relationship between Berkshire's market value and business value than has existed for any other

(continued on page 7)

Leadership in Action—The Buffett Model

(continued from page 6)

publicly traded equity with which I am familiar."

This efficient pricing stems from several key elements in Buffett's (and Berkshire's) methods of doing business:

● **They reward the right behavior.** Warren Buffett and Charlie Munger receive their rewards from the growth in Berkshire's intrinsic value, which is closely mirrored by the performance of its stock. Buffett recognizes that alignment of the interests of managers and shareholders is a must; if the remuneration package for management is wrong, the behavior it induces is also likely to be wrong.

● **They set achievable targets.** Buffett's long-term rate of return for Berkshire has been 15 percent per annum. He set this target in light of the fact that the long-term average return on equity in the United States is around 12 percent. This is the stable frequency — the truth. It doesn't need to be "fixed" in the name of market control, like below-average returns do, nor does it face the remorseless scrutiny that typically greets above-average returns. With Berkshire's fundamentals and his Circle of Competence, Buffett considers 15 percent to be a realistically achievable return.

● **They embrace volatility**. Volatility can bring opportunity, and Buffett operates using the best of what an irregular world has to offer. He operates in a state of preparedness, husbanding capital and raising it in an opportunistic fashion when necessary, financing in anticipation of a need, rather than in reaction to it.

● **They work to obtain shareholder-partners.** Buffett realizes that getting quality shareholders is no easy task. It takes convincing them that what they are buying is what they will get — any increase in intrinsic value from their point of entry will be mirrored in the market value of the stock, which encourages a long-term perspective. Buffett says he tries "through our policies, performance, and communications, to attract new shareholders who understand our operations, share our time horizons, and measure us as we measure ourselves."

● **They maximize the trust between themselves and their shareholder-partners.** Naturally, Buffett's Circle of Competence and his track record have engendered a great deal of trust between him and Berkshire's shareholders. This trust can only be established and grown over the long term — some things, quite frankly, take time. Buffett also recognizes that trust can be destroyed in an instant. "Once management shows itself insensitive to the interests of owners," he says, "shareholders will suffer a long time from the price/value ratio afforded their stock." ■

Marconi's Rhetorical Advantage Proves Disadvantageous

All CEOs need to establish where the rhetorical advantage lies within the companies they manage. At the UK telecommunications company Marconi, the rhetorical advantage lay in becoming a leading player in the telecom industry, and the company clung doggedly to a growth strategy that eventually brought the company to its knees.

"We didn't give up on the beaches of Dunkirk, and we are not going to give up now," said one non-executive director at Marconi, going down with his sinking ship.

Marconi's chief failure was following a predestined strategy, without considering the impact of that strategy and its rigidity on their business in a volatile market, and without considering its impact on those who invested in the company. "Managers frequently have trouble putting themselves in the shoes of their shareholder-owners," observes Warren Buffett.

The Circle of Illusory Competence

Buffett owns and operates franchises because of mean reversion. He associates with the right personality types because human nature is resistant to change. He swings only at fat pitches because the market is generally efficient. He buys only good businesses, and he structures his acquisitions in a particular fashion because successful mergers are difficult to bring about. By imposing these operating restrictions on himself, Buffett is admitting to the probability of failure should he behave any differently.

But it is Buffett's outside view — his detached and global perspective on the task at hand — that defines him both as a capital manager and a leader. His Circle of Competence delivers this, enabling him to let go and trust in the natural laws governing outcomes. He can also adopt an inside view and consider a problem individually, rather than in its global context.

How Buffett Focuses on the Rational

Buffett has identified two problems in the management of capital.

The first lies in the nature of the environment in which he must make his forecasts; the second in the brain that he uses to make them.

Complex systems may be inherently unpredictable, but they are also eminently comprehensible. In order to step forward into the otherwise unknown, humans feel compelled to be in the driver's seat, even though the human

(continued on page 8)

The Circle of Illusory Competence

(continued from page 7)

brain can only process a limited amount of information at once. Buffett admits his abilities in this regard are "boundedly rational." His early career taught him to set aside emotional reactions and involvement and focus purely on the truths at hand. Emotions compensate for the fact that a person lacks a comprehensively rational mechanism for sorting the relevant from the irrelevant and weighing the relevant aspects accordingly. Warren Buffett's focus has evolved to encompass the rational and relevant, and little else.

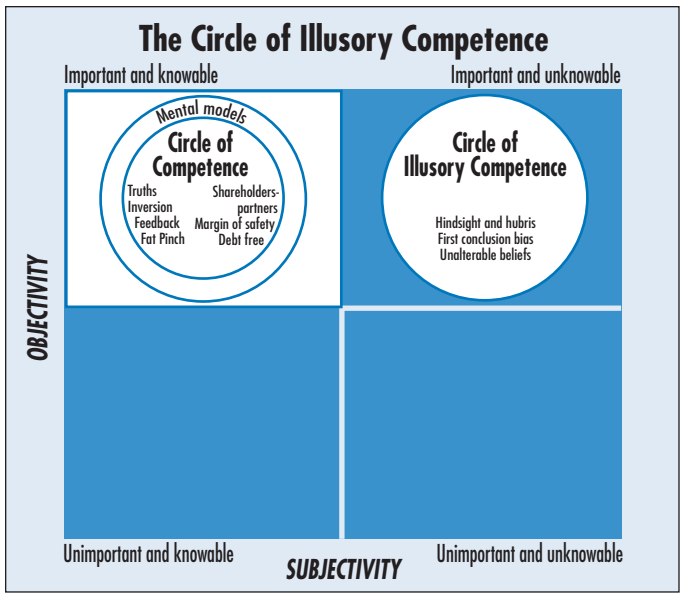
Buffett recognizes that cognitive biases and emotions seldom exist in isolation; indeed, they tend to act in concert. When they do, they can lead people to a Circle of Illusory Competence in which they come to "know" the unknowable. The consequences for the quality of decisions made in capital management can be easily guessed.

Hindsight Bias

Humans not only tend to view what has happened in the past as inevitable, but also as having been relatively inevitable before it happened. Our memories do not form perfect replicas of events they're supposed to recall. Instead, we reconstruct our memories by filling in missing details with plausible material.

We also have an innate talent for spotting patterns, which helps us extract the narratives from his history that enable us to explain what was previously unknowable. This is what makes hindsight bias so powerful and such a strong contributor to overconfidence or hubris.

The next step is to overestimate our ability to predict the future, since the notion of a surprise-free past is suggestive of a surprise-free future, enabling us to convince ourselves that we know the unknowable.



The "Except-For Insurance Company"

It is crucial for executives to admit mistakes or miscues — or else will they ever learn or improve performance? Warren Buffett recounts a story he was told by one of the ex-chairmen of insurance giant General Re:

"Every year his managers told him that 'except for the Florida hurricane' or 'except for Midwestern tornadoes,' they would have had a terrific year. Finally, he called the group together and suggested that they form a new operation — the Except-For Insurance Company — in which they would henceforth place all of the businesses that they wouldn't want to count. In any business, insurance or otherwise, 'except for' should be excised from the lexicon. If you are going to play the game, you must count the runs scored against you in all nine innings.

"Any manager who consistently says 'except for' and then reports on the lessons he learned from his mistakes may be missing the only important lesson — namely, that the real mistake is not the *act*, but the *actor*."

Weak Tests of the Past

It is in our nature to convince ourselves that we know what we purport to know. This is an automatic tendency often called "first conclusion bias."

One of the ways we achieve this is by subjecting the hypotheses in our narratives of the past to weak tests; we tend not to cast around for reasons we might be wrong. When we receive positive feedback, we attribute our successes to skill and infuse them with foresight. When disappointed, we write off failure.

If CEOs operate within a Circle of Illusory Competence, they will convince themselves that they know the unknowable, to which Warren Buffett responds, "If we can't find things within our circle of competence, we won't expand the circle. We'll wait."

Within his Circle of Competence, Buffett makes sure he knows what he purports to know. In his early days as a manager, Buffett went through several failures before he began to take a serious look at the information revealed in postmortems of his deals. When he found a portion of his strategy that did not work, he changed his strategy. He was not trapped by a need for an illusion of competence or control—he rationally looked at the truths of each matter and honestly appraised his performance.

The only way to break the cycle of self-deception and the formation of unalterable beliefs is to stop living in denial of incompetence. The person who wants to define a Circle of Competence in the Buffett mode has to admit his mistakes — in the Buffett mode. ■

THE SUMMARY IN BRIEF

There is a serial killer of companies on the loose—the status quo—and it is coming for every slow-moving and change-resistant organization on the planet. Change can be summarized in sixteen words: Change is hard yet essential. Everything tends to work out if you get good at it. To survive and thrive in our fast-paced world, business leaders must embrace reinvention of their companies before it's necessary.

Humans resist change, even when they know it's essential to survival. ***The Reinventionist Mindset: Learning to love change, and the human how of doing it brilliantly*** encourages business leaders and entrepreneurs to recognize that the greatest risk to their organizations lies not in the future but in the present and explains how to stay relevant—or return to relevance—quickly and humanly.

Author Joe Jackman, the CEO of Jackman Reinvents, the world's first and foremost reinvention company, uses clear prose and case studies of reinventions (Duane Reade, Old Navy, JCPenney, and many more) to bring his ideas to life and convince his readers that resistance to change is futile.

IN THIS SUMMARY, YOU WILL LEARN:

- The five principles of the Reinventionist Mindset.
- Why the greatest risk of failure is in the present, not future.
- The importance of moving fast to reinvent your business.
- The rules of the "game" of reinventing your business.

Introduction

What was once an occasional need for substantial change over the course of a business or lifetime—with plenty of time in between the "big change moments"—is now occurring more frequently. Commercially, brand and business life cycles are shorter. Old-model businesses are failing faster and new models are scaling faster. "Change management" is a discipline in the corporate world.

The Serial Killer of Great Companies

Even though we know the pace of change is quickening and we and our companies must keep up, we don't wholeheartedly embrace change. Fundamentally, we just don't like change, and we avoid it in favor of the status quo. If only we could position change in our minds as good and not bad, embracing it as a force for gain well worth some degree of pain, we would be better off.

Of the companies listed on the Fortune 500 in 1955, only sixty remain today. Once-great companies are being replaced by new things; they're not evolving into those new things. This is completely unnecessary. Continually creating a better version of themselves should not have been a remote possibility for these companies, but a mandate.

There Are Rules to This Game and It's Wise to Know Them

Life gets easier and more rewarding once you understand the rules:

- Change is hard. Irrelevance is harder.
- Change is not risk, it is opportunity.
- Change before you have to, always.
- Change comes with roadblocks. Speed is your ally in crashing through them.
- Change does take a village.
- The surest way to stay true to who you are—company or brand or even individual—is to reinvent.

This last point is the heart of the thesis of this book. The surest way for any organization to become its truest and best "self" is to get really good at reinventing itself (not throwing everything out and starting again). Reinventing should not be a big change in a short time, but a fluid state of continually evolving and improving toward an outcome.

The Five Principles

The right way to go about making big change requires acknowledging and accepting that transformation is fundamentally a human endeavor with a business consequence, not a business endeavor with a human consequence. Getting it right with people will get it right for business.

1. Seek Insight Everywhere

Being a reinventionist requires you to develop your natural abilities to identify insights. Insight can be defined as a fundamental human truth one can uncover and action to create value. Without insights you are guessing, and smart people don't guess. The first principle is Seek Insight Everywhere, and there are multiple places to look.

Start with your customer. What do they really care about, emotionally?

Look within your company. It's essentially to know what makes your company what it is.

Look within your category. What are people excited about within your category?

Look outside your category. Get inspired by what others are doing well beyond your realm.

Look at what's happening in the world. What are the trends, and the early indicators of future trends, that show you where the world is going?

Look within. What excites or even scares you?

If your business is running out of gas and more than a tweak or two will be required for it to grow, you may wonder, How do I get out of this? You have four choices:

Double down. Do what you're been doing, only harder.

Strategize. Initiate an endless loop of analysis, meetings, consultants' reports, and planning that ultimately yield nothing.

Ostrich. Ignore all warning signs and take no action.

Reinvent. Build a foundation of "facts and feelings," develop deep insights from it, and use it to reset your strategy. Then, in a thoughtful and human way, get everyone on board and fully activate it internally and externally to ignite momentum and rapidly return to relevance and growth.

2. Embrace Uncertainty

What stands in the way of progress is uncertainty, which we humans don't like. We prefer reliability and predict-

ability. If the world around us has decided to go in a different direction than we have, or is moving faster than we are, it's game over. The only two choices are to run from uncertainty or learn to embrace it.

There is only one true certainty—that things will change. Your greatest risk isn't ahead of you, in the unknown; it's all around you, in the present.

Necessary change is often halted because leaders want to minimize their own risk of failure. Would you rather be faulted for trying new things, or for presiding over the past until it failed you and everyone else involved?

We humans have a tendency to stop change. We nitpick and pull threads until the fabric comes apart. We sow seeds of doubt until people and plans wither. We tear down rather than build up. Or, we set the bar for success so high there is no chance it can be achieved. A common version of this is the expectation trap, where we continue to forecast that performance will at least hold as it has. When it doesn't play out that way, the gap between what was promised and what can be delivered crushes confidence.

Uncertainty causes doubt. It fuels fear. It slows progress and stops reinvention. Do not let it.

3. Create the Future Now

The future is what happens when you move through a simple sequence: from who and what you were, to what you dreamt you could be, to what you become. It keeps unfolding when you continue. To see and treat pretty much every move forward as a significant departure from the norm and therefore a BIG decision, weighted with risk and gravitas, is to resist the future—to view it as not only scary but optional.

We don't need to "future-proof" our business—to prevent bad and unknown things from happening to it. Rather, we need to actively engage in writing our own futures. The only thing we should fear is getting stuck in any particular chapter, bringing the book to a precipitous end.

Here's how to Create the Future Now:

Pay attention—to your customers and to your associates.

Never wait. You'll never have to bet the farm if you keep planting and harvesting future seeds.

Distinguish between doing things to win and doing things to learn. Stop making everything about performance improvement and financial metrics. Continually exploring creative new ways to engage and satisfy customers is where the game changers of the future live.

Have fun. When is the time to make change? The best overall diagnostic is to understand where your business is within its life cycle:

Growth phase. This time calls for continual honing and refinement.

Maturity. This is "position A" for beginning reinvention.

Peak. This is "position B," the fallback start time if you haven't already begun to reinvent.

Decline. You've left things far too long, so it's time for "hurry up" offense and reinvention on steroids.

There are telltale signs, beyond general performance erosion, that reinvention is necessary or overdue:

Growth from the core business has disappeared or is slowing. Successful businesses are those that are growing within their footprint as well as expanding it.

The business or brand isn't being talked about anymore.

The business adheres faithfully to the rules of the category.

The category itself is without growth, or in decline.

The most valuable customers are older.

4. Obsess the Outcome

Movement from one place to a better one is almost always filled with trials and tribulations. Therefore, picturing it—the land of milk and honey, with its comforts and rewards—is essential to conjuring the will to overcome the barriers standing in the way of achieving it.

Picturing and then obsessively focusing on achieving an intended outcome is one of the keys to reinvention.

Reinvention isn't just a strategic and financial exercise, it's a human one. In any community of people, 20% will be movers, 20% will be stoppers, and 60% will be the momentous middle, who will make up their minds based on what they see, hear, and come to believe. For your strategy to succeed, the movers and the middle need to grasp the need for the journey (why), where it leads (where), some sense of the path to get there (how), and the ultimate reward (what).

5. Make Momentum Together

Without a reason to move and evolve—either a compelling

growth opportunity to pursue or a threat that catalyzes change—the natural state is inertia—business as usual. We need momentum on our side.

The more changes you put in motion and the faster you go in implementing them, the more momentum you are able to generate.

Here's how to Make Momentum Together:

Consult widely (and be seen to consult widely). Ask your people what they think and share with them what you think.

Make no plans alone. It must be our strategy, not my strategy.

One team and one way forward. Success is what happens after a strategy is complete and launched.

Go as fast as you possibly can. Action begets action and speed generates both excitement and followers.

Overcommunicate. Just about the worst thing you can do is be absent or leave people guessing.

Companies that are in most need of reinvention are those in the worst position to engineer one. The more desperate the circumstances, the bolder the actions required to change the trajectory. De-risking bold moves, while continuing to be bold, becomes central.

Strategies fail for three reasons:

1. They are flawed strategies.
2. They are sound strategies, yet factors beyond control cause them to fail.
3. They are sound strategies and conditions are right, yet they fail due to lack of buy-in, cohesive follow-through, or both.

The last is the most common. Humans tend to support that which they help create and resist that which is forced upon them. In business as in war, strategies do not win battles, people do. You don't have a strategy until everyone buys into and is acting on it.

Make Change

Reinvention is supported by four pillars:

1. Mix: the complete set of skills and experience required for business reinvention, under one roof or at least assembled as one cohesive team.
2. Method: the collection of steps the team will need to move through together.
3. Mindset: the five principles of how to think and behave to increase the odds of success, as described previously.
4. Model: some kind of financial model, at minimum a way in which everyone involved in your reinvention will feel they have some ownership of and stake in the outcome.

Conclusion

As Dr. Seuss's Grinch found out, the future arrives regardless of our attitude and readiness for it. Be ready for it: instead of avoiding change in the name of prudence, develop a Reinventionist Mindset.

Joe Jackman is the CEO of Jackman Reinvents, the world's first and foremost reinvention company. An advisor to consumer brands, retailers, B2B companies, and private equity partners for more thirty years, Joe has proven invaluable to leaders intent on sharpening strategy and orchestrating insight-led reinventions of their businesses. Throughout his career as strategist, creative director, marketer, and Reinventionist, he has helped companies create the most powerful and relevant versions of their brands and businesses in record time; he is widely considered to be the leading expert on rapid reinvention.

THE SUMMARY IN BRIEF

The world is changing. It's changed already. Shifts in technology in the 20th century have driven massive development in organizations, and in society. The world has been described as volatile, uncertain, complex, and ambiguous. For leaders, this demands a shift in mindset, skillset, and behavior.

Clearly, there is a need for a new type of leadership and organization based on relationships, purpose, value-creation, engagement, network, transparency, involvement, belonging, and trust. In The Responsive Leader, Østergaard focuses on the mindset you must have as a leader, and on the behavior and practices that can support it. This shift begins with understanding why the world is changing. Then leaders must move to apply design principles of the future of work.

Are you ready to shift your center of gravity to this new practice of leadership? Have the willingness and determination to do something different and to try it out. Volatility and change can be met with positive approaches in this tremendous opportunity for shaping the future.

IN THIS SUMMARY, YOU WILL LEARN:

- The mechanisms, behavior, and mindset of the responsive leader.
- To anticipate challenges that may arise with shifting leadership styles.
- Models for leading responsively across the network.
- Ways to motivate your employees and peers for the future of work

Organizations are on the cusp of massive change as the world moves in more unpredictable ways. For organizations to survive, we need adaptable leaders capable of moving us forward. We need greater awareness and consciousness beyond black-and-white, quarterly report, profit-and-loss thinking. Responsive organizations and conscious leadership hold a fundamental truth: people and purpose matter just as much as profit.

Paradigm Shift

Despite the seemingly dystopic predictions of AI, automation, and loss of jobs, these changes bring some exciting possibilities for replacing the existing management and organizational structures with something more future-oriented. This the right time to stop and rethink our approach to work. It's time for a paradigm shift. If you change, develop, and align your mindset in the organization and together create an evolvement in new skills, then the change in behavior will be a natural consequence of the mindset.

Principles for The Future

The interactions, decisions, and business transactions hinge around people and the relationships between people. You are not a B2B or a B2C company; you are H2H—human to human. People come first in the quest to provide purpose, meaning, sense-making, and value-creation in the workplace. A guiding principle for work in the future is the need to experiment. In a rapidly changing world, where there are several "right" answers to a question, you must deliberately experiment, test, and investigate.

Ostergaard relates the story of Danske Bank. Mikko Laukka announced to his whole department that he wanted to initiate a rather substantial culture and collaboration project, affecting all 120 employees in his division. The team was responsible for delivering automated financial services. They didn't drop their attention to the product. However, the management team directed their focus and energy to the employees and the culture first and foremost. They applied design thinking to create a "people first" workplace with less hierarchy and more agile delivery methods.

Before staging two grand meetings for the rollout of the plan, the management team was fully prepared, having made the business case for the transformation. A portfolio of activities was introduced and executed including weekly standup meetings, intense accountability, and larger workshops for culture development.

The first few meetings were rather "polite," and almost all items reported were presented as complete. But as the employees felt they were safe, and their reports were acted upon, more honest reporting and requests for help emerged. In their all-division workshop, the whole department co-created a culture book, answering two questions. Firstly, what does the world's best workplace look like, and secondly, how do we get there?

The culture changes led to the bold move of eliminating a management layer, creating a higher manager-to-employee ratio, with some managers having up to 25 reports at times. To handle the relevant one-to-one dialogue with the employees, peer-coaching and peer-onboarding were initiated.

During the first six months, the turnover rate of employees doubled, but, interestingly, the empty spaces were quickly filled as the idea of the culture spread and became apparent in mindset and behavior.

The Future of Work

In a constantly changing world you cannot make thorough plans for the future of your organization by merely analyzing, thinking, and planning, as if your assumptions are correct and non-changing. Understand what problems you are solving and for whom, and what value you are creating for the customers.

Purpose and Direction

Focusing on purpose enables you, the organization, and every employee, to focus on WHY you do what you do, instead of WHAT you do. Knowing the why creates a deeper understanding and engagement and is a comprehensive framework for empowerment, delegation, and commitment. If everybody understands why you do what you do, then you can challenge the status quo, think holistically, and take initiative in a decentralized way. Focusing on purpose enables you to set the direction accurately. You must rethink the strategy and make it agile and circular—or spiraling—instead. Finally, focusing on purpose is a tremendous motivation and a filtering factor for more and more people when they choose which company to work for.

Triple-Bottom-Line

For some employees, it's hard to understand the effect their work has on economic results, as the actual money transactions happen somewhere else in the organization, and the transparency and direct relation to their work can be extremely hard to establish. Instead, more employees, project managers, and department leads are turning to social

capital and value-creation for a means of understanding the cause and effect of activities. Social capital lies in the strength of relationships and networks. Value-creation gives attention not only to the value the organization offers but for whom and how much. Economic health is certainly not neglected. Turnover, revenue, billing, etc. remain important to the responsible leader.

A purpose narrative establishes a correlation between the elements in the triple-bottom-line once the connection is created. The purpose ties you together, strengthening your relationships and social capital. It describes the value you create and supports you in reaching your financial goals by focusing on and prioritizing your resources and investments.

Innovation as Usual

Innovation is not restricted to products and processes. Leadership, organizational structures, and culture must also undergo innovation and disruptive changes.

Mindset

Few organizations are capable of being disruptive to the extent of companies like Google, Tesla, or Netflix. However, everybody and every organization can be innovative, thereby ensuring relevancy to the customer, flexibility to change when needed, and attractiveness to employees through making the workplace a fun, engaging, and developing place to be.

A mindset and culture of risk-taking and no-blame, where failure is not frowned upon, encourages innovation. Major mistakes or losses are mitigated by performing small-scale tests and experiments to investigate and document the ideas and feasibility. Innovation can be strengthened through a circular approach to execution, working in sprints, inspired by the Agile world. Everything from company strategy to daily maintenance tasks should be thought of in circles or spirals, where we periodically stop, evaluate, re-aim, and adjust. There are a plethora of plan-do-check models. The faster we can test the experiment and assess the hypothesis, the faster we can evaluate the feasibility. This lowers the cost of failure and increases the speed of application.

Innovation—Everybody and Everywhere

Get everybody to think about innovation, even in small things. Then let them do it. Often a good idea or a strong initiative is halted because a manager says no to change. When we're trying something new, there is inherently a chance of success and a chance of failure. In any case, there is 100% certainty of learning.

The responsive leader has an insatiable drive for results and achieves that through and with other employees. This means that they act and think like an entrepreneur, working more "on" the business than "in" the business. A deeply rooted skill and character trait for an entrepreneur is the ability to be innovative; a natural sense for spotting new solutions to existing challenges or cross-pollinating existing solutions to create new opportunities.

Pingala, a Danish IT consultancy, takes responsibility for the future of work in their business. One of the design criteria for their organization is that they want to keep the organization flat and eliminate the need for a manager wherever possible. To do that, they analyzed and documented the real networked organization. Based on their study, they constructed a chain of mentor/mentee links so that the employee development interview and sparring takes place on a peer-to-peer level in the network, and not as a hub-and-spoke structure, with the manager as the hub. The kind of new conversations that arose was fantastic, and employees got feedback and sparring from someone who had a better understanding of their professional challenges, and who they also had a social connection with. Even the CEO got an employee mentor, a reverse mentoring-approach.

Viscous Culture

The greatest cultures are the ones people are attracted to, where they like to show up to work, are sad when they quit, and return after a short period at another company. A great culture creates a sense of belonging, rising engagement, and declining sick leave.

Belonging and Identity

The key to developing your culture is not power, but influence. By networking, building relationships, giving and asking for feedback, and engaging with your employees, you begin building the foundation of a culture that is resilient, responsive, and inclusive.

We need organizations where people feel they belong. Organizational culture in the future of work is one of communities and belonging. You need to build a culture of relationships, transparency, diversity, empowerment, and trust. The personal leadership style is key to driving and nurturing this. These communities need to be suitably viscous, to be both a psychological safety net and gravity point for the full-time employees and be adaptable and inclusive for gig-workers and fluid engagements.

Culture as a Product

Pingala and similar organizations see culture as their product. The key to developing your culture is not power, but influence, which starts with an authentic approach to the ones you surround yourself with, namely people. In business terms, see culture as a business product and cultural development as a project. Allocate time and effort to projects and activities that your employees and your customer will benefit from, and have someone driving it.

For every five employees who leave ProActive, an IT company in Denmark, two return within a few years. Why? Because of the culture, they say. ProActive communicates an "I trust that you can do it" mindset. The responsibility and accountability are rapidly given to the employees, according to the will, skill, and experience of each employee. Naturally, when this kind of empowerment and meritocracy-based authority replaces micro-management, mistakes can happen. They have gradually formed a networked team-of-teams organization.

The key to obtaining this kind of responsive organization on top of the strong empowerment has been a deliberate investment in horizontal leadership. Bringing the approximately 20 peer leaders together in cross-organizational forums regularly to get to know each other and to share challenges and experiences has been a huge lever for the social capital. Every Friday, a resource assignment meeting is held between all delivery-responsible employees and line managers to match employees to projects and tasks.

This, of course, requires the line manager to have a deep understanding of each employee.

Some of the leaders have it in them as a natural gift. Some of the leaders use the input and ability of each other to master the roles and behavior together. The result is that people return to ProActive.

Mix

Managing the principles for leading responsively requires a new kind of leader, conscious of their own behavior and impact. The responsive leader focuses their mental energy on the moral compass, on personal development, on activating and cross-pollinating across the strength areas of the business.

Roles and Behaviors of the Responsive Leader

The responsive leader cares about the development and well-being of the employees, investing time in helping each employee be the successful and best version of themselves. This means frequent conversations and sparring, open questions, and, at times, hints, direction, and advice. As coach and mentor, the leader creates trust, safety, and confidentiality and is ambitious on behalf of the employee. As a coach, the leader is a facilitator for drive, ideas, understanding, and reflection. A coach asks questions and guides the employee to seek answers themselves. As a mentor, the leader also has attitude, opinion, multiple views, and experience, and will voice these. A mentor comes with specific suggestions to the challenges the employee is experiencing. Additionally, sometimes you must be an oracle and should prescribe a solution or approach. The delicate challenge lies in balancing these three: the coach, the mentor, and the oracle.

You are the one who points the organization and your employees in the right direction and towards the right mindset. And it's you who needs to take the first step. And the next, and the next, and to ensure that you do it together and that no one is left behind.

Erik Korsvik Østergaard is partner in Bloch&Østergaard, which he founded in 2014. Erik has worked with leadership, digitization, strategy, change management, and organizational transformation for over 15 years, as manager, project manager, and consultant.

Over the past years Erik has focused on codifying the mechanisms for the future of work, striving to establish a leadership framework that provides the modern organizations and leaders with a coupling between megatrends, theory, and real-life practice.

The Ride of a Lifetime

by Robert Iger

Robert A. Iger is the Executive Chairman of The Walt Disney Company and Chairman of the Board of Directors. Prior to his current role, Iger served as Chairman and Chief Executive Officer of The Walt Disney Company. Over his 15 years leading the Company, he built Disney into one of the world's largest and most admired media and entertainment companies. He has made Disney an industry leader through its creative content offerings across multiple platforms. Robert Iger has been named one of the "World's Most Powerful People" by *Forbes* magazine (2018), among other awards, and he was inducted into the Television Academy Hall of Fame in January 2020. *thewaltdisneycompany.com/leaders*

Leadership Secrets that Brought Magic to Life

Robert Iger spent 45 illustrious years working for the same company. He started as a junior production employee at ABC and rose in the ranks steadily over 22 years. He spent the next 23 years at Disney after they acquired ABC, eventually becoming the "sixth CEO to run the company since Walt founded it in 1923." As CEO, he describes his time as an energizing ride on the most exciting theme-park attraction imaginable.

But it hasn't been all fun and games. Running a multinational corporation like Disney is also intensely challenging and stressful. Iger has learned to "compartmentalize" and shift focus from one responsibility to the next. He knows how to get the work done when things go according to plan and when an unforeseen crisis throws things off course. In ***The Ride of a Lifetime***, Iger shares insights that "could be useful beyond his own experience."

10 Guiding Principles

Iger identifies 10 vital principles for effective leadership. Readers who have their own business or manage other people may find guidance in these "universal ideas" about taking risks and creativity, building a culture of trust, inspiring curiosity in yourself and others, embracing change, and showing integrity.

Optimism: Leaders will face difficult choices and things will not always turn out as planned. Leaders must stay optimistic so they can energize and motivate others. Pessimists are not effective leaders.

Courage: Risk-taking requires courage, and in today's "ever-changing, disrupted businesses, risk-taking is essential, innovation is vital, and true innovation only occurs when people have courage."

Focus: The appropriate time, energy, and resources must be allocated to the "strategies, problems, and projects" with the highest priority. Further, leaders must clearly and regularly communicate priorities to those around them.

Decisiveness: Leaders must make decisions in a timely manner. Leaders should invite diverse opinions to the decision-mak-

ing process, but that should be "balanced with the need to make and implement decisions." Morale is deeply corroded when a leader is chronically indecisive.

Curiosity: Innovation is a path that begins with curiosity. Leaders must remain curious to "discover new people, places, and ideas" as well as to "understand the marketplace and its changing dynamics."

Fairness: Strong leadership requires "fair and decent treatment of people," empathy, and accessibility. Give subordinates second chances when they make a mistake, and leaders should refrain from "judging people too harshly."

Thoughtfulness: Leaders have to "take the time to develop informed decisions." Opinions that are based on knowledge are "more credible and more likely to be correct." Thoughtfulness is an element often underrated in effective leadership.

Authenticity: People can tell when you are being fake or when you are being real. Being authentic, or genuine and honest, "breeds respect and trust."

The Relentless Pursuit of Perfection: Leaders should never settle for "good enough." Put effort into making something as great as possible. "If you're in the business of making things, be in the business of making great things."

Integrity: High ethical standards are essential for a company or a leader to succeed. An organization's people and their products must be of the highest quality. This is true for "all things, big and small." "The way you do anything is the way you do everything."

Iger illustrates these guiding principles through his accounts of his experiences at ABC and Disney.

Extreme Focus in Shanghai

Iger made a location-scouting trip to China in 1998 for the forthcoming Shanghai Disneyland. In 2016, he took his fortieth trip there to preside over the opening. He was the only person at Disney who had been involved with the project from the very beginning and through every step.

The planning and development of the park took 18 years, $6 billion, 963 acres, and "as many as 14,000 workers living on the property." Major decisions such as "the safety and comfort of Chinese workers," and tiny ones, such as whether it was appropriate to cut a ribbon on opening day, were a mainstay of the process.

Iger writes, "The creation of the park was an education in geopolitics, and a constant balancing act between the possibilities of global expansion and the perils of cultural imperialism. The overwhelming challenge, which I repeated to our team so often it became a mantra for everyone working on the project, was to create an experience that was authentically Disney and distinctly Chinese."

The official park opening was slated for Thursday, June 16. On Sunday, June 12, the terrible news of the mass shooting at Pulse nightclub in Orlando reached the Disney team in Shanghai. The Disney security team was scrambling to determine whether any of their own were injured or killed in the shooting, when more shocking news arrived. Disney security discovered that the shooter had visited Magic Kingdom months before the shooting, with CCTV footage showing him pacing around a park entrance in Downtown Disney. It is believed that Disney World was the shooter's primary target, which federal investigators confirmed. This suspicion shook Iger to his core.

Iger's ability to focus in the face of extreme circumstances would be tested even further. On Wednesday June 15, the day before the opening, Iger was leading a VIP tour of the park with about 100 guests. Disney's head of Parks and Resorts, Bob Chapek, approached him. Iger assumed that he was about to get an update on the shooting investigation. Instead, Chapek pulled him aside and said, "There was an alligator attack in Orlando. An alligator attacked a young child. A little boy." Iger attempted to hide his "rising sense of horror" as he learned the details. The attack happened at a Disney hotel resort. The 2-year-old boy, Lane Graves, was missing and presumed dead.

The morning of the opening in Shanghai, Iger called the boy's parents to express his condolences and empathize with their "unimaginable pain." At Mr. Graves' request, he promised to do whatever he could to "prevent this from happening to another child." During the conversation, Iger cried so hard that his contact lenses fell from his eyes. He was drained and felt like he couldn't move. But he had no choice but to get up and get back to work.

Never in his worst nightmares could Iger have imagined that the opening of Shanghai Disney World would take place in conjunction with two terrible tragedies. But the unexpected happens. When it does, Iger relies on "a kind of instinctive triage to kick in." He tunes into his internal "threat scale" to determine what needs his immediate attention and what is important but must wait. He trusts that those around him will do what they need to do so that he can focus on the more pressing issues. Iger demonstrated this ability to focus in his handling of the unexpected and tragic events that coincided with the opening of Shanghai Disney World.

Massive Courage with Marvel

Disney's acquisition of Pixar kicked off a new growth strategy. Goals included global growth, technological advancement, and increasing quality content. Iger and his colleagues developed a "list of acquisitions targets" with intellectual property that could advance them towards those goals. Top of their list was Marvel Entertainment, with its treasure "trove of compelling characters and stories" that could be plugged into Disney's "movie, television, theme-park, and consumer-products businesses."

But Marvel wasn't actually for sale, and two other factors complicated the situation. First, many of Marvel's characters were licensed to various different studios. Columbia Pictures owned Spider-Man, and The Fantastic Four was under contract with Fox, for example. Even if Disney could successfully purchase the remaining properties, it would make for a clunky IP acquisi-

> **Marvel was not an obvious choice for Disney. It was 'edgier,' and there was genuine concern that fans would not react positively. . .**

tion full of brand confusion and "licensing complications down the road." The second and greater challenge was that Disney had no access or relationship with the "legendarily tough and reclusive" head of Marvel, Ike Perlmutter.

After months of failed attempts to secure a meeting, Perlmutter agreed to meet with Iger at the Marvel offices in Manhattan. Iger elected to handle this meeting alone, without a team of Disney executives with him. They discussed each executive's history and experience. The notion of purchasing Marvel came up only after Perlmutter inquired about the previous Pixar acquisition. Using this opportunity as a segue, Iger explained how Disney was able to integrate Pixar into their company while "maintaining Pixar's unique culture." This, he explained, is what they could do with Marvel. Perlmutter was intrigued enough to continue the conversations and, eventually, seriously consider an offer from Disney.

There were many risky aspects of acquiring Marvel that required courage. Marvel was not an obvious choice for Disney. It was "edgier," and there was genuine concern that fans would not react positively to the brand being associated with Disney. But careful consideration led Iger to believe that Disney "could manage the brands respectfully and separately, that they could exist side by side, and neither would be negatively affected by the other."

He consulted Steve Jobs, a board member of Disney and his close friend. Jobs' first reaction was to tell Iger how much he hated comics. Iger persisted and was able to convince Jobs that despite the risks, a Marvel acquisition would be every bit as good for Disney as Pixar had been. Jobs agreed to call Perlmutter and nudge him in the right direction. Perlmutter agreed to the deal, citing Jobs' call as the turning point.

Disney announced they were buying Marvel for $4 billion. They anticipated backlash. "Marvel is going to lose its edge! Disney is going to lose its innocence! They spent $4 billion and they don't have Spider-Man!" The market reacted with a 3 percent drop in Disney's stock price the day of the announcement. But that didn't last.

Disney has since released over 20 Marvel films, each "averaging over $1 billion in gross box-office receipts." The acquisition has proven far more successful than imagined. Marvel's popularity and impact has extended into our culture, by introducing diverse superheroes, including women and people of color. And it all started because Iger had the courage to make such a bold move.

Innovate or Die and Disney+

The face of media was changing. The future of entertainment companies was at stake. If Disney didn't innovate, they would be left behind. So Iger and his team "concluded that it was time to start delivering content in new and modern ways." They did not want to piggyback off another enterprise's platform. They wanted to develop their own.

After shopping around for technology companies that could bridge the gap in the company's infrastructure, Disney acquired "a 33 percent stake in BAMTech with the option to buy a controlling interest in 2020." At the time, the primary owner of BAMTech was Major League Baseball. They had successfully launched a streaming service for baseball fans and were in the process of developing HBO Now.

Less than a year before Disney's initial investment, Iger and his team presented a "bold and aggressive" plan to the board. Rather than wait until 2020, Disney "would accelerate the option to buy a controlling stake in BAMTech, and then use that platform to launch Disney and ESPN direct-to-consumer video streaming services." This news made Disney's stocks soar.

When faced with industry-wide disruption, Iger led an internal disruption, knowing full well that it would bring significant losses in other areas of the business. Iger recognized that those hits would be short term and kept his eyes on the long term gains. Aside from the massive success of those particular services, jump starting ESPN+ and Disney+ served as the unintentional catalyst for Disney's next massive acquisition.

In a one-on-one meeting, Fox's Rupert Murdoch made it plain to Iger that he felt Disney was uniquely poised for the future. Iger intuited that Murdoch might be interested in selling. Disney acquired "a broad portfolio of assets" from Fox, including Fox Searchlight Pictures, the FX Networks, majority or controlling stakes in Hulu and National Geographic, and much more. By embracing innovation, Iger opened Disney up to new opportunities and an immensely bright future.

When Iger took the helm in 2005, Disney was faltering. Faced with extreme disruption industry-wide, Iger developed three goals that informed every decision: Produce content of the highest quality, use technology rather than resist it, and expand globally. Over 15 years, Iger achieved those goals in such abundance that it defies logic. Along the way, he learned what it takes to be an effective leader.

Anyone with an interest in how to be genuine, bold, and successful in business or life will enjoy Iger's account, which offers an insider's view of the deals behind the scenes at a company of enormous size and complexity. This honest narrative will make readers want to know what happens next—a rare prize for an executive writing a business memoir.

THE SUMMARY IN BRIEF

Taking over as CEO is always a high-stakes challenge—but stepping into the role after a founder adds another layer of complexity. The founder likely shaped the company's identity, culture, and success. As the "Second CEO," you're expected to honor that legacy while steering the business to its next phase of growth. It's a delicate balance that can quickly go wrong without the right approach.

In ***The Second CEO***, Matt Sharrers offers a practical and deeply informed guide to navigating this difficult transition. Drawing on his own experience as a Second CEO and his years of coaching others in the role, Sharrers provides a clear roadmap for succeeding in a role that is as risky as it is rewarding, while delivering actionable insights on how to gain your footing, align with the board, build your leadership team, and scale effectively. The book features real-world stories, advice from serial Second CEOs, founder insights, and perspectives from private equity investors.

IN THIS EXECUTIVE BOOK SUMMARY:

- Develop the mindset you need to succeed as a Second CEO that follows a founder.
- Detailed explanations about the transitions you have to go through and how to do so successfully.
- Key processes and a step-by-step guide to cultivating culture through purpose, vision and values, and crafting your own strategy to succeed.
- Determine what kind of leader you want to be and what to do during the first year on the job to set your company on the path to growth.

Introduction

I've had three distinct careers, and they've all been around high performance. First, I was a hockey player. When I retired, I started my business career, quickly rising up the ranks to become the vice president/corporate officer before my thirty-fourth birthday at a Fortune 500 company. From there, I joined Sales Benchmark Index (SBI), a Go-to-Market (GTM) strategy consulting firm, as its first employee, working alongside its three cofounders. We scaled SBI into one of the largest boutique firms in go-to-market consulting over fifteen years.

But all wasn't always rosy. During my eighth year with SBI, our cofounder and CEO, Greg Alexander, let us know he wanted to exit SBI. The partners agreed that I should be his successor. In theory, it sounded fantastic—I was about to follow the founder and be the new CEO! But in practice, there was no playbook. We had to do it all by trial and error.

A lot has been written about succession. But there's an extra degree of difficulty when you're following a founder. That difficulty has elements of personality, culture, and history that can easily derail the entire transition if they aren't handled well.

Here, I'll guide you through your thoughts, feelings, and actions, from the moment you're tapped on the shoulder as the successor or the external search has identified you as a match through the actual transition and your first year as CEO.

Chapter 1: Passing the Baton Versus Throwing It and Running

There's no such thing as thinking too much about the transition from founder to Second CEO. If you're not prepared for the transition, the consequences could be dire, personally, professionally, and financially.

Case Study #1: Greg and Me

I was the first employee at SBI, a strategy consulting firm that specialized in go-to-market effectiveness. The company was growing, and Greg, our CEO, started to feel that entrepreneurial urge in year seven. He was delegating more and more to me because he was getting frustrated and looking for a path out. We found a way to make that happen while allowing the rest of us to continue to grow the firm.

I think it's fair to say no one behaved like their best selves during that process. And a lot of that comes back to the fact that we didn't have a playbook. What the business needed was a consistent, methodical operator to standardize what we were doing and scale it. And of course, it needed a process for succession.

There I was, suddenly CEO, making mistakes of my own, beginning with not being cognizant of the fact that a Matt-led SBI is different from a Greg-led SBI. I did too much too soon, making a lot of changes and putting my stamp on things.

My reckoning came at month six, when we had to lay off 10 percent of the firm. It was very painful, personally and professionally. I lost confidence and hit a professional low. That's when clarity came for me. I got my bearings as a CEO and identified my priorities.

The fix for my situation began with hiring the leadership assessment firm ghSMART to assess me as a CEO and identify my gaps. Then I found a coach to work with to help me fill those gaps. Finally, I needed what's called a scorecard, which details what the CEO of this company does, and where they're going.

Case Study #2: Kristie and Eric

The flip side of my situation with SBI is Bespoke Partners, an executive search firm that specializes in private equity software. The founder Kristie Nova asked me to be on the board a few years ago with one of my primary responsibilities being to help her create a succession plan.

Our search for a scorecard-match for Bespoke Partners landed on Eric Walczykowski, who had energy for ideation and the kind of objectivity that would allow him to figure out what the business needed, and do that without emotion.

Eric was able to appreciate the war stories and other shared memories in the context of an evolving Bespoke. Meanwhile, Kristie embraced the need for change and had no issue letting go. Within sixteen months of him becoming president, the firm had a liquidity event, Eric became the CEO, and the torch was passed.

Takeaways from Case Studies #1 and #2:

- Self-awareness is vital to a successful transition, but it's not enough.
- Having a clear plan for transition is key.
- Culture matters, and it must evolve.
- When you have a solid transition plan, it makes a world of difference to the internal stability of the company.

Business leadership isn't a marathon; it's a relay race. The first person to hold and pass the baton is the founder, and that person is qualitatively different from the successor CEO.

- Founders have entrepreneurship in their DNA.
- There's a difference between a new CEO coming from within and from outside.
- The founder needs to believe they have a successor.

Business leadership isn't a marathon; it's a relay race. The first person to hold and pass the baton is the founder, and that person is qualitatively different from the successor CEO. Whether the handoff is done well is largely based on how you handle it.

Chapter 2: Can I Really Do This?

The way the handoff happens is critical to the success of the transition, Whether you're from the inside or the outside, and whether you're a first-time CEO or not, you're wondering if you're up to the task.

Transitions can have personal, financial, professional, and social consequences. Sometimes they go well by accident, with the person unaware of all the components of the transition and what could have gone wrong. When you're following a founder, you have three transitions to go through, whether or not you realize it.

1. Your transition out of whatever you were doing.
2. Your transition into CEO.
3. Your transition into the team.

Setting Yourself Up for a Successful Transition Trifecta

There are three steps you can take to set yourself up for a successful transition trifecta:

1. Have the right mindset: A curious, compassionate, adventurous mindset will take you a long way as you start your new chapter.
2. Create an informal board for yourself. I recommend three people who each contribute a different perspective, who know you fairly well, and who aren't Yes Men.
3. Develop a scorecard. You have to decide who you want to be as a leader, and though you might not have all the details worked out, making the scorecard a priority is making a statement about your leadership. It's telling everyone that clarity is a big part of who you are as a leader.

Chapter 3: Working With The Founder

It's rare that a founder just leaves and is gone forever. They usually keep a role on the board, at least.

Three years after leaving SBI, Greg founded Collective 54, the first mastermind community for boutique professional services firms. Collective 54 has identified five effective leadership styles. This list is helpful for getting insight into the founder you're following as well as figuring out what kind of leader you want to be.

1. The Capability Seducer

These founders look for expertise everywhere. They ignore conventional practices like CVs, degrees, job histories, etc. They find trapped and hidden genius in the most unlikely places.

2. The Emancipator

The Emancipator frees employees from the soul-crushing work environment of big corporate America, where they exist under constant restraints. An Emancipator creates elbow room for their employees to thrive.

3. The Defier

The Defier constantly tests and stretches their employees. They believe people grow

4. The Head Bumper

The Head Bumper believes any problem can be solved if enough heads are put on it, that is, "Let's bump heads on this." This leader doesn't care who won or lost the argument, only that a sound decision was made.

5. The Sponsor

The sponsor is the opposite of a micromanager and is as hands-off as one can possibly be. They sponsor a project or an executive, and they empty the bank account in support of the initiative.

Finally, there's the leadership style to avoid: It's called the Pleaser. The Pleaser has the best of intentions. They think they're doing a good job but are not and just do not know any better.

If the founder you follow was a Pleaser, odds are you'll see the consequences of that when you speak with your employees and hear about culture. If your Pleaser will be around for a significant period of time during your transition, it will be critical for you to tightly define a role for them.

Chapter 4. Am I Doing It Right?

The first ninety days as second CEO are about getting a sense of the current state by talking to customers and employees, understanding the market, and validating what you built in your thesis in the interview process. Here's what you'll think about and do.

- Do you want the job? Pre-acceptance discovery.
- Take a beat to process this life transition.
- Identify a coach or mentor.
- Speak with other CEOs about the position.
- Listening Tour - speaking with your key people internally for all of the Whys, Hows, and Whens of their positions.
- Present your findings to the firm.

Once you accept the new job, there are three things you need to do immediately.

1. Write a letter to your future self. Congratulate yourself for getting to the top of the hill and express some gratitude for how blessed you are for this opportunity.
2. Announce your Listening Tour. Tell your people you'll be speaking to everyone, and that includes the competition and getting a real sense of them. During your internal Listening Tour, you should be asking five questions for every statement you make. Keep that 5:1 ratio in mind to prevent yourself from thinking you know more than you do.
3. Present your findings. After your ninety-day Listening Tour, you'll demonstrate you understand communications, culture, product, and people by presenting your findings. The company will feel like you've gotten to know them and what they care about.

When I'm brought in to coach someone following a founder, I want to know how they define success. I ask three questions immediately:

1. Do you have a documented scorecard that tells you what the CEO of your new company needs to do?
2. Does that document have the key outcomes that drive shareholder value?
3. What's your cadence for reviewing your key outcomes with the board so you can all see if you're on track or off track?

New CEOs will frequently say they have those things but they don' t have an actual scorecard. Scorecards translate your business plans into role-by-role outcomes and create alignment among your team, and they unify your culture and ensure people understand your expectations.

Once you have your scorecard, you can cascade that into scorecards for the rest of the executive team and then into the roles for everyone else in the company.

Chapter 5: Culture Cornerstones: Purpose, Vision, Values

Culture means different things to different people. Meanwhile, some people use mission and values, and others use purpose and values. Some have visions rather than missions. Culture is the result of everyone understanding and living the purpose, vision, and values.

Key considerations:

- Purpose is the WHY behind what you do on a daily basis.
- Vision is what you can become; it's your North Star.
- Values are how you behave.
- Culture arises from the synergy of purpose, vision, and values.

Make sure you form a Culture Committee that's diverse and includes naysayers. Include the perspective of your clients.

Make sure you form a Culture Committee that's diverse and includes naysayers. Include the perspective of your clients.

Common Mistakes

1. Doing all this in a vacuum and only considering executive feedback.
2. Doing all this in a vacuum and only considering the feedback of a small group of veterans rather than getting a diverse cross-section of roles and people.
3. Not reading client feedback, employee exit interviews, and employee engagement studies to help you understand how clients and employees feel about the firm.

Remember to behave like you're from the outside. That mindset will help you be receptive and thorough.

Chapter 6. Strategy: Where To Play And How To Win

The core challenge for the CEO is balancing taking care of the near term while planning for the future. I think about this through a Two-Horizon framework.

Horizon One is the first twelve months in the job. Horizon Two is your three- to five-year value creation plan (VCP). This includes you clearly articulating what you want the business to look like and who is sitting around the table as part of your executive team.

Horizon One

I asked founders, successors, and private equity investors how much time the most successful CEOs spend on Horizon One thinking and operating in the first year. The consensus was around 70–80 percent.

Simon Freakley, the CEO of management consulting firm Alix Partners, who is on his third tenure as a CEO, had this to say about the significance of the Listening Tour to the second quarter and strategy: "You're assembling all the information in the first ninety days, while in the back of your mind thinking, What are the strategic priorities of the business to enable it to continue on its journey of growth and development?"

As that first year comes to an end, you'll start to see your time allocation shift, where you're spending more like 40–50 percent of your time in Horizon One. Meanwhile, you also need to carve out purposeful time in your calendar to work on the business rather than in the business. When I asked Second CEOs how to ensure they did this, the overwhelming response was discipline.

Horizon Two: Your Strategy

Strategy is a question that needs to be answered by the CEO. And the information required to properly and thoroughly answer it comes from listening. So the outcome of the Listening Tour is strategy. After your tour, you have one question . . . Do we have the right strategy in place to activate and fulfill our vision?

Outcome #1—Yes. Then move to the execution of that strategy.

Outcome #2—No, not really, almost-but-not-quite, and any other version that isn't a complete Yes.

This is by far the most common situation, where the strategy needs some refinement. It's your job to refine it. Strategy, simply put, is where to play and how to win.

Common mistakes to avoid:

- Leaping into action, without an actual strategy and without communicating what you'll be doing and why.
- Not taking enough time to whittle down the most important elements of the company strategy into a format people can understand.
- Your strategy having a lot of "intuition" and "gut-based" language rather than being fact-based.
- Your strategy not being codified in a way that the rest of the organization can understand.
- Thinking present forward.
- Planning too ambitiously, and it is disconnected from where the business is today.

Chapter 7: The Continuous Nature Of Processes

Once the Second CEO knows what they want to achieve strategically, it's time to build processes to support that work. I think of processes as having three phases:

- Initial discovery
- Documentation
- Iteration based on new information

The first two phases get done in the second half of Year One, and the rest of your tenure is all about iteration.

Most newly minted CEOs move a little too fast. They make quick changes instead of being mindful and getting the full picture, just like I did at SBI. So make sure you balance having a true holistic understanding and putting trust in your leadership team. This is a time when you're going slow to go fast, correctly.

Chapter 8: Structure: Focus On Roles, Not People

Bringing someone in from your past isn't necessarily a bad thing, but it needs humility and clarity to be done well. Decisions should always be based on the facts and the data of the company you're working with now. The Second CEO's job is to put individuals and their relationships aside for a moment and figure out what roles are required to activate the strategy. The most important mindset you can have right now is to get as close to objectivity as possible.

As you go through your thinking around who reports to whom, there are a series of questions the Second CEO needs to ask:

1. Where do we have unnecessary bottlenecks or balls being dropped?
2. Why was the organizational chart set up in its current fashion?
3. What's not getting done that should be getting done and why?
4. If we have a process, is it the execution of or the management of said process that's holding us back?
5. The immediate gaps must be shored up while you determine the longer-term, future-back organizational chart.
6. As the CEO, how do you align the key metrics of a function with the key priorities of the business?

You should feel you've succeeded when you can clearly articulate why the organizational structure is the way it is. Your reasons should be tied to customer satisfaction, employee engagement, and competitive advantage.

Chapter 9: Building Your Team

When you're following a founder, there's always a tendency to hang onto historical, legacy rituals that exist in a business. The same can be true for hanging onto people. And while it might be true that everyone loved the C-suite, you have to ask yourself, Knowing what I now know, how do I determine if these wonderful folks who worked well alongside the founder are also my people?

You can answer that question and build a different team, if that's what you need, with a three-step process:

Understand Who You Have

As the Second CEO, whether you're from the outside or not, you must objectively assess the talent you have. You'll be inspecting the performance management standards and performance reviews, as well as their level of commitment to the company's vision and core values.

Identify Who You Need

Once you have a picture of the past and the present, it's time to identify who you need for the future. We'll begin, as we usually do, with making sure you have a scorecard and a vision of what each person in the C-suite needs to drive the future strategy.

Create a Cohesive, Well-Functioning Team

Your functional leaders need to operate as a cohesive team. They need to have the ability to put their egos aside and work for the greater good. You're looking for people who have a history of developing others. You're looking for people who say "we" not "I."

Common Missteps

- Moving too slowly.
- Hanging onto people because you don't want to be too disruptive
- Bringing people in from your previous life whom you trust and have comfort with but who don't match the

scorecard and the culture.

- Taking feedback from others.
- Defaulting to internal promotions.

Chapter 10: Building Your Two Boards

Part of being able to accelerate and scale the way you need to is surrounding yourself with the right advisors. Looking back, one of the best things I did as a CEO was build my personal board along with the formal, fiduciary board of directors for the company.

Your Board

We don't see our blind spots, by definition. You need to assemble your dream team:

1. A coach
2. Mentor(s)
3. Peers.

The Company's Board

Realistically, many founder-owned businesses don't have a formal board of directors. And if you're walking into a company without a board, create one and run the company like it's private equity backed. A great board allows you and the executive team a higher probability of accomplishing your strategic objectives in less time while avoiding common pitfalls.

The Second CEO's relationship with the board is a vital component of their success. It needs to be nurtured and maintained, and at all times transparent. As far as meetings go, the ideal board cadence is once a quarter virtually and once a quarter in person. Your goal is to be surrounded by the best minds available for the strategic issues that are critical for your Horizon Two.

Conclusion

You're never done when you're the CEO of a business, especially one that was led by a founder. There are always going to be things that you recognize you need to be doing differently.

There are three things the CEO will always be responsible for: (1) vision/strategy, (2) culture, and (3) team. You must continue to invest in these three components and never delegate them. They're your priorities.

To step toward your full potential in the role of the CEO is to realize that regardless of industry, you're in one business: the people business. People will be at the center of your results, good or bad. So, keep investing in being in the top 1 percent of leading and influencing others. Helping others get what they want will get you what you want. Congratulations. Keep betting on yourself. And remember, in the journey to full potential, you're never, ever done.

Matt Sharrers is a coach, investor and advisor to CEOs and the PE firms for whom they work. Sharrers spends his time enabling these CEOs to accomplish uncommon goals that alter their personal trajectory. Currently, Matt serves on 5 boards and is the Executive Chairman at SBI, a B2B strategy consulting/growth advisory firm that he and his partners sold a majority stake to CIP Capital in January of 2020. Sharrers resides in Scottsdale Arizona and when not working with CEOs can often be found doing pull ups, playing average golf, or reading.

THE SUMMARY IN BRIEF

Leaders today are stuck between two worlds. On one hand, we're barely starting to move away from the old way of thinking about leadership and its relentless focus on top-down hierarchy and planning. On the other hand, we haven't fully developed our thoughts on what comes after the bureaucratic organization.

That's where ***The Self-Evolved Leader*** comes in. Dave McKeown has seen how failure to navigate the new world of leadership has created a rising tide of issues. Now, he's found a way to help leaders tackle these issues head-on by adopting a different perspective, a different approach, and a set of disciplines you may not be comfortable with at first. They require you to lay down the old ways of thinking about leadership and take a step towards becoming a self-evolved leader.

Rather than a list of leadership platitudes or philosophies, ***The Self-Evolved Leader*** is designed to be an instruction manual and playbook for getting the most out of yourself, your team, and your organization. Each skill builds on the one before, taking you a step further toward your journey to better leadership.

IN THIS SUMMARY, YOU WILL LEARN:

- How to stop managing from crisis to crisis and spend more time focusing on the long-term development of your people.
- How to lead in a way that gets better results from your team overall.
- How to dramatically increase the value you bring and the impact you have on your organization and community.

What Came Before is No Longer Enough

Each year we spend tens of billions of dollars on leadership training, books, workshops, webinars, coaches, and keynote speeches. Despite the colossal amount we invest in building better leaders, we're experiencing a more significant leadership gap than ever before.

Employee motivation is at an all-time low, turnover is up, and in survey after survey, the gulf between leaders' self-assessments of their effectiveness and the perception by those whom they lead is ever expanding.

This is important for two reasons. First, the world we live in isn't getting any less complex. We aren't going to return to a simpler time. Second, the problems faced by our organizations, communities, and species aren't going to get any easier. Climate change, rising income inequality, the polarization of political discourse, and the lens of tribalism through which we view the best way to tackle our most significant challenges all require a cadre of leaders who will rise to help us find a better way through—together. Never before have we needed a generation of leaders to step up and lead with authenticity, purpose, and effectiveness as urgently as we do now.

This book aims to provide a road map for leaders at any level of any organization to discover their authentic leadership calling, create a vision of a better world, and build the framework and structure needed to chart the course.

Break the Cycle of Mediocrity

Unfortunately, we as leaders have allowed a distorted image of what it means to lead our organizations, and it's causing a profound and dangerous knock-on effect on our teams. Let's call it the Cycle of Mediocrity.

Because it seems that decisions must always be made now, immediately, without delay, there's little time taken to consider the best course of action. This leads to leaders that take 'heroic' courses of action, plowing forward in an effort to 'lead.' But heroic leadership actually disempowers teams in the long run, putting the power of action entirely in your hands and stripping the power from your team members. This eventually leads them to feel helpless, disengaged, and unimportant. The result? You're required to take even more 'heroic' actions in the future.

Your goal should always be to elevate the things that are most important, not most urgent. Plenty of things are urgent, demanding attention right away—an email request for information, for example. But they're not always important. The important things are those that have long-term ramifications for your organization.

Building shared accountability for these important things and focusing on developing your people moves your team towards excellence. This creates a cycle of excellence, in which important tasks are handled by your team, creating shared accountability, development, and empowerment.

Reset Your Perspective on Leadership

Every transformation starts from within, and the transformation into a self-evolved leader is no different. Before you can make a material impact on your team and organization, there are some internal characteristics that need to be nurtured. Some of these may come naturally, and some will take a bit more time to develop.

Here are some of the primary traits of self-evolved leaders:

- They push for growth.
- They pursue an objective understanding of their leadership effectiveness.
- They take responsibility for their development.
- They focus on practice and reflection.
- They demonstrate vulnerability.
- They practice empathy.
- They feel a sense of connectedness.
- They operate from the locus of their control.

Vision—Set a Shared Destination

Building a compelling vision is the first of three key elements to becoming a self-evolved leader. A compelling vision brings alignment, a shared purpose, and a North Star for decision making. It gives your team a rallying cry, a motivational tool when things get difficult or pace slows down.

What does a compelling vision look like? The best ones are clear, exciting, representative of your 'why,' and connected to your organization's larger, overarching vision. This ensures that you and your team are always working towards goals that keep you in line with the bigger picture, and that your team feels closely engaged with and important to your company's mission.

What's the key to sustaining your vision? A constant drumbeat of communication. Never assume that everyone is on the same page. Don't mention the vision once and then assume that it will be top-of-mind for your team going forward. Your vision should be reinforced daily, or even more often. It should integrate itself into nearly everything you do.

To start, bring your team together to explore their perspectives on your team vision. Have them create two or three candidates for you to wordsmith into a final statement. Once you've established the final vision, use every opportunity to share that vision with your team, including team meetings, celebrating it in action, and as part of your onboarding plan for new team members.

Pulse—Build an Implementation Rhythm

Having a powerful, inspiring, and compelling vision for your team helps align people around a common goal. On its own, however, a vision isn't sufficient for success. You'll find that there are a few people for whom understanding the vantage point of where you're going is enough for them to understand how to deliver on the day-to-day.

The majority of your team will require a series of linkages that helps break that high-level vision into a series of actions. Your goal as a self-evolved leader is to help provide that clarity for everyone, regardless of which vantage they feel most comfortable operating at.

The challenge, then, is to start showing the connections between the 50,000-foot level and the runway level. This involves building a set of repeatable interactions across a number of vantage points, which allows you to set and review your team's progress in a proactive rather than reactive fashion.

Building an implementation pulse is a proactive way to wall off your team's time to focus on the important rather than get dragged into the urgent. Each vantage point provides its unique perspective on the progress of your team, and there should be a clear link between each of the interactions and achieving your overarching team vision. In fact, your implementation pulse should have a ruthless focus on execution.

Discipline—Develop the Key Practices

Creating a compelling vision is the most powerful way to call your team to a higher purpose, and your implementation pulse provides you with the drumbeat to get there. But when the weather changes and you go off course, you'll have no way to redirect yourself and your team without the discipline to overcome these challenging moments.

Discipline can be broken down into six 'micro-disciplines,' each of which can be drawn upon to help an individual or your team as a whole refocus and avoid losing momentum. They include:

- Take a pause.
- Exist in the present.
- Set context.
- Be intentional.
- Listen first, talk second.
- Push for clarity.

These are all learned behaviors, independent of personality, leadership style, emotional palette, or circumstances. If you and your team put in the hard work to adopt them in your day-to-day leadership, over time you'll see the positive impact they can have.

Reclaim Your Attention

The people in a room whose focus is on what's happening in the room consistently make better decisions, get more buy-in from their teams, and get better results. Multitasking is not a leadership skill. Managing your attention to devote full focus on the task, person, or project at hand is. Self-evolved leaders who get good at this and even master it are able to achieve a shift in focus to what matters, more achievement in a shorter period of time, increased creativity, and more control.

Facilitate Team Flow

Have you ever experienced the feeling of getting lost in an activity or task? You become so engrossed in what you're doing that hours go by. Psychologists describe this as a state of 'flow,' and when you operate in this state, you find a fine balance where the challenge of the task stretches your skills and spurs you to improve but not so much that it feels overwhelming. Flow is the middle ground between anxiety and boredom, and those who experience it regularly are usually happier, more productive, and have reduced stress levels. Although most of the research and modern perspectives on flow have applied to the individual, self-evolved leaders facilitate a sense of flow within their entire team.

Aim to delegate everything except those things that only you can bring value to, which will increase the chances of your team entering a flow state while collaborating together to solve problems. In almost every case, time spent showing

someone how to do a task or project is worth the investment. Once you've taught, step back and let them learn further themselves. Effective delegation will empower your people and free up your time to spend working on their long-term areas of development.

Support High Performance

Your goal as a self-evolved leader is to remove any chance of learned helplessness and help your people feel supported and empowered to find appropriate solutions to their challenges. Specifically, you should move from the perspective of managing high performance to supporting it.

When you try to manage high performance, you put the onus on you and your leadership skills, removing the sense of control your people have. When you support high performance, you provide the environment from which performance emerges—you push your team to assess their challenges themselves, to weigh their options and take action. The advice and guidance you give is sparing and only used to help them unlock a difficult situation.

Have Symbiotic Conversations

One of the key tenets of the self-evolved leader is the belief and understanding that the relationships and interactions between and among their team are growing ever more connected. The impact of one team member's decisions, actions, emotions, thoughts, and behaviors have a sustained impact on the rest of the team. A great day for one can lead to an even better day for the team, a kind word can increase morale, and a toxic person can poison the culture almost beyond repair.

At some point, you'll have to have a behavioral or performance-related conversation. These conversations work best when they're symbiotic conversations, or conversations that acknowledge the interdependence of the group and provides an opportunity for further growth among its members. Such a conversation can be centered on a positive event, for example, a team meeting that celebrates the individual contributions of a team member. Usually, however, the conversation is centered around a negative event, like a conversation with an underperforming team member.

Before engaging in a difficult conversation, start by assuming positive intent and mapping out what success looks like for you. Start the conversation by letting a team member know that the feedback is not criticism and ultimately, they have a choice of how to act on the information. Share data and examples, state the issue clearly, and know that you're not responsible for their reaction. Finally, put the next steps in their hands.

Build Shared Accountability

Building shared accountability within your team helps you move from pulling your team uphill to working with your team to push it together. Accountability and ownership cannot be taught; all you can do is provide the environment for your team to want to take it. Meanwhile, building shared accountability is a natural outflow of setting a clear vision, building an implementation pulse, and mastering the key disciplines.

Dave McKeown is the CEO of Outfield Leadership where he speaks, coaches, and trains on building leadership excellence at every level of an organization. He has a wealth of experience in connecting individual and team performance to improved business results with a particular focus on fast-growing, complex organizations.

THE SUMMARY IN BRIEF

As a business leader, you have plenty of tools at your disposal to communicate with employees. These tools allow you to talk to employees and get your point across. But how hard is it to sync your message with their needs - to actually engage them in their work as something collaborative, communal, and team-oriented? This is one of the most significant challenges that today's business leaders face.

Dr. Rick Goodman made it his mission to discover what made high performers successful. He spent two years traveling around the world, spending time with top leaders, CEOs, and entrepreneurs who had been responsible for creating and developing multi-million-dollar businesses with great leaders who had built outstanding teams and retained employees for years. In ***The Solutions Oriented Leader: Your Comprehensive Guide to Achieve World-Class Results***, Goodman shares the wisdom he gained on that journey and gives readers the 'secret sauce' to transform teams into rockstars.

IN THIS SUMMARY, YOU WILL LEARN:

- Seven traits of truly inspiring leaders.
- Six changes you may need to make to your leadership style today.
- How to hire smart to assemble your dream team.
- What hurdles impact employee retention.
- The five habits of engaging leaders.

Success Begins with You

The success of your team ultimately begins with you. Understanding this principle is the starting point for developing excellent team members. In the workplace, we tend to define ourselves according to job titles and descriptions. Our title establishes what we do, what we're in charge of, what our responsibilities are, and what is outside of our obligation. It lets us know when we are fulfilling our obligations and, perhaps, when we are truly going the extra mile. One common denominator of successful leaders is that they all exceed their job descriptions.

Real leadership means understanding your job description, and the job descriptions of everyone on your team - but it also means not being ***bound*** by those descriptions. Effective leaders do anything and everything they can do to elevate their team members to a place where they can succeed, and they ensure that everyone is working together toward meeting the team's goals. Leaders must really know their team members in order to tap into potential beyond job titles and descriptions. Leaders should also get to know their own strengths and weaknesses. An earnest assessment and appraisal of yourself allows you to know where to be hands-on and where to delegate. Leaders who do that separate themselves from the pack and quickly develop followers.

Going through a self-inventory will help you determine if you have the hallmarks of what it takes to be truly inspirational. There are seven traits of inspiring leaders that improve employee retention, maximize productivity, and increase the happiness quotient we can have in our business. Take stock of yourself and use these points to determine how inspiring a leader you are:

1. Perfecting a sense of purpose beyond your own success. Leaders measure their own success by the success of others. They see it as their mission and purpose to help their team members thrive.
2. Approachable. Team members should feel comfortable approaching you with questions, concerns, and feedback. If you're intimidating rather than approachable, that's a problem.
3. Open-minded. Great leaders are open to whatever works, even if it's not their own idea. Actively court solutions and suggestions from your team members and implement the ones that you think will work.
4. Candid and constructive. Inspiring leaders give the gift of feedback. If your team members actually accept your constructive feedback and make changes to their performance, that shows that they know you're trying to help them improve.
5. Treating your employees with equality. Favoritism and inspiration do not work together. If your employees feel like you prefer some over others, that ultimately reflects badly on your leadership style.
6. Being grateful. Inspiring leaders are thankful for the efforts of their team and they are not afraid to say so.
7. Focus on your team. Inspiring leaders are happy to give credit to team members rather than giving all the credit to themselves.

Follow the Leader

Nobody likes following a boss, but everyone loves to follow the leader! The decision you make about being a boss or a leader will affect everything you do from your communication to your outcomes. Let's take a look at the difference between a boss and a leader so that you can make an educated decision on which path you want to follow.

Leaders actually lead while bosses rule, govern, and dictate. Leaders listen, want to hear from their team members, and have them engage in the decision-making process. Bosses are not known for their openness towards collaboration. Leaders empower others by guiding team members and instilling them with confidence. Bosses on the other hand, may throw their employees into a project without much training or support. Leaders do not use intimidation as a tool for managing team members, but bosses don't know better than to leverage fear. Bosses think of themselves as above other employees who work for them. Leaders work with their team.

If you've made the decision to become a better leader, there are six changes you may need to make to your leadership style today that will point you in the direction you want to go:

1. Learn to listen rather than bark orders. Instead of commanding, call your team together for a discussion. Work together toward a solution, and then move forward.
2. Find tools for motivating your employees rather than scaring them. Provide metrics and data to your team members, showing them the impact they make.
3. Step away from micromanagement. Don't control

Give credit where credit is due, and make sure your employees know that you notice and appreciate their hard work.

your team members. Just provide them with some basic guidance. Share a goal and guidance and let them take it from there.

4. Make sure your feedback is constructive. Constructive feedback addresses problems, improves performance, empowers people, and ultimately yields better results.
5. Delegate. You have to trust your team members to tackle projects on their own. Take something that is on your plate and give it to an employee.
6. Be generous in your praise. Give credit where credit is due, and make sure your employees know that you notice and appreciate their hard work.

Hiring Smart

Assembling your dream team means paying attention to the folks who interview with you and ensuring that you're hiring not just on the basis of their skills or their resume accomplishments, but also on the basis of how they fit into your team and complement your other players. Here are a few tips for hiring smart:

- Hire for a specific set of tasks, responsibilities, and functions, not generalities. Make sure you can identify how all those tasks support the overall vision and mission of your team.
- You don't build a good team by hiring a group of people who all act and think like each other. Hire people whose perspectives and skill sets complement each other.
- Pay attention to personality. An applicant may have all the skills you need but he or she won't mesh well with the other team members. A clash of personalities could prove disruptive to the team dynamic.
- Solicit input from your team. Ask them what skills are needed in the office and what personality traits to look for in a new player.
- Communicate your team's purpose and vision during the interview process. Make sure the applicant is enthusiastic about it.
- Involve select team members in the hiring process. They can gauge the chemistry between new and existing employees.

Employee Retention

Leaders, employers, and HR representatives pour countless hours into each employee - grooming them, training them, investing in them, making them into integral members of the team. Sometimes, just when you turn an employee into a rockstar, that employee jumps ship. Of course, you probably do what you can to enhance employee retention but the hurdles to retention are numerous.

The first big hurdle to retention is bringing on the wrong employees in the first place. Team building starts with the hiring process. If you're recruiting employees who are a bad fit, don't be surprised when they don't stick around for the long haul.

Employees who get hired then quickly realize they have no clear way to advance in the company in another hurdle to retention. Talk to team members regularly about their career goals and be open with them about possible avenues for advancing within the company. Also, invest in training to make sure your employees know you care about their development.

The third hurdle to retention is lack of proper communications. Employees like to know that they have an open dialogue with the leader, or at the very least the HR manager. It's important that you keep those channels open.

Often the biggest hurdle to retention is money and benefits. Although you want to provide your employees with enticing benefits and competitive salaries, sometimes the budget just doesn't allow for it. That's when you have to get creative by offering cost-effective benefits like flexible scheduling, work-from-home options, and professional development events.

Engagement in the Workplace

Employee engagement is the measure of how emotionally committed your employees are to the team. Employee engagement plays a definite role in your bottom line and has a major impact on productivity, retention, morale, innovation, communications, and recruitment. When employees are engaged, they believe they are really a part of the organization and that you have invested in them as integral members of the team. Some of the fundamental hallmarks of employee engagement include: soliciting employee feedback, genuinely listening to them, ensuring they are clear in the vision of the company, and showing that you want them around for the long haul - something you can do by providing opportunities for professional training and development.

This factor of development is key. Employees need to know that they have opportunities to grow, to broaden their horizons, to deepen their skillsets. When there's no room for growth, employees feel stagnant and ultimately, leave the team.

Employee engagement doesn't actually start with your employees. It starts with you, the leader - with the example you set, the culture you build, and the commitment you make to inspire your team members. If you want to boost engagement, put some effort into these practical, real-world steps:

- **Align the Workforce:** It falls to you to cultivate a clear sense of mission and to make plain how every project, task, and employee contributes to that mission.
- **Empower the Managers:** Those that you interact with daily are the ones you need to invest in first. Provide them with direction in house they can listen, set clear expectations, and deliver feedback that is truly constructive.
- **Emphasize Fairness:** In everything you do - from resource allocation to how you make sales - make sure you're being fair. Playing favorites leads to disenfranchised employees.
- **Create Leaders:** Invest in promising talent and encourage them in leadership development. Help them develop skills of engagement and motivating others.
- **Measure!** As the solutions-oriented leader, one of your most important responsibilities is measuring results. Use surveys and other employee feedback programs to benchmark your progress.

If you are feeling more like a boss and less like a leader, change is possible. By focusing on becoming a solutions-oriented leader you will develop specific traits that lead to consistent success. If you follow these proven-successful principles, you will begin to develop your dream team that will gladly follow you, their leader.

Dr. Rick Goodman is one of the most sought-after leadership and engagement experts today. His keynote presentations and workshops have produced transformational results leading to highly engaged employees, increased productivity, and higher profits. Dr. Rick is also a successful entrepreneur who walks his talk and shares his winning philosophies with his audiences. He has built several extremely successful multimillion-dollar businesses and uses those experiences to provide solutions for his clients and audiences throughout the world.

THE SUMMARY IN BRIEF

There is one thing that is common to every individual, relationship, team, family, organization, nation, economy and civilization throughout the world - one thing which, if removed, will destroy the most powerful government, the most successful business, the most thriving economy, the most influential leadership, the greatest friendship, the strongest character, the deepest love.

On the other hand, if developed and leveraged, that one thing has the potential to create unparalleled success and prosperity in every dimension of life. That one thing is trust.

The Five Waves of Trust model serves as a metaphor for how trust operates in our lives. This summary will cover these forms as the structure for understanding and making trust actionable, including a look at the Four Cores of credibility and the 13 Behaviors of high-trust leaders.

IN THIS SUMMARY, YOU WILL LEARN:

- The economics of trust and its effects on speed and cost in relationships and organizations.
- How you can assess your credibility based on character and competence.
- The taxes and dividends that flow from organizational trust.
- How to be an effective leader by inspiring and extending trust.
- How to restore lost trust.

Nothing Is as Fast as the Speed of Trust

Simply put, trust means *confidence*. The opposite of trust - distrust - is *suspicion*.

The difference between a high- and low-trust relationship is palpable. Take communication. In a high-trust relationship, you can say the wrong thing and people will still get your meaning. In a low-trust relationship, you can be very measured, even precise, and they'll still misinterpret you.

You don't need to look far to realize that, as a global society, we have a crisis of trust on our hands. On the organizational level, trust within companies has sharply declined. But relationships of all kinds are built on and sustained by trust. They can also be broken down and destroyed by a lack of trust.

Society, organizations and relationships aside, there's an even more fundamental and powerful dimension to self-trust. If we can't trust ourselves, we'll have a hard time trusting others. Personal incongruence is often the source of our suspicions of others.

Truly, we are in a crisis of trust. It affects us on all levels - societal, institutional, organizational, relational and personal.

Economics of Trust

Trust always affects two outcomes: **speed** and **cost**. When trust goes down, speed goes down and cost goes up. Consider the time and cost of airport security after 9/11, or costs for Sarbanes-Oxley Act compliance, passed in the U.S. in response to Enron, WorldCom and other corporate scandals.

When trust goes up, speed goes up and cost goes down. Warren Buffett completed the acquisition of McLane Distribution from Wal-Mart on the basis of a two-hour meeting. Because of high trust between the parties, the merger took less than a month and avoided the usual months and millions for due diligence and attorneys.

The serious practical impact of the economics of trust is that we are paying a hidden low-trust tax right off the top - and we don't even know it!

You've undoubtedly seen this tax in action many times - perhaps in a conversation where you can tell that someone is automatically discounting everything you say by 20 percent, 30 percent or even more. In some situations, you may have paid an "inheritance tax" when you've stepped into a role that was occupied by someone who created distrust before you.

Just as the tax created by low trust is real, measurable and extremely high, so the dividends of high trust are also real, quantifiable and incredibly high.

Whether it's high or low, trust is the "hidden variable" in the formula for organizational success. The traditional business formula is:

(Strategy x Execution = Results).

But there is a hidden variable:

(Strategy x Execution) x Trust = Results.

A company can have an excellent strategy and a strong ability to execute; but the net result can be torpedoed by a low-trust tax or multiplied by a high-trust dividend. This makes a powerful business case for trust, assuring that it is not a soft, "nice to have" quality.

Myth vs. Reality

Myth	*Reality*
Trust is soft.	Trust is hard, real and quantifiable. It measurably affects both speed and cost.
Trust is slow.	Nothing is as fast as the speed of trust.
Trust is built solely on integrity.	Trust is a function of both character and competence.
You either have trust or you don't.	Trust can be both created and destroyed.
Once lost, trust can be restored.	Though difficult, in cannot be restored. most cases lost trust
You can't teach trust.	Trust can be effectively taught and learned, and it can become a leverageable, strategic advantage.
Trusting people is too risky.	Not trusting people is a greater risk.
You establish trust one person at a time.	Establishing trust with the one establishes trust with the many.

One of the reasons this hidden variable is so significant in today's world is that we have entered a global, knowledge worker economy that revolves around partnering and relationships. The ability to establish, grow, extend and restore trust with all stakeholders - customers, suppliers and co-workers - is the key leadership competency of the new, global economy.

You Can Do Something About This!

Who do you trust? A friend? A work associate? Your boss? Why do you trust this person? What is it that inspires confidence in this particular relationship?

Now consider an even more provocative question: Who trusts you?

With the increasing focus on ethics in our society, the character side of trust is fast becoming the price of entry in the new, global economy. However, the differentiating and often ignored side of trust - competence - is equally essential.

Once you become aware that both character and competence are vital to trust, you can see how the combination of these two dimensions is reflected in the approach of effective leaders and observers everywhere. People might use different words to express the idea, but if you reduce the words to their essence, what emerges is a balancing of character and competence.

The Five Waves of Trust

Your boss, division leader, CEO, board of directors, spouse, children, friends and associates may all have problems as far as trust (or anything else) is concerned.

But that does not mean that you are powerless! In fact, you probably have no idea how powerful you can be in changing the level of trust in any relationship if you know how to work "from the inside out."

The key is in understanding and learning how to navigate "The Five Waves of Trust." This model derives from the "ripple effect" metaphor that graphically illustrates the interdependent nature of trust and how it flows from the inside out.

It defines the five levels, or contexts, in which we establish trust. It also forms the structure for understanding and making trust actionable.

First Wave: Self Trust. The key principle underlying this wave is credibility.

Second Wave: Relationship Trust. The key principle underlying this wave is consistent behavior.

Third Wave: Organizational Trust. The key principle underlying this wave, alignment, helps leaders create structures, systems and symbols of organizational trust.

Fourth Wave: Market Trust. The underlying principle behind this wave is reputation.

Fifth Wave: Societal Trust. The principle underlying this wave is contribution.

Understanding these waves will enable you to see, speak and behave in ways that establish trust, allowing you to become a leader who gets results by inspiring trust in others.

The First Wave: Self-Trust

The good news is that we can increase our credibility, and we can increase it fast, particularly if we understand the four key elements, or four "cores" that are fundamental. Two of these cores deal with character; two with competence.

Core 1: Integrity

To use the metaphor of the tree, integrity is the root. Even though it's underground and not even visible most of the time, it is absolutely vital to the nourishment, strength, stability and growth of the entire tree.

We've all seen people with enormous capability, strong results, even sometimes good intent who unfortunately go about what they're doing in a dishonest or unprincipled way. It's "the ends justify the means" mentality.

On the other hand, to have integrity only - and not the other three Cores - is to be a "nice guy," maybe even a thoroughly honest person, who is basically useless.

To most people, integrity means honesty - telling the truth and leaving the right impression. But there are at least three additional qualities: congruence, humility and courage.

So how do we go about increasing our integrity?

1. **Make and keep commitments to yourself.**
2. **Stand for something.**
3. **Be open.**

Core 2: Intent

In the dictionary, intent is defined as "plan" or "purpose."

No discussion of intent would be complete without talking about three things: motive, agenda and behavior.

1. **Motive**. Motive is your reason for doing something, and it inspires the greatest trust when it shows genuine concern for people, purposes and society as a whole.

2. **Agenda**. Agenda grows out of motive. It's what you intend to do or promote because of your motive. The intent that inspires the greatest trust is seeking mutual benefit, realizing that life is interdependent and seeking solutions that build trust and benefit for all.

3. **Behavior**. Typically, behavior is the manifestation of motive and agenda. The behavior that best creates credibility and inspires trust is acting in the best interest of others. This is where the rubber meets the road. It's easy to say "I care," and "I want you to win," but it is our actual behavior that demonstrates whether or not we mean it.

In many organizations, the message communicated by behavior is not "we care;" it's "you're expendable." Consider these findings from a study:

- Only 29 percent of employees believe that management cares about them developing their skills.
- Only 42 percent believe that management cares about them at all.

It's important to keep in mind that sometimes, unfortunately, poor behavior turns out to be bad execution of good intent.

1. **Examine and redefine your motives.** It's human tendency to assume we have good - or at least justifiable - intent.

2. **Declare your intent.** It signals your behavior and lets people know what to look for so they acknowledge it when they see it.

3. **Choose abundance.** Abundance means there is enough for everybody. The opposite - scarcity - says that there is only so much to go around, and if you get it, I won't.

Role models, insightful thought leaders and practitioners serve as powerful reminders that we can do something about even the very deep, personal, character-based issues that impact our credibility, which is the prerequisite for trust.

Core 3: Capabilities

Going back to the metaphor of the tree, capabilities are the branches that produce the fruits or results. Capabilities are particularly essential in today's changing economy, where technology and globalization are outdating skill sets faster than ever before.

One way to think about the various dimensions of capabilities is to use the acronym TASKS (Talents, Attitudes, Skills, Knowledge, Style).

Talents are our natural gifts and strengths. *Attitudes* represent our paradigms - our way of seeing - as well as our ways of being. *Skills* are our proficiencies, the things we can do well. *Knowledge* represents our learning, insight, understanding and awareness. Style represents our unique approach and personality.

The end in mind here is to develop our TASKS and to create the best possible alignment between our natural gifts, our passions, our skills, knowledge and style and the opportunity to earn, to contribute, to make a difference.

To enhance credibility by increasing capabilities:

1. **Run with your strengths.**

2. **Keep yourself relevant.**

3. **Know where you're going.**

Core 4: Results

Results matter! They matter to your credibility. In the words of Jack Welch, having results is like having "performance chits" on the table. They give you clout.

Returning once again to the metaphor of the tree, results are the fruits - the tangible, measurable, end purpose and product of the roots, trunk and branches.

There are three key indicators by which people evaluate results: past performance, present performance and anticipated future performance.

Given the importance of results in establishing credibility and trust both with ourselves and with others, the question is: How can we improve our results?

1. **Take responsibility for results.**

2. **Expect to win.**

3. **Finish strong.**

The Second Wave: Relationship Trust

The Second Wave - Relationship Trust - is all about behavior ... consistent behavior. More specifically, it's about the 13 Behaviors that are common to high-trust leaders and people throughout the world. As you work on behaving in ways that build trust, one helpful way to visualize and quantify your efforts is by thinking in terms of "Trust Accounts." Remember that each trust account is unique; all deposits and withdrawals are not created equal; and what constitutes a deposit to one person may not to another.

All 13 Behaviors require a combination of both character and competence. The first five flow initially from character, the second five from competence, and the last three from an almost equal mix of character and competence.

Taken to the extreme, however, these Behaviors do not build trust, and the "opposite" or "counterfeit" of each Behavior creates the biggest withdrawals.

Character-Based Behaviors

Behavior #1: Talk Straight. Communicate clearly so that you cannot be misunderstood. Preface your discussions by declaring your intent, so you leave no doubt about what you are thinking. Counterfeit behaviors include withholding information, flattery and spin. Be honest and call things what they are. Don't manipulate people, distort facts or leave false impressions.

Behavior #2: Demonstrate Respect. This behavior is based on the principles of respect, fairness, kindness, love and civility. The opposite is commonly experienced as showing disrespect, which is a huge issue, both at work and at home. The counterfeit is to fake respect or concern, or, most insidious of all, to show respect and concern for only those who can do something for you.

Behavior #3: Create Transparency. Be real and genuine and tell the truth in a way that people can verify. The opposite is to obscure, and the counterfeit is illusion or pretending things are different than they are. You can establish trust quickly by being open and authentic, erring on the side of disclosure and not having hidden agendas.

Behavior #4: Right Wrongs. Make restitution instead of just apologizing. The opposite is to deny or justify wrongs because of ego and pride, and the counterfeit is to cover up mistakes. Apologize quickly, take action to make restitution when possible, and demonstrate personal humility to achieve this behavior.

Behavior #5: Show Loyalty. Give credit to others and speak about people as though they are present. The opposite is to take credit or not represent people fairly. The counterfeit is to appear to share credit but then downplay others' contribution when they are away. To exhibit a trustworthy character, give credit freely, don't badmouth people behind their backs and don't disclose others' private information.

Competence-Based Behaviors

Behavior #6: Deliver Results. This is a way to convert cynics and establish trust in a new relationship. Because it is often difficult to measure results, take time to define results up front. By establishing a track record, making the right things happen, being on time and on budget, and not making excuses for not delivering, you quickly restore lost trust on the competence side.

Behavior #7: Get Better. Continuously improve by learning, growing and renewing yourself. Others will develop confidence in your ability to succeed in a rapidly changing environment. The opposite is entropy and deterioration, while the counterfeit is the eternal student - always learning, but never producing. Don't be afraid to make mistakes but learn from them. Develop formal and informal feedback systems and respond to them.

Behavior #8: Confront Reality. Take the tough issues head-on. This affects speed and cost by facilitating open interaction and fast achievement, and also allowing you to engage the creativity, capability and synergy of others in solving problems. When leaders use the opposite behavior by ignoring problems, they pay a huge tax when people feel they are being dishonest. It is far better to address the real issues and lead courageously in discussions of uncomfortable topics.

Behavior #9: Clarify Expectations. Create shared vision and agreement up front. The opposite is to leave undefined expectations and the counterfeit is to be vague about specifics. Consider that most circumstances encompass three variables - quality, speed and cost - but you can only have two. Always discuss and reveal expectations, and never assume they are clear or shared. Renegotiate if necessary, but don't violate expectations once they have been validated.

Behavior #10: Practice Accountability. Hold yourself and others accountable. Leaders who generate trust do both. The opposite is not to take responsibility, and the counterfeit is to point fingers. Other people respond to accountability - particularly performers. They want to be held accountable. Don't avoid or shirk responsibility, and be

clear on how you'll communicate progress.

Character & Competence Behaviors

Behavior #11: Listen First. Genuinely understand another person's thoughts and feelings, before trying to diagnose or advise. The opposite and counterfeit are to speak first and listen last, or not at all, and to pretend to listen while waiting for your own chance to speak. Listening teaches you which behaviors create dividends. Use your eyes and your gut to listen as well as your ears, and don't presume you know what matters to others.

Behavior #12: Keep Commitments. It is the quickest way to build trust in any relationship. The opposite is to break commitments and the counterfeit is to make vague, unreliable commitments, or never make them in the first place. Some cultures view commitments differently, and understanding the difference is key to getting dividends and avoiding trust taxes. People tend to see family commitments as more flexible than work commitments, but they are just as important. Make keeping all commitments the symbol of your honor.

Behavior #13: Extend Trust. Shift trust from a noun to a verb. While the other Behaviors help you become a more trusted person or manager, this 13th Behavior helps you become a more trusting leader. Extending trust leverages it to create reciprocity.

The opposite is withholding trust. The counterfeit is extending false trust by giving people responsibility, but no authority or resources to complete a task. There is also fake trust that seems like trust until you follow-up behind people and micromanage. Based on the situation, extend conditionally to those who are earning your trust, but extend it abundantly to those who have earned it.

Stakeholder Trust

The Four Cores and the 13 Behaviors of the First and Second Waves are all trust-building tools. Stakeholder trust focuses on the context in which you can use these tools to increase speed, lower cost, create value, establish trust, and maximize your influence and the influence of your organization.

An organization can be a company, a department or your family, but the Third Wave deals with internal stakeholders. The Fourth and Fifth Waves deal with external stakeholders.

Third Wave: Organizational Trust

Most people find that their organization has symptoms of low trust - people manipulating facts, withholding information, resisting new ideas and covering up mistakes. A lucky few find that people in their organization share information openly, tolerate and encourage mistakes, are innovative and creative, and share credit abundantly.

The low trust environment is a result of violating principles - not only individually, but organizationally. Leaders are missing the solution because they are not looking at the systems, structures, processes and polices that affect day-to-day behaviors. They are focused on the symptoms instead of the principles that promote trust.

This misalignment creates symbols that represent and communicate underlying values to everyone in the organization or family. A symbol can be either negative or positive; from a 500-page employee handbook, to a newly appointed CEO who refuses to accept a pay raise because it might send the wrong message to workers. If your organizational symbols communicate and cultivate distrust or less trust than you want, return to the Four Cores.

Fourth Wave: Market Trust

Market Trust is all about brand or reputation. It's all about the feeling you have that makes you want to buy products or services or invest your money or time - and/or recommend such actions to others. This is the level where most people clearly see the relationship between trust, speed and cost.

Brand is important to all organizational entities, including governments, school districts, charities and hospitals, not to mention corporations. School reputation affects who moves

eBay Creates Transparency

eBay CEO Meg Whitman and her team lead what she describes as a "dynamic self-regulating economy" in the complete openness of the worldwide Web. Whitman recognizes her company's distinctiveness: "We have a unique partner - millions of people." According to BusinessWeek OnLine, rather than controlling or hoarding information, eBay has chosen to let their citizens have full access to "every trend, every sale, every new regulation in the eBay world. The system is utterly transparent."

into the district and therefore the taxes available to the school. Cities have reputations that turn into tourist dollars and attract business.

On a micro level, every individual has a brand or reputation that affects trust, speed and cost. It comes across in your resume in comments from your references and it translates into how people interact with you in social situations.

In the global marketplace, many brands are now being taxed or receiving dividends based on people's perception of and trust in the country of origin. Whether a company is based in China, France, India or the U.S. affects people's perception of whether the company can be trusted to do what is right. Currently a trust tax is hitting U.S.- based brands hard. Though they receive dividends in the U.S. and Asia, they are taxed heavily in parts of Europe.

If you find you do not have the brand you desire, you can measurably increase its value by using the Four Cores as a diagnostic tool to pinpoint the reason why, and where investment will bring the greatest return. Then use the 13 Behaviors with external stakeholders - customers, suppliers, investors, communities - and you will build trust at the marketplace level.

Fifth Wave: Societal Trust

The overriding principle of high societal trust is contribution. It's the intent to create value instead of destroy it; to give back instead of take.

Microsoft guru Bill Gates, his wife Melinda, U2 lead singer Bono and Oprah Winfrey are all high profile contributors, but society is full of individuals contributing time, energy and money in communities throughout the world.

This is not an impractical or utopian view of the world. The principles of contribution and responsibility create trust at a societal level through today's trend toward global citizenship, or corporate social responsibility (CSR). Intel, Wells Fargo and Procter & Gamble, all in the top 10 of *Business Ethics* magazine's "100 Best Corporate Citizens" show that doing good is no longer an addition to business; it is part of business itself.

CSR, or "intentional virtue," was part of the original concept behind Adam Smith's free enterprise system. During the 1990s it was diluted, and massive violations of the Four Cores and 13 Behaviors led to greed, fraud, and low trust taxes.

Now a backlash is creating a global renaissance of trust. Though initially fear of pain might motivate global citizenship, over time, the dividends and abundance created by contribution will become primary drivers for both individuals and organizations. Global citizenship will be demanded as customers support companies that demonstrate the Four Cores.

Inspiring Trust

Trust is a whole life choice, and until you are actually in a front-line situation, you will not even see the full power of the Cores and Behaviors on speed, cost and trust. Look immediately for ways to apply them and find opportunities to teach them to others.

You will see how the speed of trust; the profits of the economics of trust; the relevance of the pervasive impact of trust; and the dividends of trust can significantly enhance the quality of every relationship on every level of your life.

You may still be hesitant or fearful when it comes to actually extending trust, but leaders who extend trust become mentors, models and heroes. Inspiring trust is the prime differentiator between a manager and a leader, and the prime motivator of successful enterprises and relationships.

Companies that choose to extend trust to their employees become great places to work. Most people respond well to trust and do not abuse it. We are born with a propensity to trust and choosing to retain or restore that propensity is key to our ability to forgive. We have countless opportunities to extend and inspire trust to others, but it also makes a difference in our own lives. Trust is reciprocal.

Extending 'Smart Trust'

Have you ever trusted someone - and gotten "burned?" Have you ever failed to trust someone and missed significant opportunities?

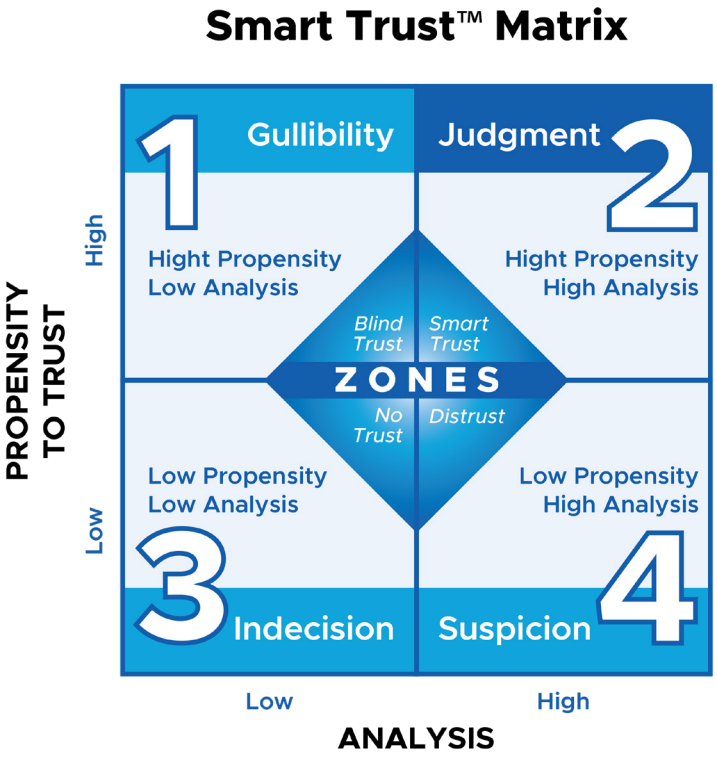
Extending trust can bring great dividends. It also creates the possibility of significant risk.

Zone 1: Blind Trust zone of gullibility. The suckers sure to fall for scams.

Zone 2: Smart Trust zone of judgment. Good business judgment and good people judgment combine to enhance instinct and intuition.

Zone 3: No Trust zone of indecision. Those who don't even trust themselves and are immobilized by insecurity and protectiveness.

Zone 4: Distrust zone of suspicion. Those who rarely extend trust beyond themselves.



Zone 1 (gullibility) and 3 (indecision) are definitely high risk, but people might think Zone 4 (suspicion) is the lowest risk zone because it is where you analyze and calculate and consider issues by yourself. Actually, it is high risk, because high suspicion leads you to validate and analyze everything to death, decreasing speed and increasing cost.

Managers in Zone 4 miss opportunities, cut off collaboration and analysis from others. They incur low trust taxes including bureaucracy, politics, disengagement and turnover, and they lose high-trust dividends such as innovation, collaboration and partnering.

The lowest risk and highest return occur in Smart Trust Zone 2 (judgment), where risk is wisely moderated and managed and you can carefully evaluate and consider issues. Your propensity to trust releases, encourages and generates synergy.

It is not necessary to extend Smart Trust automatically. You can extend limited trust or no trust at all in Zone 2, just as you might do in Zone 4. The decision may be the same, but the different approach and risk management always builds trust, whether you are a business leader or a parent.

Managers who don't become leaders don't know how to extend Smart Trust. They operate in Zone 4. They delegate tasks without parameters or extend fake trust, but they don't fully entrust people with stewardships that engages genuine ownership and accountability.

Inspire trust by starting with yourself and your own credibility, and then consistently behave in trust-building ways with other people. You should also think about the way your style is perceived, so people do not misunderstand you.

Restoring Lost Trust

The idea that trust cannot be restored once it is lost is a myth. Though it may be difficult, in most cases, lost trust can be restored - and often even enhanced.

Societal Trust: Restoring trust on the societal level means rebuilding trust in countries, institutions, industries, professions and in other people generally.

In the Republic of Ireland, leaders over the past 30 years have changed the nation's focus from inward to outward. They have moved the nation from economic independence to interdependence from overhauling an archaic educational system to making Ireland one of the world's undisputed education leaders.

Market Trust: In the 1990s, Nike was criticized by activists for not being socially responsible, based on the conditions in some of the plants of their foreign manufacturing partners.

Chairman Phil Knight acknowledged the company's "bumpy original response" to criticism, however, and Nike's actions and behavior over the ensuing years has demonstrated tangible results. In 2005 they were listed as #13 on the "Best Corporate Citizens" list.

Organizational Trust: Restoring trust within an organization may seem difficult, however, the fact that high-trust organizations outperform low-trust organizations by three times provides a strong incentive to make the effort.

Relationship Trust: If you're a customer of a company that violated your trust, you may not give them a chance to restore it. That's a transactional thing.

But if a family member violates your trust, it's not transactional. One area that creates huge trust issues in personal relationships is money.

Money problems are a key cause of divorce. Two people coming into a relationship are often scripted in different ways

by family experience - one may come from a background of spenders, while the other comes from a background of thrift.

Even in difficult situations in close, personal relationships, trust can be restored. And the very effort of restoring it can make it even stronger than before.

Self Trust: Often, the most difficult trust to restore is trust in ourselves. When we violate a promise we've made to ourselves, our self trust can really take a dive. Restoring self trust gives another dimension - a powerful dimension - to the Cores and behaviors.

Broken Trust - A Beginning: If you've broken trust with someone else, it's an opportunity to get your own act together, to improve your character and competence, to behave in ways that inspire trust. Hopefully, this will influence the offended party to restore trust in you.

If someone has broken trust with you, it's an opportunity for you to grow in your ability to forgive, to learn how to extend Smart Trust, and to maximize whatever dividends are possible in the relationship.

Stephen M. R. Covey is co-founder and CEO of CoveyLink Worldwide. A sought-after and com- pelling keynote speaker, author and advisor, Covey addresses audiences around the world on issues such as trust, leadership, ethics and high-performance.

THE SUMMARY IN BRIEF

The world has changed, and the human touch in business is a casualty of those changes. Many people seem to believe that everything is about them. Technology allows us, even requires us at times, to transact business with machines rather than human beings. Somewhere along the way, dealing with others with heartfelt kindness has become a lost art.

The Spirit of Hospitality: How to Add the Missing Ingredients Your Business Needs explains how to own a spirit of hospitality and infuse it in your business to make it successful.

Author Larry Stuart, a hospitality expert with 40+ years of experience in hospitality leadership, explains the seven key ingredients of hospitality and what business should be like when they're applied. This book is not about being fake. The spirit of hospitality is caught, not taught. Especially if you are a leader in hotel, restaurant, or airline management, this book will inspire you to "catch" a heart that recognizes kindness and spreads it to others. In the process, your business' bottom line will grow.

IN THIS SUMMARY, YOU WILL LEARN:

- What it means to run a business with a spirit of hospitality.
- The 7 key ingredients in the spirit of hospitality.
- How you can build and maintain the spirit of hospitality.
- How a spirit of hospitality will help your business.

Building the Spirit of Hospitality

How can your business build the spirit of hospitality? It starts with your company's culture. Eat, sleep, and breathe your spirit-of-hospitality culture. Talk about it everywhere, at every opportunity, so team members will make it their own. When the right people are on board and everyone is clear on what the company's culture is, turnover decreases and productivity, morale, and commitment increase.

Integrity and the Spirit of Hospitality

Operating with a spirit of hospitality is not about pretending to care. You and your people must have integrity, which means you must be honest and have strong moral principles. Your good name, and the company's, are critical to success. A good name is built by following through on what you say you will do and doing the right thing for the right reason, no matter the cost. Set a standard of excellence.

Hiring the Spirit of Hospitality

When hiring, the key is to find the right people who are passionate about life, their purpose, and career goals. You must hire quality people who understand the difference between doing their job and serving other people from their hearts.

In hospitality, team members must be people persons. A sunny disposition is a must. Look for people with a natural welcoming smile. If you hire people with these qualities, you can train them to do the tasks you need them to do. To reduce expensive turnover, consider carefully what position to put a new hire in.

Training the Spirit of Hospitality

Your efforts cannot end when employees are hired, of course. You must have a robust training program, and it should include training not only in necessary skills but also in the company's culture. Everyone, from the CEO down, must walk the talk.

It will be helpful to include the following in your training program:

- Team members must know and understand their purpose—what they're responsible for and how to best serve.
- Train your team members ***with*** empathy and to have empathy when they're serving guests. Team members should consider the guest first and the business second.
- Make sure that team members understand your expectations about the business culture and their job performance—and what the consequences are of failure to comply. Set achievable short-term goals and set long-term goals or a motivating vision for your team members and yourself.
- Train team members to be flexible, which helps when dealing with difficult or disagreeable situations.
- Use showmanship and drama to create a positive environment. Train your team members to know your product so they can answer questions and make recommendations. Give your products personality! But the show shouldn't take precedence over service itself. Understand when guests want to participate by interacting and when they want to be left alone.
- Acknowledge people for a job well done and recognize their needs. Train team members to go "off script" and converse with guests rather than just give canned responses.
- Time management is the key to productivity.

After formal training concludes, follow up proactively with your team members. Training must be ongoing. Don't hesitate to invest in training. A dollar spent on training will save you three in advertising for new employees. And train your people ***with*** people, not just technology.

Together Everyone Achieves More

Teamwork, a cooperative effort by members of a team to achieve a common goal, starts with servant leadership. Make it a point to know your team members. Roll up your sleeves and work alongside them, when needed. Treat them like they're part of a larger picture—as indeed they are—so they will be encouraged to take ownership in their responsibilities and stay with the company. Think of your team members as "internal guests." Like external guests, they are people with their own needs, desires, talents, and skills. Without them to serve guests, we would have no guests and no business.

The 7 Key Ingredients for the Spirit of Hospitality

1. Team Unity

Without unity, a team will fall apart. All members of the team, including leadership, need to operate with a like-minded approach—with a servant's heart. Many things can get in the way of like-mindedness, including individual clashes, cliquishness, and competition. To establish a team that works in unity, establish values, review goals, relate the values to the goals, and demonstrate team relations.

Trust is important to promote unity, and it comes down to character. Always keep your word. The better you care for your internal guests, the better they'll care for your external guests. To help build your team members' trust in you and the business, don't micromanage; give team members a chance to prove themselves capable.

2. Encouragement

Servant leaders are champions for others. They know how to encourage others to get past their challenges and failures and continue to grow. Acknowledge the people at all levels who helped you reach your achievements. After all, it was a team effort.

Build up others through encouragement and reward—everyone who contributed, not just the obvious people. Know your people and figure out what kinds of encouragement they most need.

3. Accountability

As servant leaders, we must be willing to admit our mistakes, which builds trust, in turn leading to loyalty.

Our team members should be held accountable as well, because we want to consistently increase productivity, thereby improving guest service. Four ways to hold staff accountable are to review their performance, redirect their work with kindness (and in private), reward them, and, when necessary, remove them from the position.

Of course, we as leaders and all team members must be accountable to provide great service to guests. When things go wrong, we should do everything we can to correct the error, regardless of what caused it.

4. Generosity

In hospitality, we must allow ourselves to be generous, so our guests will be blessed, and then we, in turn, will also be blessed. Greedy people will suck the life out of the work environment, step over others, and treat guests with disdain. That's no way to live and no way to conduct business. Give with a joyful heart—time, money, even something small like a smile.

When giving any kind of gift to guests or to team members, it's important to recognize what they (not we) would appreciate. Every guest and every team member wants to know that they are important. Servant leaders need to be willing to go the extra mile for them.

Rewards to team members should be distributed in a standard, consistent way in order to avoid discrimination or even the perception of it.

5. Kindness

Many people have forgotten the value of kind, which is a shame because when we act with kindness, the recipient is made to feel exceptional, important, and special.

People don't soon forget kindness. The guest who enters your establishment needs to feel your and your staff's kindness from the time they step foot through the door until the moment they leave. Otherwise, they may not ever come back.

It's not difficult: look for ways to do acts of kindness as part of daily life and treat others as you would like to be treated.

6. Humility

Change is good; don't be afraid of it. Adopt the mindset that you're always learning and open to new ideas. Every business and everyone who works there has strengths and weaknesses. Recognize what needs to be changed and be humble enough to admit your mistakes—immediately own a mistake, admit it, and make any necessary apology.

Humility is all about putting ourselves before others. In the hospitality industry, there is no room for pride or selfishness.

7. Gratitude

Regardless of how guests and others treat us, it's important that we maintain an attitude of gratitude in every situation. When we recognize that life isn't about us, it becomes easier to be thankful when serving others. We can make a choice not to take others' emotions and actions personally and go down their negative path. In other words, we can choose the spirit of hospitality. Happiness is circumstantial; joy comes from within. Choose joy.

Working with a Spirit of Hospitality

Empowering the Spirit of Hospitality

The best thing you can do for your team members is empower them to do their jobs well and provide a system of accountability so they can take responsibility for their mistakes, failures, and successes. Give them the support, coaching, training, and authority to make one-time, on-the-spot decisions for the benefit of the guest and the company. When a guest explains a problem to a staff member, the one who hears it owns it.

What the Spirit of Hospitality Looks Like to Guests

Guests want to be welcomed into a warm, inviting environment, to be noticed, to be treated like they matter, to be served, and to perceive that the server cannot wait for the

opportunity and pleasure of serving them. Exceed their expectations. Make eye contact, recognize each guest before they get to you, and give them a warm smile.

Regardless of how much the guest is spending, give great service to each individual guest. Guests who don't feel appreciated aren't likely to return. If you listen to their concerns, solve their problems efficiently and amicably, and consistently serve them from the heart, they will return.

Serving the Spirit of Hospitality

Serve your brand by providing extraordinary guest service. Wow your guests! They will notice and spread the word about how they felt welcomed by your business.

The key to a life of service is compassion. Someone who operates with a servant's heart has five characteristics:

- They don't see labels.
- They don't fear the consequences of doing what they see as right.
- They are never too busy to meet a need.
- They don't bat an eye at what it will cost them to care for another person.
- They expect nothing in return.

Excellent guest service is not a reaction to guests' needs but a sincere proactive effort toward building a warm relationship by serving guests from the heart.

For you and your team members, knowledge is key. Everyone should be able to anticipate what guests are going to ask—they ask the same questions all the time—and be prepared to answer with a variety of answers depending on what seems most appropriate for the individual guest.

Knowing how to read people helps greatly—and genuinely listening to them will take you a long way.

Conflict and the Spirit of Hospitality

In hospitality, as in every part of life, conflicts will happen. The key is to have a plan for how to handle conflict internally and with guests and make sure your team knows what is expected ahead of time.

The integrity of a true service-oriented business is shown in how it responds when things go wrong. No matter how a guest is acting, stay calm, listen carefully, and empathize. Guests aren't interested in excuses and explanations, so accept responsibility for solving the root problem to the guest's satisfaction. Unfortunately, 96 percent of unhappy guests never complain about rude or discourteous treatment; they just don't return. Even worse, they spread the bad news about their experience.

Return on Investing in the Spirit of Hospitality

To increase our business' ROI, there are three things we need to make a point to be aware of: first, our external guests' satisfaction; second, our internal guests' satisfaction; and third, how we stack up in the industry against our competition.

ROI is about relationships. When a business loses customers, the biggest reason is service-related. Sixty-eight percent are turned off by and disappear because of an attitude of indifference on the part of a company team member.

To sum up, the spirit of hospitality comprises the extraordinary ingredients that are necessary for a business' success in today's world. Weave the spirit of hospitality into every nook and cranny of your business relationships and you will see the rewards in your quality of life, your relationships, your career, and your business' financial success.

Larry Stuart is a Hospitality Professional who has spent a lifetime serving others. He is a true "Servant Leader" who has built Enthusiasm, Excellence, and Greater Purpose into the teams he has been honored to serve.

Larry is a Graduate of Cornell University's School of Hotel and Restaurant Administration, an Adjunct Professor, Forbes Contributor, Author, Speaker and, Emeritus President of the Cornell Hotel Society FL. He currently owns and operates a 24-year-old business in Walt Disney World. He has started up, opened or operated over 50+ Restaurants, 7 Major Hotels, and 1 Airline.

The Unstoppable Power of Leaderless Organizations

THE STARFISH AND THE SPIDER

THE SUMMARY IN BRIEF

A spider is a creature with eight legs coming out of a central body. It has a tiny head and usually eight eyes. If you chop off the spider's head, it dies. That's exactly what happens with a centralized organization. A centralized organization has a clear leader who's in charge, and there's a specific place where decisions are made. Get rid of the leader and you paralyze the organization.

A decentralized organization is a different animal — it is actually a starfish. At first glance, a starfish is similar to a spider in appearance. But the starfish is decentralized. The starfish doesn't have a head. The major organs are replicated throughout each and every arm. In reality, a starfish is a neural network — basically a network of cells. Instead of having a head, like a spider, the starfish functions as a decentralized network.

In The Starfish and the Spider, *Ori Brafman and Rod A. Beckstrom address the fundamental differences between the starfish organization and the spider organization. They demonstrate with examples why starfish organizations are sometimes confused with spiders, how difficult it is to attack or destroy a starfish organization and why a smart business model for the future is a hybrid organization — part starfish, part spider.*

In addition, this summary will address:

- ✓ ***The right questions to ask when distinguishing a starfish organization from a spider organization.***
- ✓ ***The rise of successful starfish organizations, such as Skype, craigslist and Wikipedia.***
- ✓ ***The importance of circles, catalysts and ideology to the starfish organization.***
- ✓ ***The key differences between catalysts and CEOs.***
- ✓ ***Specific strategies to defeat starfish organizations.***
- ✓ ***Rules for living in the new world of decentralization.***

THE STARFISH AND THE SPIDER

By Ori Brafman and Rod A. Beckstrom

— THE *COMPLETE* SUMMARY

When There's No One in Charge

When there's no one in charge, you'd think there would be disorder, even chaos. But in many arenas, a lack of traditional leadership is giving rise to powerful groups that are turning industry and society upside down.

Decentralization has been lying dormant for thousands of years. But the advent of the Internet has unleashed this force, knocking down traditional businesses, altering entire industries, affecting how we relate to each other and influencing world politics. The absence of structure, leadership and formal organization, once considered a weakness, has become a major asset. Seemingly chaotic groups have challenged and defeated established institutions. The rules of the game have changed. ■

MGM's Mistake and the Apache Mystery

Don Verrilli was about to argue a case in front of the Supreme Court in late March 2005; Verrilli and an all-star legal lineup were the hired guns of MGM. MGM, in turn, was joined in the suit by giants like Columbia, Disney and Atlantic Records. What were these giants fighting? Grokster, a tiny company that allows people to steal — or "share" — music and movie files over the Internet for free.

Justice Stephen Breyer wanted to know why it was such a problem. Verrilli pleaded, "The facts are that the recording industry has lost 25 percent of its revenue since the onslaught of these services."

Five years before the Supreme Court case, Shawn Fanning launched a company called "Napster" out of his college dorm room. People logged into a central server and shared files with others around the world. The recording labels quickly slapped Napster with a lawsuit. In February 2000, the courts ruled against Napster, and in June 2003, the company declared bankruptcy.

The recording industry went after the specific thieves — the people who were swapping the music, and they also went after the people who were enabling the theft, like Napster. They hired attorneys like Verrilli. Two months after his oral arguments in front of the Supreme Court, a unanimous decision was handed down in MGM's favor.

This did not prevent the problem of music piracy, however. In fact, the labels were adding fuel to the fire with every new lawsuit. The harder they fought, the stronger the opposition grew.

Ancient Mysteries and the Spanish

The best explanation for these events comes from an unlikely source: Tom Nevins, a cultural anthropologist who wrote a book on the Apaches. He tells the story of an ancient mystery. Spanish explorer Cortes went to the Aztec capital of Tenochtitlan in Mexico and encountered a civilization with a central government and a lot of gold. He took the gold, killed the leader, Montezuma II, and starved 240,000 of the city's inhabitants. Two years after Cortes discovered Tenochtitlan, the entire Aztec empire had collapsed. The same thing occurred when the Spanish confronted the Incas.

The Spanish took control of the continent by the 1680s. Then they encountered the Apaches. This meeting is crucially linked with the music industry's fight. Why? Because the Spanish lost.

They lost to a people who at first seemed primitive. The Apache defeat of the Spanish was all about the way the Apaches were organized as a society. The Apaches distributed political power and had very little centraliza-

MGM's Mistake and the Apache Mystery

(continued from page 2)

tion. They persevered because they were decentralized.

A centralized organization has a clear leader who's in charge, and there's a specific place where decisions are made. Rules need to be set and enforced, or the system collapses.

Decentralized systems, like the Apaches, are different. There's no clear leader, no hierarchy, no headquarters. The power is distributed among all the people and across geographic regions.

Instead of a chief, the Apaches had a Nant'an — a spiritual and cultural leader who led by example. On first impression, it may sound like the Apaches were disorganized. In reality, they were an advanced and sophisticated society that was immune to attacks that would have destroyed a centralized society.

Coercive vs. Open Systems

When a coercive system, like the Spanish, takes on an open system, like the Apaches, they start killing the leaders. But as soon as they killed a Nant'an, a new one would emerge. The strategy failed because no one person was essential to the overall well-being of Apache society.

Amazingly, the Spanish attacks served to make the Apaches even stronger. This is the first major principle of decentralization: *When attacked, a decentralized organization tends to become even more open and decentralized.*

Napster's destruction didn't quell people's desire for free music. Along came Kazaa. It was different from Napster because there was no central server. Kazaa is like an Apache village. Unlike the record labels, there are no headquarters, and if you want to make a thousand copies of your favorite song, go right ahead.

Not only is the music industry unable to curb pirating, but, in accord with the first principle of decentralization, every time the labels sue a Napster or a Kazaa, a new player comes onto the scene that's even more decentralized and more difficult to battle.

The harder you fight a decentralized opponent, the stronger it gets. Waging the battle started a chain reaction that now threatens the entire music industry. What we've seen is just the tip of the iceberg. ■

The Spider, the Starfish and the President of the Internet

It was 1995, and Dave Garrison had a problem. He'd just been hired as the CEO of Netcom, an early Internet service provider, and he knew nothing about the Internet. He learned about it in a limousine, while riding around trying to raise money for the company.
