To maintain a challenging environment, we, as leaders, have to be on guard against complacency, an innovation killer. We also need to keep the fire lit under our team, reaching out to all members to make them feel they belong — that they are valued and we trust them to move us forward to success.

Shifting Goals from Performance to Learning

A performance goal is an aspiration to perform well. A learning goal, in contrast, is an aspiration to learn something new or improve at a particular skill or task. Learning something new requires experimentation, hard work, long study or new ways of collaborating.

Sometimes a learning goal involves staring intently at someone else who is more skilled in order to visualize, and then develop, a particular skill. And sometimes a learning goal involves spectacular failure while attempting something new.

Carol Dweck, the author of *Mindset,* found in her research that choosing difficult tasks for the sake of continuous improvement is something to be sought after.

When we see excellence, we should praise the effort, grit, patience and hard work it must have taken to get there. We'll not only be rewarding excellence but also reinforcing the idea that continuous growth and learning is a good thing, and that challenges are to be embraced, not feared. Constant growth and learning is one of the key ingredients to building resiliency and overcoming difficult situations and setbacks.

While we, as leaders, should always work to build up our teams by offering them challenges, we also should be on the lookout for the best talent we can add to those teams. Our secret sauce is our people. But attracting and keeping the best people means continually offering them challenge and the right environment in which to meet it.

4. Express Gratitude

While meeting challenges is valuable in building character, we also need to reward that effort. Expressing gratitude for good work is critical for trust and well-being in ourselves and in our teams. Gratitude doesn't mean just saying "thanks." To show gratitude in a meaningful way, we must understand what drives our need for it, what drives us in our work and the rest of our lives.

Organizations have to get all the factors right. Without fair pay, there is a deep sense of inequity and loyalty erosion. Without clear goals, people feel adrift and without purposeful direction. Without praise, people feel neglected. But one factor outweighs the rest — making meaningful progress. That quarterly bonus is nice, but we're not going to stay if that's all we're getting out of a job.

While praise, incentives, equitable pay, interpersonal support and clear goals are all important, they are also all *extrinsic* motivators — they come from the outside, from someone else. A sense of satisfaction in making progress doing meaningful work is an *intrinsic* motivator. It's a sense of joy and satisfaction that comes from within.

Here are a few ways to stoke your sense of meaningful progress:

- **Express creativity.** We should go ahead and add a flourish — put our signature on it, make it our own. When we do this, we take personal pride and ownership of our work. It becomes meaningful to us personally.
- **Revitalize dormant relationships.** Nothing is as marvelous as gaining new insights from old friends to fuel our efforts.
- **Assume leadership.** We should take responsibility, step up. Assuming leadership can be terrifying, making us feel scrutinized, uncertain and out of our element. And that's a good thing. Pushing ourselves to the edges of our capacity in leading meetings, projects and interactions will help us grow as leaders.
- **Be of service.** Our most powerful motivator comes from within. The real question we should be asking is not "What can I get?" but "What can I give?"

Looking Outside the Box

"It's easy to feel grateful for the good things," writes Robert Emmons, codirector of the Expanding the Science and Practice of Gratitude project at the University of California, Berkley, "No one 'feels' grateful that he or she has lost a job or a home or has taken a devastating hit on his or her retirement portfolio."

If we can summon the strength to reframe a negative experience into a positive one, we can grow in our own self-development. If a relationship really was toxic and we have the strength to see through the emotional pain of being dumped to be grateful that the other person was willing to confront it and end the relationship, then we can grow and move on.

When we summon gratitude in the face of adversity, we turn meaningless cruelty into growth and strength.

5. Fuel Curiosity

You can spot a real expert versus a phony. Look for three little words: "I don't know." The phony will have all the answers, while the expert will admit what they don't know. Real experts are relentlessly curious, even *assertively curious* — that is, they will demand explanations for things that many others simply accept as rules.

Creativity consistently ranks among the most sought-after and valued characteristics of workers today. Executives know that the next killer app, product, service or innovation is going to come from relentlessly curious and creative people.

The most desirable professionals today are happy, collaborative and have hustle, but, above all, they are relentlessly curious and creative.

These people are also assertive. Curious people are decision makers. They are influencers. In interviews, they often say they have direct influence over the outcome of decisions and change. If you think of the people in your company and community who consistently drive change, you will likely be thinking of inquisitive people — people willing to ask the hard questions.

These two behaviors — deeply questioning and then taking action — reinforce levels of creative engagement. This is because highly creative people also tend to be fearlessly persistent. They often describe themselves as "adventurous" and "risk taking." They tend to follow their values, even when their path runs counter to what the group is doing.

Cultivating Curiosity by Shifting Perspective

There is good evidence to suggest that our own success can stifle the curiosity of those around us, so it's important not to get too inebriated by our own sense of power and prestige. A powerful antidote to power poisoning is learning to take the perspective of someone else, to set aside our own agenda for a moment and consciously attempt to understand another's point of view.

One way to fuel the creativity of those around us is simply to work on understanding and communicating back to them their own perspective. Perspective taking is the exercise of intentionally shifting from trying to convince others of an idea to trying to understand the ideas and perspectives of others.

The exercise of conscientiously taking another's perspective tends to elevate communication and openness to new ideas, because other team members feel a greater sense of empathetic interest.

The small, intentional act of seeking to understand another's perspective has a direct and powerful effect on accelerating collaboration and innovation.

6. Grant Autonomy

While it's good to help our teams build their confidence and meet challenges, it's also important to let them loose to explore and try their ideas on their own.

When we feel like we own much of what we do, we tend to take responsibility and really love our work. And when we love our work, we learn faster.

In 2014, a team of researchers examined 88 different studies on the effects of practice over time. Practice certainly matters, they found, but other factors were equally important, such as how much the participants enjoyed the activity.

That may come as no surprise, but we should keep that in mind when making project and task assignments in our professional work. Task invitations that are a stretch but that people might enjoy are invitations for excellence. But we are far more likely to get mediocre results when we offer project and task invitations for activities people detest. And research seems to suggest that no amount of arguing for pluck, grit and perseverance will improve results when the task presented is against the skill set of those assigned it.

Letting Others Fail On Their Own

Too often, hiring managers and recruiters brag about only hiring the best and the brightest from the top schools but then won't give them the latitude to make even the most mundane decisions on their own.

In a November 23, 2015 interview, Bashar Nejdawi, executive VP of Ingram Micro, said that sometimes he knows a project or initiative of a junior team will fail. He has the experience and the insight to recognize that it's likely to bomb, but he lets it unfold anyway. He believes that, as long as it's not a mission-critical failure, it's more important to let people go through that learning experience themselves. They need to have the experience of understanding firsthand that a particular process or initiative won't work.

At some point we have to let go of those we manage and understand that the benefits of granting autonomy can yield big results in terms of company success.

7. Strive for Authenticity

It's quite common for people to conceal parts of their identity for fear of being stigmatized. At work people often hide their religion, political values, sexual orientation and health conditions. People even conceal what might seem to be quite benign things, such as parental obligations to fetch a sick child from school or take them to a dentist appointment — all out of fear of being branded as not professional, not dedicated or, most important, not like everyone else at work. It's an effort to get along, to be part of the group, to fit in.

Once we start to conceal personal identity traits, it also becomes harder to honestly and genuinely connect with others. The result is that we lose a sense of belonging, which is at the very core of one of today's buzzwords: engagement.

To bring out the best in people, we need a culture that not only allows but actively encourages expression of who we are. And the very best bosses and leaders understand this by creating an environment of inclusiveness and acceptance, because those basic fundamentals of inclusiveness, social acceptance and assuming the best in others are the building blocks for accelerating innovation.

Paying the Cost of Conformity

When we perform tasks or engage in activities because, as part of an organization, we go along with the idea that "we've always done it that way," or because the person with the greatest seniority in the room suggested it, we're acting out of conformity.

Conformity can be a great thing — it can enable teams to soar and military groups to function seamlessly and efficiently, and allows decisions to be made faster. It means acting in accordance with social standards and conventions, which can offer safety, convenience, efficiency and harmony within a society.

But it is not conformity but rather positive and creative deviance that drives change. On December 1, 1955, in Montgomery, Alabama, Rosa Parks, at age 42, refused to obey bus driver James Blake's order that she give up her seat to make room for a white passenger. In her own words, she was "tired of giving in."

We are all vulnerable to conformity and, to stay on the creative edge while truly participating in group decision making, we need to be aware of our vulnerability to it. We need to cultivate healthy skepticism toward our own group, and to be willing to disappoint or surprise people in the name of being true to ourselves and for the sake of innovation. It's the difference between belonging to a group and simply fitting in. When we feel a strong sense of belonging, we feel enabled to be ourselves, wholly and authentically. That sense of belonging gives us better confidence to think and act authentically.

8. Be Fully Present

While leadership sometimes requires action, it sometimes means simply showing up and being fully present. Let's explore the concept of being fully present and, closely associated, the state of mindfulness, and how being fully present and mindful affects the quality of our relationships with others.

The definition of "mindfulness," a concept with Buddhist roots, varies depending on the source. The *Merriam-Webster Dictionary* defines it as "the practice of maintaining a nonjudgmental state of heightened or complete awareness of one's thoughts, emotions or experiences on a moment-to-moment basis."

Mindfulness is also about relationships. In fact, Dr. Richard Chambers and Margie Ulbrick write in their book *Mindful Relationships: Creating Genuine Connection with Ourselves and Others,* "mindfulness *is* relationship" — with ourselves and the world around us, our environments and the people we interact with. It's about how we experience our bodies and our emotions, and each other.

Sitting with a loved one, or alone, watching and enjoying a sunset is a mindful moment. Walking our dog in the park, or preparing a meal or listening to music can all be mindful experiences if we are fully present, focused and undistracted. At work, we can be mindful, sitting quietly in a meeting and listening thoughtfully to the ideas and opinions of a colleague if we are undistracted and listening with unbiased openness.

For decades people have attempted to do everything faster, even reading faster in vain attempts to absorb information faster. But a growing body of new evidence suggests that the path to heightened comprehension and immersive learning is by reading *slower,* not faster.

The fact that greater comprehension and content cognition comes from slowing down makes perfect sense when we understand that, at a fundamental level, mindfulness is — in the words of Ellen Langer, one of the world's foremost scholars on mindfulness — "the process of actively noticing new things." It makes sense because to notice new things we must be present, open and aware.

Mindfulness teaches us to understand our lives as one integrated whole.

Showing up each day with mindfulness and presence, and modeling the behavior you believe in, is a small act of leadership.

9. Inspire Others

One of the greatest predictors of effectiveness, happiness and success in work is our capacity to inspire others. Inspiration is rooted in passion, in curiosity and in our desire to live our lives to the fullest. To inspire, we must be inspired, and to be inspired, we have to take time to notice the small acts of leadership readily available in any situation.

Slydial is the app that lets you go straight to voice mail, safe from the possibility that someone might actually answer your call. Slydial exists in part because of the energy vampires in the world — those people you dread talking to because they leave you depleted, bummed out, frustrated or annoyed with every conversation. However hopeful you remain, they will figure out how to suck the energy from the conversation.

To avoid being an energy vampire, we should ask ourselves, "When people leave an interaction with me, do they leave feeling more or less energized?"

According to Rob Cross, associate professor at the University of Virginia's McIntire School of Commerce, our ability to create energy in the workplace, with our colleagues around us, is a more powerful predictor of our success than other criteria, including function, title, department, expertise, seniority, knowledge and intelligence. These are all descriptors. Creating energy is a behavior, and it can be learned. The ability to generate energy in those around us is so important that many successful executives and leaders place it at the top of the list as the most important attribute in team members.

Inspiring others by energizing them doesn't have to do with backslapping or pumping people up with platitudes or grandiose conference-room speeches. We can all become energizers by developing the characteristics energizers have in common:

- They are fully present.
- They open up possibilities.
- They follow through.
- They add value instead of trying to top others.
- They use supportive questions.
- They share their vitality.

10. Clarify Roles

History is littered with disasters that came about because the wrong person was in charge at the wrong time or because who should be in charge was unclear. Sometimes these disasters occurred through miscommunication and sometimes because leaders neglected their roles.

The key to a beautifully crafted machine is that every part works and is in the right place — in the role it fits. The same is true of teams in the workplace.

Next time you're standing at the gate waiting to get on a flight, watch when the crew shows up. Watch how they interact with one another. Do they laugh? Do they ask questions they don't know the answer to? Does it sound like they are listening well to one another? Or do they ask questions out loud — to no one in particular — and answer themselves?

They are all pros and they work at the same airline, but there's a very good chance they have never met one another. Yet, it turns out that how these professionals interact in the first few minutes will tell you a lot about how effective they are going to be shortly as a team up in the sky.

Mary Waller, a researcher at York University in Toronto, has been studying something she and her colleagues call "swift-starting expert teams." These teams are everywhere — TV news crews, emergency-response teams, event organizers. They are composed of highly specialized professionals who assemble for a specific job or task and often have little or no previous interaction with one another but do share the following characteristics: They are competent and familiar with complex work environments; work quickly under situations of time pressure; have a stable role on the team but ad hoc team membership; and have complex, interdependent tasks that rely on interactions with teammates.

It turns out that how members interact with one another during just the first 15-20 minutes is highly predictive of how they will perform as a team for the entire duration of the job. The reason is that interaction patterns established early in these relationships usually persist throughout them, on any operation in which they serve together.

The communications within well-performing teams have the following characteristics:

- They are simple, consistent and balance with one another.
- The most effective teams keep their communication short, precise and targeted to a specific task or job sequence.
- They are balanced. Team members rely on one another and balance participation in communication.

If we keep our team communications consistent, targeted and balanced, our teams will soar. Team rituals — however small or humble — will help us better define who is doing what on our teams.

11. Defy Convention

Positive deviance refers to actions that, although outside and even disruptive of the norm, have honorable intentions and positive outcomes.

On Monday, August 29, 2005, Hurricane Katrina made its third and most devastating landfall, with sustained winds of more than 125 mph. Inside the headquarters of Hancock Bank in Gulfport, Mississippi, Katrina's 30-foot storm surge had driven four feet of water throughout the ground floor and destroyed the elevator system. A tornado had ripped out 13,000 windows on the face of the building and blown glass, furniture and debris throughout the interior. The bank had a one-inch-thick steel roof that had been peeled off by the gale-force winds, and in the basement, the central data center was flooded and blasted with falling sheetrock as the interior walls crumbled and fell.

The following morning, the bank executives huddled over the hood of a car in the parking lot. Serving customers from Texas to Florida, Hancock Bank was one of the primary banking providers in the region. But without power at its branches or ATM facilities, there was no way the bank's customers could access their funds to buy basic needs. The executives then did something remarkable: Reminded of the original charter of the bank to serve communities first, profits second, they asked their branch managers to open no matter what.

Without power or lights, and some without doors or windows, that afternoon 10 locations opened for business. Several of those locations served customers from card tables in front of the shattered bank. In exchange for an IOU on a Post-it note, with only a name and an address if they had no identification, each makeshift bank provided $200 in cash to anyone who asked for it. That's right — in the critical week following Katrina, without requiring either proof of identification or verification of account information, Hancock Bank pulled cash from destroyed ATM machines, dried it out and put $42 million into the local economy.

According to bank CEO George Schloegel, less than $200,000 was not returned. And in the five months following the disaster, 13,000 new accounts were opened, and bank deposits grew by $1.5 billion. Yes, billion. Hancock Bank had definitively become the bank of the community.

That's the power of knowing the right thing to do and actually doing it, no matter how far it deviates from business as usual. It's what happens when leaders are courageous enough to disrupt the status quo, deviate from the norm in a positive way and live their values.

12. Take a Break

In our work to commit constantly to small acts of intentional and incremental leadership behavior, we may overlook a seemingly small act that can reap huge benefits — taking a break. Hitting the pause button can help us gain a new perspective, refresh our creative energy, relate better to our team members, and spur innovation.

Ryan Sanders cofounded a staffing company, BambooHR, about five years ago. Tired (literally) of the go-go workaholic mentality he saw in the 1990s, he now enforces a 40-hour workweek at his company, which has specific policies to keep its employees from working overtime. If you are a BambooHR employee at your desk at 5:30 p.m., Sanders will probably visit you and ask what's up. But if your work problem persists, you could be fired. One of his software developers nearly lost her job after putting in a few 60- to 70-hour weeks.

BambooHR understands what should be clear to all companies: When we are exhausted, our work quality deteriorates and our decision-making ability falls off a cliff. There's a reason that sleep deprivation is used as a form of torture.

We can create more positive futures for ourselves and for those around us through small, incremental steps taken each day. You may think to yourself, "But I don't live in that world. I live in the world of rushing to meetings and oceans of emails and stress!" We can all move into a calmer, more fulfilling and more impactful life. And the path to getting there is filled with small but highly intentional choices made consistently over time.

It is not intermittent, extraordinary actions that separate great leaders from everyone else; rather mindful leaders consistently do the simple things — like knowing when to take a break — extraordinarily well. When we start by doing the small things well, big things can happen.

MORE SV CONTENT ON LEADERSHIP BEHAVIOR

Access these and more in your Soundview Online Library:

Summary: *Fearless Leadership* by Loretta Malandro. Dr. Malandro, leadership guru, has developed a groundbreaking behavior-based approach that is used around the world to create top-performing leaders and high-performance companies. This step-by-step will show you how to properly handle uncertainty and how to hold yourself and your employees accountable.

Webinar: *Connecting with the People Who Power Your Business* by Ed Wallace. Relationships hold companies together and fuel future growth. From connecting with customers to forging high-performing teams, success depends on everyone working well together. Ed Wallace will help you establish common ground, focus on collaboration instead of command, put people before process, demonstrate worthy intent and make every interaction matter.

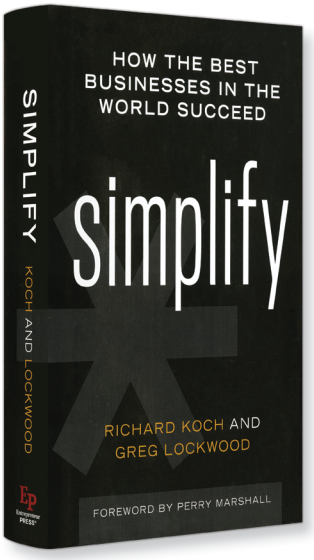
Simplify

How the Best Businesses in the World Succeed



by Richard Koch and Greg Lockwood

THE SUMMARY IN BRIEF

Are you ready to become the next market leader?

Over the last 40 years, investor and successful entrepreneur Richard Koch has worked to uncover the simple principles and strategies behind every successful business. With the help of venture capitalist Greg Lockwood and supported by research from OC&C Strategy Consultants, Koch has uncovered the one uniting principle behind successful companies such as IKEA, Apple, Uber and Airbnb. The answer is simple: They simplify.

Through common-sense principles, careful research and engaging stories, Koch and Lockwood show how the best businesses in the world achieve amazing success by simplifying in one of two ways: via price or proposition. Presenting detailed, step-by-step plans for how to simplify using these two main strategies, they also outline the traps that lead managers to avoid simplifying, and explain how to recognize whether a business might be at risk of disruption from simplifying challengers.

By following Koch and Lockwood's simplifying strategies, businesses can achieve phenomenal success and help society in the process. Don't chase success by making things more complicated. Instead, let *Simplify* show you how to win by doing the opposite. Start simplifying today.

IN THIS SUMMARY, YOU WILL LEARN:

- Why simplifying a business or market is the key to exponential growth.
- The key differences between simplifying price and simplifying proposition.
- What it means to make a "virtuous trade-off."
- How companies like IKEA and Uber have simplified to crush the competition.
- To recognize warning signs from simplifying competitors.

THE COMPLETE SUMMARY: **SIMPLIFY**

by Richard Koch and Greg Lockwood

The authors: Richard Koch is the best-selling author of *The 80/20 Principle*. He is also a highly successful entrepreneur and investor whose businesses have included Filofax, Plymouth Gin, Belgo Restaurants, Betfair, FanDuel and Auto1. Greg Lockwood is a founder of Piton Capital, a London-based venture capital firm that invests in businesses with network effects. He is the co-author of *Superconnect* with Richard Koch.

The Secret Is Out!

Simplifying is the secret of creating a very large market and of generating a very profitable business. In hard economic terms, simplifying has two great benefits:

- It can lead to high growth in a business and market; and
- It can do so at high margins, because simplifying can lead to low costs of production and high prices at the same time.

Nearly all of the great success stories of the 20th century are stories of simplifying.

Simplifying is *the* key to the kind of product and business innovation that creates incredibly high value for customers, society and shareholders alike. Simplifying has been an invisible red thread running through business history in our lifetime and that of our parents and grandparents.

But now the secret is out! And this should enable tens of thousands of new innovators to create extraordinary value for themselves and others. The process of intelligent innovation can be speeded up!

How to Simplify

If you want to simplify, you must choose one of two simplifying strategies that is best suited to your venture, aspirations and market opportunity. You must then be uncompromising in executing the chosen strategy.

The first is called *price-simplifying*. This requires cutting the price of a product or service in half or more. The way to cut prices by 50–90 percent is usually *not* to provide an inferior product but rather to organize the delivery of the product in a different way that allows much higher volume and greater efficiency . . . and often to co-opt the customers into doing some of the work! Price-simplifying works because markets usually respond to dramatic price cuts by multiplying their size exponentially.

The second strategy is *proposition-simplifying*. This involves creating a product that is useful, appealing and very easy to use, such as the iPad (or any other Apple device of the last decade), the Vespa scooter, the Google search engine or the Uber taxi app. Proposition-simplified products are also usually aesthetically pleasing.

Proposition-simplifying creates a large market that did not previously exist in the same form or at all. For instance, there was no market for tablet computers before the iPad. Unlike price-simplifying, products that proposition-simplify do not involve a radical reduction in price; they may even command a price premium. Proposition-simplifying works when the product becomes a *joy to use*.

Let's start by looking at some of the best examples of simplifying that research has uncovered.

PART I: GREAT SIMPLIFIERS

The Man Who Democratized Travel

When he was 45, and a moderately successful industrialist, Henry Ford took a brave stand that shook the world. He decided to simplify and democratize the automobile. His great insight was that the key was price. If he could make a car cheap enough, it would, he believed, sell in vast quantities.

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor in Chief; **Ashleigh Imus**, Senior Editor; **Masiel Tejada**, Graphic Designer; **A. Imus**, Contributing Editor

He had some supporting evidence: In 1905-6, Ford made two models, one priced at $1,000 and the other at $2,000. The company sold 1599 cars that year. The following year he simplified both models and slashed the prices: "The big thing was that [my] cheapest car sold for $600 and the most expensive for only $750, and right there came the complete demonstration of what price meant. We sold 8,423 cars, nearly five times as many as in our previous biggest year."

How did Ford manage to keep his prices sufficiently low to create a new mass market? His first idea was to redesign the product and make just one standardized, simple model. By making a single product — for more than a decade, with few variations and options permitted — Ford could reduce his costs considerably.

He also paid great attention to the materials that went into his cars. For example, he pioneered the use of vanadium steel, a French invention that was both very light and very strong. The vanadium steel disposed of most of the weight in Ford's car — decreasing fuel consumption — yet actually cost less than the traditional alternative.

The other plank of Ford's low-price car was a new production system, geared to make vehicles at high scale and low cost. He built the world's largest factory on a 60-acre site at Highland Park, near Detroit. The average number of employees rose from 1,908 to 4,110 and the cars built from a little over 6,000 to nearly 35,000.

The real breakthrough came with a proprietary innovation, designed by his production managers: the move from batch production to a continuously moving assembly line. This didn't happen until 1913, and it was then that Ford famously insisted that all of his cars would be painted black, because only Japanese black paint could dry quickly enough to keep up with the speed of the line.

Ford's case perfectly illustrates how cost and price reduction is not a one-off affair but a gradual, continual process fueled by a few big innovations.

Prices don't have to be slashed in half immediately. Instead, a virtuous circle can be created, where the first cost reductions create a larger market and greater market share, with the benefits of greater scale subsequently lowering costs and prices and raising demand further. What is essential, however, is a dogged commitment to achieve the lowest possible cost and price.

Though Ford's main objective in simplifying was always to cut costs, he also simplified to achieve two other objectives — a more useful car (higher utility) and one that was easier to drive and maintain (greater ease of use).

Ford foreshadowed some of the other great simplifiers, because they built on his methods.

The Billionaire Who Travels by Bus

Ingvar Kamprad was only 17 when he founded IKEA as a mail-order company. Five years later he started selling furniture. The story goes that one day he couldn't fit a table into his car, and a friend suggested removing the legs. Kamprad immediately had the idea of flat-packed furniture. He realized that half the sale price of a table was in the cost of transporting it. So if he could persuade the customer to do the final assembly — by engineering parts that fitted together easily and providing unambiguous instructions — he could cut his costs in half.

IKEA is founded on the idea that its goods should cost no more than half — and preferably a third — the price of equivalent furniture and furnishings. The obsession with target prices and economy comes directly from IKEA's founder. Employees still talk about the time Kamprad attended a glittering event to collect a Businessman of the Year award. The security guards saw him arrive by bus and refused to let him in.

How can IKEA be so much cheaper? Much of the answer lies in transportation costs. A table or a bookcase sold through a shop has to be transported at least twice and often three times — from the factory to a warehouse, from there to the store, then from the store to the customer's home. IKEA eliminates most of this cost. Typically, its goods travel only once at IKEA's expense — from the manufacturer to the store. And because the goods are in flat packs, they are much easier and cheaper to transport and to store than preassembled furniture.

IKEA would not make so much money without getting its customers to lend a hand. So how does it manage to convince those customers to do so much hard work? A very low price — less than half the price under the traditional system — is the obvious answer. But IKEA increases the *usefulness* of its products and its shopping experience by offering a one-stop solution. A visit to the store can be a day out for the whole family — there are play areas for children and inexpensive restaurants. Then there is the *art* embodied in the products. IKEA's products are well designed and stylish. IKEA also increases *ease of use* for its customers. The stores are easy to find — with their colossal yellow-and-blue signs — and have ample, free parking. There is a more extensive range of stock sitting within the store than elsewhere. And the vast majority of items can be taken away immediately — no waiting for delivery.

Like Ford, Kamprad was a price-simplifier. A common tactic in price-simplifying is to cut back certain expensive services and to compensate for this by lavishly providing

low-cost (or, ideally, profit-making) services. That is exactly what IKEA does.

The overriding objective is to cut prices yet offer "cheap" or "free" benefits to draw in more customers. These benefits can be categorized as ease of use, greater usefulness and art. These provide a template for any simplifier to dream up cheap or free advantages for their customers.

The big test of any new system for a simplifying firm over the long term is whether it can be imitated or improved by a rival. If the new business system is bold enough, if it eliminates traditional benefits that the customer is willing to forgo in exchange for large price cuts, and if it provides other benefits that are both cheap and unique, then the risk of imitation or supersession falls dramatically.

Market share provides the final bulwark against this risk. If, like IKEA, you can win more than half of the relevant market (self-assembly furniture in IKEA's case) and be 10 times larger than any rival, you are likely to be secure unless a rival spots a different way to discount prices again. In IKEA's case, this seems highly unlikely.

Steve Jobs is an example of a second breed of simplifier — *proposition-simplifiers* — because the overwhelming innovation and advantage lie in the proposition of the product or service, not in its price. In Jobs' own phrase, the product has to be "insanely great." The product must be a joy to use; it must have a palpable "wow factor."

With proposition-simplifiers, their absolute priority is to make the product or service not just a little better but a whole order of magnitude better, so that it is recognizably different from anything else on the market. The Macintosh, the iPod, the iPad, and the Apple watch all met this criterion: The proposition was either a great improvement on an existing product or else a totally new, unique creation. It had to be insanely great, a joy to use.

At least one of the dimensions specified as optional extras for price-simplifiers — ease of use, usefulness or art — must be present in a proposition-simplifier's new product or service. In fact, usually two or three of these benefits must be present; but whether it is one, two or all three of these advantages, they must transform the proposition.

Taxi! The Brave New World of Apps

The big advantage of Uber is the proposition, not the price. It provides all three of the customer benefits from simplicity:

Ease of use: Simplifies the ordering process: no hailing, no phoning, no searching; reduces uncertainty of when the car will arrive and the type of vehicle; simplifies the payment process — the system is entirely cashless; makes the price transparent with an accurate fare estimate for your trip.

Usefulness: Security and peace of mind through tracking; better quality through rating driver and passenger on every trip; universality — a single app works in most major cities around the world; saves time through seamless on-demand dependability; automatic electronic receipts; choice of services, from everyday to luxury cars.

Art: The experience is a revelation when compared with traditional taxis. In sum, it is a joy to ride in an Uber cab.

The system itself is extremely simple, not least for the company itself. It owns no cars. It is just an intermediary that uses technology to connect riders with drivers, then takes a slice of each transaction. Uber was founded in San Francisco in 2009 by CEO Travis Kalanick and Garrett Camp. They devised the software app that enables the system to work, recruited drivers in San Francisco and launched the site in 2010. Since then, Uber has spread to 250 cities throughout the world. Although it was started with very little money, on May 15, 2014 the *Financial Times* reported that Uber had raised $1 billion of funding at a $10 billion valuation. Seven months later, the firm raised a further $1.2 billion, but now the reported valuation was more than four times higher — $41 billion. And in May 2015 the company was reported to be raising a further $1.5-2 billion. By then, the valuation had increased to $50 billion, and in November 2015 is said to be up to $70 billion.

The Two Strategies and Their Trade-Offs

The two simplifying strategies are very different — in what you have to do to make them happen, in what your objectives are and in the way you are rewarded for success. But at the heart of the two strategies is the imaginative use of trade-offs, baked into a unique business system, to outfox competitors and deliver a product that the target market will buy in droves.

Price-simplifying: Create a mass market — simplify to make a product or service dramatically cheaper. Simplicity results in the product being easier to make, so simplicity for the producer matters most. The producer operates on low margins but enjoys massive growth in revenues.

Proposition-simplifying: Create a premium market — simplify to make the product or service dramatically better and a joy to use. Simplicity results in the product or service being easier to use and usually more useful and/

or aesthetically appealing, so simplicity for the user matters most. The producer enjoys high margins and growth in both revenues and profits. The premium part of the market will normally be a smaller part of the total market than with price-simplifying, although in some cases proposition-simplifying can create a new mass market, as with smartphones.

Three precepts for the price-simplifier: 1) Use simplicity to make something much cheaper both to make and to supply. This must always be the primary objective. 2) In making the product cheaper, simplify to eliminate "expensive utility" — anything the customer can do without.

Two precepts for the proposition-simplifier: 1) The primary objective is to use simplicity to make something a joy to use — to add utility through greater ease of use in the first place; then greater usefulness and/or art. More than half of the battle is knowing what the end result should be. To get there, you either have to make a huge leap in imagining what would make life simpler for the customer or see an early prototype and realize where it is heading and how it might be improved. 2) A secondary objective is to use simplicity to make the product cheaper to make; or at least to ensure that the extra utility far outweighs the extra cost.

Making Clever Trade-Offs

When developing new products and business systems, designers always have to make trade-offs — that is, they have to decide between two positive attributes since they can't have both together to a great degree. For the price-simplifier, the central objective is always to reach a very low price — which the customer will value enormously — by trading off attributes that your customers think are less important. Yet, cunning price-simplifiers always substitute cheap benefits for the expensive ones they eliminate.

Proposition-simplifiers make deals with their more affluent customers, with the latter persuaded to pay a little more for something that they believe is much better. The way to square this circle is to go through the complex process of simplifying what is bought. Think of the speed and intuitive nature of a Macintosh; the ease of use and peace of mind in taking an Uber cab.

But the highest form of making a trade-off comes when the trade-off is not really a trade-off at all — a "virtuous trade-off." Instead of choosing between two good things, if you are very lucky or very creative, you may be able to trade off something bad against something that is good. This is really creative simplifying — ingenuity that trumps iron laws. Many "giving back" attributes of price-simplified products are really virtuous trade-offs in disguise. IKEA's free entertainment and play areas boost revenues and profits. The stuff for kids is a genuine benefit, but its cost is illusory. Both customers and the company win.

PART II: HOW TO SIMPLIFY

How to Proposition-Simplify

Product design is nearly everything in proposition-simplifying. The objective is to make the product a joy to use: first and foremost, easier to use; then, if possible, more useful and more aesthetically pleasing.

Step one: easier to use. The essential first step — make the user experience easy and simple — is more than the sum of its parts. It requires empathy with the user and a genuine simplifying mission. There are five major themes for making things easier to use: eliminate; make intuitive and easier; make faster; make smaller/lighter/more portable; and make easier to obtain.

Step two: more useful. There are also five ways to make a product or service more useful: vary performance — make more (or less) powerful; improve quality; add new capabilities without adversely affecting ease of use; provide a wider range of products; and personalize.

Some propositions are more useful across all five of these dimensions. Facebook offers a "social operating system" for the internet, aiming to sit at the center of users' online social lives. You could argue that it ticks all the boxes above when compared with how people traditionally kept in touch and interacted, and that it offers a wide range of activities on the site while ensuring that it remains easy to use.

Step three: more aesthetically pleasing. "Art" can be defined as anything that enhances the appeal of a product that cannot be reduced to hard usefulness or ease of use. Art is to do with the appearance and texture of a product or service, how it makes the customer feel and how it turns consumption into a great experience. Steve Jobs understood this better than anyone. When making the Apple II, he took inspiration from Cuisinart's revolutionary food processor, introduced five years earlier. With its rounded, transparent shapes, the Cuisinart is very useful but also a beautiful artefact in itself. Jobs repeatedly told his people to make Apple computers "look friendly." Hardly anyone understood what he meant, but that was part of the advantage he had over his rivals. Jobs

explained, "We're really shooting for Museum of Modern Art quality."

How to Price-Simplify

With price-simplifying, you are on the side of target customers who want to buy the product or service but simply cannot afford it. Put yourself in their shoes and provide your product for a fraction of the current price.

If you are contemplating cutting prices in half, three fundamental changes must take place: the product must be redesigned to make it simpler and cheaper; the business system must be redesigned to make the product simpler and cheaper to produce and deliver, and to provide protection for your firm against imitators; the business must be scaled — that is, its sales must multiply and continue to multiply — as quickly and extensively as possible.

Part I: Product Redesign

Step one: Subtract features/performance and return to the product's core function. To launch a price revolution you need to work out the core, primary function that the product serves. Most likely the products that are currently available, before your price revolution, have strayed beyond the original purpose and now serve more than one function. Subtract everything that is not absolutely essential for a product's usefulness. Doing so will leave you with nothing but the core function. For a physical product, subtraction should also be pursued in two other dimensions — weight and size.

Step two: Reduce variety — invent a universal product. Successful simplifiers slash the variety of what is offered to customers in order to cut costs and prices. Ideally, a single "universal product" emerges, one that is both cheaper to produce and achieves high fame and scale: the Model T Ford; the Big Mac; IKEA's light-colored pine furniture; Penguin books; the Honda Supercub; single-class travel on Southwest Airlines. Consolidating many different products into a few — or just one — has really strong economic advantages: large reduction in stock-keeping units; higher stock turns; lower purchasing costs with greater volume per product; lower marketing and selling costs; and lower production costs.

Step three: Add cheap benefits. The third step is to provide benefits that cost the price-simplifier little but have substantial value for target customers. Often these benefits can cost the simplifying firm nothing whatsoever — or even less than nothing when the additional volume of customers and their spending are taken into account.

Part II: Business System Redesign and Scale Up

Once the product has been simplified, a business must set about rejigging their entire business system and creating a new mass market. There are five steps you can take to redesign your business system.

Step four: Automate. Automate means that you should standardize a product or service so that it can be repeated more automatically, with the result that it demands fewer resources and/or less managerial intervention and enables you to operate at much greater scale while maintaining consistent quality. The common theme is a dramatic reduction in cost. If air travel and restaurants can be automated and a mass market created by offering very low prices, the same must be true for any other sector.

Step five: Orchestrate. Orchestration means pulling the strings in an industry by seizing the high ground — the customers — and then co-opting independent players into your new system. They benefit, but you benefit even more. Walmart and Amazon ruthlessly exploit the benefits of scale, brand and, most importantly, a strong customer relationship with a significant proportion of the U.S. population. Because these two orchestrators enjoy such enormous customer volumes, they are able to force their suppliers to cut their prices to the bone; and because their prices are so low, they are able to maintain enormous customer volumes.

Step six: Co-opt customers. The customers take on some of the functions that used to be performed by the firm, and in exchange the firm cuts prices down to levels that the customers can afford.

Step seven: Sell direct. Price-simplifying through direct selling kicks in when at least two of the following three conditions apply: an expensive middleman is eliminated; new technology is used in some shape or form; there is a clever simplifying idea at the root of the new business.

Step eight: Use simpler technology. If there is a new, inferior but much cheaper technology that has not yet been seriously adopted in your industry, and if it has the potential to cut costs in half, you would be wise to jump in before anyone else does. Construct a business system around it so that you can become — and remain — the low-price player.

Step nine: Scale up and roll out internationally. If the price cut is significant, if the design is good and you have developed a universal product, and if the business system is unique, simple and elegant, you will win . . .

unless another firm copies your approach and builds volume faster than you do. If that happens, you will almost certainly lose. Scaling up quickly is therefore vital. Maximize sales and take an early lead, even if that means operating at zero or negative margins for a few years. If cash is a constraint, seek venture capital. As volumes build, your costs will decline, and you will be able to take a small margin on high revenues. Once the concept is proven in one place, take it nationwide, then international and global as quickly as possible.

PART III: SAVE THE DINOSAURS?

Do They Need Saving?

A long and impressive roll-call of blue-chip firms have seen their market value and profits collapse almost overnight when challenged by simplifying insurgents. In the 1960s, IBM lost a large portion of its market when DEC introduced "minicomputers," which, as the name suggests, were much smaller and simpler than mainframes. Pan-Am, TWA and American Airlines all filed for bankruptcy after losing U.S. market leadership to Southwest Airlines. Kodak lost out to Sony when the latter introduced digital cameras.

Certainly, dominant firms cannot afford to be complacent. The sensible approach is to watch out for the wrecking ball and take steps to avoid it before it is too late.

Warning Signals from Price-Simplifiers

- A much cheaper product emerges. It does not matter if the new product's performance is inferior. If it is good enough for the market, it is a serious threat.
- The firms making the new product are recently established. This means that their impact cannot be determined as yet and that they may not be constrained by traditional ways of operating.
- The new entrants are playing the game differently. Their product may be smaller, lighter, faster or all three. It may be based on new technology.
- At least one simplifying firm is growing fast.
- The new firm has lower margins than yours. Its business may seem to be unprofitable or only marginally profitable. This is a warning because it may discourage you from making the new product yourself.
- The new product has the potential to cost much less to make than your rival product.

Warning Signals from Proposition-Simplifiers

- The product or service is designed differently. It is radically simpler, using a new method or technology, or it is based on different assumptions about what is important to the customer.
- The new product is a joy to use.
- The product is priced at a premium to yours, yet it is eating into your market share.
- The challenger is playing the game differently.
- The firm or firms are recent entrants to the market. At least one of the new entrants is growing fast.
- Your firm either can't make the new product or chooses not to.

The Weakness of Strong Firms: Five Bad Reasons Why Managers Don't Simplify

There is plenty of anecdotal evidence that managers in large, successful firms consistently tend to use to make their businesses more complex rather than simpler. But why do they do that?

It turns out that there are five reasons why managers in market leaders don't simplify, and they are all traps.

The Overhead Trap: Organizations like to go upmarket, towards higher gross-margin products and customers. Yet making overhead commitments well beyond the norm in an organization can be just as problematic as accepting margins that are much lower.

The Cannibalization Trap: The cannibalization paradox is the decision to provide a stripped-down, simpler and much cheaper product. It is valid if your customers will use that product. If you think they will, you might as well cannibalize yourself before some other firm does it for you. If you think they will never use the cheaper product, it might seem to make no sense to introduce it. And yet, if you truly believe that your customers will never switch, there is no danger of cannibalization, so you might as well make the cheaper product anyway and use the profits to top up those from your existing business. So, with the important exceptions of luxury and niche markets — where customers are not price-sensitive — it logically follows that there is no circumstance in which it makes sense not to introduce a simpler and cheaper

product! The fear of cannibalization paralyzes successful management, delaying action until it is too late.

The Customer Trap: This is when you assume that your customers aren't interested in the new business model. The trap here is that the market leader believes its customers and so ignores the threat from the new product. The typical pattern can be summarized as follows: The performance of the new product gradually improves, and after a while it meets the requirements of all but the most demanding customers. With increased learning and volume, the simpler product becomes ever cheaper, which makes the price difference between it and the premium product increasingly hard to ignore. As this happens, a typical response of the market leader — such as Harley-Davidson — is "segment retreat," a move to even more complex and expensive products. This is usually explained as a natural response to short-term earnings pressure from the simpler product.

The Complexity Trap: At the start of its life cycle, the only way to improve a product is to add more resources and energy. After a while, though, this ceases to be true. It becomes possible to simplify — to make lighter, smaller products that have fewer features, are easier to use, cheaper to buy and operate, and less costly to produce and deliver. Yet managers who are used to progressing only by adding complexity often see simpler products not as a step forward but as a step backwards.

The Skills Trap: The firm may not have the right skills for simpler products, but it also fails to appreciate that these can be acquired, often quite cheaply.

PART IV: THE REWARDS OF SIMPLIFYING

Does Price-Simplifying Pay?

How good are the returns from price-simplifying? To shed some light on the financial rewards of simplifying, OC&C Strategy Consultants examined 12 case studies — six price-simplifiers and six proposition-simplifiers — that they considered the most significant simplifiers since 1900.

In every price-simplifier case

- halving prices multiplied the market size;
- the revenues of the price-simplifier rose by several thousand times;
- the value of the company rose sharply, with increases measured in the tens, hundreds, thousands, tens of thousands or (in one case) hundreds of thousands;
- the compound annual growth rate of value increased impressively, ranging from 10 percent a year over more than a century to 40 percent a year over four decades.
- outperformance relative to a comparable non-simplifying company or the stock market was also striking, varying from 11 times to over 9000 times;
- the value increase continued over several decades, even when the company stopped innovating or cutting prices.

Does Proposition-Simplifying Pay?

Does proposition-simplifying pay as impressively as price-simplifying? All 12 simplifiers have enjoyed high growth, and there is no evidence that price-simplifying is better than proposition-simplifying or vice versa. While 12 cases is a very small sample, one may surmise that, for the highest returns, it does not matter which type of simplifying is employed. Either approach can lead to stunning increases.

Simplifying is not the only viable strategy or the only way to make a fortune. Yet the gods of economics and customer psychology favor the simplifier. A small and relatively new firm that commits to following one of the two simplifying strategies and adapts it to suit its own industry can hit the jackpot. Simplifiers, in addition to benefiting themselves, will surely help society and everyone in it to a much greater degree than non-simplifiers. Finally, although there are limits to the genius of simplifying, there is no limit to the number of simple universal products than can be imagined and created.

Go forth and simplify!

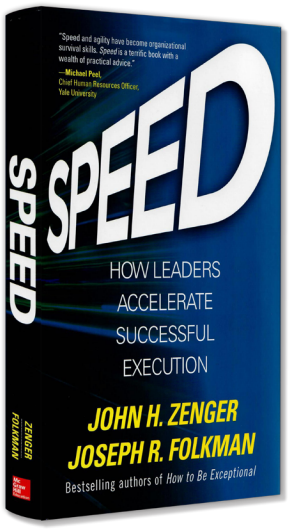
Speed

How Leaders Accelerate Successful Execution



by John H. Zenger
and Joseph R. Folkman

THE SUMMARY IN BRIEF

During the last few decades, speed has increased dramatically in daily business activity. Speed in business is partly a reflection of the increase in speed in every area of modern life. In order to stay competitive and profitable, companies must improve the speed at which they operate and make crucial decisions. Today, competition is fiercer than ever as companies all over the world vie to be the first to market new products and services. The first-to-market advantage nearly always results in a dominant share of that market. But, can an organization move quickly if its leaders and professionals move slowly?

Drawn from extensive data and field research, *Speed* reveals eight essential behaviors that anyone can adopt to improve speed and drive organizational effectiveness. Leadership experts Jack Zenger and Joe Folkman share valuable insights gleaned from one million 360-degree feedback assessments of more than 75,000 leaders. Repeatedly, speed was shown to be a powerful predictor of a leader's effectiveness.

As the authors demonstrate, speed is produced not by frantic activity but by skillful execution of several key behaviors. Step by step, they show how to increase your own speed, anticipate trends and be more productive. Speed gives you a much-needed competitive advantage in business and in life.

IN THIS SUMMARY, YOU WILL LEARN:

- How to overcome "speed bumps," challenges and obstacles.
- Tactics and strategies for speeding up critical elements of your day.
- Quicker, more effective communication.
- Behaviors that increase speed and spark innovation in yourself and others.

THE COMPLETE SUMMARY: **SPEED**

by John H. Zenger and Joseph R. Folkman

The authors: John H. Zenger is CEO of Zenger Folkman, a firm that provides leadership development for organizations worldwide. An expert on leadership development, he's been inducted into the Human Resources Development Hall of Fame and was the recipient of ATD's Lifetime Achievement Award. Joseph R. Folkman is a respected authority on assessment and change and is cofounder and president of Zenger Folkman. As a renowned psychometrician, he's worked with General Mills, General Motors, Invesco, Reed Elsevier, Yale University and the MUFG.

Speed Matters

Speed in business is partly a reflection of the overall increase in speed in every area of life. Speed is not an end goal, but speed creates real value rapidly. It appears to be a powerful predictor of a leader's effectiveness as well as the organization's success.

What produces speed is not one unique competency but a combination of behaviors, including a leader's tendency to think about the future and to "see around the corner" before most others see the trend emerging. The speed syndrome also incorporates an ability and willingness to identify a problem and respond to it without delay. Finally, the syndrome encompasses the tendency to make changes in processes and procedures quickly so that problems are resolved on a permanent basis.

Researchers created a "speed index" that measures a leader's ability to:

- Spot problems or trends early.
- Quickly respond to problems.
- Quickly make needed changes.

Those leaders who were rated in the top quartile on this speed index, compared to other leaders, were rated substantially higher in their overall leadership skills. Speed was a powerful predictor of overall leadership effectiveness.

Correlation does not imply causation. Is speed a vital sign or a root cause of leadership effectiveness? Speed is an indicator of a pattern of behavior, attitudes, energy and focus that combine to produce good results for any given manager. Also, the speed with which a leader acts is a clear force unto itself that produces good results and causes that person to be seen as highly effective. The correlation between speed and perceived overall effectiveness comes from the fact that those who operate with greater speed accomplish more in a given period of time than others would have. It is this absolute level of productivity in comparison to others that accounts for the way they are perceived.

PART I: NEED FOR SPEED

Speed Laws

Studies on working hours have shown that for highly educated and well-paid workers, the number of working hours has increased. One study found that executives in the 1970s had to deal with roughly 1,000 messages per year. In the 1980s, the number of communications quadrupled. Email started to be utilized in the 1990s and the first mobile phones were introduced. With this new technology in the 2000s, the number of communications went up to 25,000 per year. Currently, executives are receiving about 30,000 messages per year.

Speed Is a Source of Competitive Advantage

Most organizations in the world can see and recognize the advantage of speed. Software developers have embraced processes such as Agile development, in which increased collaboration and compressed development schedules have substantially reduced the development

time for major applications. In the manufacturing world, many organizations have embraced Lean manufacturing and production. Lean is a systematic method for the elimination of waste and non-value-added processes. Lean processes shorten the cycle time by eliminating inefficient processes and allowing organizations to deliver faster. Top managers at a telecommunication company in the midst of an Agile implementation realized that their company would not be able to become more Agile as an organization until its leaders increased their speed. In their view, "Agile organizations are full of speedy leaders."

Organizations can only move as fast as their employees. The pace of employees will impact the pace of the organization. Even more important is the pace of the leader. As Lee Iacocca observed, "The pace of the leader becomes the pace of the overall organization." Leaders who resist a brisk pace can be a major source of a company's problems—and, ultimately, its failure.

Speed Traps

Doing Things Fast Versus Doing Things Right

Leadership speed means having the ability to execute quickly and correctly so that the time to value is decreased. Speed alone is of little advantage. Work must be accurate. But for the majority of jobs, accuracy alone is insufficient. You must have speed and accuracy.

Leaders who are able to execute, respond to and make decisions quickly and correctly will be perceived as much more effective leaders.

The Illusory Trap of Burnout

Does a faster pace increase stress? Andrew Bernstein, author of *The Myth of Stress*, makes the point that it's not the activities or the environment that creates stress, but rather it is our emotional reactions to those situations. If two people perform the same activity, one might find the activity stressful and anxiety producing, but the other person may well find the activity interesting and challenging.

It turns out that there is a significant correlation between pace and the level of stress people experience. This makes a lot of sense when you consider that those who have a quicker pace are often able to accomplish tasks quicker. David Allen, the productivity guru, observed, "Much of the stress people feel does not come from having too much to do. It comes from not finishing what they have started."

Several studies on stress conclude that it is not the work itself but primarily people's responses to their work and perceptions of it that cause a small percentage of people to feel overwhelmed and drained. And that percentage is more than cut in half when these people pick up their pace.

Leadership speed is reducing the time to value by doing things fast and doing them right. Frantic activity does not make organizations more successful, but strategic speed or delivering value is the key to more successful organizations.

Organizational Benefits from Leadership Speed

Impact of Leadership Speed on Employee Engagement

Employee engagement is an excellent way of determining the level of commitment and satisfaction of direct reports. When a leader has employees with high levels of engagement, not only is the attitude of the employees much better, but numerous studies show that they have increased willingness to take on challenging projects, and their commitment to work hard escalates.

To test the effect of leadership speed on engagement, the authors looked at data from leaders who had been assessed based on their leadership speed. All of the direct reports were also assessed based on their level of employee engagement. Leaders who were rated in the bottom 10 percent regarding their speed had engagement levels in the 27th percentile. Leaders who were in the top 10 percent regarding speed had direct reports whose engagement was in the top quartile. This one leadership capability seemed to have an extremely positive impact on engagement.

Using the same data set, the authors examined the relationship between leadership speed and discretionary effort. Discretionary effort measures the extent to which direct reports are willing to go above and beyond basic expectations. They found that leaders who are in the bottom 10 percent regarding leadership speed only have 16 percent of their direct reports who say that they are willing to "go the extra mile." Those in the top 10 percent have 63 percent of their direct reports willing to go above and beyond.

Is There a Downside to Leadership Speed?

The research shows that, in fact, there appears to be no negative side effects to leadership speed. The better leaders

are at speed, the higher the engagement of their direct reports. Statistically, the more leadership speed, the better.

In their article, "Need Speed? Slow Down," Davis and Atkinson submit that while speed is a huge advantage for most organizations, the best are not reluctant to pause along the way to ensure that they are truly focused on building value for the long term. They observe that companies are better off periodically slowing down to make certain that they are on the optimum course. They write that "higher-performing companies with strategic speed made alignment a priority."

PART II: TACTICS TO INCREASE SPEED

Speeding Up Your Day

Being a good boss means that people must have access to you. Your influence is directly proportional to the quality and frequency of the connections you make throughout the day. So, what can you do?

Set the pace when you initiate the conversation. These conversations don't have to be long, and you can make them happen at a relatively brisk pace.

Softly guide others' conversations. Help others get to the heart of the matter, and let them know you respect their time and you want them to respect yours.

Set expectations with your workforce. Employees appreciate consistency. Whatever way you consistently choose to push conversations forward will help them to be better prepared.

Use very short, scheduled meetings. Work expands so as to fill the time available for its completion. Try scheduling shorter meetings, and see how much can be achieved. Even a five-minute meeting can be effective when people come prepared.

Change your attitude. Cultivating certain beliefs can increase speed. Examples are: "I do my best work and rise to the occasion when performing under a deadline," and, "When things get bogged down in a meeting, I do what I can to move things along."

Stop multitasking. By now, most people have heard that multitasking really doesn't save time or make you more efficient. The bottom line is: Our brains work most efficiently when they focus on one thing at a time.

Delegate. It's a "win-win." The leader is freed up to focus on activities that only the leader can perform and subordinates are given additional activities that expand the scope of their jobs and usually increase their level of job satisfaction.

Learn to use the latest technology. Software programs, such as Microsoft Office, can be an enormous boon to productivity. For those who write lengthy documents, voice recognition software can save time and relieve the physical exertion of typing long documents.

Don't let your busy day decrease the number of interactions you have. These conversations can be beneficial if kept positive and short. Emotions are contagious, so make your interactions and meetings generally positive.

Accelerate Meetings

A leader with accelerated speed and pace greatly increases the likelihood of a productive meeting. Research on productivity improvement shows a high correlation between improved productivity and the efficiency and effectiveness of meetings.

There are several simple steps every leader can take to accelerate meetings:

- **Have an agenda.** Solicit agenda items from everyone. Circulate draft agendas, and seek comments on whether these are the really important issues the group needs to address. Put the most important agenda items first.
- **Make the purpose of each topic clear.** Is the item there to collect opinions? If it requires a decision, make this known. Nothing makes participants feel better than to see every meeting produce a group of clear decisions.
- **Suggest times for each topic.** It helps to set a general expectation. It is best for the leader to have an estimated time and to keep the pace brisk.
- **Lead the process.** Are we on topic? Have we heard from all the people who possess important information? Have all sides been heard? Is the meeting moving at a good pace? The leader needs to manage both content and process. A helpful technique is for the leader to periodically summarize where the group is on a topic. The success of the meeting is the leader's responsibility, and the leader cannot delegate that to anyone else.
- **Use idea-building processes.** Use group processes to encourage the flow of ideas. Techniques ranging from traditional brainstorming to asking participants for the strategy they would use if they chose to be a new competitor in your industry can be helpful in opening the valve of new ideas.

- **Determine decision-making processes.** Sometimes, the leader is seeking opinions but will personally make the decision. Other times, a decision may warrant a democratic vote. It helps when people understand the ground rules.
- **Resolve conflicts.** Differing viewpoints in meetings can produce conflicts. Left unchecked, they can move from being largely substantive to being emotional and personal. The effective leader encourages everyone to practice inquiry and minimizes advocacy. Probing for the assumptions that undergird a person's point of view usually helps to resolve conflicting viewpoints.
- **Maintain energy.** The element in shortest supply in most organizations is the energy of the CEO. Nowhere is this level of energy more visible than in the meetings that the CEO conducts.
- **Keep action minutes.** Record decisions that were made and specific actions that need to be taken. These notes should indicate who needs to take the action and when it is targeted for completion. Circulate minutes quickly after the meeting is completed while the meeting is fresh in everyone's minds.
- Evaluate the meetings. At the end of every meeting, ask the group what could have been done to make the meeting more productive and efficient.

PART III: COMPANION BEHAVIORS FOR LEADERSHIP SPEED

After analyzing 360-degree feedback data pertaining to approximately 52,000 leaders, the authors determined there were eight companion behaviors that helped leaders increase their speed.

Innovating

The No. 1 companion behavior that leverages speed is innovation. Change takes energy, discipline and often a willingness to do something we have never done before. The people most likely to be innovative are those who are not satisfied with good performance but are constantly looking for superior performance and time-saving, efficient methods.

Using Pull, Not Push

Two possible methods to yield innovation are pushing harder and pulling harder. Leaders who push harder set deadlines for innovations to be created, hold individuals accountable for improvements, regularly follow up with individuals and push people hard to deliver on their commitments.

Leaders who pull harder generate excitement and interest about what innovations could do for the organizations; they find ways to energize colleagues to innovate more and celebrate any success in innovation.

While pull is most helpful at generating innovation, leaders who also held others accountable, set deadlines and pushed hard were able to achieve even better results.

What leaders who pull do to generate innovation in their teams is:

- Set "stretch goals" that require people to do the impossible. Stretch goals force team members to rethink the entire process and begin to imagine innovative approaches to accomplish objectives.
- Provide a clear sense of direction and purpose. Communicate often about the desired direction, and help people connect their individual responsibilities to the overall business objectives.
- Paint the long-term vision for where the organization needs to go. The long view of an aspirational goal and objective keeps people on track and provides them with a sense of destination about where they need to go.
- Turn on a dime. The road to innovation is full of potholes and wrong turns. Learn from mistakes, and move forward. Provide support for people who make mistakes.
- Keep the focus on the customer. Exceptional leaders understand the current and future needs of the customers and look for opportunities to have team members interface with customers to increase their understanding and commitment.
- Sell the new idea to others. Too often, people believe that the value of a new innovative approach will be so obvious that it does not need to be sold. Often, this is where innovation fails because others in the organization do not see the value.
- Be willing to take risks. Those who are more willing to take risks are rated substantially higher on their ability to innovate.

Exhibiting Strategic Perspective

The complexity of today's organizations requires that many people in a variety of functions make decisions. Outlined below is a set of key behaviors that describe how these leaders sharpen their strategic perspective to leverage speed.

Communicate powerfully. It is absolutely critical that leaders continually reinforce and remind others of the strategy and direction of the company. When people lack clarity, they slow down. In meetings, one CEO studied makes a habit of connecting every topic back to the strategy and vision of the company. Excellent performance by the company year after year made evident that the amazing execution of the company was partly due to the clarity every person had about the company's strategy.

Be willing to challenge suboptimal standard approaches. A clear strategy will inevitably hit barriers. Leaders who were willing to challenge the standard approaches were viewed as much more effective at strategic perspective. One group of innovative leaders often came up against government regulations that most leaders were not willing to challenge. These innovative leaders said that if they presented a good case for change, one that provided value for the government, they would get an exception. Too often, people encounter longstanding rules or policies and stop pushing the boundary.

Use push and pull to implement strategy. It's clear that many people need some push. They need strong direction, decisive action, standards and deadlines. Push alone, however, never achieves great results. Leaders who also know how to pull get team members excited and passionate about the strategy. Team members start to view the strategy as a noble cause that is important, and they are more likely to be willing to go the extra mile.

Market ideas and perspectives to others. Too often, we don't realize the importance of selling our ideas to others. To market your ideas, become a champion and a cheerleader, and point out the advantages of your idea versus another. Have the courage to speak up and take a stand. Be enthusiastic. And don't wait for the perfect time—because there is no perfect time. Do it now!

Displaying Courage

Courage is one of the key characteristics of leaders who exhibit high levels of speed. People we label as "courageous" exhibit a particular set of behaviors.

For instance, people who are willing to volunteer are viewed as more courageous. Volunteers are viewed as being willing to take initiative, possessing greater commitment and being better team members.

- Find something you are passionate about, and become a champion of it.
- Quickly recognize the need to change. It takes courage to change. Resisting change gives others the impression of lacking courage. Change puts people in a situation where they will likely make some mistakes, but if they ask for help and try hard to learn, they will be successful.
- Challenge stupidity. People with courage are willing to challenge standard approaches when they see a better way. To challenge standard approaches, a person can be bold or simply ask good questions.
- Look beyond the trees. Having a clear line of sight upon specific goals and objectives gives people much greater insight into the distance to the goal and the difficulty of achieving a desired vision. Having that future vision helps people move faster, and then they are viewed as more courageous.
- Sell yourself. Many people resist marketing or selling their ideas to others. Often, people justify this behavior by inferring that it is somehow beneath them to sell their ideas to others. It takes courage to sell your ideas.
- Be the first to identify a trend. People who notice trends and warn others of eventual consequences are viewed as having more courage. Take some time to see new trends and identify the consequences.

Setting "Stretch Goals"

When people embrace a stretch goal, it moves them forward faster. Leaders who were the most effective at getting others to embrace a stretch goal did more than simply set the goal. They set focused goals, they inspired others and they pushed. They found approaches that fit individuals. They made the stretch goal developmental by requiring learning new skills. And they consistently followed up with people on their progress.

To encourage others to achieve stretch goals, focus on utilizing the approach that works for the individual. Individuals respond differently to the same stimuli. Some people are motivated and inspired by one approach while others are disinterested or annoyed. Figuring this out for your team members is a critical way to get improved performances.

Many leaders find it relatively easy to set goals for others. Then, they expect them to perform and become angry when people fail to accomplish their goals. Consistent follow-up makes a profound difference.

A word of caution on stretch goals: Setting stretch goals in the absence of strong values, and leaders who are role models of those values, is a recipe for significant problems. Encouraging team members to simply do whatever they

can, regardless of ethical considerations, can lead to team members using any available means to achieve goals, ethical or unethical. Leaders who set stretch goals need to have high levels of integrity. They need to be aware if they are pushing team members to do things that violate ethics or company values.

Communicating Powerfully

Great communicators share information in a way that others remember and appreciate. The information not only informs others, but it influences them to take action. Suggestions are: Connect information you are presenting to the individual needs of others; present information in a way that demonstrates a win-win for all parties; ensure you have cooperation on your proposals from other required parties; and make your message inspiring and energizing. If you are asking others to change, be a role model for that change. Take the time to explain the rationale for decisions and actions. Find an innovative way to present and share the information.

Ask the kinds of questions that get people to really think and reach deep for an answer. Involving others is a powerful way to influence them. For example, ask questions like: "What has caused you to have the opinion you hold about this subject we've been discussing? Who has had the most influence on the way you think about this subject? What are the important assumptions that are the basis for the point of view that you hold?"

If others do not feel that you understand and appreciate their issues, they will rarely accept or change their point of view. Too often, leaders do a poor job of listening to others, their primary excuse being, "I don't have enough time!" However, people who have conversations in which the boss really listened and had a desire to understand their points of view report the average time of those conversations is 15 to 20 minutes.

What Should Be Communicated

Your manager is looking for different information than your peers or direct reports. Most managers do not want to be swamped with every detail, but most want to be informed about successes you experience as well as potential problems.

Your manager wants to understand the action steps you will take to achieve your goals. As you communicate your plans, connect what you are planning to do with the overall direction and purpose of the organization. Also, demonstrate that you have considered all the options and evaluated the risks, pros, cons and trade-offs.

Your ability to communicate with your direct reports will have a dramatic impact on their productivity and engagement. Connect the dots. Translate how their assignments can have an impact on the strategy and direction of the business. Appreciate and value your employees. Give employees feedback, and help them develop. Have conversations about their career possibilities and development opportunities. And as direct reports develop, delegate additional responsibilities to them, and explain what decisions they can make personally.

Bringing External Focus

A strong internal focus can hide reality. We believe what we see and experience, and if we limit our vision and our experience, then our world is very small.

The big problem with a narrow view and internal focus is that we live in a global marketplace. We are in a competitive struggle. It's only by understanding our competition that we stay competitive.

Beyond the competitive issue, consider the value of finding a way to accomplish your work more efficiently, increase the value that you provide or find ways to have substantially more impact. Having a strong external perspective provides a window to a much larger world. A strong external perspective gives you the opportunity to comparison shop and find the highest value or the most features at the lowest cost for an improved, more efficient organization.

Here's how to improve external perspective:

- Become a great networker.
- Broaden your reading and listening.
- Study other organizations.
- Travel.
- Participate in industry and alumni associations.
- Develop international colleagues.
- Become close to customers.
- Embrace technology.

Taking Initiative

Those who initiate action can be counted on to follow through on commitments. They are willing to go above

and beyond, and they are energized to take on challenging goals. In their research, the authors discovered that women were significantly more effective at initiating action. The authors discovered there were key behaviors that helped women be better at initiating action. They believe that these behaviors are the key to improvement in both men and women.

Rock-solid integrity. Beyond honesty and accuracy in what you say, the integrity measured here is an accumulation of little things that add up to form an impression when people are asked, "Does this person honor commitments and keep his or her promises?" Be careful and accurate about what you agree to do. Keep track of your commitments, and most importantly, honor those commitments.

Deliver results. Start with a plan, anticipate problems, connect to the strategy and vision, provide feedback, act quickly and support the team with resources.

Cooperate rather than compete. When leaders encourage groups to work together and cooperate, they get more accomplished in less time.

Set high standards of excellence. Those with high standards are constantly striving to do top-quality work that makes a significant difference. By setting standards higher, people work harder to achieve their goals.

Continual improvement. Having the attitude of "We can always improve" creates an atmosphere in which people continually up their game. Those who desire continual improvement are constantly looking for feedback from others on their performance.

Inspire others to high performance. Inspirational leaders create a sense of excitement about the work and an urgency to get that work done.

Be willing to be the champion. When people are willing to be the champion for a program, they are much more likely to be perceived as initiating action. It takes a good deal of courage and self-confidence. When you are a champion, the spotlight is on you, and that provides motivation to move forward.

Move forward despite ambiguity. The key to overcoming ambiguity is to find a way to move forward. While there is confusion about some things, there is not confusion about everything. Find a way to move forward knowing it is possible that you may need to backtrack.

Possessing Knowledge and Expertise

Having deep technical knowledge and expertise invariably increases speed. Analysis of assessment data revealed that leaders with the highest speed rating (the top 10 percent) were rated much higher on knowledge and expertise than leaders with the lowest level of speed (the bottom 10 percent). Further, only 9 percent of those in the top 10 percent in speed rating gave themselves a higher rating on their technical expertise than other respondents had given them. It seems that those with a higher speed rating were more humble about their level of knowledge and expertise.

The following are suggestions for acquiring greater technical expertise and knowledge. Leaders need to do a baseline assessment to identify areas of strength and areas that need improvement. Make a habit of reading and studying the materials that are difficult to digest but need to be understood. Recruit mentors to help you learn. Seek job assignments that force learning. Surround yourself with experts, and gather their input and ideas every day.

Leaders in the top quartile on both speed and knowledge and expertise had higher employee engagement. They also had higher ratings on making good decisions on complex, high-risk issues; acting with a sense of urgency; following through on objectives, marketing projects, programs and products; and seeing patterns in data that others miss.

We live in a world in which the pace is escalating. The survival of organizations depends on their ability to move quickly. Leadership speed reduces time to value. There is an urgent need for and huge benefit to attaining true leadership speed.

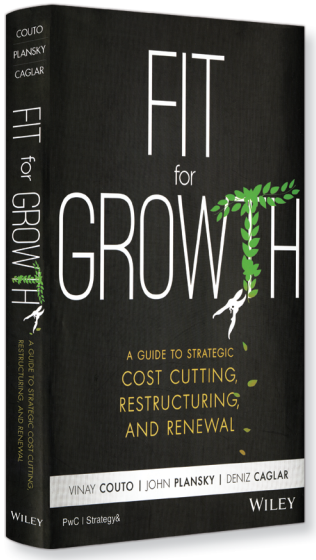
Fit for Growth

A Guide to Strategic Cost Cutting, Restructuring and Renewal



by Vinay Couto, John Plansky and Deniz Caglar

THE SUMMARY IN BRIEF

Very few organizations manage their expenses for sustainable success. And when the time inevitably comes to cut their costs, many companies cut in a way that makes them weaker, not stronger.

The experienced consultants with PwC's Strategy& team reveal the hidden problems of conventional cost management — and how your company can do better. Drawing on decades of research, observation and experience helping clients, these experts have developed a unique approach to help CEOs and senior executives cut costs constructively.

The Fit for Growth concept redirects an organization's resources and investments toward its few differentiating capabilities — the strengths that set it apart from competitors. When a company manages costs this way, it becomes fit for growth. Its cost structure, organization and culture are aligned with its strategy.

Total business transformation requires total buy-in, and it entails a series of decisions that must not be made lightly. *Fit for Growth* offers a definitive game plan to cut costs and grow stronger.

IN THIS SUMMARY, YOU WILL LEARN:

- The three essential actions for becoming Fit to Grow.
- Why growth requires cuts and how to achieve both.
- Smart levers to restructure costs.
- Strategies to help leaders, managers and employees embrace large-scale organizational transformation.

PART I: FIT FOR GROWTH OVERVIEW

Do You Need to Cut to Grow?

Whether they're trying to jump-start flattening revenues or facing imminent bankruptcy, companies across industries and geographies are realizing that the only way to unleash growth — profitable growth — is to cut costs, often dramatically. In the globally interconnected, digitally disintermediated market in which all enterprises operate today, there is no safe harbor when it comes to the bottom line. To protect and bolster it, companies need to focus on managing costs as rigorously as they concentrate on growing revenues. There is no profitable growth without equally robust pruning.

Are you fit to weather this tough competitive environment and come out ahead? Are you Fit for Growth? To be *fit* in this way means to have your resources, and thus your cost structure, aligned to your company's overall strategy — deployed toward the right businesses, initiatives and capabilities to execute your growth agenda effectively. Companies become Fit for Growth by doing three things consistently and continuously:

1. They focus on a few differentiating *capabilities.*
2. They align their *cost structure* to these capabilities.
3. They *organize* for growth.

In the current business and economic context, company leaders need to accept the facts: They need to cut to grow. And that is hard. It requires difficult choices and wrenching trade-offs. Not everything you do is a differentiating capability, which means that you are probably overinvesting in the rest of your processes, systems and organization if you haven't made conscious choices on how to allocate costs.

It's easy to play Monday morning quarterback, but when you are a senior manager in the midst of stalled growth and declining growth, it is anything but easy to clear a way up and out. It's not hard to be Fit for Growth, in theory, but in practice, for many companies it's next to impossible. For those companies that align their costs and organization with their distinctive and differentiating capabilities, however, the results are impressive and enduring.

Becoming Fit for Growth

The Restructuring and Renewal Journey

How do you know if your company is fit or unfit for growth? The diagnostic is deceptively simple: Have you identified the differentiating capabilities that drive your growth strategy? Are your resources — which determine your costs — deployed toward those capabilities? Is your organization set up to enable and reinforce those capabilities? A successful Fit for Growth agenda will be embedded in a company's overall strategy and culture and addresses each of the three pillars.

1. Focus on differentiating capabilities. Achieving true cost fitness requires a more strategic perspective on what "cost" is. Costs are an outcome of the choices

you make about where to invest your resources. The right way to think about costs is to align them with the strategic growth priorities of your business — those few capabilities that distinguish your company and contribute disproportionately to its success. Those capabilities should be fully funded, whereas other costs — those that are purely discretionary or may be necessary but are not differentiating — should be subject to stricter scrutiny and more intensive pruning. Also, it's not enough to have a single capability. Success derives from having mastered and institutionalized three to six capabilities, which come together in a distinctive, powerful and mutually reinforcing way that is almost impossible to replicate. This is what is called a *capabilities system*.

2. Align the cost structure. Fit for Growth companies evaluate their costs in light of three questions:

- What do we do? Start by analyzing everything you do. If an activity, process or person furthers a differentiating capability, make sure it is adequately resourced and set up for success. Determine what non-priority capabilities and business segments can be eliminated or scaled back dramatically.
- Where do we do it? Review where your operations and people are located, and explore opportunities to consolidate and gain scale efficiencies or scope economies. Relocate work and people to lower-cost locations. Take advantage of shared services models, and consider outsourcing or offshoring.
- How (and how well) do we do it? Streamline inefficiencies in company execution. Review and reengineer business processes to eliminate waste. Exploit and improve automation. Implement strategic sourcing to reduce direct and indirect material expense. Delayer the organization, optimize management spans of control and ensure pay scales match the complexity of the job performed.

3. Reorganize for growth. In the context of a Fit for Growth transformation, a well-designed organization model enables fitness and growth in two ways: by enabling and sustaining cost reductions (which can then be redeployed as investments in differentiating capabilities) and by creating the right conditions for managers to drive growth. In the first way, the well-designed organization model unleashes a number of cost-reduction levers. In the second way, a well-designed organization model can fuel dramatic growth by empowering managers to act like owners of the business.

The Leader's Role

Aligning Costs with Strategy

Certain consistent leadership lessons emerge on how to achieve the promise of a large-scale restructuring while avoiding the pitfalls. CEOs and other top leaders have three core questions: How do I energize my organization for transformation? How do I achieve cost fitness while also enabling growth? How do I actually manage the transformation and make it enduring?

A set of 10 leadership principles provides answers to these questions. These combine the first principles of strategic cost reduction and reallocation with the "new normal" mandate dictated by increasingly activist investors and shareholders demanding accelerated value creation.

How do I energize my organization for transformation?

Principle 1: Make the case for change. The CEO must personally make the case, starting with a compelling and candid analysis of the business climate and the company's (faltering) position within it. He or she needs to make bracingly clear why the organization must make major changes.

Principle 2: Align the top. The senior management team must invest in the case for change first. They must be unified, aligned and committed to taking the steps necessary to achieve the targets articulated.

Principle 3: Declare a "new day" and grant amnesty for the past. You have to anchor the disruptive change you are launching in a positive, strategic vision of the future and your company's prospects for growth in it — a vision that will actually inspire and attract people to commit.

Principle 4: Showcase quick wins. To build confidence and accelerate momentum, identify and showcase quick wins early in the transformation process. These are cuts that generate significant savings rapidly with relatively minor transition costs.

How do I achieve cost fitness while enabling growth?

Principle 5: Put everything on the table. To be credible, you have to put absolutely everything on the table, even seemingly "sacred cow" expenses. This sends a powerful signal to the organization that "we're all in this together."

Principle 6: Challenge the what, how and how well. You need to address the root causes of high costs rather than just the symptoms. Don't just look at *how* or *how well* you do something but also *what* you do in the first place — that determines your cost structure.

Principle 7: Balance cost cuts with capabilities investments. Efforts to significantly change the cost

structure of an organization must always be framed within the positive context of building unique, distinctive and powerful capabilities.

How do I manage the transformation and make it enduring?

Principle 8: Set up a parallel organization to change the business. Establish a dedicated PMO (program management office) to oversee implementation of a single, cohesive transformation program — rather than a collection of separate and decentralized expense-reduction projects.

Principle 9: Communicate before, during and after. Communicating early and often is an article of faith in these massive change campaigns. Skillful internal and external communication tied to a strong strategic vision is a must.

Principle 10: Keep the weight off. During the course of any major change effort, new practices for achieving accountability, distributing benefits, allocating incentives and tracking results are introduced. These should remain in place even after financial targets are met.

In essence, the Fit for Growth approach differs from conventional cost reduction in its perspective. It starts with strategy — with a focus on what to keep rather than what to cut. All spending is investment. Every cost is a choice. The secret to unlocking growth through cost reduction is to make deliberate choices not only about what to cut but also about where to invest. The right choices are those that close the gap between strategy and execution.

PART II HOW TO CUT COSTS AND GROW STRONGER: A MANAGER'S GUIDE

Levers of Cost Reduction

What, Where and How

Any well-run Fit for Growth transformation initiative has three major elements:

1. Setting the objective — a target for overall financial savings and a timeframe for achieving it.
2. Identifying differentiating capabilities that define your company — these will highlight areas that must be preserved and, if possible, strengthened while you are cutting elsewhere.
3. Selecting the levers you will use to transform the cost structure and free up funds — either to take them straight to the bottom line or reinvest them in your differentiating capabilities.

Selecting the Cost-Reduction Levers

The Fit for Growth Cost-Reduction framework organizes various cost reduction levers and challenges companies to reevaluate basic tenets of their business by asking three questions:

What do we do? These are the investments and costs that are most fundamental to what a company has chosen to do: what products and services the company sells, to which customers, in what markets and through which channels. The two levers that can be applied to the "What do we do?" question are portfolio rationalization and zero-basing.

Portfolio rationalization: Evaluates the net margin contribution and strategic coherence of products, customers, geographies and entire business units, and decides which ones are central to the company's strategy and way to play.

Zero-basing: Evaluates the existing set of capabilities and makes choices on what to dial down or simply eliminate. Zero-basing is predicated on the concept of a blank sheet and the idea that it's what one is keeping, not what one is cutting, that needs to be justified.

Where do we do it? Decisions involving the operating model define how a company organizes its operations and support, how it delivers those services and where it locates them. The three levers in this category are business operating model, outsourcing and footprint optimization.

Business operating model: Redefines how roles, responsibilities and decision rights are distributed between headquarters, business units and shared service organizations. These decisions will influence the level of centralization and standardization in the organization.

Outsourcing: Evaluates whether some internal capabilities are better performed by a vendor. Outsourcing can cover the vast majority of a company's value chain, including manufacturing, supply chain, R&D and support services such as IT or finance.

Footprint optimization: Restructures the physical footprint of a company's manufacturing plants, distribution centers and R&D and administrative offices. The sites can be consolidated or moved to low-cost locations to reduce costs and improve effectiveness.

How and how well do we do it? Operational excellence levers make it possible to execute existing work more efficiently. These levers include optimizing processes, delayering the organization and increasing management spans of control, deriving benefits from strategic sourcing and digitizing processes. Operational excellence levers include process excellence, spans and layers, strategic supply management and digitization.

Process excellence: Optimizes processes for greater efficiency and effectiveness by using Lean, Six Sigma and other approaches.

Spans and layers: Increases direct reports and reduces management layers to decrease management overhead and flatten the organization.

Strategic supply management: Improves the efficacy of an organization's direct and indirect material spend.

Digitization: Evaluates existing processes, customer channels and partner interactions for opportunities to use technology to automate manual work and replace manual interactions with digital ones.

Selecting which levers will be used and how is a pivotal moment in any transformation program. These decisions will determine how much savings you produce, the degree of change your organization needs to manage and how well you are positioned for future growth.

Considerable synergies can be achieved by applying multiple levers concurrently across multiple functions and business units. For example, business-portfolio decisions frequently give rise to footprint and operating model questions. Process excellence is much more powerful when combined with digitization. And zero-basing is inherent in levers such as process excellence, strategic supply management and outsourcing, all of which are about discontinuing low-value work and making lights-on capabilities more efficient.

Portfolio Rationalization

Decide What Business You Should Be In

Portfolio rationalization systematically analyzes the profitability of categories, products, customers, channels and geographies to identify where complexity is driving high costs, understand the root causes, and take out both the costs and the underlying drivers of complexity. The goal is to reduce complexity that is not differentiated or adding value, while building a capability to manage the "good complexity" that is driving profits.

Not all complexity is bad, of course. Complexity is good when the balance between added value and added costs is right — when managers are able to limit the rate at which costs go up. A company can create competitive advantage when it knows how to add complexity in the pursuit of growth that's based on its differentiating capabilities — creating offerings that competitors can't match without being overwhelmed by operational chaos or organizational gridlock.

Many companies recognize that portfolio complexity is an issue; many others, however, fail to see an underlying portfolio complexity problem. Some companies may even mistake the problem for a virtue. They may see their diverse set of product and service categories as proof that they're diversifying market risks, or feel their sprawling and diverse catalogue of products and large numbers of customers is evidence they're serving their customers well — all the while ignoring the growing complexity that's undermining their bottom line. Many others find they have created a portfolio complexity problem as they try to react to changes in their marketplace.

Rationalizing the portfolio follows a three-step process.

Step 1: Understand portfolio complexity. The first step in portfolio rationalization is to analyze the true, integral profitability of categories, products, markets, channels and customers. Performance analyses often provide revealing insights and instantly show where money is being lost. They also enable you to see the underlying problem clearly.

Step 2: Manage the trade-offs. The next step is to determine how to solve the problem. If low-volume products or SKUs are unprofitable, for example, the questions become, What happens if I stop producing or selling these products? Can I migrate the customer to another product? Will I lose a customer who also buys other, profitable SKUs, once the unprofitable SKUs are no longer available?

To answer these questions, you need to link the customers who are buying the products and consider how much of your total revenue the unprofitable product represents. Since the goal of rationalization is to reduce complexity across the company's overall portfolio, leaders must understand and accept trade-offs that are hard for any one department to make. Unite the key departments to make these decisions in light of "what's best for the enterprise."

Step 3: Take out associated costs. The organization has built up significant costs to support the complexity. Only by taking out these associated costs will portfolio rationalization truly pay off.

Zero-Basing

Justify What to Keep, Not What to Kill

Zero-basing is a repeatable process for rigorously scrutinizing every dollar in a company's budget and instilling a culture of cost management across the organization. A well-executed zero-basing program yields sustainable cost reduction, fosters a mindset of

questioning the need for every activity and releases funds to invest in differentiating capabilities.

Zero-basing demands that a strong case be made for every expenditure. A decision-tree analysis based on five questions separates costs that support differentiating capabilities from those that support table-stakes and lights-on capabilities.

- What do we need to absolutely keep this business or function going?
- Which non-lights-on capabilities drive true competitive differentiation and support our right to win?
- Of the capabilities that are not differentiating or lights-on, which ones do we think we can cut altogether?
- Of the capabilities we want to preserve, is there a more economical way of deploying them?
- What risks would the business run if it made the cuts and changes we're considering?

Answering these questions enables a company to realign spending priorities to reflect the importance of each capability to competitive differentiation, and to channel resources to critical capabilities while cutting back elsewhere. After assigning each activity to the three capability categories — differentiating, table stakes and lights on — a company can realign its cost structure to reflect its strategic priorities.

Aligning the Operating Model

Redefine Where Critical Work Gets Done

A company's operating model defines where critical work is done in the organization and how resources should be organized to deliver that work. A key step in a Fit for Growth cost transformation is to ensure the operating model aligns with the company's strategy and supports its differentiating capabilities — and if that is not the case, acting quickly to adjust the operating model.

At most companies, the primary building blocks of the operating model are the corporate core, the business units and a shared services organization that provides company-wide support services.

Operating models take many different forms across the corporate landscape. Each company must follow its own path to the optimal design, based on its strategic priorities, business and asset portfolio, geographic footprint and other unique characteristics. But the design process always requires fundamental decisions about the roles and structure of the three major organizational units. First, however, you'll need to answer four basic questions:

- Where are my resources and costs, and are they in the right places?
- What approaches will yield the greatest savings?
- What corporate operating model will best enable cost savings and capture growth opportunities?
- How do we rewire the organization to support the new operating model?

Based on your answers to these questions, define your major organizational units — the business units, corporate core and shared services. While every operating model redesign process is different, most move through four major phases: understanding value creation levers, framing options to accelerate value creation, developing a new organizational architecture and implementing the new design.

Companies with effective operating models do more than draw new organizational structures and order people to change their ways. They explain how the new system will work, outlining clear roles, responsibilities and accountabilities throughout the organization. They spell out how decisions will be made, how decision makers will get the information they need and how the organization will motivate people to adopt new behaviors.

Outsourcing

Let External Providers Generate Value for You

Outsourcing is a contractual relationship in which a company pays an external service provider to perform activities it would otherwise handle in house. The provider could be anywhere — a remote offshore locale, a neighboring country or even right next door. The power of outsourcing stems in part from its broad scope. You can outsource just about any link in the corporate value chain, from research and development to manufacturing, supply chain, sales and back-office activities.

Outsourcing creates value in three primary ways: turning fixed labor costs into variable expenses that rise and fall with fluctuating business volumes; driving efficiencies through the provider's highly competitive labor costs, expertise, scale and platforms; and transforming processes through the provider's investments in automation and other technologies that spur continuous improvement and year-over-year productivity gains.

A well-developed sourcing strategy is the cornerstone of smart outsourcing. It lays out screening criteria and other

guidelines for critical decisions about which processes to outsource and how. Your strategy should articulate the specifics of what you are trying to accomplish, the geographies, functions and processes to be sourced, insource-outsource scenarios, associated economics, and risks and transition strategies. From this you can find the best partners, know what market pricing and terms are required to implement the solution, and define a plan for execution against the business case.

Process Excellence

Simplify Work and Minimize Bureaucracy

Process excellence advances a Fit for Growth transformation by optimizing processes to achieve sustainable efficiency and effectiveness while supporting differentiating capabilities. Process excellence applies a market-driven perspective to create a blueprint of the four macro business processes found in every company — innovation, sales and marketing, delivery and support — and how they interact to deliver the targeted customer-value proposition.

The goal is not simply to reduce costs but instead to reshape processes to fulfill customer needs at cost and service levels that meet organizational objectives. By doing that, it offers a solution to how to do more for the customer, for less.

Building best-in-class processes involves five key steps. Start by defining your core processes; then use a customer-back analysis to identify your challenges. Gather the data you need to fully understand the current performance and the root causes of performance gaps. Use this information to develop and pilot a solution. Last, evaluate results of the pilot against your expectations, and then formalize your new processes.

Spans and Layers

Flatten and Empower the Organization

Restructuring the spans and layers of management control within a company is one of the most effective tools for addressing organizational bloat. This lever reduces organizational layers and management overhead, which not only cuts costs but also simplifies decision making, improves flexibility, enhances responsiveness and unleashes innovation — positioning the company for better growth.

Restructuring spans and layers optimizes two critical aspects of organizational structure: the spans of control (the number of direct reports for each managerial position) and management layers (the number of hierarchical levels that distance the front line from the CEO).

Even the best-run companies tend to lose focus on their organizational structure over time, at least in some businesses or functions, and end up with too many layers and too much management overhead. Excess management layers with narrow spans of control slow down decision making, delay the flow of information from the top to the front lines (and vice versa), stifle creativity and frustrate employees subjected to micromanagement by supervisors who don't have enough management work to do.

The "right" span of control for any managerial position depends on factors including complexity of the role — the scope and complexity of work overseen, the degree of judgment involved in day-to-day activities, the stability of work processes and the amount of interaction with others within and outside the organization. Managers overseeing highly complex activities should have fewer direct reports, while those responsible for simpler functions can manage more employees without undue risk.

Wider spans of control force managers to focus on guiding, coaching and managing, and empower individual contributors to make decisions and truly "own" their work. Wide spans also enable companies to reduce managerial ranks and eliminate layers of management.

Reducing layers brings senior management one or two steps closer to customers and front-line operations. With fewer midlevel managers, accountability and transparency increase. Eliminating layers also pulls talented managers up from lower ranks and improves career opportunities for others stuck in the middle.

As management structures become more efficient, employee engagement increases when decision-making authority devolves to front-line employees, micromanagement subsides and opportunities for development and advancement increase.

PART III COPING WITH COST RESTRUCTURING: HOW TO MANAGE AND SUSTAIN THE CHANGE

Running a Cost Transformation

Mobilizing, Scaling and Sustaining

Let's discuss the process needed to transition your organization to be Fit for Growth. When a true transformation is needed — when the company is setting out to dramatically reshape its cost structure and organization — the

typical business-as-usual approaches are insufficient. Given their level of complexity, such transformations require a *programmatic* approach.

Transformations following the Fit for Growth approach typically begin by conducting a diagnostic exercise and building the case for change (Phase 1). Next, they build a detailed design of the transformation (Phase 2); last, they are executed (Phase 3).

Phase 1: Diagnostic and case for change. The purpose of Phase 1 is to set the direction for the program, prioritize opportunities to pursue and create the case for change. While cost reduction is top of mind in Phase 1, investments in differentiating capabilities are equally important — a Fit for Growth transformation always seeks to strengthen the company's capabilities system as a simultaneous objective. Phase 1 is the time to detail why a change is needed, the vision for the future, the benefits of the transformation and the outlines of the transformation road map.

Phase 2: Detailed design. Phase 2 takes the directional findings of Phase 1, translates them into a detailed design of the future processes, organization and systems, and develops a detailed plan for moving from the current to the future state. Phase 2 also jump-starts the change management process by identifying what will change, describing who change will impact and how, and developing a detailed plan to enable the organization to change.

Phase 3: Execution. In Phase 3 of the transformation, the focus turns to execution. The transformation is no longer an esoteric exercise; it is the new normal for everyone in the company. No more is the success of the transformation in the hands of the sponsors or working teams. Workstream leaders turn their meticulously developed plans over to line managers to execute.

The Human Element

Getting People Ready, Willing and Able to Change

All the elegant plans to transform the organization will come to naught if the employees do not get on board with the transformation. Its ultimate success will hinge on how successfully employees adapt new ways of working. For that to happen, employees need to understand why such a big change is necessary in the first place, agree that this change is best for the company and for them personally, and be inspired by what the future promises.

The basic change-management building blocks include leadership alignment, change impact assessment, stakeholder engagement, employee communications, training, and measurement and tracking.

These basic building blocks of change management are absolutely necessary during a Fit for Growth transformation, but they are not sufficient to ensure that change is adopted. For large-scale change to succeed, the leadership team needs to work with and within their company's culture to motivate and mobilize the employees.

Those on the front lines have to embrace the change, and to get them on board and keep them on board, you have to enlist your organization's culture and leverage what works within your culture. The Fit for Growth journey will require employees to change not only what they *do* but how they *behave* on a day-to-day basis. That is a considerable ask, and it will go unanswered unless you are able to put your culture to work. Thus, the Fit for Growth transformation approach emphasizes culture-led and behavior-based change.

The transformation needs to build on the company's existing organizational and cultural strength. It's not about *changing* the culture; instead, it's about harnessing the positive aspects (which every culture does have) and emotional forces in the existing culture to motivate and mobilize people around the task at hand — the business of transforming the company for the good of all.

Ultimately, your fortunes rise and fall based on the decisions and trade-offs that individual employees make every day. Will those decisions benefit the firm as a whole or maximize the self-interest of the person making them? It's only when you reinforce a capabilities-driven strategy with both organizational design and cultural prompts that you succeed in becoming and remaining Fit for Growth.

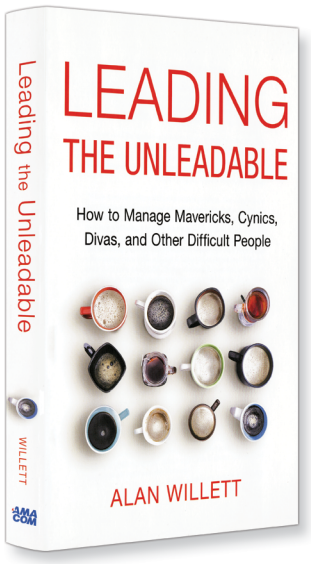
Leading the Unleadable

How to Manage Mavericks, Cynics, Divas and Other Difficult People



by Alan Willett

THE SUMMARY IN BRIEF

The control-freak, the narcissist, the slacker, the cynic... Difficult people are the worst part of a manager's job. Whether it comes from direct reports or people above, outbursts, irrational demands, griping and other disruptions need to be dealt with — and it's your responsibility to do it. *Leading the Unleadable* turns this dreaded chore into a straightforward process that gently yet effectively improves behaviors. Written by an insider in the tech industry, where personality issues routinely wreck projects, Alan Willett reveals a core truth: Most people actually want to contribute results, not cause headaches.

Once you realize the potential for change, the Willett's simple steps and examples explain how to right even the most hopeless situations. You'll learn how to master the necessary mindset; explain the problem calmly in a short feedback session; get a commitment to change and follow up; coach others to replicate the process; and develop the situational awareness required to spot trouble even earlier in the future.

Every manager has "problem people." What sets great managers apart is how they turn them into productive team players. Prepare to transform the troublesome into the tremendous.

IN THIS SUMMARY, YOU WILL LEARN:

- What it means to accept the call of exceptional leadership.
- How to take action and follow through with troublesome employees.
- Key criteria for deciding whether to remove or improve an employee.
- How to prevent problems by setting the bar high.

THE COMPLETE SUMMARY: **LEADING THE UNLEADABLE**

by Alan Willett

The author: Alan Willett spent 20 years building and delivering superior integrated software-hardware products to the marketplace. He quickly took on management positions as a result of his strong organizational skills and commitment. He was part of the management team that created Xerox's first digital print production system. As a consultant, he has worked with executives and leading experts from around the world.

Preface

Exceptional leaders have one obligation above all. Whether they are managing an entire company or a team, a division, a single project or simply a meeting, they must focus on the group, not the individual, and if an individual is hurting the group, that person must be brought back into the fold or cut out altogether.

PART I: THE CALL TO EXCEPTIONAL LEADERSHIP

The Leadership Crisis Point

The greater the responsibilities of leadership, the greater the amount of trouble you must deal with. Recently, a division manager responsible for $100 million in revenue and 500 employees distilled the situation perfectly to a roomful of colleagues. He held his hands a few inches apart. "This," he said, "is how much good news I get to share with the upper management of this company." He then stretched his arms the full distance. "This," he said, "is how much bad news I get to share with upper management." The other leaders in the room nodded their heads in agreement.

This is why leaders often reach the point at which they wake up one morning and simply think, "I don't want to do this anymore." They have reached a leadership crisis point. There is a way forward, though.

Leadership isn't just making a series of decisions (choices) on a daily basis. The very essence of being a leader and how you lead is itself a choice.

Choose not just the call to leadership; choose the call to exceptional leadership. This is a call to embrace the tremendous personal growth opportunity in learning about yourself, in growing your own career and in contributing good to the world.

Before we can listen to the call, we first must understand and *accept* the following facts about leadership: the call to leadership is a choice; whatever you lead, leadership is about leading people; leadership comes with a taxonomy of trouble; and the trouble is your fault, even when it is not. When we accept these facts, we are ready to learn how to lead the unleadable, including our own troublesome selves.

Difficult challenges that leaders are likely to encounter include

Troublesome Project Teams. The problem occurs when the project's troubles start negatively impacting the whole organization: teams that are always late and have quality issues; teams that are constantly battling fires; the stress on any team striving for excellence that often leads to conflict.

Troublesome Individuals. People issues that leaders commonly must address include the cynic, the slacker, the diva and the pebble in the shoe (teammates who provide persistent annoyance to other teammates).

Troublesome Leaders. These include a clash of the titans, when a leadership group is composed of people actively trying to make each other fail; the maverick, who is ready to throw away all of the status quo; and leaders who are facing their own leadership crises.

Troublesome Stakeholders. These include too many bosses with conflicting priorities, the wrong level of

involvement from your stakeholders and irrational pressure from above.

Remember that blame has nothing to do with troublesome situations. If you are the leader responsible for making sure the mission is accomplished, if it is not accomplished, it is still your responsibility.

Accept the Call of Exceptional Leadership

Successful leaders get things done. Their businesses are successful. They deliver. They make a profit. And these leaders do this in spite of all the troubles that plague them. Many managers are successful in this way, but the call to exceptional leadership can take them to a higher level of achievement.

The first difference with exceptional leaders is that they have a very personal, passionate mission that goes beyond those simple (and, yes, important) results. Thus, their measures of success also have a much higher bar.

Exceptional leaders also measure the positive difference for their customers, track the attrition rates of top talent, measure whether constructive conflict occurs much more often than destructive conflict, watch the trend lines of unacceptable behaviors or results and watch their protégés excel.

Accepting the call to exceptional leadership does come with new challenges and new responsibilities. Here are five things to do to help meet the challenges:

1. **Be fearless.** When you start saying "no" to things you used to say "yes" to, the reactions can vary and even include anger. Nonetheless, saying "no" will often be the right choice. Be fearless and confident in your choice.
2. **Build your own community of exceptional leaders.** Leaders who choose this path notice that there are not many people who have chosen this path, but they can immediately identify the leaders who have. Talk to them, work with them and learn from them.
3. **Stop whining.** That is obvious and still worth saying. It is fine to take the occasional whine break, but make it short.
4. **Learn to love the challenge of transforming the troublesome to the tremendous.** This is the opposite of the whining that perhaps you used to do! When you have a difficult employee who is challenging you, learn to relish this as an opportunity to grow others and yourself in the process.
5. **Know that learning will have setbacks.** Taking on brand new learning opens up pathways in your mind and is very exciting. There will be moments, though, where it is a more difficult path than the familiar one. Take your time and learn the new road. It is worth the effort.

The Mindset to Lead the Unleadable

When we change our mindsets, that changes how we act in response to the events that occur around us. How we act changes the outcomes. To be able to best manage the mavericks, cynics, divas and other difficult people and situations, we have to first change our frames of reference in how we think about them.

Here are the key elements of the mindset for leading the unleadable:

Key 1: Appreciate the diversity of every leaf. If you inspect the leaves on a single tree, you will find differences among the leaves. As in nature, the diversity of culture is a rich, textured tapestry of where we have all come from with our unique backgrounds. Exceptional leaders more than understand this diversity; they love it!

Exceptional leaders know that when encountering some behavior or action that appears unacceptable, their first thought should be to wonder what they don't understand about the person and the communication process. Having multiple ways of thinking about things can lead to arguments, but with great leadership this results in great innovation.

Key 2: Start with the belief that everyone has good intentions. The exceptional leader believes that when someone is causing problems, it is not the person's intention to cause problems. Almost certainly the troublesome person is trying to do his or her best to further the overall good of the initiative. The calm leader has the mindset that when trouble arises, it is not of evil intent, it is because something is missing.

Key 3: Accept reality but do not let reality define you. Exceptional leaders do push to set a high bar and to define what that high bar should be. This takes an important mindset, which is summed up in the threefold relentless pursuit of seeing reality, accepting reality and,

based on this, dealing with reality in a way that sets a high standard of achievement.

Key 4: Set the high bar for excellence that people desire. The leaders of the high-quality results organization know that people crave the high bar of doing excellent work. They also know that in spite of any whining that may occur initially, in the end people are proud of producing great products and great results.

Key 5: Understand the power of gelled teams. The exceptional leader is always looking for ways to create teams of people in which the team can figure out how to address the trouble without management involvement. As you grow as a leader, the troubles you and your organization encounter will not diminish, but as your skills grow at creating the desired culture, the number of times you must personally get involved will greatly diminish.

Key 6: Treat trouble as information-rich data. If there is trouble occurring in any of the things you lead, it is important information — not just about the actual incident or the actual trouble; it also contains information on the process, the people involved, the culture you are creating through your leadership and you.

Key 7: Own your leadership power. The meaning of this is simply that you understand and own all the keys of the mindset of leading the unleadable. It means that when you have setbacks in making those mindsets your first response (and there will be setbacks), you don't let the setback become a norm; you forgive yourself and get back on track. It means that you don't let the trouble you have to deal with define your response; you take ownership of your response. You take ownership of your leadership process and the results.

PART II: THE LEADER IN ACTION SPOTTING TROUBLE, DEALING WITH TROUBLE

Fine-Tune Your Radar for Trouble

To deal with issues you first must be aware that they exist. And, as in all things, the earlier you are aware of issues emerging the more likely you will prevent damage and achieve the excellence desired.

How good is your radar for trouble? For those who have now objectively determined that their own radars are flawless, scan these areas and see if you find anything new to help make them even better. If you have found that your radar can be improved, consider the following three methods:

Method 1: Talk to people. More importantly, listen to people. The most obvious way to be able to spot trouble is to be there when the situation is beginning or at least right when it happens. And since you cannot always be there, the next most obvious way is to hear about troublesome situations soon after they happen. One way to do this is by the classic "management by walking around" or, in this very connected world filled with distributed teams, leadership by calling around and checking in. You have two goals with this. The first goal is to find out if there are any situations that need your help to ensure the achievement of the project goals. The second goal is to build trust in a way that people will come to you without fear about difficult situations.

Method 2: Pay attention to differences. Often, the first indicator that something is wrong is a feeling that something is different from previous experiences. The key is to pay attention to that feeling and investigate whether your feeling is meaningful or not. Is there something that needs your attention? Notice the differences. Ask about them. The answers could be very interesting.

Method 3: Look beyond the first level of data. People often have a story that goes with data, especially if that data doesn't indicate good news about the project. And although the story gives a great context to the data, the data is still important. It is important to go deeper when the story and the data do not match. When looking at the data, ask, Is the data providing a compelling answer to useful questions? Was the data collected accurately and consistently? Based on the data, what actions can and should be taken based on trigger points?

Take Action: Transforming the Troublesome

Once you spot trouble, how will you deal with it? There is a choice to be made by the leader. If action is not taken, it is possible that things just might get better. However, it is more likely that if action is not taken, things will get worse and often in unpredictable ways.

It is best to take proper action. To take proper action, proper preparation is required. Four steps are needed to prepare for proper action: understand what emotions you are feeling and why; move past negative judgments and assumptions; prepare your clear, short (two minutes or less), judgment-free message; and set aside time with the individual to focus on this one topic.

Follow these steps when taking proper action:

Meet in a private space: This can be via videoconference or telephone, however do not use email or other written correspondence, as the most likely outcome is to make the circumstance worse.

Deliver your key message. Do not start with small talk. Deliver your key concern with respect and empathy toward the other person. Do so concisely and without judgment.

Wait patiently and quietly for a response. Wait for the individual to talk. If you have to, wait longer; the response is often an unexpected set of events you did not know about.

Be in the moment. The best way to prepare for the response is not to anticipate what it will be. Sometimes the response is a complete surprise. Given that you really do not know the response you will get, just be in the moment and listen.

Listen to understand. Stay focused on what the speaker is saying and how he is saying it. If there are parts you don't understand, just keep listening until the person is done speaking.

Reflect. Tell the person what you heard to make sure you did understand. Reflect both on the facts and the emotions. This is not a place to argue.

Discuss. It is fine to ask questions. It is fine to bring up things you are wondering about. The discussion part should not be long. It is just for you to make sure you understand the situation and the other person understands the impact his behavior is having.

Set expectations. The meeting must provide clarity on what your expectations are. This is the part of the meeting for the other person to listen and understand.

Ask for action steps. It is best if you set up a second meeting for the person to be able to take time to internalize what he heard. He will also have time to build a proper set of actions for moving forward.

Summarize. Conclude the meeting with a summary.

There are a variety of responses that you would expect when delivering the difficult message that a person is falling short of expectations. You might expect to see anger or rationalizations or many forms of excuses. If you are centered and in the moment, you should focus on listening and also keeping clear in your own mind your expectations of excellence. The concern you started the meeting with was based on those expectations. The meeting should conclude with that clarity.

Follow Through: A Bridge to Enduring Improvement

Leaders must always be prepared for follow through. In many situations, the conversation is the start, and the leader's next step is to help the person to build a bridge to successful improvement. To create a bridge for successful improvement, you must start with the following three clear expectations.

The first expectation is to have the intention for successful improvement through collaboration. The second expectation is that you as the leader are accountable for the success of the initiative you are undertaking. The third critical expectation is that you start with the belief that success is probable.

A plan for follow through should always focus on a clear vision of where you, the individual, the team and the organization want to end up.

Follow-up actions should include periodic check-ins. These do not have to be long. The most important thing to do in these cases is to focus your check-ins on the new behaviors you are expecting to see. Surround people with support, and provide space for learning new behaviors.

Finally, it is important to set the bar of excellence high. It is a leadership mistake to recognize just effort. It is more important to recognize when success is achieved.

Decision Time: Remove or Improve?

Your leadership obligation is to the group as a whole. The primary purpose that guides your action should have the overall mission of the group in mind.

There are circumstances where it is clear that it will not be possible for an individual to improve to the performance level required in the time required. For example, there are situations where only a scant few weeks remain before the launch of a product. If someone is being especially disruptive, it is unlikely there is time to properly remedy the situation when everyone is already under stress. However, even in this situation, you may think that saving the individual is critical for future organization improvement. Unless the troublesome behavior is outright illegal, these decisions are rarely clear and easy to make. Is it the right time to remove or the right time to improve?

All decisions this important must be made in the context of the situation the leader is facing. A number of factors come into consideration. The following are the most important.

- Has the individual shown the willingness and ability to take critical input and use it for self-improvement? If the person has issues and always indicates that the problem is not with her but with others, then the leader will have a significant challenge.
- How well liked is the individual by the rest of the organization?
- Is the individual able to raise the ability of others through collaboration? Individuals who can bring together a diverse set of abilities and personalities are important assets to organizations.
- Do the technical skills and experience of the individual fit the needs of the project today? Are those skills exemplary or ordinary? The big question is how much impact the removal of this individual will have on the project.
- Do the skills and experience of the individual fit the needs of future projects? It is important for the exceptional leader to always keep an eye on the horizon.
- How likely will you be able to acquire the skills this individual has from outside the organization in a timely manner? This is a critical factor.

Using these criteria-based questions will help raise the leader above an emotional response to difficult situations, and enable him or her to begin to think clearly about the situation.

PART III: THE LEADER IN ACTION PREVENTING TROUBLE

The Need for Mountains

In 1914, Sir Ernest Shackleton's Antarctic expedition became shipwrecked. It took 500 days for the commander and his crew to reach safety while living in the harshest conditions our planet has to offer. Years later, though, Shackleton returned to the Antarctic on another expedition, and most of his crew joined him. They went back because they recalled the freezing, starving, dangerous journey as one of the happiest times of their lives. It wasn't just that they relished the challenge, it was that they remembered overcoming the challenge as a team.

There is a need for challenges as high as mountains. There is a need for people to gather together and work toward a great goal. There is a need for quests.

If you see people having the same arguments over and over and again, it is almost always a battle about what the next steps should be or what the overall solution should be. The root cause of this repetitive argument is *not* about being deadlocked on which solution is superior. If those people battling took time out of the battle to dig deeper, they would often find that the individuals deadlocked have different goals in mind. They are headed to different destinations.

Even organizations in the midst of the survival journey are better off if they set compelling goals.

If your organization is successful and survival is a given, the need for compelling goals is even more critical. But how do you set a compelling goal when the obvious one of survival is no longer there?

Start with the "big why." Why is your goal important to you? Even more important, why is it important to your clients? Why is it important to your employees? You can set goals for a period of time, for a project or to set the stage for creating a new organization.

Make your goals about going somewhere inspiring. Too often, managers put forth goals about "not doing" something. We are going to "stop providing bad service" is not nearly as compelling as "customers will call other people to tell them about the service we provided them."

Work on language that will create visceral emotion. How can you state your goal so that it will evoke an emotion that people understand, care about and will remember?

Leave room for people to take their own meaning and ownership. If you provide too much detail, it leaves no room for the imagination to take hold. It doesn't leave room for a dialogue.

Set Expectations of Excellence

Exceptional leaders are fearless in setting their expectations of excellence in clear language before and during a project, as well as in the way they handle deviations from the expectations they have set forth.

Whether you desire to reset expectations or you are forming a new organization or simply a new team, the creation of your expectations of excellence should be done in a thoughtful manner. The following are considerations in forming your expectations of excellence:

Consider the context of your organization. What is the organization's vision and mission? Are you leading a group in a risky new enterprise, or is this a critical project building on existing technologies?

Take a view from the outside looking in. What attributes would you like your organization to be known for? Consider what it may be known for right now.

Engage key opinion leaders in the conversation. Inside your organization, you want to engage in a conversation that helps form and develop your ideas. Also, by engaging in the conversation, you are setting the stage for your key internal opinion leaders to make your expectations of excellence be part of the fabric of how they think as well. Engage in conversations with people external to the organization. How do they view your organization now? Do they see you the way you see yourself?

Make your expectations concise and memorable, and provide detail. The slogan "Quality is Job #1" is concise, and in many ways it is memorable. But you must provide examples of what *good* is when you say quality is job #1. Leaders should be ready with examples of what they mean by *quality,* especially for the most important aspects of their organizations. They also should have examples of ways that quality can be measured.

Expecting Excellence Every Day

What happens in the halls and in meetings and many other interactions in the organization define the true expectations of excellence. If those interactions are not congruent with what is written on the walls, the hallways will win. As a result, people will become cynical, and leaders will have a more difficult time managing trouble. It is much harder to point to what *good* is with inconsistent reinforcement of the organizational expectations of excellence.

When the formal expectations of excellence match the daily interactions, a powerful foundation is formed that enables the whole organization to rise to expectations of excellence. What is happening is that the leaders are not just creating expectations of excellence, they are consciously forming a culture of excellence that makes the desired behaviors of leaders and team members a natural experience of how they do work. This is the key to preventing trouble from occurring in the first place.

Like it or not, meetings set the tone for an organization. If meetings pulse with energy, the potential for greatness grows. Take ownership of the meetings you own or run. Vary the rhythm. Many weekly meetings are the same every week. Rotate agenda items. Consider different styles for the weeks. Find out what people really think. Work to become a master facilitator.

Use skill gaps as opportunities to grow the culture you need. There are times when you put up the high bar of your expectations of excellence, and people simply cannot reach it. The way to keep the bar high is to give people the skills they need to reach it through training, coaching, mentoring and clear role modeling. Do not reward the sweat. Reward the results.

Exceptional Starts Lead to Exceptional Results

Starting a project poorly leads to having to do significant rework later and being constantly behind expectations of schedule and quality. In addition to resulting in constant stress for the project team, projects that start poorly very seldom fully "win" by delivering all expectations on time or early and delighting both team members and customers.

How do projects start right? Start by thinking about what you should do:

Have a clear purpose for the project with clear priorities. Why is this project important to the organization? Even if the project is an exploration of a possible new marketplace, the project must have a clear purpose defined for the beginning as well as an end result of success in mind.

Understand how important this new project is in respect to the current portfolio of projects. Is this a tactical urgent response to a current problem? Is this more or less important than current projects?

Start with a small team. Typically, starting a project exceptionally means establishing a strong foundation to add other people to later. Starting with a small team with the attitude to start the project correctly will make the project go faster and faster as the right team members are added.

Start with the right leadership sweet spot for the type of project. If your project is exploring brand new technology and marketplaces, you want a leader who is fearless about being wrong and learning quickly from taking those risks. You want a leader who will ensure that the current technologies continue to work well for your customer base. Look for the right type of leader for the project context.

PART IV: LEADING LEADERS

Lead Leaders: Growing Proven Ability

The most fundamental problem of leading leaders is that they can be unleadable too and in whole new ways. As

one CEO is quoted as saying, "The higher up a manager is in the organization, the more fog there is around that manager's performance. It is very hard to judge how well they are doing." The problem with the fog is it takes longer to see if the leader is the root cause of the problem.

As a leader of leaders,

- There is an increased distance between you and much of the work. Thus, you will often be one or more levels removed from where the trouble is and even distant from the indicators of trouble.
- You do not know the details of how the work should be done.
- Your breadth of responsibility increases, and with great power comes great pressure.
- There is increased need for autonomy among the people whom you are leading. People need the space and capacity to make their own decisions, to make their own mistakes and to complete excellent work.

In the organizations where there is a significant issue in the ranks of leadership, the most common root cause is that the leader of the leaders has not clearly thought about the expectations for how the leaders working for them should lead. The key is to make your expectations of leadership known. This is the most important preventive measure in ensuring that the leaders you lead will more likely be tremendous than trouble.

As a leader of leaders, you must have a longer view than any of the leaders working for you. The CEOs of larger organizations must be focused on creating next year's business while other leaders focus on delivering today's products, services and promises. Each leader must be able to articulate the direction the company is going in and how the success of today contributes to longer-term potential.

It is your job to provide each person you lead with inspiration, guidance, discipline, correction, training and, most of all, the opportunity to make mistakes and to excel.

If you are making decisions about direction that others disagree with, expect them to challenge you.

Get things done while growing the talent of teams and collaborating with peers. It is a high bar of excellence. Expect nothing less.

Leader, Lead Thyself: Exceptional Self-Leadership

If you truly want to be an exceptional leader who can consistently provide great value, to have positive impact and even to transform troublesome situations to tremendous, then the focus must start with your inner game of leadership.

Find your leadership sweet spot. On a tennis racquet there is a miraculous zone known as the sweet spot. It is where multiple forces are designed to come together to create a harmonic response.

The same is true for leadership. When you do work that misses your leadership sweet spot, it is jarring and more quickly drains your energy. When you do work from your sweet spot, it provides more energy to you than you put into it. This is also an intersection of three forces that you can control to come together to create a great harmonic response.

Passion is the type of work that energizes you. You like this style of work and like doing the work in this area. This is the work that puts a smile on your face.

Competence is simply having the skills needed to make the work successful. When you have passion and competence, the work done will provide you with great pleasure and pride.

To do work that truly energizes you in the long run, the work that intersects with your passion and competence must also be work that provides **value** to others.

Exceptional leaders work to create ways to grow their sweet spots.

As managers, as leaders, your obligation is to the group as a whole. Every time that there is a troublesome person or situation, it is an opportunity to help someone grow — and perhaps even yourselves. It is an opportunity to transform the troublesome to the tremendous.

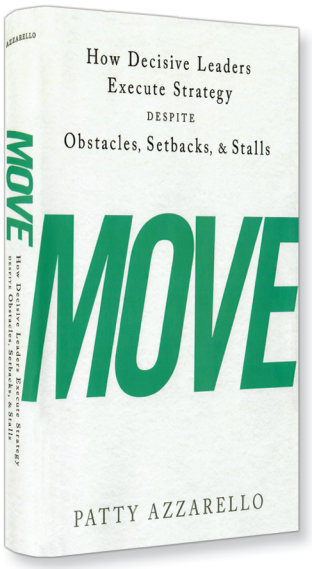
MOVE

How Decisive Leaders Execute Strategy Despite Obstacles Setbacks, & Stalls



by Patty Azzarello

THE SUMMARY IN BRIEF

Too many new initiatives lose drive and direction before they finish. At the beginning, when a team first commits to implementing a new strategy, there is a great energy and enthusiasm — driven by the allure of the end goal. But then comes the long, dangerous part in "The Middle," where everything needs to get done, obstacles inevitably spring up, and people feel a strong temptation to revert to the old ways. *MOVE* explains how to keep your team focused, motivated and resilient enough to push through the unavoidable, chronic challenges that derail most change initiatives.

Some of the most recognizable brands in the world use the *MOVE* methodology to ensure their change strategies don't stall. Business transformation expert Patty Azzarello explains the four components of a prosperous business transformation and exactly what it takes to keep everyone moving the new strategy forward. The MOVE Model will help you make sure that everyone stays engaged, maintains momentum, and that your initiatives succeed.

IN THIS SUMMARY, YOU WILL LEARN:

- The key elements in an execution plan that guarantee accountability and momentum.
- Empowering tools for transforming the team you have into the team you need.
- A powerful new way to think about leading and communicating to genuinely engage people throughout the implementation.
- Using communication to produce results and build trust.

Introduction

At the heart of every execution problem is the fact that there are not enough people doing what the business needs to move forward. As leaders, we need to figure out how to keep our strategic change alive and moving forward without constant management intervention. How do we make the whole organization not only own the change, but have the ability and the motivation to keep it going?

The MOVE model defines the four steps for how you get and keep your whole organization moving forward and not asking, "Are we still doing this?" It is the useful shorthand for the four key elements of a successful business transformation: M is for the Middle; O is for Organization; V is for Valor; and E is for Everyone.

M = The Middle: Where Transformations Either Happen or Get Stuck

The Middle is where the transformation will happen — or not. One of the undeniable realities of the Middle is that it's the long part — and the simple, human fact is that it's really hard for anyone, not to mention a whole organization, to stay focused and motivated on doing new and difficult things for a long time. The *beginning* is really clear and strong, with lots of investment, excitement and great intentions. And the *end* is really well defined. But the problem most strategies face is that there is no real plan for the Middle — which is where everything needs to happen!

A big reason for the stalls that too often occur in the Middle is that many organizations mistake listing end goals as a strategy. You become excited about the wonderful achievement at the end, but there is nothing in the definition of that end goal that tells you specifically what to do, which way to go about it, what problems you need to solve, or what you need to fix, change, stop or invent to get there — these are all things that need to happen in the Middle. These are all things that describe what you will do.

Your job in making the strategy come true does not stop after you announce it. One of the hardest things to do is to get an organization to stop doing what it is currently doing and start doing the different thing that it needs to be doing.

As a leader, you need to get involved enough in defining outcomes and measures and holding people accountable to specific things to make sure that the strategy is taking hold and is moving forward through the Middle.

Leaders struggle with two things when it comes to managing execution:

1. **They feel like it's low-level work.** They act as though it's not worth their brilliant, strategic time to focus on what people are actually doing. They view execution as a low-level job for other, less important, less strategic people to deal with.
2. **It's hard and boring.** Measuring, tracking and communicating something that has already been defined is not nearly as exciting as pursuing a big, strategic deal or creating something new.

What strong, personal leadership looks like at the beginning of the Middle is keeping yourself educated

on the business drivers that are causing the need for this change in the first place. This knowledge will give you the insight and power to lead your own piece of this transformation and to never be caught off guard by changes you didn't anticipate.

Concrete Outcomes

A company can be really clear about what it wants to accomplish yet struggle to articulate the specific tasks that will make those goals come true. A strategy must describe what you will do, including how you will measure and resource it. Strategy must clarify specific actions. An end goal, no matter how inspiring it is, is not enough to mobilize an organization. By insisting that your strategy describes what you will *do,* you will, by definition, be making it clear what things need to happen in the Middle.

It's vitally important as a leader to recognize when your team is falling into the pattern of accepting smart-sounding ideas and inputs instead of measurable forward progress. Situation conversations are the easiest conversations to have because there is no risk. You are simply stating facts. The fact of the matter is that there is no forward progress because you are simply describing what is happening.

The way to break through this type of stall is to train your team members to catch themselves having a situation discussion and then say, "Let's stop talking about the *situation,* and let's try to define an *outcome* that we want to achieve."

By focusing on describing what it would look like if it were working, you are able to define outcomes that are concrete enough to suggest the specific necessary actions. When you get concrete in your language about outcomes, the action plan just falls out in a very clear way.

Once you get a group of people talking about concrete desired outcomes instead of situations or vague high-level goals, a few wonderful and remarkable things happen.

- **More information comes out.**
- **The action plan builds itself.**
- **People can figure out how to contribute.**

Getting your team to define concrete outcomes unlocks a lot more of the power of your team.

Timing and Momentum

When people focus only on the long-term end goal, the first step in their long-term journey is a delay. It's important to create a framing of the initiative in a way that avoids this early sense of complacency. The next tool to keep everyone on track through the Middle is timing. Once you have defined concrete outcomes that will enable your long-term goal, you need to get your team to define smaller, midterm checkpoints and deliverables that are necessary at *specific mid-points all the way through the Middle, to achieve your desired outcomes.*

By placing these clear, midterm checkpoints on a timeline, you will create the lightposts that the organization needs in order to see where they are going through the long Middle — and to keep going. These become not only your midterm checkpoints but also your enablers of urgency — if you place them on a timeline so they occur at an aggressive pace, you will be creating the urgency you desire.

Control Points

The right measures are so important. But just like there are end goals masquerading as good strategy, there are often bad measures standing in for truly meaningful ones. Good measures predict actual desired outcomes and enable you to move the business forward. Bad measures measure only activities or steps in the process, not outcomes.

Control points, by definition, are a more broadly defined outcome than a detail or process step. One of the reasons why we have so many bad measures is that details and process steps are so much easier to measure. If you've got a good control point defined, ask yourself what the genuine measure of success would be. If it turns out to be a description of how something is working, that's OK. Go with it.

Resource Reality

Another harsh reality during the Middle is that resources will never self-optimize to support a new initiative, strategy or transformation. You need to make sure that you have specifically resourced the activities necessary to achieve the outcomes you have put on your timeline. If you want to know what your strategy actually is, just look at your budget. Your budget describes what you will be doing specifically throughout the Middle.

Don't Sign Up for the Impossible

The most pivotal decisions you can make in the business are based on this: What are your revenue and expense targets? When companies try to support an artificially high, unsupportable expense target, they can't do anything well. Cut the expenses to a level that the actual revenue plan will support.

O = Organization: Are You Leading the Team You Have or the Team You Need

There is no more important thing you can do as a business leader than to build the right team. With the right team, you can take on any challenge, and more of your energy is focused on actually moving forward. Below are some questions you can ask yourself to see if your team has the fundamental ingredients to be successful:

1. **Are all your team members facing forward?** They may be facing sideways (confused about where you are going) or backwards (in disagreement with where you are going).
2. **Is everyone on your team truly in alignment about what the course is and what their role is?** If people's roles aren't clear, or if you have competing, conflicting or duplicate efforts within your organization, the team can't move forward.
3. **Is each person capable and up to the task required of their role?** When there is a team member who cannot pull their share of the weight, the manager and other team members are forced to compensate.
4. **Are they all motivated to go where they need to go?** Do all the members of your team personally care about where you need to go? Are they engaged? Are they invested?

Are all of your managers good managers? Many organizations settle for having people in managerial roles, who quite simply are not good managers. It will serve you well to make sure that you select, support, train and set expectations about what is required of a good manager in your organization. You need your managers to be engaging, motivating, supportive and facilitating the right work, not preventing it.

Organize for Outcomes

Often, leaders make the mistake of thinking about organizational changes in terms of moving the existing people around. A better approach when you are at these crossroads and need to make a change is to first focus on the business outcome, and then decide what the ideal organization would be to achieve that business outcome. Your job as a leader is to develop and, if necessary, change the people to build a highly capable team that can do what the business needs in the future.

Start with a blank sheet of paper and focus on the business outcome. Here is a suggested process used for developing an ideal, blank-sheet org chart:

1. **Start with the desired outcome for the business.** Really understand and articulate the specific work, strategic problem solving, concrete outcomes and control points that your team needs to drive.
2. **Next, draw your ideal blank-sheet org chart.** Draw a picture of what the ideal team would be. Think through what the specific roles (roles, not people) on your new team would need to be to drive the key business outcomes — not just now but in the future.
3. **Now, clearly define each specific new role.** Really work to articulate the new stuff that is different. This is the key. Once you define the new org and the new roles, you have just created a clear and actionable picture of your goal.
4. **Get input.** The added benefit here is that if you bring some team members into the design of the new organization, they will be much more ready to support the new structure moving forward.

The People

The best way to find stars and other high-caliber, talented people that you need on your team is to never stop looking for them. Don't wait for a position to open up. Keep your eyes open for them and build relationships with them. Then recruit whenever you get the chance.

Hire for creative problem solving. You need smart people who can solve problems and figure out what to do without you needing to do all the important thinking for them. It's important to look for creative problem-solving skills in your interview process, so that you can find those people who you can send off to fix, solve, create or improve things on their own.

Hire a star. For stardom, you need to prioritize potential over experience. When assessing if you see a star, here are some of the important clues to look for:

- Fast or weird advancement. Stars have a track record of advancing and doing things that were bigger than their jobs and doing more than their peers. Stars don't stay in the same role for years and years.
- Ambition. Stars are motivated to achieve great things for you. Enjoy it while you can, and then support them to move up and onward.
- Really smart. Stars are motivated by learning and have a track record of learning on the job (fast) and advancing beyond peers.

The right team will get you there. Expect that leading change and getting an organization to stick to it through the long Middle will be exhausting — because it is. If you can get even just one or two truly remarkable people on your team, your chance of success (not to mention your own health and sanity) over the long term will rise exponentially.

Building Capacity

The vast majority of people in corporations think that high performance equals doing their jobs well. Many do not realize that high performance is found outside the boundaries of one's job description. High performers realize that they have to break through the limits of their job descriptions and do things over and above it to meet evolving business needs and to develop themselves.

A critical factor in both building capability and ensuring your transformation keeps moving forward is how you do performance management. Effective performance management is as important to stimulate the development and positive performance of your team and the individuals, as it is to deal with poor performers.

Performance management can and should be about tuning performance so that your organization is clear about what behaviors are expected and rewarded and which ones are not tolerated. Lack of clarity about performance expectations related to the transformation create opportunities every day to ignore the important new work that needs to get done during the Middle.

Unstructured Conversation

The most valuable moments in leadership come from the informal conversations where people let their guard down and say what they really think. Unstructured conversation has an enormous ability to unlock higher productivity, not to mention to greatly reduce execution risk.

People need unstructured conversation in order to establish their own ways of believing in the strategy. They need to get their own opinions, thoughts, and beliefs in line before they will be ready to move.

Without unstructured conversation, you risk the team not truly engaging on a personal level, and you also risk ongoing misunderstandings, disagreements and sabotage.

Stop Having Status Meetings

Status meetings are almost a form of anti-communication. They do not foster a healthy sharing of knowledge, ideas and risks. There are three key problems that status/review meetings cause:

1. You don't gain necessary insights about risks and opportunities.
2. You keep people from doing real work and waste a lot of time.
3. You fail to discuss the things that would give you insights about risks and opportunities because you spend all your time and energy reviewing project details.

There are two things that you need to rework once you decide to stop having status meetings: You need an alternative, effective plan to track status, and you need to decide what else to do at your staff meetings if you are not reviewing status.

Virtual and Remote Teams

Many companies provide work-from-home options. Employees love it. But many managers struggle with it. Individuals can be more productive working at home, but teams can't. So, your goals for your work-at-home policies should be to create a way of working that optimizes individual productivity by letting people work at home sometimes and optimizes team productivity by having people together in the office sometimes.

If you want your work-from-home policy to work, get very clear about your desired outcome for both individuals and teams. Establish clear desired outcomes, schedules and priorities both for the individuals and the team.

Getting People to Actually Care

When you are thinking about what it will take to get and keep people moving, it's important to remember that money is not the strongest motivator — meaning is. If you don't create meaning for people on an individual level, they will not have any personal motivation to move your strategy forward, which is more powerful than money. If you want your team to be motivated, it starts with you as a leader showing your own excitement and commitment.

Employee motivation is not a task you can accomplish with a problem; it is an outcome of making genuine connections with people. If you make an effort to share with people how their work fits into the bigger picture, their work will take on a bigger meaning and they will be more motivated and more effective.

V = Valor: Facing the Hardest Stuff with Courage and Persistence

If you are a leader, you will be attacked and challenged sometimes. The bigger the job, the harder it gets because as you move higher, there is less clarity of expectations, less

support from your direct manager, less feedback and higher stakes. You need valor to progress through the long Middle.

Think of valor this way: Once you embrace the fact that your job equals your job description plus all the crap that gets in the way of delivering on your job description ... you will feel (and be) in a lot more control.

Mission Impossible

Four things will help you feel less crazy and stressed:

1. **It's OK to be scared.** Everyone has moments in their careers when they feel like a fraud or an imposter. It's not just you. If you feel scared, it's because you are challenging yourself and progressing, not because you are not good enough.
2. **Do what is true for you.** People can see authenticity — and it is a powerful thing. You are always your most powerful when you are being authentic.
3. **Use mentors and experts.** Mentors are so necessary, not only to ask for help you need it, but also to point out your blind spots. Asking for help from experts even when you don't feel like you need it can make the difference between simply getting something done and creating huge success.
4. **The parallel universe exercise.** Next time you feel thoroughly discouraged and stuck, ask yourself, *In a parallel universe, that is exactly the same as this, but has a better version of me: What would that better version of me do?*

Too Busy to Scale

It might sound a little counter intuitive, but the companies that scale are the ones that do fewer things. It works because they can do those few things really well. By comparison, the companies who get stuck often get stuck because they keep trying to do too many things. You can't do too many things well. This is another area that requires extreme valor because it's really hard to say no to opportunities and give up potential or actual revenue streams in order to focus on becoming great at the few things you choose to win at.

There are three problems related to doing too many things that will keep you in chaos and stall your forward progress:

Problem #1: Addicted to busy. New initiatives require new work. If people are just too busy and distracted to get traction on the new thing, it doesn't get done simply because there is no time to do it.

Problem #2: Doing too many things. Valor is very much about having the guts to make the choice of doing fewer things. You need to make choices and tradeoffs. You need to decide where you are going to place your bets and then need to stop doing some other stuff.

Problem #3: Being too reactive. When there is a customer emergency, everyone drops everything and it's all hands on deck until the customer is satisfied. Strategic work stalls. Without an intentional change to choose strategic over reactive, this situation will never resolve itself.

Detail

The idea that your value as a leader is only highly regarded if you understand a deep level of detail is a false one. To insist that all of your managers must also stay versed in all the details kills organizational effectiveness, is hugely expensive and introduces more risk than it averts. Reviewing detail at every level wastes a huge amount of time (everyone's time) — time that is then not spent on moving the business forward.

A useful rule of thumb is that you should never move details up in the organization: Insights move up. Details stay down.

Create systems and processes that feed you the insights and information about how the work is going that make you feel completely comfortable, without your needing to review all the details personally. Your system should have triggers that measure and report progress, and communicate problems and risks along the way.

Clarity and Conflict

As a leader, one of your biggest responsibilities is to remove uncertainty. You need to make the big decisions. Uncertainty is a huge, hidden expense and a generator of stress and low productivity in your team. When people are confused, there's the obvious expense of work not getting done — as uncertainty causes people to wait for decisions instead of working.

Unresolved strategic issues don't just stay in the boardroom until you finally get them answered. Every unanswered strategic question leaves legions of people in your organization deciding for themselves as they go along. Everyone is less productive and busier than they would be with clear direction. The problem is the inconsistent outcomes that are created by everyone taking their best guesses while waiting for the strategy from above. Be right or wrong, but never unclear.

Creating real clarity about resources is where the biggest source of conflict starts. Here are some ideas for how to create clarity and work through necessary conflict with your team:

- **Clarify the desired outcome.** Define what, specifically, is expected.
- **Don't give people the chance to passively agree.** Ensure the level of discussion produces a plan with concrete tasks, owners, measures and communications about it.

Decision Stall

With any amount of data, making a decision is hard — because a decision is a commitment to do something specific. There are two surprising reasons why you might have trouble deciding. In addition to the fear of making a bad choice or of the risk that comes with a choice, one of two other, very interesting things often happens:

1. **The leader does not want to force it through:** The study is seen as an opportunity to get the participation and buy-in of the team, so the leader is not seen as dictating the decision top-down.
2. **The team thinks the leader requires more information:** The study is seen as an opportunity for the team to satisfy the leader that their recommendation is valid because the choices have been fully studied and justified.

Study only gives you theoretical knowledge. Putting something out in the world gives you real knowledge. A decision always feels more risky than further study or conversation, but decision and action will always yield valuable results.

If you fail, fail quickly. Recognize it was a bad idea and move on. Learn, then try something else if necessary. The most successful companies are the ones that can fund their mistakes.

Another decision-blocking behavior is too much emphasis on consensus. Consensus breaks down when the discussion never moves past the input and discussion phase. It breaks down because leaders wait for everyone to agree before moving forward. Command breaks down when you make a clear, fast decision and just give orders without letting anyone speak their minds and share their opinions and knowledge.

If you have time to get input, you are always better off to have the discussion, encourage the debate — and then make a decision.

Tracking and Consequences

If you need to make strategic progress, you can't let any deadline come and go and leave the failure totally unacknowledged and unexamined. Not addressing a miss sends all the wrong messages and sets a very low standard of execution.

Without measures and consequences, anything else you do for motivation becomes hollow and pointless. The work has to matter. If failing to get it done on time doesn't matter, by definition, the work doesn't matter.

Many managers get uncomfortable with enforcing consequences because they don't know what the appropriate "punishment" should be. You don't need to fire the person, but you do need to confront the poor behavior. Acknowledge it. Have the conversation. You can be kind to people and tough on results.

E = Everyone: You Can Lead a Transformation from the Top, but You Can't Do a Transformation from the Top

Transformation cannot happen as a top-down process created and driven by executive effort alone. You need active involvement from everyone.

You should never assume that just because you have told everyone your strategy, they were listening carefully and they internalized it — that they know what they need to do personally to act on it and how to optimize it with regard to their current work, and that they will actively do the right things to implement their piece of it. The right measure is never about how clearly you think you have communicated. The only right measure is about how much your audience has internalized. You have communicated successfully when the people in your organization are talking about it amongst themselves.

For your transformation to work, the change must be a part of the social fabric of the whole organization in a very real way — and that happens through conversation. Conversation that creates action happens when you enable the people whom you need to implement the transformation to start talking about the transformation among themselves in an ongoing manner.

The best way to make people feel safe and to motivate them to move forward is to make sure they see that all their peers are also doing it. This will happen only if peers are talking about it.

Decorate the Change

The most effective organizations take forward progress a step further and intentionally create rituals, artifacts and even modifications to their physical workspaces to make

the change highly visible throughout the whole Middle. This is referred to as "decorating the change."

It's important to think about how you will decorate your change. After you communicate your strategy, you then need to create a conversation (the conversation is a primary decoration in itself) and then find other ways to decorate your change so that people can notice it in their environment and want to join in.

Top-Down Communications

Top-down communication is not enough on its own, but it's very important as a leader to show up consistently and make your presences and your personal commitment to the transformation felt. Your communications make your own personal engagement tangible and visible throughout the long Middle — it's another one of the things that decorate the change.

Make it a point to share the context. What made you choose to change something or do something in the first place? Take the time to explain it. You need to communicate the big picture and sell the business reasons why your strategy is important and why the new things must be done. Make it vividly clear that the new way is vastly better than the current way — and why.

Your consistent, repetitive communications along with rich conversations among the people doing the work will ensure that confidence in you as the leader remains high, and that progress does not stall.

Listen on Purpose

As a leader, you can use the critical insight you gain from talking to individuals about what's really happening to improve the business and to keep things on track throughout the Middle. You will be surprised how useful the information is and how much more effective of a leader you will become once you know this information.

Another reason to always be listening on purpose is to make sure that you are putting yourself in the stream of the very best ideas. Highly successful people are always ready to learn from anyone. They seek out good ideas everywhere, all the time.

Sharing Information

Keeping momentum through the Middle requires a constant sharing of information across your organization, so people can feel safe that what they are doing makes sense in the context of what everyone else is doing.

People tend to forget to communicate with people outside their own groups. Make a list of all the people and groups you should be sharing information with, and all of the people and groups you should be seeking information from. By first making these lists, you are reminded that there are others who exist out there in the organization who would benefit from knowing what you know.

The benefit of shared knowledge in a business is incredibly valuable, and the risk of not having it is incredibly high and very costly. But, communication in the form of sharing knowledge is so often viewed by managers and employers as an extra, nonvital thing. It's outside the job description, and therefore optional. Why not make sharing information part of everyone's performance objectives?

Power and Trust

If you acknowledge that you have a big responsibility — because you are in a powerful role — but you share power and respect with others, you will build a loyal and powerful team that supports you. And this is so critical in transformation!

"Shared power" leaders win people over by building an environment of trust and respect. To truly motivate your organization and build loyalty and trust, it's important to treat people like people. A key factor in treating people like people is to invest in learning what they truly care about, both at work and outside of work. When you start treating a person like a whole person instead of a cog in a work machine, you build the foundation for a huge amount of trust. And that trust drives motivation and momentum.

The reality is that when people feel trusted, and they trust you, they will work harder and faster, be more innovative, get more done, and treat customers better. They will trust you when they are in the Middle and can't yet see the light at the end of the tunnel. They will keep going. They will MOVE.

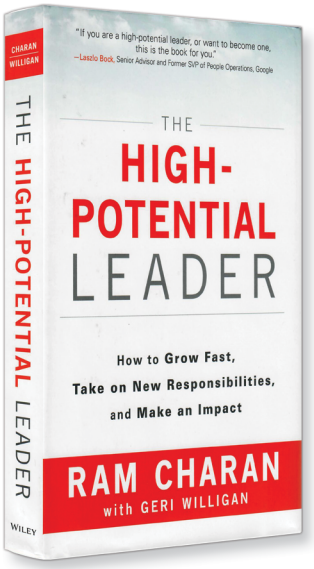
The High-Potential Leader

How to Grow Fast, Take on New Responsibilities, and Make an Impact



by Ram Charan
with Geri Willigan

THE SUMMARY IN BRIEF

Companies need a new kind of leader to meet the enormous challenges of today's fast-moving business world. Whether you have potential to step up and lead or are charged with finding those who can, *The High-Potential Leader* is your authoritative guide.

Known for his coaching work with many of the world's leading CEOs, bestselling author Ram Charan explains how "hipos" can know who they are, create their individual path and accelerate their growth. The book also helps top management and human resource professionals cultivate in their hipos the skills, judgment and mental capacity needed at the highest levels.

This hands-on guidebook contains practical advice for making daily progress toward running a large team, business unit or company, a framework for deciding when and how to make job changes that speed up development and firsthand examples and lessons learned from top leaders around the world in a variety of industries.

IN THIS SUMMARY, YOU WILL LEARN:

- To build the skills and capabilities you need to be a high-potential leader.
- When to make big moves that will get you ready and battle test you.
- How to redefine leadership potential.
- How to rethink your role in supporting high-potential leaders.

High-Potential Leaders Are Crucial to Helping Businesses Adapt and Thrive in the Digital Age

Companies big and small are coming to realize that it will take leaders with a different way of thinking and different skills to reinvent the business. They are having to redefine the very notion of what a successful leader looks like. Now, the race is on to find those with high potential to lead their companies onto new paths in a world of constant change. This is a time for leaders who can thrive in the face of relentless change, complexity and uncertainty.

What "High Potential" Means Now

Amid everything that is new and different, today's high-potential leaders, or "hipos," must be able to identify the untapped opportunities their companies will pursue and mobilize the organization. This is a weakness in many older business leaders. It's now clear that businesses might need to be transformed more than once in a leader's tenure, and today's hipos must be prepared for that. They should exhibit three characteristics that the previous generation of leaders did not always need:

- They imagine on a large scale.
- They seek what they need to make it happen.
- They understand the concept of the ecosystem. Hipos have the ability to see the total picture, to conjure a mental image of the web of interrelationships and to think imaginatively about how to redesign it.

Hipos will come primarily from the 53 million millennials in the work force now. They adapt quickly to the new, have diverse social networks and have a change-the-world mentality. Without the qualities and abilities the fast-changing world now demands, a leader is not likely to succeed in a high-level leadership job, at least not for very long.

Some people are high-potential individuals. High-potential individuals would be losing ground if they set their sights on a job where they have to deal with all sorts of people and relationship issues and do the kind of strategic thinking they have little interest in. High-potential leaders, on the other hand, multiply the energy and skills of others.

Getting Hipos There Faster

Hipos reach their leadership potential through the disciplined, routine practice of essential skills combined with periodic leaps. Status quo leadership-development programs leave companies at serious risk of coming up short when it comes time to fill the most important leadership jobs. Even as hipos take greater control of their own growth, companies have an urgent need to change their approaches to finding and growing them.

Let's assume you meet the criteria for a hipo leader. Here, you will learn to continually expand, to keep building your skills and to define your next step or leap. Senior leaders, HR departments, learning experts and bosses will have to face the dangerous reality that today's hipos will leave unless they can progress into the kinds of jobs they are capable of handling. That will require breaking conventions about job promotions and, at times, shaking up existing jobs to make room for the most promising hipos.

PART I: FIVE ESSENTIAL SKILLS FOR HIGH-POTENTIAL LEADERS

Increase the Return on Your Time (ROYT)

If you're like most hipos, your biggest complaint is that you don't have enough time to do everything you need to do, especially as you rise in an organization and face larger and more complex projects and challenges. But just as you can raise the return on your money with smart investing, you can learn techniques to raise the return on your time. Leveraging your multipliers — those things that allow you to accomplish more — will free your time and mental space to focus on bigger things, including your own learning and self-improvement, while delivering excellent results.

Get Comfortable with People Better Than You

Your highest leverage is not process, organization or money. It's people. It takes a deep personal commitment to devote the time and energy to ensuring that you have the very best person in each of the jobs you oversee. The better you are at it, the more you expand your own capacity and ability. Do not be afraid to hire people better than you; hipos succeed because they do precisely that.

Most hipos want to be comprehensive — to do everything that's important, and do it well — but their time and concentration soon get diluted. You will be far more effective if you narrow your priorities to the few that will have the greatest impact on your business. Determining these priorities is the result of having clear goals, knowing the realities of your business and making a judgment about what matters most. Ultimately, you will want a set of three to five laser-sharp dominant priorities. Arriving at these, keeping intense focus on them and driving them relentlessly is key to execution. It's important to periodically look for tasks and projects that have become less relevant and can be dropped. Of those that remain, ask yourself what only you can do now and what might be passed to someone else.

Available information grows exponentially year after year with no end in sight. The internet is an increasingly useful filter for information as more and more sites and search engines enable you to customize alerts, briefings and condensed news items. They can help ensure that you are aware of all the top stories related to your company, competitors, marketplace and industry while saving you hours of reading. You no doubt need a lot of data to do your job, but there is an overabundance of it today in virtually every organization — more than an individual can possibly review. You might want to create your own version of a dashboard. Given that your skill as a leader lies in being able to extract insights from data, shaping the kinds of information you receive and how it is presented will be tremendously beneficial. The flow of information via email must also be managed: Don't open your email until you've devoted the first hour of your day solely to your top priority, create email-free time zones during your day and use automatic sorting.

You should be spending your time on things only you need to do and delegating the rest. Learn to delegate well. As a general rule, you should delegate tasks to the lowest possible organizational level and to a particular person, and you must be sure that person has the necessary expertise and information to complete the job. Many leaders feel their work is done once they've assigned the person and clearly laid out the expectations, but that's hardly the case. It's your job to discover any problems and make sure they are resolved promptly.

Efforts to improve the return on your time will not amount to much if you have trouble making decisions. If you feel stuck, reflect on what blocks your decisiveness. Overcoming these blockages will expand your potential. Take some well-calculated risks when you have between 40 percent and 70 percent of the information, and learn from your successes and failures.

Multiply the Energy and Skills of Those Around You

The quality of the people you hire, how well they fit their jobs and how well they work together determines much of your success and that of your organization. Think of it as a formula when you build your teams: People Quality + Job Fit + Collaboration = Team Performance. You have to invest considerable time in order to know and grow people and integrate their work. You also have to face up to tough decisions about people, including removing those who drain energy from others.

The best way to power up your organization and your leadership is to improve your skill in judging and developing other people's talents. Your aim should be to see people in their entirety and accurately judge what they do really well — their "god's gift" if you will — so you can put them in jobs where they will flourish. You'll see a person's god's gift more accurately if you do two things: Carefully observe the person's decisions and behaviors, and cross-check your observations with others.

Build Other People's Strengths

Having identified where a person's natural abilities lie, think of creative ways to build on those abilities. This should be an ongoing, everyday activity for you. Expanding the talent of other hipos by finding jobs or tasks in which they can make a leap is one of the greatest things you can do. Another way to help multiply people's energy and skill is through constructive feedback. Don't take it personally if your hipos decide to take a job elsewhere. By nature, they are seeking new opportunities.

Nonperformers — the people who are repeatedly unable to do what they agreed to do — are anathema to high performance. If they don't improve, you have to move them as soon as possible. Think of it as a poor fit rather than failure.

Think of yourself as an integrator — a leader who is particularly good at getting diverse groups to coalesce. Integrators get people to see beyond the narrow view of their organizational silo or expertise by focusing on the bigger picture of what is best for the unit or company as a whole. Leaders who understand this role and play it skillfully will unleash tremendous energy. The energy is contagious. Applied to the organization's most critical intersections — for example, among the CFO, CHRO and chief strategy officer — skillful integration can energize the entire company.

The essence of group work is in the dialogue. It's where behaviors are modeled, corrected and reinforced. One reason people hate meetings is because of the dialogue that takes place. The conversation wanders, it's boring and there's no conclusion to anything. If you learn the skill of conducting dialogue, you will find it to be a powerful leadership tool.

As the scope of your responsibilities expands, you will have an opportunity to be the "social architect" who identifies and defines critical intersections. The organization will perform faster and better if you understand where people need to come together to make important decisions, design the organization accordingly and diagnose how well those intersections are working. When people are working well together at critical intersections, decisions are made, work gets done and results materialize.

Be a Master of Big Ideas and Execution

The ability to satisfy your curiosity 24 hours a day with total access to information is a great spur to creativity, but your ideas must be actionable. True hipos can do both: Come up with big ideas and get them executed.

Make Your Big Ideas Better

The transparency and democratization that are creeping into the workplace are a gift to hipos who have big ideas and want to be heard. You should feel encouraged to put your ideas out there, but they are more likely to gain traction if you develop your skill in shaping and reshaping them first. The best way to clarify your ideas — whether they have to do with a new product, a new way of competing, a new way of working with ecosystem partners or a new technology platform — is by talking with others.

How to Assess Your Good Ideas

Most millennials understand the value of creating a minimum viable product that is tested, rejiggered and tested again. For many products, the toughest issue is not whether the idea can be made practical but whether it can be scaled up, brought to market properly and deliver financial results. Above all else, the idea must be mentally tested.

Executing Big Ideas

Understanding the ins and outs of execution will help you turn ideas into reality and ensure that your ideas are grounded in the first place. Don't be afraid to toss out the bad ideas. Better ones will come. The heart of getting things executed well lies in how you work within three core processes that every company has in one form or another: Managing people, strategy and operations. You have to be involved in all three areas, get information and real dialogue going in them and recognize the connections between them. Good leaders seek input from people close to the ground and adjust for those realities as they define the specific actions that need to be taken and their timing. Then, they assign specific goals, and follow through to make sure the work gets done and results materialize. Leaders who are good at execution do that through three particular actions: Set clear goals and priorities, stay informed about how things are going and follow through and follow up.

Asking the right questions will help you gauge other people's performance and unearth problems in execution. You learn this art by watching others who are good at it, as you would by watching an artist or craftsman. The best questions are brief and cut through the clutter to a pivotal assumption or bigger point. The tone is respectful, not insulting or fear inducing. Good questions create order out of a jumble of information and condition your mind.

Get to Know Customers, Competitors and the Macro Environment

You may be so busy dealing with the immediacies of your job and the many demands on your time and attention from others in the company that you lose sight of the world beyond your four walls. Increase the return on your time and use the freed up mental space to expand your horizon. If you maintain an external orientation and turn your casual scanning into a discipline, you'll be better prepared to see where the opportunities lie and what might upend your business.

In the internet age, power has passed to the consumer. People use search engines, social media and apps to research products and compare prices; the point being that the consumer has easy and cheap access to information, and shopping habits are changing fast. You're not just buying a product, you're engaging in an end-to-end experience that includes everything from the time the idea of buying a product or service is stimulated in your mind by an advertisement or word of mouth to the actual purchase, use and servicing. All of this combines to create an integral experience. Despite the value of big data and analytics, you should cultivate an intuitive feel for the consumer, in part by direct observation. Such observations can have enormous business implications.

Know the Competition

You may already be focused on how to differentiate your company and increase the distance between you and the most relevant competitor. Be sure you are looking at that differentiation through the eyes of the consumer. In today's world, a lot of information about competitors is publicly available. Customers will tell you something about competitors, such as why they are buying more from them than from you. And, of course, social media may be an early indicator of how well a company is tracking with investors or society in general. Firsthand observation is as useful for understanding the competition as it is for understanding the consumer, and the two are often intertwined. That's why so many successful innovators and retailers walk the stores.

Dissect Ecosystems

Competition today is among ecosystems, not just among direct rivals, and every company must be part of at least one. An ecosystem is a system of partners who are joined by a common platform. They can trade among themselves, with customers and with suppliers. The platform they hook into is governed by the platform designer, which also governs the behavior of ecosystem partners. Previous generations of leaders tried to control the value chain, from suppliers to the consumer, but the new game requires new attitudes. For example, you have to accept that your ecosystem could include competitors and that it is dynamic.

See your business from the outside in. The conventional logic used to be to focus on how your company was different from competitors and build on those core strengths. That type of career history can cause people to see the world from the inside out, as if their company were at the center of the world. Even young leaders of digital-born companies can miss external changes, but astute leaders anticipate them. That allows time to react defensively and, more to the point, take advantage of emerging trends to go on the offense — or a combination of both. Anticipating change and finding opportunities in it begins with the discipline of scanning the environment broadly and spotting the unstoppable trends and change makers. Scanning the environment as a routine, being receptive to different perspectives and searching for what is new and different will help you spot opportunities or bends in the road.

Technological innovation lies at the heart of the world's rising standard of living. Every time there is a technological advancement, you should ruminate on it. Who will ride the entrepreneurial wave and build a big business out of it, and what are the implications for other kinds of companies? You don't have to be a technologist, but you should develop a routine to stay informed about what new relevant technologies are emerging and how they are changing the competitive landscape, bearing in mind that one new development can accelerate others.

Build Your Mental Capacity

We all know that mental capacity can grow in a nanosecond if there's a will, discipline and practice. It might be a question or comment someone makes that causes you to see things differently or have a breakthrough thought. With practice, you can build your mental capacity just as athletes build their physical capacities.

The more broadly you see the world, the bigger your vision is likely to be. A wide lens helps you define the opportunity and fires up the imagination. The ability to see the big picture is a common trait among successful entrepreneurs but is equally useful in existing businesses. Top leaders are looking for those who have this ability.

You can widen your lens (or bandwidth) by reading and visualizing things on your own or by interacting with other people. In any case, diversity is key.

All of your forward momentum depends on the things you learn and how well you learn them. Have the humility to realize that there is always something more to know, and that many other people know more than you do. Think of learning broadly, so you're not just accumulating factual information but also deriving insights and meaning from it. Learn about your business, about yourself — your behaviors, how your mind works, what you're good at — and about other people.

Hipos keep extending their networks and don't hesitate to reach out to so-called big shots. Networking is nothing more than building human relationships. Lots of them. Keep in mind that networks are becoming increasingly important to everyday work as companies foster collaboration among various departments, partners and individuals in the so-called gig economy. You should also feel free to reach out to people in other parts of your company, if only to learn what they do and how they see the business.

Information stimulates learning. Diversity of information stimulates creativity. Reading, conversations and learning events are great sources of information, so be sure to include regular infusions of them in your day, week and month.

- **Reading:** Investing a half hour in reading each day, seven days a week, 365 days a year is a habit that will bring more value to your leadership strength than any other investment of your time. Use the time to keep up with the trends and topics that are making the headlines as well as the ones that relate to you and your runway.
- **Conversations:** Take time to arrange conversations that expand your mental potential. Short, targeted conversations with a wide range of individuals gives breadth to your knowledge.
- **Learning events:** Attend a conference. Attending a learning event in person can bring you in contact with some of the most innovative business thinkers in the world. Or, take a class from a leading business school — it's easy and free through Coursera or other massive open online courses (MOOCs).

As you feed on information, try to become aware of how you process it. Habits of thinking can limit you or open new lanes of creativity and make you more adaptable to change. Here are things to watch for and practice to increase your mental flexibility:

- **Reframing:** Looking at things from a completely different perspective can increase your range of options and provide insight into how to overcome problems.
- **Band height:** By expanding your band height — the ability to shift your thinking from high-level strategy to the specifics of how to make it happen — you enhance your own mental abilities as well as your value to your company. As a hipo, you may love the realm of big ideas, but to connect vision and execution, you have to be able to make a sharp descent.
- **Qualitative logic:** Interpretations are qualitative, and some will be more predictive or more precisely diagnostic than others. Strive to make your thinking and judgments more precise.

PART II: TAKING CHARGE OF YOUR GROWTH AND CHOOSING YOUR NEXT BIG CAREER MOVE

How, When and Why to Make a Leap

You can expand your range of capabilities and deepen your knowledge and judgment faster by putting yourself in new and increasingly complex and ambiguous situations. You'll benefit more from each move if you know what you need to develop next, how to maximize the learning in each new situation and how to build the support you need.

Venturing into unknown, ambiguous new situations (versus doing an expanded version of the same job) is the best preparation for the challenges you'll face at the highest organizational levels, where you'll suddenly have to integrate many functional areas, balance conflicting interests and sort through a large number of variables.

Making Leaps Without Leaving Your Company

You'll know when it's time to make a leap. The key here is hunger for a new challenge yet excellent performance in what you're doing. Seek out jobs and tasks that will challenge you and demonstrate your readiness in meetings, where your bosses, peers and subordinates see how you think and lead. Don't play it safe by choosing projects where you can expect sure success. Instead, seek the ones that involve complexity or ambiguity. Take heart in knowing that top leaders are seeking talent and that databases are being constructed that will whittle down the bureaucracy and opacity around job promotions and leadership development.

Whether the relationship is by luck or by design, great mentors can accelerate a leader's growth. There's no need to wait for recognition; you can and should actively pursue people who can help you grow. Decide what mentoring you need based on a precise definition of what you need to build. As you reach out to experienced pros, you will likely get some backlash from peers, customers or bosses who feel you are going around them. Understand that such "people problems" are rooted in fear and must be handled with sensitivity.

Leaps Outside the Company

Sometimes, you have to leave the company to make a leap. If you are no longer growing in that environment, your immediate boss is not stretching you, you've run out of opportunities to broaden your thinking skills and you're not succeeding at getting things changed, face it: It's time to seek your next opportunity somewhere else. There's no better way of finding opportunities in the larger world than tapping into a broad network of friends and acquaintances starting with those already in your social networks. Once you've found an interesting opportunity, start a set of notes where you bring together company information and your reactions to their brand, strategy, culture and customer focus.

"How do I know if this is the right move?" That's a question almost everyone asks when facing a potential fork in their road. Whether the job opportunity came from your own search or from a headhunter out of the blue, you should weigh the new opportunity from multiple angles. Above all, does it hold the promise of letting you live your purpose and achieve the accomplishments and fulfillment that are important to you?

The way you end your assignment in your current job can live on in the company's internal lore for years, even decades. Here are a few guidelines to keep in mind as you prepare your exit plan: Be respectful, smooth the transition and stay in contact after you leave.

As you enter a new role, nothing trumps humility. Listen more than you speak, reach out to solicit ideas and insights from others and avoid judgments at all costs. Focus on connecting with people, listening, learning and asking questions.

Track Your Mental Health and Work/Life Balance

For a life that's truly fulfilling, plan your growth trajectory from two perspectives: your business achievement and your life satisfaction. You need to include both in your ongoing priorities and revisit the balance between them at each new decision point along your runway. You also need to mind your mental health — the anxiety, stress and disappointment that can creep in along the way and undermine the best-laid plans for success in your life.

Business Achievement

Your business achievement has to do with the external gains you seek. You wouldn't be a hipo if you didn't care about these things because they form part of your motivation to excel and achieve. But take time to identify the specific goals that you want, and ask yourself *why* you want them. Knowing the outcome and knowing where you want your increasing power to take you will help you plan a runway that will get you there more directly.

Life Satisfaction

What you're doing now may be a calculated point in your long-run plan or a job delivered by circumstance. You need to be sure that what you're doing (and how you're doing it) gives you intrinsic rewards. A few simple benchmarks will give you a good idea of whether or not what you're doing will be ultimately satisfying: You are true to yourself, your work means something, you regularly experience "flow," you regularly use your unique strengths, most of the stress in your life is positive rather than negative and people enjoy being around you.

Most hipos have a driving ambition to achieve or create something big. The hipos who turn out to be gamechangers don't have to ask themselves about their focus — they already have a big idea or a driving vision. They are looking far beyond their immediate runway, and their focus never wavers as they relentlessly push through obstacles that would stymie other people. Many successful startups are built on the founder's sense of purpose, which gives the whole organization a clear focus. Your passion may actually be more important than you think. Passion is a key ingredient of grit, which is why it's so important to tap into your underlying passion as you map your future. Keep your focus — one that relates to both your personal and professional values — in mind and continuously look for ideas and opportunities that support it.

Most of us live with some degree of anxiety about work. While anxiety helps drive you, it can take a much more malevolent form, creating a sense of apprehension or fear. When anxiety crosses the line, you're not the only one affected. Your bad habits and even your mood can create anxiety in others. It's your job as a leader to create a healthy work environment and relieve other people's

anxiety when it escalates. To do that, you must first know how to manage your own stress. Watch for symptoms in your physical condition and behavior. Seek support from your mentors, friends, family or professionals.

PART III: THE CARE AND FEEDING OF HIGH POTENTIALS: EVERY ORGANIZATION'S PRECIOUS RESOURCE

Identifying, Recruiting and Retaining Hipos

At most companies, the journey to transform the company into a digital one has begun. Your role in that journey is to find, recruit, develop and deploy leaders with high potential to drive the transformation and deftly steer the organization in the emerging context. Take the initiative to give your company's approach to high-potential leaders a total rethink starting with four basic principles: Hipos are a resource for the company, not for an individual boss; development paths are customized for each individual hipo; the onus is on the individual; and growth must be accelerated. Identifying hipos, helping them find and create opportunities to grow exponentially and continually refreshing the pool should be the central focus of your work.

You won't get the leaders you need at high levels if you focus on developing the wrong people. Make the important distinction between hipo leaders and hipo individuals. HR needs to hold the line to ensure that those identified as hipo *leaders* are chosen because of their *leadership* skills, and not just because they are the smartest or most knowledgeable among their peers. Identify hipos by creating a set of minimum criteria they must meet; the skills presented here, for example, are universally important. Then, allow for differences because no two leaders are exactly alike, and no leader is perfect.

Hand in hand with rethinking what high-potential leadership looks like, rethink what a hipo's next step ought to be. While encouraging hipos to take the initiative to define their own paths, you should be helping find or create opportunities for them. If the right openings don't regularly arise, you might have to get creative. Think about horizontal moves, where the hipo can apply skills at a similar organizational level but in an entirely new geography, function or business unit. Remember that hipos will leave if they don't see the chance to progress quickly.

When it comes to selecting people for jobs, HR should be sure that people have the right kind of information about and perspective on hipo candidates. Be assertive in working with management to create an environment that is conducive to identifying and growing hipos. Be prepared to address head-on the common issues that arise around accelerating the development of hipos: The boss doesn't want to give them up, the person doesn't want to move on or the recipient boss feels he is taking a risk.

HR should take ownership of tracking the progress that each hipo is making and ensuring the accuracy of assessments of how she performed and what has been learned in each new position. The company should have a rhythmic process with a set frequency for high-level people to discuss individual hipos and the hipo gene pool more generally. This kind of qualitative assessment is not for HR in isolation. Business leaders have to be in the discussion; the best insights emerge when four or more people share their specific observations simultaneously.

You should assume that your hipos will be poached, so you'll need to build a recruiting machine to bring in new talent. A reputation for accelerating growth helps attract top leadership talent, but gone are the days when you can coast on a big brand name. Many hipos today want to know that they will be contributing to something meaningful. Every company should clarify its higher purpose, just as hipos clarify their own.

How to Use These Principles to Develop Your Organization's Hipos

Working with the hipos you've identified should be an ongoing, active process, not a bureaucratic one. Remind the hipo that skill building is ongoing, and leaps are periodic. Ask the hipo to decide what capability they want to build and to start thinking about what developmental leaps they might want to make next. Meet with the hipo at regular intervals and with his or her boss to discuss progress. Use digital tools to track progress, and keep the dialogue going so hipos know they're on your radar. Remember to keep your own risk aversion in check when hipos reach for bigger opportunities, and let the hipo drive the learning process.

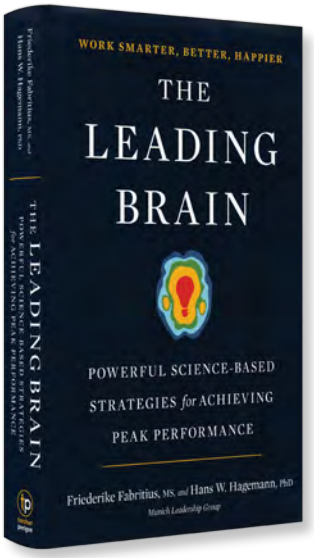
The Leading Brain

Powerful Science-Based Strategies *for* Achieving Peak Performance



By Friederike Fabritius, MS and Hans W. Hagemann, PhD

THE SUMMARY IN BRIEF

Our understanding of how the brain works has radically shifted, exploding long-held myths and fundamentally changing the way we interact and succeed in the workplace. In *The Leading Brain*, neuropsychologist Friederike Fabritius and leadership expert Dr. Hans W. Hagemann present simple yet powerful strategies for sharpening focus, learning and retaining information more efficiently, improving complex decision-making, cultivating trust and building strong teams.

Based on the authors' popular leadership programs, which have been delivered to tens of thousands of leaders all over the word, this clear, insightful and informed guide will help both individuals and teams perform at their maximum potential, delivering extraordinary results.

Effective leadership is a science, which shouldn't be dependent on buzzwords or slogans. It should be based on a bedrock foundation of our understanding of the brain. Thanks to breakthroughs in neuroscience, we no longer have to merely speculate on the behavior of our brains. What we've learned from rigorous scientific studies has the potential to radically change the way we lead and succeed.

IN THIS SUMMARY, YOU WILL LEARN:

- How understanding neurochemistry can help you achieve peak performance.
- How to retrain your brain to sharpen your focus and regulate your emotions.
- How to develop new and better habits.
- How to harness the power of unconscious decision-making.
- How to improve the learning process for yourself and your team.

THE COMPLETE SUMMARY: **THE LEADING BRAIN**

by Friederike Fabritius, MS, and Hans W. Hagemann, PhD

The authors: Friederike Fabritius, MS, is a pioneer in the field of Neuroleadership. Trained at the Max Planck Institute for Brain Research and an alumna of McKinsey & Co., she combines her expertise in neuroscience and business to help top Fortune 500 executives achieve peak performance. Hans W. Hagemann , PhD, is managing partner/cofounder at the global leadership consultancy firm Munich Leadership Group and a global expert on leadership and innovation who has led seminars, coaching sessions and workshops with top executives in more than 40 countries.

PART I: REACHING YOUR PEAK

Find Your Sweet Spot

All of us strive to find our sweet spot of performance, that zone where we're at our most productive and most effective. Peak performance comes at the spot where the level of arousal is sufficient to provide optimal focus and attention. Without knowledge about the brain and the ability to use this knowledge, opportunities to perform our best are squandered, and the potential for great achievements remains unfulfilled. The good news: The skills it takes to improve one's mental game in business and in life can be learned, trained and improved.

The wiring in your brain isn't really wiring at all but a series of signals that hop from one cell to another. Working together, these microscopic messengers are responsible for every action, reaction and emotion that you experience, including what psychologists Robert Yerkes and John Dillingham Dodson called *arousal* in 1908, referring to the mild electric shocks they subjected rats to in order to improve their performance in navigating a maze. Yerkes and Dodson determined that peak performance happens when the level of arousal is sufficient to provide optimal focus and attention. Without it, we're likely to feel bored or apathetic. When arousal's too high, our focus deteriorates into a situation of stress — or even worse, panic.

The DNA of Peak Performance

Although more than 100 neurotransmitters have been identified, from the standpoint of peak performance, only three are truly important: dopamine, noradrenaline and acetylcholine. These are the "DNA of Peak Performance."

Dopamine is involved in your ability to update information in memory, and it also affects your ability to focus on the task at hand. Dopamine is known as a novelty neurotransmitter because its effects are strongest when the stimulus that generates it is new. This explains in part the enthusiasm you may feel when you start a new project and why the thrill isn't usually as strong after you've been working on it for a while.

Noradrenaline was evolutionarily designed to help you respond quickly to any threat, real or perceived. It does so by regulating your attention and alertness. Noradrenaline is at an optimal level when you feel slightly overchallenged. It is also released when you push yourself to perform a difficult task better, faster or with fewer resources.

Acetylcholine is the chemical driving the mechanism you use to achieve the extraordinary focus required for peak performance. Babies release acetylcholine without even trying, but adults are not so lucky. The automatic mechanism for extraordinary focus shuts down when we're still quite young. As adults, there are only a handful of ways we can flip the switch that turns on acetylcholine: when we make a conscious effort to pay attention, when we get physical exercise or when we are exposed to something important, surprising or novel — in other words, when our brain releases dopamine.

Finding Your Home on the Range

When it comes to achieving peak performance, the same stimulation that invigorates one person may be overwhelming for another. Seen as a normal distribution curve, some of us are "right-side performers" — those who find it easier to access a state of peak performance

under pressure but may lag or become bored with too little stimulation — while others are "left-side performers" — those who perform highly without requiring a lot of external stimulation but may fall apart under pressure. Still others lie somewhere in between. One type of peak performer isn't better or worse than an other, they just require different conditions to reach their peak.

When it comes to peak performance, self-awareness is essential. Pinpointing your position on the curve from time to time and from task to task can be critical to your success. Once you're aware of the situations in which you're at your best, you can adjust to your environment to play to your strengths and then fine tune conditions so you can reach your peak when you need to.

Although achieving peak performance should be your goal, staying at the top of the curve for an extended period is neither desirable nor beneficial. You should rise to the occasion when it's needed most. Attempting to maintain the optimum mix of dopamine, noradrenaline and acetylcholine for a prolonged period would likely overtax the system and deplete the neurotransmitters, resulting in burnout and exhaustion.

Find a daily, weekly and monthly rhythm that leads to optimal energy management. If you're a leader, try to adapt the workplace environment to allow people to operate more in line with their individual performance profiles. Aim for enough flexibility in working conditions so that everyone can more readily reach his or her peak.

Regulate Your Emotions

As humans, we are capable of displaying a remarkable array of emotions. Yet, most of them grow out of just two very basic and very primitive networks in our brains: the threat circuit and the reward circuit.

The Threat Circuit: When we see something that we perceive as putting our survival in danger, we react quickly and often unconsciously.

The ability to instantly avoid dangers, such as an oncoming car, can literally save our lives. In contrast, our response to a social snub is rarely lifesaving. That's not because it isn't as quick as our reaction to a car. It's just that our lives were probably never in jeopardy when a colleague questioned our performance. Our executive brain almost certainly realizes this, but by the time it does, our threat circuit has already kicked in, responding to the co-worker almost exactly the same way it would if he or she were an oncoming car.

These days, most stress no longer protects you as it was originally designed to do. Ironically, it is more likely to put you at risk. When our threat response reacts to sudden and genuine danger, it can literally be a lifesaver. But this fight-or-flight reaction was designed to be acute, not chronic. If your body remains on constant alert, it leads to a physiological and neurological state that is damaging to your health and cognitive performance.

The Reward Circuit: Luckily, the fight-or-flight response isn't the only primitive system that we inherited from an older version of our brains. A second set of circuitry, the reward response, plays a role that's nearly as important — although not quite — as our threat mechanism. Unlike fight-or-flight, which operates according to fear, the reward response deals in gratification. When the brain is in the reward state, dopamine, so important to peak performance, is released, which leads to positive sensations.

Train Your Brain

In a sense, the story of the brain is the story of warring brains. The midbrain and the cerebral cortex are often at odds, and this dynamic is at the crux of emotional regulation. Protect yourself by strengthening your ability to handle stress, and train your brain by teaching its weaker but more sophisticated conscious regions how to outsmart the stronger but more primitive unconscious parts.

You can bolster your resistance to emotional imbalance by creating overall life conditions that promote balance. The tried-and-true recommendations of exercising, eating well and getting plenty of sleep may sound like tired clichés, but they are cited again and again for good reason: They work. Few things can better build your resilience in facing oncoming stress than this trio.

There's nothing inevitable about the way your brain responds to a particular situation. Your brain may be smart and powerful, but it's also surprisingly naïve and impressionable.

Lead with Your Body: Changing your body can change your brain. Hundreds of peer-reviewed studies support this powerful conclusion: By consciously focusing on relaxing your body or by directing your attention to a simple sound or object, you can cause your brain to switch off its stress response. By assuming the expression and posture of a happy and successful person, you can often trick your brain into believing you are one. Let your body lead the way, and your brain will usually follow.

Use Cognitive Jiu-Jitsu: Strictly speaking, stress is not the enemy. What matters is the way in which you respond to that stress. It is possible to take what would normally be

considered negative, corrosive stress and transform it into something positive and energizing.

Rather than operating as one continuous response, stress plays out in two discrete phases, each handled by a different brain function. Although our powerful and primitive limbic system is automatically activated in response to an arousal, it is the more civilized part of our brain that has the job of analyzing the data. Making use of the delay between when our instinctive subconscious responds and when the more deliberate region of our brain interprets that response may hold the key to effective emotional regulation and taking the sting out of stress.

The two secret weapons of cognitive jiu-jitsu are *labeling* and *reappraisal*.

Labeling involves giving a name or explanation to your emotional response. When you're feeling stressed or emotional, you're allowing your primitive brain to run the show. Labeling helps you to regain control. Research has shown that labeling the source of your stress actually lessens the activation of the amygdala, the primary source of your fight-or-flight reaction.

Your limbic system responds instinctively, unconsciously and remarkably quickly to anything that it perceives as a potential threat. By the time this threat response is activated, there is nothing you can do about it — at least not directly. What you *can* do is influence how you *interpret* that response. That's the essence of cognitive reappraisal.

Sharpen Your Focus

The prefrontal cortex (PFC) is responsible for rational processing. It handles what are often referred to as the brain's "executive functions," such as reasoning, strategizing and problem solving. It's also home to the working memory, the staging area where new information rests while you decide what to do with it. The PFC is responsible for higher-order thinking like planning and decision-making as well as focus, or what psychologists commonly call *attention*.

Attention occurs when the PFC has the right mix of neurotransmitters, hormones and other chemicals released by the body. The DNA of Peak Performance, not coincidentally, is also the recipe for attention. Noradrenaline is constantly on the lookout for any unusual activities. When something catches your attention, acetylcholine zeros in on its location and identity, and finally, dopamine helps you determine what to do about it. Unfortunately, dopamine and noradrenaline can both strengthen and sabotage your attention.

When your dopamine levels rise, the reward feeling drives you to keep doing more of what you're doing in order to get even more dopamine. The result is often focus. But as your attention flags, your fickle brain starts seeking out new experiences that will trigger another burst of the neurochemical.

Noradrenaline suffers from a similar capriciousness. You can count on it to attract your attention, but you can't rely on it to maintain your focus. Unless you take action, both dopamine and noradrenaline will keep you searching for the next distraction.

The best ways to avoid succumbing to distractions are pretty straightforward:

- **Eliminate potential distractions at the outset:** Don't waste thinking power by stacking the deck against yourself. It's easier and more energy efficient to simply clear distractions out of the way.
- **Establish concentration time:** Make time during the course of the day when your door is closed, your phone is turned off and everyone who works with you is aware that you are unavailable.
- **Try to find some fun and interest in what you're doing:** If your task is novel and fun, you're less likely to look elsewhere for stimulation.
- **Work in manageable blocks of time:** Rather than rapidly switching back and forth between multiple tasks, devote 20 minutes exclusively to one before shifting to another. The satisfaction of completing each time block should give you a dose of dopamine, as will the prospect of facing the next "new" task.

The single most tenacious source of distraction is your own wandering mind. Mind wandering not only occupies roughly half our waking life, but it's also associated with lower levels of happiness.

A wandering mind is the domain of neuronal circuitry known as the default mode network. It is associated with planning, pondering and daydreaming. It's active when you think about yourself as well as about other people. But it falls short in focusing on the here and now, which can be a bit of a problem if you're supposed to be paying attention. Two things can help you keep your mind from straying: happiness and cognitive control.

In a study by Harvard University psychologists, subjects were found to be happier when they focused on what they were doing instead of on extraneous thoughts. Actually, whether or not their minds wandered was a greater predictor of overall happiness than the activity itself. And when we're happy, our brains release a number of neurochemicals, including dopamine, which greatly increases our ability to learn and remember. What's more, when

the mind ceases to wander, we tend to feel better because we're no longer on high alert for the next potential threat.

Make Mindfulness a Habit

Mindfulness is the antidote for a wandering mind. It involves observing your thoughts and feelings from moment to moment nonjudgmentally. By doing so, you learn to become an outside observer of your own thinking process, a skill that gives you greater control over those times when your thoughts are focused and prevents you from constantly heading down the path of each new distraction.

What's truly astounding about mindfulness is that it not only changes your thoughts, but it also physically changes your brain. Mindfulness has been shown to physically change several regions of the brain in as little as eight weeks. Overall, mindfulness enhances the brain's capability to dynamically rewire itself, a phenomenon commonly known as neuroplasticity.

The best way to employ mindfulness over the long term is to dedicate some time every day to mindfulness practice. Periodically during your day, just call a quick time out and take a deep breath. Observe what you were doing at that moment, and think about how it makes you feel as well as how it might make others feel. This basic act of reflection — psychologists call it "metacognitive awareness" — can lead to potent, positive and often permanent changes in your thinking patterns and physical responses.

From Focus to Flow

The most satisfying and productive form of focus is called "flow." Flow is a subjective state in which you are completely involved in something to the exclusion of everything else. To achieve flow, you need a well-defined goal, an optimal challenge and clear, immediate feedback. The goal supplies acetylcholine to help maintain your focus, the challenge triggers noradrenaline and the feedback provides you with a rewarding burst of dopamine.

PART II: CHANGING YOUR BRAIN

Manage Habits

Habits of one sort or another account for roughly 45 percent of daily life. During these times, rather than relying on reason or motivation, we shift into automatic pilot and depend instead on context, automated actions, time pressure and yes, even low self-control to provide the engine for our behavior.

There's a good reason for this: Our brains would quickly become overloaded if everything we did had to be done consciously. Good habits make life easier by using our brains more efficiently. Bad habits make life harder and in some cases can be harmful or even deadly. The automatic nature of habits is what makes them hard to control or change.

The basal ganglia region is the part of the brain that handles the things we've committed to long-term memory and can engage in with relative ease. Our brains may be smart, but they're also kind of lazy. Each habit in our basal ganglia functions like a labor-saving device.

A typical habit has three components: a cue, a routine and a reward. The cue is a specific stimulus or combination of stimuli that triggers the routine. The routine is the habit itself. Initially, it is the anticipation of a reward that drives the routine and ensures its storage in the basal ganglia.

Establishing good habits or getting rid of bad ones involves the same basic skills:

- **Goal setting and motivation:** Most successful goals share two key qualities: (1) there is an emotional basis for the motivation, and (2) the goal setter is able to visualize not only reaching that goal but also, and more importantly, the process involved in achieving it.
- **Getting started:** Getting started is one of the most difficult parts of changing. Procrastination is the principal impediment to initiating a habit change. Large goals can seem intimidating unless broken into manageable steps. From the standpoint of your brain, threats aren't simply things that put your life in danger. They can be anything that the brain perceives as a misallocation of resources. Changing almost any routine requires additional conscious effort and, with it, additional energy. Aroused from its comfortable complacency, your brain sounds the alarm by awakening the watchdog of your limbic system, the amygdala, which triggers your threat response. Focus on small steps to avoid the threat response that frequently drives procrastination.
- **Staying on track:** Habits can rarely be stopped — or started — with brute force. A more successful long-term strategy is working *with* your unconscious instead of against it. In this case, it involves consciously manipulating the cue, routine and reward that provide the habitual framework.

A strategy called "implementation intentions" can help you stay on track by artificially reproducing the three elements of most habits. Change an old habit by attaching a new routine to an existing cue, or create a new habit by linking some sort of cue to a desired routine. When commitments of personal change are supported by concrete implementation intentions, the probability of achieving specific objectives doubles.

There are three simple but powerful processes that can aid in kicking deeply ingrained habits:

- **Describe**: Recognize and acknowledge a trigger when it occurs. Like labeling, describing your habit trigger leads to *metacognition*, or "thinking about thinking." This takes a normally unconscious process and shifts it into the realm of your conscious.
- **Distract**: Develop a competing ritual that will momentarily divert your attention from your original compulsion. The most effective distractions are pleasant ones. They put you in a reward state, triggering a burst of dopamine, which makes your brain more receptive to change. Distracting has a lot in common with cognitive reappraisal.
- **Delay**: Once you've found an effective alternative to your old bad habit behavior, the key is to sustain it. The longer you can last without "giving in," the more ingrained the new neuronal pathway will become.

Unleash Your Unconscious

Our unconscious accounts for a major part of our decision-making activity. Unlike the working memory, which typically has room for just four pieces of information at a time, the capacity of the unconscious is practically limitless. In fact, it's next to impossible to make a complex conscious decision using just your working memory; it simply doesn't have enough room or resources to accommodate all the variables.

While beginners benefit from thinking more, experts can actually be hampered by it. Thinking about what you're doing can actually become disruptive. Reduce the burden on your PFC whenever possible by relying more heavily on the brain's secret weapon, unconscious intuition.

What is meant by "intuition" here is, in fact, "expert intuition," a speedier way of analyzing information using accumulated expertise. But, the expertise needs to be there, or intuition won't work. Intuitive decisions are often the product of years of experience and thousands of hours of practice. Expert intuition isn't an exclusively unconscious affair. It draws heavily from your bank of experience. It begins with consciously assembling all the data you'll need to make your decision and then keeping your conscious mind distracted while your unconscious rolls up its sleeves and gets to work.

Why We Don't Trust Intuition

One of the chief characteristics of intuition is that we can't always articulate what led us to make a particular decision. Our gut reaction and subsequent decision are the only elements of a complicated process that come into the consciousness. You can imagine why this would create problems for our conscious brain, which, rather than being about feeling, is more about explaining.

While it's true that lightning-fast, intuitive decision making is occasionally susceptible to manipulation, it's equally true that time-consuming (and often budget-busting), rational decision-making can be prone to massive misjudgment as well.

The optimum way to use your brain in many decision-making scenarios is to delegate the lion's share of the work to your unconscious brain and rely on your conscious primarily to monitor and vet the unconscious decision-making process. The unconscious excels at getting the job done quickly and efficiently. The conscious is best at double-checking to make sure that it has been done right. There's a reason why the key activities inside the PFC are commonly called executive functions!

Foster Learning

Studies show that we can continue to acquire new skills well into adulthood. Long-lasting neuroplasticity depends on noradrenaline to keep you alert while the rewards that come from learning lead to secretion of dopamine and acetylcholine, which help to ensure that any rewiring endures.

Learn with Your Heart, Not with Your Head

The key to learning is that it is a fundamentally emotional process driven by the threat and reward circuits that reside in the limbic system. It's no surprise that an unpleasant experience, such as burning your hand on a hot stove, leads to immediate learning.

Teaching that triggers the threat response can be highly effective — when used sparingly and responsibly. Negative learning is good at inhibiting behavior, but it's terrible at teaching you to find creative solutions. That's because it activates a threat state, which means your PFC is temporarily shut down and with it your executive functions. Your reaction may be speedy and instinctive, but it isn't nuanced and thoughtful.

Although they aren't as powerful as threat responses, reward responses are the more common and much-preferred driver to successful learning. In general, when information moves us, scares us, pleases us or otherwise makes a powerful impression, we are more likely to remember it. But even this rule has its pitfalls and limitations.

Don't confuse emotional relevance with sheer novelty. Because the size of working memory is limited and the stimuli that bombard your brain are practically relentless, your PFC is often forced to make some pretty tough choices. Dopamine is a primary decider. It asks, "Is it

new?" And if the answer is yes, there's a good chance that your PFC will zero in on the information, and your working memory will begin the process of retaining it. But, if the information that is merely new is at odds with the information that is truly important, the latter is likely to get crowded out, leaving you with little or no recollection of the stuff that really matters.

The lesson for leaders is clear: If you seek to increase the interest in the information you convey, be sure that the embellishments you add to liven up your lesson support your core message instead of competing with it.

Learn with a friend: It pays to learn in groups instead of individually. The social interaction that comes from learning with someone else releases oxytocin, which enhances neuroplasticity and the possibility for change.

Use multimodal learning: The capacity of your working memory is surprisingly small, but it can handle words and pictures simultaneously. What's more, other senses, like our sense of smell, bypass the working memory entirely and yet can serve as an additional trigger for recall. The more parts of the brain that are involved when you learn something new, the more likely you are to remember it.

Sleep on it: Getting sufficient sleep not only aids in emotional regulation, but it also improves your ability to learn. It reduces the levels of stress hormones, such as cortisol, in your bloodstream while encouraging the growth of new nerve cells that are necessary for learning and memory. And finally, it assists the hippocampus in determining which information you've recently learned will be stored in long-term memory for future use and which will be discarded.

PART III: BUILDING DREAM TEAMS

Thrive on Diversity

The most useful, neuroscientifically based insights into differing personality traits come from the work of Rutgers University biological anthropologist Helen Fisher. Dr. Fisher identified four basic personality styles.

The Explorer: Explorers are sensation seekers. Thanks to greater activity of the dopamine system in the brain and an extra burst of noradrenaline, Explorers require a higher level of arousal to achieve peak performance. Explorers tend to get bored easily. Since they always need a new challenge, you shouldn't weigh them down with run-of-the-mill activities. They can be highly creative and quick thinkers, so give them a chance to engage in these kinds of activities.

The Builder: The personality of a Builder is largely defined by the stabilizing influence of serotonin. The serotonin that Builders express makes them the inverse of high-risk Explorers. You can always count on them to follow through with their tasks and responsibilities. Builders are very structured, loyal and future focused but can be thrown by unanticipated changes in their schedules and agreements.

The Negotiator: Influence from the hormone estrogen is what differentiates Negotiators from their colleagues. Negotiators are very empathetic and see the big picture. They are highly sensitive to unresolved conflicts, and their performance will suffer if you don't create a trust-based, appreciative climate. Negotiators' strengths are their talent in handling people, their verbal fluency and their ability to draw connections between seemingly unconnected topics.

The Director: With the Director, the defining hormone is testosterone. Directors are tough minded and highly analytical. They thrive in competitive environments where they can excel at their skills in problem solving and structuring. Due to their high testosterone levels, Directors can be pretty rough and undiplomatic in their communication. They work well only when the hierarchy is clearly defined; otherwise, the risk for openly displayed conflict is high.

Each of the personality styles can contribute certain skill sets that are complementary to each other. As an example, the fast-paced, curious Explorer will enhance the team with creativity and drive and make working together fun. The Negotiator will be very sensitive to the human touch of collaboration and be particularly skilled at anything that has to do with verbal expression and communication. The Builder will add stability and the persistence to follow through with a task until the end. The Builder is the one who will make sure the timeline is respected and commitments are taken seriously. The Director, on the other hand, will reduce complexity and use logical skills to cut through any seemingly confusing problems, keeping the team up to speed and on track.

Cultivate Trust

As humans, we are fundamentally social creatures. Most of the behavior that constitutes group dynamics hinges on our assessment of the people around us as either enemies or friends. Reward and threat, the two key circuits in our limbic system, largely dictate our behavior around others.

For the sake of our survival, our default response is to treat the people around us as threats until we learn otherwise. This prompts what psychologists call "avoidance

behavior." The flip side of avoidance behavior is approach behavior, an equally primitive response that places people in the "us" camp and is based on a feeling of trust.

SCARF is a model for social interaction that reflects the latest findings in social cognitive neurosciences. This acronym represents the five major factors that determine whether groups are characterized by approach or avoidance behavior.

Status: Status refers to how people feel after they've interacted with you. Treat the members of your team in a way that makes them truly feel valued; it will lead them to believe they can make a genuine difference.

Certainty: Uncertainty makes us uneasy and can lead to a threat response while the perception of certainty is likely to trigger a sense of reward. You can't always take the mystery out of situations, but what you can do is try to shed some reassuring light on the process.

Autonomy: When people have a sense that they are masters of their own fate, their moods improve and their stress levels go down. Provide your teams with a greater sense of autonomy by granting them the freedom to work according to their own style as long as they are willing and able to meet agreed-upon goals.

Relatedness: People perform better when they feel connected. Devote some time to building good relations between you and your group by fostering an environment of caring and inclusiveness.

Fairness: Our brains don't maximize profit, they maximize relationships and fairness. Our brains can even trigger a reward response when we see others being treated fairly. However, any perception that we're getting a raw deal could set off the threat alarm. If you work to foster a climate of fairness, everyone and everything will likely benefit — including your bottom line.

Develop the Team of the Future

Fielding a Strength-Based Team

When it comes to building top-performing teams, hiring always trumps training. Although training is important, it has its limitations. It makes far more sense to invest time and money into spotting talented people and hiring them than it does to spend it on training to cultivate talent that may not even exist.

We all have strengths and weaknesses. Doing something we're good at focuses our attention, triggers a burst of dopamine and often puts us into a rewarding state of flow. Working on something we're not so good at tends to lead to discouragement, frustration and a dissipation of energy.

Instead of building on the unique strengths of their employees, far too many companies are trying to iron out their weaknesses. The valleys may get shallower, but the peaks get lower in the process as well. Employees neglect the skills they're good at in order to improve the areas where they've never done well.

Obviously, if an employee is failing to meet certain standards, then something definitely needs to be done about it. If any of an employee's skills are ranked as "not acceptable," we definitely need to improve those specific areas. The goal is not to transform an area where the employee is struggling into one of his greatest strengths but simply to lift that skill out of the hole of "not acceptable" and onto the firmer footing of "acceptable standard."

Once we've raised any unacceptable skills up to an acceptable standard, we can focus the majority of the time on improving the employee's strengths. And unlike reviews that put weakness under a microscope, strength-based appraisals capitalize on the pride and motivation that most employees already feel for areas they are good at and inspire them to aim for the stars.

The lesson for teams and team building is simple: Not everyone needs to do everything. Strive to find a mix of people with each excelling in a different area. In the event that the highest team ranking in a particular area is "acceptable standard," seek out and add someone to the team who is "best in class" in that area.

Keeping the Brain in Mind

We now know about the neurochemistry of reaching our personal best, we've learned about how neuronal pathways can be wired and rewired to our advantage throughout our lives, and we've gained revolutionary insights into what really matters in building a happy and successful team. Far from being a leadership fad, this knowledge is supported by a mountain of data.

Combining these principles provides us with an opportunity to thrive both in our businesses and in our personal lives and to truly become leading brains!

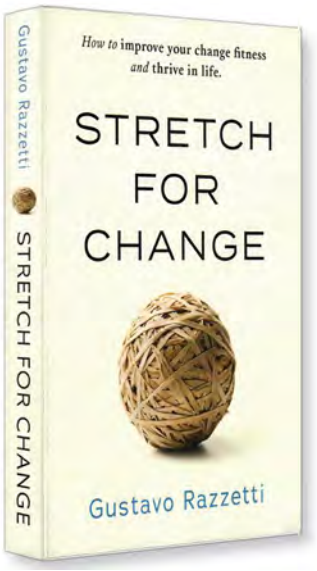
Stretch for Change

How to Improve Your Change Fitness and Thrive in Life



by Gustavo Razzetti

THE SUMMARY IN BRIEF

We all admire daring innovators. In our own lives, however, it often seems safer to stick with the status quo. Change can be frightening, but embracing it can lead to phenomenal growth. Choose change, and free yourself to improve your adaptability and problem-solving skills.

A sought-after expert on innovation and change leadership, author Gustavo Razzetti challenges traditional change management theories with a down-to-earth and human-centered approach, providing a pathway to help you achieve your dreams and join the world of innovators.

Stretch for Change offers you a new framework to guide you in creating a flexible mindset that is more open to new ideas. Discover how to thrive in our unpredictable world, re-engage with your passions and improve leadership skills by stretching your mindset.

Mentally preparing for change is like stretching your muscles before exercise. It leaves you ready and limber for whatever comes next. Change is a natural force, and welcoming it will put you and your team ahead of the game!

IN THIS SUMMARY, YOU WILL LEARN:

- How to stop fighting change and embrace it as a natural force.
- To create change and solve the problems that really matter.
- To build a culture of experimentation within your organization.
- How to become "change-fit" to boost your ability to lead change.

Introduction

Stretching Beyond Your Comfort Zone

Don't wait for the right moment to show up. Create the right moment instead. What you must be willing to do is challenge yourself. Let go of excuses and become comfortable with being uncomfortable: prepare for and embrace change.

We are *all* presented with opportunities to live our dreams. But only a few of us choose to follow them.

Change hurts. But, it hurts less if you are prepared to deal with it. That's the purpose here: *To help you become "change-fit."*

Unfortunately for many of us, change can be threatening. But with the right mindset, it can also be a tremendous source of inspiration. There's one clear lesson: Adaptability can become a competitive advantage, professionally and personally. And that requires preparation and courage to stretch beyond your comfort zone.

PART I: MINDSET STRETCH, HOW TO DEVELOP A "CHANGE" MINDSET

UNSTUCK — Shake Up Your Current Mindset!

Our mindset is the lens through which we perceive reality. To embrace a new mindset, we first need to let go of older ones. That includes, fundamentally, letting go of two of the most harmful emotions: apathy and fear.

Most people live in the "Stuck" mindset without realizing it. While regular folks normally complain about what's not working, changemakers jump into action. When you fully embrace a "Change" mindset, you cease being apathetic.

Fear is a chain reaction in the brain that starts with a stressful stimulus — the fear of what we don't know. The critical question is, how do we deal with that reality? If you get stuck, overwhelmed by your emotions, you lose your ability to act with agency. And if you wish to overcome a setback, your pain cannot become an excuse or an impediment to your long-term goals.

When we try to avoid getting hurt, we become paralyzed. We all need to learn to live with and become masters of fear: Tame the beast. Avoid anticipation — worrying about what might happen. Avoid generalizations — thinking that because one thing went wrong, everything will go wrong. Avoid labels — putting ourselves in a box that we can't get out of. Avoid obsession about others' acceptance — limiting our potential to be unique, to be who we want to become. In short, stop being paralyzed. Taming the beast of fear will help you to build a "Change" Mindset.

The Importance of Building a Strong Foundation

It's not just your mindset that needs to stretch for change. You need to build a strong foundation: to thrive

in changing environs, you need to build endurance and the capacity for resilience. When your resilience is put to the test, your body and mind will thank you.

Those who tend to overwork also tend to overdisconnect during breaks and holidays. Instead of jumping from one extreme to the other, remember that life is not a sprint but a marathon. Stamina is good for reaching intermediary benchmarks, but endurance is what counts the most in the long run.

Like regular exercise, good sleep and continuous learning are critical to refuel our bodies and minds. But most importantly, they are indispensable for building a strong performance foundation. Being conscious of your cadence is critical if you want to be a successful changemaker.

Sleep is one of the most important activities you can do. Powerful research shows how we might be at our most creative when we are emerging from the realm of sleep. If you want to be energized, sleep well. And the rule that counts most is sticking to your wake-up time.

Be mindful and aim for balance. Giving our mind a complete break can have a devastating effect. Taking a well-chosen pause is indispensable to refresh your mind and body. However, completely disconnecting from everything and becoming stagnant can corrode your overall performance.

OPEN-UP — From a "Stuck" to a "Change" Mindset

Are we obsessed with change? As a society, we idolize changemakers. People love change but don't want *to change.* Most people think of change as something external, something that happens to them, a potential threat. *That's when we see change as a noun.*

Think of change as something that you can make happen by playing an active role. This simple trick will help put you in a "Change" mindset. When you see change as a verb, your relationship with "change" changes. You feel in control: you start playing an active role in your life rather than being a passive victim.

Reframe Your Mindset: From "Stuck" to "Change"

When we stop complaining and take ownership of our destiny, it's easier to move into action. Instead of playing the martyr, we stop reacting and start adapting. When you learn to not only accept your internal and external constraints but also use them to your advantage, that's when constraints can become a superpower.

Embracing a "Change" mindset requires you to realize that you cannot control every event. Be more experimental; put your perfectionist mind aside. Do new things, do things in a new way or launch something even before it's perfect. Be more improvisational: have a plan but be open to hit any ball, especially those that come from unexpected places.

We all need to rethink our relationship with being busy. Busyness is a state of mind. Either we control it or it takes over our lives. Start by challenging your attitude. Next time you feel busy, ask yourself: Am I really busy, or am I using busyness as an excuse?

The Overrated Fear of Making Decisions

The choices we make determine our chances of success. But success requires full commitment. The willingness behind a decision matters more than the decision itself. Also, equally important is our ability to adapt to the outcome; nothing is definite. Think of making decisions/outcomes/decisions as a constant work in progress.

Every time we're about to make a decision, the outcome feels uncertain, and that's simply because we don't control the future. So why stress out about something that doesn't depend on us? What you can control are your emotions. Being a changemaker is a game of courage. To move things forward, you need support. Getting (some) support is critical for a successful implementation. There will be resistance most of the time, so don't panic.

It's impossible to have everyone on board at the same time. Consensus is a trap you should avoid. Look for alignment. Listen to the objections. But, you need to move on and make the call at some point. That's when everyone needs to align behind the decision even if there are still objections. If you let go of the obsession of making the right decision, you'll be more flexible and more open to experiment. Those who embrace a "Change" Mindset know that nothing is definite. Changemakers learn to change their minds, to adapt from time to time, but not too often. It's all about finding the right balance.

Getting lost, on purpose or not, wandering around without a clear objective is a perfect way to give room to your experimental mind. Getting lost helps you let go of anticipation. Check out these seven ways to get lost with a purpose: wander aimlessly, change the physical setting, try new routes, become ignorant, let others take the steering wheel, create a routine of disrupting your routines, and stop anticipating.

THRIVE — Turn Constraints into a Superpower

When you stop fighting obstacles and start thinking of them as inspiration, you can actually turn those constraints into a superpower.

Life is not fair. Get used to it. If you truly embrace a "Change" mindset, improvising and experimenting will help you move forward. Don't allow people to put you in a box. Boxes are external; not only should they not limit your confidence and potential, but you should outsmart those who attempt to put you in any box.

Over time, and especially in the workplace, we've been wired to believe that having more (resources, money, time, etc.) is what matters. It's natural, and completely human, that every time we lack something we — supposedly — need to do our jobs, we get stuck.

Don't Confuse Constraints with Being Constrained

The path of becoming a changemaker is not an easy one. The journey will be full of challenges or constraints. You can choose to see them as obstacles that get in your way or simply embrace them. Purposefully eliminating something that you need to do ordinary tasks is a nice way for constraints to become your best friend. Not only will you feel less afraid of facing future limitations, but you might actually enjoy it. The main realization is that constraints are simply external: It's on us to let them become obstacles or not.

Our mindset is critical to turning a limitation in our favor rather than surrendering to it. Moving from being a victim to behaving like a superhero is not easy. But, the more you become aware and the more you avoid letting your emotions take over, the easier it will be.

Reframing the challenge is half of the solution. If we want to turn the problem into something exciting, let's start by asking more interesting questions.

Once you've reframed your constraint, the next step is to find solutions. When everyone else is asking the same old question, use constraints as an inspiration.

Our emotions are one of the most powerful constraints. Like with any constraint, if you learn how to deal with emotions, like frustration, you can turn them into a powerful tool. Frustration is the gap between our expectations and our reality. To minimize it, we can choose to either reframe our expectations or change our reality.

Prioritization doesn't mean that there is only one thing that matters. Prioritization requires making choices. Once you are clear on your priorities, commit time to working on what matters to you. Don't wait; start right now. Committing to what you want is critical. But, it means nothing if you don't have a method to turn it into action.

Refuse to Be Defined by Failure

If you are not failing, it's because you are not stretching out of your comfort zone. Most successful people — like Hemingway — have experienced a similar path. Though we tend to remember the nice success stories, they had to overcome failure many times.

Take matters into your own hands. Put into practice what you believe in with conviction. Find like-minded revolutionaries who want to join your cause.

PART II: CHANGE-MAKING, SOLVE PROBLEMS THAT MATTER BY AMPLIFYING YOUR PERSPECTIVE

RE-ENGAGE — From Detachment to Human-Centered

Embracing a problem-solving mentality comes with the "Change" Mindset. The only caution is to make sure that you are solving the right problem. It's not a matter of big versus small problems but of making sure we spend our time on something that will create a positive impact.

Let's re-engage people at work; let's create a place where they want to reconnect and bring their passions. Bringing our souls to work is about connecting our personal and professional sides.

The notion of designing for people is not something new. The most effective problem-solving method emphasizes that the best way to find solutions is with a better understanding of who you are solving for. The importance of applying a Human-Centered Design approach is to bring people to the core of what an organization does.

The Bridge to Solve Meaningful Problems

One approach to problem-solving (and innovation) is a bridge that starts with an "Undefined Problem" and helps you find a "Meaningful Solution" on the other end. The human aspect, though present during the whole process, is critical for the initial and end phases, when we have to talk to people.

Empathy Research is about finding human stories. That's the raw material we'll need to reframe the problem. We want to catch personal and meaningful stories to better understand problems. By reframing an Undefined Problem

via Empathy Research, we want to identify what's a Meaningful Problem for the people we are designing for.

Empathy is about letting people define what they want to talk about. We want to connect to people's desires and motives, what really drives their behavior. And we want to go as deep as possible.

Some people are more empathetic than others, but anyone can master empathy. It's not an intellectual journey but an emotional one. The most critical part is to become aware of when your own biased perspective is filtering what people are saying.

From Extreme Users to Multiple Perspectives

When it comes to having empathy sessions, the Design Thinking approach is to find "Extreme Users" — those whose feelings and behaviors are amplified. The idea is that their insights will provide an interesting perspective on the larger population. If you talk to the usual suspects, don't expect to find *anything* unexpected.

Innovation is much more than coming up with an innovative solution. It's about creating real impact from going against established norms, to driving adoption or scaling up. And moving the organization behind a new solution is where most innovation teams struggle.

To move innovation forward, developing internal capabilities is critical. But, driving solo can limit an organization's ability to drive real innovation. If you want to win the innovation championship, your approach needs to be balanced. Focus your energy on how to get the best of both worlds. Or, better said, the best innovation team.

The stronger your innovation team, the better. Change is messy and not easy. It requires you to develop an experimental mindset, build internal capabilities and complement those with external help when needed.

AMPLIFY — From Detachment to Human-Centered

Outsiders, misfits and outliers see things differently. Not just because they are different but because their relationship with the problem is different too. They don't just see, they observe.

Our experience has taught us that the biggest challenge in solving a problem might be you or rather your perspective — the biased way in which you see the world — which might hinder the discovery of fresh solutions.

Challenging your perspective is the first step in amplifying how you see the world. Allow people to contribute beyond their disciplines to challenge the team to develop more Meaningful Solutions. If you want to be a changemaker, you might just want to try and borrow a fresh pair of eyes.

A Social Media Approach to Amplify Your Perspectives

Some people are Action/Control-driven while others are People/Emotion-driven. Some people like to Command/Tell and others are more into Connecting/Asking. The intersection of these two axes determines four types of "Social Media" personalities:

- Twitter — Wants to achieve a huge success/build a reputation
- Facebook — Wants to be part of a successful team
- Yelp — Wants to get a lot done with minimal risk
- Instagram — Wants to be respected and admired

This social media approach doesn't just tell you who you are but helps you be more open to other people who are different and behave differently than you do.

The Importance of Multiple Perspectives

The same way an extreme user sheds light on an extreme behavior, Multiple Perspectives will provide a collective view on extreme behaviors. People see the problem with different eyes depending on their backgrounds, education, knowledge and proximity to the problem, to name a few characteristics.

Knowing too much in a specific field can become a barrier; it can cloud your eyes, but if you combine that expertise with an outsider, that's when the magic of Multiple Perspectives happens. It's about balancing one with another versus establishing a hierarchy. The first thing to do is challenge the problems by talking to people who will help amplify your perspective.

The first thing to consider is to avoid using a right-or-wrong approach. None of the perspectives is better than any of the others. We are simply trying to see the problem from different angles. The nature of the problem dictates the type of perspective you might want to tap into.

REFRAME — The Importance of Multiple Perspectives

The symptom is *not* the problem. But, there's a problem behind the symptom. We get caught in the trap of solving short-term symptoms instead of fixing the real problem. Solving Meaningful Problems, not just symptoms, will not only excite your team but also those who will benefit from the solution.

Reframing the challenge into a more interesting one will get you halfway to the solution. If you want to turn the problem into something exciting, start by asking more interesting questions.

So, how do we reframe problems into meaningful ones? Well, it all starts with finding the right inspiration: stories.

Once you've been able to capture interesting stories, the next step is to use them to reframe the initial problem.

Using Insights to Reframe Problems

A lot of inferring and interpretation is needed at this stage. Understanding what drives people's behavior is not pure logic. Conducting a deep analysis of tensions, contradictions and surprises is very helpful. The problem is that most people expect a direct conclusion out of these, and it is not that straightforward. Both learning how to facilitate great Empathy Research and distilling insights to reframe a problem are practices that are perfected over time.

SOLVE — Solutions That Matter

Good solutions should be good for everyone. The notion of bringing Multiple Perspectives is to see the problem through various lenses and find solutions that will be meaningful to the whole.

Being more conscious of the larger impact of our solutions is a big challenge. As changemakers, by considering other sectors' needs we can minimize the impact or aim for holistic solutions. Instead of seeing players as opponents, spur collaboration. A Meaningful Solution is one that takes into consideration the interest of the people, the society or community, not just the organization.

Analogous Inspiration

Another way to amplify perspectives and lessons is to use analogous inspiration. This builds on the notion that the farther you look, the more interesting the perspective and inspiration will be.

The idea is to learn from how other people or industries solve problems and then apply the approach or thinking behind it — not their solutions — to your specific needs.

Why You Should Create Your Own Enemy

Stretching for change means preparing our mindsets and behaviors and providing a toolkit so we can deal with change in a more effective way. Change is no longer optional. You can wait for things to happen, or you can get ready for them. Creating your own enemy is a strong tool to do exactly that.

Organizations and teams need to spend time and resources on creating their own enemy. Exploring different scenarios, potential threats and how to anticipate those must be a priority. Do you want to be the missile or the target?

PART III: CHANGE-FITNESS, THE COURAGEOUS PATH TO BECOME A CHANGE LEADER

TRY — Building a Change-Fit Culture

The path toward building a change-fit culture starts by increasing openness, becoming more experimental and, in the end, building a culture that thrives on change. Let's start by understanding the key elements of this journey: transparency, experimentation, cadence, resilience and mindful leadership.

How to Create a Culture of Transparency

Trust can bring a culture together or tear it apart. It's almost impossible to encourage people to experiment and take more risks when they worry about the consequences. Transparency is critical when dealing with change. Here are some insights to inspire your own experiments:

1. If they know, they will care
2. Curate, don't filter
3. To show you're serious, take risks
4. Open dialogue minimizes gossip
5. A culture of transparency is infectious
6. Building transparency takes time

Transparency, like change, requires a strong commitment. But it pays off. When participation and curiosity increase among your team — including challenging you as a leader — it's a sign that transparency is turning into a virtuous cycle.

A Culture of Experimentation: Lessons from the Start-ups

What makes some companies more successful than others is not their start-up status but having a start-up behavior. To be hungry for continuous growth, quick to move from planning to action, fearless in experimenting and genuine enough to want to change the world.

Here are some lessons in how start-up behavior can be applied to teams and organizations alike: Make uncertainty your best friend; rejection is not the end but a new beginning; fall in love with solving a problem, not with a solution; and balance purpose with profit (and vice versa).

Promoting transparency and experimentation is very important but not enough on its own. In order to build

a culture of change, team members need to have the ability to make more decisions, improvise, test their own hypotheses and learn through that process. Decentralizing decision-making and removing internal barriers — such as hierarchies — allow the team to take ownership and feel they are in control of their own destiny.

Providing teams with learning experiences should be at the core of every organization. Members gain a new skill and mindset, not just motivation. In that same direction, new rituals and behaviors can help the culture thrive in the workplace.

Culture eats innovation for breakfast. Leaders cannot create real change without organizational support. This requires encouraging the culture to be more open and more adaptive, to be change-fit.

FORTIFY — Dealing with Resistance

Resistance has a bad reputation. Instead of fighting it, we should use that energy in our favor. There are several types of resistance. The most important and critical is human and happens within your own organization. Each organization has its own specific neurosis that affects its particular relationship with change. Behind the neurosis lies an established perspective and behavior that promotes resistance. You need to tackle the root cause, not just the "stuck" symptom.

Let's review the characteristics of each of the five organizational culture neuroses: Dramatic Organizations filter reality (both internally and externally) through the eyes of emotions, so it's very hard to create alignment as subjectivity plays a critical role; Political Organizations are driven by the need to gain power and lack of trust; Ritualist Organizations tend to show repetitive behaviors; Doubtful Organizations are always comparing themselves to others, especially larger and more successful ones; and Control-freak Organizations are driven by power, hierarchy and the need for supervision.

What's driving these neuroses? What are the key symptoms? Kick-off an experiment to neutralize that specific symptom. Don't expect to eradicate it overnight. It's about starting to erase a particular behavior.

Failure to Launch: How to Stop Being Paralyzed

Are organizations failing to launch, or are they simply afraid to launch? Don't let limitations become an excuse. You can get caught blaming others for what's not happening, or you can simply move forward. It's your call. How bad do you want what you want? Stop waiting for answers, make the answers happen instead.

Once you launch, be prepared for resistance, as launching isn't the finale but just the beginning of the journey.

Driving change is a dangerous mission. You are against the odds. Disguised as a warm, caring boss or a smart client that wants to get the best out of you, the enemies of innovation just want to slow you down.

Be more aware of the enemies that want to wear you down. Anticipate their moves. Develop specific tactics. Join them, but don't become one of them. Enemies test your endurance. Enemies make your ideas better. Enemies keep you on your toes.

LIBERATE — Leading Meaningful Change

The role of leaders is overrated. Self-Organization is not about eliminating leaders but rethinking their role in a more balanced way. Worry less about who makes the decision and focus more on having the right perspectives in the room when a decision is made.

People want to see the human side of leaders. Vulnerability doesn't mean being weak but that you accept and acknowledge your weaknesses. Vulnerability means that you trust yourself. Conviction and courage, despite showing vulnerability, are what inspires people.

In an era when rigid, obsolete structures are being questioned, a new kind of leadership is required. Organizations are looking to become more flexible and adaptive to survive in an uncertain world. Shouldn't their leaders stretch their mindsets too?

A vulnerable leader generates the trust required for a team to feel safe to experiment by developing a culture in which people don't need to worry about the consequences if their experiment goes wrong. Rather than controlling information flow and avoiding tensions, the vulnerable leader promotes a culture of transparency. Addressing tensions not only helps unblock the work but also drives change.

How to Drive the Adoption of Anything New

Driving adoption of new behaviors or tools is a mysterious thing. Contextualizing the why behind a new tool or process is critical. Any new behavior you try to introduce to a team normally implies replacing an older one. Understanding the behaviors or practices that need to be replaced helps the team better understand the why behind the new initiative.

If you present something new as optional, it will always be an option. When rolling out new "things," organizations need to convey conviction.

How can we separate the illusion of change from real change? We all trick ourselves when it comes to change. Many organizations spend more time and energy selling their new strategy or celebrating self-serving headlines than making things happen. Turning words into action is what matters.

Driving innovation is a dangerous mission. You need to bring together a bunch of individuals who are passionate about proving everyone wrong. Those crazy enough to take on a risky mission. What you need is a team of misfits.

Why misfits are your best choice: Misfits love being against the odds, misfits respect crazy leaders, misfits will take missions no one else will, and misfits are brought together by passion, not by choice.

Misfits will always finish the mission, no matter how dangerous.

Hire for Cultural Fitness, not Just Cultural Fit

Culture is something dynamic rather than static. The notion that people can or can't fit into a specific culture goes against the mandate of fluid organizations. It limits its ability to grow.

Hire for cultural fitness. Stretch your culture by hiring people who will make it more adaptive, experimental and resilient.

The real problem behind diversity is that teams are not trained to deal with differences of opinion. One of the key issues in bringing "diverse" people to a team is that they see things differently. Organizations need to discuss things more openly. Creating a culture of transparency can help re-position diversity as learning.

BE — Leading a Meaningful Life

Stretch for change. Start leading a meaningful life.

Should you first find your passion and pursue it? Or should you work hard until your passion finds you? That's the perennial dilemma. Don't confuse what you are good at with your real passion. Doing things for the first time, real self-experimentation, that's stretching for change.

Don't expect your journey to be linear. Trust your instinct, trust yourself. When you feel lost, keep going. The most important thing is to learn to explore. Test and try but also enjoy the ride.

Going beyond your own limits might feel uncomfortable — and even hurt — at the beginning. Yet, it's critical to build resilience: that rewarding experience of achieving something that, at first, you thought you couldn't. Productivity is a habit that needs to be built up. Productivity is not about to-do lists but to-enjoy lists. It's up to you to create your own path and rituals toward enjoyment.

The biggest challenge you'll always face as a person is to be authentic. Being true to who you are is part of stretching for change. And that requires a thick skin, especially when other people's feedback might be anything but encouraging. The best feedback happens unexpectedly. When you stop convincing yourself that others are wrong, that's when feedback becomes a valuable gift.

Labeling things as good or bad never helps. And that's even truer with feedback. It's how we react to it and what we do with it that can turn it into a positive or negative. Feedback is just feedback. Learn to receive it as a surprise gift.

The same way feedback helps us stretch for change, rehashing memories can only get us stuck. Not letting go of bad experiences makes our mindset stiff. Ruminating is an ineffective coping behavior. Forgetting a bad experience is truly liberating. Reflecting on a bad experience is important, but being stuck in the past doesn't leave room for new experiences.

Don't confuse information abundance with knowledge. In trying to make everything simpler, we face a risk: the danger of oversimplification. The hacking mentality is good but can easily turn into a deceiving mentality. Stretching for change requires taking the long route, rather than shortcuts.

The era of information abundance needs to leave room for an era of wisdom. Wisdom is reciprocal learning: an equal relationship between apprentices and mentors in which learning experiences are created together rather than teachers dictating their learning plans to their students. Aim for wisdom, not just knowledge.

Lead a meaningful life, one worth stretching out of your comfort zone.

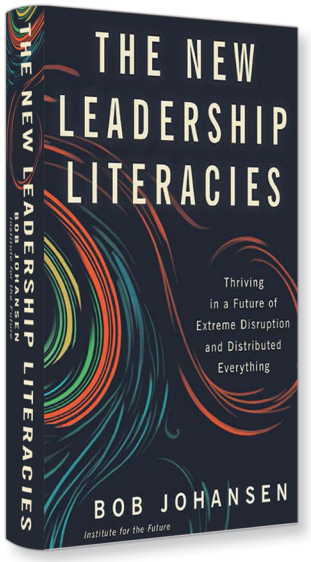
The New Leadership Literacies

Thriving in a Future of Extreme Disruption and Distributed Everything



by Bob Johansen

THE SUMMARY IN BRIEF

Over the next decade, today's connected world will be explosively more connected. Anything that can be distributed will be distributed: workforces, organizations, supply webs and more. The tired practices of centralized organizations will become brittle in a future where authority is radically decentralized. Rigid hierarchies will give way to liquid structures. Most leaders — and most organizations — aren't ready for this future. Are you?

Noted futurist Bob Johansen goes beyond skills and competencies to propose five new leadership literacies — combinations of disciplines, practices and worldviews — that will be needed to thrive in a VUCA world of increasing volatility, uncertainty, complexity and ambiguity. This summary shows how to (1) forecast likely futures so you can "look back" and make sure you're prepared now for the changes to come, (2) use low-risk gaming spaces to work through your concerns about the future and hone your leadership skills, (3) lead shape-shifting organizations where you can't just tell people what to do, (4) be a dynamic presence even when you're not there in person, and (5) keep your personal energy high and transmit that energy throughout your organization.

IN THIS SUMMARY, YOU WILL LEARN:

- To succeed despite being faced with waves of disruptions and extreme dilemmas by looking backward from the future.
- To play through fear and develop effective and efficient responses to conflict and change.
- To adapt traditional gaming behavior, such as gameful achievement, grit and gameful engagement, to strengthen your leadership abilities.

Twisting Toward Distributed Everything

The shift from centralized to distributed organizations has already begun, but the current leadership literacy — inherited from large, centralized organizations — isn't ready for a future when anything that can be distributed will be distributed.

Centralized and decentralized organizations will give way to truly distributed organizations that have no center, grow from the edges and cannot be controlled. Hierarchies will come and go in shape-shifting forms resembling a swirl. Rock-star leaders will be rare; networked leadership with strength and humility will work best. As centralized organizations become increasingly distributed, expect a cloudburst of disruption. In this future, leaders will see things they have never seen before.

In simpler times, perhaps being action oriented was enough to make a great leader. In the past, consultants and business books preached *action* as the defining characteristic of great leaders. But, even thousands of hours of action experience won't be enough for this future. Action without foresight and insight will be dumb, dangerous or both. Leaders will need to combine the practices of foresight, insight and action in an ongoing cycle of learning.

The next decade will be extremely complex, messy and threatening. Future leaders will be facing a VUCA world: Volatile, Uncertain, Complex and Ambiguous.

Disruptions

In a future loaded with dilemmas, disruption will be rampant, and clarity will be scarce. Leaders will need to provide enough clarity to make disruption tolerable and even motivational.

Trends are gradual, relatively predictable and almost-comfortable changes. Disruption is extreme and unpredictable change. Disruption is uncomfortable for most people.

Here, we focus on *disruptions,* which are *breaks* in the patterns of change. Disruptions tend to take a long time to play out and are often characterized by waves of innovation.

Disruptions often start as responses to particular problems but almost always spark unexpected changes. Despite its sense of immediacy, disruption is often a process that takes a long time to play out — disruption doesn't just suddenly pop up and then disappear.

When disruption first breaks out, it is hard to tell just what the core disruption will be. Early waves of disruption may look much different from what happens later.

Dilemmas

Dilemmas are problems you can't solve, problems that won't go away — yet, somehow leaders must learn how to succeed anyway. Future dilemmas will be embedded with both hope and fear — but the fear will be biting and the hope elusive.

If a leader characterizes a dilemma as a problem that can be solved, the failure to solve it is likely to be remembered and probably will be punished. When dealing with extreme dilemmas, leaders will need to learn how to thrive in the space between judging too soon (the classic mistake of the problem solver) and deciding too late (the classic mistake of the academic).

The *New Literacy* of Looking Backward From the Future

Foresight inevitably links in some way to hindsight. Think of hindsight as our banks of prior knowledge. Hindsight includes experience, which can be both a source of insight and a burden. Hindsight can be a cognitive anchoring in the past, and it can be a stimulus for innovation. Hindsight can keep us from seeing futures we cannot imagine.

Thinking systematically about the future helps us to loosen up, keep an open mind, and question our own assumptions.

Traditionally, innovative companies often miss the biggest potential impacts of a new technology or innovation once it finally occurs. Innovation often involves timing. A failed technology in one period can become a giant success later on. Those early innovators often watch in frustration as later (often less innovative) companies get the benefit of a delayed innovation. Hindsight — even accurate hindsight — can limit foresight. It is dangerous to assume that what didn't work before doesn't work now. Often, what didn't work before does work now. Leaders need to keep their minds open.

Insight is an "Aha!" moment that creates a new pattern of connections in your brain. Creating insight is a lot harder than generating ideas. Ideas bubble out, but insight is rare. Ideas are wonderful, but they are easy compared to insight. Insight is often hard, uncomfortable work.

The goal of futures thinking is to use foresight to induce the kind of head-jerking turn that happens as you read a great story or play a great game: an abrupt shift in your thinking. Once you have had an insight, you can't go back to your old way of thinking. Insight changes you. Ultimately, foresight is about making sense in a future world where sense is in short supply.

Collective moments of insight — when people come to the same realization together at the same time — are often the most powerful. Foresight is a wonderful way to provoke insight even if you don't agree with the forecast. You can argue with any forecast, but it is best to resist the temptation. Some of the best forecasts will be those you don't like. The most useful approach is to assume that foresight is plausible, internally consistent, and provocative.

Clarity and Dilemma Flipping

Looking backward from the future will require many skills. Two of these skills — clarity and dilemma flipping — will be particularly important for looking backward from the future.

Looking backward from the future will help you find your *clarity.* Clarity is the ability to see through messes and contradictions to a future that others cannot yet see.

Looking backward from the future will increase your ability to do the kind of dilemma flipping that will become increasingly necessary in the VUCA world. Dilemma flipping is the ability to turn dilemmas — which, unlike problems, cannot be solved — into advantages and opportunities.

To do dilemma flipping, you must like the space between judging too soon and deciding too late. If you're not sure if it's a problem or a dilemma when you're facing a challenge, it is better to assume it's a dilemma. If it turns out to be a problem you can solve, that's great. But if you think it's a problem, and it turns out to be a dilemma, you're in trouble because you have set expectations as if you're going to solve it, but you won't be able to.

Moving Toward a Future That Rewards Clarity — but Punishes Certainty

Looking backward from the future will seem unnatural for many leaders today — they are so present focused — but the tools for thinking about the future systematically are improving rapidly, and the need for looking backward from the future is growing.

The more complex the future, the farther ahead leaders will need to look. Given the external, future forces of the next decade, leaders will need to expand their leadership literacy by looking really far. Fortunately, the next generation of leaders will be gamefully prepared for this to happen.

Leaders will face an increasingly uncertain future, even while many of those they lead will crave certainty. Looking long and working backward from the future can help sift out the shards of certainty from which leaders can create clarity.

How Far Ahead Should You Look?

We want the forecast to go beyond the planning horizon for current strategy but still close enough in to be believable. The future starts to become clear only at about 10 years out. Sometimes, looking beyond 10 years will provide a view that is even clearer.

Sometimes, focusing on the future can help people move beyond the polarities of the present. The best forecasts will begin with a conversation involving foresight to insight to action, so it is very important to go far enough out to begin a great conversation and not get stuck in the polarities of the present.

Clarity Versus Certainty

In a highly uncertain world, it will be very easy for leaders to confuse clarity with certainty. Many people — including many leaders — just aren't prepared for the speed and scale of disruption they will be facing over the next decade. In this future world, simple will be good, but simplistic will be dangerous.

What is the difference between clarity and certainty? Clarity is usually expressed in stories while certainty is usually expressed in rules. Rigid rules can get leaders in a lot of trouble in the VUCA world while stories encourage people to engage. Clarity is lucid and coherent; certainty is definite and brittle.

What this means for leaders is that if you *feel* certain you are reaching a rational conclusion, your feelings may not be accurately reflecting the reality of the situation at all. What looks and feels to you for all the world like a sure thing may be anything but.

Leaders will have to develop their clarity but moderate their certainty. This will be very difficult in a highly disruptive world where people long for certainty. Seek out clarity in leaders, but beware of certainty.

The *New Literacy* of Voluntary Fear Engagement

Gaming, grit and guilds are three very old concepts that will be reimagined over the next decade to help leaders prepare for the VUCA world.

Games can be defined as "obstacles that we volunteer to overcome." Gameful engagement with the future can safely immerse you in a world of fear so you can practice ways to lead. The best response to fear is to engage with it directly rather than avoid it. Games can give leaders a way to do just that in realistic but low-risk ways.

Guilds allow people to play and learn together. They are all about connection, but it is about connection in the context of the game and the skills that are necessary to succeed in the game. Guild members have always had a shared purpose and a nurtured kinship for mutual benefit. Like the guilds of old, modern guilds allow craftspeople to share their craft, and learn from each other.

Guilds are about learning, community and power. They are not necessarily focused on winning the game, being the best or being the largest. Some might aspire to those things, but the fundamental purpose of a guild is to make a network that enables players to have a positive experience through social connections. Similarly, in the real world of the future, guilds — or whatever they come to be called — will allow people to learn from each other and learn together.

Playing Through Fear Positively

If you don't have some fear about the future, you're not paying attention. Fear is not a bad thing. It's what you *do* with your fear that can be bad. Leaders must learn to play through their fear and develop effective and efficient responses by turning fear into something positive. Leaders will need guilds because the world is becoming an increasingly scary place. Being a good guild member in the real world will require leaders to go through voluntary fear exposure in order to be a stronger link in the chain. Guilds build grit.

In a world of disruptive opportunity, leaders will need to learn how to practice voluntary fear exposure. They will need safe zones to practice their leadership skills and develop their capacities, knowledge, discipline, practices, perspective and worldview.

The big insight here is that safe zones allow leaders a chance to practice very difficult circumstances with little risk. The combination of a vividly realistic safe zone, voluntary fear exposure by leaders, and red teaming that challenges you at every stage creates powerful learning.

Managing Fear

The whole point of gameful engagement is to immerse yourself in a realistic but mock fearful environment and learn how to thrive, or at least push through it. Gameful engagement can be great learning, if you're playing the right games.

Gaming something means trying it out in a low-risk environment before doing it for real. You have to do that with a spirit that allows you to fail early, often and cheaply.

The new leadership literacy of voluntary fear will require two leadership skills in particular: immersive learning ability and rapid prototyping. Voluntary fear exposure will require leaders to develop and exercise their own immersive learning abilities. Immersive learning ability is the ability to immerse yourself in unfamiliar environments, and learn from them in a first-person way.

Voluntary fear exposure will allow leaders to create low-risk spaces where they can practice rapid prototyping for innovation. Rapid prototyping is creating quick, early versions of innovations, with the expectation that later success will require early failures.

Moving Toward a Future of Gaming for Grit

We are moving toward a world where young people will bring their gaming experience to work, and it will be a competitive advantage for them. Learning communities of gamers will emerge as powerful guilds to learn together, share experiences, and amplify their impact.

Leading through gaming and guilds will make much more sense as young people join the workforce because they grew up with often very sophisticated video games and very organized and creative guilds.

Gameful engagement will be basic to the next generation of learning, marketing, advertising, and commercials. In 10 years, most rising star leaders will be gamers, with a gameful mindset. Digital natives are going to expect a much higher level of engagement as they go to work. If companies give them an experience as rich as what they've grown up with in the world of gaming and guilds, they're likely to be very productive.

Resilience will be necessary but insufficient for the leadership demands of the future. Grit will be required to lead with hope in a world of constant disruption. What ultimately ties grittiness and games together is the ability not just to recover from failure but to find value and even enjoyment in it.

Game Achievements

The concept of *game achievements* in the video-gaming world will become more relevant to leadership development. Game achievements recognize players' abilities and long-term exploits. Achievements carry over and can hold value across games. These achievements are part of every player's profile: They unlock bonuses, award new abilities, or simply add to the pride of playing well. The importance of achievements in games cannot be understated since they represent a player's inherited knowledge, a player's worth in virtual worlds.

This notion of game achievements will carry forth into the world of work through guilds or communities of practice. In a VUCA world, leadership development will be increasingly gameful, and shared learning across games — and into real life — will become part of getting ready for work or battle, just like it is already in video games, in the military, in police work, and in firefighting.

The *New Literacy* of Leadership for Shape-Shifting Organizations

The literacy of leading shape-shifting organizations will require many skills, but the two most important ones are constructive depolarization and commons creation.

Leading shape-shifting organizations will amplify the need for constructive depolarization. Constructive depolarization is the ability to calm tense situations in which differences dominate and communication has broken down and bring people from divergent cultures toward constructive engagement.

When conflict arises at the edges of organizations, leadership can become very difficult. Shape-shifting organizations can go tribal. Mutual-benefit partnering can give way to tribal warfare. In the VUCA world, the potential for extreme disruption at the edges of distributed organizations is always possible.

Tribes can bring people together (guilds are also a kind of tribe), but tribes get dangerous when the strength of an in-group comes at the expense of others on the outside.

Over the next decade, as shape-shifting organizations become more popular, the tensions will rise, and the new digital capabilities will create weird twists that will challenge the imaginations of even the best leaders.

The literacy of leading shape-shifting organizations will require commons creating, which allows assets to be shared and provides mutual-benefit partnering models for innovation. Commons creation is the ability to seed, nurture, and grow shared assets that can benefit all players — and allow competition at a higher level.

Commons creation allows leaders to share new assets that benefit more than themselves, which is required for mutual-benefit partnering. Clearly, the long-term direction is shifting from more closed to more open, which is not to say that open sourcing will prevail. Rather, in a world where everything that can be distributed will be distributed, it will be difficult to control intellectual property in traditional ways. Mutual-benefit partnering will allow companies to share risk and rewards.

Moving Toward a Future of Distributed Authority

In the near future, many traditional, hierarchical structures will bend and break. Lots of diverse partners will come together in new ways to create new kinds of organizational structures that will be more fluid and less rigid.

The job of leaders is to have the perspective necessary to recognize true innovation and when it is ready to take off. The capability to connect distributed organizations was made possible by the invention of packet switching. Over the next decade, these capabilities will finally be able to spread on a global scale.

Over the next decade, shape-shifting organizations will become much more common, and distributed leadership will become mandatory — even though the literacy of distributed leadership is still very much a work in progress. Shape-shifting organizations will disrupt traditional organizations and, in some cases, blend with them.

Economies of structure — organizational structure — will be required to thrive in the world of the increasingly VUCA future. Shape-shifting organizations will be more messy but more productive than traditional organizations.

What's Next: The Blockchain Disruption

Shape-shifting organizations and new economies of organization will be created using blockchain or similar platforms for distributed computing.

Think of blockchain as distributed computing that can track the status of autonomous virtual objects and provide security *without central authority.* It is being used to prototype new infrastructure for organizing ourselves in a global society.

In the future, blockchain will be:

- A way to provide high-trust interactions in low-trust environments.
- A way of documenting and verifying integrity.
- A new kind of coordination being built on top of the internet.
- A distributed, unchangeable ledger or log of information that tells an immutable story of provenance.

Blockchain will provide the advantages of a single platform without the disadvantages of a single provider, such as Google, Facebook or Twitter. It will be to value what today's internet is to information.

It is a big step toward distributed everything. Although it will surely be a confusing process of creation, blockchain will make it possible for shape-shifting organizations and economies of organizations to thrive. Also, blockchain will challenge traditional organizations in profound ways.

The *New Literacy* of Being There When You Are Not There

Leaders will need to find new points of contact in the distributed organizations within which they will be working. Leaders will need a new leadership presence, through a wide mix of media and in-person meetings in varied combinations. Leaders will need to create organizational cultures that are amplified by the increasingly rich mix of media options that will emerge over the next decade.

Even when leaders are not present in person, they will need to have their presence felt. This has always been true, but it will be increasingly important in shape-shifting organizations. The good news is that the tools for culture seeding and nurturing will be so much better than what we have today. Augmented reality, mixed reality and virtual reality are the current buzzwords for a new blended-reality world of work that will take shape over the next decade.

Meeting in person will be crucial but in the context of a blended-reality and increasingly distributed world. We should all be focused on creating great conversations in a multimedia world.

Great leaders will not only be trained in a wide range of media, but they will also have their own signature flair within each medium. At this stage, the media options are improving rapidly, and the styles of use are still taking shape. Media-mix options for leaders will break down into roughly into five categories:

Same Time/Same Place: Best for getting to know others, developing trust, and understanding context and cultural background of others.

Different Time/Different Place: Best for the coordination of tasks and working fast — all of which work much better if workers have a shared orientation and sense of trust in advance.

Same Time/Different Place: Best when coordination and quick feedback are needed and it is important to get a "sense of the meeting" but it is not possible to get together in person for some reason.

Same Place/Different Time: Best when a central location or physical space is required for the work tasks, but being at the space simultaneously is either not possible or not required.

Any Time/Any Place: Best for continuous communication and staying in touch.

Each leader needs his or her own personal strategy for each media option as well as a personal skills development plan.

Moving Toward a Future That Is BEYOND Being There

The great news is that the blended-reality world of leadership in the future will be media rich, with lots of exciting choices for communicating. The challenging news for leaders is that they will have to have experience with how to lead in the expanding array of media-rich worlds, and most importantly — they will have to get very good at deciding which medium is good for what. However, richer media mixes may not be better than simpler forms.

For leaders at a distance, audio will be the primary medium. If your audio channel is weak or scratchy, you will have a weak or scratchy leadership voice — literally and symbolically. Leadership voice will be critical, and audio will be the most important channel for bringing your voice to life.

The Uncanny Valley

Blended-reality media will provide new opportunities to communicate more effectively, productively and persuasively than ever before. These same vivid media will also create new forms of remote presence that will have the potential to be off-putting, alienating and even inhuman. The term *uncanny valley* is used to describe how humans react to humanoid robots.

In climbing toward the goal of leaders being there without being there, our affinity for those leaders will increase until we reach an uncanny valley, where leaders will be perceived as being weirdly present.

The challenge for the future of distributed leadership is we don't yet know what could be on the other side of the uncanny valley for leadership at a distance. Most likely, it is a leadership experience that will not be the same as if the leader were there in person. Rather, it will need to be a hybrid of human presence and machine support. And it will need to be better than if the leader were there in person.

As we move into a world of ambient communications media, many will fall into the uncanny valley of leadership at a distance. In climbing toward the goal of leaders being there without being there, our affinity for those leaders will increase as their virtual connection increases — until they reach an uncanny valley, where leaders are perceived as being weirdly or inappropriately present. Do we really want our leaders to appear virtually as if they were there in person, or can we do better and at the same time avoid the uncanny valley?

Shared Presence

This will be a world where co-presence is possible, even when people are not present physically together at the same place and same time. Mixed-reality experiences will be able to be shared across distances. The best leaders will have vivid shared work and life experiences with the people they lead. Physically distant leaders will want to feel close — but not too close.

This will be a world where sensors are ubiquitous, many of them are connected, and some of them will be in our bodies. Moreover, leaders (and everyone else) will have the ability to make sense out of all that sensory data. These embodied systems will be able to link workers with leaders through biomarkers.

The best leaders will be able to literally embody and sense the moods of the people they are leading without intruding on their privacy.

This will be a world where we can finally put to rest the old notion that the only productive workers are those who are physically present and able to be seen by their leaders.

Leaders will need to develop their own sophistication in the art and science of being there without being there. There are some general directions of change. For instance, leaders will have to shift from thinking about physical proximity to attentional proximity and come to see scheduling as a much more dynamic and ad hoc process. But, on the whole, communications strategies will have to become much more situational.

The *New Literacy* of Creating and Sustaining Positive Energy

Certainly, there are many ways to express positive energy, and each of us has to express our own energy in a way that is authentic for us.

If leaders are going to thrive in a future of extreme disruption, they must not only manage their own energy, they must encourage, model, and reward positive energy in others. Fitness will be a price of entry for top leadership roles. Extreme fitness — physical, mental and even spiritual (though not necessarily religious) — will be required for most leadership roles.

Physical Well-being: While there is much debate on almost every healthy-living practice, everyone seems to agree on the importance of exercise. Former Chief Medical Officer of Google Kelly Traver says, "Exercise physically changes your brain. It helps you learn and remember better. It promotes alertness and enhances creative thinking. It elevates mood and lowers stress. In short, exercise is your biggest ally in achieving and maintaining good health."

Mindful Well-being: The good news is that neuroscience will get very practical over the next decade. Leaders will have a wide range of new resources to help them develop brain-smart ways of leading. Mindful well-being includes the popular interest in mindfulness, but it emphasizes applying the principles of neuroscience to leadership and daily living.

Interpersonal Well-being: By interpersonal, we mean family, friends, neighbors and those with whom you have direct communications on a frequent basis. In order to experience interpersonal well-being, you must have a community of individuals with whom you are so close that you could call them at 3 a.m. when you are crying.

Societal Well-being: This refers to how well linked are you to the culture, the society and the planet around you.

Financial Well-being: For many people, making a living means having a job. In the future, however, there will be fewer traditional jobs and lower job security for those who do have them. On the other hand, the new ways of working will allow much greater flexibility and many more ways to make a living.

In-Work Well-being: A career calling is much more than a casual choice of what you want to do with your life. Leaders, particularly in a work-oriented country such as the United States, are at their best if they truly believe in what they are doing at work.

Spiritual Well-being: Spiritual does not necessarily mean participation in any organized religion. The key is a sense of grounding, a sense of meaning that allows a leader to maintain a center in spite of being encircled by disruption.

Creating positive energy will require many skills, especially bio-empathy and quiet transparency. The literacy of creating and sustaining positive energy will require nurturing bio-empathy with yourself. Bio-empathy is the ability to see things from nature's point of view, to understand, respect and learn from nature's patterns. Nature has its own clarity, if only we humans can understand and learn from it.

Bio-empathy involves learning the principles of nature and applying them to yourself in order to develop your own body and mind as well as your own leadership style.

The literacy of creating and sustaining positive energy will require quiet transparency with strength, humility and empathy. Quiet transparency is the ability to be open and transparent about what matters to you without advertising yourself.

Moving Toward a Future Where Leaders Are Body Hackers

Over the next decade, sensors will be everywhere, and neuroscience will get practical. And if they pay attention with personal rigor and grit, leaders will benefit dramatically. Using body hacking, leaders will be able to monitor and enhance their own energy levels, as well as engage with people who work with them through body sensitivities and metrics.

Hacking means to start with something as it is but make it better. In the future, we will all have a tremendous ability to hack our own bodies, to zoom in and zoom out with high-resolution views in a way that only a few people can today. High-resolution body hacking will allow leaders to make and remake their own bodies, enhance personal energy levels and performance, and help them be more prepared for the leadership challenges they will face.

The people who will succeed in shape-shifting organizations will be full of grit, hope and optimism. It will be up to leaders to keep people hopeful and optimistic; in turn, they will be rewarded with gritty people who will see adversity and change as opportunities rather than challenges.

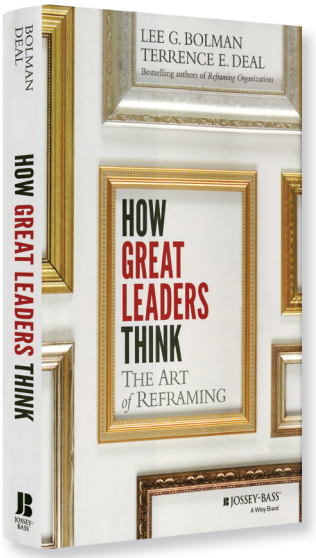
How Great Leaders Think

The Art of Reframing



by Lee G. Bolman
Terrence E. Deal

THE SUMMARY IN BRIEF

Why do some leaders succeed where others fail? What did Steve Jobs have that his predecessor lacked when Apple's board brought him back to save the company in 1997? What magic did Howard Schultz bring when he returned after an eight-year hiatus to get Starbucks out of a funk? Why was an airplane guy, Alan Mulally, able to pull Ford Motor Company out of a death spiral after Henry Ford's great-grandson tried and failed?

How Great Leaders Think: The Art of Reframing uses compelling, contemporary examples to show how better thinking is the key to better leadership. Leaders who can reframe capture a sharper image of what's going on around them and understand what they need to do to achieve the results they want. Lee G. Bolman and Terrence E. Deal's influential four-frame model of leadership and organizations offers leaders an accessible template for understanding four major dimensions of organizational life: structure, people, politics and culture.

IN THIS SUMMARY, YOU WILL LEARN:

- How to use structural tools to organize teams and organizations for better results.
- Techniques to build morale by aligning organizations and people.
- Strategies to map the political terrain and build a power base to navigate the partisan struggles in organizations.
- How to develop a leadership story that shapes culture, provides meaning and inspires people toward a shared purpose.

THE COMPLETE SUMMARY: **HOW GREAT LEADERS THINK**

by Lee G. Bolman and Terrence E. Deal

The author: Lee G. Bolman holds the Marion Block Missouri Chair in Leadership at the Bloch School of Management, University of Missouri-Kansas City. He is the co-author of the best-selling book *Reframing Organizations*.

Terrence E. Deal is the founder of the Deal Leadership Institute and has served on the faculties of Stanford, Harvard, Vanderbilt and the University of Southern California. He is the author or co-author of 27 books, including the best-seller *Corporate Cultures*, as well as numerous articles on organizations, change and leadership.

PART I: LEADERSHIP IN FOUR DIMENSIONS

Introduction: The Power of Reframing

Intelligence, talent and experience are all vital qualities for leadership, but they're not enough. They don't make the difference between success and failure. It's commonplace for business, once successful, to go into a funk. Then they need a turnaround because the smart, experienced people in charge who know the place better than anyone else have failed. The usual solution is to bring in an outsider with a stellar track record, but that approach doesn't always work. It all depends on how a leader thinks.

Framing

Neuroscientists now tell us that believing is seeing rather than the reverse. The human brain constructs its own images of reality and then projects them onto the external world. Reality is what each of us believes it to be: Beliefs come first; explanations for beliefs follow. Our mental models — rich or impoverished — determine the breadth and depth of our personal reality. How you think determines what you see and how you respond to situations.

There are many labels for such mental models: maps, paradigms, mindsets, worldviews and cognitive lenses, to name a few. We call them frames. A frame is a set of beliefs and assumptions that you carry in your head to help you understand and negotiate some part of your world.

Four Leadership Frames

There are four major frames — structural, human resource, political and symbolic. Books, articles and training programs typically present one frame or another, isolated from the others. Such single-lens views are exactly what get people in trouble and frustrate other leaders.

Each of the frames has its own image of reality. Multiframe thinking requires moving beyond narrow, mechanical approaches for understanding organizations.

PART II: STRUCTURAL LEADERSHIP

Getting Organized

Some leaders pay little attention to structure, either because they don't understand it or because they don't see it as very interesting or important. Social architecture has been a fundamental underpinning for many successful leaders. Leaders savvy about structure reason that even in the smallest work situation, people need to know what they're supposed to do, how to work with one another and who is in charge of what. Otherwise, confusion, finger-pointing and conflict undermine even the noblest of intentions.

As a leader, you continually choose how to decode the circumstances you face. You can choose to emphasize or ignore structure, to make it central or unimportant.

Elements of Social Architecture

Every structure is designed and crafted using a particular configuration of basic elements. One is the hierarchy

of authority, or chain of command, typically with three levels: executive, managerial and operational. Authority for making decisions can be concentrated at any of the three levels. A second element is the division of labor.

Managers also have to decide how to group individuals into work units. Once authority is established and roles and responsibilities defined, structural design needs to provide ways to link the parts together. The challenge is to develop an appropriate mix of vertical and lateral coordination:

Those at higher levels provide vertical coordination by exercising authority, setting policy and strategy, and establishing planning and control systems.

Lateral coordination happens through a variety of formal and informal roles, meetings and groups. Individuals in coordinating roles have diplomatic license to span boundaries across specialized groups and areas. Matrix structures cross business and product lines.

Contextual Factors

Tinkering with structural arrangements requires a clear understanding of your situation. In developing the right social architecture to fit specific conditions, every organization needs to respond to basic contextual factors:

Size and age. Organizations become more complex and formal as they get bigger and older.

Core process. Simple, top-down structures work for stable and predictable tasks but not for more complex and turbulent ones.

Environment. Stable environments reward simpler structures; uncertain, chaotic conditions require a more complex, flexible structure.

Strategy and goals. Top-down structures work better with consistent, well-defined goals; more ambiguous goals and strategies usually work better with more flexible, decentralized structures.

Information technology. Information technology permits flatter, more flexible and more decentralized structures.

Nature of the workforce. More educated and professional workers need and want greater autonomy and discretion.

Applying the Structural Frames

Managers often try to fix problems by fixing the people, but miss structural solutions that are more effective and easier to implement. Three simple questions can help guide a structural analysis:

1. What's going on? What's working and not working?
2. What's changing (in your organization, your technology or your environment) that creates an opportunity, a threat or both.
3. What problem do you need to solve? What options should you consider?

Understanding the complexity and variety of design possibilities can help you create patterns and prototypes that work for rather than against both your people and your purposes.

Organizing Groups and Teams

Organizations depend on groups and teams to do much of their work, but teams often founder on structural flaws. A team's structure may come from the top initially but often needs to evolve locally to meet the challenges of the game, the work at hand.

In developing a team structure, a basic consideration is the nature of the work to be accomplished. Tasks vary in clarity, predictability and stability. Simple tasks align well with basic structures. More complicated projects generally require more complex structure. But when a situation becomes exceptionally ambiguous and fast-paced, particularly when time pressure is high, reverting to more centralized authority often works best. Without a structure aligned to the work, performance and morale suffer, and troubles multiply.

Leadership becomes even more critical in self-managing teams, which many see as the structure of the future. Such teams plan, assign tasks and roles, schedule, make decisions and solve problems on their own. Self-managing teams usually need help getting started, and work best when they have a clear sense of what game they're playing and how success is defined.

PART III: HUMAN RESOURCE LEADERSHIP

Leading People

For most of management history, standard practice has been to treat employees like pawns to be moved where needed and sacrificed when necessary.

That attitude explains why so much of the public thinks of bosses as selfish, heartless tyrants. In an era of high unemployment and economic distress, elites in every sector are suspect, and the idea of sacrificing people for profits persists as a popular view of the workplace. The human resource frame offers a much more positive and productive way to think about people.

Hiring the right people. At Brazilian manufacturing company Semco, Ricardo Semler studied managers who

failed. He realized they often were technically capable but lacking in leadership talent. In response, he developed a system in which subordinates rated their bosses on both technical ability and leadership.

Keeping them. To attract the right people, progressive companies reward generously and share the business profits. To retain loyal and hardworking employees, they protect jobs and promote from within.

Investing in people. Semco understands that undertrained workers cause harm by delivering shoddy quality, poor service and costly mistakes.

Sustaining power to the people. Semco took democratic decision making to a level few companies have ever contemplated. Workers began to design production processes and products, approve or veto new businesses, set production quotas and set their own hours and pay.

All would be well if leaders understood themselves and others. Unfortunately, that's not always the case.

Seeing Ourselves as Others See Us

One of the most basic and pervasive causes of leadership failure is interpersonal blindness. Many leaders simply don't know their impact on other people. Even worse, they don't know that they don't know. They assume that other people see them pretty much the way they see themselves; then they blame others when things go wrong.

Self-Awareness

Leaders develop self-awareness through ongoing learning about their actions and their impact on others. It's hard to know how others see you unless they tell you.

If you understand a few basic principles of interpersonal feedback, you can accelerate your own learning and perhaps improve others' as well.

1. **Ask and you shall receive.** People are reluctant to tell us more than we want to know. Persistence and specificity make your requests clear and credible.
2. **Say thank you.** Be sure to thank anyone who tries to help. If you respond to a gift by rejecting it, criticizing it or inducing guilt, the flow of future offerings will dry up fast.
3. **Ask before giving.** When someone doesn't want feedback, catching him or her off guard will usually breed suspicion and defensiveness rather than listening.
4. **When asked, give your best.** Resist the temptation to offer reassuring platitudes, but don't jump to the opposite extreme of brutal confrontation.
5. **Tell the truth.** This is familiar advice that almost everyone endorses and almost everyone violates. The primary barrier is fear. We'd say what we think — if we weren't afraid of the consequences.

Leadership Skills: Advocacy and Inquiry

It's easy to see that leaders need to communicate clearly and persuasively to advocate effectively on behalf of their mission and constituents. But many leaders fail to recognize that they also need to be good at inquiry. Probing with questions and observation enables them to learn from experience and to acquire information they need if they are to understand what's going on.

PART IV: POLITICAL LEADERSHIP

The Leader as Politician

Every group and organization is political, for two reasons: (1) individuals and groups have divergent interests and values, and (2) they live in a world of scarce resources. It is impossible for everybody to get everything they want.

Political Skills

The leader as politician needs to master at least four key skills: agenda setting, mapping the political terrain, networking and forming coalitions, and bargaining and negotiating.

Setting agendas. You need to understand how key constituents think and what they care about to ensure that your agenda meshes with their concerns.

Mapping the political terrain. A simple way to develop a political map for any situation is to create a two-dimensional diagram showing players (who is in the game), power (how much clout each player is likely to wield) and interests (what each player wants).

Networking and building coalitions. The first task in building networks and coalitions is to figure out whose help you need. The second is to develop relationships so that people will be there when you need them. The political map helps pinpoint the key constituents. Once you cultivate allies, you can move to "horse trading": promising rewards in exchange for resources and support.

Bargaining and negotiation. From a political perspective, bargaining is central to decision making. How does a leader decide how to balance win-win and win-lose approaches to bargaining? At least two questions are important: How much opportunity is there for a win-win solution, and will I have to work with these people again?

Conflict plays a key role in political dealings. This makes it very difficult for leaders who prefer calm waters to

stormy seas. Unfortunately, conflict is an integral part of life in organizations.

The Leader as Warrior and Peacemaker

There are two stances leaders can adopt in handling conflict: warrior and peacemaker. These can be symbolized by Apple's Steve Jobs epitomizing the warrior and Walt Disney's Bob Iger serving as peacemaker.

Steve Jobs was an aggressive pugilist ready to slug it out for any project or cause he championed. His combat style relied more on persistence and brute force than compromise and subtlety.

Described as a leader who does more listening than talking, Iger was as sensible and solid as those around him were volatile and had a disciplined calm, which helped him deal with large egos. Iger observed, "Every negotiation needs to be resolved by compromises."

Iger and Jobs embody two basic approaches to conflict. Organizations need both. Warriors are resolute fighters who raise the heat and intensify the conflict. Peacemakers work to lower the temperature and defuse conflict in the hope of minimizing destructive, lose-lose dynamics.

The Peacemaker: Cooling the Flame

Leadership often has to challenge existing beliefs and emotional investments, asking others to review where they stand and what they know or value.

Several guidelines can help peacemakers do their work well.

Be patient. Skilled peacemakers understand that conflict resolution takes time, effort and learning.

Listen and inquire: Understand parties' interests, thinking and feelings. Inquiry and listening are critical for two reasons. One is to ensure that you understand the political map. Listening is also critical because parties who feel they have been heard and understood are better able to put emotions aside and focus on solving the problem.

Engage the parties: Put people to work. Leaders need to create arenas with rules, roles and referees and be prepared to tightly manage the exchange. When these tasks are done well, they increase the chances that participants can learn from the dialogue and find a way out of the impasse.

The Warrior: Turning Up the Heat

Leaders often need to confront conflict head-on rather than fear it and back away. Both modern research on leadership and ancient wisdom on strategy teach that successful warriors combine four basic ingredients: spirit, mind, skill and power. Four guidelines can help leaders achieve victory in combat:

Fight with passion and persistence — or avoid combat. Passion energizes, sustains courage and fuels persistence.

Out-think opponents — win with a better game plan. It is foolish to go into combat without knowing what you are fighting for and what price you are willing to pay. Once your purpose is clear, you need a game plan.

Recruit and rally your team. Knowing the group psyche is vital: rallying constituents involves making an offer so attractive that they are eager to sign up.

Build and leverage a power base. The modern warrior needs social and institutional power. Four power assets are paramount: position, allies, organization and resources.

Conflict is intrinsic to leadership and can be a barrier that prevents leaders from achieving their dreams, particularly when they fear it or handle it badly. But in the hands of gifted leaders, conflict can also be a powerful lever for change.

PART V: SYMBOLIC LEADERSHIP

The Leader as Magician

As he sat at his kitchen table early one morning in February 2007, Starbucks chairman and former CEO Howard Schultz was enveloped in the gloom of the Seattle weather outside his window. When he visited individual stores, Schultz felt that something intrinsic to the Starbucks brand was missing.

Schultz began to organize his thoughts on a yellow legal pad in a handwritten memo titled "The Commoditization of the Starbucks Experience." In it, he noted recent technical advances that were undercutting key cultural values and ways.

Schultz ended the memo with a heartfelt statement: "We desperately need to get back to the core and make the changes necessary to evoke the heritage, the tradition and the passion that we all have for the true Starbucks Experience."

Schultz intended the memo as confidential food for thought for key executives, but, to his chagrin, someone leaked it. Schultz was stunned by the leak and felt pressure to do damage control. By the end of 2007, same-store sales started to show double-digit declines. Schultz and the Starbucks board agreed that he needed to return as CEO.

Barista Boot Camp

One of Schultz's first initiatives was to close all 7,100 U.S. stores for an afternoon of barista re-education. Back at headquarters, Schultz worked on renewing roots with a playful brainstorming session for key executives. A week after the stores closed for barista training, Schultz convened the top 200 Starbucks execs from around the world for a hands-on, interactive three-day leadership summit.

Schultz's package of symbolic initiatives helped to refocus Starbucks' strategy and re-energize its people. From losses in late 2008, Starbucks rebounded to record revenues ($10.7 billion) and profits ($1.4 billion) two years later, while retaining its place on Fortune's list of the 100 best companies to work for and expanding its efforts to become greener and provide more support to coffee growers.

The Ways of Magic: How Symbolic Leaders Work

Leaders like Howard Schultz lead through both actions and words; they interpret experience to impart meaning and purposes through phrases of beauty and passion.

Symbolic leaders respect and use history. If leaders assume that history starts with their arrival, they typically misread their circumstances and alienate their constituents. Wise leaders attend to history and link their initiatives to the values, stories and heroes of the past.

Symbolic leaders interpret experience. In a world of uncertainty and ambiguity, a key function of symbolic leadership is to offer plausible and hopeful interpretations of experience.

Symbolic leaders develop and communicate a hopeful vision. One powerful way in which a leader can interpret experience is by distilling and disseminating a persuasive and hopeful image of the future. A vision needs to address both the challenges of the present and hopes and values of followers.

Symbolic leaders convene rituals and ceremonies. Rituals and ceremonies are special times in the life of a group or organization. During such occasions, people swap stories, renew ties to one another and recommit to cultural values.

Seeking Soul in Teams

Teams often fall short because they come together rationally but not spiritually. Uncommon spirit — or soul — is often the key ingredient of wildly successful teams or "hot groups."

Leadership is often viewed as the work of extraordinary individuals, but in great groups, leadership is almost always shared and fluid. Leadership initially focuses on assembling individuals with the right stuff and building powerful cultural bonds that inspire and sustain team members through the ups and downs of challenging work.

The Eagle Group: Reasons for Success

The Soul of a New Machine is Tracy Kidder's dazzling yearlong account of a small group of engineers at Data General who, in the 1970s, created a new computer in record time. Despite scant resources and limited support, the Eagle Group outperformed all other Data General divisions to produce a new state-of-the-art machine. The technology is now antiquated, but lessons from how the team pulled it off are as current and useful as ever.

Signing up. Joining a team involves more than a rational decision. It is a mutual choice marked by some form of ritual.

Leadership diversity as a competitive advantage. Leadership diversity among the Eagle Group's top engineers was channeled into specialized functions. Understandably, there was tension among these leadership roles and subgroups. Harnessing the resulting energy pulled the parts into a cohesive team.

Example, not command. The group itself had some rules but paid little attention to them. Subtle and implicit signals rather than concrete and explicit guidelines or decisions held the group together and directed it toward a common purpose.

Specialized language. Every unified group develops words, phrases and metaphors unique to its circumstances. A specialized language both reflects and shapes a group's culture. Shared language allows team members to communicate easily with minimal misunderstanding. A shared language binds a group together and is a visible sign of membership.

Building a Soulful Team

After extensive research on high-performing groups, Peter Vaill concluded that spirit was at the core of every group he studied. Members of such groups consistently "felt the spirit," a feeling essential to the meaning and value of their work.

PART VI: IMPROVING LEADERSHIP PRACTICE

Reframing in Action

Most leadership challenges can be framed in more than one way, and every turn of the kaleidoscope offers a different image of the problems and possibilities.

The frames are powerful because of their ability to spur imagination and generate new insights and options. But each frame has limits as well as strengths, and each can be applied well or poorly.

Benefits and Risks of Reframing

The essence of reframing is examining the same situation from multiple vantage points. Each lens offers distinctive advantages, but each has its blind spots and shortcomings.

The structural frame risks ignoring everything that falls outside the rational scope of tasks, procedures, policies and organization charts. Structural thinking can overestimate the power of authority and underestimate the authority of power.

Adherents of the human resource frame sometimes cling to a romanticized view of human nature in which everyone hungers for growth and collaboration. Human resource enthusiasts can be overly optimistic about integrating individual and organizational needs while neglecting structure and the stubborn realities of conflict and scarcity.

The political frame captures dynamics that other frames miss, but has its own limits. Political action is too often interpreted as amoral scheming.

The symbolic frame offers powerful insight into fundamental issues of meaning and belief as well as possibilities for shaping people into a cohesive group with a shared mission. But its concepts are also elusive; effectiveness depends on the artistry of the user.

Leaders can harness frames as scenarios, or scripts, to generate unique approaches to challenging circumstances. In planning for a high-stakes meeting or a tense encounter, they can imagine and experiment with novel ways to play their roles.

Leadership and Change

You're better off seeing quicksand before you're mired in it. Likewise, your chances of success are enhanced when you use the frames to help you see pitfalls and roadblocks in the road ahead. It rarely works to retrain people without revising roles or to revamp roles without retraining. Planning without broad-based participation that gives voice to political opposition is likely to provoke stiff resistance. Change alters power relationships and undermines existing agreements and pacts. Even more profoundly, it intrudes on deeply rooted symbolic forms, traditional ways and rituals.

Resurrection at Ford Motor

As Ford Motor Company was chalking up a $13 billion loss in 2006, chairman William Ford III reluctantly concluded that, hard as he had tried, he was failing in his efforts to save the company his great-grandfather had founded. He went in search of a seasoned leader smart enough to figure out where Ford needed to go and tough enough to take on the infighting and entrenched mindsets among executives and divisions that had defeated Bill Ford's best efforts. Eventually, he set his sights on Alan Mulally, the number-two executive at Boeing.

Mulally quickly concluded that Ford needed a major overhaul of a "convoluted management structure riddled with overlapping responsibilities and tangled chains of command."

To reach the thousands of employees beyond Detroit, Mulally traveled to locations around the world, asking questions and reinforcing the message that Ford was coming back. He issued every employee a wallet card that carried the essence of the plan going forward: "One Ford. One Team. One Plan. One Goal."

"One Ford" may sound simple, even simplistic, but for Mulally it was a powerful mantra and polestar. It meant replacing chaos, parochialism and political infighting with simplicity, teamwork and unity — worldwide.

Mulally's efforts worked, though more slowly than he had initially hoped. Just as Ford began to turn the corner, the recession of 2008 devastated the auto industry worldwide. But two years later, the economic crisis forced both General Motors and Chrysler to beg for U.S. government bailouts to stay in business. Ford had the cushion it needed to avoid taking taxpayers' money. That became a huge marketing edge. After losing market share for 13 straight years, Ford gained share in 2009, turned a profit in 2010, and achieved its highest profits in more than a decade in 2011.

Searching for Soul: Leadership Ethics

The frames or leadership lenses help leaders think better and make better decisions. But many of the decisions they face require choosing among imperfect options. What ethical ideals will inform your leadership tasks of thinking and doing? What ethical ideals will inform your leadership? Every leader and organization needs to choose and commit to personal and collective ethical principles. Each frame implies both a central value and a leadership "gift" that can help breathe soul into an organization's daily life.

The Factory: Excellence and Authorship. The structural frame, with its emphasis on finding the right design for the task at hand, implies a value of excellence. Critical for creating and maintaining excellence is the gift of authorship. Authorship turns the classic organizational pyramid on its side and provides space within boundaries.

The Family: Caring and Love. Caring begins with knowing; it requires listening, understanding and accepting. It progresses through a deepening sense of appreciation, respect and ultimately love.

The Jungle: Justice and Power. Justice is often hard to define, and disagreement about its application is inevitable. The key gift that leaders can offer in pursuit of justice is power — the capacity for constituents to make a difference in things they care about.

The Temple: Faith and Significance. Leaders can build and sustain meaning by fostering faith in an organization and its work. Significance is partly about the work itself but even more about how the work is embraced.

Ethics ultimately must be rooted in soul: an organization's commitment to its deeply rooted identity, beliefs and values. Each leadership lens offers a perspective on the ethical responsibilities of organizations and the moral authority of leaders. The frames offer spiritual guidelines for the quest.

Great Leaders, Great Stories

As you think, so shall you lead. Much of the literature on leadership focuses on the style, attributes or actions of leaders. But thinking needs to precede action. Otherwise, action is a shot in the dark by mindless leaders who haven't thought enough about why they are choosing one path or another. The quality of leaders' thinking depends ultimately on the stories they tell. Leaders live within the stories they have created and invite others to join them on the adventure.

Worldviews, Frames and Stories

A leader appears, bringing a worldview and a personal story to a particular time and place. The setting provides a context with its own organizational story. The leader's worldview and personal story influence how she responds to the organization's story. However she makes sense of the organization's story and circumstances, she constructs a narrative to guide her and the organization going forward. Then she asks constituents to become participants in a shared story.

We can think of a leader's worldview as containing four key elements that influence how he or she makes sense of the world:

1. **Concepts and categories.** What's out there? What are the ideas and things I might notice and pay attention to?
2. **Beliefs.** How do things work? What actions lead to what outcomes?
3. **Values.** What's good or bad? What's important or not?
4. **Self-image.** Who am I? What do I care about? What are my leadership strengths and weaknesses?

The Leader's Story

Consciously or not, leaders create a personal leadership story to guide their work, a story built over the course of a lifetime's experience. Organizations also fabricate a story gleaned from their past and adapted to present circumstances. Some organizations maintain connections to their roots; others lose contact and become rootless.

As new leaders assume their roles, a dialogue opens, an interplay between the leader's story and that of the organization. New questions come to the surface:

1. **Where have we been?**
2. **Where are we now?**
3. **Where should we go from here?**
4. **How will we get there?**

Great leaders use multiple frames so as to see what they need to see and craft a story about what will work. Meanwhile, organizations have evolved their own narratives. The interplay of leaders' and organizations' stories gives rise to an emerging script that, at its best, provides a compelling image of where a group or organization is, where it needs to go and how it will get there. Bad stories often lead to disaster, but good ones conjure magic.

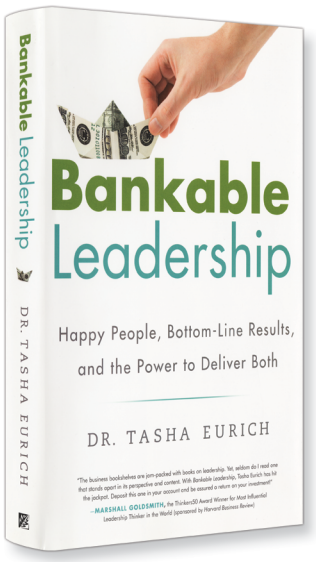
Bankable Leadership

Happy People, Bottom-Line Results, and the Power to Deliver Both



by Dr. Tasha Eurich

THE SUMMARY IN BRIEF

As a leader, you've likely felt the tension between driving results and developing positive relationships with your people. Despite all the research telling us that effective leaders do both, most of us struggle to balance the happiness of our teams and the health of the bottom line. We are more comfortable focusing on one or the other, and we feel overwhelmed and drained by the challenges we face when we try to accomplish both.

In *Bankable Leadership,* psychologist, executive coach and proud leadership geek Dr. Tasha Eurich solves this dilemma and reveals how to make leadership exhilarating, fun and fulfilling. Built on decades of research and the transformation of real leaders, her fresh, practical model can help anyone become bankable — producing results while fostering a healthy work environment that ensures sustainable success. Discover how to be human and drive performance, be helpful and drive responsibility, be thankful and drive improvement, and be happy and drive productivity.

Whether you're struggling to build a more productive team, increase confidence in your leadership skills, or consistently deliver results, *Bankable Leadership* is the resource you've been waiting for!

IN THIS SUMMARY, YOU WILL LEARN:

- How to navigate the four tensions between taking care of people and driving results.
- How to build trust with and among your team.
- What Theory Y is and how to use it to be helpful and drive responsibility in your employees.
- How to deliver balanced feedback to team members.

THE COMPLETE SUMMARY: **BANKABLE LEADERSHIP**

by Dr. Tasha Eurich

The author: Dr. Tasha Eurich is a workplace psychologist, speaker, author and principal of The Eurich Group. Her life's work is to help organizations succeed by improving the effectiveness of their leaders and teams. Dr. Eurich regularly works with executives in large, Fortune 500 organizations and serves on the faculty of the Center for Creative Leadership. Her expertise has been highlighted in outlets like the *New York Times* and *Forbes.*

Introduction

Two outcomes often feel like they are mutually exclusive. "I can drive my people to perform," you think," OR I can be their friend." But the belief that leaders can't learn to do both is the biggest leadership myth in the business.

You've probably heard that employee engagement is strongly linked to financial success. One famous study conducted at Sears found that for every five-point increase in employee engagement, customer satisfaction rose 1.3 percent, which then increased revenue by 0.5 percent. In a company with $50 million in revenue, that means a $250,000 increase to the bottom line!

What creates employee engagement? Leadership! And how do leaders become bankable? By displaying behaviors that balance four basic tensions between taking care of people and driving results:

- Be Human and Drive Performance: Bankable leaders balance caring for and understanding team members as people with the need to drive their individual performance.
- Be Helpful and Drive Responsibility: They balance helping team members succeed with ensuring that they feel responsibility for the results they produce, rather than abdicating or making excuses.
- Be Thankful and Drive Improvement: They balance showing appreciation for what team members contribute with driving a continuous improvement mindset that things can always be better.
- Be Happy and Drive Productivity: They balance enjoying (and not being overwhelmed by) work with ensuring that each team member is maximally contributing.

PART I: BE HUMAN and DRIVE PERFORMANCE

Bankable leaders connect with their teams as human beings and drive them to top performance. It's a rare leader who can do both naturally without careful thought and development. Two common types of leaders are the Pushover and the Tyrant. The Pushover is overly focused on the happiness of her staff, so rather than being direct and upfront, she'll tell her team what she thinks they want to hear. The Tyrant is focused on performance at all costs. This type of leader can often create results; however, research shows that they aren't sustainable and will come at a cost.

You probably lean more toward one pole than the other, but you need to do both to do either one well. To get great results, you have to connect with your team on a human level. To connect with your team, you have to give them something to be a part of that's worth their best efforts.

Trust and Be Trusted

Although most of us know trust when we see it, it isn't commonplace in most organizations. Sometimes it's easiest to identify situations where trust isn't present because FEAR — the opposite of trust — prevails. But when FEAR is gone and trust is present, employees feel valued and are willing to go the extra mile. The best coaches and leaders build two types of trust: trust based on competence and trust based on motive.

Building Competence-Based Trust

When you earn competence-based trust, others see you as competent and reliable — the first step towards being bankable. Whatever your role, your team must believe that you have the necessary skills for your position.

How do you develop your competence, both actual and perceived? Make it a point to attend conferences to keep up to date on the latest in your profession. If you don't have a mentor, get one. Create a key personal indicators dashboard. Pick four or five key measures you want to keep track of and review them monthly.

Competence-based trust is also an accumulation of satisfied promises. If you are not seen as someone who makes good on your word, you won't be seen as competent. Here are two approaches that work best when it comes to keeping commitments:

In whatever manner best fits you (Outlook tasks, Post-its, etc.), keep a record of every commitment you make to others as well as the time frame you promised. Don't cross off any item off the list until it's complete. If you can't keep a commitment, let the person know as soon as possible, apologize, and renegotiate the deadline.

Second, commit to fewer things. Don't say you'll do something unless you believe you can and should accomplish the task. Finally, you should be not only demonstrating competence-based trust yourself but also fostering it in your team. If your team members trust each other to be reliable and competent, the whole team's performance improves.

Building Motive-Based Trust

When you earn motive-based trust, people believe you have positive intentions. There are three ways to improve your team's motive-based trust in you: self-disclosure, demonstrating fairness, and acting with integrity.

Self-disclosure: The more your team understands your motives, thought processes and personal history, the more they will give you the benefit of the doubt. If you're honest about what you don't know, your team will trust your motives: They'll see it's more important for you to get it right than to look good.

Fairness: If your team trusts you to be fair, they'll be more likely to accept the decision and give you the benefit of the doubt. To be seen as fair, practice outcome fairness, when employees perceive that rewards are given proportionately to what recipients put in; process fairness, or applying procedures consistently, making the processes clear, and giving employees a chance to ask questions; and interpersonal fairness, or treating your employees with kindness, respect and consideration.

Acting with Integrity: If your team can't predict how you'll behave with relative accuracy, they will feel uneasy. Take time to consider your leadership principles, which then help you build your leadership credo. Aim for a list of three to five principles that drive you and are essential to who you are as a leader.

Be Unmistakably Transparent

Bankable Leaders create two kinds of transparency. Transparency of intent builds on our discussion of self-disclosure and fairness by telling our employees why you're making decisions. Transparency of information means sharing your department and company's strategy, financials and operations.

These five actions will help you be unmistakably transparent with information and your intent:

1. **Make sure you, your manager and your peers are aligned.** If each of you is interpreting things differently, you could each be telling your team different things, and chaos will ensue.
2. **Be transparent about transparency.** When you know something and can say it, say it. When you know something but can't say it, tell them why. And if you don't know something, tell them when you'll know and how you'll follow up.
3. **Build structure around transparency.** Create forums to regularly share information.
4. **Be a detective who ruthlessly ferrets out rumors.** When you unearth a rumor, the best approach is to address it directly without attacking employees. It takes courage for an employee to share the rumors they've heard. Thank them; then set the record straight.
5. **Know when not to be transparent.** Sometimes sharing information can do more harm than good. Instead of sharing in-progress items, explain the process that is being used and give a timeframe for when you will be able to announce the change.

Set Crystal Clear Expectations

Leaders who set clear expectations drive not only results but confidence within the team as well. It is necessary for bankable leaders to create clarity of the "what" and the "how."

The What: Set high expectations for the team, which leads to better relationships, more difficult goals, more learning and more employee engagement. Create and communicate a vision of the future to guide your team's work and thinking about their roles. Clearly define each team member's role, asking questions and defining specific contributions. Create clear expectations with your employees regarding the results you expect.

The How: Tell team members exactly what you expect from them individually, outlining acceptable and unacceptable behaviors for how to get their work done. Give the team as a group clear direction on how you want them to engage with you for meetings, issue resolution, reports and written documents, etc. Help your team clarify how they will work together, including how meetings will run, preferred methods of communication, team operating principles and decision making.

Be a Lightning Rod of Compassion

When you don't understand and support your team members, they will feel like cogs in a machine. This feeling almost always prevents employees from forging a connection to you or their jobs.

Few would disagree that compassion is essential for leadership success. But for many reasons, it's surprisingly difficult to demonstrate on an ongoing basis.

Compassion = Empathy + Supportive Action. The three essential elements of empathy are taking their perspective, understanding the impact of your title, and realizing that names go a long way. When your team knows that you understand what they're going through, they will cut you a lot more slack and will be able to better manage difficult situations.

The title you hold will almost always impact how your team sees you. As a leader, your actions become magnified, good or bad. Bankable Leaders understand the power of simply noticing and appreciating others. Commit to learning the names of your employees, their spouse or partner, their kids and even their pets.

The supportive action part of the equation is about lending a hand to help your team. Three ways to lend your support to the team include standing with them in the line of fire, giving them your full attention, and reaching out when the going gets tough. Stand beside your employees, especially at critical points. Put in a late night with them before a big proposal is due. Visit the construction site. The important thing is for you to physically (or virtually) be there and to be one of them.

PART II: BE HELPFUL and DRIVE RESPONSIBILITY

Bankable leaders help their employees succeed even as they drive responsibility for the employee's actions and decisions. Doing both can feel difficult, with the two ends of the spectrum being the "Enabler," who is too helpful, and the "Dictator," who is so focused on employees taking ownership of their work that he doesn't help them by creating the right conditions for success. Both types of leaders treat employees like children, but for different reasons. Enablers don't give them the responsibility adults are entitled to, and dictators don't allow them to make their own decisions.

It helps to understand the Theory X and Theory Y paradigms of leadership as coined by management professor Douglas McGregor in his 1960 book, *The Human Side of Enterprise:*

Theory X: Leaders assume that workers are lazy by nature and they must be pushed to get work done; micromanagement at its finest.

Theory Y: Leaders assume that workers are naturally motivated and interested in their success as well as the company's and that leaders should focus on helping them succeed rather than control them.

Leaders who use a Theory Y approach help their employees succeed, and they drive responsibility.

Treat Adults Like Adults

Overzealous policies reward terrible leadership and often don't deal with poor performers directly. The clear solution is to treat your employees like adults, letting go of tightly controlled work practice and giving employees true ownership of their behavior. You can help them perform simply by believing in their competence, and you can engineer ownership by empowering your team.

Believe in their competence. The simple leadership lesson is this: What we believe about others comes true.

When you "act as if," you are treating your employees as if they were the most talented, motivated and capable people around. To "act as if," you have to delve into the fundamental assumptions you're making about your team. And remember, you choose these assumptions.

Engineering ownership is the second approach to treating your people like adults. When you do this successfully, you can give up a certain level of control to your team members, making them — and your customers — happier in the process. When empowering your employees, set

clear expectations for what you want accomplished, but give them leeway with the how. Regularly give your employees a voice in the decisions that affect them, and listen to their input. Also, give them flexibility in how they schedule their work and nonwork time.

Support, Don't Hand-Hold

Two tactics for supporting and encouraging your employees even as you give them increased responsibility are to give them meaningful work and to make sure they feel supported and included.

Meaningful Work: Show employees their work matters to you personally. Regularly thank them for their contribution, and tell them how much it means to you — as their leader and as a person — that they are working so hard and producing so much. Help them see the impact of their work on the department, the organization, etc., and don't assume they already know this.

Manager Inclusion and Support: Carve out one-on-one time with each employee to talk about their successes, challenges and goals and to show them your support. Create a sense of camaraderie within the team by spending time together and creating opportunities to be supportive of one another.

Bring Out Their Best

Bankable leaders help their employees take responsibility for their own growth, find their strengths, and create a vision for their learning and development. And when issues arise, they coach them rather than solve the problems for them.

Bankable Leaders commit to finding something good within every employee. Employees who are given feedback on their strengths are more likely to feel engaged and productive than when they get feedback on their weaknesses. Once you discover the individual strengths of your employees, you'll set them on the course to develop their true potential. But getting work done is rarely that simple, and people are bound to hit a roadblock or two on their journey. That's where coaching comes in.

Coaching boils down to three basic behaviors: listening, asking questions, and ensuring that the employee follows through on the coaching. Remember that coaching is about helping employees solve their own problems. Center the conversation around the employee, intently listening with an open mind. Assume that employees have the right answer and that it's your job to ask the right questions to surface it.

PART III: BE THANKFUL and DRIVE IMPROVEMENT

Leaders will never have happy, engaged employees without showing gratitude, and they'll never drive sustainable results without constantly asking employees to improve — it's a difficult balancing act. The two ends of the spectrum range from the "Everything Is Great" leader, who lavishes too much praise and can cause employees to become complacent or entitled, to the "Nothing's Good Enough" leader, who is never satisfied.

Bankable Leaders can successfully drive change by walking the tightrope between thankfulness and improvement.

The Science of Entitlement-Free Appreciation

One of the most common leadership mistakes is neglecting gratitude and overemphasizing continuous improvement. According to the Society for Resource Management, 79 percent of employees cite lack of recognition and praise as their top reason for leaving an organization.

So what is the right way to thank your team members and acknowledge their efforts? Appreciation is a science, and the first concept we must understand is self-efficacy — your own belief that you can perform effectively.

When employees believe they can do something, they usually prove themselves right. What's more, leaders can really improve employees' self-efficacy by providing encouragement and appreciation. However, the opposite is also true: Researchers have shown that when leaders are stingy with appreciation — or worse, criticize them in the spirit of improvement — their team actually performs worse.

Banish Entitlement

But just as it is important to show gratitude, you must banish entitlement. To prevent entitlement, you must differentiate recognition and/or make it unpredictable. If the same amount of appreciation is given for mediocre performance as exceptional performance, people will start to become not just mediocre, but entitled. Make sure that you differentiate recognition between average and top performers. Consider establishing prestigious and selective rewards that only the highest performers win.

The perception of scarcity will drive improvement. Finally, make team-level recognition creative and unpredictable so your employees don't start expecting to be rewarded every time they do something.

No-Fear Feedback

People deserve honest feedback — the good, bad and ugly. For a leader, giving feedback can cause you to feel tension between being thankful for the work your employees do and being honest about how they can improve their performance. It's hard to tell your employees what you want them to keep doing and ask them to step up their game.

Because most of us dread being called out for mistakes or weaknesses, leaders who hope to give honest feedback run the risk of angering employees and decreasing productivity if it isn't delivered correctly. Some leaders feel like they're "damned if they do and damned if they don't." If they don't give honest feedback, it might not upset their employees, but certainly it won't make them better. If they do give feedback, it might communicate what they need to change but upset them.

But the value of appropriately delivered improvement feedback is irreplaceable. The goal is to give "no-fear" feedback: There should be no fear for employees in receiving it and no fear for you delivering it. If you can help employees know what they're doing well and have the courage to help them be more successful, they'll pay you back in performance.

2D Feedback: A Foolproof Technique

There are two types of feedback: behaviors employees should Duplicate in the future and behaviors employees should Deviate from in the future. This is the 2D Feedback Model.

To give effective duplicate feedback, start by thanking the employee, then describe what they did and its effect. Ask for more in the future (reinforcing the need to duplicate their performance), and be on the lookout for the behavior, and reinforce it with gratitude. While duplicate feedback may be easier for a leader to share with an employee, it doesn't mean that deviate feedback should be difficult. Here are five pointers to help you deliver nonthreatening "Deviate" feedback:

1. Be direct but supportive. State what you're giving feedback on and that you want them to succeed — this feedback is a tool for them to use for improvement.
2. Describe the behavior that needs to be different and why in an even, calm tone, almost as if you're reporting the weather.
3. Agree on the behavior they'll try instead. First ask for the employee's perspective on the situation. Then, ask for their ideas with the goal of agreeing on the best approach to use in the future. State the benefit of changing the behavior.
4. Determine next steps, such as following up in a month.
5. Offer your support, and end on a positive note. When you see improvements, give "Duplicate" feedback.

If deviate feedback isn't working, be honest with yourself, and take the appropriate action when you've exhausted all other options. You have to take poor performance seriously.

The Change Blueprint

Our proclivity to become set in our ways presents a problem for leaders, whose task is often to introduce change to their department or organization. And when leaders don't successfully navigate change, people become anxious, hopeless and angry — and that's just the beginning. On the results side, poorly managed change efforts will fail, often with negative consequences for profit, stock price and even the company's reputation.

Anytime you're asked to drive change, you must adopt the right mindset. First, you must distinguish between the things you can control or influence and the things that are out of your control. If a change needs to be made and you can control or influence it, charge ahead with your team, and make it happen. However, if a change needs to be made but it is out of your control, don't waste energy. Rather, support your team, and help them manage their anxiety.

Once you've adopted the change mindset, you're ready to apply the change blueprint. Help your team understand the change by explaining why it is taking place, how it will impact employees, what the process will be, what alternatives were considered, and what the cost will be if the change isn't adopted.

Make sure your team believes in the change by involving them in the process, expressing your support for their sacrifices, and showing gratitude for their willingness to leave the old way behind.

Finally, clearly communicate what employees should do to support the change. Equip them to demonstrate the behaviors the change requires. Be generous with appreciation when they demonstrate these behaviors.

PART IV: BE HAPPY and DRIVE PRODUCTIVITY

Viewing happiness and productivity as mutually exclusive is one of the most common mistakes in modern organizations. As a leader, you can't take care of people without letting them enjoy themselves, and you can't drive results in the long term without helping your team produce in a smart way. Not only can these two outcomes exist at the same time; in fact, they are interdependent. You need one to optimally produce the other.

So what stops leaders from doing both? Much of the time, it's the belief that we experience happiness at the expense of productivity. Or we think that if we're being productive, we can't be having fun at the same time. The spectrum ranges from the "Only Fun Matters" leader, who creates a positive and enjoyable environment without expecting hard work in return, to the "Only Productivity Matters" leader, who is so overly focused on productivity that they exterminate fun. But Bankable Leaders can create a fun environment where stuff actually gets done.

Why No One Can Work 80 Hours a Week — for Long

Working too many hours drains and depresses us, leaving little extra energy for being productive. One of the most effective antidotes to burnout is time off. But according to the Center for Economic Policy and Research, 25 percent of Americans don't take any vacation, either because they have it but don't use it or because their employer doesn't provide it.

Why would anyone choose not to take a vacation they rightfully earned? For many employees, fear is a factor — fear of missing out on that promotion, fear of topping the layoff list, fear of being judged by their boss or coworkers. But bankable leaders realize that employees are fighting against this current and actively help them balance time off with hard work.

If long vacations are difficult, help your team take a few short breaks during the year at a minimum. The benefits will actually be greater if they take more frequent breaks rather than one long one. Also, don't bother your employees while they are out of the office. Instead, make sure everything is covered before they leave. Working during time off will diminish the benefits of the break.

And remember, even a bankable leader needs to take time off to prevent your own burnout. What applies to your employees also applies to you, and if they see you unplug, they'll be more likely to do the same. In addition, consider your time off as an opportunity to groom your high-potential employees and give them more responsibility while you're gone.

The Power of Power Breaks

Now that you know the brilliance of time away from the office, here's how you can make the most of your team members' energy while they're in the office.

Suggest your team take a short break every hour — even if it's just a minute — especially when they're working on projects that require focus, such as writing a proposal or preparing a budget. Encourage them to get up and stretch, look out a window, or even (Heaven forbid) check their Facebook feed.

In addition to taking power breaks throughout the day, consider evenings and weekends as great power-break opportunities. iPhones, BlackBerrys, laptops, web conferencing — they were all designed to help us be more efficient, but they've turned into a tether. By responding to emails at 11:00 p.m., you create the expectation that you will do the same thing in the future, and expecting employees to be constantly available can be dangerous.

Instead, make your expectations clear to your team: Outline what types of emergencies or urgent issues you expect them to respond to and which can wait until the next business day.

The OLT (One Less Thing) Principle

Constantly having new projects or tasks added to our already packed schedules is the new normal. In modern organizations, most people have way too much on their plates. When was the last time you received an order from your boss telling you to stop doing anything? And just like you, your team is bombarded with goals, initiatives and corporate fire drills. Realizing when to stop investing time and energy in your team's projects might be just as important as knowing when to start.

The OLT principle ensures that your team is focused on the right things and spending no more time than necessary to produce the results you need. Here's how it works: For every activity your team is performing, you (and they) should ask:

- **Can this activity be focused so less time is spent completing it?** You should have no more than three to five goals to guide the efforts of your team, and use these goals as a daily barometer to

focus its activity and energy. Also, constantly assess whether "good enough" is enough, balancing the time required for perfection with the diminishing improvement you will probably see. This will allow you the energy to make your most important tasks or projects perfect because you won't be wasting energy elsewhere.

- **Can this activity be delegated to another person or group?** If your team members are stressed or overloaded, delegating tasks to other people or groups capable of accomplishing them is crucial. Coach your employees to provide clear instructions about the end result, to hand over projects in their entirety to capable employees, and to help the person who got the project to stay on track as it progresses.
- **Can this activity be stopped?** Stay aware of changing priorities, and be vigilant about what tasks or projects your team could stop doing entirely so they can focus their energy on what's most important. Also, have the courage to challenge assumptions about how your team should spend its time as business conditions change.

Remember, even if you feel powerless against the magnitude of your team's workload, there is almost always an opportunity to streamline or focus. Taking the time to ask the three questions of the OLT principle will make life better for your team and help them spend time on what's most important. As Stephen Covey says, "First things first."

Loosen Up!

When employees are having fun, they are happier and more productive. According to David Abramis, fun guru and Cal State-Long Beach professor, fun improves communication and enhances team spirit. It also reduces boredom, conflict and absenteeism.

Regardless of company size or industry, organizations who take fun seriously almost always reap the rewards. Every year the Great Places to Work Institute surveys more than 10 million employees around the world about what it's like to work at their companies. The result is the highly coveted "100 Best Companies to Work For" list. An average of 81 percent of employees at these companies report working in a fun environment. Only 61 percent of employees in other companies say the same.

Most leaders have difficulty fostering fun at work. For some, it can feel like the last thing they have time for given their stresses and demands. For others, it feels fluffy or frivolous. But bankable leaders take fun seriously.

Be a Catalyst for Fun

Here are four things that bankable leaders can do to be a catalyst for fun:

1. Realize that your team will need to goof off from time to time. If you walk by and see this happening, don't jump to the conclusion that the employee is lazy or unproductive. Ask questions and learn the pattern first.
2. Blur the line between work and fun by making day-to-day tasks or meetings more enjoyable. Order in lunch for your team. Bring in doughnuts. Carve out meeting time for games or contests.
3. Turn otherwise average tasks into games. For example, if your sales team makes its quota, take everyone on a field trip outside the office — say, to a baseball game.
4. Understand that carving out "unproductive" fun time (where you're not directly working on your team's tasks) will help drive productivity and improve morale. Think like a camp counselor, and bring out your (and their) inner child.

Bankable Leadership Happens Day by Day

The journey to Bankable Leadership is like learning a violin concerto. You first have to learn the concepts (like reading music) and behaviors (like playing the violin). Then you practice over and over to turn that knowledge into a beautiful piece of music. Bankable Leaders must acquire the concepts (the tension between people and results) and behaviors (trust, transparency, etc.). To be successful, you must first make a plan for what you want to improve. Second, you have to engage in deliberate practice. The German poet Johann Wolfgang von Goethe said, "Whatever you can do, or dream you can, begin it. Boldness has genius, power and magic in it." So begin it, and go get 'em! Here's to your professional prosperity.

Discover Your Authentic Leadership

TRUE NORTH

THE SUMMARY IN BRIEF

According to Warren Bennis, as the world becomes more dangerous and our problems become more complex and dire, we long for truly distinguished leaders, men and women who deserve our respect and loyalty. *True North* is about this kind of leader.

True North is the internal compass that guides you successfully through life. It represents who you are as a human being at your deepest level and is based on what is most important to you.

Author Bill George shows how anyone who follows his or her internal compass can become an authentic leader. This leadership examination is based on research and first-person interviews with 125 of today's top leaders — with some surprising results.

The leaders interviewed for *True North* ranged in age from 23 to 93 and were chosen based on their reputations for being authentic and successful. They make up a diverse group of women and men from an array of racial, religious and socioeconomic backgrounds and nationalities. Among them are Howard Schultz of Starbucks, Andrea Jung of Avon and Chuck Schwab, founder of Charles Schwab & Co. Half of the group are CEOs, and the other half includes a broad range of nonprofit leaders just starting on their journey.

Discovering your True North takes a lifetime of commitment and learning. But as long as you are true to who you are, you can cope with the most difficult circumstances that life presents. When you are aligned with who you are, you find coherence between your life story and your leadership. Can you recall the time when you felt most intensely alive and could say with confidence, "This is the real me"? When you can, you are aligned with your True North and are prepared to lead others authentically.

IN THIS SUMMARY, YOU WILL LEARN:

- The five dimensions that make up an authentic leader.
- How to identify the five types of leaders who have derailed.
- How to build your support team.
- How to empower people to lead.
- How to optimize your leadership effectiveness.
- How to link your leadership style with your sense of power.

Learning From Authentic Leaders

It is understandable why academic studies have not produced a profile of an ideal leader. Leaders are highly complex human beings, people who have distinctive qualities that cannot be sufficiently described by lists of traits or characteristics.

Authentic leaders not only inspire those around them, they empower people to step up and lead. Thus, there is a new definition of leadership: *The authentic leader brings people together around a shared purpose and empowers them to step up and lead authentically in order to create value for all stakeholders.*

There are five dimensions that make up an authentic leader:

• **Pursuing purpose with passion.** Without a real sense of purpose, leaders are at the mercy of their egos and narcissistic vulnerabilities.

• **Practicing solid values.** Leaders are defined by their values, and values are personal — they cannot be determined by anyone else.

• **Leading with heart.** Authentic leaders lead with their hearts as well as their heads.

• **Establishing enduring relationships.** The ability to develop enduring relationships is an essential mark of authentic leaders.

• **Demonstrating self-discipline.** Authentic leaders know competing successfully takes a consistently high level of self-discipline in order to produce results.

There are two key steps to becoming an authentic leader. First, you have to understand yourself, because the person you will always find hardest to lead is yourself. Second, you must take responsibility for your own development. You must devote yourself to a lifetime of development in order to become a great leader. ■

The Journey to Authentic Leadership

Authentic leaders consistently say they find their motivation through understanding their own stories. What makes leaders' stories different from everyone else's? Many people with painful stories see themselves as victims, feeling the world has dealt them a bad hand. Or they lack the introspection to see the connection between their life experiences and the goals they are pursuing. The difference with authentic leaders lies in the way they *frame* their stories. Their life stories provide the context for their lives.

Many learn the hard way that leadership is not a simple destination of becoming CEO. Rather, it is a marathon journey that progresses through many stages until you reach your peak leadership. Of all the leaders over 40 who were interviewed, none wound up where they thought they would.

Phase I: Preparing for Leadership. The first 30 years is the time to prepare for leadership, when character is formed and people become individual contributors or lead teams for the first time.

Phase II: Leading. The second phase of your leadership journey begins with a rapid accumulation of leadership experiences and culminates in the 50s, when leaders typically reach their peak leadership.

Phase III: Giving Back. Many leaders are bypassing retirement to share their experience with multiple organizations. They serve on for-profit or nonprofit boards,

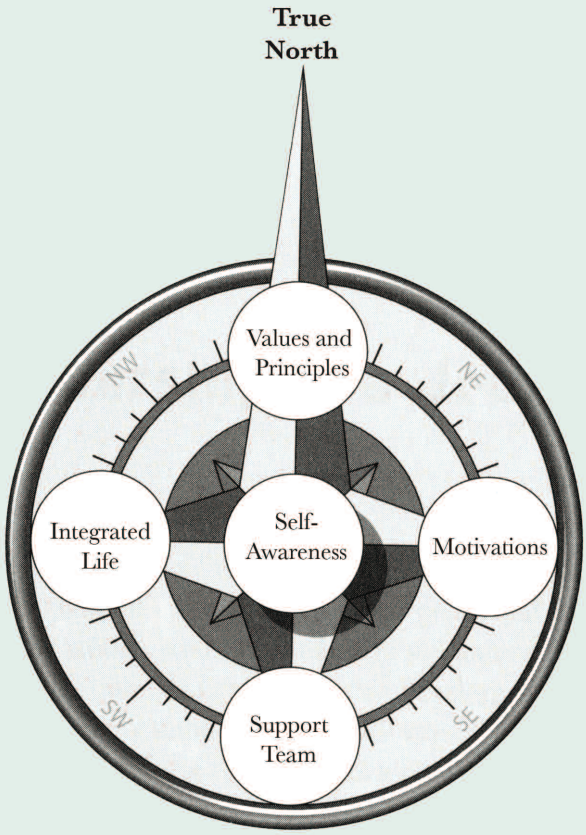
The Journey to Authentic Leadership

(continued from page 2)

The Authentic Leadership Compass



mentor young leaders, take up teaching or coach newly appointed CEOs.

Lord John Browne, who led BP to new heights in his 11 years at the helm, supports the idea of giving back. In announcing he would step down as CEO, Browne said, "I don't believe in retirement. The idea seems a touch out of date." He suggested he would be looking for an interesting new position with a purpose. ■

Why Leaders Lose Their Way

Why do people with excellent potential get derailed just as they appear to be hitting the peak of their leadership? People who lose their way are not necessarily bad leaders. They have the potential to become good leaders, but somewhere along the way they get pulled off course.

Before people take on leadership roles, they should first ask themselves two fundamental questions: "What motivates me to lead?" and "What is the purpose of my leadership?" If honest answers to the first question are simply power, prestige and money, leaders risk being trapped by external gratification as the source of their fulfillment. There is nothing wrong with desiring these outward symbols as long as they are combined with a deeper desire to serve something greater than oneself.

While many leaders have a deep-seated fear of failure, the irony is that they learn the most from their failures. Some rising leaders have such a fear of failing that they avoid risks. When they reach the top, they are not prepared to cope with the greater challenges they face.

Derailment: Losing Sight of Your True North

In observing leaders who have derailed, five types who lose sight of their True North have been identified.

Impostors rise through the organizational ranks with a combination of cunning and aggression. They understand the politics of getting ahead and let no one stand in their way. They have little appetite for self-reflection or for developing self-awareness.

To people outside their organizations, **Rationalizers** always appear on top of the issues. When things don't go their way, they blame external forces or subordinates or offer facile answers to their problems. They rarely step up and take responsibility themselves.

Glory Seekers define themselves by acclaim of the external world. Money, fame, glory and power are their goals as they pursue visible signs of success. Often it seems more important to them to appear on lists of the most powerful business leaders than it does to build organizations of lasting value.

Loners avoid forming close relationships, seeking out mentors or creating support networks. They believe they can and must make it on their own. Not to be confused with introverts, loners often have a myriad of superficial relationships and acolytes, but they do not listen to them.

The lives of **Shooting Stars** center entirely on their careers. To observers, they are perpetual motion machines, always on the go, traveling incessantly to get ahead. They rarely make time for family, friends, communities or even themselves. As they run ever faster, their stress mounts. They move up so rapidly in their careers that they never have time to learn from their mistakes. ■

Transformation From 'I' to 'We'

To become authentic leaders, we must discard the myth that leadership means having legions of supporters following our direction as we ascend to the pinnacles of power. Only then can we realize that authentic leadership is about empowering others on their journeys.

(continued on page 4)

Transformation From 'I' to 'We'

(continued from page 3)

This shift is the transformation from "I" to "We." It is the most important process leaders go through in becoming authentic. How else can they unleash the power of their organizations except by motivating people to reach their full potential? Only when leaders stop focusing on their personal ego needs are they able to develop other leaders.

Jaime Irick on Transforming

Jaime Irick, a West Point graduate and rising star at General Electric, offered insight into the process of transforming from "I" to "We." "You have to realize that it's not about you," he explained.

"We spend our early years trying to be the best. To get into West Point or General Electric, you have to be the best. That is defined by what you can do on your own — your ability to be a phenomenal analyst or do well on a standardized test. When you become a leader, your challenge is to inspire others, develop them and create change through them. If you want to be a leader, you've got to flip that switch and understand that it's about serving folks on your team. This is a very simple concept, but one many people overlook. The sooner they realize it, the faster they will become leaders." ■

Knowing Your Authentic Self

In their interviews, leaders said that gaining self-awareness was central to becoming authentic leaders. For this reason it is at the center of your compass. When you know yourself, you can find the passion that motivates you and the purpose of your leadership.

Your Emotional Intelligence

Self-awareness is the first element of emotional intelligence, or EQ. While intellectual intelligence, or IQ, has long been thought of as an essential characteristic for managers, EQ may be more important for authentic leaders. Leaders with an exceptionally high IQ get too intellectually involved and have trouble being tolerant of others. You have to have a certain level of intelligence at the top. Above that level, you need leadership skills, interpersonal skills and teamwork.

Dirk Jager, the former CEO of Procter & Gamble, is an example of a failed leader because he imposed his intellect on others. Jager was a brilliant strategist who had excellent ideas about the strategic and cultural changes needed at P&G, but his style was so abrasive that he threatened the essence of P&G's culture. As a result, his management team rebelled, and the board asked him to step down in less than two years as A.G. Lafley, a longtime P&G executive, took his place. Using a combination of wisdom, humility and personal engagement with employees, Lafley is transforming P&G into one of the great success stories of the 21st century.

Why Knowing Yourself Is So Important

The better you know yourself, the more likely you are to choose the right role. When leaders know themselves well, they become comfortable in their own skins, act consistently in different situations and gain the trust of others. Most leaders see the process of gaining self-awareness as crucial to their ability to build strong relationships. Those who are comfortable with themselves tend to be more open and transparent. Leaders who know their strengths and weaknesses can fill their skill gaps with colleagues who complement them.

Becoming Self-Aware

Without self-awareness, it is easy to get caught up in chasing external symbols of success rather than becoming the person you want to be. It is difficult to regulate your emotions, control your fears and avoid impulsive outbursts when you feel threatened or rejected. Without being aware of your vulnerabilities, fears and longings, it is hard to empathize with others who are experiencing similar feelings.

One of the most difficult things in becoming self-aware is seeing ourselves as others see us. Although it can be difficult to hear, leaders need accurate feedback to identify their blind spots. When you can do that and be open to new ways of doing things, the change you can accomplish is almost unlimited.

Accepting Yourself

Self-awareness is only half the challenge. You still have to accept yourself. But with self-awareness, accepting your authentic self becomes much easier. You see yourself clearly and accurately, and you know what you truly believe. The key to self-acceptance is to love yourself unconditionally. This level of self-compassion enables you to get to the source of your True North and to accept yourself as you are. ■

For additional information on self-awareness, go to: http://my.summary.com

Practicing Your Values and Principles

In gaining a clear awareness of who you are, you must understand your values and the principles that

(continued on page 5)

Practicing Your Values and Principles

(continued from page 4)

guide your leadership. Staying centered on your values is not easy. You can easily drift off course as the temptations and pressures of the outside world pull you away. But if you are centered by a high level of self-awareness, your compass can help you get back on track.

Values, Leadership Principles and Ethical Boundaries

The values that form the basis for your True North are derived from your beliefs and convictions. In defining your values, you must decide what is most important in your life. When you have a clear understanding of your values and their relative importance, you can establish the principles by which you intend to lead. *Leadership principles are values translated into action.*

Your ethical boundaries set clear limits on what you will do when you are tempted or are under pressure or when you start rationalizing a series of marginal decisions. One way leaders understand their ethical boundaries is to use the *New York Times* test. Before proceeding with any action, ask yourself, "How would I feel if this entire situation, including transcripts of discussions, were printed on the first page of the *New York Times*?" If your answers are negative, then it is time to rethink your actions; if they are positive, you should feel comfortable proceeding. ■

What Motivates You to Be a Leader?

Chuck Schwab's strengths, talents and motivations all came together when he founded Charles Schwab & Co. He combined his investment research skills with the persistence and resilience learned from years of suffering with dyslexia and an upbringing that instilled an enormous respect for individuals who want to achieve financial independence.

Building a company with a cause in which he passionately believes, he has helped millions become more confident while achieving financial independence himself. Schwab's company is an American icon, with 14,000 employees and market capitalization of $20 billion.

Like Chuck Schwab, you need to know what motivates you and have a realistic understanding of your strengths and weaknesses so you can put your best capabilities to work.

Intrinsic and Extrinsic Motivations

There are two types of motivation — extrinsic and intrinsic. *Extrinsic motivations*, such as getting good grades, winning athletic competitions or making money, are measured by the external world.

Intrinsic motivations, on the other hand, are derived from your sense of the meaning of your life — your True North. They are closely linked to your life story and the way you frame it. Examples include personal growth, helping other people develop and making a difference in the world. Schwab's passion for helping Americans achieve financial independence is an intrinsic motivation, even if the end result made him wealthy.

Avoiding Traps

Moving away from external validation of personal achievement is not easy. Achievement-oriented leaders grow so accustomed to successive accomplishments throughout their early years that it takes courage to pursue their intrinsic motivations.

But at some point, most leaders recognize that they need to address more difficult questions in order to pursue their true motivations. As a star consultant for global management firm McKinsey & Company, Alice Woodwark had achieved success at every stage of her life by age 29. She noted: "My version of achievement was pretty naive, born of things I learned early in life about praise and being valued. But if you're just chasing the rabbit around the course, you're not running toward anything meaningful." Many leaders turned down higher-paying jobs in early career decisions in order to pursue roles they would enjoy. They came out ahead in the end — in both satisfaction and compensation — because they were successful in doing what they loved.

However, many young leaders are tempted to take high-salaried jobs to pay off loans or build their savings, even if they have no interest in the work and do not intend to stay. Some become so dependent on maintaining a certain lifestyle that they get trapped in jobs where they are unmotivated and unhappy. Locked into the high-income/high-expense life, they cannot afford to do work they are passionate about. Ironically, not one of the leaders interviewed wound up taking a position predicated upon establishing wealth early. This course enabled them to later pursue roles they would enjoy. ■

Building Your Support Team

Your support team is a key element of your personal development plan. Members of your team help you stay focused on your True North, keep you grounded in reality and provide the support you need as you venture on your leadership journey. Leaders do not succeed on their

(continued on page 6)

Building Your Support Team

(continued from page 5)

own; they must give as much to their relationships as they get from them.

The Most Important Person to Your Leadership

Your support team starts with having at least one person in your life with whom you can be completely vulnerable and open. Often that person is the only one who can tell you the honest truth. Most leaders have their closest relationships with their spouses, although some develop these bonds with other family members, a close friend or a trusted mentor.

Mentors

Many authentic leaders have had a mentor who has changed their lives by helping them develop the skills to become better leaders and the confidence to lead authentically. But what some people, especially aspiring leaders, fail to recognize is the importance of the two-way relationship with their mentors. *Lasting relationships must flow both ways*. The best mentoring interactions spark mutual learning, exploration of similar values and shared enjoyment.

Current chairman and former CEO of Intuit Bill Campbell is the dean of mentoring in Silicon Valley. Many venture capitalists and board members in northern California will not hire a new CEO without first checking with Campbell. Although he keeps a low public profile, "Coach Campbell" is one of Silicon Valley's most respected executives.

Campbell has mentored dozens of entrepreneurs and business leaders. People are drawn to him because they consider him a great mentor and leader who has helped them unleash their own leadership potential. His selfless spirit, cultivated on the football fields of his youth, has enabled him to develop a loyal network of mentees, supporters and friends.

The best mentors put the interests of those they are mentoring above their own. These relationships can grow into strong personal friendships, especially when the participants are no longer in the same professional context. The cycle then continues when those who benefited from strong mentoring mentor others.

Creating a Professional Support Network

Many leaders develop professional peer networks both within and outside their organizations to consult with about important issues and to provide counsel and guidance. Having a peer support structure within your organization can be invaluable, because colleagues may be facing comparable experiences, have insights about things you do not see or be in a position to offer you real-time feedback on your leadership. ■

Staying Grounded: Integrating Your Life

Integrating their lives is one of the greatest challenges leaders face. To lead an *integrated life*, you need to bring together the major elements of your personal life and professional life, including work, family, community and friends, so that you can be the same person in each environment.

Authentic leaders are constantly aware of the importance of staying grounded. In doing so, they avoid getting too arrogant during the high points and forgetting who they are during the low points. Spending time with their families and close friends, getting physical exercise, practicing spirituality, doing community service and returning to places where they grew up are all ways they stay grounded. This grounding is essential to their effectiveness as leaders because it enables them to preserve their authenticity.

Measuring Success

Have you defined what success means for you and for your life? Unless you have thought through the answer to that question, you are at risk of letting others define success for you. Only when you can define what is most important in your life can you set the right priorities and become an integrated leader. ■

Leadership With Purpose and Passion

In 1998, Andrea Jung was facing the most difficult decision of her long and successful career. Four years after joining Avon Products, she had been passed over for promotion to CEO in favor of one of the company's outside board members. "I had an offer to become CEO at another company, but Ann Moore, CEO of Time Inc. and an Avon board member, advised me to stay," she recalled. "She told me, 'Follow your compass and not your clock.'"

Jung decided to stay, becoming president of Avon and a board member. The decision changed her life. Just 20 months later, the new CEO retired, and Jung was named his successor in November 1999, becoming Avon's first female CEO.

What is the purpose of *your* leadership? Are you fol-

(continued on page 7)

Leadership With Purpose and Passion

(continued from page 6)

lowing the True North of your compass or the timetable of your clock? If you examine your True North again, you will find that it points the way to the purpose of your leadership. When you understand your purpose, you are ready to find an organization — or create one — where you can fulfill that purpose.

Discerning Your Passions

How do you discern your passions? For most leaders passion comes from their life stories. By understanding the meaning of key events in your life story and reframing them, you can discern your passions. Following your passions will enable you to discover the purpose of your leadership. Leaders can sustain their effectiveness only if they empower employees around a shared purpose. As a leader, you must convey passion for the business every day while maintaining clarity about the mission of your organization. ■

Empowering People to Lead

If mutual respect provides the foundation for bringing out the best in people, what are the steps needed to empower them? Effective leaders use the following approaches at different times, depending on the capabilities of the people involved and the situation they are facing:

- Showing up
- Engaging people
- Helping teammates
- Challenging leaders
- Stretching people
- Aligning everyone around a mission.

Woody Allen once remarked, "Eighty percent of success is showing up." Surprisingly, many leaders get so busy they don't take the time to be there for people. Showing up at important events or at unexpected times means a great deal to people and enables them to take their leaders off their proverbial pedestal and see them as real people.

The most empowering leaders are those who engage a wide range of people. That means being with them face-to-face; inquiring about their work, their families, their personal lives and their careers; and being open and vulnerable with them. Authentic leaders help their teammates, whether it is with a personal problem or a career problem, by counseling them, offering suggestions or assisting them in making vital contacts.

Most people want to be stretched in assignments that enable them to develop. The leader's key is to sense when people are ready for such challenging experiences. Yet it is important for your team to know that you will be there to support them if necessary.

The most empowering condition of all is when the entire organization is aligned with its mission and people's passions and purpose are in sync with each other. Individuals usually have their own passions. If the organization's leaders can demonstrate how they can fulfill their purpose while achieving the organization's mission, then alignment can occur. ■

Honing Your Leadership Effectiveness

Once you empower people to lead around a shared purpose, you are well positioned to achieve superior results through your organization. The final step in maximizing your effectiveness as an authentic leader is to hone your leadership style and make authentic use of your power. The process produces a virtuous circle that will encourage others to join you and sustain your effectiveness on an ongoing basis.

Optimizing Your Leadership Effectiveness

The style of an effective leader must come from an authentic place. That will only happen when you have a high level of self-awareness, are clear about your values and understand your leadership purpose. Without this clarity, your style will be shaped by the expectations of your organization or the outside world, and will not be seen as authentic.

Yet your use of style and power must fit the situation you are facing, and you have to be versatile to maximize your effectiveness in *that situation*. In the aftermath of the attack of 9/11, New York Mayor Rudy Giuliani acted decisively to get urgently needed resources in place. He had no time to build consensus. In situations like these, people need decisive leaders to guide them efficiently and calmly to solutions. In other instances, such as when trying to create a future vision for their organizations, leaders need to use a more participative style that involves a wide range of people and gets them engaged and committed to that vision.

As you think about your leadership style and power, ask yourself these questions:

- Is your leadership style consistent with your leader-

(continued on page 8)

Honing Your Leadership Effectiveness

(continued from page 7)

ship principles and values? Is it ever inconsistent?

• How do you adapt your style to the circumstances facing you and to the capabilities of your teammates?

• How do you optimize the use of your power in leading others?

• In situations in which you used your power over others inappropriately, how did they respond?

• How do you respond to powerful people who use their power over you?

Your Leadership Style

How do you know what leadership style fits you best? Many organizations work hard to get young leaders to embrace the company's normative leadership style, sending them to training programs to bring their styles into line. If you simply adopt an organization's normative style or try to emulate someone else's style, your lack of authenticity will show through. That's why you should find a leadership style that is authentic to you and continue to refine it.

Using Power Wisely

The effective use of power in relationships is essential to achieving one's goals. Many leaders in high-level organizational roles use their positional power to dominate others. They do not realize that their intimidating style and excessive use of power shuts down the contributions of others.

The irony is that the more power one accumulates, the less it should be used. By exerting your power, you are taking away the power of others. Authentic leaders understand they need power to get things done, but they learn to use it in subtle ways. They prefer to persuade others to adopt their point of view or to build a consensus rather than force subordinates to go along with them.

Adapting to the Situation and to Your Teammates

As leaders mature through multiple experiences, they develop an authentic primary leadership style that works well for them. That style is effective as long as their situation or context stays the same. But what happens when the context changes?

In leading, you must always understand the situation in which you are operating, as well as the performance imperative. Once you understand the context, you can adjust your leadership style to get results.

In determining the style and power you want to use in a given situation, you should consider the readiness of your teammates to accept greater power and authority. For example, teammates who are used to taking clear direction may not be ready to adapt to a leader with a consensus style; conversely, followers who are highly creative and independent will not respond positively to a directive style. You should also think carefully about the kind of relationship you want to have with your teammates and what type of relationship will enable your team or organization to achieve its business imperatives. These relationships generally fit one of three types: dependent, independent or interdependent.

In creating *dependent relationships*, leaders must recognize that their teammates will rely entirely on their direction and their decisions. *Independent relationships* give teammates the autonomy and freedom to act on their own, but there is little bonding or group support. In creating *interdependent relationships*, expert, coaching, consensus and affiliative leaders share power with teammates and bring out their best qualities. They believe interdependence creates better decisions and greater commitment to ensuring success.

The bottom line for all leaders is to optimize their effectiveness to achieve superior long-term results. Authentic leaders are more effective at doing this because they have a clear sense of their moral compass and are explicitly committed to building their organizations over time. By developing an authentic leadership style, they get the best from their teammates and their organizations. ■

Linking Leadership Style and Power

Your style conveys your sense of power, just as your use of power reflects your leadership style.

- **Directive leaders** create dependent relationships with their subordinates, who obediently carry out their orders and respond to their demands.
- **Coaching leaders** create interdependent relationships.
- **Consensus leaders** use power in subtle ways to reach agreement without hurting others' feelings or isolating people with different points of view.
- **Affiliative leaders** are embraced by others for their highly empathic relationships.
- **Expert leaders** believe knowledge is power and being right and efficient is more important than relationships.

Brave Leadership

Unleash Your Most Confident, Powerful and Authentic Self to Get the Results You Need

by Kimberly Davis

THE SUMMARY IN BRIEF

While we may think that we need to follow some kind of prescription to get results, the most amazing leaders are those who dare to be their true selves, powerfully. People *want* to give them their best. But in a business world that's so competitive and uncertain, how do you connect with others more authentically to tap into their elusive want?

Brave Leadership is the essential guide for leaders in today's ever-shifting world. Professional-actress-turned-leadership-educator Kimberly Davis shares the transformative tools she uses in her workshops to help thousands of leaders worldwide. Drawing from years of working with leaders of all experience levels and industries and the latest research in psychology, sociology, business and the arts, Davis bridges traditional business how-to with a personal-development approach to demystify what it takes to be the brave leader you were born to be.

Wherever you are in your leadership journey, if you aspire to be the best leader you can be, then *Brave Leadership* is for you.

IN THIS SUMMARY, YOU WILL LEARN:

- Why focus, vulnerability, presence and connection are the keys to brave leadership.
- Tools to perform powerfully in a high-stakes environment.
- The difference between a goal and a Super Objective.
- To own your power and cultivate bravery.

Summary copyright © 2018 by Soundview Executive Book Summaries ® www.summary.com, 1-800-SUMMARY.

What Is Brave?

Leadership is not about title, position or power. A leader is someone people *want* to follow, not *have* to follow. They want to be there. They want to give their best. They choose it. They choose you. To be a brave leader, it's critical to ask yourself, "Do the people I need to follow me want to follow me?"

Brave is being your most confident, powerful and authentic self. Brave leadership is not reserved for a privileged few. You can be a great leader — a brave leader — if you choose to be.

Whether you're the CEO of your company or a team leader at work, school, family or community, you can lead bravely and have an impact.

Your unique path has set the foundation for who you are as a leader. It's how you leverage what you've learned from your past, how you act in the present, and how you shape your future that will determine your outcome.

Whatever leadership role you may hold, now or in the future, you are a person first. Who you are as a leader and how you behave as a leader is influenced by who you are and how you behave in life.

Everything you need to be a brave leader is already there. You simply need to get real about what you're doing that's working and what's not, learn how to make powerful and often minimal adjustments, and put them into action.

That is the work — to identify and leverage the unique qualities about you that make you special, while minimizing the ones that get in your way of being and bringing your most confident, powerful and authentic self to the world. It's something worth fighting for.

A Whole New World

The leadership game has changed tremendously over the past 10 to 15 years, but few people talk about it and even fewer model the way. It's hard to find good role models at the precipice of a new era.

The rules of the past no longer apply. No longer can we compartmentalize who we are at work and who we are outside of work, because "who we are" — for real — shines through. And if who we really are doesn't connect with the people we lead, we can't get anything done.

In the past, work was much more predictable. There were clear systems in place — job descriptions and reporting structures — that made a leader's job fairly routine. A manager's job was to make sure that people did what they were told to do by the time they were told to get it done. Until recently, this command-and-control leadership would have given you the results you were after.

Industry experts believe that the average worker now changes jobs between 10 and 15 times in a lifetime. The workplace is more complex, uncertain and ambiguous than ever, the speed of business has increased exponentially and information channels have multiplied. Jobs require cognitive thinking and critical decision-making skills.

Command-and-control leadership is no longer effective in today's work environment as it repels top talent and retains the least confident, creative, productive and effective workers. If you want to be a brave leader, it's critical that you recognize that the kind of leadership that worked in the past is no longer effective with today's workforce.

Dealing with Real

Brave leaders deal with what's real at work, which means that they must deal with the real emotions in the workplace.

When people feel insecure and vulnerable, how are they showing up at your meetings? If half of the company has been laid off, are they going to speak out when they see a problem or disagree with someone?

When people feel afraid or worried about messing up or losing their job or looking foolish, are they going to risk more of themselves, or are they going to play it safe?

In today's business environment, what's really going on with the human beings inside our organizations?

People are tired of playing the game. Like an actor getting into costume, they put on their protective mask, emotional armor and cloak of perfection and head into the office each day with their hearts anesthetized, ready to survive.

The problem is, everything that can make our companies great is hidden behind those masks and that armor and those cloaks. Creativity, engagement, passion, commitment, excitement, loyalty, joy and trust are all activities of the heart. They come from caring and connection and are accessed through vulnerability. That's what's real. A brave leader is someone people want to follow, not have to follow. Want comes from the heart, not the head. You must be willing to deal with the real human emotions of the people you lead and connect to their hearts if you want results in today's work environment.

Unlocking the Want

What can you do to ensure that everyone you lead wants to be led by you and will bring their best? There is no formula. To want is a personal choice. Every time, in every situation, what it's going to take to ensure someone wants to be led and be a part of what you're up to is going to be a little different — because every time you're going to have a different human being in front of you.

You can't fake want. Want is the center of commitment, loyalty, engagement, satisfaction, creativity, passion and joy. Want transforms deadlines into achievement, obstacles into adventures and colleagues into collaborators. Want unlocks the best that people have to give and fuels the results organizations need to deliver.

There's a lot of conversation out there about authenticity and the need for authenticity in the workplace. A useful definition of authenticity comes from Harvard Business School Professor and authentic leadership guru Bill George. His definition of authenticity is "genuine, worthy of trust, reliable and believable."

Who gets to decide if you're worthy of trust or if you're genuine? In the framework of leadership and influence, the people around you get to decide — your direct reports, your team, the people you lead, your boss, your colleagues and your suppliers. They get to decide if you're authentic. You do not. It requires that you pay attention to the fact that everyone around you has different needs. Whether or not someone wants is anchored in those individual needs.

To be the kind of leader that people *want* to follow instead of *have* to follow, it's critical to ask yourself, "What do they need from me to experience me as genuine, worthy of trust, reliance and belief?"

Barriers to Brave

Disappearing Genius

Back in the 1960s, two educators named Dr. George Land and Dr. Beth Jarvis did some interesting research. NASA had come to them requesting a test that they could give to potential hires to measure creativity. Since no such test existed, Land and Jarvis successfully developed one. But when that project was completed, they wanted to learn more about where creativity came from, so they gave the same test that they developed for NASA to a group of 1,600 3-to-5-year-olds. The results were astonishing, as 98 percent of the children tested as having a genius level of creativity.

Fast-forward five years, and the good doctors once again gave the same test to the same group of kids, who were then 8 to 10 years old. The second time, only 30 percent of the children tested at the genius level for creativity.

Fast-forward again another five years. The kids were now 13 to 15 years old. The final time the kids were tested, how many do you think tested at the genius level? Only 12 percent.

Since the findings were so shocking, they decided to give the same test to more than a million grown-ups (over the age of 24; the average age was 31). Only 2 percent of grownups tested as creative geniuses.

Creativity is simply a form of unique expression in the world. If we want to be and bring our most confident, powerful and authentic selves to our leadership, we've got to figure out what's getting in the way of our ability to express our unique selves in the world.

We all learn to follow rules and master the expected ways of behavior to fit into the system that is society. No

matter who we are, part of growing up is learning how to play the game. From the time we're young, our lives are filled with a cast of characters, all delivering their lines: "Sit still." "Keep your hands to yourself." "It's not talking time, it's listening time." "Inside voice, please."

The lines almost become boundaries for self-expression. We, unconsciously, shrink ourselves back to live within the lines, exchanging the desire to express our unique selves for comfort. But comfort zones can be lethal to leaders. When we live our lives within the walls we've constructed to keep perceived risk out, there is no room for creativity or powerful self-expression.

The problem isn't the lines. We all have lines. Some are real, and some are imagined. The problem is the focus of attention we give the lines that define our lives. It is impossible to be and bring our best if we are focused on the lines.

If you want to be a brave leader, it's critical to challenge your focus.

Vulnerable You

If you look up the word "vulnerability," you can understand why we're not psyched to embrace it. The dictionary defines vulnerability as "capable or susceptible to being emotionally or physically wounded or open to attack or damage." Vulnerability expert Brené Brown defines it as "uncertainty, risk and emotional exposure." However you define it, vulnerability is scary stuff.

Yet vulnerability is both our biggest obstacle as human beings and our greatest source of power. It is the gateway to brave leadership.

We are physiologically designed to avoid vulnerability at all costs. As we take in the world around us with our five senses, the frontal cortex of our brain hastens to sort through the incoming information, maps it to our past experiences, our memories and the meanings we've made (both real and imagined), and kicks out data in the form of body sensations. These are clues. They're telling you that something's up — you've bumped into one of your lines.

When feeling vulnerable, we all have our own unique go-to strategies to protect ourselves. Whether you're in a high-stakes conversation with a recruiter, you're in a stressful situation with your boss or you're speaking in front of a group of a thousand people, when you feel vulnerable, you protect yourself.

Some of us do it by trying to hide and stay off the radar. Maybe you evade eye contact, slouch your shoulders, tilt your head downward or make your voice small — whispery or breathy. Maybe you stumble over your words, ummming and aaaahhhhhing your way through a conversation or presentation. Maybe you use cynicism or sarcasm to keep people at a distance. Maybe you fold your arms in front of you like a shield. You might clasp your hands or put them in your pocket.

Some us do it by overcompensating. Maybe you pace or talk fast or try to make everything perfect. Or maybe you use lots of amazing, extraordinary superlatives or talk louder or become more animated. Maybe you overcompensate by being forceful.

But vulnerability doesn't have to hold you back from being a confident and powerful leader. If you know how it affects you and take the right actions, it can be used to your advantage. If you want to be a brave leader, you must understand how vulnerability affects you physically, emotionally and mentally; examine your coping strategies; and ensure you navigate vulnerability constructively.

Where Are You Really?

Whether you like it or not, if you're not present, you don't have presence. Being present seems nearly impossible. Our minds constantly tick off mile-long to-do lists while we put out fires, juggle work with family and do more with less. It's hard to take the time when it feels like there's no time. Yet, what is the price that we pay for not taking the time?

Employees say that if their leaders aren't present, they start to check out. They stop bringing their ideas. They stop sharing their challenges and their wins. They stop turning to their leaders for support. They stop caring — at least about their leader. When people sense that we're not invested in them, that they're not important enough, they stop investing in us. They take their want elsewhere, or worse, they stay. As a leader, can you afford that?

If we need people to experience us as genuine, worthy of trust, reliable and believable — to want to follow — then we have to cut through the noise in our lives and be present with the people around us.

Pushing Through to Brave

A Matter of Focus

In Moscow, at the turn of the century, a young man who was an actor, director and theater administrator became curious. As the son of one of the richest families in Russia, he had a keen sense for business that caused him to take notice. Why, he wondered, did some actors

consistently attract huge audiences, while others did not? What were they doing differently?

With the heart of an actor, the eye of a detective and the mind of a businessman, he studied and questioned the Moscow Art Theatre performers he most admired, and married his observations with his personal experiences on stage, until slowly certain themes started to emerge.

Constantin Stanislavski discovered that the most powerful performances — the ones that drew the biggest crowds, the loudest applause, that kept the audience at the edge of their seats with bated breath — were by actors who did something different than all the others. Instead of being worried about what others thought about them, about trying to impress others or prove themselves, they instinctively understood how to focus their attention outside themselves to impact someone or something on the stage. No longer plagued by the vulnerability most people feel in such a high-stakes environment, these actors were free to perform powerfully. The by-product was thunderous applause and increased revenue for the theatre.

When you're at work, like an actor you are also on stage. People are always paying attention to your performance. You are in a vulnerable, high-stakes environment. Like actors, if you focus on yourself — how you're feeling, trying to prove and impress — your results will suffer.

What Stanislavski learned is that a powerful performance stems from connecting to the impact you want to have outside yourself, or what he calls your "Super Objective."

Unlike a goal, Stanislavski's concept of the Super Objective is tied to what drives you as an individual at your very core. It is your purposeful center. It is the birthplace for confidence, powerful action and extraordinary results. It is why you care in action. What is the impact you want to have on your employees, your team, your culture, your organization?

We think that focusing on goals is the answer to results, but goals are not enough. In our zeal to get the biggest reward quickly, we often sacrifice our values, relationships, health and best selves in the process. If you want to be a brave leader, it's critical to ensure that your goals are anchored in your Super Objective — the impact you want to have outside yourself — to ensure your actions are constructive and your achievements don't come at the sacrifice of your relationships, health, values and best self.

Action From the Inside Out

Unlike a leadership philosophy, or the way many people think of principles, purpose and values, a Super Objective lives in *action*. You cannot achieve a Super Objective without *doing something*.

Tom is a conscientious young manager. He works in an industry that has a great deal of diversity and has not only seen people being treated poorly for being different but has experienced it himself. He has done a great deal of self-reflection about his beliefs and values, and he's crafted his leadership philosophy to help guide him toward being the kind of leader he wants to be for his new team. "I believe in respect and dignity for all people," Tom writes.

This is a great philosophy. The only problem is that Tom can believe and believe and believe until the end of time, and it won't change anything.

In contrast, a Super Objective forces action. If we were to transfer Tom's philosophy into Super Objective language, it might read something like this: "I champion respect and dignity for all people." Tom can't champion from the sidelines.

If he's truly a champion for respect and dignity, it's going to require more from him. It's going to take looking for something to respect in people he doesn't like. It's going to take standing up to people who aren't treating others with respect. It's going to take bridging differences and listening and dialogue. To champion requires *action*.

A Super Objective puts you on an active path to be your most confident, powerful and authentic self. It doesn't make life easier; it makes you and your results better.

For the Sake of What?

In 2008 Starbucks' stock was falling, and fast. CEO Howard Schultz had just returned after an eight-year absence and was under enormous pressure from the shareholders to turn things around.

Starbucks' comprehensive health coverage was under fire by one of their biggest investors, and he insisted that the timing was ideal to cut the $250 million program. Other companies were doing it, so why shouldn't they? Surely it was justified.

Schultz responded with clarity. The essence of their brand, he explained, is humanity. Their culture was built around two primary benefits: providing health coverage and giving stock options to anyone who works over 20 hours a week. And Schultz held so firmly to those beliefs that he went so far as to say, "If you believe the financial crisis should change our principles and core purpose, perhaps you should sell your stock. I'm not building a stock. I'm trying to build an enduring company. We are a performance-driven organization, but we have to lead the company through the lens of humanity."

To build an enduring company steeped in humanity. Some might call that a pretty powerful Super Objective. Howard Schultz brought unwavering clarity around what Starbucks stands for as an organization, and they've courageously held on to that pillar of truth in the face of some mighty winds. What if you were to bring clarity about what you stand for as an individual, and let that inform your actions? Do you know what you stand for?

What's Your Intention?

If your Super Objective is the compass that directs you toward your best self, then Intentions are the road markers that keep you on your true path during all the crazy twists and turns you encounter on your journey. Your Super Objective is your strategic big picture — what you stand for as a leader — and your Intention is tactical. It's what you're going to do to achieve your Super Objective in the situations you face. Like the language we use for a Super Objective, Intentions are also active verbs — forcing deliberate, purposeful action.

Intentions keep us in check. They force us to think before we act. It can be incredibly difficult to stay mindful of what you stand for and how you'd like to show up in the world in the complex landscape that is our life at work.

Imagine you're a newly promoted director of sales who stands for "inspiring your people to greatness." What Intention (or action) should you take to inspire them to greatness when someone's not hitting their numbers? Do you threaten repercussions? Do you call them out during a team meeting? Would that inspire them to greatness? Probably not.

What actions could you take in the face of them not hitting their numbers, if you were truly about inspiring your people to greatness? Perhaps you could bridge their self-confidence by reminding them of past obstacles they've overcome. Or maybe you could share a personal story about a time when you weren't achieving your best and how you overcame that obstacle to succeed. Or is it possible that they don't have the resources they need to be successful? It's all about taking mindful constructive action that is in alignment with who you are as a leader.

Brave leaders choose their actions rather than operating on autopilot or reacting to the world around them.

The Magic If

There's an acting technique called the Magic If. When creating a character for the stage, you have to consider everything that makes a person who they are and why they do what they do. You consider the given circumstances. You do what is called a character analysis and explore the character's history, values, beliefs and physical characteristics. And you do all of this to come to a single basic question: Given everything you know about your character and the world they live in, what would you do if you were in these circumstances?

If, as an actor, you approach this critical question with any judgment at all, your performance is guaranteed to ring false, and all presence goes out the window. Without a doubt, the audience will find you phony and uninteresting. Instead, you simply have to relinquish any preconceived ideas you might have about anything or anyone, look at the given circumstances, put yourself in their shoes and move forward.

What if you could step into your boss's shoes and better understand the pressure she is experiencing and the fears that she has? What if you could step into the shoes of your direct report? What might he be balancing in his life? How does he feel about himself when you're around?

The definition of empathy is to understand and share another person's experiences and emotion. A leader who shows empathy makes it possible for people to feel safe to take risks and to challenge themselves to grow and improve. Empathy is the key that unlocks what others need from you to experience you as genuine, worthy of trust, reliable and believable. The Magic If is empathy in action.

Own Your Power

The word power means many different things to people: strength, control, authority, title, fame, wealth, position and leader, to name a few.

A useful definition of power is "influence over others, the source of which resides in the person, instead of being vested by the position they hold." True power is your inherent ability to influence others.

Traditionally, most of us have thought of power as something outside ourselves to be gained — a title, a position, money or control — things requiring someone else's participation or permission. Looking outside ourselves for power only limits our ability to see how we're getting in our own way and thus the possibility of being as powerful as we can truly be. To be powerful in the world, we must first be powerful in ourselves.

This means we must know ourselves, which is easier said than done. You need to know yourself well enough to identify what you might be doing, consciously and unconsciously, to dissipate your own power.

- When we're in a stressful situation, we start to hold our breath and cut off oxygen to our brains. When

you find yourself in a stressful situation, take low, slow breaths, and allow your brain to fully participate in the situation at hand.

- Tension blocks authentic expression. Identify where you carry tension in your body before you enter a situation, so you can first release it.
- How you physically carry yourself will impact how you feel. Be sure to carry yourself in an open, expansive posture, with your shoulders back, spine lengthened and head held high.
- Many of us hide our feelings and our true selves at work by putting on a mask. To be authentic, powerful and brave, you must be willing to take down your mask to give others permission to do the same. Only then can true connection occur.

Connection Is the Game

Leadership is about connection. Either you actively connect to the hearts and minds of the people you lead so they want to follow, or you don't and they don't (follow, that is). Presence is irrelevant if you don't connect. Your results are simply a by-product of your ability to truly connect with the hearts and minds of others.

We work so hard to get it right. We agonize over our slides and polish our pitch. Points can be hit and arguments can be refuted, but the truth is, it doesn't matter how close to perfect we may come if we don't truly connect with the human beings in the room.

To lead, to have presence, to influence and to present powerfully, we've got to find a way to move past our need to be perfect and aim for something far more elusive yet critical. We must risk being *seen*. We must be vulnerable enough to be real. We must risk connection.

So what steps can you take to feel more connected to people at work?

Take initiative. If we're all waiting for someone else to go first, nobody is ever going to go.

Be curious. Learn to ask great questions and listen to answers, and your relationships will soar.

Be present. Even though you've got a million things going on, be willing to set your phone aside and bring your full attention to the conversation, even if it's for a brief amount of time.

Listen for commonalities. Commonalities give us a jumping-off point for richer conversations. We often have more in common than we think; we just need to be willing to stay curious long enough.

Remove the mask. Have the courage to take your mask off first to give the other person permission to do the same, so real connection is possible.

Share personal stories. Our personal stories are the investment we make to gain access to the hearts and minds of others — where connection lives.

Connect like your life depends on it. When someone takes the time to have a real conversation with you, don't take it for granted.

We can choose to connect. We just have to be brave enough to go first.

A Brave New World

Own Your Mess

Guess what? You're human. You say and do stupid things at times — we all do. Mistakes in and of themselves aren't the issue. Yes, we hope that as we grow and learn and evolve that we'll become more mindful, make fewer mistakes, and that when we make them they're not as ugly.

But the key to being and bringing your best isn't only about making fewer mistakes, it's also about how you deal with what happens after you blow it. People are amazing creatures. They have an enormous capacity for forgiveness when someone has the courage to own their mess.

But if that same person leaves the mess for someone else to clean up, their memory is long. They may not tell you what you've done that fractured their trust and belief in you, but they have filed it away as evidence of who you really are. They'll hold back and play it safe or get the heck out of Dodge. If you care about results, you need a different outcome.

Know your triggers. Certain things cause us to become emotionally hijacked. Something happens that triggers us, and the feelings ignited are much bigger than the situation merits, typically causing a strong reaction that we regret.

But we don't have to be victims of our emotions. Find a way to stay curious about how you're feeling, and let that lead you to understanding instead of reaction.

Part of owning your mess is to see where you haven't acknowledged the hard work that people are investing all around you to make your life and your organization better. Pay attention to the amazing things going on — the days people come in early or leave late to finish big projects, the extra care and attention people bring to their work, the obstacles they have to overcome to help you. Say thank you to your direct reports, your boss, your contractors, your colleagues, your clients, your vendors, your family, your kid's teacher and your friends.

People need to know that they're seen and that they matter. That is the greatest gift we can give each other, and it's one that will pay dividends for years to come.

Cultivating Brave

Maya Angelou once said, "Do the best you can until you know better. Then when you know better, do better."

A commitment to mastery is critical to cultivate brave. You will never hit your bull's-eye every time. In order to achieve what you stand for as a leader, in all the crazy situations you find yourself, you will need an arsenal of Intentions. To be your best self, you'll have to take one mindful action after another, working diligently to get closer to your target every time, course correcting along the way and cleaning up your messes.

Set healthy boundaries. There are so many negative influences out in the world — negative, snarky posts and negative, snarky people. We cannot be and bring our most confident, powerful and authentic selves if we're focused on the negative. Set boundaries around what you watch, with whom you share your time and what influences you allow. Fiercely protect your mindset.

Surround yourself with brave. Brave doesn't happen in a vacuum. If you actively work on growing your brave, it's like a magnet to others who are working toward being their most confident, powerful and authentic self. Relationships begin with true connection. Instead of thinking about them in terms of what you can get, consider looking at them with the mindset of what you can give. Make genuine friendships rather than contacts. Be curious about people, listen as if the stakes are high and stay fully present. Create for yourself a brave community.

Create your own process. There is no single answer or system to be brave, as every person is unique. Learn and absorb as much as you can from a wide variety of teachers, leaders, writers, philosophers, psychologists, artists, scientists and other insightful people who share your day. Observe and test what works best for you.

Take baby steps. Huge accomplishments are simply a series of small steps. Focus on the single next step in front of you.

Nurture and grow your whole self. Exercise, eat healthy, sleep, take breaks — you are a person, not a machine. Machines are not brave.

Make a positive impact. Do something to make a positive impact. It will force you to get out of your head, to look beyond your own nose and to connect to other people. It is the key to cultivating brave.

If you dare to be your most confident, powerful and authentic self, anything is possible. And that kind of commitment makes you a special person. A leader in a world that so desperately needs people to step up and make a difference.

Some might even call you . . . Brave.

The Brave Leadership Manifesto

We believe that our best lies in being more of who we really are, not less.

We believe that everyone has the ability to make a positive impact.

We believe that we are all far more powerful than we know and that true "power" comes from within, not from title or position.

We believe that being anchored in purpose gives us the presence we need to influence and helps us bring the courage to take risks.

We believe that mindful, constructive action is a worthy pursuit.

We believe that compassion and empathy matter — that embracing our humanity is crucial.

We believe that there is power in vulnerability.

We believe that we can always be better — that there is always something to learn and ways to grow.

We believe that real connection — as a leader, a presenter, a colleague, as a human being — is key to success.

And **we believe** that extraordinary results are simply a by-product of us showing up as authentically and powerfully as we can.

This is our definition of "Brave Leadership."

It's something worth fighting for.

Want to join the fight?

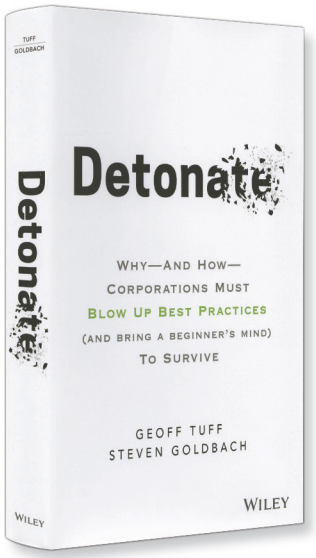
Why — and How — Corporations Must Blow Up Best Practices (and Bring a Beginner's Mind) to Survive



by Geoff Tuff and Steven Goldbach

THE SUMMARY IN BRIEF

Without meaning to, and often with the best of intentions, most organizations continually waste precious time and money on processes and activities that don't create value and no longer make sense in today's business environment. Until now, the relatively slow speed of marketplace evolution has allowed wasteful habits to continue without consequence. This reality is ending.

Detonate explains how organizations build up bad habits, identifies which ones masquerade as "best practices" and suggests alternatives that can contribute to winning in the marketplace. With a focus on optimism and empowerment, it presents an approach and mindset that are critical to successfully compete in an era characterized by profound technological advances and uncertainty.

If you want to compete differently in today's marketplace and to challenge the things your company does that you have a nagging feeling are actually just a waste of time — and maybe value-destroying — *Detonate* gives you what you need to ignite change.

IN THIS SUMMARY, YOU WILL LEARN:

- How "best practices" create a vicious cycle of organizational behavior.
- Seven conventional playbooks to target for demolition.
- Four key principles that underlie new, better practices.
- How leaders can accelerate progress by asking better questions.

THE COMPLETE SUMMARY: **DETONATE**

by Geoff Tuff and Steven Goldbach

The authors: Geoff Tuff is a principal at Deloitte and a senior leader of the firm's innovation and applied design practices. His work centers on helping clients transform their businesses to grow and compete in nontraditional ways. Steven Goldbach is a principal at Deloitte, and he serves as the firm's chief strategy officer. He helps executives and their teams transform their organizations by making challenging and pragmatic strategy choices in the face of uncertainty.

PART I: LIGHT THE FUSE

Tinderbox

Hazardous Unwritten Rules

When you hear someone say, "This is what we've always done," you know that you're dealing with conventional wisdom — the thinking that governs a habitual decision or choice. People fail to question the logic for this behavior. It simply is the automatic choice — the safe choice.

But the problem with actions that take on conventional wisdom arises as you become further and further removed from the original reason for the action. The people who make the decision stop treating that action as a choice and instead treat it as a rule.

Rules are the governing body for how you pursue your objective. In many industries, regulations and laws broadly define what you can and cannot do, but for the most part businesses have a relatively broad mandate. Still, conventional wisdom gets in the way of creativity. Conventional wisdom is what we see as the right thing to do, often without deeply thinking about why we do it.

Organizations spend countless hours debating how (not whether) they should implement best practices, and they then convince themselves that they can somehow win with their customers because they will have implemented all of them.

Actually, the entire concept of best practices, by definition, means that you're doing the same thing as your competition.

There are some best practices that were smart given the context, but when context changes (as it is now for many businesses), we need to abandon the practices because they've turned into a waste of time and money. We need to move from a world where best practices are the rule to one where best practices are one of several possible tools for solving a problem.

As consumers of others' goods and services, we naturally wonder why things are the way they are. Why do grocery stores force shoppers with the largest baskets — and therefore of the most value — to stand in the longest lines? Why do hotels force tired business travelers to wait until the middle of their workday to check in? Some of these experiences likely have a reasonable root cause, but not all do.

Every time you identify a particular orthodoxy, you should research its existence. Ask why you do things this way, and try to dig into where each practice might have started. Imagine life without this orthodoxy; what would be the impact on your company's activities and/or success model?

You'll need to do more, however, to create the confidence to go and do something about this orthodoxy at scale. The key is to get out and try — at a "minimally viable" scale — to challenge the orthodoxy.

Spark

Acceleration of the Vicious Cycle

Let's consider why unknowingly pursuing conventional wisdom has become a path to almost assured failure. For the vast majority of business history, companies have

simply needed to "evolve" to compete effectively. The pace of change has been such that we have only needed gradual adaptation in order to survive; we haven't *really* needed to consider existential threat.

The advancement of technology is making possible the breaking down of long-standing barriers or allowing companies to replicate customer value propositions at fractions of the costs, or creating goods or services that couldn't have existed not so long ago, and the clock speed of this transition is happening fast because of computing power.

Consider the case of a typical retail business. A prototypical business model was to try to create substantial presence within a given footprint to create the likelihood that customers would notice and ultimately visit and purchase from your store.

However, advances in technology and forward thinking have given the consumer what they appear to really want — the ability to have nearly endless selection, the convenience of not leaving their house and good-enough delivery times. What was once an advantage has been turned into an Achilles' heel — too much cost deployed against something the consumer no longer values.

It's not a question of *if* something is going to happen. It's a question of *when*. To put it even more bluntly: Uber ate the global taxi industry. And you're hoping it won't happen to your business. But it will, and soon.

Urgency and the Vicious Cycle

Yet there's more to it than just "technological disruption is coming for you." In today's world, best practices create a vicious cycle of behavior that can prove deadly in a rapidly changing environment.

It goes something like this: You plan for a long career, embrace orthodoxy, follow the playbooks, make the safe bets on marginal calls and enjoy a long career. The vicious cycle happens when organizational and individual instinct kick in to try to protect the old model in the face of undeniable digital change.

Now it goes something like this: You plan for a long career, embrace orthodoxy, follow the playbooks and make the safe bets on marginal calls. But a new digital reality (new competitors and business models) throws off results from "safe bets," and they turn out to be bad calls. Bad outcomes result, leading to the need for increased burden of proof, so you rely on playbooks and orthodoxy and get more bad outcomes.

Corporations have become devastatingly inward-focused, structuring and optimizing for process adherence and execution rather than for making good choices. This vicious cycle is now accelerating given the increasing clock speed of technological advances that ripple through business systems and the nature of opportunity that they create.

Coordinates

Targeting the Blast

Our psyches typically relate explosions with a bad event: a bomb being dropped during wartime, a terrorist deploying a suicide vest, an accident at a plant. But detonations have also played a critical role in enabling progress. When history and memory are anchors to progress, we may need to tear down monuments to allow the collective to move forward. How we do this to avoid collateral damage is critically important and requires deep expertise.

Four principles create the basis for transformation. Anchored in philosophy and work approach rather than processes and playbooks, these core principles to compete effectively in a time of accelerating change are

1. Focus your activities on understanding and driving human behavior. Most companies have lost sight of the fundamental subatomic element of business — changing human behavior. If the objective is to grow revenue or profit, or create new capabilities to transform an organization, then as you peel back the layers of what that will take, you always find yourself requiring a human being to *do something different than what they're doing today*.

2. Bring a "beginner's mind" to all that you do. The people best at spotting orthodoxy are often those newest to a company or industry and those most often found asking, "Huh! I wonder why they do it that way?"

3. Embrace impermanence. We have to be prepared to create structures, processes and systems that aren't expected to last forever.

4. Build minimally viable moves to test and learn. The single best way to avoid failure is to make sure that every time you make a move in a space governed by uncertainty, that move is open to course correction immediately if it turns out to be a bad one. Ideally, you will learn just a little every time you make a move so that not only do you avoid failing outright, but you begin to build a base of knowledge that allows you to operate even more effectively in analogous situations in the future.

Let's now discuss seven different kinds of playbooks and how you can target them for demolition. The four principles will be used to show you how to do it.

PART II: BLOW UP YOUR PLAYBOOKS

Dismantle Your P&L

Why Revenue Should Be the Last Thing You Worry About

When organizations ask what they think they'll earn next year in terms of revenue, it's usually some function of looking at what they've done in the past, comparing it to "expert forecasts" of what the industry will do next year, thinking about how they'll increase their share and then landing on a revenue goal. Once they have that revenue goal set pretty much in stone, they ask what profit they want to make.

The typical financial forecast process is predicated on several faulty bits of conventional wisdom. The core assumption is that the future will be the same as the past. It assumes that companies have an inalienable right to have revenue continue in a predictable fashion into the future. The fact that most forecasts *start* with revenue effectively makes the assumption that *our customers will keep coming back if we just keep it up*.

By not asking "why" revenue ought to behave consistent with the past, you're missing the underlying cause of your revenue — your customers' behavior. Also, if you tend to presume that the past trend line will continue, you minimize opportunities to do more with less.

There is a better way to plan that would give organizations much greater insight into what really matters, one that helps create something both valid and reliable while learning about their customers. The core principle that we want to apply is to focus on the subatomic element of business — behavior.

Develop business plans around the customer behavior that you want to cause, and have financial plans inexorably linked. In other words, financials become — as they are in the real world — the outcome of customer behavior. A simple way to put this in practice is to ask the question, "What broad customer behavior objective would most help me achieve the business results I want to achieve?"

For example, broad behavior objectives for existing customers might include "keep buying my product or service in the same way you are buying it today and potentially pay more for it," "buy more of my product or service for the same reason you are purchasing it today" or "buy more of my product or service for a different reason than you are purchasing it today."

Once you set a behavior objective, you then need to further specify the series of customer behaviors that will lead to the behavior objective. An effective tool to aid businesses in focusing on behavioral outcomes is having a customer journey map. This is the story of how the customer arrives at performing the behavior that is advantageous to your business.

By having a clear picture of the different ways customers can arrive at the advantaged behavior, businesses can decide on tactics they can use to influence behavior (and determine how much they cost), which would have the end result of achieving revenue. In this way, businesses can ground their financials in real-world customer behavior.

Trash the Calendar

A Strategic Planning Schedule Is Largely a Waste of Time

Most organizations do strategic planning in the following way: There is a season for planning. There are typically templates and/or a set process. Strategic planning is deeply oriented around meeting a financial objective, or the outcome is a financial objective that is not usually accompanied by a logic for why the objective makes sense or under what conditions it might change. There is a predetermined time orientation to the plan — be it an annual plan, a three-year plan or a five-year plan.

The core Detonate principle to apply here is looking at the subatomic element of behavior. You should plan around behavior change, not the calendar. Let's examine it in two buckets: customer behavior and employee behavior.

For customer behavior, your planning period should reflect the minimum amount of time you need to test whether your actions are having the desired impact. If you're a chain of gyms targeted at women 40 years and older, and the behavior you want to drive is for women who aren't exercising regularly at any gym to join your facility because you offer an entirely different regimen, then your planning periods should be flexible enough to test several variables. You might want one longer planning period to determine whether undertaking this is viable overall, and a few shorter planning periods to refine various ways to change the behavior.

Like customer behavior, changing employee behavior can take considerable time (especially in the context of a broad-scale transformation); therefore, companies might think about evaluating over a longer period of time the ability to actually create the capabilities and management

systems for which the strategy calls. In shorter periods, they might evaluate the ability to make progress against milestones toward the development of those capabilities.

The planning cycle is really never-ending; once you finish, you have to cycle back to the beginning and re-evaluate your assumptions. This is another way to start testing other behaviors that can help you grow. Your planning horizon should center on the time it will take to understand whether you can do the things necessary to change customer and employee behavior to achieve your goals in the marketplace.

Businesses must treat their planning processes as a thinking exercise, not a template exercise. The pace of change is increasing, and this should only increase the importance of not falling prey to conventional ways of undertaking planning.

Defy Expertise

Syndicated Data Create Zero Advantage

Companies still largely behave the way they did 20 years ago, using external information as the most important factor when making important business choices.

Syndicated data are a typical best practice with a double-edged sword. On one hand, you can't ignore information that could have potential value in understanding the world. On the other, it is dangerous to rely on syndicated data as your only weapon against the competition.

Companies repeatedly look at syndicated data and don't probe for deeper insights or see choice in what the data reveal. Why is that so bad? Your competition has all of these data and insights, too. So, you and your competitors all figure out that a customer segment is really attractive, and you all focus your resources on doing pretty much exactly the same thing.

Because all of your competition offers the same thing, customers shop around for where they can get the best price. The fastest-growing, most profitable segment quickly becomes the most heavily competed, and profits come down. The best thing you can say about this is that the customer wins.

Knowing that your competition has the data, too, should frame how you use it. The Detonate principle that applies here is the beginner's mind. A beginner might say something as simple as, "We should measure what you're trying to do" — and not necessarily measure what is easily available.

Instead of using only syndicated data and risk falling into lazy thinking, companies should seek ways to create proprietary data and insights. Done properly, this allows you to make moves your competition can't see or wouldn't have made based on the data they have.

Have proprietary data be an outcome of your business model. Customers come into a store — that's data. They visit and browse a website — that's data. Do you know who those customers are? Which customers came to a website, and who browsed what? How long did they visit? What did they buy, if anything? From where did they do this? What device? What location? What promotional material did they see in advance?

By definition, your business must do something that others cannot — and that applies to your data strategies as much as it does to any other part of your business.

Upend Insight

Customers Can't Tell You What They Believe

If we trust customers to tell us what they want, they will — invariably and unknowingly— lie to us. It's not their fault. They don't really know themselves. Yet, most businesses act as though they can.

It's not that customers aren't well intentioned; they are. But social scientists have shown time and time again the size of the gap between expressed preferences (what customers say) and revealed preferences (what they actually do).

It's not that taking data from the market as a source of inspiration is a bad idea. It's that companies should stop investing in certain types of market research. Specifically, companies should stop trusting insights generated from quantitative surveys that broadly ask the customer to answer the question "What do you want?"; qualitative focus groups and group interviews; and a miscellaneous bucket called "Sales said so" (information from sales reports and anecdotes from sales visits).

Instead, companies should stop asking and start observing, simulating and inferring. And we can do that by going to the principle of focusing on behavior.

Start observing and inferring is the domain of cultural anthropology, and it holds the key to how companies must interact with and understand the markets they serve if they are going to thrive in an era of constant change and "unknowable" opportunities. At its heart is the ability to get as unfiltered a view on what humans are trying to accomplish in their lives as possible and to use expert

insight — or observers — to understand what is actually happening in any given circumstance.

Anthropology and observing processes to generate insights entered the corporate world several decades ago. In 1979, Xerox hired Lucy Suchman, for instance, to observe everyday life with Xerox's products such as copy machine usage in the workplace. Her findings helped drive understandings regarding human-machine interaction that informed product design.

These methods give us a leg up in bringing a beginner's mind to the question of exploring what customers are trying to achieve. Because they're not filtering data through the assumptions of research designers or statisticians, they're as close as we can get to being "inside" the motivations of the people for whom we are trying to create value.

This starting place of blissful ignorance will ideally allow companies to work from first principles as they imagine how to build that value and how to take it in minimally viable increments to the market.

Lose Control

Discard Opportunity Management Systems

The economist Frank Knight first popularized the differentiation between risk and uncertainty almost a century ago. You can measure risk, but not uncertainty. In that sense, risk can be "managed" by taking steps to mitigate the impact of the variability while still meeting your objective. Uncertainty can also be managed, but usually the cost to effectively manage uncertainty is considerably higher relative to the objective.

We need to manage risks and uncertainties differently. The behavior to detonate here is a one-size-fits-all approach to risk management.

Stage-Gate is such an approach. It perfectly embodies what happens when a system is mindlessly applied without consideration as to whether the task fits its original intent. Rooted in chemical and engineering labs of nearly 80 years ago, it aims to bring data and reason to investment decisions in the product development process.

Stage-Gate's premise is straightforward and — on the surface — sensible. Instead of committing at the outset to invest heavily in developing a new product, plan to run the project through a series of linear, predictable development stages, each one punctuated by a "gate review." At this meeting, key decision makers review progress against goals and decide to continue the project if it's hitting predefined hurdle rates on key metrics — and kill it if not.

What's the issue here? By presuming that Stage-Gate will do its job, companies trigger an orthodoxy: All you need for a steady stream of innovations is to feed the beast. Focus on "filling the front end" of the funnel, and Stage-Gate will sort the winners from the losers. Clogging the pipeline with relatively low-quality ideas, however, leads to hours wasted on subsequent evaluation.

Even if Stage-Gate takes all the waste out of the system and optimizes the burden of proof brought to the table, it still only works for problems that are knowable. When you run truly new challenges and opportunities — things that are unknowable unless you try them — through a process that rewards "knowability," you can easily kill great ideas.

The core principle to apply here is — once again — bringing a beginner's mind. By asking "why" they are undertaking certain kinds of evaluation, companies can better match the work done to mitigate risk and manage uncertainty to the kind of problem they face.

Stomp Out Platitudes

Celebrating Failure Is an Excuse for Mediocrity

More and more these days, it seems as if business leaders are celebrating their spectacular failures and suggesting that failure is the only path to organizational learning. Inspirational posters adorn some corporate walls touting close cousins of the idea: "Embrace Failure!" "Failure Is Just the Opportunity to Begin Again!" "No Idea Is a Bad Idea!"

Let's please stop the madness.

Thomas Watson, Sr., one of IBM's founding fathers, famously said that "the fastest way to succeed is to double your failure rate." Watson's quote embodies an important truth that creating business innovations requires an element of risk taking and learning from potential (if not inevitable) mistakes.

But of late, companies seem to have taken this to an extreme. The idea has been applied so sloppily and with such abandon over time that it must be held responsible for a whole lot of wasted time and some truly awful ideas introduced into what is meant to be serious consideration of business opportunity.

An absence of success actually can hurt when there is real economic or reputational exposure: Stock prices take a hit, and boards tighten the screws on management to improve short-term performance.

A better system could be built entirely on the concept of Minimally Viable Moves. Organizations in the future will increasingly succeed or fail based on their ability to learn. But you can't learn if you aren't clear on your hypotheses regarding cause and effect in the world (i.e., if we make this move, we will cause this outcome).

In addition, you won't learn if you don't test your hypotheses in ways that don't consistently bet the company. And you need to make sure that the organization complies with this mode, so you need to punish those who don't behave consistently with the direction. Therefore, the key components of such a playbook would be,

- **Demand transparency and open logic from your organization**. The organization demands, assesses and rewards the logic behind all decisions rather than simply the result itself. The dynamic at play here is one of openness: If you are able to make your logic clear and open to challenge at every step along the way, then the collective system should be able to prevent failure by catching flawed logic.
- **Create a never-ending series of experiments**. Nothing really beats real-world tests for the ability to predict success in the real world. Yes, some things can be analyzed well, but in a world that is moving and changing quickly, increasingly the past doesn't predict the future. So the only way to know is to move.
- **Punish failure to comply**. In this world, failure will still exist, but big, unthinking failures will ideally not be tolerated except in very small doses and very occasionally. If we have created an ability to operate effectively with a system in which failure has been designed away, then it should in fact be punished when it occurs.

The good news is that increasingly — even exponentially — we will have tools at our disposal to monitor behavioral outcomes and to speed up the cycle time for course correction.

Embrace Impermanence

Org Charts and Career Paths Are Past Their Sell-By Date

The general pattern of organizational silos dictating work that gets done is not new, nor is it a secret. The problem is the presumption of permanence in organizations. If we create a role, we presume it will exist forever. Because the people in those roles benefit in some way from being in it, their natural inclination is to protect such roles. We may need a massively invasive restructuring to take groups of people out of roles that don't make sense anymore, which has the potential to be helpful but also creates new silos over time.

There's a better way. Organizations must embrace impermanence in how they design their organizations and undertake work. Focus on prevention rather than on a cure. Here are several ways to embrace impermanence:

Periodically shake up your organization. This could mean moving people around in leadership roles, creating new roles or undertaking a wholesale restructure. With frequent organizational shake-ups, no silo ever takes hold, so the underlying problem in the marketplace easily rises to the surface.

Resist career paths. Today, career paths are at best a false sense of security. Reorient your people around the concept that "great work is rewarded" with more responsibility. "And we don't know precisely what you'll be doing in 5 to 10 years, but if we're successful in delighting our customers, and you are successful in delighting your organizational customers, you'll have ample opportunity to be doing really cool stuff down the road."

Limit the size and scope of your internal organization. No organization is best at everything. Therefore, there is a limit to what you can ask of your organization without it becoming increasingly unwieldy with size. Think carefully about not letting yourself get too large. Undertake only those actions that are central to delighting your end customers. Assign adjacent actions to someone else outside the organization. This will allow your business to run efficiently and enable you to focus your precious team time on the things that matter.

PART III: BUILD SOMETHING BETTER

Where to Start

Pick Your Site to Apply the Detonate Mindset

We need to start blowing up some of our most sacred playbooks — but we don't need to challenge orthodoxy from corporate rooftops, declaring to all who will listen that the company is in dire danger. Such Chicken Little behavior, even when warranted, rarely gets the attention it deserves and often just breeds resentment that someone is disturbing the peace.

Instead, focus on a minimally viable move to get going, trusting that something good will come of it even though

you may not have the end game in mind. The questions are what, where and with whom.

Where: Focus on the core. Detonate is all about directly shifting the core from the inside; you can't blow up playbooks effectively and permanently from the periphery. Focus on a limited set of fundamental principles that — as demonstrated via small successes — gradually attract more adherents. Eventually, there will be enough momentum behind the movement to make it unstoppable.

What: Start with behavior. The most direct way to catalyze the Detonate journey is to start thinking about, talking about, planning around and taking action on human behavior in everything you do as an organization. Examples abound of companies that applied behavioral economics in the course of driving growth and change. Amazon Prime is perhaps one of the best known: A suite of features, from one-click ordering to guaranteed delivery and free media, radically reduced barriers to action and led to impressive results. The proportion of first-year Prime members who spend over $800 annually on Amazon is currently double those who are not subscribed.

With whom: It depends. The most important characteristic is someone who is willing to embrace change and is curious. This person might be young or old, a digital native or immigrant, but as long as they are willing to learn, they can be effective.

Implications for Leadership

Accelerate By Asking Better Questions

Jonathan Goodman, the Global Managing Partner of Monitor Deloitte, is fond of saying, "The most powerful tool executives have to drive change is their questions." Change the question, change the outcome.

Consider these especially egregious questions and how you can ask them better or ask different questions altogether.

What's the ROI on this? When people hear this question, their immediate stance becomes one of defending the investment rather than considering it. Hear this question enough, and you'll learn to come in armed with all the facts and data you can imagine to prove your position. A better way to capture the imprecision of forecasts and inherent volatility of possible outcomes is to ask, "What's a reasonable range of outcomes of our investment?" This explicitly acknowledges the fact that you can't know the precise outcome and gives the space for the responder to share detail that drives the investment.

Has anyone else in our industry done this before? This question is really asking, "Am I going to look crazy for doing this?" or "How hard is this going to be to get through the organization?" Those are legitimate concerns that the organization can address through company dynamics and culture, not through asking this question, which creates unnecessary and wasteful work. A better way to ask the question is, "Has this type of problem been solved anywhere else in the world?" You can create value in your industry by taking something that has been meaningfully proved elsewhere and figuring out a way to apply it to your problem.

How can we prove this will work? When you ask this question, your team invariably scrambles to create the illusion of proof, so you end up with mountains of slides filled with analysis, none of which really offer definitive proof. If you're looking for more information, simply ask, "How could we learn more about this?" This clarifies that you, too, are in exploratory mode, and it positions you as part of that journey. You're not throwing responsibility on team members to figure everything out.

You also acknowledge uncertainty and are placing the value on the information that informs the decision, not the decision just yet.

See beyond the constraints of best practices and start a conversation in your organization. If you're not the executive in charge, consider asking some probing questions of your executives.

If you are an executive, look around your organization for all the signs of ossification. And when you hear answers that sound like "this is the way we've always done it," zero in on those issues and demand better from your organization.

Let's light the fuse.

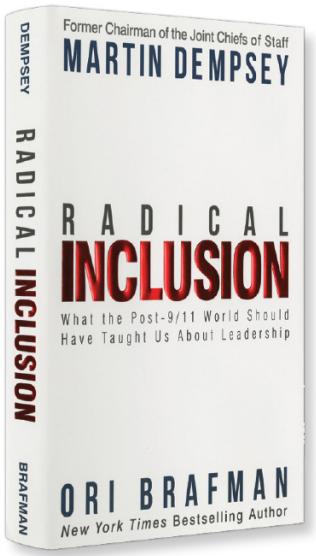
Leadership

Radical Inclusion

What the Post-9/11 World Should Have Taught Us About Leadership



by Martin Dempsey and Ori Brafman

THE SUMMARY IN BRIEF

In *Radical Inclusion,* authors Martin Dempsey and Ori Brafman show that today's leaders are competing for the trust and confidence of those they lead more than ever before. The nature of power is changing and should not be measured simply by degree of control.

In today's environment, the speed and accessibility of information create "digital echoes" that make facts vulnerable, eroding trust between leaders and followers. Fear of losing control in our fast-paced, complex, highly scrutinized environment is pushing us toward exclusion — exactly the wrong direction. Leaders should instead develop an instinct for inclusion. The word "radical" emphasizes the urgency of doing so.

Power and control once went hand in hand, but no longer. Control is seductive but unlikely to produce optimum, affordable, sustainable solutions. *Radical Inclusion* demonstrates that leaders must relinquish and share control to build and preserve power. Through examples from business, the government and the military, the authors bring to life key principles for adapting to the new leadership landscape.

IN THIS SUMMARY, YOU WILL LEARN:

- To understand "the digital echo."
- Why narratives are so influential in today's leadership environment.
- The six key leadership principles of radical inclusion.
- Three essential leadership instincts for those who practice radical inclusion.

THE COMPLETE SUMMARY: **RADICAL INCLUSION**

by Martin Dempsey and Ori Brafman

The author: Martin Dempsey served for 41 years in the U.S. Army, including as the Chief of Staff of the U.S. Army and the Chairman of the Joint Chiefs of Staff. In 2015, he was named one of the most influential leaders in the world by *Time* magazine. Ori Brafman is a researcher, entrepreneur and author of three *New York Times* best-sellers. Brafman's ideas on leadership have been implemented by the U.S. government, Google, Microsoft, Cisco and Intel, among others.

PART I: THE OPERATING ENVIRONMENT

The Digital Echo

People who have been to battle know that the most dangerous attacks don't announce their arrival. The most lethal attack is the one that catches us by surprise.

The military describes such blindness to impending attack as the "fog of war": the myriad things you may not know about your adversary — their location, numbers, capabilities and goals.

But think about this: What if the fog not only denied you access to the facts but actually convinced you of the validity of erroneous data? From a business perspective, imagine not merely being unsure about the num ber of your customers but being certain of an incorrect number. It's under this condition — of believing wrong information — that the most difficult issues emerge and take us by surprise.

There is always some fog present, and organizations try to diffuse it as best they can. Businesses analyze market trends to identify and outmaneuver the competition. But what if the information you see deceives rather than informs you?

Consider a recent hoax in which, with the aid of bots, the Twitterverse was convinced that a Louisiana chemical plant had gone up in flames — local news even reported on the fire. They eventually got the facts right when they sent a reporter to the scene, but what happens when local news gets replaced by distributed networks? In other words, what will happen when anyone can produce a news story? In a case like this false fire, social media might have two versions of the same story. One would say there was no fire — showing a video of the unburned site — and then there would be another narrative, with photos purporting to show the explosion and its victims.

It's not always accurate to call instances like these "fake news." They can occur without any intentional deception. An inaccurate news story — even an accidentally inaccurate one — creates a "digital echo," and though the original source may be corrected, the echo — reverberating across distributed networks — endures forever.

In a world where verifying facts is becoming increasingly difficult, inclusion is imperative. It gives us sources as close to the ground or the action as possible, providing our best chance of getting at the truth. When we are forced to compete in a battle of narratives, inclusion is still our best weapon: Only by leveraging a diversity of voices can we create a winning narrative.

The Power of Narrative

How many times during your personal or professional life have you been on the right side of an argument but been unable to convince others around you? How many teams have you been a part of that felt excluded from the overall organization?

Narratives are having greater and greater impact in industries and on the world political stage alike. The world is moving from debates about facts to battles of narratives.

Facts are by definition grounded in logic. Narratives, however, are based on emotions. Facts need to be verified in order to have utility. But narratives gain power merely by spreading. Unlike facts, no one expects narratives to be exacting. They are derivatives of the truth, not pure versions of it. Thus, they're allowed to be more flexible and agile, because they spread by being

interesting, not necessarily by being accurate. They don't have to be scientifically on point; they just need to have a compelling plot.

This brings us to the core of the issue. Facts depend on expert validation to persist, while narratives simply need to be retold. That means that you can't win a narrative battle by simply proving that the opposing narrative is in some way inaccurate. *A narrative battle is won by drowning out the countermessage.*

The Boston Marathon Bombings

Exactly two years after the Boston Marathon bombings, a meeting was held at Harvard Business School where senior White House officials, entrepreneurs, members of the Islamic community, media strategists and policy experts were invited to discuss how we might prevent an attack like the one in Boston from happening again.

The group began by trying to understand how the Tsarnaev brothers were recruited to commit the terror acts in the first place. They weren't part of a formal organization that gave them commands, nor were they even members of an underground network that hatched a September 11–style attack. The terror networks had turned to technology and to narratives to stay alive.

Terror group members were posting their content online and hoping for the best. In the past several years, more and more videos had been posted. And remember: top-ranked videos are by definition compelling and easy to mutate or regenerate. The narrative continued to mutate until the Tsarnaev brothers learned from that content and committed their act of terror. In a very real way, the narrative had *become* the organization.

The Harvard group recognized that you couldn't contain the narratives through conventional means. Eliminating them from one social media site was like playing Whack-a-Mole, as videos would pop up on another site almost instantaneously. Trying to debunk the message (and win the debate) only gave the videos more attention.

We now need to start considering videos and other narrative-building content as their own entities. Online videos make it easy to belong, to feel an affiliation with a story, especially a memorable one. Lacking resources, the weaker player will often resort to fighting a narrative battle because — unlike court cases or massive protests — producing a story is cheap and easy. Instead of relying on centralized distribution channels, video stories are easily disseminated among members of a network and beyond.

The realization that narratives have become a new type of organization sheds light on how governments and businesses alike can react to a market force that demands inclusion. For companies wanting to effectively engage in a battle of narratives, inclusion is becoming the new way of being heard.

PART II: HARNESSING THE POWER OF INCLUSION

The Economics of Inclusion

Participation, Personalization and Purpose

If you're able to give a marginalized community (be it a group of voters, the employees of a company or a segment of social media users) a chance to participate, to personalize content and to do so toward a common purpose, you can tap into an underutilized resource that can be harnessed very effectively using fewer resources.

Consider these three central points: First, not including — exerting control — comes at an economic cost, one that is increasingly difficult to bear and harder still to justify.

Second, the way to thrive in the age of the digital echo is to bring a cause to a preexisting community. That is, rather than trying to build a community around a specific idea or belief, identify existing communities with whom the cause will likely resonate.

Third, and most important, although much has been written about diversity and the importance of inviting more people — and more voices — to the table, many have been viewing inclusion through the wrong lens. Inclusion isn't necessarily the opposite of exclusion. Real inclusion isn't about letting just anyone in; it's about understanding the pillars of participation, personalization and purpose.

Participation. We often think of inclusion as simply the act of not excluding, of not barring anyone. We thus associate inclusion with, basically, letting anyone in the door. The kind of inclusion referred to here isn't necessarily about admission; it's about participation. The people in your organization need not be a part of every meeting, but are you enabling them to participate in furthering the organization's overall goals?

Personalization: Humanizing the How. Whether you're communicating with customers or managing employees, you can rely on inclusion to humanize your message and deliver it more effectively. Inclusion is about concentrating the *what* (i.e., the directive, the goal) and distributing the *how*.

Purpose: Bringing the Cause to the Community. Traditional efforts to mobilize groups of people follow the assumption that once you've identified a worthy cause

(whatever it may be), you must then build a community around it. The problem with this approach is that it's hugely time consuming, and every new cause requires a new supporting community to be built from the ground up.

But what if we flip this notion and bring a cause to a preexisting community? Then the cause becomes the *what* and the community, already vibrant and thriving, rallies around to determine the *how.*

The Power of Belonging

Since the 1940s, a sense of belonging has been recognized as a human psychological need and one of the major sources for human motivation. It's important to us; whether we're conscious of it or not, a sense of belonging keeps us healthy and happy.

Belongingness developed to serve an evolutionary need: those who formed mutual attachments to others enjoyed the safety of numbers and were less likely to wander off alone into danger. As social beings, we protected one another, shared resources and collaborated to gain advantages over other species.

Though deeply rooted in basic survival in a very different world, the need to belong hasn't faded over time. Today and millennia ago, belongingness consists of the combination of a sense of identity (how we distinguish ourselves from others), a sense of security (the opposite of powerlessness) and a sense of order (structure and predictability).

In the past, our sense of belonging was rigidly defined in terms of traditional markers of social identity: our families, close friendships, lifestyle choices, nationalities, professional identities and hobbies.

Today, for the first time in human history, via the Internet, people are able to create their own geographically dispersed belonging categories. We can seek and find groups whose members could be anywhere across the globe. Simply by participating in a social media network, an individual has the ability to start a movement, become a leader and gain a following.

Studies have demonstrated that the Internet environment is very supportive of friendships, romances, volunteerism, fund-raising and every variety of support group an individual might seek out. Yet research has shown that compared with traditional group behavior, people engage in aversive social behavior in the digital world extremely easily.

Research also suggests that in online groups, individuals feel stronger attachment to the group's identity than to their own personal identities; in fact, personal identity is all but erased due to the lack of nonverbal cues highlighting individual differences. This makes for an extremely cohesive in-group: one that suppresses individuality and magnifies the differences between the in-group and outsiders. There are obvious implications for online communities espousing extremist views of any stripe.

The human desire to belong holds a key to understanding how to lead in our current environment. In a world where people are not readily feeling as if they belong to a positive cause, and where everyone has the ability to belong to something, we need to help our team members make good decisions regarding the efforts with which they choose to identify. We as leaders must create real and authentic ways for our subordinates to feel that they are a part of something meaningful.

PART III: THE INCLUSIVE LEADER

Belonging Isn't Optional

Leadership Principle #1: Give Them Memories

If people don't feel like they belong to your group, department, company or corporation, they easily can and probably will find something else to believe in and belong to. The most important responsibility of leaders — no matter how busy they are and how many other priorities demand their attention — is to make their people feel like they belong.

Opportunities to make our followers feel they belong are all around us, opportunities to "give them memories" so that they know we care about them by investing in them our scarcest resource: time. Leaders have to develop an instinct for communicating a sense of belonging to their followers and then be alert for opportunities to do so. A private word in the hallway. A compliment at a meeting. The willingness to listen for just a few minutes beyond our usual attention span. Producing memories of success, memories of failure, reinforcing a feeling of commitment and belonging. Give them memories, or someone else will.

"Give them memories" is the ongoing practice of providing your subordinates with meaningful experiences from which they will learn and that they will carry with them into the future.

The kinds of experiences a leader should provide include the following:

Successes: Every team member should have memories of what success looks like. How the team

accomplished its goal. How the individual himself contributed to that goal. And what it felt like to contribute to the success of the organization.

Failures: Everyone should also have memories of what failure looks like. What the team did wrong or what it could have done better to achieve the goal. What effect the failure had on the overall goals of the organization. And the feelings one must manage in the face of failure.

Being cared for: At the core of belonging are a sense of purpose and a sense of safety. When we show our followers that we care about them as individuals and as contributors to our teams, we reinforce the strength of their sense of belonging to the organization.

What right looks like: Leaders need to provide their team members with opportunities to learn how to decide what is the right thing to do and carry out those actions, even when doing so is the more difficult route.

What wrong looks like: Mistakes are bound to happen, and these are often the best learning opportunities.

Memories help to inspire and nurture in each individual a genuine commitment to follow the leader in his or her mission to serve the purpose of the organization.

Connect Effort With Meaning

Leadership Principle #2: Make It Matter

The movie *Saving Private Ryan* takes place during the initial days of the Normandy invasion in June 1944. It is a tale of unimaginable courage and leadership under the harshest of conditions.

A schoolteacher before being drafted, Captain John Miller and nine of his men survive the horrors of the landing on Omaha Beach and are sent to find Private Ryan, a soldier who has landed behind enemy lines with the 101st Air Assault Division and the sole surviving son of a mother who has just lost her other three sons in combat within days of each other.

There is a powerful scene at the end of *Saving Private Ryan* in which Captain John Miller, dying of his wounds and having lost eight of his nine men on the mission to find Private Ryan, whispers to Private Ryan, "Earn this!" Captain Miller is telling Private Ryan to make their sacrifices matter.

We all want to believe that what we do matters. That's true whether we're reflecting on our personal life or on our life in the workplace. One of a leader's responsibilities is to make sense of things for their followers. As "sense makers," leaders help those around them understand how their contributions fit into the organization's accomplishments. They help them appreciate how they matter. The best leaders do this deliberately and the very best do it often.

The ways leaders can "make it matter" include

Define and allow others to understand who you are. Leaders at every level must understand who they are individually and within the larger vision of the organization. The knowledge of where you fit in the organization gives you strength, aligns your values and encourages you to lead. The drive, passion and energy you feel should be worn on your sleeve each day to model desirable behavior and as evidence of how one's individual purpose can coexist with the overall vision of the organization.

Make each individual feel that they have the potential to be a better person. By allowing your subordinates room to grow and fostering collaboration among team members, you encourage the entire team to use their work as a vehicle to the benefit of themselves and the organization.

Make sense of things for the team. It is the leader's responsibility to instruct, to coach, to hold accountable and, importantly, to "make sense" of what's going on around the team as it seeks to accomplish its goals. Only when the leader shares knowledge can individuals within the organization understand where they fit.

Think About What You're Not Thinking About

Leadership Principle #3: Learn to Imagine

In team sports, what most often sets elite athletes apart is the ability to use their imagination in creating opportunities for themselves and for their teammates. Legendary hockey player Wayne Gretzky once attributed his great success to "skating to where the puck is going, not to where it has been."

Imagination is a learned attribute. It's some combination of training, experience and eventually instinct that produces creativity in complex environments at the speed of teamwork.

Leaders can learn to imagine if they place the emphasis on "learn."

- If they learn to listen and to seek to know what the most junior member of their team knows.
- If they learn to be alert for weak signals and to avoid becoming complacent, satisfied with information affirming their beliefs.
- If they learn to find advisers who will challenge them, encourage them, surprise them.

- If they learn to connect disparate thoughts and to become uncommonly articulate.
- If they learn to challenge assumptions and to ask the right questions.
- If they learn to become comfortable with complexity and wary of simplicity.

If you're a leader, you will need to exercise your imagination on behalf of your team. But learn first, and then you'll be able to imagine. Just like an elite athlete.

We as leaders must accept and understand that the environment in which we find ourselves leading today is constantly and rapidly changing, and the information we receive is affected by the digital echo. And this has a number of implications for how we run our organizations.

It means that what worked for us before may not work for us now, that the procedures manual on which we relied in the past cannot possibly cover all the issues we will face in the new environment. Our roles as leaders are continually increasing in complexity as the challenges we face become vaster and more diverse.

Instead of executing tasks as experts in our fields, we will be asked to solve problems that we may feel only somewhat able to handle. We will be responsible for carrying out tasks and completing missions for which we have no experience whatsoever, and with a lot at stake.

The solution is that when faced with any task, whether routine or extreme crisis, we must first imagine the possibilities, or "learn to imagine," in order to determine exactly what our team's goal should be in order to solve the problem.

As leaders we must avoid assuming that the first answer is the best answer. We cannot blindly follow existing procedures simply because they have worked in the past. Our environment is changing too quickly, and our challenges are becoming too complex.

Prevent Decision Paralysis

Leadership Principle #4: Develop a Bias for Action

As a leader in today's environment, you may not find yourself responsible for the outcome of an ongoing evolutionary contest, but you will find yourself responsible for the outcome of a contest for the success, the trust and the confidence of those who follow you in an ever-evolving, ever-changing environment.

And to prevail in that contest, you need to develop a bias for action. A bias for action is a leadership instinct based on the belief that in order to decide, you must learn, and in order to learn, you must alter the status quo.

A bias for action is a leadership instinct that mitigates decision paralysis and helps you avoid the endless pursuit of that one exquisite piece of information that seems to be all that stands between you and clarity.

A bias for action is the recognition that, in our complex world, learning is active and iterative. We act, we assess and we act again. A bias for action is the recognition that facts are vulnerable and that speed matters in the era of digital echoes. A bias for action won't solve all of your leadership challenges, but it will energize your organization, keep you alert to both vulnerabilities and opportunities, and illuminate the often-hidden cost of inaction.

The military has a saying: "Lead, follow or get out of the way." That's a bias for action.

In a well-known anecdote about Albert Einstein, he is quoted as saying that if he had 60 minutes to save the world, he would spend 55 of those minutes understanding the problem and five minutes fixing it. Many past leadership theories have echoed Einstein, encouraging leaders to carefully analyze problems before taking action.

Contemporary leadership theories, however, must understand the changing nature of time and how it affects us as leaders and the decisions we make in our organizations. Leaders cannot allow themselves to become paralyzed by a search for the perfect answer while information flows and technology updates at ever-increasing speeds.

Leaders are now facing scenarios that require action in the moment, before significant changes can occur in the environment and before we can possibly fully analyze the problem. The longer we take to respond to catalysts, the more our environment adapts, and the less we understand about the issue and how to solve it. So we must act quickly but intelligently.

To interact with the new environment, we need to change and evolve along with it. We need to act based on the information we have, not remain immobile waiting for "better" options to emerge.

Actively engaging with issues to influence their outcomes early, before they evolve in ways that may prove even more counter to our interests, is paramount. We need a bias for action not only to be decisive in our reactions to catalysts but also as part of our overall strategy in building and sustaining our power. Without it, companies and countries alike will simply be outpaced.

Collaborate at Every Level of the Organization

Leadership Principle #5: Co-Create Context

Decisions are always made in some context. As a result, they produce second- and sometimes even third-order effects that inevitably affect future decisions. So gaining the best possible understanding of context before making decisions produces better decisions.

For example, military commanders in Iraq and Afghanistan quickly learned that destroying infrastructure used by enemy forces might make perfect sense militarily, but in that environment and in that kind of conflict the adverse effect on local civilians could be detrimental to the long-term objective of gaining their support and ending the campaign. The decision to destroy buildings, bridges and markets or leave them intact depended on an appreciation of context.

An understanding of context is best achieved when there is collaboration at every level of the organization. This is called the "co-creation of context," to make the point that it is everyone's responsibility and to highlight — again — that speed matters in the era of digital echoes.

Typically, senior leaders gain an understanding of context by "pulling" it from within their organizations. In the military, senior leaders publish "priority information requirements" (PIR), which tell subordinates what these leaders want to know.

But we would be more effective as leaders if individuals within the organization were organized and encouraged to tell us not just what we say we want to know but also what they think we need to know.

In discovering options, the best ideas do not always come from the top of the organization; in fact, it is often the team members on the front line who have the most creative solutions — which may turn out to be the ones that save us. Our challenge as leaders is to empower the entire organization to take part in understanding the problem the team is facing and to encourage individuals at all levels to suggest potential ways to reach our desired outcomes.

Expand the Circle

Leadership Principle #6: Relinquish Control to Build and Sustain Power

The era of digital echoes requires leaders to develop an instinct for inclusion, an uncommon commitment to reach beyond collaboration all the way to trust, and a willingness to purposefully relinquish control to preserve power.

In these times, we can choose to see the world as a perpetually competitive arena where interactions result in winner-take-all outcomes, or we can see the world as an increasingly and inevitably collaborative space where common benefits accrue through common costs.

Rather than attempting to dominate, leaders instead should learn to relinquish control. Instead of grasping at the control we may feel slipping through our fingers, we should embrace the changing nature of power. We should allow control to flow out of our hands and into the capable, trained hands of the members of our organizations.

Without power, we cannot expect to lead. But leaders often exert control when it is not needed and at a cost that is not justified. In this new environment, concentrations of power cannot endure. While power remains necessary for effective leadership, the path to sustainable power is no longer through control. Real power is measured not in degree of control but rather in the ability to find optimum, affordable, enduring solutions to complex problems. In these times of complexity, speed and scrutiny, the best solutions, the most affordable solutions, the most enduring solutions will be the product of inclusion.

The energy sector provides a good example. For most of the last century, the energy sector has enjoyed a relative monopoly. However, that monopoly is rapidly eroding. Nineteen states have adopted competitive energy markets, and the other 31 are in various stages of reforming their regulatory structures.

Jim Rogers, former CEO and president of America's largest energy company, Duke Energy, describes the changing energy environment as "the democratization of electricity." Customers are increasingly going off the gas and electric grid in favor of renewable energy.

Jim also describes an industry where there have been few positive interactions with customers. "Everyone," he says, "knows the cost of a gallon of gas. No one knows the cost of a kilowatt-hour of electricity." The result is suspicion, mistrust and an adversarial relationship with customers, who have felt imprisoned by a lack of choice in energy providers.

Together these factors have made the cost of maintaining control of the traditional natural gas and electric utilities prohibitively high. Jim's answer: Utilities need to take on the task of designing customer experience with energy. To preserve their power — their market share and influence — they must relinquish some control to renewables and to their customers.

In his vision statement for National Grid, titled "The Democratization of Energy," president Dean Seavers reflects on the tremendous change facing his industry and outlines three imperatives for managing that change: "First, we must put customers in charge. Second, we must embrace our technology partners. Last, yet most important, we must change how we regulate and finance the industry."

What do Jim, Dean and most in the energy sector understand? That they must act now, that they must co-create the context in which energy decisions will be made with numerous — and even some unlikely — partners, and that they must relinquish control to create an optimum, enduring and sustainable outcome.

The Leadership Instincts: Listen, Amplify, Include

There are three attributes that are essential in a leader. They interact in this way:

Listen to learn. Listen to make it clear to those who follow that you value their insights, their judgments and their advice. Listen to understand the organization and to become mindful of opportunities and vulnerabilities. Listen because it is most often "weak signals" that portend success or failure.

Amplify to establish expectations. Amplify the best ideas, the best recommendations, the best practices, and do so in a manner that encourages teamwork at every level of the organization. Amplify the organization's values to strengthen the inner voice that reminds us what's right, a voice that can sometimes be drowned out by digital echoes. Amplify because the best leaders establish a drumbeat of emphasis on values within their organization. Amplify because everyone benefits when there is a common vocabulary about what's expected of them.

Include to empower. Go wide and deep in including members of the organization to share knowledge, to create a common understanding of problems and to encourage ownership of solutions. Include to inspire loyalty. Include as the first step in developing a climate of trust. Include because if you don't, who will?

Leaders must understand that the instinct to listen is an art, a skill and a system that must be employed in order to build a team ethos, embrace a bias for action and relinquish control.

Opportunities to listen are all around us: personal interactions, structured and unstructured meetings, walking the halls, social media, town hall meetings, conversations in the elevator. Everywhere and anywhere are opportunities to listen.

By amplifying the successful ideas and solutions created by members of our teams, leaders show how relinquishing control, empowering the team and listening benefit the organization as a whole. They advance the mission of the organization by making positive examples of the kinds of ideas and actions that achieve results necessary for optimum, enduring and sustainable success.

When a leader amplifies the successes of the members of his organization at all levels of responsibility, it is not only a "pat on the back" for the individual whose success is amplified. It's a memory, and it's one that matters. It has helped to reinforce a sense of belonging and demonstrate the leader's willingness to relinquish control.

All of these principles and instincts are what this new leadership theory deems necessary for companies and countries to thrive in the new environment. Through constant reinforcement of these principles and ongoing development of these instincts, leaders can develop teams and organizations that will build and sustain their power not through control but by radical inclusion.

For those who aspire to lead, the future is rich with opportunity. Issues will continue to become more complex, mutate more rapidly and draw more scrutiny. Technology will provide more data and more accessibility. Leading will be exciting, and it will be dynamic.

It will also be harder: harder in an environment that can produce paralyzing choices, ubiquitous distractions and dramatic polarization. Inclusion is harder and can be slower, but it is a necessary precondition for achieving effective, efficient and enduring solutions to complex problems.

It's about persistent learning, shared ownership of decisions and deeper commitment to the implementation of those decisions. It's about developing trust by listening, amplifying and including.

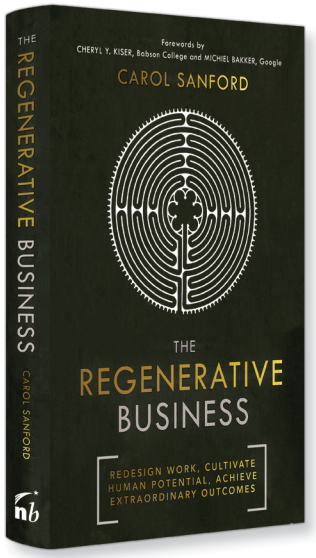
Leadership

The Regenerative Business

Redesign Work, Cultivate Human Potential, Achieve Extraordinary Outcomes



by Carol Sanford

THE SUMMARY IN BRIEF

Through a profoundly contrarian paradigm, Carol Sanford shows leaders why today's so-called business "best practices" undermine success — and then, how to transform a business into something so flexible, so innovative, so developmental, it becomes virtually nondisplaceable in the market.

A regenerative business is one that connects every one of its people to its "essential core" — its unique foundation for innovation and market power. This provides the fulcrum for an organizational culture that embraces the internal destabilization and discomfort that comes with responding creatively to the unfamiliar. The payoff is a motivated and innovative workforce that is prepared to take a business to the top of its industry — and stay there.

Sanford's work focuses on what fundamentally fuels an organization: the capacity and capabilities of the people within it and the design of work to empower them. By implementing this all-encompassing way of working, businesses are able to have a positive impact beyond the bottom line to the broader marketplace and the communities in which they operate.

IN THIS SUMMARY, YOU WILL LEARN:

- How to make your business flexible, innovative and developmental.
- How to build a motivated and innovative workforce.
- How to take your business to the top of its industry.
- How to design new and better ways of working.

THE COMPLETE SUMMARY: **THE REGENERATIVE BUSINESS**

by Carol Sanford

The author: Carol Sanford's work is deeply rooted in the belief that people can grow and develop beyond what their leaders or anyone believes is possible: to be incredibly entrepreneurial, innovative and responsible in their business and personal actions. For 40 years, she has worked with leaders of successful companies, such as Google, DuPont, Intel, P&G and Seventh Generation, helping them to innovate and grow their business by growing their people. Carol is currently the Executive in Residence and Senior Fellow in Social Innovation at Babson College.

Introduction: Pursue Disruptive Innovation

When it's done well, disruptive innovation has the power to regenerate whole industries and markets. Beyond this, it also has the potential to regenerate the social and ecological systems within which an industry operates.

The potential for disruptive innovation exists in every aspect of business, not just its offerings. It is possible and important to innovate with regard to management, production, distribution, customer relations, marketing, supply system, investment and at least a hundred other arenas. *Regeneration* is a process by which people, institutions and materials evolve the capacity to fulfill their inherent potential in a world that is constantly changing around them.

The Regenerative Mindset

In practice, there are some real and not-so-obvious challenges built into creating regenerative organizations. The single greatest barrier to innovation is our unconscious attachment to comfortable and habitual patterns of thought — that is, to our mindsets. We can develop the ability to choose and evolve our mindsets.

A mindset is a lens through which we view and make sense of the world. In business, the regenerative mindset is actually quite rare. Yet the capacity for disruptive innovation depends on the ability to see the world through precisely this lens. To create and continue to evolve a world-changing business, the regenerative mindset must be intentionally built in, not unconsciously designed out.

Go Beyond Training and Develop Your People

Automation and artificial intelligence are expected to displace 50 percent of what's left of blue-collar jobs in the U.S. by the end of this decade. At the same time, there is a global shortage of workers with the critical-thinking skills, technical agility, motivation and independence needed by the emerging economy. What is urgently needed now is an approach to work design that educates workers to be successful in the 21st century.

A number of businesses and the consultants who serve them have worked hard to create flat organizations with self-directed employees. But, unfortunately, many of these alternative structures are still based on the old belief about motivation — namely, that it is fostered through a system of rewards and punishments. Also, many of them focus on the development of technical skills rather than on the deep work of growing critical thinking, personal mastery and business acumen.

By tapping into the inherent, self-organizing, creative energies of your workforce, you will improve margins, cash flow and earnings. As an added bonus, you will contribute to making better lives for the people your business affects and more enduring democratic institutions for society as a whole.

The Evolution of Work Design

Work design is the key to developing people who have the ability to create a regenerative business. If a business

wants to differentiate itself and not do the same things in the same way that everyone else is doing them, it needs to give conscious attention to how it's working and what it's working on.

The regenerative approach to work design begins from the recognition that human beings share certain fundamental characteristics:

- They have an innate desire to grow and improve.
- They are social and benefit from opportunities to engage with and learn from one another.
- They derive a sense of meaning and purpose from contributing to something larger than themselves.

A regenerative business elicits and strengthens all three of these characteristics in its employees and builds them into the core of its operations.

Three Approaches to Work Design

Initially, work design focused on *performance improvement*, or how well a business and all of its people were performing with regard to serving its customers. It has since become apparent that when performance is the primary concern, the scope of design tends to be narrow, limited mostly to efficient functioning.

The beginning of the second half of the 20th century saw the emergence of a new focus on *human growth*. This grew out of the human potential movement, cognitive psychology and breakthroughs in neuroscience. The scope of work design expanded to include the facilitation of people's ability to work together as part of creative, self-directing teams.

Parallel to the development of this approach, a third stream of thinking explored the implications of theories of complex living systems for work design. This approach made *systems regeneration* its primary concern and considerably broadened the focus of work design to include the improvement of all of the multiple, overlapping socioecological systems that a business is a part of. This provided the basis for building regenerative businesses.

Each of these approaches — representing three historical eras in the evolution of work design — can be found in the business world today.

The Case for Regenerative Work Design

The emerging business environment of the 21st century demands that businesses be nimble, resilient and — above all — innovative. They will require intelligent and adaptable workforces that are capable of anticipating and responding to evolutions in markets long before they become generally apparent. Without this intelligence and adaptability, more than 60 percent of businesses worldwide are expected to fail within the next two decades.

Not surprisingly, executives are focused on how to build these qualities into their companies. They tend to focus on six pressing issues that are the main drivers of change for business at this time. Fortunately, all of these issues can be addressed through a regenerative approach to work design.

How can I hire and retain top talent? A regenerative organization focuses on developing its talent rather than buying it. Instead of wasting energy chasing a limited pool of talent, a regenerative organization grows talent in everyone it touches.

How do we become a "best place to work"? In a regenerative business, the work design, itself, rather than the amenities or human resource programs, motivates people to become part of the organization and to take on more and more challenging work because they feel themselves to be part of a future that they want to help create.

How can I make my company an innovation powerhouse? A regenerative organization sees innovation as the responsibility of everyone, not the province of a specialized team. As part of the work design, each individual commits to making an extraordinary contribution and is given the support needed to carry through on that promise.

How do we build the resilience to weather wild fluctuation in our markets? For a regenerative business, financial effectiveness comes from effectively managing both top-line growth and bottom-line returns. The aim of regenerative work design is to shift a business's orientation away from selling more of the same product to more new customers to becoming the industry leader in product and service development for a loyal, growing customer base.

How do we deal with ever-increasing complexity? By design, a regenerative business sees through the chaos to the patterns that will allow a system to evolve and designs its work to respond to the opportunities that are revealed. Rather than creating jobs, a regenerative business creates space for reinvention.

How can I make my company a healthy place to work? Research shows that people experience health and well-being at work when they have a sense that they are making life better for customers and other stakeholders. Because a regenerative business has a systems-actualizing orientation, it creates the conditions for workers to innovate with regard to how their work is going to benefit people and systems outside of the business.

Source Work Design from First Principles

Three criteria work on growing human capacity, enabling people to take the kind of risk that produces strong businesses (and, by extension, strong individuals, families and democracies).

Criterion One: Internal Locus of Control. *Locus of control* refers to a belief about where power lies with regard to the events in people's lives. An *internal* locus of control arises when people understand that they have full responsibility for their actions, how they experience the world, and the outcomes they produce for themselves and others.

Criterion Two: External Considering. This means caring deeply about something or someone in addition to ourselves, a concept developed by Armenian philosopher G.I. Gurdjieff as a way to counter the nearly universal human tendency to be narrowly self-referential. External considering requires understanding that what we care about is whole and alive, with its own purposes and potential, and it demands the reflective capability to understand how our actions contribute to or diminish this potential.

Criterion Three: Personal Agency. This refers to the strong inner urge that people have to be active players in the world, taking responsibility for manifesting the effects they want to create. Personal agency is important to businesses because they need people who are able to take appropriate initiative. A workforce made up of people who can see what needs to be done and who will step up to do it is far more powerful than a workforce that depends on delegation to know what to do.

Using these criteria, it is possible to test the regenerative potential of any work design. For a business or any other organization to work in a coherent and systemic way, all three must be present and rigorously cultivated.

Build Innovation into How Work Is Done

Most organizations know that to engage in real, disruptive innovation, they need great, creative people. They also understand that they must provide the conditions within which these people will flourish. In addition to a vibrant culture, they must design work in such a way that it invites and even compels innovation. A regenerative organization establishes the conditions that will grow creativity across the entire organization.

The right conditions can radically expand what people consider possible while nurturing a compelling desire in them to be part of it. Three design criteria focus on these fundamental conditions.

Criterion One: Initiative Activation. *Initiative activation* is a structured means for drawing out the inherent human tendency for personal agency, bringing it into the business and its endeavors. Most businesses spend people's initiative on proscribed activities that have been delegated by someone higher up in a hierarchy or dictated by the organization's track record. This severely limits the potential for true innovation. Organizations have an obligation to foster creative initiative.

Criterion Two: Developmental Infrastructure. Businesses can create a *developmental infrastructure* that enables the establishment and evolution of a regenerative culture by setting up a pattern of recurring processes to support the individual and collective development of all workers. The key to working developmentally is to recognize that all members of an organization are unique. If their creative energies are to be effectively unleashed, then businesses must ensure that this uniqueness is drawn out, realized and amplified.

Criterion Three: Change Accelerator. A *change accelerator* is an approach to change that connects people's motivations to the meaningful effects they could have in the world. Most businesses, instead, work only on internal changes that have to do with how they operate. They try to redirect people's attention and energy through incentives, and those who receive rewards for adopting new behaviors become role models for the rest.

These three criteria are specifically designed to enable businesses to provide focus, organization and order to the initiatives of their members, so that their creative energy gains coherence and trust.

Eliminate Toxic Business Practices

As we move through different stages of our lives, we are shaped (often unconsciously) by our family and social environments, our cultures, and the character of our times. These social forces frame how we interpret our experiences, and they also affect the decisions and choices we make. Unless we expend real effort, we can be completely blind to the impact of social forces and the habitual patterns of thinking and behavior they reinforce. Businesses are just as susceptible to this accretion of unconscious influences handed down from one era and generation to the next.

To become regenerative, an organization must engage in a process of self-examination in order to recognize and root out self-destructive practices that might otherwise prevent the company from pursuing its potential.

A regenerative approach is systemic and based on a coherent worldview or paradigm. It can't be bolted onto an existing work design that was built out of toxic practices and derived from antiquated paradigms. Why would you want to drag the old destructive patterns into the different future you are trying to create? You might be able to achieve a few improvements here and there, but the transformational benefits of a regenerative work design would be lost. You need to clear the decks of old, toxic practices and the mindsets from which they arose.

Design a Developmental Organization

There's a myth out there that people naturally hate and fear change. It's simply not true. What people hate is the sense that change is inflicted on them — that they are victims of circumstance and have no ability to participate in shaping the future that they are being dragged into. Even when the reasons for the change effort are excellent, an external approach triggers a natural and completely appropriate resistance from those on whom it is imposed.

Real change arises from the desire and agency of individuals who see an audacious possibility on their horizon and are willing to try almost anything to make it happen.

Developing Whole Human Beings

There are three critical learning principles that are necessary guides for the kind of human development program that regenerative work systems are based on.

First, human development comes through education rather than instruction. That is, it needs to be designed to draw people out rather than cram things into their brains — to build their critical-thinking skills rather than spoon feed them content.

Second, when people come to an educational session, they need to be working on real business endeavors with their natural working team so that together they can implement what they've learned and planned immediately upon leaving the room.

Third, the development of people is directly tied to their ability to make a difference in the lives of customers, those individuals and communities that a business exists to serve.

Whether for individuals or institutions, transformational change takes strong effort. The almost overwhelming tendency to slip back into habitual ruts and well-worn ways of working competes in people's minds with the initial motivation to change. Thus, all those who are evolving regenerative organizations need to accept that profound change requires growth through time as they pass through subsequent phases of development.

Phase One: Evolve into Strategic Disruption

The purpose of the first phase of regenerative work design is to destabilize an organization by introducing a provocation that causes people to think from radically new perspectives. This is called a *conscious shock* for two reasons. It's *conscious* because it invites people to remember the origins and purpose of their work and to discover meaningful new ways to express these in the world. It's a *shock* because it also makes people aware of how conditioned the organization has become, how mechanically reactive it is to outside forces and how easily it loses connection to its authenticity.

A successfully applied conscious shock challenges familiar routines and shakes people out of their comfort zones. Yet it does this without introducing any sense of threat to their identity or position. Rather, it connects them to the essence of who they are, as individuals and as a company, and to the essence of their customers.

The Core Team

It takes time to introduce a conscious shock across an entire organization. In practical terms, a business leader makes this possible by setting up a *core team,* whose purpose is to grow the business. The first step of the core team's work is to dismantle the tradition of hierarchical decision-making.

The core team is chartered to learn how to think systemically and strategically and to channel this new knowledge directly into transformational change. They are not representatives; they are not elected, and they are not expected to represent the opinions of a particular group. Rather, they are expected to use their diverse perspectives to generate understanding about how each aspect of the business influences and participates in the strategic direction of the whole.

The first and most important task of the core team is to help the entire company shift the way it thinks about who it is in relationship to its customers. This requires upending conventional practices of market research, which deliver *knowledge* about customers but very little *understanding* of what it's like to live their lives. Market data

can shed light on various aspects of customers behaviors or preferences, but it doesn't help businesses see the customers as a whole.

This same caring for the customers can be awakened in others, and it is one of the core team's primary responsibilities to invite their coworkers to join them in becoming curious about their customers' lives.

This shift in orientation from static to dynamic produces a risk-taking culture and develops workers with the agency to be self-directing rather than dependent on direction from above.

Phase Two: Evolve a Courageous Culture

To make real change in an organization, it is necessary to change its culture. And if we want to create a new culture, we need to change the ways we work — in every activity, every day.

Characteristics of a Regenerative Culture

Imperturbability in the Face of Uncertainty. A regenerative business wholeheartedly embraces the reality of a changing market and world. Because it strives to innovate in ways that will anticipate and define these changes, it is inevitably venturing into the unknown.

Purposefulness Beyond Reproach. Purpose is not something that people have; it is something that people serve. In other words, it is the opposite of self-aggrandizement; it always comes from the benefits people deliver to something other than themselves. In a regenerative business context, these benefits need to ripple out so that customers are better able to serve their own larger purposes (for example, the intention to be a good parent, citizen or business person).

Developmental Means. In a regenerative business culture, change leaders see their colleagues and employees as individuals with potential that can be developed rather than as problems to be solved or managed. These leaders learn to see the new capabilities that people will need to grow if they are to fulfill their potential, and they devote their energies and talents to ensuring that opportunities are provided for this development to occur.

Regenerative Thinking. Regenerative thinking is a rigorous discipline. It demands that people concentrate as they seek to understand what is at the core of how something works. Regenerative thinking also demands that workers be present and creative — generating new thoughts rather than recycling thoughts that they've had before. Unlearning nonregenerative habits of thought takes effort and patience, which is why it is so helpful to have a regenerative culture to support employees in their development.

Unifying Strategy. When people have a shared focus, they gain confidence in their ability to stay on the same path, even as they are pursuing diverse initiatives. This encourages self-direction in decision-making and action taking. It also helps eliminate fragmentation of focus because it links every aspect of work back to a single origin.

Self-to-Self Relationships. Thinking together, which grows organizational intelligence, is extremely difficult to do in conventional hierarchies, which promote role-to-role relationships (manager to subordinate, investor to executive, representative to customer and so on).

In a regenerative business, self-to-self relationships are supported by the use of systematic frameworks that enable diverse people to think together about complex questions. Using frameworks, colleagues from throughout an organization can build on each other's work, while challenging one another to become more comprehensive and innovative in their thinking.

Phase Three: Evolve People and Thinking Processes

Process refers to how people think, act and interact. Process is where change hits the ground. A developmental organization grows the ability in every one of its workers to see the world in process terms. This means enabling them to be present to what is happening in this very moment.

Some processes that most people consider essential to running an organization are: hiring, working, disciplining, managing outputs, developing and celebrating accomplishment. Here are two examples contrasting the conventional approach with a regenerative one.

In most companies, working means following a job description in order to perform tasks prescribed by others. The implication is that the job is independent of the person filling it; it consists of a set of procedures that any qualified person should be able to follow.

In a regenerative business, working is a creative process undertaken by a team. Because it is not locked into pre-established procedures, a working team in a regenerative business has the freedom to invent new ways to deliver the results its customers are looking for.

Most companies equate developing people with training them, helping them build skills they will need to perform particular functions. Some companies also work on providing challenges that will stretch their employees,

giving them opportunities to grow by exposing them to diverse aspects of the business or difficult problems that need to be solved. Where coaching or support is provided, it is focused on problem solving and advising, rather than on deep education to produce new, systemic thinking capacity.

In a regenerative business, educational activities are developmental. They provide resources and support as people develop the qualities they need to take charge of their own destinies and make profound contributions to their work communities. These qualities include self-management, critical-thinking skills and the ability to embrace complexity and conflict as necessary dimensions of significant work.

Phase Four: Evolve Business Work Systems

Once a company has charted a new strategic direction for itself, started to grow a new culture and transformed its key processes, it will no longer fit comfortably in its own skin. At this point, it will need to redesign its systems and structures to better serve the role it has chosen to play in its market and industry.

Organizations create systems to keep multiple people and functions aligned, so that they can achieve a shared purpose in a relatively predictable way. In a regenerative organization, systems themselves are instruments for the development of people — designed to be managed and continuously upgraded by those who are using them.

One of the reasons that so many of the systems found in businesses work against innovation is that they are intended to make things easy rather than make them developmental.

Five Categories of System

There are five categories of system; each will mean developing a particular capability across the entire workforce.

Managing. At every customer interface, managing systems should ensure total satisfaction. Amazon, for example, has become dominant in its market by setting up systems designed to consistently give purchasers an experience of customized service, without ever having direct contact with employees. On the relatively rare occasions when things go wrong, it's easy for customers to reach live service agents.

Site. Site systems work on the interacting dynamic flows — for example, of material, equipment and people — required for operational work. The critical capability needed for designing and improving site systems has to do with letting go of what currently exists — including all of the limitations built in to ways that the various elements of the business currently work — in order to see directly into how things *want* to work.

Operating. Operating systems work to improve performance across various aspects of an organization in order to build its overall effectiveness at producing intended results. Southwest Airlines built its business model around flying only one kind of airplane, the Boeing 737, so that every plane and every part is interchangeable, and every mechanic, pilot and member of the cabin crew knows all of the planes they're responsible for intimately.

Personnel. Personnel systems work on growing people as a way to evolve the development and expression of an organization's potential within the context of agreed upon purposes. This is fundamentally unlike the conventional system of job descriptions, which is designed to slot people into existing, predetermined positions.

Planning. Planning systems lay out the work that needs to be done and then ensure that production stays on track with regard to strategy, budget and goals. It's not enough to check off boxes with regard to goals and benchmarks. As a company's strategy evolves, its systems should evolve as well. In a regenerative business, people within the organization take this on, and it becomes a critical arena for their personal and professional development, forming a basis for their promises beyond ableness.

Phase Five: Evolve Work Structures *Last*

Structures serve as the enduring frame within which change happens, providing the coherence that allows an entity to grow and evolve without descending into chaos. Work design also uses structures to direct traffic, but in this case, traffic is the ingenuity and decision-making required to get work done. In a regenerative organization, work design produces dynamic stability, like the stability required to ride a bicycle or ski down a mountain, and its structures support evolution rather than stasis.

Structures dictate choices and cannot be shifted or removed without real investment of effort.

Three Kinds of Regenerative Structure

Developmental Thinking Structures. Thinking structures shape and direct our mental processes. For example, businesses will use cost-benefit analyses to organize their thinking about where to invest. As often as not, we utilize thinking structures without awareness of them, and they function as mental models. *Developmental*

thinking structures, on the other hand, enable us to become conscious of the way our thinking is structured and to reshape it. We may unconsciously experience the world as polarized — right or wrong, winner, or loser, left wing or right wing. To broaden our options, we can use developmental thinking structures to actively examine decisions.

Generative Structures. Generative structures enable a company to transform itself from functionally static to functionally dynamic by disrupting familiar ways of working that have become calcified, dysfunctional or outdated.

A *core team/market field team/task team* structure can be introduced to accomplish this disruption. and initiate phase one of an organizational change process.

A *core team* identifies critical work that has been ignored, such as discovering the essence of buyers, and it democratizes work that has formerly been the province of small groups, such as marketing or tracking financial performance. At the same time, it evolves work design in ways that generate new capacity.

Market field teams dedicate themselves to understanding customers. Each team focuses on a specific buyer class, inquiring deeply into its unique needs and aspirations. The market field teams receive support and take strategic direction from the core team.

From time to time, the strategic growth of an organization requires focused work to develop new systems or processes. This is the role of *task teams*, whose scope is always clearly defined and whose members disband once their work is accomplished. Because task teams serve the transformation of particular aspects of the business, they are inherently formed to serve disruptive purposes.

Manifestation Structures. Manifestation structures direct the flow of decisions, outcomes and accountability so that the daily cycle of work can get done. In a regenerative organization, workers are expected to be self-motivating, self-managing and conscious of the whole of the business, as created and held by its strategic direction; the essence and identity of buyer classes and how they live; financial performance; primary processes, systems and structures; and so forth. Because it starts from this philosophy, a regenerative organization designs very different manifestation structures than are usually found in a conventional business.

For example, in conventional reporting structures, higher levels in a hierarchy provide to lower levels their plans, procedures and standards, ensuring compliance in order to obtain orderly, controlled operations and improvements. In contrast, a regenerative reporting structure expects that levels are needed only in order to provide a distinctive and additive contribution toward business and functional excellence. No one serves as boss over another person's work. In some instances, supervisors might become educators, providing expertise to help teams achieve the purposes they undertake on behalf of the business. In other cases, they may resource an employee's personal development. Roles will evolve as the company evolves.

In a regenerative organization, individuals and teams are accountable for their behavior based on mutually agreed upon principles and purposes. This works because teams create clear deliverables linked to the markets they serve and because self-reflection is built into every team process. Also, resourcing support is made continuously available rather than provided only during annual reviews.

Epilogue: The Regenerative Paradigm

A regenerative business doesn't get into bidding wars for talent because it grows on its own. It doesn't need to chase after trendy benefits packages because it attracts and keeps people by offering them profoundly meaningful work to do. Managing complexity is no longer an executive suite problem because everyone is trained in the collective use of systemic frameworks. And the best way to keep people healthy and happy is to provide them with opportunities to express their potential in service to something greater than themselves.

In other words, a regenerative approach to work design is elegant. It simply dissolves the kinds of issues that cause other executives to tear their hair out. It does this by giving workers permission to focus on potential rather than problems and, thereby, to create the world that wants to come into existence.

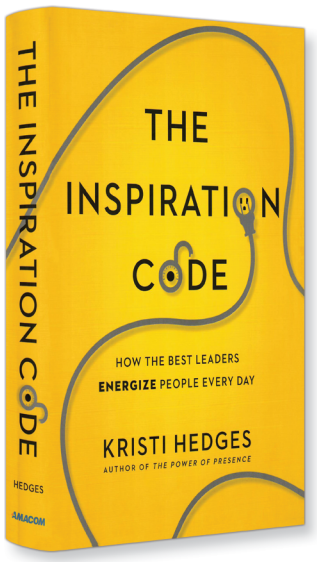
Leadership

The Inspiration Code

How the Best Leaders Energize People Every Day



by Kristi Hedges

THE SUMMARY IN BRIEF

A spark is all it takes to inspire: the boss who tells you that he recognizes your potential, the colleague who truly listens to your ideas and concerns, the manager who communicates with a mixture of authenticity and vulnerability. These conversations and genuine connections galvanize people to achieve more than they thought possible and drive organizations to new heights. More than any other trait, the ability to communicate in a way that inspires lies at the heart of great leadership.

Based on findings from a commissioned survey on who and what inspires people, an analysis of published research and her own extensive work as a communications expert and executive coach, author Kristi Hedges uncovers a set of consistent, learnable behaviors that dramatically enhance leadership success.

Intimate and psychologically astute yet geared to workplace situations and goals, *The Inspiration Code* awakens you to the power of speaking and listening, challenges you to rethink assumptions and coaches you in the art of intentional, connected conversations that lift everyone higher.

IN THIS SUMMARY, YOU WILL LEARN:

- What it takes to stay focused despite pressure and distractions.
- How to project authenticity even to large groups.
- How listening intently will increase your investment in others.
- How to energize people with the right amount of passion and show conviction using both verbal and nonverbal cues.
- Why you should be courageous in your words and choices.

Introduction

The Conversations that Count

Every once in a while, we have a conversation that changes our lives. A conversation that changes how we think about ourselves opens our minds to what we're capable of doing and shows us what's possible.

When people describe who inspires them, they talk about these conversations that count. They're the right words by the right person at the right time.

We can't will ourselves to be inspired. Rather, there's a trigger. This may be a person, an idea or both. Furthermore, inspiration involves two separate component processes: We are inspired *by* something as well as *to* an action.

Inspiration can't be forced. It can't feel like manipulation or even influence. Inspiration is an invitation, and since it fosters a personal insight, it can't be heavy handed.

If we want to have inspired companies, then we need inspirational leaders. And that involves being the kind of leader who communicates in a way that creates the conditions for inspiration in others.

A Journey Along the Inspire Path

There are certain definitive communication behaviors that make a conversation an elicitor of inspiration. These elements are brought together in the Inspire Path model.

Inspire Path conversations happen when we communicate in a way that is *present, personal, passionate* and *purposeful*. These four factors greatly enhance our inspirational effect. All four need not occur simultaneously, though many inspirational conversations do involve most elements in one form or another.

PART I: PRESENT — THE GIFT OF ATTENTION

Are You Talking to Me?

People who inspire us are both physically and mentally available to us. They give us the gift of their time and, just as important, the gift of their attention.

On a basic human level, we crave positive attention from those who matter to us. Leaders should keep in mind that their attention casts a large shadow and has an inflated impact. When you're a leader, people are watching you more closely, and you're more prone to overlook them.

Being fully present at key times has a motivational impact. When a leader actually pays real attention to us, the capacity to inspire is heightened.

Being Present: A Pretty Amazing Present

For most people, it's unrealistic to resolve to be present for every interaction. However, there are certain conversations in which we do want to connect and inspire another person to expand perspective or take action. There are a number of ways to show how important these conversations are to you:

Create a distraction-free zone. It's easier to put ourselves in a place where we can't be distracted than to resist distractions by our computers, our phones or office interruptions. When you show how seriously you're taking a conversation, it raises the importance for everyone.

Use the power of pause. Take a few moments before the conversation and sit quietly. By using this pause to consider what feeling you want to create, you reorient your brain away from external noise or internal concerns and toward the moment in front of you.

Hold the space. When we hold the space for other people, free of distraction and with full attention, then we provide the opportunity for them to process their own thoughts through dialogue. By holding the space, you don't rush the conversation either explicitly or implicitly. You designate a time for it, and you honor it.

Say that it's important. We all fall prey to the *transparency illusion,* which is a psychological phenomenon in which we overestimate how well others can guess what we're thinking. It can benefit the conversation to state our motivations at the outset, so there's no guessing required.

The Stories We Tell Ourselves While We're Falling Apart

When we are around people who seem overwhelmed, our primary instinct is to distance ourselves from them.

If we're the ones who are overwhelmed, we can't have an Inspire Path conversation when our audience would prefer to get away from us. Like a narrowing lens, overwhelm takes away our ability to see the full extent of what's in front of us. It limits creativity, agility and ideation and overrides empathy.

There are actually two motivating forces behind our behavior: love and fear. Any other emotions we have are subcategories of these two. In the workplace, love can mean passion for our work, care for our teams or enjoyment for making a difference. Fear may mean worry about being successful, insecurity about not measuring up or engaging in undermining behavior to secure our status.

We operate from a place of fear more often than we realize. When we do, we aren't inspiring or connecting. We're pushing people away. And most of the time, we don't even realize it because we're merely surviving in overwhelm mode. Fear-based behavior is reactive and sometimes even irrational. Stress and overload absolutely change the way others feel about being around us. Even when we think we're good at hiding it, it leaks out.

Yes, I'm Overwhelmed. Where's My Lifeline?

Once we begin to notice that we've gone into overdrive, we can begin to develop strategies for how to get ourselves back to a place where we can be present. Your schedule, your workload or your office demands are what they are. They are a neutral variable with no emotional charge. It's your reaction to them that causes you stress.

This means that you have the ultimate control and choice in the matter. People get themselves out of the hole of overwhelm all the time. It may not be easy, but it's possible.

Challenge Your Assumptions

When people want to change the results that they're getting, they typically try different actions. However, for significant change to take place, people need to question their underlying assumptions, thoughts and values.

Say you want to be promoted (the result), which requires you to raise your visibility (your assumption). So, you go about taking action to do that. At the end of the period, many more people will know your name. Yet, you're no closer to getting that promotion.

Now, let's look at what possibilities would open up if you challenged your assumption that raising your visibility would lead to a promotion. Suppose you learn that a handful of influencers were vocal advocates for every person who'd been promoted. The actions you might choose to take would look quite different — and include ones you couldn't even see before questioning your assumption.

Pause and Hit Reset

When we're trying to get out of a stress event or a chronic state of overwhelm, mindfulness can have a major impact in a short amount of time.

It's to your advantage to clear out the stressful energy and refocus yourself. This stimulates your parasympathetic nervous system — "rest and digest" — and turns off your sympathetic nervous system of "flight or flight."

Use Situational Intentions

Situational intentions are in-the-moment calibrations to get your head around your real purpose in communicating.

Before important interpersonal exchanges, pause to consider the following:

- How do I want my audience to feel?
- How do I need to show up and put that feeling in the room?

The operative word is "feel." We process people emotionally first, then fill in the blanks with logic.

When we take this moment to reorient our thinking, center our energy and focus on an intention, we make ourselves far more present to the person in front of us.

Tricking Your Brain to Open Your Mind

We'd like to believe that our thinking expands with experience and age. In fact, our thinking calcifies with success and experience. The more we think we know, the less we listen and consider alternative viewpoints.

Open-Mindedness and Being Present

We're more present if we're more open-minded. Those who inspire us are right there with us, not judging, not pushing, but trying to understand where we're coming from.

Unfortunately, our brains are rigged against us. It's not just success that gets in the way of an open mind but our basic brain functioning. Because the brain's primary goal is efficiency, it creates a myriad of shortcuts for us to simplify our thinking so we can reduce our energy burn.

This is terrific news when we're driving to work, as we barely have to think about how to get there. But it's not so good when we make knee-jerk assumptions at work.

Princeton University professor Daniel Kahneman breaks down our thinking into the following two functions:

- System 1 thinking is automatic and quick, requiring little to no effort. We don't even realize we're thinking.
- System 2 thinking takes effort. It's associated with concentration, decision-making and analysis. It requires attention, and when that's taken away, System 2 is interrupted. In general, System 2 takes the suggestions of System 1 without challenge. It's only when System 1 has a problem that System 2 jumps in.

System 1 is fast but far from accurate. It's filled with biases: cultural, personal and learned. It also can't be turned off. The only thing we can do is understand what's happening in our thinking and prompt System 2 to boot up when we need it. If we want to grow in this area, we have to make an effort to understand our thinking and then challenge it.

Use a "Pre-Mortem." Know yourself well enough to understand what biases will kick in, what triggers could flare, what influences you're susceptible to and what you'll do ahead of time to remain present, focused and open minded.

Ask Open Questions. Most questions that we ask are close-ended fact finders that start with "why" or "did." Primarily, they elicit right-or-wrong answers, and they come across as judgmental. On the other hand, open-ended questions encourage minds to wander. Coming from a place of curiosity about the other person, they can be illuminating for both sides of the conversation.

Embrace "I Don't Know." People are most resilient and successful when they develop what Stanford University psychologist Carol Dweck calls a *growth mindset* — the belief that basic abilities can be developed through effort and hard work. Those with a growth mindset expect to work hard for mastery and don't take it personally when challenges arise. Embracing "I don't know" encourages a growth mindset. The follow up to it is, "Let's find out." When leaders are also learners, their teams and organizations benefit because the behavior models a collective growth mindset that says, "Never stop improving."

PART II: PERSONAL — PUTTING YOURSELF INTO IT

First, Keep It Real

Authenticity is the epitome of being personal because we're being our true selves. When we're having Inspire Path conversations, authenticity plays a critical role in connection. Your listener looks to you first to see how much you care, and this is what shapes how much he will care.

The Magic Balancing Act

People are drawn to those who blend competency with vulnerability. The most compelling leaders blend strength with struggle, power with vulnerability and steely resolve with a learning approach.

So, there's a balancing act to have the right amount of authenticity, which can seem like the opposite of being authentic. It's a tension that's in the background and can cause us to feel that we never get it right.

Communicating authentically can be tricky. It's not simply flipping on a switch but engaging in a continuum of behaviors. It's helpful to approach this as a two-step process: Start with the internal piece and then move into how to translate that to the external.

Authenticity Internalized

When we aren't clear about what we stand for and where we're coming from, we open up the conversation to miscommunication and misinterpretation. By getting our values clear, embracing our story and owning our message, we can come across with heightened clarity.

Know your values and determine your brand. List your most cherished values that are critical to your self-image. Narrow those values down to a brand. Your personal presence brand is your anchor. It's a reminder in times of stress, distraction, tedium or frustration of what you want to show up to be and stand for.

Embrace your leadership story. There can be a downside when we buy into our own stories. But there is also a time when embracing our stories does help us connect with others. Think of this as your leadership story. Your leadership story reveals enough of yourself so that others can get to know you and see what your values are.

Own the message. Leadership maturity is the idea that when you take the job, you assume ownership over the messages and make them your own. It's not parroting talking points but revealing your values through them.

Authenticity Externalized

While you can never please everyone, and shouldn't expect to, it's to your advantage in Inspire Path conversations to present yourself honestly and authentically. When we do that, others reply in kind.

Explicit transparency. Most people think they are transparent, but in fact, we're all very difficult to read. To overcome this, we need to be explicitly transparent. A simple, "Here's my intention for this conversation," can change the direction entirely.

Genuine language. When we want to externalize our authenticity, we should sound like we do in any other part of our lives. While it's good to be thoughtful and consider how we'll communicate, it's less about the exact wording than it is about the sentiment behind those words.

Vulnerability expressed. Share your leadership story so the other party can better get you on a basic human level. Connection doesn't really start until we know we're dealing with the real person across the table.

Lifting Sights Toward Potential

Recognizing another's potential — sincerely, specifically and altruistically — is one of the most powerful and inspiring conversations we can have. Conveying potential is not about manipulating or pandering. Conversations about potential have the impact they do because we offer them with no attachment to the outcome for us.

Conversations about potential aren't the same as positive feedback, though there can be overlap. Positive feedback is given around a particular work area or function. Conversations about potential are primarily about the person, not the job, and they aren't directive.

At their core, potential conversations are about what's possible. They lift people's heads out of their day-to-day routine to see something larger in themselves.

So, What's so Powerful About Seeing Potential?

How people in authority view us becomes a self-fulfilling prophecy: We rise or fall to their expectations.

All leaders, whether in the classroom or the boardroom, have tremendous power simply by being in positions of authority. They possess the ability to influence how others view themselves. When you call out people's greatness, the recipients see the greatness, too.

When someone we respect — and who may even be in a position of authority — tells us what she believes we can do, we will borrow that person's confidence in us.

The Quiet Influence of Listening

Listening signals respect. It shows that we value the speaker. In Inspire Path conversations, attentive listening plays an important role. When people describe inspirational figures in their lives, they say the person made them feel truly listened to. Listening at that level says, "Your opinion is so valuable that I'm going to devote myself not just to hearing you but to fully understanding you as well."

Talk Is Cheap, Listening Is Expensive

Miscommunications abound because in any single conversation, there are actually multiple conversations. Every time you open your mouth, there's a running narrative also going in your head. If we don't actively manage it, we pay more attention to our internal conversation than to the one we're having externally.

The Subtext Is Screaming if You Listen for It

Just as in any conversation there's an external and an internal dialogue, there's also a text and a subtext. The text is the words that we're speaking. The subtext is the underlying meaning. It's the context of the conversation — our thoughts, history, past interactions, emotions, larger culture and expectations. When we ignore the subtext, it is all too common for two people to walk away from a conversation with dramatically different ideas of what just happened.

Shift Your Listening to Open Your Understanding

There are four key shifts you can make when you're trying to listen intently. They all require you to move from *how* you listen to *what* you're listening for.

Listening Shift 1: Listening for facts › Listening for the whole person. Often when we listen, we're trying to determine the facts. We're better listeners if instead of zeroing in on the facts, we widen our focus to take in the whole person in front of us. We discuss the facts, but we also listen for how that person explains the situation, what his body language is telling us about his emotional state.

Listening Shift 2: Listening for text › Listening for text and subtext. Sometimes, we have an idea of what the subtext might be, but we're not sure, so we don't mention it. Other times, it goes right by us. Conversations in which we aren't brave enough to be real and say what needs to be said are never inspirational.

Learning to listen for subtext in addition to text requires a commitment to being in the moment and noticing both the said and the unsaid.

Listening Shift 3: Listening for what you need › Listening for what the other person needs to say. Similar to listening for facts, we can default to listening for what we need from a conversation and miss what the other person needs to say. When we listen in this way, our agenda is the only one that matters. Depending on the conversation, this can negate the whole reason we're communicating with this person in the first place.

By shifting our listening to what the other person needs to say, we're opening our own minds to the meaning of the conversation. We're sharing the agenda; we're taking in the details we deem worthy, and we're also noticing the value another places on those details.

Listening Shift 4: Listening to judge › Listening out of curiosity. Being able to draw swift conclusions aids our functioning in a busy work environment and may even be why we're good at what we do. When it comes to listening, however, that same capacity to make snap judgments can hinder our ability to understand — and show understanding of — another person.

This shift requires us to tamp down the analytical, critical part of ourselves in order to stay with the conversation and show empathy to the other person. We need to shift to curiosity when we want to learn rather than just confirm what we already think.

PART III: PASSIONATE — BRINGING HEART AND ENERGY

Your Energy Is Contagious

People who are passionate enthusiasts for what they do create passion in others. People desperately want to find and maintain passion in their work and in their lives. Just as important, we want to work for passionate leaders. Passion is the precursor to personal investment.

Inspire Path conversations can't happen without the right level of passion. It infuses energy into them, creating that lift we feel after an inspiring exchange.

Energy is the most visible form of passion and arguably the one that we react to the most viscerally. Energy is contagious, be it positive or negative. And when the person with the strongest mood is in a position of power, the contagion is flat-out viral.

The amount of energy we convey sets the benchmark for what other people will be able to feel. We are leading the way in showing how meaningful and important what we're communicating should be to the other person.

We've all seen what happens when someone else's energy, even when it is intentional and well meant, is not well received. There's an out-of-sync feeling between the energy someone's putting out and those on the receiving end. It can be off-putting and have a strong countereffect.

Showing the right amount of energy or passion can be harder than it appears. We want to be inspirational but not over the top. We need to light a fire but not burn people out. We have to instill a sense of seriousness but not be scary. And we mess up these energy differentials all the time.

Once you know where your authentic passion lies, you'll need to calibrate it against the situation before you. You don't want to be so far away from your audience that they reject your message. Inspiring conversations create energy but only if the other party lets them in.

Moving Hearts Before Minds

In the workplace — and to a larger extent, in life — we don't feel free to express ourselves emotionally. And yet, as we consider passion, it is inherently emotional. Enthusiasm without emotion comes across as flat or disingenuous.

When we share our emotions, we allow others to share theirs. It's the observing of emotions in someone else that brings them to the surface. It makes sense that revealing our emotions is part of how we show others who we are. When we can reveal an emotional side of ourselves and our message, we bring head and heart into it. It resonates in a more meaningful and personal way.

Emotion is a key part of how we process information, and while it can get in the way of logic, it also makes us care. Without emotion, there is no empathy. Our emotional responses call upon the deepest parts of our humanity.

We've already discussed how stories convey authenticity. Part of the reason is that a good story evokes emotion. Stories change how we listen and how well we listen.

It's worth noting that some may feel ambivalent or disdainful about purposefully tapping into their own and other people's emotions. It's understandable. After all, we've made considerable efforts to show up as unflappable and logical. Culturally, making an emotional case can feel sleazy and wrong, as if we're trying to trick someone.

So, let's frame the situation up front: When we bring emotion into our Inspire Path conversations, we're not faking or manipulating. We're authentically communicating the emotions that we already possess. We're bringing to the surface the emotions of others, which are guiding their decisions and thoughts already. In short, we're communicating in a wholehearted way.

Say It Like You Mean It

Conviction is the last component of passion. We engage through our energy, we deepen the connection with emotion and we show our mettle through conviction. When we seek to inspire others, we are encouraging them to believe. When we demonstrate conviction, we show that we already believe wholeheartedly, making it safer for others to take that leap.

One of the primary places that we look for this quality is in nonverbal communication. It's not enough to speak with conviction; we must also want to see it reflected.

So, how do you say it like you mean it? It comes down to alignment. You need your nonverbals to match your words and both to match your intent.

Start by Realizing What You Think You Know Is Probably Wrong

David DeSteno is a psychology professor at Northeastern University who studies physical signs of trustworthiness. According to DeSteno and other researchers, when it comes to reading another's body language, we look at clusters of behaviors, not isolated traits. Context also plays a role. And even when we read body language correctly, we often rationalize ourselves out of those impressions.

If you want to show conviction, instead of picking your nonverbal communication behaviors apart with a scalpel, a better approach is to get your head in the game and let your body follow the lead.

When Your Mind Speaks, Your Body Listens

The link between our bodies and how we think and feel plays directly into displaying conviction and managing nonverbal behavior. If we know the emotion we want to convey, that's more likely to show up in our body language.

Smiling can show openness and invite another into the conversation. Though not all Inspire Path conversations are ones to smile about, when they are about positivity, optimism, joy or excitement, smiling works in more ways than one.

All this can be summed up in three ways. First, people desire to know the right way to show up verbally and nonverbally to be most effective. Second, there is no right way: We don't respond to someone's communication style trait by isolated trait. We take them in through a series of aspects that we can't always logically explain. Third, instead of trying to get a checklist of communication attributes to put on like a suit, we're more effective when we consider the nuanced ways that we can put our thoughts in our bodies and let our bodies confirm our thoughts. Rather than perfection, we should strive for alignment.

PART IV: PURPOSEFUL — SPOTLIGHTING MEANING

Purposeful Conversations

If passion is the accelerator, it's purpose that steers the car. It's what creates meaning from our labor. Finding an inspired purpose is an equal-opportunity desire in every type of job at every point in our careers.

We hear a lot about purpose-driven organizations. And yes, it can be inspiring to work for an organization with a clear sense of purpose — especially when that purpose aligns with your own. On the other hand, if there's an explicit or implied corporate purpose that conflicts with your values, it can make you miserable.

But for most people, the process of finding purpose exists on a more nuanced, personal scale. It's less about a grand vision outside of ourselves and more about the vision we possess internally. That's why those who inspire us are willing to have conversations about purpose, even pointing to it when we're not looking for it. Helping someone find that internal spark of purpose, or reignite it, is a transformational act.

If we don't know why we're doing what we're doing, we won't know how to accomplish our goals. But if we can determine the why, our perspectives on the how expand dramatically. We find purpose not by starting with the goal and working backward ("I want to get promoted because I like a challenge.") but by starting with you and letting that lead to a new goal ("I like challenges, so how can that manifest?"). All too often, we talk ourselves into a goal without ever having thought through why we want it.

The Purpose of Purpose

Purpose and inspiration are closely related in the research and causally related in our own lives. Having a purpose is inspiring to us, as are those who help us find it.

Being an inspirational force for another may be enough of a reward. We get a big psychic boost from being helpful. However, there are ample business reasons to support the development of purpose in others. Purpose and inspiration have been shown to increase well-being and goal progression as well as vitality, positivity and life satisfaction.

We know from decades of research that people find internal motivation, inspiration and purpose through consistent means — by doing what they're good at and enjoy, feeling useful, being in relationship to others and having a sense of agency that carries them forward.

If You're Not Wearing It, You're Not Sharing It

When we share and show a purpose, we inspire others to do the same. Role models are a powerful force in motivation. As a behavioral model, role models embody the goals of aspirants, allowing them to learn vicariously and increase their confidence. By representing what's possible, role models show how an aspirant can be like them, not just today but in a future state. And in terms of being inspirational, role models stimulate ideas for new goals and make them desirable.

The same questions that work on others, work on us. Find the time to consider the questions for yourself. Put the threads together to understand what you're good at doing and enjoy doing, what feels useful, what creates forward momentum and what puts you in relationship to others in a way that you desire.

The Call for Courage

Many behaviors found in inspiring leadership require courage. Inspiring leaders have to go off the worn path, which takes courage. Inspiring conversations require much more of us intellectually and emotionally. They, too, take courage. We admire courage in others. We know it's the harder path.

Being willing to be in conversations about purpose, both with others and within ourselves, requires us to make courageous choices. Leading a purpose-driven life doesn't happen by accident. We have to make decisions and act in ways that support our purpose.

Courage in All Its Forms

Courage can seem like a lofty concept or even a platitude. But it's conveyed by small, everyday choices. Even large, courageous moves typically begin as discrete, defined decisions. Courage isn't an abstraction. It's a series of decisions that we believe are right even if they're tough.

Bill Treasurer, author of *Courage Goes to Work,* outlines three different types of courage.

- Try courage: the courage to take the initiative, attempt new things and take risks.
- Trust courage: the courage to have faith in others, let go of the need to overly control situations and be open to change.
- Tell courage: the courage to voice concerns, provide tough feedback, assert an unpopular viewpoint and speak truth to power.

Your Leadership Shadow Is Showing

In leadership circles, there's a concept called a leadership shadow. It's the idea that the leader's values, style and actions cast a larger shadow of influence on those around her. Leaders can eloquently say what they care about, but the shadow is determined more by the choices they make.

To be purposeful, we need to make courageous choices. We have to say no to some things, like comfort, certainty and other opportunities. Our purpose is defined as much by what we say no to as what we say yes to.

Conclusion

You're Already in a Virtuous Cycle

We often don't know the effect we've had on others when we were simply trying to connect, encourage and empathize. Only the other person knows the true effect and where it leads. When we're a force for others to find purpose, when we help them ignite their passion, when we give the gift of our full presence to connect personally, then we are part of a virtuous cycle. We create a ripple effect of positivity, confidence, excitement, agency and possibility. When you have interpersonal connections at work, you want to do more, be more and give more.

It's Always Been About the Connection

We can decide to take an Inspire Path approach to any conversation by deciding to be present, making the connection personal, bringing passion and illuminating a larger purpose. The ways we inspire aren't hard; they aren't even complex. When we put intention behind our communication and bring as many of these elements together as we can, then we develop a personal strategy to be more inspiring leaders. We make inspirational communication our default rather than a pleasant accident.

MORE SV CONTENT ON COMMUNICATION

Access these and more in your Soundview Online Library:

Summary: *Speaking as a Leader* by Judith Humphrey. Leading communication coach, Judith Humphrey, shows how to make the most of your daily communications — the seemingly "insignificant" interactions in everyday work life — in order to create a presence on the job as a genuine and constant leader.

Webinar: *How the Best Leaders Energize People Every Day* by Kristi Hedges. In this webinar, executive coach Kristi Hedges reveals that inspiring communication isn't about grand gestures but about doing things that motivate us routinely, consistently and intentionally. Great leaders inspire action with their words, sparking enthusiasm and commitment.

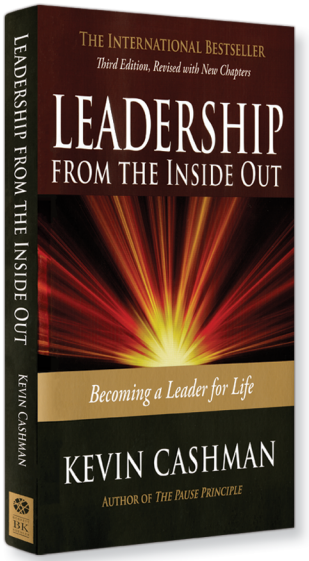
Leadership from the Inside Out

Becoming a Leader for Life



by Kevin Cashman

THE SUMMARY IN BRIEF

The long-awaited third edition of *Leadership From the Inside Out* turns leadership development inside out for a new generation of authentic, purpose-inspired leaders. Balancing timeless principles with emerging research, this new edition offers two new chapters; new case studies; stories and exercises; new validating research from the frontiers of leadership, neuroscience, psychology and human potential; and an even more powerful and transformative development experience.

Now framed in eight profound and pragmatic "mastery areas," *Leadership From the Inside Out* serves as an integrated growth experience that helps leaders understand how to harness their authentic, value-creating influence and elevate their impact.

Cashman demonstrates that his trademark "grow the whole person to grow the whole leader" approach, focusing on purpose-driven leadership, is even more relevant in today's hypercomplex world. For everyone from CEOs to emerging leaders, this new edition of a proven classic advances the art and science of leadership.

IN THIS SUMMARY, YOU WILL LEARN:

- Why leadership goes far beyond external behavior.
- The eight mastery pathways to leadership growth and development.
- Why stories are essential to leading with inspiration.
- The difference between time management and leading with energy.
- Why awareness, commitment and practice are the foundations of coaching.

THE COMPLETE SUMMARY: **LEADERSHIP FROM THE INSIDE OUT**

by Kevin Cashman

The author: Kevin Cashman is a best-selling author, top-10 thought leader, world-class keynote speaker, global CEO coach and pioneer of the "grow the whole person to grow the whole leader" approach to transformative leadership. He is the founder of LeaderSource Ltd., Executive to Leader Institute and the Chief Executive Institute, recognized as leadership development programs globally. He has written six books and scores of articles on leadership and talent management and has been featured in the *Wall Street Journal*, *Chief Executive*, *Bloomberg*, *Fast Company* and other national media. *Leadership from the Inside Out* by Kevin Cashman, copyright © 1998, 2008, 2017 by Kevin Cashman, has been summarized by permission of the publisher, Berrett-Koehler Publishers, Inc. 272 pages, $24.95, ISBN 978-1-5230-9435-6.

The Beginning of the Journey

We tend to view leadership as merely an external act. We only see it as something people do. But leadership comes from a deeper reality within us. It comes from our values, traits, principles, life experiences, beliefs, motives and essence. Leadership is an intimate expression of who we are; it is our whole person in action. We lead by virtue of who we are.

Likewise, most descriptions of leadership focus on the outer manifestations of leadership (i.e., vision, innovation, results, drive, etc.) instead of getting to the foundational principles of *leadership itself.*

What is foundational to the most effective, results-producing leaders? What supports their various competencies or styles on the surface?" Three patterns are clear:

Courage and Authenticity: Having the courage to authentically be our whole selves, complete with strengths, vulnerabilities and differences; having the courage to authentically show up with openness and integrity.

Influence: Purpose-driven communication that inspires self and others to do what is genuinely important and meaningful for the long term.

Value Creation: Serving multiple constituencies — self, team, organization, family, community and world — to sustain enduring performance and contribution.

These principles lead to an essential definition of leadership: *Leadership is courageous, authentic influence that creates enduring value.*

The implications of this definition are potentially far-reaching. From this new perspective, leadership is not viewed as hierarchical; it potentially exists everywhere in organizations. Anyone who is courageously and authentically influencing to create enduring value is leading. Some may influence and create value through ideas, others through systems and yet others through people, but the essence is the same. Deep from their core, leaders courageously bring forward their talents, connect with others and serve multiple constituencies.

Mastery of leadership from the inside out is not merely a function of achieving things. It is principally about achieving one thing — consciously and courageously making a bigger difference by fully applying our potential.

There are eight mastery pathways to our growth and development. These mastery areas are not stages of development arranged in a sequential or hierarchical order. Rather, they are an ongoing, interrelated growth process in which each mastery area reinforces the others. When arranged together, they are an integrated whole, with each mastery area supporting progress toward a more fulfilling destination: making an enduring difference by bringing forth our gifts to serve others.

Each of the following eight sections offers you pragmatic torches to illuminate your pathways to become a leader for life.

Personal Mastery

Leading with Courage, Authenticity and Awareness

A priest was confronted by a soldier while he was walking down a road in pre-revolutionary Russia. The soldier, using his rifle to block the path of the priest, commanded, "Who are you? Where are you going? Why are you going there?"

Unfazed, the priest calmly replied, "How much do they pay you?"

Somewhat surprised, the soldier responded, "Twenty-five kopecks a month."

The priest paused and, in a deeply thoughtful manner, said, "I have a proposal for you. I'll pay you 50 kopecks each month if you stop me here every day and challenge me to respond to those same three questions."

How many of us have a "soldier" confronting us with life's tough questions, pushing us to pause, to examine and to develop ourselves more thoroughly? If "character is our fate," as Heraclitus wrote, do we step back on a regular basis to question and affirm ourselves and to reveal our character? As we lead others and ourselves through tough times, do we draw on the inner resources of our character, or do we lose ourselves in the pressures of the situation?

Personal Mastery is not a simplistic process of merely affirming our strengths while ignoring our weaknesses. It is about acknowledging our talents and strengths while facing the underdeveloped, hidden or shadow sides of ourselves. Personal Mastery involves appreciating the rich mixture of our life experience.

Deepening Authenticity for Sustainable Leadership

Of all the principles supporting sustainable leadership, authenticity is one of the most important. It also can be one of the most challenging.

Authenticity is the continuous process of building self-awareness of our whole person, as well as being transparent with others about our whole person — both strengths and limitations. Commonly referred to as "walking the talk," authenticity also means embodying your talk at a very deep level.

Authenticity is so much more than simply being true to ourselves; it also requires being true to others. Another prominent feature of highly authentic individuals is openness. The most real, genuine, sincere leaders tend to have the courage to be open about both their capabilities and their vulnerabilities. This more complete self-awareness allows them to focus on the team, organization and marketplaces — not on themselves.

Exploring Beliefs

Two distinct types of belief systems operate in people: Conscious Beliefs and Shadow Beliefs. Conscious Beliefs are the explicit, known beliefs we have. Examples of Conscious Beliefs someone might have are, "I believe in treating people with respect; I fear trying new things; I am creative and resilient; many people are untrustworthy; hard work brings results."

Taken from the Jungian concept of shadow, Shadow Beliefs are manifestations of hidden, unexplored or unresolved personality dynamics. A Shadow Belief is cast when we are unable to deal with something. When a deep-seated fear, loss or trauma is ignored or hidden, a Shadow Belief is operating beneath the surface. We all have shadow beliefs.

Let's say we have a Shadow Belief that "we only have value if we are doing and achieving." If we are unaware of this Shadow Belief, our drive and determination will soon turn into workaholism and lack of intimacy, with profound negative implications for our health and relationships.

Leading in Character...Leading by Coping

When a leader approaches the question, "How authentic am I?" it is often helpful to ask some other questions first: "Where is my leadership coming from? Where are my beliefs and values coming from?" Is our leadership arising from our Character, which is driven to serve others? Or is it derived from a pattern of Coping, where we tend to react to circumstances to elicit a more immediate or self-serving result?

For example, if our actions are principally guided by safety, security and comfort, we are in a Coping pattern. This is a big one for most of us. It is also subtle. We are usually unaware of how staying safe is actually limiting new experiences and possibilities.

Personal Mastery is not about eliminating Coping. It is about increasing Character to such a degree that Character is primary and Coping is secondary.

Eight Principles of Personal Mastery

Keep in mind the following principles as you begin to master your ability to lead courageously with more awareness and authenticity.

1. Take total responsibility.
2. Bring beliefs to conscious awareness.
3. Develop awareness of character and coping.
4. Practice personal mastery with others.
5. Listen to feedback.
6. Consider finding a coach.
7. Avoid confusing self-delusion with self-awareness.
8. Be agile.

Story Mastery

Leading with Inspiration

While spreadsheets are the language of management information, stories are the language of leadership inspiration. Stories can activate our deepest, best selves; they are certainly one of the most transformative of all leadership tools. Powerful narratives can bridge the authentic, essential depth of a leader to the complex breadth of strategy, culture, values and purpose.

Yet despite the nearly universal recognition of their inspirational impact, rarely do we examine and master their effective and affective use in leadership development.

Humans are story beings. From cave paintings and oral histories to novels, films, dance and digital media, we are driven to create, share and absorb stories. Anthony de Mello, the spiritual teacher and writer, put it beautifully when he wrote, "The shortest distance between a human being and the truth is a story." Likewise, the shortest distance between a leader and collective inspiration is a heartfelt story.

A Tale of Two CEOs

Two different CEOs were running two different global enterprises. One had honed his skills as an inspiring leader, and the other one was a more analytical, "only the facts" kind of person. Each was about to roll out his recently refreshed set of organizational values to support the cultural and leadership shifts needed to achieve his strategic goals.

The fact-oriented leader went to the stage and stood before 3,000 associates hopeful to hear a new agenda. They were primed for something new, ready to hear fresh, different and engaging ideas. Thinking that his job was merely to inform, the CEO dryly, rationally listed the five critical values with precision, all supported by a well-crafted PowerPoint.

The group was stunned. A resistant quiet blanketed the room. People moved back from the edges of their seats and leaned into their seatbacks with a disappointed, resigned thud. Doubt filled the room.

The other CEO took a different approach. Yes, he had five core values too, which he listed for everyone with the help of a PowerPoint. And yes, some of the values were identical to our other CEO's values. However, instead of reading them off as a list, he took his time, and he told an authentic, real-life story for each one. As he did, the PowerPoint melted into the background, and each of the core values came to life.

To present the first value, he told a moving story of a health crisis experienced by his teenage son and how the trauma of this tough journey made the value real for him. For the second value, he shared the story of a failure that he had faced early in his career and how the experience still keeps him humble, compassionate and open to learning.

You can imagine the audience perched on the edge of their chairs, absorbed in the authenticity and relevance of the CEO's inspired messages. The CEO had tapped into the collective brain and the collective heart of the organization, and the connection resonated in the room.

The sweet spot of stories is where deep, personal authenticity meets high relevance for others. Great stories operate at the intersection of the authentic "I" and the deeply connected "We."

Like all aspects of leadership growth, Story Mastery is a combination of art and science that can be learned, developed and practiced. It begins from the inside out with finding our own stories. This begins the transformative experience, but its real potential for transformative impact is in connecting people and ideas to something much larger, more important and more purposeful. This energizes the feedback loop from both the inside out and the outside in.

Purpose Mastery

Leading On-Purpose

There are three big realities that we, as leaders, have to clarify and place in meaningful relationship for our organizations to thrive:

- The Big What Question (Vision): What is possible for us to become?
- The Big How Question (Strategy): How will we get there?
- The Big Why Question (Purpose): Why is it so important that we exist in the world?

Unfortunately, too often we deal with these three realities in the wrong sequence. We largely over-focus on the What and the How and under-focus on the Why. While it may be counterintuitive to many leaders, the most strategic and energizing place to begin is Purpose: the Big Why. By focusing on purpose — an aspiration that lifts us and infuses significant meaning in our day-to-day work — and putting it first, we catalyze our courage and authentic influence to create enduring value.

Managers tend to focus on the What and How, wondering Why anything else is important; leaders awaken the wonder of Why to envision a more expanded, compelling What and How.

David Lubetzky, founder and CEO of KIND Snacks, is a great example of a leader whose vision and strategy for creating enterprises has been driven by compelling values and purpose. He is also inspired by his personal experience and his worldview.

Lubetzky, the son of a Holocaust survivor, grew up hearing stories of his father's survival in the Dachau concentration camp during World War II. In one story, Lubetzky's father told him that a guard tossed him a potato when no one was looking. In his mind, it was this guard's simple act of kindness that made it possible for him to know that he could survive. Despite the horror and harshness of his experience, he could get through it because he knew that kindness still existed. The power of this simple act of kindness gave him hope.

This story always stuck with David, and it is the core reason behind KIND. Lubetzky is a staunch believer that we can create a culture of kindness and empathy and that business enterprises can be a force both for good and for profit.

Lubetzky embodies the KIND brand and purpose while also nurturing its profitability and success. The company employs 600 people and sells its products in more than 150,000 stores. In the last five years, they have generated 111 percent compound annual growth rate, and since its inception in 2004, the company has sold more than one billion KIND bars. Lubetzky's employees see him as a humanitarian "who happens to be a great businessperson."

Keep the following principles in mind as you begin to master leading on-purpose:

Get in touch with what is important to you. Understanding our values, what gives meaning to our lives, gives us the "GPS coordinates" of our purpose.

Act on-purpose. Most people have an intuitive feeling about their purpose in life. Turning this hazy intuition into a clear, tangible commitment helps turn a dream into a reality.

Find team core purpose. Once you get clear on how your gifts make a difference, consider engaging your team around a similar exercise.

Do not mistake the path for the goal. Be careful not to simply adopt other people's views.

Focus on service. Purpose is not purposeful without serving others. It is self-expression that creates value for those around you.

Interpersonal Mastery

Leading through Synergy and Service

There appear to be two main streams of development in leadership. Both approaches can get results. One of these leadership approaches is extremely hard-driving and forceful, with a strong sense of personal power — in short, an "I" leader who gets results. These leaders have no problem asserting their power of voice, even at the expense of morale, at times. This heroic type of leader needs to become more collaborative and relational to bring results to the next level.

The other leadership approach is more interpersonally connected. These leaders are strongly collaborative and synergistic, and their power of connection ("We") is so strong that they may not appropriately put forth enough of their own power of voice ("I") when required.

Interpersonal Mastery is about balancing our courageous influence — our voice — with human connection. This is not easy. When we have two powerful elements — our power of voice and our power of connection — coming together, we experience one of our most significant leadership moments. But it is much more challenging than simply bringing forward our "Authentic I" and our "Connected We."

Relationships are the bridges that connect authenticity to influence and value creation. Leadership always operates in context, in relationship. While leaders may lead by virtue of who they are, leaders also create value by virtue of their relationships.

As crucial as relationships are to leadership success, many of us have a difficult time breaking out of the self-limiting illusion that we are "the ones that make things happen." Most leaders would not admit to this, but often their behavior clearly demonstrates this belief.

Beyond 360° Feedback to 720° Development

The tool most organizations use to help leaders deal with the intention-perception gap is 360° feedback. With such programs, leaders are given feedback from multiple sources on their behavior, skills and leadership competencies.

If a development process is modeled primarily around 360° feedback, executives only learn how to create themselves in the image of others. Such feedback can create a defensive reaction, in which no growth takes place. It encourages people to simply deliver the desired behaviors without giving them the personal insight and motivation to grow — a formula destined to limit authentic influence by creating actors, not leaders.

But 720° Development is different. It begins with an Inside-Out 360° — a deep, broad, valid, integrated assessment of our personality traits, motives and competencies as well as our current and desired stages of development. This first stage ensures that we begin to master a more authentic understanding of ourselves.

Then, an Outside-In 360° is completed to give broad feedback on how people above, across from and below us perceive our strengths and areas of development. With 720° Development, leaders now have a more complete context to reconcile their inner and outer realities.

In addition, it is also important to get feedback in real time. Ask people for their feedback on your views and how you are coming across. Make 720° Development and real-time feedback a way to accelerate your self-awareness and interpersonal awareness.

Change Mastery

Leading with Agility

We operate under the illusion that life remains constant, but in reality everything is always changing. Since birth, we have been swept up in a raging, constantly changing, never-ending flow of experience. Sometimes we love the flow of life; sometimes we hate it and resist it. But because the flow of the river is constant, we have no choice in the matter. We have to change. It is part of the price of admission to life.

We have no choice in the matter except for one aspect — mastering our *ability to adapt and learn*. Most leadership research illustrates that as we go up the executive ladder, we need to become increasingly comfortable with uncertainty and sudden change.

The qualities needed at the top — courage, openness, authentic listening, adaptability — also indicate that leaders need to be comfortable with and able to embrace the "grayness" that comes from multiple points of view coming at us at once. In other words, we have to master our adaptability mentally, emotionally, strategically and impersonally.

Learning Agility is a key to unlocking our Change Mastery. Learning Agility is a complex set of skills that allows us to learn something in one situation and apply it in a completely different situation. It is about gathering patterns from one context and using those patterns in a completely new context. In short, Learning Agility is Change Mastery — the ability to learn, adapt and apply ourselves in constantly changing, first-time conditions.

Consider these seven principles of Change Mastery:

1. Be open to learning. Encourage yourself to open up consciously to the learning hidden in changing circumstances. Grow with the flow . . . and grow within the creative tension of change.

2. Practice present-moment awareness. Imagine an athlete preoccupied with the last play or the next competition instead of the play at hand. Would he or she be successful? Developing focus on the present moment allows us to begin to "connect up" a series of present-moment successes into a lifetime of effectiveness.

3. Integrate immediate focus and broad awareness. Being deeply focused yet simultaneously aware of the meaningful context of our lives is one of the keys to enduring success.

4. Trust yourself. Developing our inner ability to trust is crucial as we hurl through the air between the potent forces of creation and destruction.

5. Develop resilience through mental/emotional stretching. Gradually increase your emotional/mental/spiritual flexibility to make yourself more agile for life's major events. Follow the same principles used for physical training: stretch, don't strain — nanometers of daily progress are sufficient.

6. Remember that all significant change begins with self-change. If you want to develop your people, be the development you want to see.

7. Take the leap. Accept the fact that you will naturally feel some hesitation and anxiety when facing the trapeze bar of change. Learning to see beyond the fear of loss and into a more purposeful vision gives us the courage to take the leap.

Resilience Mastery

Leading with Energy

Let's face it, time is a finite resource. We get 24 hours, no matter how we carve them up. However, shifting our focus from time management to energy leadership can allow us to discover our own unique formula for sustained energy and resilience to serve our most important constituencies.

David, the CFO of a midsize company and another extreme traveler, had a wake-up call. Returning from a two-week business trip, he was lifting his luggage out of the trunk of his car when his 4-year-old son walked into the garage from the house. Surprised by the unfamiliar sight of a man in his garage, the child ran back into the house screaming. His son actually mistook him for an

intruder! In that moment, David knew it was time to reenter all parts of his life.

That's the essence of our challenge as leaders: finding enough energy, resilience and connection to serve all our important life priorities without any one of them, or us, "running out" in a panic.

Moving from Time Management to Energy Leadership

Research reported by Tony Schwartz and Catherine McCarthy in a *Harvard Business Review* article, "Manage Your Energy, Not Your Time," addresses this issue. "The core problem with working longer hours is that time is a finite resource. Energy is a different story. Defined in physics as the capacity to work, energy comes from four main wellsprings in human beings: the body, emotions, mind and spirit."

Schwartz and McCarthy continue, "To effectively reenergize their workforces, organizations need to shift from getting more out of people to investing more in them, so they are motivated — and able — to bring more of themselves to work every day. To recharge themselves, individuals need to recognize the costs of energy-depleting behaviors and then take responsibility for changing them, regardless of the circumstances they're facing."

Mastery of Resilience is about practicing inner and outer behaviors that keep us grounded and centered so we can deal with all the dynamics outside. As we build more resilience, we can do more with ease.

How do we go about finding more resilience in our lives? The best model for resilience exists in nature. All resilience in nature comes about through alternate cycles of rest and activity. The cycles of day and night and the seasonal cycles constantly balance a rest phase with an active phase. Nature expresses its vitality in the active phase and reconnects with its vitality in the rest phase. Each phase interacts in just the right combination to achieve dynamic balance.

Our lives are similar, with one major difference: We get to choose the quantity and quality of activity, as well as the quantity and quality of rest. When we choose inappropriately, our life is out of whack. When we choose well, we experience vitality. Nature lets us choose freely, but she also gives us immediate feedback on how well we have chosen. As we learn to listen better, our energy and resilience increase.

Being Mastery

Leading with Presence

Being is our essence, our deepest presence and the core of who we are. Being is like a silent, calm ocean supporting the waves of energy, achievement and contribution on the surface. Accessing and expressing Being fosters the deep presence needed to lead with authenticity, equanimity, mindfulness and calm energy. Although this may be unfamiliar territory to many people, we can learn practices for leading from this deep state of restful awareness within us.

Leaders are constantly searching for something more. We want more achievement, more happiness, more fulfillment. The crucial thing, however, is how we satisfy this inherent desire for more. Do we attempt to "fill ourselves up" from the outside in? Or are we able to give ourselves something really satisfying from the inside out?

Being Mastery is that satisfying "something" we can give ourselves in a self-sufficient way. It is about learning to transform our state of awareness to greater strength and satisfaction by ourselves. No outside intervention or stimulation is required. We can do it all by ourselves, with no harmful side effects.

Imagine having the power to transform yourself physically and emotionally when you are feeling tired and stressed. That's the power of Being. Imagine problems turning to opportunities, irritation to compassion and alienation to connection.

Although meditation is a great way to connect with our inner potentiality, it is not the only way. Meditation is a technique to bring our mind from the surface of life to the depths of being. Other techniques include reverence for nature, music, present-moment awareness, children at play and inspirational reading.

Four Principles of Being Mastery

1. Take your own journey into being. Only you can judge what "vehicles" will help you on your journey.

2. Resolve life challenges by going to a deeper level. Learn to go to a deeper level to view things in a more comprehensive way. As your mind learns to settle down yet remain alert, the ability to sort through and organize your life will be amazing.

3. Consider learning to meditate. If you have a particularly strong resistance to spending time with yourself in reflection or meditation, then the need to do so is probably great.

4. Integrate some reflection into your life. Take some "Being breaks" by investing some time in getting reacquainted with yourself.

Coaching Mastery

Leading by Developing Self and Others

For coaching to have a lasting, transformative impact, three interrelated foundations need to be constructed: Building Awareness, Building Commitment and Building Practice. If all three are present and operating, breakthroughs will occur, and growth will be sustained. If any one of the three is absent, the results will dissipate over time.

Coaching Mastery Step One: Building Awareness. Building Awareness is the process of bringing new information into our field of view. Awareness encompasses the inner discipline of looking within ourselves to shed light on our strengths and our growth challenges, and the outer discipline of observing ourselves through the eyes of others as we engage in making an important behavioral shift.

Coaching Mastery Step Two: Building Commitment. Building Commitment begins with comprehending the consequences of our actions. However, it is not enough to understand intellectually that if we continue on the same course, we're going to fall short of our goals or hurt ourselves or others. We have to *feel* it. When we have a deep, emotional connection to the impact of a behavior, our life can change permanently.

Coaching Mastery Step Three: Building Practice. Building Practice is the process of consistently engaging in new behaviors to enrich our lives. It is the application phase of growth. While it is crucial to Build Awareness and Commitment, they are not sufficient for transformation; consistent action and new, tangible, pragmatic behaviors are required. What new behavior will you practice that will, over time, move you forward?

The Art of Coaching Others

Coaching is the art of drawing forth potential onto the canvas of high performance. It's the gentle yet firm hand of leadership guiding the way, like a caring friend, helping the "coachee" steer clear of danger or set a more positive course. Leaders touch lives and hold destinies in their hands; it is a sacred calling with sacred responsibility. That calling is best honored when a leader sets the highest example of personal and professional behavior and then enlists others to take this challenging path as well. To accomplish both of these tasks, nothing is more vital than coaching.

Coaching Others to Build Awareness. As leaders, often the greatest task of Building Awareness is in the human, interpersonal domain. Helping others Build Awareness requires discipline on the part of the coach to stay out of the expert or fix-it approaches to coaching. Building Awareness requires openness to help those we are coaching in sorting out their own current reality and beginning to chart their own future approaches.

Coaching Others to Build Commitment. To elicit commitment, we must help people envision the positive and negative outcomes — what they will gain and what they will lose — if they continue on their current path. When one's emotions deeply register both the compelling, positive reasons to change and the damaging behaviors to leave behind, transformation begins. Help people sort out consequences; allow your commitment to catalyze their commitment; look for openings; make sure commitment leads to practice; and be patient.

Coaching Others to Build Practice. Practice breathes life into our new awareness and commitment. Practices involve the consistent repetition of new behaviors that transform our lives. For practice to become a habit, it needs to be consistently engaged for at least 40 days. A day here and a day there will not bring transformation. Here is the key to practice: If you stop practicing, no problem — just start practicing again.

A short passage from the *Talmud* tells the whole story of life and leadership. It goes something like this: "Every blade of grass in all of creation has an angel bent over it passionately whispering three words of encouragement: Grow . . . Grow . . . Grow."

Grow in courage and authenticity. Grow in influence. Grow in value creation. Become a leader for life.

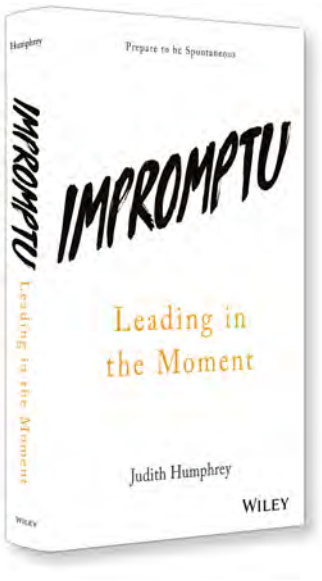
Leadership

Impromptu

Leading in the Moment



by Judith Humphrey

THE SUMMARY IN BRIEF

Today the most iconic leadership moments are spontaneous, spur-of-the-moment events that reveal the inner workings of the leader's mind. When these impromptu opportunities arise, leaders must be able to listen, think and respond within seconds. They can tailor a message — in a meeting, in the corridor or in a tweet — to influence and inspire any audience. Those who shine in that moment are remembered for their leadership.

The ability to speak on the spot is often seen as an innate gift, a talent of "natural-born" leaders. The truth is, it's a skill that can be learned — a skill that is quickly becoming a must-have for anyone in a leadership position. Guided by her entrepreneurial success as founder of The Humphrey Group and her firm's work with tens of thousands of leaders over the past 30 years, Judith Humphrey makes clear the importance of preparing to be spontaneous — as counterintuitive as that may sound!

Impromptu provides clear, actionable guidance to help you reach your full leadership potential. It will enable you to influence and inspire followers on the many "small stages" that define our daily lives.

IN THIS SUMMARY, YOU WILL LEARN:

- Why impromptu speaking has become an essential skill for leaders today.
- To develop an impromptu mindset.
- To create an impromptu script for every occasion.
- To deliver your remarks with maximum effect on the impromptu stage.

THE COMPLETE SUMMARY: **IMPROMPTU**

by Judith Humphrey

The author: Judith Humphrey is founder of The Humphrey Group, a premier leadership-communications firm. She founded The Humphrey Group in 1988 as the first Canadian firm to focus on teaching top executives to be effective speakers. As a communications expert, Humphrey teaches global clients how to communicate as confident, compelling leaders. She is also an acclaimed speaker and a columnist for *Fast Company*. Her other books include *Speaking as a Leader* and *Taking the Stage: How Women Can Speak Up, Stand Out and Succeed*.

The New World of Impromptu

The Rise of Impromptu Speaking

Back in the 1980s, CEOs and top executives in every organization regularly delivered formal speeches and rarely spoke spontaneously — nor was anyone else encouraged to communicate. The law of the land was for managers and junior executives to keep their mouths shut.

And then in the 1990s something odd but unmistakable occurred. The demand for formal speeches declined, while the number of people asking The Humphrey Group for assistance with impromptu remarks soared. Today more and more leaders — pressed for time and anxious to be authentic — are scrapping the script.

Elon Musk, CEO of SpaceX, hired Dex Torricke-Barton, Mark Zuckerberg's speech writer, but was quick to point out in a tweet that "Dex will do comms, but my speeches are just a conversation w the audience. No time to rehearse & don't want to read from a prompter." This transformation of leadership communications from scripts to spontaneity, from the big stage to the small stage, reflects a new era of impromptu speaking.

The rise in impromptu speaking reflects three closely related developments that have changed our world. First, the flattening of organizations. There's still someone at the "top." But there are now fewer layers, and fewer barriers between top and bottom. Knowledge and decision-making are decentralized. Leadership is expected at all levels of the organization. Today's leaders must communicate in a more open, authentic and informal manner than was previously done at the top.

Second, technology has accelerated the shift to distributed leadership. Emailing, messaging, texting, blogging, tweeting and conference calls provide nonhierarchical channels of communication. People are communicating in shorter, more spontaneous and more authentic ways, making impromptu speaking more the norm than the exception.

Third, thanks to our interconnected world, time zones have dissolved and we live in a 24/7 universe. The flow of information, once a trickle, has become a veritable Niagara Falls of emails, texts, news reports, videos and social media posts. This leaves less time for lengthy, formal events, with the result that older forms of communication (speeches, presentations, meetings) have been replaced by crisp impromptu exchanges. In fact, impromptu speaking has become the modus operandi for leaders, reflecting the fact that everything leaders do is chopped up, fragmented into short bits of activity.

Power of Spontaneity

Impromptu speaking has compelling power for leaders. People don't necessarily "get" what you want them to if you say it only once. You need to repeat your messages over and over and over again. In impromptu settings you can do just that — in the corridor, the elevator, the lunchroom, the meeting room and the office. Each time you repeat your message it will sound fresh and spontaneous, and over time you will have the impact you want.

Impromptu conversations can stimulate collaborative idea sharing. "Ideas typically do not just come to you," Mark Zuckerberg said in a 2014 Q&A session at Facebook. "They happen because you've been talking about

something or thinking about something and talking to a lot of people about it for a long period of time."

Spontaneous conversations allow you to resolve problems and give feedback on a more timely basis. Sundar Pichai, Google's CEO, often meets with Google employees in a room next to his office that has been nicknamed "Sundar's Huddle." On one such occasion, according to an article in *Fast Company,* the group had "barely begun its presentation when Pichai starts peppering [participants] with questions, opinions and advice. For half an hour the discussion careens from subject to subject." This is the power of impromptu, on-the-fly exchanges that lead to better decision-making.

Spontaneous speaking allows you to be authentic and trustworthy — no small benefit when you are leading a team or organization. When leaders speak in an unscripted mode, their tones are more genuine and their listeners know they're speaking from the heart, not from a text that someone else might have written for them.

The crowning touch of impromptu speaking is that it will make you charismatic. According to research published in *Psychological Science,* people who respond to questions or statements without hesitation come across as charismatic. "When we looked at charismatic leaders, musicians and other public figures, one thing that stood out is that they are quick on their feet," said the researchers. And this ability to react without hesitation is attractive to others.

The Impromptu Mindset

Good impromptu speaking is a matter of words, scripts and presence. But before those words can be selected or scripts formed, there is a need to bring the right mindset. The right mindset includes having the intention to lead, being a good listener and being authentic, focused and respectful. Get your outlook right, and you'll find the other pieces will fall into place.

Be Intent on Leading

In this new world of spontaneous communications, an opportunity to lead might come at any moment, in any situation, at any level, to anyone in the organization. But you must have the *intention* to lead. This involves the desire to move others by shaping their opinions, influencing their actions, or just connecting with them on a human level and making them feel better about their workplace or their lives. Seizing these opportunities means, above all, realizing the potential of your own leadership and the ever-present opportunity to have an impact on others.

Smart leaders know when to seize leadership moments.

Pick the right time and place. Don't speak too soon or wait too long to share your ideas. Choose your setting, too. Public spaces are not the best for sensitive discussions.

Collect your thoughts. This is perhaps the most difficult challenge for impromptu speakers. After all, you may have only seconds to collect your thoughts. Think first…then speak.

Have your audience's full attention. Even if you have something powerful to say, or feel the person you are reaching out to knows you're there, don't speak until you have the undivided attention of the people you're talking to.

Have something valuable to say. If you don't have something of substance, keep quiet and listen to others.

Be politically sensitive. Even though organizations are flatter today, there are still political protocols for leading up, down and across your organization. And that means impromptu conversations must be undertaken with sensitivity.

Be a Listener

A commitment to truly hearing others is an important part of the impromptu mindset. But active listening involves more than listening with our ears. It's a threefold approach that requires our entire being — our *physical, mental* and *emotional* powers.

Good physical listening begins with body language that shows you are interested in others. Open your hands and arms, and direct your gestures toward the person you are talking to. Turn your head and body toward that person. Warm up your voice, and be expressive. Look people in the eye, and even in a group meeting, always look at the speaker even if that person is not talking to you individually. Smile, nod, show rapport.

Listening mentally is the second tier of listening and involves fully engaging your mind in what those around you are saying, and probing and building upon their thinking. The starting point of mental listening is attentiveness. Mental listening also involves probing, drawing out others and eliciting their views. Mental listening at its best involves orchestrating a discussion and bringing coherence to disparate views.

The third tier of listening involves emotionally connecting with others and not letting your own feelings get in the way of effective listening. The starting point of emotional listening is reinforcement — nodding your head or saying "yes" and "I understand." Show that you empathize

by using phrases like, "I can see why you feel that way" or "That must have been a difficult decision for you."

Be Authentic

Authentic leadership involves sharing the genuine qualities that define us. But it is more than that. It also requires embracing the values and deep beliefs that represent leadership at its best. Those qualities include the intent to lead and listen and to respect the views and dignity of others. The most successful leaders share what they know, believe, feel and experience in such a way that they inspire others.

There are many ways to bring your authentic self forward. The following six will put your audience (and you) in touch with your true self.

- **Share your presence.** It is about being "in the moment," being open to the conversation and aligned with the person or people you're talking to.
- **Share your ideas.** Authentic ideas are original, bold ideas that come from within you. Leaders need to delve deep to find them.
- **Share your beliefs and values.** Authentic leaders inspire others with their beliefs and values.
- **Share your feelings.** Authentic leadership involves showing positive, motivational passion and filtering out destructive feelings that might demotivate others.
- **Share your vulnerabilities.** Authentic leaders are forthcoming about their strengths and weaknesses.
- **Share your stories.** Nothing will endear you more to an employer, boss, team, colleague, customer or friend than an inspiring story about yourself.

Be Focused

The need for focus is important today because everyone is on information overload, and you'll lose your audience if you don't deliver clear, focused thinking. In *Brief,* communications expert Joseph McCormack writes, "In 2008, Americans consumed about 1.3 trillion hours of information outside of work, an average of almost 12 hours per person per day." At work, the demands are even greater. Given this flood of information, it's no wonder people's attention span has gotten shorter and shorter.

The solution? Have a focused mindset that (1) encourages you not to talk, talk and talk because you like to hear the sound of your own voice, and (2) distills your thinking rather than offering up a content dump. Steve Jobs distilled his presentations down to one message: "Today Apple is going to reinvent the phone, and here it is," he told his MacWorld 2007 fans.

In impromptu speaking, being focused is a make-or-break quality. You'll lose your audience if you speak too long or get sidetracked. But if you stay focused you can rivet your listeners' attention on exactly what you want them to know and care about.

Be Respectful

True leaders show the utmost respect for their employer. If that sounds "old school," just think of organizations as *communities.* Loyalty to your organization shows you value a community that includes you, your team, your colleagues, your customers and other stakeholders. As a leader, you should inspire others to believe in the organization and what it stands for.

Respect your management as well. When speaking off the cuff, avoid comments that show disrespect for your boss or senior management. Organizations may be flatter than they once were, but showing respect is still a coveted quality.

Respect your colleagues. Respectful people are the ones who listen attentively to others at meetings, who don't interrupt when someone else is talking, who can be trusted with confidential information, and who always are generous and positive in their comments about others. They make others look and feel good.

Finally, respect yourself. Successful leaders also project a consistently positive and credible "brand" for themselves. They don't undercut themselves when they feel vulnerable, tired or upset. Respect needs to be at the core of our impromptu conversations — and for that to happen we must make it part of our mindset.

The Leader's Script

This section discusses how to craft scripts for impromptu speaking. First, let's learn how to create a strong foundation for your script.

Lay the Groundwork

The first step in preparing your extemporaneous script is knowing your subject matter. This includes three kinds of knowledge:

Subject knowledge. People expect you to demonstrate a solid grounding on the topics you're discussing. Get your facts right, or risk damaging your credibility.

General knowledge. The better read you are and the more you keep up with developments in science, politics

and sports, the richer your remarks and the more persuasive you'll be.

Experiential knowledge. The best impromptu speakers also draw upon their life experiences. Martin Luther King's "I Have a Dream" speech was largely extemporaneous, but it embodied ideas he had lived.

Preparing for impromptu speaking also means having key leadership messages in mind. Mark Zuckerberg does this well. He is always "on message." His central message and mission is this: "To give people the power to share and make the world more open and connected." He consistently delivers variations on this theme.

Read Your Audience

Take time to analyze your audience before you're face to face. Ask yourself, "What is their appetite for the ideas I will introduce?" "Will I need to bring them around to my way of thinking?" And "If so, what is my best strategy?" Assessing your audience's level of knowledge is also critical. Will you need to explain the basics to them, or do they have a sophisticated knowledge of the subject?

Once you're in front of your audience, be sensitive to the dynamics in the room and respond accordingly. When speaking, keep the following questions in mind and let them guide you in reading your audience. "Is my audience engaged?" "Which ideas are gaining traction?" "What is the organizational culture?" "What political realities are present?"

Follow up by asking yourself, "Did I 'get' the audience?" "Did I read the situation correctly?" Those post-mortems are valuable and a good way to improve your skills.

In sum, always think in stereo — one track keeping tabs on your own thinking while the other track monitors the audience's response. And to be a great impromptu speaker, read your audience — before, during and after you speak.

The Scripting Template

In every situation it's important to collect your thoughts rather than spew out whatever comes into your head. Winging it simply doesn't work for leaders.

The Leader's Script® template is a model for organizing your thinking in impromptu conversations. This easy-to-master template has a four-part structure rooted in the fundamentals of persuasion. Here's how it works:

First, engage your audience with a "grabber." This bridge to your audience can be a friendly greeting, a reference to a previous discussion or a segue from someone's point.

Second, state your message. This is your point. It is the heart of your impromptu script.

Third, build your structure. Create a compelling case for your message with clear, persuasive arguments.

Fourth, end with a call to action. Show how your message can be acted upon.

This four-part template will allow you to lead others through persuasive and sound thinking. Burn it in your mind, and use it every time you speak impromptu.

For example, you're about to meet with your boss for an update on a project. Take 10 minutes before the meeting to write down the key elements of your script. Your grabber might bridge to your boss by saying, "I know you're keenly interested in Project X."

Your message would follow: "I've got good news: We're making excellent progress." Now for your proof: Jot down several points that illustrate why you say things are moving along well. Close with action: What do you want your boss to do? Or what will you do next?

That's it — a simple template that guides you through any discussion. Creating your script is an important aspect of impromptu speaking. It will keep you from blathering, as so many people do. With a clear and persuasive structure, you will influence and inspire your listeners.

Commit to a Message

At the heart of the Leader's Script is a point — your point. It is the idea you want to get across. Without a message, conversations become information-based rather than idea-based. Listeners are not sure what point you're suggesting or why you're proposing a certain action.

The best speakers know the qualities of a good message. Here are the six characteristics to keep in mind.

First, a message is one idea. Too many ideas — or no idea — both produce the same thing: confusion in the minds of the audience.

Second, it's a single, clear sentence. Why? Because if your message is more than one sentence or is a long, convoluted sentence, the audience will not "get it."

Third, it is engaging. Design it so your listeners hear it, believe it and want to follow it.

Fourth, it carries your convictions. Make sure your message is an idea you believe in.

Fifth, it is positive. Your message should move the room, so be sure it embodies hope, aspirational goals, possibilities and accomplishments.

Sixth, it's recognizable. Often expressing it as a strong, clear, declaratory statement (with a tone of conviction) is enough to flag it as your main idea.

Make a Compelling Case

Stating your message is rarely sufficient. You need evidence that encourages listeners to buy into that point of view. So after presenting *what* you believe, share *why* you believe it.

Building your case involves choosing the right pattern of organization for your points. The secret is to learn the following four patterns and pick the best one for each impromptu script.

1. Reasons. This pattern backs up your main point with reasons. Suppose your message is, "I believe we need a more inclusive working environment." Your bullet points might be: "First, we're way behind in hiring women and minorities. Second, a diverse workforce leads to a better bottom line. Third, inclusivity is the right thing to do!"

2. Ways. This pattern shows the ways your main point can be acted upon. Or it can refer to "things" that have to be done. Suppose your message is, "I know we can fix this situation for our customer." Your bullet points would show the ways: "First, we will interview our customer. Second, we'll assign a team to resolve the situation. Third, we will follow through and make sure it's fixed."

3. Situation/Response. This pattern is used when your message refers to a situation or challenge to be acted upon. The first bullet describes the situation or challenge, while the second presents the response. Your message might be, "Although last year's results came in below expectations, we've taken steps to turn the division around." Your bullet points would sound like this: "Adverse economic conditions resulted in earnings that were 10 percent below projections last year. But our new product line and cost efficiencies should allow us to meet or exceed expectations this year."

4. Chronological. This pattern takes your listeners through a temporal sequence that elaborates your message. Say your message is, "We have met our project commitments on schedule." Your bullet points might sound like this: "When we launched this project, we said we would complete the installation in three years. In the first year we achieved the goal we set. In the second year we were ahead of schedule. Today all of our commitments have been met."

To decide which structure to use, pause after your message, and choose your pattern. And if you have time to think in advance, all the better. Eventually the decision will become second nature. Having a message and bullet points will guide you through your impromptu remarks. Fill in the words as you speak.

Impromptu Scripts for Every Occasion

Meetings

Studies show that busy professionals attend more than 60 meetings every month and spend approximately 40 percent of their time in meetings. CEOs spend a full 85 percent of their time in meetings of various sorts, including scheduled and unscheduled meetings, brief encounters, conference calls and networking events.

You as a leader have a wonderful opportunity to influence and inspire in these meetings. For example, your boss asks for an update on a project or a string of projects. Realize that project updates are always a little more than just that. What you're really doing is selling your boss, and anyone else in the room, on your work and why you think it matters — and why it should matter to them, too. To do that well, you need to avoid the mind-numbing, fact-based approach: "This happened, that happened, here's where we are, blah, blah, blah." It's a poor idea to provide that jumbled-up selection of good news and bad news.

Start by writing down a positive message for each project, no matter what stage it's in. Then write down or type out several reasons or ways your project can be shown to be in good shape. On your way to work, run through that messaging in your head.

When it's your time to present, begin with your grabber. If you're presenting to your boss, you might say, "You'll be pleased about Project X." Then set forth the positive message: "It's on track to deliver higher revenue for our salespeople." Always make sure your message inspires. If your group is underperforming, don't hide the fact, but have a message that commits to turning the situation around. Poor results? Show why they'll get better. Once you've delivered the above message, move to your proof points. Finally, your call to action ("Stay tuned!").

Such a script will allow your boss to sleep well. Position every project in this way, and you'll demonstrate your leadership and build confidence in your team.

"Just the Big Picture"

A meeting convenor or executive has told you time is tight, saying, "Just give us the big picture." These words can be scary. Here's a brief guide to shrinking your presentation on the spot.

The worst thing you can do is skim through your entire presentation or report, frantically trying to figure out what to say and what to delete. This approach is often

characterized by talking too fast and occasionally discarding a slide with the comment, "That's not important" or "We'll pass over that one." A far better approach is to bring your impromptu skills into play and create a shorter presentation on the spot. There are three ways to do this.

1. Scrap the slides and deliver your thinking. If you used the Leader's Script in preparing your presentation, it will have all the key elements of a good impromptu script — grabber, message, proof points and call to action. If your time is reduced, tell your audience that you will give them the key messages of your presentation.

2. Select key slides. Focus on the few slides that present the key elements of your talk. In preparing your presentation, create an outline that has all the components of the Leader's Script. Do this even before you create your visuals. Then design the visuals around this template. If you're asked to speak in less time, use only those slides. Be sure to save this mini-presentation of four to six slides as a separate file.

3. Just use your message. There may be occasions when you don't even have time to deliver a version of your presentation's structure. Your boss may rush by and say, "I've got to run. Give me the gist of your presentation." Or you may find yourself in a situation where someone needs the simplest version of your talk. Often this comes in a hallway conversation, an elevator chat or a client meeting. So always carry in your mind the one message you want to get across.

The Impromptu Speech

A vice president was asked to introduce a minister of labor at a business luncheon. The executive had prepared an adulatory introduction, but the minister showed up early and needed to speak well before her designated time. When the VP arrived, his introductory remarks were no longer needed.

After the minister finished her keynote address, the master of ceremonies called upon the VP to "say a few words" about the speaker. The executive knew he had to craft an impromptu speech, do so quickly and make it right for the occasion. The theme of his remarks came to him as he walked up to the podium to address the 700 people in the room.

He began, "Madame Minister, I am not surprised you were ahead of schedule today. After all, as your speech indicates, you have been moving rapidly to address labor issues in this province." The VP then enumerated a few of the labor issues that the minister had been tackling and resolving. After doing so he concluded, "Thank you for coming today and for staying ahead of schedule on your commitments to this province."

The best impromptu speeches reverberate with a single, captivating idea. The executive's central idea (praising the minister for "moving rapidly to address labor issues in the province") flowed out of the grabber ("I am not surprised you were ahead of schedule") and led to the call to action in the final line of the speech. Once you have that message, you're well on your way to a great speech. All you need to do is figure out your proof points and your call to action.

The Impromptu Stage

Rehearse Your Remarks

Successful spontaneity is a practiced art. There are times when you'll want to rehearse your remarks out loud because it can make all the difference in client pitches, job interviews, Q&A exchanges, impromptu speeches and difficult conversations.

Pitching clients can be unnerving, so it's best to practice. Whether you're an entrepreneur, a salesperson or a team leader, selling your ideas takes practice, and rehearsing will help you stay on message.

Rehearse for job interviews, too. Practice until you know your script thoroughly and can successfully field any questions thrown your way. This takes work, but it's worth it.

Sussannah Kelly, executive vice president, DHR International, regularly rehearses candidates for CEO positions. She fires questions at them and gives them feedback on their answers. According to Kelly, "What they learn from these rehearsals is that it's not about them. It's about how they can help the company."

Smart business leaders also prepare for Q&A. A financial executive was a pro at such dialogue because he rehearsed for his conference calls with analysts. Before each call he'd write down all the questions they could ask him, and create succinct, message-based answers. Then he would be grilled on those questions and others, including a few "left-field" questions like, "I hear there's a management shakeup in the works at your company, is that true?" Or "Do you have any plans for a merger?" As a result of these rehearsals, he was terrific on the conference calls.

Choose Your Words

Mark Twain once said, "The difference between the right word and the almost right word is the difference between lightning and the lightning bug." In impromptu

speaking, we may struggle to find the right word but land instead on the almost right word or even the wrong word — followed by apologizing, self-correcting or rephrasing.

To strengthen your impromptu language, keep the following four Cs in mind:

1. Be clear. Unclear language comes from unclear thinking. Too often words roll off the tongue, yet they don't present a clear idea. Prune your prose. Say "We'll focus on," instead of "What we are going to do is focus on." Junk the jargon. Delete phrases like "Transform our educational knowledge set," and replace with the more familiar "learn."

2. Be conversational. Impromptu language should be conversational — marked by the simplicity we use in everyday conversation. Use short words. Don't use "however" if you can use "but." Don't say "prioritize" when you can say "choose." Also, your audience can understand shorter sentences better than longer sentences. Finally, be conversational, but be professional. Avoid "yeah," "yup," "nope," "gotta," "you guys," "stuff," "hey" and "whatever!"

3. Be confident. Speak with conviction. Use phrases like "I believe," "I'm convinced," "I've thought a lot about…." Filter out the filler. Avoid words like "um… ah… yeah… well… like… you know… to be honest" or any combination of these. Shun weak words ("just," "a little bit," "only," "maybe"), and watch wiggle words ("perhaps," "probably," "possibly," "basically").

4. Be collaborative. Limit the language of "ego." Words that can smack of egotism if overused, such as "I," "me," or "my," should be used sparingly. Nix the negatives. Collaborative language builds relationships and is therefore positive. Avoid "I can't" or "I won't," as in "I can't get the budget for this project" or "I won't be able to make the meeting." Also, focus on common goals, and encourage diverse viewpoints.

Find Your Voice

Your voice is a powerful instrument for impromptu leadership. If you're too rushed, too loud (or soft) or seem out of breath, you will undercut your ability to engage others. Let's discuss how to achieve a strong, confident voice by learning to breathe, grounding your voice and achieving the ideal volume, tone and pace.

Begin by breathing. You're in a meeting and suddenly a question is thrown at you. Before answering, pause and take a deep breath. That breath will send a calming message to your brain. You will sound — and be! — more focused in your reply. It takes a steady, reliable supply of breath to speak powerfully.

Ground your voice. Grounding your voice will make it deeper, stronger and more credible. To build this skill, think of the connection between "gravitas" and "gravity." Imagine your voice tugged down by gravity. When we are tense or surprised, or rushing as we speak — as often happens in off-the-cuff moments — our voices rise. So gravitas is a perfect antidote to that tendency.

Strive for the right volume. Find a voice that's neither too loud nor too soft but strong and confident. If you speak too softly, people will tune you out. You'll sound tentative and unsure. By the same measure, if you're too loud or aggressive, you'll offend people. Also, adopt a warm, committed tone that inspires confidence. Let your voice be expressive and show you're a person who cares about what you say and about those you're talking to.

Pace yourself. Your pace should be slower than you think. Pause between sentences. This will allow you to formulate your next idea, and it will also help your listeners absorb what you've just said. Typically the pause between your sentences should be about two seconds. Deliver your ideas at a relaxed tempo, and pause between the elements of the Leader's Script. Those breaks are a sign to listeners that you are moving from grabber, to message, to structure and, finally, to the call to action.

Few skills are more important today for leaders and aspiring leaders than the ability to speak well in impromptu situations. The day when executives could deliver the big speech and then retreat to their offices is long gone. Constant, spontaneous interactions with colleagues, senior executives, clients and stakeholders have become the norm.

The new world of leadership is full of conversation, collaboration and charisma. Make the most of these opportunities.

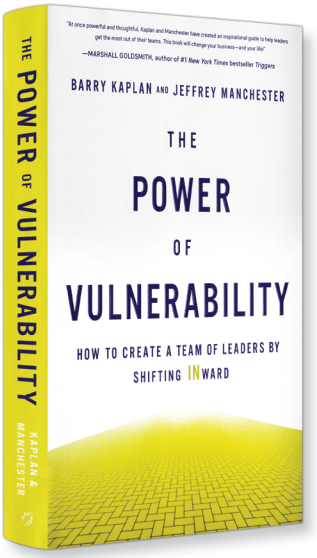
Leadership

The Power of Vulnerability

How to Create a Team of Leaders by Shifting INward



by Barry Kaplan and Jeffrey Manchester

THE SUMMARY IN BRIEF

Work is often a source of dissatisfaction for people because in their desire to get ahead, they often lose touch with their values and internal sources of power. *The Power of Vulnerability* offers a new approach to transforming corporate culture so that you can thrive at work and in life.

Authors Barry Kaplan and Jeffrey Manchester have leveraged their decades of experience and created a guide to finding success and fulfillment for teams and individuals. They teach readers how to create a sense of safety, encourage exploration, develop an INpowered team that transcends organizational hierarchy, foster communication and be authentic.

Manchester and Kaplan can help you find INpowerment so that you and your colleagues can create a fulfilling, supportive and open corporate culture. This fulfillment creates loyalty and long-term employee commitment to organizations.

The Power of Vulnerability includes everything you need to unlock the potential of yourself and your organization.

IN THIS SUMMARY, YOU WILL LEARN:

- Why authenticity and vulnerability are the keys to unleashing power.
- To INpower everyone to lead more effectively, whether they're the boss or not.
- To create rules of engagement for true authenticity in your organization.
- To find your purpose and create a life plan.

THE COMPLETE SUMMARY: **THE POWER OF VULNERABILITY**

by Barry Kaplan and Jeffrey Manchester

The authors: Barry Kaplan, a partner in Shift 180, is an expert in organizational development and leadership. He is an executive and team coach for entrepreneurs, leaders and their teams and actively leads small group, board and management team offsites and retreats. Jeffrey Manchester has worked with over 1,000 presidents and CEOs as a strategic advisor. He is a master at INpowering individuals and teams to maximize their true potential through the gateway of authenticity. *The Power of Vulnerability: How to Create a Team of Leaders by Shifting INward* by Barry Kaplan and Jeffrey Manchester, copyright © 2018 by Shift 180, LLC, has been summarized with permission of the authors, Barry Kaplan and Jeffrey Manchester, by arrangement with Greenleaf Book Group. 256 pages, $24.93, ISBN 978-1-6263-4473-0.

The Journey Begins: Isn't It Time?

Do you want more? Do you feel like you are going through the motions at work? Are you struggling to find meaning in what you do? Many business leaders and professionals say they have a sense of feeling alone.

Disconnection from purpose and authenticity is the root cause of this loneliness and lack of inspiration. Lack of connection gets us stuck. What keeps us stuck in the same place are our self-limiting beliefs. We create limits for ourselves, and we actually spend energy finding ways for these boundaries to be reinforced by others. Ultimately, they become embedded into our internal operating system of how we must show up in our roles and perform our jobs.

These limiting thoughts include beliefs about how much of ourselves we can reveal in meetings; beliefs about our roles in the leadership of a team, department or organization without being the hierarchical boss; beliefs about the appropriateness of more real, open, even vulnerable conversations; beliefs about our ability to take risks within the organization; beliefs about our own powers, authority and/or ability to change our circumstances; beliefs about the combined capabilities of the team; beliefs about our ability to feel a deep sense of fulfillment; and beliefs in our and the team's ability to handle chaos.

These self-limiting beliefs are self-fulfilling — unless we choose to change the belief.

"INpowerment" (not to be confused with empowerment) comes from our beliefs that each individual and team have more power than we realize; each of us has the capacity to access the power inside us; we can learn how to do it; we can do it on our own but even better as a team; and we need to discover and unleash that power by shifting inward. The potential of INpowerment reaches beyond our imaginations, yet it requires the courage of vulnerability to join the journey.

For Return to Connection: INpowerment Is Worth It

Organizations can be the ones to create the changes needed to create an environment that fosters connection and engagement. Embracing authenticity is a new paradigm for corporate culture. Authenticity is the key to unleashing power.

When you get to see someone for who they really are as a human being, beyond the façade, underneath the armor — not what they want you to know about them but the true person — you can genuinely open yourself to their struggles on the job. You then develop empathy, compassion and a feeling of care for your colleagues that comes from a genuine desire to support them with their challenges. That's because you're emotionally engaged with them and with their cause, not just intellectually curious.

The notion of how to empower individuals and teams too often misses the critical element of authenticity. With INpowerment — we have to always look internally first before we can look externally. We have to be all IN and willing to be the beautifully imperfect beings we are. We have to be willing to share our diverse set of perspectives, to use our own unique voice.

INpowerment requires a shift to claim personal responsibility to do what you need to find alignment with something greater than yourself, show up with your voice and bring your personal power to the team. The only

obstacle to accessing that power is our judgment about what we cannot be or do.

Breakthrough: Claim Responsibility to Shift Direction

Now that you've realized you want your voice back, the journey can begin. This is a journey back to YOU.

Classically, we look outside ourselves for answers and change, hoping to find a cure for the aching pit in our stomachs. But searching outside hasn't led you to a sense of passion and fulfillment in your life. It's only left you less than whole — a partial you. You must go inside and embrace that the change you must make begins with you. It's not the team that has to change. It's not your boss. It's not your commute. It's not your kids. It's you.

When you have lost your connection to yourself, you have lost touch with the many things that make you who you are — your values and beliefs, your wants and desires, and what you are most passionate about. This lack of connection to self is the chief culprit responsible for your loss of power.

Once you open yourself to the possibility that you are responsible for creating the "stuckness," you have the opportunity to change. You got yourself here; now you need to get yourself out. Start now. Choose to begin the process of learning more about you. Choose to engage with yourself and others more fully and completely. Start looking inside to find your voice and learn where you can connect with something greater than yourself.

Who Goes First? Don't Look Outside Yourself for the Leader

The journey to INpowerment is for individuals and their teams. Ultimately, transformed individuals build powerful teams, and a powerful team inspires individuals. The two serve each other.

Most people assume that embracing a deeper level of authenticity, especially when you are changing the culture of an organization, must start with the head of the organization or team. Though hierarchal leaders need to buy into the benefits and be willing to become authentic in order for the shift in the organization to be sustainable, the catalyst for that change can actually come from anyone on the team.

It's important that we distinguish the difference between a boss and a leader. The boss is the person who owns the ultimate decision. They are accountable for a particular decision. A leader can be anyone on the team — anyone, including the boss. That's because everyone has something to offer.

Leaders bring their power to the team — their voice that shares their ideas, opinions and concerns. Everyone who exercises his or her personal power in this way is a leader. While the boss may have the final decision, you owe it to yourself — and your team — to bring all that you have to discussions and meetings.

Vulnerability is the gateway to unleashing all of your power! This idea may be completely counterintuitive. But vulnerability is leadership within a team. When you are in a place where it feels safe to become more vulnerable, and you show up with your truth, you are bringing your power to the team. That gives others on the team permission to do the same thing. When you are willing to take the risk and make yourself vulnerable, the team will draw upon your example, and the entire team, through its vulnerability, will unleash the power that comes from authenticity.

Reclaim Your Power: Any and All Leaders IN

When the hierarchal boss understands and embraces this conceptual shift, that boss comes into the true power of their leadership. The boss is an individual, too. So, the development of the boss in their leadership calls for them to accept that the best way to get stuff done, to be the boss, to be a real leader, is to encourage others to step into their best version of personal leadership. That means you, as a boss, need to accept that you may not always be right, that you may not always know the answer, that you may not even know who does know.

You'll also need to accept that it is okay and even sensible (though risky) to move into the unknown, that it is okay to believe that the best outcome is when you can be both the boss and a leader without having to always lead. Embrace the reality that sometimes the highest form of leadership is when you lead from behind by creating the environment for others to claim their power and step in before you.

But the boss starts out like everyone else, needing to go inward and do their work to unlock their power, too! They may have hierarchical power or authority, but they still need to reclaim who they are.

This is a brave new world for the new boss as they continue to allow themself to be a member of a team of leaders, not THE leader of a team. The weight of carrying the burden of having to be right or to be the person with all the ideas and answers is now gone! The boss can worry

less about what they have to give to their teammates in direction and ideas and focus more on what they can take away from their teammates (through helping them remove barriers and blocks to their success). They are leading, and the boss is engaged in making them the best that they can be in their roles.

By INpowering each leader to lead, meetings will look and feel different. Previous meetings where the boss was required to bring the agenda and try to facilitate dialogue among the team will give way to each leader bringing content and/or agenda items to co-create the specifics of the agenda.

Time to Show Up: Start a Cultural Revolution in Your World

As members of the team embrace this new form of authenticity and it begins to flow into the rest of the organization, the culture of the organization will begin to change. This truly is a cultural revolution.

What unfolds next is a greater capacity for creativity and innovation and, ultimately, productivity. The boss no longer has to push their agenda; rather, the other leaders on the team will learn to co-create buy-in to align with the agenda.

Buy-in is more compelling and important than agreement. You can disagree with a final decision and still give your buy-in, because you have expressed your beliefs, opinions and feelings. It's better than just feigning agreement because of the inevitable decision or vote. Rather than forcing the vote, the ultimate decision is organic, a product of everyone speaking his or her truth until it is clear where the buy-in resides.

The growing power inside each individual radiates to create greater power for the team. No longer concerned about hiding something or being shamed, team members can show up in their power as leaders. This is the core of the cultural revolution.

Now your team is feeling the power that authenticity provides. This new connection creates resolutions to core issues that will propel the company into new levels of performance. The individuals on the teams are even more fulfilled in their contribution.

Hang On: Disruptive Processes Ahead

A cultural revolution calls for a dramatic change, or disruption, in our way of being. To get to our infinite store of hidden power inside, it's helpful to use disruptive processes to unlock it. Although this may sound a bit scary, don't be afraid to be afraid! This is the gateway that we need to go through to get to the power on the other side.

In the context of a team, a disruptive process is, by definition, doing something that the team wouldn't normally do. It disrupts our normal "business as usual" protocol. This requires getting comfortable being uncomfortable.

Think of your normal meeting experience. Typically the agenda has been predistributed to the attendees. As soon as everyone arrives, you might greet each other. "Hi, how are you?" elicits the rote response of "Great, how are you?" which then elicits yet another superficial response of "Fine." Then, most everyone continues to look at their phones, knocking off emails and texts, even after the meeting has opened and typically several times during the meeting.

Instead of this "business as usual" approach, you could start your meetings by having everyone turn off all electronics (or, in some cases, collect cell phones in a basket when everyone comes in the door). This simple step immediately pushes everyone outside of his or her comfort zone. The eye twitches and technology withdrawals begin! Excuses and rationalizations about why they have to have their phones are endless. But to bring your power and engagement to the meeting, you have to be present, not distracted by other matters, and this is all about accessing your own and the team's latent power.

Operating with disruptive processes is at the core of the revolution. Once you embrace these tools for a period of time, they will no longer be considered disruptive — they are the new normal.

Warm Up: Access Power Through Vulnerability — Ask, Don't Tell

It's time for a meeting or offsite, and the team wants to prepare for the big event. There's a lot to cover, and you have your ideas about what you'd like to say. Yet at the same time, you're reserved and unsure whether it's worth the risk to speak up. You'd like the interactions to be authentic and therefore productive. So, how do you get ready? The process calls for taking risks and vulnerability.

Begin the journey to authentic connection by deeply listening to what is needed to help make the team thrive. Work to understand what cultural shifts and changes in management meetings and rhythm need to happen, what "elephants" may be in the room and what sensitive conversations need to be facilitated. Only then can you begin to craft an agenda that will take the group to where it needs to go. As you begin your journey of INpowerment, start with that deep inquiry into a vulnerable place.

The INpowerment principle that applies here is, your depth of connection with the team will mirror the depth of your connection with yourself. Before you can connect with the team, first connect with yourself.

First, ask yourself about "you." Do you have limiting beliefs you're holding toward the team or any individuals? What issues do you have with other teammates that are preventing you from engaging more fully? What is the range of emotions that get triggered when you reflect on your role in relation to the team? This will inform you about how to navigate frustration or anxiety around certain individuals.

Next, how do you feel about team or organizational challenges or blind spots? Invite yourself to diagnose these flaws that might be getting in the way of the team becoming more powerful. What are the organizational challenges that emerge from those blind spots or other stumbling blocks? Do you see blocks to achieving the results you're committed to? You are getting clarity on what is most important for you and the team to tackle.

When you have connected to yourself first and then fully and transparently connected with your group, you have opened the gateway to make direct requests about what you want. Start by looking inward to get clarity up front about what is important to you. Explore what you want to have happen at the meeting or what a successful outcome looks like if you get what you want. Although you may not get it, if you don't start by asking yourself what you want, you'll never know.

Taking the Leap: Safety Belts, Please!

Imagine that you are considering a bungee jump off of a bridge that's several hundred feet above the canyon floor. The first thing you're going to do is look at the company's safety record. Then you'll check the maintenance procedures for the safety harness and bungee rope that is supposed to hold you. If you deem it to be safe and therefore that you TRUST it, then you'll take the leap.

Taking a risk in a relationship with a colleague requires the same thing — safety. If you don't believe it's safe enough for you to share your opinions, you are not going to. Yet, because you have clarity about what you want, you can now navigate the relational and team dynamics to ensure that you express yourself more fully. Because you have clarity about your need to create safety, it's already safer.

Creating safety in the team is the prerequisite for taking risks. There are five steps to the process of creating a safe space.

1. **Getting present.** First, getting present in the moment invites you to set aside distractions that will inhibit your power. Your presence leads to your power.
2. **Understanding and committing to guidelines and a protocol for how we are going to connect.** Introduce guidelines for everyone to embrace as a framework for interacting with and connecting to each other. As examples, everyone commits to speaking their truth, owning their judgments and feelings, actively listening and speaking respectfully without blaming or shaming.
3. **Using the Clearing and Resolution model.** Instead of ignoring the elephants in the room, clear them out so everyone can be aligned with themselves and the people they work with. The construct for clearing issues uses the following elements: facts, judgments, emotions, role or responsibility and specific wants.
4. **Completing exercises to take steps toward authenticity.** Sometimes this may be a simple prompt that calls for self-reflection and vulnerability. For example, ask everyone to share an experience from the past month that inspired his or her passion.
5. **Anchoring and integrating the process.** Take time to debrief the outputs and next steps to assure that the decisions, insights and learning can be brought to life in a meaningful way. That makes it safe for the team the next time it comes together.

Where Are You Right Now? Eyes on the Road

The only place you have any power is in this moment, right here, right now. If you are still thinking about this morning's breakfast meeting, you have no power. If, in this moment, you distract yourself with the electronic buzzes and beeps from electronic devices, you have no power.

The key to being in your power is to be acutely present in this very moment. This takes slowing down at the beginning of the meeting to accept and honor that it takes a few minutes for everyone to get present. Being present will allow for greater clarity in conversations and the ability to move through the agenda more effectively than you would having everyone mentally somewhere other than where they're sitting.

A useful check-in tool follows the acronym MEPS, which stands for Mentally, Emotionally, Physically and Spiritually. The question that goes with MEPS is, where are you right now (not this morning or next week)

through four energy centers: the head, the heart, the body and the soul?

- **Mentally** (in your head) — are you clear or distracted? Focused or in a stream of consciousness?
- **Emotionally** (in your heart) — what is the range of your feelings: glad, mad, sad, scared, ashamed, guilty or tender? Are you feeling more than one?
- **Physically** (in your body) — as you scan your body right now, do you feel achy, tight, fit, hungry or tired?
- **Spiritually** (in your soul) — are you connecting (or not) to something bigger than yourself? That could be nature, purpose or calling, higher power, connection to people, or perhaps right now there is lack of connection.

As you all become present in the moment, you will sense a different energy in the room. It is palpable. The same bodies are around the table, but the communal spirit is heightened. Each of you is bringing more of yourselves by connecting with your presence.

Rules of Engagement

Assuming everyone is present, connected and engaged — now what? Even if you are starting to buy into the premise that vulnerability and transparency are critical, there is still a need to understand HOW to actually show up in a safe way.

A cultural communication revolution requires the establishment of guidelines that everyone can embrace and honor. These guidelines lay out specifically how we are going to connect with one another to honor confidential conversations, encourage open and honest dialogue, commit to speaking individual truths, and include emotional context for where the team is so they know how to process interactions.

Here is a set of guidelines for working with groups of various sizes, from one person to small and large groups:

- I will respect confidentiality.
- I will be present in the moment.
- I will stay when times get tough.
- I will speak my truth.
- I will ask for what I want.
- I will take care of myself.
- I will express and own my feelings.
- I will own my perspectives.
- I will actively listen.
- I will speak respectfully, without blaming, shaming or fixing.
- I will ask permission before offering feedback or advice.
- I am willing to make mistakes.
- I am willing to laugh at myself.
- I will be on time and stay until the end.
- I will turn off all electronics.

These guidelines are a framework to keep things safe so you can work. They are a path to the safety of mutual respect and honor the breadth and depth of truth with compassion for others and ourselves.

Wow, Honesty! Navigating Rocky Roads

When a team member is holding back a concern or issue with another team member or with the team, that issue needs to be cleared.

How do you know when you have an issue that needs to be cleared? You will likely be emotionally stirred up as you attempt to reconnect with the individuals on your team. You may notice that your internal dialogue wants you to shut down or withhold how much you share. Sometimes you may feel an emotional trigger someplace in your body — perhaps your belly, neck, head or shoulders. Triggers are blocks to the openness you are looking for. The only way to create the trust necessary to get back into a deeper conversation is to clear the trigger.

When you get hit on an issue, here is a five-step clearing process to identify and separate the clutter:

1. **What are the facts?** A small part of your issue is grounded in facts, so it helps to parse those bits of provable, objective data first.
2. **What are your perspectives?** These are your opinions and beliefs that come from your point of view. In the clearing process, as with the guidelines, you own your perspectives. This keeps the person or team you're clearing with safe from any projections.
3. **What are you feeling?** Do you remember any physical sensation you have experienced about the issue? That physical feeling was associated with an emotion. By identifying and speaking about the identified emotion, you are liberating or clearing yourself from them.

4. **What was your role in attracting the issue to you?** Stuff doesn't just happen to people. Rather, they have a role or responsibility in why they attracted whatever situation they were a part of. In this critical step, you share what your part may have been in creating the issue.
5. **What do you want specifically?** Now you have the opportunity to ask for what you want. You may not necessarily get it. Though if you don't ask, you'll never know. This request is also the platform for what resolution may follow the discussion.

A clearing helps people break free from emotional triggers that get in the way of presence, and one of its benefits is getting opportunities for resolving real problems and issues that come from the specific wants articulated in the clearing.

Embracing Our Fellow Travelers

The gift you are bringing to this company and this management team is YOU. And what makes you different from every other person that is sitting in the conference room with you is your story.

For us to truly know one another, we have to understand each other's stories — not what's in your resume or your company bio but the life-shaping experiences that have made you who you are. These experiences have formed your belief systems and how you operate.

The sharing of personal stories is crucial for creating an authentic team. It starts the conscious choice of building relationships and investing in the lives of the people you work with.

When you share your story, connect to the narrative through emotion — express your feelings with both words and nonverbal energy. Share how your story impacts you, your family and vocation. Your goal is to win over the listener as an invested cheerleader for you, because they are now connected to the real "you" through your story.

After connecting with everyone's life-shaping experiences, the team will have formed a bond that will forever change how you see each other. You will now begin to understand your colleagues' decision-making processes and the motivations behind their ideas and positions.

This doesn't mean that you won't have differences of opinion. On the contrary, you will have taken the level of trust to a much higher level, allowing for even more expressions of dissenting opinions.

Making Our Way: Use It or Lose It

To assure that change stays with your organization instead of becoming a fleeting flirtation, you need to anchor and integrate new processes and systems. Here are some specific actions that you can take to anchor and integrate this experience.

Use processes more rather than less. There are many times during the day that doing a MEPS at your desk can help you get present before a call or other work you're trying to accomplish.

Integrate processes in every meeting and interaction for three weeks. Yes, in every interaction. If you drop in on a colleague for an impromptu meeting, check in first. When your colleague asks you, "How are you doing?" reply with depth, saying something like, "Well, I'm pretty scattered right now. I'm anxious about my kid's upcoming surgery, fatigued from lack of sleep but pretty connected to my belief of hope." You'll energetically invite your colleague to also check in, and you'll find the dialogue that follows will reward both of you.

Model authenticity and clear often. Anyone on the team can step up to go first and model authenticity. So, practice it every day in all interactions. Before the first month is out, everyone on the team will be able to lead and model the new rhythm. For the first six months, also have everyone bring at least one item to clear at the beginning of the meeting. These clearings will give the group confidence that they can successfully use the model.

Come up with unique ways to maintain connection with your group. One way you can do this is to have each person offer up their own icebreaker to use at the beginning of your meetings to help others get present. You could rotate responsibility around the group for a connective icebreaker. This helps everyone embrace the "responsibility" portion of ensuring that integration happens.

Real Journeys

Thomas was a founder and CEO of a growing retail chain of beauty salons. His biggest challenge was recruiting and retaining talent. Thomas referred to the problem as "putting bodies behind chairs." He had a whiteboard in his office that had a running tally of bodies — he called it the "Body Count." His formula for success got him to 100 stores, but now his rate of growth was stalled. The team was running in place, and he was even having challenges retaining some of his top executives.

On a three-day retreat, his team worked on building safety, to (re)introduce themselves as the real people they were rather than as workers in the particular roles they played.

Joe was from Cincinnati. Sid grew up in Brooklyn. Cathy was the fourth generation in her family from New Jersey. Frank was originally from Toronto. Sarah was born in Israel and grew up in Miami, and Greg was from Salt Lake City. They shared their stories, owned and expressed their regrets, their triumphs and defeats, and even their aspirations and dreams. They bonded. They connected. Moreover, Thomas started to appreciate his team as people instead of as employees. He recognized the possibility that his office had lots of people with unique stories.

On the retreat's final night, Thomas revealed, "You guys taught me that there is more to our business than numbers or my Body Count. I have sold most of you short. I'm pretty sure I've underestimated the store managers and stylists back in our stores. They are far more than numbers. They are real people with heart in each of their stories. We need to shift the way we're going after growth. First, I want to stop the bleeding of attrition by recognizing our staff as people; and second, I want to change the way we go after new people."

This new sentiment spread once everyone returned to the office. Thomas continued to be relentless about the organization's growth possibilities, but his aspirations for those lofty goals were no longer just about him and his success — they now included his teammates and incorporated their stories. Throughout the head office and into the field, word spread about a new kind of energy.

Wide Road Ahead: It's Your Brave New World

How many of you have created a business plan? These plans are often how we continue to think about our business, which constantly challenges us to find that elusive ideal "work-life balance."

Unfortunately, trying to manage life balance with only a business plan starts with a win/lose scenario (either work wins and family loses or vice versa) and a zero-sum game where we must be involved seven days a week and 24 hours a day. This approach doesn't work. A life plan, on the other hand, changes the nature of how we approach our lives. It's designed to help us be intentional with those key areas of our life that bring us joy and fulfillment.

The key ingredient for a life plan is changing the win/lose scenario of a plan that only looks at our vocational life as multiple wins across all domains. Let's say you want to focus on your marriage, kids, health, leadership and deepening your faith over the next year. Your life plan will allow you to create an intentional rhythm to connect to each of these five domains, inviting you to feel connected to the totality of your life in a real and meaningful way.

This means that even if you choose not to work over the weekend, the connection and fulfillment that you've experienced by being fully engaged in your life will translate into more creativity, energy and enthusiasm when you are back at work. Because the energy from all areas of your life is connected, your "work" in your personal life helps you to be more effective at work, even though you are technically spending fewer hours.

Now that you are choosing to be all IN for your life, you also need to know your purpose, what drives you at your core. Your purpose provides you with the overarching guide for every choice you make. Aligning with your purpose is key to maximizing fulfillment in your life. It's what brings meaning to you.

Think about it this way: Just as every business has a mission statement designed to guide the company's focus, your purpose acts to give you focus for your life.

Knowing your purpose helps you be in alignment with your true power. It is an indescribable feeling that evokes the sweet spot where mental clarity, positive emotion, physical gratitude and spiritual connectivity merge. And, as you authentically connect inside yourself, you immediately have the success formula for becoming the best leader, parent, sibling, child and friend you can be.

With presence and power, you are right where you need to be right now — so, be INpowered.

Once you are, you will feel an ever-growing realization that you are aligned with yourself. This is a result of being in sync with your deepest truth. As you show up and realize you are where you are meant to be, that alignment will create an even deeper sense of purposefulness in how you show up.

It's not in the future or in the past. It's right here, with you, in this moment.

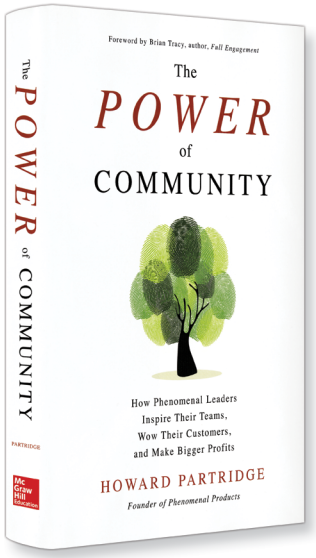
Leadership

The Power of Community

How Phenomenal Leaders Inspire Their Teams, Wow Their Customers and Make Bigger Profits



by Howard Partridge

THE SUMMARY IN BRIEF

It seems the more connected we are through email, smartphones and social media, the more disconnected we become on a personal, human level — and teamwork suffers tremendously. If this is happening in your company, fear not. The solution is here.

The Power of Community provides a step-by-step approach to transforming your organization by tapping into the human need to connect with and feel valued by others. By creating a company culture based on core community values, you'll empower your workforce, build customer loyalty, and drive profits and growth.

This game-changing guide describes why "community" is the answer to employee disengagement — which is now at a record 70 percent — and it explains how to develop the kind of culture that makes an industry leader of your business. It takes hard work and determination, but the rewards will astound you.

When people feel they're part of something bigger than themselves, they're more collaborative, creative and innovative — and this will always drive organizational success. Everyone wins in *The Power of Community.*

IN THIS SUMMARY, YOU WILL LEARN:

- Why leadership is essential for building community.
- Three keys that unlock community and six steps for building community.
- Strategies to encourage your people and inspire emotional trust.
- To develop your community systems and create your community brand experience.

Why We Need Community

Today, more than ever before, strangers on a screen influence people's minds, molding their beliefs, instilling fear rather than hope. Communication has been reduced to emails, instant messages, sound bites and tweets.

The challenge for leaders today is to make our work more compelling than whatever is happening in the media or what's happening on a team member's screen. That's a tall order and a big part of the reason we need a sense of community in our workplaces.

We can make our work so meaningful to our team members that they will engage at an unprecedented level. Building a sense of belonging — a sense of community — in our companies is the answer. The reason we need community is to re-engage our team members. It's the only weapon powerful enough to disrupt the digital disconnect that happens in every company today.

All leadership experts agree that culture is the most important thing in any business. The solution is to define your culture and create a sense of belonging by creating a culture of community.

The challenge when bringing people together in the world today is that each of us has different values, a different personality and different ways of dealing with conflict. Each one of us has a different vision of the way work and life should be.

Leadership Is Essential for Building Community

In order to transform your organization, you'll have to build a foundation on leadership. Before leaders are able to change their culture to create community in their organization, they must first learn to be better leaders. Phenomenal leadership is creating a community experience that inspires the team to implement. In order to accomplish that, leaders need two things: We must have a meaningful, compelling vision, and we must learn to communicate well. Leadership is effectively communicating your vision.

Leadership can communicate most effectively in the context of community. When a group of people feel like they belong to one another, they feel cared for and they believe that the vision is worth sacrificing for, they will go the extra mile for the company. There's no stopping a group of people who not only have the same vision and values but feel like they belong to one another — and know their team has their back.

If you think about the word community for a moment, it really means "communicating in unity." Communicating is just one part of the equation. Unity is the other part. It's only when we are truly connecting that we're really unified. Or better put — when we're unified, we connect better.

But first, understanding what can take away the sense of community is vital to re-establishing it.

How We Lost Our Sense of Community

At the beginning of the 20th century, for the first time in human history more of the world's population lived in cities than in rural communities. As the locomotive and the automobile became a part of normal life, the Industrial Revolution steamed forward. The factory, rather than

the family farm, became the "normal" workplace, which brought tough management systems. As strangers worked next to one another, they became just another cog in the wheel of industry. "Command and control" management was the order of the day during the Industrial Revolution.

In the 1960s there was another major shift. Data clearly shows a direct correlation between the rise of technology and the decline of face-to-face social groups. Live television brought Watergate, the Vietnam War and the assassinations of JFK and MLK into our living rooms. A media of strangers began to instill fear rather than hope into our lives on a massive scale. Television also became the new babysitter.

Artificial intelligence is another trend that promises lifelike companionship with a machine. Machines give humans extraordinary experiences, but nothing can replace a real relationship. The more accustomed we become to relating to images on screens, in "virtual" environments, and soon with artificial beings, the farther we move from real community. A virtual community is an oxymoron.

Phenomenal Leaders Build Real Relationships

All of business and all of life is about relationships. Phenomenal leaders understand that humans are starving for authentic relationships.

Many business owners and leaders worry that if they get too close to their employees, they will be taken advantage of. They fear the employee will fail to perform and will expect leniency. Although that is certainly a possibility, you can build a meaningful personal relationship while maintaining a strong professional relationship. Most people haven't learned how to be authentic with one another and therefore have not been able to maintain the balance between the two. This is a relationship skill that can be developed.

Positive relationships are built on trust and respect. Before we care for something, we have to value it. Before we respect someone, we must value that person. This is why the first step in building community is valuing people. Not for what they've done but for who they are. Human beings have inherent value and should be respected and dignified for that.

Creating a sense of community is possible. Let's now learn the three keys that can unlock community in your organization and six concrete steps you can follow to take the sense of community to the next level.

Three Keys That Unlock True Community

Before reaching the ultimate goal of true community, you'll first need to create a sense of belonging, which can lead to a sense of community. Your first goal is simply to get your team members feeling like they belong to something meaningful rather than just going to a job every day.

The three keys to creating *true* community are support, encouragement and accountability. The three keys look like this in a business environment — the Six Steps to Building Community are outlined with two steps under each key.

- **Support.** Helping your team members reach their goals and realize their dreams. Step 1 is Value True Community, and Step 2 is Pursue Champion Connections.
- **Encouragement.** Inspiring your team members to do the things they may be afraid to do. This key unlocks Step 3: Inspire Emotional Trust and Step 4: Practice Gift Exchange.
- **Accountability.** Providing feedback to your team members so they can become the persons they need to be. The third key brings us to Step 5: Invite Open-hearted Encounters and Step 6: Build Growth PODs.

The First Key: Support. Many employees feel that no one cares about them. What if you started helping your team members reach their goals in life? This is a major key to the whole idea of community. In order to get support, we have to give support. By supporting them — by going the extra mile to help them reach their personal goals — you'll earn their support in your efforts to reach the goals of the organization.

The Second Key: Encouragement. Encouragement is what inspires people to do the things they don't feel like doing, the things they fear doing and the things they don't know they can do. As Zig Ziglar said, "Encouragement is the fuel on which hope runs." In today's world it's rare for a boss or manager to give an "Attaboy" or "Attagirl" to an employee, but your business can be the place where people get the emotional fuel they are starving for. The Dale Carnegie Institute has long taught that what employees want more than anything is sincere and honest appreciation.

The Third Key: Accountability. Accountability is key to becoming the person you were created to be.

That's because it is only by being accountable that you can discover and develop your gifts and help others discover and develop theirs. In practical terms, being accountable means being true to your own values — to what you believe is important in life. And if you want to build true community in your organization, you have to determine the values that will guide that community and make sure that every member of your team, every individual in the community, operates by those values.

As an owner or manager it is essential that you create an atmosphere of accountability, which means you have to take the first step by being accountable toward others. In order to do that, you have to live a life of accountability yourself. Once you are living an accountable life, both personally and professionally — and the two are connected — you will be able to promote that value in your organization.

Now let's learn about the Six Steps to Building Community at a deeper level.

Step 1: Value True Community

The first of the Six Steps to Building Community is to value true community. We cannot build something we do not value. Valuing true community is assessing your vital need for deep, trusting relationships with people of shared beliefs to help one another become all you can be.

When we value something at a high level, we tend to protect it and promote it. Your team members can be your greatest asset or your biggest liability, and that depends on your skill as a leader.

Supporting others is being the "human bridge" that helps others have the life they want to have. You can begin the process of supporting others by simply asking those on your team about their personal goals and dreams. It might be to buy a house, run a marathon or learn a skill. You can then begin to help them in those endeavors.

You might also call this the Law of Reciprocity, which in essence says, "If you help me, I'll help you." President Dwight Eisenhower proclaimed, "Leadership [is] the art of getting someone else to do something that you want done because he wants to do it." Why would the person want to do it? Because you've added value to him or her. You've helped the person get what he or she wants. Not just at work but at home.

How do you value relationships? How do you value others? How do you value shared beliefs, shared values and shared goals?

A Leader Is a Coach

Community begins with coaching. When you value someone, you spend time with the person getting to know him or her. Instead of seeing yourself as a boss or manager, start viewing yourself as a coach. The origin of the word "coach" is "carriage," which is simply a vehicle to help people get from where they are to where they want or need to be.

A boss is just someone who tells others what to do. The employees may do what you say, but they may be disgruntled as they do it.

When you truly care about others, you'll coach them to success. Impactful leadership is about "care and coach" rather than command and control. A leader is not a manager. Leaders develop people.

Of course, at the same time, as a leader, you must avoid creating a sense of entitlement. Supporting someone is not doing everything for him or her or providing everything for him or her. Supporting someone personally is helping him or her with information, physical help, contacts or resources. If people are not doing their part, a coaching session is in order to talk about their role in helping themselves.

Step 2: Pursue Champion Connections

Pursuing champion connections means investing intentionally in relationships that have the potential to become strong alliances of support and mission. On the inside of your organization, you'll want to begin by selecting a couple of people on your leadership team who you know are loyal to you. Begin intentionally investing in those relationships, and then you can expand the size of the group from there.

Find out what these leaders' personal and professional goals are. Find out what their personal values are. Share your vision with them and get input from them.

Your first small group will become the heartbeat of the company. This is where you'll flesh out the vision for your company. This is where you'll talk about what really matters in the company. You'll develop your mission, values and purpose together. This is where you'll learn how to create community together and you'll "do life together."

We need to pursue champion connections not only inside the company but outside the company as well. Outside the company, we need to intentionally invest in

relationships that have the potential of becoming strong alliances of support and mission.

Attracting a Strong Community

Building community inside and outside your company creates a powerful combination that will inspire you and your team to greater heights in your business.

Your best clients, team members, vendors and associates will most likely come from your intentional relationship-building activities. Here's a simple process to attract phenomenal team members.

Identify people who have the same values you do. In other words, you have the same worldview, you have the same outlook on life. Diversity of gifts is important, but having similar values helps build a strong community.

Identify future candidates. When marketing your company, you don't wait until you need a customer to start marketing. In much the same way, you don't wait until you need a team member to build a relationship with him or her. Always keep your eyes out for future talent. The most important function as a leader is to hire the right person with the right kind of values and gifts for your community.

Add value to them (even if they aren't on the team yet). Add value to everyone you meet, and they will be attracted to you and to your company. Find ways to support people you want on your team. Find ways to encourage them. When you're continually investing in those you want on your team and you're investing in enough of them, you'll always have people attracted to you.

Now let's talk about how to move from support to encouragement.

Step 3: Inspire Emotional Trust

The second key to building community is encouragement. Encouragement is the emotional fuel people need to do the things they are afraid to do. Encouragement means to give courage.

Getting rid of fear is not the goal. Instead, try to show them they can find success by moving forward in the face of fear. That's courage. As a leader, you can be an encourager to your team, and that will inspire emotional trust, which simply means that others will trust you with their emotions. The reason that's important is that you haven't truly connected with someone until you know his or her true feelings and that he or she is buying into you and your vision.

Here are a number of ways to encourage people:

Know their story. You may have employees whose loved ones are struggling with cancer, or maybe they have other tremendous challenges that you don't know about. Or you may have a common interest that you're unaware of. Someone once said, "Everyone is lovable when you get to know their story."

Affirm their value. Every human being has inherent value, but most people suffer from a poor self-image and need someone to affirm their value. Encourage people to do the things they fear. Encourage them to pursue their biggest dreams in life. Encourage them to lead.

Recognize their gifts. Every human being has a gift and potential. It is leaders' job to help their team members discover their gifts and develop them. When you help people discover their gifts, you will encourage them greatly.

Encouragement means helping others find their purpose. Just as most people don't know what their potential is, they don't know what their purpose is. When you've inspired emotional trust in someone's life, you're likely to help that person find his or her purpose. To inspire emotional trust, follow these four steps:

- **Demonstrate commitment to the individual.** Show people you care about them by inquiring about how they are doing as a person. Show them you care by spending time with them. Seek to understand before being understood, as the old saying goes.
- **Invest time understanding their heart.** When investing time with people, ask them about their life. Learn about their biggest desires and biggest fears in life. Hopefully by this point, you've proved that you truly do care about them as people, not just as employees.
- **Affirm their value.** Most human beings can't see their inherent value, much less their future potential. A great leader helps others see their potential future.
- **Give them hope.** Give people hope by sharing inspirational stories of others who have overcome and perhaps from your own personal life if you've had to overcome difficulties.

Step 4: Practice Gift Exchange

As part of the encouragement key, practicing gift exchange is nurturing specific relationships that mutually recognize and promote one another's strengths and talents in an intentional manner. A championship team is made up of talented individuals with tremendous gifts, skills and

talents. But they win only if they communicate well and if they recognize and promote one another's gifts.

For example, Tom Brady, quarterback for the Super Bowl champion New England Patriots, has a different skill set than tight end Rob Gronkowski. Different positions require different talents. They are both extremely talented, but if they don't communicate — if each doesn't do his job — they fail together. Not only do they have to communicate, they have to support each other, encourage each other and hold each other accountable to win consistently. We win together and we fail together. That's community. If you think of yourself as a coach, your job as a leader is to develop your players.

How to Develop Your Team Members

Here are some steps to take to develop your team members:

Facilitate personality profiles. There are many behavior assessments and personality profiles available: DISC, Myers-Briggs, Flag Pages, Birkman and more.

Implement personal development training. There are many ways to implement a personal development program in your company: facilitate a growth POD (see Step 6 for explanation); host a formal training; invite a guest speaker; use video technology, outside training courses or private mentoring and coaching.

Discover gifts and talents. There are a number of assessments that can help you and your team members discover their unique talents. In addition to MBTI and DISC, StrengthsFinder is an assessment that helps individuals identify their strengths and talents through a series of 177 questions. The Birkman Method is a behavioral assessment that measures people's needs, evaluates people's personality and perceptions in social settings, draws a correlation between attitude and performance in a work environment, and provides participants with career choices unique to their working styles. The RIASEC assessment is a personality evaluation that groups people's personalities into six basic career fields; this helps people find a job that is suitable to their personality.

Develop the team professionally. Find ways to help team members grow in their areas of expertise. In addition to technical training, consider leadership training as a path for professional growth. In order to develop leaders, people need to know how to lead. Most managers fall into the "command and control" trap, but when you have them trained in the right kind of leadership philosophy, you can replace yourself in many areas, and you now have people who can lead new teams to grow your organization.

Step 5: Invite Openhearted Encounters

It's time to talk about the third key: accountability. Far too often, business owners or managers try to hold people accountable without a relationship. When accountability is done right, people will *want* to be accountable. They will *want* to be better. There's a big difference between forcing someone to be accountable and inviting someone into accountability through support and encouragement.

For our purposes, accountability is helping others become the persons they need to be. To help your team members develop themselves, grow to their full potential and be as valuable as they can to the community, you need to build a culture of accountability that says, "I care enough about you to help you become the person you want to be." As with the other keys, in order to offer this level of accountability to someone else, you must live it yourself.

The fifth step, "openhearted encounters," means to embrace the power of transparent experiences with faithful friends — permitting them to speak honestly and ask piercing questions.

Inviting "openhearted encounters" helps each of us become the person we need to be, and leaders who help their team members accomplish that will not only be followed but will be loved as well. Creating these kinds of relationships is also an important element of promoting community in an organization. In this sense it means providing feedback to your team members so they can become the people they need to become.

How to Coach Without Drama

Many business owners and managers don't do a great job of coaching someone who misses the mark. Calling someone out is awkward and uncomfortable. However, when support, encouragement and accountability are part of the culture, when you've followed the first four steps of creating a culture of community and when you've outlined your systems, coaching becomes much easier.

Keep in mind that a leader is a coach — and a good coach asks questions. You can coach someone to success simply by asking questions. The following questions cut to the chase:

- Do you know what to do?
- Do you know how to do it?
- Do you have the tools and resources you need?

The goal of a coaching session is simply to determine whether you're dealing with an *aptitude* issue or an *attitude*

issue. In other words, is it a skill problem or a motivation problem? A simple question is, "Are we still the right fit for you?" Notice, this is not "You're not the right fit for us." You can respect team members and give them dignity by phrasing the question that way.

And notice that this is a question rather than a statement. Sometimes people join the team with a great amount of zeal but lose interest. If that's the case, let them decide to go somewhere else. Can you see how simply asking questions helps them make the decision?

In order for us to give proper feedback to our team, to hold them accountable to the values we've adopted and to invite them into openhearted encounters, we must be vulnerable enough to enter that space as leaders ourselves. True community means you have people around you who tell you the truth even when it hurts. It may take a while to get to this point in a relationship and with your team members, but it is possible, and the rewards are worth the climb.

Step 6: Build Growth PODS

The sixth and final step in building community involves developing small groups called PODS, which stands for Power of Discovery Systems. A Growth POD is a small group that meets on a regular basis that not only helps move individuals toward true accountability but also helps spread community throughout the organization.

The purpose of the POD is to foster more effective communication. Over time, these groups can move people from a sense of community to a true community experience of belonging and transformation. Unlike what happens in a traditional meeting, in which one person speaks to the group, interaction is encouraged in a POD meeting.

These purpose-minded life-support groups can be used for almost any reason — to reach company goals, keep a project moving forward, achieve personal goals, change habits or develop members' skills or gifts.

PODS, typically made up of seven to nine individuals, are designed to allow participants to discover what they need to do or who they need to become rather than being taught (or, worse, *told*). When people discover something themselves, they feel a sense of ownership, which makes it more likely that they will implement it.

The Practice of the POD

A POD can be used to share information, to simply build relationships or to complete a specific task. To learn and practice the POD, start with your two closest, most trusted team members. This is your leadership team — your inner circle — your guiding team.

Regardless of the type of leading you are doing, *less* is *more.* Share less information to get more implementation. The length of a POD can vary, but typically it will be from 60 to 90 minutes.

Each of the five parts of a POD begins with the letter I. The five Is of a POD are

1. **Icebreaker.** Engage each and every participant.
2. **Information.** Share relevant information.
3. **Interaction.** Facilitate a discussion around the information.
4. **Implementation.** Request an action item from each participant based on the information discussed.
5. **Inspiration.** Close with something inspirational.

Develop Your Community Systems

Every tribe and every community has its unique ways of doing things. In other words, all of them have systems. Installing systems in your business will help you live out the essence of community but also comes with additional benefits.

A system is simply a group of working parts that make up the whole. The five Ps of building your community system are purpose, positions, PRDs (performance results descriptions), policies and procedures:

Purpose. The "why" of your organization is its purpose. Why does your organization exist? What difference does it make in the world? What void would exist if your company or organization didn't exist? The biggest reason you want to have a meaningful purpose is to connect what each of your team members does every day to the difference it makes in your customer's life. Inspiration happens when your team members understand why they are doing what they are doing and how it makes a difference in the lives of their customers.

Positions. The next step is to identify your team positions. There are five systems of a business and three levels of leadership. The five systems are leadership, marketing, sales, operations and administration. The three levels of leadership are directing, managing and implementing.

PRDs. A performance results description (PRD), similar to a job description, outlines the results that are required for that position and the performance that is expected to achieve the results. An example might be a

sales goal (result) and the number of calls to be made in a day (performance) to reach that goal.

Policies. Every game has boundaries and rules of the game. In your organization, your employee handbook would be a good example of a set of policies, but you also want to have policies attached to the PRD. For example, if the bookkeeper's responsibility is to make daily bank deposits, you would have a policy of when those deposits are to be made.

Procedures. Procedures are the "how to" of the business. For each major task, outline the steps or the script for each one. Staying with the bookkeeper analogy, you would outline the step-by-step procedures on how the deposit is done.

When you systematize your organization, your community will be able to deliver the community experience *consistently.*

Create Your Community Brand Experience

The final phase of this journey is extending your community brand experience to your customers, clients, guests, patients, donors or members.

What sets a company apart more than anything else is the customer experience. And at the top of the food chain of experiences is a community brand experience. An experience properly created invokes emotion that in turn inspires people. A community brand experience is one in which your clients feel like they belong to your brand.

Starbucks has done an amazing job with this. In fact, the creation of Starbucks as we know it today came from a "community epiphany" Howard Schultz had in Milan, Italy. At the time he was the national marketing director for Starbucks — a small Seattle-based company that sold coffee beans to coffee enthusiasts. At that time, Starbucks didn't offer coffee drinks.

Howard Schultz's epiphany came as he tasted an espresso in a corner espresso bar amidst the sun-drenched Italian architecture. He realized that community was happening right before his eyes. Neighbors met for a latte. Couples romanced over a cappuccino, and businessmen negotiated over an espresso. As they came and went on their Vespas, Howard Schultz imagined re-creating that community experience back in Seattle. The owners of Starbucks wouldn't have it.

Schultz left the company and started his own little chain of espresso bars called Il Giornale (named after a Milanese newspaper). He later bought Starbucks and created one of the greatest examples of a community brand experience ever.

The Three Es of Experience

The three Es of Experience outline a simple way to outline the community brand experience:

1. **Engage.** Engagement is how you interact with someone. The goal is to connect in a personal, meaningful way to get the experience off to a good start.
2. **Educate.** Education is simply helping people understand the brand so that they can make the right choices throughout the experience.
3. **Entertain.** Serve your target audience by creating experiences for them. Entertainment isn't exclusive to funny videos or theatrics but involves "going the extra mile" and serving your clients in a way that is meaningful to them, that also can grow into a relationship that feels like community.

When you intentionally build community in your company and then intentionally create community experiences for your customers, clients, patients, members, donors or guests, you'll make a meaningful contribution to their lives — and you'll also be poised to make bigger profits.

The gift of support, encouragement and accountability is the most special gift of all: who you become as a leader and who your team members become. When you discover how to have an impact in another person's life, it's the most satisfying feeling in the world.

The time is now for business owners and managers to step up and become phenomenal leaders. We all need the gift of support, encouragement and accountability to have the phenomenal life we all deserve.

by Jennifer B. Kahnweiler, Ph.D.

THE SUMMARY IN BRIEF

Introverts may feel powerless in a world where extroverts seem to rule, but there's more than one way to have some sway. Jennifer Kahnweiler proves introverts can be highly effective influencers when instead of trying to act like extroverts, they use their natural strengths to make a difference.

In *Quiet Influence,* Kahnweiler identifies six unique strengths that introverts embrace to achieve an impact: taking quiet time, preparation, engaged listening, focused conversations, writing and thoughtful use of social media. Each strength is a powerful lever of influence, and when put together, the power of strengths multiplies. She also introduces The Quiet Influence Process and a Quiet Influence Quotient (QIQ) quiz to measure how well you're using these six strengths now.

Ultimately, through questions, tools, exercises and powerful real-world examples, *Quiet Influence* will help you increase your mastery of these strengths and create your own unique way of making a quietly powerful difference.

IN THIS SUMMARY, YOU WILL LEARN:

- How to turn an introverted personality into a powerful influence in any organization.
- Why the digital age may be the golden age of Quiet Influencers.
- How to identify, develop and use the Six Strengths of Quiet Influence.
- How the best ideas often emerge from solitude.
- How a thoughtful use of social media will help raise your QIQ.

Why Quiet Influence, Why Now?

Everyone in a professional role needs to influence others. From Seoul to Seattle, today's competitive workplace demands that you influence a variety of situations and people, not once in a while but multiple times a day. Although influence is sometimes about really big issues and opportunities, it is also about nudging change along one small step at a time.

Noted researchers such as Jay Conger ("The Necessary Art of Persuasion") have found that selling ideas and getting people on board is a process, not an event. Influence is not about forcing people to come to see things your way but about learning from others and negotiating a shared solution. This approach is well-suited to the introverted temperament. It involves patience, planning and perseverance. If we all think that the only way to get things done is to shout louder and take up more center-stage space, we'll miss the opportunities to listen, learn and respond thoughtfully.

It may be that our society is starting to get this message. Extroverts are slowly realizing that we stand to lose the wisdom and contributions of more than half of the population if we don't listen to the introverts in our world.

Moreover, even though they will never really experience how an introvert truly feels, extroverts are starting to get the differences on a personal level. Hope for a broader change springs from such a personal connection.

Perhaps the strongest driver for quiet influence, however, is how it can contribute to success in today's shifting workplace. These four trends indicate that the time for Quiet Influence is now:

1. Flattened organizations and complex vendor, supplier and customer interactions mean that you must, no matter what your position or personality type, be effective at getting your ideas heard.

2. Going global means that you need to find multiple ways to influence an increasingly diverse set of colleagues and customers. You can use your Quiet Influence skills to make a difference with those in cultures that value a quieter approach.

3. The virtual world is evolving and ever present. In today's society, it's highly unlikely that you can influence a broad group of people without using digital media in purposeful ways. Introverts have been drawn to social media because it lets them use their strengths and better manage their communication.

4. Heightened competition for business and jobs means that companies are seeking suppliers and employees to bring fresh, innovative approaches. Self-promotion and loud persuasion are passé. You will stand out from the crowd if you have a knack for building up others and are committed to listening instead of talking.

Stop Trying to Act Like an Extrovert

Did you know that the best ideas often emerge in the depths of solitude, that writing a persuasive email may move a project along faster than a standard conversation, and that listening for what is not said is more important than listening for what is?

Quiet Influencers — those people who make things happen without in-your-face techniques — learned these lessons through experience. Like ripples in a pond, they deliver a big impact without making a loud fuss. In their quiet, humble way, introverted influencers make sure that the people they are hoping to impact get the message.

Yet they are frequently overlooked and underestimated by organizations and colleagues who buy into the idea that talking reigns supreme.

If you are an introvert, chances are that you've tried to influence others by mirroring your more outgoing colleagues. I believe, however, that you will become a more effective influencer when you stop trying to act like an extrovert and instead make the most of your natural, quiet strengths.

The Roadblocks to Quiet Influence

The extroverted approach sets up roadblocks to Quiet Influence. Do any of these roadblocks resonate with you?

1. Focus on teams. Your supervisor may be called your "team leader," and your work group is likely called a "team." For introverts, this team-heavy approach presents a problem. Not only does being intertwined with others deplete their reserves of people energy, it takes them away from the physical and intellectual space where they do their best thinking. With this pressure to be engaged with people all day, Quiet Influencers have a hard time finding the quiet time and preparation to hatch their plans.

2. The need to talk about accomplishments and ideas. In most organizations, sharing your accomplishments contributes to your personal "brand." People come to know you and appreciate the value you offer because you've talked about yourself and what you've done. Those who don't "brag on themselves" often find themselves unwittingly out of the loop. Today's corporate cultures do not reward humility. Introverts have great ideas that go unheard.

3. The pressure to act extroverted. Many Asian cultures deeply value the ability to not show much emotion. Western workplaces, however, barely tolerate expressionless faces or quiet people. It seems that to fit in, you have to be animated and verbal. Not your style? Too bad. To succeed, you have to fake it.

4. Making quick decisions. From answering a question in a meeting to responding to an overnight e-mail from a customer, today's environment pressures people to make quick decisions. The speed of technology and an increasingly competitive global climate have revved up the pace of work. Introverts are frustrated when they are unable to slow down the decision-making process. Their "delay" often costs them the opportunities to influence the decision.

5. Lowered privacy boundaries. Social media sites like Facebook pile on the pressure for us to open up our inner selves to the outer world. Lower privacy boundaries create an uncomfortable climate for introverts, who like to get to know someone before baring their soul. The pressure to share and connect every day at an accelerated pace stresses them out, depletes their energy, and challenges the very relationships they are seeking to build on their own terms.

6. Being talked over. In the talkative climate of Western society, interruptions abound. If an introvert speaks quietly or takes a pause, others jump in and steal the stage. Introverts' ideas cease to be explored by the group, and they tend to surrender to the opinion of the loudest person in the room. The result: introverts are demotivated and less inclined to float new ideas.

Instead of trying to avoid these roadblocks on the extrovert highway, take a more direct, efficient and

Characteristics That Shape Introverts

What does the term introvert really mean? It's a term many people throw around but few people really understand. Let's start with a fundamental question: when you need to recharge, do you tend to want to be alone in a quiet place? If you answered yes, you're likely an introvert. Technically speaking, introversion and extroversion are terms that refer to personality traits and are about sources of stimulation and energy. Shyness is a product of fear or anxiety in social settings, whereas introversion is simply about a source of energy.

This tendency to find energy from within comes out in these observable characteristics of introverts. See if any of these resonate with you:

- Embrace solitude (prefer quiet, private spaces)
- Think first, talk later (consider carefully, stop and reflect)
- Hold emotions inside (seldom outwardly emotional)
- Focus on depth (delve into issues before moving on)
- Let fingers do the talking (prefer writing over talking)
- Act low-key (speak softly and slowly)
- Keep private matters … private (keep personal matters under wraps)

These traits are not good or bad; they just are. Unfortunately, they are frequently misunderstood, undervalued and underappreciated. Yet ironically, these traits are precisely why introverts often make the best influencers of all.

enjoyable route. Embrace what you do naturally and see greater results.

The Six Strengths of Quiet Influencers

I believe that influencers make a difference by challenging the status quo, provoking new ways of thinking, effecting change or inspiring others to move forward.

Influencers labor in every type of workplace, from soundstages to hospitals. Their jobs range from administrative assistants and authors to parents and community activists. Sometimes they hold traditional positions of power: they are our most inspired political leaders, academics whose life's work it is to birth new concepts, bosses who motivate people and harness resources, and committee chairs who move projects forward.

Just as often, however, influencers don't have the big title. They are simply people who encourage change and growth and achievement: the team member who comes up with the great idea, the middle manager who takes a project to fruition, the colleague who has a knack for changing the boss's mind, the intern whose favorite restaurant becomes the team's new lunch spot.

People who use their natural talents and learned skills to influence others take our world forward in large and small ways. Some of those people are extroverts some are introverts who make a difference through a process I call Quiet Influence.

Quiet Influencers can certainly be found where you may expect: in technology, engineering and science. But they are also found in marketing, project management, teaching, medicine, law, human resources and small businesses. What they all have in common is that their powerful approach draws upon what introverts do naturally. I have named this approach the Quiet Influence Process.

The Quiet Influence Process: Combining the Six Strengths

Through observation and interviews with numerous Quiet Influencers, I have identified the six strengths that introverts embrace to achieve an impact:

1. Taking quiet time. Quiet Influencers begin their influencing journey where they think and recharge best: in quiet. Being silent provides energy, increases self-awareness and spurs creativity.

2. Preparation. Careful preparation gets Quiet Influencers ready for all types of situations by increasing their knowledge and poising them to address potential objections. Through creating a strategy and asking questions, they become more comfortable and confident in their efforts to influence others.

3. Engaged listening. They tap into their innate strength in Engaged Listening to build rapport and mutual understanding.

4. Focused conversations. These are purpose-driven dialogues in which they problem solve and work through conflicts with others.

5. Writing. They articulate authentic, well-developed positions to make a difference with others.

6. Thoughtful use of social media. They consider how social media platforms can advance their cause and reach a previously untapped, broad or distant audience.

Each strength by itself is a powerful lever of influence; when put together, the power of strengths multiplies. Every Quiet Influencer mixes these strengths in different ways according to his or her own personality, needs and situation.

Who Are the Quiet Influencers?

Tim Cook, who became CEO of Apple in late 2011 after the illness and ultimate death of Steve Jobs, had some big shoes to fill. His thoughtful demeanor and low-key style were very different from his predecessor, and in his previous role as COO, it appeared that he provided a tempering, calm counterbalance to Jobs' sometime bombastic personality. As COO, Cook was responsible for some major operational changes at Apple that contributed to tremendous company results.

Cook has moved forward with his own leadership agenda and has received high marks from many in the technology community. A reporter at Fortune magazine described an investor meeting in which Cook exhibited his own brand of Quiet Influence. "What shocked the Apple investors that day was that CEO Tim Cook popped into the room about 20 minutes into Oppenheimer's (the CFO) talk, quietly sat down in the back of the room, and did something unusual for a CEO of Apple: He listened. He didn't check his e-mail once. He didn't interrupt.

After the CFO finished, Cook stood to offer his remarks. He strode confidently to the front of the room and held court in the no-nonsense style that has become his trademark. 'He was in complete control and knew exactly who he was and where he wanted to go,' says one of the investors. 'He answered every question head-on and didn't skirt any issue.'"

Your Quiet Influence Quotient (QIQ)

Would you like to know how well you perform as a Quiet Influencer? Start by taking this quiz to determine your Quiet Influence Quotient — your "QIQ." This tool will let you know how effective you are at using each of the Six Strengths.

Assess yourself by indicating how often you engage in these behaviors, using a scale from 1 (never) to 5 (almost always).

1. I take time to be quiet each day.
2. I effectively tune out distractions.
3. I use my quiet time to engage in self-reflection and planning.
4. I develop clear plans to achieve my influencing goals.
5. I conduct research as preparation for influencing.
6. I adapt my plans to respond to changing conditions and responses.
7. When listening, I act as a sounding board for others.
8. I tune into another's voice and body language to understand his or her message at a deeper level.
9. I ask focused questions that help people to move forward.
10. I use conversations as a vehicle to problem solve with others.
11. I share relevant personal information during conversations.
12. I make an effort to schedule one-on-one conversations, whether face-to-face or by phone.
13. I consider the receivers' preferred communication style when writing to them.
14. I put effort into my writing when communicating my position.
15. I pay attention to details like grammar, spelling and punctuation when writing to influence.
16. I make thoughtful choices about which social media platforms are right for me.
17. I actively engage in dialogues through social media applications, contributing ideas as well as reading others' postings.
18. I use social media to initiate and/or support relationships.

Total your numbers. The following ranges reflect a rough estimate of your QIQ:

- 76–90: Very Strong. Take a look at how you can apply your strengths to workplace challenges and situations.
- 61–75: Solid. You are doing well. Some areas still could use some attention. Pinpoint when your influencing efforts are successful and not successful.
- 46–60: Moderate. You have some work to do in ramping up your Quiet Influence strength portfolio. Pay attention to a work situation where you are not being effective, and consider which different strengths you can apply.
- 45 and below: Lots of Room for Improvement. Start by noticing your own behavior and asking trusted coworkers for honest feedback and suggestions. Begin by working on one strength that you want to develop, and set a specific goal for this week. Next week, tackle another skill. Keep at it; you will see results.

Next, take some time to compare how often you draw upon each individual strength to influence. The following identifies which questions correspond with which strengths. Add your subscore for each grouping of three questions:

1. **Taking Quiet Time.** Questions 1–3.
2. **Preparation.** Questions 4–6.
3. **Engaged Listening.** Questions 7–9.
4. **Focused Conversations.** Questions 10–12.
5. **Writing.** Questions 13–15.
6. **Thoughtful Use of Social Media.** Questions 16–18.

Use this guide to understand what each of the subscores mean:

- **12–15: Very Strong.** You excel at this strength. Look for ways to apply it to your influencing challenges.
- **10–11: Solid.** You are doing well in demonstrating the strength. Build on your success by applying it in a variety of new influencing opportunities.
- **6–9: Moderate.** You have some work to do in developing the strength. Pinpoint when you use it with ease and identify what stops you from using it at other times.
- **5 and below: Lots of Room for Improvement.** Your low use of this strength is likely holding back your ability as a Quiet Influencer. Consider making it a top priority in your development plans. Watch and learn from effective quiet influencers around you who are comfortable using the strength.

Don't be overwhelmed by the QIQ assessment — and certainly not by your score. It was your first self-assessment snapshot. Remember that you do not need to excel at all of the strengths all of the time.

Quiet Influence Strength #1: Taking Quiet Time

Quiet influencers use a variety of highly successful approaches to obtain their quiet time and turn it into a zone for calm reflection. There is no one right way to recharge and reflect, and no two introverts have precisely the same approach to stepping away. Many do so by following three steps.

1. Create structure and protect your quiet time. Schedule and protect quiet times on your calendar. Make a date with yourself as important as your appointments with others.

One way to ensure your quiet time is to keep eating lunch alone. This gives you the opportunity to be with yourself. Using your midday break to regroup and recharge can be an ideal strategy, especially if you don't do it every day. Remember to build in breaks. Because being "out there" can be so draining, be sure to take yourself out of the office, away from the conference or removed from wherever work happens to be — if only for a few minutes.

2. Manage technology. Turn off your devices. Go ahead. Try it. Even for introverts, it can be extremely challenging to set aside certain times to check electronic devices. Yet ongoing interruptions become huge distractions when they break up the blocks of time you need to think and create.

3. Go within yourself. Get up and move around. Quiet time doesn't have to be sedentary time. In fact, exercise is an essential component of many people's quiet time.

Quiet Influence Strength #2: Preparation

Because they plan so strategically and consciously, Quiet Influencers can pinpoint exactly how they get ready for meetings, conversations, events, presentations and other influencing opportunities. Their actions fall into the following four logical steps.

1. Gather information and insight. Pull together what you know. Gather information you already have and organize it. Conduct due diligence before meetings.

2. Strategize. Conduct a question-and-answer strategy session in your head. What are you trying to accomplish? Draft a strategic plan and prepare for your own meetings by crafting talking points and questions that are relevant to the session.

3. Manage yourself. Take the slow-but-deep approach to influencing. Remember to use your natural strength of responding thoughtfully and patiently. Avoid exhaustion and burnout by knowing your limitations and enlisting the help of others.

4. Practice. Stand up and give your influencing remarks a test drive. Experiment with different tonalities of your voice. Although you may be aware of the impact of your body language, you may not have given much attention to your voice.

How One Organization Supports Quiet Time

Microsoft's New Way of Working Program exemplifies how an organization has recognized the need for its employees to have quiet time. All employees at the software giant's office outside of Amsterdam have home offices but also come in for meetings and collaboration.

When researchers at the Rotterdam School of Management measured the impact of this program, they found 40 percent improvement in work/life balance scores over five years and measurable improvements in productivity. The report said, "Now, no one has a fixed office anymore, and the building has been designed to be what we call activity based. It is no longer an office in the traditional sense. Instead, it is a workspace where employees can locate themselves in different parts of the building depending on the tasks they need to perform. Increasingly, it is a meeting place where employees can interact with colleagues, partners and clients.

Because this balanced approach provides options that respond to the preferences of both introverts and extroverts, it promotes an environment that encourages thoughtful, purposeful communication and nurtures creativity and decision-making, the hallmarks of influence.

Quiet Influence Strength #3: Engaged Listening

Although there are countless resources that aim to teach listening skills, these introvert-tested tips will help you develop your engaged listening skills and raise your QIQ. They fall into the following four categories.

1. Create the right conditions. Start by slowing down. You can be an island of calm in your organization's

When Face to Face Isn't Possible

Chances are, you work with people at a distance. Sometimes, face-to-face focused conversations are not possible. More and more work is being done through teleconference or video conference technology. You can still excel at these conversations and incorporate them into your influencing approach. Use these tips to make the most of "virtual" meetings.

1. Become familiar with the technology. Don't miss your opportunity to influence because you are preoccupied with troubleshooting your technology.
2. Be sensitive to time-zone differences. If you're in charge of scheduling a virtual meeting, don't plan meetings too early or too late for others.
3. Plan questions for group input. A virtual conversation needs even more guidance than a face-to-face conversation.
4. Take advantage of video. Although not exactly face-to-face, video technologies do let you see the facial expressions of others in the meeting.
5. Utilize chats and polls. Chats and polls invite people to participate in a way that generates the give-and-take associated with a conversation. Plus, these features keep people engaged and awake.
6. Tag team with a "producer." Reduce your stress and increase your ability to participate in the conversation by delegating the technology aspect.

storm of activity. Get face to face by arranging a quiet place to listen. Show up prepared to focus.

2. Serve as a sounding board. Let the other person speak, even vent, without giving advice or otherwise interrupting. When you do, others feel heard. Reflect back on what you hear when you listen. Be sure to say it in your own words, and don't parrot exactly what you hear. After listening quietly, help the person move out of inertia and toward action.

3. Ask questions. Go into listening situations with a set of questions in hand. Use open-ended questions to gain more insight. Most of the best open-ended questions begin with how or what. Through your questions, you can influence the trajectory of a conversation.

4. Go beyond words. Observe the other person carefully and read his or her nonverbals. Remember to be aware of your own engaged listening presence. Tune in to your own nonverbal signals in addition to observing the eye contact and body language of others.

Quiet Influence Strength #4: Focused Conversations

Some quiet influencers shine during formal planned conversations. Others are more comfortable in less structured environments. Some swear by face-to-face conversations, and others find the telephone just as effective. Many prefer one-on-one or small group discussions rather than large gatherings. You can increase your QIQ and get the most out of your conversations no matter what they look like or where they take place. Here are three tips.

1. Set up space and times to talk. Design or use your workspace to enhance conversations when you choose to have them. Make a special effort to carve out face time. Don't forget to allow for serendipity. Let your inspiration come from walking around, and be open to the ideas that emerge from chance conversations.

2. Strengthen your case. Take your time to listen and observe what is going on. Doing so can make your comments land with more impact. You may need to repeat a message multiple times in order to get it to stick. Use focused conversations to bounce ideas off of people as you craft and shape your arguments in the preparation stage of influence.

3. Be authentic and flexible. Prepare stories and examples to make conversations come alive and to bring the person or people with whom you're speaking into the moment. Pick up on others' vibes by observing their body language and listening to their words. Decide if they feel like talking or not; you will not be an effective influencer if you force a conversation on someone who is not in the mood to converse. Finally, share information about yourself so that the other person understands you better.

Quiet Influence Strength #5: Writing

Quiet influencers transform their innate writing skills into a powerful influencing strength. Here are three skills they use.

1. Know and adapt to the audience. Remember the acronym WIIFM when you're trying to put together a persuasive appeal. WIIFM stands for "What's in it for me?" The "me" refers to the person you're trying to influence. Pay attention to tone. Notice the style that writers use, and mirror aspects of that back to them when you can. Use written documents to give people a chance to mull your ideas over before you initiate a conversation. Send out meeting materials well in advance of the scheduled time.

2. Attend to the craft of writing. Focus on depth over breadth. Take the time to construct your written piece so that the depth of your concerns and knowledge emerges clearly for the reader. Pay attention to the details and use good grammar, spelling and punctuation.

3. Make a persuasive case. Use step-by-step logic to make your case. Effective quiet influencers are masters at this persuasive writing technique because it's a carefully thought-out exposition. Incorporate numbers, pertinent details and data points to convince others of your argument. Keep it short and make it effective. You often do a better job of influencing others with succinct, to-the-point writing rather than lengthy tomes.

Quiet Influence Strength #6: Thoughtful Use Of Social Media

What do I mean by social media? I am talking about web-based and mobile-based technologies that are used to turn communication into interactive dialogue among organizations, communities and individuals. Social media give today's Quiet Influencers a particularly effective and efficient option. They allow introverts to organize their thoughts at their own speed and be selective about where and when they place them. They also give those who hesitate to speak in public the opportunity to communicate and collaborate with hundreds or even thousands of people all over the world. For that reason, it may be just the perfect lever for Quiet Influencers now and into the future.

A thoughtful use of social media helps to raise your QIQ and use it to move people to action, develop and grow relationships, achieve visibility, and teach and learn.

Introverted influencers who use social media effectively freely admit they don't have all the answers about how to be most effective in what is still essentially "the wild west" of sites and apps that launch or change each day. To best cut through the noise, quiet influencers use three key approaches.

1. Think about it. Start by defining your goal. If you don't know where you are going, any road will take you there. Ask yourself what you are trying to accomplish through your social media activities. Resist the pressure to get overwhelmed; take one step forward. Don't try to "do it all." Instead, just pick the two or three social media outlets that will help you meet your goals, and then do a good job on those sites. Limiting your involvement will help make your commitment more manageable.

2. Engage. By limiting the number of social media outlets you use, you will achieve a great deal even if you engage for only 10 minutes each day. It's a matter of doing a little of the right activity on a very regular basis.

Use social media to set the stage for offline conversations, and then capitalize on the one-on-one opportunities you generate. For quiet influencers who are uncomfortable taking on social media, you should find a social media tutor.

3. Focus on content. Get your thoughts out of your head and onto the screen by writing. Posting your own pieces on social media sites and starting a blog can be real plusses for an introvert who naturally prefers writing to talking. Don't forget to focus not just on the content you create but on content created by others. Drop in on discussions and visit groups related to your areas of interest. Use the social media universe to conduct research that contributes to influencing your strategies.

Making A Quiet Difference

No matter where you start, always remember to acknowledge your efforts in trying on new influencing behaviors. Savor each moment of success and learn from things that don't go exactly as planned. As the Spanish expression goes, it's "poco a poco" — or in English, "little by little." Don't get overwhelmed and think you have to try all the new ideas at once. Remember, influencing is a process, not an event. You will fail and you will succeed. Both experiences will move you forward and increase your QIQ.

And your reward? Seeing that you are successfully challenging ingrained ways of thinking, that your new ideas are taking hold, that changes you envisioned are coming about, and that others are moving forward with your inspiration. In your own quiet way, you will be making the difference that you were naturally born to make.

THE SUMMARY IN BRIEF

Whether you are in a professional position of leadership or a leader of your own life, ***7 Ways to Lead*** shares common sense and easy to use insight to enhance your personal leadership and effective leadership skills.

If you're an engaged and learning leader, you are interested in living the life and lifestyle of your dreams. Andre Young brings over 17 years of experience as a mental health professional to bear on leadership at work and at home. Young presents leadership as two-fold. First, show up in your career, in your life, and in your relationships in a way that makes people want to follow you. Then add excellent leadership skills—the ability to Influence, Protect, Impact, Build, and Decide.

Leadership is a verb; therefore, leadership is a decision! We must decide to become leaders; in and of our own lives. We must choose to show up in our lives, our work, and our relationships with a positive attitude and willingness to DO and BE our best.

IN THIS SUMMARY, YOU WILL LEARN:

- A leader must self-engage a positive mindset.
- Gratitude affects both the leader and those who follow.
- A leader's measured and genuine confidence is contagious.
- Awareness of self and others creates a healthy environment.

A Leader's Preparation

How you consistently show up with a positive mindset, a servant leader attitude, expanding the vision, and intentionally building-up others through impact, influence, protection, and expectations for greatness . . . That's Personal Leadership!

The 3 Other Marriages

You get ready each morning and brush your teeth in front of the mirror to head out to win the day, but how many times do you make intentional eye contact with the person in the mirror? The author describes his vows to himself in this way: I remember the day I married myself . . . like any other day, standing in front of the mirror getting ready . . . I felt compelled to make eye contact, maintain eye contact, and make some vows to me. I vowed not to fail, to reach my definition of success, to go deeper, and also to be a success as a husband, a father, and a friend. I vowed to live my dream of supporting my family with content I created through my own business and to live our desired lifestyle as a family! What a powerful moment that I will never forget and use as daily motivation! What vows will you make for yourself, your life, and your future?

Get Your Triangle Right

Let's get your triangle right! Imagine a triangle. At the top is your vision and expanded definition of success, as well as your faith. If you are a faith-based person and your faith helps you to be a better person, have a better relationship, and live an honorable life . . . that's at the top. If you are not a faith-based person, talk with your partner about your dream and vision for your life, lifestyle, relationship, and family. This is what guides you—not the kids, not your job, and not the duties of the day.

On the bottom-right side of the triangle is you and your partner; and other important relationships. On the bottom-left side of the triangle is YOU. Care for yourself, treat yourself, follow YOUR dreams, and live your best life. Get your triangle right and EVOLVE!

A Leader's Gratitude

Avoid the "I have to . . ." trap

What if you transform your language, allowing an EVOLUTION of perspective and gratitude? Instead of "I have to" . . . try . . . "I get to." "I get to go to work". . . you know the place you interviewed at, were excited to get the acceptance from, and can quit anytime you choose. "I get to go to work" sounds and feels a lot better than "I have to go to work." "Tonight, I get to take my kids to basketball practice" sounds and feels better than "I have to take my kids to practice." Most importantly, it positively impacts our brain, forming a more positive thought, leading to a more positive feeling, positive behavior, and positive consequences. What do you "Get to Do" today?

T.G.I.T

T. G. I. T. has nothing to do with what day it is. It has everything to do with you, your mindset, gratitude, joy to meet the day and all it has to offer. Beat the day instead of it beating you! YOU get to rise today and begin your day. Some people didn't! You get to go to the job you applied for. If you hate it, change your perspective or start looking for a new one! You get to spend time with your significant other today . . . at some point, you won't. So, how will you enjoy him/her today? You get to spend time with your kids . . . whether through the craziness of their schedules or carrying them to and from practices and games. Enjoy them!

A Leader's Confidence

If you have the guts to move forward toward your dream, what you'll need is CONFIDENCE! And at times, that can be in short supply.

Stop Allowing an Average Life

Life is amazing. Life is odd. Life is a lot of things! There are times when life will surprise us, both good and bad. Life can be fair, and it can be extremely unfair at times. Good and bad happen to the good and bad alike. Although some things are out of our control . . . remember this, we tend to live what we allow!

Actively living a great life is not for the weak! It takes risk, inner strength, determination, self-love, and respect for ourselves and others to live the life of our dreams. It's a good thing these all exist in YOU! You can choose to take this journey as fast or as slow as you'd like. But, today is your first step! Whatever you do . . . if it's your passion . . . make sure to do it daily, do it smart, and do it to the best of your ability! Enjoy!

Leaders Can Be Insecure?

Insecurities . . . we all have them, but yours alone yells the loudest in your head, in your heart, and within your rela-

tionships at work, in your home, and in your personal life.

So how do we begin the process of overcoming our insecurities? We must first be aware of what our insecurities are and why they are. Second, acknowledge where you are and who you are. This includes your positives, negatives, and what you personally bring to the table as a Person, a Professional, a Partner, a Parent, and more. Take pride in it! Finally, enjoy your life, live, and actively work to build up those around you.

Daily Leadership

As a leader, it's your job to exist and be great when the non-ready get ready so they know where to go, how to get there, and what to do!

The more deposits you make in the lives of those you lead, stemming from your interest, care, and respect for others, the stronger your relationships will be as a leader. Difficult conversations will be less frequent, less offensive, and less sharp. The difficult conversations are those TALKS about unmet needs, disappointment, or sharing some hard observations with someone you value or care about. Those conversations are never easy, but if you've made enough deposits, a few withdrawals won't bankrupt the relationship. It still matters how you say it. Frequent deposits do not give a leader the green light to spout whatever they want. What are the dreams of your Employees, Leaders, Players, Students, Partner, Kids, Parents, etc.? How will you help them achieve those dreams?

Ride That Rollercoaster

Some people love rollercoasters, can't get enough, and are one with the motion. Others prefer the security and control of being on solid ground, having limited risk, and relaxing in safe confines. However, there are no safe confines in the world of leadership, and rollercoasters are a lot like life, leadership, and success. It may start off slow, and you can't wait for it to pick up . . . so you can feel the adulation of your success, making your own decisions, making your own path and mark. This success doesn't come stress or worry-free.

Leaders express concern and anxiety in making hard but necessary change, managing many people, managing old friends, managing people more senior or more experienced than themselves, or people they don't necessarily care for or respect. It's easy for fear and self-doubt or our "ego" to step in, whispering destructive things into our head. Then . . . POW . . . off you go at warp speed with all the highs, lows, twists, and turns of leadership and success!

The way to EVOLVE and master the rollercoaster of success and leadership is to maximize the highs, minimize the lows, don't let the twists and turns take your eyes off the vision and mission, and pull into the station at the end, wide-eyed, knowing you've just lived and conquered!

Clear and Concise Leadership

Here are a few scenarios to explore. Have you ever received instruction from someone and did what they asked, only to be told how bad a job you did? Have you been left feeling bewildered and not good enough? Have you ever received instruction, only to be left feeling confused but too nervous to ask for clarity, thinking it must be you, and you'll do your best to figure it out? Or, have you received zero instruction, handled the situation to the best of your ability, knowledge, and capacity only to be told how you handled it was wrong? Much of this can be avoided with enhanced Clear & Concise Leadership!

As leaders, our job is to ensure answers to these questions: Are the expectations, rules, consequences, and plans clear to everyone. Are they simple enough and easy enough for everyone to understand? Is everyone aware?

A Leader's Risk

As a leader, you have a dream, a goal, and a desired lifestyle. Whatever your vision, IT WILL REQUIRE SOME RISK! You will risk your comfort, your heart, your money, your identity, and, most likely, your time, energy, and effort.

A Leader's Risky Evolution

Risk doesn't promise success. It only promises you different short-term experiences. How you choose to process, learn from, and apply short-term experiences will lead you to success. As you EVOLVE through the process of risk-taking, you may be surprised how your definition of success may change. It is up to you to evaluate the risk for you, your team, and the people it will impact.

When you decide to go for it, prepare yourself and your team to push a bit past the comfort zone and enjoy the positives of EVOLUTION. Allow time to celebrate successes and accept each set-back as a "Success Lesson"!

A Leader's Self-Care

Give yourself permission to pause to consider your Continue, Stop, and Start. You must be doing some great things to be where you are in life right now. Look around you . . . do you have shelter, people that enjoy you, not to mention . . . the ability to read and listen to leadership resources? Things could be a lot worse. So, continue what you are doing great!

Stop—What do you need to stop? We all engage in behaviors, whether as a Person, Professional, Partner, and Parent, we can benefit from stopping. Let's STOP the unhelpful thought patterns and behaviors that add stress and lead to future chaos in our lives! If you can't stop them, at least be willing to modify and do them in moderation. Your future is counting on you! Start—Although Stopping or Modifying the negatives in our lives is good, there are times to replace the negatives and start something new. This is the key to your Success, your Leadership, and your Work/Life Harmony!

Superman/Superwoman Syndrome

The demands of your day are numerous, constant, and at times thankless. It takes a special person to do what you do and accomplish what you accomplish in a day. You are SUPER, but you may not need to be Superman or Superwoman. Every superhero takes solace in their alter ego. Superman sometimes gets to escape the pressure of being the hero when he is Clark Kent. Clark Kent gets to take a breath, go on vacation, see the world through a different lens, experience the same people in his day-to-day in a different light. In a world always urging you to be super, move forward, and succeed. Today, embrace your Clark Kent, put your cape down, and allow other people to be the hero!

The Leader's 7

If you planned to move to France and live there for the rest of your life, would you learn French? Why? You could get along without knowing the language, but your ability to connect, feel comfortable, and your overall experience would be limited. Learning the language of the land opens us up to better communicate, enhancing our ability to understand and meet the needs of the people we're leading!

There are seven languages employees, athletes, students, and our followers want to hear, need to hear, and benefit most from hearing from their leaders that impact motivation, inspiration, self-worth, bonding, and purpose! Goodies Time may include doughnuts in the morning or a full catered gourmet lunch—people remember these treats. Quality Minutes benefit the culture, creating and enhancing curiosity, bonding, attachment, and a sense of belonging and loyalty!

Those who enjoy Recognition & Affirmation are motivated and inspired by hearing positive things about their work and effort. The employee who values Knowledge and Advancement wants to know what you know and may want to be YOU someday. Individuals who prefer Incentives are motivated by raises, bonuses, earned trips, and/or office competitions. Others are highly motivated by Flexibility. And finally, everyone enjoys the language of Respect.

As leaders, we need to speak the Leader's 7, remembering that each person we lead has a top one or two. Your ability to know your craft, convey a vision and message, connect with others, not just the people you enjoy, move others forward together toward a common goal, and remain positive along the way… this is leadership!

Andre Young is a speaker, author, leadership trainer, and Founder of You Evolving Now, LLC. He worked as a Mental Health Therapist for 19 years, played sports at every level from high school to professional, been an employee, business owner, and self-employed, and is an author of two other books, *EVOLVE* and *7 Ways to Love.* Most people would like to EVOLVE as leaders, professionally and personally, and as Founder of You Evolving Now it is Andre's mission to enhance their leadership with his books, on-site speaking engagements, and leadership programs.

How Winning Leaders Make Great Calls

JUDGMENT

THE SUMMARY IN BRIEF

Two titans of effective leadership, Noel M.Tichy and Warren G. Bennis, have identified the fundamental essence of leadership as the ability to make consistently good judgment calls, especially when the stakes are high, information is limited and the right call is far from obvious.

The authors of *Judgment* clarify an important concept that is often misunderstood. Many assume that good judgment is an inborn trait, but Tichy and Bennis show that it's actually a skill that can be developed, refined and nurtured throughout an organization.

Leaders do, at some moment, make a judgment call, a determination about how things should proceed. Judgment resides at the core of leadership. The authors explain that judgment is a contextually informed decision-making process encompassing three domains: people, strategy and crisis. And within each domain, leadership judgment follows a three-phase process: preparation, the call and execution.

Leaders are remembered for their best and worst judgment calls. In the face of ambiguity, uncertainty and conflicting demands, the quality of a leader's judgment determines the fate of the entire organization.

Tichy and Bennis show how to recognize the critical moment *before* a judgment call, when swift and decisive action is essential, and also how to execute a decision *after* the call.

This summary provides ground rules for leaders. Whether they are running a small department or a vast corporation, the authors' insight will help leaders achieve greater success by exercising good judgment.

IN THIS SUMMARY, YOU WILL LEARN:

- A useful framework that will help leaders make better judgments and help shape the next generation to do the same.
- How to address the most vexing questions leaders confront when making their most important judgments.
- How to improve your own judgment-making faculties.
- How to do a better, more intentional job of developing good judgments in others.
- Why some leaders are better equipped to deal with crises than others.

Judgment and Leadership

On Nov. 1, 1997, AT&T was a $130 billion company when Michael Armstrong became CEO. It wasn't the powerhouse it had been for much of its 100-plus-year history, but it had a stockpile of cash and plenty of opportunity. For the next eight years nothing seemed to work for AT&T, and Armstrong's long string of poor strategic judgments finally caught up with him, bringing his career to an unenviable end. In 2005 a nearly dead-broke AT&T was acquired by its former subsidiary SBC (Southwestern Bell Corporation) for a paltry $16.9 billion. Only its name survived on the combined company.

General Electric Co.'s stock had suffered in the wake of the stock market crash of 2001, but Jeff Immelt was succeeding CEO Jack Welch, dubbed "manager of the century" by *Fortune* magazine and *BusinessWeek*.

Welch had left GE after failing to complete the huge $47 billion acquisition of Honeywell he had attempted in the final hours of his 20-year reign. But the company was still a huge dynamo, and Immelt's job was to find a way to keep generating more power. With revenues of $130 billion in 2000, Immelt would have to come up with $3.5 billion in new revenue every quarter to maintain the torrid 10 percent annual growth pace set by Welch. To do that, Immelt took bold steps to reinvent the company. He shifted the company's primary business model to capitalize on emerging technologies and emerging markets. By mid-2007 the stock market was rewarding his efforts. Immelt had succeeded in delivering average growth of some 8 percent per year, no small feat for a $100-billion-plus juggernaut.

Armstrong, former AT&T CEO, could not turn his company around and lost significant shareholder value in a short span of time and ultimately lost his job as well. Immelt and Welch at GE faced no easier challenges, yet they and their organization ride from success to success. When they stumble they are able to recover quickly. Why is that? It's a matter of *judgment.*

Judgment Calls

The cumulative effect of the leaders' judgment calls determines the success or failure of their organizations.

The essence of leadership is judgment. The single most important thing that leaders do is make good judgment calls. In the face of ambiguity, uncertainty and conflicting demands, often under great time pressure, leaders must make decisions and take effective actions to assure the survival and success of their organizations. This is how leaders add value to their organizations. They lead them to success by exercising good judgment, by making smart calls and by ensuring that they are well executed. A keen sense of judgment is what makes or breaks a leader.

Getting the Important Ones Right

The thing that really matters is not *how many* calls a leader gets right or even what *percentage* of calls a leader gets right. Rather, it is how many of the *important* ones he or she gets right. Good leaders not only make better calls, but they are able to discern the really important ones and get a higher percentage of them right. They are better at a whole process that runs from seeing the need for a call to framing issues to figuring out what is critical to mobilizing and energizing the troops. ■

Framework for Leadership Judgment

Despite the implications of the word *call,* the judgment calls that leaders make cannot be viewed as single,

The authors: Noel M. Tichy is the author of *Control Your Destiny or Someone Else Will, The Leadership Engine* and *The Cycle of Leadership*. He is a professor at the University of Michigan Business School.

Warren G. Bennis is the author of *On Becoming a Leader* and *Reinventing Leadership*. He is currently a university professor and distinguished professor of business administration at the University of Southern California.

point-in-time events. Like umpires and referees, leaders do, at some moment, make a call. They make a determination about how things should proceed. But unlike umpires and referees, they cannot — without risking total failure — quickly forget them and move ahead to the next play. Rather, for a leader, the moment of making the call comes in the middle of a process.

That process begins with the leader recognizing the need for a judgment and continues through successful execution. A leader is said to have "good judgment" when he or she repeatedly makes judgment calls that turn out well. These calls frequently turn out well because the leader has mastered a complex, constantly morphing process that unfolds in several dimensions. There are three phases to the process:

1. Time. This includes what happens before the leader makes the decision, what the leader does as he or she makes the decision that helps it turn out to be the right one and what the leader must oversee to make sure the call produces the desired results.

2. Domain. The three critical domains in which the majority of the most important calls are required are judgments about *people*, judgments about *strategy* and judgments in time of *crisis*.

3. Constituencies. Leaders make the calls, but they do it in relation to the world around them. A leader's relationships are the sources of the information needed to make a successful call. A leader must interact with different constituencies and manage those relationships to make successful calls. The four types of knowledge needed to do this are self-knowledge, social network knowledge, organizational knowledge and contextual knowledge.

The Three Judgment Domains

People, strategy and crisis are the three domains that make the most difference to the survival and well-being of any institution. If they are unattended or if bad calls are made in these domains, it can be fatal to an organization.

1. People Judgment Calls. If leaders don't make smart judgment calls about the people on their teams, or if they manage them poorly, then there is no way leaders can set a sound direction and strategy for the enterprise, nor can they effectively deal with crises.

2. Strategy Judgment Calls. The role of the leader is to lead the organization to success, so when the current strategic road isn't leading toward success, it is his or her job to find a new path. How well a leader makes strategic judgment calls is a function of both (1) his or her own ability to look over the horizon and frame the right question and (2) the people with whom he or she chooses to interact.

3. Crisis Judgment Calls. Crisis calls require that a leader have clear values and know his or her ultimate goal. Crises not handled well, where good judgment calls were not made, can lead to the demise of an institution.

The Process of Judgment Calls

In all three domains, people, strategy and crisis, good judgment calls always involve a process that starts with recognizing the need for the call and continues through to successful execution:

• **The Preparation Phase.** This phase includes sensing and identifying the need for a judgment call, framing and naming the judgment call, and mobilizing and aligning the right people.

• **The Call Phase: Making the Judgment Call.** There is a moment when, based on his or her view of the time horizon for the judgment and sufficiency of input and involvement, the leader makes the call.

• **The Execution Phase: Action — Make It Happen.** Execution is a critical part of the exercise of good judgment. Once a clear call is made, then resources, people, capital, information and technology must be mobilized to support it. If they aren't, the decision-making simply goes down the tubes. Good judgment calls always produce good results.

Resources and Constituencies

The quality of a person's judgment depends to a large degree on his or her ability to marshal resources and to interact well with the appropriate constituencies. Most of the time the resources and the interested constituencies overlap. A good leader uses four types of knowledge to make judgment calls:

1. Self-Knowledge. Leaders who exercise good judgment calls are able to listen, reframe their thinking and give up old paradigms. GE's CEO Jeff Immelt said, "It is an intense journey into yourself."

2. Social Network Knowledge. Leadership is a team sport; there must be alignment of the leader's team, the organization and critical stakeholders to create the ongoing capacity for good judgment calls. The leader must consciously work to encourage teamwork, draw on the best resources of each individual and help individuals learn to make better judgments in their own areas of responsibility.

3. Organizational Knowledge. Good leaders work hard to continuously enhance the team, organizational and stakeholder capacity at all levels to make good judgment calls.

4. Stakeholder Knowledge. Good leaders engage customers, suppliers, the community and boards in generating knowledge to support better judgments. ■

For additional information on framing and naming the judgment call, go to: http://my.summary.com

Having a Storyline

How a leader works the judgment process depends to a great extent on *who* the leader is. Winning leaders, the ones who continually make the best judgment calls, have clear mental frameworks to guide their thinking. They have stories running in their heads about how the world works and how they want things to turn out. And they have the all-important qualities of character and courage. They have the internal discipline and the guts to make the right calls and to follow through.

Teachable Points of View

Winning leaders are teachers. They drive their organizations through teaching, and they develop others to be leaders/teachers.

Winning leaders are good at this because they have made the effort and spent the time to develop Teachable Points of View (TPOVs). TPOVs are what enable leaders to take the valuable knowledge and experiences that they have stored up inside their heads and teach them to others. Winning leaders/teachers use their TPOVs to convey ideas and values to energize others and to help them make clear, decisive decisions.

While TPOVs are essential to transformational leadership and to developing others as leaders, TPOVs have an equally crucial role to play in guiding leaders' own decisions and actions.

The TPOV comes alive and is most valuable when a leader weaves it into a storyline for the future success of the organization. As a living story, it both helps the leader make the judgment calls that will make the story become a reality and enlists and energizes others to make it happen.

TPOVs and Storylines

Dr. Martin Luther King Jr.'s "I Have a Dream" speech, delivered at the Lincoln Memorial in 1963, is one of the most famous and compelling examples of a leader transforming a clear, logical TPOV into a vivid and inspirational storyline. The goal of achieving it drove both King's decisions and the success of the civil rights movement.

Winning leaders' storylines specifically address three areas of questions:

1. Where are we now?

2. Where are we going? The inspirational storyline here adds to the motivation for change, but more important, it lights the beacon. It defines the goal.

3. How are we going to get there?

The storyline is never complete and is always being modified by the judgments the leader makes. However, without a solid storyline, the leader's judgments are disconnected acts that may or may not move the organization forward. ■

Jack Welch and Peter Drucker

In the case of Jack Welch, interactions with management pioneer Peter Drucker had a powerful impact on his strategic thinking. Soon after he became CEO of GE, Welch had a meeting with Drucker. As they discussed GE's various businesses, Drucker, Welch recounts, asked him at one point: "If you weren't already in this business today, would you go into it?" It was a question that crystallized Welch's thinking and ultimately resulted in his famous "#1, #2, fix, close or sell strategy."

Character and Courage

What does it mean to have character? It means having values. It means having a moral compass that sets clear parameters for what one will and will not do. Character is all about knowing right from wrong and having worked these issues out long before facing tough judgment calls. It is about knowing what your goals and standards are and sticking with them.

Integrity

We often use the word *integrity* to describe a person of character, a person whose values and principles are above reproach. Psychiatry speaks of such people as *integrated*. Character plays the guiding role in how honest personal feedback and coaching are in the organization, how internal competition and politics are handled, and how suppliers and customers are treated. The CEO's character sets the stage for all the important judgment calls.

Character also means putting the greater good of the organization, or of society, ahead of self-interest. As management legend Peter Drucker put it, it is about worrying about "what is right" rather than "who is right."

Courage

Judgment is about more than decision making. It is about not only coming up with the right solution to the right problem, but it is also producing results. And this is where courage comes in. Having the courage to act on your standards is an integral part of the bundle of what it takes to exercise good judgment. The standards by themselves aren't enough. If you don't act on your "standards," there is some question as to whether they really are your standards.

It's the courage that Procter & Gamble showed in

closing down plants in Africa for a year rather than pay bribes. It is the courage to take the hard road, despite all the obstacles, because you *should*.

Leading With Character

Trust is the emotional glue that holds teams together. Steelcase CEO Jim Hackett said, "You can't lead if you don't have trust, and you can't have trust if you don't have integrity."

Leading with character gives wise leaders clear-cut advantages. They are easier to trust and follow; they honor commitments and promises; their words and behavior match; they are always engaged in and by the world; they are open to "reflective back talk"; they can admit errors and learn from their mistakes. They can speak with conviction because they believe in what they are saying. They feel at ease in the spotlight and they enjoy it there. They tend to be more open to opportunity and risk. ■

People Judgment Calls

To make good people judgments, a leader has to recognize the need, frame the issue, and mobilize and align the parties who can provide the information and advice needed to make a good call. Then the leader must make the call at the appropriate moment and follow through on the execution to make sure that the result turns out as well as possible.

People judgments are the most complex of the three domains for several reasons. First, a judgment about whether someone will be a good leader is a judgment call about how well the person will do making other judgment calls. Will he or she be able to build a good team? Develop effective strategy? Deal with the inevitable crises?

Complex Dynamics

People calls also have other distinct challenges. Unlike strategies, the "objects" of people judgments are humans who make their own judgment calls and engage their own political circles even as the process unfolds. In a competitive world, no judgment call is ever made in a static situation. But in people calls, the dynamics are more complex, if not more fluid, than in other realms.

No matter how hard-nosed some leaders may appear, they all have emotions that affect their judgments. They have feelings about other people. They become attached to them or maybe detest them. And it's these feelings that can keep them from making good, objective calls.

Wayne Downing

Wayne Downing, the retired four-star general who ran the United States Army Special Forces, said that "most of my bad judgment calls were generally about people. There have been times when I knew I had to take people out of a position. I knew they weren't going to change, and they weren't going to do what had to be done. But it's traumatic when you do that. The higher up you go, the more traumatic it is for the organization to remove people, and you don't like to do that, but in the final analysis you have to."

Aware that the ultimate goal is to produce a successful outcome, leaders who have good judgment track records are always vigilant. They are constantly checking to make sure that conditions are as favorable as they can possibly make them to support the success of the judgment. If they need to take time and expand the decision-making process, they do.

People judgment comes first. If there is not a team of trusted leaders, it is impossible to make good strategy judgments as the people politics will undermine what is good for the enterprise. ■

People Judgment: CEO Succession

Who heads up an institution is by far the single most important people judgment. CEO succession in any type of organization is the key determinant of organizational performance. This seemingly obvious premise must be examined in light of the empirical reality of success in the last decade. The track record in many companies has been abysmal. Given the importance of this judgment, the grade among blue chip-companies is probably no more than a D, as many blue-chip companies have failed to develop a successor CEO.

Not to have a successor at the top of an institution is the ultimate in bad people judgment. The preparation phase includes a long-term commitment to developing a stream of talent, a leadership pipeline, designed to develop leaders at all levels and ensure a flow of leaders. There are multiple candidates and a succession pipeline that feeds opportunities at lower levels in the organization.

Bad CEO Judgments

Bad CEO judgments happen because of broken leadership pipelines; that is, there are no good candidates and the building of appropriate leadership bench strength has not occurred. There are a variety of underlying causes. In some cases it is family nepotism, such as putting Bill Ford in as CEO at Ford. After only a few years, Ford stepped out of the role and brought in an outsider, Alan Mulally from Boeing, as CEO in mid-2006.

Other causes of broken leadership pipelines include lack of a disciplined succession planning process, board

Key Elements of Good People Judgments

Here are six lessons for making good people judgments:

1. Anticipate the need for key people changes.
2. Specify the leadership requirements looking into the future, not the rearview mirror.
3. Mobilize and align the social network to support the "right" call.
4. Make the process transparent and judged fair.
5. Make it happen.
6. Provide continuous support to help the leader succeed.

neglect, poor understanding of changing world and talent requirements, and ego issues with the CEO not wanting to let go. Any combination of these problems contributes to bad CEO succession judgment. ■

Strategy Judgments

For a leader, developing strategy is a never-ending job of crafting the storyline for success. It is rarely an "aha" clear vision. It is an evolving story that starts off fuzzy. It gets continuously revised and becomes clearer as strategic judgments are made. Each big acquisition or divestiture, or judgment on a big R&D investment, changes the company's position and the possibilities for the future. These judgments are not only manifestations of the storyline, but also shapers of it going forward.

Jeff Immelt's Storyline

Immelt's judgment about the acquisition of Amersham by GE Healthcare for close to $10 billion reflected his storyline of building a medical business around tomorrow's technology for personalized medicine. Thus he manifested his storyline by making an acquisition consistent with where he wanted the business to go. The judgment then sets up a process of reshaping the business in new and unforeseen ways; the Amersham judgment leads to authoring the next chapter of the future. The iterative process of making judgments to further the storyline, which then helps write and revise the future storyline, is how leaders like Immelt drive successful transformations.

Good Strategic Judgment

Good strategic judgment is built on the leader's capacity to intellectually frame the world of opportunity and the organization's potential, as well as the leader's ability to mobilize and align key leaders to help make a smart judgment and get it executed. Like all good judgments, strategic judgments need to be a process: (1) preparation, (2) the call and (3) execution.

Strategy judgments alter where the organization is heading. They require the leadership to have a clear TPOV and storyline and then have the courage to make the calls and see that they follow through on the execution. ■

Strategy Judgments at GE

CEO Jeff Immelt was on the line in 2007 for his GE strategy judgments. He spent five years repositioning GE for future growth; he needed to now demonstrate that his strategic judgments would yield the promised results. His is a work in progress. He has dropped businesses from the portfolio, a never-ending process, and is adding new ones through acquisitions and organic growth to create the GE future engines of growth. Five years into the transformation, his judgments were showing clear evidence of being rewarded in the stock market.

Immelt states: "To be a reliable growth company requires the ability to conceptualize the future. We are investing to capitalize on the major growth trends of this era that will grow at multiples of the global GDP growth rate. We are using our breadth, financial strength and intellectual capital to create a competitive advantage."

Immelt is relentless in sharing his storyline and relentless in driving the strategy execution. ■

Crisis Judgments

Good judgments made during times of crisis follow the same process as judgments made under less stressed circumstances. There is a preparation phase, a call phase and an execution phase. The preparation phase, however, needs to be done before the crisis occurs.

The most effective leaders prepare for crisis even before knowing what kind of crisis will occur. It is perhaps even more true in crisis situations than with judgments about people and strategy that the likelihood of making successful calls is vastly increased if they are made in the context of a pre-existing Teachable Point of View (TPOV) and on the platform of the storyline for the future.

Leaders generally make bad crisis judgments either because they lack a clear TPOV and storyline or because they have made bad people judgments. For leaders to handle crises effectively, they must have an aligned team. Otherwise, the crisis situation will splinter the team just when smart, coherent action is needed most. Bad people

judgments or bad strategy judgments can precipitate a crisis, but once one happens, teamwork and focus make all the difference between survival and disaster.

Crisis Judgment Compresses Time and Root Causes

The reason crisis is one of the three categories of key leader judgments is that all leaders have to deal with them. The fundamental process of judgment is the same as with people and strategy. Have a solid TPOV, and make sure the judgments you make are consistent with the TPOV or at the very least do not hinder execution of the storyline for where you want to ultimately end up. ■

Crisis as a Leadership Development Opportunity

Why are some leaders better equipped to deal with crises than others? The answer is because they anticipate crises. They aren't psychics. But they clearly understand that some crises *are* going to come down the pike, and they prepare themselves and their organizations to respond effectively and efficiently when they do. These leaders know that in order to survive crises, and perhaps even come out ahead because of them, they must have three things:

1. An aligned and highly trusted team

2. A TPOV and storyline for the organization's future success

3. A commitment to developing other leaders throughout the crisis.

Navigating Through Crises

David Novak, CEO of Yum! Brands, and Phil Schoonover, CEO of Circuit City, are two leaders who have successfully navigated their organizations through several crisis situations. Both Novak and Schoonover do three things simultaneously:

1. Effectively, in real time, deal with their crises.

2. Mobilize, align and engage the right social network of leaders in their organizations by tapping their brains and their emotional energy to handle the crises.

3. Focus explicitly on developing the leaders engaged in the process, taking the time to teach and coach in real time.

Leaders who succeed in crises are able to do so because they work on developing their own capabilities and on building them into the fabric of their organizations. Every crisis that Novak has faced has led to good judgments. They have also given him the platform to keep developing other leaders who will be better and better at handling the inevitable and unforeseen crises. The lesson for others is to clearly have mechanisms in place that provide quick responses to crises and that develop the next generation of leaders. ■

Knowledge Creation

The first imperative to being a good leader who makes good judgments is a commitment to be a learner, to keep building one's knowledge and wisdom. Leaders have two imperatives when it comes to knowledge creation. First and foremost, they must continuously strive to make themselves smarter and better at judgments by the kind of self-journey to improvement that GE's CEO Jeff Immelt and other leaders have taken.

In addition, leaders need to garner the support of their teams; their organizations; and their stakeholders in people, strategy and crisis judgment making. While striving to make themselves better with the support of others, they must simultaneously invest in the development of leadership judgment in others: namely, their team, their organization and the organization's key stakeholders. This duality, making oneself better while teaching and developing others' judgment capacity, is the key to good leadership.

Self-Knowledge Creation: A Journey Into Yourself

Good leaders are on a transformational journey starting with themselves, which carries over to their teams and organizations. To do this, leaders need the paradoxical combination of self-confidence and humility to learn.

First, it has to be a central agenda item of the leader. It takes commitment to self-learning, significant time, relentless willingness to "look in the mirror," and a paradoxical self-confidence and humility.

'An Intense Journey Into Yourself'

Jack Welch chose Jeff Immelt to succeed him as CEO in large part because he recognized that Immelt was a leader with an insatiable thirst for being better, who invested himself in self-knowledge creation. Immelt told an incoming class of MBAs at the University of Michigan: "The first part of leadership is an intense journey into yourself. It's a commitment and an intense journey into your soul… more than anything else, the burning desire inside me was to get the best out of what I could be and go on that journey."

The leader's knowledge creation journey is the necessary condition for focusing on knowledge creation at the social network, organizational and contextual levels where the leader not only mobilizes these domains to support the judgment process, but also builds his or her capacity to develop judgment knowledge capacity.

Social Network/Team Knowledge Creation

It is up to the leader to build knowledge creation processes for his or her team and to ensure that these processes are executed.

Virtually every leader relies on a group of trusted advisers. For most leaders, their team is the group with which they spend the most time. When there are difficult judgments to be made, they convene their team to debate and deliberate. Building a social network that keeps developing knowledge creation capacity is central to the success of a leader.

Organization Knowledge Creation

Building judgment capacity means creating processes that engage leaders in judgment muscle strengthening activities.

All leadership development, from new hires through senior leaders, needs to be geared toward knowledge creation for better leadership judgments, both to support real-time judgments and to develop the next generation's capacity for leadership judgment.

Contextual Knowledge Creation

The final knowledge creation arena is how to work with the stakeholders, the board, the suppliers, the customers and the communities in which the organization operates. Leaders need to develop customer and supplier interactive processes for developing new knowledge. ■

Judgment for Future Generations

Mayor Michael Bloomberg and Joel Klein, the chancellor of the New York City school system, want to help shape good judgment in 1.1 million New York City children. To do that, it takes leadership in the New York City schools, where there are 80,000 teachers and 1,400 principals. To deliver on the Bloomberg and Klein strategy judgment, the focus had to be on the principals. This is the leadership role that has the maximum impact on the children; a good principal is the key to good teachers.

The New York City Transformation Journey

When Mayor Bloomberg changed careers, from a very successful entrepreneur to mayor of New York City, he sensed and identified the need for revitalizing the human capital side of New York, namely its schools and the next generation of young people.

Judgment No. 1 was to frame and name the issue. Bloomberg said, "We have a leadership problem in our school system and schools, and it needs to be fixed to impact outcomes." Bloomberg had witnessed years of emphasis on curriculum and teacher education but very little on who was leading the schools.

Bloomberg's Teachable Point of View included an assumption that organizational performance was dependent on a good leader. The key leader was the one closest to the students, namely the principal. For these front-line leaders to succeed, the top leaders needed to provide the context and the selection and development pipeline; that was the challenge for Bloomberg, who needed a leader who could execute his judgment to tackle the public education problem in New York City.

That is how Mayor Bloomberg framed it. He made a bold people judgment call and recruited Joel Klein, a non-educator with a successful career in business and law, to be school chancellor. He wanted Klein to be his partner in transforming public education in New York. Klein had a vision of a leadership academy for principals.

Principals and Teachers Shape Our Future

Bloomberg and Klein mobilized a social network of leaders to join in the very difficult execution phase of their yet-to-be completed strategic judgment. Execution required organizational processes, namely the establishment of the New York Leadership Academy and a mechanism to drive large-scale development and transformation of the schools by focusing on the principals as the key to better schools. ■

Conclusion

The process of judgment begins with the leader recognizing the need for a judgment and continuing through successful execution. Leaders are said to have "good judgment" when they repeatedly make judgment calls that turn out well. And these calls often turn out well because they have mastered a complex process that unfolds in several dimensions: time, domain and constituencies.

This framework can help you improve your judgment-making faculties, to do a better job of developing good judgment in others and to encourage a more vigorous conversation about judgment. We need more leaders with better judgment. ■

How Effective Managers Harness Their Willpower, Achieve Results, and Stop Wasting Time

A BIAS FOR ACTION

THE SUMMARY IN BRIEF

Managers blame many factors for their lack of accomplishments: a lack of motivation, limited time, not enough money, too much work, and corporate bureaucracy. But new research suggests that the amount of willpower managers bring to their jobs can be a critical element in their success.

In A Bias for Action*, leadership expert Heike Bruch and management expert Sumantra Ghoshal demonstrate that managers often confuse activity with accomplishments, and motivation with true leadership. Their new study reveals that 90 percent of managers waste their time by procrastinating, becoming emotionally detached, and distracting themselves with busywork. They point out that only 10 percent of managers truly act purposefully to get the most important work accomplished.*

Based on the authors' research across numerous industries, and illustrated with personal case studies from BP, Sony, GE, Philips and others, A Bias for Action *reveals how great managers get results by engaging their own willpower through a combination of energy and focus. The authors present simple strategies for bolstering willpower and provide ways managers can use the willpower of others to encourage collective action.*

What You'll Learn In This Summary

- ✓ How to create a culture that supports positive, purposeful action.
- ✓ Why some managers succeed in taking purposeful action while others do not.
- ✓ How many leaders deliberately reshape their personal behavior by re-energizing themselves or renewing focus on their work.
- ✓ How to define your challenges and overcome stress and negativity.
- ✓ How to overcome common obstacles such as conflicting demands and bureaucratic red tape.
- ✓ How to move from motivating others to fostering willpower in others.

A BIAS FOR ACTION

by Heike Bruch and Sumantra Ghoshal

— THE *COMPLETE* SUMMARY

PART ONE: HARNESSING YOUR WILLPOWER TO ACHIEVE RESULTS

Management Is the Art of Doing and Getting Done

Laura McCormick had just landed the most challenging role in her career. IBG, a $7 billion conglomerate, had acquired her employer, Delta Technologies, a telecommunications supplier — and appointed her, at 33, one of two instructors in IBG's much-touted total quality program. Energetic, enthusiastic and articulate, she had risen quickly in her seven years at Delta.

Early in her new position, however, McCormick began to stall. Having squabbled before with Sam Butler, a manager from the factory floor, she considered him entirely unsuitable for the job of the second instructor and avoiding him whenever possible.

After three months and several managerial shifts that included the demotion of her boss and mentor, McCormick pushed on, running one program after another, attending meetings, tackling problems that cropped up, and spending hours each day answering e-mails and returning phone calls. She was constantly busy, but could see that morale was dipping and Delta was headed for its first quarterly loss.

When McCormick finally asked to relinquish the teaching role, her boss said, "I do not want to lose you." She polished her résumé and resigned a month later.

The Truth About 'Busy' Managers

What could have happened, for example, if instead of avoiding contact with Sam Butler, McCormick had tried to build a great relationship with him from the beginning? Like Laura McCormick, managers tend to ignore or postpone dealing with the organization's most crucial issues. Most managers spend their time making the inevitable happen instead of putting their energy into the exceptional things that create a company's future.

Most managers do not reach for the opportunities for significant achievements. Although their days are filled with a constant stream of meetings, conference calls, e-mails, voice mails, pages, etc., they tend to ignore or postpone dealing with the organization's most crucial issues. Those problems require reflection, systematic planning, creative thinking, and time. Instead, managers let operational activities requiring more immediate attention squeeze important problems out. Daily routines, superficial behaviors, and poorly prioritized tasks take up their capacities. This all makes unproductive busyness one of the most critical behavioral problems in large companies.

Purposeful Action

How can managers turn busyness, or what the authors call "active nonaction," into purposeful action — consistent, conscious and energetic behavior that shows a bias for action? Purposeful action is action-taking with undivided resolve to produce results. Those who exhibit purposeful action possess energy and focus. The following are four kinds of managerial behavior that are based on the levels of energy and focus that managers display:

- **The Frenzied:** Forty percent of managers are distracted by the many tasks they juggle every day. They are highly energetic but very unfocused and appear to others as frenzied, desperate and hasty.
- **The Procrastinators:** Thirty percent of managers procrastinate on doing the work that really matters to the organization because they lack both energy and focus. They often feel insecure and fear failure.
- **The Detached:** Twenty percent of managers are disengaged from their work altogether. They are focused but lack energy and seem aloof, tense and apathetic.
- **The Purposeful:** Only 10 percent of managers get the job done. They are highly focused and energetic and come across as reflective and calm amid chaos. ■

The authors: Heike Bruch is a professor of leadership at the University of St. Gallen in Switzerland.

The late Sumantra Ghoshal was a professor of strategic and international management at London Business School and co-author of *Managing Across Borders*.

Distinguishing Purposeful Action From Active Nonaction

Few managers use time as effectively as they could. Most managers are aware of their unproductive busyness and complain about the problem. Managers who take effective action — those who make the seemingly impossible happen — rely on a combination of two critical aspects of executive work: energy and focus.

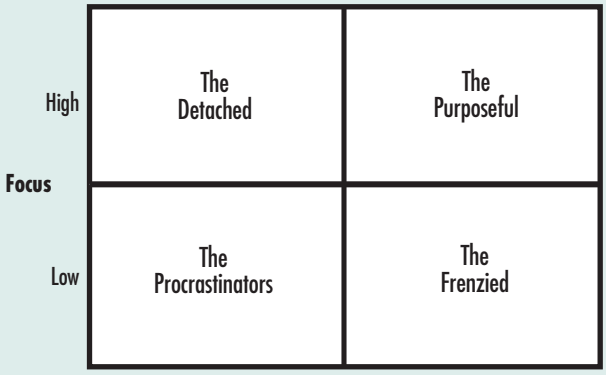
We think of energy as exertion or vigor deriving from intense personal involvement, and focus as concentrated attention. By plotting the two dimensions of energy and focus against each other, we discovered a powerful framework for understanding the causes of active nonaction and the sources of purposeful action that correspond with the four types of managerial behavior: the procrastinators, the detached, the frenzied and the purposeful. (See graph below.)

Energy Displayed at Sony

The development team that created the Sony VAIO computer displayed effective energy when it created the first personal computer to let users combine other Sony products and services, such as digital cameras, camcorders, and portable music systems. Responding to CEO Nobuyuki Idei's challenge to create an integrated technological platform to provide home entertainment to the burgeoning generation of kids with digital dreams, Hiroshi Nakagawa and his team put in 100-hour weeks to create the kind of breakthrough product that Idei had hoped for.

One manager, Kazumasa Sato, was so committed to the project that he spent every weekend for three years watching customers in the electronics shops of Tokyo's Akihabara neighborhood. The insights he developed into consumer buying patterns helped Sony create a shop layout that enhanced traffic flows and, ultimately, sales of the PC. In the end, VAIO captured a significant share in Japan's highly competitive PC market.

Focus, Energy, and the Four Managerial Behaviors



Energy

Energy is vigor fueled by intense personal commitment and involvement. It is the emotional tenacity that can release immense inner resources when the stakes are high. In business, energy allows quick and effective action in high-pressure situations. The Sony team illustrates these three critical elements of energetic behavior:

1. Energy requires that the action be subjectively meaningful. Managers do many things, but they put energy only into those projects that mean something to them personally — as the VAIO project clearly did for the team at Sony.

2. Energy implies that managers take proactive action and initiative. Their need to act comes from within — as it did for Kazumasa Sato during all those weekends he spent in electronics shops. Energy leads managers to develop goals and initiate actions, rather than to be constrained by situational requirements.

3. Energy is what pushes managers to make exceptional efforts when tackling heavy workloads or responding to tight deadlines. That kind of energy drove the VAIO team members to work 100-hour weeks until they achieved their objective.

Focus

The other critical element of purposeful action — focus — is essentially energy channeled toward a specific outcome. There are three conditions that managers must fulfill to develop focused behavior. They are:

1. Rather than merely reacting to developments as they arise, or meeting routine requirements, focused managers are goal oriented.

2. Focus requires that a manager is intentional, channeling all activities toward achieving the desired goal.

3. Focus requires personal discipline. Focused managers protect themselves against the usual noise of everyday demands that will inevitably tug at their attention and emotions.

High-Energy, High-Focus

About 30 percent of the managers studied were procrastinators who exhibited low energy and low focus. About 20 percent exhibited the low energy and high focus of the detached. Forty percent were the frenzied who showed high energy and low focus, and about 10 percent of the managers were purposeful managers.

Purposeful managers make deliberate choices and embody both focus and energy. They tend to exhibit a strong sense of personal significance, an ability to thrive in chaos, and an ability to step back and reflect. These managers also appear more self-aware than most people. Their clarity about their intentions, combined with discipline, helps them make careful, high-quality decisions about where and how they spend their time. ■

Marshaling Energy and Developing Focus

Managers can harness the necessary energy and focus to succeed and engage fully in their work by developing a combination of strategies that includes defining a goal, mastering techniques for overcoming negativity, and then learning ways to visualize that goal.

Clear, challenging goals give people a sense of meaning and direction, and they help sustain people through the effort needed for achieving them. A manager must also personally believe he or she can achieve the goal.

When defining a worthwhile goal, one should:

- *Choose a goal that is well defined and concrete.*
- *Pick a goal with which one can personally identify.*
- *Set a goal that feels personally challenging.*

Harnessing Energy and Focus at Lufthansa

When Lufthansa underwent its transformation in the early 1990s, every manager confronted painful tasks under difficult circumstances. Most of them experienced a substantially increased workload and long-term strain as well as a very high level of emotional tension. Some managers fell victim to a gradual but inevitable erosion of their emotional energy. Others found ways to re-energize themselves and continue to pursue their projects.

How could these managers sustain their emotional force? They relied on two simple but effective mechanisms. First, they appeared to have a valve for regulating the flow of their emotions. They knew exactly how to process their painful emotions and inner tensions. For some it was an intensive sport that helped them let off emotional steam. Others relied on the help of a personal "crying wall" — their partner, a good friend, or a colleague with whom they could share their fears, frustrations, and inner burdens.

Second, most of these Lufthansa managers had a "personal well" — a distinct source of positive energy — from which they could draw regular replenishment. Personal wells could be anything from a hobby to a special place that had a re-energizing effect, but they all shared certain characteristics: They were associated with positive experiences as well as with a comprehensive — physical, emotional and mental — sense of well-being. Overall, the well served two purposes: It was a reliable source of positive energy, and it was a source of emotional strength, a place to refuel.

The Ability to Visualize and the Courage to Commit

For managers to gain traction and begin making real progress in their work, they must create vivid mental pictures of what they want to achieve, and stake their jobs on a personal commitment to that vision.

Focus begins when you simplify your goal or intention into a vivid mental picture. Visualize what you want to accomplish. This picture will help you sustain purposefulness, intentionality and discipline through the action-taking phase. The clearer and more vivid your picture, the stronger your passion and personal attachment to the goal. Vivid pictures are especially important for staying committed to long-term objectives.

You also need a concrete mental model of ways to enact that intention. If your goal is to roll out a new product, then you should not only imagine what the product and its customers look like, but you should also see yourself performing a set of actions, for example, to bring that product to market. A model of specific actions also prepares you mentally and emotionally to overcome the inevitable speed bumps. You must also develop the courage to commit to your intention.

Managers who want to cultivate a bias for action must take full responsibility for their intentions or goals. Without this kind of personal commitment, it is easy to go astray or blame others for setbacks. To make such a commitment, your intellectual assessment of your job must align with your own intuitive and emotional desires. The resulting intention exists beyond the reach of measurable rationality and constant personal cost-benefit analysis.

Asking questions such as, "Does it feel right?" and "Do I really want it?" forces you to reflect on what the goal means to you personally instead of allowing you to base your choice on potential rewards. Focused managers must go through inner consensus building in which they resolve their own conflicts and doubts. ■

Moving Beyond Motivation To Willpower

On Jan. 11, 49 B.C., Julius Caesar made a crucial decision: to cross the river Rubicon with his army, thereby effectively declaring civil war against Pompey, who held power in Rome. With the words *alea iacta est* (the die is cast), Caesar resolved to return with his legions to the city. Once he crossed the Rubicon and ventured into the Roman heartland, he knew there was no turning back. Either he and his soldiers would take the city, or Pompey would destroy them.

Before he crossed the river, taking Rome had been merely an idea, a wishful desire that he might achieve. After the crossing, it became an unalterable course, with the force of his whole will behind it — which in itself practically ensured success.

To move from "motivation" to "willpower," a manager must undergo precisely this decisive shift to total

(continued on page 5)

Moving Beyond Motivation to Willpower

(continued from page 4)

commitment. An unwavering committed force of will underpins the two hallmarks of a purposeful manager: energy and focus. Willpower separates the executives who remain stuck in unproductive behavior from those who overcome their procrastination, detachment or frenzied busyness to develop a strong bias for action.

Many managers have never witnessed or experienced willpower in action. Only 10 percent of the managers studied have felt fully engaged and driven toward a goal for which success is the only option.

Motivation Versus Willpower

Motivation is often triggered by external stimuli or the expectation of some reward. Both intrinsic motivation (the internally driven desire to do something) and extrinsic motivation (the expectation of some reward) are volatile because they are susceptible to changes from one's environment and one's inner preferences. A more attractive opportunity could come along or obstacles could appear that render a reward worthless.

On the other hand, willpower implies the commitment that comes only from a deep personal attachment to a certain intention. Willpower springs from a conscious choice to make a concrete thing happen. This commitment to achieving something represents the engagement of the human will. Volitional managers are infected with an incurable need to produce certain results. Willpower enables managers to act in a disciplined way even in situations when they have no desire to act, feel unmotivated because they do not expect to enjoy the work, or feel tempted by alternative opportunities.

A move from motivation to willpower manifests itself in three ways. They are:

1. It feels easy to begin taking action toward your objective. You know what you want, and you do not need further information or external stimuli to get started. You do not suffer from the painful hesitation and doubt that motivation often implies.

2. You will find that your perception is biased. All of your attention, energy and preferences will focus on your intention, and you will constantly look for information that will help you realize it. You will block out contradictory information and will not feel tempted by alternative opportunities that present themselves or distracted by surprise disruptions.

3. With willpower, you will respond in new ways to obstacles. Faced with negative feedback, lack of interest from management, resistance from colleagues, or any other impediments to purposeful action-taking, motivation often dissipates. With willpower, barriers will only make you redouble your effort and commitment.

Four Stages of Volitional Action

These are the phases that people pass through on their way to volitional action:

1. Forming your intention. This is a period of seeking, exploring and beginning to formulate an objective.

2. Committing unconditionally to your intention (crossing your Rubicon). This is the point where superficial attachment to an idea ends. You accept the challenge and essentially declare war. You cannot turn back.

3. Protecting your intention. Volitional managers find ways to change and discipline themselves, and *manipulate their environment* to stay the course.

4. Disengaging your intention. You must establish "stopping rules" right from the beginning. ■

For Additional Information on how a Swiss entrepreneur crossed his own Rubicon, go to: http://my.summary.com

Crossing the Rubicon

How does a person cross his or her own personal Rubicon? How can managers align emotional and rational forces to embolden themselves to act persistently and purposefully — and perform their jobs with a bias for action? First, volitional managers discovered their deepest, innermost feelings about their goals. Second, their thoughts about their goals assumed a new clarity, and they became confident of achieving their objectives. Third, they aligned their emotions and thoughts about their goals.

Aligning Thoughts and Emotions

People can align their thoughts and emotions by relying on one or more of the following three strategies:

Strategy #1: Harnessing the emotions that support your goals. Managers who adopt this strategy deliberately establish positive responses to strong emotions for their intention that keep them on track. Often, they rely on specific visceral images.

Dan Anderson of Conoco used this volitional strategy while battling an oil and gas monopoly in Europe. By visualizing the characters in the film *The Untouchables*, he could see himself as "busting the system" — an image that gave him the force to meet his objective in a very challenging situation.

Strategy #2: Managing the emotions that distract you from your goal. Most managers have mixed feelings about an objective right from the start. To stop derailing yourself, you need active self-management of both negative and positive reactions. Some emotions tempt you toward a goal that conflicts with the intention on which you have already decided.

(continued on page 6)

Crossing the Rubicon

(continued from page 5)

Peter Meyer, a young lawyer responsible for the building laws for a major urban entertainment center in Europe, loved his role in the ambitious, extremely challenging project. A recent change in his firm's promotion policy diminished his chances to become a partner, and the center's investor was questioning its potential profitability. When delays and lack of acknowledgment lessened Meyer's passion for his job, he envisioned leaving his firm and starting his own business.

Soon, the constant friction between his job dissatisfaction and his excitement about alternatives began to wear him down. He knew he had to manage his emotional distractions to stay on track. As he weighed his options, he realized that, in a private practice, he would never work on what he loved — big challenging projects like the entertainment center. He realized how passionate he felt toward his project. He saw himself as a top lawyer in a powerful firm, not a soloist who accepted mundane jobs to survive. Gradually, opening his own office lost its appeal. Because of his exceptional effort and success, his firm made an exception to its policy and made Meyer a partner eight months later.

Strategy #3: Achieving the state of flow. Volitional managers search for solutions in which their thoughts and emotions about their goals naturally overlap, and, if necessary, they modify their goals to harmonize with their emotions. Achieving such a state of flow requires greater courage and effort during the process of decision making. In the long term, you will have more emotional energy for meeting your objectives in the flow state.

To act with willpower, then, you must expand and reinforce your flow area in many ways. You must first become aware of your emotions and your learned responses to them, and learn why you might be resisting your established intention. By taking time to reflect, assessing your feelings, and applying visualization tools, you can reorient your undertakings, redefine your goals, or strike out on a new path. By addressing the emotional issues that might hinder you later, you will enter fully into a state of flow.

The Limits to Self-Discipline

With Strategy #1 and Strategy #2, you build self-discipline and strength, so the rationality of your goal overrides the ups and downs of powerful emotions. To muster the energy for what does not initially excite them, successful managers generate positive energy while dealing actively with their negative responses to strong emotions.

Sometimes these strategies for harnessing willpower can be limiting — especially when they involve leveraging emotions to create energy for action. Overly disciplined managers can become easily overwhelmed and fraught with inner turmoil. By denying their needs, they can feel increasingly irritated and alienated. Therefore, managers should not overuse the first two strategies. ■

Managing Your Emotions

One way to manage the emotions that distract you from your goals is to transform negativity into positive energy. To do this, you can do the following:

✓ Use positive mental pictures.

✓ Process negative thoughts with trusted friends and colleagues.

✓ Inject humor around your fears.

✓ Use other people's nay-saying to mobilize your pride and spur you toward your goals.

✓ Distance yourself from negatively charged situations to decrease their power.

Overcoming the Three Traps Of Nonaction

There are three common traps of nonaction that keep managers from leaping with a bias for action. They are:

- **Overwhelming demands.** Some day-to-day jobs are so demanding that they leave little time for reflection on what really matters.

Rather than simply responding to any request that gets thrown at them, purposeful action-takers manage their demands by developing an explicit personal agenda, practicing slow management, structuring contact time, and shaping demands and managing expectations.

- **Unbearable constraints.** Many managers feel discouraged by corporate constraints to pursue goals they consider significant. Rarely are these constraints as absolute as managers make them out to be.

To remove themselves from this trap, purposeful action-takers adopt strategies that include: mapping relevant constraints, accepting trade-offs, selectively breaking rules, and tolerating conflicts and ambiguity.

- **Unexplored choices.** Focused on job demands and constraints, most managers develop tunnel vision and concentrate on immediate needs and requirements, and are unable to exploit their freedom to make choices about what they would do and how they would do it.

Purposeful action-takers, in contrast, avoid this trap by being aware of their choices; by expanding their opportunities and their freedom to take action on the choices they have; by developing personal competencies that both create choice and enhance their ability to make things happen; and by learning to enjoy both the freedom and the responsibility that choice brings with it. ■

PART TWO: CULTIVATING A COMPANY OF ACTION-TAKERS

Developing Purposeful Managers: The Organization's Responsibility

How can leaders instill willpower in others and ultimately create organizations that consistently demonstrate a bias for action? Once they have transformed themselves into purposeful doers, they must craft a context within the organization itself that supports purposeful action-taking. Leaders can do this by undertaking two main tasks: overcoming the challenges inherent in building an organization of managers with a bias for action, and weaving the values of volition and personal responsibility into the cultural fabric of the company.

Building an Organization of Purposeful Managers

People engage their willpower only when they think they have personal control over their situations. To benefit from volitional action that aligns with corporate goals, leaders must ensure that people at every level internalize the overall purpose of the company. That means crafting a shared vision and a set of common values that everyone authentically subscribes to as a personal source of identity and meaning. To build a context for volitional action, purposeful leaders must develop in their people a shared commitment to an overall direction as well as to a set of common values and mutually agreed-upon norms of behavior.

Creating the Space for Volitional Action

BP's corporate CEO John Browne believes that people work better in smaller units because the closer they can identify with objectives and targets, the better things happen. Therefore, the best way to achieve excellent overall performance is to divide up the big long-term targets of the company into small units that can take full ownership of those targets.

When Browne restructured the company into 150 business units, he yielded to the unit managers a great deal of freedom to run their operations autonomously. By creating space for volitional action, BP created a performance-contracting process designed to provide a clear line of sight between the performance of individual business unit leaders and the corporate-level business goals. The contract, defined annually and reviewed quarterly, specifies financial goals and high-level nonfinancial target. Targets are taken very seriously; failure to meet them usually means a transfer for the manager.

Weaving Purposeful Management Into the Organizational Culture

To unleash people's willpower, leaders must not only build an organization that supports the exercise of freedom and choice, but they must also embed volitional behavior as a central element of the company's cultural core. A company's culture (its shared values, informal norms, habits and traditions), not its structure (its explicit, tangible, formal regulations, rules and strategy), stimulates and sustains a manager's courage to exercise choice and ability to enjoy freedom.

At GE, Jack Welch spent two decades relentlessly breaking up corporate bureaucracy and insisting on decentralized initiative to release the entrepreneurial spirit of his managers. ■

Unleashing Organizational Energy for Collective Action

Marshalling organizational will to support the productive energy and focus not only of individual managers, but also of the company itself, is the final aspect of building a bias for action. In companies that have successfully focused their organizational energy, the leaders unleashed the energy inherent in their organizations, and created a strong collective force that fueled purposeful action-taking and led to extraordinary results.

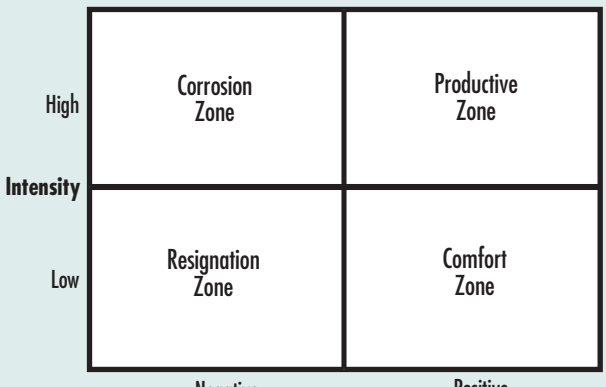
These leaders brought their organizations around specific strategic initiatives by first mobilizing the organization's energy, and then focusing it. They succeeded because they nurtured their organization's energy in a way that their people could sustain it steadily over time.

The Four Organizational Energy Zones

The typical energy states of organizations can be framed in terms of two characteristics: intensity and quality of energy. (See graph below.) The quality of organizational energy distinguishes between positive energy (e.g., enthusiasm, joy, satisfaction) and negative

(continued on page 8)

The Four Organizational Energy Zones



Unleashing Organizational Energy For Collective Action

(continued from page 7)

energy (e.g., fear, frustration, sorrow). Intensity refers to the strength of organizational energy as seen in the level of activity, the amount of interaction, and the extent of alertness and emotional excitement. The intersection of intensity and quality determines an organization's energy state, which usually falls into one of four categories: the comfort zone, the resignation zone, the corrosion zone, and the productive zone.

While different departments in the same organization can sometimes function in different zones, most organizations function overall in one predominant energy zone at any given point. The goal for any company is to find itself in the productive zone.

Moving an Organization Into the Productive Zone

Companies that have achieved truly radical change had leaders who adopted one of three approaches for focusing the energy of their organizations and moving them into the productive zone. These strategies are:

- **The Slaying-the-Dragon Strategy.** Companies using this strategy drive their people out of the comfort zone by focusing their emotion, attention and action on a crisis or a threat to overcome. Leaders must clearly define and describe the "dragon" by identifying a distinct and tangible threat (e.g., bankruptcy, a particularly dangerous competitor, or a disruptive technology).
- **The Winning-the-Princess Strategy.** These companies mobilize their organizations into the productive zone by building people's enthusiasm for realizing a specific, motivating dream. This strategy relies on leaders creating energy from a belief in a vision for the future, for example, or in the potential of a new product, a new market, or a new acquisition.

Other companies adopt a third strategy of combining the first two, and although this is done less frequently, the results often prove stellar. Companies without either a dragon to kill or a princess to win inevitably fall into one of the energy traps: They gradually decline to mediocrity and eventually face a full-blown crisis. ■

How Philips Slew the Dragon

In July 1990, Dutch electronics giant Philips shocked the financial world by announcing a loss of more than $1 billion, driven primarily by the company's semiconductor division. At the heart of the radical turnaround the division would achieve lies a classic example of the slaying the dragon strategy adopted by Heinz Hagmeister, the division's new CEO.

Jan Timmer, Philips's new corporate CEO, initiated one aspect of this strategy — activating strong, vivid emotions. In one meeting, he shocked all the members of the senior leadership team by presenting them with a dummy newspaper report postdated by seven months with the headline "Philips declares bankruptcy." Participants in that meeting initially regarded the report in disbelief, but the actual financial figures Timmer presented soon revealed that bankruptcy was indeed unavoidable unless they cut costs immediately.

Freeing Your People to Act: A Mandate for Leaders

There are six strategies that leaders can use to help their people engage their willpower toward a bias for action. These strategies are:

- **Strategy #1: Help managers visualize their intention.** To build commitment, managers must have a clear and vivid picture of what they wish to achieve. Purposeful leaders stimulate their people to transform their ideas into concrete intentions.
- **Strategy #2: Prepare managers for obstacles.** Instead of obscuring obstacles and downplaying risks, as a purposeful leader you must ensure that managers fully understand the potential costs and benefits of an engagement before they commit to it.
- **Strategy #3: Encourage managers to confront their ambivalence.** True commitment requires that managers confront their emotions and reflect on whether they can personally stand with their head and heart behind an intention.

A Climate of Choice

- **Strategy #4: Develop a climate of choice.** To create managers who act from personal willpower, you must offer them choices, make them perceive and develop the courage to use these choices — and then step back. Find new ways to support your managers' actions while not defining and determining what they do.
- **Strategy #5: Build a self-regulating system.** Have your managers define, right from the start, their stopping rules: certain critical events or intermediate results that, should they occur, trigger the project's termination.
- **Strategy #6: Create a desire for the sea.** The French World War II pilot and philosopher Antoine de Saint-Exupéry wrote: "If you want to build a ship, don't drum up your men to go to the forest to gather wood, saw it, and nail the planks together. Instead, teach them the desire for the sea."

To be creative and to engage willpower, managers must not only have the freedom to act but also *feel* that they have it. Leaders must provide managers that space and freedom in which to act, as well as convince their managers to *use* that freedom. ■

THE SUMMARY IN BRIEF

Leadership in modern organizations is defined by increasing complexity, social dynamics, and the need to influence without relying solely on authority. ***A Leader Worth Following*** examines the central problem of how leaders can motivate others, build trust, and create environments where people choose to follow. The book advances the thesis that effective leadership begins with self-mastery and extends through empathy, communication, and intentional influence grounded in an understanding of human behavior.

The author presents a structured framework rooted in psychology and experience management, emphasizing that leadership effectiveness depends on understanding how people think, feel, and behave. The work situates organizations as systems of people, resources, and goals, and argues that so-called soft skills—such as communication, emotional awareness, and behavioral insight—are foundational to achieving sustained performance and engagement.

The book develops this framework across three dimensions: mastering oneself, improving interpersonal communication, and shaping environments that influence behavior at scale. It outlines how leaders can refine their thinking, regulate their behavior, and design organizational contexts that reinforce trust, reciprocity, and shared purpose, establishing conditions under which voluntary followership can emerge.

IN THIS EXECUTIVE BOOK SUMMARY

- Explain how experience management connects human insight to outcomes
- Develop self-mastery through introspection, mindset shifts, and awareness
- Strengthen communication by framing messages and gathering diverse input
- Shape environments that reinforce trust, reciprocity, and performance

Introduction

Throughout my career, I have focused on how to train employees effectively, select the best candidates, measure people's attitudes, and predict what they'll do in the future. Time and time again, I have found that what really makes employees tick, and on the flip side, what demoralizes them, can be traced back to the people who lead them. And the more I study what drives productive consumer attitudes and behaviors, the more convinced I become that leaders hold ultimate responsibility.

If we were to walk around and ask random people about the leaders they follow, we'd probably find that those leaders fall into one of two buckets:

1. Leaders who people follow because they *have to*
2. Leaders who people follow because they *want to*

Sadly, most of us are all too familiar with leaders who fall into the first category, those we follow because we have to, and perhaps, if we're honest with ourselves, we might admit that we've been this type of leader at times. This style of leadership is often deeply rooted in insecurity and painful life experiences. It takes its toll. Let this be a warning: choose this path at your own risk.

The path to becoming a leader people want to follow, on the other hand, takes far more courage. You'll have to sacrifice a lot. You'll have to set aside quick fixes. It requires bravery and hard work. It's not a lazy path, but it is an honorable one. And the fruits of your journey will be immeasurable. By choosing this path, you'll be far more likely to find fulfillment and long-term happiness.

CHAPTER 1

The Daunting Challenges of Modern Leadership

In addition to the normal struggles we face in our daily work lives, leaders shoulder the burdens of others, multiplying the challenges they are responsible for. Leading and influencing people comes with significant responsibility and accountability. Some feel called to lead, while others prefer to avoid it. And that's perfectly normal.

Leading takes serious guts. Organizational leaders are often caught between competing interests, forced to make seemingly impossible decisions with no clear right answer—it's not for the faint of heart.

Humans Have Evolved to Both Lead and Follow

From an evolutionary perspective, the human brain has developed into the impressive organic machine it is today precisely because humans are social.

Our ability to think abstractly, run hypothetical simulations in our minds, and infer others' motivations reflects the most advanced parts of the brain, which are also the youngest and most recently evolved.

The more advanced parts of our brains operate the way they do because we are highly social and work together in groups. In all known human groups, there are social hierarchies. In other words, we're hard-wired to both lead and follow.

Every Organization Has the Same Skeletal Frame

Every organization you've worked for, currently work for, or will ever work for is unique. Each has its own unique fingerprint. But as organizational psychologist Steve Hunt points out in his book *Talent Tectonics*, beneath the surface, all organizations look the same. Stripped to their bare bones, they consist of just three elements:

1. a group of people
2. shared resources
3. shared goals

While the operational and financial aspects of our organizations are extremely important, they are functions of people, resources, and objectives.

First and foremost, organizations are the people that make it up. Organizations are ever-changing; after all, people come and go. But at any given moment, those people collectively *are* the organization itself.

Soft Skills Are the Hard Skills of Leadership

The term soft skills is, fortunately, going out of vogue in modern business vocabulary. But traditionally, many of us have distinguished them from what we refer to as hard skills.

Hard skills is a catchall term for knowledge and abilities that people possess that are directly applicable to a job; for example, using software or coding.

Unlike hard skills, soft skills are largely social in nature. In business, they take the form of empathy, active listening, vulnerability, intentional body language, and storytelling, among others. These are the skills many of the best leaders possess and work diligently to develop. They are the skills that earn volitional followership.

> Soft skills are the skills that earn volitional followership.

Our Desperate Need for Leaders Worth Following

Whether we like it or not, all of us who work with others, see potential in people and processes, and strive to reach that potential *are* already leaders. We all have the ability and responsibility to influence those around us.

And while leadership is indeed "effing hard," the hard things we do in our careers often end up being the most rewarding. And to be sure, leadership comes with many rewards: the greatest of which go beyond mere surface-level benefits like power and money.

CHAPTER 2

The Business Philosophy of Experience Management

Exceptional experiences, in business, are sadly a little hard to come by. But when we as consumers and employees have a truly excellent experience with an organization, it leaves a lasting impression.

We often see everyday people step toward others to meet their needs and desires. We see people who are willing and able to view the world through others' lenses and make an effort to improve their experiences. These efforts bring joy not only to those who receive them but also to those who give them in return.

How does an organization scale these behaviors? The short answer: through leaders.

Finding Deeper Meaning in Work

Consider the question: Why do we work?

Underneath this short string of words is a deep question. Take a second to answer it for yourself. Write down the first answer that comes to mind. You may find other reasons popping up—jot those down too.

I've asked this question to hundreds of people throughout my career, and nearly everyone I've asked eventually articulates many reasons, several of which have nothing to do with money or basic survival.

The Origins of Experience Management

Experience Management (XM) was created by Qualtrics in 2017. While the central idea of XM isn't novel, the creation of the category helped build a global community of practice, bring historically disparate business functions together, and galvanize the field.

Before Qualtrics created the XM category, the company had established itself as a premier survey tool for a wide range of academic and business research.

By 2015, when I joined the company, we had organized ourselves along four lines of business: market research, product research, customer research, and employee research.

We realized how intimately connected those activities were. And yet, we also realized how siloed these functions were in most organizations. The category of XM was introduced to encompass them all and to impress upon business leaders the inherent interconnection among these fields and their impact on financial results.

What Exactly Is Experience Management (XM)?

In the XM Institute, the research arm of Qualtrics, we formally define XM as:"The discipline of driving actions based on an ongoing flow of insights about how human beings are thinking, feeling, and behaving."

Now, admittedly, the definition laid out above is a bit formal. Here's my simple elevator pitch:

XM is a business philosophy: when organizations do right by people (employees and customers), strong financial results tend to follow. To do this, organizations must understand what people want and need. And to do that, they must talk to them—often and through many channels over time.

It enables organizations to look at the world through the lenses of their stakeholders. This philosophy can transform a business and ensure its relevance as the needs and desires of its stakeholders evolve.

It also helps organizations conduct scalable conversations with their stakeholders and better understand their evolving needs and wants. XM empowers leaders to look at the world through the lenses of others.

CHAPTER 3

Leadership Isn't About You ... or Is It?

Our mindsets and behaviors inevitably influence others' thoughts and behaviors, especially those who report to us, buy from us, and look up to us. Our ability and willingness to command our minds and bodies is key to being a leader others *want* to follow. When we use these tactics with good intentions to positively influence the experiences of others, we become leaders worth following.

Leadership is both other- and self-focused. Imagine a team or an entire organization taking ownership of their mindsets and behaviors, managing themselves to positively influence colleagues and customers. In this environment, people are aware of their body language and its impact on others' perceptions, and they take accountability for it.

Born to Lead and Follow

Every discussion of leadership is inherently a discussion of social hierarchies. For many, the word "hierarchy" carries a negative connotation. And yet, like leadership, I believe it's accurate to say that when we speak of any human society or group, social hierarchies of some kind are involved.

Hierarchies, and thus leadership, appear to be an evolved strategy of social living that helps us solve the many problems associated with group coordination.

All leaders possess some degree of social status, but there are different paths to attaining it. Social psychologist Jon Maner identifies two: dominance and prestige. While dominance involves imposing oneself on others, prestige involves sharing one's gifts and, in turn, receiving the social rewards of status.

CHAPTER 4

Create Ongoing Dialogue

Like leadership, communication is foundational to social life and is a primal experience we all share. Communication comes so naturally to most of us that we take this amazing ability for granted.

But if communication is so foundational to social life, why does it break down so often? Why do countless professionals get sent to communication training each year? Shouldn't communication be the simplest of things?

In my experience, strong communication patterns within organizations are hard to establish. Each person views the world and the groups they belong to—their team, department, or company—through a slightly different lens. As more people join the group, interactions and coordination become increasingly complex.

Others Do Not Read or Hear Your Words as Intended

Communication is the vehicle of leadership. To lead others, we must exchange information. In business, we most often do this through our words.

Unfortunately, when we communicate verbally or in writing, the intended meaning behind our words can be misunderstood or misconstrued. Most often, the string of words we construct appears clear and self-evident to us, and the thought that others could misinterpret it barely registers. We cannot remove ourselves from our human shell to view things truly "objectively." So what are we to do?

Every time you communicate—every time—you must operate under the assumption that not everyone will understand your message the way you intend.

Framing Mental Images

In business, there are a few specific examples of framing you could use because they are intimately connected to the ways in which our brains and minds work.

As a leader, your ability to communicate with others is heavily dependent on how vivid an image you create in their minds. It's also dependent on your ability to view and prepare your message from the perspective of others. This requires time and effort, but you'll certainly improve your leadership and communication skills by applying these principles in your work.

Improving Your 1:1 Meetings

One of the most natural ways we create ongoing dialogue in the workplace is through one-to-one meetings. These meetings are pervasive because they benefit both parties tremendously. People's aversion to them often stems from *how* they're run. Indeed, the benefits of 1:1s only emerge when they're conducted well.

Effective 1:1 meetings share several key characteristics. Professor Steven Rogelberg, the world's leading expert in meeting science and fellow organizational psychologist, has published extensively on the topic. Here are a few of my favorite takeaways from his work:

> When organizations do right by people, strong financial results tend to follow.

- Direct reports own the agenda.
- Avoid going through a list of status updates.
- In group meetings, pose the agenda items as questions.

Gather Genuine, Diverse Feedback

Some of the most admirable leaders I've worked with are slow to speak in group settings. They often sit in silence early on, waiting until others speak their minds. When I observe leaders who immediately jump in before their subordinates, I observe more conformity and a lack of diversity of thought.

Delaying your contributions in group meetings is a critical habit to grow into, especially when your goals are to drive innovation and creativity.

Soliciting feedback individually and holding your tongue while others speak help generate more genuine and diverse perspectives from those you lead. This brings out the group's collective expertise, which is often more comprehensive and creative than any single individual's perspective alone. Importantly, this approach encourages healthy debate and productive disagreement.

CHAPTER 5

Master Your Mind

In business, our success as leaders is largely defined by our ability to influence others. The operational and financial outcomes we're held accountable to are functions of people, resources, and objectives. A leader's job is essentially to drive people to use shared resources effectively and accomplish shared objectives. All this hinges on leaders' willingness and ability to learn, grow, and improve themselves.

Introspection is the process of intentionally exploring one's own mind. It's not a passive activity nor is it always pleasant. In fact, it can be quite painful to confront parts of ourselves we don't like and reflect on how often we fail to think rationally or behave in ways that are contrary to our goals.

But through introspection, we develop a much deeper relationship with ourselves and can learn to avoid past errors. If we're committed to becoming leaders worth following, introspection is a process I believe we must commit to.

A World of Contrary Truths

As a psychologist, I find the distinction and interplay between objective and subjective reality fascinating. What's especially fascinating to me is that we frequently behave as if these are (or should be) the same. Clearly, they're not.

The universe in which we live is full of contrary truths. It's not nearly as black and white as we perceive. And yet, in modern organizations, we face many pressures that influence us to think digitally. Leaders who waffle or straddle the fence risk being labeled as indecisive. They also risk introducing uncertainty, which can wreak havoc on employees, customers, and organizations.

But one of the most fundamental elements of mastering one's mind is to acknowledge the shortcomings of the mind and to realize that what we normally refer to as "reality" is probably better characterized as "shared subjective reality."

We can improve our decision-making and influence by reorienting our minds to recognize that our social reality is heavily shaped by people's perspectives and is not nearly as black and white as we often assume.

What Shapes Our Perceptions?

One concept to anchor on is what the psychologist and Nobel laureate Daniel Kahneman calls WYSIATI: "what you see is all there is." Our perspectives essentially shape how we perceive the world around us.

According to Kahneman's research, WYSIATI is at the heart of many human biases and decision-making errors. It is one of the reasons why employees' and executives' perspectives on work issues often differ and why our customers *see* things differently than the employees who develop and deliver products and services to them.

It is essential for leaders to keep this in mind and remember that what they see and perceive is almost never exactly the same as what others, especially those at lower levels of the organization, see and perceive.

We Are of Two Minds

Thanks to neuroscience, we now know that our brains are organized into different regions, with some specialized neurons

designated for specific functions. Partially because of the regionalization of our brains and partially because our brain's main job is to keep us alive, our minds can be explained as having two systems.

This mental pair is known as:

- **Automatic system**: the always-alert, intuitive part of our minds. It is always active and allows us to respond to our environment automatically.
- **Reflective system**: the more rational system of our minds. When we consider the seemingly simple question "Who am I?" and reflect on ourselves, this is the part of the mind we engage. It directs our conscious attention and supports planning and complex problem-solving.

As a leader, it's crucial to understand this duality. Not only will this help us anticipate and understand employees' and customers' behaviors, but it will help us empathize with them, especially when they slip in their speech or make seemingly unexplainable decisions.

To lead and influence complicated humans toward collective goals, we must learn to acknowledge the shortcomings of our own minds, slow down, and actively engage our reflective system. Importantly, this does *not* mean completely shutting off or ignoring our automatic or emotional responses.

Adopt a Growth Mindset

The American psychologist Carol Dweck has spent much of her career studying the mindsets that drive people to succeed. One of her greatest contributions to our understanding of human psychology in business is her work on fixed and growth mindsets.

Dweck's work has overwhelmingly shown that success is more likely to come when we adopt a "growth mindset." When we do, we acknowledge that we can get better through learning and practice.

Neuroscientific research has shown that people with growth mindsets show increased brain activity after making errors, compared with those with fixed mindsets, and perform better in subsequent tasks after making mistakes earlier on.

Thinking During Times of Stress and Uncertainty

Uncertainty is a particularly pernicious source of stress we all face. The volatility and uncertainty surrounding modern business will very likely increase in the future. From the perspective of our brains and minds, uncertainty means that we can't easily predict what's going to happen. When our brains don't have the inputs to predict the future, we experience unpleasant feelings.

What can leaders do during these ever-more-common periods of uncertainty? Here are a few ideas:

1. **Make the uncertain certain**: As a leader, if you don't know what's going to happen, say exactly that. That, at least, makes the uncertainty certain.
2. **Clearly share what is certain**: Share what you do know that's certain about the situation.
3. **Provide a path to greater certainty**: Communicate next steps and ways for people to learn more.

CHAPTER 6

Master Your Body

Our ability to control our bodies has direct and lasting effects on those we lead and influence. Over time, your mastery of body language (or lack thereof) will play a significant role in determining your success as a business leader.

Body language is an ancient form of communication. A deeper understanding of why humans communicate nonverbally can help us understand the foundational psychological processes that happen without us even *knowing*.

Even though our brains normally process body language below the level of consciousness, you gain great power by bringing that processing up, putting your finger on it, and making a conscious decision about how to respond. Again, this puts your reflective system in the driver's seat, which can override the subconscious biases and automatic responses that we're all susceptible to.

Finally, a deeper understanding of body language may help you develop greater empathy for those who struggle with it and offer ideas for coaching them.

Key Points to Remember About Body Language

- More is communicated nonverbally than verbally when people interact.
- Make the peer handshake your default. It is an egalitarian gesture that sets the stage for cooperation.
- In most business situations, keep your hands open and palms facing upward. This signals safety and encourages others to speak up.
- Smile and laugh more often. These cues are contagious and help buffer daily stress.

> Communication is the vehicle of leadership.

- Use open body postures when interacting with employees and customers.
- In a 1:1 or small group setting, point your feet toward the person you're speaking with. Maintain eye contact without staring; aim for 60–70% of the time.
- When speaking to a large group, make eye contact across the room rather than focusing only on senior leaders or the most engaged listeners.
- Avoid faking facial expressions. It can create a sense that something is off.
- Consider clusters of body language cues rather than overinterpreting a single signal, and always account for context and culture.

CHAPTER 7

Acknowledge the Power of the Environment

How can leaders influence groups of people and create exceptional experiences, both directly and indirectly? To answer this question, we must first take a serious look at the power of the environment.

For better or worse, people are products of their environments. Sometimes this statement is convenient for us as it seemingly allows us to deflect personal responsibility. At other times, it's decidedly inconvenient as it threatens to disrupt the neat, coherent stories we tell ourselves.

The Fundamental Attribution Error

We humans tend to over-attribute other people's behaviors to stable traits that they must possess. In doing so, we erroneously underestimate the effects of the environment and context on people's behavior.

Like other cognitive biases, the fundamental attribution error (FAE) has evolutionary roots. We engage in this bias today because it likely served our ancestors well. When we see someone behaving aggressively, we label them as "aggressive." When we see someone behaving generously, we label them as "altruistic." It's easy to see why this tendency was adaptive.

The most important lesson about the FAE is this: when we make mistakes, we often attribute the cause to something or someone else. When others make mistakes, we attribute them to their character—it's just who they are. When we do this, we underestimate the power of the environment.

Proactively Focusing on the Environment

Much has been written about organizational culture, but for our purposes, we can define it as the shared values, beliefs, and behavioral patterns of a group of people.

An organization's culture includes environmental cues and social pressures that affect both employees and customers—whether directly through interactions with employees or indirectly through the company's products and services. In other words, organizational culture creates environments that shape human behavior.

Swiss American business theorist and psychologist Edgar Schein described organizational cultures at three levels:

- **Artifacts**: the visible manifestations of an organization's culture and environment; what employees and customers directly perceive.
- **Values**: not directly observable but reflected in artifacts, shared language, and behavioral norms.
- **Underlying beliefs**: the deeply held assumptions that underpin a company's values.

Artifacts create an observable environment in which employees operate and which customers experience, directly or indirectly. Espousing values that aren't reflected in meaningful, visible behaviors or environmental cues falls flat. Cultural artifacts and environmental cues communicate a great deal. They often signal how others typically behave, which is a powerful influence on human behavior. Leaders must proactively consider the environmental cues that encourage productive employee and customer behavior.

Know Thyself and Thine Environment

It's partially true that we are products of our environments, and it is also partially true that our genetic makeup, personalities, and choices play a big role in determining what we do and say.

Ultimately, leaders who appreciate the power of the environment gain a huge advantage over those who don't. They gain more empathy for others and take a meaningful step from being leaders others follow because *they* have to, to becoming leaders they follow because they *want* to.

CHAPTER 8

Build a Self-Propelling Reciprocity Engine

Reciprocity is a powerful driver of human behavior. It is one of the most powerful and natural levers for business leaders to influence others and create exceptional experiences at scale.

The norm of reciprocity is universal among human societies. Organizations that intentionally (and ethically) leverage and reinforce this principle among employees and customers reap many benefits.

Leaders Are the Pivot Point

What can leaders do when trust among employees and leaders is low? What can leaders do when they want to incite or spur a more productive mindset or behavioral pattern among those who follow them? In a word, lead.

A tried-and-true way to get someone to move toward you is to first move toward them. This is the best approach for leaders to crank up the reciprocity engine. Will this principle work every time? Probably not. Will you get taken advantage of from time to time? Probably, yes. But if you're leading messy, complicated humans, you're going to get burned every now and then no matter what you do.

A proactive approach gives leaders more direct control. As leaders, we must assume our pivotal role in driving group performance, and reciprocity is an essential principle to embrace.

Build a Propensity to Trust

To build a reciprocal trust cycle and create a high-trust environment over time:

- Show you care about people's interests and well-being
- Make yourself accessible
- Look out for "sliding door moments"

Trust among employees and customers is associated with favorable business outcomes. To build an environment that promotes trust, leaders must start the cycle. To earn trust, start by putting trust in others. Building and maintaining a trusting environment is hard work in the short term, but it pays off in the long run.

CHAPTER 9

Don't Take Yourself Too Seriously

The tactics discussed are not silver bullets nor are they immutable. Leaders worth following acknowledge that there is an entire universe of knowledge and understanding yet to be discovered and what we know represents a tiny sliver of all there is to know. One mark of a great leader is openness to asking genuine questions, learning, and improving over time.

Prune Your Perfectionism

The pursuit of perfection is common among ambitious business leaders. Many modern companies acknowledge this and actively try to stem it.

Leaders worth following aren't perfect, and neither are the outputs of their work. They are, however, acutely aware of their blind spots and surround themselves with people who are better than they are in meaningful ways. They remain open to learning and improvement. Remember, this doesn't show weakness. Acting as if one is perfect is what shows weakness instead.

Be More Curious

Being curious comes naturally to some of us. For others, it doesn't. The problem is that a lack of curiosity isn't particularly adaptive in modern business. In the business world, it pays, literally and figuratively, to be curious. How can organizations possibly thrive with incurious leaders? What can we, as leaders, do?

In my own experience, curiosity breeds more curiosity. Answers lead to more questions. To become more curious, ask more questions.

To Know vs. to Do: Tips for Committing to Change

It's one thing to intellectually agree that we need to change, but it's another to actually do it. To follow through:

- Focus on one thing at a time
- Start with the foundation
- Write down your commitments
- Make your commitments public

- Make it easy on yourself
- Assume the position

CONCLUSION

Be a Leader Worth Following

Leaders worth following are meaningfully different. Instead of aiming to control others through their words and behaviors, they focus on and right-order themselves. Such leaders earn social status through prestige and by adding value to the groups they lead. They also forgo easy, quick fixes. Eager to learn and grow, they recognize that their journey is ongoing. These leaders reflect on how their actions and words impact others and intentionally control themselves for the good of those they lead.

Ultimately, their words and actions bring people together. What is an organizational leader's job if not to bring people inside organizations closer together, to drive people to work together to achieve the goals they share?

Organizations create better experiences for employees, customers, and everyone they interact with when leaders evolve their thinking and actions to see the business world through others' lenses. They then align their words and behaviors.

Over time, organizations that invest in their leaders and the environments they create will achieve stronger financial and operational outcomes.

Dr. Benjamin Granger is Chief Workplace Psychologist at Qualtrics and has more than fifteen years of experience designing and optimizing experience management programs for global organizations. His research has appeared in academic and practitioner outlets including *Forbes*, *CNBC*, *Journal of Business and Psychology*, and *Academy of Management* publications. His insights have also been featured in major media outlets such as *The New York Times*, *The Wall Street Journal*, *Bloomberg*, and *Fortune*. A LEADER'S LEGACY

THE SUMMARY IN BRIEF

Most leaders want to leave a mark in their fields, to create a lasting imprint by their work being appreciated and remembered. A Leader's Legacy *shows readers how a legacy is more than a link to a position or place in an organization. A legacy comes from the idea that everyone, regardless of position, can make a difference. Thinking about legacies requires moving beyond short-term definitions of success. Legacies encompass the past, present and future, and force us to consider where we have been, where we are now and where we're going. A quest to leave a lasting legacy is a journey from success to significance.*

By asking ourselves how we want to be remembered, we plant the seeds for living our lives as if we matter. By living each day as if we matter, we offer up our own unique legacy. By offering up our own unique legacy, we make the world we inhabit a better place than we found it.

A Leader's Legacy *is a compilation of 21 essays on leadership grouped together into four sections on major parts of the idea of legacy: significance, relationships, aspirations and courage. Each section has a brief introduction that summarizes the highlights of the topic. The essays discuss various leadership-related topics, both in theory and in practice. They represent brand new experiences and stories, as well as new variations on familiar themes. This summary culls the essence of these vignettes and presents the practical, timeworn advice from those in the know, based on the authors' collective research through the years.*

What you will learn in this summary:

- ✓ ***Why being an effective leader involves serving others.***
- ✓ ***Why you can't take trust for granted.***
- ✓ ***Why it isn't good to be a micromanager.***
- ✓ ***How a forward-looking perspective is integral to a leader's vision.***
- ✓ ***How to reflect on moments of courage.***
- ✓ ***Why it's OK to fail at your endeavors.***

A LEADER'S LEGACY

By James M. Kouzes and Barry Z. Posner

— THE *COMPLETE* SUMMARY

Significance

When we move on, people do not remember us for what we do for ourselves. They remember us for what we do for them. One of the great joys and grave responsibilities of leaders is making sure that those in their care live lives not only of success, but also of significance. Leaders who see their role as serving others leave the most lasting legacies.

Teaching is one way of serving. It's a way of passing along the lessons learned from experience, particularly to those who look immediately to us for leadership. By asking ourselves how we want to be remembered, we plant the seeds for living our lives as if we matter.

Leaders Serve and Sacrifice

Are you on this planet to do something, or are you just here for something to do? If you're on this planet to do something, what is it? What difference will you make? What will be your legacy? These questions were posed to first-year students in leadership classes at Santa Clara University.

"What will be your legacy?" does not have a single answer or a right answer. But asking the question opens students up to the notion that along life's journey they're going to be struggling with determining the difference they want to make.

Asking these questions brings forward another central observation: Leadership is not solely about producing results. Being a leader brings with it a responsibility to do something of significance that makes families, communities, work organizations, nations, the environment and the world better places than they are today. Not all of these things can be quantified.

Leadership often begins with pain and suffering. And leadership can be as much a service to others. As John Gardner once observed, "A loyal constituency is won when people, consciously or otherwise, judge the leader to be capable of solving their problems and meeting their needs." John didn't mean that the leader should personally fix the problems and fulfill the needs. He was suggesting that people willingly follow someone who's attuned to their aspirations, fears and ideals.

Loyalty is not something a boss can demand, just as a company cannot demand loyalty from customers. Customers decide whether to continue to give us their business, and if we want our customers' loyalty, then it's our job to be responsive.

The first objection to this point of view is that customers pay us, but we pay our followers. But what about energy, drive, initiative, spirit, dedication and all the other emotional currencies that people pay us with? Viewing leadership as service is not a new concept. Robert Greenleaf, himself a retired corporate executive, observed that the "great leader is seen as servant first, and that simple fact is the key to [the leader's] greatness."

When people talk about leadership, they often use the word passion. But when you look up the word passion in any dictionary that includes origins you'll see that it comes from the Latin word for suffering. Leadership is hard work. It's not easy despite what we, or others, may write in our attempts to make leadership more accessible. One guarantee is that what people will say about you will not be about what you achieved for yourself but what you achieved for others. Not how big a campfire you built but how well you kept others warm.

The Best Leaders Are Teachers

The best way to learn something is to teach it to somebody else. As the late Peter Drucker observed early in his career: "My third employer was the youngest of three senior partners of a bank … Once a week or so he

(continued on page 3)

The authors: James M. Kouzes and Barry Z. Posner are preeminent researchers, award-winning writers and highly sought after teachers in the field of leadership. Their groundbreaking studies, pioneered in 1983, led them to create a model of leadership that has been embraced by more than one million people around the world.

Significance

(continued from page 2)

would sit down with me and talk about the way he saw the world … In the end, I think he learned more than I did from our little talks."

Our teachers continue to teach as we go on to tell their stories. This should make each of us wonder about a few things:

- **What lessons am I teaching in each interaction I have?**
- **What stories will others tell about me in the future?**
- **What am I learning from others as I teach?**

We All Need Loving Critics

We close our ears to constant and predictable complainers. Yet, we never truly believe the sycophants whose flattery is so obviously aimed at gaining favor. No one can be as good as they seem to think we are. To stay honest with themselves, what leaders need are "loving critics" — people who care deeply enough to give honest feedback. The problem, as shown by research, is that most leaders don't want honest feedback, don't ask for it, and don't get much of it.

Credibility, the foundation of leadership from a behavioral perspective, is about doing what you say you will do. But how can you do what you say if you don't know how you are doing?

Try this the next time you're in a meeting. Begin by asking, "How am I doing?" More than likely you'll be greeted with stunned silence — a sure sign folks are not used to being asked this question by you. But if you wait long enough some brave soul may venture an honest response. When that happens, tell the rest of the group, "That's what we need more of around here. More loving critics."

You Are the Most Important Leader in Your Organization

The CEO is not the most important leader in an organization. Despite the fact that CEOs get most of the press, they get far too much credit for success, and far too much blame for failures. The attributions are way out of proportion to their actual influence.

If the CEO is not the most important leader, who is it? If you're a manager in an organization, to your direct reports, you are the most important leader in your organization. In other words, you are the CEO of your group.

Lots of evidence supports this claim. When we're young, we're more likely to view our parents, teachers, coaches or people in the community as role models. When we're out of school, we're more likely to select business leaders first. When at work — the person most likely to influence our performance is our most immediate manager. Because we influence those who are closest to us the most, we're given a great gift, but we may feel weighted down by the responsibility.

No One Likes to Be an Assumption

No one likes being taken for granted. Saying, "Well, I just assumed you knew how much I appreciate what you do" is not going to motivate anyone to higher levels of performance. Not expressing appreciation to others is the same as making them disappear. We need to accept and acknowledge that nothing really significant can ever be achieved unless people feel appreciated. People who are ignored aren't going to put forth the effort it takes to sustain greatness. ■

For additional information on the leadership challenge model, go to: http://my.summary.com

Relationships

Leadership is a relationship between those who aspire to lead and those who choose to follow. No matter how much formal power and authority our positions give us, we'll only leave a lasting legacy if others want be in a relationship with us. Lasting success depends upon whether we like, as well as trust and respect, our leaders. All leaders should want to be liked. Being motivated to be liked will result in more enabling actions and these actions — actions such as listening, coaching, developing skills, providing choice, making connections — will create higher levels of performance.

Leadership Is Personal

People need to know more about the leader than the fact that the leader is their boss. They need to know something about the leader as a person. It is worth repeating: Leadership is a relationship between those who aspire to lead and those who choose to follow. People want to know:

- **Your values, beliefs, aspirations and dreams.**
- **Who has influenced you the most.**
- **What prepares you for the job you're doing.**
- **What you're like as a person.**
- **What drives you.**
- **Your hobbies and other personal tidbits.**

We are more likely to trust people we know, and the more we know about our leaders the more likely we are to trust them as human beings. We lead our lives in the company of others, and that is where we leave our legacy. It is the quality of our relationships that most determines our legacy.

Leaders Should Want to Be Liked

"You don't love someone because of who they are,"

(continued on page 4)

Relationships

(continued from page 3)

said Irwin Federman, addressing a group of MBA students at Santa Clara University. "You love them because of the way they make you feel." Irwin has it exactly right.

We work harder and more effectively for people we like. We like them in direct proportion to how they make us feel. The leaders people want to follow are the ones for which they have genuine affection. Likeability is a major factor in being successful in just about every endeavor in life. Research shows that people perform significantly more effectively when their leaders treat them with dignity and respect, listen to them, support them, recognize them, make them feel important, build their skills and show confidence in them.

When You Don't See Eye to Eye, Seek to Understand

How can you lead others when you don't see eye to eye with the leader you're supposed to follow? It is frustrating when your leader doesn't share your values, your vision or your passions. This can challenge you and test your dedication. Our gut instincts may tell us to quit in such a situation. But, fleeing is rarely a viable option. Besides, it's tough to leave a legacy if you leave the relationship.

Experience is a great teacher, and not all experiences are going to be pleasant. Working with people with whom you have difficulty is a terrific laboratory. Consultant and author Roger Harrison once said after a particularly difficult encounter, "Your enemy is your teacher." When you find yourself in a serious conflict with someone, ask yourself, "What is it that I need to learn?" Self-awareness is a predictor of success in leadership.

We need to take the responsibility to engage proactively, creating a communication channel that works for both parties and letting our manager know how he or she can help us succeed. Understanding our managers' working styles and being sensitive to their challenges can also go a long way toward creating an effective working partnership. Being able to relate conflict to specific issues and not to take it personally is essential. When we actively engage with others in difficult conversations, we frequently learn that while there are serious differences in styles, we may actually be aligned on our goals and objectives. We can agree on goals even though we disagree on methods.

In a difficult and tense situation, first find out if everyone involved shares the same purpose and goals. Talk about desired outcomes and make every effort to get everyone aligned. Once you're working towards the same set of goals and operating by the same set of norms, you'll be less likely to second guess each other's motives and be more likely to understand each other's working styles.

However, when everyone agrees all the time, especially just for the sake of getting along, we're unlikely to achieve the best outcomes. We cannot afford to surround ourselves with "yes" people. We need to have people willing to support us and also willing to voice their disagreements.

You Can't Take Trust for Granted

Trust is the social glue that binds human relationships. Without it we'd be unable to get anything meaningful accomplished.

What does trust look like? Trust is valuing other people such that you respect their opinions and perspectives. Trust means moving outside of your comfort zone and letting go of always doing things the way they were always done.

For leaders, trust is the willingness to be vulnerable and open up to others, even when doing so may risk real harm. If trusting means making yourself vulnerable and you're the leader, then that means your life and career are on the line, too.

But if you don't trust, then what? Many things just won't get done. You're left with doing more and more work yourself, constantly checking up on other people's work, getting less than the best from your team. And the less you trust them, the less they trust you. Eventually, you burn out from the workload and stress.

Sometimes, despite our best efforts, people don't do their jobs. The temptation may be to hold on tighter. But when you constantly look over other people's shoulders they begin not to trust you. Trust cannot be taken for granted, but it is the basis for good working relationships.

Let Your People Go

Developing leaders throughout an organization is a

(continued on page 5)

Promote Constructive Insubordination

Historian Doris Kearns Goodwin tells the story of how Abraham Lincoln consciously and willfully assembled a cabinet made up of the very men he had defeated in the election. Kearns called them a "team of rivals."

We all could take a lesson from Abraham Lincoln. If he could manage to lead a team of rivals under the extraordinary challenges of the Civil War, we could certainly find it within ourselves to manage the conflicts we face, modest as they are by comparison to his.

Relationships

(continued from page 4)

very scary thought, especially for those in hierarchical settings. Freedom, for some, conjures up visions of anarchy. But the opposite is actually the case. The more you control others, the more likely it is that they will rebel. Exemplary leaders have repeatedly stated that they get the greatest commitment precisely when they let their people go.

When Bruce Hillsberg, director of government storage solutions at IBM, was asked how he maintained a high-performing team, he replied, "Hire smart and capable people and then let them do what they do best."

Bruce didn't start off with this attitude. In the past, he took a rather tight-leashed approach to his employees and their progress. Eventually, one of his subordinates had enough and approached him about the problems with his management style. This was a turning point for Bruce. He sat back and thought about his constituents and realized they were very good at what they did. It changed his approach from micromanaging to letting his people go and do what they do best.

Personal responsibility can exist only if people have free will and if they exercise it. Personal responsibility cannot exist independent of choice. To make a meaningful difference we have to make our own meaningful choices. If leaders steal from others the opportunities to make such choices, they steal a bit of the legacy those others might have created. ■

For additional information on Sergey Nikiforov and personal leadership, go to: http://my.summary.com

Aspirations

People commit to causes, not to plans. If the values about which we care deeply are vividly clear to us, then the whims of fashion and the opinion polls won't sidetrack us.

Leaders are expected to look into the future and communicate to us what they see. This is not about being prescient or clairvoyant. It's about being discerning and perceptive. Being forward-looking may differentiate leaders from other credible people, but it's the skill at which leaders are the most inept. Exemplary leaders also have the confidence to turn themselves into followers, trusting that many others are also eager and competent to make a difference in the world.

Lead From the Inside Out

Authentic leadership comes from the inside out. People want to know about the person behind the mask. What gives leaders the confidence that makes them think they can actually pull off what they attempt? The quest for leadership, therefore, is first an inner quest to discover who you are, and it's through this process of self-examination that you find the awareness needed to lead. Self-confidence is really awareness of and faith in your own powers. Leadership is developing the self.

When Mike Sullivan started his new position in investor relations at Intel, he knew that he had to find what "grabbed him and wouldn't let go." He spent a lot of time thinking deeply about these values, talking them over with his spouse and closest friends. In turn, he realized that the leadership challenges he was facing at work were the result of "preconceived ideas about leadership that were stereotypical, outdated and simply wrong."

Forward-Looking Is a Leadership Prerequisite

Today's leaders have to be concerned about tomorrow's world and those who will inherit it. They are the custodians of the future, and it's their job to make sure that they leave their organizations in better shape than they found them.

While forward-looking is a highly valued leadership competence, it's the one leaders are least capable of demonstrating. Those of us who help leaders become better at creating and communicating visions of the future stink at it, too. If there's reliable evidence and general consensus that it's so important for leaders to articulate a vision and get others excited about it, why do leaders do so poorly at it?

The most frequent explanation is that people and organizations are hostages to the present, too focused on quarterly profits. The pace of change keeps us from even trying to think more about the future, when it makes it harder and harder to cope with the present. This is not likely to change soon. Even so, people still want leaders to be forward-looking. That won't change either. Despite the daily pressures that hold our minds hostage, we can be more future-oriented.

(continued on page 6)

What Employees Want to Know About Their New Leader

- ✓ Who are you?
- ✓ What do you stand for and believe in?
- ✓ Where do you want to take us?
- ✓ Why you?
- ✓ What qualifies you for this job?
- ✓ What makes you think you can do this?
- ✓ Do you really know what you're getting yourself into?
- ✓ What changes are you planning to make?

Aspirations

(continued from page 5)

The best place to start creating the future is by being more mindful in the present. Our failure at being forward-looking may be more due to mindlessness in the present than any other factor — not really noticing what's going on around us, believing that we know everything we need to know, viewing the world through pre-established categories and operating from a single point of view. We have to stop, look and listen. We have to *stop doing* for some amount of time each day. We have to remind ourselves that most of the disruptive electronic devices have an off switch. Then start noticing more of what's going on around you right now. And don't forget to look at the future.

It's Not Just the Leader's Vision

At some point during all this talk over the years about the importance of being future-oriented, leaders got the sense that they were the ones who had to be the visionaries. Leaders have assumed that it's their vision that matters, and if it's their vision then they have to create it.

To be able to describe a compelling image of the future, you have to be able to grasp what others want and need. And what if people don't know what they need? This is all the more reason to be a stellar listener. Listening is not just about the words. It's also about what is unspoken. It's about reading between the lines. It's about paying attention.

Liberate the Leader in Everyone

Leaders can arise to meet particular problems. Leadership is an observable set of skills and abilities that are useful whether one is in the executive suite or on the front line, on Wall Street or Main Street. Any skill can be strengthened, honed and enhanced if we have the motivation and desire, and if we practice and get coaching and feedback.

Some people are better at it than others. However, the more we attribute leadership to a set of innate character traits, the more we abdicate our own responsibility to become the best we can be.

Leaders Are Followers, Too!

There is too much focus on the leader leading and not enough on the same leader following.

"A good leader is also a good follower," said Susanna Wong, vice president of Sherwood partners LLC, a business consulting firm in Palo Alto, Calif. "This may sound like a paradox," she continued, "but based on my experience I notice that the good leaders are the ones who understand their boundaries and are willing to accept sound advice from their followers."

The emphasis is on following the process, and not the person. Looking at leadership and followership through this lens, leaders should consider these guidelines:

- **Clear values and beliefs consistent with their own.**
- **A vision of the future that they share.**
- **Creative ideas that enable the organization to make changes so that the values and vision can be realized.**
- **Other people whose strengths and talents contribute to the enactment of the values and vision, and teams whose collective capacity is greater than that of their leaders.**
- **Their hearts and caring for the people who make it possible to get extraordinary things done.**

Being a follower is good for the soul. It reminds us that we're not alone, that any success we enjoy depends on the success of others, and that we've got to remain open to learning. Humility comes from grasping these fundamental ideas and realizing that our own legacies are built upon the legacies of those who have come before us and those who labor alongside of us. ■

Moments of Courage

When the authors began asking people to reflect on moments of courage, patterns emerged. It seems we humans call upon our courage when:

- ✓ **Our lives present some significant challenge.**
- ✓ **We feel fear when facing this adversity.**
- ✓ **It requires personal initiative to overcome the fear and the challenge.**
- ✓ **Something personally meaningful is at stake.**
- ✓ **We might suffer loss in the process.**
- ✓ **Our life is transformed by the experience.**

Courage

Leaving a legacy is all about making a difference. We can only make a difference when we take stands. Everyone of us is capable of takings stands on things that matter. It takes courage to realize your dreams and to give meaning to your values. If you're going to leave a legacy of lasting significance, it'll be the result of acting courageously. You can't plan to be courageous, but you can chose to act that way. Courage is the virtue that makes all other virtues possible.

We must realize that there is no money-back guarantee for leaders. You can do your best, and it still may simply not be enough. There are forces that are always outside of your control. It is also true that every leader-

(continued on page 7)

Courage

(continued from page 6)

ship virtue taken to excess can become a vice, and every strength can become a weakness. We have to remain vigilant in reigning in our own sense of self-importance, and have the humility and grace to admit that we depend on others as much as they depend on us.

There's Courage in All of Us

Courage is one of those big, bold words. It has this image of being something way out there on the edges of human experience. It's commonly associated with superhuman feats, life-and-death struggles and overcoming impossible odds. But when you look beyond the headlines you find out that this account of courage is certainly not the whole story.

Courage is poorly understood and not what people typically think it is. The ancient Greeks, who did have a lot to say about courage — Socrates and Aristotle, for example — thought of courage as one of four cardinal virtues that were essential for living a good life and for sustaining a civil society. (The others are prudence, temperance and justice.) They spoke of courage as the disposition that gives one the capacity to face danger without being overcome by fear.

While the reading of philosophy gives us a better sense of the historical meaning, it doesn't bring courage alive. But in asking people to reflect on moments of courage, definition and principles emerge. Everyone can recall an experience that required summoning up courage. Courage is not just for heroes after all.

You Can't Plan to Be Courageous, But You Can Choose It

People want prescriptions. They want to know how they can apply good ideas to their daily work. But as author and consultant Peter Block points out, "Courage isn't done for the sake of being practical. It's chosen for its own sake. As soon as you make courage practical, you've stolen its humanity."

What in your life or work is causing you great hardship and suffering? For Beverly Kaye, now a highly accomplished businesswoman, author and speaker, it was stating her name and talking about herself without stuttering in a special postgraduate class at MIT.

What are you most afraid of? Consultant and author John Izzo expresses it this way: "Part of courage is to face whatever are the inner blocks or demons or barriers that keep you from becoming the fullest person you can be in the world. A lot of courage is really facing yourself."

When you think about the adversities that you face, what's at stake? Jim "Gus" Gustafson, a leadership researcher and wireless company executive, realized that in order to pursue his dream, he needed to quit his job. "I'd been employed since I was tall enough to push a lawnmower," he said, "and the concept of walking away from a perfectly good job was frightening." You can't plan to be courageous. But you can choose it.

It Takes Courage to Make a Life

We may be able to make a secure and comfortable living without exercising courage. Yet most of us want more from life than security and comfort. We want a life that matters, a life that makes some kind of difference to our family and friends, and even to our organizations, our communities and our world. It takes courage to make that kind of life, to make a lasting difference.

Several lessons of courage can be learned. Little acts can have huge impacts. One person can make a difference. Courageous acts flow from beliefs. Small acts can be called Rosa Parks moments, in honor of the black seamstress who refused to move from her seat on a bus so a white person could sit down. Her actions weren't strategic or grand. They weren't self-promotional or manipulative. They were simple and mundane.

By her refusal to move from her seat, Rosa Parks demonstrated the power of one person. Furthermore, courageous acts flow from a commitment to deeply held beliefs — you just can't separate the two. "I didn't get on that bus to get arrested. I got on that bus to go home," Parks wrote in her autobiography *Quite Strength*.

The Courage to Be Human

Leadership is a humbling experience. Leadership is hard work. Anyone who's ever been in a leadership role quickly learns that you're squeezed between others' lofty expectations and your own personal limitations. You realize that while others want you to be of impeccable character, you're not always without fault. You learn that you can't see around every corner, and even if you know your

(continued on page 8)

The Achilles' Heel of Leaders

Kirk Hanson, university professor and executive director of the Markkula Center for Applied Ethics at Santa Clara University, asserts that the Achilles' heel of leaders can be found when they:

- ✓ **Believe they know it all.**
- ✓ **Believe they are in charge.**
- ✓ **Believe the rules don't apply to them.**
- ✓ **Believe they will never fail.**
- ✓ **Believe they did it all by themselves.**
- ✓ **Believe they are better than the "little people."**
- ✓ **Believe they are the organization.**
- ✓ **Believe they can focus everything on the job.**

Courage

(continued from page 7)

way forward, everyone may not end up at the same destination, let alone be on time. You discover that despite your best efforts to introduce brilliant innovations, most of them don't succeed. You find that you sometimes get angry and short, and that you don't always listen carefully to what others have to say. You're reminded that you don't always treat everyone with dignity and respect. You realize that you are human.

Failure Is Always an Option

Telling people that failure is not an option is just plain nonsense. Failure is always an option. In fact, if you're not willing to fail at what you do, you'll never become great and you'll never innovate.

It's really all about your point of view. Imagine that you play professional baseball. The very best hitters each season will have a batting average of a little better than .300. For every 10 times they get up to bat, they get about three hits. The real reality is that despite the probabilities, professionals believe in the possibilities.

Here's another way to think about it. We only learn and move forward when we experiment and experience doing differently what we already know how to do well. It's called a learning curve. A learning curve is not a straight line. It always goes down before it goes up.

Life is our laboratory, and we ought to use it to conduct as many experiments as possible. Try, fail, learn. That should be the leader's mantra. Charles Kettering, the founder of Delco and holder of more than 140 patents, used to say, "It doesn't matter if you try and try and try again, and fail. It does matter if you try and fail, and fail to try again."

No Money-Back Guarantee

News Flash: You can do all this leadership stuff perfectly and still get fired. Take the case of a former senior vice president of marketing for a large packaged goods company. When new technology made it possible to introduce a substitute for his company's product, he took his studies to a board and urged the development of a market entry. The board did not share his point of view.

This senior vice president excelled as a leader. He was someone who was held up as a role model. Even so, he got fired. Sometimes, despite our very best efforts, we don't succeed.

We know that being forward-looking and communicating a clear and common vision of the future are what set leaders apart from others. Yet a singular focus on one vision of the future can blind a leader.

If perfection is not the leadership ideal, what is? The answer is being more of who we are. David Whyte, author and poet, once said, "The great question of leadership, about taking real steps on the pilgrim's path, is the great question of any individual life: how to make everything more personal." ■

The Legacy You Leave

Sergey Nikiforov, a Russian immigrant to the United States who is co-founder and vice president of product development at Stack3, Inc., wrote this note:

"Where do I start becoming a better leader? This question has been nagging me for some time … Naively I assumed that to become a better leader meant to perform formidable tasks … Then it occurred to me—I was thinking selfishly …"

Sergey has nailed it. Each day provides countless changes to make a difference. The chance might come in a private conversation with a direct report or in a meeting with colleagues. When we choose to lead every day, we choose aspirations of long-term significance over short-term measures of success. It takes courage to lead. It takes courage to make a life. Courage, like leadership, is a choice.

As John Maxwell, author of numerous books on leadership, said, "It's been said that there are two kinds of people in life: those who make things happen and those who wonder what happened. Leaders have the ability to make things happen. People who don't know how to make things happen for themselves won't know how to make things happen for others." He went on, "What you do with the future means the difference between leaving a track record and leaving a legacy."

Legacies aren't just wishful thinking. They're the result of determined doing. The legacy you leave is the life you lead. You just never know whose life you might touch. What you do know is that you can make a difference. You can leave this world better than you found it. ■

THE SUMMARY IN BRIEF

Reflecting on his life through memoir, Michael Ainslie expected to expound on change and leadership. In his teens, a rare autoimmune disease almost killed him. In his early twenties, he narrowly avoided arrest by a Russian soldier at the Finnish-Soviet border. In his thirties, the oil embargo of 1973–74 doomed his first real business venture. In his late fifties, at the end of a successful ten years as CEO of Sotheby's, he became entangled in one of the most public price-fixing scandals of the twentieth century. Though he wasn't guilty of wrongdoing, merely having his name linked to the company spelled trouble. In his mid-fifties and early sixties, he was on the board of Lehman Brothers, casting a vote on the night that Lehman was forced to declare bankruptcy.

This is not just a memoir about change and leadership, but what it looks like to grow through adversity and discover you have more to offer the world. Ainslie shows that a person can succeed and rise due to highly ethical behavior and a willingness to do the right thing. Any one of his difficult moments in life could have stopped him in his tracks, but he chose to move forward.

IN THIS SUMMARY, YOU WILL LEARN:

- That the foundation of family matters for setting life's course.
- Integrity must be consistent across all parts of work and life.
- Giving back starts early—don't wait to invest in others.
- Abundance of finances and connections are made to be shared.

Introduction

Late on Sunday evening, September 14, 2008, the Lehman board considered a vote that could have sent markets plummeting at an even faster rate than they did in the next few days. Lehman Brothers, although the smallest of the four major investment banking houses, had recently been the most successful of the four, riding high on the wave of prosperity that ran through the American economy in the early years of the twenty-first century. The board did what they had to do. They approved the largest bankruptcy in world history. This was a harrowing moment for Ainslie, one of many moments in his life of making difficult, but right, choices.

The First Decades

Ainslie's grandfather's early death left his father, at sixteen, the male head of the family, with the prospect of supporting his mother and his sister. He could not afford the luxury of a college education, and he set about devising ways of creating some income. One of them involved raising chicks in the basement of his family's Knoxville home. This venture worked fine until he nearly squashed Ainslie's grandmother one day when she, a petite lady, was in the basement, inspecting the hatchery. Suddenly, the six-foot-tall incubator that warmed the tiny chicks came crashing down on her one-hundred-pound frame, but with his father's help, she managed to escape with nothing more than a few bruises.

Despite the mishap at sixteen, Ainslie's father was known for the way he treated people. It didn't matter whether he was talking to a gas station owner, a convenience store clerk, or a random man in the street; Ainslie watched his dad treat every person with equal respect, going the extra mile to help people improve their lives.

Strengthened by Weakness

Ainslie's hopes for a future in college basketball were dashed when doctors diagnosed him with Addison's disease. But, Ainslie, as a believer that all things happen for a reason, could say that having to give up basketball turned out to be the best thing that happened in his young life.

Heading to Vanderbilt, with no chance of playing college sports, Ainslie turned to student government. That became one of the first opportunities in his life to identify a problem, "see things the way they are not," and then sell a "big idea." He enjoyed getting others excited about sharing a vision. In his first campaign, with his good friend as his opponent, he did well, particularly among the guys, winning the male vote by a slim margin. However, he had a secret weapon. His girlfriend at the time was incredibly well-liked and well organized, and largely through her leadership and their joint efforts, he won the female vote by a sizeable margin. He won the election and learned that going against established ideas can be rewarded if your new idea is a better one and is delivered with clarity.

Traveling the World

Ainslie's worldview expanded when he was named a Corning Fellow with the opportunity to step out of the classroom and learn in the world. Feeling like a bird out of a cage, he spent $1,300 of the $5,000 grant on a Pan Am round-the-world ticket. Ainslie visited nearly thirty countries, interviewed hundreds of people, and become a citizen of the world. These experiences allowed him to grasp something more of the complexities of different cultures and societies. There was no curriculum—his instruction was simply to travel wherever he wanted, interview people, and explore. Lessons learned shaped his future career in business and entrepreneurship.

During his year as a Corning Fellow, Vietnam was a place that left a long and lasting impression. In the throes of the Vietnam War, his economics degree from Vanderbilt placed him in a role as labor negotiator between the U.S. Embassy and the corporation that employed 50,000 people, mainly Vietnamese, in wartime construction. Some circumstances stood in his way of success—protesting Buddhist monks, a near crash-landing of a small aircraft, and navigating the politics of war. Ainslie discovered that life's lessons are best learned on the hoof. Sometimes that entails quick thinking, sometimes ingenuity, and always patience.

Modernizing Sotheby's

Sotheby's has a long-standing reputation of being one of the world's largest and most venerable brokers of jewelry, fine art and collectibles, and luxury real estate. Ainslie assumed the role of CEO in 1984, not imagining the legendary company would ever be involved in scandal.

Changing of an Institution

When Ainslie joined Sotheby's, he was full of trepidation because of his limited art knowledge. He soon realized that the company's challenges did not lie in the realm of art expertise, which it had in great depth. It needed saving in many other ways. When Ainslie arrived on the scene, it was evident that animosity was running high between the stuffy

British establishment and those Colonials across the Atlantic. Even their computer systems couldn't talk to each other.

So how did he change Sotheby's? His ideas freed up time for experts to reach out to clients. Sotheby's began to hand-carry works of art around the world. They made galleries the fun, social place to be on weekends. Sotheby's provided financing to ease the immediate cash demands of collecting. Through these and many other changes in antiquated practices, they began to break down the "threshold resistance" and bring private collectors into the salerooms. And Sotheby's the art retailer it aspired to be.

Behind the Scenes at a Top Auction House

One influential member of the board was Henry Ford, grandson of the founder of the Ford Motor Company. Ainslie grew fond of Henry, who was a good-hearted soul. He was not a man who liked to be surprised, and as chairman of the compensation committee, he wanted to be briefed in detail before each board or compensation committee meeting. This necessitated that Ainslie fly to Detroit eight or nine times a year so that he could script every part of the meeting. It's interesting to think of how quickly the world's attitude can change—the Sotheby's board provided a perfect example. The grandfathers of Henry Ford and Heini Thyssen were both known anti-Semites who openly supported and assisted Hitler. Yet little more than four decades later, their grandsons sat at the same table on a board chaired and liberally populated by Jews, and everyone became genuinely good friends. Sometimes there is hope for humankind.

Sotheby's Scandal

Ainslie was still CEO of Sotheby's when the famous collusion began between Sotheby's and Christie's, the competing auction house. The collusion was extensive and well documented. At the trial, it came out the Christie's player had maintained a treasure trove of documentation chronicling their deliberations, more than 500 pages of illegal exchanges and agreements, over five years. With these agreements, they guaranteed future profits and clearly showed no regard for clients or employees of the two firms. As was proven after exhaustive legal inquiries, Ainslie had absolutely no knowledge of their meetings.

Despite the problems that were brewing behind the scenes toward the end of Ainslie's tenure, he looks back on the time at Sotheby's with far more fondness and a sense of achievement than regret. It was the highlight of his working life.

Family

Ainslie met his second wife, Suzanne, at a lavish birthday party. It took a year to propose. Ainslie, speaking of his wife, says, "The longer I was with Suzanne, the more I came to understand what an exceptional woman I had found. She was more than a partner, a lover, and a wife. She had become my best friend and my advisor on all aspects of my life."

For Ainslie, among the greatest of investments you can ever make in your life is your family. He is most proud that his children have pursued their passion, even when it was not the most obvious or lucrative profession; they are doing what they love, and as a result, they are great parents and happy spouses.

Public Service For A Life That Matters

Ainslie's business experience made him unafraid to ask for what he wanted. Turning those requests to the needs of others defined his post-Sotheby's years. Ainslie believed that philanthropy plays an enormous role in the life of the United States and is one of our country's greatest strengths. It enables us to find solutions to social issues in the most creative ways. As a whole, it's important to remember that we all arrived on this earth with nothing, and we all depart with nothing. It is up to us to share what we are fortunate enough to accumulate in a world that we all know is far from equitable.

Posse

In 1989, five seventeen-year-old kids—four girls and a guy—boarded a Greyhound bus with their mothers in New York City and set off on a twenty-six-hour ride to Nashville, Tennessee. The kids who got on the bus did not have a lot of money, were not necessarily the most academically accomplished students from their various public schools, and hadn't made top SAT scores. But they'd been invited to participate in an innovative program. The students had each been specially selected because of their drive, intelligence, vision, and ability to communicate. They'd been chosen because they had, even in their high school years, already demonstrated themselves to be leaders. They were headed for Vanderbilt University under a new program called Posse, and that bus ride was only the beginning of their journey.

Ainslie's opportunity to become involved with Posse arrived at a time in my life when he was trying to find a new passion after leaving Sotheby's. The more young people he

met through Posse, the more he came to realize how much untapped talent they possessed yet how limited their opportunities were. Without The Posse Foundation, they would likely not be able to change the trajectory of their lives. It affected Ainslie's trajectory, as well.

Raising Funds for a Cause

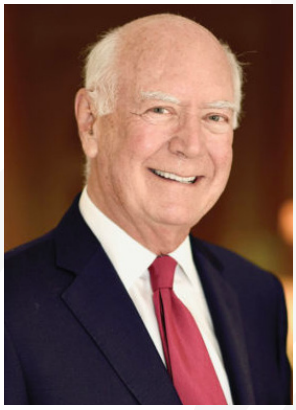
During his time at Sotheby's, Ainslie was asked to help the oldest child welfare agency in America, Graham Windham, founded in New York City in 1806 by Isabella Graham, Sara Hoffman, and Eliza Hamilton, who was the widow of Alexander Hamilton. The request centered around the need to restore a campus on the banks of the Hudson River. The campus housed kids from the impoverished inner-city areas of New York who, sadly, could no longer live at home due to abuse, abandonment, or other dire circumstances.

Creating Beginnings for Others

Ainslie believes there's something powerful in the connections we make with people that can create opportunity, bring good out of a situation, and build bridges. He engaged with people in a way that demonstrated respect and genuine care. He wanted to help them recognize their potential and be better off in the long run. At some point, he began to see connecting people as a primary role in his life, and now, every day, Ainslie tries to do something intentional to connect personally with others or connect people with one another. This can involve introducing a Posse scholar to someone who works in a field of interest to the scholar, helping someone land a good summer job, helping a connection get accepted into naval Officer Candidate School, or advising a young professional. Ainslie enjoys being able to connect people in a way that inspires others, makes people think, and offers a greater perspective. And he's always glad to have opportunities to meet more people and build relationships. Inevitably, these names and faces come to mind at later points in life. As Ainslie says, "You never know when one person's story might need to intersect with another, and simply in connecting the two, you open a door."

Conclusion

A life holds opportunities, challenges, and lots of adversity. The big question is, how does one make the most of the years that are given? A good life is one that overcomes adversity, learns from it, and tries not to repeat the mistakes, all the while helping others.



Michael Ainslie is an American businessman. He served as the president and chief executive officer of Sotheby's from 1984 to 1994. He was a director of Lehman Brothers from 1996 to its 2008 bankruptcy, and oversaw "the sale and disposition of the company's remaining assets" by 2010.

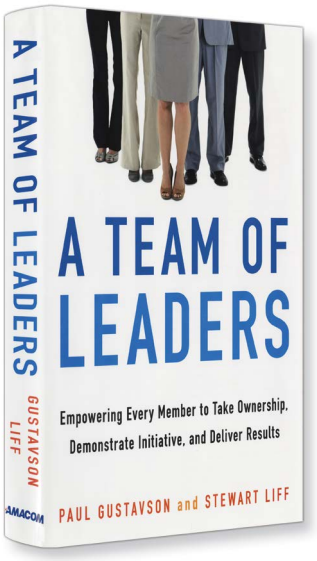
Leadership

A Team of Leaders

Empowering Every Member to Take Ownership, Demonstrate Initiative and Deliver Results



by Paul Gustavson and Stewart Liff

THE SUMMARY IN BRIEF

No matter how many good people you gather, most workplace teams settle into the same old rut. Once the initial enthusiasm dissipates, they become little more than order takers, satisfied with so-so results.

A Team of Leaders offers a completely new way to approach the team experience and an empowering formula for improving performance. At the core of the team dilemma is a little-known truth: It's not the people who need to change but the design of the team that needs an overhaul.

By improving the core design components — the systems, the processes, knowledge, management and visual management — you'll get far better results. Unmotivated teams will be transformed into energized groups of employees who take responsibility for long-term outcomes.

It all starts with the Five-Stage Team Development Model, which outlines a distinct set of characteristics that teams exhibit as they move from traditional Stage 1, leader-directed teams to self-managed Stage 5 teams full of knowledgeable people who think and act like leaders. *A Team of Leaders* supplies the tools, processes, and principles for putting them on this path to reinvention.

IN THIS SUMMARY, YOU WILL LEARN:

- To recognize the importance of choosing the right team structure, information systems and people systems.
- How to design integrated processes that support leadership growth.
- To adapt a value creation tool that pinpoints the contribution each team member makes and highlights the urgency of everyone pulling together.
- How to capture and quickly disseminate the key knowledge that teams need to become effective, self-managing units.

THE COMPLETE SUMMARY: **A TEAM OF LEADERS**

by Paul Gustavson and Stewart Liff

The authors: Paul Gustavson is an organizational design consultant and the founder of Organization Planning & Design, Inc. (OPD), which helps companies around the world create and sustain high-performance teams. He is the former chair of the Marriott School of Management's OB/HR Advisory Board and coauthor of *The Power of Living by Design* and *Running into the Wind.*

Stewart Liff is an HR and visual management expert and the president and CEO of the consulting company Stewart Liff & Associates. During his career with the Department of Veterans Affairs, his office was selected for Vice President Al Gore's first Hammer Award for Reinventing Government because it successfully used the principles described in this book. He is the author of five books, including *Managing Government Employees* and *Managing Your Government Career*.

Introduction

How do you create an environment that successfully addresses the many challenges that supervisors and employees deal with while producing outstanding performance? The answer is simple: you have to create an environment where everyone is a leader. That is, an environment where everyone works together, takes the initiative, assumes ownership, is willing to deal with difficult issues, and accepts accountability for the team's results; an environment that is in stark contrast with one in which the supervisor tries to get everyone to produce.

This is a fundamental change in the way that most work entities operate. However, such a workplace design will produce better performance and make your work life much more exciting, enjoyable and fulfilling.

The model we recommend using to build a team of leaders is the Five-Stage Team Development Model. This model identifies the five distinct stages of team development. At Stage One (the way most units/teams work today), the team leader interacts with each team member one-on-one. The model goes on to describe how your team can evolve and grow in varying stages all the way up to Stage Five. This is the stage where the team essentially manages itself, everyone becomes a leader, and the supervisor's time is freed up to work in other areas that create more value.

Imagine being the leader of a team that is at Stage Five. Under this scenario, you would advise the team as needed but spend most of your time working on higher, cross-functional and outside issues. Many of the problems that you typically deal with would now be handled by the team itself, freeing you up to work at a broader level.

If you are a team member, imagine what it would be like to be part of a team of leaders at Stage Five. You would be a valued member of a team that manages itself. Instead of having someone standing over you cracking the whip, you would now be part of a cohesive team wherein everyone holds each other accountable.

An Example of a Team That Has Succeeded at Self-Management

You're probably wondering, "Is it possible after all? Can it work in the real world?" Here is an example: The General Electric plant in Durham, NC, does final assembly for the GE90 and CF34 jet engines. The plant has over 300 employees but only one boss — the plant manager. All of the employees report to the boss; they have no supervisor. Self-directed teams build the jet engines — teams that decide how to manage the work, how to manage time off, how to improve systems and work processes, and how to deal with problem teammates.

The teams do not maintain a typical assembly line. Instead, they own an engine from start to finish. Moreover, everyone's work varies on a daily basis, keeping the work interesting and resulting in a high degree of variety.

As you might expect, everyone does not successfully fit into this environment, especially "people who expect to

SOUNDVIEW **1-800-SUMMARY** **service@summary.com**

Rebecca Clement, Publisher; **Sarah Dayton**, Editor in Chief; **Ashleigh Imus**, Senior Editor; **Amanda Langen**, Graphic Designer; **Elizabeth Van Woert** Contributing Editor

take orders." That is because the plant was designed to be operated by teams of leaders.

The people in the Durham plant are clearly engaged, have high energy, possess multiple skills, and are very motivated. In addition, they take tremendous pride in their team and the work they perform. More important, the plant's performance has continued to excel, and it is considered by many to be an industry leader. When the GE plant first started out on its transformation effort, the plant had 175 employees. Since then, the workforce has virtually doubled, and GE continues to invest in the plant.

Since most problems are caused by the way teams and their management systems and processes are designed, in order to address the problems once and for all, teams need to change their design. If little information is shared, you will not know what value you contribute or understand the effect of your actions, in which case the unintended consequences are going to be low productivity and/or downstream errors.

The point here is that you get what you design for; if you want to have a team of leaders, you must design and align all your systems and processes to make that happen … design your team for the results you want.

Creating Advantage Through the Five-Stage Team Development Model

Key Principle: Leadership always exists in a team; however, everyone becomes a leader once a team achieves Stage Five of the model.

A successful self-managed team generally evolves through a series of discernible stages. At the first stage, your team will start off with virtually every key decision being made by the supervisor or team leader. Because the transition to self-management is going to require a lot of change, the team needs an enormous amount of support.

Some of the initial enthusiasm often gives way to sarcasm as things will not go as smoothly as many people expect. This is why the team leader must be more involved than ever — to ensure that people understand how teams evolve, to address areas of uncertainty, and to deal with issues that the team is not capable of handling.

Slowly your team will become less leader-focused. As the team moves to Stage Two, it will start to grapple with what its goals and objectives are and try to ensure that everyone is on the same page. The team leader will still have to do a lot of coordinating and mentoring as the team begins to take baby steps while the leader begins to gradually move away from exercising full authority.

Stage Three is the midway point in your team's evolution. While there still may be some frustration, members will start to learn their roles and come together. The "big picture" starts to become clearer to the team and its members, and a few individuals will even step up and provide some limited but real leadership. Moreover, the team will start to focus on performance. This is also the stage where your team will start to deal with difficult people issues.

At Stage Four, your team will really start to hum. Most of the team members are able to step up and lead in at least one specific area. People will communicate quite well and learn from each other. They will also take a serious interest in performance and try and actively achieve many of their goals and objectives. The level of engagement will clearly rise, and the team will look to take charge of all its key processes and procedures. There will still be work to do, particularly in the areas of problem solving and conflict resolution.

You must also continue to work on ensuring that all the team members have the requisite skill sets. At this stage, the supervisor will now be more of a coach and be on a more equal footing with the other team members, and the primary focus becomes training and developing the team members. He will have time to begin to focus on higher order work and contributions.

Reaching Stage Five

Once your team reaches Stage Five, you will now work together as a unit to set and achieve a challenging set of goals and objectives. Individual team members will no longer be followers — they will be leaders who look down the road and at their environment in order to get and stay ahead of the curve. Meanwhile, your team members will only accept excellent performance and beyond. Finally, the energy level of the team will be extremely high as its members will know what they need to do, will be committed to doing it, and will work together to provide the best performance possible. Now the leader becomes more of a peripheral member of the team and is free to work on larger issues such as analysis, planning and cross-functional concerns.

The principles and evolution of a self-managed team are the same regardless of whether you are dealing with a senior team of managers, a football team, a white-collar team, a manufacturing team or even a family. If you want to have a self-managing team, you must progress through a defined series of stages toward self-management. But in order to do this, you must have the requisite design,

processes, tools and support systems in place — otherwise, frustration and chaos are likely to ensue.

Secrets of Great Design

Key principle: For everyone to become a leader, the team's management systems and design choices must be designed, aligned and properly implemented.

Teams are perfectly designed to get the results that they get. This principle is the starting place for designing your team. Simply put, if for any reason your team wants different results from what it is now getting, you will have to change your design. The most successful high-performing teams have a common vision and purpose, and the degree to which you can involve your people in the cause and help them become strongly connected to one another is what will electrify and unify your team and help everyone realize its greatest hopes for success.

The Organization System Design

The Organization System Design (OSD) Model illustrates the components of a team working together and shows their combined impact on results.

Outcomes are the result of all the choices your team makes — choices about strategy as well as systems and structures. The external environment inevitably affects your team as well. Your team's culture is hugely shaped by all your team's choices and can have a filtering or focusing effect, diluting or turbocharging final performance.

The model provides a framework for understanding the relationships that affect your team's outcomes — relationships between your external environment, design choices, culture and outcomes. Teams generally exist at a variety of levels within most organizations.

For your team to reach Stage Five of the team development model and produce the highest level of performance, all the requisite design elements should be in place.

Team design starts by understanding how all the elements of your team relate to each other. The first element is *external influencing factors*. The external environment places a constantly changing set of demands on your team, and you must learn to proactively respond to these requirements in order to survive.

You may want to offer your customers exceptional service that they have never requested but that delights them once they see it; your suppliers may be willing to collaborate with you on technology solutions; and/or you may help develop a creative strategy that can distinguish your team from others. All three examples show that your team can influence external expectations rather than take them as given.

There are five basic groups in your external environment: customers (both current and potential markets), stakeholders (shareholders and their representatives), influencers (suppliers, regulators, legislators), competitors and best-in-class teams. Make sure you are well aware of all five of these groups and understand their needs and expectations. Then figure out how you can best influence them.

The next element to consider in the OSD Model for Teams is *outcomes*. As previously discussed, teams are perfectly designed to get the results that they got. Therefore, it is crucial to consider what outcomes you really desire before making any design choices.

There are five categories of potential outcomes, along with possible indicators for an organization.

1. Customer Indicators
- Customer satisfaction relative to your competitors
- Repeat buyer rate
- Customer referral rate
- Market share

2. Stakeholder Indicators
- Profit and loss
- Earnings growth and revenue
- Return on investment and equity

3. Community Indicators
- Sustainability practices
- Community perception survey scores
- Compliance ratings
- Public service awards

4. Operational Excellence Indicators
- Cycle times
- Quality results and ratings
- Quantity of units produced
- Commitments made to plan
- Plans developed and approved

5. Team "Voice of the Workforce" Indicators
- Turnover
- Safety record
- Voice of the Workforce (VOWF) team survey scores
- Individual contribution to community (e.g., school boards, service organizations)

The actual indicators/metrics you choose for your team will reflect the size and focus of your team as well as its direct contribution to these organizational outcomes.

Now we come to *knowledge and culture.* Culture is "the way things get done around here." It is the set of shared basic assumptions or emotionally charged beliefs that develop over time among your team's members. It is manifested in symbols, stories, rituals, routines and behavioral norms.

Your team's ability to learn, share and apply new knowledge is the most important source of your competitive advantage. The culture of the team is a critical factor in its learning capability. Culture cannot be mandated, but it can be influenced. It modulates between design choices and outcomes — in other words, the explicit design choices you make will lead to improved results, but only through the culture of your team.

Culture encompasses the behaviors, feelings, and values shared by your team's members. The effect on your culture will be positive when your team harmonizes its plans and processes and when your team members are brought together with a common purpose.

Next are *choices*, which we can subdivide into choices about your *strategy* and choices about your team's *systems*.

Regarding strategy, there are four types of choices for your team to make:

Mission. A mission statement identifies your primary reason for being and your distinctive competency. A good mission statement should be energizing, simple and concise.

Guiding principles. These statements describe your team's underlying beliefs about the best way to create the right team culture to do business and achieve your mission and outcomes. They include beliefs that govern how teammates should treat one another as well as beliefs that should govern the decisions about the team's design choices.

Uniqueness. This is what separates your team from others and makes it special. In essence, it is your team's identity.

Team metrics. These are the measures important for achieving your desired outcomes. They can be summarized as a set of key performance indicators that measure ongoing performance in customer performance, financial performance, internal operating performance, and culture and knowledge.

Your team cannot make the overall strategic choices for your organization. That is the role of the organization's leaders. They need to be closely aligned with the organization's strategy, which will have a direct impact on your team's future. You can and should make supplemental choices at the team level. The key here is that your team must stay consistent with the organization's strategy while exercising its own initiative to excel.

When discussing choices about your team's systems, there are six categories of systems in every team:

The team's business processes deal with the activities you routinely carry out to create and deliver value for your customers. It also encompasses your physical arrangements for interacting and exchanging knowledge and technology.

The structural system is the way your team is organized.

The decision-making and information system deals with decision-making processes throughout your team. What specific responsibilities are given to which roles? What are your planning processes?

The people system pertains to how people are attracted, selected, oriented, trained, certified, performance managed and promoted. It includes capability and career development choices.

The reward system is your pay and benefits structure; it also includes incentives, celebrations, and informal rewards and recognition.

The renewal system is the way you encourage and formalize continuous learning process and performance improvement. What structures or processes are in place for gathering together to learn, to share best practices, and improve team processes and performance?

Three tools to use in carrying out a design effort are an environmental scan, process analysis and culture analysis. Using these tools yields information about how current design choices align and what future choices should be designed to accomplish the team's goals.

Environmental Scan

The goal of the *environmental scan* is to verify or discover what your customers and other stakeholders value most. Teams are "open systems" — they exist in an environment that influences them. Environmental scanning is a review of the groups outside your team that most affect the team. It is a study of the specific requirements of those groups and an inquiry into how those requirements might be changed. The knowledge gathered during environmental scanning helps you make better design choices.

A good way to begin environmental scanning is to identify the important groups or elements in your environment. Customer and stakeholder interviews or surveys are a good way to flesh out your knowledge and gather what you need to know.

Process Analysis

Once customer and stakeholder requirements are understood, turn inward to your team's processes. This analysis is called process management or technical analysis. This is the time to carefully analyze your processes and understand how well they are working. There are seven process analysis tools:

Process mapping is a tool that helps you visualize the flow of work in an organization and identify the points within a process where value is created. Process maps are an essential tool for grasping and communicating your organization's work.

Categorization of work is a process for distilling your work into one of several categories (competitive work, essential work, compliance work, etc.) in order to determine the work's priority.

Value analysis is where you identify which tasks are value-added and which are not, and then reduce or eliminate non value-added tasks.

Constraint analysis is a tool that helps you identify the point(s) in the process most responsible for slowing it down and limiting the team from achieving higher performance.

Variance analysis is a series of tools for finding and eliminating mistakes and defects.

Process management begins as process analysis wraps up. Here is where the team considers who will own each business process. Every process should have an owner.

Key decision analysis is where the team looks at the decisions associated with any given process. Revealing and resolving ambiguities in decision-making activities ultimately results in clear roles and responsibilities.

Culture Analysis

The *culture analysis* tool set helps you study knowledge, networks and culture in your team. Using information from process analysis about your distinctive processes, you can seek to understand what knowledge is distinctive and determine how well that knowledge is being converted into customer value. Culture analysis will also look at how well your team renews its knowledge base. In other words, you will study your learning capability.

You will also study the networks surrounding critical roles in the team. Much knowledge, by its very nature, cannot be shared outside the context of active, trusting, cooperative relationships — the right people talking to the right people about the right things at the right time.

The culture analysis tool kit contains the following assessments:

Interaction network analysis is a means of assessing the communication patterns and networks within a team. It helps diagnose where collaboration has collapsed or cliques have been cultivated, where talent and expertise could be better leveraged, where decisions are bottlenecked, or where opportunities for leadership and/or innovation are being lost.

Individual needs assessment is designed to determine the extent to which the needs of each individual in a team are met. The idea here is to rank the team members' overall satisfaction with the way their needs are being met and then address these findings when making future design choices.

Voice of the team assessment determines how well the members of a team display the behaviors, feelings, and attributes needed to drive the organization to its desired outcomes.

Knowledge assessment links design choices about process changes, new structures, and other improvements with the corresponding development of beliefs, skills and information.

Skills matrix, the final culture analysis tool, helps outline the skills and skill levels needed by a team. A completed skills matrix is a useful template for training and selection initiatives.

With respect to individual needs, people only bring so much energy to work. If individual needs are met, people will most likely channel their energy in a positive direction. But if their individual needs are not met, people tend to devote energy to counterproductive purposes in the team.

Once the analysis work is complete and the design has been finalized, you need to turn your attention to implementing the design. Good implementation naturally begins with careful transition planning. Careful transition planning is crucial because in the middle of any change effort, people are likely to long for "the way it used to be" — even though they might not have liked the old way at the time.

Teams Have Processes, Too

Key principle: All your processes must support the goal of making everyone a leader.

Teams are generally part of a larger organization and at least one of its processes (e.g., product development, demand creation, supply chain); by the same token, teams have their own processes, which are essential to carrying out the team's purpose and objectives. These processes include performing the core work of the team, managing team performance, selecting and on-boarding new members, building capability of the team and its members, and managing the disengagement or deselecting of team members.

Every team has its core work to perform. However, for everyone to ultimately become a leader, the team as a whole needs to understand how that work actually flows so that it can make sure that work is being performed as effectively and efficiently as possible.

The best way to get started is through process mapping. By looking at your work in this manner, it will help your team map and define the strategic impact of your processes and activities. It will also help you identify waste and variability and bottlenecks in your processes.

Individuals in the Team

Periodically, your team should also look at how each team member is contributing to the overall team performance. A team is only as strong as its weakest link, and the more team members work together to lift everyone's performance, the better.

Individual performance standards should be closely aligned with your team's goals and objectives. The immediate supervisor should initially provide feedback, although as your team moves through the five stages of team development, this role should gravitate to the team. Feedback should let the employee know exactly how she is doing and what she needs to improve. The employee should also be given the opportunity to express her opinion.

The key to employee performance management, regardless of your team's current stage, is ensuring there are reliable consequences for every level of performance. Excellent employees should be recognized and rewarded commensurate with their contribution, average employees should retain their jobs and receive all the appropriate benefits, and action should be taken to deal with poor performers. Employees will then conclude that the system works as intended, will consistently follow the rules and processes, and will strive to achieve the team's goals and objectives.

Selecting New Members

High-performing teams participate in the selection of their members. If that's the practice of your team, then your team will have much more at stake in its own success and exhibit a different level of ownership and commitment. Selecting the right person is one of the most important decisions your team can make.

Once a person is hired, your team will invest an enormous amount of time and energy in developing the employee. If the person proves to be a bad fit, more time will then be spent trying to turn the employee around and, if necessary firing him or her, in which case the process starts all over again.

Team Value Creation Model

Key principle: People are much more likely to become leaders if they understand the value they contribute to the team.

For your team to run as a self-contained business, with everyone being a leader, everyone must know his or her success in creating value for the organization. And for people to know their success in creating value for the organization, they must have two vital pieces of information: their cost for the process/team, and the value of the output they produce. With these two figures built into a model and some basic business management skills, you can determine how much value the team and each team member generates. This information will ensure that team members understand their value and will prod the team to look at its outputs and processes from a more practical, business-driven perspective. Moreover, it will help identify weaknesses within your team and suggest opportunities for productivity and efficiency improvements.

For your team to truly succeed, it must take a whole-brained approach to managing the team operation. That is, while team members must know how they are doing and whether they are creating an increase or decrease in value for the organization, they must also be connected around a sense of purpose.

Developing and Managing Knowledge Is Key to Team Performance

Key principle: To build leaders, you must determine the knowledge they need, decide how to acquire it, and then manage its distribution.

It is said that knowledge is the purest source of advantage for high-performing teams. To deliver that extraordinary value, teams must manage the speed of discovery and diffusion of key knowledge better than any other alternative source. It is especially important to recognize that the diffusion and application of fresh ideas are inherently *social* activities. How well your team uses knowledge is dependent on the quality and extent of the social networks within and surrounding the team.

The team knowledge needed to deliver outstanding performance includes tacit values, attitudes and expertise. A design cannot be complete, nor can we be confident that it will be successful, until we consider the full range of team knowledge to achieve performance goals and make plans for developing that knowledge.

Tacit knowledge refers to knowledge that one has but cannot explain. It is difficult or impossible to put into words. *Codifiable* or *explicit* knowledge, on the other hand, is knowledge that can be explained and organized into rules or policies. *Know-that* refers to knowledge that is a fact or a truth, including an idea or a belief that's held as true. *Know-how* indicates the ability to perform tasks or operations either "in your head" or "in action."

High performance teams are more conscious of tacit (noncodifiable) knowledge. If you have ever played basketball, you know that when the team is playing at a high level, it feels as though everyone knows what the other

player is doing. They are in the flow and can anticipate each other's moves.

Teams need to develop all types of knowledge and expertise so that it becomes second nature, thus enabling them to be able to make many rapid but sound decisions. The best teams possess and capitalize on the tacit knowledge that helps differentiate them from their competitors.

Tacit knowledge is more likely to be developed with unstructured methods, while codifiable, explicit knowledge is learned best in conventional, structured settings. Know-that is learned just fine through cerebral methods such as study, conversations and reflection, while know-how is best learned through action-oriented methods.

Conducting a knowledge assessment is a great opportunity to take a step back, look at the knowledge types required by your team, and then put a plan together to meet your needs.

Visual Management

Key principle: Visual management, also known as visual performance management, is a program that uses the senses to reinforce the previously described principles, drive performance, and build future leaders.

Assuming you take all the steps previously described, you will be well on your way to having strong, self-managing teams. However, there is another innovative design element you can add to the equation to continually keep the object of getting to and staying at Stage Five in everyone's face. Moreover, this particular innovation will support and reinforce all your design elements and help take you to another level. This element is called *visual management*.

Visual management is a time-tested approach that combines generally accepted management principles along with the fine arts to improve your team's performance by 1) transforming your space into an inspiring, data-driven environment and 2) helping to elevate employees so that they become leaders. It is not a program per se; it is a conscious choice to use your space to send clear and consistent messages, support all the other team design elements, and help brand your team with its own unique environment.

Visual management combines sound management principles along with the fine arts (painting, photography, sculpture, music, film) to create and sustain competitive advantage. It creates a work environment that supports and reinforces all the systems and processes explained earlier. Such an environment helps you change your culture and improve your team members' attitudes, perspectives, knowledge base, mindset and, most important, performance.

Think of it as a combination of a NASA or Pentagon war room combined with the beauty and clarity of the Metropolitan Museum of Art, with a touch of Las Vegas glitz thrown in. The idea is to have the one element of the work experience that people see all the time — i.e., your physical space — perfectly aligned with the other design elements so that everyone working in that space receives incredibly clear and consistent messages and information.

For instance, one customer contact team set up an area right outside the entrance to its offices showing video holographs of customers talking about their experiences. In a different team, the leader sits right in the middle of the workspace with no partitions or barriers, even though other team members have offices. The clear message here is that the leader's role is one of support, not dominance — a sign of a Stage Five team.

These types of images and displays will improve communication and teamwork, knowledge and understanding, engagement and commitment, responsibility and accountability, and innovation and creativity, all of which will elevate the employees and the team and drive performance.

Conclusion

In the 21st century, people want to be involved, challenged and empowered. They want to be part of something that is bigger than them, and they want to make a difference. Moreover, they want to continue to grow and develop.

Creating a team/organization of leaders is not an easy thing to do — if so, everyone would have done it by now. However, it is the *right thing to do*. A team of leaders will both produce the results you are looking for and make the work experience much more exciting and enjoyable for everybody ... and now is the time to get started.

Accountability

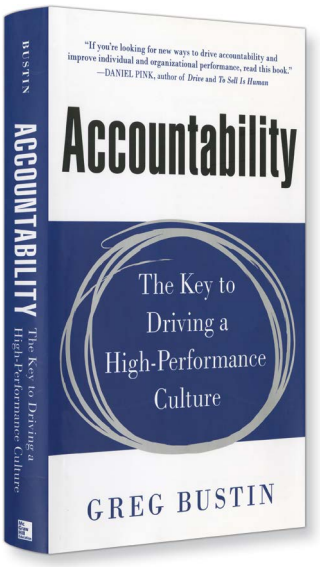
The Key to Driving a High-Performance Culture



by Greg Bustin

THE SUMMARY IN BRIEF

Accountability is one of the biggest challenges business leaders face, but it can also be one of the most important factors leading to success. Top business consultant and speaker Greg Bustin has dedicated a career to working with CEOs and the leadership teams of companies on this crucial topic. From his experience, Bustin has developed a set of leadership tools that will increase accountability and drive success for any type of organization.

Accountability will transform the way you manage, maintain and motivate yourself, your team and ultimately your workforce. As a business leader's guide to the best practices to turn long-term vision into reality, it introduces the Seven Pillars of Accountability: character, unity, learning, tracking, urgency, reputation and evolution, and shows how each pillar is a crucial part of effective leadership.

Lack of accountability is the single greatest obstacle facing even the most experienced leaders. Bustin shares what he has learned the hard way: if you are not clear about everything — vision, values, objectives, strategy, rewards and penalties — the likelihood of achieving your goals is slim.

Accountability is a must-read for anyone who wants practical, actionable steps to build and grow a thriving business.

IN THIS SUMMARY, YOU WILL LEARN:

- Why accountability starts with purpose.
- How to get from Point A to Point B with everyone on board.
- How to use the Seven Pillars of Accountability to create your bridge to the future.
- How to sustain a high-performance culture based on purpose, trust and accountability.

Introduction

As leaders, we get the behavior we tolerate. When it comes to holding people accountable, we are often our own worst enemy. We accept excuses that sound logical even when we know better. We allow emotions to cloud our decision making. We delay having a conversation with an underperformer because it's easier to avoid a difficult conversation than have one. Instead of practicing accountability, we practice avoidance.

Three valuable lessons about accountability are,

1. **Clear expectations must be established.** When your purpose, expectations and rewards are crystal clear, your employees will embrace accountability as a way to become even more successful.
2. **Bad news does not improve with age.** As soon as you see a problem, it's best to address it immediately. Failure to speak frankly with the person about his or her performance means nothing will change.
3. **It's not personal.** Leave emotions and opinions behind. Stick to the facts, set a plan to get performance back on track, and communicate specific consequences for underperformance.

In organizations like The Container Store, Ernst & Young, Herman Miller, Marriott, Nucor, Sony and Southwest Airlines, accountability is more than a conversation. It's an attitude and a set of expectations that show up in every aspect of their firms' operations: how they hire, communicate, develop people and make decisions.

Organizations wrestle with accountability in similar ways, and exceptional organizations succeed by following principles and practices that are similar regardless of age of the organization, geography, industry or size.

Accountability Starts with Purpose

Before you can hold others accountable, you must first hold yourself accountable. And you first must know what matters most to you. Two of the hardest questions any of us will ever answer are, "Who am I?" and "What do I want?"

It is pretty easy for most of us to describe to others *what* we do. This is the *doing* part of our life. What about the *being* part? Who do you want to *be* that causes you to do what you *do*? Do you do what you do only for the money or for something else? What drives you? What fulfills you? What causes you to make the sacrifices you make?

Human Beings, Not Human Doings

Most business leaders aspire to their positions because they are skilled and hard-working, and they envision a better life for themselves. More of the good life. As their responsibility grows, some leaders gradually discover they are working harder than ever. They have changed from human beings into human doings.

Does this description resonate with you? If so, try answering these two fundamental questions: "What do I want out of life? Is my business helping me get it or keeping me from it?" These two simple but powerful questions help leaders discover what really matters. Along the way, some leaders realize they are so busy doing what they are doing that they might be enjoying less of who they are being.

Figuring out who you are is the natural first step in the accountability process. You must know who you are, what you want and what you don't want before you and your organization can codify and live out the core values you will use as guidelines for holding everyone in your enterprise accountable.

What Do You Want?

Executives say that thinking through what is significant in their lives, articulating those thoughts as a set of measurable goals, and then writing them down is a powerful process that drives personal accountability. Compare your personal goals with the goals you've established for your career. How do these two sets of goals complement each other? Where are they out of alignment?

Your sweet spot is where your personal core values (what you're *willing* to do) intersect with your experience (what you *can* do) and your interests (what you *want* to do). Finding your sweet spot is one of the most gratifying accomplishments you can experience. It's also a key to driving accountability.

Learning from Winners

Every leader is tasked with getting from Point A to Point B. It's often their most significant objective and the hardest to achieve, and accountability is the single greatest threat to reaching Point B.

Accountability's Chokepoint

Every organization deploys three fundamental resources: time, people and money. Think of your organization as a funnel into which time, talent and treasure are poured. Emerging from the funnel's spout is the result of your investment in those three commodities. As time, talent and treasure move through your funnel toward a result, their original state is altered as they come into contact with one another. This contact is shaped by two key contributing factors: the processes inside your organization and the behavior of people. The sum of this behavior is your organization's culture.

For many leaders and their organizations, the narrowest point of the funnel is a chokepoint because it's a place where emotions can enter into decision making and influence the results. Emotions can prevent successful leaders from holding themselves, their peers and those who report to them accountable.

Part of what makes accountability difficult is that when you are working with smart people and things don't get done well or on time, you are often handed excuses. It is a vicious circle, and the excuses are infinite. Talk is cheap, so we often buy it. When we do, accountability suffers. And even though accountability is a significant component of any leader's success, it is not even your biggest problem. Your biggest problem is reaching Point B.

Crossing the Abyss

To cross the abyss to reach Point B, your first challenge is to help those on your team see that it is both necessary and possible to get to the other side. They not only need to share your vision, they need to *believe* it. Unfortunately, those who share your enthusiasm are usually outnumbered by those who do not.

You will need everyone's help achieving the organization's vision, not just a select few. So, your second job as the leader is to bring everyone along so that they, too, believe in the vision and commit to achieving it.

People are more likely to support a plan they helped develop, so guide your team through the development of a plan that shows how you will cross the abyss and get from Point A to Point B. Your plan should include objectives, strategies, budgets, responsibilities and schedules. Your plan is your road map. It's also your contract with each other. Without a plan, expectations are not clear. And without clear expectations, accountability is not possible.

Getting Comfortable with Change

If you don't plan to change, don't bother to plan. Planning, by definition, means doing more of what's working and less of what isn't. So the planning process should be expected to identify people, processes and programs that are delivering high levels of performance as well as those that no longer serve the enterprise or are inefficient.

Tackle change head-on, and expose difficult issues that must be addressed if the company expects to improve its financial and operational performance. Leaders in these sessions talk openly, perhaps hesitantly at first but then more confidently as the session continues, about fixing problems, replicating successes and carving up sacred cows.

At the conclusion of these debates, a choice must be made. Those who agree with the decision are prepared to be held accountable by colleagues and likewise are prepared to hold colleagues accountable for implementing the plan.

The Seven Pillars of Accountability

High-performing organizations share seven distinct characteristics called the Seven Pillars of Accountability:

Character: An organization's character is shaped by its values, and these values are clearly defined and communicated. The organization does what is right for its customers, employees, suppliers and investors, even when it's difficult to do so.

Unity: Every employee understands and supports the organization's mission, vision, values and strategy and knows his or her role in helping to achieve them.

Learning: The organization is committed to continuous learning and invests in ongoing training and development.

Tracking: The organization has reliable, established systems to measure the things that are most important.

Urgency: The organization makes decisions and acts on them with a sense of purpose, commitment and immediacy.

Reputation: The organization rewards achievement and addresses underperformance, earning the organization and its leaders a reputation both internally and externally as a place where behavior matches values.

Evolving: The organization continuously adapts and changes the organization's practices to grow its marketplace leadership position.

The acronym: C.U.L.T.U.R.E. will help you remember the seven pillars and that your culture is a significant predictor of your future performance.

Imagine a bridge spanning an abyss supported by seven pillars, each representing one of the seven characteristics that are essential in high-performing cultures. Crossing the abyss — moving your organization from Point A to Point B — requires the commitment of you and your team.

Character Counts

Most mission statements are a dime a dozen. We've all seen these impressive declarations that sound good but that are rarely lived out in the behavior of the people in the organization. It's one thing to say you are committed to a particular belief or behavior; it's another thing to believe it and live it.

The paradox of saying one thing and doing another is prevalent in most organizations: the things we *say* we value — treating others how we want to be treated, quality, innovation and even accountability — we don't *treat* as valuable. Our actions are the outward expression of our character.

Your culture mirrors your character. Leaders who commit "little murders," such as starting a meeting late, are contributing to a culture that eventually makes accountability all but impossible. Sooner or later, encouraging certain behavior or ignoring other behavior will result in that behavior becoming your organization's default culture.

Hire People Who Share Your Values

Leaders at exceptional companies like Southwest Airlines hire people who share their values. "At Southwest we firmly believe in the importance of hiring the right person," says Elizabeth Bryant. "You cannot train somebody to care about other people or to smile when they see a customer. That's something you either have or you don't have. So we first find the people who embody the values that we have at Southwest Airlines. From there, we can cultivate them and grow them and train them in the technical skills."

To codify your character, the strategy is simple but powerful: hire the best candidates who align with your values and then pay them accordingly. Whether you call them values, beliefs or principles, you can use them every day as a filter for making decisions, including who you hire.

When you hire for character as much as skill, you improve accountability because you are in alignment on big things like mission, vision and values. Your debates and decision making will be centered on practices, not principles. And you'll be rewarded with less turnover, lower recruiting costs and a higher-than-industry-average productivity rate.

The Schizophrenic Organization

When leaders are asked, "To whom does your organization make promises?" they generally respond with "customers." There's often a "whatever it takes" mindset that comes into play to make sure you're keeping customers happy. It's a big part of who you are — your character — to deliver on those promises. These promises are important, but they are promises made *outside* the organization. What about promises being made *inside* your organization?

Why do we treat customers one way and colleagues another? That behavior makes for a schizophrenic organization. The promises being made inside the organization, such as deadlines, commitments and agreements made to one another, are broken every day. Broken promises reveal a character flaw.

When a promise to a customer has been broken or is about to be broken, it's often because someone broke a promise to a colleague. When these types of events occur inside your organization, they signal an accountability problem. Such problems make it hard to scale your operation because you're managing by exception.

As you calculate the cost of one of these events, bear in mind that more than money is at stake. Your reputation with your customer has been tarnished. Your reputation with your colleagues hangs in the balance as employees wonder why these problems are allowed to continue and why the people who are part of the problem are still on the team.

Up to this point, we have examined the idea of character as it relates to the qualities and traits of people. Character can also refer to the qualities and traits of things.

So before rushing off to blame a person, reexamine your processes. Consider the character of three processes:

Workflow: What systems are in place to replicate success? Do those systems reflect the way work really gets done? What steps can be added, deleted or modified to improve efficiency?

Tools, training and development: Do people have the tools they need to be effective? Has the organization provided training and development to help people do their jobs to the best of their abilities? How do we develop soft skills, such as leadership, judgment and problem solving?

Communications: Were the expectations of the job clear? Were the expectations related to individual performance clear? Were the direction and feedback provided consistent?

The words you choose to describe your values are important. You have chosen these words to describe your organization's character. Your promises are the actions that speak louder than your words.

In high-performing organizations, accountability is a side-to-side process. But accountability starts at the top and is shaped by the character of an organization's leaders.

Galvanizing Your Team: Unity

Your organization's mission (its purpose beyond making money) and vision (where you're going) are especially important. They must translate beyond the financial performance of the organization. They must matter to everyone on your team and inspire people to show up every day and give their best to achieve a goal that is bigger than any individual. It is how great organizations drive accountability.

People want to win. Winning requires unity, commitment and accountability. Leaders unify their colleagues and put them in a position to win.

Unity does not mean absence of conflict. A certain amount of tension is inevitable because conflict is the price of individuality. The key to unity is being able to answer "Yes!" to the question, "Are we in agreement on the big issues?"

High-performing teams achieve unity by talking through concerns, questions and doubts, and committing to the strategy, the action and allocation of resources required to achieve the vision. And then they hold one another accountable to their shared commitment.

A blueprint for any executive seeking to unify a group of people in order to accomplish a difficult task is,

- Seize attention.
- Describe the situation and the motivation for action.
- Appeal to shared values.
- Acknowledge difficulties and provide context.
- Paint the vision, show commitment, mix with humor.
- Be specific.
- Leave them inspired.

Clarity Creates Confidence

To bring out the best from the people on your team, you must tell them what to expect. Setting clear expectations at every level in the organization is one of the simplest and most effective steps leaders can and should take to drive performance.

Your operating (or strategic) plan should ensure that everyone is clear about

- Where we are (Point A).
- Where we're going (Point B).
- How we'll get there.
- Who's responsible and will be held accountable for specific tasks.
- Deadlines for commitments.
- Rewards and penalties related to performance.

When your plan includes the above-mentioned components, it becomes your contract at the leadership level. And the basis of your accountability model.

At the individual level, expectations should be established as an up-front contract with an if/then component. The power of the if/then component is its simplicity, its clarity, and the fact that it is discussed and agreed to — as the name of the contract says — up front. "If you do this, then you will get this. If you do not do this, then this is what will happen." Clear expectations and clear consequences for both sets of behavior are indicated.

Accountability breaks down and emotions swirl when clear expectations are not established up front.

To galvanize unity and drive high performance, people need to know what you want them to do and what's in it for them when they do it.

To accomplish great things, the employees of an organization must be unified around a common goal, and each person in the organization must believe that what they do will affect whether that goal is reached.

Green and Growing: Learning

Learning continues to be exceedingly important because the pace of change has never been faster; and it will never again be as slow as it is today. How can you and your team keep up with learning all that you need to know? How

do you know what you need to learn to do the job you're supposed to do?

You are wise to look beyond your four walls to learn from changes occuring in the competitive, political, regulatory, cultural, technological and financial arenas that will make an impact on your business.

But before you look outside your organization, first look inside. Learning doesn't just come from the top. Nor does it come only from experts conveying information and training to your employees. Learning can and should be bottom to top and side to side, just like accountability in high-performing organizations.

Successful companies understand they can learn from their employees, so they survey their workforce to learn how employees feel about the company, to measure employee engagement and to assess whether the company's training, development and communication initiatives are working.

More than anything, learning is an attitude, and it's a way of thwarting complacency, attacking problems and spurring intellectual, skill-based and, ultimately, financial growth.

Leaders of high-performing companies share an expectation that the company will do its part to provide training, tools and development opportunities, and the employees will do their part. Like everything else in the accountability equation, the responsibility for learning is shared equally.

Even when you hire great people with values that match your own and who share your enthusiasm for the work, you still need to invest time, money and patience to help them reach their full potential in your organization. Hire for values. Develop skills.

If you want to grow your business, you must grow your people.

What Your Employees Want: Tracking

If you believe — and just as important, your employees believe — tracking helps people make better decisions, improve performance and celebrate milestones, then tracking will be an essential component in your quest to drive accountability at every level of your organization.

Tracking performance and making this information visible throughout the organization are crucial for driving high performance because they provide the feedback mechanism that enables leaders to remove much of the subjectivity, emotion and excuses associated with underperformance. Tracking performance allows the facts to speak for themselves and do the heavy lifting of holding people accountable.

The key components of the Tracking Pillar are deciding what performance indicators to track and what increments to use; ensuring that what's being tracked is shared widely and connects with your employees intellectually, operationally, emotionally and financially; and making the tracking timely, accurate, consistent and visible.

Tracking sales or profit indicators alone won't tell you the entire story. Running a business without tracking nonfinancial indicators, without gathering data directly from your customers, or without providing performance feedback with your employees is like piloting an airplane from the aft galley without any gauges to help you. You're flying blind.

Not Everything Can Be Counted

Your first decision about tracking performance is determining what to track. Leaders frequently get carried away tracking activities that are meaningless to most employees. And sometimes what is being tracked is meaningless to the company's performance.

Of all the things you track, which two or three indicators should be emphasized repeatedly, communicated continuously and then celebrated when significant milestones are reached? If you have the right employees, they will tell you what information they need to be effective and to feel like the work they're doing is meaningful.

Although it's true that what gets measured is what gets done, it's also true that your accountability and performance will improve when what you measure connects to the work you're asking your people to do. Making the connection between the person, their performance and the organization's purpose is essential.

Tracking is your mechanism for communicating clearly and unambiguously the performance that is occurring at the enterprise, business unit, departmental and individual levels. It's what your best employees want. They want to know how they are doing against their individual objectives, and they want to know how their performance is helping the organization achieve its larger objectives. If you have the right people on your team, peer pressure is a powerful accountability force.

Instilling a Sense of Urgency

By whatever name you choose to call it — persistence or passion, stubbornness or stamina, drive or determination — all great leaders demonstrate an urgent will to win.

As the leader, you don't have to be the one solving the problems, but you must identify them and then act on them. Balancing reflection with action is one of the hallmarks of a great leader. Thinking things through can make your company great.

Just as the Unity Pillar and Tracking Pillar are linked by virtue of what each communicates about expectations and progress against those expectations, the Learning Pillar, Urgency Pillar and Evolving Pillar are linked because the characteristics shared by these three pillars embody the approach exceptional companies take to harness, apply and benefit from knowledge.

The Urgency Pillar converts learning into high-performance by sustaining a laser-like focus on improving processes to drive productivity, minimizing red tape to create a sense of urgency and a bias for action, and recognizing mistakes and moving quickly to address problems.

Don't confuse urgency with lots of change. People can handle only so much change because it's stressful. And don't equate urgency with rash, hasty decision making and execution. Urgency for high-performing companies is the disciplined focus on a handful of compelling priorities that are executed with purpose, commitment and immediacy.

Communicating Urgency

Founded in 1974, Clark Builders had grown to $473 million by 2008 and gained a reputation for delivering great results in cold-climate construction. Brian Lacey joined the company in 1990, and today he's one of Clark's eight partners. He said, "What I've found is that people tend to want to do well, and I've learned that communication is key to helping them succeed. Like any process, communication can have a weak link, and when that weak link breaks the chain in your critical path, you can find yourself in trouble."

Lacey identifies his top performers to handle the critical items on a project. He creates a sense of urgency, charges them with the responsibility for the outcome, and sets the up-front contract so expectations for accountability are clear. "When you provide good people enough information to operate well, they're going to strive to meet or exceed your requirements," Lacey says.

Walking the Talk: Reputation

Warren Buffett once said, "We can afford to lose money — even a lot of money. We cannot afford to lose reputation — even a shred of reputation." Reputation, the sixth pillar, is at risk as your colleagues watch to see how you handle adversity, conflict and character flaws. The Character Pillar and Reputation Pillar are linked. Character is who you are. Reputation is how others see your character being lived out.

Most leaders' first thought when asked about "reputation" is to consider it as something that occurs outside the organization. Although technically true, this assessment is only half the equation. Your reputation as a leader is also being formed by your ability or inability to live up to your promises inside your organization. Are you living your values? Are you walking your talk?

Holding people accountable is difficult. A delay in addressing underperformance signals to your employees that you are either oblivious to the problem or afraid to confront the issue. Neither choice inspires confidence, and such behavior diminishes your credibility.

Confronting Underperformance

Successful companies are better than most at identifying underperformers, balancing "humanity and performance" as they coach these underperformers, and then moving them out if the employee can't or won't improve.

As you "search for the guilty," you must decide what role you played in the event. Is the process broken? Were you unclear in setting expectations? Did you make it difficult for someone to come forward and warn you of the impending disaster? If the problem lies with the individual, you must decide how you will address that person's performance.

To address underperformance, you must figure out what's happening below the surface, the part you may not be able to see. What is the underperformer thinking? Feeling? Has that person's beliefs changed? How aware is the person that his or her performance has gone south? Questions are less likely to put the person on defensive, and questions help you avoid making incorrect assumptions about a person and a particular behavior.

Listen patiently without thinking about what you will say next. Listen for what's not said. Watch body language. Assess the gap between their reality and yours. Determine whether they are able and willing to improve. You cannot want success for them more than they want it for themselves. Your assessment will help you answer the hardest

question of all: how much more time will you invest in them to get their performance back on track?

The company Herman Miller provides the tools and coaching employees need to be successful. "If they can't improve their performance, if moving them to a position that better suits their capabilities is not feasible … or if they choose for some reason not to address their performance, then we look at exiting them from the organization," says Tony Cortese. "When that is the decision, we make every attempt to do that with dignity and respect."

If you can't change the people, change the people.

Change Practices, Not Principles: Evolving

A leader must accept that customers' needs are always changing, and so the company you are leading must be ever evolving. Therefore, two of the most important questions a leader must ask and answer, says author Peter Drucker, are, "Who is our customer?" and "What does the customer value?" An organization's top leader is responsible for getting answers to these questions and accountable for executing the changes that will enable the company to provide the products and services customers want.

Changing a business model takes smarts and guts. Transforming people is even harder and takes leadership. The steps of a change management program, says Sony's Steve Dalton, are "not rocket science: casting a vision for the future, getting change agents on your side, getting some quick wins, communicating your vision without exception to everyone, achieving buy-in, and figuring out how to reward people. Yes," he says, "many people know those steps. The issue for me was this: You have got to believe in it yourself if you're the leader. And how you implement and execute your plan is the key."

Making yourself visible to your employees and showing them that you care are smart steps for a leader to take under the best of times, and they are essential when the uncertainty of change causes anxiety among the workforce.

Seven Words You Can't Say

Comedian George Carlin was known for mixing observational humor with larger, social commentary. His groundbreaking 1972 album *Class Clown* featured his most famous monologue, "Seven Words You Can Never Say on Television."

George Carlin had his seven words, and here are seven you shouldn't say: "We have always done it this way." If you are serious about getting better, you must be fully committed to considering new ways of running your business. Do not change your principles. You must, however, be willing to look critically at changing your practices — your business proposition, your programs, your processes, your people — to evolve and propel your organization to the next level of success.

The flip side of "always" is "never." Here are five other words that will kill your efforts to evolve, improve and achieve your organization's performance potential: "We've never done that before."

Tastes change. Habits evolve. New expectations develop. Smart leaders make big, smart bets and are held accountable for the results those bets produce. Big deals. Small improvements. Calculated risks. Follow-through. Your ability to leverage change, your willingness to evolve, and your conviction to execute your plans will drive your future performance.

All organizations wrestle with accountability in much the same way. Although the scope and complexity may differ from organization to organization, the problems leaders encounter on their journey from Point A to Point B are the same.

High-performing organizations create and sustain a culture of purpose, accountability and fulfillment that is guided by a set of principles and practices that are simple to say and hard to do.

The key to accountability is bringing together these principles and then acting on them with consistency to sustain a high-performance culture.

You now have a bridge, supported by the Seven Pillars of Accountability, to help you reach Point B. Where will your bridge take you?

THE SUMMARY IN BRIEF

Every leader wants to make a difference to their business, but that is easier said than done. With so may leadership styles and preferences today, finding the key to success can be tricky. Not to mention, many descriptions of a great leader are subjective. In order to be the type of leader that makes a difference and is respected no matter what, you must transcend from being a great leader to an adored one.

In ***Adored***, Dr. Tom DeCotiis draws upon his own experience as a teacher, entrepreneur, and CEO to explain how using your values can allow you to transform your business and coworkers for the better. DeCotiis uses personal anecdotes and insightful instruction to explain exactly how and why to transform from an accepted leader to an adored one, all by setting your ego aside. *Adored* is the perfect guide for anyone wanting to be more than a simple desk leader. With implementable tips and amusing stories, DeCotiis can help you become an Adored Leader by leaning on what matters to you most: your values. Only when you combine active attention and goodness to your leadership approach can you become a truly Adored Leader.

IN THIS SUMMARY, YOU WILL LEARN:

- What separates an Adored Leader from other leaders.
- The 4 most important habits of Adored Leaders.
- The steps to getting a leadership edge.
- How to connect your knowledge, values, and achievements through hard work.

Introduction

Today, more than ever, ethics and personal values must be put into the heart of your leadership skills. That is because being sort of great will not cut it. Looking back at our past presidents, we can see that there is a distinct separation between great and sort of great. For example, George Washington and Abraham Lincoln stand out as being great leaders, despite their numerous ethical failures.

In contrast, many modern presidents, such as Barack Obama or Donald Trump, are described as great by certain people, but the statement is easily contested. What does this teach us? It teaches us that the notion of great and sort of great rely heavily on subjective opinion. If the notion of great is subjective, then why are certain presidents, such as George Washington and Abraham Lincoln, overwhelmingly approved despite their shortcomings?

The answer is rather simple. These presidents are not just great or respected. Instead, they are adored. Though their shortcomings are noted, their eagerness, goodness, and achievement allow them to stand the test of time and be remembered as game changers. How does one become an Adored Leader, though? What does "Adored" even mean in the sense of leadership?

The Three As of Leadership

When it comes to leadership, there are three different classifications: an appointed leader, an accepted leader, and an Adored Leader.

An appointed leader is one that gets appointed to the job but never goes above and beyond to be a fantastic leader. Instead, an appointed leader is simply there to fill the role, and their lack of action and ego tends to do more harm than good for the company. Although an appointed leader is rather straightforward and easily seen, the distinction between an accepted leader and an adored one is much more subtle and warrants further discussion.

An accepted leader, in contrast, has great intentions. They care about the organization and their team, and they work hard to get the job done. Accepted leaders are often liked or appreciated, but they are not all that special. Even though they often make a difference, they are not the difference maker for their team's success. Instead, they are more like cogs in a leadership wheel, one more successor in a chain of succession. Most leaders fall under this category.

Then, there are a few leaders that go above and beyond and make other people wonder how they can do it. Through their energy, insight, and ability to motivate people, they constantly blow other leaders away and are revered among their coworkers and team. This is an Adored Leader. An Adored Leader is someone who is regarded with utmost esteem, love, respect, and honor. They somehow meld achievement with goodness to make a difference in the team.

But how does one transform from an accepted leader to an adored one? The first thing that distinguishes an accepted leader from an adored one is the sense of wanting to make a positive difference in the lives of others. In fact, the essence of leadership is this very fact. If you do not incorporate this essence of leadership into your leadership strategy, you can never be an Adored Leader. At most, you can be an accepted leader.

The second thing that distinguishes an accepted leader from an Adored Leader is the emphasis on two characteristics: achievement and human goodness. Many accepted leaders focus on one of these characteristics, but not both. They may force achievement while forgetting about human goodness. Conversely, they may be really lenient and kind but not push forward for achievement. Adored Leaders do not pick between these two characteristics. Instead, they have both of these characteristics at once.

Finally, the last characteristic of an Adored Leader is that their achievements do not happen by accident. Instead, they intentionally act to do better to set them apart from other accepted leaders. In other words, they view their leadership success as a matter of choice and personal responsibility.

The Starting Point of Personal Growth

To begin your journey of becoming an Adored Leader, you have to ask yourself one question: how good a leader do I want to be? This is the starting point of personal growth. Although this question may sound a bit juvenile, it is a serious question that will shape your destiny. Many people assume that answering this question happens anytime anyone takes a leadership role, but very few leaders take the time to ask themselves this question.

Even if you do not formally ask yourself how good of a leader you want to be, you will inevitably answer this question through your actions. Your actions will be seen by your peers, colleagues, and history. What you do will tell you exactly how you answered this question. Adored Leaders answer this question intentionally and know that it is up to

them to make their answer a reality.

You Are What You Repeatedly Do

You are what you repeatedly do. The sort of habits you incorporate into your leadership style will determine the type of leader you are. An Adored Leader is one that incorporates habits of excellence into their day to day life. Although it may sound simple to have habits of excellence, it is actually a lot harder than it may sound.

Something becomes a habit whenever the new behavior becomes automatic. The person who instinctively reaches for a cup of coffee upon waking up has a habit. So too does the person who laces up her sneakers and hits the streets for an early morning run. Just as you can have positive habits, you can also have harmful habits, and harmful habits are much harder to break than good ones. After all, it is much easier for me to break the habit of running in the morning than it is to grab a candy bar in the checkout line.

Habits become ingrained in your neuropathways the more you do it. That is why it is tough to add a new habit to your routine. There is not a pathway to help us establish it yet. Likewise, it is hard to break habits because the pathways are already etched in our mind.

The 4 Habits of an Adored Leader

Adored Leaders know the importance of habits. Nothing they do is accidental or coincidental. Instead, their achievements are based on habits that they have worked hard to build up in their mind. There are four habits in particular that an Adored Leader rests upon that separates them from an accepted leader: focus, preparation, commitment, and reflection.

Focus allows you to know where you are going and how you get there. If you do not know your destination, any road will take you there. Adored Leaders focus on the mission at hand. They know what they need to achieve, allowing them to focus on how to achieve it. They then work with an experienced and effective team to make this focus a reality and they have clear expectations and accountability. These expectations and accountability allow for everyone to remain focused.

The second habit of an Adored Leader is preparation. The Adored Leader knows that they must practice excellent habits in order to be excellent when it matters most. In other words, they prepare and practice day to day. Just as the old saying goes, "practice makes perfect." Adored Leaders practice often so they can be as perfect as possible.

Adored Leaders also make commitment a habit of theirs. Commitment goes much further than being engaged. Instead, it is about giving a part of yourself for the benefit of others, including your enterprise, team members, and community. This commitment allows them to be better. Even if a follower cannot see an Adored Leader's commitment, they can feel it. In many ways, commitment is the driving force behind many Adored Leaders.

Finally, the last habit of Adored Leaders is reflection. There is no growth without reflection. Otherwise, you will stay in your comfort zone and stagnate, as the easiest path is to do what you have always done. Growth happens when you think and reflect on yourself and your actions. Personal growth does not come from experience, but from reflecting on experience. Adored Leaders reflect on themselves and their own experiences to reach achievements.

The Leadership Edge

An edge is something that provides us an advantage in the pursuit of something valued. The leadership edge puts six different stepping stones together to achieve one end: being an Adored Leader. This allows you to create your personal edge, starting with your definition of a leader and encourage you to customize one of your own. Here are the six stepping stones of the leadership edge:

1. Define: Define what it means to begin with the end in mind and answer the question, "What is a leader?"
2. Know: Know what it means to understand the driving force that underlies positive relationships and what it is that an Adored Leader gifts to his or her followers.
3. Be: Be is about developing your personal character--that is, how you approach the challenge of being a good person.
4. Universal Promises: Universal promises refer to what Adored Leaders promise their team members and what Adored Leaders expect in return.
5. Measure: Measure means monitoring your progress on your journey to being an Adored Leader.
6. Achieve: Achieve is about the destination of honorable character and being an Adored Leader.

The Head, Heart, and Hand Triangle

In order to understand the habit building process and how to apply it to yourself, you need to understand the head, heart, and hand triangle. The head represents the knowledge and understanding of what it is that you intend to do. We must have knowledge of what we want to do before we can actually do anything. The heart represents your emotions, values, energy, and what you will actually do. Finally, the hand represents action aligned with the power of knowledge and commitment. In other words, it allows you to connect your head and heart.

All three aspects are seen as a triangle because they relate to one another and are equally important. Without one, you will likely not become an Adored Leader. You will find routine visits to your head, heart, and hand triangle to be invaluable on your journey to being an Adored Leader.

Hardworking Is Not the Same as Hard Work

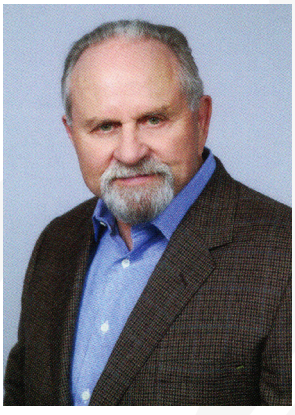
Being a hard working leader is not the same as doing the hard work of improving your knowledge of the profession, lining it up with who you are, and executing it to a high level. Many leaders do hard work to make achievements, but they are not hard working in the intellectual sense. Instead, they are lazy.

It may be more helpful to distinguish between hard working and hard work in the terms of a doctor. Would you want to go to a doctor who is lazy and does not stay up to date on the most recent treatments? Of course not. You want a doctor to be as knowledgeable about medical improvement and science as possible. The same should be said of a leader.

By working hard, you can begin to connect the knowledge of your profession with who you are and executing it. Not doing the hard work of learning the lead at the highest achievable level will lead to serious consequences.

Conclusion

You have already started the hard work of learning to become an Adored Leader. Now, you must challenge yourself by following along the six stepping stones of the leadership edge and more so that you can transform yourself from an accepted leader to an adored one. The choice is up to you.



Tom Decotiis is co-founder and CEO of CorVirtus. He has more than thirty years' experience working with start-up, fast-growth, and turnaround companies and not-for-profits that want to emphasise values, execution, and being the best in their industry as the basis of their growth.

THE SUMMARY IN BRIEF

This book is designed for leaders who want to pursue "aliveness" and are willing to do whatever it takes to make those changes happen. It is for people who are fully committed, who want to live with more purpose and passion, and who desire to feel more alive every day. ***Aliveness Mindset: Lead and Live with More Passion, Purpose, and Joy*** by Jack Craven is for those who are willing to question beliefs that are limiting them and make critical shifts that will catapult them into the best versions of themselves.

The process can be messy. Even scary. It can be intimidating to be fully honest with yourself and with what you want and need in life. But, the principles outlined in this book work. They produce results. It doesn't happen automatically or overnight, but if you focus on becoming more aware of yourself and more tenaciously devoted to the kind of life you want and need, things will change for the better.

IN THIS EXECUTIVE BOOK SUMMARY:

- Grasp how to identify, describe, and experience what makes you feel most alive.
- Learn the meaning behind "The Circle of Aliveness" and the seven key Aliveness Mindsets.
- Understand why the Aliveness Mindset is crucial to live a more fulfilling life.
- Find out how to "Live All In", prioritizing how you want to feel daily and engage in actions that support this feeling.

PART I: INTRODUCING ALIVENESS

This is What I Want

When have you felt most alive? Truly alive. What does aliveness feel like to you? If you could extract the essence from those moments and memories, what specific words would you use to describe it?

If you're going to become more alive, you have to learn to identify, describe, and ultimately experience your own version of aliveness. Try to sum up your specific experience of aliveness in a few words. Jot down whatever words come to mind to describe how aliveness feels in your body, your emotions, and your mind. Now ask yourself, what if I could always feel that way, or feel that way more often? How would that change my life?

For many people, aliveness is a foreign concept because they've never been challenged to imagine a better quality of life than what they are experiencing. They have material and career goals, but those are superficial metrics of success. What about success on the inside? What about a lifestyle characterized by peace, joy, fulfillment, and positive energy?

You can take your personal version of aliveness into every aspect of your day-to-day life.

Aliveness is found at the intersection of what makes you feel most alive and how you approach your day-to-day life. If either of those is out of whack then it will be hard or even impossible to experience ongoing aliveness.

Aliveness is a state of being characterized by bringing the best version of yourself into your day-to-day experience through identifying and adopting mindsets and actions that align with your unique way of being fully alive.

The Circle of Aliveness

Aliveness is best represented by a circle. A circle centered on what I call your Optimal State.

Inner Circle: Optimal State

The first circle, the center of the whole shebang, is your Optimal State. This represents the bull's-eye of how we want to feel and what we want our daily experience to be. This is the goal and the intention behind all we do. This is you at your best.

Middle Circle: Aliveness Practice

This middle circle is intensely personal and practical.

Outer Circle: Aliveness Mindset

This circle consists of seven individual mindsets that together form one overarching philosophy or approach to life: an Aliveness Mindset. Together, these are the entry points for aliveness, because without these things, it will be nearly impossible to stay in your Optimal State.

The pursuit of aliveness is not linear, but circular and cyclical. The more you take ownership, the more you'll need to be open. The more open you are, the more aware you become. The more aware you become, the more honesty, courage, and tenacity you need.

More than a Nice Concept

Why should you pursue aliveness?

1. Because you deserve it. You deserve to feel alive, fulfilled, satisfied, and complete simply because you're human.
2. Because it will improve every area of your life in a holistic, integrated way. Aliveness is bringing the best version of yourself into your day-to-day experience of life.
3. Because the people in your world want and need you to experience it. You are connected to other people in so many ways, and your interactions and relationships with others will have a direct effect on your experience of life as well as theirs.
4. Because today matters. One of the toxic lies of "success," as our society often defines it, is that happiness lies on the other side of the next achievement. Goals are an essential part of life, they cannot be the point of your life or you'll always be pursuing what's next and never find a level of fulfillment that transcends what you do.

Show Up or Shut Up

You will have to be brave, wise, strong, and creative. You will have to take some risks. You will have to have a few hard conversations and maybe even disappoint some people —at least at first. You will have to look inward to discover the aliveness within you.

PART II: ALIVENESS MINDSET

It's All in Your Head

Reactivity is one of the greatest enemies leaders face, and openness is the antidote.

Is it possible that wrong mindsets are hindering your experience of aliveness? Could you be harboring ways of thinking about yourself, your job, your problems, other people, or life in general that are draining your energy and impeding your progress toward the best version of you? Could you have a mindset problem? We all have mindset problems.

This is why the Circle of Aliveness starts with the Aliveness Mindset. Changing how you think is the entry point into your aliveness.

Start with Your Mind

Renowned psychologist and researcher Carol Dweck has spent decades conducting groundbreaking research about how the way we think influences our leadership and lifestyle. These ways of thinking are mindsets, and they are remarkably powerful.

What we choose to think and believe becomes reality. We can use mental fortitude to frame our present situation in a positive light. That, in turn, positively affects our experience of the situation.

When it comes to aliveness, we have to start with our mind. Until we address the unhealthy ways of thinking and seeing the world, it's nearly pointless to address our behaviors and emotions. Conversely, once we adopt the right mindsets, our actions, thoughts, words, feelings, decisions, and relationships fall more naturally into place. Bottom line: keep an open mind.

The Aliveness Mindset

The Aliveness Mindset is made up of seven individual mindsets that frame and empower the Circle of Aliveness. These include ownership, openness, awareness, authenticity, courage, tenacity, and love.

Thinking about how you think is one of the most impactful tools you have to transform your life. It is a tool you always have access to because it exists inside of you and is completely within your control.

LOOK IN THE MIRROR

ALIVENESS MINDSET 1: OWNERSHIP

If you blame other people for what you don't like about your life, you take away your power to change it. A mindset of ownership is essential to aliveness because it gives you back your autonomy. This approach is "Look in the Mirror" leadership. Own what you have done to create the current results in your life.

ACCESSING THE ENERGY WITHIN
ALIVENESS MINDSET 2: OPENNESS

Research indicates that an open mind coupled with humility facilitates learning, adaptation to diverse environments, and innovation. Reactivity is one of the greatest enemies leaders face, and openness is the antidote.

Why? Because reactivity is an automatic reaction, which means you do it without thinking about it. Being open, on the other hand, engages intentionality and reflexivity. We all experience fear, worry, anxiety, and stress.

But we also all have the opportunity to live above those things. To replace control with curiosity. To shift our mental posture from the heels of our feet to the balls of our feet.

Openness is a decision to engage the rational part of your brain. You move from unconscious reaction to conscious action.

Anxiety can be an indication that something inside of you is out of alignment. Instead of ignoring or suppressing it, work with fear and anxiety by engaging openness. How?

Step 1: Don't ignore it; listen to it. What if, instead of ignoring fear, you listened to it?

Step 2: Don't kill it; tame it. Your thoughts and emotions are your responsibility, and outside circumstances don't have the right to control them.

Step 3: Don't let it use you; use it instead.

THE FIRST STEP TO (ANY) CHANGE
ALIVENESS MINDSET 3: AWARENESS

This takes intentionality. Once you decide to analyze what you are thinking or feeling, you can often identify problem areas within a matter of seconds. What are you feeling? What are you afraid of? What is triggering you? What could you do to recover your aliveness?

Your day should begin with an awareness of you at your best, of how you want to feel throughout your day, and of what you need to do to create that experience for yourself. That means taking a few moments every morning and as needed throughout the day to intentionally engage with an aliveness mentality.

Awareness is the starting point for all change. Take time to become aware. Take time to truly see and understand. Be aware of the situation at hand, but even more importantly, be aware of you.

THE BEST YOU IS THE REAL YOU
ALIVENESS MINDSET 4: AUTHENTICITY

Authenticity refers to the degree to which your life aligns with your true self rather than conforming to societal expectations or external pressures. Author Brené Brown defines it as "the daily practice of letting go of who we think we are supposed to be and embracing who we are." An authenticity mindset means you pay attention to the stories you tell yourself and the excuses you make to give up too soon. What belief or story are you using to convince yourself that the things you want the most can't happen?

If you want to understand yourself better, pay attention to what excites and what frustrates you. Your emotions are meant to work together, and they are meant to motivate you toward positive change.

OVERCOMING FEAR
ALIVENESS MINDSET 5: COURAGE

You can't eradicate fear and anxiety, so don't make that your focus. Instead, listen to them long enough to learn from them, to hear what they are trying to tell you—then choose courage. The ambiguity of life means that in order to achieve and remain in a state of aliveness, you will always need courage.

What does courage look like for you, and where do you need to engage it? Don't confuse courage with adrenaline.In contrast, aliveness feels more like effortless play. We have infinite energy when we are alive, and courage is a natural result.

PLAY THE LONG GAME
ALIVENESS MINDSET 6: TENACITY

Tenacity is the quality of being persistent, determined, and unwilling to give up or be discouraged in the face of challenges or obstacles. When it comes to aliveness, a tenacious mindset is one that has a strong and unwavering commitment to remaining in aliveness—or to recovering it if it's been lost.

In the pursuit of aliveness, you have to play the long game. You can't expect quick fixes or easy answers because usually the things that need to change are within you, and that kind of soul-searching and honesty doesn't happen without some resistance.

CONNECTION IS EVERYTHING
ALIVENESS MINDSET 7: LOVE

A mindset of love is about more than having warm, fuzzy feelings toward people. Author Bell Hooks wrote, "Affection is only one ingredient of love. To truly love we must learn to mix various ingredients—care, affection, recognition, respect, commitment, and trust, as well as honest and open communication."

In your pursuit of aliveness, include your heart. Don't neglect this vital element of human connection and interdependency. Be intentional about leaning into love, into generosity, into sharing, into connection.

Let's look at a few of the ways love can help protect you.

1. Love is a protection against ego.
2. Love is a protection against isolation.
3. Love is a protection against fear and anxiety.

PART III: ALIVENESS PRACTICE

Feel It: Your Personal Brand of Aliveness

Have you considered what aliveness feels like for you? This is the heart and soul of the aliveness journey. You can't pursue what you can't define.

Learning to Listen to Yourself

Learning about your aliveness starts with feeling it. Before you can define it, before you can analyze it, before you can create it—you have to feel it.

Your Personal Brand of Aliveness

As you strive to connect with your personal "brand" of aliveness, focus on engaging the mindsets of: ownership, openness, awareness, authenticity, courage, tenacity, and

When you choose how you want to feel each day, you are effectively choosing how you want to feel about your life.

love. They will help you discover your aliveness and remain in that state.

Lock it In: Your Anchoring Mindsets

Introducing Anchoring Mindsets

Anchoring Mindsets are highly personalized. They are essential components of your value system and your inner motivations. When you identify them and learn to intentionally engage your AMs, they help move you toward aliveness, regardless of how difficult of a challenge you might be facing.

They are a stabilizing force, a source of strength and protection when life is difficult and aliveness seems hard to hold on to.

Discovering Your Anchoring Mindsets

So how do you identify the Anchoring mindsets that are so important to you? Discover your AMs by looking inward and paying attention to what is inside you already.

Below are questions to help you explore and name your Anchoring Mindsets.

1. What elements are common to my memories of aliveness?
2. What thoughts calm me, energize me, or otherwise move me toward aliveness?
3. What do I naturally feel, do, and prioritize when I don't feel threatened?
4. What is sabotaging my aliveness, and how do I try to counteract that?
5. What do other people say about me when they are praising me?

Live It: Aligned with Aliveness

Many of us lead a reactive life based on our calendar and schedule. There is another way to live. You can be focused and intentional, making life happen in a way that places you in your genius zone and in the flow. To do that, you have to learn how to align your actions with what creates aliveness for you.

Prioritize How You Want to Feel, Not What You Want to Do

This means every day, you look at your schedule through the lens of how you want to feel throughout the day. This is a critical mindset shift you must make too. It runs counter to the hyper-efficiency teaching most of us grew up with, but it leads to greater sustainability, satisfaction—and, ironically, efficiency.

Prioritizing your feelings or your experience of aliveness implies two things at the same time.

1. Choose to Carry Aliveness into Your Day

This means changing how you think: your mindsets, your expectations, your inner dialogue.

2. Choose to Structure Your Day to Support Aliveness

This means changing what you do on a practical level: ruthlessly restructuring your calendar, choosing what meetings to be at, having conversations with people whose underperformance is draining your energy or who need to perform at a higher level, and so on.

Productivity Is the By-product, Aliveness Is the Goal

Focus on experience. This is your life, and you get to live it only once. When you choose how you want to feel about each day, you are effectively choosing how you want to feel about your life. The significance of that cannot be overstated.

PART IV: OPTIMAL STATE

How Do I Know?

Your Optimal State is not something you can name, define, and perfect in a fifteen-minute exercise. It's a state of aliveness, which means you're describing the ongoing condition of experiencing feelings that are uniquely important to you.

Understanding Your Optimal State

1. Optimal State is an experience, not an action.
2. Optimal State is your personal brand of aliveness.
3. Optimal State is you at your best.
4. Optimal State is a place you spend a lot of time.
5. Optimal State is not always possible, but you can always move closer to it.

Flowing in Aliveness

Flow is a psychological state of complete absorption and focus on an activity. Distractions fade away, and you have a sense of clarity and natural concentration. Flow is often connected to a sense of control over your actions and a belief in your ability to overcome obstacles. This autonomy and self-efficacy give you a sense of empowerment and increase your motivation.

Can you think of times where time stood still, the world around you faded away, and the energy to face a challenge came from within? Don't assume those moments are the exception. They should be the norm.

Aliveness is the Rule, Not the Exception

Your Optimal State is not just a goal to strive for; it's a place to stay. To live in and live from. And if you do stray from this place of aliveness for whatever reason (which we all do), you should try to return as soon as possible.

Take a minute to think about what place or object could represent staying in your OS. Maybe there's a real place that could provide a visual connection for you, such as the beach, a forest trail, or a cabin where you always vacation; or maybe a different metaphor comes to mind.

Removing Aliveness Blocks

Since your aliveness is distinctive to you, your blocks are as well. If you pay attention to your feelings throughout your day-to-day experiences, you will generally be able to pick up on the situations or triggers that most affect you.

Accelerants

Accelerants are small, practical actions that help you activate, sustain, extend, and maximize your aliveness. These are actionable, schedulable things that you can turn to at any time.

Living All In (LAI) Tools

If you don't have a plan for when you get reactive, it's nearly impossible to minimize reactivity in the moment.

The fifteen LAI (Living All In) tools are tips and strategies to help you discover and remain in your Optimal State.

1. Identify reactivity
2. Identify resistance
3. Breathing
4. Meditating
5. Self-compassion
6. Self-distancing
7. Rehearsing OS and AMs
8. Accelerants
9. Inner coach
10. Reframing
11. Whole-body yes
12. Journaling
13. Look back
14. Wall of gratitude
15. Kindness and connection

THE FUTURE IS ALIVE

Embracing aliveness is about recognizing and nurturing the moments when you feel most alive and bringing that essence into your daily life.

By identifying your Optimal State and adopting practices and mindsets that align with your personal version of aliveness, you can transform your daily experiences into a more fulfilling and vibrant existence.

Remember, the pursuit of aliveness is not linear but a continuous, cyclical process that requires courage, openness, and a commitment to personal growth. By focusing on how you want to feel and aligning your actions to support those feelings, you can achieve a more holistic and integrated sense of success and well-being.

"Take nothing for granted. It's great to be alive." Lin Brehmer, a well-loved DJ at Chicago classic rock station WXRT for over three decades.

Jack Craven has always shaped his professional journey around his passions. Starting out as a trial lawyer with the Chicago State's Attorney's office, he moved into private practice and later took on the role of CEO for his family's business for nearly two decades. Yet, his move into executive coaching stands out as the most challenging — and rewarding — chapter of his career. It was during this time that Jack created his "Living All In" philosophy. He has utilized his extensive professional and personal growth journey to empower individuals to discover deeper purpose, joy, and happiness in their lives.

THE SUMMARY IN BRIEF

We expect from physicians a lot more than we've ever anticipated from these professionals in the past. A doctor is always viewed as a leader and that role impacts every aspect of a physician's job. Physicians also need extensive strategic and decision-making skills to optimize outcomes and always protect a patient's interest.

All Physicians Lead: Redefining Physician Leadership for Better Patient Outcomes focuses on the strategic roles healthcare service providers have to embrace. From convincing their patients a certain treatment is the best choice to expediting the work of labs or imaging departments, doctors have to communicate, persuade, and inspire every single day. Unfortunately, many medical professionals lack the training and the skills to embrace that important role.

Author Leon E. Moores, a neurosurgeon, and a seasoned healthcare leader, shares his insight on physician leadership. Moores has chosen a focus on the "concentric circles" model – learning about oneself in order to become a better personal leader and a confident professional who can eventually start leading others. Primarily targeting physicians, the book also speaks to medical schools and healthcare organizations where leadership isn't considered a bonus but rather a core competency.

IN THIS EXECUTIVE BOOK SUMMARY:

- Realize how our perception of physician leadership needs to change.
- Why does physician leadership matters so much in the context of healthcare service provision?
- What's the best physician leadership development model?
- Learn how leadership circles work.

Introduction

All physicians are leaders. That may not sound like a profound statement, but it really is. And it has vast implications for our healthcare industry. All physicians lead, not just those with designated leadership titles, such as Department Chief, Chief Medical Officer, or CEO. Leadership is foundational to the role of the doctor. Every single interaction with patients and healthcare team members requires managerial acumen and precise, persuasive communication. Luckily, leadership skills can be learned and acquired.

Improved physician leadership leads to better teamwork, higher morale, and improved decision-making at every level of the healthcare delivery system. This leads to higher-quality medical treatment, which leads in turn to better health outcomes—for patients. This simple but powerful idea is the premise of this book: better physician leadership leads to better patient health. But this idea has not yet been institutionally embraced by the medical community. I hope this book plays some small part in changing that.

Section 1: The Value of Physician Leadership (Why It Matters)

Chapter 1: Redefining Physician Leadership

Physician leadership is almost always approached in the context of reaching a managerial position within a healthcare setting. The definition of the term leadership, however, is pretty simple: influencing thought and behavior to achieve desired results. It's easy to see how this skill can help anyone become a better physician, regardless of their experience level or career pursuits.

It's a given that people look for leadership in their doctors. Physicians are expected to make critical decisions that affect everyone – from the patient and their family to the healthcare organization as a whole.

That's why the chapter argues the minute you put the long white coat on, you start leading patients. As a physician, you'll also have to lead healthcare teams, medical students, and anyone else involved in the complex process of healthcare service provision.

According to the Accreditation Council on Graduate Medical Education, the six core competencies for physicians are:

- Interpersonal and communication skills
- Professionalism
- Systems-based practice
- Practice-based learning and improvement
- Medical knowledge
- Patient care

The connection of most to leadership is obvious. Hence, the author makes the important argument that leadership in itself should be ranked among the core competencies. In the absence of good leadership, outcomes deteriorate. Its absence has been linked to disruptive behaviors, low performance and high stress for teams, low morale, high employee turnover, and ultimately – poor patient outcomes.

The reasons for leadership not being embraced as a core competence, however, are systemic and in need of broad addressing. Formal medical education lacks an emphasis on leadership. It's qualified as one of the non-essential soft skills that can't be crammed into an extensive medical curriculum. It's also a well-known fact that choosing a managerial direction in healthcare can be frowned upon. These complex factors lead to the exclusion of leadership skills from the qualities every physician needs to acquire.

Chapter 2: Qualities and Components of Leadership

A good leader is more than a checklist of positive attributes. They often are the "sum that is more than its parts." And yet there are many identifiable characteristics that good leaders almost uniformly possess. These characteristics include:

- Truthfulness
- Accountability
- Professionalism
- Good communication skills
- Service-mindedness
- Empathy and emotional intelligence
- Character

At the same time, the role of leaders is evolving. They're no longer perceived as supervisors or managers. They also have to provide a sense of consistency in everyday processes, psychological safety, good problem-solving, transparent communication, cultural modeling, and even inspiration.

When looking at what makes a good leader, we to distinguish between positive and negative leadership. Negative leadership is a traditional, autocratic rule. People aren't inspired to do their best, they are driven by a fear of negative consequences.

Negative leadership is often the result of a failure to realize one's leading role and confusing authority with actual leadership.

Positive leadership encourages and inspires. It creates a vision that every team member can get on board with. Clear communication, as well as rewards for positive accomplishments, are also hallmarks of positive leadership.

Many physicians adopt a negative leadership style and that's not because they're bad people. Negative leadership is often the result of a failure to realize one's leading role and confusing authority with actual leadership.

Over-regulation in the healthcare sector can also make things difficult. Introducing changes can be a nearly impossible task if a certain way of doing things has become institutionalized.

That's why positive leadership requires the right attitude and a commitment to the desired outcome. Physicians have the responsibility of leading the change, which means they often clash with traditional views of authority and management in the healthcare sector. Making small adjustments every single day, however, can pave the way for more innovative thinking and a completely new way a leadership role in healthcare settings is being perceived.

Chapter 3: Benefits of Better Leadership

The moment your leadership skills improve in the clinic or the operating room, you begin improving your patients' healthcare experience and health outcomes. The better you get at leadership, the more improved results you will continue to see over time.

Leadership benefits every level of health service provision. It motivates everyone to bring their A-game. It empowers and stimulates people to perform and apply their skills and knowledge for optimal outcomes every single day.

When you feel cared for by leadership, you want to care for your teammates and your leader in return. That's what it all boils down to. Good leaders create a sense of camaraderie, a shared mission everyone can embrace as their own.

The effects of leadership, however, aren't just immediate. They extend way beyond the team or individual unit. The organizational benefits of effective physician leadership are numerous – improved patient satisfaction and financial results, better staff retention, better relationships between physicians and the administration, and better succession scenarios.

All that sounds amazing but how do you start practicing when you don't feel like a natural-born leader? The following chapters of All Physicians Lead provide in-depth information on building those skills and making them a part of everyday practice.

Section 2: The Concentric Circles of Leadership

Chapter 4: Leadership Circle #1: Leading Yourself

Leadership development can be viewed as a series of concentric circles that build upon each other. These circles "grow" from the center outward, much like the rings of a tree. All of the circles interact with each other, back and forth, increasing strength and perseverance. This means the center is never "completed." It continues evolving and interacting with the other circles – a mechanism that adds strength and supports growth.

At the very heart of this model is learning how to lead yourself. If you don't know how to do that, you'll never be capable of becoming a true physician leader for others. In learning how to lead yourself, you also become the model of leadership behavior others can emulate with success.

Self-leadership starts with a very accurate and intimate self-assessment. Knowing your strengths and your weaknesses, reflecting on your performance, and taking full ownership of your behavior all lie in the foundations of being a good leader.

Begin the journey towards better leadership with self-awareness, both internal and external. When you realize there is an aspect of yourself that is more fundamental than your mental and emotional activity, you begin to gain the ability to look at your thoughts and feelings more objectively. Internal self-awareness is a lifelong process that deepens understanding of your own emotions. External

self-awareness, on the other hand, is the ability to look at your behavior with a measure of objectivity and imagine the effect it is having on others.

The desire to develop self-awareness is the most important first step on the journey towards becoming a better leader. When you have it in place, you can start doing the actual work.

Self-leadership involves all these essentials:

- Doing an honest and detailed self-assessment
- Seeking feedback from others
- Developing a practice for continuous self-awareness (that can include meditation, counseling, mentorships, or guided retreats)

Self-leadership can also benefit from the development of a few additional skills. A growth mindset allows you to continue learning, inspiring others to do the same. Working on your confidence but maintaining a sense of humility at the same time will also be vital to your practice. You can probably recall immediately someone whose confidence is quiet and natural, seeming to flow from within. These people have exceptional self-awareness and they don't need external validation to recognize their value.

Finally, self-leadership needs direction and a sense of purpose. A personal mission statement gives you the "why" that will help you continue even during difficult moments. Purpose is the spark that inspires others to follow you and perform on a high level.

To be a good leader, you have to focus on yourself. That also involves self-care. Being a physician is demanding and stressful. Your ability to perform is heavily dependent on addressing your needs in four domains – physical, mental, emotional, and spiritual.

Chapter 5: Leadership Circle #2: Leading Another

Every successful leader has the ability to influence other individuals, whether such interactions occur on a one-on-one basis or the leadership scenario involves entire teams or departments.

Your ability to form a positive relationship with another human being, even if you spend only five minutes with them, helps create a basis of caring and trust that allows you to influence thought and behavior to achieve a desired result.

So, what does it take to become an effective leader that other people will be willing to trust and follow? Influencing another individual is a complex endeavor and one that certainly merits more focus and training in physicians' careers.

One skill is the key to forming sustainable one-on-one relationships. That skill is active listening. Active listening is the art of being fully present and fully engaged with another person. It depends on doing a number of things, the most important ones being the creation of an optimal physical environment for an interaction, maintaining good eye contact throughout a conversation, giving necessary feedback, clarifying, engaging beyond the spoken words, reflecting back, and asking open-ended questions.

Active listening is something that can be practiced every single day. It's a part of building relationships and developing trust.

As a physician, you will have to work with and influence specific individuals. One-on-one encounters will occur in multiple settings and the chosen communication approach will depend on context and the very nature of the interaction.

Dealing with patients and family members, for example, will work well if you have the ability to put yourself in these people's shoes. You should always assume a patient is fearful or anxious before talking to you. When you adopt such a worst-case scenario, you'll work on building trust, even if a routine interaction is involved.

When having one-on-one interactions with team members, remember they are human beings with their health issues. Also, keep in mind they have other bosses. Conflicting agendas may exist. Dual lines of authority will almost always be a real problem. If a teammate is struggling with the recognition of your leadership, they may be responding to conflicting directives.

Interactions with fellow doctors depend on a few cultural and professional specifics. All doctors are conditioned to be strong, autonomous figures. Doctors will often ask tough questions. They may be resistant to change. Presenting convincing arguments and being strategic, especially when attempting to initiate change, may be the difference between success and a complete fiasco.

When influencing doctors-in-training, try to model the kind of respect you want them to give their peers and patients. At the same time, don't coddle them. Sometimes, making residents uncomfortable will be the key to building knowledgeable, confident professionals.

Good team leadership is an outcome of being a good self-leader and also a master of one-on-one interactions. Leading teams, however, comes with more complexity because of the group dynamics.

Finally, you have to master one-on-one interactions with bosses. Trying to influence the thoughts and behavior of those above you on the organizational chart can be the one thing needed to promote lasting positive change. You do this by having good communication skills, asking questions, building trust, and acting with integrity. Knowing the parameters of your role will also help you be seen and heard.

Chapter 6: Leadership Circle #3: Leading Teams

Leading teams in healthcare can be extraordinarily rewarding. Here is where you get to see, in real time, the difference your leadership skills can make. A high-performance team has undeniable effects on patient care and these positive outcomes are experienced on a daily basis.

Good team leadership is an outcome of being a good self-leader and also a master of one-on-one interactions. Leading teams, however, comes with more complexity because of the group dynamics.

Addressing a team as a group is dependent on multiple aspects of being a good leader. Active listening is once again vital. The behaviors of people tend to be more revealing in group settings, which is why you have to be very attentive of all cues and signals.

While working with the team as a whole unit is essential, you'll also need to know how to interact with each member individually.

To do so, you need a good understanding of team dynamics and also an effective approach to interact with natural team leaders who may be in open or covert disagreement with you. To do so, you have to get those people understanding that you're on the same team and you're pursuing the same goal. Your leadership style will matter, especially in such challenging circumstances.

Self-awareness and authenticity are also assets that team members will sense. You will have to make conscious choices about how you present yourself to team members. You'll also want to be seen as a full and genuine human being.

Striking the balance between being strategic and being yourself isn't easy. Adding the power differential to the equation can also make things challenging.

Some of the leadership practices that yield the best results in team dynamics include giving people a sense of direction, paying attention to everyone, calling attention to people's strengths, encouraging debate, showing that you care, and celebrating victories. Achieving victories is what high performance is all about. Celebrating your wins – never becoming blasé about them – helps keep the high performance going.

Chapter 7: Leadership Circle#4: Leading Organizations

Moving on to lead on an organizational level entails massive change that can be terrifying. You need to remind yourself, however, that this next professional step is no different from the challenges you have faced and overcome in the past.

The good news is that running an organization is a team effort. You will have the support of colleagues who will be subject matter experts in niche organizational fields. Drawing from their experience and being a good listener will help you embrace the new leadership role.

The move to organizational leadership, however, also requires a mindset shift. The change from clinical to executive settings will be challenging. An ego adjustment and a new thinking model will both have to be embraced for the shift to work.

As an organizational leader, you are now a questioner rather than an answer provider. You have to inspire teams to look for solutions. You also have to question the effects change is going to have on the organization and this once again involves team effort in the quest to find answers.

Leading organizations depends on the development of various skills. A multidisciplinary approach is imperative. You'll no longer be a vertical thinker – you'll now have to examine the horizontal lines through active input from all the departments you manage.

Your leadership style will also have to be adjusted, given

the fact you'll be dealing with department heads now. Humility and a more democratic approach toward decision-making are both going to yield a much better outcome than an authoritarian approach.

As a physician, you have unique perspective that can be very beneficial when leadership occurs on an organizational level. At the same time, broadening your horizons and seeking active input from others (HR teams, compliance experts, IT professionals) will help you develop a holistic managerial approach that produces the best answers and solutions benefiting the entire organization.

Leading organizations involves multiple steps, the most important ones being:

- Setting the tone
- Assessing challenges and opportunities
- Assessing your own strengths
- Having a good understanding of organizational culture
- Communicating a mission effectively
- Working on culture establishment and enhancement
- Making change gradual and manageable for everyone across the organization

Section 3: Redefining Physician Leadership at the Institutional Level

Chapter 8: The Four Essential Lines of Effort

A line of effort (LOE) is a line that links multiple tasks using the logic of purpose… to focus efforts toward establishing a desired end state. Lines of effort are essential to long-term planning.

The four LOEs recommended in the context of physician leadership at the institutional level include:

- Develop interest – early exposure to leadership theory and practice
- The Foundation – provide leadership education
- Apprenticeship Refined – mentorship and coaching
- Building the Bench – identify, recruit, and build experience for future senior leaders

These four LOEs should form a multipronged approach to training physicians as leaders, both in their current role as practicing doctors and for future promotion within organizations. This will involve coordinated work among educational institutions, healthcare systems, and professional societies for physicians.

Chapter 9: Schools, Systems, and Societies

It is my belief that we should be teaching leadership as a core competency for all physicians. The three entities that will play the largest roles in revamping the way we train doctors as leaders are physician training institutes, healthcare systems and organizations, and physicians' professional societies like the American College of Surgeons and the American College of Physicians.

Right now, leadership skills are missing from educational curricula that are extensively focused on teaching physiology. At the same time, a physician who is a less effective leader is a less effective doctor. That's why a change in the educational paradigm is essential to instruct better doctors.

Standardization would benefit healthcare system leaders as they would know that newly hired doctors possess a base level of leadership competency, much as they now know that all doctors possess a base level of clinical competency.

The vision sounds promising but we are a long way from seeing it in reality. This kind of change doesn't happen overnight. Changes in the medical establishment occur slowly but advancing the conversation is a definite step in the right direction.

So, what can institutions do to promote such change?

Physician training entities like medical schools can begin teaching foundational courses that aren't necessarily leadership-labelled. Teaching medical students about organizational skills, communication, and cultural competency will deliver the kind of training needed to build the physician leaders of the future.

Once medical universities start doing so, residency training programs and physician employers can also embrace the trend and build upon the foundation.

Numerous schools have already recognized the need for leadership education in the medical field. Curricula are already being revamped to embed leadership training in a progressive manner over the duration of the entire medical program.

Healthcare systems and organizations should reinforce and continue the training that begins in medical school.

Residencies and fellowships allow new doctors to interact

with skilled professionals who can observe and fine-tune a resident's leadership development. This whole idea is once again based on the concentric circles model, especially the first three circles mentioned earlier in the book.

Residency also provides good opportunities for personalized learning and focusing on one's specific needs. This is also a chance to address some of the inconsistencies resulting from curricula differences between medical schools.

Finally, professional societies deliver another excellent resource to both make the case for better leadership training for physicians and provide some of that training.

Membership in physician societies has benefits. Conventions and even small seminars organized by those entities provide chances to present new ideas and offer ongoing education. Focusing on physician leadership in the coming years can have a serious impact on the way physicians train and acquire professional skills. Looking at specific leadership-related issues will help to track and trend important shifts and performance measures.

Conclusion

Being a doctor means being a leader.

If you are a physician, you should want to be the kind of leader who inspires people through your words, your actions, and your very presence. And if you are in healthcare management, you should want to have a staff full of physicians who possess this kind of leadership ability.

My hope is that every physician who reads this book makes a commitment to review their own leadership skillset and takes concrete steps toward filling any gaps. My even greater hope is that medical school deans, residency and fellowship program directors, healthcare administrators, and leaders of physicians' societies feel inspired to work together and take up the cause of teaching better leadership skills to physicians. In doing this, we will enrich the future of medicine, create higher performing healthcare teams, and improve patient outcomes.

Leon E. Moores, MD, DSc, FACS is a neurosurgeon and seasoned healthcare leader who literally "wrote the book" on physician leadership for the U.S. Army. A West Point graduate, Moores became an officer and a surgeon in the Army and recognized how the lack of formal leadership training for doctors impacts physician effectiveness, team performance, and patient outcomes. Moores now shares his leadership wisdom, and the lessons he has learned through decades of healthcare organization leadership, with physicians everywhere and with all readers passionate about improving healthcare.

THE SUMMARY IN BRIEF

We all have ideas to share with the world. Whether we do that successfully in business and in life depends on getting others not only to listen but also to act on what we say. That's the power of influence, the capacity to have an effect on an outcome and to positively influence change. Here's some good news. Influence is a science that can be learned. Whether it's a manager trying to inspire their team, a parent providing guidance to a child, or a salesperson working to close a deal, the goal is the same–to influence an action or decision. Basically every profession and worthy act of life requires some level of influence for us to find success.

In ***Amplify Your Influence: Transform How You Communicate and Lead***, author René Rodriguez uncovers the hidden drivers that shape our decisions and behaviors. He shows readers how susceptible we are to the influence of others. He teaches how people make purchases and decisions subconsciously as a result of the stories they share and how sequence–the order of things–matters more than substance. Learning to harness the power of influence–to AMPLIFII™ it–can transform our lives, increase our happiness, and help us find new levels of success.

IN THIS SUMMARY, YOU WILL LEARN:

- The five hidden drivers of influence.
- Four steps to influence.
- The AMPLIFII Formula of frame, message, and tie down.
- Skills to amplify your influence.

Part 1: The Concept

The Power of Influence

The AMPLIFII™ Formula = Frame/Message/Tie Down

AMPLIFII™ can influence your business and your life for the better. But to share its powerful message, we first must be persuaded to listen. That's the most crucial challenge in the world of influence–getting others to listen to what we say.

We live in a world where seemingly everyone competes for our attention. We're constantly bombarded with emails, text messages, social media, meetings, advertisements, movies, television, and more. The reality is that all these distractions clamor for our precious attention.

So do you.

You want an audience to listen to what you say because you also have an agenda to market, whether you're selling a product, teaching a class, sharing a vision, managing people, or simply talking with another person.

If someone wants to influence an outcome or decision, they must first eliminate the distractions–external or internal. To deliver our ideas and messages, whatever they are, we must first figure out how to present them in the best possible setting or situation. That means eliminating the distractions so that others will listen and act on what we say.

Unfortunately, many people don't understand the extent of influence and miss opportunities to advance their careers, earn greater income, and make a bigger impact on the world around them. That's why learning to harness the power of influence–to AMPLIFII it–is a crucial tool to increase success and improve the quality of life for us all.

Influence is the "how" of leadership. Influence would be at the center of a manager's professional development, too, because in a world where people have choices, it takes more than command, control, or title to affect outcomes. Human beings don't respond well to being forced, obligated, or pushed into doing something. They respond best when they are inspired to do so.

The Hidden Drivers of Influence

More than 2000 years ago, the Greek philosopher Aristotle was the first to recognize the power of persuasion and its role in argumentative thought. He identified three critical elements, three of which became known as Aristotle's rhetorical triangle. Those three critical elements include logos (logic), pathos (emotion), and ethos (credibility).

He took his thoughts further and included two additional, often overlooked appeals, kairos (timeliness), and telos (purpose). An in-depth understanding of these appeals is crucial to the AMPLIFII formula. Mastery in these areas will propel you even further and garner bigger results, with the latter appeals being even more important to influence and persuasion today. Let's look at these motivational appeals more closely.

Ethos: Would you take advice on how to lose weight from someone who was overweight or how to make money from someone who is broke? Of course not, because they have no credibility. They lack ethos. Ethos is your credibility and character. Ethos is not something you own. Instead, your audience owns your ethos; they grant you credibility.

Ways someone can build their ethos include:

- Having a great social media presence.
- Be the one in front of the room or on the stage.
- Publish a book or article.
- Create a well-crafted introduction instead of a boring resumé.
- Get an endorsement or referral from a trusted third party.
- Have a professionally designed website with updated photos.

Pathos: Pathos is the ability to reach someone else via a story, humor, or any appeal that moves that individual to connect emotionally. It's the ability to create empathy in others. Vulnerability is truly a superpower when it comes to pathos.

Your ability to share your story, your struggle and not your success, is what matters. Imperfection is what makes us human, and someone who can't or won't tell that story has a hard time sparking passion in others.

In today's highly competitive business environment, developing and managing relationships with customers or potential customers is a crucial differentiator. The emotional connection–pathos–is at the core of those relationships we build that lead to the person answering your call, responding to your email, or truly listening to your offer.

Logos: Logos is the logical argument, the appeal to our sense of reason, the facts and figures. Today with the dominance of social media, ethos and pathos tend to carry a stronger appeal, but we still need logos/logic to buy into the message.

. . . when we add the idea of getting our hearts to speak in that neurological sequence, we can achieve the ultimate goal of maximum connection and impact.

In business, logos is critical and is what remains after pathos wears off. Without logos, we are left with buyer's remorse and cognitive dissonance. Logos is the plan, the steps, the agenda, the goals, the process, the rationale, the budget, the numbers, and the data.

Kairos: Kairos translates from ancient Greek into "the right time" or timeliness. In the discussion of persuasion and rhetoric, kairos refers to relevance to the current era, or current zeitgeist. In other words, it's about taking advantage of the perfect moment to deliver a message and delivering it in a way that's relevant to those listening. The key word is relevant.

Lacking kairos can cause you to lose ethos. Word choice matters. Using outdated terminology, such as *stewardess* instead of *flight attendant*, can cause you to lose relevance. But kairos goes far beyond being politically correct; it's about being relevant and timely.

Using kairos well means you tailor a message to your audience based on who they are and their current needs. It shows that you are current and in touch with the times versus out of touch and dated.

Telos: In Greek, the word telos means literally "the end." As it relates to understanding influence, telos is the end game, the purpose, the essential aim of a speech, a sales pitch, or a presentation. It's the point you hope to convey to your audience.

Sequence is EVERYTHING

Sequence–the order of things–plays a major role in how effectively we influence others. It's a driver of whether the audience gets the message, takes it to heart, and then acts on or rejects it. We must accept the reality that there is a sequence to how people process information and more importantly, accept ideas. Sure, there's a beginning, middle, and end to every story, but beyond that when a message follows the right sequence, it's easier to understand and repeat.

For the purpose of amplifying your influence, sequence is positioning your message and delivery of a message, story, or presentation in a way that aligns with the biological and neurological makeup of how our brains are wired to receive it. What's more, when we add the idea of getting our hearts to speak in that neurological sequence, we can achieve the ultimate goal of maximum connection and impact.

Successful communicators intuitively use this kind of sequence. But for many people, this is a new kind of sequence. At first it may feel counterintuitive and at times paradoxical. But once understood, the AMPLIFII sequence–the formula for delivering an influential message–will explain many confusing or mysterious aspects of life, seriously. The goal is for you to understand this sequence explicitly and be able to replicate it consistently.

Four Steps to Influence

Our brain shuts down to new ideas under stress. There is a sequence that helps calm the primitive defense mechanisms that get in the way of change, innovation, relationships, conflict resolution, presentations, and selling.

Step 1: Am I Safe?

The first job of the brain is to keep us alive so the amygdala is constantly searching for threats. The hypothalamus is the area of the brain that oversees our autonomic functions, including fear and the flight/fight/freeze response. Only one question concerns the hypothalamus: "Am I safe?" If that question can't be answered or is, "No," then the brain will not be open to new ideas, change, or influence.

When it comes to our audiences, we can encourage the feeling of psychological safety by making people feel comfortable voicing their opinions without fear of being judged. For a leader, psychological safety also could mean ensuring that a team is part of the decision-making process by listening to the team's needs and tailoring the message with those needs in mind. The best way to create safety is to establish structure, orders, and predictability.

Step 2: Do You Care About Me?

After someone feels safe, the next step is to ensure they feel valued. The absence of feeling valued creates more stress, which leads to cortical inhibition we want to avoid. The

limbic system controls our emotions and our memory as well as our values. It is affected by outside influences and allows us to connect to our audiences.

It is the part of the brain that is primed for relationship and rapport building. It actually buys your products. Go back to the fundamental things we learned in school and from our parents. Listening, eye contact, smiles, and validation are simple ways to value people.

Step 3: Is This Engaging?

Once we have an audience's attention, we need to keep it by not being boring. We do that by fluctuating between stimuli and novelty. In a business setting, the use of visuals, colors, powerful music, dynamic voice inflection, and body movement all contribute to making things more engaging.

Step 4: Is This Inspiring?

The final step is to engage the brain's prefrontal lobe to align future actions with personal values. This part of the brain constantly creates scenarios and looks to the future. Especially fascinating about the prefrontal lobe is how it connects to the limbic system when trying to decide your next move. That connection determines if the move is aligned with your values. If it's aligned, you act. If not, you don't. When values are engaged, we will stop at nothing.

Self-Awareness

The No. 1 skill of a leader is self-awareness. Every reputable leadership course teaches it, and every top leader exhibits it. Self-awareness is the power that enables us to effect change in our own lives and the lives around us. Self-awareness isn't just a soft skill. It has a significant impact on a company's bottom line.

Research from Kern Ferry, a global organizational consulting firm, found that employees at poor-performing companies, as measured by stock performance, were 79 percent more likely to have low overall self-awareness than those at firms with solid rates of return.

Even with scientific data supporting the importance of self-awareness, it remains an elusive skill for many in the workplace. Anyone can learn the skill of influence, but if we lose sight of how our behaviors affect those around us, those skills are for nothing.

On the other hand, a self-aware leader has the power to inspire us to effect change in our own lives and the lives of those around us. As leaders, people are watching us whether we like it or not. Self-awareness is a skill that can be learned. We have to AMPLIFII our level of self-awareness with time, conscious effort, and practice.

Part II: The Formula

Frames: Window to Your World

Frames are constructs of reality that provide psychological context to help us understand our world. The more familiar terminology is frame of reference–the concept of drawing on past experience or knowledge to help understand something in our current reality. The list of possible frames is endless. Someone who frames an experience as fun will respond differently from someone who frames it as humiliating.

In communication, either the speaker provides the frame or the listener will provide one subconsciously. To truly master the art and science of influence requires us to unlearn old habits. That includes ceasing to answer questions and deliver messages without first proper framing.

The AMPLIFII Formula: Frame, Message, Tie Down

Frames

For centuries, stories have proven to be a powerful way to convey a message. Origin stories are a strong basis for framing but there are many other frames and types of framing devices. Props, jokes, quotes, statistics, memes, third-person stories, and music all influence the experience. The influence objective is to "claim the frame" to preempt or prevent an undesired response and shift it to the one that is desired.

A well-thought-out and well-constructed frame is a strategic advantage in the marketplace and can pay handsomely in the long run. In this battle of whose frame will win, a sales professional should be able to understand the viewpoint of their potential client. But the professional also must have a strong belief in their value and be able to communicate it with conviction through metaphor, story, props, and examples. That's how to win the battle of frames.

Messages

When people think of communicating, they usually mean the message to be delivered. We as communicators and leaders do everything from overthinking how to deliver the message to not thinking about it enough. Most people don't put much thought into the message they are trying to communicate. They just talk, assuming the audience will figure it out. They feel like they understand their

When we learn to connect with people through a clear frame, message, and tie-down–the AMPLIFII formula–the listener not only is engaged but influenced.

message. They have an intuitive sense of what they want, but articulating it isn't so easy.

A good message is clear enough for the listener to understand the actions expected of them. The goal is to eliminate, as much as possible, the need for any assumptions. Consider some possible messages that might need to be communicated:

- Value propositions
- Concepts
- Key messages
- Mission statements
- Differentiators
- Action items
- Feelings
- Expectations

Some of these messages are more easily accepted than others. But all of them risk being misunderstood and can cost time, energy, relationships, and money. The frame in which they are presented, though, will determine how they are received. In essence, the message often helps determine the best frame.

Ties-Downs

Because I have your attention doesn't mean that I have influenced you yet. Influence happens through tie-down. The tie-down is the most powerful way to ensure a message is not only received but that it is understood exactly as intended. The tie-down easily cuts through confusion and erroneous or negative frames and locks in the exact message. The tie-down explicitly outlines the precise value of the message in the context of what is important to the audience and their current needs. When you can accomplish all that, the magical outcome is influence.

When we speak in person, our audience constantly searches for:

- What this information will mean to them
- What value it will add to their lives
- How it will help them achieve their goals

The tie-down answers the specific question of *what this message means to you*, the audience. The tie-down allows you to funnel the emotion (pathos) created in the frame to a specific action. That action is your influence objective.

When we learn to connect with people through a clear frame, message, and tie-down–the AMPLIFII formula–the listener not only is engaged but influenced.

Part III: The Skills

The Art and Science of Storytelling

Stories are everywhere if we learn to look for them. The part of our brains that says, "Yes, listen" or "Forget about it" is designed to discern what is important. When stories become important to us, we will create a category for them in our minds and begin to see them everywhere. The power of storytelling is to completely transform and shift our experience and reality.

It is also true that storytelling is the most powerful way to engage an audience in complex concepts and ideas. The right story can move audiences to support extremely complex business ventures and give money to finance them.

Very much like framing, science and storytelling represent two different ways to construct reality. Science searches for objective patterns that outline general truths about the world, while narratives outline the connections through the human experience that help us create meaning and value around our reality. Regardless of their differences, both are essential because they help us make sense of the world and find our place within it. If trust is established, stories can influence how people think and make decisions.

Body Language and Presence

Your body introduces you before your words. More than ever before, today people make snap judgments based on first impressions. That's why body language is central to the influence

tool set. The same holds true for nonverbal cues such as tone of voice, eye contact, and how close we stand to someone. Those cues convey specific messages that affect influence.

To understand the cues you give and receive requires self-awareness, mindfulness, humility, empathy, emotional intelligence and discipline–the basic skills of leadership and influence. There are tools, techniques, and even some secrets of successful body language. But the reality is that when we speak with authenticity and passion, our bodies know exactly what to do and how to be congruent with our words.

Interpersonal Communication: LOVE and Other Things

Mastering the art of conversation has a massive impact on relationships and the ability to influence. Unfortunately, the skill of how to be a good conversationalist has become a lost art form for many. There is a natural sequence to connect with others comfortably.

A powerful sequence that follows what the best communicators do is all about L O V E. That's an acronym for:

- **Listen:** We clear our minds and listen without an agenda.
- **Observe:** Physically observe body language and how it matches to the tone of voice as well as the other nonverbal messages someone sends when they speak.
- **Validate:** Authentically reflect back what that person said that influenced us.
- **Expand:** Go beneath surface-level topics that do nothing to reveal who we are and what we value.

None of this is easy. It takes discipline, self-awareness, and intentional effort. When we master this art, we can take a cold relationship and warm it relatively quickly.

The Stress Factor

All the methods, techniques, sequences, scripts, and values you learn do not matter if you can't access them when you are stressed. Let that sink in for a minute. It's easy to lead when times are good, but to spark an idea in the mind of the opposition, to have the emotional discipline to not react in the face of hostility, and to find your best strategic response requires advanced skills that are rooted in understanding the role stress plays in our lives day-to-day.

Stress hinders your ability to perform at your best and therefore sabotages your ability to influence. What really sets the elite apart is their ability to perform under stress, period. One way to learn to control stress is to understand the science behind it and why sometimes we can't totally control it.

Since stress is a physiological response, you can use physical approaches to calm it. Breathing techniques, progressive relaxation, 5 minutes of alone time, meditation, laughing, and more are effective ways at activating the parasympathetic nervous system to calm the body and mind and reduce stress.

Putting It All Together and More

It's true joy to watch someone who has struggled to communicate their message embark on the journey to uncover their own story and discover the discipline to learn the skills to communicate effectively. When all this comes together, someone's life changes in an instant.

The clarity of focus they find is inspiring. The effortless way they tell their story and transition to powerful and relevant tie-downs is like watching a gymnast nail a perfect 10 at the Olympics. People also begin to see themselves differently. They stand taller, speak louder, and take bolder steps.

Having confidence and knowing that you can communicate any message so people will not only listen to but also act on it is energizing. Having the self-awareness to know when people resist and the skills to overcome that resistance to deliver a message opens doors to opportunities.

The ability to influence in areas where others can't truly has a powerful effect on the world. To spark an idea in the opposition–"I never thought about it like that before,"–is the kind of influence we need in today's world.

The exploration of your own story is not an easy one. The discipline to learn the skills to deliver your message in a way that is congruent with your values is not an easy one either.

But the most difficult task in front of you is to have the courage to use these tools in the difficult times when it matters the most, when no one around you is listening or cooperating. To be an effective leader, you must have the ability to influence. True leadership is revealed in the struggle.

You now have the tools to completely transform your life and influence those around you. You must find your voice, put in the work, and take the bold steps necessary to positively influence the world. You are here to inspire people in a way that matches your purpose and story.

Uncover it, practice it, and live it boldly. Every day. It may not be easy, but it will be worth it, and the world needs it. Now go and let your heart speak in sequence.

Considered by many as the leading authority on leadership and influence, Rene Rodriguez is a best-selling author, keynote speaker, leadership advisor, and transformational speaker coach. For the last 27 years, René has been researching and applying behavioral neuroscience to solve some of the toughest challenges in leadership, sales, and change. As an entrepreneur and CEO of multiple companies, Rene integrates a practical business approach that inspires his audiences to take action. Through his keynote, bootcamps, workshops and proprietary Amplifii™ course, he helps us own our backstory to build the frame for not only our unique value propositions but also a beautiful picture of life.

Improve Employee Experiences
Page 8

THE SUMMARY IN BRIEF

The next generation of leaders must create a workplace where teammates feel genuinely connected, engaged, and empowered—without relying on technology. Based on Dan Schawbel's exclusive research studies, featuring the perspectives of over 2,000 managers and employees across different age groups, ***Back to Human*** reveals why virtual communication, though vital and useful, actually contributes to a stronger sense of isolation at work than ever before. How can we change this culture?

Back to Human explains how a more socially connected workforce creates greater fulfillment, productivity, and engagement while preventing burnout and turnover. Schawbel shares exercises, examples, and activities, which readers can work on individually or as a team, that will help them increase personal productivity, be more collaborative, and become more fulfilled at work.

Back to Human ultimately helps you decide when and how to use technology to build better connections in your work life. It is a call to action to leaders across the world to make the workplace a better experience for all of us.

IN THIS SUMMARY, YOU WILL LEARN:

- To use technology in ways that increase connection rather than fuel isolation.
- To connect by promoting diverse ideas and embracing open collaboration.
- Why it is so important to hire for personality—and how to do it right.

How Technology Is Isolating Us at Work

Modern technologies have impacted our workplaces in ways that would have been impossible just a decade ago. Instant messaging, digital platforms, and videoconferencing have completely changed how, when, and where we work.

A Gallup survey found that over a third of the entire US workforce has worked remotely. Robotics and artificial intelligence have supercharged our productivity at the cost of replacing tasks and even eliminating full-time jobs from our economy.

Our devices offer many incredible benefits, including real-time interactions, efficiencies in workflow, creation of new ideas, and access to resources. At the same time, those devices have disrupted our relationships and made our workplaces more dysfunctional. Instead of strong bonds, we have weak ties. Instead of productive meetings, we have distractions.

Technology has created an illusion that today's workers are highly connected to one another, when in reality most feel isolated from their colleagues.

What they crave most—and what research increasingly shows to be the hallmark of the highest performing workplace cultures—is a sense of authentic connection with others.

Deeper Relationships Build Commitment at Work

To be fulfilled at work, committed to our teams, and happy, we need to focus on building deeper relationships with the people around us.

A few researchers have studied the correlation between the loneliness that isolated employees feel and their commitment to their teams. The consensus is that having work friends and team camaraderie can make a huge difference when it comes to job performance, loyalty to the employer, and employees' overall well-being.

It's possible to address the hidden emotional need that makes us more human and less machine, not by discounting technology altogether but by using it to propel your career.

When you master self-connection, promote team connection, and build organizational connection, you can be the leader your organization desperately needs while providing greater fulfillment for you and those you connect with.

PART I: MASTER SELF-CONNECTION

Focus on Fulfillment

Regardless of our age, gender, or ethnic background, we all share the basic human needs to connect deeply with others, to feel loved, and to matter. By meeting these needs, we will be happier and more fulfilled and thus more productive and successful in our teams. Being a leader is about creating fulfillment for yourself and your team, and when you do, the true magic at work occurs.

The Five Characteristics of Personal Fulfillment

There are several key factors you need to focus on to ensure that you're living a happy, well-balanced, and meaningful life:

Connection: A strong connection to your teammates makes work more meaningful and enjoyable. The lack of it makes work feel like a chore and creates the silos that eliminate creativity and innovation.

Values: If one of your values is authenticity, create and support a transparent and honest culture in your team. Your values are reflected in your actions, so the more you demonstrate them, the more you internalize them.

Purpose: Think hard about your personal story up until right now and about the thread that connects the decisions you've made.

Openness: Many people fear change because it is unpredictable. But as a leader you need to be open to it. Instead of keeping company secrets, confide in your team so that you can build trust. Being open is also about expressing your true feelings instead of holding back.

Accomplishment. This is not only something we desire but also the emotional feeling we have when something is finished. If you want to be more accomplished, set more goals and make sure they're attainable.

Begin by focusing on your own fulfillment. When you feel fulfilled, you naturally have a positive attitude and a clearer direction for what you're working on.

- What do you enjoy doing the most?
- What do your past accomplishments tell you about your strengths?
- What are your core values (i.e., adventure, challenge, contribution, respect)?

Today, text messages and emails are competing for our time with human connections, and the technology is winning big-time.

- What brings out your most positive feelings and emotions?
- Where do you envision yourself in the future, and why?

Optimize Your Productivity

Today, text messages and emails are competing for our time with human connections, and the technology is winning big-time. Several studies show that the average office worker receives more than one hundred emails per day.

Relying too much on technology inhibits our ability to connect and get things done. That said, used appropriately, technology can be our greatest ally. There are several key ways to use technology to bring us together so we can get our work done in the quickest, most efficient way possible.

For example, use a conference room-booking system to lock in a time and place for your team to talk about an important project or facilitate a one-on-one catch-up meeting. Or you can use search engines to quickly answer basic questions. That will save you and your team from having long, unnecessary discussions about them. Use videoconferencing to connect remote employees so they get to see one another even though they aren't physically with the rest of the team.

Three Actions to Optimize Productivity

Technology undermines our productivity in significant—and insidious—ways. Following are three ideas on how to curb that problem.

Procrastinate less. Whenever you're working on a project, it's always helpful to break it down into smaller tasks. When you do that, the overall project becomes less daunting and more manageable, which makes it harder to procrastinate.

Resist perfectionism. Perfectionism is a weakness disguised as a strength. We think that being perfect will enable us to be more productive and successful at work, yet striving for it depletes our time, causes anxiety, and makes us unhappy. Perfectionism doesn't work in the fast-paced, always-on world that we live in. If you move slowly at work, another worker who's willing to work smarter and faster will replace you.

Stop multitasking. Dozens of neuroscience research studies prove that our brains don't do tasks simultaneously. Instead, we jump from task to task rapidly. When we shift from the conference call to the status update to the email, there's a stop-and-start process in our brains that causes a momentary lag between steps when nothing happens at all.

The best way to keep from wasting a bunch of time trying to multitask is to become an expert at prioritizing your workload so you're always focused on the right project at the right time instead of on multiple projects all at once. Start by not saying yes to everything people ask of you, because there is truly no way to manage everything at the same time. Instead, focus on what's most important, and delegate the rest to your teammates.

Practice Shared Learning

If you care about your team's success, you need to become a shared learner who is open to giving your teammates the knowledge they need when you receive it. At the same time, you need to be just as open to learning from your teammates. This free flow of information is good for everyone—and for business. By collaborating with your team, sharing what you know with them, and learning from them, you'll all acquire information more quickly, retain it better, and be able to apply it in new ways.

When you're actively helping your teammates, you become a role model for how they can better learn and support one another. The following is a list of recommendations for creating a culture of shared learning.

Ask for and give feedback. By giving your employees regular feedback and then soliciting theirs, you'll create an environment in which it's acceptable to both criticize and compliment, and you'll facilitate invaluable conversations that will benefit everyone.

Track accomplishments. Take a hard look at what you and your team have done over the past several months, and examine the actual business results of your activities. Think about the team's accomplishments and employees' indi-

vidual ones. By identifying gaps and weak points, you can create a learning ecosystem that will support everyone.

Be flexible. Be flexible with how you share new material. Having a proper mix of face-to-face meetings, videoconferencing, email, and social media can support everyone's needs.

Have a positive attitude. Push your ego aside, and get excited about improving the lives of those around you. When you're in shared learning discussions, encourage—and embrace—criticism, because that's how you'll get the most honest feedback possible. When you hire for your team, look for those who have a positive attitude about helping others, and be wary of those who seem to be focused on becoming the next CEO.

Promote the expertise of others. Everyone has their own unique skills and can be a teacher, not just a learner. Over time the interactions you have with your teammates and the actual work they produce will let you know what their strengths and weaknesses are. Pay special attention to what they're good at, and when you see an opportunity for them to help, bring them in.

PART II: CREATE TEAM CONNECTION

Promote Diverse Ideas

Not long ago, when people talked about diversity they were referring to a number of visible demographic attributes, such as race, ethnicity, age, and sex. After a while the definition of diversity expanded to include less visible attributes such as sexuality, religion, and even educational attainment. Today diversity has become even broader and now includes intangible characteristics such as upbringing, socioeconomic status, life experiences, and worldviews.

It would be impossible to create a workforce made up of a perfect, mathematical representation of every conceivable demographic. That said, there's one type of diversity that is achievable. In a global study, four thousand young workers were asked about the type of workplace diversity they value the most, and they didn't say gender, age, religion, or ethnicity. Instead, they said, "diverse points of view." This can be called diverse ideas. Focusing on people's experiences, mindsets, and viewpoints effectively incorporates diversity in all its forms.

How to Effectively Manage Diversity

We can all do a better job of incorporating the ideas of others and making people feel more comfortable at work.

Hire unconventional candidates. To get the right level of diversity in your team, you must change your hiring criteria. Don't just look at candidates' accomplishments and where they went to school. Ask about their passions, who and what most influenced them, and their interests outside of work.

Understand individual needs. Instead of just observing your team from a distance, set up one-on-one, in-person meetings to get to know your teammates better. Don't bother texting or instant messaging them; that won't give you a sense of their emotions, views, and creativity. You need to get to know the people you work with and their habits so you can lead them in the most effective way.

Create a safe space. Having a safe environment in which people feel comfortable interacting and sharing their perspectives is what makes a team successful and more productive than others. Those feelings of safety and security reduce employees' stress and encourage them to share their ideas instead of keeping them to themselves.

Encourage people to share their ideas. Successful leaders around the world do this in a variety of ways. Patricia Rollins, senior director of marketing at CA, dedicates a few minutes of every team call to thinking through what's working and what's not. "I encourage one 'get fired' idea (something that's really out-of-the-box thinking) to help transform our roles. I then assign a lead to that idea to get it executed."

Embrace Open Collaboration

How we collaborate and network within our teams has evolved over the past decade, and we now rely to a much greater extent on technology for both activities. Today, you can have a videoconference with teammates and co-workers in a dozen different countries without even leaving your office (or bedroom, for that matter).

As an employee, you can work at home, at a coffee shop, or even on a plane or in some other vehicle. As an employer, giving your employees a choice of where and how to work is critical to ensuring that they're comfortable, feel supported, and are in a creative environment. Research shows that a growing percentage of workers are willing to make less money in exchange for this flexibility. The most successful leaders of the future will embrace flexibility.

Although working remotely gives us freedom of choice, it also tends to separate us from the relationships that make businesses function properly. When you don't have true hu-

man interaction, you lose some of the humanity that makes collaboration meaningful, fun, and exciting. One study in the ***Harvard Business Review*** found that the most productive and innovative teams had leaders who were both task and relationship oriented.

Leaders who focus only on results will be ineffective if they disregard the relationships that are required to achieve those results. In-person relationships are much stronger than virtual ones.

Promote a Culture of Open Communication in Your Team

Here are some ways to promote a culture of open communication in your team.

Make everyone on your team commit to being open and accessible. The best way to do this is to set ground rules up front for people to agree on. For instance, if you have an office, you should have an open-door policy that encourages any team member to stop by and share an idea or issue without repercussions.

Champion real-time feedback. Research shows that employees (especially younger ones) want feedback regularly and are too impatient to wait a year for a performance review. Get your team comfortable with providing much more frequent feedback. This starts with you. If one of your teammates shares a new idea in a meeting in an off-putting tone, talk to him afterward and explain that although the idea was great, there are better ways of communicating it.

Share your to-do list. Although you may think you should keep your tasks and goals to yourself, sharing them actually increases the chances that you'll accomplish them. When your co-workers know what you're working on and what your priorities are, they'll be much more likely to help you accomplish them. You can all hold yourselves (and one another) accountable by sharing your daily or weekly to-do lists.

Reward Through Recognition

Personal recognition can not only make team members want to work harder for you and stay at your company longer; it can also create a lasting positive memory in their minds. Although many leaders don't offer much feedback or recognition, doing so can have significant individual, team, and company-wide benefits.

Employees who say that they're consistently recognized at work in ways that are meaningful to them are 11 times more likely to spend their careers with one company and seven times more likely to be completely satisfied in their jobs. Organizations that have formal recognition programs have six times greater operating margins and employees with the highest engagement levels.

Throughout your day, there are countless opportunities to compliment your teammates, and that can make all the difference in their work experience and satisfaction. You can compliment them in the moment, during a meeting, in passing, virtually, or in a formal review.

> In-person relationships are much stronger than virtual ones.

Ask Your Team Members How (and When) They'd Like to Be Recognized

There are various ways to recognize your employees. Obviously not all of them will resonate with everyone. Some people, such as Katie Vachon, merchandise manager of women's apparel at Puma, will prefer public recognition in front of their peers (or a larger group), whereas others, like Chris Gumiela, vice president of marketing and advertising at MGM National Harbor, prefer a private pat on the back.

The best way to figure out how to maximize the effectiveness of your recognition—and which approach will work best—is to simply ask.

But be prepared for some pretty honest answers, such as this one from Sam Howe, director of business development at MSLGROUP. "I think there is a tendency among older generations to treat millennials like we are kindergarteners, and they offer us ice cream socials and pizza for our hard work," he said.

"Now, I am for ice cream and pizza as much as the next guy, but I would like to be recognized at work, as often as earned, by being given more advanced titles (and associated compensation), responsibilities and influence. In essence, we should be rewarded by being given a voice and seat at

the proverbial leadership table. And by being treated like adults, not a Trophy Generation to be placated."

Also, don't underestimate the value of a personal touch. Because we spend so much time online, it's super easy to shoot off a tweet, post something to Facebook or the company website or newsletter, or send an email blast. And while that type of praise is nice, in-person, face-to-face interaction is far more effective.

PART III: BUILD ORGANIZATIONAL CONNECTION

Hire for Personality

Because the pace of business is constantly speeding up and companies are always looking for ways to save money, many have looked to technology to lower the cost of recruiting talent and increase the number of people they can reach.

While these companies tout how much money they're saving by doing their interviewing by phone or video, they don't seem to realize that neither of those approaches can ever replace in-person interviews, in which you actually meet people, see their body language, and observe how they handle themselves. Those approaches are missing the critical emotional connections and personality traits that will help you hire the best possible candidate, who will stay with you longer.

Because relationships are the cornerstone to a healthy workplace, shouldn't we put more emphasis on personality when recruiting new employees? It's challenging to work with someone we don't like, but it's exciting to work with someone who has a great personality that meshes well with our own. Hard skills are important, but they can be learned on the job. It's the soft, intangible skills that are so valuable to creating a team that thrives. They're also the ones that technology has a difficult time assessing.

Five Personality Traits to Look for in a New Hire

When you're hiring for your team, there are five personality traits that you should look for. You'll be able to screen for each by paying close attention to the answers you get to a number of key, strategic questions.

Confidence. If you're not confident, you're less likely to share new ideas, stand up for what you believe in, and perform at your best. When you're confident, you know what you're doing and how to convey your knowledge to others.

Ask candidates, "What was an obstacle you overcame in a previous job?" The answer to this question lets you know about the candidate's ability to push through failure and the challenges that naturally happen in any work situation.

Attitude. You want to hire employees who have a positive attitude because they tend to boost the morale of everyone around them and encourage and motivate their team members to perform better. Ask candidates, "When have you admitted to your teammate(s) that you made a mistake, and how did you manage it?" Candidates with a positive attitude will hold themselves accountable and tend not to make excuses or point a finger at others.

Professionalism. The most obvious signs of professionalism are punctuality at the interview (or being early) and the candidate's basic manners. Ask candidates, "Give me an example of a situation in which you had a conflict with a team member, and tell how you handled yourself." The answer to this question will give you a sense of how candidates handle their emotions during a tough situation.

Likability. In the workplace, likable people somehow manage to bring out the best version of you. Also, they have an incredible competitive advantage because they tend to get promoted more quickly (managers tend to promote people they like over those they don't) and build strong relationships with others, which leads to new opportunities. Ask candidates, "Who has been a great mentor to you, and how was that manifested?" The answer to this question will give you some clues about candidates' relationships with others. Likable candidates typically attract better mentors and describe those relationships in a more positive way.

Curiosity. People who are curious about their own potential and are willing to try new tasks and roles are better able to adapt to change, challenge themselves, and grow as team members. Ask candidates, "Do you have any questions about the position or the company?" Candidates need to impress you, just as you need to impress them. People who don't ask good questions—or any at all—won't be the type of employees you want because they won't push the boundaries or challenge the status quo.

Engage to Retain

According to Gallup, about two-thirds of employees are disengaged at work. Part of the problem is that all that technology—the very things that are supposed to connect us to our teammates—often ends up making us feel even lonelier. Another part of the problem is the rise in remote

Empathy is the most important ingredient in successful, long-term relationships with your teammates, family, and friends.

work, which despite the best of intentions, contributes to a culture of social isolation. And in social isolation, both strong personal relationships and corporate culture suffer.

The Four Ways to Promote Employee Engagement

Countless research studies and conversations with leaders across a variety of businesses show that employee engagement comes down to four factors: happiness, belonging, purpose, and trust. As a leader, if you can nurture these factors, you'll significantly increase the likelihood that your teammates will stay productive, fulfilled, and committed to your goals.

Spread more happiness. Have a serious conversation about work-life balance to show employees that you care about their personal lives and not just their work performance. Do a random act of kindness, like ordering lunch for everyone on a day other than Friday, to show that you care about them. Spend time with your employees, get to know them better, and ask how you can create a better work experience for them.

Create a sense of belonging. Promote belongingness by scheduling social events, having team lunches, and creating an environment in which people feel safe to share information about their personal lives. Hold more meetings that include your whole team so that all feel their voices are being heard and their needs are being met.

Connect purpose to the work. Bring in a customer who has been personally affected by your team's work so that your employees can hear and see the impact of their efforts. Don't just assign work; make sure your teammates know why they're doing it and how it will be used to support your organization, your customers, or even the world. Have employees share their accomplishments and the sense of purpose they feel when they come to work every day. This will help identify shared purpose and goals.

Establish and maintain trust. Be transparent with your team, letting them know what's really on your mind and keeping corporate speak to a minimum. Admit your mistakes. That makes you seem more human and trustworthy and will make it easier for others to admit their own mistakes. Keep your promises so that people know they can always count on you.

Lead With Empathy

Empathy is the ability to understand someone's feelings as if they were our own—in many cases because we've actually had them. Empathy is the most important ingredient in successful, long-term relationships with your teammates, family, and friends.

MIT professor Sherry Turkle explains that technology prevents us from learning how to be empathetic. "It's not some silly causal effect, that if you text you have less empathy; it's that you're not getting practice in the stuff that gives you empathy."

Turkle says that when you apologize face-to-face, you see the other person's body language and potential tears, and you know how upset she is. And the other person gets to see, from your body language and facial expressions, that you have genuine compassion and are truly sorry.

Becoming an Empathetic Leader

To train yourself in how to lead with empathy, take small steps. Set aside time to speak to one of your teammates, and at the beginning of the conversation, just ask how they're feeling. This is an easy, low-stress, direct way of starting an emotional conversation.

There's a big difference between asking, "How are you doing?" and "How are you feeling?" The word *feeling* elicits emotion, whereas *doing* is more activity based. Your goal is to get closer to being open instead of using technology to check in.

If you aren't comfortable with the word *feeling*, that's okay. The point is to ask questions that elicit honest answers—questions that can't be answered, "Fine." If the individual is not interested in engaging in empathetic conversations, whether they're about sexual harassment or death in the family, don't push the issue. But if employees decide to open up to you, listen wholeheartedly.

Improve Employee Experiences

The employee experience is the sum of all the interactions that affect employees' cognition, behaviors, and feelings. Their experience includes conversations with their teammates, the physical space they occupy every day, the nature of the work they do, and their observations throughout their journey at your company. It's how they feel about their workplace, their jobs, their teammates, and their bosses.

The Three Dimensions of Employee Experience: Culture, Relationships, Space

When thinking about the different touch points we have with our teammates, we need to focus on three dimensions. You can control various levers in each dimension in a way that will affect how your employees feel, but over time things must be set up to run without your having to be involved.

Culture. These are the unwritten rules of how teammates work together to accomplish goals and the glue that creates a cohesive, well-oiled team. Culture is made up of many elements, including core values, empathy, community, work ethic, language, symbols, systems, ethics, and rituals.

Relationships. This is a critical part of employee experience because people connect emotionally with other humans much more than they do with a logo, a brand, or a product. If you treat your employees unfairly or you have a toxic employee who aggravates everyone else, the good people on your team are going to leave—and you shouldn't blame them.

The best leaders and companies are the ones that create a family-like environment. They know that when you care about others' success, you create a strong emotional connection.

Space. Physical space is key to creativity, collaboration, and wellness at work. Space enforces and reinforces your culture every single day. Although your company controls the light switches and layout, employees should be able to decide how to personalize their cubicles or offices. If you don't get space right, another company will.

In the not-too-distant future, robots may bring you your morning coffee and brush your teeth for you, but you'll still have a heart, a soul, and a mind—and so will the people who work for and with you. The essential qualities that you'll need to be an effective leader, such as empathy, openness, and vision, can't be outsourced to machines. For that reason, as leaders we need to get back to human and become the masters of technology instead of the other way around.

So, put your phone down, turn off your notifications, and get offline. There's no going back in time, but there is going back to human. Make every interaction count every day, every hour, and every minute.

THE SUMMARY IN BRIEF

Certified as a Change Management Practitioner and Talent Optimization Consultant, Shara Hutchinson wrote ***Barefoot in the Boardroom: Every Leader's Guide to Navigating Change*** to demonstrate how to assess one's leadership capacity, change impact, and organizational health. She reveals the strategies and tactics necessary to achieve a leader's most audacious goals.

By following Shara's proactive measures and techniques outlined in this book, business professionals will expand their leadership skills while simultaneously encouraging the growth of others. *Barefoot in the Boardroom* will scale an organization, team, or department to not only identify the right strategic initiatives but to execute those initiatives and sustain success. This book will challenge business professionals to break out of the box and innovate with the times. Each chapter offers clarity for strategic initiatives, key objectives, operational tactics, and measurable outcomes that encourages leaders to implement change and innovation in order to sustain professional longevity.

IN THIS SUMMARY, YOU WILL LEARN:

- A vast array of proven techniques and strategies.
- The competencies needed to develop a high-performing team.
- How leaders can align their business strategy with their team.
- A signature change management strategy.
- How to expand leadership skills while encouraging the growth of others.

Introduction

Within *Barefoot in the Boardroom*, business leaders will find a vast array of proven techniques and strategies to apply. The author introduces her "Exposeyour™" Leadership Capacity approach, which includes the nine leadership competencies needed to develop a high-performing team, while her encouragement of vision teaches leaders how to align their business strategy with their team, ensuring that they have the right people in the right seats to get the right results. She also introduces the "Barefoot Method™", which is her signature change management strategy that can be applied to any organization, team, or department to ensure it is future-proofed.

Phase 1 – You're Already In The Boardroom

Time For A Change

No leader with an audacious vision builds a company with the intent of only surviving for a few years. The objective is to keep growing and reach the heights of success over time and have a future. For that, a plan and having the right leaders in the right positions is necessary.

Change is the leading force in the corporate world that decides the decline or rise of a company, so get comfortable with it and get ready to take your shoes off!

Organizational success and survival are highly reliant on the capacity to manage and adapt to change. As a result, businesses must establish a long-term strategy beyond prior techniques, approaches, and quick fixes. This entails planning for the future, looking beyond the confines of the internal business environment, and considering the entire industrial ecosystem in which the company operates.

Expose Your Next Level

You cannot take your team to the next level if you haven't identified the next level. Likewise, you can't identify the next level for your organization or department's vision of success if you haven't exposed the next level for yourself.

There is always another level to everything, including your leadership. Leadership is about getting people to appreciate and invest in your mission. Working with and managing your team to accomplish your goals is all about maintenance and seeing that things happen as they should every day. Both are necessary, but only leadership will take you to the next level.

No matter how successful you are, you can always explore another level, discover new things, make mistakes, improve yourself, experience failures, and develop game-changing ideas. You will have a higher chance of learning more unique concepts and having new ideas if you expose yourself to new people and new information. As a result, you will create an appetite for more growth, expose your next level, and then act towards achieving it.

The culture of your organization or department is mainly dependent on how the leaders handle change, chaos, and discomfort. The quality of your leadership is determined by the quality of the questions you ask yourself daily. These questions allow you to explore possibilities, fail forward, and challenge yourself to change.

Expose Yourself To New Ideas

Exposure to new environments and situations has a lot to do with growth. Sometimes exposure is unintentional and we experience it whether we want to or not. Yet, intentional learning is more critical for the development of a leader. This means it is necessary for leaders to knowingly introduce themselves to diverse situations and conditions, learn new things, and polish their abilities.

A leader must prepare and have the skills needed to improve their organization in order to escape a demise. They need to know how things work in a particular context to learn new things, bring up their game, and make adaptive plans for potential shifts in the future. To learn how various environments act, however, a leader must first introduce themselves to these environments.

Rapid, constant, and disruptive changes now require leaders to change and develop. It involves exposure to diversity in many aspects. That's why, as leaders, we must discover the correct solutions by strategically opening ourselves up to creativity, new concepts, and fresh possibilities. We have to upgrade our information pool continually. Leaders must improve themselves and continually learn new things to deal with the latest and ever-changing market conditions.

Phase 2 – Take Your Shoes Off

The Employee Experience

Significant results within your organization require a team effort, making it necessary also to develop your team. You must start by knowing your team members to coach them to success. It requires understanding their personalities,

work styles, strengths, weaknesses, needs, and wants.

A diverse group is becoming a business necessity instead of an ethical banner that companies hold to show their commitment to embracing and valuing difference and change. As leaders, we have an inspiring vision, a comprehensive and strategic plan, and we know the results we want to achieve. However, we often overlook the necessity to develop a strategy for the most important asset: the people who will ultimately make it happen.

If your corporation hopes to achieve your desired market objectives, you must choose an organizational model that helps implement your business plan. A host of issues occur when the structure and strategy of an organization are in contrast with each other.

There is no single right way to develop a people strategy. That's because every organization has a unique business strategy, structure, culture, and workforce. To create the best people strategy, leaders need to consider multiple factors. And for that, leaders must engage in understanding their employees and be involved with their development.

The Customer Experience

For any business, customers are important stakeholders. Everything from planning to the execution of a product or service is about satisfying the end-users. Over time, the preferences and choices of end-users change, so a business must innovate its customer services along with other business innovations.

The future of the customer experience and the future of your business are intimately intertwined. If your customers are not happy, they will not be customers for long. As a result, you won't be in business for long. There is a continual variation in what clients want and expect. Ultimately, companies that do not conform to delivering a higher level of customer service endanger their future.

A business market is never free of competition. Therefore, it is imperative to build trust and continually discover newer ways to serve consumers and improve customer loyalty to remain competitive.

A business needs to think like an innovator—always coming up with ideas to improve their services and products or to introduce something new in the market. A business should be able to see the market changes coming from a distance. Predicting future demand by analyzing the current market pattern can provide a company with solutions even before the customers realize they are expecting something else.

Your teams can use customer journeys to map and track their complaints and strategize the area of improvement needed to boost sales. The awareness, consideration, and decision-making stages of sales help you envision how customers pass through and encourage each interaction.

BAREFOOT Method™

Every organization has its predetermined path, better known as best practices and processes. If you are determined to succeed, you must be committed to a culture of innovation and constantly challenge the "this is how we've always done it" mindset.

The BAREFOOT Method™ is an acronym of eight letters. It comprises proven strategies and tactics that I have implemented to achieve exceptional results and the framework I've observed while watching other successful leaders and mentors. Each word of this acronym explains a step to effectively lead your team through change and demonstrate the heroic measures that the world's greatest leaders utilize to reach the next level.

B – Break: Corporate transformation may be difficult to achieve, as many businesses are learning.

A – Assess: Assessments are necessary for a business to examine and analyze where it is today and where it wants to go in the future.

R – Reposition: When you ask a business owner what their secret to success is, you will almost always hear something about the people that work with them.

E – Execute: Starting with the first step and then assessing many elements, the plan will become evident—you'll see the whole image of what you have and require at this time.

F – Follow-Up: Follow-up is the next important step. To keep an eye on the "pulse" of your major projects and the company as a whole, you'll need to plan recurring meetings.

O – Operationalize: You have identified goals, created a thorough action plan to meet them, and established the accountability framework. Now it is critical that you operationalize your plan.

O – Opportunities: Many individuals are apprehensive about change. That's reasonable given how many large corporations have been affected by such developments and have lost their market share. However, there is another angle to consider.

T – Timeline: Whenever I am on a long road trip, I always have two questions: Are we delayed? What time will we arrive? Knowing the answers to these questions allows me to evaluate whether I need to make any further stops and to set reasonable expectations.

Phase 3 – Stand On The Table

Effective Change Management

Change management is at the heart of a company's ability to accept and implement change successfully. It enables employees to comprehend and commit to the shift while also allowing them to perform efficiently. Effective change management is vital to fundamental transformation.

When you take unconventional actions in hopes of getting an extraordinary outcome, the responses are similar. As a leader, you must have the courage to take such steps—to be "barefoot"—so that you can do whatever is necessary to achieve your most audacious goals. You must be willing to stand out and do things differently than others would. After all, someone must go against the norm to ensure your organization has longevity.

When you STAND as a leader, you demand respect and accept responsibility for bringing about essential changes for the organization's growth and development. It conveys that it is not about exploiting the authority you have, but about bringing innovation, development, and implementation of plans under your supervision.

Change management does not end, even when the change is complete. You must continually analyze outcomes, collect data, train staff on new techniques and business processes, and revise targets as needed throughout and after the process. If your organization is embarking on large-scale changes with the BAREFOOT Method™, you may need to interchange various methodologies in conjunction with it.

Trust The Process

When the dream you have is big enough to ensure your organization has longevity and your team scales to meet the demand, there will be times along the journey when you will wonder when you'll see tangible results. Change takes time, even when you have the right team in place and all the right tools. It is possible to have a fully functioning organizational structure and still need intervention. When you feel discouraged, if you determine that you still want the result, you will achieve it as long as you keep taking steps in that direction. Trust the process.

Conclusion

Many leaders are afraid to take the steps necessary to get to their next level for various reasons. Remember, it is not just about survival but about sustainability. Take control of the wheel of your leadership vehicle, avoid an organizational CRASH, steer in the direction of your most audacious goals, and navigate change until you arrive at the desired destination. In other words, take the steps to enter the boardroom, take off your shoes, and then STAND on the table!

Shara Hutchinson is TEDx Speaker and International Best-Selling Author. With a master's degree in Business as well as a bachelor's degree in Technical Management, Shara Hutchinson is the CEO of Xposeyour. Page 2

Part Three: The Conversation
Page 3

Part Four: The Four Leadership Styles
Page 3

Part Five: What Next?
Page 4

Conclusion
Page 4

THE SUMMARY IN BRIEF

Leaders have a powerful and proper role to play in leadership roles. Being "wrong" is about discovery, making it a good thing. From a collapse on a golf course at twenty-nine years old to completely changing the wrong in his life, Colin Hunter's book ***Be More Wrong: How Failure Makes You an Outstanding Leader*** explores how the wrong experiences can actually be the right ones – transforming our qualities as a leader into something more than we ever expected.

No one likes being wrong, mainly the connotation that you have failed at something. Failure can be devastating to some, but even if you are wrong, it doesn't mean that you aren't learning something in the process. More importantly, failure can be used as a tool for learning. When reframing failure as something useful, you are less likely to avoid taking risks – which is a powerful quality for a leader.

IN THIS SUMMARY, YOU WILL LEARN:

- The importance of the leadership impact model.
- What enables you as a leader and why.
- The importance of directing the conversation.
- The four different types of leadership styles.
- How to continue your leadership journey being wrong.

Introduction

In his book, Colin Hunter defines leadership as "agitating for the future." The purpose of leadership is to acquire the art of future-proofing your organization – essentially peeking around the corner to see what's coming. Instead of focusing on the wrong that can pop up in any circumstance, shifting to a growth-oriented mindset is the best thing a leader can do for their leadership strategy. Taking the changes and stretching the boundaries are the very spirit of being more wrong.

As a leadership consultant, the role requires providing guidance to clients and their people, bringing them to a place they never thought that they could get to on their own. Incorporating the failures with the successes creates a foundation that makes leaders more efficient in their roles because it shows that there are lessons to be learned that may or may not have come to fruition on their own without the event.

To truly appreciate this requires the willingness to stop, pause, reflect, and even possibly go back a step if necessary. This is a critical cog in the system – willingness to be wrong and go back and correct it.

Part One: The Playground At Work

The Leadership Impact Model

The Leadership Impact Model is used to show how habits and systems intersect to create a vibrant leadership impact. This framework embodies the three enablers that provide confidence, conviction, and connection when delivering styles to the world. With this model, leadership in terms of the "long-game" can be explained.

The goals of leadership is to create a sustainable network of systems and habits that outlive the leader. These refreshingly direct conversations, systems, and habits bring about the foundation for the four leadership styles – host, energizer, disruptor, and catalyst. All of these elements are crucial in the ongoing development of robust habits and systems to sustain a journey of being more wrong.

Systems And Habits: The Secret Sauce

The systems we have as leaders need to allow us to be our best selves. We have to ensure that we are clear on our purpose, and that we constantly revisit our story. We need to have a system based on our identity, with measures to ensure that we are portraying – and others are experiencing - the identity we want others to experience.

There are six habits that describe creative people.

The first habit is framing a problem by asking "how might we…?". This allows an approach that invokes thought to offer solutions that may not be right at the front of your mind.

Habit two is gathering inspiration by observing without judgment to determine what people really need.

The third habit comes from synthesizing information to bring out the meaning of the diverse information you gather through your observations to identify a focus.

The fourth habit has to do with generating ideas by pushing past the obvious solutions and coming up with a breakthrough idea.

Habit five is making ideas tangible by getting out and testing them to see what outcomes may prosper from them.

Finally, the sixth habit has to do with testing to learn what works and what does not. Experimentation is key to finding out the right solution versus the "right now" solution.

Part Two: The Three Enablers

Purpose

Anyone is capable of leading, but being a leader isn't a role everyone is born into. It is possible to lead without a purpose. To be an exceptional leader, it requires having a compelling purpose. When purpose is driving a leader, they can experiment, fail early and often, learn from that, and then achieve great things. There has to be importance in finding your purpose if you want to continue on your journey of discovery.

Identity

Everyone has an identity – our people, families, and children all have a view about us, whether it be consciously or subconsciously. Parts of our identity include our skin color, sexual orientation, and birthplace – these we have no control over. Other areas are created by influence and if we do not make these decisions on our own, they are often decided for us. Leadership is not about being a part of a popularity contest. We cannot be successful and be flexible with who we are. You have a view as a leader, and it should coincide with the purpose that you want to achieve. The

careful choices you make about your identity will influence who follows you, how much passion they bring, and how successful you become.

Presence

Presence comprises the perceived and real impact a leader has on others. Either a leader uses their interactions in the moment, or they create the impact across legacy events over time. Presence reflects your ability to be agile in the moment and context. Your presence as a leader should be fluid and seen as the appropriate dance to the music playing in your life at the time. Your presence is made of a series habits and systems that provide confidence in the people you surround yourself with.

Leaders must master agility and make changes in their behavior to remain seamless in the eyes of others to be successful. The levels of respect earned, and the mandates created by you are often based on the level of the perceived authenticity you have with your team and in customer interactions.

Part Three: The Conversation

Refreshingly Direct Conversations

As a leader, to be more wrong successfully, you need to develop a mindset that will communicate to your followers (clearly) that you promote a safe space for error, failure, and learning. These are embedded within the Potential Impact Squared model. The conversations within the habits and systems of the model need to have that mindset too. Your people need to feel as if they can fail and make errors, admit to them, talk about them purposefully, and learn lessons from them.

One of the best ways to build a lasting relationship and trust with your people is through the experience of clear and direct conversations. The most effective conversations have a five-step infrastructure – a simple opening and follow-up, being intensely curious, listening and providing time for someone to feel listened to, giving advice or jointly finding a solution, and agreeing on the outputs and linking back to the overall purpose.

Part Four: The Four Leadership Styles

Host

No matter what your leadership style is, you need to be able to build rapport and make connections. To achieve a level of antifragility, it requires constant and careful nourishment, just like a good training program. To be a great leader, it requires a high level of empathetic listening.

The host leadership style focuses on paying it forward, with success coming from people playing the infinite game and gifting something to others with no expectation of return in the process. Hosts also engage with their people, bringing together those who will jell without implementing a project-based culture.

Energizer

Energizers inspire. When you are a leader, you are in charge of the stories that are streaming into your teams and followers. You have to be the one in charge of the narrative and the storytelling that affects the mood and mind-set of the people. It's your job to find what will inspire them as the energizer. As a leader, you need to find your own style to tell your stories. Energizers require the drive in their purpose to create successful situations even when it is wrong.

Disruptor

Disruptors are focused on what experimenting can bring to their leadership value. These leaders create a unique edge or difference in their approach, product or service, which requires an unbiased human-centered observation to unlock the ways of meeting unarticulated needs.

A large part of success focuses on shaping the market or sector through differentiation in product, service, or ways of operating. That is essential, because standing still will get you nowhere fast as a leader. The disruptor approach focuses on radical and new ideas but is about innovative thinking. Disruptors do not shy away from a challenge, instead embrace it, especially if it supplies a learning experience.

Catalyst

Leaders who have a catalyst style are able to play different roles in the lives of their people. They can be the role of mentor and coach, with each playing a significant independent role. As a leader, it requires agility on both accounts. The catalyst style is both reflective and developmental in nature, embodying the dual skills necessary for active leadership. The most important part to remember about a catalyst is using every moment as a teachable moment. The coach factor comes from giving the guidance necessary to utilize the teachable moments into strategy for success.

Part Five: What Next?

Your Journey Continues

The systems and habits of a leader are more focused on the long-game for leaders. Leaders have to build systems and habits that are sustainable and adaptable to the challenges of the future. That is why learning exactly what leadership styles you want to utilize in your role as a leader are important.

If you are faced with a situation where the support of your ecosystem is not immediately obvious, choosing the right catalyst may be necessary. The same applies with other leadership styles. If you find you are missing something – cultivating the skills and styles of your leadership may be the answer.

Conclusion

After reading, the steps to be better at being wrong is to start by stopping, pausing, reflecting, and engaging. Next, conducting a thorough leadership audit can help you identify the wrong and how to learn from it. Once you have the wrong, start analyzing it by asking "so what?"

Once you have direction you can begin working on your purpose and what it takes to get there. Take the first step, it is always the hardest. Leadership is about embarking on the journey – focusing on the small steps and small experiments in your life.

Part of being a successful leader requires the ability to be wrong, learn from it, and make for better situations ahead. By implementing the five different types of leadership styles, you can learn the most effective way to be wrong and learn the lessons necessary to achieve success. Failure should not be looked at as a roadblock but the first step at achieving something new. That is the purpose of working toward being more wrong – the more wrong you are the more right you can be come.

Colin Hunter is an author, mentor, entrepreneur, coach, CEO and Lead Guide to a business, Potential Squared, founded in 2001. Colin created the business to inspire leaders by disrupting the way they engage and develop their people. He and his global team specialize in creating immersive, measurable playgrounds to inspire new ways of thinking, systems and habits. Colin's individual passion is for experimentation in leadership, creating impact through presence in leaders and developing systems and habits embedded with purposeful practice for those leaders. **BeMoreWrong.com**

THE SUMMARY IN BRIEF

Building a dream team that is always at its peak performance is far from easy. But does that mean it's not possible? Does it take months (or perhaps years) to unlock maximum team productivity, collaboration, and engagement? Absolutely not!

The gap between where you are now and a 10 represents your company's potential. The book ***Be a Better Team By Friday: A Playbook for High-Performance Business Leaders*** will help you get to 10 fast. It contains the foundational skills and tools that turn groups of high-talent individuals into extraordinary work teams.

Having overserved high-performing teams reach exceptional levels for years, authors Justin Follin and David Butlein Greenspan lay out actionable and customizable steps for leaders to unlock the untapped potential of their teams and skyrocket their performance. The book also helps leaders grow motivation and engagement on the team, get more done with less work, build a sense of greater purpose, and ultimately become a better team by Friday!

IN THIS SUMMARY, YOU WILL LEARN:

- How to build a high-performing team and business.
- How to adopt the mindset of great leadership.
- How to know your and your organization's "Fundamental Why."
- How to stay focused and get things done.

Introduction

The title of this book, Be a Better Team by Friday, is both an assertion and a promise. The assertion is this: in a matter of a few business days, your team's performance can skyrocket. The promise is this: the practices outlined in this book will get you there.

Each chapter in the book is a practice, which stems from our years of working with hundreds of leaders and studying the habits that help high-performance teams reach exceptional levels. Here, you'll find the disciplines of practice which are the basic exercise to apply repeatedly to build your skills. Inside many of the disciplines, you'll see questions to ask yourself and your teammates to facilitate better conversations.

Aside from positively impacting your organization, the seven practices outlined in the book will also help you create healthier, more authentic relationships with everyone you care about including your colleagues, your friends, family, spouse, and most importantly yourself!

Chapter 1: Choose Your Mindset

Being a great leader is not easy. You will face challenges that would seem insurmountable. When you're a great leader, though, you move through hardship and accomplish goals despite the challenges.

The first step to being a great leader is to choose to be great. The next step is to empower your team to lead, too. Being a great leader does not mean you're a lone hero making all the decisions. It is about finding better ways to work together on your team when facing significant obstacles.

Everyone on high-performance teams chooses to excel. High-performance leadership mindsets enable high-performance collaboration. But before you choose your way of thinking, you must first realize that what you think is a choice.

Your mindset is your choice. It is the answer to the question, "How am I thinking about this right now?" To be a great leader, you must choose the mindset of great leadership. To be a great team, everyone on the team must choose the mindset of great teams.

It is often easier to focus on what's wrong than on what's going well. This is due to a phenomenon called the negativity bias. This bias tells us that things are much worse than they are. Escaping the trap of negativity bias requires choosing a different mindset about the situation. While circumstances might be out of your control, how you think about your situation is always a choice. Your mindset is the foundation that your entire leadership operating system relies on. The practice of choosing an empowered mindset is a simple one, but it requires tremendous effort. The three steps to help your team from a disempowered mindset to an empowered one include:

- Realizing you are in a disempowered mindset by practicing self-awareness
- Choosing an empowered mindset by shifting from complaining to creator, rescuing to coach, blaming to challenger mindsets
- Coaching each other to choose empowered mindsets

Chapter 2: Get Real With Each Other

In fast-growth companies, things change so quickly that the teams you worked with a year ago might look a lot different today. Teams build trust when they approach leadership as a conversation. When you practice deep listening, you empower your teammates to get real with you. You foster the trust that helps them be honest and vulnerable.

High trust equals high performance. Google's Aristotle Project concluded the single most important determinant of a team's performance is psychological safety. Listening is often the best way to build psychological safety in teams that don't have it. Through deep listening, you can deepen connections and encourage honest communication. When teams listen to each other, psychological safety goes up, which in turn builds trust.

Get real with each other to lay a foundation for better communication. The three disciplines of the practice of deep listening include:

- Listen to understand. Don't formulate your opinion while someone is talking. Instead, focus on understanding why someone is saying what they're saying and why it's important to them. When everyone listens to each other, they make decisions that are more inclusive than competitive.
- Be vulnerable. Your team's ability to get real with each other depends on everyone's ability to be vulnerable. Remember, trust takes time to build and only a second to break. To create an environment of psychological safety that leads to high performance, everyone must practice vulnerable exchanges in every conversation.

- Stop having Either/Or arguments. The Either/Or equation lies at the heart of every argument. Replace this habit and allow your team to include perspectives from all sides.

Collective deep listening requires a commitment from everyone. With consistent practice, collaboration, productivity, and happiness, your team will surpass everything you haven't seen yet.

Chapter 3: Know the "Fundamental Why"

The "Fundamental Why" simply means an underlying purpose or intention. A company's Fundamental Why creates a shared understanding across the organization. It serves as a core intention for employees to return to when they temporarily lose their sense of purpose. Your team's Fundamental Why should be what unites it. A meeting, project, or request that has a Fundamental Why answers the question, "Why is this request important to the person making it?" Knowing this "Why" leads to a level of intrinsic motivation.

All individuals have a Personal Fundamental Why as well. Ask yourself, "Why do I do what I do?" Other questions to consider as you make your way to Fundamental Why include, "What is important to me about the work I do besides a paycheck?", What achievements do I feel most proud of?", and "What professional obstacle have I overcome that's made me who I am today?"

Learning the Fundamental Why of each person helps you know what motivates them, find ways for them to do more of what they love, build deeper trust and collaborate better, and show them you care about them.

Make sure every request you make of others has a clearly articulated Fundamental Why. Get to know each of your team members' Fundamental Why. Give everyone the opportunity to share their Personal Fundamental Why with their team members, including managers. Finally, seek the commitment to your Fundamental Why out loud regularly and often. Share it with those outside your teams. Finally, ask for help in making your commitment happen.

Chapter 4: Give Feedback Like a Coach

Everyone knows giving and receiving feedback is essential, but most people hate it because they're used to experiencing feedback as bad news. But feedback doesn't mean criticism. It is information that leads to improvement.

If you're not receiving feedback on a daily or weekly basis, or if you regularly experience hostile pushback when you give feedback, you've got room for improvement. A strong feedback culture emerges when the team adopts a coaching style of leadership. This helps the whole team get better by giving each other feedback that leads to performance development.

But how do you put it all into practice? As a team, commit to the practice of giving and receiving feedback on a day-to-day basis. Regularly offer specific feedback about "what is going well." Include affirmations like "Nice job" and "Thank you." Usually, this affirmative feedback is enough.

When needed, give solutions-oriented suggestive feedback that usually begins with, "From my perspective…" When necessary, give more difficult, direct feedback about areas that need specific changes. Make sure you provide concrete examples such as, "When… you did… then this happened…).

Be considerate in both speaking and listening. When speaking to someone, have friendly body language and use a warm tone. Always give negative feedback in person. Turn difficult feedback into a dialog by asking, "What do you think? What do you see could be ways to address this issue?" Finally, practice care, dignity, and respect whenever you give feedback.

Chapter 5: Adapt Your Work Style

A great way to identify your strengths and weakness would be to use the TILT assessment. It covers four distinct styles: impact, connection, clarity, and structure. These four styles often allow people of diverse backgrounds and work styles to quickly work together on any team. By reflecting on how you communicate, you can quickly figure out how you can TILT.

If you're an impact-oriented person, you talk a lot about the big picture. You want to set goals and talk about results. Sometimes you act like you know everything and dominate conversations when you get stressed.

If you're a connection-oriented person, you talk a lot about people, big ideas, and feelings. You socialize ideas across the organization and make sure everyone is looped into your communications. Sometimes, you can seem checked out when things get too stressful.

If you're a clarity-oriented person, you cite research when anyone brings forward an idea. You are thorough in your reporting and presentations. When you get stressed, you get agitated by having to make decisions without more information.

If you're a structure-oriented person, you are the process planner and architect. You usually present each step of a plan in your presentations. When you get stressed out, you attempt to micromanage the process, which can make teammates feel stifled by you.

Map everyone on your team on the TILT quadrant model. Together ask, "Where are we strong? Where do we need to build strength as a team?" If you have a communication breakdown with someone, ask, "What is their preferred communication style on the TILT map? How can I adapt my style to fit theirs?"

Determine what TILT strengths you'll need each time you start a project. Identify the strengths of each person on your team. Share what you observed in a one-on-one conversation. All four styles create a well-balanced team. Once you understand how you TILT and how you don't TILT, you begin to recognize strengths in styles other than yours.

Chapter 6: Get Focused

Lower-performing teams are often plagued by a lack of strategic focus and inadequate time management. High-performing teams, on the other hand, do less but accomplish more. They focus on a few things and do them well. The practice of Getting Focused requires structure and discipline. It requires a strategy to work smarter instead of working more. This is where the value of the 80/20 model comes in. The premise here is that 80 percent of your results should come from 20 percent of your input.

Another mantra for attaining team focus is deploying the Big 2 Focus Goals. In keeping with the 80/20 principle, it suggests that you can usually focus on only three things at a time. Any more becomes too distracting to achieve well. With this in mind, there are not simply big, annual Rocks, but three quarterly priorities, three weekly priorities, and three daily priorities. Get clean on team and individual Big 3 Focus Goals for the year, quarter, and week. Make sure daily priorities work toward those Big 3 Focus Goals.

Apply the 80/20 rule for meeting scheduling as well. Ask yourself, "Do we need this meeting, or can this be done one-on-one or via email?" Make sure every meeting has a clear, written Fundamental Why and Agenda beforehand. If it doesn't, cancel the meeting. To avoid going down rabbit holes, list any off-topic issues in your parking lot. Have a different person in each meeting to manage the parking lot. Make clear decisions about every agenda item, including who does what by when. Always write out your decision registry and share it with everyone in the meeting.

Chapter 7: Get It Done

You probably have highly skilled people on your team. But for some reason, things don't get done. Projects start strong, but then they stall.

On the other hand, teams that accelerate are teams where every member owns the success of the whole team. As a team, you must commit to bringing tasks "over the finishing line." This decision, however, requires concrete action plans and doing what you say you'll do. Here's your roadmap to effective planning:

- Articulate a clear Fundamental Why for any project or initiative
- Create a clear, compelling vision of wild success
- Document a collective point of view of your current state
- Have a conversation about options for potential actions
- Decide what you will do
- Write out a plan of accountability to determine who will do what by when
- Always do what you say
- Make clear, powerful requests

Conclusion: Put It into Practice

Now that you know the seven fundamental practices that will make you a better team by Friday, it's time to put it all into practice. Start with Practice 1 and you'll see the results will extend far beyond what you can imagine from your vantage point now. After you feel you have integrated one practice, move on to the next. Within the first week of applying these practices, you'll notice your organization's productivity and engagement increase.

At first, incorporating these practices may feel awkward or seem hard. But once you commit to these practices, you will

be energized by how quickly your workday becomes easier, more productive, and increasingly engaging. Keep in mind that the shift to high performance is an ongoing choice. Your team will slip at times. After all, it's only human to fall out of practice sometimes. When you begin to see any warning signs, immediately jump back to the practice that will best recalibrate the team.

Throughout the journey, be patient with yourself and with each other. Good luck on your road to high performance!

Along with co-author and founder **David Butlein Greenspan**, **Justin Follin** is the co-founder and managing partner of Bluecase Strategic Partners. Drawing from David's PhD in high-performance psychology and their combined twenty-five years of organizational consulting expertise, Justin and David specialize in solving leadership cultural problems that inevitably come with scale.

Conclusion
Page 4

THE SUMMARY IN BRIEF

Be a Happy Leader goes beyond the lanes of biases and biology to help leaders around the world learn how to lead a more meaningful and purposeful life. It is based on positive psychology and neuroscience. It unravels a solid methodology to unlock happiness in both personal and professional lives. As a leader, you can navigate the lanes of this book to discover your very own happiness havens.

Author Tia Graham carefully crafts the roadmap for a meaningful pursuit of happiness and unravels what can be at stake when happiness takes a backseat in your life. Her evidence-based research and extensive experience in understanding the path toward happiness lays the groundwork for every leader who seeks to "lead happily." Through her work, she helps you understand that happiness is not impossible to achieve. With the right understanding, effort, consistency, and an unfailing belief in yourself, you can not only smile but also thrive as a leader.

IN THIS SUMMARY, YOU WILL LEARN:

- How happiness can be extremely beneficial for your personal and professional life and what it means to be a happy leader.
- What can be at stake if prolonged unhappiness replaces positivity.
- How your happiness and professional life are inextricably linked.
- What the Happy Leader Methodology is and how you can inculcate it in your personal and professional life.

Introduction

Somewhere down the line, as we grew older, we began to forget what happiness really felt like. Some of us came to a stage where answering the question, "what is happiness" seemed almost impossible.

Each one of us feels pain via stress, anger, fear, guilt, and sadness. But these occurrences must not permanently close the doors to happiness itself. Happiness is a commitment to your personal joy, contentment, and purpose while accepting the peaks and valleys of life. Being happy is more than possible and most importantly, happiness is directly linked with how well you, as a leader, would perform in your professional life. Through this book, you will know:

- What it feels like to create sustainable happiness and lifelong contentment.
- How many lives and careers you will positively impact if you have an exact methodology for success.
- What leading a healthy, fulfilled, and successful life truly means.

Part 1: Navigating Happiness In Leadership

The Calling Of Leadership

Being a leader today means juggling expectations, teams, technology, and never-ending demands. So, naturally, the work you do can seem overwhelming.

Amidst so many things happening in a leader's life, it can be fairly easy to not focus on being happy even when happiness, in itself, is the single most important ingredient that creates a successful life. But what exactly is happiness and how can you bring it into your personal and professional life?

Happiness takes conscious effort. Happiness demands your time. Happiness requires you to take all the necessary actions to design your life by keeping positivity and your personal well-being in mind.

Positive Leadership: What's At Stake?

Positive psychology researchers completed a "meta-analysis," a study of nearly every scientific happiness research article available. In this study, they reviewed over 200 studies on 275,000 people around the world. Their findings prove that happiness leads to success in your work, health, relationships, sociability, creativity, and energy."

But what happens when you're unhappy for long periods of time? Your immune system suffers – triggering sleep and digestive problems. Your personal relationships get filled with feelings of unfulfillment. Your self-esteem stoops which in turn tears you away from reaching your full potential. When you're filled with negative feelings, your career, your team, and your organization end up taking the blow.

Every leader knows what both happiness and unhappiness can bring to the table. But how can you possibly achieve happiness to thrive in both your personal and professional life? The Happy Leader Methodology is the answer.

Part 2: Be A Happy Leader Methodology

Eight Steps To Becoming A Happy Leader

Sometimes, there are parts of your job that may not be easy to handle. If, for example, you receive negative feedback from a stakeholder, boss, peers, or from direct reports, it can be highly likely for your motivation and psychology to take a hit. But good leadership is built on the foundation of happiness and greatness. The Happy Leader Methodology shines a guiding light on life, happiness, and achieving greatness as a leader. It lays out eight practical and comprehensive steps to becoming the leader you want to be.

Step One: Start With You

Step One is all about starting with YOU. It helps you to prioritize your happiness and well-being, find purpose in everyday life, cherish your physical body and mental state, cultivate positive personal relationships, live with awe, and understand the importance of continuous personal development and improvement.

Keep thinking about the happiest times in your life. It could be from recent times or from your childhood. The more you think about these times, the more it helps you understand your capability of being really happy and supports you in creating clear visions of what you need for your future work and life."

Cherish your physical body and start exercising. There exists a direct link between your exercise level and happiness level. Your mind starts to thrive when your body immerses itself in movement. Aside from exercising, make sure you follow a healthy diet and have a healthy sleep routine. The food you eat has the ability to make you happy or sad and

your sleep cycles can directly influence your decision-making, creativity, memory, and critical thinking.

Step Two: Zoom Out

Photographers zoom out to get the widest possible view of the scene. To leaders, it means to have a broad perspective and to view the entire organization and system, not just the area that is their responsibility. A broad perspective allows leaders to see divisions, challenges, and opportunities from many different angles, which positively affects decision-making.

Step Two teaches you to Zoom Out and widen your perspective on things. By practicing zooming out, you can see the business from your peer's perspective and become a stronger communicator during executive meetings – ultimately building trust and teamwork at the executive level.

Step 3: Execute Brilliantly

To execute brilliantly means that you are efficient and accurate in executing your job. This step helps you unravel how to get clarity of your goals and create boundaries.

Start by focusing on your speed. In a world where competition continues to grow every moment, it is critical for you to always stay one step ahead. Speed allows you to accomplish your work, analyze the success, pivot, and keep going.

Create comprehensive plans and take action. Accountability should always go hand-in-hand with the goals you set. The best approach for this is to create clear strategies with accountability and due dates for larger goals that you are looking to accomplish. Be a master at using your calendar and stay fully organized.

Step 4: Prioritize Relationships Over To-Do Lists

Your success is truly defined by the success of the members in your team. This step helps you prioritize really getting to know your team members and the stakeholders who affect both you and your overall team.

Take the time to understand your team's personality, backgrounds, strengths, and weaknesses. Ask them what sparks their motivation and the kind of communication they would be most comfortable with. Understand your stakeholders' perspective on the team, the company, the competitors, and the opportunities. Dissecting what your team and stakeholders want will help you understand how to specifically work with each of them."

Step 5: Your Number One Priority

Cultivate "Active Whole-Being Listening" to ensure each one of your team members feels heard. Being a great listener takes intention and effort. The idea is not to listen and then jump in with all of your ideas and suggestions. Instead, you want to partner with them to gain new insights and communicate solution ideas.

A great leader uses teaching as a tool to encourage their team. As a leader, you can teach in many different ways. For example, you can bring together your entire group and ask what topics and knowledge they would like to learn and make it a point to share valuable knowledge with them in a way that will constantly help them progress. Remember, when your team members are happy and motivated, they will be more productive, engaged, creative, and efficient. Your job is to boost them up and show them that you believe in them.

Lastly, think of an HR team as your partner and resource, not simply people to whom you delegate work. When leaders play an active role in recruiting, they stand a better chance of hiring valuable talent.

Step 6: Measure To Excel

The only way you can be "wildly successful" is if you find ways to consistently gauge your progress. But how exactly can you determine what to measure? The answer? Put the spotlight on your "Wildly Important Goals." These are the two to three most important goals for the team for the year. If a team achieves or beats its Wildly Important Annual Goals, they are viewed as successful.

Once you and your team master the art of measuring your goals, everyone will be aligned and connected with your organization's bigger purpose and goals, and less competition, improved cooperation, clarity, and vision will exist. "

Step 7: Be The Spark

Ask yourself, on a scale of 1 to 10, how energetic are you at work right now? Does your team gain energy from being in your presence, or are you draining them?

Energy is an open-loop circuit, meaning that the vitality you bring to a situation or group will be felt and taken in by the other people around you. Energy is powerful. It can be a positive force in your professional and personal success, and it can be very detrimental. "Emotional contagion" is a well-established phenomenon, where we can take on the emotional states of those surrounding us.

Your spark or your energy is the vitality you can bring to your group. Happy leaders tend to be more passionate and energetic about their work and this contagious energy later gets shared by their teams.

Step 8: Master Your Mindset

What does a mindset mean, exactly? "A "mindset" is a set of notions or assumptions held by one person or a group of people. Your mindset at work and in life directly connects to your happiness. Having a positive and optimistic mindset is a choice and is the result of effort and daily habits, or "rituals," as I like to call them.

The best way to master your mindset is to take your self-development game extremely seriously by consistently brainstorming and thinking about how you can grow and change. Only if you master your mindset, you can create an environment of self-development for your team.

Another way to work on your mindset is to remain open-minded and welcome new ideas instead of dismissing them without exploring them. When you are positive and open, you are happier inside and a much easier person to work with.

Part 3: The Ripple Effect

A Work In Progress

We are told how to be happy. You and I learn how to live and view the world from our parents, family members, and friends, and from how society tells us to view it. We are influenced by our cultures and where we grew up. We are constantly shown messages by the media. Society tells us how to be happy.

Happiness, however, comes from within. It takes conscious effort and some serious mental and lifestyle transformations. The happiness movement, the science of happiness, and adult neuroscience are changing the way people and organizations view happiness. It's proven that a direct connection exists between your happiness and your professional success.

By being a lifelong learner you can not only find new ways to be happier but also know how to flex, grow, and adapt to changing environments.

Conclusion

The plethora of benefits that being happy offers is often not acknowledged. Happiness is more than just showing up with a smile. It is the foundation for your personal and professional success. Happy leaders have higher levels of productivity and creativity. They carry optimism and energy that is contagious. They often attract the best talent and create the most loyal employees. Happiness also brings great health and professional success. So, with the countless benefits that happiness has to offer, the question emerges, why should there be any space for unhappiness in life?

Tia Graham is the Founder of Arrive At Happy (aah!), a Certified Chief Happiness Officer, and has worked with dozens of global companies such as Goldman Sachs, Four Seasons, and Kashi to elevate engagement, sales, and drive bottom line results. With multiple certifications in neuroscience, positive psychology, leadership coaching, and employee morale she supports executives and teams through advising and experiential events.

THE SUMMARY IN BRIEF

Communication is the glue that holds an organization together. It builds a strong connection in the workplace that improves productivity and brings long-term success. But how exactly can you, as a leader, build Supercharged Communication systems? How can you build a genuine connection with your people?

The book ***Be the Best Part of Their Day: Supercharging Communication with Values-Driven Leadership*** reveals three vital elements of effective communication: engaging and connecting at a personal level, engaging with intent through various mediums, and being mission-focused through united leadership.

Author David L. Schreiner lays our research-based and actionable strategies to connect with others, embrace authentic leadership, build a culture of positivity, energize people, and drive long-term success that is deeply meaningful. By helping leaders cultivate a mindset of kindness, abundance, and appreciation, he helps them truly "become the best part of their day!"

IN THIS SUMMARY, YOU WILL LEARN:

- How to build a solid framework for efficient communications.
- How to engage in the most impactful way possible.
- How to cultivate a mission-focused and values-based leadership.
- How to connect with people at personal and professional levels.

Introduction

As the CEO of Katherine Shaw Bethea Hospital (KSB), a rural hospital in Dixon, Illinois, I run into the people our hospital serves in the course of my average day. Some of these encounters had been positive while some weren't. I began to wonder if there was some way to turn things around and be able to make every encounter a better experience. I wanted every employee or person in the hallways to feel that seeing me was the best part of their day. That's when I took up the leadership doctoral program at Benedictine University.

I ended up interviewing CEOs at five of the best-performing rural hospitals in America, and I spent many hours examining the data behind Supercharged Communications (through research I designed myself). I realized that the results of my research would change my life and those of the people working in and around the hospital. I also realized it had applications everywhere. We are all leaders. How can we move through the world making a difference? I think I've found the formula, and I am excited to share it with my readers.

This book is for you if you've wanted to discover the secret to making your communications transparent, honest, real, compassionate, inspiring-and Supercharged.

Chapter 1: The Best Part of Someone's Day

At its core, communication is really about how people feel when they spend time with you. I will give you an example. In the past, if someone came to me complaining that a bill was not itemized properly and that they were frustrated by red tape, I would have absorbed their criticism and called billing to try to sort it. I'd make some vague reassurances (which I meant).

But now it's different. As you'll learn in this book, I approach situations like this totally differently. I now use Appreciative Inquiry. Appreciative Inquiry (AI) is a proven, collaborative, strength-based approach to facilitating positive change and building capacity in organizations, groups, and communities.

So, using our example of the bill someone is unhappy about, I listen. I pause. And then I start asking questions like: If the bill looked EXACTLY as you want it to look, describe it to me in vivid detail. What would you like to see on it? This kind of communication style changes things in an instant. First of all, rather than inviting a laundry list of what is wrong with the bill, it invites specificity of what is needed for it to be right. It switches our mindset from a deficit mentality to an abundance perspective. More importantly, it makes others feel "heard." You are listening – and for many people that is all they want.

Appreciative inquiry requires you to take your constituents into consideration. Your constituents are the people who matter most to you in your current position beyond just your stakeholders or department heads. The entire idea of Appreciative Inquiry is very much centered on that first word. According to the Merriam-Webster Dictionary, when you appreciate someone, you "grasp their nature, worth, quality and significance." You "value or highly admire" them. You also "recognize them with gratitude."?

The "inquiry" part is based on asking questions with respect and listening, following through, and making sure that you truly understand the other person's concerns (not just "smile and nod"). Then, with that understanding, it's trying to see if there's a way that you can help them think through it or give them suggestions.

I would like to take us through, in order, each piece or step of this Supercharged Communications approach. You will see each part has a "D" word to represent it, as used by the Center for Appreciative Inquiry:

1. Definition. Before you approach a problem, you need to define it. Just because there is a problem does not mean it has to be viewed through a negative lens. The first step is to frame your question in a positive way. Instead of asking, "Why does our customer service department have longer call times than our competitors?" ask, "What are some of the positive aspects of our customer service department—when were we firing on all cylinders? What specifically makes our call center best in class?" This approach involves "flipping the script" to ask what your organization wants more of, as opposed to a focus on the problems you want to solve.

2. Discovery: Part 1. You have flipped the script. Your inquiry is down a positive rabbit hole— not a negative one. Now, you simply have to dig deeper into that positive. This involves interviews and collecting stories. Questions for this portion of Appreciative Inquiry might include: "When are we at our best as an organization?" "What are the stories that show that?" "What are the elements in place in those stories?" These stories can energize your constituents. By building on the positive, people can feel excitement or hopefulness – far more than stats, bar graphs, and a lot of internal "jargon-speak."

Frustration is often a sign of the need to dig deeper and do more exploration.

3. Life-Giving Forces: Discovery Part 2

Appreciative Inquiry uses a term called life-giving forces (LGFs). These are the "elements and experiences that represent the organization's strengths when it is operating at its very best."

As the name implies, LGFs are those elements that should be nurtured, developed, and grown.

4. Dream

The next part of Appreciative Inquiry is taking these positives and creating a dream or vision. In keeping with the earlier theme of connecting to stories, the dream should not be a list of KPI targets (not that those aren't important). Instead, it should include visual images and word images

5. Design and Destiny

There are few things more frustrating than working feverishly on a problem or a vision, to channel real solutions, to come to a consensus with your peers and colleagues on the best course, and then to see those ideas aren't acted upon. However, in Appreciative Inquiry, this is when the real work begins. Once everyone is on board, there should be energy within the organization for this new dream. How can innovation be inspired to make this a reality? What can be done to improvise and embrace the new future for your company, healthcare system, or nonprofit?

6. Identify your constituents. All of them. Remember that Appreciative Inquiry embraces true appreciation, compassion, and grace toward others. It also requires reframing your inquiries from negative to positive. Remember your D's: Definition; Discovery; Dream; Design and Destiny. Words and visions, stories, will captivate and inspire more than a lot of data and graphs.

When instituting changes, culture can be stubborn to transform. Start with yourself and cascade it out from there.

Chapter 2: Values-Based Leadership

Appreciative Inquiry must be closely intertwined with values-driven leadership. "Values-driven" leadership implies a conscious commitment by leaders at all levels to lead with their values and create a corporate culture that optimizes financial performance, ethical practice, social contribution, and environmental impact.

Some life-affirming values include honesty, integrity, excellence, courage, humility, trust, care for people, social responsibility, and environmental responsibility. Values must be lived and be a seamless part of how you operate as a leader. Bolster your values-driven leadership through the use of your Life Tree. Here are the elements that are important to define in this tree:

- Your definition of values-driven leadership. If you were picking the one thing that is most important to your leadership style when you were operating at the top of your game, what would it be?
- Leader as results driver. What results do you expect from your role as a leader?
- Leader as teacher and learner. If you were leading as a mentor, teacher, or colleague, what would that look like?
- Your leadership life perspective. How do you want to be as a person?
- Leader as a relationship builder. What do you want to bring to every encounter with you? The goal is to be the best part of someone's day.
- Change leader. If you were looking at your organization's key metrics and you were able to be in the outstanding category in every one of them, what would that look like? What would you have to do?
- Leader as an authentic self. This is where you describe your most authentic self.

Chapter 3: Arriving at Supercharged Principles of Communication

I wanted my readers to know that the Supercharged Communication Principles I distilled down from my research is, indeed, research-based. I set out to study CEOs

at top-performing rural hospitals to get at the secrets of engagement. What I discovered were principles and methods that could be utilized across all sectors of business. I shared the design and focus of the study, as well as who I interviewed, and my approach to those interviews. I focused on three types of leadership: Authentic, Servant, and Positively Energizing. Through this study, I discovered the Four P's of CEO engagement:

- Leadership "Presencing" (engaging in the moment). Leaders are "on stage" the moment they get out of their car at their workplace. The words they say are magnified and the actions they take are enriched and spread contagiously throughout the organization. The interactions experienced with team members greatly influence and shape organizational culture.
- Purposing (Communicating vision and values). In today's uncertain, complex, and ambiguous times, many employees across all business sectors have an embedded level of anxiety about their organization's sustainability. Communication of the system's vision and values is imperative to build trust, which can help offset such anxiety.
- Patterning the Fabric (keeping the organization connected). Communication is enabled in a healthy, engaged way when leaders create trust and understanding. Team members need to see leaders in the hallways, cafeteria, and all departments and clinics. You can't create a cohesive fabric as a leader if you are not one of the threads in that fabric.
- Promoting Positive Change. Observations of a hospital CEO include the fact that healthcare (or any other industry) is changing so quickly that if senior leaders are not out in front and doing the right things with their team and people, change efforts will fail.

In the end, I found three primary Supercharged Engagement Principles. Each then had five elements – practical, doable methods that actually work and that you and your team could start implementing right now:

- Engage and connect at a personal level
- Engage with intent through various mediums
- Be mission-focused through united leadership.

In each of the next chapters, we will focus on one of these areas, along with the five actionable engagement methods.

Chapter 4: Supercharged Principle One – Engage and Connect at a Personal Level

The principle of Engage and Connect on a Personal Level includes five key parts:

1. Ask Great Questions and Generate Positivity.

Asking great questions of your team often includes having people think about when they were performing at their best. It's about reminding people of their worth and reminding a team of the times when everything went right – and then chasing those results. Asking great questions involves one very important trait: cultivating your curiosity.

2. Develop Outstanding Listening Skills and Practice Them Regularly

More than anything, I think asking great questions has another piece: compassionate listening and active listening. You don't jump in and try to "fix it" right away. Allow the other person to speak fully. Be patient. If you don't have an answer, it is perfectly fine to say, "Let me get back to you on that after I look into it." (But then make sure you, indeed, follow up. That is an essential key to developing trust.) Active listening involves paying attention. Your eye contact and body language should reflect that you are interested in what the other person is saying.

Be active in your unspoken cues. Nod your head. Occasionally add a filler like, "Go on," or some short, encouraging phrase showing you would like the speaker to continue. Provide feedback. You can use the technique of mirroring in order to ensure you have "heard" the intended message. "What I am hearing you say is…" and repeating back, in your own words, what you thought the other person said. Ask open-ended follow-up questions if needed. Respond appropriately. Demonstrate empathy, understanding, and compassion, and withhold judgment.

3. Be Accessible and Show an Interest in Member Concerns.

This step involves thinking about your accessibility and being proactive to improve it. A few ways to become more accessible to your people include having an open-door policy, responding to emails instantly, giving people time when they need to have a word with you urgently, sharing your number so people can reach out to you after work hours, and more.

4. Find Ways to Express Gratitude

Emotional authority is very nuanced, and all types with this authority need to get to an emotional neutral before concluding.

Studies suggest that nine out of ten people would accept earning less money if their work was meaningful to them. However, regardless of the reasons someone works, we all like to be recognized for our efforts. But gratitude goes even beyond that. Gratitude is a mindset. Obviously, bonuses and raises demonstrate appreciation. However, here are some other ideas for employee appreciation that you might implement:

- When your people achieve a goal or demonstrate good conduct, you can show appreciation in the form of extra days off, modest gifts, or simply recognizing them gracefully.
- Take your people on lunches.
- Celebrate milestones using small gestures like a cake, a bouquet, or gift card.
- Offer wellness offerings such as a yoga class.

5. Find Ways to Interact Through Rounding

Rounding is exactly what it sounds like – making rounds. You might walk the factory floor or through various departments. In a large company, you would obviously break it up, perhaps trying to get to each department once or twice a year, or once a quarter. But it's important to be seen – this is about connecting. No more hiding in the office.

Chapter 5: Supercharged Principle Two: Engage with Intent Through Various Mediums

In this chapter, we're going to talk about engaging with intent and doing so through various mediums. Our second Supercharged Communication Principle has five elements:

1. Find a rhythm of regular communication with key constituents. Look at all your communication and examine the effectiveness of each medium as well as its frequency. In my case, most of my videos and communications are now weekly. And some I play by ear.

2. Be transparent with high frequency. Only through transparency can you impact people's lives positively, set clear expectations, shield your people against workplace anxieties, and keep unnecessary gossip at way.

3. Use multiple channels to communicate your message. Meeting people where they are, including in their attitudes toward tech and communications means utilizing a mix of channels and messaging. The seven main channels of communication include:

- Face-to-face
- TV radio, broadcast communications
- Mobile communications, including texts
- Phone messages, voicemails
- Slack and other instant messaging channels
- Email
- Social media

4. Look for ways to overcome engagement challenges. Engaged employees demonstrate enthusiasm. There are more productive and willing to go that extra mile. But engagement is not a one-size-fits-all solution. Some barriers to successful engagement include the lack of a clear mission, information overload, and inconsistent communications. No two workplaces can whip up the same engagement magic but finding ways to overcome these barriers is a great first step to boosting your engagement.

5. In times of crisis be intentional about communicating differently. Every day, corporations face crisis events such as financial crises, organizational crises, personnel crises, natural disasters, and tech crises. In these situations, immediacy is essential. When your employees and stakeholders are not informed, it creates an information vacuum. When there is a vacuum, gossip, false information, rumors, and even outright hostility can take its place.

Chapter 6: Supercharged Principle Three: Be Mission-Focused and Present United Leadership

Your mission is your true north. When leadership has a clear-eyed focus on the bigger mission, the trust within the organization deepens. Let's discuss the five essential parts that makes a leadership mission-focused.

1. Keep the Focus On Your Mission and Know Your Audience – Be Prepared.

Every corporation or organization has its own unique mission. Companies need to sell products and services, they must answer to their shareholders, or their stakeholders, or the people whom they serve. But aside from that, most companies also have a bigger mission, one that often reflects a commitment to environmental, social, and governance, commonly referred to as ESG. Missions are usually also straightforward-the better to remember it. For example, TED's mission is "Spread ideas." LinkedIn's is "To connect the world's professionals to make them more productive and successful."

2. Vocally Support Team Members and Encourage Healthy Debate.

When you don't hesitate to vocally support team members and encourage healthy debate, you are also building a place of trust. When you have trust in your leadership and your teammates, disagreements come from a place of "How can we all do this better," not accusations or resentments.

3. Ensure Team Members Feel Informed and Included.

Earlier, leadership was usually autocratic. It was a hierarchy, fairly linear, and top down. Now, leadership is more people oriented and collaborative. I may be the CEO, but I am part of a leadership team. We now expect leaders to be inclusive. Instead of barking orders or commands, we inform and use our soft skills, like Supercharged Communication, to pull people together into a cohesive team.

4. Build a Structure to Support Key Leaders.

Provide your leaders with the structures and methodology needed to elevate communications and ensure they have your full support when it's time to implement something new. This not only helps avoid silos but also leads to a more collaborative space.

Chapter 7: AI and AI

Appreciative Inquiry and Artificial Intelligence both seem to take a prominent place on the horizon of communications. But are the two "AI's" compatible?

Some concerns surrounding artificial intelligence include lack of creativity, biased algorithms, data privacy concerns, lack of human touch, potential for communication misunderstanding, lack of personalization, and resistance when introducing new tools into the workplace. But this tool also comes with powerful advantages such as customized communications, potential for quick content creation, measurement and analysis capabilities, increased efficiencies, and elimination of human errors.

The conclusion? It's important to remember that ultimately artificial intelligence is an "and" tool, not an "or" one. With the right apps, tools, and approach, it can enhance your communications, streamline them, create efficiencies, and enable personalization with a few keystrokes. But you as human must still put the thought into your approach.

Chapter 8: Putting It All Together

So, how do you apply Supercharged Communications principles, as well as Appreciative Inquiry, in your organization and life?

Begin with the Life Tree and use it to crystalize what you want for your yourself – as well as your family, your organization, you bigger community, and even the world. Take the time to create the picture of your values and life and what is truly important to you. Remember though, trees are living and breathing organisms. Our trees will change as we evolve in our leadership.

Analyze where you are personally by revisiting your Supercharged Principles and the approaches beneath them that bring them to life. Use the same step to analyze where your organization is. Look at the scores and consider where there is misalignment and the potential reasons for that. Look at your strengths and think about how you can build on them. But if you have lost sight of your mission and purpose, you need to figure out how to bridge that.

Conclusion: How Can I Help?

Most of the people I know go into healthcare because they want to help people. I know I did. We may think of "helper" professions as those in, for example, healthcare, teaching, or social work. But regardless of your profession, there is the adage in business that you are not selling a product but a solution. You are helping people – whether you are providing a service, leading a rural hospital, or have a B2B product that helps your customers solve a business problem.

I invite you to spend the next month typing into your phone, or scribbling into a little journal, anything that touches your heart and soul over the next four weeks. Write down your experiences. See how those little moments relate to your Life Tree. At the end of these four weeks, update your tree. Continue working on these reflections as you evolve into someone who becomes "the best part of their day!"

David L. Schreiner, Ph.D., is a values-driven leader who lives in the moment, has an unquenchable thirst for continual learning, challenges existing practices, produces positive results, innovates to improve the lives of others, and loves unconditionally. He aims to be a missionary for excellent health and vibrant communities. His research has focused on the area of excellence in communications and authentic leadership.

THE SUMMARY IN BRIEF

Have you ever met someone, and within one or two minutes, you know that they're special? That they stand out from the crowd? They are the energy in a room. They have a spark that lights up their environment. They don't seem to have trouble succeeding. And they seem to be the exception to the rules the rest of us are bound to. They are Unicorns and you can be one, too.

That may sound like a crazy promise, especially in today's hyper competitive and ever-evolving work world. But author William Vanderbloemen has found a way to achieve this, based on data collected and studied over the course of his career as the founder and leader of an executive search firm. With thousands of repetitions under his belt, he is pretty good at spotting Unicorns. In fact, he's not only learned how to spot them, but what qualities and habits they have in common. And in ***Be the Unicorn: 12 Data-Driven Habits that Separate the Best Leaders from the Rest*** he's going to share them with you.

IN THIS SUMMARY, YOU WILL LEARN:

- Why being overeager is not a weakness.
- The role agility plays in personal and corporate success.
- Why being prepared is better than playing hard to get.
- How likability trumps competence.

The Fast

We've all been told to play it cool at some point in our lives. Looking overeager weakens your position, right? Wrong.

Speed wins.

Unicorns know this. Response time matters. In business and relationships, being quick to respond almost always pays off.

Okay, so "be responsive." Is that it? That's it. While this seems like an easy one to hack—and indeed is the easiest of the twelve traits—it's harder than it sounds. Acting fast isn't always in our nature. Some of us come naturally to the habit of rapid response. The rest of us have to hone this skill.

There are barriers to speed but you can break them. Two things can keep you from living up to your potential as a member of the Fast:

1. Access to the opportunity
2. Fear

You can't respond quickly if you never receive the message. Maybe your phone is charging in the other room or maybe you never check your email. That's not to say you need to be accessible all the time, but you do need to allow for messages and opportunities to find you in the first place.

But being the Fast is not a matter of saying yes to everything. It's a matter of determining what your answer should be quickly. Fear can paralyze your decision-making and lead to overthinking.

Fear loves to make you overthink. Overthinking makes you safer, right? You're more likely to get the right answer or work out all the possible scenarios if you overthink. Wrong. "Thinking" is valuable. Overthinking is not. Be confident and respond quickly.

The Authentic

Living in the Google era means there is no hiding. Whatever secrets you have will be discovered. The delivery (or lack thereof) on whatever promises you make will be found out. Authenticity is quickly becoming a differentiator between the best candidates for jobs and the rest. So what are the ways to develop your own authentic and transparent self while maintaining your sanity and privacy?

In our online lives, pictures are polished and reality is spun. With endless Instagram filters, software, and an isolated world, it's just a lot easier to look better online than you really are. But those who can develop the ability to be authentic in their work and in how they present themselves are both rare and in high demand.

The keys for authenticity are not the same as the keys for perfection. In fact, perfection can be a real turnoff. For example, have you ever been fired? Have you ever admitted it, particularly in a job interview? Most people don't.

In high stakes situations, such as job interviews, people aren't typically transparent. People aren't usually authentic. If you can spot someone who is authentic, you've spotted someone who stands out of the crowd. If you want to be a Unicorn, you need to get comfortable with authenticity. Here's how.

Don't be afraid to share examples of where you've messed up, but there's no reason to overdo it. Authentic people have a way of sharing their mistakes with humility, bringing people together. This means you do not need to put yourself up on a cross or hire a tall nun to walk next to you crying, "Shame" all the time. Admit your mistakes or that you're struggling, and move on.

Not only are these practices good for cultivating authenticity, it turns out making mistakes and owning them helps us learn and retain knowledge much better than if we'd gotten it "right" in the first place.

The Agile

We don't need science to tell us what we see happening in real time: Getting older means getting less agile. Every day, we lose a little bit of that flexibility, a tiny path in our plastic minds.

But the world is changing, and agility is more important than ever. No matter what the circumstances, the Agile succeed. The pandemic showed us just how important it is for businesses to be agile. "Pivoting" and innovating were the difference between thriving and folding when COVID-19 suddenly changed the way we lived. Agile businesses are the product of agile people who—and this is important—are allowed to exercise their agility in the workplace.

The Agile are generally positive people who can problem-solve. They'll roll with the changes, adapt quickly, and push back only when absolutely necessary: a hiring manager's dream.

To cultivate agility at work:

Have you ever heard the phrase "build a bridge and get over it"? That's what agile people do when something changes.

- Don't add waste to projects; simplify things.
- Don't waste time during meetings.
- Don't have meetings at all if you can help it.
- Always look for easy ways to tweak the status quo and modify processes to work for your own team's needs.
- Don't be afraid of upsetting others with change.
- Celebrate when being agile moves the ball.

Have you ever heard the phrase "build a bridge and get over it"? That's what agile people do when something changes. When you're agile, your ability to become a Unicorn increases exponentially.

The Solver

When faced with challenges, people can either choose to be on the problem side of the equation or the solution side. Those who choose to find solutions, who refuse to be victims, and who spend energy moving past those challenges are irreplaceable.

There is a particular mindset that is prevalent in Solvers and in a world that is moving faster and proving less certain than ever, developing this ability will raise your value like never before.

Even though there is a higher risk of error, solving is better when done with a group. Solving problems in a group can be threatening, exhausting, and frustrating, but studies show that, when they're done right, group projects in a professional setting lead to innovation that wouldn't otherwise have happened.

You know who does like to solve things in a group setting? Millennials. Congratulations if you're a member of this generation. You're more likely to be better at adjusting to whatever the workforce throws your way. You're also better at dealing with conflict. These qualities correlate with successful workplace collaborations. Not surprisingly, millennials value collaboration and are some of the most successful Solvers.

Tips for cultivating a Solver mentality at work:

- Encourage humility and lifelong learning.
- Celebrate Solver victories and give credit to individuals
- where it's due.
- Ask that staff bring solutions to the table at each meeting; even if they're bombastic and unachievable, it puts them in the right mindset.
- Language counts: rebrand "problems" as "possibilities."

Being a Solver will help you go far, particularly if you solve collaboratively. People who lead with "we" are both exceptional and amazingly valuable in whatever situation they find themselves in.

The Anticipator

There are some people who develop the ability to see what's coming next; to read minds and trends well enough to be able to "see around the corner." They're Anticipators. Those who anticipate rise above the crowd. They actually do almost see the future. You can too.

Our brains are the ultimate anticipators. Author Lisa Feldman Barret has done extensive research on this. She writes, "In a very real sense, predictions are just your brain having a conversation with itself. A bunch of neurons make their best guess about what will happen in the immediate future, based on whatever combination of past and present that your brain is currently conjuring."

This feature of our brains has helped us out for as long as people have been on this earth. In modern times, our brains are still at it, helping us survive today's perils. You don't need to have any special psychic ability or gift. Anticipation is something that you have to practice, focus on, and develop. Not by looking way out into the future but by seeing what's right in front of you.

You can learn to be a better Anticipator by knowing yourself, your history, and your surroundings. Another big part of being an Anticipator is knowing you can't anticipate

everything and being able to adjust quickly. Anticipators are cool, calm, and collected. At least that's what they appear to be. This helps in winning over everyone they engage with.

The Prepared

Luck happens to the prepared. Those who do their homework always have a leg up. But in today's world, learning how to prepare for a job, an interview, and a relationship has changed drastically. Being prepared in the new world is a key to rising above the ordinary crowd.

The founder of the Scouts, Robert Baden-Powell, chose Be Prepared as the organization's motto. It means, he wrote, "You are always in a state of readiness in mind and body to do your duty; be prepared in mind by having disciplined yourself to be obedient to every order and also by having thought out beforehand any accident or situation that might occur, so that you know the right thing and the right moment, and be willing to do it."

We can take the "be obedient to every order" part out of our definition, but thinking things out beforehand is definitely the jam of Unicorns.

When a candidate has shown that they've put in the work to learn about your company, they have an obvious advantage over candidates with a more nonchalant attitude. Playing hard to get doesn't often work with hiring managers. Best to wear your heart on your sleeve and show up more prepared than a Scout.

How to cultivate preparedness at work:

- Encourage "opposition research." It's not enough to know your position on a topic; the top 1 percent know their opponents' objections and are ready to handle them.
- Practice poking holes in plans and ideas in a constructive way. This will help your team get thinking of and prepared for all scenarios.

Prepared people do their homework before interviews, meetings, and presentations. Like the Anticipators, the Prepared also see the whole picture. They inspire confidence and have an easier time gaining buy-in.

The Self-Aware

The world has never been noisier or busier. Having the ability to be self-aware, to know weaknesses, to realize where you are in a crucial conversation is perhaps rarer than ever. Learning the process of self-awareness will cause you to stand out in a noisy, busy crowd.

Socrates didn't write much (if anything) down, but his most famous advice lives on as some of the best: "Know thyself." Those who are familiar with their strengths and weaknesses and who are honest with themselves are most likely to be Unicorns.

Self-awareness isn't just nice to have. Sure, it makes your life easier and the lives of anyone you interact with easier. How many of us wish houseguests were more self-aware when deciding how long to stay at our homes? Self-awareness, like so many of the traits Unicorns have, is a survival skill.

When you're self-aware, you're not going to put yourself in danger or set yourself up for failure. Knowing your strengths will allow you to position yourself for the win. To know what you can confidently and capably do is essential to standing out.

Being self-aware also makes you better at finding solutions. Knowing yourself comes with a guaranteed pinch (or more) of humility, so when a self-aware person is faced with a challenge, they can decenter themselves from the issue. Being self-aware is knowing all about you while knowing that it's not all about you. Whatever the crisis, the Self-Aware remain even-keeled and committed to the goal.

Self-awareness is the key to a lot of happiness, too. People who are self-aware are more creative, more effective at their jobs, better at relationships, better leaders, and more likely to be promoted. When it comes to knowing yourself, ignorance is not bliss.

Cultivate self-awareness by practicing humility and patience, trusting others to help, learning your limits, and pushing yourself to grow.

The Curious

Many of humanity's greatest minds, from Socrates to Einstein, celebrate curiosity as a key factor of success. But being curious is hard. We're not being offered potions to drink and rabbit holes to climb into at every turn, after all. And what's surrounding us on a regular basis is mundane. It's boring. Can we be expected to simply cultivate curiosity out of nothing?

While many of the other twelve traits of the Unicorns are learned over time, curiosity is one that comes as a factory setting.

Absolutely! You don't need to have curiosity thrust upon you. You can make your own. You can learn to find even the most prosaic interesting, ask questions, and listen to the answers with interest. This is what Unicorns do.

All of us are born with curiosity. While many of the other twelve traits of the Unicorns are learned over time, curiosity is one that comes as a factory setting.

Curiosity is any time we take a genuine interest in someone, become absorbed with a show on the nature channel, or get caught up in our kid's research project. Curiosity is looking around us and letting our brains be captivated.

Our brains actually reward us for being curious with a boost of dopamine. Research has also shown that curiosity is good for our mental health. Anxiety, for example, is not compatible with the feel-good, mental high-fiving your brain does when you're wondering and discovering.

It's not always easy to remember to be curious. Life gets in the way. A lot. But as much as you can, follow the advice of author Clarissa Pinkola Estés when she says, "Practice listening to your intuition, your inner voice; ask questions; be curious; see what you see; hear what you hear. . .These intuitive powers were given to your soul at birth."

The Connected

It's always been about who you know. Connections are king, especially when it comes to getting ahead. Think of connections as relationships you can build from anywhere. Being connected is about more than what powerful and influential people you can network with. It's about being a good person to all people because you never know where your life may lead.

Experts estimate that between 75 and 80 percent of jobs are won thanks to personal or professional connection. Networking is more important than ever. But knowing people isn't always enough. You can be in the same room as someone or be "friends" on all the social platforms, but if you can't connect on a human level, you're not going to succeed.

Hiring managers possess better-than-average judgment of character, but they still appreciate people vouching for a candidate. Even better, when a position opens up, they can always rely on the Connected to spread the word and get good names in the ring.

Tips for cultivating connection at work:

- Offer referral bonuses for team members who recommend good candidates.
- Encourage networking; give team members allowances for professional memberships and conference attendance.
- Mentor, mentor, mentor.

Life isn't a straight line. It's a spiral. While you're climbing the mountain of success, seek connection with others. Always err on the side of sending the text or forwarding an email if it means it might help connect someone you know with someone who needs it. Sixty seconds of your time could change someone's life, so make the effort. Being kind has a shelf life, and if your connections think of you as one of the good ones, all kinds of doors will be opened to you.

The Likable

It's amazing how often the candidate that prevails is simply defined by "plays well with others." Many companies end up having to fire (or wishing they could fire) a "brilliant jerk" on staff. But the Likable have the ability to stay employed and even get promoted simply through relational equity, a store of goodwill built up with another person over time.

Learning to be likable is easier than you might imagine and with a crowded, noisy world, this trait may end up being more important than any other.

Likability trumps competency almost every time. Stay likable and the doors will be flung open wide. What's more, your likability will protect you from the consequences that may come with not being quite as competent.

Have you ever noticed that likable people really never talk about themselves but always turn the conversation toward

you? Think about how this principle could help you in your professional life. In sales meetings, think how you can turn the conversation back toward the customer. In leadership situations, share stories and examples of other team members' wins. When you're speaking your vision for your organization's future, make it about everyone in the room.

Being likable isn't the same as being a people pleaser. People pleasing comes from fear. Being likable comes from confidence. If you're worried about crossing over into people-pleasing territory on your journey to perfect your likability, don't be. As long as you have healthy self-esteem and your likability is an expression of your true self, you won't become a people pleaser.

The Productive

Being productive is about making the best use of your time and distinguishing yourself among the crowd. It's all too easy to kick projects down the road and let distractions get the best of you.

With the rise of social media, instant messaging, and an on-demand world, attention spans are falling like a stone. More time gets wasted than ever in the workplace. Conversely, when a productive person shows up to a job or task, they shine brighter than ever.

There's not a one-size-fits-all prescription for productivity, but there are some key guidelines to follow. Being productive comes down to a few factors:

- Knowing how you work best
- Staying organized
- Valuing outcomes over output

You've got to know how to set yourself up for productive success. This comes down to letting your brain do what your brain does best, without distractions, and finding the right circumstances for that. If you have the option of working from home or not, it's important that you know which situation suits you better. When at work, keep track of your productivity during the day. Find out when it's highest and when you're in a slump. Plan accordingly.

Most people have their own system of to-do lists and productivity strategies that work for them. Apps, email reminders, pen and paper—it doesn't matter how you do it; the important thing is that you do it to stay organized.

Metrics certainly have their place, but measuring productivity in output is outdated. What really matters are the outcomes, not the output. There's not a lot of room for creativity, discovery, or innovation when output is being tracked. When outcomes are the concern, however, then true, meaningful productivity can happen.

Unicorns are not only productive; they know the best ways to become productive.

The Purpose Driven

Some people are driven by a well-defined cause that supersedes money. Developing your sense of "why" will accelerate the "what" that you do in a way that makes you winning and irreplaceable.

You don't need a disaster on a global scale to be purpose driven. Common, everyday goals drive the Purpose Driven; the only difference is that these goals add up to more than the sum of their parts.

Unicorns know that professional success depends on two things:

1. You have a strong sense of purpose.
2. You find an organization whose purpose aligns with yours.

McKinsey did a deep dive on purpose in the workplace post-pandemic. They found that COVID-19 caused an estimated two-thirds of workers to reevaluate their purpose at work and in life. (Hello, Great Resignation.) This was a good thing as it forced both individuals and organizations to uncover and define what their purpose was.

The McKinsey research found that when employees feel that their purpose is aligned with their organization's, benefits include "stronger employee engagement, heightened loyalty, and a greater willingness to recommend the company to others." When you have a purpose and when you find an organization that shares that purpose, you both benefit.

Tips for cultivating a purpose-driven workplace:

- Have absolute clarity in your mission.
- Understand what motivates you and what motivates your team.
- Celebrate when you "catch" team members living the purpose.

To be purpose driven, it's essential that you know yourself

well enough to know your passions and interests. Purpose comes from within. Once you have your purpose, hold onto it, and keep it front of mind. Distill it into as few words as possible and then drill it home at every opportunity. Unicorns are very clear on their purpose.

What's Next?

The Unicorn Tapestries are a series of intricately woven wall hangings made at the turn of the sixteenth century depicting a unicorn and its capture. Although his story is fraught with hunting dogs, people clamoring for a grasp of his magical horn, and his actual death, the final panel shows the restored-to-life unicorn content in his new position, wearing an expensive collar and sitting idyllically under a tree.

People wanted this unicorn. People sought out this unicorn. Now, the unicorn sits in a place of honor, celebrated and valued by people who know how special he is.

You can stand out, be special, and succeed, no matter what comes your way. We can't predict the challenges that await us, but we can be ready for them. Develop and grow these traits, and you will be more than ready: you'll be a leader, a sage, and a visionary.

You'll be a Unicorn.

William Vanderbloemen has combined over 15 years of ministry experience as a Senior Pastor with the best practices of executive search to provide faith-based organizations a unique offering: a deep understanding of local church and theology with the very best knowledge and practices of professional executive search. Prior to his founding Vanderbloemen Search Group, William studied executive search under a mentor with over 25 years of executive search at the highest level. His learning taught him the very best corporate practices, including the search strategies used by the internationally known firm Russell Reynolds.

Becoming Your Best

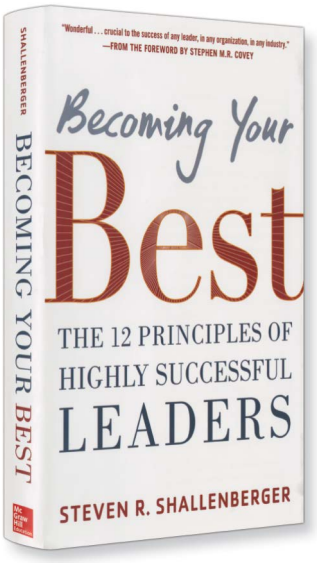
The 12 Principles of Highly Successful Leaders



by Steven R. Shallenberger

THE SUMMARY IN BRIEF

Running a business or department in today's high-pressure business landscape gets more difficult every year. Given the level of competition as well as market ups and downs, it seems that you either sacrifice your personal life for your job, or you lose everything. Steve Shallenberger has an important message for you: It doesn't have to be this way.

Becoming Your Best reveals the 12 principles you need to follow in order to reach your highest potential and drive the kind of innovation that turns good companies into industry leaders — all while living a well-balanced personal life.

Divided into three thematic sections — Transformational Leadership, Transformational Teams and Relationships, and Transformational Living — *Becoming Your Best* is packed with advice, tools and examples for turning your thoughts into action, motivating yourself and your people, inspiring teams to solve problems creatively, and building the life you've always dreamed of. You'll begin to see everything through a completely new lens — one that reveals change as something to embrace, not fear.

Becoming Your Best will arm you with the knowledge and tools to measurably improve your life as well as the lives of your employees and loved ones.

IN THIS SUMMARY, YOU WILL LEARN:

- How to avoid communication roadblocks.
- Four tips to living the Golden Rule.
- How to set goals and develop a plan to achieve them.
- How to control what you can control.

PART I: TRANSFORMATIONAL LEADERSHIP

Be True to Character

One of the greatest assets a person or an organization can have is strength of character based on universal principles. However, a strong character is not easily acquired. It is forged over time as we are tested and our values and judgment skills are refined and tempered. People who have a strong character withstand tests and temptations by holding true to time-honored principles that have been identified as being good and honorable throughout the course of human history.

These bedrock principles include integrity, honesty, trustworthiness, perserverance, humility, compassion and respect for others. When your character reflects these principles, you earn the respect and trust of those around you. When you are true to your highest character, your actions reflect your beliefs and guide you through life, helping you to be your best.

Be Strong in the Moment of Choice

Strength of character is demonstrated not just when things are going well, but especially when things get tough.

It is best to be strong in the initial moment of choice, but if you blow it, you will often have an opportunity to make a correction. We all have moments of weakness and poor judgment, but the ability to self-correct is critical if we want to build a strong character and a life of fulfillment and meaning.

As your integrity, honesty and respect for others are tested, tried and refined, the moral fabric that makes up your character grows stronger. Over time, you become someone who can be counted on. This character establishes a moral authority within you that gives you great power and credibility.

Stand Up and Speak Out

Another measure of a strong character is a willingness to speak up and take a stand that you believe in, even when it is not the popular choice. Such a display of strong character is the basis of many of our most popular tales of heroism, but we can also find examples of it in our daily lives.

Have the courage to be true to character. Exercise integrity, honesty, respect and correct principles. Whether you are the leader of a country, an organization, or a team or simply in your daily life, be determined that you will not sit idly on the sidelines of life when issues of character come up. The strength of your character will be evident in how you conduct yourself with all people.

Guard Your Character

Being true to yourself is a hallmark of great character. In theory, this is easy to do, but it is tougher given the reality of the temptations and peer pressures encountered in daily life. In good times, it's easy to say that you will be true to your principles and values and remain strong, but your true character is formed and displayed in challenging times.

Lead with a Vision

In nearly all individuals, classrooms, teams, divisions or organizations where we see sustained excellence, there is an inspiring and well-articulated vision.

Regardless of whether they call it a dream, a mission statement or a cause, most highly successful leaders have a vision that helps to inspire and drive them.

A vision aims for a high level of achievement. It is not the same as goals or objectives, which are created after your vision is formed. A vision is a high-level desired outcome or accomplishment that you hope to achieve. A vision is how you describe yourself, your team or your organization from the 35,000-foot view.

Attributes of a Transformational Vision

A vision can be transformational. When you have a clear, compelling vision, you transform the effort, the conversation and the results of not only your life but the life of your organization — whether that organization is a company, a community, a team or a family.

A vision sets a positive and meaningful direction with a purpose and a cause. It rallies support that results in commitments and new levels of contribution. A vision is developed through individual and shared leadership. Each participant in the vision is a "leader" who contributes uniqueness to the whole.

The value of the vision is what it communicates to you and to others. If it is clear and describes the desired direction of leadership, then it ensures that you're headed in the right direction.

Manage with a Plan

The secret to getting things done in any area of your life is to use your imagination to create a vision, then develop goals as part of a long-range plan that supports the vision. Finally, of course, you have to summon the energy and determination to carry out that plan.

Set Annual Goals, and Develop a Plan to Achieve Them

A very effective way to set individual goals is called Roles and Goals. You can use Roles and Goals to set clear and actionable goals and then develop a plan to make those goals a reality. Here are the ABCs for using Roles and Goals.

1. Review your vision and the key roles in your life. Begin by aligning your goals with your vision. Next, divide your life into key roles. These roles might include parent, friend, manager, employee, professional, student, citizen or church member. You also have the "personal" role — maintaining your physical, mental, emotional and spiritual health. When you divide your life into your various roles, it helps prevent misalignment of priorities and helps you focus your time on what matters most.

2. Develop annual goals in each role using the SMART method. SMART refers to setting goals that are Specific, Measurable, Achievable, Relevant and Time-specific. Set SMART goals within each role.

3. Share your goals. Send your goals to a few friends, mentors, advisors or others who you admire and respect and who can give feedback that is worth following. This makes your goals official and makes you accountable.

4. Develop a plan and set milestones. The next step is to develop a plan with milestones to accomplish your goals. Determine what you'll do in each step, with markers or milestones along the way. Breaking down a goal into actionable milestones makes it doable.

5. Post your goals in a prominent place. Put your written goals and plan in a place where you can see them often. Review your annual goals or major goals regularly so that they remain fresh in your mind. It's helpful to review them each week prior to doing your planning for that week.

Plan for the Unexpected

It's great to have a written and well-thought-out plan. Then again, how often do things actually go as planned?

Contingency plans are essential to your survival, yet they'll be much more effective if you think about your response before the crisis hits. Every leader needs to be prepared for health issues, changes in government regulations, product failure, lawsuits, a shift in the economy and the loss of key people.

When you think about your contingency plans, one place to start is to consider what your first three responses would be to a crisis situation in your personal life or your organization.

Looking at contingency plans for your business, you should consider how you would respond to situations that could have a dramatic impact on your bottom line.

Manage for Results

Even with great plans, it still takes an effective leader to manage the plan and ensure that is is executed effectively. No leader succeeds without building a strong team of individuals who share the same vision and goals.

Effective management means that you inspire and empower your team members to stand with you and help you succeed.

Once you've attracted good people and instilled the vision into them, you have to give them the freedom to respond to dramatic changes in the external environment.

Decisive action may be essential during chaotic situations. There is rarely time to sit back and brainstorm, so your team has to have the confidence and the freedom to do what needs to be done in a crisis situation.

As a leader, you are responsible for the success of the plan. Highly successful leaders are continually looking for ways to manage and lead their teams more effectively. It's about never being satisfied with where you currently are but always looking for ways to improve as a leader and as an individual. That's the spirit of becoming your best.

Prioritize Your Time

Doing what matters most frequently requires discipline and maybe even sacrifices in your personal and professional life. This principle is about time and how to do and become our best with the time we have in life.

Get Your Priorities Straight, and Think High Quality and High Quantity

The first action is doing what matters most so that you are focused on both high quality and high quantity (HQ/HQ), in the *high-performance zone*. If you're not in the high-performance zone, sit down with a partner or a team and evaluate your plan. How do you need to adjust your plan to focus on what matters most? Maybe it means adjusting the development and production plan to launch a pilot rather than mass producing a product on the initial run.

Take Control of Your Life Through Pre-week Planning

Your efficiency, flexibility and stress management will significantly improve if you engage in careful and thoughtful preparation for what you'll do in the upcoming week. Pre-week planning is simple enough. You take 15 to 20 minutes on Saturday or Sunday and develop a detailed plan for the upcoming week.

Five steps in pre-week planning will help you focus on what matters most each week:

Step 1. Review your vision and your annual goals.

Step 2. Look ahead one to three months, or even further out, in your master calendar.

Step 3. Enter into your calendar all of the meetings and other scheduled events that you have planned for that week.

Step 4. Identify what matters most that week in each role.

Step 5. Determine a time during the week when you'll do each item you listed under each of the roles.

Pre-week planning is a powerful way to reduce stress, give you better quality time in each area of your life, and certainly increase your balance. It also prevents important things from slipping through the cracks.

Protect and Conserve Your Time

To stay focused on what matters most, you need to create internal guidelines so that you don't get trapped by all the distractions. To protect your time,

- Handle each task when it arises, and don't procrastinate.
- Manage your email and other electronic media effectively.
- Try to eliminate or minimize ineffective meetings.
- Avoid negative, draining interactions with others.

You can't really change or control others, so don't allow them to throw you off. Draw upon your strong inner core for your own peace, happiness and direction. Your positive and peaceful energy and your effective use of time are two of your most precious resources. Be a master at conserving them carefully.

PART II: TRANSFORMATIONAL TEAMS AND RELATIONSHIPS

Live the Golden Rule in Business and in Life

The spirit of the Golden Rule, simply put, is to "treat others as you would like to be treated." The rule transcends time and culture and can be a game changer when it comes to your long-term success and relationships.

Four very significant ways that you and I can apply this ageless rule in our modern world are, use the power of kindness, be caring and give service to others, put others first — and take them all the way home, and practice four powerful tips to live the Golden Rule.

Tip 1: Carry a shield of love. Make an effort to love someone, even when that person has been mean or rude to you. It's counterintuitive. However, just watch the peace, power and control that come into your total being as you take the high ground and respond with kindness guided by this force field of love.

Tip 2: Empathize with others. The Golden Rule is a reminder that you should be as attuned to the people around you as you are to yourself.

Tip 3: Be compassionate with others. When you feel critical of another person, consider saying to yourself, "There, but for the grace of God, go I." Then offer compassion instead of judgment.

Tip 4: Celebrate differences and avoid prejudice in every form. Prejudices can easily become ingrained in our perceptions of others. Make it a habit to celebrate the differences of others.

As the great poet and writer Maya Angelou noted, "I've learned that people will forget what you said, people will forget what you did, but people will never forget how you made them feel."

Build and Maintain Trust

Trust is something that the highly successful leader constructs over time and then nurtures over the course of any relationship, whether it is with a family member, a coworker, an employer or the community. Strong and deep relationships are built upon trust and trustworthiness. When you betray a trust, it shows a weakness in your character, and that leads to fewer opportunities and diminished chances for success.

When you do things that increase the level of trust, your capacity to build relationships, create and seize opportunities, and achieve success increases substantially. When trust is high, you become more effective and influential in all aspects of your life. Even the most complex interactions and transactions become significantly easier when there is a high level of trust.

Build and Maintain Trust Through Your Actions

You certainly want to trust others, and you want others to feel that they can trust you. Here are a few specific actions you can take to make yourself worthy of trust:

- Do high-quality work, and finish it on schedule.
- Be consistent so that others will see you as reliable.
- Be predictable.
- Be open in communicating commitments, and be willing to have your performance measured.
- *Give* trust.
- Tell the truth.

As you achieve trustworthiness and meet the expectations of others, you will experience peace and balance in your life. Your relationships will be more rewarding, you will be better able to resist negative influences and you will build self-respect.

Another specific action you can take to build and maintain trust includes conscientiously working to establish trust at all levels of your organization. Trust doesn't simply flow from the top down. It's vital that you have a culture in which employees are willing to share their feelings, to express concerns and to offer solutions. For that to happen, highly successful leaders create a culture of listening and understanding the ideas and feedback from others, no matter how unpleasant the circumstances may be.

Learn the Stories of Those Around You

The first step in creating bonds of trust is to build a rapport based on shared experiences and mutual understanding. It's difficult to work with someone you don't trust, and it's even harder to trust someone you don't know. The challenge in this fast-paced and hectic world is to learn the stories of those around you in order to build bonds of trust with them. Highly successful leaders always find a way to build relationships.

To build trust with someone, try these game-changing words: *What is your story?* No matter what your profession may be, if you take the time to get to know the people around you, it will establish a higher level of trust and foster opportunities for more business.

As you work to become your best in your relationships and your career, trust is a critical component.

Be an Effective Communicator

Better communication begins not with speaking or expressing yourself but with *listening* to others instead. How you listen to others says a great deal about your character. So, to become a better listener — a sincere, interested, positive listener — you must begin with what's inside of you.

Be a Highly Effective Communicator

Here are some of the keys to becoming a highly effective communicator:

- Look the person in the eyes.
- When someone is speaking to you, don't worry about what you're going to say next.
- Pay attention to body language.
- Repeat back and check for understanding.

Avoid Communication Roadblocks

You should also be aware of certain obstacles to clear communication in the workplace and in your relationships. Some of these are related to tone, attitudes and simple communication habits. Others may be the result of character flaws, prejudices or insensitivities that need to be addressed if you hope to become your best and be a successful leader.

Here are a few "roadblocks" that may be hindering your effectiveness as a communicator and leader:

Ordering, directing and commanding. Example: "You will do as you are ordered without question." Keep in mind that in most cases, leaders cannot be effective if they demand respect; they have to earn it and share it.

Warning, admonishing and threatening. Example: If you miss that quota one more quarter, I'll find someone who can do the job." Most people do not respond well to threats or pressure.

Moralizing, preaching and imploring. Example: "You, of all people, should have known better. I'm disappointed in you." Moral superiority is a tough mantle to wear well. No one likes to be treated like an inferior being.

Advising or giving suggestions or solutions. Example: "If it were me, I'd do it this way." This can be highly appropriate if you are training Eagle Scouts, but that may not be the best way to communicate with your department heads, your spouse or the IT wizards you brought in to revamp your company software.

Master the Art of Feedback

Feedback is free consulting! When we ask for and give feedback in the right way, it can make a tremendous difference in an organization or a relationship.

There is a very practical method for gathering feedback in the form of ideas, suggestions and concerns, without creating conflict. It involves a three-step process called Continue-Start-Stop. Write the three words on a sheet of paper. Below the word "Continue," write your ideas or suggestions for things that work well and that you would like the person or organization to continue doing. Below the word "Start," write your ideas and suggestions for things you would like the person or organization to start doing that aren't currently being done. Below the word "Stop," write your suggestions for things that the person or organization should stop doing because, in your view, they are not working well.

You can use this three-step method to provide feedback to others or to solicit feedback from others for yourself or your organization. Although it takes some courage to invite others to provide feedback like this, if the feedback is sincere, specific and constructive, it can be invaluable for improving communication and helping relationships get to a better place.

Learn to Control Your Emotions

A final area that many people find challenging is controlling their emotions, particularly their anger, when communicating in stressful situations.

Wrath, which can be defined as anger, impatience, being opinionated or prejudiced, or even expressing rage, is a major barrier to effective communication. Communicating when you are wrathful usually alienates those who you are trying to influence or reach. Rarely does anything good come out of it. More often, it results in bitterness, retaliation and rejection.

Stepping back and giving yourself time to regain control of your emotions is a proven method for improving your communication skills. The minute you revert back to listening, you get to a better place. The next time you feel hot blood rising with emotion, say to yourself, "Don't react. Listen and understand."

Innovate Through Imagination

From research into what makes individuals, companies and organizations successful, we identified common success factors in the long-term highest achievers, and one of them was the ability to tap the power of imagination to innovate and remain relevant over many years and decades.

The human imagination is capable of producing endless opportunities and possibilities. With them comes *hope* and the belief that there are solutions to problems.

First comes the idea, the inspiration or the vision, and then comes the process for making your dream a reality. Imagination also allows us to sketch out the pathway to that reality. It creates the magic in our lives, our businesses and our organizations.

Here are four ways to fire up your imagination:

Be curious and ask the right questions. Highly successful people fire up their imaginations with an insatiable desire to understand how things work. Their curiosity is boundless. Their lives and accomplishments are built upon creativity and drive as well as powerful intellects.

Create a brainstorm of possibilities. Having different perspectives is critical to innovation. That's what brainstorming involves: tapping the mental energies of a group in order to trigger every participant's imagination. When you enlist the help of others, the number of new and fresh ideas goes up exponentially.

Walk away and let your subconscious do the work. Incubation is defined as a time when a problem is "parked" in your subconscious. You can't see any progress being made, but your mind is quietly whirling away. Sometimes the subconscious can unlock amazing ideas when we least expect them, so we should be open and ready for them.

Write about your ideas. Often the simple act of putting pen to paper will allow your thoughts to flow. Writing can help you clarify and organize ideas that might otherwise slip away.

PART III: TRANSFORMATIONAL LIVING

Be Accountable

We all fall short of expectations and make mistakes occasionally. When there is a misunderstanding, confusion, a missed meeting, something that is not going right or a mistake, simply fess up — take responsibility — and move on. When it's all over, take stock of what went right and what went wrong. Evaluate what you could have done better, jot down your thoughts, and then put the problem behind you.

People who aren't accountable tend to blame others or deny that they were responsible. You may be tempted to offer one of the classic copouts: "I didn't know," "I wasn't there," "I didn't have time" or "It's not my job." But using those excuses creates more anxiety and doesn't take you toward personal or institutional success.

Embedded in the commitment to be accountable is a commitment to do what you need to do to take control of your life and to become your best.

Accountability Strategies

I want to share with you strategies and tools that can help you understand how to live with accountability as an individual and as a leader.

1. **Control what you can control.** Focusing your energy on what you can control empowers you to move away from criticism, complaints and condemnations and forge ahead to become your best and achieve the highest levels of success. By controlling your response to challenges, frustrations and aggravations, you can greatly enhance the quality of your life.
2. **Develop relationship agreements.** These documents clearly define the vision, the reward system, the expectations and the accountability in any relationship, personal or professional. What's important is that you focus on your sphere of influence, and that will carry over to others.
3. **Eliminate procrastination and follow through.** There are specific actions that you can take to improve your accountability: eliminate procrastination and follow through. Do what you say you will do, and do it in a timely manner. If there is a problem or a good reason to withdraw your commitment, make sure you communicate with the people involved so that they can make adjustments if necessary.

Apply the Power of Knowledge

Your actions and your behavior follow your thoughts. If you thoughtfully engineer *what* goes into your mind and your heart, these factors of change will have an enormous impact on your ability to achieve your dreams and realize the best you can be.

If we really want to learn to apply the power of knowledge, it's important that we approach learning with these characteristics: a hunger to learn, humility and a willingness to try new things.

I have several game-changing invitations that could have a dramatic impact on your personal and professional life:

- Develop the habit of reading at least one book a month.
- Invest 3 percent of your income in acquiring more knowledge through seminars, training, books and personal development courses.
- Surround yourself with people who inspire and lift you.

The second part of this principle is to regularly assess the external environment. These are things that are outside of your control. They include natural disasters, disease, the death of a loved one, an accident, the economy, government regulations, your spouse or partner, children, people you work with, setbacks with your company, competition, changing markets and bad weather. Make an assessment by getting out a sheet of paper and drawing a large circle. You are on the inside, and the external environment is on the outside. Now, write down all of the external forces on the outside that could possibly have an impact on your life.

Once you finish thinking about the various factors, circle or highlight the two or three threats or opportunities that can have the biggest impact on your life. Then develop an action plan for taking advantage of opportunities or avoiding the threats to you and your organization.

This is a powerful way to gain knowledge, which then allows you to effectively apply it.

Live in Peace and Balance

Four harmonizing principles of peace and balance can help you clear your mind during even the most chaotic times at work or at home. They can be especially helpful to leaders who are striving for the highest levels of success.

- Increase balance in your life.
- Increase your peace through meditation.

- Laugh often.
- See yourself in a positive light through self-affirmation and positive self-talk.

Finding peace and balance requires inner strength. The more self-reliant and balanced you are in the different areas of your life, the greater your capacity to work effectively while making a difference.

Let's try a simple assessment called the Circle of Peace and Balance, which divides our lives into six areas that need our attention and consistent care. When each of these six areas is properly cared for, it's like balancing the wheels on your car to keep it running smoothly.

1. Your physical and emotional health.
2. Your mental health and your intellect.
3. The financial aspects of your life.
4. Security and safety.
5. Social life and relationships.
6. Your spiritual life.

With all these elements in place, the Circle of Peace and Balance resembles a wheel with six spokes. Each spoke of the wheel represents one of the six areas that are critical to maintaining balance in your life. Write a scale of 1 to 10 coming out from the hub in each of the six areas, and rate yourself by circling a number in each. Then connect the numbers that you circled. If you have a nice balanced circle, congratulations! However, most people rate themselves high in some areas and not so high in other areas.

The Circle of Peace and Balance is a simple way to assess whether your life is in balance, but make no mistake, it can be a lifesaver if you use it to identify areas that may need additional attention. Once you identify those areas, you can go to work and make the necessary adjustments.

You are the master of your fate. Finding peace and balance during the journey, both personally and in your organization, leads to greater health and happiness and an increased capacity to sustain excellence and fulfillment.

Never Give Up!

If you choose to never give up, you have a much better chance to succeed. You may still have to make corrections in your course, but as long as you refuse to give up, your goals will be within reach.

Virtually everyone will experience a failure or setback at some point. According to our research, high achievers typically experience at least three to four major failures and seven major successes in their careers. We can learn great lessons from our own failures and from the failures of others.

There are three steps to bolster your determination and inspire you to keep striving to achieve your dreams and goals, no matter what opposition, challenges or failures you experience:

1. Defeat the enemy within through hard work and action. If you learn self-control to such an extent that you can adjust your attitude on the run, you will never be defeated by self-doubt, which is the enemy within.

2. See the value of failure. Your failures do not define your life unless you allow that to happen. When a challenge arises, be aware of the words that instinctively come to mind. The thoughts we entertain define our mindset toward failure. If negative, self-accusing, angry thoughts are instinctive to you, then your mindset will be to see failure as worthless. If you choose to entertain positive, self-motivating and inspiring thoughts, then you're more likely to see failure in a positive light.

3. Hold to a purpose that inspires you. We don't ask for adversity or challenges. They often come when we least expect them. Think now about finding a purpose if you should experience a great tragedy. Think about what drives you, and tap into it before challenges arise. Use whatever inspires you as a life vest when storms hit. Cling to your most inspiring visions as sources of strength and determination. The moment you think about giving up, recall what has brought you this far, and resolve to continue on toward your dreams and goals.

Finally, remember that *never give up* is a guiding constant for successful people, relationships and organizations. It makes all the difference between those who falter and those who finish.

RECOMMENDED READING LIST

If you liked *Becoming Your Best*, you'll also like:

1. ***360 Degrees of Influence*** by Harrison Monarth. Monarth provides advice on how to gain the trust and respect of those around you and how to expand your influence well beyond your immediate environment.

2. ***Just Listen*** by Mark Goulston. A veteran psychiatrist and business coach, Goulston reveals the secret of how to get through to anyone, even when productive communication seems impossible.

3. ***The 360 Leader*** by John C. Maxwell. According to Maxwell, you can learn to develop your influence from wherever you are in the organization by becoming a 360-degree leader.

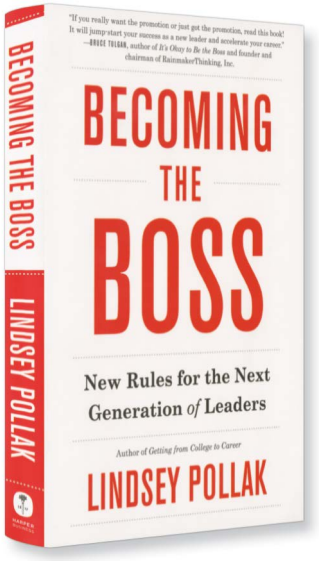
Leadership

Becoming the Boss

New Rules for the Next Generation of Leaders



by Lindsey Pollak

THE SUMMARY IN BRIEF

We are in the midst of a leadership revolution, as power passes from Baby Boomers to Millennials. All grown up, the highly educated Generation Y is moving into executive positions in corporations and government, as well as running their own businesses. Author Lindsey Pollak reinvents the concept of management for the new generation, offering a fresh and relevant approach to career success that shows them how to make the next step: becoming a leader.

Becoming the Boss is a brisk, tech-savvy success manual filled with real-world, actionable tips from an expert they respect and relate to. Pollak defines what leadership is and draws on original research, her own extensive experience and interviews with newly minted Gen Y managers and entrepreneurs around the world, to share the secrets of what makes them successful leaders — and shows young professionals how to use that knowledge to rise in their own careers.

From learning to develop a style that appeals to your older colleagues, to discovering the key trends affecting your career, to mastering the classic rules of excellence that never go out of style, *Becoming the Boss* helps you identify your next professional move and shows you how to get there.

IN THIS SUMMARY, YOU WILL LEARN:

- How to learn, lead and last in today's diverse, high-tech workforce.
- To harness the positive traits of the millennial generation to become a better manager.
- To build your brand, communication skills and network to lead in the 21st century.

Introduction

Enormous demographic, economic and technological shifts are taking place right now in business, government, law, the media, health care, the nonprofit sector and almost any other realm you want to work in. These shifts are both exciting and daunting, and they are fundamentally changing the world in which you'll lead today and into the future. The leadership advice of the past is simply not enough to prepare you for today's complex realities.

You will lead through a demographic revolution. Becoming the boss in a time of demographic change means that you will need to build your skills in communicating with and managing people of different generations who have different expectations and styles of working.

You will lead through an economic revolution. You are becoming the boss in what some economists call a "post-employment" economy, in which companies can function and thrive without hiring as many workers or paying them as highly as in the past. For the next several years at least, you'll likely need to learn how to lead within the confines of a limited budget and a limited number of employees.

You will lead through a technological revolution. As a boss in high-tech times, you'll need to become an expert at managing through technology, including overseeing virtual employees, handling the etiquette of new communication tools, and keeping current with important new apps, networks and devices.

All of these demographic, economic and technological shifts add up to the fact that we are living in a make-or-break moment in modern history. It is a moment that will require a new generation of leaders who are as dynamic and revolutionary as the times we are experiencing.

PART I: LEARN

Prep

How well you are capable of leading other people begins, first and foremost, with how well you lead yourself. You will be a far better leader of others if you spend time building your knowledge, your mindset and your attitude first. Here are five key ways to become a leader on the inside so you're ready to be a leader on the outside:

Don't fear the fear. Career fear is totally natural. The trick is to keep moving forward despite the fear. Decide that you want it more than you are afraid of it. Deciding that you want it is not just about moving past fear; it's also about committing 100 percent to what you want. You'll have to reach for what you want with conviction. When it comes to leadership, in particular, fear is okay, but wishy-washiness is not.

Fill the tanks. Be a sponge, and not just in your own field. Because what happens when you fill the tanks with ideas from other realms is that you start to make random connections and come up with really creative ideas.

Three steps to fill the gaps. True leaders are regularly assessing what their gaps are and making plans to improve their knowledge and skill set. Here is a three-step plan:

1. **Assess your current skill set:** Do you possess the same educational degree or comparable experience/learning as leaders in your field? In what areas

have other people encouraged you to improve, and have you done so?

2. **Take immediate action to fill the gaps you identify:** Take whatever skills you want to acquire, and go find the very best book on the subject. Subscribe to multiple blogs and/or e-newsletters on the topic(s). Register for a class.
3. **Practice daily:** You will become smarter and better at anything just by committing to doing it a lot. Let go of perfection, and focus on practice.

Make new friends. Create a support network of people who understand your leadership goals and what it will take to achieve them. Find a community where it's okay to talk about your biggest dreams.

Develop global competence. Here are a few ways to ensure your leadership toolkit includes global competence:

- Talk to people from other countries.
- Read *The Economist*.
- Travel abroad.
- Volunteer for an internationally focused nonprofit organization.
- Take a trip on YouTube. Look at the amazing documentaries out there.

"Take the initiative to educate yourself" is ideal advice when it comes to every element of preparing for and thriving in a leadership position. Leaders don't wait for someone to guide them to where they need to be; they take a deep breath, roll up their sleeves and pursue the necessary action.

Be

What kind of leader do you want to be? It's important to think about not only what you want to *do* as a leader but also what you want to *be* as a leader. The concept of personal branding places your reputation and career management almost entirely in your control. Here are four overarching areas to focus on:

Visibility: Are you findable where your desired networking contacts are looking? Leaders need visibility.

Differentiation: This is what gets you noticed and what gets you continually promoted.

Consistency: Sets the tone for your team to be consistent.

Authenticity: Are you genuine in your image and your outreach to people? Maintain your personal integrity always.

What are you known for? Let's start to home in on your unique personal brand as a leader. You want to know what your current reputation is so you can reinforce what you are doing well and build your reputation in new areas you want to be known for. Ask people you trust to describe your professional skills and reputation. Revisit your recent reference letters and performance reviews. What words were used? Look at the Skills and Endorsements section of your LinkedIn profile, and see what skills people in your network have endorsed.

What do you want to be known for? If you overheard the people you lead talking about you, what words would you hope they would use? Start to sprinkle these words into your conversations with the people you lead. Use these words in your resume, professional bio, performance reviews and LinkedIn profile. Use your personal brand traits to check in with yourself when making decisions big and small.

Here are three ways to build your leadership brand before you've got the title or responsibilities to go with it:

Take initiative: You don't actually need a designated leadership role. All you need to do is get things done.

Show commitment: Initiate and take part in conversations about long-term plans for the organization. Volunteer for committees and task forces. Attend non-required events.

Act like a leader: Start acting — appropriately — like you already have the job. Ask yourself, "What would a leader do?"

Personal Leadership Brand Checklist

You always want to be authentic and bring your unique approach to each element of your personal brand, but here are some overall guidelines for managing your offline leadership brand:

- A strong self introduction: Also known as a 30-second pitch or elevator pitch. Take some time to practice describing yourself.
- A confident handshake: One of the easiest things to get right and the worst to get wrong. A good handshake is firm, includes direct eye contact and encloses the other person's full hand.
- A level-up wardrobe: Look the part. Use your wardrobe to build your authority. Get in the habit of dressing one level up from the people you manage.
- Business cards: Business cards provide people with your contact information and can guide people to your preferred method of communication.

Be.com

Your online image can make or break an opportunity you don't even know exists yet. If you want to be a leader in any area, you have to pay attention to what people find when they search your name online. And you have to ensure that what they discover about you on the Internet is consistent with the you they encounter in person.

How to Clean Up Your Online Presence

Google your name. The first few results on Google should reflect the professional presence you most want to project. For most people, this should be your LinkedIn profile because it is 100 percent professional and 100 percent in your control. Other ideal listings might include your bio on your organization's website, your social media profiles, your own website or blog or that of your organization and a positive news story written by or about you.

Negative online content can absolutely hold you back from achieving your leadership goals. The good news is that in many (but not all) cases, you can clean up a less-than-professional online reputation:

Untag, untag, untag: Go through all your profiles. If you find any inappropriate content, delete or untag yourself.

Pay attention to privacy settings: The default setting on most social networks is that everything you share is public. Make privacy settings as tight as possible.

Request removal: If someone else posted offensive content, politely ask the source to remove it.

Build better content with your name attached to it so that search engines find and rank these pages higher than the unwanted links.

Become more social: Build up a positive presence through social networks such as LinkedIn, Twitter, Facebook, Tumblr, Reddit, Pinterest, Google+ and others.

Accept the attention: When you raise your hand for leadership, you are opening yourself up to public scrutiny and criticism. If your intentions are genuinely good and you keep your focus on doing the best job you can for your constituents (however you define that word in your leadership role), then you should be fine. Just be smart about it.

The Ultimate LinkedIn Guide for New Leaders

Given how important your LinkedIn profile is to your online personal brand, here is a step-by-step process for building a leadership-worthy profile:

1. Study the best: Study the profiles of the people you admire in your particular industry or company. How do they write about themselves? What words and phrases do they include in their Skills and Endorsements section? What groups do they belong to?

2. Impress with your profile headline: People are busy. They want a concise explanation of who you are and why they might want to know you.

3. Post a professional headshot: People are going to check out what you look like, and what you want to look like is a leader.

4. Craft your summary: Your bio should act as an overview or greatest hits version of your career. Use the third-person voice.

5. Show, don't tell: Include visual examples such as videos of your professional speaking, slide decks from presentations or PDFs of articles.

6. Promote your skills: Skills and Endorsements is where you choose keywords to describe your top talents, and the people in your network give you an endorsement.

7. Customize: Add sections for honors and awards, projects, publications, volunteer experience and causes.

8. Crowdsource: Ask trusted friends or colleagues to review and share feedback.

9. Update frequently: Continually tweak and add to your profile.

Another option for building your online brand is to create what is called a nameplate site. The most popular is About.me, which essentially serves as a one-page Web site to share your contact information and provide links to your social networking profiles and any other sites you want to direct people to. About.me will also provide you with a short custom URL that you can include on business cards or in your email signature line. Nameplate sites can help push positive content about you to the top of your Google rankings as well.

PART II: LEAD

Listen

The words we use (and don't use) can make or break our reputations, our projects, our relationships and our organizations. For leaders, the stakes are even higher: one comment from a leader can cause elation, confusion or panic among the ranks. Let's start with some big-picture advice:

It's not about you: Remember that as the leader of a team, you are still a member of that team. *We* is one of the most powerful words in your vocabulary.

Know your audience: You can't have a one-size-fits-all communication style. You have to be adaptable based on the situation you're in and the people you're speaking to.

Overcommunication trumps undercommunication: Communicate as frequently, honestly and thoroughly as you possibly can.

Actually listen: Start with your audience. What is their perspective? Be open. Don't listen for what you expect to hear. Strive to understand. Don't rush to fill the silence. Pause and think before you respond.

Your method matters: The nuances mean everything. Choose your communication methods carefully.

How to Choose the Right Communication Method

Choose the tool that will best communicate the information to your listener and will achieve the outcome you desire:

- In person: It is still safest to communicate eyeball-to-eyeball about sensitive issues. In-person communications also give you a better chance to defuse heated situations.
- E-mail: Best for non-urgent communications and for reaching out to someone you've never met.
- Phone: When you can't speak in person and don't want an electronic trail of exactly what you've said, it's safer to pick up the phone. A phone call is often an efficient way to solve a problem or make a decision.
- Voice mail: Valuable in situations where the tone of your voice is essential to your message and you are not able to reach a person directly.
- Instant message: Best for quick, specific and nonsensitive communication, particularly yes/no answers.
- Text: Not always professionally appropriate. I would never text any professional contact unless that person has texted me first.

Become a Master of Meetings

Let's dig into the nitty-gritty of leading meetings, conference calls and formal presentations.

Meetings. Take control, and make every meeting the very best and most efficient it can be. Cancel as many meetings as possible. Invite the minimum number of participants possible. Have a written plan for topics and outcomes. Keep the pace moving forward, or do something to fix it. Put away smartphones. Assign a note-taker to send follow-up assignments. Change it up: meet outside, or have a standup meeting, or surprise your team with treats.

Conference or videoconference calls. Double-check the call-in line and your headset, headphones or microphone. Call in early. Channel your inner radio host. Introduce each agenda item with comments, and ask individuals for feedback by name. Look into your device's camera rather than at the person on the screen.

Presentations. Think of any presentation as an opportunity to promote your leadership brand and win support and respect. Organize your talk in a meaningful, logical way. Tell people up front how long you plan to speak and when they will have the opportunity to ask questions. Keep track of time, and stick to what you've promised. When it comes to visuals, less is more. Your slides should be additive, not central. Rehearse in front of the camera. Plan a great ending. Even for the shortest presentation, you always want to finish strong.

Manage

A study at Google found that technical expertise ranked last among the predictors of a boss's effectiveness. Instead, employees most wanted "even-keeled" bosses who made time for one-on-one meetings, helped solve problems, and took an interest in their lives and careers.

You can't become a master manager in a day, or a month or even a year. You'll have to lead before you're totally ready. That is perfectly okay. Lead anyway.

The Three Essential Laws of Twenty-First Century Management

What skills do today's leaders need that are new or different from the skills that past leaders needed? Three overarching themes will permeate many of the specific situations you'll face as a boss:

1. Adaptability to rapid change: Commit to keeping up with technology no matter how busy you become. Also, the more approachable, fair and supportive a manager you are, the less frequent turnover you are likely to see. The pace of change today requires extreme agility and open-mindedness.

2. Cultural awareness: Millennials represent the most diverse generation in American history, which means they will need to cultivate a more inclusive leadership style than previous generations.

3. Transparency: Much of the reason we expect transparency is the Internet. We know more about everything now, so we want to know more about and from our leaders.

How to Manage People When You Have Zero Experience Managing People

Most first-time managers have no idea what they're doing, and the role of a manager is more complicated today than ever. Very few organizations are good at teaching people how to be good bosses. Many don't provide this training at all, or they provide it too late. Successful leaders offer these suggestions from the new manager trenches:

Be yourself: It's a mistake to put on a new "boss" persona that is not authentic. People will see through that false front, and it can lead to serious fumbles. While it may seem counterintuitive to practice being natural, rehearsal is a helpful strategy.

Launch a listening tour: You have to go out and spend time with the troops. Just be careful that seeking input doesn't turn into managing by consensus.

Drive the truck: If you haven't risen up the ranks, do your best to learn from each employee what his or her daily experiences are and what changes would improve productivity or results.

Secure early wins: People want leaders who can get things done. Early wins can be large or small, ranging from cutting an unpopular "required" report to announcing a new client or funder.

Establish key performance indicators: Tie individual contributions to overall team or organizational goals. Setting key performance indicators (KPIs) for each person will help team members see the big picture and how each will contribute.

Remember that managing is your job … but make time for the rest of your work: If you have spent an entire day talking to your team members, you have been doing your job. Of course you will also have other responsibilities. Carve out moments in your day that are uninterruptible.

The Feedback Frenzy

Millennials have received more coaching and praise from parents, teachers, professors and coaches throughout their lives, so they enter the workplace expecting the same attention and encouragement from their employers. Employees who want feedback are showing that they want to improve and contribute.

How to give positive feedback: Give a "one-minute praising" by looking that person straight in the eye and telling her what she did well. Tell her how good you as the manager feel about what she did so well. Specific praise is far more meaningful and effective. Consider small ways to recognize achievement, such as quarterly awards, gift cards, flowers, lunch or even a handwritten note.

How to give negative feedback: You'll achieve the best results when your genuine intention is to be constructive. Create an environment where feedback and coaching are routine. Be specific and only criticize the issue at hand. Criticize the behavior and not the person. When the reprimand is over, let it go and move on.

Motivation Nation

Wherever your team members are based, another of your leadership responsibilities is to build and maintain morale. Here are eight ways to do just that:

- Do the opposite of every bad manager you've ever had (such as making fun of employees, deciding not to attend meetings at the last minute, dismissing ideas).
- Manage by walking around. To motivate people, you have to see them, chat with them and understand their day-to-day experience.
- Explain the why. Millennial employees desire to know why they have to accomplish a given task. Everyone wants to feel that his or her work is making a difference.
- Show interest in each person's self-development. "Where do you see yourself in five years?" Genuinely want to know — and support — the answer.
- Motivate different individuals in different ways. Find creative ways to correlate each individual's goals with the bigger picture.
- Encourage excellence. One Millennial leader told me that whenever she assigns a project, she says, "Make it as awesome as you want."
- Provide a safety net. Assure your employees that it's okay to ask questions and occasionally mess up.
- Change it up. Random, unplanned perks can be fantastically motivating in all sorts of situations.

Prioritize

How do you lead in a world where the pace of work is so much faster, the amount of information is so much greater, and everyone's stress levels are constantly increasing?

Being busy is not a badge of honor. If you are a leader and you are "slammed" all the time, you are not delegating enough, not organized enough or being dramatic. Learn how to manage a very full schedule without losing your cool. Here are some reminders:

Leadership is a marathon, not a sprint: You won't be perfect every day, and when you stop trying to be perfect, you'll end up better in the long run.

Take care of the big rocks first. You have to schedule the steps related to the big things before anything else. The smaller things tend to fall into place.

An ounce of planning is worth a pound of work. Stop in your tracks and make a plan. Part of being a leader is making tough choices about where your attention is most needed at any given moment.

Stress is not actually contagious. Remain calm when the people you manage are stressing out. Model the behavior you want.

You can cut down on stress and decision fatigue by routinizing a few trivial choices. And, a few calm, deep breaths can slow your heartbeat and give you a moment to collect your racing thoughts. It's wise to take several breaks throughout the day for at least a few minutes, even on your busiest days, just to give your mind and body a chance to recharge.

Work/Life What?

Work/life balance is now being referred to as "work/life integration" — or, frankly, just "life" — because we've come to realize that the issue is not about equally balancing one's personal and professional lives but integrating them into a complete whole.

In the past, when work/life separation was the norm (in theory at least), employees considered it a perk to work from home or make a personal call at work. Nowadays, almost everyone works from home at least occasionally and expects some level of flexibility. Millennials in particular have fully embraced the constantly connected work/life style.

This is a good thing in many ways, but it can lead to difficulties setting scalable and fair HR policies. Millennial leaders will be the ones to address future workplace issues such as,

- Will there be a concept of "regular work hours" in the future?
- If so, should hourly wage employees be paid overtime for responding to emails after hours?
- Will it be legal to reprimand or fire an employee for something she shared on a personal, privacy-protected social media site?
- Will you allow employees to "bring your own device" to work, and if so, how will you protect sensitive data?

Now let's bring the work/life topic back to you as an individual. There inevitably will be times when personal events conflict with professional events. As the boss, your handling of such moments will be closely observed. Here are some coping strategies:

Don't apologize for how you spend your time. Many successful leaders don't feel the need to explain their schedules and their boundaries. Never apologize for the choices you're making, as long as you're not being irresponsible.

Buy every tool available. It's always worth the expense to acquire any tool that will help you better manage all the various elements of your life as a leader.

Get better at saying no. Here are some of the perks I have enjoyed when I got better at saying no: First, I became significantly clearer on what I really wanted to do, because I challenged myself to say no more often. Second, I accomplished more of my big goals by clearing my calendar. Third, I learned that people would rather hear an honest no than a dishonest yes. Fourth, I had more energy. When I'm really overscheduled, I don't feel buzzed and energetic; I feel tired. And my final and most surprising revelation about saying no more often: no one noticed!

PART III: LAST

Connect

How do you find true supporters and attract the interest of key decision makers who will help to fast-track your leadership ascent? And how do you build an authentic and valuable professional network overall?

Find a mentor with extensive leadership experience — and the desire to share it. A mentor can help you think through decisions, better understand complex people management issues and anticipate leadership challenges. The best mentors are forthcoming with advice, open to tough questions, honest with feedback and genuinely supportive of your success.

Co-mentoring, or reverse mentoring, is a two-way street. Young people have their own wisdom that is valuable for older colleagues.

Befriend someone who will really understand the day-to-day experiences and challenges you're facing. If you don't have a professional network of peers, then industry associations, networking events and conferences can be good places to meet them.

Networking in the 21st Century

Keep building contacts. You have countless methods to leverage in your relationship building. The most successful 21st-century networkers use all the tools — online and offline — available:

Leave. Your. Desk. It is way too easy to spend your entire life in front of a screen. You'll increase your relationship building success exponentially if you actually go places.

Pick. Up. The. Phone. When you have some sort of misunderstanding, pick up the phone.

Build relationships before you need them. You have to continuously build this foundation so that people will be there for you when you want to reach out.

Give first. Even little "gives" make a big difference: advice, compliments, referrals, ideas.

Ask, too. It's part of good relationship building to ask for assistance when you need it.

Always take the meeting. If you're not necessarily interested in the opportunity but the person may be a good connection, go for it.

Diversify. Build relationships with people from other industries, countries, ethnicities, generations, regions and political views.

Network up. Determine the key players in your field, organization or department, and invite them to have a phone chat or join you for a cup of coffee. It's far more common than you think.

Take notes. It helps you retain information better and shows other people that you value their thoughts and ideas.

Follow up faster. Provide someone with follow-up information after a call or meeting within 24 hours.

Know that "thank you" is a form of networking. It is never bothering someone to gratefully thank them for their time, advice, help or anything else.

Do your homework. Before reaching out to or meeting with anyone, always Google the person and review his or her social media profiles.

Follow organizations. If there's a company you are interested in in any way, follow them and subscribe to them.

Give people and organizations reasons to reach out to you. Sharing status updates is a golden opportunity to heighten awareness of you and to spark interest in your leadership brand.

Customize everything. Many social networks provide generic outreach messages. Erase the generic sentence, and write your own words. Show that you are human.

Finally, you have the unique opportunity to give back to people younger or less experienced than you are. Do it. You'll not only help the other person, you'll also see how enjoyable it is to be the one providing the mentorship.

Grow

When leaders, particularly new ones, become overwhelmed, they tend to lose sight of their own career and personal development. In our fast-changing times, you need to continually focus on your own development as well. Millennials are perfectly suited for this. Here are some expert strategies for evolving over time:

Trust the foundation of your leadership training and the experience you build every day. As the world changes around you, never forget the basics. Of course, you'll have to work hard to stay current. Build relationships with smart, interesting people in your field who are younger and hipper than you are.

There are times it will pay to be brash as a leader. There are infinitely more times it will pay to be modest. Do not feel the need to grow your head along with your career.

At a certain point as you are rising in your success, you need to *decide* to be the best. You can't just wait and hope you rise to the top. Take time to craft ideas into a pitch, and share them with your team or higher-ups. Keep pitching those big ideas now and forever.

Don't be afraid to take a detour, make a lateral move, start a business on the side, or break out of what appear to be the prescribed rules of career development.

You're going to make mistakes and fail sometimes. So do your best to fall with style. Leaders take responsibility not just for wins but for losses. Leaders can and should apologize for important mistakes and still retain credibility. Life is long and will be filled with many more mistakes to come. We can't avoid them, but we can get better at handling them.

Not every millennial is succeeding today, and not every millennial will (or wants to) change the world. But as a generation, the millennials have the diversity, talent and skills to do so.

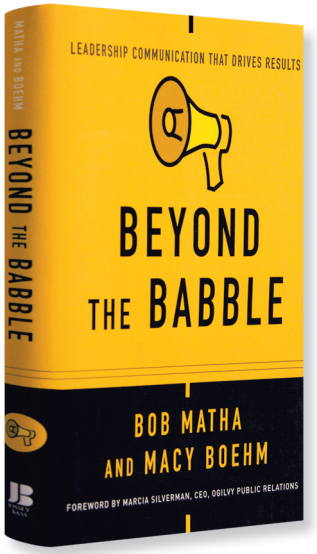
Leadership: Strategies

Beyond the Babble

Leadership Communication That Drives Results



by Bob Matha and Macy Boehm

THE SUMMARY IN BRIEF

The CEO takes the podium and begins to speak. It's a polished presentation and he looks impressive. As he talks, people nod their heads in apparent agreement, but after the applause dies down, the painful truth is revealed. His message didn't get across. It was all just so much babble.

Leadership communications experts Bob Matha and Macy Boehm offer a strategic plan for addressing one of the most difficult challenges any business leader can face: engaging employees to take action. Written for all those who lead groups — including supervisors, managers, HR and communications professionals, executives and CEOs — this practical resource describes how to put in place proven communication principles that do just that. Matha and Boehm's "On Strategy" communication plan focuses on one critical employee question: What do you want me to do? And it gives leaders the tools they need to mobilize a team of 10 or an organization of thousands.

Filled with examples from the world's top companies, *Beyond the Babble* explores the critical role communication plays in driving performance, how to leverage it and how best to measure results.

IN THIS SUMMARY, YOU WILL LEARN:

- How to clarify direction to the organization and make it relevant to employees.
- How to prepare leadership — from top to bottom — to deliver direction and engage employees.
- How to communicate to the larger organization about strategy through an ongoing "conversation" with and among employees.
- How to get business results by improving communications.

The Power of Communication

Babble is big in business today. It's the tendency for executives to talk about important issues in convoluted, evasive or empty terms, and it's evident every day in the newspapers and on television. However, it's much more insidious inside companies than outside them. It corrodes an organization's ability to achieve results, derailing leader and employee alike.

Babble is a key reason behind employee antipathy toward management and apathy about strategy execution. More than half of employees in the United States are "not engaged" in their work, according to Gallup Research. They take a wait-and-see attitude toward their jobs, and results suffer. Even more detrimental to performance is the approximately 15 percent of employees who are "actively disengaged." According to Gallup, "These employees aren't just unhappy at work; they're busy acting out their unhappiness. Every day, these workers undermine what their engaged co-workers accomplish." According to Gallup's Curt Coffman, a key problem is a lack of clear communication from leadership.

Babble isn't a challenge just for senior executives. Functional leaders, middle managers, team leaders, frontline supervisors — anybody who needs to lead people to get things done can be sidelined by babble.

On Strategy Communication Cuts Through Babble

On Strategy is a term for effective leadership communication. It explains where the company is headed and how it will get there, what employees need to do to make it happen and why it's important to the business and to them. It's about the business and the realities that affect it.

On Strategy communication frames complex business direction in simple, straightforward, motivational terms, so everybody, from the CEO to frontline supervisors, can understand and discuss it. As a result, On Strategy communication makes strategy the topic of conversation in an organization, as employees and managers alike engage in an ongoing conversation about how to execute plans to achieve common goals.

The heart of On Strategy communication is in leaders and employees talking to each other — every day — about strategic information and perspective that help them do their jobs and do them well. It depends on not only senior executives, but also leaders up and down management ranks — including frontline supervisors. Local leaders are critical because they have continuous and direct interaction with employees. They also are the people best equipped to translate strategy into actionable terms for employees.

What Do You Want Me to Do?

On Strategy communication thrives on simplicity. People focus well on a handful of priorities, but they lose their way if the list is too long. On Strategy communication focuses on answering one critical employee question: What do you want me to do? Then it motivates them to act.

On Strategy communication is emotional. People talk about — and execute — what they care about. Employees in every organization have some sort of motivational connection to their work. Good leaders tap that connection to drive action. It's what gives work a special meaning.

The On Strategy approach requires leadership com-

mitment, process and discipline. The On Strategy approach is a specific leadership activity. The communication and human resources departments can help orchestrate leadership communication, but the ultimate accountability lies with the leaders themselves.

On Strategy Communication: An Overview

The On Strategy philosophy, process and tools provide leaders with a way to improve communication. It not only delivers leadership's message to the organization so it is inescapable, but it also makes strategy the topic of conversation from the meeting room to the water cooler to the assembly line. The On Strategy approach organizes and articulates leadership's direction so employees can hear it and understand what they are supposed to do. It makes strategy accessible and tangible for employees and connects it to employees' motivations so they take action. Finally, it orchestrates communication as a business process and management discipline.

Leaders implement On Strategy communication in three steps. Step One ensures that leadership's message is about strategy, understandable, relevant and motivational. On Strategy content is driven with the *Action Equation: Know + Feel = Do*. This equation is simple: What people know, plus what they feel, inspires them to take the right actions to execute strategy. With this in mind, On Strategy communication first determines what employees have to know and feel in order to act. Then Steps Two and Three prepare for and orchestrate how leaders actually communicate. Through a discipline called the *People Channel*, leaders from the CEO to frontline supervisors engage employees in conversations to deliver direction, perspective and information, and to pull feedback up from the ranks. In this way, On Strategy communication helps leaders lead.

The Action Equation

The Action Equation organizes *what* leaders need to communicate to employees. It begins by focusing a leader's thinking on what employees need to *do* to execute strategy or support the company's position on an issue. Then it expands that thinking to address what employees need to *know* and *feel* so they take the right actions. Moreover, it helps identify what is critical to communicate, and it filters out communication that wastes time, or worse, could be counterproductive to driving action and results.

The Action Equation involves research and analysis done *before* communication begins. Building the Action Equation can take some time, but if you skip the work required to adequately inform all three parts of the equation, your communication will be less effective, and you will miss a valuable opportunity to drive execution and results.

Here is how it works:

- **The Action Equation Begins With *Do*.** Informing the Action Equation starts with a leader determining exactly what he or she wants the organization to accomplish and, just as important, what employees need to do to make it happen. On Strategy communication seeks a simple, clear answer to two key questions every employee is really asking: What are we trying to accomplish, and what do you want me to do?
- ***Know* Creates Understanding.** Leaders inform the *Know* portion of the Action Equation as they determine what they need employees to *Do*. When they frame this direction in the context of the overall organization, they also "connect the dots" for employees between what individuals are doing, what the larger organization is doing and what's happening outside the organization. Employees need to know what to do and why it's important.
- ***Feel* Drives Action.** Employees in nearly every situation can have a connection to their work that gives it special meaning. It's about more than pay, recognition or opportunity (although those things are important). It involves what people do because they want to do it, not just because they are paid to do it. These intrinsic motivations can include an affinity for customers and products, energy around the substance of the work itself or the relationships employees have with their teams.

The People Channel

On Strategy communication aligns leaders up and down an organization — the People Channel — to deliver a consistent, strategic message to employees. More than that, it equips them to deliver information in conversation, in the context of local work issues and "in the moment" when employees ask questions and are making decisions about their work.

The People Channel generates an active interchange of knowledge and ideas among employees and leaders, rather than a passive cascade of information. It provides processes and tools to help engage leaders and employees in an ongoing conversation about strategy, so people have an opportunity to increase their understanding of strategy and offer their ideas and perspectives on how to improve and execute it better.

Do: What Do You Need Employees to Do?

Effective direction begins with telling employees what the organization needs to accomplish and how, and what employees need to *Do*, which is one part of the Action Equation: Know + Feel = Do. It's very actionable — the difference, for example, between telling the sales force they need to increase revenues by 10 percent (an outcome) and telling them they each need to make 200 additional sales calls (an action). Good direction also makes the tough decisions between priorities, as opposed to putting them all on an equal footing and making employees decide, when they come into unavoidable conflict, which is more important.

For example, good direction tells employees that ultimately quality is more important than volume, customer satisfaction is more important than cost reduction and growth is more important than margins (or vice versa), so they make the right decisions when they have to. Finally, good direction also includes specifics around critical outcomes of non-negotiables, such as safety, maintenance, customer satisfaction and ethics. These are the kinds of things that leaders may assume they can take for granted but can be compromised as employees pursue other goals — sales, returns, efficiency and the like — that are more dominant in communications (and in performance management tools, recognition, advancement, and so on).

Simplify Direction

Business plans usually outline all the goals, objectives, strategies, initiatives and resource allocation. Because of their complexity and length, they are not good communication documents (even though they may be great planning tools). Therefore, leaders must simplify direction into a handful of key concepts they must communicate. In fact, good direction usually can be distilled into a message of 500 words or less, one that simply tells employees what the organization needs to accomplish and how, and what the employee population is supposed to do.

Good leadership direction is about what leadership does, not just what it says. Words and actions have to match. This means the objectives leadership stresses in communication must be backed up by resource allocation, initiatives, attention and compensation — the concrete actions employees see that make the talk walk.

Know: What Do Employees Need to Know to Take Action?

Everybody in an organization should know where the company is headed and how it's going to get there. Some employees, however, need to know more in order to do their jobs. Leadership must communicate on strategy to those groups in deeper, more actionable terms.

Ensuring that employees know what they are supposed to do is an essential role of leadership communication. If leaders communicate this alone, they will be ahead of many companies. But there's more to leadership communication than that. Employees need to know the reasons behind goals and strategies. Answering their "why" questions helps reduce the distractions that come when they try to figure it out themselves.

Employees want to understand not only why certain strategies were chosen by leadership and how those strategies are intended to benefit the business, but also how execution against the strategies will benefit them personally — the eternal "What's in it for me?" The reasons could be financial requirements, competitive factors, societal issues, industry trends or customer trends. Relevant answers to the "why" questions can build confidence in leadership in the minds of employees and give a context to strategy that helps employees make decisions and trade-offs when they're needed.

Determine Who Needs to Know What

Every leader in an organization should know the organization's strategy. In addition, certain groups of employees have a disproportionate impact on the execution of certain strategies, and leaders must consider this as they communicate. Some people need to know more detail than others. Research and development people, for example, have a significant impact on strategies involving innovation and product leadership. Employees in manufacturing have a significant impact on quality and cost strategies. Leaders must consider this in developing their communication to ensure that specific groups have the opportunity to understand strategy at the level appropriate for their roles.

Conversations about strategy among leaders and employees not only help the employees be more effective in their jobs, but also bring insight and information on strategy and its execution to leaders.

Feel: What Do Employees Need to Feel to Take Action?

Emotional communication is anything but soft and fuzzy. Take the Marines. As a matter of doctrine, they build in their "employees" an emotional commitment to their teams — the frontline squads that form the backbone of the fighting force. From the time a Marine first puts on a uniform, his or her drill sergeant begins to instill that commitment to team, along with other emotional connections to the organization such as pride in the Corps and elitism. That commitment goes well beyond the "rational" reasons why a soldier should walk into harm's way — to achieve mission objectives, to protect the country and others. Actually, the fundamental reason men and women risk their lives in battle is because of the men and women who surround them. They do it for each other, for the team. If emotion isn't soft and fuzzy to the Marines, surely every business leader can embrace emotion as a legitimate part of leadership communication.

Leverage Intrinsic Emotional Connections

The rational elements of leadership communication are just one piece of the puzzle. Truly effective leaders also seek to understand and leverage the intrinsic emotional connections employees have with the company and their work. People will work for a paycheck, but they'll die for a cause — and every organization can find a cause.

Nearly every job — even assembly line work and flipping burgers at a fast-food restaurant — has a motivational connection for employees. It might involve being part of a team, making cool products or saving lives, but *something* can motivate an employee to do more than just clock in. It's a leader's job to find out what that is and tap into it by connecting strategy execution to that intrinsic motivation. That intersection between strategy and employee motivation is a key to performance. Communication can leverage it to drive results.

The 'Why Nots': What's Getting in the Way?

A person's *experiences* shape his or her *beliefs*, which shape his or her *behaviors*, which drive *results*. These linkages make up the Behavior Chain. Leadership must consider the Behavior Chain in developing On Strategy communication. It provides the insights necessary to address the reasons why people don't take action — the "why nots."

Two Common 'Why Nots'

Analysis of the Behavior Chain reveals a number of "why nots." Employees cite experiences that shape beliefs that make it difficut for them to change their behavior in order to follow leadership's direction. Two prevalent beliefs are as follows:

- ***"This will pass, just like the last program of the month."*** This belief blocks leadership's attempts to drive new behaviors, as employees continue past practices while waiting for new strategies to die on the vine.
- ***"They didn't ask me, so why would it work?"*** This is what employees often say about strategies developed for their work areas without their input. Experience tells them that the programs don't work well when they have not been involved in developing them. Even if they might work, employees often undermine them because they were not included in the process, and the expectation of failure becomes a self-fulfilling prophecy.

Just as there are reasons why employees will take action, there are reasons why they won't. These are the "why nots." They often involve deep emotions around employee perceptions of management regarding issues such as trust, commitment and competency. "Why not" issues are a significant challenge to employee motivation and a barrier to strategy execution.

The Behavior Chain

The "why nots" usually can't be talked away. When employees believe they have been lied to by management, for example, leadership can't simply say "Trust me" and expect employees to respond with the needed behaviors. Instead, leaders must address the root cause of the belief, identifying the experiences that shaped the negative belief about trust. This connection between experiences, beliefs and behaviors is the Behavior Chain.

Leaders can get a picture of their employees' beliefs and how they affect behavior and results by reviewing many of the responses on their employee surveys as well as by conducting qualitative research among employees, typically through discussion groups.

The Experience Link

To reverse a "why not," leadership must address the experience link in the Behavior Chain. For example, to overcome the barrier of established mistrust, a leader might begin by telling employees that he or she will

always tell the truth in a straightforward manner. Then the leader must prove it through visible, demonstrable actions — telling the truth about difficult subjects, for example. Finally, the leader must remind employees that he or she told the truth. This words-actions-words cycle creates a new experience for employees, which in turn shapes a new belief. After enough cycles of telling the truth (and reminding employees of it), employees will begin to trust leadership's words again.

Leaders have been successful using this approach to address a wide variety of "why nots." Removing the "why nots" as a factor in the minds of employees puts leaders firmly on the path to successful strategy execution. ●

Package: Turn the Action Equation Into a Conversation

Effective communication happens in the moment, when people are talking about the business and making decisions in their work areas. To enable leaders — from the CEO to a frontline supervisor — to communicate about strategy in the moment, they must be equipped with a message they can remember and deliver. That means the message has to be short — about five chunks of information. This five-chunk limit is driven by human short-term memory capacity.

The Conversation Platform

The five chunks must be constructed to cover the key points of the Action Equation in the form of a very short story, not a separate laundry list of thoughts. The information must be articulated in the vernacular of day-to-day conversation, not corporate language. In fact, the chunks should be viewed as concepts employees can put into their own words, as opposed to lines of a script or slogans. This overall story is the Conversation Platform.

The Conversation Platform is one of the most valuable and versatile tools leaders have at their disposal to improve leadership alignment and communication throughout the organization. It simplifies concepts to a point where they are easily remembered and articulated by top leaders, managers, supervisors and employees alike. It enables all leaders to boil down the essence of where the organization is going and how it's going to get there (or to discuss complex, difficult issues facing employees and the business) in a short communication that could be delivered in an elevator ride or form the basis for a three-day conference on strategy and issues. ●

Align: Make Sure All Leaders Are On Strategy

Top leaders need help communicating with their organizations — they can't do it alone. Therefore, a leader must align his or her leadership group behind strategy and communication, starting with top leadership and then extending the alignment all the way down to frontline supervisors. Without this kind of alignment, employees head in different directions, work at cross-purposes and derail strategy execution.

The first step in aligning leadership behind strategy and communications is to begin with the senior leadership team. Experts recommend enlisting the help of a seasoned, trusted facilitator to interview each member of the leadership team, using the Action Equation as a basis for intake. These intake sessions identify differences in understanding, perception, philosophy and other factors that may divide the leadership team. They also will uncover deeper motivational issues around trust and commitment that can inhibit collaboration. The output from these meetings helps drive productive discussion among the top leaders to resolve their issues and get on the same page.

Test Messages in the Field

Once top leadership is aligned, take messages (in the form of the Conversation Platform) to the field and test them with line managers and supervisors. This determines whether line managers will support the strategy and how leaders want to communicate it.

Just as a good marketing company wouldn't introduce a major new product without testing it with customers, leaders shouldn't take important messages to the organization without first ensuring that they will work. In working to align the organization behind the strategy, don't miss one of the most important constituencies — the informal leaders to whom those individuals turn for information and perspective. They may or may not be found in the leadership boxes on the organizational chart, but their influence in the organization is undeniable. ●

Equip: Give Leaders the Tools They Need to Communicate On Strategy

Businesses train top leaders, managers and supervisors in many things, but seldom provide training about strategy and how to communicate it. Train with this purpose. This isn't skill training, but content training, and as such should be a prerequisite of any leader's

participation in the management of the business. Moreover, because it's content training — it's about strategy — leaders should be active in delivering the training.

Develop a training approach organized around the Conversation Platform and Action Equation, focusing on the core message or "cause," the building blocks and the proof points. This helps create a common understanding and delivery method for strategy communication (it also helps deepen the understanding managers and supervisors have of strategy). With the platform as a foundation, the training should be used to:

- **Develop a solid understanding of strategy among managers and supervisors.**
- **Ground leaders in what the Conversation Platform is and how it's used.**
- **Build understanding of the communication processes the organization will use to communicate strategy and support managers.**
- **Get feedback.**

In addition to training, provide ongoing communication support tailored specifically to managers and supervisors. This includes a communication process or vehicle to keep them updated on strategy so they know news before the rest of the organization and therefore can help communicate and provide perspective. This should include the opportunity to ask questions. Concerning skills training, focus on interpersonal rather than communication techniques. Improving in that area will provide the most benefit, because On Strategy communication asks people to talk to each other not just make presentations and speeches.

Some managers will not become effective enough in communication to deliver On Strategy messages — at least in time to have an immediate impact on performance. In those cases, pair those managers with others who are effective communicators. That way the leaders serve immediate communication needs relative to performance, help the deficient leader learn how to communicate better and show the rest of the organization that communication is recognized as a critical leadership capability. ●

Drive and Support: Orchestrate and Sustain On Strategy Conversation

Once you have informed the Action Equation, built a Conversation Platform, trained and equipped your managers and launched the People Channel, it is time to kick-start communication and step on the gas. This happens through the various communication channels available in most organizations, which include traditional communication vehicles — such as the company newsletter, intranet and town hall meetings — as well as the operating vehicles that managers and supervisors use to run the business, such as departmental meetings, reporting documents, memos and e-mail.

To communicate on strategy, you can use these vehicles to produce a continuous drumbeat of information about strategy (based on the Conversation Platform) and occasional campaigns that turn up the volume of communication for specific, short-term purposes. You can create a drumbeat by keeping the content of every vehicle related to and in support of strategy. Even simple communication such as a personnel announcement can contribute to the drumbeat and reinforce the Conversation Platform. By setting up a communication calendar to track all of the organization's key deadlines, activities and events, you can use every opportunity to its fullest.

Generate Conversation

As you create the drumbeat, it's important to use communication that generates conversation by its nature — communication that has some level of controversy or is provocative, not the normal fare. The On Strategy approach is an ongoing conversation with employees, not a monologue, and the best vehicles generate and promote that conversation.

The communication department is a valuable resource in delivering On Strategy communication and achieving business results if you establish and use it strategically. It's best to populate the communication function with people who are both good businesspeople and passionate about communication. The combination can be very powerful in driving new thinking about the role communication plays and how leaders use communication to deliver business results. Communication people also provide valuable tactical support in delivering communication.

Involve People in the Entire Process

To make the most of your communication people, you should involve them in the entire process of strategy development, so they can contribute to and understand strategy in the deepest ways. Understanding strategy helps them prioritize their work and concentrate on strategic essentials as opposed to providing communication support and services. Tying their advancement and compensation to business results, rather than intermediary communication results or the production of materials, puts them in the lifeboat with you, where they belong and can help the most. ●

How Top Leaders Manage the People Channel

When managing the People Channel, top leaders focus on:

- **Measurement.** The ultimate measurement tools are your business metrics. Communication should influence results, or it will not (and should not) be a priority. Relate communication to performance metrics.
- **Reward, recognize and hold accountable.** It is important to follow up with employees with the proper rewards, encouragement and reinforcement. Recognize managers who are setting an outstanding example.
- **Prioritize.** Beyond managing the People Channel, a leader must also manage his or her own communication focus and activity. This begins with prioritizing where the leader spends time and resources.
- **Lead by example.** Top leadership must provide clear and consistent alignment at the top of the organization. Few things are more likely to discourage a manager from communicating with his or her employees than confusing and contradictory messages from leadership.

You: The Top Leader's Role

The People Channel is the sum of its parts: all of the managers and supervisors up and down the leadership ranks and informal leaders in and out of management. Its effectiveness is a direct result of top leadership's commitment to it. The People Channel spreads the responsibility for strategic communication across all leaders, thereby making communication more effective and less of a burden on top leadership. However, the top leader's role is indispensable in forming, shaping and sustaining the People Channel. In that role, top leaders must manage the People Channel, beginning with setting high expectations.

Never Assume and Always Monitor

You must outline the specific actions you expect managers to take at every communication juncture.

It's important to be specific about expectations for each major communication action. For example, if you are providing an update on your organization's performance and want managers to first attend a meeting with you to review and then sit down with their employees in small groups to review and discuss the information, tell them that. Don't assume they know what the next steps are just because you've done it a certain way in the past. Accompany each major communication opportunity with a clear set of expectations, as well as a process to determine whether or not managers and supervisors meet those expectations.

Orchestrate Communication Delivery

In addition to setting expectations for major communication events, top leadership must also lead by example as active members of the People Channel and participate in the campaigns required to drive On Strategy communication. At the same time, top leaders must play a visible role in managing the People Channel. That involves establishing measurements, allocating resources, recognizing good communication performance and making communication a priority task, not only for the organization, but also for you. ●

'How to' Resource Guide

There are a number of processes that help leaders deliver on the On Strategy approach. Here are two of these "how to" processes:

- **Conducting discussion groups.** Use discussion groups as a research tool on a frequent and ongoing basis (so long as you do something about the findings and tell employees that you did). To lead the groups, it usually makes sense to use a third-party facilitator from outside your direct business or organization. An unbiased party helps to encourage dialogue that is more open.
- **Identifying informal leaders.** Incorporate informal leaders into the People Channel in a number of ways: as people to bounce ideas off of, to provide ongoing reality checks, as part of the day-to-day communication process and more. Informal leaders in your organization can be identified by asking yourself: Who do I go to for the inside scoop, and who do I listen to and trust — at every level of the organization? Then ask the same questions of others in your organization. If you follow that path, you'll quickly identify the informal leaders in your organization.

Walk through the physical space to see which vehicles will work best to trigger conversations. The opportunities are plentiful. There's no substitute for the real thing — so experience it with a real visit. ●

THE SUMMARY IN BRIEF

A team that consistently executes at a high level will win in any market, with any product or service, regardless of the competitive landscape. But what are the steps to developing a high-performing organization? How do managers get out of crisis mode so they can effectively lead their team? In ***Beyond the Hammer***, these questions (and plenty of others) are answered in two very intentional sections.

First is a familiar picture — a fictional story of George, a business owner struggling with burnt-out employees, high turnover, and frustrated customers. We follow George as he befriends a mentor who shares the five foundational pillars of leadership. In the second part of the book, the narrative shifts from storytelling to strategy, with an actionable blueprint for weaving these five pillars into any business. The book's two-part format has been designed to demonstrate problems and solutions. Written for managers and leaders alike, *Beyond the Hammer* offers a simple, yet powerful approach to creating a team that is aligned and properly positioned to win.

IN THIS EXECUTIVE BOOK SUMMARY:

- Explore how leaders can elevate team performance through Five Pillars of Leadership.
- A struggling business owner learns from a mentor how foundational leadership principles can transform his crisis-ridden company culture.
- Practical guidance on building a resilient, purpose-driven team.
- Learn how leadership creates a motivated team culture ready to overcome any challenge.

Part 1: A Business Parable

George, a stressed construction company owner, faces an unending series of challenges: demanding clients, costly project mistakes, and a crumbling company culture that compounds his frustrations.

The story centers around his interactions with a high-maintenance client, Chuck, whose botched kitchen project symbolizes George's mounting troubles. Chuck's relentless criticism and unrealistic demands exacerbate George's anxieties about managing his company, Warren Construction, since taking over after his father's sudden death.

George reflects on his upbringing, shaped by his father's legacy, and the pressures of running a family business. He's frustrated by the lack of accountability in his team, symbolized by his project manager Duncan, who resigns for a competitor.

George's struggles with leadership and finding stability in his company highlight his perceived inadequacy and loneliness in a role he never felt prepared for. These feelings culminate in a crisis of confidence.

Enter Marty, an old friend of Chuck's, who owns a successful contracting company with a strong, supportive culture. Marty sees George's plight and offers mentorship. Through a tour of his own business, True North, Marty shows George how positive, value-based company culture can empower employees and instill accountability, turning around even the most challenging situations.

Marty explains to George that every company has a culture, and that culture is defined as the accumulation of shared values, goals, attitudes, and behaviors - both when everyone is watching and when nobody is looking.

George realizes that leadership and culture-building skills are essential but have been neglected at Warren Construction. He also feels that he is not a natural-born leader, and when he is stressed or upset, he lets his team know that he is stressed and upset through his words and actions.

Over the course of a year, George continues to try to figure out how to improve his now failing business while reaching out to Marty for guidance. At first, George is solely focused on putting out fires, and only wants Marty's advice for specific, tactical issues.

Marty keeps steering George back to think more long-term and look at the big picture. He asks George probing and important questions to help him get to the root cause of why his business is struggling and why his employees are leaving.

He begins by asking George what the company's mission and vision are, but it's clear that George has not written down - or even thought of - either of these statements.

As they spend time together and throughout their discussions, Marty teaches George about his Five Pillars of Leadership. As Marty explains to George, these pillars can transform a business.

Each pillar is like a support beam, and when all five are implemented, you've built something that can stand up to any storm a business might face. George continues to make mistakes and missteps, but he starts to hear Marty's voice in his head as he's confronted with different issues.

Instead of reacting the way he usually does, he begins to approach his challenges in a different way. He has to make some difficult and uncomfortable decisions, but with the five pillars as his foundation, he understands that these decisions are not only for the betterment of his construction company, but also for the people who work for him.

At the end of this story, George feels better than he ever has about his company. He's keeping everything moving in the right direction thanks to his implementation of the five pillars.

These Five Pillars of Leadership are:

1. Belief is Transferable
2. Leaders Shape Culture Through Purpose and Direction
3. Leaders Are Aware of the Echo of Their Voice
4. Leaders Model Their Business as a Training Organization
5. Managers Need a Checklist.

Lessons Learned:

Accountability and Ownership: Successful projects depend on team members who take responsibility. Building this mindset requires a leadership culture that values ownership and empowerment.

Importance of Culture: A company's values and sense of purpose impact every layer of the business, from employee retention to client satisfaction. Strong culture can prevent issues and help retain talent.

Remember that negative voices are louder than positive ones.

Leadership is Developed, Not Inherited: Effective leadership is built through experience, mentorship, and deliberate practice — factors George lacked in his journey but can now seek to address with Marty's guidance.

Empathy and Belief: Leaders transfer their belief to others. Showing faith in team members' abilities encourages them to rise to challenges and builds a positive, resilient team.

Ultimately, George learns that transforming Warren Construction will require more than project management; it will take a purposeful commitment to culture and leadership. Marty's mentorship and the five pillars of leadership provide George with a transformative perspective on running his business.

As he sees at True North, leadership isn't about managing projects alone — it's about creating a sustainable culture where employees feel valued, empowered, and motivated. Implementing these pillars requires a shift in George's mindset, from simply putting out fires to building a strong foundation based on belief, purpose, accountability, growth, and resilience.

Part II: The Five Pillars

As Marty explained to George in Part I, there are Five Pillars of Leadership:

Belief is Transferable

When you believe in someone, truly and deeply, you light a fire in them. You can believe someone into success.A positive belief about yourself will inspire a limitless mindset.

A negative belief can be lethal. As leaders, we can, and we must, help others recognize their potential and encourage them to journey toward it.The idea that Belief Is Transferable is easy to understand, but not always so easy to implement.

Here are five things to keep in mind when helping a team member who is experiencing FUD (Fear, Uncertainty, Doubt).

Remember that negative voices are louder than positive ones. Leaders can help overcome this by transferring positive belief to their team frequently, consistently, and authentically. Make your belief evidence based. Try using the concept of "belief-because."

Remember to read the room. Watch your team members for signs of FUD, rather than waiting for them to tell you about it. The whispers of FUD that live in people's heads can be drowned out by a leader's louder voice positivity.

Belief is Transferable goes beyond title and position. When individuals are not aligned around a shared team purpose, it's easy for negativity and interpersonal conflict to creep in. On the other hand, when team members have a shared purpose and direction, they will feel good about their role and will want their peers to feel good as well.

Try to frame feedback using a center and a sphere. The idea is to raise awareness of areas for improvement so that an individual feels inspired and empowered to grow.

If there are performance gaps that need to be addressed, the goal is not to terminate the person, but to "coach up" and tell them:

1. Why we believe in them.
2. What they need to work on.
3. Why we're confident they can successfully incorporate the feedback they've just received.

Numbers 1 and 3 are the sphere and Number 2 is the center. In other words, the sphere is why you believe that person can improve, and the center is the need for improvement.

Leaders Shape Culture Through Purpose and Direction

Before talking about how to use your mission to shape culture, let's define what culture is. One simple explanation reads: "the attitudes and behaviors of the employees within an organization." Moving on to Mission and Vision statements, a mission statement describes why an organization exists today, and a vision statement looks to the future.

A vision statement should answer the questions "what does

a business want to become?" and "how do you win?" It should be noted that while a mission statement is timeless, the vision statement should be revisited every few years.

A clearly defined mission and vision woven deep into an organization will act like jet fuel for igniting individual and team performance.

There are five ways to shape company culture with purpose and direction.

Start with onboarding. New team members should be exposed to your purpose and direction on their first day.

Create an awards program. Try thinking about a recognition program that goes beyond KPIs. Include categories like "Top Mentor of the Year" or "Coach of the Year."

Weave the mission into conversations. The idea is to take a small phrase from your mission statement and pepper it into different conversations. This consistent reminder of the mission of the company will make it "sticky" and better understood by employees.

Review team members according to the vision statement. Each department needs its own vision statement. It acts as a North Star for the employee and a valuable tool for the manager. This helps everyone stay focused on their department's - and the company's - purpose and direction.

Use cause marketing to develop company culture. Cause marketing aligns a team around serving others and helps your brand. Team members feel inspired when they feel like they are part of a greater purpose of an organization, regardless of their role.

A meaningful mission statement and a well-crafted vision statement serve as the beating heart of a company, embodying its core values and aspirations.

Leaders Are Aware of the Echo of Their Voice

Recent studies have shown that 60% of employees have left a job to get away from a manager. If a leader comes across as stressed or angry, the team will be stressed and angry.

If a leader comes across as if they are steering the ship, and it's all under control, then the team is going to feel safe - especially in times of turmoil. In front of employees, leaders don't get to have bad days.

There are many examples of echoes that tear people down. Let's talk about Echoes that Build.

The echo of staying present.

Whether it's an informal or random conversation, or a structured performance review, staying present means you're "all in" during the moment at hand. This shows your team that you value them and creates more authentic human connection, and it also inspires them to do the same.

The echo of being immaculate with your words.

If you make a statement as a leader, it needs to be true, and if you make a promise or a commitment, you need to keep it.

The echo of body language.

Your physical presence is a powerful tool to show you are interested and open to what people have to say.

Leaders who are aware of their echo intentionally stay engaged in the meeting, not just until they understand the information, but until every last person in the room understands it too.

The echo of clarity.

Recognize your echo and make sure you communicate clearly. For example, as a leader if you are kicking around ideas and say something in a meeting like: "We really need to bring social media in-house instead of outsourcing it" - your team might take this as a directive where you only intended it as a starting point for a brainstorm.

A better approach would be to ask "What does everyone think about bringing social media in-house?" Always recognize your own echo and make sure you are being clear in your communication.

The echo of intent.

There are many different types of meetings, and the most productive meetings happen when each person in attendance knows what type of communication to expect ahead of time.

When you have an organization where leaders and managers are aware of their echo and communicate effectively, your culture will be stronger, and your business will be better because of it.

You will not only attract more top talent, but you will retain them, too, because the reverb of your echo will reveal itself in the satisfaction, productivity, and commitment of those on your team.

There's a difference between handing someone an employee manual and modeling your business as a training organization.

Leaders Model Their Business as a Training Organization

There's a difference between handing someone an employee manual and modeling your business as a training organization. Training organizations don't view training as something with a start and end date. Instead, it's a mindset, and the value of training is woven into the fabric of the business. Training organizations are always sharpening their blades.

Zappos is a training organization.

Their philosophy was to succeed by inspiring team members rather than just giving them a paycheck. Customers regularly wrote emails, blogged, and even created videos about Zappos level of service. In 2009 the company was sold to Amazon for $1.2 billion.

Training organizations document their systems and processes.

Envision a customer's journey through your company from the first touchpoint to the final interaction, How many times is someone engaging with them? What do you want those communications to look like? Each of these touchpoints is an opportunity for friction, and therefore is an opportunity for training. By documenting a vision for every engagement, you will create an impactful learning tool.

Is training structured, or is it organic?

Some organizations have a dedicated trainer where content and cadence are planned and delivered with consistency. Others prefer to empower the team to conduct their own training at the time and place of their choosing. Which is better? Somewhere in between where the organization has both structured training as well as allows for - and encourages - more organic, team member to team member training.

Hire for ETHER.

ETHER stands for Ethical, Trainable, Hungry, Energetic, and Reliable. Candidates with the right balance are the ones you want on your team. But keep in mind that not every role requires the same amount of all these qualities.

A willingness to learn.

There are methods to help identify people who are willing to learn. For example, if you have a role that requires script memorization, you can send the candidates a short script to memorize before the interview. The goal isn't to see who does it perfectly, but rather who puts the effort into it. Those are the best candidates for the role.

Getting training to stick.

A training organization needs to measure the effectiveness of the training, in real time. Daily quizzes during training can help with this, and are beneficial to both the trainee and the trainer.

For the trainee, momentum matters. Small, early wins build confidence, create momentum, and fuel a learning mindset. For the trainer, if the students in the class are doing well on the daily quizzes, then the training is working. If they are struggling, then it's clear there is an issue with the training and the course.This allows the trainer to adjust and improve.

Investing in people.

By modeling your business as a training organization, you are not just teaching a skill set, you are igniting a culture of continuous growth and innovation. More than professional development, it's an authentic commitment to every team member's journey towards recognizing their potential.

Managers Need a Checklist

There's a list of the Top 10 Practices of Top-Performing Managers. This list is:

1. Is an effective coach and mentor.
2. Leads with a team vision statement.
3. Practices empowerment.
4. Communicates effectively.
5. Is KPI focused and accountable.
6. Discusses performance and career development.
7. Keeps a learning mindset.

8. Collaborates with other business units.
9. Embraces continual process improvements.
10. Praises performance publicly.

The role of the manager.

Managers handle key operational tasks such as hiring, promoting, training, rewarding, and when required, terminating team members. A manager's approach to these duties will either cultivate a positive, productive, and engaging team culture, or lead to a demotivated, distrustful, and dysfunctional one. A manager's actions directly influence the culture of the company and the mindset of the team.

Mindset matters.

How we think about things - our mindset - affects how we feel about things. How we think and feel impacts how we act, our behavior. It's crucial to ensure your managers are aware that how they approach their daily responsibilities impacts the mindset of their team, and therefore the overall organization.

Managers influence culture.

The CEO, along with other top executives, shapes the culture of a business by providing clarity of purpose (mission) and business direction (vision). It's the managers, however, who are the custodians of the company's culture. Culture and mindset determine the degree of employee satisfaction, commitment, productivity, engagement, and retention for those you work with. The impact will be reflected in how the business performs.

Difference between leaders and managers.

Managers navigate the day-to-day complexities inside a business, ensuring the systems and processes are being adhered to, while leaders drive change; change in direction, change in mindset, and change in human behavior. Leaders and managers are usually the same person doing different things at different times.

Levers of influence and levers of control.

Sometimes the goal is to coach, motivate, and inspire team members. The practices that require these skills are called levers of influence. At other times, it's about managing processes and systems. Those practices are levers of control. In management, the blend of influence and control is key. Influence without control can lead to chaos, while control without influence can create a rigid and uninspiring environment. The art of successful coaching, and indeed successful management, lives in finding the right balance between these two very different levers.

Levers of influence drive change by shaping attitudes and behaviors in a positive, nurturing way. Levers of control provide the necessary framework and boundaries within an organization, so both the business and the individual can grow together. The best managers are adept at understanding when to use which lever.

To quote Aristotle, "We are what we repeatedly do. Excellence, then, is not an act, but a habit." As a leader, you get to choose what you want to practice, and what you want to perfect. In doing so, you're also modeling the way for those around you. The five pillars, when practiced, can transform the culture of a business, and the mindset of a team. In this newly transformed business culture, people are no longer put in a box where their contribution isn't valued or appreciated. Instead, team members can thrive in an environment filled with meaning and purpose, surrounded by others who believe in them. And in that world, everyone becomes limitless.

Brian Gottlieb is an inspirational business leader who founded a home services business in 2009—on a plastic folding table with $3,000. When he sold the businesses twelve years later, the organization had expanded across multiple states, grown to 600 employees, and neared $1B in lifetime sales. The company was recognized by INC 5000 as one of the fastest-growing companies in America. A Harvard Business School executive education alumnus, Brian is an active angel investor, board member, and keynote speaker who inspires businesses and individuals to reach their utmost potential.

Play to Keep Playing for as Long as Possible

There's a reason we talk about business in militaristic terms—battles are fought to be won. Leaders plan strategies to gain territory (market share) and to outwit the enemy (the competition). Marketers and salespeople implement campaigns, and any competitor information gained by illicit means is referred to as industrial espionage. Victory is achieved when the enemy is vanquished either through surrender (a merger or takeover) or outright defeat (driven out of business).

In his new book, *The Infinite Game*, Simon Sinek points out a fundamental flaw with this approach. Businesspeople fight to win, but business is inherently unwinnable because there is no defined end point. Personnel may change over time, products and services may come and go, and companies will rise to prominence, maturity, and inevitable decline, but: "There is no such thing as 'winning business.'"

Games like chess or football are finite in nature. There is a clear end point to be achieved by fixed rules, and there are easily identified winners and losers at the end. The world of business, by contrast, is more contradictory. Leaders play to win but the objective isn't really to win, it's to keep playing (ideally in pole position) for as long as possible. Sinek defines this as an infinite game.

The author's inspiration for this terminology is *Finite and Infinite Games: A Vision of Life as Play and Possibility*, by James P. Carse, published in 1986. It is that promise of "play and possibility" that Sinek seems to find so attractive, because he presents this perspective of business as an infinite game as the key to transformation from a company of stressed and overworked production drones to a cohesive team of innovative risk-takers. To achieve that transformation, the author proposes five fundamental practices that leaders must follow if they hope to achieve a truly infinite mindset.

1. Advance a Just Cause

What kind of company do you want to build? This is not the same question as Sinek asked in Start with Why. That was about establishing a clear purpose in all you do. Answering that question drew on the past—your life experiences and value

> **Being the best is great for a finite game, but it's no guarantee of success in an infinite game. . .**

system that led you to this point—your origin story. In this instance, you are looking to the future. If business really is an infinite game, it must be about future potential that can take you in multiple directions. In this game, you're not competing with another company, you're competing with yourself. Sinek cites the example of sharing a cab with an Apple designer who was very nonchalant about Microsoft launching the Zune to compete with the iPod. Apple wasn't worried about the Zune, they were worried about what came after the iPod.

The choice of the term cause is a deliberate attempt to separate from a profit motive or other corporate metric. This just cause "must be durable, resilient, and timeless." As such, profit becomes a means to the continued pursuit of that cause rather than an end in itself. The inherent service orientation here leads us to a detailed discussion of a broader responsibility of business beyond order fulfilment and customer satisfaction.

What makes a "just cause"? Sinek describes this as: "a specific vision of a future state that does not yet exist." That future state has to be so compelling that your employees will gladly enter the fray on a daily basis, making endless sacrifices for something that they consider to be bigger than themselves. They are acting for something rather than against something else.

Don't confuse this with a run-of-the-mill vision statement that shows up in every annual report alongside mission and objectives. Sinek quotes the vision statement from Garmin, the GPS device maker, that proudly states: "We will be the global leader in every market we serve and our products will be sought after for their compelling design, superior quality, and best value." This, the author points out, may be a guiding philosophy, but it's not a just cause. Being the best is great for a finite game, but it's no guarantee of success in an infinite game, as Garmin was to discover when its market value fell by two-thirds from 2007 to 2018.

2. Build Trusting Teams

Sinek makes a detailed distinction between performance and trust. Companies hire based on past performance and then treat those hires as expendable resources to be cut loose when financial performance metrics demand. The Human Resources (HR) department is usually complicit in this process. For companies playing the infinite game, this scenario should be reversed. Hire the best people and then trust them to do their jobs. If you find that you can't trust them, then why did you hire them in the first place?

With that trust in place (which, the author admits, will take a while), the role of HR then changes to protecting the people from the short-term mentality of leaders seeking to boost the bottom line with a quick reduction in labor costs. Employees who feel trusted and protected perform at a higher level, and customers respond to that.

Sinek offers a detailed example of the Marine Corps where the priority in leadership training isn't the ability to overcome any obstacle, but rather to "create an environment in which everyone feels trusted and trusting so that they can work together to overcome any obstacle." This message is underlined with frequent reiteration of the statement that: "leaders are not responsible for the results, leaders are responsible for the people who are responsible for the results."

An example of a clear failure to comprehend this message is presented under the heading of ethical fading. The case of Wells Fargo's toxic work culture that prompted employees to open new accounts for customers without their knowledge or permission is covered in detail. The gradual fading of any ethical standards is an inevitable consequence of an oppressive work culture in which any act of malfeasance can be rationalized in the name of employment security. The fact that the financial penalty paid by Wells Fargo—$185 million—represented less than one percent of their annual profits is indicative of the lack of serious concern for this issue. Sinek takes his clear frustration one step further by calculating the fine in terms of an employee's salary: "It's the equivalent of someone who makes $75,000 in annual salary being fined $150. Not much of a punishment."

3. Study your Worthy Rivals

Closely studying your competition should be second nature for any competent business leader. How you study and which rivals you choose to study will quickly reveal whether you are playing a finite or infinite game. Are you simply following in your competitor's shadow, constantly playing catch-up, or are you examining every detail of what they do to learn as much as you can from them?

Sinek recounts the story of former Boeing Commercial executive Alan Mulally joining Ford Motor Company as its new CEO in 2006. When asked what kind of car he drove, Mulally stated unequivocally that he drove a Lexus, and followed-up with the justification that: "It's the finest car in the world."

To state that the car you drive is better than any car made by the company you now run might have seemed sacrilegious to some, but Mulally was sending a very clear message—Toyota makes better cars than Ford and we have to fix that. That one statement changed the perspective of the entire corporation. Instead of monitoring every competing car maker as a matter of corporate

> . . . real courage comes from making a decision that takes your company in a completely new direction.

policy, Ford now had a worthy rival. When the stock market crashed in 2008, Ford was the only US auto maker to survive the market downturn without federal assistance. Both General Motors and Chrysler received a government bailout—a move that Mulally wholeheartedly supported. For him, the opportunity to let two competitors go under was worth far less than keeping two rivals around to make sure that Ford stayed sharp.

4. Prepare for Existential Flexibility

Sinek draws a clear distinction between the daily flexibility you need to be good at your job, and the existential flexibility needed to be ready to make a huge strategic shift in pursuit of your just cause. Walt Disney made such a shift when he put everything on the line to elevate cartoons from the black-and-white short of Steamboat Willie in 1928, to the glorious feature-length color of Snow White and the Seven Dwarfs in 1937. This was not a 'bet-the-house' gamble in pursuit of maximum profit. It was a commitment to providing the audience with an opportunity to "leave the stresses and strains of life behind and enter a more idyllic world of [Disney's] creation."

Being willing to risk everything in pursuit of your just cause is only one element of existential flexibility. Finite leaders live in constant fear of having their carefully planned strategy upended by new or disruptive technology. Infinite leaders, who are playing the long game, welcome the disruption and embrace the new technology as an opportunity to improve their product or service and better serve their customers.

Sinek further clarifies that an Existential Flex should not be confused with the passion and vision of an entrepreneurial start-up venture that is fueled more by faith than resources. An Existential Flex happens when a fully formed and mature company recaptures that infectious enthusiasm and passion for something new at a time when the company appears to be doing fine on all other metrics—making sales and profits. To outsiders, the decision to shake everything up may seem crazy at worst and iconoclastic at best, but infinite leaders know that this is the very time that you should reset and reinvent.

5. Demonstrate the Courage to Lead

From the author's perspective, playing the finite game doesn't require real courage. Yes, there may well be some risk in expanding into a new market or committing research dollars to the development of a new product, but real courage comes from making a decision that takes your company in a completely new direction. When you decide, "That's bad for business, and I'm going to do it differently," you may be impacting your sales and profitability in the short-term as a sacrifice to the longer-term viability of your just cause.

CVS Caremark made such a choice in February 2014 when the company announced that they would stop selling any tobacco-related products in their stores. They expected the decision to cost them as much as $2 billion in annual revenue across over 2,800 stores. What would prompt a corporation to make such a decision that was guaranteed to invoke the wrath of Wall Street analysts and pundits? Sinek points to CVS' Just Cause: Helping people on their path to better health.

The company wasn't responding to an online campaign or national boycott. Nor were they reacting to bleak market data that called for the end of all tobacco products. They were simply committing to their just cause. As for the Wall Street analysts, the predicted loss of revenue to competing retailers never materialized. As Sinek points out: "The seven hundred packs of cigarettes per week per store didn't just go somewhere else. They went nowhere. The total sale of cigarettes actually decreased." Removing the availability of tobacco-related products in their stores encouraged customers to quit the habit rather than get them somewhere else.

Sinek concludes by drawing comparisons between the game of business and the game of life. We can consider our lives as finite, but life itself, as far as we know, is infinite. Changing that perspective, the author argues, might just change your whole life. In any other game you get to choose whether you want to play or not. In life you become a player the moment you are born. You then have a choice to follow a finite path of short-term goals (usually in pursuit of financial gain), or an infinite path in pursuit of a just cause—what Sinek calls a life of service.

Sinek doesn't present finite and infinite games as being mutually exclusive. Every infinite leader will have to make finite choices in the short-term to pursue their just cause. The message of his book is that the finite mindset is, by definition, restrictive. The rules of the game are decided for you, and if all you do is focus on beating your competition at any cost, you forego so much potential that you could access if you just stopped for a moment and thought about how you want to play. Playing the infinite game isn't portrayed as easier by any means, but the prospect of leading a company that truly reflects your values, respects the people that work with you, and commits to something more substantive than the almighty dollar, must be worth serious consideration.

Leadership Strategy and Tactics: Field Manual

by Jocko Willink

Jocko Willink was a U.S. Navy SEAL for twenty years, rising through the ranks to become the commander of Tank Unit Bruiser, the most decorated special operations unit of the Iraq War. After retiring, Jocko continued on the disciplined path of success, co-founding Echelon Front, a multimillion-dollar leadership and management consulting company, writing the New York Times bestsellers Extreme Ownership, Discipline Equals Freedom, and The Dichotomy of Leadership, along with the Way of the Warrior Kid children's book series, and creating one of the top-ranking podcasts, Jocko Podcast.

Leadership Is Hard Because 'People Are Crazy'

If you aspire to a leadership role in your organization, there are probably two primary paths ahead of you: an academic path, where you examine leadership theory based on historical models and case studies, or a real-life path where you learn from those around you and/or receive mentoring from your boss. This less-structured and often very serendipitous path is known as OJT—on the job training.

In his new book, *Leadership Strategy and Tactics: Field Manual*, decorated U.S. Navy SEAL team commander and management consultant Jocko Willink takes the same prescriptive approach to educating his readers as he did in his earlier bestsellers *Extreme Ownership* and *The Dichotomy of Leadership*. Leadership is hard because "people are crazy." You may be able to identify general patterns of behavior, but when you're dealing with small teams of individuals, whether on the battlefield or in the corporate world, those individual identities will supersede any leadership theory you may have read about in college.

Willink's perspective is inevitably grounded in the military paradigm, but he manages to remain cognizant of his corporate audience, balancing the tough-mindedness of a command leader of men and women who are expected to follow orders, with the fair-mindedness of a leader who is expected to develop the strengths and skills of his direct reports.

Leadership Strategies

As the book's title implies, Willink approaches the topic in two parts, setting the groundwork in part one with a detailed look at "Leadership Strategies: Foundations, Core Tenets, and Principles." In the second part, he drills down to more specific recommendations by addressing "Leadership Tactics: Becoming a Leader, Leadership Skills, Maneuvers, and Communication."

Foundations

If you're a listener of the Jocko Podcast, you will find the direct tone of this book to be very familiar, but Willink isn't above

> . . . Subordination of your own ego can be even more challenging than understanding the needs of the individual personalities on your team.

sharing stories of his own lack of experience in his first platoon, and his naiveté as a leader. In describing a combat training exercise on a commercial oil rig, he tells a story where his platoon was presented with an unexpected layout, causing everyone to freeze in anticipation of further instructions that never came. Willink was able to detach himself from the intense focus on mission parameters to make a quick decision that allowed the platoon to move forward. That detachment from a singular focus served him well as he rose up the ranks. As leader, you don't need to burden yourself with the expectation of knowing everything about the mission (or project) and every possible outcome. Instead, develop the ability to remain objective so that you can better respond to unanticipated events.

The more you burden yourself with knowing every single detail about the mission, the greater the likelihood that you will fall victim to your own arrogance, not listen to your experienced team, and make the wrong call when a deviation from the mission parameters is clearly needed.

Core Tenets

Awareness of and control over your own arrogance and ego is a prevailing theme through part one of the book. Transparency, communicating everything to your team (both positive and negative), being humble enough to ask for help when it's clearly needed, and having the humility to never stop learning as a leader, are critical tenets for future success. Having an assigned rank in a chain of command (or an organizational chart) is not an automatic entitlement to influence and respect—they both have to be earned. You do that by demonstrating extreme ownership (of the good outcomes and the bad) and investing the time and effort to build trust and relationships with each of your team members.

Willink reminds us that subordination of your own ego can be even more challenging than understanding the needs of the individual personalities on your team. The more experienced and skilled you become as a leader, the greater the temptation will be to show them which direction to take or decision to make. That not only deprives them of a valuable learning opportunity, it also sends the message that you don't have confidence in them to make the decision on their own.

Principles

The author runs the risk of alienating his audience with the statement that "Discipline is the best way to take care of your people." Coming from an experienced military leader, that perspective should not be a surprise, but the fact that he subscribes to the same approach in a corporate environment is surprising. The 'tough love' approach has an underlying message, however. It's your job as leader to make sure your people are as well prepared to succeed as they can be—that's your job—and if you elect to "coddle them" to avoid being unpopular, you fail at that job. Willink isn't advocating that you drive them to burnout, he is arguing that you should know your people well enough as individuals to be able to maintain a balance and push only when needed with the objective of each person achieving their individual goals as part of the goals for the team as a whole.

Leadership Tactics

The transition from strategy to tactics assumes that the reader has now been appointed to a leadership role. Part two offers some general but valuable homilies that underline the accountability of leadership. It's not a time to kick back and let your former peers carry the weight of the mission or project for you. In fact, it's the exact opposite. If you are to earn the trust and respect of your team, you must work harder than them while being humble, respectful, balanced and honest. Several of Willinks' examples underline the message that you only have a limited window of opportunity to get this right. The first time that you behave in a manner that demonstrates a lack of confidence or trust in your team, or you simply throw the weight of your new rank or title around, will be the one and only time you get to do that. You will not earn back the trust you just lost. Worse still, if you make a bad decision and don't own up to it, choosing to throw one of your team under the bus to protect your own ego, you will have lost that team for good.

Becoming a Leader

The comparison between two platoon members—Larry and Brian—being promoted to LPO's (leading petty officers) demonstrates how easy it can be to get off on the wrong foot. Larry is serious and focuses on the checklist of things to get done. He doesn't let the promotion go to his head, respects the experience of his platoon, and wins their trust and respect easily. Brian, by comparison, attempts to diffuse the tension through humor by announcing his promotion as: "Looks like I'm responsible for all the crap now." Needless to say, it took Brian a little longer to get his "leadership bearings."

Leadership Skills

Much of the advice that Willink offers falls under the category of not doing what you think leaders are supposed to do. Remaining objective (as emphasized in part one) allows you to uncouple from the emotional stress, to read the room more

> . . . Don't respond to rumors, and don't let rumors get started in the first place–they are a red flag that you aren't communicating effectively.

accurately and to act accordingly. Iterative decision-making is a great example of this. New leaders are extremely sensitive to the fact that they are in charge now. Being in charge means you make the important decisions, and so you feel pressure to make those decisions. Willink believes that there is often an argument for not making a decision at all—"if it ain't broke don't fix it"—choosing instead to detach and allow the situation to develop and to give you a clearer sense of what is really happening before making a more reasoned decision at an appropriate time.

Maneuvers

A promotion is often seen as the culmination of a job well done. Willink approaches the topic from a broader perspective, often choosing to use a promotion as a corrective tool, deliberately changing the perspective of an employee who is not performing as expected. He offers examples of high-potential platoon members who become either disruptive or too laid back. In both instances, the platoon member is bored and unchallenged and responds accordingly. Traditional leadership policies would consider both to be unsuitable candidates for promotion, but by deliberately changing their perspectives, Willink was able to bring about dramatic changes in performance.

Communication

Transparent communication of both positive and negative news is reinforced as being critical to leadership effectiveness throughout the book. In this section, Willink is more concerned about how you communicate with your team, in terms of direct and indirect feedback.

Much of it revolves around the control of emotion. Emotional instability when giving instructions or feedback will sabotage the outcome as well as destroy the message delivery. Preparation is key. Don't respond to rumors, and don't let rumors get started in the first place—they are a red flag that you aren't communicating effectively.

One piece of advice that will probably resonate as being too militaristic is Willink's position on praise. If given too often or too effusively, praise can lead to people relaxing under the impression that they have got this leadership thing figured out and can now coast a little. Again, we have a 'tough love' approach rearing its head, but the concern is valid. Praise should aspire to be a reinforcement not a surprise gift. Some may not need it because they are driven internally by other, more personal, motives. Others may depend on it for ongoing behavior adjustment. It's your job as the leader to figure out who needs which in your team. If you elect a blanket approach of effusive praise for everyone, Willink argues, you will lose respect and devalue the praise that you give by virtue of the ease and frequency with which it is given.

Setting the Example

As if you weren't already traumatized by the complexity of leadership responsibilities, Willink closes with the reminder that your team will be watching you constantly. They'll be watching your attitude, your behavior, and even your body language from the tiniest raised eyebrow to the quickest eye-roll or stifled yawn. The subsequent mimicry will be both conscious and unconscious. If you're late or unprepared for a meeting, they will take that as permission to do the same. If you show-up "dressed like a slob" for that meeting, the dress standard for the office will start to decline accordingly. The most powerful test of leadership is whether you can live with that constant close attention and be comfortable setting the example that you want them to follow.

It Is All on You, But Not About You

As Willink's third book on leadership, the basic premise of Leadership Strategy and Tactics should come as no surprise. "When you are a leader, there are no excuses, and there is no one else to blame." No sugar-coating, no soft sell. Being in charge is a responsibility that carries clear and often overwhelming expectations. The prescriptive, no-nonsense style may take some getting used to, but the veracity of the message isn't diminished by it.

Leadership books are especially susceptible to 'flavor-of-the-month' theories by equally 'flavor-of-the-month' consultancies promoting new systems or organizational constructs designed to launch your company into the next great corporate paradigm. If that's for you, this book isn't.

Willink's position is that there is no universal panacea for leadership because "people are crazy." Promoting generally applicable solutions in that environment leaves you herding cats. If, instead, you focus on how you need to conduct yourself in a leadership role and what each of the individual members of your platoon or team need from you in that role, your chances of success will be greatly improved.

THE SUMMARY IN BRIEF

Company leaders worldwide seek business growth for many reasons. Whether it is to expand profitability to drive shareholder value, to build stronger market value in preparation for a transaction, or to support and promote their employees, growth is desirable for just about every organization. So, why do only 13 percent of companies sustain a modest single-digit growth rate for ten or more years?

As leaders, it is critical we identify which of our company's historical models, practices, and behaviors are self-limiting and undermining results. Margaret Reynolds, in ***Boost Your GrowthDNA,*** examines complex business problems and provides systematic solutions. GrowthDNA has four strands that contribute to an organization's successful growth. These "growth genetics" are invisible and typically not tracked or measured. Yet, like DNA, they are predictive of outcomes and can be managed and modified. Proactively managing GrowthDNA yields a healthier business and generates sustainable high performance.

IN THIS SUMMARY, YOU WILL LEARN:

- How to develop the confidence needed to challenge the status quo and set sights on bolder goals.
- What is required to achieve strategic clarity organization-wide.
- Why developing organizational commitment to strategy is a leader's #1 job.
- The importance of a growth-minded culture and the role of communication in achieving it.

What Is GrowthDNA?

If leaders want to be champions for growth in their organizations, they must understand it isn't the activities themselves that matter; it is how organizations approach them. A company can do everything "right" and still have very limited success. The sole source of growth, regardless of industry, is the organic conformation of the company—its DNA. Every organization has DNA that influences how they get things done; it is the DNA that separates those which are successful from those which are not.

Human DNA testing has exploded. Today, around one in twenty-five adult Americans have access to their personal genetic data. DNA is a predictor of what is possible. It increases the odds of a potential outcome. What exactly is DNA? The DNA molecule is two long, thin strands twisted around each other like a spiral staircase. An organism's DNA affects how it looks, how it behaves, and its physiology.

Businesses Have DNA

Like humans, organizations also have distinct DNA—a genetic imprint that determines outcomes. Fortunately for growth goals, your business DNA can be altered to drive improved growth results. That DNA consists of how people approach problems, how work is defined, how decisions are made, and how communication takes place. A company's DNA is more than its culture; it's a composite of how the organization thinks and works, expressed through behaviors and processes. GrowthDNA is a framework designed to help leaders identify the unseen variables in their organizations: the DNA that contributes to or detracts from the growth of the company.

Understanding Your Company's DNA

As with human DNA, to manage outcomes, you must first understand your company's unique genetic code. There are four essential DNA strands, or components, of GrowthDNA. Each of these strands is distinct but also interconnected. All four GrowthDNA strands must be boosted to achieve sustainable and significant growth results.

ConfidenceDNA

ConfidenceDNA comes from using market data to challenge the status quo, understanding capabilities, weaknesses, and opportunities. Business leaders need relevant market facts, not anecdotes, and a solid understanding of what customers want, rather than what is easy to provide.

Market Intelligence

The days of answering the phone and picking up sales from loyal customers who want to buy what they bought last year are moving into the rear-view mirror. We need to get in front of where our customers want to go and help them get there with new and creative solutions to their problems that use existing products in new ways, or new products with more integrated service features. Selling solutions can be a valuable win-win with benefits for not just the customer, but the provider, too. Market intelligence that helps you identify gaps in the market which align with organizational strengths gives companies the confidence to think and act boldly, delivering on this first strand of GrowthDNA.

A ConfidenceDNA Case Study

Amazon is a giant in market intelligence. They excel in one-click checkout and tracking customer interests. They applied that knowledge to developing an Amazon GO store in downtown Seattle. The store is a neighborhood grocery designed to provide a cashier-free shopping experience. Just scan your phone when you enter, and using Artificial Intelligence and cameras, the store records what you take off shelves. When you are done shopping, just leave, and it is automatically charged to your account. Sure, Amazon is a giant with years of experience growing through market intelligence; very few companies have their depth of market intelligence DNA. The key is to start. Start now. Start simple. Start collecting relevant data from customers and marrying that with trends. If the organization can't answer the question, "Why do customers buy from us over the alternatives?" based on what is known versus what is assumed, this is a good place to start. Decisions based on market intelligence nurture ConfidenceDNA and without it, many companies settle for incremental growth rather than defining and achieving their potential.

ClarityDNA

ClarityDNA comes from crafting a specific, well-defined strategy that is clear to all responsible for its success. Strategy answers the question of where an organization will play in the marketplace and how it will win.

The Strategy Funnel

Clear strategy is like a funnel, with the broadest strategy decisions at the top. As each strategic decision is made, it takes options off the table for strategic decisions that follow. At the top of the strategy funnel is the overarching strategy.

Once determined, this will not be unique to your company, but how you implement it will be. Strategic positioning then determines how the organization will compete against others in the industry. It defines how the company will differentiate itself from its competitors. The value proposition, when identified, determines where the company needs to consistently excel. Finally, a company decides who is the target customer and what products and services best meet that customer's demands.

A ClarityDNA Case Study

John Knox Village provides independent living and long-term health care services. The organization's vision is to be the leader among senior living communities. The village had to address a rapidly changing target market with different needs. It was important to honor its vision and reinvest in being the leader in senior living. The extensive data analysis conducted on the front end— tracking industry trends, analyzing current property conditions and housing inventory, benchmarking other facilities—led to a courageous commitment to a long-term redevelopment plan that would not only bring the campus up to speed but also position the village to wow residents of the future.

The scope of the plan was significant and had to integrate many moving parts across different business units. To bring clarity, the organization spent countless hours redefining their target market and developing the financial model that would be a win-win for them and their residents. They stopped managing each function of the community and started looking at how to integrate services. They also realized that how services were delivered mattered as much as the facilities themselves so they developed a commitment to a resident-centric hospitality culture. Finally, they developed a long-term redevelopment plan that would phase work over a decade and created an employee group to drive the necessary cultural change.

CommitmentDNA

CommitmentDNA begins at the top and is the number one goal of leadership. In companies with GrowthDNA, leaders understand their role to be that of coach, not just boss. Developing buy-in and encouraging contributions at an individual level is central to success.

A CommitmentDNA Case Study

Kevin Brown, CEO of Omaha Steel, a company with 42 percent growth in 2017, sums it up. "Most of my focus over the last ten months compared to three years ago is on employee communication. We all try to roll up our sleeves to get the job done. When people see your heart, that you are willing to work alongside them, and know your interests are in the right spot, it is amazing to see what people will do for each other. We are rowing the boat together. For us to continue to move forward, the only thing that will stop us is us. We need to be sure the team stays fully vested in wanting success. The rest of it solves itself."

CultureDNA

The final DNA strand, and perhaps the most critical because it drives sustainability, is culture. It is CultureDNA that enables organizations to sustain growth year after year.

Growth-Minded Culture

GrowthDNA companies have specified important values that spawn growth-mindedness at all levels of the company. Changing culture starts with changing the leadership approach. Leaders and managers across all functional areas must be aligned by common objectives and priorities. Then, everyone in the organization must understand the direction of the company or its vision.

Employees can't help drive value if they don't know what is expected and what they are empowered to do. All too often a strategy doesn't change the work of an organization because it sits on top of day-to-day operations rather than being integrated into it. A growth-minded culture looks for ways to engage and inform employees, empowering decision-making at all levels. Growth-minded leaders have conversations instead of having meetings, focus on people over technology, augment direction with rich, contextual, informal communication, and give control rather than take it.

A CultureDNA Case Study

Gray Manufacturing Company, Inc. has been designing, manufacturing, and selling lifting equipment for the automotive, truck, and service vehicle industries since 1952. This family-owned organization has deployed a fierce commitment to serving the customer with an eye for product innovation, driving a 25-percent increase in revenue in the last four years. Gray wanted to challenge themselves to be the best—in their industry, to their customers, and as an organization. After eight months of data-diving and strategy formation, the leaders know where the potential lies. Because they are better informed with data, and clearer about priorities, they can then ask

questions and contribute ideas, making discussions more meaningful and generating more unified confidence in decisions. From a strategic perspective, the organization shifted to enterprise-wide projects, which elevate each department's contributions and brought alignment among departments. Shared data puts more people on a level playing field. The number of initiatives identified are fewer in number but have much more potential impact. They are asking, "What can we stop doing that is tied to the past but doesn't advance the business so that we can start investing in the things that will drive our future?"

Up until now, Gray has been very self-sufficient with excellent results. But the next level will require people to look at the business in an entirely different light, no longer stretching what is done to accommodate growth, but instead asking what will be necessary to enable the growth potential. The dynamics have changed, enthusiasm is high, and prospects for growth are excellent.

How GrowthDNA Works

Each of the four strands of GrowthDNA is essential. These strands are intertwined and mutually reinforcing. Best performance outcomes occur when all four strands are strong and are functioning interdependently. Therefore, it is important to understand how they work together.

GrowthDNA is Cyclical

The initial engagement point for those wanting to build GrowthDNA is ConfidenceDNA. Without it, other actions around the circle are typically more incremental in nature, with less impact, and are often under-resourced. Strategy drives ClarityDNA and sets the course for the future vision of the organization. CommitmentDNA is the stage where value will be won or lost. CultureDNA requires leaders to operate in a constant state of consciousness to avoid falling into hereditary habits. To sustain high performance over time requires a growth mindset to permeate the organization.

GrowthDNA is Cumulative

The four intertwined GrowthDNA strands are cumulative, each reinforcing the other. Much as in weaving, where fragile threads intertwine to produce strong cloth, GrowthDNA relies on all four strands to boost performance results.

Boosting GrowthDNA results in an organization confident in its bold long-term goals with clarity of direction, an aligned and committed leadership team, and a growth-minded culture that includes everyone in the organization. And the kicker? Cultivating GrowthDNA is not a big financial commitment like installing a new ERP or building an R & D Center; it is simply a change in how the organization works every day.

Margaret Reynolds, Master Growth Catalyst of Breakthrough Masters Unlimited, a division of Reynolds Consulting, LLC has assisted companies with growth planning for over 20 years. Margaret has an extensive background in helping companies of all sizes, from Fortune 500 to aspiring mid-market clients, find ways to innovatively and profitably grow their businesses. Her unique blend of experiences ensures that the work she does with companies is creative but practical as she integrates the planning process with business realities, resulting in plans that are actionable and profitable.

Boundaries for Leaders

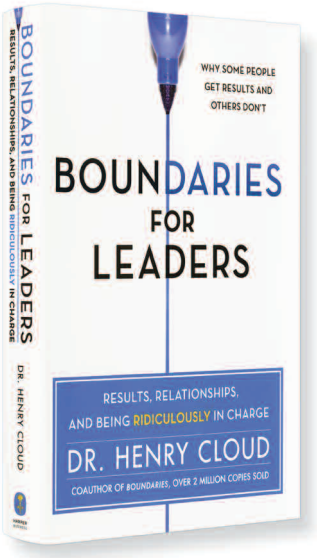
Results, Relationships and Being Ridiculously in Charge



by Dr. Henry Cloud

THE SUMMARY IN BRIEF

In *Boundaries for Leaders*, Dr. Henry Cloud gives leaders the tools and techniques they need to achieve the performance they desire — in their organizations and in themselves. Drawing on the latest findings from neuroscience, Dr. Cloud shows why it's critical for leaders to set the conditions that make people's brains perform at their highest levels. How do great leaders do this? One way is through the creation of "boundaries" — structures that determine what will exist and what will not.

Readers will learn the leadership boundaries that set the stage, tone and culture for a results-driven organization.

The strong call to action in this book is that leaders are ridiculously in charge of all these elements, and they must own what they either create or allow to exist.

Filled with inspiring and practical examples from Dr. Cloud's coaching practice, *Boundaries for Leaders* is essential reading for everyone who aspires to lead companies, teams and cultures defined by high performance and healthy relationships.

IN THIS SUMMARY, YOU WILL LEARN:

- How to help people focus their attention on the things that matter most.
- How to build the emotional climate that drives brain function.
- A method to create organizational thought patterns that limit negativity and helplessness.
- The best way to create high-performance teams organized around behaviors that drive results.

The People Are the Plan

My client, CEO of a $20 billion company, looked at me with one of those expressions that smart people get sometimes when something extra smart goes off in their heads, the kind of thought that captures even their own attention. Head tilted and eyes squinted, he said something profound: "You know what is weird?"

"What?" I asked.

"Everybody out there is always trying to figure out the right plan. They meet, they argue, they worry, and they put all of their energy into trying to come up with the 'right' plan. But the truth is that there are five right plans. There are a lot of ways to get there. The real problem is getting the people to do what it takes to make the plan work. That is where you win or lose. It's always about the people."

He was right. Ultimately, leadership is about turning a vision into reality; it's about producing real results in the real world. And that is only done through people doing what it takes to make it happen.

When the "People" Side of Things Doesn't Work

As I meet with leaders and their companies, I find that more often than not, they have smart plans. They know their business, or they would not be where they are. They are strategic, talented, gifted and experienced. Their "business" expertise got them to where they are, but as they rise to more significant positions of leadership, they need other skills in addition to what their business smarts can provide. They need to be able to lead people to get results.

What usually got them there was being good at the business, devising and executing "the plan." But now, as leaders, they also have to be good at something else: getting people to do what it takes to make the plan work. It is about leading the "right people," empowering them to find and do the "right things" in the "right ways" at the "right times." That is what will bring a plan to real results.

"People" issues tend to sneak up on even the best leaders, sometimes derailing even the best talent and the best-laid plans.

Chris: A Great Plan Hits The Wall

Consider the experience of one such leader. Chris founded his company by building on his success as a rainmaker. He had worked for a technology company and had consistently closed more sales than everyone around him. Like many successful people, Chris decided to do on his own what he had done for others. So, with some investors, he launched a new venture. "Why sell this stuff for someone else when I can do it for myself?" he reasoned. He was soon to find out the answer.

Things went well early on. Adding more and more employees, Chris's company soon became a substantial entity, with revenue growing every year until it became a true market leader in its competitive space. The future looked good.

But within a few years, things began to be not so good inside the walls of the company. Key employees who had joined Chris because of his high energy and can-do spirit began feeling overworked and increasingly stressed out because of what they called the "chaos." The company seemed to lack its original direction and momentum. That is when Chris's board, comprised of key investors, called me.

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor In Chief; **Andrew Clancy**, Senior Editor; **Amanda Langen**, Graphic Designer; **Jeannette Scott**, Contributing Editor

The board's concern came from what they were hearing directly from some members of Chris's executive team. The team told the board that they had reached the breaking point, that they couldn't take the chaos and dysfunction anymore, and that if the board did not do something soon, they were going to leave. That amount of talent threatening a mass exodus certainly got the board's attention.

I wanted to get a feel for what was happening. What struck me first was the team's love for Chris. They wanted to be on his team and make what they had created succeed and grow.

But they had gotten to a bad place. When I interviewed them, they were as dismayed and as frustrated as they had been motivated and inspired at the beginning of the company's journey. They reported feeling like they were running around in a thousand different directions. Even worse, Chris would send emails to his executive team's employees, putting those people into a state of confusion as to whom they were supposed to be answering to — the CEO or their own boss?

The Need for Boundaries

The issue was that Chris and his team had failed to establish the boundaries that would positively drive organizational health and the boundaries that would immunize them against sickness. The only solution was for the board to find a way to help Chris achieve his potential and for Chris to find a way to be the kind of leader his company needed.

The good news is that the issues Chris and his team faced are fixable. When leaders lead in ways that people's brains can follow, good results follow as well.

Ridiculously in Charge

Recently I was discussing similar people issues with another CEO. I asked him why he thought those problems were there. He talked about some reasons, most of which had to do with the various players involved, and also, the constellations of a few teams. But then I asked him a simple question.

"And why is that?" I asked.

"What do you mean? I think it is the reasons I just said."

"I know that reasons you said, but why do those reasons exist?" I continued.

"I don't get it….What do you mean?" he asked further.

"Who is the leader? Who is in charge of the culture? Who is in charge of the ways that it is working, the fact that all of that exists?" I pushed.

He just looked at me and nodded. "I am," he said.

"So what kind of culture would you like?" I asked. "What kind of culture would drive the business forward if you had it?"

When he thought about that, he looked upward, lost in thought for a moment. Then he got out of the "problem-speak" mode, and I could see a shift in his energy as a new vision of a different culture sprang to life in his eyes. He began to describe a company culture that was positive, highly energetic, accountable, innovative and performance oriented. He came alive when he talked about it.

"So why don't you build that kind of culture?" I asked.

For a nanosecond, it seemed like he was about to reflexively blurt out a reason why it could not happen, but then he paused and said something I will never forget:

"You know, when you think about it … I *am* ridiculously in charge."

At that point, I knew he got it. He realized that he would have exactly the culture that he creates and would not have the one he did not allow to exist. Whatever culture he got, he was either building it or allowing it.

Boundaries: What You Create and What You Allow

What are boundaries? They are made up of two essential things: what you create and what you allow. A "boundary" is a property line. It defines where your property begins and ends. If you think about your home on your property, you can define what is going to happen there and what is not. You are "ridiculously in charge" of the vision. You build and allow the culture. It is all yours. You set the agenda, and you make the rules. And what you find there, you own. In the end, as a leader, you are always going to get a combination of two things: what you create and what you allow.

Leaders, through a handful of essential boundaries, make sure certain things happen, prevent other things from happening, and keep it all moving forward. Leaders are a positive force for good and a negative force against bad. You know what they are for and what they are against.

Focus And Energy

But this positive and negative boundary-setting does not happen by itself. It takes energy and focus. As one founder of a very successful enterprise described it to me,

When I started my organization, no one told me that half of my energy would be spent actually building and leading it,

and the other half, or even more, would be spent protecting and defending it against all of the things other people wanted it to be. It takes a ferocious amount of spinal fortitude to not end up making a crappy mix of your vision and endless bits and scraps from others who didn't have the cojones to start something themselves.

When a leader steps up and leads and sets boundaries that provide clarity that cuts through the noise, it is a new day.

Leading So Brains Can Work

You do not have to be a brain surgeon to establish the boundaries that are usually made by a great leader.

But at the same time, underneath it all, it really is brain surgery because the reason that a leader's boundaries work is that they actually make it possible for people's brains to function as they were designed. Said another way, if you are trying to lead people and do not establish effective boundaries, your people will not be ale to do what you need and want them to do because their brains can't work that way. You will build an organization full of geniuses who are producing brain-impaired results. "That explains a lot," one executive said to me. "Those are the kinds of results I am getting from all these smart people I hired."

The Brain's Executive Functions

In brain terminology, executive functions are needed to achieve any kind of purposeful activity — such as reaching a goal, driving a vision forward, and conquering an objective. Whether driving a car or making and selling cars, the brain relies on three essential processes:

Attention: the ability to focus on relevant stimuli and block out what is not relevant: "Pay attention!"

Inhibition: the ability to "not do" certain actions that could be distracting, irrelevant or event destructive: "Don't do that!"

Working Memory: the ability to retain and access relevant information for reasoning, decision making and taking future actions: "Remember and build on relevant information."

Organizational ADD

Sadly, many organizations seem to be suffering from the equivalent of attention deficit disorder (ADD).

The remedy for organizational ADD is found in the way that great leaders think and lead in everything they do. I was in a planning meeting in a company where I had just begun to talk to them about leading with executive functions in mind. The president, who had been very frustrated for about a year, began the meeting by saying, "Today we are going to be here for an hour, and when we leave this meeting, we want to have answered this question…(and then she gave the question). That is it, no other topics." Then, when the group began to get distracted with extraneous issues and discussions that were not going to get them to an answer to that question, she brought it back. "Off topic for today. Back to getting to an answer." And they did it. More to the point, she and the team left the meeting invigorated and excited about the future. "We can turn this around! That felt so much different," she said. She was attending, inhibiting and creating a flow of working memory. Others felt it too.

One Big Brain

Here is a little more brain science for you. When those three processes of the brain are activated, results happen because they enable the next level of the brain's executive capacities, which are the ones you really want to have activated in your organization.

Goal Selection. People can choose goals based on priority, relevance, experience and knowledge of current realities while also anticipating consequences and outcomes. Key Words: Choose Goals and Anticipate Outcomes.

Steve Jobs' Moment of Clarity

When Steve Jobs returned to Apple as CEO, the company was in trouble. After diagnosing the problem as a lack of focus and by pruning 70 percent of Apple's models and products, Jobs brought the company a much-needed moment of clarity through setting a positive boundary.

According to the biography *Steve Jobs* by Walter Isaacson,

After a few weeks, Jobs finally had enough. "Stop!" he shouted at one big product strategy session. "This is crazy." He grabbed a Magic Marker, padded to a whiteboard, and drew a horizontal and vertical line to make a four-squared chart. "Here's what we need," he continued. Atop the two columns he wrote "Consumer" and "Pro"; he labeled the two rows "Desktop" and "Portable." Their job, he said, was to make four great products, one for each quadrant. "The room was in dumb silence," Phil Schiller recalled.

From that point on, when it came to making computers, Apple employees knew what they were supposed to be working on as well as what they were not supposed to be working on.

Planning and Organization. They can generate steps and a sequence of linear behaviors that will get them there, knowing what will be needed along the way. Key Words: Generate Behaviors and Strategy.

Initiation and Persistence. They can begin and maintain goal-directed behavior despite intrusions, distractions, or changes in the demands of the task at hand. Key Words: Begin and Maintain Behavior.

Flexibility. They can exercise the ability to be adaptable, think strategically, and solve problems by creating solutions as things change around them, shifting attention and plans as needed. Key Words: Adapt, Think and Solve.

Execution and Goal Attainment. They exhibit the ability to execute the plan within the limits of time and other constraints. Key Words: Execute within Time.

Self-regulation. They use self-observation to monitor performance, self-judgment to evaluate performance, and self-regulation to change in order to reach the goal. Key Words: Monitor, Evaluate, Regulate.

If you look at this list, it is not a leap to see your team or organization becoming one big brain, figuring out what is important, what is not, and getting it done through goals, plans, persistence, adaptability, flexibility, execution and good self-management. Not to mention the innovation and creativity that follow. Almost every organization in the world has goals and plans. But only a select few organizations benefit from leadership that creates the environment and the practices that attend, inhibit and remember, thus making high performance possible. ●

The Emotional Climate That Makes Brains Perform

In the same way that the brain cannot work without the executive functions in place, it also cannot work if it is drowning in stress hormones. The cold, hard scientific facts are that your people think better when they are not stressed, afraid or depressed. Yet many leaders do not put a lot of thought into creating a positive emotional climate for their people, and sometimes they create the exact opposite. As a result of their leadership, they create stress, fear and sometimes even depression. There might be lots of little things you're doing, none of them outrageous or dramatic, that still might be having a negative effect on your people.

Give Boundaries, But Check Your Tone

There are two human drives. One is connection, and the other is aggression. Aggression here does not mean anger. It means initiative and energy used in the service of goals. Everything we do is either relational or goal directed or, ideally, both. Basically, we are "lovers and workers." We have relationships, and we do things.

An integrated leader does both at the same time in a way where one affects the other. He provides a positive state of being and tone while aggressively accomplishing things with people. The problem in leadership is when we do one without the other.

Lack of structure, a lack of clear boundaries, creates its own kind of stress. But the opposite is also true. When leaders are only "task oriented," aggressively pursuing results with no focus on the emotional tone of their interactions, they set off stress reactions in others. The trick here is to give people the direction, structure and accountability that drive good energy but to do it in a way that does not create stress.

Preserve Relationships and Get Results

As the person in charge of setting emotional boundaries, your job is twofold. First, do everything possible to create "good fear," the positive performance anxiety that activities healthy stress. The drive that says, "If I get with it, I can get something good and avoid something bad." Second, diminish destructive fear, which is communicated through tone, lack of structure, and the threat of relational consequences — anger, shame, guilt and withdrawal of support. People need to know that you are going to be "for" them, even when they don't do well. ●

Power Through Connection

Creating connections is another form of boundary setting. You are setting a positive boundary, or structure, to form unity. And you are setting a very firm boundary against disconnection and fragmentation. We know from neuroscience that certain kinds of relational and emotional interactions build connection and unity based on patterns of the brain's functioning.

Here are some of those ingredients that build unity:

Shared Purpose. This can be the overarching mission of the company or a team, or it can be the specific mission of that time of getting together.

Awareness. Make sure that you set the stage in your team and in the larger entity so that people are aware of what is happening with one another and with the orga-

nization. When people feel like they are out of the loop, the seeds of disconnection are sown.

Nonverbal Cues. Use nonverbals to show that you are open, positive and warm. When you have to deliver hard news, be respectful but firm. And put your smartphone in your pocket, purse or bag.

Collaboration. Project updates don't require meetings, but collaboration does. I'm talking about creating a climate where problems and issues get shared and solved through the team's engagement with one another.

Coherent and Relevant Narrative. Make a place for people to see where they are in the story, what it means for them, and what role they can play in moving the story forward.

Conflict Resolution. When people can go into the hard stuff and begin to talk about what they are experiencing, the power of relationships to transform those states of fear into courage, or anger into resolution, is a truly wonderful thing to see — something that no number of happy-talk slogans can compete with.

Emotional Regulation. At some time or other, we all experience very difficult, even destructive, emotional states. Fortunately we don't have to remain there. Connecting with others can provide a form of self-regulation.

Emotional Reflection. Reflection is not problem solving, planning or initiating something new. It is not judging. It is simply looking at things together and examining one's thoughts, observations and feelings.

Emotional Repair. Repair is one of the most important things that happens in good relationships. The truth of the matter is that we do have conflict, misunderstandings, reactions and the like. Seek repair and, when necessary, even have your team discuss how they would like to repair.

Listening. Probably the most important connection builder is simple but aggressive (active and intentional) listening. It is simple because it gets to the most basic need in life. ●

The Gatekeeper of Thinking

I like to tell people that "thinking" is like a piece of software. It is like a computer program that runs everything we do and dictates our outcomes. If a software program says do "a" or "b," then "a" or "b" will happen. If it is not written in the code, you can click on the icon all you want, but nothing is going to happen.

So it is with thinking in individuals and in groups. Whatever norms and behaviors get encoded and reinforced determine what happens next — indeed, what is possible. The prevailing thinking patterns of a team or an organization — its norms and belief systems — will define what it is and what it does. Not to mention what it doesn't do or what it doesn't allow. And the leaders' boundaries determine the thinking that prevails.

The "Can't Be Done" Virus

I was working with a company where a team was considering an acquisition that would require a significant capital infusion. In the executive team meeting where the opportunity was being discussed, several members pushed back strongly on the idea: "We can't waste our time on this plan. It is impossible to get the financing that we would need to do this."

I felt like my hair was about to catch on fire because I had just come from a meeting with another company whose founder did not think this way at all. In fact his company would not even exist if he had. When he had started it, he was in bankruptcy from a previous business. It would not have taken the smart naysayers very long to say, "Forget about finding money for a new start-up. It is not going to happen. Your financials won't allow it." But he did not suffer from that kind of thinking. Instead he thought it could be done.

So he found an office building for sale that he knew would be perfect for the right big tenant. Then, he went to a Fortune 500 company and convinced them to rent "his" building (that he did not yet own) at a rent very favorable to them, subject to his purchase of the building closing. Next, he went to a bank and sold them on the blue chip company that had signed a lease with him that would more than service the note. The bank financed the purchase of the building, and he pulled $10 million out at closing and used the proceeds to finance his startup. About six years later, this startup had amassed over $3 billion in assets — assets created from bankruptcy, but not from bankrupt thinking. ●

Control and Results

The lesson for leaders is clear: Focus your people on what they have control of that directly affects the desired outcomes of the organization. When you do that, two powerful things happen. Not only do you get results, but you also change the brains of your people so they function better and then get even more results, in a spiraling, upward direction. Both are important.

A Positive Energy Field

Getting people to attend to what they can control that affects results while inhibiting activities and thinking that

don't is one of the most powerful ways to create energy where there has been stagnation.

A residential real estate developer I worked with was in a very bad market situation, and neither he nor his competitors were selling much of anything. One of the important metrics in this business is the cost of carrying a project until it is sold, carrying the loans before the finished property can be sold. The longer a project takes to sell, the longer the builder has to carry the cost on his books, and the higher the costs eating into profits. Therefore, time-to-closing is a key driver of success. As you can imagine, any CEO studying the numbers will be eager to move inventory.

In this instance, the CEO had delivered a clear message about what factors his team could control to beat the competition and drove the message continuously. "You can control three things: have the best product, have the best salespeople, and have the best price," he had told them. They could not control the recession, but those three they could absolutely control. Having delivered on the first two, product and salespeople, and still not getting sales, he saw that the only one that was left to attend to was price.

What had happened up until this point was that their competition was lowering prices when there were sales in the marketplace, trying to catch up with others in the price drops. In the CEO's mind, that was reactive. The only way to get ahead of the price war, he figured, was to do one thing before anyone else: forget margins, focus on closings only, and drive the result by activating a behavior that you can control: lowering price first and by a lot. In the short term, margins would be lower, but you would win in many other ways in a bad market.

So he gave his team one target mandate that they could control: "Make closings, period. Cut the price to make closings, but make the closings." And he put them totally in control of meeting the closing metric by controlling the only behavior that would drive the closings — lowering the price. They were free to lower it to make a close. And they won, big time. They stayed ahead of everyone else, ended up cutting prices less in the long run because they were first, and got rid of expensive carrying costs. In their markets that year, they were the only builder that did not lose money. They focused on what they could control and held each other accountable for closings.

You can set values and goals, but if you give your people specific ways to be in control of actions that drive the organization forward, you'll have created a distinct competitive advantage. ●

High-Performance Teams

"Ok, in the spirit of getting the dead fish out of the drawer, I have to tell you that no matter how long he has been there and how much loyalty we have toward him, Jerry is just not able to oversee moving a factory from one country to another. He just can't pull that off." So said the head of operations at the beginning of an executive team meeting.

His reference to "a dead fish" was shorthand for a lot of hard conversations this executive team had tackled to get to this moment. A dead fish? They got it.

So, what was it that the team instantly understood? It went something like this:

Talking about Jerry's ability is an issue that we all know is not pleasant. It smells bad.

And even though it smells bad, no one wants to deal with it. So it stays hidden in the drawer. As a team, we have committed to always getting the dead fish out of the drawers. In light of that, we are now going to talk about it, and I can assume buy-in from you guys.

After a few heavy sighs, the team got down to it. Jerry had to be reassigned. No doubt about it.

Change Behaviors = Changed Outcomes

Leaders get what they create or what they allow. So, a team's operating values create a certain kind of environment with an allowance for certain kinds of behaviors and a prohibition against others.

Which brings us to another point: Values make it possible for a guiding language to develop that gives structure and identity to the boundaries of behavior we want to encourage and prohibit. Every team needs a common lexicon, a memorable language, to communicate just what these boundaries are. When the team landed on the saying "dead fish out of the drawer," everyone now knows exactly what that means. And whenever it is said, the team instantly comes together around a shared value they had agreed upon. ●

Trust Makes Teams Able to Perform

The first requirement to build trust is to connect through understanding the other person. Remember, people do not trust us when we understand them. They trust us when they understand that we understand them.

I remember once, in a team meeting with my staff, I gave an employee a project to do and a deadline. She told me there was no way she could do it. I disagreed,

countering that it wasn't that big a deal. In fact, I was certain she could get that project done in time without it taking away from the other objectives I had committed her to. She pushed back again, and I was bugged. I thought she was being negative and exaggerating the whole thing. From my vantage point, it was all very simple, very much a just-do-it proposition.

As the conversation went on this way, I could tell she was getting amped up even though she was not getting overtly mad. But I saw her chin trembling, not in sadness but in anger. Her words were getting crisper and almost staccato as she said them. Then she said, "OK, come here. I want to show you something."

We went down the hall into her office, where she proceeded to outline all of the work that had been required the last time I'd asked her to take on a task very much like this one. Wow, I could now see that it was complicated and time-consuming, involving interactions with federal agencies, professional agencies and several businesses. The paper trail alone was daunting. I looked at her and said nothing for a moment. I was embarrassed at my clueless lack of understanding.

Finally I just looked up and said, "I'm sorry. I had no idea."

At that moment, I saw a few teas forming in her eyes. She finally felt understood as she understood that I understood.

She did not have to protect herself anymore. She trusted me, so she could stop resisting me and join me instead. Plus, as she described the things that were involved, I was not resisting them and was more in a role of working together to find some solutions. ●

Boundaries For Yourself

There is a law of leadership physics that affects many leaders without their being aware of it, and it can do them in if they are not careful. But if they are, they can soar. The law is this: the higher you go in leadership, the fewer external forces act upon you and dictate your focus, energy and direction. Instead, you set the terms of engagement and direct your own path, with only the reality of results to push against you.

Leaders Open Themselves to Outside Inputs

Great leaders simply don't buy the old saying that it is lonely at the top, even if they do accept that the buck stops with them. When it does stop with you, the last thing you need to be is isolated.

What I'm talking about is outside support and input — support from people who can be objective and who don't have a vested interest in outcomes other than their care for the leader and his personal and professional growth.

Boundaries On Thinking And Fears

I have not met a leader who thinks perfectly rationally 100 percent of the time. All humans have a tendency toward goofy or distorted interpretations of events and other people's motives, especially under extreme stress. And all of us have our insecurities and those touchy buttons that when pushed cause our thinking to go awry and our fears to be magnified.

The key is to know your own particular style of kookiness. Once you know your own patterns, you can recognize them and change them. While there is no limit to the variations on distorted thinking that affect performance, there are some patterns that crop up more often than not. These include overidentification with results, indecisiveness, conflict avoidance and resistance to change. Let me explain.

Still Ridiculously in Charge

When you realize that you are ridiculously in charge, it does not only mean you are in charge of others or in charge of what goes on in the organization. It also means that you are ridiculously in charge of yourself. My experience with high-level leaders is that there are two kinds. The first kind of leader is defined by the work. The second kind is in the process of actively defining the work, and they do that by first defining themselves and taking charge of who they are going to be and how they are going to work. They have good self-leadership boundaries.

Think of it as another way of not just working in the business but of working "on" the business by working on you. Lead with these boundaries on yourself, and you will be more in charge than you ever thought possible. ●

Boundary Spanning Leadership

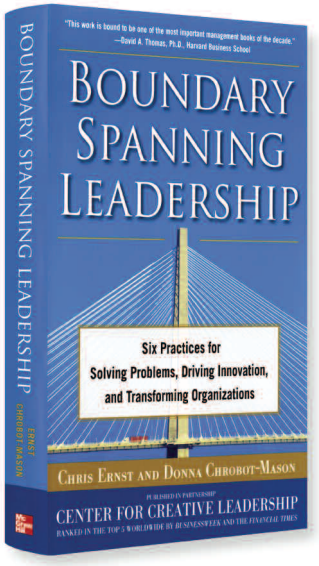
Six Practices for Solving Problems, Driving Innovation and Transforming Organizations



by Chris Ernst and Donna Chrobot-Mason

THE SUMMARY IN BRIEF

We live in a world of vast collaborative potential. Yet all too often, powerful boundaries create barriers that can splinter groups. And this can lead to uninspiring results. To transform borders into frontiers in today's global, multi-stakeholder organizations, you need *Boundary Spanning Leadership*.

Powered by a decade of global research and practice by the top-ranked Center for Creative Leadership (CCL), this book shows you how to build bridges across boundaries. Through compelling stories and practical tools and tactics, you'll learn how to apply the six boundary spanning practices that occur at the nexus where groups collide, intersect and link: buffering, reflecting, connecting, mobilizing, weaving and transforming.

These practices combine to create what authors Chris Ernst and Donna Chrobot-Mason call the Nexus Effect. The Nexus Effect allows groups to be more agile in response to changing markets; be more flexible in devising and deploying cross-functional learning and problem-solving capabilities; work with partners in deeper, more open relationships; empower virtual teams; and create a welcoming, diverse and inclusive organization that brings out everybody's best.

Boundaries exist. What matters most is how you work to bridge these divides and transform your organization's wide-ranging talents and knowledge to deliver value. With *Boundary Spanning Leadership*, the possibilities are limitless.

IN THIS SUMMARY, YOU WILL LEARN:

- How to define boundaries to create safety.
- How to suspend boundaries to build trust.
- How to reframe boundaries to develop community.
- How to cross-cut boundaries to enable reinvention.

Introduction

In navigating today's unfamiliar terrain, we are all challenged to think and act beyond the current borders that confine us, our teams and our organizations as a whole. Developing innovative solutions requires reaching beyond present boundaries and seeking new frontiers at the nexus where groups collide, intersect and link.

Boundary Spanning Leadership

Boundary spanning leadership is the ability to create direction, alignment and commitment across boundaries in service of a higher vision or goal. By employing the six leadership practices — buffering, reflecting, connecting, mobilizing, weaving and transforming — you create direction, alignment and commitment between groups to achieve critical organizational outcomes. These practices reside within the interactions across groups, teams, functions, units, organizations and broader communities. As a boundary spanning leader, your job is to build a bridge and your role within that job is to provide the space for these practices to occur.

In our research and practice at the Center for Creative Leadership (CCL), we define leadership in terms of accomplishing three outcomes:

- *Direction:* a shared understanding of common goals and strategy
- *Alignment:* the joint coordination of resources and activities
- *Commitment:* a commitment to collective success that is equal to or above the commitment to the unique success of any single group.

To put it bluntly, when you are leading in the middle between groups, the days of "I lead and you follow" are over. Gone are the days when leaders work *within* an intact group in which leaders and followers share a culture, values and interests.

Instead, today you must lead *across* groups, at the juncture where wide-ranging experience, diverse expertise and varied identities intersect. It is at this intersection where two powerful human forces — differentiation and integration — collide that you can enact the six boundary spanning practices to catalyze collaboration, drive innovation and transform your organization. ●

PART 1: THE FORCES THAT PULL US APART AND BRING US TOGETHER

The Shifting Leadership Landscape

Today's most pressing challenges span boundaries, and so, too, must leadership. A recent CCL survey paints a compelling picture of the many boundaries leaders must navigate in today's environment. We see a shifting leadership landscape that is rocky and jagged, filled with many turns and sharp curves, and constantly in flux. It is a landscape that is cause for concern and action. Among the 128 senior-level executives who participated in the CCL survey, 86 percent told us that it is "extremely important" that they collaborate effectively across boundaries in their current leadership roles. However, only 7 percent of those executives believed they were

"very effective" at doing so. That's a 79 percent "critical gap," the largest anyone can ever recall in our decades of collecting senior executive participant data at CCL. These leaders are the CEOs, presidents, senior vice presidents and directors of the world's best companies. Their candor serves as a call to action for us all.

In the CCL research, we also asked the senior executives to describe the types of boundaries they needed to work across. The boundaries they described were multifaceted and distinct, but there was considerable overlap. They included spanning vertical boundaries between hierarchical levels of the organization, horizontal boundaries between functions, stakeholder boundaries with customers and suppliers, demographic boundaries in working with people from diverse groups, and geographical boundaries of distance and region.

Transcending Cultures, Contexts and Time

Our research at CCL, along with the work of others in the field, allows us to state confidently that these five types of boundaries are universal, transcending cultures, contexts and time. They've been an integral aspect of organizational life in the past, they're with us today and they'll be here tomorrow. But as the senior executives made clear, today's shifting leadership landscape requires thinking and acting beyond limiting borders and embracing new frontiers where wide-ranging expertise, diverse experiences and varied identities collide. When we asked the executives *why* it was important for them to work across the five types of boundaries, they spoke about human relationships. The boundaries that keep leaders up at night are not those which can be solved by simply restructuring the organizational chart or reconfiguring distribution channels. The boundaries that are the most challenging to leaders today are more psychological in nature. They involve relationships and thus are associated with strong emotions, such as loyalty, pride, respect and trust.

Wherever boundaries collide, the promise of new possibilities and inspiring results awaits. But so does the peril of limiting and counterproductive outcomes that occur when groups divide into Us and Them. The difference, in large part, is you and the leaders throughout your organization. ●

Us and Them: Why Identity Matters

Identity dynamics that split groups into Us and Them are at the heart of the challenge you will face when managing across the five types of boundaries. Identity is the reason working with different groups requires a delicate balance between meeting the two fundamental needs of differentiation and integration. Identity plays out at work each and every day as we all strive to experience a sense of belonging and connection while distinguishing ourselves as unique from others. Identity dynamics create problems at work when we must find a way to work with other groups despite significant differences in our most defining values, perspectives and beliefs. Consider the five types of boundaries and the way identity dynamics may create challenges for you when groups define themselves on the basis of their differences and split into Us and Them.

Vertical Boundaries. A vertical boundary can become a border when identity plays out in the different perspectives or vantage points of the top management team versus first-line supervisors. The identity of senior leaders is based largely on their vantage point within the company — the big picture and looking out for its long-term viability. First-line supervisors have a very different vantage point, and their role and identity are based on a view of the company from the trenches in which day-to-day operational demands take priority. Bringing together any two groups whose identities within the company lead them to see company interests from very different vantage points can create significant challenges.

Horizontal Boundaries. A horizontal boundary may highlight identity differences between the sales and engineering teams. The members of the sales team define their group as the growth engine of the company because they drive revenue and profits more than any other and see themselves as the "face of the business." Yet the members of the engineering team would also define their group as the growth engine because they generate new ideas and products responsible for future market share. Thus, horizontal boundaries can present a challenge as you attempt to span lines of expertise and identity differences become a barrier.

Stakeholder Boundaries. Identity dynamics come into play when you must find a way for different stakeholder groups to collaborate when, by definition, they each have different and, at times, competing interests.

Demographic Boundaries. Managing across demographic boundaries means crossing generational lines of difference when baby boomers' identification is tied to loyalty, a strong work ethic and dogged determination, whereas Gen Xers pride themselves on enjoying life rather than "working themselves into the grave." In this case, the different generational groups view organizational commitment in radically different ways that can create problems for their leaders, who must find a way to evaluate and reward both groups fairly.

Geographic Boundaries. Finally, geographic boundaries can result in the separation of groups on the basis of distance when, for example, Westerners define themselves by and take pride in their entrepreneurial spirit, whereas Easterners pride themselves on tradition and conformity. Such identity differences pose challenges for a leader managing a multinational team.

Navigating the complex identity dynamics of Us and Them requires that you achieve a delicate balance between knowing when to define and strengthen boundaries to meet the fundamental need your organizational members have for differentiation and uniqueness, and knowing when to span boundaries and foster unity to meet the fundamental need for integration and belonging. ●

Intergroup Boundaries: The Great Divide

At the peak of the heat and humidity during the summer of 1954, 22 11-year-old boys were dropped off by their parents at Robbers Cave State Park in a densely wooded area in the Sans Bois Mountains in Oklahoma. Their parents would have no contact with them for three weeks, but the boys were too excited to care. Unknown to the boys, they were to become participants in one of the most famous psychological experiments of all time.

The Eagles and the Rattlers

Half the group arrived on June 19 and immediately was assigned to the same bunkhouse. The other half arrived on June 20 and was assigned to a different bunkhouse, far enough away from the first group so that neither knew the other existed. Friendships quickly formed. They even came up with names for their bunkhouses: the Eagles and the Rattlers.

During the second week of their stay, the boys finally became aware that another bunkhouse existed at camp. Counselors brought the Eagles and the Rattlers within earshot of each other. Distinctions between "Us" and "Them" became clear, and the boys grew protective of their things and their space. Within a few weeks, two groups of boys alike in almost every way possible (race, education, socioeconomic status, region) acted as if they had nothing in common. They splintered into Us and Them and were caught in the middle of a Great Divide.

The Great Divide

You may be feeling that Great Divides are inevitable and that all you can do is brace for the chaos and attempt to minimize the damage. Fortunately, that's not the case. The good news is that you have the power to create the conditions for the Nexus Effect — the positive side of what can happen at the intersection of group boundaries.

During the next several days, the Eagles and the Rattlers had several opportunities to interact with each other. But rather than reduce conflict, more opportunities to interact only added fuel to the fire. In one telling example, the groups were given a chance to "make peace" while having a meal together, yet an argument spiraled out of control and a massive food fight ensued.

Fortunately, the boys' summer camp experience did not end with mashed potatoes on their foreheads. But it did take more than just spending time together to close the Great Divide. The experimenters created a series of events in which the boys had little choice but to work together.

The Robbers Cave study in Oklahoma illustrates many of the messages we have been trying to convey. The study demonstrates that group identity forms quickly, resulting in positive bias toward the in-group, and that groups in competition often develop negative attitudes toward one another. The experiment also shows that simply bringing groups together is often not enough to reduce distrust and disrespect. The researchers found that it was only when the boys had to work together to solve a problem or reach a common goal that the Great Divide began to disappear and cooperation across boundaries occurred.

The lesson learned from the Robbers Cave experiment and other examples is clear: As a leader, you play a key role in spanning boundaries and transforming divides into new frontiers. ●

PART 2: MANAGING BOUNDARIES

Buffering: Creating Safety

Buffering is about defining group identities and involves shielding or protecting groups from outside influences or threats to identity. Once the boundary is clearly marked, information, people and resources can be filtered through it as appropriate. Buffering allows groups to develop and maintain a strong sense of identity and define their reason for being. The result is that buffering builds intergroup safety: *the state of psychological security that develops when intergroup boundaries are defined and maintained.*

Buffering is a way to monitor and manage the boundaries between groups. There are any number of buffering tactics you can use in your organization. Below are

five tactics we observed in our research and practice with organizations around the world:

Buffering Tactic 1: Separate Groups. One tactic that may be necessary in certain situations to help groups accomplish a specific task is to separate the groups. The goal is to eliminate interactions across boundaries altogether. When group boundaries are violated and conflict frequently erupts, physically separating the groups may be the only solution that helps them focus on the task at hand.

Buffering Tactic 2: Reduce Threat From External Influences. Whenever there is organizational change, perceptions of threat are probably not far behind. Steps must be taken to temper the perception of loss to reduce threat and resistance. During times of change, it is important that you help employees see "what's in it for them" to prevent groups from digging in their heels or isolating themselves from other groups in self-defense. Helping groups see how their identities and roles evolve as the organization changes can help those groups feel safe and secure despite the turbulence around them.

Buffering Tactic 3: Make Boundaries Visible for Others. There are times when you must make boundaries clear and visible for others because a boundary is being disregarded or violated in some way. There are any number of tools available, such as team contracting, establishing rules of engagement, using team governance models and creating operating agreements to make boundaries more visible.

Buffering Tactic 4: Creating a Unifying Team Identity. Another buffering tactic is to create or strengthen a group's identity by clarifying its mission and vision and making roles and tasks clear for its members. You must know where your group boundaries lie before you can take steps to prevent those boundaries from being violated.

Boundaries Will Always Exist

Boundaries help people feel safe. They can keep unwanted things or people out and provide us with a defined space where we feel welcome by being around others who are like us.

Boundaries will always exist in organizations. Even as they disappear because technology and a global market allow us to work with others anywhere in the world, the psychological boundaries between people caused by identity differences remain and in some cases become even deeper and more entrenched. Although boundaries sometimes become borders that limit or constrain collaboration, they are also necessary for groups to have a defined purpose and role within the larger organization.

Buffering Tactic 5: Build Team Cohesion. It is important to focus first on the task: what the task is and how to accomplish it. But once the team moves toward execution of the task, conflict is more likely to emerge. This is when the leader should turn his or her attention to creating team cohesion. As is the case in many teams that come together to work across boundaries, a new boundary must emerge in the process of creating a cross-functional team and team members must feel a part of the new group. In addition to defining the team's mission and tasks, the team members must feel that they belong to the new team, that it is an important and valued part of their identity. ●

Reflecting: Fostering Respect

Reflecting involves representing distinct group perspectives and facilitating knowledge exchange across groups to understand boundaries and foster intergroup respect. Each group shares an image of its values, needs, hopes, fears and priorities with the other. In the process of doing this, both groups begin to understand the boundary between them and accept both differences and similarities between the two groups. When competing or opposing groups develop greater positive regard for each other, greater direction, alignment and commitment can develop between them. Below are several tactics that you can use to engage in the practice of reflecting. We recommend that groups begin by learning about one another, then uncover deep differences and finally begin to identify commonalities.

Reflecting Tactic 1: Create Opportunities for Groups to Listen and Learn About One Another. There are many ways you can enable groups within your organization to listen and learn across boundaries. Create opportunities for your team to learn about other functions, regions and product lines by attending their communication sessions, reading postings on their intranet sites, and seeking to understand their strategic goals and priorities. Shadowing, job rotation and site visits encourage people to experience life in the organization from a different vantage point. Each of these steps will foster greater awareness about other groups and the potential collaborative opportunities between them.

Reflecting Tactic 2: Ask Powerful Questions to Uncover Deep Differences. Asking powerful questions can uncover the root of the challenges groups face when attempting to work together: the values, assumptions, perceptions and emotions that often form a wedge that leads to conflict rather than collaboration.

Reflecting Tactic 3: Let Commonalities Emerge From Differences. Digging into and understanding differences often uncovers the similarities that lie underneath. Thus, it is important to create opportunities for groups to learn about the ways in which they view and experience the world differently and to continue to dig deeper to uncover the values and perspectives they share.

Reflecting Tactic 4: Counteract the Tendency for Groups to Want to Make Them Like Us. Working together across boundaries requires accepting the differences that separate groups. However, energy and resources are wasted when a group tries to collaborate with another group by attempting to make Them more like Us. This almost always backfires. Groups just dig in their heels. Therefore, to accomplish reflecting, it is important to encourage groups to accept one another and focus on change from within.

Reflecting Tactic 5: Slow Groups Down to Speed Them Up. Though counterintuitive in an ever-faster world, slowing groups down for learning, perspective taking and knowledge exchange is essential. Time-outs and routine breaks enable groups to make sense of the complexity of the tasks they face. ●

PART 3: FORGING COMMON GROUND

Connecting: Building Trust

The practice of connecting enables you to create a neutral zone where people can interact as unique individuals rather than members of distinct groups. As a boundary spanning leader, you can use a number of different connecting tactics to link people to build trust:

Connecting Tactic 1: Meet in a Neutral Zone. To suspend boundaries between groups, you need to take into account the physical environment. We use the concept of the neutral zone to represent a location, environment or space that is welcoming to groups on all sides of a divide.

Connecting Tactic 2: Create Attractor Spaces. Organizations are full of physical boundaries separating groups, functions, levels and divisions. In most office buildings, floors divide employees by level, walls separate people by function, corridors serve to "funnel" groups into their designated locations and complex security procedures keep unwanted people out. Of course, physical boundaries in the work environment serve a worthwhile purpose in placing groups of people with similar work responsibilities in close proximity. Yet they often get in the way of groups that need to be collaborating. To balance these inevitable tensions, you need to create "attractor" spaces that encourage serendipitous cross-boundary relationships to develop.

Connecting Tactic 3: Utilize Communication Technologies to Link People Together. In the span of a few short years, company intranet sites and virtual collaboration technologies have gone from being the exception to being the norm. Similarly, networking environments, such as LinkedIn, Facebook and Twitter, have exploded on the scene. By themselves, these technologies may serve only to create borders as like-minded groups create their own virtual worlds. You can counteract this tendency and use the same technologies to suspend boundaries and create new connections instead of fortifying borders.

Connecting Tactic 4: Build Leadership Networks. Both formal and informal events that take place during work hours are one of the easiest yet least effectively utilized tactics to link people and bridge divided groups proactively.

Connecting Tactic 5: Mix It Up Outside the Office. Last but not least, building relationships outside the office is another timeless approach. The formality of established work protocols, status hierarchies and process routines can be left behind, allowing more informal relationships to develop. As in the tactic immediately above, your role is to serve as the connector. ●

Mobilizing: Developing Community

Asking groups to set aside their differences to work toward a common cause is a timeless and universal approach used by leaders. It is one of the most powerful means to bind people together to take collective action. How often have you found yourself entering the fray in a meeting by asking disputing groups to "work together for the common good" or "put aside your differences and go for the win-win"? It is one thing to do this effectively when groups are relatively similar in values, needs and interests. It is quite another when you find yourself trying to bridge groups with deep and long-standing differences: people with clashing religious beliefs, former competitors or even bitter enemies. In these situations, you need to find a way to create a shared identity that is large enough to be unifying for all the groups yet specific enough for joint action to be taken. The following tactics will help you negotiate this delicate balance:

Mobilizing Tactic 1: Craft a Galvanizing Vision, Mission or Goal That Rallies Groups to

Take Collective Action. In the corporate arena, staking out common ground often focuses on strategic or competitive goals: winning market share, hitting financial targets, being first to market with an innovative product or service, or outperforming a competitor. For example, nothing builds community better at Apple than going toe to toe with PC computer companies. Tactics such as these forge common ground by focusing on a common enemy and emphasizing what is positive and distinctive about one organization compared with its competitors.

Mobilizing Tactic 2: Build Shared Identity by Identifying Common, Inclusive Values. Although a vision or goal helps point groups in a common direction, a shared set of values helps groups internalize the core behaviors and beliefs needed to get there.

Mobilizing Tactic 3: Develop a Culture in Which "Everyone Belongs." Creating and changing organizational culture begins with you and the other leaders in your organization.

Mobilizing Tactic 4: Craft Shared Symbols or Artifacts to Represent Who "We" Are and What "We" as a Collective Believe. Throughout human history, symbols, artifacts and icons have served as a powerful force for clans, tribes, cultures, nations and organizations to express who they are and what they believe in. Similarly, you and the leaders throughout your organization can draw on symbolism to create meaning and transcendent purpose.

Mobilizing Tactic 5: Narrate Stories in Which Everyone Plays a Part. Analysis breaks down complex topics into smaller component parts. It is associated with left-brain thinking processes, such as logic, reason and objectivity. In contrast, narratives (i.e., stories) are a means for synthesis, stating how things fit together and conveying shared values, emotions and aspirations. Stories are associated with right-brain thinking, such as meaning, emotion and subjectivity. Analysis and narrative both play an important role in business. Yet when it comes to crafting shared purpose and meaning, a compelling story probably will prove more useful than any number of objective statistics or data points. ●

PART 4: DISCOVERING NEW FRONTIERS

Weaving: Advancing Interdependence

The practice of weaving enables a leader to draw out and integrate group differences with a larger whole. Below are several tactics you can use to advance interdependence where boundaries collide, intersect and link:

Weaving Tactic 1: Clear the Path — Remove Group Barriers, Roadblocks and Obstacles That Get in the Way of the Larger Collective Goal. By removing limiting barriers between groups, you can tap into and integrate differences to exploit new frontiers.

Weaving Tactic 2: Let Different Groups Be Different Groups — Draw Out, Utilize and Capitalize on Differences. This simple idea turns conventional thinking about leading change on its head. The dominant view in management research and practice is that the key to leading organizational change is alignment: getting "buy-in" from all groups and getting "everyone on the same page." Alignment is important, but the rush for integration doesn't have to come at the expense of enabling the productive use of differences.

Weaving Tactic 3: Connect the Dots — Link Group Expertise, Experience and Actions Back to Larger Collective Goals. The greatest advantage of unique group knowledge and expertise is realized when it is applied to solving a larger problem or creating a new solution that benefits the organization as a whole.

Weaving Tactic 4: Foster an Interdependent Group of Groups. In today's shifting leadership landscape, teams look less like teams in the traditional sense of the word and more like groups that come together, get their work done, disband and recombine with other groups. Yet they still need to have a clear identity, purpose and set of deliverables. In line with this business reality, you can take steps to help teams foster dual identities. Think of this as a "group of groups," or "different groups working on the same overarching team."

Weaving Tactic 5: Create Interdependent Goals That Groups Cannot Achieve on Their Own. The most important business challenges we face today are interdependent: They can be solved only by groups working collaboratively. Yet all too often we find groups in the same organization working independently or, worse, at cross-purposes. This is problematic because the way we work has to match the nature of the goal we want to achieve. When the goal is interdependent, you can create the conditions for groups to capitalize on their distinctive resources to succeed. In these situations, it is the health of the whole that ultimately determines the success of the different groups. ●

Transforming: Enabling Reinvention

The practice of transforming seeks to bring together different people (the *who*) using different approaches (the *how*) to cross-cut boundaries of identity and enable inter-

group reinvention. When intergroup identities change, the boundaries associated with those identities change.

Transforming Tactic 1: Bring the Whole System Into the Room: Gain Representation Across All Groups and Ensure Maximum Diversity of Perspective. In cross-cutting boundaries, you need to make a concerted effort to ensure that you have representation from all groups. Encourage a broad and inclusive group of people to attend, allow all points of view to be heard and bring the full range of the system into the room.

Transforming Tactic 2: The Way You Frame the Issue Is the First Act of Leadership. In bringing multiple and often opposing groups together, the way you position issues is critically important. The way you frame an issue needs to take into account the identities of all the groups that span the divide.

Transforming Tactic 3: Give Equal Space to All Groups — Give All Groups an Equal Opportunity to Create and Envision an Alternative Future. Including people from all parts of the system and framing issues in an open and invitational way are two tactics for setting the stage for cross-cutting boundaries. Now that you are ready to bring competing and divided groups into direct contact, another tactic to consider is to give all the groups equal time and space to participate.

Transforming Tactic 4: Allow All Groups to Confirm Their Core Values. Another tactic for cross-cutting boundaries is finding avenues that allow members of disparate groups to confirm their core values. At one level, this allows people to feel more grounded and secure. At another level, it allows people to realize that despite their differences, members of both groups have decent and principled values that sometimes overlap.

Transforming Tactic 5: Create a Channel for Both Positive and Negative Energy to Flow. The previous tactic highlights the importance of affirming core values. Now, as you seek to discover new frontiers, you have to draw out both similarities and differences. This final tactic can be used to create a channel for positive and negative energy to flow. ●

PART 5: THE NEXUS EFFECT

The Nexus Effect and You

Buffering, reflecting, connecting, mobilizing, weaving, transforming — out of these six boundary spanning practices come safety, respect, trust, community, interdependence, and reinvention. Leaders create the Nexus Effect by spanning boundaries and harnessing the energy between groups that is above and beyond the energy created by groups working alone.

We define the Nexus Effect as *the limitless possibility and inspiring results that groups can achieve together above and beyond what they could achieve on their own*. Unlike the nearly limitless connections found in biological cells or on the Internet, a collaborative nexus between groups is not something we see happening every day, probably because creating the Nexus Effect is not easy. But you know it when you see it. You can spot it by the energy and sense of resolve you get from talking to someone who has experienced the Nexus Effect. Those people are excited to share their story, the barriers they overcame and how it once seemed impossible to get where they are today. ●

One Group Enhances the Other

The word *nexus* comes from the Latin word *nectere*, which means "to bind." A nexus is a specialized cellular connection that enables molecules and ions to pass freely between cells. In technological terms, Nexus was the name given to the world's first Web browser, developed by Sir Tim Berners-Lee in 1990. In mathematical terms Alfred North Whitehead, a 19th- and 20th-century English mathematician and philosopher, described a nexus as a system of relationships in which the whole is greater than its parts.

Combining elements at the precise time and in a precise way can result in a multiplicative effect in which 1+1>2. For example, in manufacturing, the yield from two machines working together, in concert, is greater than what can be achieved by both machines working independently of each other. The same principle can hold true for organizations, where groups that are able to work collaboratively achieve infinitely more than they would if they worked alone. In this case, the presence of one group enhances the other.

RECOMMENDED READING LIST

If you liked *Boundary Spanning Leadership*, you'll also like:

1. ***Everyone Communicates, Few Connect* by John Maxwell.** Maxwell offers five principles and five practices so you can connect one-on-one, in a group, or with an audience.

THE SUMMARY IN BRIEF

Many leaders and teams struggle to scale their businesses while keeping their brands distinct and meaningful. In a crowded marketplace, success comes not from louder messaging but from making and keeping a clear, resonant promise to customers, consistently.

In ***Building a Brand That Scales: How to Unlock the Hidden Value in Your Brand and Business***, Jed G. Morley offers a strategic roadmap for companies that want to grow without losing their core identity. Morley, founder of Backstory Branding, helps organizations bridge the divide between brand marketing and performance marketing. His approach shows how clarity of purpose and aligned messaging across teams and customer touchpoints can drive both revenue and long-term brand loyalty. Using his proprietary Backstory Brand Wheel™ Framework, Morley explains how to transform your brand from a vague concept into a scalable business asset.

Whether you're a startup or an established company looking to reinvigorate growth, this book provides practical tools to build a brand that aligns with who you are and what your customers truly value.

IN THIS EXECUTIVE BOOK SUMMARY:

- Learn how to shape customer perception through clear, compelling brand strategy.
- Understand how to communicate your value consistently across all channels and teams.
- Find out how to align internal teams with unified verbal, visual, and experiential guidelines.
- Learn how to drive growth by tailoring messages to each stage of the customer journey.
- Get useful advice on how to codify your brand's culture and purpose for lasting differentiation.

Preface

In college, I studied graphic design, thinking I could learn to build great brands if I could just learn how to design an iconic logo like the Nike Swoosh. I soon learned that there is more to building a brand than designing a memorable logo. In grad school, I discovered the power of consumer insights and the need to get below the surface to understand why brands do or don't connect with customers on an emotional level.

Working at IDEO, the global design and innovation consultancy, and witnessing its design-thinking principles, I saw the significant impact human-centered insights can have on creating connections and winning business models.

This is dedicated to leaders and teams who are committed to building a brand that scales by setting their brands apart from the status quo and forming lasting relationships with their customers by consistently making and keeping a meaningful promise.

The principles I share come from over twenty years of experience, culminating in lessons learned from collaborating with dozens of businesses and brands at my brand strategy and messaging consultancy, Backstory Branding (Backstory), where we aim to build brands that live up to their promise. Our proven process consistently results in brand breakthroughs that accelerate growth and maximize the value of companies at exit. If your brand is stuck, underdeveloped, or undefined, this book is for you.

Chapter 1: A Different Kind of Wheel of Fortune

Some brands get big by getting lucky. They stumble into success and somehow manage to grow without much forethought. However, most brands that scale do so on purpose. Creating an intentional brand strategy gives you a much better chance of building a brand that can grow with your business, generate more revenue, and make a more significant impact in the world.

What is a Brand?

At Backstory, we define a brand as the perception someone has of a particular person, place, thing, or idea. No perception, no brand. Branding includes the thoughts and feelings we have when we think of a brand name and the reputation, value, and cultural currency it represents.

Customers determine what your brand is based on their cumulative experiences with it, and the branding process creates those experiences intentionally. You know you have a brand when your proper noun (i.e., capitalized) brand name becomes synonymous with the common nouns customers use to describe or search for solutions to their wants and needs.

Your business may own its brand name, logo, and tagline, but customers ultimately own brands because they decide what they stand for and, consequently, determine their value. You can *influence* what customers think of your brand, but you can't decide what it means to them. Everyone who works with you—employees, contractors, partners, and agencies—makes an impression on behalf of your brand, for better or worse. Defining what your brand stands for and providing your team with guiding principles for consistently communicating that meaning ensures everyone on your team can be an effective brand ambassador.

The Backstory Brand Wheel Framework

The Backstory Brand Wheel Framework is a complete tool set that can guide your company through the process of getting its story straight inside and out to help you achieve and sustain the alignment required to build a brand that scales. The four-phase framework is simple for nonmarketers to understand and implement and is meaningful to marketing professionals who want tools and inspiration to do their best work.

- Phase 1 is Brand Discovery, the place where you uncover insights into your current and desired brand perceptions.
- In Phase 2, Brand Foundation, you clarify and articulate the ideas needed to communicate the five foundational elements of your brand story, including your brand purpose, brand position, brand promise, brand pillars, and brand personality.
- The focus of Phase 3 is Brand Expression, where you'll build on your Brand Foundation (i.e., brand platform) by defining the attitudinal and behavioral characteristics of your ideal customers, articulating the value you provide them, naming your brand, creating your visual brand identity, and defining the guiding principles for the visual, verbal, and experiential aspects of your brand.
- Phase 4, Brand Activation, aids you in consistently and correctly communicating your brand across all your

Familiarity can blind us to the changes we must make for our brands to be great.

customer touch points to drive brand performance and profitable growth.

The point of this framework is to simplify and systemize the branding process. These straightforward brand definitions and methods have been designed to help executives and functional teams effectively develop a shared branding vocabulary and work together to achieve their brand goals.

PHASE 1: BRAND DISCOVERY

This phase focuses on understanding your current and desired brand perceptions and determining what gaps exist between them. Finding these gaps informs your brand strategy by identifying the words, images, and experiences needed to create your desired brand perception.

Four types of insight inform brand strategy: company insight, customer insight, competitor insight, and creative insight. Great brands are born where these insights intersect.

Chapter 2: In-depth Interviews

The first step in Brand Discovery is interviewing individuals who have valuable insights into your current and desired brand perceptions. These in-depth interviews should include one-on-one conversations with your company leaders and customers who can provide meaningful and diverse perspectives into your brand and business in context of the competitive landscape.

Good interviews come from selecting and curating a group of insightful, opinionated, and articulate participants. Each should be willing and able to discuss what they think and feel about your brand and category and, most importantly, *why*.

Asking Expansive Questions

The most fundamental skill to develop and apply in conducting effective interviews is to ask thought-provoking, open-ended questions. The goal is to invite the people being interviewed to open up and share more, not shut them off with simplistic, yes or no questions that drive the conversation down a dead end.

The Brand Ladder Method

You can improve your interviews by focusing on the interviewee's purpose or reason for their answers. Discovering a rich "why" vein of golden insights to mine becomes more predictable and repeatable when you use the Brand Ladder Method.

This method operates on four levels of insight: features, benefits, feelings, and values. Great brands communicate and connect with their customers on all four levels.

Four seemingly simple questions can help you build a brand ladder that unlocks strategic insights into your customers' wants and whys:

- **Features**: Of all the things that set this brand apart, which one matters most to you?
- **Benefits**: What are the benefits of that feature, and which one matters most to you?
- **Feelings**: How does having that benefit make you feel?
- **Values**: What is important about feeling that way?

Interview Guidelines

Following some simple guidelines can make a big difference in making interviews more valuable:

- THINK FIVE AND FIFTEEN
- BE SELECTIVE
- DO YOUR HOMEWORK
- GET THEIR NAME AND A BRIEF BIO
- PRETEND YOU KNOW NOTHING
- BE PREPARED TO OFF-ROAD
- BE COMFORTABLE WITH QUIET
- ASK JUST ONE QUESTION AT A TIME
- GUIDE THE DISCUSSION
- TAKE TRIGGER NOTES
- DON'T SETTLE FOR SATURATION

- HAVE THEM CLARIFY WHAT THEY MEAN – IN THEIR OWN WORDS
- DON'T CORRECT THEM
- RECORD THE INTERVIEWS
- TRANSCRIBE THE INTERVIEWS
- CODE THE INTERVIEWS
- COMPLETE THE INTERVIEWS WITHIN A FOCUSED TIMEFRAME
- SEE WHAT THEY'RE SAYING
- INTERNAL INTERVIEWS
- EXTERNAL INTERVIEWS

Tripping Over the Truth

Strategic branding leaders and practitioners tune their antennae to recognize significant insights in the moment. The Brand Discovery process systematically prepares your mind to more fully identify, appreciate, capture, understand, and act on insights however subtle those signals might be. Without this heightened awareness, we may "trip over the truth" without realizing what we've stumbled upon.

Chapter 3: Brand Audit

Familiarity can blind us to the changes we must make for our brands to be great.

Following our four-step process for conducting brand audits – gather, score, evaluate, and plan – can help. Please note the brand audit process applies to brand refresh and rebrand projects. You can skip this step altogether if you're creating a new brand.

Step 1: Gather. Gather representative examples of the brand touch points your organization currently creates, delivers, and facilitates for internal and external audiences. Brand touch points include the words, images, and experiences contributing to the perceptions—intentional or not—that internal and external audiences have of your brand.

Step 2: Score. Once you've collected a well-rounded cross-section of brand touch point inputs, weigh and sort them based on their perceived value to your audiences and compare the relative importance of your audiences to one another. Conducting internal and external customer interviews and surveys can help inform this process—specifically, which touch points matter most to your most important audiences and why.

Step 3: Evaluate. Once you've collected examples of your current brand touch points, evaluate the degree to which they add to or subtract from how you want audiences to perceive your brand. Next, rank their relative importance to your customers and other audiences. Evaluation methods include customer surveys, in-person or by-phone interviews, and videoconference calls.

Step 4: Plan. Take time to review the findings of your brand evaluation and extract general guiding principles from them for your brand strategy. Rather than getting bogged down in the details, summarize actionable, high-level brand takeaways and enlist the help of the right individuals and teams to take your brand where you want it to go.

Chapter 4: Competitive Analysis

Competition can bring out the best in us when we are committed to winning the hearts and minds of our customers. Competitive analysis is an essential ingredient in creating an effective brand strategy. It helps you gain a more objective understanding of whether or not your offering is truly differentiated. Knowing who your competitors are and how you win against them from a customer perspective puts you in a position of strength because it shows you how they view the market.

PHASE 2: BRAND FOUNDATION

Like the firm foundation of a building, your Brand Foundation helps ensure the strength and structural integrity of your brand for years to come. A strong Brand Foundation helps you build your brand in a way that is aligned and congruent with your brand strategy to reinforce your desired brand perception.

Chapter 5: Brand Purpose

Simon Sinek popularized the idea of building a purpose-driven organization and creating brand stories that *Start with Why*. His framework revolves around insights into how the human mind works, starting with why the people do what they do, then *how* they do what they do, followed by *what* they do.

According to Roy Spence, the adman who built the advertising agency GSD&M, which developed successful brands for Southwest Airlines, Walmart, DreamWorks, the PGA Tour, the United States Air Force, and the Texas Department of Transportation, purpose is a definitive statement

Resonating with your customers is the ultimate desired outcome of effective marketing messaging.

about the difference you are trying to make in the world. Spence further clarifies these reasons why you should want a purpose statement for your organization:

- Purpose drives everything.
- Purpose fosters visionary ideas and meaningful innovation.
- Purpose moves mountains.
- Purpose will hold you steady in a turbulent marketplace.
- Purpose injects your brand with a healthy dose of reality.
- Purpose recruits passionate people.
- Purpose brings energy and vitality to the work at hand.
- Purpose contributes to a life well lived.

A memorable, motivating purpose statement needs to be authentic. There is no cookie-cutter template to create yours; it has to be true and genuine to your organizational and personal values. Here are a few guidelines to get you there.

- **Inspirational and motivational.**
- **The aperture principle** *(being specific enough but not so specific as to box your business in).*
- **Keeping it simple and keeping it real.**
- **Room for more.**
- **Different means to the same end.**

Sharing Your Purpose

Once you have clarified your purpose, created authentic and effective mission, vision, and values statements, and written down your recipe for success by codifying your culture, you have to teach them to your employees over and over again.

You'll need to bring your employees, investors, and other stakeholders on board by helping them understand and appreciate the significance and stories behind these things. They need to believe and buy into your purpose so they can make it real for themselves by creating and sharing stories of their own.

Chapter 6: Brand Position

Your brand position consists of the words and ideas customers associate with your brand name. When you think of brand position, think of brand perception.

The first step in the brand positioning process is determining what words and ideas customers currently associate with your brand compared to your desired brand perception. Current perceptions define your statement of brand position.

To change your brand from its current perception to the one you want, you need to make intentional, deliberate, and consistent choices to reinforce your desired brand perception from the customer's point of view.

Reframe the Narrative

Creating a strategic brand narrative can elevate your brand positioning and help you close the gap between your current and desired perception. Although the applications vary from one practitioner and framework to another, the guiding principles for setting your brand apart with a compelling narrative remain the same.

- **Principle 1. Make your customer the center of your story.**
- **Principle 2. Show your customers how their world has changed by creating a problem they can't afford to ignore.**
- **Principle 3. Show customers what life could be like with their problem solved.**
- **Principle 4. Define the criteria for success on terms only you can satisfy.**

Chapter 7: Brand Promise

At its most basic, building a brand is making and keeping a meaningful promise at scale. Your brand promise is the overarching value you deliver to customers – *overarching* meaning your brand promise is audience-agnostic. A well-crafted brand promise is a meta-benefit statement that resonates with all your audiences all at once—that is music

to their ears regardless of their unique pain points and reasons for buying.

Chapter 8: Brand Pillars

Having defined your brand purpose, position, and promise, you've laid a strong Brand Foundation for building. The next step in developing your brand is to set forth your brand pillars – the five most significant reasons you win. Your brand pillars make a case for why customers should prefer and choose your offering over alternatives.

Find Your Pillars

Identifying the five most important success factors is a blend of thinking about what customers need to succeed and what sets your offering apart. A helpful exercise to facilitate this process is creating a simple value curve chart in Microsoft Excel or Google Sheets that shows what customers want in a solution for a particular problem and scoring your offering's ability to satisfy those needs compared to competitors' offerings.

Chapter 9: Brand Personality

Creating a distinct personality for your brand starts by choosing modifiers (adjectives) that define your brand and can guide the ongoing creative efforts of everyone who's working on giving expression to your brand and bringing it to market – from your ads, content marketing, social media, and PR to your internal employee and investor communications.

A strategic, thoughtful, coordinated, and consistent approach to defining your brand personality and aligning everyone to it helps reinforce what your brand stands for in customers' minds. Each customer touch point, campaign, and creative contribution ought to reinforce your desired brand perception and enhance your brand equity with customers—like compounding interest—rather than allowing random weathervane acts of marketing to take your brand in whichever direction the wind blows.

By clearly defining your brand personality and consistently expressing it throughout all your brand communications, you help customers understand what you stand for and attract customers who share your values and brand sensibility.

PHASE 3: BRAND EXPRESSION

This phase is about defining the words, images, and experiences that will shape and influence how customers see and value your brand – your brand perception.

Chapter 10: Marketing Messaging

Resonating with your customers is the ultimate desired outcome of effective marketing messaging. Resonance results from solving a significant customer problem and communicating your solution's features, advantages, and benefits so customers recognize they can't afford not to change what they're doing and how they're doing it.

Creating resonant marketing messages starts with an in-depth understanding of who your audiences are, what they want, and the problems that stand in their way of getting it – issues your solution is uniquely qualified to resolve for them.

You can only create clear, consistent messaging that communicates the problem-solving capabilities of your solutions when you have validated your business model and achieved product-market fit.

Chapter 11: Brand Narrative

A compelling, intriguing, and consistent explanation of who you are, what you do, why it matters – and to whom – *is crucial to building a brand that scales.*

Being ready to answer these foundational questions, both in spoken and written communication, goes a long way to setting you and your organization apart in meaningful, memorable ways. A strategic brand narrative consists of three parts: a one-line elevator pitch, a one-paragraph about us statement, and a one-page company overview.

It takes about three seconds to share your elevator pitch, thirty seconds to read your about us statement, and three minutes to read your company overview. These three degrees of detail give you flexibility in meeting the demands of different situations and scenarios. Having each of them ready to go can facilitate meaningful connections with employees, customers, investors, and partners.

Chapter 12: Brand Name and Visual Brand Identity

Learning what makes brand names and visuals meaningful is a blessing and a curse. Once you become aware, you see missed opportunities everywhere. Of course, you see great examples, too, which inform good decisions when it's your turn to give clear, creative direction and make creative choices that serve your brand well.

Naming a brand that can scale and creating an appropriate visual brand identity for it should be a strategic, intentional process with the goal of reflecting the character and personality of the brand in a way that resonates with your customers. It should always be a name and identity the brand can grow into over time.

There are four main types of brand names:

- **Descriptive** – depicting what a company is or does.
- **Suggestive** – implying what a company is or does.
- **Arbitrary** – using real words in an unexpected context.
- **Fanciful** – made-up words like Kodak or Xerox.

Another important consideration in naming your brand is giving equal, if not greater, emphasis to how it sounds when spoken, not just how it looks in writing.

Visual Brand Identities

Designing a visual brand identity that can scale with your business as it grows starts by defining a clear brand strategy, including its brand personality. Without a clear strategic direction for your brand, selecting a logo design can default to personal preference and decision by committee—the worst method of all. Instead, use objective criteria to guide the design evaluation process to create a logo that reflects your desired brand perception.

PHASE 4: BRAND ACTIVATION

Th ultimate aim of the Brand Activation phase of the brand-building process is to build your brand while building your business. Some would have you think these goals are at odds with each other, that it's an either-or proposition, but we disagree. We believe in blending both brand *and* performance marketing simultaneously so you get the best of both worlds.

Chapter 13: Customer Touch Points

Creating and maintaining alignment in bringing your brand to life is a never-ending process because circumstances and inputs constantly change. Consistently and effectively activating your brand requires constant focus, detailed attention, and continual refreshing.

Every interaction between you and your brand is a customer touch point. The personal impressions from all your brand touch points meld in customers' hearts and minds to form an overall picture of your brand and a feeling that gives customers confidence in buying and recommending your brand—or not. Because everyone who works for your organization creates or contributes to customer touch points in some way, branding is everyone's responsibility, not just the marketing team's.

Following The Backstory Brand Wheel Framework can help you identify the right audiences and messages to make your marketing dollars work harder for you. Creating cohesive, cogent, consistent brand touch points is vital, but so is defining the right audiences and messages to share with them. It doesn't do your brand or business much good to consistently communicate the wrong messages to the right people and vice versa.

Conclusion

The purpose of our work at Backstory is to build brands that live up to their promise. Our job is to discover and define what is and isn't the essence of a brand and reveal it by removing anything that isn't essential. What our clients receive as a result of this process is pure relevance and resonance with their audiences.

What had been an incomplete idea of what they have been or could become is transformed into a clearly defined and refined concept as well as a clearly and consistently communicated idea, story, and relationship that resonates deeply with their ideal customers.

Here, you're given a methodology for bringing your vision to life as you consider what to paint on your brand canvas and sculpt in your studio. You can leverage this process to define your brand and bring it to market at a level that expands your capacity beyond what you can do yourself. With the help of talented teams who follow the process and work within the brand guidelines you've established, the collective work can be true to your standards.

The result is a great brand that is bigger than you and your ability to touch every aspect of it—a purposeful brand that can make a difference for good in the world beyond making money.

Jed G. Morley is the founder and CEO of Backstory Branding, a brand strategy and messaging consultancy focused on helping companies build brands that deliver on their promise. He has guided dozens of businesses in clarifying their purpose, defining their value, and codifying their culture to support growth. Jed holds a BA in design from Brigham Young University and an MS in Integrated Marketing Communications from Northwestern University. Outside of work, he enjoys supporting the performing arts with his wife, Angie, spending time with family, cycling, and exploring Swedish genealogy.

THE SUMMARY IN BRIEF

Organizational culture has undergone a seismic shift in the 21st century—and with it, the requirements of leadership. In ***Building the Best***, LearnLoft CEO John Eades takes you on a journey of transformation that will equip you with the tools you need to become the kind of cutting-edge leader today's workplace so urgently needs.

Beginning with the benefits of great leadership—and the drawbacks of bad leadership—Eades describes how leaders elevate others and how their practices pay huge dividends. At the core of such leadership is a carefully balanced blend of "love and discipline"—a guiding principle that helps create high levels of performance by leaning on standards while at the same time caring about the long-term success and well-being of each team member.

Leadership is a journey, not a destination. ***Building the Best*** offers a powerful blueprint for embarking on that journey—the first step in taking your team or organization toward true greatness.

IN THIS SUMMARY, YOU WILL LEARN:

- Why elevating others requires practicing love and discipline.
- The four elements of team culture and how to develop them.
- The purpose trifecta of values, vision, and mission.
- To maintain high standards and practice true accountability.

Part I: Change Your Heart

Point to the Benefits

The impact that a great leader has on the world is powerful enough to set aside the most irreconcilable differences. After President Abraham Lincoln was assassinated in 1865, more than 7 million citizens paid their respects as Lincoln's body was transported from Washington, DC, to Springfield, Illinois.

The political turmoil dissipated as individuals from all walks of life rallied in droves to pay their respects. A good friend and confidant of Lincoln, Ulysses S. Grant, famously wept at one of his memorial services as he said, "Lincoln was the greatest man I had ever known." The heart of the United States was wholly broken.

If great leadership can be powerful enough to set aside irreconcilable differences, what is the impact of being a bad leader?

There are two main costs of being a bad leader: financial and health. Research at LearnLoft estimates that one bad leader costs a company between $100,000 and $115,000 over the course of a year due to higher-than-average turnover, low employee engagement, and an overall lack of productivity.

The health costs are even more interesting. In 2011, the American Institute of Stress conducted a study on managers and executives, finding that they are 52 percent more likely to die earlier than their counterparts due to stress-related issues. It makes a convincing case that the worse a leader is, the higher the leader's stress is going to be, increasing the likelihood of early death.

A recent Gallup study showed that 75 percent of employees leave their jobs because of their bosses and not the position itself. The majority of top performers gladly exit a toxic environment instead of tolerating lousy leadership. This often leaves average or below-average employees reporting to bad leaders. For fear of losing their job, these employees are forced to deal as best they can.

A real cyclical effect emerges, and it takes a major shake-up in an organization to change the negative agents at work.

Your responsibility as a leader is bigger and broader than you think. Think about the impact Abraham Lincoln, Ulysses S. Grant, and John F. Kennedy had and still have on the world. It's a humbling thought that as a leader, good or bad, you will impact the world for decades after you are gone.

Regardless of the leadership you've experienced, the leader that you are and the impact that you will have is a choice that lies within you.

It All Starts With a Model

Commit this definition of leadership to memory: *Leadership is inspiring, empowering, and serving in order to elevate others over an extended period of time.*

All three words (inspiring, empowering, and serving) are paramount to building the best and elevating others. If what you are doing to proactively elevate others results in them being more inspired, empowers them to make decisions, and serves their heart, then you are on your way to true leadership.

While having an incredible leader at the helm is critical, in order to grow and evolve as a business or team, you must have an army of leaders behind you that also build the best and elevate others. What they need is a simple idea or way to think about how to do it. Let's talk about that next.

Practice Love and Discipline

Principle 1: Use high levels of love and discipline to elevate others.

How can the terms "love" and "discipline" translate into a corporate environment? They aren't exactly words encouraged by Human Resources. "Love" and "discipline" are words that can be ambiguous, so consider these definitions that apply to the workplace.

Love (verb): to contribute to someone's long-term success and well-being.

Discipline (verb): to promote standards in order for an individual to choose to be at his or her best.

A LearnLoft study of 40,000 leaders in various roles ranging from CEOs to frontline managers revealed a direct correlation between leaders' effectiveness and their use of love and discipline. Highly effective leaders were those who leveraged high levels of both love and discipline; those leaders who ranked low in effectiveness rated low in their use of love and discipline.

Leaders whose style is to elevate leverage love and discipline through 16 key demonstrable competencies, eight in love and eight in discipline. These 16 core competencies are a fantastic barometer to determine specific strengths and weaknesses in the way you lead.

As a leader, you must consistently share your competence and care in order for people to trust you.

Love Competencies

Recognition: How often and effectively you take advantage of opportunities to make your team members feel valued and appreciated.

Personability: How engaging you are with individuals on your team, both in your mannerisms and demeanor.

Development: How much emphasis you put on the development of your team to ensure their long-term success and well-being.

Unity: How well you create a sense of belonging and connections between your team members.

Positivity: How optimistic you are when speaking to or being around your team.

Vulnerability: The level at which you share the truth about mistakes, personal feelings, or lack of knowledge.

Empathy: How well you are able to identify with your team to understand their feelings and perspectives, in order to guide your actions.

Trust: How confident your team is that you will do what's right.

Discipline Competencies

Standards: How clearly you define, communicate, and promote what good looks like.

Coach: How effective you are at providing guidance and training to improve the skills of your team.

Goals: How clearly you've defined, communicated, and measured goals.

Model: How well you exemplify the standards and behaviors you expect from your team.

Consistency: The stability, predictability, and emotional intelligence of your behaviors.

Accountability: How effectively and consistently you hold your team accountable to the standards you've set.

Priority: How clearly you determine the order in which your team should complete work based on relative importance.

Vision: How well you define, communicate, and reinforce what you want your team or business to be in the future.

Simultaneously leading with high levels of love and discipline isn't easy. But if you don't use love, you won't connect with people to get their best possible performance. If you don't use discipline, you aren't going to get anyone to levels they didn't think possible. The natural question becomes, where do you start, and how do you do it?

Part II: Start With the Fundamentals

Build Real Bonds

Principle 2: Without strong relationships, you can't lead.

The ability to lead a team starts with good, quality, professional relationships, built on the bond of mutual trust. As a leader, you must consistently share your competence and care in order for people to trust you. The key word here is consistency. Reid Hoffman, founder of LinkedIn and partner at Greylock, came up with a good formula for easily understanding trust:

Consistency + Time = Trust

The Trust Compound Theory says that each day, you get the opportunity to build stronger bonds of mutual trust with your team by sharing your competence, showing you care, and exposing your character. Each member of your team is evaluating how much they trust you based on how well you do these three things.

Competence. Competence hinges on the depth of your knowledge and how willing you are to impart that to others. The key to sharing your own competence is imparting the technical knowledge you have gained to those you lead as well as your leadership skills on an ongoing basis. Your willingness to share these two things is your ticket to building bonds that lead to big things.

Care. In order for your team to understand how much you care about them, you must reject the notion that words hold great power. Instead, accept the power of actions. In order to show your people you care, you have to get to know them on a professional and personal level. This starts with asking them questions about their own journey, experiences, challenges, and what drives them. Instead of just going through the motions, you have to be intent on listening and remembering so you can adjust your actions in the future to show them you listened.

Like all great relationships, the only way to get there is by dedicating time. Your time is valuable, and you can't get it back. Devoting time to someone else shows that you care, and they are more important than anything else you have going on. Another powerful way to show you care is to be vulnerable; share truths and ask for help when you need it.

Character. Character is defined as the mental and moral qualities distinctive to you as an individual. It's an engraved set of disciplined habits and a settled disposition to do good. When there is clearly a right or wrong, the choice you make is based on your character. In the workplace, a person's character is put to the test frequently.

The simplest examples in which your team will evaluate your character include things like

- How do you treat others who have nothing to give you in return?
- How do you act in groups?
- Do you interrupt others when they are talking?
- What do you value most out of life?

Encourage the Culture

Principle 3: Culture starts with you, but your people prove it.

Culture in the modern business sense is the shared beliefs and values that guide thinking and behavior. Four elements make up any team's culture:

Safety. Before people can perform at their best, they first need to feel safe and protected. How does the current environment make your people feel? First, are the working conditions physically safe? Second, do team members feel emotionally safe to share ideas and feelings without fear of any repercussions?

Creating a physically safe environment is cut and dried. What isn't so cut and dried is creating an emotionally safe environment so people on a team are able to set aside their self-doubt, uncertainty, and fear so they can perform at their best. The only way for you to encourage a psychologically safe environment is by understanding that it starts with you. You have to be intentional about creating an inviting work space where people can share ideas, ask questions, and collaborate. If your team perceives their comments are going to be judged or not respected, they will begin to reserve those ideas and questions for a different environment altogether.

Unity. Inclusivity and people feeling like they are part of something bigger than themselves help feed productivity and innovation. Does each person on your team feel like he or she plays an integral part? Does everyone work together as a team, or do they create silos or cliques? At the center of unity is mutual respect among team members and a feeling of belonging. It is a major responsibility as a leader to give your people this sense of belonging in order to create a unified team.

Positivity. Beliefs drive people's actions, and actions drive results. If your team's beliefs are optimistic, the chances of good things happening in the future are drastically higher than the alternative. Positivity is driven from the top down, and it's contagious. If you want to have a culture that is encouraging for others, it is your responsibility to make a conscious effort to be positive.

For positivity to take root in your culture, it has to reach every individual on your team: When bad things happen, respond with a positive comment. Promote and encourage things that help create positive energy. Finally, remove the people that cause negativity.

Energy. Energy keeps your team going and impacts the intensity and speed at which people perform. High energy yields high performance. Traditional thinking says energy comes from results. While this isn't wrong, energy can be produced, well before results are achieved, through the power of words or mantras. Examples of mantras include "Let's Go," "Take Dead Aim," and "Move the Needle."

Part of your job as a leader is to ensure you have a Maximizing Mantra for your team, company, or even your family so you can create a similar sense of energy for others. It's important that your Maximizing Mantra is simple, provides clarity, is action-oriented, and most importantly, is fun. Use it all the time, and keep it in the forefront of your people's eyes and hearts.

Clarify the Purpose

Principle 4: People persevere because of purpose, not pay.

With so many options for people to choose from when it comes to where they work or what team they join, those leaders who are intensely connected to their purpose stand out from the crowd. It also fuels a team to continue to pursue their purpose when times are difficult or challenging.

Three cornerstones are necessary to clarify a purpose. The purpose trifecta is made up of values, vision, and mission. Clarifying these three parts will dramatically increase your odds of building the best team and organization.

Values. Core values are the fundamental beliefs a person or team holds true. Once established, these guiding beliefs dictate behavior and help individuals decipher right from wrong.

A common denominator of all leaders who build the best is the time they dedicate to defining a set of core values. But they don't stop at defining the values. Instead, they make those values part of the team's guiding light.

Values come alive not through words on a wall or a website but through the actions of everyone in the organization. Talented people are not attracted to empty words but, rather, the exercising of them. Rewarding, recognizing, and talking about them on an ongoing basis provides a clear expression of how important they are to you and your people.

If you don't know where to start, take this list of common core values and narrow it down to four or five that best align to the group you lead: hard work, work ethic, loyalty, honesty, consistency, serving, creativity, courage, perseverance, ownership, humor, open-mindedness, reliability, compassion, competitiveness, will, passion, empower. When you come up with a final list, design a phrase that brings it to life.

For example, Skookum Digital Design, a software development and design company based in Charlotte, North Carolina, defined four core values and later added one more: simplify and go; embrace change; own it; choose to be happy; and give more than you take.

Vision. The best leaders are visionaries. They have in view what is possible in the future.

Ask yourself these questions about the future: "What does it look like? What is happening on the team or in the company? How many people are joining you on the journey? What kinds of people? What is the celebration going to look like? How are you going to feel? How is your team going to react? What is your family going to say? How will the world be different? How will the lives of the people you touch in the process be different?"

Mission. There is no exact formula to dictate how an organization or team should lay out its mission statement. Roderic Yapp, a former Royal Marines officer, shared a formula: *We do X in order to achieve Y for Z*.

Broken down, it is simply what you do, why you do it, and for whom it is done. The key is to define your mission in a way that everyone can identify why decisions are made and actions are taken. Here's the mission statement of Movement Mortgage: "We exist to love and value people by creating a Movement of Change in our Industry, Corporate Cultures, and Communities."

Values come alive not through words on a wall or a website but through the actions of everyone in the organization.

Part III: Balance People and Performance

Execute Every Day

Principle 5: Goals aren't achieved without priorities put into action.

While your purpose trifecta of mission, vision, and values remains solid and steady over time, it must be put into action. In order to do that, it has to be broken down further into an actionable system everyone on your team can buy into and use as a grounding force as they take ownership of their daily decisions.

The GPI System involves goals, priorities, and initiatives. GPI puts the purpose trifecta into an actionable format that leaves nothing to question. It's the step-by-step directions your team will follow to get you from a short-

term goal to a long-term vision.

Goals. If you haven't already created a clear goal for your team, use this formula to come up with one:

Clear Objective + Completion Date + Carrot = Your Team Goal

The team will be far more likely to succeed if the goal is specific and each member gets behind it. The key after defining the goal and a completion date will be coming up with the "carrot" that helps motivate the team to achieve the goal.

Priorities accelerating growth. Regardless of your industry or the nature of the work your team does, you must have defined priorities if you want to hit your team goal. These are specific things that are regarded as more important than other things. If you have never defined priorities, consider specific areas within products, people, projects, or job functions. When evaluating your own priorities in these areas, ask yourself, "Will focusing on this help our team achieve our goal?"

Initiatives to make impact. Much like defining a goal, priorities by themselves don't do a whole lot. Your team must make decisions every day in alignment with those priorities in order for them to drive real results. That's why the GPI System goes one step deeper into initiatives.

Entrepreneur Mac Lackey came up with a simple method that focuses on daily tasks that will "move the needle" for his company. Each day he pulls out a three-by-five notecard and writes "WMN" on the top. Underneath he fills out his to-do list with initiatives that will help his company "move the needle." He aptly calls his method WMN, or "what moves the needle."

Instead of thinking of this as a big change, just consider the fact that you and probably everyone on your team either writes down their initiatives each day or keeps a mental checklist. WMN ensures you aren't just making a to-do list full of tasks to check off but, instead, working on things that will move the team or business forward.

Align the Behaviors

Principle 6: The instant you lower your standards is the instant performance erodes.

You can and should leverage standards to align the behaviors of your team. When you do, you will be on your way to getting the results you want out of others.

Imagine for a minute your state decided to remove speed limit signs altogether. Drivers could drive as fast as they wanted on any given road. Would you still drive 25 mph in a school zone, or would you go 35 mph and just keep an eye out for children? You would likely pick the latter. The principle here is this: The instant you lower the standard is the instant performance begins to erode.

High standards produce behaviors from people. Those behaviors, when practiced repeatedly, become a habit, and those habits lead to results. This pattern is called the Route to Results. Instead of focusing on results first, you must have the patience to follow the Route to Results. Start at the beginning by setting great standards, and the rest will follow.

Building the Best workshops use a specific structure for the creation of standards: Write down two standards that fall into the categories of policy, procedure, and merit. Keep it to a sentence or less to ensure a clear standard. For example, a policy standard is "Dress code: Dress appropriately for the day."

For each standard you set for your team, it's critical you are able to articulate why it exists by tying it to one of two thoughts our brains are always evaluating: gain or pain. The simplest way to think about "gain" is by answering the following question around each standard you have established: What good thing happens to each person individually or the team as a whole if they live out the standard?

The simplest way to determine the "pain" is by asking yourself a slightly different question: What bad thing happens to them or the team if they fail to live out the standard? Whether you lean toward connecting why a standard exists to gain or pain, the key is knowing the answer and being prepared to share it.

Once you're ready to have the conversation with your team, either one-on-one or in a group setting, there is a simple four-step conversation framework you can use to improve the likelihood you are successful:

- Step 1: I realize I have failed you from a leadership perspective (vulnerability);
- Step 2: Here's how I propose we solve it (standard);
- Step 3: If you live out this standard, here is what will happen (pain avoidance or gain);
- Step 4: Do I have your commitment moving forward? (buy-in).

Have Direct Dialogues

Principle 7: Accountability is an advantage; make it your obligation.

Simple acts of acknowledgment go a long way toward helping employees feel the opposite of. . . negative emotions.

Most people think of accountability in a negative way and believe because they are willing to fire someone that they are good at it. The truth is, accountability isn't only focusing on the negative; firing someone is one of the weakest forms of it. Accountability can be used to praise and recognize team members who meet and exceed the standards set by a leader.

In the Acts of Accountability Mode, you provide accountability by sharing disapproval when someone fails to meet the standards, acknowledging them when standards are met, and/or giving praise when standards are exceeded.

Once you are able to quickly identify the behaviors from someone on your team, here is how you engage in disapproval, acknowledgment, and praise by using Direct Dialogues. A meaningful Direct Dialogue requires the use of a three-part formula that has helped countless leaders have successful dialogues with their people:

Standards + Evidence + Courage = Direct Dialogue

If you have all three parts—standards, evidence, and courage—the interactions with your team members who fail, meet, or exceed the standard will happen naturally because you will be evaluating the standards set for your team, constantly observing evidence, and showing the courage to bring important things to their attention.

Setting standards has already been covered. The second element is evidence. You need to be prepared with facts and not feelings to support your disapproval, acknowledgment, or praise. The evidence should be specific, detailed, and tangible.

Once you have gathered the evidence of why a team member is failing, meeting, or exceeding standards, then you need the most significant element of the formula, courage. Courage is simply the ability to do something that frightens you.

The 6-Step Disapproval Dialogue is a straightforward set of steps that can be used to have more productive disapproval dialogues with your people in a short amount of time:

1. Set the stage.
2. Share evidence.
3. Allow response.
4. Talk impact.
5. Coach for growth.
6. Close with Actions.

To acknowledge when standards are met, leaders who elevate use these phrases: "Thank you!" "Well done!" "Good job!" "Looks good!" "I appreciate the work!" "Keep it up!" Although this seems simple, choosing to use these words with your team can be a powerful tool. A large number of employees feel undervalued, under-appreciated, and frustrated at work. Simple acts of acknowledgment go a long way toward helping employees feel the opposite of these negative emotions.

It is equally important to give authentic praise and recognition when people go above and beyond the standard. The 3x3 Praise Model shows how and where to give praise. First, how: Be definitive, discuss the impact of the behavior, and show appreciation. In terms of where to do it, give praise one-on-one, publicly, or indirectly.

Develop the People

Principle 8: Coaching unlocks potential and elevates performance.

While a team can function autonomously, a strong, dedicated leader plays an integral role in pushing people to new heights of development. They do this by focusing on coaching their people for role development and going beyond the role.

There are four clear stages a person moves through in a position or role. Well-tuned leaders are able to identify where team members are currently in their development and align their coaching appropriately. This allows for a platform through which each team member can flourish and grow. The goal is steadfast: Help your people reach a stage of development that exceeds where they are today.

Stage 1: Awareness. Individuals are made aware, either by another person or through self-discovery, of the important

fundamental skills they need to develop in their current role. They then do a mental assessment of their current proficiency level in each of the fundamental skill areas. Once this is established, they evaluate the ways and/or resources available to help them make progress. The time spent in this stage can be anywhere from one day to six months.

Stage 2: Building critical mass. Individuals begin building critical mass in their role as they acquire knowledge and get the opportunity to advance their skills within the position. They advance quickest in this stage when they get both the opportunity to watch others apply the skills effectively and the opportunity to practice the skills while being watched by someone else. Eventually, confidence is built and individuals will start to apply the concepts learned by themselves. Their proficiency in all the skills involved in the role will often double time after time in this stage. Time spent in this stage ranges from three months to two years.

Stage 3: Accelerated performance. The role becomes easier for individuals to execute, and they are able to fully execute the job responsibilities on their own at a high level. Because of this, their confidence continues to increase and the ability to add on or modify skills contributes to the streamlining of related daily tasks. Errors are much less frequent. Often individuals are able to teach less-experienced team mates how to do the job by transferring the knowledge and experience they have gained.

As great as this is, many people stop developing their skills at this stage. There's a tendency for people at this stage to believe they've learned all they can and settle into a false sense of security. Time spent in this stage can last anywhere from 12 months to 10 years.

Stage 4: Sustained excellence. The role is mastered. There is no lack of knowledge, as individuals at this stage have a well-rounded understanding and ability to execute at the highest level. This doesn't mean they always perform all of the tasks required to do the job without error, but they sustain excellence by having the ability to self-correct when they make mistakes. Their sustained excellence can earn the individual the title of "industry expert." It often can take five or 10 years to enter this stage, and sometimes it's never achieved, regardless of time.

This world needs you to lead in a way that elevates others. If your actions can inspire, empower, and serve in order to elevate others over an extended period of time, then you can lead wherever you are.

When you do, the impact you make on others will go beyond your wildest imagination. It will be a force on this earth well after you are no longer here because the people you lead will remember and eventually elevate those they lead.

THE SUMMARY IN BRIEF

Have you ever wondered why dominant companies fail? How seemingly invincible corporations just fade away? If you were a teen or adult in the 80s, 90s, and early 2000s, you probably spent a fair amount of time at Blockbuster. It was a behemoth for many years, and then...it wasn't.

Alan Payne is the single most successful Blockbuster franchisee in the company's history, and in Built to Fail he outlines exactly what Blockbuster did wrong— and how it all could have been prevented. How did Blockbuster go from a sure bet to what Carl Icahn called 'the worst investment I ever made'?

It turns out that streaming didn't kill Blockbuster— its culture and leadership did. In ***Built to Fail*** and this accompanying summary, it's time to find out why. Trace the incredible rise, massive domination, and eventual fall of the world's most famous video store and discover how the lessons of what went wrong and what could have gone right can help owners, entrepreneurs, and managers everywhere build more resilient businesses.

IN THIS SUMMARY, YOU WILL LEARN:

- How Blockbuster rose from small video store chain to the leader in video rentals worldwide.
- The management change that led to Blockbuster's initial decline.
- How Blockbuster's own actions (and inaction) were more devastating than anything Netflix or other competitors did.
- What leaders can learn from Blockbuster's mistakes.

Introduction

Despite popular belief, Blockbuster was in severe financial trouble long before Netflix ever streamed a single film. So if streaming didn't kill Blockbuster, what did? How can a company that so dominated an industry be in an almost constant struggle to survive? Because through its brief twenty-five-year history, the only thing Blockbuster ever did better than everyone else was open more stores. But when competitors multiplied and opening more stores was no longer enough, Blockbuster was helpless.

Blockbuster was phenomenally successful in its early years and made thousands rich beyond their wildest dreams. But it was built to grow and nothing else. Even though leaders at the company had ample time to rescue Blockbuster from itself, we all know how that worked out. Blockbuster became one of the most iconic brands in the history of American business, but it cracked at the first sign of a challenge. From its founding, Blockbuster was a company built to fail.

America Goes to the Video Store

In the 1980s, landmark court cases established the right for video rental stores to rent out films to customers. Meanwhile, the video rental industry launched and funded an unprecedented movement for independent films, which could find a home in video rental stores they would have never found in major theaters.

Video rental businesses began to explode. Video Station boasted 500 stores, while smaller competitors like National Video, Adventureland Video, Erol's, Video Concepts, and Video Biz all had at least 100 stores. But none of these companies could keep up, and each of them would fail in the next few years. But in 1987, the owner of a waste management company from Florida was about to take over the industry.

Blockbuster Takes Charge

H. Wayne Huizenga bought controlling interest from Blockbuster when it had just 20 stores, so even though he's not technically the 'founder' of Blockbuster, he is the one who made it what it ultimately became. His strategy? Buy, buy, buy. He opened stores. He purchased production companies. He even bought land and initiated plans to build a theme park in Florida to compete with Disney World.

But in a few years, every one of the businesses Blockbuster had bought to expand the brand had failed. And, of course, BlockbusterLand was never built.

Blockbuster's history could have been very different had it used this time and flood of cash to commit more resources to improve the business instead of having a singular focus on growth. And while Blockbuster sat on the largest movie database in the world and did very little with it, others were already using their own information to develop a superior consumer proposition.

That Little Old Grocery Store Company from Texas

In 1992, Blockbuster's leading competitor was Video Central, a smaller chain owned by retail grocery company H-E-B. There were only 35 locations of Video Central, but almost all competed directly with Blockbuster and dominated their locations in head-to-head competition. Sales at Blockbuster stores near Video Central were half the national average, and Video Central stores across the street from Blockbusters were profitably generating sales two to three times that of Blockbuster.

How did Blockbuster respond? By raising prices for new releases, which helped give rise to Redbox's low-price approach. Even as Netflix was demonstrating how consumer tastes were expanding, Blockbuster's selection of catalog titles was shrinking.Blockbuster's biggest mistake came from its lack of curiosity about competitors. It could have learned from them, but was never interested until it was too late.

Welcome to Blockbuster

For the next decade, venturing out to the video store would become America's favorite way to watch movies. Yet the industry leader, Blockbuster, was already crumbling on the inside, incapable of transforming itself from a growth company to an operating company. But before the extent of the carnage was known to the outside world, Huizenga had sold Blockbuster and was on to his next venture. The problems were left for others to fix. So, would the new ownership turn the company's direction around with some innovative ideas that would change Blockbuster's fortunes? Not exactly. What came next was, in fact, even worse.

The Decline Begins

Although still dominant in 1996 thanks to its sheer size, Blockbuster was in trouble financially. In a stunning decline, average annual store sales in the U.S. had fallen over 20% from $900,000 to $700,000 over the course of just three years. Sales growth had not kept pace with new store open-

ings which, given the high fixed costs of business, virtually guaranteed the financial problems that would plague Blockbuster for years to come.

The dramatic decline occurred years before new technologies would pose legitimate threats. Unknowingly, the group that purchased Blockbuster in 1994 had purchased a company that was on the verge of collapse. It had been built to grow and nothing else.

Death by DVD

In 1997, DVD arrived and immediately began to change everything about home entertainment. However, widespread DVD players in homes were still a bit of a ways off. Blockbuster did its best to adapt, but instead of going all-in on DVD instead focused on an increasingly baffling barrage of promotions and raised prices. They created characters, looked for new sources of revenue including a pizza partnership with Round Table Pizza and even an electronics partnership with Radio Shack. Not surprisingly, both failed.

DVD was destined to help destroy Blockbuster. Or rather, it was the weapon with which Blockbuster destroyed itself. Why? Not just because it was superior to VHS in every way, but because it was cheaper. A brand-new DVD could be purchased for just $20 at retailers. That meant more people could buy movies they wanted versus renting them from Blockbuster.

Did Blockbuster take advantage of lower DVD prices and rent them out to customers at a lower price? Nope. Instead, they kept prices high and continued to offer an increasingly poor selection of movies. They failed to rebuild their inventory to transition customers from VHS to DVD. They thought customers would just shrug off missing DVD titles and instead rent the VHS. Instead, they left and bought the DVD for themselves— cutting out Blockbuster entirely.

The Netflix You Do Not Remember

Netflix didn't start as a streaming giant. They started with an even simpler idea— eliminate the trip to the video rental store and send people DVDs directly. It got attention, but it didn't initially have public approval. Even though Netflix was a Wall Street darling, five times more people still preferred to rent DVDs in stores.

There is no reason to believe Blockbuster could not have run successful stores for several more years. Just as Netflix used its DVD-by-mail business to build a bridge to streaming on the internet, Blockbuster could have done the same with its stores. Instead, they destroyed them by trying to turn them into Netflix— which was, of course, impossible.

It's Over

By the end of 2005, the degree of carnage at Blockbuster was fully understood. Rental revenue declined by about $220 million, $150 million more than Blockbuster projected. But the bigger issue was cost for product. Rental margin declined from 72% to 66%, which reduced gross profit by $250 million, more than double their expectations. But it was not nearly enough to stop the massive out-of-stocks caused by ending late fees. Sales never recovered— but even if they had, the end of late fees had destroyed the supply chain and had reduced gross margin to an unsustainable level. There were now fewer reasons than ever to go to Blockbuster. The DVDs you wanted were probably not there, which was once Blockbuster's greatest strength— availability.

McDVD

In 2004, McDonalds tested an odd idea at 100 of its locations throughout Denver. It was a series of automated kiosks outside the store, by the parking lot, where people could rent DVDs for cheap. They called it Redbox.

Immediately, Blockbuster stores in the Denver area saw reduced sales. You can imagine what happened when Redboxes started popping up in every Walmart, supermarket, and drugstore around the country. At this point, it should come as no surprise that Blockbuster didn't even attempt to develop their own kiosks. Blockbuster once again ignored a competitor until it was too late.

Fixing What's Broken

A small contingent of Blockbuster franchise owners believed that if the stores were better managed, the bank that was now managing the company at that point could recover much more of its loan balance by simply running the stores as opposed to liquidating them. The bank agreed, so instead of buying the stores, the franchisees entered into a three-way management agreement with the bank, Blockbuster, and new owner Glen Klicker. Immediately, sales and profits improved dramatically and the stores were re-energized.

The immediacy of the turnarounds was a testament to the demand for what they were renting— DVDs. DVDs were still America's favorite way to watch a movie. In 2007, nothing else came close. Once the inventory was there and the pricing was right, customers came racing back to stores.

Unfortunately, every time the store owners in this experiment tried to contact Blockbuster to explain how they'd turned the stores around, they were politely told to go away.

Full Death Spiral

In June 2007, Blockbuster had roughly 8,300 stores. More than half of them were in the U.S. Annual sales were trending at about $5.5 billion— still almost double the number from a decade earlier.

Yet the company was barely profitable and sales trends were the weakest in its history. Blockbuster could not service its debt, and its stock was trading at one-third of its all-time high. And because of its precarious financial condition, the company didn't have access to new capital, which would be necessary for any hope of survival. Yet the ownership insisted Blockbuster was well-positioned for the future, and just three years later, would blame the company's failure on their successors.

One Last Chance

Throughout the final years of Blockbuster, its demise was defined by well-meaning people making critical decisions from 30,000 feet when those decisions could best be made on the ground, in the stores, listening to operators and customers about what really happened in a Blockbuster store. But from the company's founding until its very end, that was never part of Blockbuster's DNA.

In the years leading to bankruptcy, franchise stores were subjected to untold bad press because of Blockbuster's persistent financial difficulties. They couldn't even have a sale without customers believing it was a 'going out of business' sale. For every step forward, it was two steps back due to negative headlines about Blockbuster's mass store closures, layoffs, and eventual bankruptcy. In the end, the Blockbuster ticket no longer stood for the proud brand it once was. More than anything else, it was now a symbol of failure.

Conclusion

What can we all learn as leaders from Blockbuster's failures? There are seven core lessons.

Clearly define your company's purpose— and its mission.

Identify what drives your business and pursue it relentlessly

Measure what matters

Respect and learn from competitors

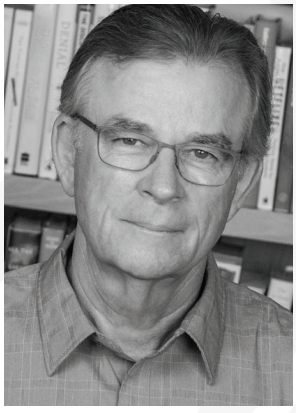
If you're going to do it, be the best.

In difficult times, rely on the fundamentals to survive.

Don't just talk about the future. PLAN for it.

What can we do that Blockbuster failed to do? We can define our own path, our own purpose, and the path we'll take to get there. We'll determine how we measure our progress and stick to those metrics.

No one can do that for us. Every organization has unique challenges that require original ideas, and those can only come from within by following our passion, guide by facts, to the right answers.



Alan Payne spent thirty-one years in the movie rental business, the last twenty-five of those as a Blockbuster retail franchisee. He took over a small group of Blockbuster stores in 1993 and grew it into one of the largest and most successful chains in the company. He finally closed his last store in 2018, more than eight years after Blockbuster filed for bankruptcy.

THE SUMMARY IN BRIEF

More than 80 years of research prove that humans have three primary cravings at work that, once fulfilled, make them happier and more productive. Yet, despite billions of dollars spent to improve employee motivation, most businesses still suffer from a lack of engagement.

In ***CRAVE***, author Gregg Lederman draws on this research to offer a proven, accessible way for leaders to give people what they CRAVE, thereby driving rapid growth in employee engagement and business results. Backed by research and real stories of success, Lederman's Ultimate Habit™ method shows leaders how to achieve their most important results quickly.

You have the power to make a great place to work by showing people they matter and that what they do matters. Let this indispensable guide show you how to fuel the work environment with more of what people CRAVE.

IN THIS SUMMARY, YOU WILL LEARN:

- The secret to achieving more than 90 percent employee engagement.
- How to invest 10 Minutes by Friday to become a better, more effective, and trusted leader.
- A step-by-step process to master the Ultimate Habit for accelerating business results.
- A proven, habit-building approach to ensure sustainable behavior change among managers and leaders.

Introduction to What We All CRAVE

Over the past 80 years, hundreds of studies of workforce engagement have shown the same result: If humans are more motivated at work, they will be more productive and profitable employees. Yet, decade after decade, businesses struggle to maximize the opportunity these findings present.

One of the most commonly cited studies is Gallup's "State of the American Workforce," with over 31 million respondents in its most recent version. The study is nothing short of alarming as it shows that about two-thirds of the American workforce is not engaged. Even more concerning, this figure has not changed in the last 18 years.

How can so many Americans still be disengaged at work? People are not getting nearly enough of what they CRAVE! When applied the right way, this answer will positively change your approach to leadership, your work environment, your customer experience, and—most important—the business results you want.

The Ultimate Habit

For the last decade, I've pored over hundreds of studies, interviewed researchers, and even conducted a few studies of my own to understand what leads to happiness, more motivation, and increased productivity in the workplace. I've also worked with thousands of leaders from hundreds of organizations in a quest to improve employee engagement and make better places to work.

I've learned that employees CRAVE three things that can help them to become happier, more motivated contributors to their organization's success: **respect**, **purpose**, and **relationship**.

People want to feel respected for the work they do. They want to see how what they do has purpose, makes a difference, and is relevant to the organization. And employees want help building stronger connections with people, especially their immediate managers and supervisors.

When humans have these three cravings fulfilled, good things happen: employee engagement, the work culture, and customer experiences all improve.

Leaders who are most successful giving people what they CRAVE are able to master the Ultimate Habit, which is to strategically recognize employees. The habit of employee recognition is the number one management skill for fueling the work environment with more of what people CRAVE.

We Love Recognition, But We Are Terrible At It

Whether we want to admit it or not, recognition plays a huge role in our everyday lives: in our happiness and our well-being, both at work and in our personal relationships. Giving and receiving recognition fuels our happiness and our productivity. This makes developing the Ultimate Habit of strategically recognizing employees one of the most effective and affordable ways to provide people what they CRAVE: greater understanding of the purpose, meaning, and importance of their work and respect for the effort they provide.

When people get more of what they CRAVE, quite simply, they become more motivated and committed. But the problem is, we are terrible at recognition at work. We simply struggle to give it. And most of us don't even know it, which is helping to fuel the employee engagement crisis in America.

According to recent research, 70 percent of employees say they wish they received more recognition; 65 percent of Americans report they weren't recognized even once last year; and 79 percent of employees who quit their jobs cite lack of appreciation as a key reason for leaving. Moreover, 83 percent of leaders say they could do more to recognize others.

You as a leader have the power, with very little time investment, to accelerate business outcomes while also positively impacting the lives of people at work. You have the power to give people what they CRAVE by showing them they matter (respect) and what they do matters (purpose), and when you do this you will find it builds stronger relationships. But only if you learn to fuel the environment with more of what people CRAVE!

Part I: The Overwhelming Evidence About What Motivates Us

Edward Deci and Richard Ryan are considered the premier thinkers on personal motivation. What did they do to earn this status in their field? Quite simply, they explored a whole new way of thinking about personal motivation and uncovered three psychological needs that all humans have.

Together, Deci and Ryan created the framework that has changed the way millions of people think about motivation in the workplace (as well as many other aspects of life). They coined it Self-Determination Theory. Self-Determination Theory focuses on the social and work environment conditions that lead humans to tap into more of their personal motivation.

> Instead of asking, 'How can people motivate others?' we should be asking, 'How can people create the conditions where others will motivate themselves?'

Deci and Ryan conducted or influenced many studies revealing that people do not perform as well at problem solving when they are working for an external reward than they do when they are intrinsically motivated. They were also quick to point out that people's behavior can, to some extent, be controlled in the sense that people will do what they have to in order to get a reward, avoid punishment, or win a competition.

That said, problems arise when we rely on rewards and controls to motivate people. Once you decide to use rewards to control people, you can't easily go back. The research shows that the behavior will last only as long as the rewards are forthcoming. But at work, the activities we reward are usually ones that we would like to keep going long after the rewards have stopped.

The second problem is that once people are oriented toward rewards, they will all too likely take the shortest or quickest path to get them. Usually, however, the shortest path is not what we hope to promote.

Deci and Ryan point to hundreds of scientific investigations that support their findings: When people are autonomously motivated, their behavior will be more creative, they will be better problem solvers and they will perform better. In addition, autonomous motivation lends itself to more positive emotions and is associated with improvements in both physical and psychological health and well-being.

Change the Question ... Uncover What Really Motivates Humans

Arguably, the most important thing that Deci and Ryan did early on in their partnership was change the question researchers were asking for decades. Instead of asking, how can people motivate others? (which implies that motivation is something that is done to people), they asked a new question built upon the idea that motivation is something inside of humans and that conditions (the environment) are what encourage people to tap into it: How can people create the conditions where others will motivate themselves? This was a subtle yet significant change that would enable their future work, and the research of many others, and ultimately position them as true pioneers in the study of motivation.

When it comes to creating the work environment for more motivation and commitment from the workforce, CRAVE includes all three of the basic psychological needs that Deci, Ryan, and their arsenal of disciples have proved in the past and continue to prove in their research today. These three components of Self-Determination Theory are autonomy, competence and relatedness. Each of these basic psychological needs fulfills the cravings humans have for respect, purpose, and relationship.

Part II: Accelerating Business Results in 10 Minutes by Friday

Between 1981 and 1996, approximately 73 million millennials were born. They are critical to accelerating business results as they already make up one-third of the workforce, and that number is expected to grow to 75 percent by 2025.

Business leaders across the globe are talking a lot about this generation, trying to understand their attitudes and beliefs and to make sense of their behaviors. They want to apply this knowledge to create more employee engagement, better customer experiences, and of course, better business results.

While millennials certainly differ in some ways from an attitude and behavior standpoint, they largely want the same things as Boomers and Generation X. They are looking for growth opportunities, good managers who care about them, and jobs that are well-suited to their talents and interests. Their cravings remain the same as that of their older counterparts: "Show me respect and help me see the purpose and meaning of my work."

The big difference might be that millennials want even more of it and show up at work each day with expectations that they should receive it. Here are the top three notable differences with millennials that should be taken into consideration when demonstrating the Ultimate Habit to give them what they CRAVE.

First, millennials are direct in their desire to work for companies that are purposeful in the way they operate and in the products and services they deliver. According to one study, 60 percent cite "a sense of purpose" as a reason for choosing their current employer.

Second, millennials want frequent communication. And leaders should want to provide it. Why? Because it has been proven that more frequent communication, especially in the form of recognition and praise, leads to higher performance for individuals, teams, and organizations.

According to Gallup, "Forty-four percent of millennials who report that their manager holds regular meetings with them are engaged, while only 20 percent of millennials who do not meet regularly with their manager are engaged."

So, if you can get more than twice the engagement level from millennials by simply meeting with them a little more often and strategically recognizing their success, then why in the world wouldn't you? Bottom line, the more conversations managers have with their millennial employees, the more engaged they become.

Third, technology provides a notable difference among generations. Not just any technology, but the day-to-day technology that sparks collaboration and connection.

What the Science Tells Us

I've shared the social science behind human psychological needs that, when fulfilled, enhance motivation. From a biological perspective, the science tells us the same thing. Dopamine, serotonin, and oxytocin are three brain chemicals that influence our feelings. They are released when we feel respected for the work we do, understand the purpose and relevance of that work, and build strong relationships with those we work with. While many events can trigger these neurotransmitters, strategically recognizing employees can put you in the driver's seat to creating more motivation in the workplace.

Dopamine is one of the chemicals regulating the pleasure center of the brain. It is a major force contributing to our motivation, as it sends signals to receptors in the brain saying, "This feels good!" This chemical is released anytime we hear, feel, or see something we like. Its primary function is to make us pursue happiness. In the work environment, recognition for a job well done provides a healthy, small increase in dopamine, enabling people to get what they CRAVE.

As a leader, when you take the few moments to spot a successful achievement, whether it's a little extra effort or an accomplishment (small or large), and you acknowledge and share your opinion, you enable that dopamine rush for the employee. They receive your recognition of their effort and their brain rewards them with a hit, which encourages them to keep going and work even harder to be successful in hopes of more dopamine later on.

The chemical responsible for our moods is serotonin. Not having enough of it has been proven to lead to depression and anxiety. Serotonin levels are heavily influenced when we feel valued and appreciated. There are many positive ways to get small increases in serotonin, which also fulfills our craving for being respected and understanding the purpose and meaning of our work.

This is where you come in as the leader, with the power to provide a little "mood-altering" gratitude that boosts serotonin. Consider it your job to spot moments where employees should feel good about the work they are doing, and make it a point to tell them (and others) about it.

Known as the "trust" chemical that helps create healthy relationships, oxytocin is activated by positive social interactions. In the work environment, it helps motivate us to work together to achieve common goals. Acts of kindness also encourage the production of oxytocin. This means that when you invest the time as a leader to recognize the success of others, you get a hit of oxytocin as well.

What a wonderful, win-win situation. You get to provide people what they CRAVE, and in return, you get a little shot of "feelgood" as well.

10 Minutes by Friday Drives 150 Percent Increase in Employee Recognition

Patrick is the EVP of store operations for a large retailer. His company has nearly 100,000 employees, of which about 10,000 are managers, and more than 4,000 stores. Prior to Patrick's arrival at this organization, they had invested a significant amount of money and time rolling out a social recognition platform (an online portal for sharing kudos, thank-yous and stories of success), only to find that over the first two years a mere 17 percent of the workforce were appreciated and recognized for living their values. Not exactly accelerating-results-type activity, and Patrick knew this.

My first encounter with this retailer's leadership team was one year before Patrick took the role of running store

operations. I brought up the potential challenge of getting managers and the workforce to use this platform, but my concerns were met with deaf ears and an attitude of "We've got this. We've partnered with a vendor who is helping us to build a culture of appreciation."

After two years of relatively dismal recognition activity, I got the call I'd been waiting for. "Can you help us make recognition more pervasive throughout our workforce?" My response was, "Let's do this! But let's start with the business results you want most and first focus on the top one-thousand leaders you want to lead the way. And let's get them to commit to 10 Minutes by Friday! Ten minutes to simply stop and think about an opportunity to recognize someone."

The goal was to consider whether a recognizable moment happened that would be good to share, not only to provide that individual or team with what they CRAVE but also to spread best practices for others to learn from.

The results they wanted to accelerate for the biggest impact on overall sales and profitability included

- Increase employee engagement;
- Increase customer satisfaction and loyalty;
- Decrease customer complaints;
- Decrease theft, both employee and customer (referred to as "shrink" in the industry);
- Decrease safety incidents and associated insurance costs.

Over the next 60 days, approximately one-thousand top field leaders were taken through the Ultimate Habit process (covered in further detail in Part III). Each leader was introduced to the concept of 10 Minutes by Friday as a discipline for thinking about and sharing examples of employees "living the values." In addition, careful attention was paid to the business results they wanted to accelerate.

Within two months, use of their recognition platform increased from 17 percent to 42 percent—a nearly 150 percent increase. Even more impressive were the accelerated results uncovered in the following year:

- Employee engagement rose 24 percent in areas where leaders provided optimal recognition.
- Customer complaints fell 38 percent.
- Employee and customer theft decreased.
- Customer accidents decreased 32 percent. According to one leader, "More focus through our recognition effort on the safety and care for customers has improved awareness of things that could cause accidents."

Were these results exclusively triggered by increased recognition? Of course not. But a call from Patrick provided an intriguing insight. He said, "You can certainly accelerate results without doing a great job recognizing employees. You can also start a fire without matches and lighter fluid, but doing so is way more difficult. Strategically recognizing employees is the fuel that ignites business results faster."

> Strategically recognizing employees is the fuel that ignites business results faster.

You Can't Stop the Raging River

Even with all of this evidence and logic, some may still feel as if taking on the responsibility of doing the Ultimate Habit is a daunting task they simply don't have the time for. In reality, it will save time. Consider that 79 percent of people who leave their job report a lack of appreciation as the reason they left. When people leave, especially those you don't want to leave, it costs you and everyone around you time (and money). Therefore, it's time to make the time!

If you are like most people today, you feel overwhelmed with too much to do and too little time. I'll bet you create to-do lists, don't you? Leaders do this to stay focused and try to accomplish key objectives. And what happens once you get a few things checked off that list? What is waiting for you? That's right, a few more things to do. Sometimes you feel as though you'll never get caught up.

I call this the Raging River of Responsibility, and most leaders suffer from it. Like rapids coming down the river, your to-dos and high-priority tasks keep coming. You get a few done and more pop up. The Raging River of Responsibility does not end. Thinking so is … wishful thinking.

But you can reprioritize and make the Ultimate Habit a must-do leadership skill in helping you to create the environment where more people will become more engaged. When you do, you will fuel the work environment with what employees CRAVE: more respect, a better understanding of purpose, and a stronger relationship with you—decreasing stress and saving you time.

Three Steps to Being Strategic About Recognition

Regardless of the type of recognition, make sure it is strategic. This can be done by following the three simple steps below:

1. **Tell the ACTION:** Describe what the person did (behavior) that is worthy of being recognized. Be specific, and do the recognition in a timely manner. Doing so shows the recognition recipient that you respect them for their effort and are helping them to see the purpose of their work.
2. **CONNECT to a focus area:** A focus area may be living the core values, performing a customer service experience, or implementing an "operational excellence" improvement program or any other behavior-based program. All require certain behaviors to be successful. It is important to link the action because doing so makes it clear that what the person did "makes a difference" in achieving a priority or goal for the organization.
3. **Share the IMPACT:** Note why it is important. In this step, it is critical to show the benefit of the action for the team, customers, or the organization as a whole. By sharing the impact, you are providing another healthy dose of respect and purpose!

Part III: Mastering the Ultimate Habit––Recognizing and Sharing Success

At higher levels of management, most of the leading players are quite smart and technically skilled. In most cases, that's why they got to where they are with the responsibilities of managing systems and humans. And this is exactly why the Ultimate Habit of strategically recognizing employees is even more important for those who've risen up the leadership ranks.

Keep in mind that, all things being equal, your habits (or lack thereof) are more noticeable the higher up you go. People are closely watching what you say and, more importantly, what you do.

Every supervisor, manager, and executive—no matter what title, rank, level of busyness, or responsibility—can become a more effective and trusted leader who creates an even better place to work, leading to better customer experiences. And you will accomplish this when you invest up to 10 minutes a week to stop, think about, and/or actively recognize employees in a way that connects their effort to the specific business results that matter most to your organization.

Regardless of how much money organizations continue to pump into employee engagement and culture improvement initiatives, the results are usually a far cry from the expectations wishful leaders have. However, this is not the case for workforces where leaders follow the Ultimate Habit process you are about to learn. Instead, these leaders achieve remarkable engagement levels with more than 90 percent of employees motivated and committed at work. These leaders do three things very well:

- They change their mindset, getting more comfortable with considering new ways of thinking.
- They adopt new behaviors and routines.
- They pay attention to the positive impact over time, both personally and to their organization.

10 Minutes by Friday: The Ultimate Habit Challenge

Changing a behavior is hard! One might argue that asking an adult to change their behavior is one of the most difficult things you can ask them to do. Why is this? The reasons are usually not because people are bad or stupid. Instead, the usual cause is a lack of understanding on how to change.

Since changing the way we act is hard, it requires a little bit of structure: the right mindset, specific behaviors, some willpower, and a belief that the change is going to be beneficial. As you will learn, these make up key components of a habit.

A habit is a gift we've all been given. It's an amazing achievement tool that will perform the actions you've programmed it to perform without conscious thought. But to receive this gift, you have to follow a process.

From my experience, we tend to not get much better at changing our behaviors without a little structure. Stick with me to create the Ultimate Habit of strategically recognizing

To make something habitual, you need to take a daily inventory of your thoughts, words spoken, and actions.

employees and establishing the ongoing accountability to sustain your habit over time.

Leaders who do a great job recognizing employees commit to a small investment of time each week: 10 Minutes by Friday! If you commit to the goal of 10 Minutes by Friday, you will share a strategic recognition some weeks, and some weeks you won't because you may not witness anything worthy of sharing. But at the end of the month, if you've demonstrated your habit at least a few times, you will be doing a very good job.

You don't need to be perfect. You do need to make progress in making employee recognition strategic, genuine, and results focused. And if you are able to find and share a success every week, you will be doing an amazing job!

Everyone has at least 10 minutes a week they could invest to consider an opportunity to recognize an employee in a way that fulfills their craving. Especially if it accelerates motivation, engagement, and stronger performance. Here are the five steps to help you make strategic recognition a habit.

Step 1: Decide on a mindset. The first step in making strategic recognition a habit is to decide on a mindset. Building any habit requires behavior change, and behavior change requires a change in thinking, a "rewiring of the brain" that takes a little time and persistence.

Once your mindset is in place, it will shape your attitude and influence the very behaviors you need to power the habit. The mindset you begin with helps strengthen your reasons for strategically recognizing employees.

Many managers say they are committed to recognizing effectively, but their reasons are simply not strong enough. In those cases, they are at risk of their excuses taking over. What do you need to change your mind about to keep the habit of recognizing employees a high priority?

Step 2: Create routines and behaviors. If you are to keep your commitment to recognizing employees with a time investment of 10 Minutes by Friday, you will surely need a few routines to guide you. But let's not complicate this step. There are three very specific routines that are highly recommended by those who do employee recognition very well. As a matter of fact, I've heard from managers at all levels that following these routines changed their lives at work, helping them to communicate more effectively with their teams and inspire higher performance.

- **First routine: Schedule it**. Put time for recognizing and sharing success on your calendar as a weekly appointment. What gets scheduled tends to get done.
- **Second routine: Conduct the one-minute reminder**. Add one minute to the front end of the agenda for a regularly scheduled meeting. During that 60 seconds, highlight an example of someone doing something that helped make for a better place to work, enhanced productivity, or enabled a good, if not great, customer experience. You can also ask others on your team if they have any examples of recognition to share with the group.
- **Third routine: Link to an existing weekly habit**. You may have weekly habits already established, such as submitting expense reports, posting a schedule, or completing a progress report. If this is the case, you've already built a routine. Why not commit to achieving your 10 Minutes by Friday goal as part of that weekly activity? Stop, ask yourself if you witnessed something worthy of employee recognition in the past few days, and if so, take the initiative to strategically recognize that employee either before or after you complete your already established task.

Step 3: Demonstrate willpower. Making a new habit requires a little extra thought and energy to get it going. And part of this extra energy and thought requires you to plan for the inevitable willpower obstacles. Willpower is the ability to do what really matters, even when at times it might seem difficult. Running out of willpower can ruin your habit. With the design of any habit, you must predict where and when you might run out of willpower.

Step 4: Focus on benefits. All too often, when we don't see a positive change right away, we struggle to keep the

commitment we make to ourselves. In this step, you have the chance to double up the reasons WHY you are committed to strategically recognizing successes at work. These reasons will overpower any excuses that could diminish your willpower.

To get started, ask yourself these two questions: First, how will demonstrating the Ultimate Habit of strategically recognizing employees make a positive difference in your life? Second, how might it make a positive difference in the acceleration of the business results you want?

Any benefits that come out of this step coupled with your mindset from Step 1 will help you drive your reasons why through the roof, while helping you to minimize excuses that can block your success.

As you complete the Focus on Benefits step, keep in mind that you must be forward-thinking. Imagine what success will look like and feel like when you make the effort to recognize employees on a more regular basis.

Step 5: Track effort daily. Take a few seconds each workday to ask yourself, "Did I TRY to see someone doing something that was a recognizable moment? Did I TRY to spot a success at work?"

Take notice: You are not asking yourself whether you actually recognized someone. You're asking whether you even tried to spot a recognizable moment — a little extra effort, someone going above and beyond, or maybe even a WOW experience.

If you do this for five seconds a day, I guarantee you will improve! You will make positive progress and get better than you are today at strategically recognizing employees, leading to at least some of the benefits you've been thinking about.

To help guide you through the five steps to creating the Ultimate Habit, download the worksheet from **www.greggleberman.com/ultimatehabit**.

To make something habitual, you need to take a daily inventory of your thoughts, words spoken, and actions.

Now is your chance to take your leadership skills to the next level by mastering the Ultimate Habit. When you do, you will get more of what you CRAVE while giving others what they CRAVE, leading to all kinds of time-saving and cost-reducing benefits that will make the Raging River of Responsibility a little bit easier to navigate.

The best time to start performing the Ultimate Habit is NOW! Ten Minutes by Friday.

THE SUMMARY IN BRIEF

Creating true change is never easy. Most startups don't survive. Most community groups never get beyond small local actions. Even when a spark catches fire, it often seems to fizzle out almost as fast as it started. The status quo is, almost by definition, well entrenched and never gives up without a fight.

In ***Cascades***, innovation expert Greg Satell delivers a guide for driving transformational change. To truly change the world or even just your little corner of it, you don't need a charismatic leader or a catchy slogan. What you need is a cascade: small groups that are loosely connected but united by a common purpose.

As individual entities, these groups may seem inconsequential, but when they synchronize their collective behavior as networks, they become immensely powerful. Through the power of cascades, a company can be made anew, an industry disrupted, or even an entire society reshaped. As Satell takes us through past and present movements, he explains exactly why and how some succeed while others fail. Let ***Cascades*** help your movement be one that succeeds.

IN THIS SUMMARY, YOU WILL LEARN:

- Why networks, rather than special leaders, are the key to understanding and generating cascades.
- Two key tools to develop plans for change.
- Why successful movements rely on values to not only achieve victory but sustain transformational change.

PART I: THE ANATOMY OF A CASCADE

A Shift From Hierarchies to Networks

Revolutions are remarkable things because they upend the existing order, which has power and inertia on its side. In effect, they make farces out of the conventions of normalcy that have become ingrained in our minds.

But what if our conventional notions of how the world works are flawed? What if there are natural forces at work that make cascading movements not only possible but inevitable?

Our existing mental model is that strong governance drives change. Wise leaders who sit atop hierarchal organizations recognize the need for a shift and make it happen. Many of us were raised to believe in the "great man" theory of history, that movements succeed only when a charismatic leader like Martin Luther King Jr. or Gandhi inspires them.

But cascading movements don't follow the "great man" script. Today's reality is that hierarchies have lost their power not because they have suddenly become illegitimate but because they are slow and the world has become fast.

The connectivity that drives networks has become predominant. We can now initiate, build, and maintain relationships with far greater velocity and at far greater distances. That has changed the nature of power, shifting it from being a function of hierarchies to one of networks.

In a world pervaded by digital technology, connections form much faster than we can keep track of them, much less plan their formation. We now live in a world where networks trump hierarchies and cascades form whether we want them to or not.

Two Ingredients of Successful Movements

Successful movements combine two aspects. The first is network cascades. This involves a simple formula: small groups, loosely connected, but united by a common purpose. Anytime an idea goes viral and becomes a cascade, we will see those three components.

The second aspect, seemingly antithetical to the first, is planning, organization, and discipline, without which a cascading movement will spin out of control. It is not the passion and fervor of zealots that creates change, but it is when everyone else joins the cause that a movement gains power.

There are reasons why some ideas become movements and others sputter out, just as there are concrete principles we can apply to increase the likelihood of a cascade forming or to prevent one from harming us.

But to uncover them, we need to go back to 1998 in Ithaca, New York, where a young graduate student in mathematics had become fixated on the chirping of snowy tree crickets.

Fireflies, Snowy Tree Crickets, and the New Science of Networks

In the 1990s, Cornell University researcher Steven Strogatz was studying a strange phenomenon called coupled oscillation, which occurs when a disparate group of entities act in unison, such as when pacemaker cells synchronize to make our hearts beat. It happens about once a second for our entire lives. A more spectacular form of coupled oscillation comes in the form of various species of fireflies native to Thailand, Malaysia, and other parts of Southeast Asia, where it coordinates their behavior to make entire jungles blink on and off as if populated by Christmas lights.

Many species of crickets can coordinate their chirping in a similar way, providing a pleasant backdrop to summer barbecues. Somehow people, just like fireflies and crickets, can coordinate their behavior across vast collectives.

Duncan Watts, a graduate student and Strogatz's research assistant, found himself spending his evenings climbing trees in search of a coupled oscillator indigenous to Cornell's location of Ithaca, New York: the snowy tree cricket. During the day, Watts attempted to classify the insect's behavior by translating the synchronized chirps into mathematical formulas.

However, he soon became distracted by a series of questions. How were the crickets connected to each other? If they were each reacting to the behavior of others, maybe the structure of their relationships could explain how individual behavior scales up to collective behavior.

For more than 200 years before Duncan Watts attacked the problem of coupled oscillation, there had been scattered pockets of insight. Researchers had already shown that even random arrangements of links can be incredibly efficient, that real-life networks biased toward clustering were just as potent as random networks, and that these clusters could be very effective in transmitting information through second- and third-degree relationships.

It was Watts, under Strogatz's direction, who would show

A cascade makes change possible, but it doesn't make it inevitable. Cascades are only useful if they result in influence.

that information naturally forms a particular kind of network that accounts for the amazing behavior of pacemaker cells, fireflies, snowy tree crickets, and, more important to our story about cascades, protestors in a political revolution, consumers in a marketplace, terrorists on a battlefield, independent units in a large organization, and many other things.

Watts's beta model works like this: Imagine you're in a football stadium, standing with a ring of spectators around the circumference. You can communicate pretty easily with those standing close to you, but those across the stadium might as well be out in the parking lot, or even in another city. Although they're connected to you through the other people in the ring, the connection is so loose that they might as well not be.

Now hand out a few mobile phones randomly. Suddenly, the social distance of the ring collapses. You can call someone on the other side of the stadium, and that person can get the message to anyone near him or her. The social distance collapses, and all it takes is a little random mixing.

This is exactly what Watts discovered mathematically. The more he looked, the more it became clear that it takes very few random links in the network to shorten path lengths considerably. In fact, adding only five random links, he found, would cut social distance in half, regardless of the size of the network. In effect, Watts's mathematical model predicted that small-world networks are not a special case but a natural state.

The Making of a Cascade

The unlikely success of his network studies led Watts to begin studying another network-related phenomenon known as cascades. A particularly vivid example of a cascade occurred during the summer of 1996.

On August 10 of that year, an exceedingly hot day, air conditioners across the West Coast were going at full blast when a transmission line near Portland, Oregon, failed. This was not an unusual occurrence, and redundancies were built into the system to cover for just such a failure. The load of electricity was supposed to be rerouted by a relay to another substation. However, with the entire system operating at its limit, the surge caused another line to fail. The excess power from that backup line was rerouted to yet another overly taxed component of the system, causing yet another failure.

Soon, power surged throughout the system, causing cascading failures wherever it went. Within 70 seconds, the entire power grid between California and Oregon was out. Then the surge moved east, creating outages in six other states.

Disruptive movements are very much like the West Coast blackout of 1996. A disturbance in one part of the system eventually ripples through every other part of the system, finding vulnerable clusters as it travels. Eventually, the entire order is disrupted, much like the cascading failures in the electrical grid.

A cascade makes change possible, but it doesn't make it inevitable. Cascades are only useful if they result in influence, and to do that, they must travel far beyond where they start.

How Cascades Create Transformational Change

Many great movements have charismatic leaders. We see Mahatma Gandhi, Martin Luther King Jr., and other legendary figures leading the charge, inspiring large masses of people to act in the service of a cause. In business, we see larger-than-life figures like Steve Jobs and Elon Musk at the head of their own revolutions.

In ***The Tipping Point,*** Malcolm Gladwell's explanation for how personal qualities drive change is based on what he calls the "Law of the Few." He proposes three classes of highly influential people: Connectors, Mavens, and Salesmen. Connectors know a lot of people, but they are more than just social butterflies. They actively seek out folks to introduce and, by doing so, attract even more people to them. The Mavens influence others through their deep knowledge and expertise. They are subject matter experts that others actively seek out for advice. Salesmen seem to have supernatural powers of persuasion.

But it is not "special people" who create change, although some with great talent can help to inspire it, but small groups, loosely connected, and united by a common purpose. Each of those three elements is crucial, because small groups engender strong bonds, loose connections provide greater numbers, and a common purpose gives direction. Every change effort, if it is to succeed and provide lasting results, needs each of those elements because it requires *long chains of sustained influence* to make a real difference.

If the Law of the Few were true, we would expect people with "rare social gifts" not only to be able to persuade those around them but to create long chains of influence more reliably than a normal person would. That's a very testable hypothesis, and researchers who have studied it have found it wanting.

For example, a study of 1.6 million Twitter users found that, while highly connected users were slightly more likely to initiate large viral cascades, the difference between them and normal users was so small that it's probably not economically feasible to waste resources seeking them out.

What belies the theory of "influentials" or "opinion leaders" or whatever you want to call them is that change is a matter of networks and not nodes. While it is easier and more cognitively pleasing to single out individuals, the truth is that it is the *connections between people* that are decisive. True power does not lie at the top of hierarchies but emanates from the center of networks.

Also, the structure of the connections within the network matters—a lot. That's why, as crucial as it is to understand how cascades function, the second aspect of transformational change—organization, planning, and discipline—is just as important, because it's what allows us to put cascades to productive use.

PART II: HOW CHANGE MOVEMENTS SUCCEED—AND FAIL

Identifying a Keystone Change

Every movement starts with a sense of grievance. Yet, to succeed, you must go beyond grievance to identify an affirmative vision for what you would like to be different and then identify a single, fundamental change that will bring that vision about. That's no small task.

The women's movement in the nineteenth century, to take just one example, struggled for decades to identify a single, fundamental change that would uplift women everywhere. At the time, women were treated almost like property—they couldn't own land, get a substantial education, or seek legal protection from an abusive husband. So it wasn't at all obvious that voting rights would become the focus of the movement. Yet that's what led to greater equality.

Talia Milgrom-Elcott, who leads 100Kin10, a movement to train 100,000 STEM teachers in 10 years, calls this a "keystone change," based on the ecological concept that an entire ecosystem is highly dependent on the existence of one or two species. Identifying that keystone change is the first major challenge of any change movement, and until you meet that challenge, your efforts will likely be in vain.

Using a Keystone Change to Drive Transformation Forward

When Lou Gerstner was chosen to lead IBM in 1993, what most people saw was an old dinosaur that had lost its way. Overtaken by nimbler upstarts like Microsoft in software, Compaq in hardware, and Intel in microprocessors, many observers believed that IBM needed to be broken up into smaller, more focused units to compete on a more even playing field in the new economy.

Gerstner saw the situation differently. As a longtime IBM customer, he saw the value of what IBM could potentially deliver: integrated solutions. From his point of view, enterprise customers were struggling to adapt to new technologies and needed a partner that had the breadth of expertise to solve their problems. IBM was uniquely qualified to play that role but was failing to capitalize on the opportunity because it lacked shared purpose and shared consciousness.

"Units competed with each other, hid things from each other, and wanted to control access to their territory from other IBMers. . . . Instead of facilitating coordination, they manned the barricades and protected the borders." Gerstner would later write in his memoir, ***Who Says Elephants Can't Dance***.

What Gerstner understood was that what IBM needed wasn't a strategy. What IBM needed was alignment behind a strategy. So Gerstner set out to create a movement within his own organization. He changed the focus from forcing IBM's proprietary stack of technologies down customers' throats to a new model aimed at helping customers with their "stack of business processes." In doing so, he led one of the most dramatic turnarounds in corporate history.

For Lou Gerstner and IBM, switching the company's focus from its own proprietary stack of technology prod-

ucts to its customers' "stack of business processes" was the keystone change.

To create real change, change that sticks and won't be soon reversed, you need to identify a fundamental issue that encapsulates the value of the mission—a keystone change that is concrete and tangible, unites the efforts of multiple stakeholders, and paves the way for greater change. Revolutions don't begin with a slogan—they begin with a cause.

What makes a keystone change so difficult to identify is that, while grievances are what drive the passion of some, a keystone change needs to resonate with those outside the early adopter group if it is going to spread. Movements, as the name implies, need to be kinetic. They start somewhere and need to end up somewhere else. So it's never enough to just speak to the hopes and aspirations of the loyal and faithful. You need to speak to common values shared by those outside your movement for change to occur. Driving change is always about attracting, never overpowering.

Creating a clear sense of purpose and identifying a keystone issue that can achieve that purpose is absolutely essential to create transformative change. However, it is merely a first step. Once you figure out what the end game should look like, you need to develop a plan to get there.

Making a Plan

Successful movements don't start by rousing crowds but by formulating a clear objective and building out from there. As with any journey, you start with where you want to end up and then figure out how you're going to get there. That's what a plan is.

The Spectrum of Allies

There are two tools that nascent movements can use to develop plans to make change happen. The first is called the Spectrum of Allies, which outlines the groups from which you can expect active or passive support, neutrality, and active or passive opposition. It is only through understanding where the thresholds of resistance lie that you forge the connections you need to push through them.

Make no mistake: You will not win everybody over, but it is also a grave misapprehension to see your opponents as monolithic or to dehumanize them.

In the American Civil Rights Movement, leaders had spent years mobilizing support from southern blacks and liberal whites. During their protests, mainstream America had witnessed scenes on the televisions in their living rooms that they could not imagine happening in their own country. Ordinary citizens were being beaten for exercising their right to speak and to vote. Children were being attacked by snarling dogs and fire hoses. It was unconscionable. Few wanted to be associated with such brutality and injustice.

Successful movements don't start by rousing crowds but by formulating a clear objective and building out from there.

The subsequent March on Washington in 1963 was designed not to rally the faithful but to appeal to those in mainstream America who had been watching those enormously powerful scenes unfold on their televisions—those in the middle of the Spectrum of Allies—and to shift some passive opponents to a more neutral position and active opponents to a more passive position. Surely, in the end, it didn't convince everybody, but it did enough to win civil rights and bring important changes about.

The only way to create change is to gather support, and the Spectrum of Allies maps your path to victory. If, for example, you are an employee at a major corporation and you want to push for change, camping out with a few confederates outside the CEO's office would achieve little more than losing your job and being led out of the building by burly security guards. If, on the other hand, you built allies and worked to recruit others, especially those with somewhat higher thresholds of resistance, your chances of achieving something worthwhile would markedly increase.

The Pillars of Support

The second element of strategy is the Pillars of Support. In a private organization, leaders need to maintain the support of a variety of different stakeholders, including shareholders, customer groups, partners, various functional departments, and others. Every situation is different, but one thing is always constant: Nobody rules alone. No regime is a monolith.

A successful strategy matches the key constituencies in the Spectrum of Allies and the key institutions that make up the Pillars of Support with the tactics that are most likely to bring them into the fold. That's how you win and bring about the change you want to see.

Once you've decided not to camp outside the CEO's office and you begin to recruit allies, your attentions would turn to the various stakeholders that support the business, such as internal departments, shareholders, customer groups, and so on. Which ones stand to gain from the change you want to see? Which stand to lose? How can they be convinced that change is in their best interest or, at the very least, so inevitable that resistance is futile? If you want to make change happen, these are the questions you need to ask.

Networking the Movement

A Broadway musical, like a movement, needs to attract people to it. To do so, the producers must find the right mix of tune, message, artistic expression, and commercial appeal to both engage audiences in the theater and impress critics enough to get good reviews. Millions of dollars depend on keeping people in the seats. So, if you were going to invest in a musical, what would you look for?

Two researchers, Brian Uzzi and Janet Spiro, analyzed 474 musicals that were performed between 1945 and 1989. What they found was startling. Even when controlling for factors such as competition, marketing budget, production budget, economic conditions, and the track record of the cast and crew that worked on the play, what best determined the success of any particular Broadway musical was the structure of the networks of the cast and crew.

Using a metric called "Q," which measures the "small worldliness" of a particular network, they found that if very few people among the cast and crew had previously worked together, the play performed poorly in terms of both critical recognition and financial results. However, if too many people had worked together and the connections were too dense, results were similarly bad. Top performers had combinations of both, people who knew each other well and new blood that could take the team in new directions.

In other words, small groups, loosely connected, but united by a common purpose are key to success on Broadway as well, and this can be represented by a measurable quantity. Similar results were found in studies focused on engineers at Bell Labs, currency traders, and the German automotive industry.

The results of network studies yield important insights for any movement that seeks to create transformational change. First, you need to create strong bonds within individual groups. That's how you build trust and operational effectiveness. Yet, at the same time, you must also keep your network open, not only so that you can keep the movement growing but so that new information and insights can flow through.

Lean Manufacturing via Network Effects

At Wyeth Pharmaceuticals, which sought to transform its operations through implementing lean manufacturing methods at 16 plants encompassing 20,000 employees, it was clear to leadership that a simple dictate from the top would not get the job done. So they planned to do it in stages, creating "mini-transformations" in two or three areas at eight of the plants and then using network effects to cascade early successes throughout the organization as a whole.

Michael Kamarck, then president of Wyeth's manufacturing group, described the process this way: "We copied the way viruses infect. We started small. We infected groups, individual groups, but then we brought in people from the other sites, who hadn't yet gotten started. We pulled them forward into the process, if you will. So, we made them part of the mini-transformation so that they could get infected and take the infection back."

In a movement for change, the role of leaders is not merely to plan and direct action but to inspire and empower belief. So, to create positive change, movements need more than shared purpose; they also need shared values.

Indoctrinating a Genome of Values

Our DNA is not a blueprint or a technical specification. In fact, our genome contains only about 1.5 gigabytes of data, barely enough for a full-length movie. Its genius is that rather than specifying detailed features of our biology, it provides us with rules for adaptation—first, for chemical gradients in the womb and later for the outside environment. Genetic codes are also not monolithic but contain various influences from different ancestors and can express themselves differently when exposed to different environmental factors.

Successful movements for change operate on a similar principle, providing genomes of values that act as rules for adaptation. Values are absolutely critical to success. Every effort to create transformational change is unique, with

A crucial feature of any successful movement is training activists to internalize the genome of values so that it becomes second nature.

its own "vision of tomorrow" as well as its own particular Spectrum of Allies and Pillars of Support.

However—and this is a crucial point—every movement must be true to itself, and that requires that it be faithful to certain values and maintain discipline. That's why instilling a genome of values is so crucial for success. A crucial feature of any successful movement is training activists to internalize the genome of values so that it becomes second nature.

Apple CEO Tim Cook often speaks out about data privacy and supports the principle that consumers should own their own data. This is, by all indications, a deeply held personal and corporate value. However, as many observers have noted, it is also a potent weapon against competitors like Google and Facebook, both of which have businesses based on monetizing their customers' data.

Hard Truths, Consistent Values

To create fundamental change, what is crucial is that values are tied to an affirmative vision of tomorrow rather than merely targeting grievances. You may believe that inefficiency stems from laziness, but unless you can present a clear plan for improvement, like the executives at Wyeth Pharmaceuticals did in their movement to implement lean manufacturing principles across the company, don't expect things to change. There are many people who can see flaws in any system but far too few who are willing to put in the hard work to actually make things better. That requires you to adapt to the hard truths of the real world but maintain your values nonetheless.

Values are most powerful when they speak to shared human experiences. The way you communicate those values is through platforms and tactics.

Building Platforms for Participation, Mobilization, and Connection

In their book-length study comparing 323 violent and nonviolent resistance campaigns between 1900 and 2006, Erica Chenoweth and Maria Stephan found that nonviolent activists are nearly twice as likely to achieve their goals as violent ones. At first glance this seems implausible or, at best, naive. How could a bunch of hippies in T-shirts outperform hardened and committed rebels carrying AK-47s?

Nonviolent campaigns have very few barriers to participation. Everybody, from the youngest child to the meekest senior citizen, can join in. This participation advantage proves to be decisive. In fact, Chenoweth and Stephan show that "a single unit increase of active participants makes a campaign 10 percent more likely to achieve its ultimate outcome."

That's why successful change efforts work hard to make it as easy as possible to join in. Deep commitment is essential for any change effort. However, before you can have commitment, you must have participation.

Saving 100,000 Lives

In its 100,000 lives campaign, the Institute for Healthcare Improvement sought to enlist 1,600 hospitals in its program to implement six evidence-based procedures that would reduce needless deaths through medical error.

The healthcare industry is famously resistant to change. So a key part of IHI's strategy was to lower barriers to participation, so that early adopters could not only join its movement but also easily recruit their friends and colleagues. It did so by identifying and eliminating points of friction.

First, rather than requiring an extensive application process, a simple fax from the hospital CEO, along with a commitment to share mortality data, was enough to join the movement. Instead of including every improvement it had identified during its years of research, IHI narrowed the list down to six procedures, which were chosen not only for impact but ease of implementation.

For each of these, IHI provided "change kits" complete with how-to guides. And the participating hospitals were not even required to adopt all six procedures but were free to choose those best suited to their organization.

IHI didn't focus on recruiting hardcore healthcare warriors for its battle against preventable medical errors—it recruit-

ed everybody, and it worked. After the 100,000 lives goal was achieved, IHI launched a campaign to save 1 million lives and then 5 million lives. Simple things can sometimes have enormous impacts.

In order for a movement's tactics to be effective, they must focus not merely on making a point or "raising awareness" of an issue but on actually making a difference. They must be part of a larger strategy to mobilize constituencies in the Spectrum of Allies to influence institutions in the Pillars of Support.

Surviving Victory

Every movement has an immediate goal, whether it is to promote fundamental rights; to drive implementation of new ideas, methods, and procedures; or simply to return to profitability. That's what drives action. Once those immediate goals are achieved, however, change movements often fall apart.

All too often, we have our minds so set on what we need to win that we neglect to think about what comes the day after the victory we seek. We are so focused on beating our opponents into submission that we fail to realize that they will eventually rise up again, learn the lessons of their failure, and return to the fight with renewed vigor. That's why we so often succeed in making our point but fail to make a difference.

What should be clear by now is that successful movements create transformational change through shared values. It is that easy and that hard.

The American Revolution would not be considered the great success it is today without the Declaration of Independence and the US Constitution. In fact, the founders created and then adopted the Constitution more than five years after the British were defeated in the Battle of Yorktown, precisely because it had become clear that without shared values the whole experiment was unworkable.

Yet maintaining a commitment to values is a challenge even in the best of circumstances. The quest for change is always a journey, never a destination.

Successful movements survive victory by staying true to their values even after the initial triumph. For example, the turnaround at IBM endured long after Lou Gerstner was gone because it wasn't centered on any particular strategy or technology but continued to promote the values that made IBM a great company.

Values prevail because they are not situational or of the moment but lasting principles for adaptation. Most of all, successful movements are able to leave the battle behind and make peace with the fact that victory inevitably leads to the tedious boredom of governance. They do not see that as the price of progress but its reward.

That's how you win.

THE SUMMARY IN BRIEF

In ***Catch People Doing Things Right***, author Martha C. Lawrence explores the extraordinary life and influence of Ken Blanchard, one of the world's most beloved leadership thinkers. Through a thoughtful, chronological narrative, Lawrence demonstrates how every season of Ken's life—his triumphs, setbacks, and daily encounters—was shaped by his choice to learn, grow, and serve others. At the heart of Ken's story is a consistent and unwavering belief: true leadership begins with humility, love, and the desire to help others succeed.

Blanchard's life offers countless reminders that influence is never too small and that no act of kindness or encouragement is ever wasted. By highlighting his devotion to relationships, Lawrence reveals how Ken turned networking into something far more meaningful—an authentic investment in friendship, trust, and collaboration. His journey through some of society's most turbulent decades shows how resilience, optimism, and faith can carry leaders through moments of uncertainty.

Above all, ***Catch People Doing Things Right*** is a testament to Ken's conviction that leadership is not about power or position, but about people. His example encourages readers to lead with compassion, nurture meaningful connections, and embrace the transformative impact of serving others.

IN THIS EXECUTIVE BOOK SUMMARY YOU WILL:

- Understand how Ken Blanchard exhibited strong leadership professionally and personally, by leading with heart and servanthood first before anything else
- Explore the life and legacy of Ken Blanchard including his early years where he first discovered his love for people
- Learn how Ken's businesses and many professional endeavors flourished and the different forms of sacrifice required of him and others
- Discover how to become a strong and intuitive leader who impacts more than just spreadsheets, but generations to come

Family Roots and Childhood, 1939–1944

When asked about his greatest influences, Ken always credits his parents. "They were incredible people," he says. "The lessons I learned from my mom and dad have stuck with me all my life."

Ted Blanchard and Dorothy Heidenreich (Ken's parents) married on April 17, 1926. Although they wanted children, the couple was childless during the first eleven years of their marriage. Then, just when they had begun looking into adoption, Dorothy became pregnant. Ken's sister, Sandy, was born on January 4, 1937.

Ken's primary companion in those early years was his sister, Sandy, just two years older than he was. The neighborhood was home to a lot of young parents like the Blanchards, so as Ken and Sandy grew, they had plenty of other children to play with. Many of Ken's favorite childhood activities took place in the backyard of their New Rochelle house, which featured a sprawling maple tree surrounded by a brick patio. During the day—weather permitting—the family would play croquet in the yard. On warm nights, they would sit on the patio, sip cold drinks, and enjoy sing-alongs.

Ken remembers the moment when he was standing at the top of the stairs on a Christmas Day, bursting with excitement and anticipation. "My heart was pumping when Nana looked back up at me and said, 'My heavens! You won't believe what's down here!'"

Years later, Ken would become famous for communicating his optimism to others, and that first memory—filled with excitement—would be reflected in his life philosophy:

"Life is a very special occasion!"

During his preschool years (1942–1944), Ken did not see his father, who stayed overseas protecting the Marines and the "frogmen" (now called Navy SEALs) in the major Pacific battles, including Saipan. Luckily, the neighborhood served as a buffer during that time. Ken had a number of surrogate dads on the street who were happy to step in for Ted.

In childhood, Ken did discover a love for competitive sports.

Basketball became Ken's passion. He played in the basement every day and practiced shooting for hours on end.

Ted Blanchard, the Navy officer who had retained the respect of his men while commanding them into dangerous conditions in the Pacific, didn't waste opportunities to share leadership lessons with Ken, even when watching sports.

Ken's first major league baseball game left a lasting impression on him.

He learned a key lesson that would inform his future career: leadership wasn't about having a title or a position. After all, Slaughter and Musial were baseball players, not presidents or kings. Yet how they behaved had an impact on others. That day, Ken realized that by behaving in ways that influenced others, anyone could be a leader.

Leadership Beginnings, 1945–1957

Ken's first memorable interaction with a Black person was through playing city basketball in the sixth grade.

His father had installed a backboard and basket on the outside wall of the garage. Ken practiced every day and honed his skills by playing games at the YMCA, with church leagues around town, and at school. He became an excellent basketball player and was particularly gifted at shooting.

Ken's elementary school team had reached the finals of the city basketball championship, where it was pitted against the formidable Lincoln team, composed of highly talented players from the predominantly Black school.

His team ended up beating Lincoln—a major upset.

One of Lincoln's star players was a huge Black kid named Earl Forte. His friends and teammates called him Meatball. After the game, Ken went into the locker room to change his shoes and saw the star player sitting on a bench.

Ken went over and patted Forte on the back. "Good game, Meatball."

The Lincoln player whirled around, grabbed Ken, threw him against the locker, and growled, "Only my friends call me Meatball!"

Ken looked into the eyes of the oversized boy who had him by the throat and said with a smile, "Well, why don't we become friends?"

Meatball ended up being one of Ken's strongest supporters and campaign managers when Ken ran for president of their junior high school, and their friendship lasted long beyond their school days.

Basketball became Ken's entrée into the non-White social circle of New Rochelle, where his easygoing, egalitarian nature attracted many new friends.

Leaders are great not because they have power, but because people trust and respect them.

Even in the 1950s, New Rochelle ranked among the most diverse small cities in the nation. Once schools began to desegregate, Ken was exposed to classmates from multiple cultures.

The different schools Ken went to provided him with some of his best learning and development experiences, because they taught him firsthand about diversity. With good friends from a variety of backgrounds, Ken learned how to connect with, love, and appreciate people from all walks of life.

Friends described Ken as the kid who was popular with the whole class. Ethnicity or background made no difference to him—if you were a nice person, he was your friend.

Ken had a strong role model in his father. Inspired by his dad's leadership in the Navy, he decided to run for president of his seventh-grade class. When he told his father about his plans, Ted let him in on an early leadership lesson. "You need to get everyone laughing right away," he advised his son.

"Now that you have a leadership position, don't ever use it. Leaders are great not because they have power, but because people trust and respect them." Ken never forgot his father's words, and they served as inspiration for his later work about leading through positive influence rather than position power.

Serving in leadership positions at school gave Ken a meaningful way to channel his popularity and learn about leadership and development firsthand.

The Cornellian, 1957–1961

While Ken had always been bright, he had never been particularly good at taking tests. "My mind just didn't work that way," he commented later in life. "Today, I would never be able to get into an Ivy League school on the basis of my SAT scores."

Nevertheless, at Cornell he developed an academic regimen and stuck with it, thanks in large part to his sister, who always encouraged him to be the best possible version of himself he could be.

As she had in high school, Sandy pushed Ken to aim high and be his best self, both academically and athletically. During his freshman and sophomore years, when Sandy was still on campus, she insisted that Ken meet her regularly in the library to study.

Ken worked at his studies, but not at the expense of his social life. Spending time with friends and making new ones was as important to Ken as getting good grades.

While fraternities on Ivy League campuses in the 1950s were overwhelmingly White and economically privileged, Ken did not succumb to the exclusive, us-versus-them culture of fraternity living. His high school habit of making friends from various ethnic and social groups continued during college. He had friends all over campus, and off campus as well.

Later in his life, Ken was asked to identify something he did when he was young that was considered unique. His answer was, "I liked everyone! Kids I went to school with used to kid me about that all the time. Why? Because even young kids hang out in groups and make fun of kids that aren't a part of their gang."

Ken had been taught by his father to look for leadership role models. He discovered a powerful one during his freshman year at Cornell, when Martin Luther King Jr. came to speak at Sage Chapel on campus.

The first thing Ken noticed about Dr. King was the warm and caring way the great civil rights leader greeted him and his co-usher—making Ken feel as if they were the most important people in the world.

Dr. King's sermon that day was filled with that same warmth and caring inspiration. The topic was "Loving Thy Neighbor as Thyself."

Margie, 1961–1962

At 22, Ken was no stranger to girls. He had dated in high school and college, but he had yet to fall in love.

His parents stressed the importance of saving himself for someone special, someone he could make a lifetime commitment to. Someone like Marjorie "Margie" McKee.

Margie was intrigued by Ken. His reputation preceded him: because he had served in student government, she already knew who he was when her then-boyfriend, Looper, introduced her to him. Although Ken's fraternity had a reputation for being exclusive, she knew he had friends all over campus. Ken's outgoing nature appealed to her.

As she spent time with Ken, Margie was struck by three things. First, by how much he loved people. He had a wide variety of friends, and she could see that each would have taken a bullet for him, and vice versa. Most of the guys she knew tended to stick to their own cliques. Ken was different.

Second, Margie noticed Ken was a hard worker, poised to have a robust career. Third, she was intrigued that he had his sights set on working in the university and being a dean. No matter what he ended up doing, she knew he would be successful—as a pastor, politician, educator, coach, entertainer, or something else. Somehow, she sensed that he was going to do something important.

Ken and Margie were married on June 23, 1962, at Glenside Presbyterian Church in Glenside, Pennsylvania.

Thwarted Dreams, 1962–1966

Ken's education plan involved being part of the Preceptorial Studies Program at Colgate, where he served as an academic and social advisor to about twenty-five students. During that school year, Ken and Margie had all of the students over for dinner, one at a time. Margie gradually honed her cooking skills, learning how to keep rolls from burning and have all the elements of a meal come together at one time.

Ken's love for basketball didn't wane in graduate school. He played every chance he could and helped coach the freshman team at Colgate during the 1962–1963 season.

While pursuing his PhD, Ken found a full-time position suitable for a doctoral candidate: conducting research for the School of Education with the New York State Regents Advisory Committee on Educational Leadership—a group that made leadership recommendations concerning college presidents, superintendents of schools, and their governing boards.

Meanwhile, Margie continued working as a speech therapist. She had found a position at the Cornell speech clinic, helping foreign students improve their English accents and assisting others with stuttering problems. More and more, however, she felt as though she didn't know enough to be effective. She realized that she needed to go back to school. So, she applied to the master's program at Cornell, where she continued her studies in child development and speech science.

1965 was a notable year for Ken and Margie. In June, Margie was awarded her master's degree in speech therapy, and on August 3, she gave birth to their first child, Kenneth Scott Blanchard.

As Ken was finishing his PhD coursework, he turned his attention to finding a job to support his growing family. He envisioned a career in university administration, working as a liaison between the faculty and the students.

Ken had spent the last nine years in higher education preparing to be a university administrator. Now, at twenty-seven, he had completed the coursework and dissertation for his PhD in education administration and leadership. He had a wife he adored, a beautiful son, and another child on the way. The one thing he didn't have—but desperately needed—was a job.

A Key Partnership, 1966–1970

Ken's mother, Dorothy, had instilled in him a firm belief in the power of positive thinking. She'd taught him that setbacks were a part of life and that when they came along, he shouldn't put his head down and mumble. Instead, he should keep his head up and look for opportunities.

In the fall of 1966, Ken and Margie—who was pregnant with their second child—moved with their 1-year-old son, Scott, to Athens, Ohio.

In the mid-1960s, Athens was a small municipality with a local population of about 5,000, which quadrupled when the university's 15,000 students came to town. Ken would now be working for the largest employer in town: Ohio University, located in a sprawling cluster of brick buildings on 1,800 acres.

Teaching tapped into Ken's natural talents. With his sense of humor and easygoing attitude, students liked him immediately, and he enjoyed being in front of the class. Although he had originally set his sights on university administration, he was learning that engaging with students suited his extroverted disposition far better than pushing paper behind a desk somewhere.

The most successful leaders flex their approach to match the needs of each person they are leading.

At Ohio University, Ken's interest in leadership was front and center, and he took advantage of every opportunity to deepen his knowledge of the subject.

Life in Ohio was not all academia. On March 30, 1967, Margie gave birth to their second child, Deborah Kyle Blanchard. Meanwhile, their son was growing into a curious toddler. On weekdays, Ken drove 3-year-old Scott to Ohio University's nursery school. On weekends, they would often go into town together.

Developing a New Leadership Philosophy, 1970–1976

In 1970, Ohio University was a hotbed of new and innovative ideas in just about every academic discipline.

Ken also continued to teach and refine the Situational Leadership model he had developed with Paul Hersey at Ohio University, introducing his students to the idea that there was no single best way to lead people, and that the most successful leaders flex their approach to match the needs of each person they are leading.

Fun was central to learning, as far as Ken was concerned. His goal was to help students learn, and ever since his days at Cornell, the practice of giving A grades to only a select few had rankled him.

Ken wanted as many of his students as possible to succeed—which was why he began handing out his final exams on the first day of each of his classes.

Ken wasn't impressed by the hierarchy, and he had never forgotten that early leadership lesson he learned from his father: "Now that you have a leadership position, don't ever use it. Leaders are great not because they have power, but because people trust and respect them." He thought it was ridiculous when faculty members put on airs and "sounded British" when they were in front of students, then behaved more casually among themselves.

A Company Is Born, 1976–1980

Planning to be in California for a year, Ken and Margie spent the summer of 1976 saying goodbye to friends on the East Coast.

California was a revelation to Ken. The ethos of the Golden State perfectly suited his open, free-spirited nature. In Ohio and on the East Coast, he had chafed against the rigid expectations of academia, and his freewheeling style was often frowned upon. The academic culture in California welcomed creativity and experimentation, and Ken took to it like a bird to the sky.

In October 1976, Jerry Tomas, one of Ken's doctoral students, asked Ken to do a leadership seminar in San Francisco for a group of twenty-nine executives at the Young Presidents' Organization (YPO), where Jerry was serving as director of education.

YPO opened up an entirely new world for Ken.

Ken's presentation to the young presidents in San Francisco went so well that he was invited to speak at YPO's annual weeklong University for Presidents convention, which was being held in Honolulu in February 1977.

After moving to California, Margie had the opportunity to cultivate a long-standing interest in work-life balance. Pulling together her research, she created some seminars on the topic. Her ideas found an audience, and her seminars were well received.

Margie and Ken had enough successful seminars under their belts to convince them that they could make a go of their consulting business. They headed back to the McKee family cottage on Skaneateles Lake in Upstate New York and called their UMass friends together. The group began envisioning what kind of company they might create.

As they talked about building their ideal company, they committed their ideas to paper in a document that laid out the three primary purposes of their dream organization,

The Founders' Dream:

1. To create opportunities for people that we love and care for to work together
2. To make a difference in people's lives
3. To have fun

The One Minute Manager, 1980–1983

Margie introduced Ken to Spencer Johnson, a 41-year-old MD with a curly head of hair who had done medical clerkships at the Mayo Clinic and Harvard Medical School. Spencer had coauthored with his former wife, Ann Donegan, a series of children's books called ValueTales—short biographies of well-known people who had made a positive difference in the world.

Ken invited Spencer to attend a seminar he was conducting the following Monday at the Rancho Bernardo Inn.

At the end of the day, Spencer approached Ken and said, "Forget my parenting book. Let's write *The One Minute Manager*!"

Over the next few weeks, Ken and Spencer began drafting a parable about a "bright young man who was looking for an effective manager."

Research showed that only 10% of nonfiction books were read past the first chapter, which is why Ken and Spencer decided to keep the book to no more than 100 pages in length.

They kept producing drafts until people began offering $10 for a photocopy of the book—not a hardcover, a photocopy. This was remarkable, given that $10 in 1980 was equivalent to about $32 in 2025.

Harry Paul owned a print shop called Budget Books. The company specialized in typesetting, designing, and printing, but left it up to the authors to handle distribution and marketing. Given Ken's seminar business, that was fine with Ken and Spencer.

Harry Paul printed the books and shipped them to Chicago, where Ken and Spencer introduced *The One Minute Manager* to a meeting of the National Restaurant Association. Within half an hour after the session, more than 700 copies of the book had sold in the back of the room at $15 each—an amount unheard of in book publishing at the time. Ernie Renaud from Jerrico Inc., the parent company of Long John Silver's, placed an order for 1,200 copies on the spot.

Growing a Global Organization, 1980–1989

With his gift for captivating audiences and a wildly successful book topping the bestseller lists, Ken continued to attract new clients, and Blanchard Training and Development (BTD) scrambled to accommodate them. If they were going to stay in business, Ken and Margie needed more instructors to deliver their cutting-edge training.

Gradually, the company grew its operations to meet the massive increase in demand stimulated by Ken's mega-bestseller, *The One Minute Manager.* The book served as the foundation for a host of BTD products, including a video. BTD's *One Minute Manager* training materials and seminars were flying off the shelves. New associates—now called consulting partners—were hired to deliver *One Minute Manager* seminars around the world.

The founders and early associates knew that organizations needed help teaching managers to empower, support, and encourage their people rather than micromanage, bully, or ignore them.

The company's top values were:

1. Ethical behavior
2. Relationships
3. Success
4. Learning

Finding Faith, 1986–Present

Ken Blanchard was 43 years old when he had the heady experience of becoming a publishing phenomenon. *The One Minute Manager* quickly became an iconic title, quoted in newspapers, magazines, and on television. The book was shorthand for a new trend in business, one that brought a more humanistic approach to managing people. There were no internet or social media to speak of in 1982. Nevertheless, demand for the book and for Ken as a speaker had grown exponentially, and it kept growing.

Ken's rise from college professor to mega-bestselling author happened in just three short years. While he'd always been popular, suddenly having an international, mainstream audience gave Ken pause. He couldn't believe his phenomenal success was his alone; he felt something bigger was moving in his life.

When people put you up on a pedestal, the important thing is to not go there with them.

Several months after *The One Minute Manager* hit the best-seller lists, Ken got a call from his old friend Phil Hodges, who was working as a labor relations officer for Xerox in the Los Angeles area.

Due to some circumstances around a bad investment, Phil had a newfound humility, which had led him to reexamine his life. He'd turned to the Bible and found comfort and meaning in God's love, and he was eager to share his experience with Ken.

By the late 1980s, friends and family were noticing a change in Ken, who was beginning to identify as a Christian.

"Ken did proselytize early on as he embraced Christian theology," remembers his friend from Amherst, Dick Evans. "But always, we knew that his motivation was one of love."

In his journal, Ken wrote that he wanted to reach "a place where I feel I've glorified the Lord's name; I've made a difference in the lives of others."

Chief Spiritual Officer, 1990–2001

Ken was pleased by the awards and accolades, but he didn't let them go to his head. "When people put you up on a pedestal," he said, "the important thing is to not go there with them."

In his writings, Ken encouraged people to create a picture of the future that would inspire them to live their best lives. To help them visualize their future, he recommended that people write their own obituaries.

Influenced by findings, Ken formally changed his title from Chairman of the Board to Chief Spiritual Officer. The new title more accurately described his role, which had always been more inspirational than practical.

Ken used his role as Chief Spiritual Officer to communicate the company's vision and values to everyone who worked there. He began to leave daily voicemail messages to the entire company.

He cheered them on by praising their work, sharing inspirational ideas, and sending positive thoughts to those who were dealing with hardships.

Ken often delivered encouraging messages with a touch of humor.

Ken's books increasingly reflected his growing interest in the deeper meaning of success and his conviction that there was more to business than making money.

The Servant Leader, 2001–2007

As Ken's Christian faith matured, his leadership philosophy —which had always been about uplifting people—expanded to emphasize leadership as a sacred responsibility. His speeches began to focus less on productivity and more on serving others.

His belief that Jesus, who "did not come to be served, but to serve," was the greatest leadership role model of all time.

Ken believed how someone handles authority and power is a great measure of maturity.

Since his days coaching Cub Scouts and school basketball teams, he had been practicing servant leadership—whether he called it that or not.

To inspire and educate a new generation of leaders, Ken returned to his role as a professor.

Just as he had done in his days as a full-time college professor, he focused on empowering students. The goal was not for his students to "get an A" in theoretical analysis; it was for them to become better leaders in the real world.

Refiring, Not Retiring, 2007–2020

Generosity had been modeled for Ken from an early age. His mother, Dorothy, had taught him that if he gave from the heart, he would be amazed by the results.

The Ken Blanchard Companies established multiple ways to give. A charity called Blanchard for Others was created to provide funds to those in need. A Give-Back Program encouraged employees to choose a charity to receive a cash donation from the company in their name. The Blanchard

Ambassador Program allowed associates to spend up to forty hours per year, during business hours, in service to others. The Blanchard Institute provided access to training programs and awarded scholarships to students of all ages.

The giving extended to Blanchard employees in the form of Blanchard's gainsharing program: each year, a percentage of operating income was placed in a pool and divided equally among them.

At a time when many people retire or at least slow down, Ken's productivity surged as he approached his 70th birthday.

As he looked back on *The One Minute Manager,* Ken felt that the third secret in the book—the One Minute Reprimand—needed an update.

Thirty years after their first creative writing venture, Ken and Spencer sat down together and rewrote the original edition of *The One Minute Manager*. Much had changed since the early 1980s, and the new draft reflected the realities of a 21st century workplace. In 2015, William Morrow released *The New One Minute Manager* for a fresh generation of leaders.

Leading With Love, 2020–2023

In the aftermath of the COVID-19 tsunami, the revenues of The Ken Blanchard Companies dropped over 30%. In response to the crisis, the company's new president, Scott Blanchard, began sending a series of weekly all-company emails, sharing the stark reality of the financial challenges the company was facing and the hard choices that would be required to survive.

As the weeks went on, it became evident that the company could not sustain the losses and stay in business. For the first time in Blanchard's forty-year history, the leadership team made the painful decision to furlough and, a few months later, lay off employees.

In the case of the coronavirus pandemic, the positive turned out to be a complete overhaul of the way the company did business. After forty years of relying on physical classrooms and face-to-face training, the business pivoted to digital learning and virtual training.

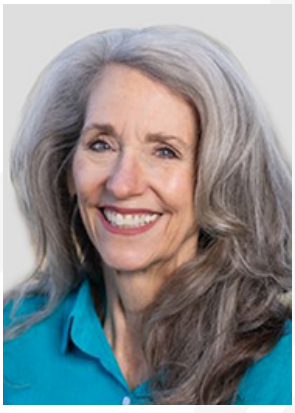
Fortunately, Margie's Office of the Future had anticipated this trend many years earlier, so the company had already begun the transition.

By 2021, Blanchard was able to hire back some of the employees it had lost. So successful were its virtual offerings that 2021 turned out to be an exceptional year, with over $58 million in revenue. At the year's end, *The San Diego Union-Tribune* once again recognized The Ken Blanchard Companies with a Top Workplaces award, spotlighting its "strong connections with employees and a strong culture of success."

After six decades in the field of leadership, Ken's philosophy had crystallized around a single idea: love.

Ken's son, Scott, who had initially thought that his father's ideas about love and servant leadership were naïve, tested those ideas and adapted them to his own leadership philosophy.

No one was more surprised than Scott to discover—through both solid research and application in the field—that leading with love resulted in business success.



Martha C. Lawrence, executive editor at Blanchard and former editor for Simon & Schuster and Harcourt Publishers, has collaborated with Ken Blanchard for more than twenty years. She has edited hundreds of books, including the multimillion-copy bestseller *Feel the Fear and Do It Anyway* and the #1 *New York Times* bestseller *The One Minute Entrepreneur*. She coauthored *Trust Works! Four Keys to Building Lasting Relationships*, winner of the 2014 San Diego Book Award, and is also the author of the award-nominated mystery series featuring private investigator Elizabeth Chase.

Change-Friendly Leadership

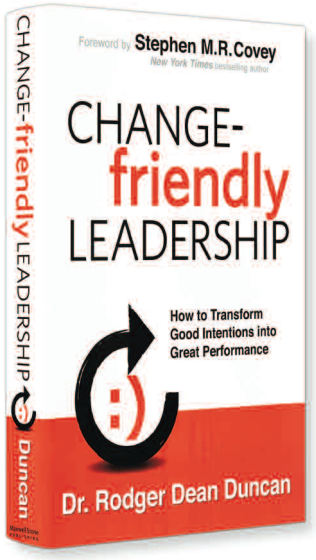
How to Transform Good Intentions into Great Performance



by Dr. Rodger Dean Duncan

THE SUMMARY IN BRIEF

Most attempts to change fall flat. Around the world, countless change efforts are underway in all kinds of organizations, spearheaded by leaders with good intentions. Despite the good intentions, the majority of these programs will fail. Why?

In *Change-Friendly Leadership*, practitioner Dr. Rodger Dean Duncan shows that humanness, approachability and friendliness are necessary, but often overlooked, elements of making change successful.

Change cannot be achieved by a press release, slogan or announcement. Effective organizational change requires the active, mindful participation of the people affected by the change. Leaders must learn how to bring their entire team on board with changes and ensure they are invested in the process as well as in the outcome.

The Friendly Factor is not just a play on words. It's the very foundation for effectively engaging people's heads, hearts and hopes. The Change-Friendly framework is based on timeless principles that are tried and true in even the toughest situations. Using this framework will enable you to create effective, lasting change in your organization.

IN THIS SUMMARY, YOU WILL LEARN:

- The three dimensions across which employees connect with an organization.
- The three critical aspects of authentic leadership.
- How to make your leadership think-, talk-, trust- and team-friendly.
- The seven steps of the Change-Friendly leadership model.

What's the Big Deal About Change?

When our children were very young, my wife and I took the family on a cross-country trip.

For each of the various stops along the way, we reserved a room at a Howard Johnson hotel. We knew that all across the country these hotels were decorated with exactly the same wall colors, lamps and bedspreads. To help our children feel more "at home" each night, we even specified that each room must have the beds on the right and the TV on the left. Sameness, we reasoned, would be comforting.

On the third night, we checked into yet another Howard Johnson hotel. As soon as we walked into our room, our four-year-old son threw up his hands and with a tone of utter despair said, "We've been driving forever and we keep coming back to the same room."

That's exactly what change can feel like. Despite your best efforts, some people will continue to ask "Are we there yet?" Some won't mind taking a trip, just not in the direction you're headed. Others will resist getting in the car at all.

The big deal about change is usually not about strategy or structure or systems. All of those things are, of course, important. But the core of it all is *feelings*. In the world of human commerce, nothing changes unless and until people's behaviors change. And the kind of behavior change that results in lasting (sustainable) change must accommodate people's *feelings* — feelings that involve trust, confidence, passion and all those other intangible, but very real, things that make us human.

You can rent a man's back and hands, but you must *earn* his head and heart. ●

The High Cost of Belly Flop: A Case for Engagement

Many so-called change efforts seem to employ the launch protocol of a belly flop — lots of noise, big splashes, a few congratulatory whoops and hollers. But then the pain sets in. Sometimes a lot of pain.

Change takes us out of our comfort zones and produces stress that people resist — not the change itself. Even positive change produces stress.

Effective change requires genuinely engaging the brains of the people expected to embrace and even champion the new state of affairs.

Effective change requires engaging people's feelings — not merely making a business case for action, but making a compelling psychological case for action.

Effective change requires engaging people's earnest hopes: their heartfelt aspirations, even their sense of self.

Discretionary Effort

By definition, a Change-Friendly work environment engages people's heads, hearts and hopes. True engagement is a function of *discretionary effort*. People don't become engaged because they've been ordered or compelled to. They become engaged because they deliberately *choose* to invest their energy, enthusiasm, ingenuity and passion in a cause that has meaning and value for them. An "engagement gap," then, is the difference between the level of discretionary effort needed to produce desired results and the level of discretionary effort actually expended.

In our work with culture and performance issues, we notice that people connect to the organization across three dimensions:

Rational: the "thinking" part of the relationship dynamic. How well do people understand their roles and responsibilities?

Emotional: the "feeling" part. How much passion and energy do people bring to their work? To what extent are they vested in what's best for the organization's stakeholders?

Motivational: the "acting" part of the relationship. How well do people perform their roles? How much effort do they put into personal improvement?

Based on responses to our questions (as well as our observations of their actual behavior), people are clustered into four groups:

Engaged. These people are giving full discretionary effort. They have high scores on all three dimensions (Rational, Emotional, and Motivational).

Enrolled. These people are partially engaged. They score well on the Rational and Motivational dimensions, but are less connected on the Emotional dimension.

Disenchanted. These people are partly disengaged. They have lower scores on all three dimensions of engagement, especially the Emotional connection.

Disengaged. These people have disconnected on all three dimensions. They do not contribute to organizational success and they are often a noticeable drag.

As you might expect, there can be migration within and between these clusters. With the right mix of opportunity, coaching and encouragement, Enrolled people can become fully Engaged. If they perceive opportunity to be diminishing, and absent the right coaching and encouragement, Enrolled people can become Disenchanted. ●

Change-Friendly: Its Rhyme and Reason

Leading effectively is a challenge under the best of circumstances. It's especially so in an environment of change and transition. People are unsure about the future, and this ambiguity feeds the aversion to risk. In such an atmosphere, people need comfort and confident direction, not a drill sergeant.

My colleagues and I work with some of the world's best organizations to help them make change a source of advantage rather than a source of anxiety.

Our guiding principles are the foundation of everything we do. We didn't invent the principles. They are timeless. If these principles resonate with you, you're well on your way to being a Change-Friendly practitioner. Try these on for size:

Keep it simple; Back to basics. Systems thinking examines the big picture to reveal the multiplicity of causes and effects. Smart organizations use it to find simple and cost-effective solutions to a wide range of performance issues. They sort through loops and links, ask the right questions and diagnose before they prescribe.

Make results, not excuses. Denial causes smart people to do dumb things because they prefer not to see, or simply can't see, a warning signal. In most cases, it's not a character flaw. It's simply a part of being human. Worried about symptoms? Get real. Rush to the root causes. Create results, not excuses.

Control the journey. Every organization is perfectly aligned to get the results it's getting. Unsatisfied with the results? Check your map and compass.

Be a gardener. Go for growth. A first tendency of many business people is to fix things. But successful leaders invest energy in *growing* rather than *fixing*. They know the organization is a living organism with many interrelated elements, capable of extinction or growth. Successful leaders are gardeners. They create a nurturing environment and they cultivate with care.

Lead the whole person. Some managers seem to regard people as *stomachs*. They try to motivate only with salary and benefits. Successful organizations use a different approach. They lead the whole person. People have heads. They want to grow and develop intellectually. They want to learn. Give them a good reason and they'll even stretch their own comfort zones. People have hearts. They want to be treated with kindness, respect and dignity. They want good relationships. They want to feel appreciated. People have spirits. They want meaning in life. They want context. They want to be inspired. And they want to know that what they contribute really matters, that they *fit*. ●

You Make a Lousy Somebody Else: Authentic Leadership

Occasionally in a coaching session with a group of clients, I show a PowerPoint slide with a simple message: *"We are facing a serious problem! I need you to give everything you have over the next several weeks to help us solve it. I'm afraid you won't sleep much or be able to spend much time with your family until things are back to normal."*

I put a face on the request. The next slide shows photos of a wide range of people — Ronald Reagan, Pope John Paul II, Mikhail Gorbachev, Tony Blair, Martha Stewart.

I point out that each of the people has (or had) a formal leadership position. But you would not want to fol-

low them — or anyone else — unless and until you had confidence in three things:

Character: the person's integrity, motives, principles and values. Character is what a leader is.

Competence: the person's skills, gifts, talents and ability to deliver on promises. Competence is what a leader does.

Cause: the person's reason for leading, vision, goals and "end game." Cause is what most often motivates and inspires.

After some lively discussion about character, competence, and cause, I then ask the people in the room: "What about you? What are you doing to inspire confidence in your character, in your competence and in your cause?"

The Change-Friendly Framework

Behaviors and relationships in place of titles and stature is the foundation of the Change-Friendly framework. It is based on what I call the power of the Four Ts: Think-Friendly, Talk-Friendly, Trust Friendly and Team-Friendly. These Four Ts inform all the behaviors in the Change-Friendly protocol. ●

Think-Friendly: See the World Through a Fresh Lens

Sound thinking is at the center of every effective change effort. It doesn't necessarily have to be brilliant thinking, although that never hurts. It doesn't even have to be innovative or breakthrough thinking, although an occasional dose of that can certainly help. But it does need to be sound thinking — thinking that raises the right questions and elicits a range of reasonable answers.

Your brain has a mind of its own. No kidding. On its own accord, the brain tends to act more out of self-preservation than out of rationality. We have a natural tendency to tell ourselves stories that justify what we're doing or failing to do. We have a natural tendency to allow our stories to masquerade as facts. The good news is that we can teach ourselves a new set of behaviors that serve us better.

FIND-IT is an approach to challenging our own conclusions that I've discovered to be helpful. It stands for Focus, Inquire, Notice, Discern, Integrate, Translate.

To illustrate the utility of the FIND-IT model, let's consider Stephen R. Covey's classic story of his experience on a subway. At one station stop, a man stepped onto the subway along with several children. The man sat down and stared blankly at the floor, the train lurched forward and the children went nuts.

Covey stepped across the aisle, sat down beside the man and asked a couple of simple questions:

"Sir, are these your children? Are you concerned that this littlest guy might get hurt in the crowd?"

"Oh, yeah," the man replied, "I realize the children are out of hand. You see, we just left the hospital. My wife has been gravely ill for several weeks. She died about an hour ago. I've told the children that their mother is gone and I'm afraid they're kind of in shock. I certainly am. I don't know how I'm going to live without my wife."

With that fresh insight, Covey's paradigm — his "story" or frame of reference — changed instantly. Instead of viewing the man as rude and uncaring, he now saw him for what he was — a fellow human swallowed by grief and shock. And when Covey's viewpoint changed, his behavior changed.

When we sincerely *Focus* on a situation, we begin to see things that were not, at first, apparent.

When we respectfully *Inquire* — not for the purpose of playing "gotcha" but rather for the purpose of discovering possibilities we had not considered — we are often surprised by what we learn.

When we mindfully *Notice* the details of a situation we begin to see and appreciate the individual pixels that comprise the landscape.

When we carefully *Discern* what's going on in a situation, we honestly distinguish between the facts (verifiable data) and our assumptions (the unsubstantiated stories we tell ourselves).

When we *Integrate* what we've noticed and discerned, we're well on the path to appropriate and useful conclusions, decisions and behaviors.

Finally, we're able to *Translate* it all in a way that leads us to productive outcomes. ●

Talk-Friendly: Put Your Best Voice Forward

Because it requires honesty and clarity, true dialogue can be uncomfortable. And because people like to avoid discomfort, it's tempting to allow some topics to remain unaddressed. Most of us have been in situations where there's a relevant issue that nobody seems willing to talk about. We might even say to ourselves, "There's an elephant in this room, and I sure wish someone else would

tame that animal." Well, to tame an elephant, you must first acknowledge its existence.

Talk-Friendly practitioners understand the difference between *implicit* and *explicit* communication. The elephant is implicit. But until the elephant's presence is made explicit, the quality of true dialogue is limited.

Taming elephants is a three-part process:

1. Identify the elephant. Although you always want to be respectful, identifying the elephant is not the time to mince words.

2. Uncover the underlying assumptions that people have about the elephant. In a spirit of genuine curiosity and discovery, talk openly about your view of the "elephant" and invite the other dialogue participants to share their perspectives. You will be enlightened, and possibly even surprised, by the ways people have constructed their versions of "reality."

3. Make it safe to talk openly about the elephant. People are afraid of elephants because they don't want to get stomped on. Good dialogue skills, like listening with empathy and inquiring to discover, can help create an atmosphere of acceptance so people can deal openly with their concerns. Underscore the mutual interests you share with the other players. This is also an important time for participants to relinquish power. Position and status differences have a major effect on people's readiness to explore different points of view honestly. ●

Trust-Friendly: Make Trust First to Make It Last

When trust is low, you pay a "tax" because everything requires more time to accomplish and everything costs you more. When trust is high, you receive a "dividend" because you're able to get things done faster and at a lower cost. This dividend is real. It's not just a feel-good factor. It's an actual economic dividend and the data on it is overwhelming.

For example, a Watson Wyatt study showed that high-trust organizations outperformed low-trust organizations by 286 percent in total return to shareholders.

Drop the Pretense

One of the more common Trust Busters is using one's higher status to compel obedience or obtain privileges. This is guaranteed to spawn resentment. When a boss pulls rank, people respond more out of compliance than out of commitment. Besides, pulling rank often comes across not as a sign of strength, but of weakness. Here are five steps to help you drop the pretense:

1. Question your motives. Are you using your position or authority to browbeat people into doing things your way? Are you trying to stifle open discussion?

2. Examine your case. Are there leaks in the case you're trying to make for adopting your view?

3. Inspect your language. Are you using words like "Remember that I'm the boss ..." or "Just do what you're told"? These are blatant examples of pulling rank, with bullying thrown in.

4. Consider the desired outcomes. If mutual purpose and mutual respect are what you really want in your relationships, you'll realize that pulling rank introduces a tone that's contrary to mutuality.

5. Practice your Talk-Friendly skills. Remember that true dialogue cannot occur in an atmosphere where one person tries to exert power over another. Stay on the lookout for communication barriers. These sometimes influence people to shift gears from collaboration to command-and-control. ●

Team-Friendly: Finding Strength in Unity

No doubt about it, teamwork is more common as a buzzword than as an actual practice. Without the benefit of nuance, teamwork is one of those catch-all terms often extended as the magic elixir for the moment's most pressing execution issue. But when we're strategic about putting both the team and the work into teamwork, beautiful things can happen.

Creating a Team-Friendly Environment

Regardless of their composition, teams don't function in a vacuum. To help ensure success, it's critical to establish and maintain the right environment.

A team is most likely to be effective when five conditions exist:

1. It's a *real team*, not just a team in name only.
2. It has a *compelling purpose* that kindles the enthusiasm of its members.
3. It has a *reinforcing framework* that promotes and enables rather than inhibits team achievement.
4. It enjoys a *nurturing context*, not just lip service.
5. Team members have ready access, individually and collectively, to *skillful coaching* on teamwork issues.

Effective teamwork is not just a nice-to-have element in change efforts. It's a DBM — a double-barreled must. If you're serious about change, teamwork is not an option. Independence and turf protection are the

absolute antithesis of a Change-Friendly environment. As we're reminded in the Japanese proverb, "a single arrow is easily broken, but not 10 in a bundle."

Change-Friendly Leadership Model

Managing change does not mean a narrow, lock-step approach that controls all the variables. It means setting boundaries around the chaos, challenging the status quo, and providing a deliberate and proactive process for getting from point A to point B and beyond.

The Change-Friendly protocol provides the framework. Based on the foundational behaviors of the Four Ts (Think-Friendly, Talk-Friendly, Trust-Friendly and Team-Friendly), the framework's seven mutually-reinforcing action steps bring order to the tactics required for successful change.

Step 1: Validate the Journey

Change is movement *away* from the Present. Change is movement through the Neutral Zone, a place that's neither completely old nor completely new. And change is movement *toward* a Future that promises not just something different but, hopefully, something better.

The Neutral Zone is the transition from the Present to the Future. In the Neutral Zone, people are anything but indifferent. They may feel unsafe, confused, uncertain or all of the above. This is the price of change. Because the Future is not absolutely firm and fixed, simply traveling through the Neutral Zone will help alter and redefine the Future.

Your challenge is to Validate the Journey. Every change begins with an ending. People look at the Present and try to compare it to the Future by asking countless questions all related to "What's in it for me?".

When you ask people to go from where they are to someplace else, your task is to create a vision they can understand and will be willing to embrace. Defining the Future with absolute, irrevocable certainty is rarely possible. But you should try to paint a picture of it with as much clarity as is practical.

Step 2: Scan for Speed Bumps

Resistance is a force that slows movement. It can bring change to a screeching halt. It comes in a wide variety of forms. But resistance will occur. Count on it.

Change never occurs in a vacuum, neither does resistance. Both occur in the context of real people struggling with real (or imagined) issues that have real (or imagined) consequences. The better you understand that context, the better able you are to behave and lead in a Change-Friendly way.

As you scan for speed bumps, you will sometimes notice the early warning signs of an impending storm that threatens your change effort. But you have an advantage over a meteorologist: you can actually redirect or even stop the storm. Rather than ducking for cover from resistance, you can meet it head on.

Let's consider some of the common warning signs of resistance:

Confusion. No matter how carefully you've worked to validate the journey, some people simply won't get it. It's not that they're deliberately pushing back. They just don't yet understand the implications of the change you're proposing.

Silence. Silence can be tough to handle because it's sort of like lassoing a cloud. Never assume that silence means acceptance.

Diversion. Many resisters are from the Yeahbut Tribe — "Yeah, but this won't work because ..." Diversionary tactics include scapegoating, rehashing the past, and telling victim, villain and helpless stories. Some diversions are no doubt deliberate, but many are unconscious.

Resistance is covert or overt — concealed or transparent. A critical part of a Change-Friendly environment is getting inevitable resistance out in the open so you can address it. Only when you understand people's concerns can you work to find common ground. Unless and until you make it safe to disagree, you won't have a chance of engaging people's heads, hearts and hopes.

Step 3: Chart the Course

Every good change agent needs a map that shows not only where you've been and where you're going, but keeps you well grounded in the here and now.

The chart the course step is where your planning begins to morph into implementation. To enhance your opportunity for success, it's critical that you mindfully determine the what, when and where of your beginning.

Use Multiple Influence Levers

How many times have you seen someone who's reluctant to complete a task and you chalked it up to "an attitude problem" or some other personality issue? While it's possible that the person did indeed need an attitude adjustment, it's also possible that he or she simply didn't know "how" to complete the task.

This motivation/ability dichotomy should not be viewed as a problem. It is, in fact, a solution. After all,

both motivation *and* ability are crucial in every successful change effort. Here are six levers to use:

Lever 1: Link to passions. Many people think that Lever 1 is the only factor at play. When someone fails to perform to expectation, some managers automatically assume the worker is lazy or uncaring or uncommitted. The key is to change the *meaning* of a particular expected behavior from negative to positive, from something that's a nuisance to something that's gratifying.

Lever 2: Shrink the know/do gap. To translate knowing into doing, identify and focus on the vital behaviors that produce the results you want.

Lever 3: Enlist social support. This is a key to the success of programs like Weight Watchers and Alcoholics Anonymous. Research clearly validates the advantages of social support in a business setting, too.

Lever 4: Work in concert. Synergy is one of the most powerful levers we can use in accomplishing our goals. Lever 4 is also effective in helping establish new group norms. In organizations that employ networks of learning partners, personal accountability is improved, performance is boosted and other positive change is accelerated.

Lever 5: Focus on behaviors. In organizations where personal accountability for performance is highest, behaviors are not left to chance. The key is to be precise about expectations, then promptly close the gap between observed behavior and expected behavior.

Lever 6: Make it easy. Carefully scan your work environment and honestly examine every single system — with "system" defined as a procedure, process, practice or activity. Unchallenged systems tend to produce fake work. ●

Step 4: Build a Coalition

Don't kid yourself. Change does not occur in isolation. You must Build a Coalition.

To help clarify the resources available to you, you need to know the CAST of characters:

• *Champions* are people who favor the change but lack the power to sanction it. As advocates for the change, Champions must willingly work to gain commitment and resources for it.

• *Agents* are people who plan and execute the implementation of the change, including diagnosing potential problems and addressing the problems strategically.

• *Sponsors* are the people who authorize, legitimize, and demonstrate ownership for the change. You can (and should) have different kinds of Sponsors. Authorizing Sponsors have sufficient organizational power and/or influence to initiate commitment of resources. Reinforcing Sponsors help promote the change at the "local" level. Sometimes a single person can fill both of these roles, but successful change efforts usually involve multiple Sponsors. In short, Sponsors are responsible for creating an environment that enables change to occur.

• *Targets* are people whose knowledge, assumptions, attitudes, emotions and behaviors must be altered for the change to be sustainable. Targets play a critical role in both the short- and long-term success of the change. They must be educated to understand the changes they are expected to accommodate, and they must be appropriately engaged in the implementation of the change.

Use Cascading Sponsorship

An effective coalition of players can help implement change in a corporate environment. To ensure clear communication along the way and to improve the likelihood of stakeholder engagement, the Authorizing Sponsor (likely with the help of Champions and Agents) builds a network of Reinforcing Sponsors. This cascading sponsorship is an important key to any successful change effort. It's so critical, in fact, that its absence virtually guarantees failure.

Cascading sponsorship develops and maintains an infrastructure of people who continue to reinforce the integrity (business case and psychological case for action) of the change.

In your Build a Coalition work, literally create a "map" of your coalition showing each of the key members of your CAST of characters. A visual representation of roles and relationships is much easier to work with than a mere list of people. Remember that your coalition must be constantly monitored and managed. ●

Step 5: Ford the Streams

Smart change agents carefully navigate the currents of organizational change. And when the currents aren't going their way, they Ford the Streams.

In a 2011 study of multiple industries around the globe, Booz & Company concluded that "there may be no more critical source of business success or failure than a company's culture — it trumps strategy and leadership." This isn't to suggest that strategy doesn't matter, the researchers said, "but rather that the particular strategy a company employs will succeed only if it is supported by the appropriate cultural attributes."

Cultural awareness is critical for leaders. Leaders who fail to become explicitly conscious of the cultures in which they operate have no hope of "managing" their cultures. The cultures will manage the leaders.

In this world of subcultures, it makes sense to Ford the Stream rather than try to re-channel the entire river. Work for cultural alignment rather than absolute cultural integration. In most change efforts, it's much easier to draw on the strengths of the subcultures than to invest what is often fruitless energy in trying to change the subcultures. A good approach is first to agree on values.

Culture is your organization's operating system. Tend to your culture with tender-loving care and it will help you and your people get the outcomes you're after.

Diagnostics That Count

Just as a good physician gathers diagnostic data on your health condition before prescribing a remedy, so should you collect pertinent data on your culture before introducing adjustments in alignment. Solid diagnostics can help you discover and understand what's really going on.

In addition to an overall culture assessment with appropriate demographic breakouts, use 360-degree performance feedback. A good 360-degree tool provides individuals with personalized, specific data. It compares the individual's own views about his or her behaviors and performance with the views that others have of him or her. ●

Step 6: Stay on Message

Too many so-called leaders buy into the myth that simply sending a message will produce the result they want. That single mistake is at the root of most challenges with change efforts.

Change-Friendly leaders get very clear on what, how and when they want to communicate. Then they Stay on Message.

You must implement a thoughtful reinforcement system. If you can remember the word PICNIC, you'll have a helpful set of guidelines at your disposal. Reinforcement for new, desired behavior should be Positive, Immediate, and Certain. Reinforcement of old, undesired behavior should be Negative, Immediate and Certain. If people in your organization have a "this, too, shall pass" mentality about change, the PICNIC approach can help bring them around to the reality that this change is not going away. ●

Step 7: Mind the Gap

My young grandson, Duncan, loves the family trips to England and Scotland. On his first trip, he especially liked the recorded safety message played loudly as passengers stepped on and off the train: "Mind the gap!" It's also an appropriate safety reminder in managing change. After all, minding the gap is what change is all about.

The Change-Friendly leadership framework, though presented in a linear fashion, is intended for use in a flexible and fluid way. Consider this metaphor: If you were flying a plane cross country or driving a car across town, you'd likely plan a specific route. But when faced with an unexpected headwind or traffic jam, you'd make necessary course corrections. Leading in an atmosphere of change requires course corrections.

Personal behaviors, and the cultures they produce, tend to be somewhat elastic. It's sometimes easy to snap back into a previous habit or behavior. Even the most attentive performer can have an occasional relapse. Consequently, Mind the Gap work must be both personal and institutional. Individuals must be given systems and processes to help them stay on course. And the organization must provide an atmosphere that constantly reinforces the behaviors that produce the desired outcomes. Culture building is not like installing a new air conditioning system. It requires constant vigilance.

Explore, Discover, Explore

Leadership does not require a title. Many people who provide the uplifting and encouraging influence of true leadership do so without authority or position. Change-Friendly leadership is not about ordering people around. It's about engaging people's heads, hearts, and hopes. Don't diminish the importance of this by calling it "soft stuff." Appropriate engagement of people is absolutely essential to success with all the "hard stuff" of organizational performance. And it must never end. There are brief stopping off points along the way, but it's a journey, not a destination. ●

THE SUMMARY IN BRIEF

When promoted, those filling new leadership positions are often caught off guard. There are a lot of new responsibilities that come with this type of role, and the best way to navigate them is by using a solid strategy – but what if you don't have one?

Holding a leadership role requires an individual to have agility when navigating a range of changing altitudes, like ability and insight. In ***Changing Altitude: How to Soar in Your New Leadership Role*** by Dennis O'Neil & Greg Hiebert, those entering these positions can learn strategies that focus on three important key elements – yourself, your people, and your environment. Both O'Neil and Hiebert dive deep into these key elements, teaching how to achieve deeper growth, understanding, and success in each of these areas.

IN THIS SUMMARY, YOU WILL LEARN:

- Strategies to build the leadership framework that will help you soar and navigate through the different altitudes of your newfound responsibility.
- The way that leadership characteristics can influence your journey, how accepting feedback can help you improve, and what your optimal altitude is so that you are performing at your best.
- How your people often share the same collective value that you do, and how to use positive communication techniques within your strategies.
- The best way to get to know your new environment and why leading paradoxically is especially important, even in crisis management situations.

Introduction

Sometimes all it takes is a conversation to give you a different perspective on a subject. The concept of changing altitudes in leadership began while sitting on the last plane out of Miami. Talking to a fellow passenger named Rebecca, who was reading Jim Collins' bestseller, *Good to Great*, it is found that she had recently been promoted to a director position at a data analytics firm. In her previous role (manager), she felt confident, knew what she was doing, and the employees under her trusted her. However, in her new role, she described the feeling: "My head is swirling with everything I'm responsible for. Honestly, I've begun to significantly doubt my ability to do this job. I miss my old life when I was just a manager."

As a leader, you are responsible for yourself, your people, and your environment – and it is all a process that you learn to navigate when changing altitude. Like many other industry promotions, the change in altitude can be hard to navigate without context and guidance. When it comes to changing your attitude, use this mindset: you have to weather the storm, get out of the clouds, and gain a deeper understanding of growth and success in all that you do.

Part One: You

Know Thyself

The first step of creating a legacy of effective leadership – "know thyself." Self-awareness is a key factor in establishing great leadership characteristics within ourselves. By being self-aware, we are more objective and become more effective. Those with the highest levels of self-awareness are more capable of being creative and adapting to whatever gets thrown at them. As we gain confidence in ourselves, we are more likely to motivate and empower others – which is critical when flying at a higher management level.

The Seven Critical Characteristics of Leadership

If you want to get honest about yourself as a leader, you have to examine yourself to see if you are exhibiting the characteristics of a leader. You can assess yourself at any time during your journey, but at some point, you have to take a long hard look at yourself about your strengths and weaknesses. That is what the seven critical characteristics of leadership are – do you have them, or do you need to work to gain them?

1. Inspiring Engagement
2. Advocating for Experience
3. Planning and Implementing
4. Driving for Results
5. Leading Change and Innovation
6. Influencing Others
7. Practicing Teamwork and Collaboration

When you put all of these characteristics together, you get the ideal leader. You have to go through each of these and assign "strength" or "weakness" – only then will you know exactly which ones you need to work on to become a better leader.

The Importance of Feedback

One of the best ways to increase self-awareness is feedback. There are a few different ways to gain feedback, including the 360-Assessment tool. This assessment tool can help spotlight the areas for growth and give you a deeper understanding of the areas where you consistently excel. You can consider having anyone who works on projects with you complete an after-action report to let you know how you are doing or work with a specialized manager/coach who can guide you in the most efficient leadership ways.

Flying at Optimal Altitude

Changing altitude can result in downward and upward spirals. That is why self-care is of the utmost importance anytime you are changing altitudes. In fact, the recommendation is spreading about 60 minutes of self-care throughout your day. Try referencing The Powers of Full Engagement by Tony Schwartz and Jim Loehr, which offers four crucial areas for optimal performance.

These include:

1. Physical Wellbeing
2. Mental Wellbeing
3. Emotional Wellbeing
4. Spiritual Wellbeing

When these are addressed, you find yourself feeling more aligned, focused, connected, and energized. We believe that self-care strategies and important and share how it helps to remain level at any altitude.

Part Two: Your People

Form and Live Collective Values

Here we have the story of Jaclyn and Hussein – a Director of Marketing who befriended a single father, offered him a job, and the relationship turned into a romantic one. Hussein was soon the center of favoritism, which damaged the entire working relationship between Jaclyn and her team. The team soon lost respect for her and did not trust her as their leader.

The restoration process begins by implementing a team covenant – everyone would know what was expected from one another. This included Jaclyn. This "contract" brought about a "reset" for the team, as well as Jaclyn. Using the covenant you build with your team, you can change the entire dynamic. Even though leadership and team respect take work, Jaclyn worked hard and had restored a lot of her teams' confidence by the six-month mark. Having and forming collective values with your subordinates shows them how much they matter and that you are willing to earn their respect as a leader – even if you have some leadership skills to work on.

Communication

Communication goes beyond what you say; it also incorporates how you think. You might think you communicate something to an employee clearly, but their actions show that they got the wrong idea about what you were talking about. This miscommunication can happen because you were not incorporating how you think into your communication with that employee.

Your thinking forms how you interpret another person. You bring this interpretation to the conversation – which can shift how the conversation is interpreted by your employee. Do they get the vibe that you are interested in or that you find them incompetent? The way you listen only drives this point home. Are you actively listening to what they have to say, or does it look as if you would rather be anywhere else but there? You are setting the tone for the connections you make with your employees – this includes the body language you are putting out there. You want your employees to feel like it is safe to communicate with you as a boss.

Leading Change and Exerting Influence

Being a leader is more than just wielding the "leader" title. Leadership influences the behavior of those around you so that goals are accomplished and positive outcomes are realized. Effective leaders get people to go with them, not against them, when trying to achieve positive outcomes in the workplace. When projects get more complicated, it requires the use of different skills – skills that may not have been utilized in the past. As the leader, you need to be the one to drive this change and show (using influence) that these are for the better and not for the worse.

Empowering Others

True leadership requires you to utilize the strengths of others around you. The example that is used here is Shannon. Shannon was an exceptional worker, great in everything she did. When promoted, she still continued doing everyone else's jobs – rarely delegating tasks. On the rare occasion she would delegate tasks, she ridiculed her employees, letting them know that they did not do it the way she would have done it. As a result of her actions, her employees felt reigned in, distrusted, and devalued.

To be an effective leader, Shannon has to take a long look in the mirror – she isn't empowering those around her; instead, she is stripping them of their confidence. Effective leaders know how to empower those around them. While complicated to do, the consequences of not delegating and empowering employees to fulfill their roles can be devastating to the leader's mental, physical, and emotional health.

Part Three: Your Environment

Understanding The Environment

There is constant change in the world around us – but the recent influx of technological advances has sped up this process. Throw in a crisis with all this change occurring, and you are bound to end up feeling like you are flat on your face. Agility is the key for an effective leader to navigate the environment they are in. They read the cues brought to them by their environment and adapt to it, creating solutions that allow them to navigate the altitude they are soaring safely. Leaders must always anticipate the future if they want to stay ahead – effective leadership is about changing the present to correspond with what the future will throw at you. We've identified five steps to help our clients analyze their environment and identify their clear next steps:

1. What is going on in the environment?
2. What do we want the end state to look like?
3. Where do we act?
4. How do we act to achieve our desired state?
5. What are the resources we require?

When using these as a foundation to address change in your environment, effective leaders can form a strategy that works for everyone involved.

Conflict Management

Put simply – conflicts happen. Even as an effective leader, there is very little you can do to stop conflict from occurring. Conflicts don't always have to be fighting or strong disagreement; in fact, many times, it is only a difference of opinion or perspective. In most circumstances, when conflicts turn out badly, it is because the situation was handled poorly, to begin with. An effective leader doesn't pick a side, but rather listens to both sides of the conflict – essentially gaining an understanding of the problem.

Paradoxical Leadership

Here you find ten leadership paradoxes. A paradox is defined as the co-existence of two things that should not be able to co-exist logically. These are the ten we want to bring your attention as a leader:

1. The Stockdale Paradox – maintaining unwavering faith that you can (and will) prevail in the end regardless of the difficulties you face
2. Quinn's Competing Values Framework – Do things fast and do them right.
3. Collins' Level Five Leadership – Balance professional hunger with humility.
4. Be flexible and rigid.
5. Be soft and hard.
6. Hold on to your vision, but know when to change your mind.
7. Be engaging and reserved.
8. Be humble and confident.
9. Be decisive and discerning.
10. Be accommodating and directing.

The idea is that paradoxical leadership is not easy, nor should it be. Leaders who find the entire process easy are likely not doing it right.

Conclusion

We've sought to provide you with the essential tools you need to successfully change altitude. Every situation, every individual, and every organization is different. Without a framework and process to reference, leaders can find themselves flying blind. We hope that the tools and principles we have shared provide you with the means to be a more effective, profound, and capable leader. We hope these evidence-based strategies give you a richness to draw from and will serve as powerful upward drafts. Ultimately, we hope they will lead you to soar.

Dennis O'Neil has decades of applied leadership and teaching experience as an executive coach with leadershipForward, a professor of strategic leadership, and a trusted advisor to CEOs, public and non-profit boards, senior government and military officials, and multinational organizations.

Greg Hiebert is the co-founder of leadershipForward and bestselling author of *You Can't Give What You Don't Have*. He's served as a leader and mentor for organizations like the United States Military Academy, the United States Army, McKinsey & Company, and the Yale School of Management.

Choosing Change

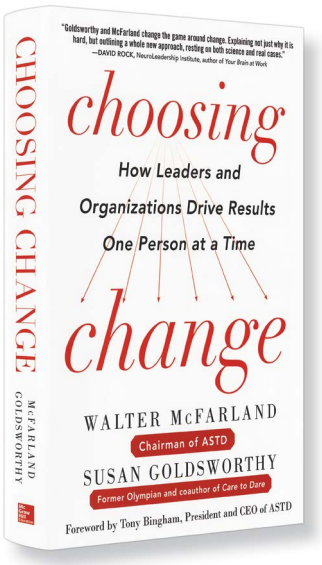
How Leaders and Organizations Drive Results One Person at a Time



by Walter McFarland and Susan Goldsworthy

THE SUMMARY IN BRIEF

If there's one certainty in business today, it's this: Change is coming your way. You have no choice in the matter. The choice you do have is either to embrace it or bury your head in the sand.

In *Choosing Change*, ASTD Chairman Walter McFarland and leadership executive coach Susan Goldsworthy offer a proven new model for not just facing inevitable change but leveraging it as a tool for long-term success. The first step is personal: You must decide that you are going to change; only then can you lead change. From there, the authors present the tactics and strategies you need to compete today.

Organized into two thematic sections, *Choosing Change* takes you step-by-step through the authors' dynamic model for leading any company to success. Part I explains how to apply the newest research findings in psychology, neuroscience and executive development to implement change in yourself. Part II focuses on organizational theory, management and organizational learning, showing you how to integrate change into your organizational DNA.

If you want to survive and flourish in today's business world, you must be prepared to adapt to changing marketplace circumstances. Sudden changes in markets, society and the economy have ruined industry-leading companies overnight — because they weren't change-focused.

Don't be one of them. Lead yourself and your organization to the top — and stay there — by *Choosing Change*.

IN THIS SUMMARY, YOU WILL LEARN:

- The Five Ds of the successful change process: Disruption, Desire, Discipline, Determination and Development.
- How to apply key findings from the field of neuroscience to maximize the success of any revolutionary change effort.
- How to implement a successful revolutionary change in yourself and in your organization.

Introduction: The Choice of Choosing Change

Change is a natural part of life, so why is change so hard for people and organizations? We believe the reason lies in the fundamental approach to change taken by both individuals and organizations. In today's business world, change readiness occurs only at the moment of revolutionary change, when the threat is great and the fear is building.

We propose a different model — one that sees change as part of daily practice. And it starts with you. Why? If you want to lead others to change, you need to first be open to change yourself. So the change we're discussing is triggered by the leadership of oneself *and* an organization; it leads to putting new approaches and processes in place to achieve a goal, or growth of some sort, that has consequences and implications for everyone involved.

We use a framework called the Five Ds to compare the key elements to be aware of during both individual and organizational change.

- **Disruption:** This relates to an event or experience that triggers a conscious choice to change. The disruption creates an awareness of something that might require attention and creates a case for change.
- **Desire:** What exactly does the person or organization want to achieve; does it believe in the possibility, and how serious is it about making the change happen?
- **Discipline:** Applying those small, consistent and frequent steps required to build the momentum that delivers sustainable change. Discipline is essential in order to manage the many demands of life and to keep pressure on the processes of change.
- **Determination:** Having the resilience to focus and deliver even when faced with setbacks. Determination is a necessary requirement because any major program of change will create resistance and will have setbacks.
- **Development:** Continuous improvement, feedback and ongoing learning for the individual and for the organization.

Neuroscience and Change

An important part of implementing change is understanding how your brain works. The brain is focused on survival. For most of human history, the brain saw survival as *physical* survival — life and death. Recent research indicates that in modern times, the brain also sees survival as *social* survival.

From long experience, the brain has learned that even minor changes in the environment can mean the difference between life and death. For this reason, the brain views environmental changes with profound suspicion. Change often triggers responses in the brain similar to those triggered by physical pain.

The brain has evolved specialized systems to quickly detect and react to changes in its environment. Key ones include

- **Working memory:** This is the brain's initial holding area for new perceptions and ideas, and is associated

Rebecca S. Clement, Publisher; **Sarah T. Dayton**, Editor in Chief; **Ashleigh Imus**, Senior Editor; **Amanda Langen**, Graphic Designer; **Corbin Collins**, Contributing Editor

with the prefrontal cortex. The challenge is that working memory is quite limited — we can't process very much information at any one time. Because change efforts require a greater use of working memory, they can overwhelm it, causing physical discomfort and reducing the brain's capacity for learning, creativity and adaptability.

- **Long-term memory:** This is held in the brain's basal ganglia, which doesn't tire like the prefrontal cortex. We use this region for physical habits and activities we can do without thinking. Change requires the difficult work of changing habits — something the basal ganglia actively resist.
- **Error detection:** The brain's focus on survival causes it to continuously scan the environment (up to five times per second) for "errors"— unexpected changes in the environment. Change efforts can generate error signals, which can trigger a fear response.
- **Fear response:** This is the brain's fight, flight or freeze reaction to perceived danger. Once triggered, it is the most extreme resistance to change possible.

Change efforts can threaten multiple systems in the brain (many of which are not conscious), eliciting behaviors to avoid and/or actively resist the change effort. This is why it is vital to apply knowledge of how our brains work in focusing on change at both the individual and organizational levels.

Part I: The Change-Focused Leader

Disruption: What Conscious Choice Will You Make?

Before we choose to initiate a change, our thinking needs to be disrupted in some way, usually by an external event. The essence of a disruption that enables change lies in asking yourself the question, "Can I afford to ignore this?" Controlled change requires a conscious choice triggered by an external event that gains your attention; one that makes you reflect, stop and think; one that disrupts your normal course of thinking or action.

Brain research shows that for every move you make, you have 0.2 seconds in which you can actively, consciously intervene in the process and choose a different response. But it takes considerable energy and attention to leverage that 0.2-second choice point. If you do not have an awareness of your choice point, your habitual response will play out like a prerecorded program. So, it becomes vital for you to catch yourself in the process of making a habitual response so that you can exercise your choice point.

Habits have a three-step loop: cue, routine and reward. The cue is the trigger that tells the brain to go into automatic mode and follow a particular habit. The routine can be physical, mental or emotional. The reward helps your brain work out whether the routine is worth remembering in the future. Unless you deliberately fight a habit or replace it by finding new routines, the pattern will unfold automatically.

You must become attuned to how you are feeling and how your body is responding. Catch your cues — notice them and write them down. The more aware you can become, the more you are able to exercise your choice point at the opportune moment, and the more you are then able to change your behavior.

Desire: What Do You Really Want to Change?

Desire is the bridge between your dream and your reality. After disruption has occurred — whether it is a crisis moment in your personal life or your professional performance — you may experience an awareness that perhaps you could do something differently. The disruption shakes you, but you still have the ability to retreat back into the safety of a comfort zone. This is why the second step, desire, is so important. The essence of the desire for change lies in asking yourself, "Do I really want to apply the focus necessary to make a change or not?" If the desire is not there, then any energy expended is likely to be a waste of time.

To adapt to and drive your role in making your desired change, you need to see the difference between a "wish," which indicates a certain lack of empowerment or engagement with the goal, and a "want," which is driven by a deep consciousness of your needs and goals. A want more closely aligns your head with the desires of your heart in a way that resonates with you. The desire then translates into a belief that its achievement is possible.

Understanding Your Beliefs

Your identification of your wants — the sustainable goals that will carry you through a major change initiative — can be strengthened by doing an inventory of the beliefs you have about yourself. Consider the following questions:

- **Core belief:** If all else failed and you lost everything that is dear to you, what one truth do you believe to be true about yourself?

- **Secure bases:** Who are the people who can both support and challenge you and who have your best interests at heart? How are you engaging your secure bases in pursuing your goal?
- **Empowering beliefs:** What are your strengths — the things you know you are good at?
- **Limiting beliefs:** What are the negative things you believe about yourself — the things embodied in your critical self-talk?
- **Personal statement:** Write a sentence in the present tense about the person you want to be when you've achieved your goal.
- **Vision:** What is your desire, your goal? And what are the key actions and timelines associated with it?

Taming Your Inner Critic

To complete the process of defining and owning your desire for change, you'll need to confront your inner critic, that mental voice that raises doubts about your ability to achieve your goal by reminding you how you have failed in the past or how unlikely it is that you will succeed.

Identifying the voice of your inner critic, naming the emotion, and then separating and isolating the thought that comes from the critic is a way of managing negative thinking. By labeling your negative emotions in a few words, ideally using symbolic language, you can actually reduce the intensity of those emotions.

Using visualization is another way to tame your inner critic. Visualization is the process of creating a mental picture of what you want to achieve. It works best when you use as many of the senses as possible. The more you repeat it, the more you can train your mind and body to perform in the way you have imagined.

Your Goals Need STAMINA

To increase your chances of success, it is important that you frame your desire and make sure that your goal has STAMINA — that is, specific, time-stamped, achievable, measurable, inspiring, narratable and actionable. Your goal needs to be specific and as descriptive and detailed as possible. You need to be clear about the time frame within which you want to achieve the goal. It must be achievable — it can certainly be a stretch goal, but it should also be feasible. You need to make it measurable, meaning that you know the stages and milestones along the way. It has to be inspiring; it is important that you gain energy just by thinking about your goal. Make it narratable: What is the story that you can tell yourself and others in relation to the goal? It must be actionable. Ask yourself every day, "What can I do today to work on my goal?"

Discipline: What Are Your Small Steps to Big Success?

Our desire may be clear, but applying the necessary discipline takes energy, focus and considerable effort. Many of us start an initiative but stop when we find it too difficult to sustain the effort. Discipline involves habitual behavior, developing willpower, looking after your mind and body, and practicing mindfulness.

When change is involved, the essence of discipline lies in asking yourself the question, "What can I commit to do on a daily basis to achieve my goals?"

Taking Small Steps to Success

Learning the discipline required to make change work for you is first about taking small steps. Every day, you have the opportunity to do something that brings you closer to your goal. These small steps build day after day, week after week, month after month, until they become habits. Developing momentum is a critical aspect of successful change at both the individual and the organizational levels. Every small win that you achieve builds up your confidence that greater goals are reachable.

If you train yourself to implement different routines, you will see a gradual and sustained change result. When you repeat something over and over, you can potentially replace an old habit with a new one. The more you can create rituals that make your actions into routines, the greater your chance of success. Turn those things that you do every, day no matter what, into nonnegotiable actions.

The Discipline of a Healthy Body and a Healthy Mind

Diet, exercise and sleep are the three key practices that deliver immediate improvement in the performance of your brain, thereby helping you to have more discipline during any type of change. To perform at your best, you need to be disciplined in these three basic areas.

Leaders who wish to develop in the area of discipline and in other areas linked to self-awareness are strongly encouraged to consider mindfulness. Mindfulness is defined as awareness of one's present thoughts, emotions and actions. "Here and now" awareness contributes to mindfulness by liberating mental energy and allowing you to pay heed to your immediate experience in the moment when it happens. Mindfulness is a proven way of reducing stress and providing significant benefits.

Determination: How Can You Embrace the Setbacks?

Setbacks will happen, and when they do, you need to have *determination*, defined as "firmness of purpose; resoluteness." The essence of determination lies in asking yourself, "How will I deal with setbacks and failure?" Rejection is part of the game — you need to view it as feedback and learn not to take it personally.

Resilience, the ability to recover quickly from change or misfortune, is an essential ingredient of determination. It is about accepting the reality, learning from it, and moving on from the setback. Working to improve your own resilience involves gaining awareness of where you are today, intervening in your daily routines and habits to make a change, and getting the necessary support from others.

Managing Transitions

Change is about dealing with transitions successfully. Transition is all about letting go of somebody or something and entering a period where we allow confusion and potential chaos to be before preparing to let something new or different come in the future. The mantra of "let go, let be and let come," is most helpful in dealing with transition difficulties. When you let go of an old habit or an old way of thinking, you create space and release energy for something new to come.

Development: How Will You Keep Growing and Who Will Help You?

The essence of development for change lies in asking, "How can I continually learn and grow?" Adopting a mindset of continuous improvement is the best way to maximize your potential for continuous success.

There are several thinking skills and behaviors you must develop if you are to strengthen this frame of mind and apply it to leadership and to life. These include knowing when to go back and practice the basics and knowing how to let go of perfectionism, maintain humility, align intention with impact, give and receive nonthreatening feedback, and seek out secure bases that challenge you and hold you accountable.

For people who have been successful in one field, it can be difficult to let go, go back to the beginning, and become successful in a different walk of life. However, if they apply the learning that made them successful the first time around, are willing to go back to basics and can work with the Five Ds, they can enjoy success again.

When you pursue a life of continuous learning and development, you open up to opportunities and never quite know where the path may take you.

The learning person demonstrates self-knowledge, self-acceptance, self-respect, autonomy, and the seeking of both solitude and company. With self-knowledge, you are able to assess your own abilities, aptitudes and motives realistically. With self-acceptance, you are able to affirm the essential validity of your own being or reality and recognize and acknowledge your own feelings and reactions. With self-respect, you are able to think well of yourself regardless of your particular achievements or possessions, and you feel adequate, lovable, acceptable and worthy. With autonomy, you are able to accept your own need for others, but you are also emotionally independent, believing that you have the emotional resources needed to handle life's opportunities and crises. Finally, when you seek both solitude and company, you are willing to spend time alone and also with others.

Having Secure Bases to Support You

You cannot see yourself as others do. We all have blind spots, and we require feedback from others to become aware of them, particularly during major change events, when the pressure is greater. Secure bases can tell you things you may not want to hear, but because of the strength of the bond between you, you will listen to them and even act upon their advice, no matter how reluctant you are. Find secure bases who can support, stretch and challenge you in the achievement of your goals.

Part II: The Change-Focused Organization

Disruption: Balancing Challenge and Opportunity

The ways in which organizations experience disruptions are both similar to and different from the ways in which people experience them. Organizations experience disruption differently because of the intensity of 21st century competition. Organizations in many industries are experiencing more competitive disruptions and view these as real threats to their survival.

A disruption can elicit great performance improvements in both people and organizations. The disorienting effects of disruption can trigger the deep reflection and changes in perspective that are required for leaps in learning and performance. To lead change in yourself, you must choose

to *act* on a disruption — to use it for personal growth. To lead change in your organization, the choice is not *whether* you will act on a disruption, but *how.* Your first step is to quickly and effectively reframe the competitive disruption as the opportunity it can become.

Competitive Disruption and Revolutionary Change

Competitive disruptions are periodic occurrences that are unexpected and so significant that they threaten the very existence of the organization. Because competitive disruptions threaten survival, organizations take them seriously and often respond with large-scale change efforts that we refer to as revolutionary change. The goal of the revolutionary change effort is to quickly and effectively address performance gaps and make the organization more competitive.

The initial steps of leading revolutionary change are about refocusing your organization away from the fear and uncertainty of competitive disruption to the opportunities it always brings by taking fast and considered action. Here are some recommendations.

- **Create a guiding philosophy:** The guiding philosophy, a sort of "core values" for organizational change, works best when it is created by the senior executive team in close collaboration with the workforce. Build an organization-wide consensus on what great organizational change is and how it is implemented. The guiding philosophy should inform every decision in managing revolutionary change.
- **Establish a change leadership council:** Quickly creating a high-level management structure to lead and oversee the change effort is a critical first step. The change leadership council defines the nature and scope of the change effort and sets goals that are in line with organizational strategy.
- **Formulate a change strategy:** A great change strategy is brief, clear and inspirational. It helps build desire for the revolutionary change by increasing organization-wide understanding of the change effort, why it is important, and how it will unfold. Formulating the change strategy is a great opportunity to involve the workforce.
- **Initiate communication:** Executives we interviewed underscored the importance of great communications in the early stages of change, when anxiety and confusion are highest. Communications should begin as soon as possible, focus on informing and integrating the change effort, and be frequent, detailed and personal.

Desire: Building Motivation to Change

Making deep changes in yourself requires transforming a wish into a more powerful "want." You must choose to build in yourself a desire that is strong enough and sustainable enough to fuel real change. At the organizational level, your ability to build a strong and sustainable desire is also essential if you are to achieve real change.

Building the Desire for Change

We recommend three actions for building strong desire in your team and your workforce during revolutionary change:

1. Shape the environment during change: Your actions can help your team and workforce reframe the change effort from something to avoid to something to approach. Model appropriate behavior. No matter what happens, stay calm, focused and positive. Provide insight and context to help your team members interpret change-related events positively as they occur.

2. Develop people during change: When you focus on developing your people, every part of the change effort gets easier: Your team members handle the disruption better; they contribute more; and they find it easier to build and sustain the desire for change. Involve people immediately; train them to be proactive and adaptable; make development personal; celebrate success and reward performance, and focus on a higher purpose.

3. Create an organization-wide communications strategy: Make it transparent and objective; it should inform, enable, integrate and celebrate the change effort. It should not attempt to coerce or persuade. The strategy should be comprehensive, consistent and inclusive and should use every means available to ensure that every person in the organization is reached. Align the communications strategy with the change strategy. Ideas should be shared and openly recognized.

Your ability to actively shape the organizational environment makes revolutionary change less threatening to the brain. This enables improved thinking and builds a desire for change.

Discipline: Coordinating Energy, Focus and Effort

Achieving discipline for organizations requires you to coordinate the energy, focus and effort of many people over time. Without discipline, revolutionary change efforts fail to sustain the desire necessary for true organizational

change. When this happens, the organization, like the individual, reverts to a former familiar state, and change fails.

One reason for the inability of modern organizations to sustain desire is the continued and/or unexpected resistance of stakeholders. Another is the arrival of new high-priority problems that divert attention and resources. A third reason is poor management of the change effort. Building the management structures that are needed to develop and sustain discipline is about experimentation, persistence and insight. You must ensure that you have the right balance between control and flexibility to achieve lasting change.

Building and Sustaining Discipline

We recommend taking the following actions to create a great management structure for revolutionary change:

- **Establish a change implementation team:** This team is created by the executive change leadership council and reports to the council. The team has two primary purposes: creating the change implementation plan and using it to guide the day-to-day implementation of the change effort. The team coordinates and integrates all change-related activities across the organization.
- **Create a change implementation plan:** The plan has an overriding purpose: to provide the organization with a clear road map for the change effort. It has at least five benefits: it focuses attention on the change effort, builds understanding and clarity, builds participation and collaboration across the organization, improves performance, and balances control and flexibility.
- **Build a cadre of change leaders:** Perhaps the most important consideration in leading successful change is building a cadre of change leaders that is optimized for your organization. Great leaders enable an organization to perform change efforts better, faster and with fewer resources. Change leaders quickly reframe disruption as opportunity, build and sustain the desire for change, provide additional discipline and determination, and actively enhance the development of people, teams and the organization.

Great change leaders are proven business executives. They understand the organization, including its core business and operating model. Successful executives understand the organization's culture and how to navigate successfully within it. They have developed important relationships and trust across the organization. Great change leaders balance the technical, political and developmental aspects of leading change. They also shape the organizational environment during change and create a balance between control and flexibility.

Identifying and Integrating a Change Leadership Competency

It is the job of your organization to define a change leadership competency tailored to meet its own vision of great organizational change. The following steps provide a general guideline for formally identifying an organization-specific competency for leading change and integrating it into the overall leadership model:

- **Work with HR to define a new, organization-specific competency for leading change:** A small team of HR professionals can define this competency, ensure that it is valid, reliable and defensible, and create a development program in two or three months. The new competency should be defined for every leadership level.
- **Integrate the new competency into your organization's overall leadership model:** This means integrating the new competency "leading change" into your organization's overall definition of leadership. Adding the leadership of change to the model tells everyone that this is a priority. It says that leading change isn't something special or separate but is an integral part of leadership in your organization.
- **Identify development actions, and integrate them into your overall leadership development program:** Everyone who's seeking advancement in the leadership ranks should be required to have development and experience in leading change.
- **Modify the performance management system so that leaders are formally assessed on their performance in leading change:** Make their performance in this area a factor in their advancement. A leader's performance in organizational change efforts should inform decisions on compensation and advancement. In this way, the importance of leading great change becomes increasingly understood. Over time, these actions help to embed the leadership of change into your organization's culture.

Determination: Coping with Setbacks

Setbacks are so common during organizational change that we have invented a "best practice" when consulting on large-scale change efforts. Before the change effort begins, we advise our clients to prepare themselves in two ways:

- Build the change intervention in a way that anticipates setbacks and plans for them in advance.

- Understand that no matter how good your advance planning is, you will experience setbacks.

Expect setbacks, and commit to the determination to push through them. Your goal is not merely to push through setbacks but to recognize and exploit the opportunities that they provide.

The Nature of Setbacks

Two types of setbacks are *typical setbacks* and *derailers*. Both are important, but the approaches for managing them are quite different. *Typical setbacks* are routine occurrences that affect the performance of change efforts. By *routine*, we mean things that often occur during change efforts and therefore can be anticipated. Examples include

- **Reduced priority of the change effort over time:** New business issues and other distractions begin to challenge the effort for priority. When the priority of a revolutionary change effort begins to fall, the effort is in jeopardy, and you must act.
- **Loss of vision:** The organization loses sight of its vision for the change effort over time. If the reason for enduring discomfort is lost, reverting to old behavior is an easy way for the brain to stop the discomfort. Successful change demands that the vision stay strong over time.
- **Senior leadership conflict and/or "stonewalling":** One manifestation of this occurs when leaders become defensive and/or try to minimize the effect of the change effort on their business unit or function. This often occurs when insufficient effort was invested in building senior leadership consensus and/or when the CEO and the top management team are not directly engaged in the change effort.
- **Inconsistent and/or ineffective change leadership:** Some change leaders foster high levels of performance and collaboration, but others foster the opposite effects. It makes great sense to build a cadre of change leaders before change is necessary.

We define *derailers* as unexpected occurrences that threaten the success of revolutionary change efforts. Derailers arise from the growing complexity of the competitive environment: increasing globalization, unprecedented competition, more or different stakeholders, economic uncertainty, energy constraints, resource scarcity and political instability.

Managing derailers in a volatile, uncertain, complex and ambiguous environment is a difficult task for any organization. Even so, two things will help: improving your organization's ability to "sense" its competitive environment and creating an internal environment in your organization that is optimized for continuous change.

Managing setbacks effectively involves reducing or eliminating their adverse effects and exploiting the opportunities they provide. We recommend four actions: anticipate typical setbacks, improve environmental sensing, continually optimize the organizational environment, and manage your determination.

Development: Learning Continuously About Change

Change leaders must embrace and focus on coordinating the development of individuals, teams and the organization as an integrated system. The primary goal of this system is to develop the ability to constantly carry out organizational change better.

Developing your organization's ability to continuously improve organizational change is about learning. Enabling learning in individuals, teams and the whole organization is the key role for you as a change leader. Three actions are important in accomplishing this:

- **Enable learning in people:** Act as a coach and a mentor, providing important context and perspective. Your focus is on creating an environment that is conducive to learning about change.
- **Enable learning in teams:** Act as a facilitator, focusing on drawing out and using the best thinking of teams.
- **Enable organization-wide learning:** Act as an integrator, focusing on building the structures and processes needed to share and use learning across the organization.

Our recommendations complement two of the foundational competencies of a change-focused organization: *develop people constantly, and ensure organization-wide learning.* Without learning, there is no sustainable change.

Your role as a change leader can accelerate the learning of people, teams and your whole organization on how to constantly perform organizational change better.

THE SUMMARY IN BRIEF

Do you remember having a really good conversation? What made it so good? Some people just seem so naturally gifted in conversations; they make you feel understood, appreciated, or perhaps encouraged and valued. What stories do you live with? What stories frequently make your mind their abode? What occupies your heart-space? Habits of our heart give ears to the stories that enter our lives, and habits of our mind give voice to the stories we echo. Sometimes these stories hurt, sometimes they heal. These questions launched Haesun Moon's decade-long quest as a communication scientist to research how coaching conversations work.

Based on the thousands of hours of research that earned Moon a doctorate degree, she describes in her book, ***Coaching A to Z,*** how storying together may begin with simply using our ordinary words in extraordinary ways. It could be as easy as ABC! is the exuberant hope behind this book—that you will begin conversing with yourself and others differently as a result.

IN THIS SUMMARY, YOU WILL LEARN:

- Good questions invite stories.
- Getting to "why" can motivate "how."
- Care undergirds cure.
- Coaching conversations reveal hope.

A to E

Already

At the heart of every coaching conversation resides an inquiry about what people want. The role of a good coach, guide, and listener in any dialogue is not to cheerlead the conversation partners with you're-almost-there messages, but to invite them to remember what they're already doing to move in that direction.

Becoming

As you sit with others in conversation, how do you respond to their hopes and dreams? As they share their preferred ways of doing their life, do your assumptions get in the way of believing that they are already well on their way? As they dream themselves into existence, in what ways do you witness and acknowledge their becoming? This "radical acceptance" of believing in the other's becoming is not just for professional coaches; it's the very glue that mends and bonds relations.

Care

Coaching involves curating stories of purpose, possibilities, and progress. "Curate" comes from the Latin noun cura, meaning care. What you are curious about will orient your conversation partner's attention accordingly. With coaching, you are inviting them on a quest to discover what they care about and what makes their heart sing.

Difference

When you listen to people daydream, what if you believe their daydreams? Based on what your conversation partner says they want to be different, you can follow the trail by asking more about the very difference those small differences might make. For example: "Suppose your family somehow changed. What difference would that make for you?" "Suppose you made a different choice. What might that do for you?" You might be surprised to see how quickly people get to what they truly care about, just by your listening differently.

Else

Many people search for the one right answer: parents second-guessing their parenting choices, leaders doubting their decisions, people searching for meaningful work. What do you say to someone looking for an answer to be either right or wrong? These curiosities invite various perspectives. "What else tells you that you're moving in the right direction?" "Who else knows and appreciates your heart for people?" "When else have you felt it?"

F to J

First

A manager might ask an employee, "What are the first few things that will signal your relationship with your team member is getting better?" A teacher might ask a student, "What could be the first sign that you're getting better at this subject?" A health-care professional might ask a patient, "What was, or what will be, the first sign of your healing?" When you ask about first things, it's like pulling the initial thread to unravel a tapestry.

Good

People often want to do more and be better. Parents want to do more for their children. Managers want their teams to produce results. Ask: "On a scale of ten to one, where ten is I feel that I am at my best in that area and one is the opposite, where would you say you are today?" "Where would be a good enough point on that scale for you within the next four to six weeks?" "What is different when you are at that "good enough" point?"

Hope

The pursuit of happiness is a popular topic. People say they'd be happier if they became richer, smarter, healthier, taller, thinner, older, or younger. Coaching provides a "language of hope." This implies an intentional and attentional choice to craft hope where happiness may or may not fit. Words carry certain impressions of the past and create new impressions as we use them.

Instead

There's always more to a story. Do you know someone who complains a lot? They find endless topics to grumble about. When this person is a family member or friend, we often tune out. If you listen closely to people telling you what's the matter, you'll find what matters to them standing right in the middle of their stories. Then ask, "So, what do you want instead of that?"

Just

People who come for coaching want to see something improve. A manager wants to build a positive culture. A parent wants to raise a happy family. A couple wants to set healthy boundaries. "How does that show up?" "Where does that begin?" The manager says it shows up when people say good morning to each other at the start of their workday. The parent says it shows up when the family is

present for dinner together. The couple says it shows up when they spend their together-time not talking about work stress. Just like that. When we follow the trail of people's hopes and dreams, we arrive at tiny signposts.

K to O

Know

Learn another's way of knowing. My mechanic's way of knowing my car might not be the same as my mother's way of knowing my heart. Unless you ask, you don't know the other person's logic for life. Listening more intentionally for what people care about makes it easier to discover their preferences and resources.

Look

How many times have we unknowingly participated in creating and perpetuating biases? When you change another person's words by adding your own, you actively shape their world. When you hear what others say, consider that as an invitation to inquire about what they mean in their world, not as permission to impose meaning from yours. Ask, "When you say that word, what does that mean to you?"

Might

People often mistake that immediate topic as the destination and start problem-solving toward it. Take that topic as another departure point on people's way to their desired direction and start building from it. Try asking questions like, "Suppose you show up at work with that peace?" instead of, "How will you get that peace?" Ask, "Suppose you walk into that interview with confidence?" instead of, "How will you gain that confidence?" Once your conversation partner supposes their preferred future, you can invite them to imagine "What might happen next?"

Notice

When you witness small-but-not-insignificant details that are working well, you become primed to notice differently. You learn to stand by, attending to the progress of others, rather than assessing them constantly. Try this as you go about your day and, after a week, take stock of what changed for the better. What do you notice now that you didn't notice before?

Opposite

To help clients visualize their progress, use a scale from ten to one. One young student described ten as her friendships deepening with two other students at her new school. At ten, they'd eat lunch together on the bench outside. A teacher described his ten as feeling confident on his first day of teaching high school, smiling and making eye contact with the students. With the scale, asking people to describe their life at ten in vivid detail, you are inviting them to perform their preferred future in their imagination.

P to T

Possible

Imagining what's possible motivates or mortifies us. Our dreams and dreads are often an expression of what we truly care about. A dream of winning a lottery was an expression of Jacob's wish for dignity. Andy, a university student, dreaded an exam because of what failure might mean to their dream. The most useful stance that you can take in your presence with others is tuning in at the frequency that amplifies their dreams.

Question

Our questions are loaded with assumptions. Within each question you ask is an embedded quest of your own curiosity. No wonder some questions feel more like an intrusion than an invitation! Observe what you are asking and what you are asking for in your conversations with others. How does the way you frame the question influence the course of the conversation?

Recent

Ivory wanted to reconcile with her brother. She wanted to be able to joke around like they used to. When invited to remember when she had seen this happening, Ivory recalled a family barbeque when they'd had fun together, playing Jenga with their nieces. In bits and pieces, people remember experiences they'd like to have more of. As you invite them to re-author a new story with those bits and pieces, you witness how they turn them into a preferred new story like turning a kaleidoscope. Their new story becomes a new way of making sense of their life.

Suppose

Behind every regret and fear lies a wish. The work is to hold on to that hint of hope, and to grow it bigger by paying attention to it, making the memory of a preferred future. Wishes show up so subtly, many times as an offshoot of a person's regrets and fears. The work is to attend to that delicate offshoot, so that it remains grafted and growing, as they

weave their resourceful past through their preferred future.

Toward

Coaching conversations, or conversations concerned with people making positive changes should begin with, "Where to?" But the tendency is to start with, "Where from?" Perhaps this happens because of the habit of asking, "What's wrong?" so that we can help others fix the problem.

All the Way to Z

Useful

When you sit with another in conversation listening into their past, you may hear difficulties, disappointments, or even disasters. Your next curiosity can be focused on how they coped with those experiences, what they learned from them, and how they are making the best use of them. You will witness something transforming right in front of your eyes.

Value

Story-listening is a highly evocative activity for both the narrator and the listener. As you sit with the other, what you listen to evokes values. There are stories about why they want something different to begin with (purpose), how they'd rather have it (preference), what may become available as a result (possibilities), and what's already working in that direction (progress).

Wonder

In coaching conversations, you are called simply to witness and wonder how another person does their living—their logic for life. Your own logic, the way you understand and organize your world, may get in the way of inquiring about theirs. If you don't try to understand their logic, your advice is, at best, a far-fetched suggestion or an irrelevant opinion.

X on a Scale

Remember the ten-to-one scale? Ask, "On a scale of ten to one, where ten is good enough and one is the opposite, where do you think you are at right now?" Draw the scale with a marker or use masking tape on the floor. Ask them to mark X with a marker or walk toward that spot on their scale. The choice is theirs, any number between one and ten. What follows is my choice of curiosity.

Yet

Conversations can position your conversation partner to be their own witnesses. People can watch their own arrival at their preferred destinations. The word "yet" creates room for anticipation. "What are some of your examples of what is yet to come?" "What have you always wanted to learn that you have not learned yet?"

Zero

You may have heard of the term "ground zero." It can be defined as the center of intense change that reminds us of what happened, what used to be, and what could have been. Often it becomes the origin of our regrets and fears, even anger. But it doesn't end there. Ground zero also calls for us to remember, remind, and rebuild beyond what was lost into multiple possibilities.

Haesun Moon is widely recognized as a leading expert and educator in evidence-based coaching and the use of language in transforming workplace dialogues. As a researcher and faculty member of The Institute of Coaching at McLean, Harvard Medical School Affiliate, she has developed coaching models and approaches that have been embraced the world over. Haesun lives in Toronto, Ontario, where she teaches at the University of Toronto and serves as Executive Director at the Canadian Centre for Brief Coaching.

Coaching for Breakthrough Success

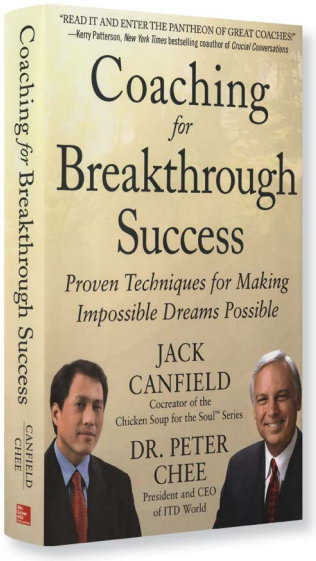
Proven Techniques for Making Impossible Dreams Possible



by Jack Canfield
and Dr. Peter Chee

THE SUMMARY IN BRIEF

"At the heart of a great coach is a firm belief that each person is a uniquely valuable individual with distinct giftedness and potential for greatness."

That's the premise behind this brilliant, empowering guide from Jack Canfield, coauthor of the 125 million-copy-selling Chicken Soup for the Soul series, and legendary global leadership development guru and CEO Dr. Peter Chee. Combining time-tested principles of exemplary coaches with the latest disruptive techniques used by the world's top performing leaders, this step-by-step playbook shows you how to nurture — in yourself and others — the three essential requirements of coaching excellence: heart, mind and energy.

Coaching for Breakthrough Success is packed with stirring personal stories, life-changing case studies, crucial coaching conversations, exemplary coaching questions and ready-to-use tools that equip you to achieve professional mastery in coaching.

This practical manual guides you through the top 30 principles every coach needs to succeed. You'll learn the six paradigms of Situational Coaching, the ultimate power of Achievers Coaching Techniques, and the tried-and-true secret to making impossible dreams possible.

IN THIS SUMMARY, YOU WILL LEARN:

- How the Coaching Principles (TCP), representing the Heart of a coach, unveil the secret to life-impacting values, beliefs and philosophies that permeate all aspects of great coaching.
- How the Situational Coaching Model (SCM), representing the Mind of a coach, unleashes the genius of a coach to apply the right combination of crucial paradigms in any given coaching challenge.
- How the Achievers Coaching Techniques (ACT), representing the Energy of a coach, can equip you with proven methods that enable you to deliver breakthrough results in coaching.

Introduction

Coaching, in a nutshell, is an empowering process of drawing out solutions from people through effective listening, asking great questions, using feedback, appreciating, and continuously supporting people to take ownership and be accountable for taking action to realize their goals. The heart of a coach, the mind of a coach and the energy of a coach build upon each other and work together to produce the best results in coaching that empower people to achieve breakthrough success and to make their impossible dreams possible.

PART I: The Coaching Principles (TCP): The Heart of a Coach

The Coaching Principles (TCP) symbolized by the heart of the coach model form a solid foundation for life, impacting values, beliefs and philosophies that permeate successful coaching relationships.

The Coaching Spirit: Principles 1-7

Developing a great coaching spirit entails believing in human potential, adding value to others, bringing out the best in people, thriving on challenges, and taking opportunities to develop oneself, not just to coach others.

In order to be a highly effective coach, you need to make believing in people, yourself and your mission one of your top priorities. When you have strong faith and belief in the potential of the people you coach, it lifts their talent and inspires them. When you believe in your own potential as a great coach, you lift your own talent and motivation. When the people whom you coach believe in your potential, it lifts their talent and motivation to be coached. The more you believe in people's potential, the more reason they will give you to believe in them.

Adding Value to Others

Great coaches understand that fulfillment comes from adding value to others. Coaches add value to people by helping them to find satisfaction in (1) achieving goals, (2) overcoming problems, (3) learning and developing, (4) installing new beliefs and habits, and (5) experiencing fulfillment in their work and lives by uplifting others. Positive emotions of true fulfillment tend to come most strongly as a result of hard work and sacrifice in the service of an end that is bigger than yourself.

One way to add value is to bring out the best in people and let them lead. A coach uses effective listening and asks the right questions to draw out solutions that lie within his or her clients. Let people lead themselves and make their own decisions, rather than providing the answers. When you stop wanting to control people, you begin to

empower them to take responsibility for their choices and actions. Empowerment means people have the freedom to decide and to act. It also means they are accountable for the results. Coaching is about helping people realize their *own* inner wisdom and release the talent and strengths that lie within them.

Use positive influence to energize people so that they collaborate with you because they want to, not because they have to. Some strategies for using relational influence to lead, rather than positional authority, include establishing a caring and trusting relationship with the client and championing their agenda; being a good listener, showing interest and asking great questions; providing useful feedback and suggestions; providing continuous support and encouragement, acknowledging progress and showing appreciation; and helping them discover and focus on their talent and strength. Coaches must guide people to find their *own* solutions.

Thrive on Challenges

When you coach, you will inevitably come face to face with adversity. To thrive on the many coaching challenges that pop up, you need to approach coaching with the right attitude. Every problem is an opportunity to learn and rise higher. Don't take things personally, and don't let problems drag you down. Take a flexible approach. Each situation you face as a coach is unique and cannot be treated with a formula solution.

Also remember that the lack of challenge is never good for a coaching relationship. Coaches need to ensure that their assignments pose strong enough challenges to the client so as to stretch them to grow.

And as clients grow, so do coaches. Before we coach, we learn, we prepare and we reflect on how we can be an effective coach. During the coaching session, we gain hands-on experience and practice coaching skills and techniques. After coaching, we reflect on what transpired and what went well, what didn't, and how we can do better next time. This cycle of learning returns over and over again. Growing others and growing ourselves goes hand in hand.

You yourself must receive coaching so you can be a shining example of the power of coaching. *The greatest enemy of learning is thinking that you already know.* It keeps you from seeking new information and expanding. When pride sets in, people think they already know it all; they close their minds to new ideas and valuable feedback and are not willing to admit their mistakes. Such people do not make very effective coaches. The best way to master coaching is to observe how good coaching is done, to practice good coaching, and to constantly gain experience from being coached by a good coach.

Relationship and Trust: Principles 8-10

Principles 8-10 form the foundation upon which coaching conversations are built: maintaining authentic rapport and humor, touching hearts with care and sincerity, and practicing integrity and building trust.

Maintain Authentic Rapport and Humor

The coach and the client need to relate well, feel comfortable with one another's presence and find common ground. The first step in developing this kind of relationship is building rapport. A well-developed sense of humor can generate hope and optimism, improve overall mood states, and ignite joy and laughter. But you must be sincere and acting in the best interest of the client, not driven by self-interest. If people understand your true intention is to connect with them and laugh with them, this will reduce their tension, help them relax, and allow them to come up with better and more creative solutions.

To engage people and influence them, we must touch their hearts. When we care, we feel an authentic desire for goodwill and happiness for another person, a genuine concern for their well-being, and a true feeling of sincerity, openness and understanding. Although you may be nodding in agreement with what the client is saying or asking a question to clarify his understanding, a client can still sense whether these actions are something mechanical and contrived or something sincere and from the heart. Leave your agenda at the door, and focus on the client's agenda and growth.

Practice Integrity and Build Trust

Integrity is the inner sense of "wholeness" deriving from qualities such as truthfulness and consistency of character, actions, principles and values. Men and women who are imbued with integrity stand for something, make and keep commitments to themselves and others and remain open. They "walk the talk" — their actions are consistent with their words. Time and again, this may require courage and conviction. The power of integrity in coaching is the result of a relationship that is transparent. When we practice this kind of communication with our client, we become a role model for them to do the same. Trust is a relationship of reliance: the coach relies on the client, and the client relies on the coach.

Asking Questions and Curiosity: Principles 11-15

The principles focused on curiosity and asking the right types of questions can help to ignite the coaching spirit, empower clients and create buy-in.

Curiosity nurtures your innate drive to explore and discover better ways of being and acting that lead to more desirable outcomes in your coaching sessions. As a coach, acknowledge that you do not have all the answers the client is seeking. You are expected to ask great questions and be an effective listener to draw out the answers that lie within the person you are coaching. But if you're not really interested, your listening will lack depth and the questions you ask will be superficial. As you ask better questions and listen more deeply, you help people find more ingenious solutions. Your authentic curiosity helps to spark *their* innate curiosity.

Ask Questions that Empower and Create Buy-In

By asking the right questions, you can establish a strong sense of empowerment and buy-in with the people you coach. Questions that empower raise your clients' self-esteem by demonstrating your confidence in their capability and potential. When the questions you ask reflect your interest about their strengths and their passions, their achievements, and the reasons that drive them to succeed, you begin to draw the best from them. This is what truly empowers them.

When people feel a sense of ownership for the solutions and action steps that arise from the coaching conversation, they become more motivated to take those actions. If they seem reluctant to commit to action steps and target dates, ask more questions that generate empowerment and buy-in. When you ask people for their views on things that really matter to them, you are sending them an empowering message that says they are capable of coming up with great ideas and that you have faith in their ability to do that.

Some coaches try to follow the question-asking mode without realizing they are still giving people advice and indirectly instructing their clients, albeit in the form of a question. Advice-oriented questions are usually disempowering for people. Instead of trying to solve your clients' problem in your mind and formulating an advice-oriented question, leave it to the people you coach to find their *own* answers. Have faith in them and ask effective coaching questions with a curious mind. When you find yourself wanting to give unsolicited advice, check your own motives and emotions.

Powerful Questions Release Solutions

To ask powerful questions, you have to be curious and courageous on the client's behalf. The art of asking powerful questions comes from knowing the right direction to take them, having the right intentions, using the right questions and asking them in the right way, asking them about the right person and asking at the right time. Questions you need to ask others and yourself are

1. "Where are we going?"
2. "Why do we need to ask the question?"
3. "What type of question and what do we ask about?"
4. "Which question do we ask?"
5. "How should we ask?"
6. "Who should we ask?"
7. "When do we ask?"

A question is powerful when it is simple, easy-to-understand, and cuts directly to the heart of the issue. Some common mistakes include asking misplaced, distracted, repetitive, disruptive, meandering and mismatched questions. With lots of practice over time, you will know better how to ask great questions that evoke self-discovery and release creative and effective solutions.

Listening and Intuition: Principles 16-20

In the workplace, telling others what to do is the command-and-control style of management. On the surface, it seems efficient. Telling is a direct and, at times, fast way to get things done; however, *telling results in compliance rather than commitment from others*.

Too much telling and not enough listening can also short-circuit your effectiveness as a coach. Coaching is not about telling people what to do or providing simple answers or solutions to their questions or problems. Instead, coaching uses the Socratic method of helping people discover the answers for themselves. The assumption of coaching is that clients know best, even if they don't know they know it. Let them do most of the thinking and find their own solutions.

Listening and Its Importance

Listening is an intellectual and emotional act. Effective listening is an active rather than a passive activity. The key to effective listening is to turn off the focus on ourselves and place it on the other person. We need to listen more and talk less. That is the attitude and the practice that is required of a good coach and leader.

Listening positively lessens arguments, reduces stress and shows others that we care. When someone cares enough to listen to what we have to say, we feel appreciated and important. When people do not listen to us, we feel ignored, misunderstood, alone and insignificant.

In order to listen to someone, you have to be present. Being present with someone means being on his agenda, available to interact with him, able to let him know you understand his situation, challenges, resistance and fears. For coach and client to hold one another mutually accountable in a coaching session, the coach must be present not just physically but mentally and emotionally. Your mind cannot be somewhere else. Remove distractions from the environment, and turn off your inner dialogue. Take time before each conversation to relax and clear your mind of any other issues not pertaining to the coaching, and get ready to fully focus.

Avoid Jumping to Premature Conclusions, and Be Impartial

Jumping to premature conclusions means to judge or decide something without having all the facts, to reach unwarranted conclusions. When we listen to our client and think we already know the outcome, our interest is affected. We may find ourselves selectively listening only to the things we want to in order to back up and confirm our assumptions. How do we avoid doing this? The first step is to become aware when we are jumping to premature conclusions. It is better to clarify than to assume. Find out more information that is relevant to the situation before saying or doing anything.

When the coach becomes an impartial and nonjudgmental third-party observer, the perspective he can offer is clear and unobstructed. The coach should resist the temptation to judge the client's actions. One way to do this is to listen with empathy. Empathy is the ability to put one's self in another person's position. To empathize with another person does not mean agreeing or disagreeing. It is trying to see things from the other person's point of view. People know when we have truly and empathically listened. Clients are the experts on their own lives. It is not your place to judge your client or their actions.

Listen Deeply; Use Observation

When you ask great questions, you are able to draw out a lot of valuable data from your client. When that happens, you need to use deep listening, observation and intuition to make sense of crucial information, carry on asking great questions, and use your curiosity until your client discovers new insight. We call this the "Crucial Conversational Process."

Deep listening means listening to understand what the client is really saying, then being able to identify what is really important to them. Good coaches listen for what is significant. For example, you listen for underlying thought patterns, habits, critical incidents, competencies, strengths, weaknesses, beliefs and values.

Observation is the process of filtering sensory information through the thought process. The coach observes the gesture, tone, hesitation, choice of words, body language, motion, innuendo and tactics in listening to what people are saying. The coach listens not only with his ears but with his eyes and other senses to collect information. The coach gets a sense of what is going on, what is said and what is not said, and uses that to ask further without judging or jumping to any conclusion.

As coaches we need to practice and hone our ability to observe, to notice even subtle clues to what might be happening inside our clients' heads.

Feedback and Awareness: Principles 21-22

Feedback on whether the client is "on course" or "off course" based on his objectives is extremely valuable. Feedback, followed by a question, helps the client find his own solution. After the feedback is given, allow the client to address it, rather than giving a lot of suggestions. When a client asks for feedback and needs it, you can share your honest reaction with them. When the client doesn't ask for feedback but he needs it, you should find the best way and time to give it. Great coaches know when to seize a teachable moment to give feedback in the form of a statement followed by a question.

When people are not aware of what is limiting their progress and happiness, they are oblivious to what needs to change; when they are in a state of denial, they will *resist* change. An effective coach works with her clients to create awareness and acceptance so that they embrace and initiate change willingly without needing to be coerced. When you help your clients know themselves better, it also helps them better manage their thoughts, emotions and behavior.

Suggestions and Simplification: Principles 23-24

There are times when your well-intended suggestions may not turn out to be suitable or helpful to the client. Instead of giving advice, after getting consent, offer sug-

gestions. Leave it to the client to consider what he would like to do about it. The act of getting consent shows respect and a belief in the capability of the people you coach. Coaching prioritizes buy-in and motivation over giving people the right solution.

When we simplify, we get the most important things done on time. We experience clarity of thought and happy, stress-free living. One of the very important roles of the coach is to help people see through the fog that makes it hard for them to see things objectively. In coaching, it's about getting to the core of the issue, the gist of the discussion that is most important, the critical actions to be taken, and the end result that the client is looking for.

Goals and Action Plans: Principles 25-27

One of your key roles as a coach is to take people through an effective goal-setting process while letting them decide on the goals they are motivated to pursue. *You are not responsible for setting their goals.* Your role is to support them in clarifying their real needs and desires.

Help your clients to create goals that are specific and measurable, with a clear timeline for completion. The goals should be achievable and yet challenging enough, and they should enable the client to grow and develop in the process of working toward them.

Once the overall goals of the person you are coaching have been clearly identified, work to help them identify the main strategies they will employ to meet the goals. Follow this by identifying more specific action steps and tactics for each strategy. Breaking a goal down into the action steps that need to be taken helps people clarify the things that need to be done. Without a plan of action, the coaching relationship would lack direction and accountability. Develop action steps gradually. Constantly review and update plans as needed.

Keep Score of Goals and Action Steps

In the process of coaching, we need to help our clients create and use a scorecard. This will serve as a guide to show how close or far they are from accomplishing their goal, what steps are to be taken and what has been accomplished. Reviewing and visualizing past accomplishments as victories gives a boost to a client's self-esteem and motivation. When people do better than expected or are on target, celebrate with them, and challenge them to see if they want to aim even higher. When their scorecard shows that they have fallen short of their target, review their goals and action steps with them, and focus on helping them find their own solutions.

Accountability and Accomplishments: Principles 28-30

Sometimes when people begin to take action toward realizing their goals and objectives, they realize that the amount of effort and sacrifice to get what they want is much more than they had anticipated. Coaching enables people to sustain change and achieve more because it offers a support system that keeps the client motivated and on track. Help your clients come up with their own support structures rather than telling them what to do. Forms of support structures can include follow-up emails, phone calls, written progress reports, using planners to schedule tasks and reminders, and celebrating the completion of tasks that mark milestones with family, friends and coworkers.

Accountability Drives Accomplishments

People who have been well coached become responsible and committed to execute what they've agreed to and capable of accomplishing much more than previously. Constant follow-up by the coach and an accountability partner helps ensure people are kept on track. Getting regular progress reports from your client keeps them responsible and serious about getting things done. Keep an updated list of goals and action steps from your client, and ask them to review and update it with you on a consistent basis.

A great coach never misses the opportunity to appreciate people for giving good answers to the coaching questions, for making progress, and for their efforts to improve and learn. You don't have to wait until people accomplish their entire goal to acknowledge them. Do it sincerely and often as people make notable advancement in improving themselves and completing their tasks. Be a cheerleader and a huge fan of your clients' successes. Reinforce their achievements in a way that they might not do for themselves.

PART II: Situational Coaching Model (SCM): The Mind of a Coach

While the Coaching Principles (TCP) develop the heart of a coach, the Situational Coaching Model (SCM) pertains to the *mind of a coach*. It consists of six crucial paradigms that a coach can use in a flexible manner to navigate a coaching conversation, shifting smoothly from

one paradigm to another so as to best meet the needs of the client and the situation.

- **Goals Paradigm: Where are you going? What have you accomplished?** The Goals Paradigm ensures motivation, clarity and focus on goals so as to enable your client to achieve their desired results. When you shift into this paradigm, you focus your conversation on your client's goals: what they want out of a particular coaching conversation and what they want from the coaching relationship as a whole. You ask questions designed to get the client to clearly articulate their dreams and goals. In subsequent conversations, you must shift into this paradigm to review your client's goals and the progress he has made from the last conversation.
- **Exploration Paradigm: How are you going to get there? What else do you need to consider?** People need help from coaches to engage in creative and "big picture" thinking to capture a wider range of good and innovative ideas that can enable them to achieve better results in a shorter time. Allow the people you coach to explore different perspectives and viewpoints and work out the implications of their goals and actions. Be very open to stimulate out-of-the-box thinking and maximum creativity from your client. Ask for outrageous and disruptive ideas; it is often from here that the most innovative ideas emerge.
- **Analysis Paradigm: Where are you now? What is the best way of getting there?** After exploring ideas and options and listening for what is significant, identify the ones that are most important to your clients and would produce the best outcomes for them. You need to work with your client on selecting the best ideas and then more thoroughly evaluating those. Identify their current status so as to be firmly grounded in the reality of where the client is versus where he or she wants to be.
- **Releasing Paradigm: How do you feel? How can you feel better?** Remember: *Coaching is not about fixing people*. It's about helping them help themselves. In this paradigm, you focus on being present, listening, caring and understanding. You ask questions to get the client to articulate her feelings and emotions related to issues she is facing. This allows her to talk about and release any psychological pain that has been building up. You are lightening her burden and uplifting her spirits.
- **Decision Paradigm: Which path are you taking?** In this paradigm, you work with your clients so that they can make the best decision for execution. If they are ready, then move forward with them. If your clients are not ready to decide, you need to ask more questions to find out why. Shift to another paradigm as necessary, and come back to this paradigm when appropriate.
- **Action Paradigm: What action steps do you need to take? By when?** Asking questions to get your client to come up with action plans — specific steps, priorities and a timeline to establish accountability and a commitment for action — is the focus of this paradigm. The coach should not coerce a client to come up with action steps when the client isn't really ready to do so. When this is the case, shift to the other appropriate paradigms depending on the situation, and then come back to this paradigm.

The Situational Coaching Model (SCM) is designed to be flexible enough to be effectively applied to any coaching challenge. Even though there seems to be a logical sequence to the flow of the six paradigms of situational coaching, coaching conversations are more complex than many people realize. No one best configuration fits all coaching conversations. Effective coaches know how to navigate through a coaching conversation by shifting smoothly from one paradigm to another.

Practice the Rule of 5

Ron Scolastico, a wonderful teacher, once told us, "If you would go every day to a very large tree and take five swings at it with a very sharp axe, eventually, no matter how large the tree, it would have to come down." How very simple and how very true! Out of that we developed what we call the Rule of 5. This simply means that every day, we do five specific things that will move our goal toward completion. Ask questions to assist your clients to come up with the five most important things that they would like to focus on daily to realize their dreams. Then find ways to motivate them to put that into action. Help them stay accountable to establish a habit of disciplined execution.

PART III: Achievers Coaching Techniques (ACT): The Energy of a Coach

The Achievers Coaching Techniques (ACT) are symbolized by the *energy of a coach*, which resonates within eight key themes that will facilitate your effectiveness as a coach.

- **Taking Full Responsibility for Results:** If people don't like their outcomes, they need to change their responses. People have control over three main things

in their lives — the thoughts they think, the images they visualize, and the actions they take (their behavior). How they use these three things determines the outcomes they will experience. Use the coaching process to empower people to want to change. Then support them in order to make the change happen.

- **Building Self-Esteem and Removing Roadblocks:** Acknowledging successes in the past will give you the self-confidence that you can have more such victories in the future. By writing down your successes each day or week, you log them into your long-term memory. This enhances your self-esteem and builds your self-confidence. You can learn how to identify those beliefs that are limiting you and then replace them with positive ones that support your success.
- **Clarifying Your Life Purpose and Vision:** When people are clear about their purpose of being in this world, their life takes on a higher meaning. The process of discovering your life purpose means identifying your talents and strengths, then figuring out the best ways you can use them to add value and serve your family, community and the world. Keep your clients accountable for doing the things that are important in their life that for some reason they keep procrastinating.
- **Setting Effective Goals:** Start by making an "I Want" list. After choosing the goals, take the goal-setting process further by making sure their goals are effectively set. Use the SMARTEST mnemonic criteria: goals that are **S**pecific, **M**easurable, **A**ttainable, **R**elevant, **T**ime-bound, **E**ngaging, **S**atisfying and **T**eam-based. Set what we call a "breakthrough goal" that would represent a quantum leap for the client and his career.
- **Visualizing and Affirming Desired Outcomes:** Focus on thinking, talking and writing about the reality you want to create. Flood your subconscious with thoughts and images of this new reality. Think of all your goals as already complete. For example, an affirmation describes a goal in its completed state: "I am celebrating feeling light and alive at my perfect body weight of 125 pounds." When you visualize your goals as already complete for at least 30 days in a row, it creates a conflict in your subconscious mind between what you are visualizing and what you are currently experiencing. Your subconscious mind tries to resolve that conflict by turning your current reality into the new, more exciting vision.
- **Planning for Action and Taking Massive Action:** When you accomplish your toughest task early in the day, it sets the tone. It creates momentum and builds your confidence. Another valuable technique for creating an action plan for the goals is the mind-mapping process. It starts with a central theme, then branches out to encompass ideas, notes, images, tasks. Using mind maps can help identify and understand the structure of the client's goal and the way pieces of information fit together to form the action plan.
- **Using Feedback, Learning and Perseverance to Your Advantage:** Most people don't ask for corrective feedback because they are afraid of what they are going to hear. But once you know the truth, you can do something about it. When you study the feedback you get, you'll start to see a series of patterns. Make a list, and next to each item, write an action step you can take to get back on course.
- **Using the Law of Attraction and Celebrating Success:** The essence of applying the Law of Attraction is to think, imagine, feel, act and focus on what you want, and attract more of that into your life. The universe responds to whatever energy you are creating and gives you more of the same. Rewards are also important. A big part of creating more success in your life is rewarding yourself when you succeed. You don't feel complete until you've been acknowledged.

Coaching works best by focusing people on the positive emotional attractors of goals and dreams rather than on negative emotional attractors such as correcting what is wrong in people. Effective coaching takes place in the domain of achievement, not in the domain of therapy. The people whom you coach need to reconnect with their most heartfelt dreams and passions and align their daily actions with them. Coaching is the ultimate self-development and growth experience. It's about expanding people's capacity to produce extraordinary results and to make their impossible dreams possible.

THE SUMMARY IN BRIEF

Collaborating with the Enemy examines the increasing necessity and difficulty of collaborating with people whose perspectives, interests, or behaviors conflict with one's own, particularly in complex and polarized environments. It identifies the central problem as the widespread tendency to "enemyfy" others—casting them as adversaries and thereby narrowing the possibilities for joint action—while traditional collaboration models depend on alignment, trust, and shared goals that are often absent. Adam Kahane argues that effective collaboration under these conditions requires a shift in mindset and practice.

He introduces "stretch collaboration" as a disciplined approach that accepts disagreement, uncertainty, and partial alignment as starting points rather than obstacles. Drawing on extensive facilitation experience, the book presents collaboration as a practice of engaging across difference through three core movements: embracing both conflict and connection among participants, experimenting through action instead of relying on predetermined plans, and assuming responsibility for one's own role in shared situations.

By framing collaboration as an emergent, participatory process shaped by tension and interdependence, it outlines how collective action can proceed in conditions of persistent disagreement and limited control.

IN THIS EXECUTIVE BOOK SUMMARY

- Distinguish collaboration from forcing, adapting, and exiting
- Reframe enemies as collaborators within a pragmatic gray area of relationships
- Integrate love, power, and justice to balance unity and self-interest goals
- Apply stretch collaboration by embracing conflict and experimenting iteratively

Introduction

Most of us find it difficult to work with people we do not agree with or like or trust, so we do not. Instead, we try to work apart from or against them—to avoid or defeat them. Sometimes these alternative approaches work, but often they do not (at least not for long), or they come at a high cost.

We wrestle with this tough challenge of collaborating across difference in all spheres and at all scales: with family members, colleagues, and neighbors; in business, politics, and community affairs; and in cities, countries, and international contexts. How can we deal with this challenge?

Collaborating with "Enemies"

The *Concise Oxford Dictionary* defines an enemy as "a person who hates one and eagerly seeks one's defeat; member of hostile army or nation; hostile force or ship or aircraft; thing that harms or injures." Although this definition refers to the actions others are taking at a certain moment (they are *acting* as enemies), we often, problematically, conflate this with their permanent identities (they *are* enemies).

Usually, we do not want to work with people we think are enemies because we believe doing so would be difficult, dangerous, or wrong. Instead, we want to work away from, around, or against them. But sometimes we need to work with them, even if we do not want to, either in spite of what they are doing or to find a way to stop them from doing these things. In many such cases, we can collaborate with them if we choose to and know how.

The Enemyfying Syndrome

Enemyfying—viewing the people we are dealing with as our enemies—paints with a broad brush, making enemies of:

- those who are seriously harming or injuring us
- those we do not agree with or like or trust
- those we feel threatened by
- those we are in conflict with
- those we differ with or from
- those we are uncomfortable with

The problem with enemyfying is that we label lots of people as enemies and thereby conclude that we cannot collaborate with them and must instead avoid or defeat them. It simplistically sorts people into friends and enemies, black and white, and thereby overlooks the larger, more complex gray area. It narrows our options, reduces what we can get done, and impedes us from getting where we want to go.

Rather than generalizing, we need to choose, carefully and consciously, whom we will view and treat as enemies.

How on Earth Can We Work Together?

Collaborating across difference is becoming increasingly necessary because people, ideas, goods, money, movements, data, technologies, weapons, pollutants, and pathogens keep flowing across organizational and geographic borders, despite our on-and-off efforts to limit these flows.

Collaborating across difference is also becoming increasingly difficult. We always have differences and conflicts among us, which are sometimes violent and destructive and sometimes creative and productive. But these days, many people are more vocal about their opinions and identities and less willing to tolerate and engage with those who are different from themselves.

As a result of all of these trends, we are experiencing a pandemic of enemyfying and thereby creating a world of separation and violence.

Two Ways to Address the Challenge

Collaborating across difference is neither easy nor impossible. It is not straightforward, and it does not always work, but it is often necessary, possible, and productive. Crucially, however, it requires us to dial down our enemyfying and find ways to live and work patiently with our differences.

There are two realistic and complementary ways to narrow the gap between the collaborating we need and the collaborating we are willing and able to do:

1. **Conventional collaboration**: we limit the scope of our collaboration so that it matches our current willingness and ability to collaborate.
2. **Stretch collaboration**: we expand our willingness and ability to collaborate so that it meets our need to collaborate.

Each approach works in different contexts. In any given situation, we need to choose which to use or how to combine them.

Stretching to Collaborate Across Difference

We become more able to work with conflict and complexity and across larger domains by stretching in three dimensions:

1. **Engaging with our collaborators**: stretching away from focusing only on the collective goals and harmony of our collaboration, toward embracing both conflict and connection among us.

> Enemyfying narrows our options, reduces what we can get done, and impedes us from getting where we want to go.

2. **Engaging with our context**: stretching away from insisting on clear, sequential agreements about the problem, solution, and plan, and who will do what, toward experimenting with different hypotheses and options.
3. **Engaging with ourselves**: stretching away from only taking directions from others and giving directions to others, toward taking responsibility for our own role.

To collaborate across difference, we need to stretch in all three of these dimensions: in conventional collaboration, we make limited stretches, and in stretch collaboration, we make extended ones. This approach is challenging because it requires us to do the opposite of what feels obvious and natural in working together.

These shifts enable us to move away from enemyfying others whom we differ with and from, toward living and working alongside them.

CHAPTER 1

When to Collaborate

The first and most basic thing we have to understand about collaboration is that we do not have to do it; it is a choice. Sometimes we think or sense that we need to collaborate, that it is our best option, and at other times that another way forward would be better.

Collaborating and Its Three Alternatives

Our potential collaborators are not neatly divided into black and white; they exist in many shades of gray, so we have more potential collaborators than we might think. We may make this decision rationally or intuitively, but in any case, we need a clear understanding of the opportunities and risks of each option.

Collaborating

We try collaborating when we want to change the situation we are in and believe we can do so effectively only by working with others. But collaborating is not a panacea: it risks producing too little too slowly, leading us to compromise too much, or even co-opting us and causing us to betray what matters most.

Forcing

We try forcing when we think that we ought to change our situation and may be able to without working with others. We think that we, alone or together with our colleagues and friends, know best what needs to be done, and can impose this on others, regardless of what they want.

Adapting

We try adapting when we think we cannot change or escape our situation and need to find a way to live with it as it is. Adapting may require intelligence, ingenuity, and courage, but we do this within our existing context. We therefore focus on doing the best we can, ignoring, avoiding, or fitting into what is happening around us.

Exiting

We try exiting when we think we cannot change our situation and are no longer willing to live with it. We can exit with fear, determination, or dignity by quitting our job, divorcing our spouse, severing trade ties, emigrating, going off the grid, or tuning out. Sometimes exiting is easy, but often it requires us to make significant sacrifices.

Choosing When to Collaborate

Most of us use these four options at different times in different situations. Forcing, adapting, and exiting are more straightforward than collaborating because, with the former, we decide and act by ourselves, whereas with the latter, we decide and act together with others. Some people enjoy or are more comfortable with collaboration and reach for it as their first choice; others find it frustrating and try it only when they think none of the other options are workable.

None of these options is necessarily stable or permanent, so we need to move among them as our situation changes. Because they involve different orientations and mindsets, moving among them requires stretching. We need to learn to choose skillfully and fluidly among these options:

- based on power
- reactively
- with others
- based on preferences
- based on ability

CHAPTER 2

With Whom to Collaborate

It is impossible to collaborate with everybody, so choosing to collaborate includes choosing whom to do it with. Enemyfying frames this choice in black and white, dividing people into those we can collaborate with and those we cannot. We therefore need to choose pragmatically whom to work with, whom to work without or apart from, and whom to work against.

A World in Black and White

These days, as always, war produces enemyfying, and enemyfying produces war: a front line dividing friends from enemies. Yet I have observed this same black-and-white perspective spreading into every kind of conflict, not only in actual wars. In many places I have been over the past few years, I have noticed increasingly ferocious enmity against others—political and geopolitical opponents; people of other races, religions, and genders; and foreigners and outsiders.

The Gray Area

Enemyfying treats many people we do not agree with or like or trust, who are different from us or who differ with us, as enemies. We enemyfy in all spheres and at all scales.

I am not saying we must collaborate with everyone we consider an enemy. What I *am* saying is that there is not a simple, principled, fixed line between those with whom we must collaborate and those with whom we must not. We must choose, pragmatically, whom to collaborate with in each particular situation.

Navigating the Gray Area

To make choices and advance in the gray area, we must first clarify its boundaries. We cannot get much done entirely by ourselves, or by only ordering others around (forcing) or taking orders from others (adapting), so we need to collaborate with some people on some things.

And we cannot collaborate with everybody on everything. Within this broad gray area, replete with the opportunities and risks created by diversity, difference, disagreement, complexity, contradiction, and conflict, we have many options as to whom we can work with, many more than simply with friends and against enemies.

We collaborate with certain people in certain domains when we think we need to. And we do not collaborate with them when we think it would be better to force, adapt, or exit.

CHAPTER 3

How to Collaborate

Collaboration works through the integration of three universal and complementary drives: the drive to come together and unite, the drive to meet their own needs, and the drive to be in good relationship with one another. I call these three drives *love*, *power*, and *justice*.

Most of us are more comfortable with one or two of these drives, so we tend to favor and rely on them. But all three are required for collaboration to work.

Love: The Drive Towards the Unity of the Separated

I use the definition of love given by theologian Paul Tillich in his seminal 1954 book *Power, Love, and Justice*: "the drive towards the unity of the separated." This captures precisely what I have experienced—that collaboration involves participants yearning to unite themselves, and the parts of the system they represent, into larger wholes.

Love in this sense is the drive to make whole what has become or appears fragmented. It arises from the reality that all of us are parts of larger wholes and expresses itself as community and belonging.

Collaboration must work with love. Ignoring love means ignoring the reality that we are interdependent and need to work together to get things done. Denying or shying away from love and belonging produces estrangement and enemyfying. On the other hand, focusing only on love and unity, while ignoring power and justice, produces sentimentality and anemia—or worse, a cynical reproduction of the status quo.

Power: The Drive Toward Self-Realization

Tillich defined power as "the drive of everything living to realize itself, with increasing intensity and extensity." In this sense, power is the drive to achieve one's purpose: *power to*.

It is the power that "guerrilla gardeners" harness when they plant seeds in vacant city lots, relying on the drive of the seeds to realize themselves and thereby create green spaces. This definition differs from the common understanding of power as *power over*.

Collaboration, then, is driven by the participants' yearning not only to unite but also to realize themselves. Power arises from the reality that each of us is a whole in ourselves. It expresses itself as identity, purpose, ambition, and agency.

> Our potential collaborators are not black and white—they exist in many shades of gray.

Collaboration must work with power. Ignoring power means ignoring the obvious everyday reality of self-realization, self-centeredness, and self-interest. Denying or shying away from power and agency produces impotence and passivity.

Justice: The Structure That Enables Love and Power

Tillich defines justice as "the form in which the power of being activates itself . . . and through which love performs its work." This means that the power and love of collaborators (their drives to realize themselves and to unite) can be expressed only if they see the form or structure of the collaboration as fair and just. In the absence of justice, power and love cannot be balanced or reconciled.

Justice arises from the reality that we are all related. It expresses itself as solidarity and reciprocity: the Golden Rule of treating others as we would want to be treated.

CHAPTER 4

Conventional Collaboration

Conventional collaboration is the way most collaboration is done (although not always well or successfully) and the way most people think collaboration has to be done.

It addresses the challenge of collaborating across difference by limiting the scope of the collaboration to activities that are low in conflict and complexity, or can be made so, and by limiting the collaborators to those willing to prioritize the interests of the team over their own. It works in contexts where these limitations are feasible.

What Conventional Collaboration Looks Like

Conventional collaboration looks like well-executed teamwork, as practiced in many "teams," whether in robotics labs or families, on concert stages or sports fields, or in business, government, or nonprofit organizations. It functions like any group with clear limits and boundaries and a directive boss: an orchestra with a conductor, an operating room with a lead surgeon, a football team with a coach, a clan with a matriarch, a corporation with a CEO, or a nation with a ruler.

Conventional collaboration is, in many contexts, simply a familiar and reliable way of living and working together. Some of us find this way comfortable and obvious, and others find it confining and oppressive.

The Structure of Conventional Collaboration

The primary characteristic of conventional collaboration is that it is hierarchical, in that the team or organization as a whole is prioritized over its members: the collaborators are, sometimes eagerly and sometimes reluctantly, aligned with and subordinate to the collaboration.

It applies in both clear and complicated contexts where, for every technical problem, there is a best solution. It works in contexts that are, or can be made to be, low in conflict and complexity—in other words, relatively simple.

But beyond that limit of management or control, this approach does not work. We also cannot make it work beyond the limits of the organization or system that we manage or control.

CHAPTER 5

Stretch Collaboration

Stretch collaboration is not the conventional way to work together, so many people think it cannot accomplish much or is not even possible. But this is not so. It is possible, and it enables us to work together even in contexts with high conflict and/or high complexity. It is a valuable option that complements conventional collaboration and requires stretching beyond what is comfortable, thereby offering additional opportunities and risks.

The Structure of Stretch Collaboration

The primary characteristic of this approach is that it is horizontal: collaborators see themselves primarily as wholes in themselves and only secondarily as parts of the collaboration or subordinate to it. They work together without having a single directive boss; they each are or have their own boss. They understand themselves to be on different "teams," with their differences and disagreements out in the open and on the table for everyone involved.

Stretch collaboration is needed for alliances of independent organizations to work together. It is also needed within organizations that have cultures that emphasize the agency and equity of individual persons and teams and that de-emphasize hierarchy. Because this form of collaboration is looser than conventional collaboration, it enables us to work with a broader range of collaborators across and within organizations: not only "friends" we agree with and like and trust but also "enemies" we do not agree with or like or trust.

It abandons the assumption of control. It gives up nostalgic, unrealistic fantasies of harmony, certainty, and compliance and instead embraces the messy realities of discord, trial and error, and cocreation.

It is often cluttered and confused, so many people find it daunting. But it can be done and, in conflictual and complex contexts, is perhaps the only workable way to work together.

How to Make Stretch Collaboration Work

The operating manual for stretch collaboration, as for conventional collaboration, explains how to make choices that integrate love, power, and justice, but now in their "stretched" (more expansive, complex, and unstable) forms.

In practice, this means working differently across all three dimensions:

- **Working with love**: rather than expecting collaborators to fit into the collaboration, we nurture their sense of belonging within it.
- **Working with power**: rather than subordinating individuals to a hierarchical structure, we recognize each collaborator's autonomy and agency and organize horizontally.
- **Working with justice**: rather than focusing on security and fairness alone, we structure the collaboration for equity and reciprocity.

These more complex manifestations of love, power, and justice enable stretch collaboration to work in more conflictual and complex contexts than conventional collaboration and to include a broader range of collaborators, including those who do not agree with, like, or trust one another.

Where Stretch Collaboration Doesn't Work

When we are in a context we find dangerous or complicated, authority- and expert-led conventional collaboration can be a good option. Stretch collaboration requires us to stretch, but in some contexts with high conflict and/or high complexity, this can feel too risky.

When we think we have gone, or might be going, too far, we reverse and contract our collaboration and our collaborators to levels we consider workable. Within this smaller domain, we then employ either stretch or conventional collaboration; outside it, we force, adapt, or exit.

CHAPTER 6

The First Stretch: Embrace Conflict and Connection

The key challenge of collaborating is obvious but not easy: how to align the needs of each of the diverse collaborators with those of the others and of the collaboration as a whole. In practice, this means working with multiple "wholes," not a single unified team.

In conventional collaboration, this is more straightforward, because collaborators are expected to act as players on a single team, aligning and subordinating their own needs to those of the collaboration.

In stretch collaboration, achieving such alignment is more difficult, because collaborators see themselves as members of other, different teams and are not willing to subordinate themselves to the collaboration.

The first stretch—embracing both conflict and connection (that is, employing both asserting and engaging)—requires getting beneath the surface of the collaboration to expose and work with the different perspectives and interests of individual collaborators, in order to discover how to align these sufficiently to move forward together. The key to this is understanding that, in practice, there is no such thing as "the whole." Every social system consists of multiple wholes that are parts of larger wholes.

Alternating Power and Love, Enabled by Justice

When we collaborate, we exercise love and power alternately. First, we engage with others. As our engagement continues and intensifies, it can produce an uncomfortable feeling of fusing and capitulating, of having to subordinate or compromise what matters to us to maintain the engagement.

This discomfort is a signal that we need to shift to asserting or pushing for what matters to us. But as that asserting continues and intensifies, it can produce in us an impulse to block, push back, or resist. This reaction is a signal that we need to return to engaging.

The key to alternating between engaging and asserting is to

> We need to focus on deciding what we ourselves will do next.

know when to employ each so as to keep the cycle generative rather than degenerative.

The Challenge of Living Together

When we notice ourselves overemploying love, we need to employ power and live with the conflict that comes with it, which can feel uncomfortable. When we notice ourselves overemploying power, we need to employ love and live with the collectivism that comes with it, which can feel limiting.

In this context, justice is the structure or quality of our relationships that enables this fruitful alternation between love and power. Therefore, the first stretch requires us to employ all three drives together.

CHAPTER 7

The Second Stretch: Experiment a Way Forward

The second dimension of collaborating is engaging with our context—the problematic situation we are trying to address through our collaboration. Conventional collaboration does this in low-conflict, low-complexity contexts by agreeing on the problem, the best solution, the plan for implementing it, and who will do what.

But in contexts with high conflict and/or high complexity, we cannot agree in advance on solutions, both because we do not see eye to eye with our collaborators and because the results of our actions are unpredictable. The second stretch is to try out multiple options, one move at a time, to discover what actually works and enables us to advance.

Discovering the Path Along the Way

In stretch collaboration, we cannot know our route before we set out. We cannot predict or control it—we can only discover it along the way. Such learning by doing can be both exciting and unnerving. It requires trying things that might not work at first.

Participants in stretch collaborations often do not agree with or like or trust one another enough to be willing to commit to any plan of action other than one that is modest, short-term, and low risk. They participate voluntarily and provisionally, with no one having control over the others. As a result, they usually have the option of exiting. Collaborators do what they want to do, so attempts to force or cajole them into doing otherwise do not work.

Stretch collaboration therefore involves more than making a deal or an agreement. It is an ongoing and emergent process in which it is more important to act than to agree. What is crucial is to create conditions that enable collaborators to act freely and creatively across a portfolio of different experiments supported by different people, and in doing so create a path forward.

Emergent Strategy

Management professor Henry Mintzberg points out that there are two opposite ways to realize an objective:

1. **Deliberate strategy**: one that succeeds in realizing an intention
2. **Emergent strategy**: one that is realized despite or in the absence of an intention

He observes that in organizations, few managers can or do implement purely deliberate strategies.

In stretch collaboration, we advance through processes that are primarily emergent rather than deliberate. We realize emergent strategies through experimentation. We try out ideas we think might work and then learn from the results.

CHAPTER 8

The Third Stretch: Step into the Game

The third dimension of collaborating is engaging with ourselves. In conventional collaboration, we focus on doing our job and getting others to do theirs. This approach works in contexts with low conflict and low complexity, where we can be confident that we can influence others' actions and that these actions will produce the intended results.

But in contexts with high conflict and/or high complexity, where neither of these assumptions holds, we need to shift more of our focus onto what we ourselves are thinking, feeling, and doing. We need to examine how we are contributing

to things being the way they are and what we can do differently to help change them.

Enemyfying Is Focusing on Others

When we are faced with a challenging or stressful situation, we focus our attention first and foremost on what other people are doing, not doing, or ought to be doing. Our habitual thinking is that *they* need to change.

We blame and enemyfy others, both to defend and define ourselves. We are frightened of losing or being hurt, so we separate and shield ourselves by asserting that we are right and others are wrong.

The problem with enemyfying is that it distracts and unbalances us, which makes it harder to choose to collaborate with people we differ from and easier to choose to force, adapt, or exit. We cannot avoid others we find challenging, so we need to focus on deciding what we ourselves will do next.

Be a Pig Rather Than a Chicken

The essence of the third stretch is assuming responsibility for the role that we play in the situation we are trying to change and for what we need to do differently to change it.

This stretch is challenging because it requires us to take the risk of engaging fully in the situation and, in doing so, being changed or hurt by it. It requires us to be more open and vulnerable, and more willing to sacrifice some of what feels known, familiar, comfortable, and safe.

"In a ham omelet," the quip goes, "the chicken is involved, but the pig is committed." Stretch collaboration requires us to be pigs rather than merely chickens.

When we notice ourselves blaming or enemyfying others, we need to bring our attention back to what we are thinking, feeling, and doing, and what we need to do differently.

CONCLUSION

Choosing to Collaborate

The world we live in has few flat, clear, straight roads, so it is often difficult to find our way forward. It is made even more difficult by the fact that, to get where we want to go, we often need to work with people we do not agree with, like, or trust. We make it harder still by enemyfying these people—viewing them not simply as people we differ from or oppose but as enemies we must avoid or defeat.

When we dial down our enemyfying, we move from blaming others for what is happening toward acting with agency to change it. We move away from trying only to force things to be the way we want, regardless of what is going on around us, or to adapt to the forcing of others, or to exit—and toward trying to collaborate.

Choosing only to force or be forced is choosing to participate in creating a degenerate world of dog-eat-dog, tit-for-tat, and might-makes-right. Choosing to collaborate, with all the arduous and liberating stretching this demands, is choosing to participate in creating a generative world of flourishing.

The recurring theme is the need for us to shift the way we are in the world, away from reacting to what is happening with separation, hurriedness, arrogance, certainty, anger, and fear, toward responding with engagement, patience, humility, creativity, curiosity, and faith. To collaborate across difference, we must choose to abide.

Adam Kahane is a practitioner and author focused on helping people collaborate across differences to address complex challenges. He cofounded Reos Partners, a global social enterprise supporting leaders in government, business, and civil society. His work has contributed to initiatives in South Africa, Colombia, Mexico, the United States, Canada, Europe, India, and Thailand, addressing issues including democracy, health equity, and climate resilience. Kahane has written six bestselling books translated into more than twenty languages. A member of the Order of Canada, he has held fellowships at Oxford and other institutions. He lives in Montreal and Cape Town with his wife, Dorothy, four children, ten grandchildren, and a cat named Gata.

How Corporations Can Make Doing Good An Integral Part of Doing Well

COMPASSIONATE CAPITALISM

THE SUMMARY IN BRIEF

Businesses have much to contribute beyond dollars and equipment: They have their expertise, their leverage, and the enthusiasm of their employees. In Compassionate Capitalism, *Salesforce.com's CEO Marc Benioff and veteran journalist Karen Southwick describe a new model of philanthropy that is so ingrained into every fiber of a company's existence that it becomes integral to the company's culture and a part of what holds the corporation together. Benioff and Southwick explain that corporations that have service as a core value of their culture will see both intrinsic and external returns. To be able to give is simply part of being human, they write, and companies that provide philanthropic community service will find that it energizes employees and executives.*

Compassionate Capitalism *shows companies, large and small, how they can use all of their resources to help their communities and, in doing so, help themselves and their employees as well. By using real-life examples from dozens of corporations and nonprofits, including Hasbro, IBM and Levi Strauss, the authors show corporate leaders how they can dare to be great by integrating community service within their organizations. They also demonstrate that there is no need to wait to be philanthropic, and describe how many companies have reaped many benefits for themselves and their communities by incorporating service into their businesses.*

What You'll Learn In This Summary

- ✓ The best ways to establish a culture of philanthropy.
- ✓ How you can define your company's mission.
- ✓ Better ways to involve employees in your company's mission.
- ✓ Ways to sustain philanthropy in good times and bad times.
- ✓ How to expand your company's philanthropy globally.
- ✓ How to forge strong partnerships with nonprofits.

Establish a Culture of Philanthropy

Hasbro is the maker of such famous toys and games as Mr. Potato Head, Tonka trucks, Monopoly and Scrabble. Chairman Alan Hassenfeld, who stepped down as CEO in mid-2003, is the third generation of his family to lead the 80-year-old company. As chairman, Hassenfeld continues to lead the company's philanthropic endeavors. Hasbro allows employees four hours a month of paid time off to do community service. When it hires senior managers, "we look at what they've done" in areas outside business, says Hassenfeld. "Has their own concern been only for profits, or has there been a sense of caring?"

Hasbro's primary philanthropic mission, both through its charitable trust and its foundation, is to make the world a better place for children. "It's always been kids, because that's where our success as a company has come from," says Hassenfeld. "This is our payback. We're so close to the needs and plight of children that we have to be a force in improving their world." In 18 years of giving, the Hasbro Children's Foundation has awarded more than $40 million in grants to agencies benefiting disadvantaged families and helped more than a million young children. Employees have racked up thousands of hours volunteering at agencies and helping to build playgrounds and other facilities.

Leadership From the Top

How does a firm establish a culture of philanthropy? As with any company cultural issue, leadership must come from the top. The CEO must make philanthropy a centerpiece of the company's mission, just like manufacturing a great product, earning profits, or giving shareholders a good return. It must be more than just a means to generate PR. The CEO must demonstrate a commitment to philanthropy in good times and bad times by establishing policies and processes that foster corporate service, such as employee time off for charitable work, recognition of employees who do such work, matching gifts, and other incentives.

The CEO's attitude must permeate the company; middle managers must recognize that allowing employees reasonable amounts of time off to perform community service is not a loss to them, but a gain in overall productivity and balance. Employees must be convinced that senior management is truly dedicated to the notion of philanthropy and will not somehow penalize those who don't spend every waking hour either working or thinking about the company's products and marketing.

Philanthropy can play a vital role in a company's effort to stay viable by attracting the types of employees and customers and other stakeholders who value a whole company and a full life. Community service also builds loyalty to the company, aligns ethical values with business values, allows employees to learn more skills, and fosters interdepartmental bonding. ■

Define a Mission

At most companies, corporate philanthropy typically gets started in one of two ways. The first way occurs when the CEO gets passionate about a particular cause and decides to donate personal and/or corporate money to it. The second way is when the company decides that it needs to do philanthropy for PR/marketing reasons and begins making grants, either through a corporate giving program or a foundation.

There are obvious flaws with both of these approaches. In the first, philanthropy never really becomes part of the culture, but is based on the CEO's whim and can be turned off or on depending on his or her devotion to

(continued on page 3)

The authors: Marc Benioff is CEO and chairman of Salesforce.com, a leading provider of online CRM applications and creator of the Salesforce.com Foundation.

Veteran journalist Karen Southwick has covered Silicon Valley for more than a decade. She has written several books, including *High Noon: The Inside Story of Scott McNealy and the Rise of Sun Microsystems*.

Define a Mission

(continued from page 2)

the cause. In the second case, commitment is superficial and easily dislodged in difficult times.

Many companies are finding that, in today's economy, it makes more sense to sit down with senior management (and, perhaps, with customers and community leaders) and work out a defined mission before undertaking a formal giving program. Having a defined mission can save much grief and misunderstanding.

LensCrafters Inc.

LensCrafters, whose 860 stores made it the largest optical retail chain in the United States, practically stumbled onto its mission: giving the gift of sight to needy people by delivering free optical services and recycling used glasses. That mission is one that has worked well, both in involving employees and in drawing extraordinary attention for a company now buried within an Italian multinational, Luxottica Group. Most corporate philanthropy champions would say that it works better to decide on a focus for giving first and then start laying out the money, and indeed that is a more efficient approach in most cases.

LensCrafters' 10 Principles for Making Philanthropy Successful

1. We focus our community service on our product, involving employees in hands-on giving experiences.
2. We keep our program nonpromotional.
3. We brand our program with a strong, single identity — the Gift of Sight (GOS).
4. We push program ownership to the individual store level by empowering stores to choose their own charitable partners and invent their own local variations.
5. We have learned to forge partnerships, especially a long-term relationship with Lions Clubs International.
6. We set and track lofty program goals. Everyone knew the GOS goal was to help 3 million people by 2003. We have treated this as a corporate goal just like sales and profits.
7. We have developed and shared a GOS folklore to give the program emotional legs. We make a point of capturing magic moments and sharing them.
8. We harness our business expertise to fulfill charitable objectives.
9. We have recognized and built upon unexpected program benefits, such as extraordinary team-building and leadership experiences.
10. We weave this into the fabric of the company.

Susan Knobler, vice president of the LensCrafters Foundation, admits that when she was in corporate communications in the mid-1980s, she was "fishing around for how to connect to a cause. My earliest motivation was not pure. I was trying to get ink," she says. She gave away 25 pairs of glasses from a local store, which earned some ink. The program expanded to a bus load of kids coming to the store to be fitted, and then expanded via a voucher program to other U.S. stores.

Finally, LensCrafters teamed up with Lions Clubs International, which already had a program of collecting used glasses for people who couldn't afford to buy them. Since then, Gift of Sight has become an international program that, in 2002, delivered 39,000 pairs of new glasses to disadvantaged people who needed them; performed 20,000 eye exams for people in need; sent 286,000 employees and physicians into the community to deliver vision screenings, eyeglass adjustments and repairs; sent Vision Vans to deliver optical services to 17,000 children in North America; performed 18,000 vision screenings in its hometown of Cincinnati; and hand-delivered and fitted newly cleaned, recycled glasses to 153,000 people in many poor countries.

LensCrafters' experience shows that you can refine a mission on the fly, and ultimately come up with a satisfying program. LensCrafters' Give the Gift of Sight program has received two awards from the prestigious Points of Light Foundation; in 1994, for volunteer action, and in 1999, for excellence in corporate service.

The operative word today in corporate philanthropy is focus. Defining a mission first of all helps the corporation figure out where it will give, and why, and enables the giving to have greater and more lasting impact. It also helps the nonprofits that might seek grants from the company to determine where they fit and how to structure their proposals.

A Well-Defined Mission

Even with a very well-defined mission, corporations are never going to become entirely proactive in their giving. They'll still listen to their employees and provide funding to causes that inspire workers, customers and other stakeholders. They'll still respond to emergencies in the communities they serve, such as natural disasters or an economic reversal.

Companies with focused philanthropy tend to keep a certain percentage of unallocated funds on hand for such events. Salesforce, for example, devotes 80 percent of its funding to its designated mission — technology and youth — and reserves 20 percent to match employee giving to respond to emergencies. After all, we live in an unpredictable world and companies don't want to become so rigid that they can't respond to the crying needs of that world. ■

Involve Employees

A corporation gains when its employees are engaged in philanthropic endeavors. "There are a range of business benefits for employee involvement, including leadership development, such as taking shop-floor personnel and giving them coordination or management responsibility that sharpens and develops new skills," says Bob Goodwin, executive director of the Points of Light Foundation. Employees involved in these activities gain increased esteem and better morale. Furthermore, "having people from up and down the organization working side by side in a community project will serve to lessen tensions that might develop between union and management," Goodwin adds, "diminishing barriers that could confound workplace dynamics and making it easier to relate to one another as peers."

Involving employees in philanthropic endeavors is a pure win-win for a corporation. There could be slight trade-offs in the hours that employees spend on the job, but four hours a month or so spent in community service — a typical benchmark — is hardly going to impact performance. It might even improve it by giving employees some much needed "time out" to rediscover other aspects of life beyond the job. Even in an economic downturn, people are still motivated to do good, perhaps even more so than during boom years. Offering an opportunity for service may not be sufficient to retain a good employee, but it certainly helps. Such opportunities not only help employees gain new skills in leadership, teamwork, and thinking out of the box, but create a more well-rounded human being. ■

Start Small

Smaller companies have to get real about what they can do in terms of philanthropy. Business for Social Responsibility's Dinah Waldsmith advises small companies to sit down and decide what they can actually afford to spend on philanthropy. You can either do this on a percentage basis — say, 1 percent of profits or equity — or as a predetermined sum: We're going to spend $10,000 this year on philanthropy. However, employee time and in-kind giving may be the most valuable contributions that small companies can make. If you can encourage half of your employees to spend four hours a month at a nonprofit by offering paid time, those hours quickly add up to significant community service. Surveying employees on their own philanthropic interests — and then providing matching dollars for their time or money — builds rapport and loyalty.

Started in 1999 to speed up dial-up access to the Internet, Propel is a company that now has about 35 employees. The main source for Propel's philanthropy is employee volunteerism. Propel allows employees to take up to 20 hours a year in paid time off to do volunteer work at schools and other nonprofits. Propel's chief financial officer Mary Korn says, "Just creating this opportunity has significant impact on the culture." The company also does concerted volunteer work such as Food Bank drives and a Family Giving Tree, where employees bring a gift for disadvantaged families.

Propel executives have gone into local schools as "principal for a day," to learn about the issues facing education and so educators can learn about the issues facing business and technology companies as well. "Part of our philosophy is that work is an extension of the community," Korn says. "You have to make volunteerism accessible to employees." Another way to aid nonprofits is to allow your facilities to be used for meetings and other activities, she adds. She also says she joined Propel partly because the company's executives appreciated the importance of her nonprofit work. ■

Maintain Philanthropy Through Tough Times

The real measure of a corporation's commitment to philanthropy happens when the company runs into trouble: Profits are falling or nonexistent, revenues may be shrinking, layoffs are occurring, employees are demoralized, and management is scrambling to meet financial targets. Philanthropy may be even more important to a corporation during these kinds of times, as a signal to employees, customers, partners and other stakeholders that things will get better, and the company is taking a long-term view of the world that includes community service.

Susan Colby, a partner with the Bridgespan Group, concedes that the inclination, when earnings are dropping, is to go after philanthropy — often a juicy target with high-dollar contributions. She advises many clients to undertake smaller projects that can exist under the radar of financial scrutiny, things like funding a day-care center or supplying books to a community center. Expect the philanthropic budget to take its lumps along with other cost centers, Colby adds, "but you don't want to just cut willy-nilly if you can help it," because that sends a message of desperation and panic.

Levi Strauss & Co.

The apparel maker Levi Strauss celebrated its 150th anniversary on May 1, 2003. Its philanthropic tradition is nearly as long-lived. Founder Levi Strauss, a Bavarian immigrant to San Francisco, donated $5 (the equivalent of $100 today) to a local orphanage shortly after arriving in 1853. When the Levi Strauss Foundation got started in 1952, "the company immedi-

(continued on page 5)

Maintain Philanthropy Through Tough Times

(continued from page 4)

ately started building a reserve," says Theresa Fay-Bustillos, executive director of the foundation. A privately held company, Levi didn't endow its foundation with stock, nor does it take outside donations. "It's only what the company gives us," she says. "The philosophy is that we're going to give you this in good times, and you build a reserve against bad times."

Even as it was forced to close plants worldwide and lay off thousands of workers in the late 1990s, Levi continued to fund its foundation, which established special programs in areas affected by layoffs. Levi's goal is fighting poverty on a worldwide basis, by focusing on preventing the spread of HIV and AIDS and providing economic development and educational opportunities to socially disadvantaged women and youth.

Fay-Bustillos explains that the company and the foundation contribute directly to communities. The company has donated, annually, about $3 million to communities in the last few years — far below what it previously gave but still significant. "Our benchmark is 2.5 percent of pretax earnings, for direct corporate giving to communities and for the foundation to build its reserve," she says. The foundation, with $70 million in assets, has been giving around $10 million to $12 million a year, down from its peak of $20 million in the late 1990s.

She says the commitment to philanthropy is especially important in tough times. "When we talk to our employees who are getting laid off, they still feel that this was a great company to work for, in part, because of everything we do in the community," Fay-Bustillos says.

If at all possible, corporations for whom community involvement becomes a part of the culture do not eliminate philanthropy in bad years. They may shift priorities, as Levi Strauss did, but they keep intact the spirit of giving by leveraging their resources, including employee volunteerism and expertise. That sends an important signal that the company stands for long-term values not only to the outside world, but to employees as well. Such a signal can shore up morale and help employees believe that there are better times ahead. ■

The 1-Percent Solution

The *integrated* corporation creates value for its shareholders and its stakeholders alike. Its size and the location of its headquarters do not dictate a centralized return on its value; rather, its value is fully distributed not only to its leadership, but to the communities in which it operates, and the global community as a whole. Integration is a new architecture for globalization.

Under this architecture, globalized corporations can leverage employees, equity, products, alliances and relationships to support stakeholders in a way that smaller, local companies could not, demonstrating the company's value to the community while turning protesters into advocates. But it will take leadership, creativity, innovation and the investment of resources to make this vision a reality.

How to Leverage Service

A CEO can look at his or her corporation and ask, "Where do I have the most leverage to serve?" Four areas are: corporate value, profits and products, employee time, and government influence. Accordingly, four models have emerged:

1. **Place a percentage of corporate equity into a public charity.**
2. **Return a percentage of profits to the global communities served.**
3. **Encourage a percentage of employee time to be used for community service activities.**
4. **Use influence with governments to positively affect policies for global communities.**

Forward-looking companies have implemented these models, validating the concept while demonstrating the dramatic results this new architecture of globalization can achieve. In the integrated corporation, successful philanthropy is organic. It meets community needs, responds quickly, partners with other organizations, and is driven by employees. Almost no one has done all of this, which is why the integrated model is unique.

While it was an independent company, Ben & Jerry's took the idea of integrated service furthest of all, fully integrating philanthropy into its products, marketing and HR practices. Giving away 7.5 percent of its pretax earnings, Ben & Jerry's funded community service in three ways: through the Ben & Jerry's Foundation, through employee Community Action Teams at five Vermont sites, and through grants made by the director of social mission development. No other company had such an explicit program for donating profits and time. The foundation, managed by a nine-member employee board, looked at proposals relating to children and families, disadvantaged groups, and the environment.

The 1-1-1 Model

The 1-1-1 model — 1 percent each of equity, employee time, and profits — is now the evolution of the integrated corporation. Corporate leaders can come forward and use their hard-earned leadership skills for a higher purpose — to fully integrate their globalized companies into the systems of which they are already a part. ■

Innovative Models

There is no single *right* way to make philanthropy a part of a business. Firms that take chances on their philanthropy, by introducing an unexpected design, leveraging their expertise in unusual ways, or being inventive in tapping into their employees' knowledge and interests, can find themselves amply rewarded. Companies that pride themselves on innovative products or sales techniques should also pride themselves on innovative philanthropy. Ideally, the two go hand-in-hand.

IBM Corp.

Louis Gerstner, a former management consultant for McKinsey & Co., became CEO of IBM in 1993. Under Gerstner's leadership, IBM rebounded from an $8.1-billion loss in 1993 to $7.7 billion in profits in 2001, while its share price increased almost tenfold. Gerstner shifted IBM from a "products" company to a "solutions" company, focusing on making things work together for its customers. Although it still supplied hardware and software, IBM also became a major consultant to technology users, utilizing its own and other companies' products to create smoothly functioning IT centers. Gerstner brought the same sensibility to IBM's philanthropy.

The company had a long history of fairly traditional support of cultural and social programs, but Gerstner wanted to enable real change — bringing solutions to large, unmet needs. He seized upon education, long a favored project for technology companies. But Gerstner's thinking went way beyond delivering computers to schools or wiring them for the Internet. He actually wanted to develop tools and solutions for deep, systemic change. He called this endeavor Reinventing Education (RE), threw IBM's formidable resources behind it ($75 million to date, plus the expertise of the company's product developers and consultants), and tapped a former political aide/educator to run it.

Digital Connections

In one school district in North Carolina, IBM created tools that allowed parents to connect to teachers digitally, letting parents view their children's schoolwork from home or a community center and compare it with the district's academic standard. According to the president of the IBM Foundation, Stan Litow, 45 patents or patent applications have resulted from its work on RE.

What IBM has gained from RE is internal knowledge about how to apply technology tools (some newly developed) and solutions to tackle huge, complex issues in meaningful ways. The RE project has proven that technology is not just a quick fix that boosts productivity or enables people to make prettier presentations with Microsoft PowerPoint, but an important tool for social change. As IBM and the schools with which it worked refined the approach, IBM was able to transfer that learning to its business customers as well.

Innovation is a tool that can be used anywhere to solve many different kinds of problems. Teach your executives and your employees to innovate in a world of severely constrained resources and large problems, and you've got a better executive or employee for your own needs. At companies for whom philanthropy is a core value, performance of service within the community only enhances performance at the corporation. ■

Go Global

In today's increasingly integrated multicultural world, you lose competitive advantage by not entering every possible market. The same reasoning extends to philanthropy: In defining your community, you can't confine your service merely to the United States, North America or other cultures with which you are comfortable. "Community" expands to encompass locations where you have plants or sales outlets, or maybe where you just have customers.

Extending philanthropy into overseas locations definitely has risks as well as rewards. "Philanthropy" does not mean the same thing in India or Albania as it does in the United States; in Japan, there is no word at all for philanthropy. When companies extend a helping hand in these places, they must be even more careful about communicating expectations up front — to governments, nonprofits and the people they are trying to help. Otherwise, well-meaning intentions, sadly, could backfire, leading to misunderstanding and tension.

Look at the Whole World

Companies must look at the whole world as their potential community, and then thoughtfully select areas where their philanthropy is most needed and can have the greatest impact, based on their mission and program focus areas. Levi Strauss & Co., which operates owned or leased plants in about 60 countries, has not been afraid to teach workers about their rights, even when they may voice complaints about Levi itself. Starbucks Coffee Co. works with farmers to set up buffers around biodiversity preserves in coffee-growing regions. LensCrafters, all of whose retail optical stores are located in North America, nonetheless saw such an opportunity for service in the Third World that it started missions there to deliver glasses. Those missions have now reached 1 million people in about 25 countries.

These companies' efforts demonstrate that, while the idea of formalized philanthropy might not be universal, the willingness to help one's fellow human beings is. Companies can reap goodwill for themselves and their employees by tapping into that powerful sentiment. ■

Strategic Philanthropy (or Not)

How much should a company exploit the public relations benefits of doing good? Some companies prefer to do what they call "pure philanthropy," which they consider philanthropy that does not have a marketing component built in. Others go to the other extreme with cause-related marketing — backing high-profile, popular events such as the Olympics. And there are gradations in between. Ultimately, corporations do philanthropy because it has benefits to them, whether in making the CEO feel good, in retaining employees and teaching them new skills, or in garnering public admiration. How far should corporations go in combining philanthropy with their own business goals?

To answer that question, Michael Porter, a business strategist and author of *Competitive Advantage*, and Mark Kramer, a former nonprofit fund-raiser turned consultant, wrote an influential article in the *Harvard Business Review* titled "The Competitive Advantage of Corporate Philanthropy." In the article, they state flatly that corporate philanthropy should be designed to give corporations a leg up on competitors. For example, the authors approvingly describe Cisco's networking academies, which train young people to be network administrators, giving them needed job skills while, at the same time, enhancing Cisco's ability to grow by providing essential IT support for users of its technology.

Some corporations have embraced this so-called strategic philanthropy, such as Hewlett-Packard, Microsoft and Coca-Cola, while others, such as General Motors and Adobe Systems, have not. Whether it's Avon going door to door to raise money for breast cancer or Microsoft putting its software in libraries, companies (or people) don't do anything out of unadulterated altruism. They do it because they figure it will help them in some way. However, the spirit of helping the community should permeate corporate philanthropy, even when it is predicated on business goals. Considering those goals when drafting a philanthropic mission can be useful in allowing the company to utilize its resources in the most effective manner. Human needs are seemingly endless, so any corporation has to find some method of picking its spots. Going with "strategic philanthropy" can be one of those methods, although it's not the only one. ■

Tackle the Big Project

Putting corporate expertise and resources behind energetic community leadership has become the new recipe for helping to solve some of society's biggest problems, such as poverty, unequal education, and homelessness. Most corporate philanthropy programs are reluctant to take on anything too overwhelming out of fear that they won't be able to make an impact and will just get lost in the crowd. But a few companies have been willing and able to tackle massive, multiyear projects that require serious commitments of money, people and resources.

Big projects are where big companies can truly shine because they have not only the dollars, but also the in-house people power to make a difference. Thus, HP lends its Digital Village partners full-time personnel for three years to help manage and coordinate the projects aimed at empowering poor communities with technology and training. IBM detaches consultants and programmers to work with school districts in its Reinventing Education program. Levi Strauss & Co. spends a decade working with several rural communities in the United States to combat racism in its Project Change program.

These are not problems that lend themselves to quick solutions. For companies that get involved, they require more than dashing off a check for a single-year grant. These companies' efforts provide a pattern for how corporations can undertake major, multiyear philanthropic efforts and deliver definitive progress. Some of the commonalities in these efforts include a willingness to devote significant resources over a long-term period; participation of key people within the corporation, both in advocating for the projects and in staffing them; strong partnerships and two-way communication with nonprofits that will be involved in the work; flexibility in readjusting priorities and methods; and, above all, the belief that meaningful change is possible. ■

Good Partners Make Good Philanthropy

The importance of forging good partnerships cannot be overestimated. Corporations that think they can simply dive into the nonprofit world with the same techniques and timetables that they've used successfully in the business world can find themselves sadly disillusioned. Many of the issues with which nonprofits are wrestling — homelessness, poverty, discrimination, lack of access to health care or other services — are the biggest challenges facing society. Before corporations can be effective philanthropists, they need to build their own capacity for community service. This means they must hire effective people internally to run the foundation or corporate giving organization; it also means finding effective partners in the nonprofit world. Examples of strong alliances include LensCrafters' partnership with Lions Clubs International to donate eyeglasses to the Third World, and Starbucks' partnership with Conservation International to encourage coffee growers to use environmentally sustainable practices.

Typically, the corporation contributes funding, personnel and expertise in planning and prioritizing. The non-

(continued on page 8)

Good Partners Make Good Philanthropy

(continued from page 7)

profit partner provides opportunities to do good and advice as to how to apply these corporate resources. The biggest complaint that nonprofits have about corporations is that they rush in thinking they know how to do it all in the nonprofit world. Then they get frustrated when their timetable does not match what is happening in the nonprofit world, and back off. Firms that build up partnerships with nonprofits and listen to their input are far more effective and less likely to run into brick walls.

Few corporate executives understand the many issues that confront nonprofits — not just the societal problems they try to correct, but also the need to constantly raise money and fund operating expenses along with project-based work. Similarly, nonprofits don't always comprehend the pressures that confront executives of public companies, especially the requirement to balance shareholder demands with community needs. Serving on each other's boards and participating jointly in projects can help corporations and nonprofits to enhance and improve their communities and themselves. ■

THE TOP 10 BEST PRACTICES IN CORPORATE PHILANTHROPY

Call to Alms

Here are the 10 "best practices" that make corporate community service do good and do well for the company and the community:

1. Start developing a program today, if you haven't already. No matter how small or strapped you are, helping someone else will raise morale and make you feel like you are in charge of your destiny. If you don't think you have enough people to make a difference, invite others to join you. "Collaboration is a powerful model," says Jeff Swartz, president of the Timberland Co. "We invite our suppliers to serve with us. We invite other companies. I believe small companies can be big companies by applying this model of leverage and engagement. It's an opportunity to access joy."

2. Define a mission by establishing priorities and communicating them to executives, employees, customers, nonprofit partners, and others. Have clear guidelines about what you do and don't fund, but be flexible enough to respond to emergencies. Dinah Waldsmith, senior manager for Business for Social Responsibility, says, "Help nonprofits to understand what you want from them, but don't create a process that's too burdensome."

3. Integrate service with your corporate culture. Make it a part of your "brand." Many companies have done this successfully, including Timberland, Levi Strauss, Hasbro and LensCrafters.

4. Demonstrate commitment from the top down, and involve employees from the bottom up. Senior managers must show support for community service by doing it themselves, and publicly championing its importance.

5. Define your community broadly, in ways that make sense for the corporation. Don't forget the rest of the world outside of North America, even though local customs and cultural barriers might make it more difficult to reach out.

6. Forge strong partnerships with nonprofits, and give them the respect you would any other business partner. Corporations love to talk about leverage, and community service is an area ideally suited to it. Once you've identified your long-term vision of philanthropy, "use that to select nonprofits that will help you achieve that vision," advises Bill Shireman, CEO of the Global Futures Foundation. Look at how the nonprofit partners relate to each other and "make sure they're complementary and won't be competing with each other."

7. Consider your business goals in developing your philanthropy, but don't be too rigid. Treat philanthropy as an investment as important as any other. IBM and Hewlett-Packard have shown how investing in the community reaps value for the corporation in the form of patents, new customers, and positive media coverage.

8. Find ways to measure and celebrate the impact of your philanthropy. LensCrafters' goal was to help 3 million people through its Gift of Sight program by the end of 2003. "Gift of Sight has elevated our daily work and given us an energizing higher purpose," says Susan Knobler, vice president of the LensCrafters Foundation, which runs the Gift of Sight program.

9. Sustain your philanthropy even when the company is going through tough times. Responsible companies that plan to be around for a long time should pace their philanthropy inversely to the marketplace, advises Global Futures Foundation's Shireman. That is, they should maximize their philanthropic efforts during economic downturns. The worst thing you can do during a layoff period is to reduce service programs, because that will further diminish the morale of the remaining employees.

10. Don't be afraid to change and try new things. You need to continually tweak and improve philanthropic programs, to ensure that they are as impactful as they can be. ■

Compelling People

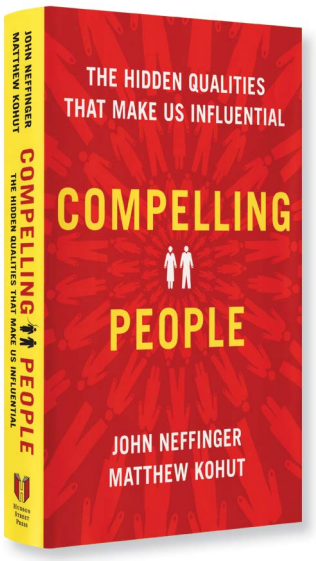
The Hidden Qualities That Make Us Influential



by John Neffinger and Matthew Kohut

THE SUMMARY IN BRIEF

When people size you up, what do they see? We would all like people to appreciate us for our positive qualities, but most of us don't think we can muster the personal magnetism of a Bill Clinton or an Oprah Winfrey. In *Compelling People*, John Neffinger and Matthew Kohut reveal the basic framework we all use to judge each other, drawing on cutting-edge social science as well as their own work with Fortune 500 executives, members of Congress and Nobel Prize winners.

These character judgments revolve around two qualities: strength (the root of respect) and warmth (the root of affection). The ability to project both strength and warmth at once is rare — so rare, in fact, that we celebrate, elevate and envy those few people who manage it.

Compelling People demystifies this process, detailing all the subtle but critical signals that make some people irresistibly engaging and others forgettable. Just as they have with hundreds of clients and in regular lectures at Harvard and Columbia Business schools, Neffinger and Kohut show us not only how to appear both strong and warm but how to internalize the attitudes that will earn you both respect and affection.

Authoritative and entertaining, *Compelling People* will forever change the way you see people — and let you change the way people see you.

IN THIS SUMMARY, YOU WILL LEARN:

- The dynamics that make it tricky to project both strength and warmth at once.
- Which factors we have control over and which ones we don't.
- Nonverbal cues that broadcast strength or warmth.
- How to use language to connect and then to lead in conversation and writing.

Preface

When we decide how we feel about someone, we are making not one judgment, but two. The criteria that count are what we call "strength" and "warmth." Strength is a person's capacity to make things happen with abilities and force of will. When people project strength, they command our respect. Warmth is the sense that a person shares our feelings, interests and view of the world. When people project warmth, we like and support them.

But understanding the signals you send is not the biggest challenge. The trickiest thing about strength and warmth is that it is very hard to project both at once. This is because strength and warmth are in direct tension with each other. Most of the things we do to project strength of character — wearing a serious facial expression, flexing our biceps or flexing our vocabulary — tend to make us seem less warm. Likewise, most signals of warmth — smiling often, speaking softly, doing people favors — can leave us seeming more submissive than strong.

The Big Idea

Strength

Strength gets things done. As a personal quality, strength is a measure of how much a person can impose their will on our world. Strength consists of two basic elements: the ability to affect the world and the gumption to take action. If having ability means you have the tools to make things happen, will is the strength of character it takes to act. People who project strength command our attention, in part because we need to know if they are going to use their strength in ways that help us or in ways that harm us. Grudgingly or gladly, we respect people who project strength.

Leadership and strength are inextricably bound together. We look to strong people as leaders because they can protect us from threats to our group. Strength is essential to effective leadership, whether the organization is a submarine crew or a school clique.

Warmth

But strength alone can only take us so far. To move beyond respect to admiration, we also need to be liked. And to do that, we need to project warmth. For our purposes, warmth is what people feel when they recognize they share interests and concerns. It is the sense of being on the same team. If strength is about whether someone can carry out their intentions, warmth is about whether you will be happy with the result. When people project warmth, we like them. Warmth encompasses several related concepts:

Empathy. Displaying empathy means putting oneself in the shoes of others, but empathy is not just about feelings. There is also a cognitive dimension to it: The shared feeling is tied to a shared perception. This is captured in the expression "I get it," meaning "I understand why you feel a certain way."

Familiarity. When someone or something is unfamiliar, we are on guard — poised to react with strength (or fear) — until we determine that there is no threat. When we meet people who are similar to us, we gravitate toward them because they feel so familiar to us. Similarity essentially works like a social magnet.

Love. When we feel a whole lot of warmth for some-

one, we say we love them. Researchers have identified three different biological systems that get labeled "love," each of which generates a different set of hormones that produces different kinds of feelings: one for romantic love, one for sexual attraction, and a third for general feelings of attachment. But it is this third feeling — basic affection and attachment — that best fits our idea of warmth.

Strength vs. Warmth

If you cannot project both strength and warmth, which one should you choose? In fact, strength and warmth are complementary, not mutually exclusive opposites, and there is a lot of interplay between them. When you project a whole lot of either strength or warmth, an interesting thing sometimes happens: You can start to project the other trait as well. You may have colleagues who want to be like you because you are known for being great at what you do — so your strength fosters warmth. On the flip side, if you are beloved by the people you work with, most of them will side with you if you get crosswise with someone — so your warmth also gives you strength. And if you are doing any job in which you have to be liked to be effective, your ability to project warmth is a key strength you bring to that role.

The Hand You Are Dealt

Quick and Dirty Judgment

Among the first things people learn about you are the physical basics: gender, body type, looks, ethnicity and age. As quick and superficial as this initial glimpse is, these attributes already convey the silhouette of a strength and warmth profile.

We humans have evolved a whole lot of neural circuitry for making split-second judgments based on basic physical factors. These rapid-fire calculations happen automatically, below our conscious awareness, with very little effort. Being thorough and precise are not the top priorities; making good enough assessments quickly do.

Jumping to conclusions about people makes us feel more confident and less uncertain about the world around us. But once we start to think we understand someone, we filter incoming information and tend to dismiss things that do not fit in our hastily drawn picture as meaningless aberrations. We become prisoners of our preconceptions. And so do the people we stereotype.

It is possible to resist being slotted into someone's preconceived notion of "people like you" by doing things that do not fit the stereotype. This is best done early on, both because first impressions formed tend to last, and because people often do not like it when you upset their expectations later. The technical term for this upsetting of expectations is a "stereotype violation." When you show them something that makes them reconsider their comfortable worldview, you make their life a little bit harder, and that can leave you seeming less warm. And when people are emotionally invested in a particular view of the proper social order, if you show a lack of appreciation and respect for that social order, they lose respect for you, see you as less strong, and regard you with contempt.

Since strength and warmth perceptions are in the eye of the beholder, people's judgments of you depend on where they sit in the social hierarchy. As a general rule, people in higher-status groups are seen as competent, while those in lower-status groups are assumed to be less competent. But the full story is more interesting than that, and there are plenty of stereotypes to go around. Everybody stereotypes, and everyone is stereotyped. It is just how our brains work.

Talking Across the Divide

Imagine a block party on a summer afternoon in a city neighborhood that has a mix of black and white families. Neighbors who usually only pass each other briefly on the street are now meeting each other more formally for the first time. What do those conversations sound like?

When people of different races talk, each group is often concerned about addressing their stereotypical shortcomings. White people want to be viewed as likable and moral, while people of other ethnicities want respect. White people understand that their socially privileged position generally checks the box on strength, so to make a good impression they want to project warmth. Some also worry about appearing prejudiced, so they want to be seen as open. People who are not white want to project warmth too, but they also want to project strength to earn respect. The groups also prefer different conversation topics. White people tend to focus on commonalities among groups, hoping to foster good feelings that will enhance their likability. Black people, on the other hand, prefer to acknowledge and talk about power differences.

This played itself out recently at a block party in John's rapidly gentrifying neighborhood in Washington, D.C. Young white residents admired the gardening skills of their black neighbors, and everyone played with each other's kids and had a good time. In the conversations that ran long enough to get past the basic pleasantries, black residents would often steer the discussion to the impacts

of rising property values and the dynamics between the police and the black teenagers who hung out in the park.

When white people miss these dynamics in interracial conversation — when they talk only about common ground and tiptoe around power dynamics — the outcome can be precisely the opposite of their goal: Instead of demonstrating warmth, the white folks demonstrate just how little they understand other people's experiences, creating frustration and disappointment on all sides. Real dialogue involves give-and-take, and that includes giving others the opportunity to put uncomfortable topics on the agenda.

Playing the Hand

The Choice Is Yours

The signals you send with your gender, ethnicity, looks and age are more or less fixed: Short of surgery, you cannot do much about them. But that is exactly why these physical attributes are far from the last word on how people judge your character. At the end of the day, character is a matter of who you choose to be, not the way you happen to be born. People judge your character by the way you act, and especially by the way you interact with them.

Even if a lot of behavior is unconscious, nearly all of it can be subject to conscious choice. You can *choose* not only to behave differently but also to learn how to behave differently: You can take steps that change the way you react unconsciously in the future. Some of these changes require a lot of practice, but others just take a little imagination.

Nonverbal Communication

How we *feel* is conveyed more by nonverbal behavior than by the words we choose. Nonverbal communication goes directly to the issue of trust. When all the signals — facial expressions, posture, gestures, vocal tone and the actual words — line up to tell a consistent story, then we can be confident those signals are an accurate expression of how that person feels. By contrast, when different signals are telling different stories at the same time, we suspect that a person is conflicted, uncomfortable, or maybe even trying to hide something.

Space

The way you use space in a room says a lot about how much strength you project. In general, strong people make themselves at home anywhere, occupy a lot of space, and move about freely rather than getting locked in one place. Above all, they exert control over space, making it clear who is in charge. Closing distance is also what we typically do when projecting warmth. Conversely, keeping your distance from someone almost invariably comes off as a lack of warmth, even if it is done out of respect.

Good, upright posture projects strength. This also is about owning a lot of space, only vertically: Standing tall demonstrates confidence. If you are more concerned with projecting warmth than strength, tilting your head slightly to the side projects more warmth than keeping it straight up and down.

If posture is how you hold your body when you stand in one place, gait is how you hold it as you walk. A short, quick gait with the head angled down sends a very different message than a gait with the head level, the chest open and the stride long.

If we consciously force ourselves to adopt certain postures, our emotions change to align themselves with that posture. Anytime you are heading into a situation where you want your body and mind to feel powerful, adopting strength poses a few minutes in advance will help make that happen.

The key to projecting strength with gesture is not to flail around excitedly but to move deliberately, discreetly, gracefully. That presents poise. The aim is to demonstrate complete control of where your body is in space. As with music, the pauses between the gestures themselves are important: You gesture intentionally, and when you are done, you are still. That stillness demonstrates your physical control as much as the motion itself does.

Both posture and gait are to a large degree under your conscious control: You can force your muscles to do whatever you tell them in the moment, no matter how you are feeling. Gesture is significantly more subject to the dictates of your own anxiety level, and facial expression is more susceptible still.

Face

A flexed lower eyelid is the purest form of facial projection of strength. Colloquially, we speak of this expression as showing "steely" eyes to reflect the unyielding will beneath. Sometimes we say this look seems like the person is boring holes into you with their eyes.

In roles like Dirty Harry and in his Westerns, Clint Eastwood wore this expression with flexed eyebrows to convey intense disgust. But even in pictures of him smiling or not making any particular expression at all, his lower lids are always flexed, always signaling intensity.

The best place to begin decoding the visual elements of warmth is the face, and the number one way we project warmth is by smiling. Smiling is a fundamental means of

nonverbal communication that is deeply rooted in human behavior around the world. We attribute all kinds of good things to people who smile at us, such as happiness, attractiveness, sociability, flirtatiousness and success, among others. Smiling can even create a halo effect, which causes us to make a wide range of positive associations with people who smile at us. Smiles are also contagious.

Smiling is a very good thing for many reasons, but all smiles are not created equal. We don't smile only to project warmth. We also smile to express joy, politeness, dominance, anger, ridicule, concern and a host of other emotions. Some of these project strength rather than warmth. Where warmth is concerned, think of smiles that demonstrate agreement, familiarity, empathy, concern and attraction. It's relatively easy to imagine a range of facial expressions that convey each of these emotions.

Voice

While visual signals are the most powerful means of communicating emotion, the voice also conveys a great range and depth of feeling. The basic elements of vocal delivery include pitch, volume, rate and tone. A metaphor for thinking about the different parts of the voice is a synthesizer keyboard, which allows you to manipulate each element in isolation and change the blend among them.

Pitch refers to how high or low a note someone's voice sounds. A low-pitch delivery conveys strength, while a high pitch can signal excitement ("We won!"), uncertainty or nervousness.

While strength corresponds with low pitch, we recognize warmth through variation in pitch. Imagine the melody to a lullaby; it goes up and down in pitch before resolving somewhere in the middle. At the other end of the spectrum, the vocal delivery that projects the least warmth is a monotone.

Volume is generally connected with strength, as we expect loud voices from traditionally strong figures, such as members of the military or police. Softness can signal either compassion or timidity. It can be soothing, which we perceive as warmth, or it can simply come across as a lack of strength.

Rate refers to how quickly a person speaks. It is more than simply a measure of raw words per second because it also includes the use of silence or pauses and fluency. Rate of speech by itself does not necessarily project strength or warmth. Together with using low pitch and good volume, however, adopting a slower rate to deliver a key point is very effective.

Tone is perhaps best understood as the musical quality of a voice. Think again of a synthesizer: It can make a note sound brassy, muted, smooth, choppy or any number of different qualities. Is a speaker barking his words like a seal, or is he employing a breathy delivery that suggests a candlelight dinner for two?

While each of these elements contributes to the strength or warmth of our voices, there is more to it because most of the talking we do is in dialogue with others, not monologue. MIT researchers have identified distinctive patterns of vocal variation, such as influence, mimicry and consistency, that serve as social signals in a conversation.

Influence in this context can be thought of as control of the conversation. Who sets the pace and dictates the direction? Who asks the questions, and who gives the answers? How long does each person hold the floor?

Mimicry is copying the patterns of another person and will often include both vocal and visual cues, such as nodding. Mimicry is a means of establishing empathy by literally sounding similar to our conversational partner. This is a very practical warmth technique.

Consistency refers to how much a speaker sticks to a single pattern of tone, rate, pitch and volume variation throughout a conversation. Great consistency projects strength, whereas vocal variability signals openness to others' ideas — warmer and less strong.

There is no one ideal combination of vocal elements; the best approach depends on how much strength and warmth a particular situation calls for.

Style

Style is a reflection of more than your tastes — it is a reflection of your attitude. Done right, your style complements the signals you send with your gender, ethnicity, age and looks, allowing you to adjust the strength and warmth profile that comes as your birthright.

Pay attention to the way clothes make you feel when you wear them, because that will affect how you carry yourself and project strength and warmth nonverbally. No matter what you look like, those nonverbal impressions are still the most powerful piece of the overall impression you make.

Words

Just as your nonverbal cues signal warmth or strength, so do your words. Verbal strength is something that we know when we hear it (or read it). Direct, active verbs add force, clarity, immediacy and vigor to speech. We also equate a rich vocabulary with verbal strength, though too much of a good thing with SAT words can cost some warmth points.

The absence of verbal strength has a different recognizable sound. For instance, hesitations or phrases like "kind of," "sort of," "like" or "you know" lead us to doubt the competence of a speaker. Qualifiers such as "I think" and "I believe" also diminish certainty and credibility, as do various kinds of vagueness.

Complex sentence structure does not necessarily translate as strength. For reasons having to do with cognitive ease, we do better understanding simpler sentences than complex ones and positive constructions rather than negative ones. Occasional use of rhetorical devices such as metaphor, analogy, repetition, wordplay and famous quotations are very effective ways of bolstering verbal strength.

Verbal Warmth: The Circle

When we work with our clients, one of the first concepts we introduce is something we call "the circle." Imagine your audience as a person you are trying to persuade to support you in something. Not having much by way of art skills, we usually just draw a stick figure to help visualize this person. Next we draw a big circle around our little stick figure. This divides the world in two. People who understand the world the way your audience does belong inside the circle, next to the stick figure.

It is a simple picture that reminds you what you have to do to communicate effectively with any audience: Your first job is to get into the circle. You can talk all day long, but if your audience does not see you as belonging in that circle with them, they will not listen.

What your audience is looking for is to know that you are on the same emotional page as they are. The key to getting in the circle, then, is simple: Show your audience that you feel the same way they do. Validate their feelings. If your audience is frustrated about an issue and you are too, show your frustration. If your audience is happy about something and so are you, share your happiness.

When you do not agree with an audience or even necessarily feel the same way they do, then getting in the circle is even more important, but definitely not so easy. First and foremost, you need to empathize. You have to identify something that your audience is feeling that you can feel, too, and then show them you feel it, too. If you want people to take your point of view seriously, you first have to be willing to take their point of view seriously. That is the deal, and it is totally, brutally fair.

Don't tell other people how they feel. Show them how you both feel, and tell them about the common ground you share.

Create "Yes Momentum"

If you want to appear to be a reasonable person, the kind of person who usually gets things right, you are going to help your cause if the first sentiment you express (the only sentiment your audience has ever heard you express) is one your audience recognizes as being reasonable.

When you start by saying something that makes your audience respond mentally with a yes, you create what you might call "yes momentum"— the natural inclination for one yes to lead to another and another and another.

Unlike in the nonverbal realm, where projecting more warmth undermines your perceived strength, projecting warmth verbally by getting in the circle opens the door to projecting strength verbally by compellingly presenting new ideas. In addition to nonverbal signals, skillful use of techniques such as sound combinations, names, storytelling and humor are some of the ways you can dial strength and warmth up and down.

Strength and Warmth in the World

A friend of ours once had meetings with senior executives at two Fortune 500 companies — a bank and a media conglomerate — in the same week. For her bank meeting, she presented herself very conservatively: dark suit, hair up, plenty of poise in her demeanor and grace in her movements. Not surprisingly, this fit their culture and expectations, and her meeting went well. Later that week she went to the media company, and she showed up dressed and carrying herself the same way. It took her a few minutes to realize something was not right. Initially she thought it was great how friendly everyone was to her. But it slowly dawned on her that they were also very skeptical of her steely demeanor. She found herself tap-dancing quickly to convince the people at the media company that she was a good fit with their culture, which placed a premium on openness, creative expression and collaboration.

Looking at our friend's experience through the lens of strength and warmth, we see a few different dynamics in play. While both companies place a premium on strong market performance, the bank's culture is colder, and the media company's culture is warmer. Our friend showed up at both places looking and acting all business, which projects strength. At the bank, that helped earn their respect, and it also helped show that she shared their sensibilities. At the media company, her appearance and demeanor suggested that she was out of sync with their culture. Her hosts likely saw her as strong but not warm.

There are some organizations that see themselves as all business, with no time for warmth. But many organizations see some form of warmth as key to their effectiveness, whether it is good client service, appealing marketing and branding, or attracting top talent by keeping employees happy.

Communicating Up, Across and Out

Nearly all of us have a complicated set of relationships to navigate at the office. The first is communicating up, or managing direct and indirect bosses and senior influencers.

With Bosses. There are obvious limits to how much strength you can bring to this task, and every boss is different. An insecure boss may interpret a show of strength as a threat. At the other extreme, a friend in middle management at a global technology company has been told repeatedly by his very aggressive boss that he is not forceful enough when making his case in their conversations.

One of the tried-and-true techniques for projecting warmth with just about any personality type is appealing to concerns that will help your boss either look good or stay out of trouble. If, for instance, you are able to pass along useful intelligence because you have an ally in an office higher up the food chain, your boss can prepare for incoming fire before it reaches her desk through formal channels. The "no surprises" rule is another golden oldie; most bosses appreciate advance notice about developments that may wind up on their desks. This projects warmth by demonstrating your loyalty to the team.

If your boss gives you a fair amount of free rein, proactive engagement can be a good way of shaping your own agenda and demonstrating your competence as a self-starter. With micromanagers, many respond well to a steady flow of information about your activities. Micromanagers are typically high in two aspects of strength: assertiveness and competence. Regular reminders that you also value competence can be a good way to set your micromanager's mind at ease. Whether your organization talks in terms of shareholder value, key performance indicators, project milestones, or team goals and objectives, the micromanager will appreciate hearing that you care about hitting those same targets.

With Subordinates. When communicating with people at lower levels in the organization, keep in mind that they see you differently than you see yourself. If you are an unknown quantity, it can be important to establish a basis for respect. This can be achieved through a combination of the words you choose and nonverbal cues, including posture and dress. In other cases, your position may confer status that gives you a halo, or it may make you the source of envy or even resentment. This is common in organizations where there is a clear line between "the suits," or management, and "the field." One potential way to inoculate against this is to acknowledge it in a lighthearted way at the outset. By demonstrating that you know how they feel about you, you can disarm skeptics and help establish warmth that can serve as a basis for a solid working relationship.

The Big Pitch

In high-stakes situations like a big pitch, whether for a venture capital investment, a hefty contract from a client or a partnership, you are being evaluated on a number of dimensions that correspond to strength and warmth. Your would-be partner wants to know you have something of significant value to offer, that you have a strong sense of the relevant business dynamics, and that you can deliver — all strength factors. They also want to know your interests are aligned and that there is a good personal fit for a long-term relationship.

To close the sale, your story will have to include both a compelling way of establishing a shared interest as well as the business case for the proposal. The rest — a character judgment — will depend on earning the confidence of the other party and demonstrating that you are their kind of person.

Depending on what kind of people they are, this may not call for high-wattage gregariousness — it may be about making clear your commitment to providing return on investment to shareholders, or some other serious concern that determines personal fit from their perspective. The warmth challenge in a big pitch is first and foremost about getting in the circle.

Leadership

When we consider how organizations select leaders, there is often an imbalance between strength and warmth. Not only are the people involved in the selection process typically most concerned about choosing someone who can get things done; they are likely to have seen only the sunniest side of the subordinates they are considering promoting. In a hierarchy, everyone is taught to kiss up to those above them, but not everyone is so nice to those below. So warmth often gets shortchanged or is undervalued.

Yet when we look at the skills good leaders need, it is clear that warmth and strength both count. Harvard political scientist Joseph Nye created a taxonomy of five principal leadership skills: emotional intelligence, communications, vision, organizational skills, Machiavellian political skills and contextual intelligence.

Emotional intelligence enables leaders to understand themselves and others in a way that allows them to move people to action. Self-mastery projects strength. Outreach to others, on the other hand, is about warmth. The ability to get in the circle, for instance, requires the emotional intelligence to read your audience before making an appeal to shared concerns or interests.

Communications can project both strength and warmth. The skill of being an effective communicator is an aspect of a leader's strength, while the ability to connect with stakeholders is an exercise in warmth.

Vision is a leader's way of describing the present and articulating an idea for how to arrive at a (presumably better) future state. The ability to create a compelling vision is a powerful way to establish a sense of shared interests that we equate with warmth.

Machiavellian political skills are perhaps the most easily identifiable manifestation of strength. It is the ability to size up others for wheeling and dealing in what Nye calls "hard power" situations that require either incentives or coercion, carrots or sticks. People who prioritize this skill at the expense of others are viewed as cold and bloodless.

Contextual intelligence is the ability to read a situation and determine an appropriate approach to the leadership challenge that it poses. This requires aptitude in dealing with organizational culture (warmth), power politics (strength), the needs of people within an organization (warmth) and information flows (strength).

Leading people ultimately demands satisfying two primary needs for the group: projecting enough strength to protect it from threats and keep it on track and projecting enough warmth to recruit and retain others who will help realize the group's vision. Leadership resides in the ongoing balancing act between strength and warmth, and leaders need to project both actively in the presence of people who work for them. The most admired leaders are the ones who project consistently high levels of strength and warmth and have the contextual intelligence to know how to use it.

In Public Speaking

Of all the moments of judgment we face in our lives, few feel as momentus as standing in front of a large group of your fellow human beings, seeing all their faces and speaking to them. Whether it is a logistical announcement, a wedding toast or a persuasive speech, most of us are not accustomed to facing the glare of that much attention all at once. Even if you are just communicating rote information, you know that at some level, the way you express yourself leads everyone in that audience to make some sort of character judgment about you. On top of that, when a lot of people are asked to pay attention, usually the topic is important, and occasionally big outcomes ride on whether you do a good job or not.

We divide the challenge of speaking well into two buckets: first, managing your nerves, and second, everything else.

When you are at the front of the room, whatever emotions you project into that room strongly influence how everyone in your audience feels. If you are uncomfortable being at the front of the room, your audience will be uncomfortable watching you. Whether they like you or not, if they are sitting there, they want you to own the room, so they know that their experience will at least be a comfortable one. The heart of projecting strength is projecting confidence — and nowhere is this more true than at the front of the room.

Epilogue

In the end, strength and warmth are not just character traits in tension. They are energies, basic life forces, and they work together, too. Strength gives us a sense of mastery, and warmth gives us a sense of belonging. Both strength and warmth have their individual benefits, but it is when they happen together that life gets good.

This is the last step, where everything comes together. It is more than not being afraid of your own shadow, more than learning the moves. It is actually emotionally engaging in the moment, understanding and feeling your own actions as expressions of your strength and warmth. In those moments, you feel powerful and deeply connected to people. That makes you compelling to others, because it makes you compelling to yourself.

THE SUMMARY IN BRIEF

What makes a company culture effective? Is it a strong core of well-paid leaders, or perhaps a workforce that's expected to do their work and keep quiet about it? Neither—the key to a company culture that makes employees and leaders happy and leads to financial success is connection.

In ***Connection Culture***, Michael Lee Stallard draws on data and research from the world's most successful company cultures to find out exactly what makes them so effective. The answer? Connection—between people, between teams, and across the organization as a whole. So why do so many individuals and organizations fail to create cultures of connection? Stallard explores the answers, then sets about the task of guiding leaders toward more effective connection. He shares insights into some of the world's best cultures and how they maintain such a high level of connection. And he shows the many risks of poor connection within organizations, and how it can completely derail a company's potential.

IN THIS SUMMARY, YOU WILL LEARN:

- The three types of company culture, and why a culture of connection is the only path forward.
- How to use the Vision, Value, Voice model to assess and improve your company's culture.
- The superpowers of connection and the dangers of disconnection.
- A plan for taking action to make your company culture a culture of connection.

A New View of Leadership and Organizational Culture

If a leader's sole focus is on seeing that tasks are accomplished, then success will be unsustainable. Leaders must create an environment where people thrive. What does it take for you to thrive at work, and what is the role that culture plays in whether or not you are able to give your best effort?

There are seven universal human needs required for people to thrive at work and three types of culture everyone should know about, including the type of culture that best promotes the health and productivity of individuals and organizations. You'll learn these in the following sections, as well as a vocabulary of culture and a simple, memorable, and actionable model to create the best culture. This knowledge will help you understand what type of culture you need to thrive, and it will begin to equip you to cultivate a workplace culture that brings out the best in the people you are responsible for leading or whom you lead through your influence.

The X Factor

Is there a 'best' team and organizational culture? Is there an X factor in culture that brings out the best in people and propels the success of groups?

Scholars are finding that organizations comprise a web of relationships best capture by theories of complexity. Meanwhile, effective leaders care about people and foster positive relationships. Connection is cited as an emerging general theory of leadership and organizational culture that integrates these trends.

Applying a one-size-fits-all culture isn't realistic in today's increasingly diverse and global working world. That said, organizations that have sustainable high performance will have common elements to their culture that enable them to be their best. Although the tasks will differ depending on the industry, when it comes to the relational aspects, there is a best culture: a culture that has a high degree of human connection.

Reflect on a time when you were energized by your work. What factors were present that contributed to your energy? Next, reflect on a time when your work felt draining. What factors were present that contributed to your fatigue or your feelings of being burned out? How would you describe the current culture you're experiencing? Does it draw you in and connect you with your colleagues and organization, or does it push you away and leave you feeling disconnected?

Connection Culture provides a new way of thinking about leadership and organizational culture. In the sections ahead, you will learn about this new approach and discover how to tap into the power of human connection.

Connection, Control, and Indifference

You can decode a culture by looking at the predominant attitudes, uses of language, and behaviors. As we explore what it takes to establish and strengthen connection cultures, it is instructive to understand how cultures differ in ways that affect the health and performance of individuals and organizations.

There are primarily three types of relational cultures: cultures of control, cultures of indifference, and cultures of connection.

In cultures of control, people with power, influence, and status rule over others. A culture of control breeds an environment in which people fear making mistakes and taking risks. It is stifling—killing innovation because people are afraid to speak up. Employees feel left out, micromanaged, unsafe, hyper-criticized, or helpless. Cultures of control tend to exhibit a number of common attributes. They're often hierarchical and formal in nature, with an inner circle that develops and is comprised of favored individuals who have the most power, influence, and status and receive the most recognition, responsibility, and compensation.

Cultures of indifference are predominant today. In this type of culture, people are so busy with tasks that they fail to invest the time necessary to develop healthy, supportive relationships. Some leaders don't see value in the relational nature of work. Whether they voice it or not, their attitude is, "You are being paid to do a job. I don't care how you feel or if you have friends here. All I care about is your work." People in cultures of indifference often come to feel like they are thought of and treated as mere means to an end rather than as human beings who are valuable in and of themselves. They may feel like a cog in a machine, unimportant, underappreciated, uncertain, or invisible. Many struggle with a lack of connection.

Leaders may have good intentions, but suffer from blind spots. This leads to a lack of organizational focus and workloads for those under them that are unreasonable and may cause people to feel overwhelmed.To achieve sustainable superior performance, every member of an organization needs to intentionally develop both task excellence and re-

lationship excellence. A culture of connection produces task and relationship excellence.

In a connection culture, people care about others and care about their work because it benefits other human beings. They invest the time to develop healthy relationships and reach out to help others in need. They embrace that every individual has something to bring to the table based on their experiences and background, and that a diverse marketplace of ideas and perspectives is a strength. This bond of connection helps overcome the differences that historically divided people, creating a sense of community and unity that is inclusive and energized, and spurs productivity and innovation.

The Vision + Value + Voice Model

The first element of a connection culture is vision. It exists in a culture when everyone is motivated by the mission, united by the values, and proud of the reputation. When people share a purpose or set of beliefs, it unites and motivates them. Vision is more than identifying and articulating a mission. It also includes understanding how an organization goes about accomplishing its mission. In other words, vision encompasses the organization's values or beliefs about what is right and, by implication, what isn't right in how it conducts its business. An organization's mission and values, including how it lives up to them or doesn't, produces the reputation that employees are proud of, indifferent to, or embarrassed by. When employees are proud of their organization's reputation, they feel more connected.

The second element of connection culture is value. It means that people are truly valued as individuals, not merely for what they produce. Value exists in a culture when everyone understands the needs of people, appreciates their positive unique contributions, and helps them achieve their potential.

The third element of a connection culture is voice. It exists when everyone seeks the ideas and opinions of others, shares opinions honestly, and safeguards relational connections. In a culture in which voice exists, decision makers have the humility to know that they don't have a monopoly on good ideas, and they need to seek and consider the opinions and ideas of others in order to make the best decisions.

When people's ideas and opinions are sought and considered, it helps meet the human needs for respect, recognition, and belonging. Being in the loop makes people feel connected to their colleagues, whereas being out of the loop does the opposite.

The Superpower of Connection and Dangers of Disconnection

Connection is a 'superpower,' a turbocharger, that makes people 'smarter, happier, and more productive.' At least, that's how UCLA neuroscience professor Matthew Lieberman, author of Social: Why Our Brains Are Wired to Connect, has described it.

Most people don't yet recognize connection as a superpower that can protect them and propel them forward, therefore, they miss out on its benefits. In their defense, they may be living and working in cultures that have conditioned them not to see, feel, or experience connection as much as they should to live the most productive and enjoyable lives possible. People thrive when they experience connection, as it impacts everything from confidence and curiosity to social skills, enthusiasm, persistence, and ability to cope with stress.

Disconnection, meanwhile, has a ripple effect. When people feel disconnected, they are vulnerable to stress. And as the pace of change speeds up and competition increases in today's hyper-competitive global marketplace, stress levels will naturally rise, too.

In summary, human connection matters to the health, happiness, and productivity of individuals. Disconnection sabotages human flourishing by increasing a host of negative outcomes including ill health, anxiety, depression, addiction, and suicide. For our own sake, and because of the impact we have on those around us, each of us needs to make sure we have sufficient connection in our lives.

Taking Action: Connecting Through Vision, Value, and Voice

What follows is a set of 15 building blocks, a collection of actions for building and maintaining a connection culture—five for each of the three connection culture elements of vision, value, and voice.

Vision

This element is present when everyone is motivated by the mission, united by the values, and proud of the reputation.

- Develop an inspirational identity phrase that connects.
- Set the top five annual priorities.
- Identify and establish core values that connect.

- Continuously reconnect people to the inspiring identity.
- Hire, develop, and promote for competence and connection skills.

Value

This element is present when everyone understands the needs of people, appreciates their positive unique contributions, and helps them achieve their potential.

- Make and encourage connections that are personal.
- Get people in the right roles.
- Create personal development plans.
- Provide training and mentors to support personal development.
- Help people develop connection skills.

Voice

This element is present when everyone seeks the ideas of others, shares their ideas and opinions honestly, and safeguards relational connections.

- Create forums for organization-wide communication.
- Hold knowledge flow sessions for decision input and idea development.
- Conduct knowledge flow sessions to evaluate events and activities.
- Provide training to safeguard relational connections.
- Maintain staff connection and development.

The Five-Step Process to Operationalize a Connection Culture

Developing a connection culture involves changing from cultures of control or indifference. Effective lasting change takes effort and consistency. The following are five essential steps to developing and maintaining a connection culture:

Step 1: Develop a connection mindset among the members of your group.

Step 2: Cultivate vision, value, and voice by intentionally developing habits of attitude, language, and behavior that connect.

Step 3: Measure connection in each subculture to identify connected leaders, connected members, and individuals who need help connecting.

Step 4: Mentor and coach individuals to become connected members and connected leaders.

Step 5: celebrate and disseminate acts of connection (both stories and practices).

Like the great organizations, be intentional and action-oriented about developing a connection mindset, connection skills, and connection character—both within yourself and your organization. Start local, and see how it grows from there.

Michael Lee Stallard, co-founder and president of E Pluribus Partners and Connection Culture Group, offers keynote speeches and workshops on leadership, team and organization culture. He also wrote, *Fired Up or Burned Out: How to Reignite Your Team's Passion, Creativity and Productivity.* He has spoken or taught at many leading organizations, including Costco, Google, Johnson & Johnson, M.D. Anderson Cancer Center, Memorial Sloan Kettering Center Center, and NASA Johnson Space Center.

THE SUMMARY IN BRIEF

John Mackey started a movement when he founded Whole Foods, bringing natural, organic food to the masses and not only changing the market but breaking the mold. Now, for the first time, ***Conscious Leadership*** closely explores the vision, virtues, and mindset that have informed Mackey's own leadership journey, providing a roadmap for innovative, value-based leadership—in business and in society.

In this follow-up to the groundbreaking best-seller ***Conscious Capitalism,*** Mackey argues that if businesses want to become more conscious, leaders themselves must also become more conscious. Each chapter of ***Conscious Leadership*** will challenge you to rethink conventional business wisdom through anecdotes, case studies, profiles of conscious leaders, and innovative techniques for self-development.

Conscious Leadership culminates in an empowering call to action for entrepreneurs and trailblazers—to step up as leaders who see beyond the bottom line.

IN THIS SUMMARY, YOU WILL LEARN:

- The nine characteristics of a conscious leader.
- What it means to lead with love.
- To go beyond win-win deals and solutions.
- How and why leaders must constantly evolve their teams.
- Strategies to continuously learn and grow.

Introduction

Leadership has always presented challenges, but today, amid our rapidly changing global economy, those challenges are truly monumental. Technology is proving increasingly disruptive, global competition is ever present, generational shifts in the workplace are complicating organizational culture, and changing attitudes about the responsibilities of business are putting more pressure on leaders.

The sheer diversity of issues that any CEO must respond to requires the wisdom of Buffett, the assertiveness of Churchill, the creativity of Jobs, the emotional intelligence of Oprah, and the patience of Mandela! No individual perfectly meets these multiple demands, but the best learn an invaluable lesson: that leadership is an ongoing journey of service, not a static position of power. Most important, there is always room for further development.

It's a well-established truth that an organization's potential is constrained by the abilities of its leader. So if our goal is for business to become more conscious, there is no escaping the imperative for leaders to step up to the challenge personally.

The Meaning of Conscious Leadership

Being a *conscious* leader means embarking upon an intentional journey of development. It means purposefully stepping up to a much higher level of integrity and responsibility.

It isn't easy to become a more conscious leader. It's not enough to simply follow rules or adopt the latest leadership fashions. The term "conscious" implies being more thoughtful, more awake, and more intentional in our embrace of our role and the responsibilities it confers. It's a word one might more readily associate with personal growth, spirituality, or philosophy than with professional development.

And that's precisely the point: conscious leadership is first and foremost an inner journey of character development and personal transformation, informed by a powerful understanding of human nature and human culture.

To some extent, what conscious leadership means and looks like for each individual will be different. However, conversations and interactions with hundreds of men and women have uncovered nine distinguishing characteristics and behaviors that unite those leaders who are striving to be more conscious. These nine characteristics are categorized into three categories:

- **Vision and virtue:** put purpose first, lead with love, always act with integrity.
- **Mindset and strategy:** find win-win-win solutions, innovate and create value, think long term.
- **People and culture:** constantly evolve the team, regularly revitalize, continuously learn and grow.

When leaders become more conscious, the organizations they lead become more conscious, creating an ever-widening circle of purpose-driven cultures and communities. We elevate business through our humanity, and we elevate humanity through business. Let's now learn the nine characteristics of a conscious leader.

PART I: VISION & VIRTUE

Put Purpose First

The first and foremost job of every conscious leader is to connect people to purpose. A leader's job is to ensure that, amid all the complexity of daily activity, purpose shines brightly—that it remains vital and relevant, a guiding context, both ethically and practically. This entails more than just believing in our organization's higher purpose. A conscious leader embodies it, and lives it out in a way that makes that purpose vivid and exciting.

Conscious leaders infuse their organization's purpose with authenticity and meaning. They make it come alive, in little ways and big ways, every day. Their passion for purpose can become a touchstone for those around them. They demonstrate and embody the "why" of an organization. And they show a reasonable pathway to "how."

A Leader's Journey to Purpose

Before there are organizations, there are individuals. Before there was a company called Patagonia, there was a young man named Yvon who cared deeply about climbing and wilderness, and struggled to find the right clothes to match his hobby. In the days before there was a movie studio named Disney, there was a young animator named Walt, hawking his wares in Hollywood, who was passionate about sketching and cartoons.

For every company purpose statement that adorns the lobby wall or company website, there was once an individual nurturing inner visions and fumbling around with novel ideas and approaches. But how does one discover a higher

Instead of thinking of business as a battlefield or a jungle, what if we think of it as a community?

purpose? How does a future conscious leader take the first step on that journey?

For most, that process begins with some type of passion or curiosity, the natural pursuit of one's life interests. At some point along the journey of self-discovery, a purpose begins to reveal itself. A "true north" begins to appear on one's internal compass. It might be bright and vivid, or it may slowly emerge, frame by frame, over time. But eventually a path, or at least a direction, can be seen. A critical journey has begun.

The long and winding road taken by many entrepreneurs is testimony to the fact that discovering our purpose and finding a way to express it in the world of business is a journey and not simply a destination.

Phil Knight had the inspiration, back in his days at Stanford, to sell inexpensive, quality shoes to running enthusiasts like himself. But he had no idea of the extraordinarily circuitous route that would eventually lead him all around the world before he founded the most successful and inspirational sports brand in history, Nike.

The key to discovering an organization's higher purpose entails discerning the intrinsic good that is at the heart of its value proposition. For Whole Foods, the intrinsic good behind its value proposition is health and vitality—both for people and for the planet.

For an information company like Google, their essential value is found in the growth of knowledge, in helping humans skillfully negotiate the burgeoning world of data in the information age. For an outdoor retailer like REI, connecting people with the beauty of nature is the intrinsic value behind their work.

Lead with Love

In principle, few would argue with the statement that love is extremely important in every domain of human life. And yet, when it comes to business, this core human virtue is striking in its absence. Love rarely makes the list alongside traditional leadership virtues like integrity, hard work, and courage.

As a consequence of this omission, corporations are far less satisfying places to work than they should be, organization cultures are suboptimal, and their highest potentials are stunted. Love is very much in the corporate closet.

But it doesn't have to be that way. We need to practice the virtue of love in all domains of our lives—including when we show up at work. And leaders who do so will discover that in fact, as consultant and author Steve Farber likes to say, "Love is just damn good business."

If we want to bring love out of the corporate closet, if we want to be conscious leaders who skillfully practice this powerful human virtue not just at home but at work, then we are going to need to think about business in entirely new ways. Instead of thinking of business as a battlefield or a jungle, what if we think of it as a community?

If we think of business as a community of stakeholders that are connected through mutual interests and benefits, then we can appreciate that leadership's job is to create value for every member of that community in a continuous series of win-win-win decisions.

The Many Faces of Love

Love isn't really one thing—it's a many-splendored virtue. We don't fully understand love unless we also understand and practice its many manifestations. For example, generosity is an expression of abundance; it's not an expression of self-sacrifice, which is a common point of confusion.

True generosity is an overflowing, a movement of the heart that wants to share what we have and help others. It arises not from a feeling of guilt or duty but from our own awareness of abundance in both ourselves and in the larger universe we are part of. We can be generous with our time, attention, money, knowledge, and even our spirit.

One of a leader's most important jobs is to salute excellence—to see it, recognize it, and appreciate it, as leaders do in meetings at Whole Foods. But remember, appreciation needs to be authentic. People have highly tuned antennas for misleading or disingenuous compliments. When we authentically appreciate somebody, it not only makes the

person receiving the appreciation feel good; it also helps build trust and break down barriers between people.

Always Act with Integrity

Integrity is a virtue that every leader should aspire to, but we won't pretend that it is easy or common. In some sense, we can more easily define integrity by what it's obviously not. It's not lying. It's not stealing. It's not fudging your accounting, or mistreating your team members, or greenwashing your marketing. It's not making unsubstantiated claims and false comparisons. It's not misleading your customers or hiding facts from the public. All of those are easily grouped into the "lacks integrity" bin of failed leadership.

But what goes in the "act with integrity" pile? Perhaps the best way to understand and ultimately embody this critical virtue is to separate the white light of integrity into its many-colored components.

Five Qualities for Integrity

Five qualities are core to understanding and practicing the virtue of integrity when it comes to leadership: truth-telling, honor, authenticity, trustworthiness, and courage.

For example, "tell the truth." There are few more basic moral injunctions. Truth is powerful, but it's not always popular, which means truth-telling can be an uncomfortable endeavor.

The leadership virtue of integrity requires **honesty** not only in what you say but also in what you allow yourself to hear. An anecdote from Ford describes this well. Alan Mulally, who was CEO of the auto maker from 2006 to 2014, described a first meeting with his senior executive team, one that would be critical to changing the culture of the struggling car company.

In those days, Ford was actually losing billions of dollars, yet the message the new CEO was receiving about the company was bizarrely positive. After a few minutes, he stopped the meeting. "We're going to lose billions of dollars this year," he remarked incredulously. "Why is every line green? Isn't there anything that's not going well here?"

As it turned out, the tendency of the executive culture at Ford was to put a positive spin on things and try to please the boss, not to tell the honest and sometimes brutal truth. In the next business review meeting, things looked different as the Ford team began to get the message—honest communication was expected, even demanded, by their new leader.

Authenticity means being true to ourselves and straightforward with others, whatever situation we may find ourselves in. Of course, this doesn't mean being blind to circumstance. Obviously it's not appropriate to speak out on every subject whenever someone asks us a question, and that's even more true if we represent a larger institution. Some things are private; some are personal.

But conscious leaders aren't obsessed with a need-to-know secrecy, and they don't parse out information at every link on the chain of command as if national security was at stake. Whenever possible, frankness and transparency guide their actions.

PART II: MINDSET & STRATEGY

Find Win-Win-Win Solutions

We all know the archetype: the dealmaker, the negotiator, the shark, the supposedly savvy businessman or -woman who always seems to get the better end of the stick—51 cents or more on the dollar when the deal is made. Their goal is to always "win" the deal. After all, it's a war out there in the business world—isn't it? The overriding goal is to survive and prevail, and crush the other party in the process. There is one winner, and the others are losers. That's just the way it works. Deal with it, sucker.

Now imagine there was a different way. What if there was an alternative ethical strategy that we could use in both leadership and life that would result in positive outcomes for both ourselves and everyone around us?

You've probably heard the term "win-win"—creating positive outcomes for both ourselves and the people on the other side of the table.

Conscious leaders, however, take this mindset one giant step further and simultaneously seek positive outcomes for the larger community—a third win. This community can be defined as widely as we wish to define it. In some contexts, the additional win could be for our families, our religious community, our city, our state, our nation, all humans, all animals, or even the health of the biosphere.

The key ethical idea in win-win-win thinking is that we are seeking to find strategies and solutions that benefit us, the parties we are directly interacting with, and the larger communities that we exist within. In business, that third win typically represents the larger stakeholder group for which the business is creating value—customers, team members,

suppliers, investors, and local and global communities.

The premise is that all the stakeholders are connected and interdependent. By managing the entire system with win-win-win thinking, we create positive synergies that benefit everyone.

Practicing Win-Win-Win: The Power of Intention

When you're stuck in a difficult situation, one of the best things you can do is to repeatedly affirm your desire for a win-win-win solution to the specific challenge. Hold that intention in your heart and mind, with great conviction. This doesn't mean you immediately jump to a solution—that's different. Rather, focus on your desire for a win-win-win solution to emerge. This practice activates your subconscious creative mind to go on an inner "search process" that can yield powerful, unexpected results.

When your focus is this clear, your deeper, subconscious algorithms are tasked to work on the problem, and sooner or later a solution emerges. Often, it will do so in unforeseen ways—a sudden insight, a wisdom-laden dream, a breakthrough in the shower, an early-morning intuition, a creative leap. A win-win-win solution presents itself. It may feel like magic, but it's not—it's the power of your own intention.

Innovate and Create Value

Ideas. Creativity. Resourcefulness. Imagination. Innovation. That is the real secret of our collective success.

Capitalism is at its best when we deeply appreciate that it's more about the application of human creativity than about the allocation of financial capital. That's why the successful innovator, entrepreneur, and even executive needs to focus on creating value rather than simply creating profits.

Here, "value" simply means the quality of product or service that encourages someone else to want to do business with you. Yes, value is tested in the marketplace, in the crucible of actual trade. But always remember that profits are downstream from created value, not the other way around.

The ability to innovate and create value for your fellow human beings (and sometimes for other secondary stakeholders, like animals or the environment) is a fundamental element of conscious leadership. Leaders have an outsize influence, and conscious leaders think carefully about how to use that influence to inculcate innovation and value creation in individuals, teams, and the organizational culture that connects them.

Innovation Loves Company

We often imagine that the path to innovation involves a heroic individual doing a deep dive into their own unique vision and emerging with some incredible novelty, but the iconic image of the lone creative genius may be oversold. In his book about the beginnings of the personal computing revolution, ***From Counterculture to Cyberculture***, Stanford professor Fred Turner made the astute observation that "ideas live less in the minds of individuals than in the interactions of communities."

> Innovation, creativity, and breakthrough ideas require more than networks of interacting neurons in our brains.

Innovation, creativity, and breakthrough ideas require more than networks of interacting neurons in our brains. They depend on interacting networks of actual people—engaging, refining, inventing, imagining, sharing, and building on one another's work.

How can we influence organizational culture to be more creative and dynamic? Here are some strategies for your consideration.

Create the right incentives. Humans are social creatures, constantly looking for feedback, affirmation, and cues from our social tribes. As a leader who is helping to set the tone of a business tribe, be aware of the "possibility field" that you are incentivizing and rewarding. Incentives can be monetary, but they can also be much more than that. One should never underestimate the power of authentic appreciation. If you genuinely reward creativity, new thinking, and innovative ideas, you'll get more of the same over time.

Encourage healthy competition. At Whole Foods, one of the reasons the stores have kept pushing the edge in terms of the customer experience is that they allow a great deal of freedom to innovate at the regional and store levels. Each regional and store team brings new ideas to the table, building and improving on what has come before. A healthy

competitive dynamic is born, with each team trying to outperform the others and come up with more innovative ideas. The best ones get replicated across the company, and the ones that don't work fade away.

Embrace the edges. If you're looking for innovation, you probably won't find it at the heart of the establishment. Genuine evolution and novelty creation often happens on the borders, at the boundaries, in the in-between zones. It thrives in those places where different cultural patterns can mix and mingle, where established rules and conventions hold less sway, and where experimentation and invention can take place free of restrictive oversight.

Think Long Term

If we are going to build a business, an economy, and even a nation that creates sustainable prosperity over the long term, then it's imperative that we look to a longer horizon, understand the dynamics of change, and invest with a multi-year—even multi-decade—timeline.

To do that, we must resist the always present temptation to maximize short-term gains at the expense of longer-term investment. Of course, the short term is always an important part of the picture—that's never going to go away. But when we start harvesting tomorrow's potential value and spending it today—in the form of significant debt, environmental unsustainability, or financial sleight of hand—we are constraining and diminishing the prospects of the future.

As conscious leaders, our goal should always be the opposite: to enlarge and expand the opportunity set of tomorrow in both economic and social terms. We can accomplish this only by keeping one eye on the long term.

Success over the long term, today more than ever, means understanding the relationship between early investments and later rewards. And in our era, like none before, thinking long term requires that we do this in the midst of tremendous uncertainty, unpredictability, and accelerating change.

Thinking Exponentially

Some of the most important leadership mindsets are specific to our time, and none more so than the ability to "think exponentially." It's a critical subset of long-term thinking.

Thinking long term requires not only stretching our minds further into the future but also learning to think "developmentally." That means learning how to cognize change over an arc of time. We don't just see discrete products or services staying the same as time moves ahead, but we see a process—from a version 2.0 to a 3.0 to a 5.0.

What did transportation industry executives think in 2009 as they looked at the picture of the founders of Google with the silly-looking Toyota Prius self-driving experimental car, with its huge, expensive Lidar sensor on top? Did they dismiss it as impractical technology? In that particular moment, it was just that.

How many of them had the developmentally informed foresight to see that only a decade later the technology would be where it is today? Thinking exponentially and developmentally encourages us to explore the trajectory of a given technology over a decade or two, and the perspective we adopt is very different. No longer under the spell of the local and linear, we grasp the process in time, not simply the object in space.

What Business Are You In?

In a world of accelerating change, long-term thinkers must be resolutely attuned to the question "What business am I in?" This is true for the simple reason that business categories are changing much faster than they did in previous decades. Define the answer to the question too narrowly, and you may miss opportunities or fail to see important disruptive developments.

A decade ago, if you had asked this question of Netflix, you might have expected to get the answer "We're in the mail-order DVD rental business." After all, they practically invented that sector. Luckily for Netflix, however, founder Reed Hastings had a different answer. He knew that Netflix was in the entertainment business. That's why he was able to pivot his company to online streaming and eventually to content creation as technology rendered its previous business model obsolete.

PART III: PEOPLE & CULTURE

Constantly Evolve the Team

In the real world, everything we accomplish is done with and through other people. As leaders, we are only as good as our teams. That may be a cliché, but it's no less true because of it. Given that truth, attracting, hiring, inspiring, developing, and retaining the very best team possible is critical for the success of an organization and its leaders.

For a conscious leader, the health of the team around them is a never-ending project, a living, three-dimension-

At its core, revitalization is all about energy—how we use it, how we can have more of it available, how we understand it, and how we manage it.

al, ever-evolving puzzle that they are always working to complete. They know that the development of the team is not simply something they can outsource to the HR department. Yes, it may take help and support from others, but it also takes care and real engagement.

The journey of a great team begins with good hiring decisions. There are several things to look for when considering the best candidate. Obviously being smart and having a high IQ is important, particularly if the role involves intellectually demanding work. But that's not enough anymore. We also need to carefully evaluate the following:

- **Emotional intelligence**. Team members need to be able to connect with people, listen well, and empathize with what others are feeling.
- **Character**. Does this person have good ethical character? Are they fundamentally going to act with integrity? If not, it doesn't matter how brilliant and capable someone is.
- **Cultural fit**. Just because someone has the relevant experience and was successful in another company in the same role doesn't mean those skills will translate across the cultural divide. A team reacts to a bad cultural fit the way the body's immune system reacts to what it perceives as harmful bacteria or viruses—it creates an immune response to repel the foreign invader.

Once we've hired the right people for the team, the next challenge is to continue to develop a culture in which individuals and teams can grow and thrive. Here are some suggested leadership practices for developing a truly conscious culture:

- Make team member happiness a core value.
- Practice what you preach.
- Create an environment of safety and trust.
- Provide clear goals and reviews.
- Value mentorship.
- Build community.

Regularly Revitalize

For leaders in any field or area of expertise, the power of rest, repose, relaxation, and rejuvenation should never be underestimated. It might seem counterintuitive to suggest that such passive, quiescent activities can be the fount of dynamism and creativity, but that's exactly the point.

At its core, revitalization is all about energy—how we use it, how we can have more of it available, how we understand it, and how we manage it. For high-performance leaders in most fields, these are essential issues.

Sleep, revisited. The foundation of any path of deep revitalization begins with sleep. We absolutely need good, consistent sleep, and not getting it fundamentally compromises the self in ways that science is only just beginning to measure. In fact, trying to be a conscious leader without getting adequate, consistent sleep is like trying to win a football game with an injured defensive line. It makes everything else that much harder. Seven to nine hours: That's what experts are recommending.

Demystifying nourishment. Whole Foods Market always considers healthy eating to be the first line of defense against sickness, burnout, fatigue, and so many other physical difficulties that can lead to unhappy team members and underlie poor performance. That is why they incentivize healthy behaviors—for example, they offer a discount on in-store food purchases that increases as team members reach certain health markers and adopt good health practices, such as not smoking.

Continuously Learn and Grow

In the year 1716, in the city of Boston, a 10-year-old boy was pulled out of school and told he would now be working full time in the family business. He'd been in school for only two years and had shown great promise, but it was little surprise that his father, a soap- and candlemaker, could not afford the luxury of an education for the fifteenth of his seventeen children.

Two years later, the boy was sent to work at his brother's printing press as an indentured apprentice. You might think that was the end of this young man's education—that, like so many of his peers, he became a career tradesman, getting by on basic reading, writing, and arithmetic skills.

But no. An unusual passion for learning had awakened in his young mind, and he spent every penny he earned on books, even forgoing meals so he could buy new ones. He taught himself to compose articles and essays through rigorous study and practice. This young man would grow up to become one of the most renowned polymaths in American history, despite less than two years of formal education. His name? Benjamin Franklin.

Franklin, one of the greatest conscious leaders of all time, provides an excellent example of what can be achieved through a lifelong commitment to continuous learning and self-improvement.

The Liberation of Lifelong Learning

What does it mean to learn, grow, and develop as an adult? Learning is perhaps the simplest of those concepts, though science is now discovering that there is more to it than meets the eye. A conscious leader does not limit their learning to the immediate demands of their job or industry. Many of the greatest leaders are voracious learners, reading and studying widely in fields that are seemingly unrelated to their own. They read literature, history, science fiction, biographies, comic books, philosophy, and more.

One of the goals of learning and growing is integration—the capacity to better integrate insights from a wide range of ideas and disciplines in sensible, thoughtful ways. The ability to allow one's intellect to range widely across fields, to cross-pollinate diverse ideas, to find patterns across disciplines, and to "see the forest" is crucial in our data-saturated age. If you are at the helm of a company, team, project, or group of people, you need to know a little—even more than a little—about a lot.

If we truly want to learn, in all the many dimensions of what that word means, we also need to occasionally set aside quantity for quality. We must dive more deeply into the long-form article, the absorbing book, the engaging documentary, the enriching dialogue, the inspiring inquiry, the edifying conversation.

A life of conscious leadership demands that we find ways to express our deepest convictions and highest calling in the actions we take every day.

If we walk this path with integrity, purpose, and love; if we're in it for the long haul and we approach the journey with a great spirit of creativity and mutual benefit; and if we care deeply for ourselves and the teams we share the journey with, we will discover the essential spirit of conscious leadership. Our lives, our organizations, and our world will be better for it.

Part V—Contagious Impact: Be a Force for Good in the World
Page 7

THE SUMMARY IN BRIEF

Everyone in an organization is a leader—for good or for bad—and leaders have tremendous power to influence those who follow their example. In ***Contagious You***, author Anese Cavanaugh shows that the quality of our leadership is based upon our intentions, energy, and presence. By emphasizing authorship, self-care, and response-*ability* (not responsibility) as leadership skills and cultural amplifiers, Cavanaugh shows you how to walk the path of more effective leadership while navigating the roadblocks in your way.

Whether these roadblocks are working with negative co-workers with secret agendas and unrealistic expectations or just the general "busyness" of life, ***Contagious You*** will take you on a journey to create more space, more courageous leadership, and stronger collaboration to influence others and create the impact you desire.

The common denominator is you. No matter what level you're on, your intentions, energy, and presence impact your ability to do anything within your life. ***Contagious You*** is an invitation to unlock your own power. So show up, lead, and intentionally become the change you wish to see.

IN THIS SUMMARY, YOU WILL LEARN:

- What it means to be contagious and how to amplify your own energetic state to create positive impact.
- Why self-care is an essential leadership skill.
- How great leaders enable and encourage positive and contagious energy.

Part I—Contagious You: Claim Your Power

You Are Contagious. Own It.

Have you noticed you have the ability to influence other people's outlooks, decisions, and moods—not necessarily through the words you say but through your presence and the intentions behind your words? Or that you can change the mood of a room by the energy you bring into it (for good or bad)? Or that you can be in a meeting that feels great and productive but you have one negative person in there—and before you know it, the whole meeting sucks?

Most of us can relate to these scenes in our lives. Why? Because we are human. And we're contagious. Our intentions, energy, presence, and state of being are all contagious.

We put energy out there; we take energy on. This happens at work, at home, at the coffee shop, on the train, and everywhere else we go. Whatever we put out there and whatever we take on affects our ability to influence, lead, and create the impact we want.

So the real question becomes, what kind of contagious do you want to be? What do you want to put out there? What do you want to take on? And in service of what?

So, What Is Contagious?

Simply put, contagious means something, a disease or an emotion, feeling, or attitude that can be spread from one person to another by direct or indirect contact that is likely to spread and affect others. For good or bad.

Great news; this is all your choice. And whatever you decide will be contagious.

At the root of your contagiousness are your intentions, energy, and presence, and your *Intentional Energetic Presence*® (your IEP). You control all of these things. They're yours; nobody can do them for you; no one can take them away. Make any of them better, and you level-up your ability to create influence.

Leadership and culture are something that we *be*, not that we *do*. The being, which is our intentions, energy, and presence, is like food coloring in water—you can't separate the being from the doing. It infuses and colors everything. It's contagious. The doing is important, absolutely—but the being is what people respond to and are inspired or repelled by.

If we lead intentionally with the being and doing working together well, we're more likely to have a positive impact.

It is easier to put culture out there—to hold culture as something to be done or something that everyone else is responsible for. Holding culture as internal—something that you are and that you are accountable for—can be confronting. It requires you to be present and aware. It requires connection with others. It requires vulnerability.

And it requires self-reflection and accountability, posing the questions, "How am I showing up to create the experience I'm having? How am I contributing to my situation? What help might I need?"

This is a tremendous gift and superpower, and like any good superpower it comes with opportunity and also great responsibility.

More Credibility, Success, and Influence Is Within You. Get It.

If you want it, go for it. The only question is, are you willing to do the work? And an even more important question that will fuel your work is *why*? What is the desire that will make this all worth it?

There is a bigger reason, a bigger "why," for doing what we do than just doing what we do. If there isn't, our goals and intentions can fall apart fast. If our why is strong enough and the thing we want is important enough—we will do it. The more connected we are to our why, the more sustainable our leadership becomes. Especially when it gets hard to do the work. So what do you want and why?

If you are having a hard time connecting with this idea or accessing what you want, start small—start with "a cup of coffee," or "a day off," or "a new pencil." Then work your way up: to have a better relationship, to run a 5K, to be a better parent, to get a promotion, to impact 10,000 people next month, and so on. You'll come up with a list. When you have all the "wants" out in front of you, go back and circle the top five to focus on for now.

The "Want It/Love It Up" Five-Step

Now that you know what you want, we can go deeper to lock it in and bring it closer to reality. Do the five-step.

- **See it**. Envision yourself doing it or being it, see the result of it, and see the people around you benefiting from it.
- **Want it**. Connect with the feeling of having this thing.

The Portal of Purpose results from clarity of intention, powerful proclamation, true presence, commitment to service, and openness to magic.

Feel where success lives in your body, the energy of having it, the feeling of connection and aliveness that comes with it, the importance of it. Really feel this. Feel it? Great, now turn the want dial up. Want it more. Breathe. Good.

- **Know it**. What will this do for you? What will it give you? What will you be able to do because of this? Who will you become? Now, tap into what will happen if you don't create this. What's the cost? Feel that. Now come back to what's possible when you've created it. Stay there.
- **Decide it**. Once you see it, want it, and know it—it's time to decide to create it. No kidding. Make the full-body decision to make it so. It's on you to lead.
- **Love it**. Now all you have to do is love it up, partner with it, stay conscious in it, and get ready to do the work.

Desire, Intention, Impact. Clarify It.

Let's talk about how to create intention and open the "Portal of Purpose" so you can unlock the next level of your ability to lead, influence, and create the impact you want.

The Five Steps to Intentional Impact Framework supports crafting intentional impact, in its simplest form, to create tangible and intangible results in any conversation, project, relationship, or experience.

1. **Outcome**. What is the outcome you want to create? This should be tangible and something you can see or touch. You would not have created this outcome without the meeting, conversation, project, and so on.
2. **Impact**. What is the emotional impact you want to have? How do you want people to feel? How do you want to feel? You will create an emotional and energetic experience with your presence and actions either way. Being intentional about it is highly useful.
3. **Show up**. How will you have to show up to create the outcome(s) and emotional impact you desire? What will your presence be? Your quality of listening? Your body language? Your attire? Anything that impacts how you show up goes here.
4. **Believe**. What will you want and need to believe in order to show up that way? Make this authentic. If you're having a hard time finding something useful and real to believe, go deeper. What's the truest thing you can believe to help you show up well and be congruent?
5. **Actions**. What actions will you need to take to make it all so? What will you actually have to do? Before, during, after?

You will find that magic happens when you are clear on what you want, have a strong why, put these five steps together, and do the work. You need all five steps. Don't skip or take any of them for granted.

The Portal of Purpose and the Power of Intention and Proclamation

These steps strengthen your intention and make it real, which is core to opening the Portal of Purpose for even more powerful and exuberant impact. The intentions we set create a portal for our reality. The Portal of Purpose results from clarity of intention, powerful proclamation, true presence, commitment to service, and openness to magic.

The portal opens up when your IEP is clear, when you listen, when you're in service of, when you come from love, when you honor your intuition, and when you're willing to say "yes" to really scary stuff because your soul demands it. The portal opens up when you're willing to be on your edge and to devote to service and creating an impact that is bigger than you.

Stories abound in which an intention is set, a proclamation is made, the purpose is strong, and magic unfolds—stories of serendipitous meetings; people attracting the right business partners, employees, agents, clients, or spouses; colleagues landing serendipitous speaking gigs and book deals; even money or clients "showing up" at the perfect time—all accessed in the Portal of Purpose.

The portal can only be accessed if we are taking excellent care of ourselves, owning our impact, holding the intention of service, and listening. Add in magic, proclamations, and true presence (which requires great IEP)—the possibilities are limitless.

Part II—Contagious Presence: Unlock and Nourish Your Superpowers

Design Your Intentional Presence. Be It.

Every interaction we have has a "vibrational energetic" impact. The difference in being successful (or not) in any engagement can be as simple as the impact our vibe creates. We can invite responsiveness—or resistance. We can create inspiration—or obligation. We can evoke doom and gloom—or light up a room. We can inspire authenticity—or fakery. We can open a conversation up—or shut it right down. All with our energetic presence.

The most important work leaders can do is strengthen our IEP. The more we tend to this proactively, the stronger it becomes and the easier it is to command our energetic presence at will. This ultimately allows us to respond and lead in the most appropriate, helpful, and effective ways possible. This is leadership.

The IEP Method®

As your Intentional Energetic Presence, your IEP is how you show up in the world (for yourself and for others). It is also your intentions—what you want to have happen; your energy—the energy and stamina you have to do so and the energy you bring to the table; and your presence—how you show up, how present you are, and what you bring to the now.

There are three parts of the IEP Method:

Reboot your presence. This is your ability to reboot your presence in the moment and shift state, no matter what. You check your presence and the energy you're bringing into a room or conversation. If it's not what you want it to be or what will best serve what you're there to do, you reboot. You breathe. Intend. Shift. Show up. And go.

Build a strong, energetic foundation and field. Building your energetic field is the biggest component of the methodology. Our first intention is to build your energetic field so you can come fully to your life, feel solid, clear, and energized, and have the capacity and range for even more.

Our second intention is to build your field so well that when others step into it, especially the people who may be more challenging to work with, you can better serve, navigate, and lead them with clarity, grace, and effect—without burning yourself out, getting sucked into their stuff, or giving yourself away. The stronger the field, the easier it is to hold these two intentions. It also becomes easier to reboot, shift state, and create intentional impact.

Create intentional impact. Part of this involves the Five Steps to Intentional Impact, noted above. The better you are at rebooting (part 1) and the stronger your energetic foundation and field (part 2), the easier it is to create intentional impact (part 3). The three parts of the method all work together.

Strengthen Your Immunity: Self-Care, Self-Kind, Self-Full. Nourish It.

Two desires—lead well and take care—are often held as mutually exclusive and working against each other, when really they need each other. One cannot survive without the other. Impact needs self-care for power and sustainability. Self-care needs impact for power and inspiration.

Self-care is not a "thing" you do; it is something you "be." It's a mindset that can inform every decision we make. When we "be" self-care, it doesn't matter if we have three weeks for vacation off the grid, two minutes of silence, or no time at all and only a moment of presence with ourselves and a kind thought we can choose—we can access self-care immediately.

The illusion of what "self-care" is often deters people from participating in it. Self-care happens "in the cracks." It doesn't have to mean eight hours of sleep each night, two hours a day in the gym, a nutritionist, a personal trainer, decadent vacations, and a massage therapist following us around.

Self-care is being kind to yourself, taking care of yourself, and being your own best friend and advocate. It happens when you've had a hard day or moment and, instead of armoring up and forcing your way through, you admit it—and let yourself have a minute.

It happens when you opt out of a toxic conversation or relationship. It happens when instead of being unkind to yourself and beating yourself up for that last "fail" or "dumb thing you just said," you offer yourself grace and even an acknowledgment for being brave. It happens when you ask for what *you* need. It happens when we give ourselves a moment to breathe, get present, and connect with our intention.

We can build our resiliency and immunity proactively and reactively. The more we're exposed to negative contagions and react or respond well (by holding our space, taking care of ourselves, bouncing back, and continually learning from it), the more we are able to build our resiliency and immunity reactively. On the flip side, we can build it proactively

via self-care, intention, and using the strategies discussed here. Think of it like eating your vegetables, taking your vitamins, and choosing your thoughts—doing these things builds your immunity and resiliency.

The Mindset of Building Your Immunity (Being)

The following are eight incredibly helpful principles for shifting mindset, building immunity, and strengthening IEP. Own and embody any of these, and you shift the field:

- My presence is my impact. How I show up matters.
- Showing up for myself first is vital to be able to show up for others.
- My relationship with myself is the most important relationship I have. (This includes any spiritual beliefs I hold and my relationship with a higher power.)
- The combination of trust, credibility, and leadership is an inside-out job.
- The clarity of my intention equals the power and quality of my impact (and the ease of doing anything).
- I matter. I have my own space. (I am "response-able" for holding and nourishing it.)
- I create my experience. I author my story. I lead me.
- Presence, not perfection.

Which feel most important to you? Whether you are a top-level executive or entry-level administrator, teacher or principal, wine-maker or grape picker . . . these principles strengthen the essential you and build your field. Choose one, embody it for a day, keep rebooting back to it, and see what opens up.

The Seven Ps of Personal Burnout and Transforming "Bad" Things Into "Good." Do It.

There's a reason for the saying "It's lonely at the top." Leadership can be lonely. The further up the ladder we go, the more opportunities and responsibilities we have, the more people look to us for guidance, and the more expectations we have imposed on us or by us.

Additionally, as we grow in leadership, we may surpass friends, colleagues, team members, and even bosses we've worked with and are now responsible for leading. Our interests and priorities can change, creating shifts in relationship dynamics that can be disconnecting and jarring. We may worry what our peers think, what this growth and disconnect means, or that we simply no longer fit in.

The following seven Ps of burnout invite us to tend to our personal nourishment and burnout prevention more rigorously:

Lack of connection to presence and the pause. Presence is about being present in the moment, to our lives, in our bodies, and to our current reality. The pause is about taking a time-out (between projects, meetings, wins, fails, and even thoughts) to regroup, reboot, rethink, reassess, and go. People are not going to let you pause (not because they're evil but because they're managing their own stuff), so you have to create presence and the pause for yourself. It is a choice.

Presence is about being present in the moment, to our lives, in our bodies, and to our current reality.

Lack of connection to purpose and the portal. It's essential that we stay connected to why we're doing what we're doing to create impact (for the sake of what and for whom?), and also that our "why" grows with us. When we're connected with purpose, service, and the humans we impact, our mission becomes clearer and stronger. From here, we're not alone but, rather, in the portal of purpose together.

Lack of connection to people. Not feeling seen or cared for, not seeing or caring for others, being separate and inferior or superior to others, or forgetting we're in relationship with the people we are with, creates separation and resistance, disconnects us from love, and violates a core human need to be a part of tribe. We have to "see" each other. Our humanity frees us.

Lack of connection to pleasure and pain. Accessing pleasure—playing, acknowledging delight, appreciating the moment, celebrating wins and failures, and taking time outs for fun—is essential for regeneration. Accessing pain and authentic emotion is just as important. In order to have our full range of experience, more of our authentic selves, and clean energetic hygiene—permission for pain and true emotion is vital.

Lack of personal power. With a lack of personal power or accountability, energy gets heavy and mucky and tends

to spiral, creating more of the same. Owning our power is contagious. Holding clear boundaries and taking accountability clears energy and empowers and supports others in doing the same as well.

Lack of partnership with oneself. The most important relationship we'll ever have is the one with ourselves. When you are present to your needs, honor your internal agreements with yourself, and trust you have your own back, you are stronger for everything else.

An overabundance of pleasing others at the compromise of oneself. Do not compromise your well-being or beliefs to please others. Do be in service of, support, or even help others—but let go of pleasing.

Part III—Contagious Relating: Build, Heal, and Optimize Your Relationships

Other People's Problems, Projections, and Expectations. Rise Above Them.

Other people's problems, projections, and (contagious) expectations (OPPPE) are things we deal with every day—on both the sending and receiving end. They are easy to get hooked into and one of the greatest causes of resentment, confusion, exhaustion, blame, judgment, and lost time and energy. We're often so close to them, we don't realize they're happening. Yet with awareness, we can start to discern what's ours, what's not, and what energy we choose to expend appropriately.

HELP: A Formula for Navigating the "Problem P" of OPPPE. The next time someone comes at you with the first P in OPPPE, asks you for support or to "have a chat," or anything in this domain that feels "off" or heavy, HELP:

Hold/Honor. Don't respond instantly to everything. Take a pause. Ask yourself, "Can I serve best in this moment? Am I in the right space to contribute?" Hold the energetic state and boundary of service and intention.

Engage/Enroll. When you do respond, ask the other person to be specific. What's the topic? How much time would he or she like? How can you be most helpful? And what are some potential times to talk so you can both be present? Getting clear here allows you (and the person) to plan and to be more fully present and in the right headspace to contribute.

Love/Lean in. When you do talk, give the person 100 percent of your presence and care—100 percent. Contribute as best you can. Love the heck out of the person. Be generous. Be there.

Plan/Parameters. Be clean about the conversation and your role. Is it something you are qualified for and the best person to support him or her in? If yes, great. If not (because it needs specific expertise from another team member, professional, or even a therapist), communicate that.

Other People's Projections. We project our experiences, feelings, thoughts, and judgments—good and bad—on each other all the time consciously and more often unconsciously. Projection is energy and a form of communication through presence and a way of being that is usually communicated nonverbally. Projection is the mechanism of a contagion, either positive or negative.

The trick is not to never do it but, rather, to be conscious of it, to catch it, to breathe, to be responsible for it, to get curious, and to get into right relationship with ourselves and others as quickly and consciously as possible. This is a practice—it is a leadership muscle.

To project is human. To have awareness and to be responsible for what we put out there in service of other humans is leadership.

Other People's (Contagious) Expectations. We have expectations of how people should show up for us, how they should perform, what they should hold as important, and what they should do for us. We have assumptions about what people agree to, how they feel about us (or anything), how busy they are, what's going on in their lives, and why they did something. Both expectations and assumptions are a form of projection.

Neither work out so great. Trying to live up to someone else's expectations and assumptions sets the tone for burnout, takes us out of presence, and diminishes trust and credibility on both sides.
